House of Commons Debates

OFFICIAL REPORT—REVISED EDITION.

HOUSE OF COMMONS.

Speaker: HON. ALBERT SÉVIGNY.

Tuesday, April 18, 1916.

The House met at Three o'clock, the Speaker in the Chair.

PUBLIC ACCOUNTS COMMITTEE.

Sir ROBERT BORDEN moved:

That the names of Messrs. Devlin and Ross be substituted for those of Messrs. Molloy and Tobin on the Select Standing Committee on Public Accounts.

Motion agreed to.

PRIVATE BILLS.

FIRST READINGS OF SENATE BILLS.

Bill No. 92, for the relief of Robert Charles Vondrau.—Mr. Scott.

Bill No. 93, for the relief of Percy Lynn Woods.—Mr. Boys.

THE BILINGUAL QUESTION.

CORRECTION OF STATEMENT IN WINNIPEG TELEGRAM.

On the Orders of the Day:

Sir WILFRID LAURIER: Mr. Speaker, may I interpose just for one moment on a question of privilege. I would like to correct a report which I find in the Winnipeg Telegram of the 13th inst. referring to me, and which, under the circumstances, is a gross and mischievous misrepresentation. The Ottawa correspondent of the Winnipeg Telegram, whom I do not know at all, writes to his paper on the 13th of April as follows:

Ottawa, Ont., April 13.—Long after midnight Sir Wilfrid Laurier, Hon. Rodolphe Lemieux, Hon. Jacques Bureau, and Ernest Lapointe, M.P., who have been chosen by the Liberals to introduce a bilingual resolution in Parliament, were in conference in the Liberal leader's office. Previous to this conference Sir Wilfrid Laurier, Senator David, and Senator Choquette had met and discussed the question. Senator Choquette, following his speech in the Senate on Ontario volunteers, went with Senator David to the Liberal leader, and, it is believed, Sir Wilfrid Laurier conveyed their views to his supporters in the Commons.

This correspondent refers to the close relationship of Senator Choquette with Sir Wilfrid Laurier. I refer to this, under the circumstances, because the atmosphere being rather charged with electricity, there is an insinuation—not an insinuation, but a positive statement for which there is no foundation of fact whatever. The relations between Senator Choquette and myself are not close; they are the reverse of close; they are very strained politically, as was admitted by Senator Choquette himself on that very day. I have never seen Senator Choquette during this session except once, and not to discuss the bilingual question. The only thing that was discussed between us was a railway question of which we may hear further during the present session. As to my relations with Senator Choquette, I call the attention of the House to the explanation which he himself gave in the Senate the day after he made his anti-recruiting speech. Everybody knows that my views and the views of Senator Choquette upon this question are the very antipodes. I need not say what has been my attitude on the subject of the war, and of Canada's participation in the war, during this session and during all previous sessions. Senator Choquette made a statement on the subject because he had seen in the newspapers that my name had been connected with his. On the 13th of April Senator Choquette, on the floor of the Senate spoke as follows:

I take on myself the whole responsibility of my words in this House and outside, and I protest most strongly against the report connecting my words with the name of Sir Wilfrid Laurier, the great leader of the Liberal party, in order by insinuation to represent him as being responsible for what I said. I advocated Liberal principles for thirty years under Sir Wilfrid Laurier in the other House, but we all know —I grieve to say it but must do so in order that the responsibility for my actions and words may be properly fixed—that over ten years ago I had some difference with Sir Wilfrid Laurier about what he should do. I have the greatest

respect for Sir Wilfrid, and I hope he has friendship for me, but we differed ten years ago when I had to take part against the Premier of Quebec at the time. Again, not more than five years ago I opposed Sir Wilfrid on his Naval Bill; I took the responsibility of my stand on that occasion, and I know the Tories were very glad to use my speech and my views against Sir Wilfrid Laurier at that time, to serve their purpose.

This is the total refutation of the imputation that is conveyed by the correspondent of the Winnipeg Telegram, and I hope he will take the opportunity of correcting that impression.

WAR CONTRACTS.

STATEMENT BY THE MINISTER OF MILITIA.

On the Orders of the Day:

Sir SAM HUGHES (Minister of Militia and Defence): Mr. Speaker, with the indulgence of the House, I desire to make a personal explanation. On the 9th of March I left Ottawa for England. A week or so prior to my leaving, I spoke to my right hon. friend the Prime Minister (Sir Robert Borden) and some of my colleagues, explaining to them the necessity of my going. I asked the Prime Minister if he would see the leader of the Opposition (Sir Wilfrid Laurier) and ascertain if there were any questions likely to arise in connection with my department which would require my attendance here. It was agreed that I should see the leader of the Opposition, and I did so. I saw also the hon. member for Pictou (Mr. E. M. Macdonald), the hon. junior member for Halifax (Mr. A. K. Maclean), and others on that side, and asked them if there were any questions affecting my department that would require my attendance here. The leader of the Opposition frankly stated that he did not know of any; but also, with the statesmanship which characterizes him, he declined to assume responsibility for all his followers. But I think I am justified in saying that he said he did not know of anything—

Sir WILFRID LAURIER: Personally.

Sir SAM HUGHES:—personally, he did not know of anything that would justify him in saying that I should require to remain here longer. None of the other prominent members of the Opposition could conceive of anything that might arise. It was known that I was going away. Needless to say, I did not "go duck-hunting with a brass band;" I did not placard the fact that I was crossing the ocean; a statement was given out that I was going South, which was perfectly true.

A day or so before I went away, the hon. member for Carleton (Mr. Carvell) spoke. I think I intimated to that gentleman also that I was going away. Those hon. members who will recall the night of his speech will recollect how his eye wandered to the clock, praying "for night or Blucher." They will recollect that he repeated himself; and, if Hansard correctly reports him, he repeated himself over and over and over again. I thought—I was unkind enough to think—that he was killing time, for it was known that I was leaving the next day at noon, and that was the only chance I should have to get at him. I asked him that night to continue and finish his speech, and indicated that I would be only too delighted to take up the few minutes that were necessary in reply—it would not take very long—before I left. But he pleaded weariness, and the sympathy of Mr. Speaker and the House was accorded him, and he got an opportunity to finish his speech next day. I do not know that much harm was done, however.

I shall not refer to my visit to England, and the splendid work the boys are doing, both in England and at the front, although so many of them are going down, I am sorry to say.

Some hon. MEMBERS: Hear, hear

Sir SAM HUGHES: But when I received the message that startling statements had been made in the House involving the honour of the Shell Committee, and, indirectly and to that extent, my own honour, I returned on the first and fastest steamer. I rather enjoyed the trip. I was glad and I am glad at the chance to clear the atmosphere.

In this connection, I wish to thank the hon. member for East Toronto (Hon. A. E. Kemp) for his kindness in acting so splendidly as Minister of Militia during my absence. I found everything in a very satisfactory condition in the department when I arrived. I have also to state that during my attendance at the sessions of this Royal Commission—and I intend looking after it fairly well—I shall do myself the honour, as has always been my custom when temporarily absent, to ask the Prime Minister to look after anything that may be necessary in connection with the Militia Department.

However, on my return, I have no hesitation in saying, I was surprised at the

character of the statements made by the hon. member for Richmond (Mr. Kyte). I had expected something really important. It is no part of a member's duty, nor is it right, to impugn the motives of another man, and I do not do so. But I had a perfect right to inquire for my own satisfaction what was the moving spirit behind the hon. gentleman's speech. Was it to ascertain the truth concerning this matter? If so, all he had to do was to communicate with Colonel David Carnegie or General Bertram of the Shell Committee, and he would have his questions answered in five minutes—answered truthfully, and answered to anybody's satisfaction. Was it to obtain notoriety? If so, he has had it, but it will be short-lived. Was it to injure the Tories? —those horrible Tories! If so, I have every reason to believe that he will fail in his object. Was it to assist the cause of human liberty? I want to point out to that hon. member that only truth and right directing a powerful attack can win for that cause. Or is it merely petty party parochial politics? I leave the public to come to their own conclusion on that subject. I cannot conceive of his object in trying to take advantage of the high-strung nervousness of the Canadian public, whose gallant sons are fighting and dying for the great cause. However, he is responsible to his own conscience and to his constituents.

Now, what are the conditions surrounding the shell contracts? At first no one could be induced to touch them. The horde of self-seekers, who afterwards came to the front, would not for love or money come out and help on the cause at the beginning. Bankers interfered who subsequently kept pestering General Bertram and the Shell Committee in order to bolster up little side-shows here and there all through the country who wanted contracts for shells. Prominent business men who had capital invested in factories and the machinery all ready could not be induced for love or money to go into the manufacture of shells and similar commodities at the beginning of the war. They were all poverty-stricken, nervous, and afraid to step in and help the Empire, though they would not take any risk in doing so. There was want of confidence on the part of capital; there was uncertainty as to the duration of the war; there was lack of proper equipment; there was a necessity for procuring the raw material; there was an absence of skilled labour; there were hard times; there were nervous people who suffered from lack of confidence; and there was a great need to remove all these depressing influences that were abroad throughout the country. But there were men who were not afraid. A few stepped into the breach; the manufacture of shells was begun; the money commenced to circulate; and it was found that Canadians could rise to the situation and play their part as well as the inhabitants of any other country in the upbuilding of the Empire and the development and protection of human liberty.

The next step was when confidence was regained. Every one wanted to get into the game. People talked in millions instead of thousands, and there were agents and promoters everywhere. That matter, however, has been touched upon by me in this House already during the present session, and I will not repeat what I said before.

As I understand the statements of the hon. member for Richmond (Mr. Kyte) and those of the hon. member for Carleton (Mr. Carvell)—I trust that if I refer more to the hon. member for Richmond than to the hon. member for Carleton, the latter will not feel slighted—they are that a contract was made for time fuses with people who had no intention of producing fuses and who will never produce them; that $1,500,000 was paid to promoters who divided that sum amongst themselves; and that Great Britain will lose that money. The fact is—the details will follow later on— that the two companies with whom the contracts were made are now employing between them nearly 8,000 men, and that they have invested in plant, machinery, and materials fully $6,000,000. While they have undoubtedly met with great difficulties in the production of fuses, they have, with the exception of one other company, done better in that work than any other company on the continent of North America. So much so is that the case that the British Government, through Morgan and Company of New York, have recently given one of those firms a new contract for 4,000,000 additional time fuses and the other an order for 1,000,000 time fuses. Every dollar of the money advanced was protected by the guarantee of the strongest trust company on the continent of North America, namely, the Guaranty Trust Company of North America, and incidentally, I may say, by the fortunes of the men behind those companies. When I state that the American Tobacco Company, the members of which are worth upwards of $500,000,000 on their own personal accounts, were behind one concern,

and that other gentlemen with personal fortunes aggregating very large sums away up in the millions and tens of millions were behind the other, you will understand, Sir, that it is no wonder that the Guaranty Trust Company of North America was only too ready to go as security for those companies. The money so advanced went for the purpose for which it was intended, namely, for the purchase of plant and material. That is the general situation. The details will be elaborated later. From the experience which has been gained, I think perhaps it would have been better to undertake the manufacture of fuses in Canada, as I understand that similar undertakings have since been started in England and also in France. As a further instance of the bona fides of those two firms, it may be noted that the above advance of money was only 15 per cent of the contract price, whereas the usual cash advance through Morgan and Company is 25 per cent.

I turn now to the Hansard report of the speech of the hon. member for Richmond, which will be found on page 2360 of the Unrevised Hansard, under date of March 28. The hon. member states:

> The reason why Mr. Thomas did not have the opportunity of consulting with my right hon. friend the leader of the Opposition was—

And so forth. I think it is rather a pity that my hon. friend did not consult with the leader of the Opposition, because, if he had done so, if my information is correct, he would have found that the right hon. the leader of the Opposition did have a conference with Mr. Thomas.

Sir WILFRID LAURIER: I had no conference with Mr. Thomas. He called on me socially; that was all.

Sir SAM HUGHES: I am not retailing any confidential information imparted to me by Mr. Thomas. I have no hesitation in telling the House and this country and the British Empire that Mr. Thomas did not state that it was a private conference. He called on the right hon. the leader of the Opposition by request—so he informed him—of the Minister of Munitions of England, and had a conference. Whether it was long or short, public or private, good, bad or indifferent, I care not.

On page 2362 of the Unrevised Hansard the hon. member for Richmond says:

> With the exception of the Dominion Iron and Steel Company, there was no factory or plant in Canada manufacturing t.n.t.

I regret exceedingly to have to correct the hon. member again. The Dominion Iron and Steel Company has never yet manufactured any t.n.t. This is another sin of the Shell Committee. When I was in England in 1914 I was asked by the War Office if t.n.t. could be manufactured in Canada. On my return to this country I sent for General Bertram, the then chairman of the Shell Committee. We talked the matter over, and the result was that the Dominion Iron and Steel Company received through the agency of the Shell Committee an advance of $90,000 to enable them to start the manufacture, not of t.n.t., but of toluol, a component part of t.n.t. Thus, through the instrumentality of the Shell Committee, the manufacture of toluol, which is subsequently manufactured into tri-nitro-toluene, was begun in the Dominion of Canada, and the credit for that is due to the Shell Committee and those who are associated with it. I merely make this remark as a passing correction. I have not yet found in the speech of the hon. member any statement that is correct, and I will just correct a few of his misstatements en passant.

The toluol manufactured by the Dominion Iron and Steel Company is taken to a place near Montreal and manufactured into t.n.t. The Toronto Chemical Company at the Sault, through the instrumentality of the Shell Committee and those associated with it, manufacture toluol, which is manufactured into t.n.t. The Curtis and Harvey Company and the Canadian Explosives Company are also manufacturing t.n.t.

With regard to a gentleman of whom some of you may have heard, Colonel J. Wesley Allison, I may say that this officer was formerly associated with Vanderbilt and Dr. Webb in the New York Central railway. I understand that he was purchasing agent or something of that kind. He was respected and is respected by the manufacturing concerns of the United States and of the Dominion of Canada. At the outbreak of the war manufacturers and contractors in the United States were uncertain whether under the law they could deliver their commodities to a foreign country in war time. It was uncertain whether the then Secretary of State, William Jennings Bryan, would not endeavour to prevent the exportation of these commodities. I challenge an instance where a contractor in the United States at that period undertook to deliver, outside of the

borders of the United States, any commodity in the war line, contracted for. Not one of them would do it. Then we were up against this proposition: That Britain, and Canada, and every other country contracting in the United States had to assume the responsibility of getting the goods out of the country. I was requested by the British Government to look after this end of the transaction, I enlisted the sympathy and assistance of Colonel J. Wesley Allison, and so well was it done—I may point out that in the early stages these articles were brought over by ferry, but that procedure became almost unbearable and could not be kept up; then whole trains were shipped right through in bond, and—I want this clearly understood, because I am told there has been some uncertainty about it—by arrangement with the Minister of Customs these war munitions were permitted to come in free of duty and were passed on to the Old Land. Later, through the instrumentality of this same officer, it was discovered that there was no need whatever of bringing these goods in a roundabout way from the manufacturing centres in the United States through Canada, so they were shipped direct from the port of New York and from other ports near the places of manufacture. So carefully was this managed that the Colonial Secretary, Mr. Harcourt, after these things had been going from New York for a year, still thought they were going by the old route through Canada. Let me point out further that when the Shell Committee had made inquiries in Canada from one end to the other, when I myself, assisting them, had asked at least fifty different concerns to undertake the manufacture of fuses in Canada—because a shell without a fuse is useless—it was found that not one firm in Canada, with all due regard to Mr. Russell, could be induced by the Shell Committee to manufacture fuses in this country. I know that articles have been padded up and written in the newspapers in this connection. I repeat that not one factory in Canada—not Mr. Russell, not Mr. Lloyd Harris—could be induced to manufacture fuses in the Dominion of Canada. I did not give much time to this sort of thing; I had other fish to fry. But I did devote an odd moment to it now and then in Ottawa at the Chateau Laurier, which does my right hon. friend the honour of commemorating him by its name. When I urged and begged some of these Canadian manufacturers to make fuses I had been met with the statement that they could not possibly make them. I turned to Allison, who was there, and I asked him if he could get capital to come in from the United States. He did not know anything about it; that afternoon he came to me and asked me about the details. I said: "I do not know a confounded thing about it; go and see Bertram." He saw Bertram and came back to me that night and mentioned the men who are in these two companies that are making these fuses to-day, and making them successfully. He spoke of a gentleman named Rufus Paterson, whom I had never met, seen, or heard of, but who was spoken of as one of the most capable mechanical engineers in the world. He spoke of Dr. Harris, well known to gentlemen on both sides of the House as a very capable man. He is a very wealthy man, living in the city of New York. He spoke of others—I forget the names; at all events they were men in these two companies. He said that they were very wealthy men, and that he would see what could be done to have the fuses made in Canada. But there were no buildings in which to manufacture them; new buildings would have to be built absolutely from the foundation up. I do not know the details; I never inquired into it from that hour on. Finally, however, when it came to letting the contracts for fuses, they could not get the buildings in Canada, and as the British Government were in a great hurry for the fuses it was decided, I understand, on the part of Gen. Bertram and the Shell Committee, to have them made in the United States in the meantime. I know nothing about Colonel Allison's connection with these companies. I may say frankly here that I think Colonel Allison, if he did get anything, or does get anything, out of these concerns, is as much entitled to it, because he has delivered the goods, as gentlemen who sell sausages, boots, leather, breeches, and other commodities of that kind up and down the Dominion of Canada.

Later, when it came to purchasing revolvers, pistols, rifle ammunition and other war material, and when I found that the price asked for rifle ammunition for the British Government at that time was $42.50 I again enlisted the services, or the sympathy and assistance, of Colonel Allison. In the intervening days I got the ammunition reduced to $37.50; I have the offer yet. We met these gentlemen through the instrumentality of Colonel Allison. I am not permitted to go into further details con-

cerning them for various reasons. I will give them to the leader of the House or the leader of the Opposition if they want them. It is absolutely straight; they can easily perceive why I could not give them. These experts gave us the benefit of their assistance and the price of ammunition was reduced from $37.50 to $33 per thousand, the cheapest ammunition by several dollars per thousand that has been contracted for during the history of the war.

On another matter, that of motor trucks, this gentleman also stepped in at my request. It was he who brought me first in touch with Mr. Beecroft and Colonel Thomas. Through association with these two gentlemen and himself our motor trucks are delivered to-day at $2,800 each, and I know of no trucks in the British Empire than can be obtained at less than list price less 10 per cent. Ours are list price less 25 per cent. At any rate, the price which we paid to the British Government for 51 trucks of the same quality as our own was $5,240 each. So that, whatever his faults may be—and I do not know that he has many more than some of the rest of us—he has at all events been instrumental in saving some money to the taxpayers of the British Empire.

On the question of Colts revolvers and pistols, let me point out how he assisted. In 1899 and 1900, the Auditor General's Report shows—and I am not finding fault with what was done then, but, oh, my! how the welkin would ring if, instead of getting our Colts revolvers to-day at $14, we had paid $15.50 for them, $1.50 going to Colonel J. Wesley Allison; and what a wail would have been set up if, instead of paying $18.50 for Colts revolvers, $1.50 had been added to that price and the total had been $20, $1.50 going to J. Wesley Allison or any other agent! There would have been a wail from one end of this country to the other. But the lowest price was the price at which orders for pistols were placed by Colonel J. Wesley Allison. His statement to the head of the Colts firm, in my presence, was that not one cent must be added to the cost of these pistols over the lowest possible net price, for any commissions or any rake-off or anything of the kind, and not one cent has been added to the cost of these pistols. They stand to-day at $14, the same pistols as my hon. friend opposite paid $15.50 for in 1900. They stand to-day at $18.50, and I challenge the universe to show one of these revolvers that has been sold for one cent less than $18.50 to any Government excepting the Government of the United States, which has an agreement to that effect. We are told that the trade can get them for $14.50. It is well known that the public, the trade, cannot get them in the Dominion of Canada or in any other country outside of the United States for $14.50 or $15; they must pay duty. And, coming into Canada, with the duty added, that revolver stand at $19.50 instead of at the figure quoted by my hon. friend. Sir, $10.50 is the cost price for that pistol in Canada, and $18.50 is the price at which it was sold to the Canadian Government, to the French Government, to the Russian Government. 200,000 of them were sold to the Russian Government at $18.50.

And now, if my hon. friend the member for Carleton, N.B. (Mr. Carvell) will permit me, I shall refer to his summary at the conclusion of his address, as containing all that is worthy of comment or recognition in his remarks. He speaks of the Shell Committee having given contracts to themselves. He instances the Bertram Company. I need only point to page 1818 of Hansard, where my hon. friend the Solicitor General (Mr. Meighen) completely refutes his argument in that regard, and shows that General Bertram had nothing to do with it. It is also shown on page 1818 that the Chapman Engine and Manufacturing Company, which is charged by the hon. member for Carleton with being subsidiary to the Bertram Company, has nothing to do with it. It is also charged that the Valley City Seating Company is subsidiary to the Bertram Company, and on page 1818 that statement is also exposed and refuted. Then it was also charged that the Universal Tool Steel Company, of which Mr. Watts is a member, was in the same position, and at page 1820 it is explained that there is not one particle of fact in that assertion. Then it was asserted that the Electric Steel and Metals Company had Mr. Carnegie as a director. I believe that is a mistake, and that they have put in the wrong Carnegie. But at page 1602 and 1805 that is also satisfactorily explained and any suggestion of impropriety refuted.

Then it is said that the Nova Scotia Steel Company was given contracts through Colonel Cantley. Let me say one word for Colonel Cantley—not of apology; he does not need it, nor does his concern need it. When this matter came up, when the manufacturers who had undertaken to make the few shells we had then on order looked into

the matter, they were told that they had to buy crucible steel, acid steel, for the shells—that the other classes of steel would not do. They came to me and said: "We are up against it; we can get only 400 tons of crucible steel in North America." I said: "What about all our big steel industries in Canada?" "Oh," they said, "their steel will not do." Then we were given some scientific reason. I said: "This is all moonshine; get out and make the shells which we have undertaken to make." I went to the Prime Minister and I asked where I could get a man who could give me data on steel, and I was referred to Thomas Cantley, of New Glasgow, Nova Scotia, who happened to be in town at that time. Let me point out that Colonel Cantley undertook to experiment with basic steel for the Shell Committee, and at one time the Shell Committee had gone into the New Glasgow Company to the extent of upwards of $500,000 through experimenting and work of one kind and another that Colonel Cantley had undertaken for the Shell Committee, without a dollar of security or a dollar of reimbursement up to that time. The result was that Thomas Cantley and the Nova Scotia Steel Corporation finally proved to the British Government that basic steel, Canadian steel, was just as good for shells as the acid steel from the United States or other lands, and to-day Canada has had eight hundred million pounds of steel produced by her own people within her own borders, and turned into shells to assist in smashing the Germans. All I have to say in connection with this is that there is nothing too good, in my opinion, for Colonel Thomas Cantley and the Nova Scotia Steel Corporation.

The next heading in my hon. friend's speech is the question of prices. I shall not go into the details of that to-day. On a former occasion I gave prices from manufacturers in Canada, in England, and in the United States, and, in every instance but one, the Canadian prices were better than those in either of the other two countries under similar conditions. I might point out that the early prices of these commodities would naturally be fairly high. In any new undertaking, by a Government or by a corporation, the cost of the new and necessary machinery is invariably added to the cost of the first few orders, which would naturally make the first few orders for shells expensive. Then the question of unskilled labour had to be considered in this case. At the beginning we had Colonel Lafferty, Colonel Weatherby, and a few lads from the Dominion Arsenal at Quebec, who worked day and night going through the country trying to establish industries, and they did yeoman work in that respect. But they could not stay in these places all the time. They had to attend to their own duties, and it was absolutely impossible that two or three men could look after the scores of institutions in Canada then making shells. But little by little we trained up expert men to do this work, and, after the first order or two, the losses through the testing of the shells were reduced to a minimum.

And to-day Canada has within her borders thousands and tens of thousands of skilled men, whereas at the beginning she had only half a dozen or a dozen. That is a great advantage. The shells were tested, and if one shell out of 120 failed, the whole batch of 120 had to be thrown away. Only the other evening the officer in charge at Petawawa pointed out to me that 40,000 fuses had been thrown out because of the failure of a few to pass the test. In the United States 100,000 fuses were thrown out because they did not function properly.

With regard to the question of prices. On February 13, 1914, a requisition was made on the War Department, England, for 2,500 quick firing 18-pounder shrapnel shell fused complete in case.

The complete quick firing 18-pounder charge comprises shell, copper driving band brass socket, fixing screw, centre tube, tin cup, steel diaphragm, ¾ bullets, resin, powder bursting charge, perforated powder pellets, plug, fuse and fuse cover.

On the 18th June, 1914, the War Office placed an order with Armstrong & Whitworth for the empty shells only at £65 per 100, or $3.16⅔ each, to which would have to be added 5½ per cent for War Office departmental expenses and inspection, bringing the price of the empty shells alone up to $3.33⅓ each.

On the 15th April, 1914, the price paid Vickers for quick firing 18-pounder cartridges complete with shells, etc., was £1. 17s. 6d. or $9.12½; adding 5½ per cent for War Office departmental expenses and inspection brought the price up to $9.63 at Woolwich.

On the 24th September, 1914, Vickers offered to supply quick firing 18-pounder shrapnel shells complete (case, shell, primers, fuse, etc.) at £248. 10s. per 100 rounds, or $12.09⅓ each, to which would have to be

added 5½ per cent for War Office expenses, or altogether $12.75½ each. The above prices are for delivery at Woolwich, England.

When the war broke out the price of No. 80 fuses (aluminum) as quoted by the War Department, England, was 10s. 9d. each, or $2.61 to which 5½ per cent had to be added, bringing the cost up to $2.76 each.

The cost of the quick firing 4.5-inch ammunition ordered on the 19th July, 1911, through the War Office from Vickers, was: cartridge, 10s. 3d. net, or $2.63¾; shell, £1. 6s. 7½d. net, or $6.84; and fuse, 11s. net, or $2.82¼. My hon. friend will therefore see that he has made an error in quoting the price of the 4.5 shell.

In regard to the cost of shells in Canada, I have here a statement showing the estimated total cost of the materials ordered, the balance of shells to be filled at present prices, and the War Office prices authorized to the Canadian Shell Committee for the manufacture of those shells, and which they filled; there is a surplus of $42,690,630 from the prices authorized by the War Office. So that the Canadian Shell Committee would have been entitled to pay for the manufacture of those shells on the basis of the British War Office prices a sum of $42,690,630 more than they did pay. And yet we are told that the Canadian Shell Committee paid exorbitant prices. The War Office authorized a total cost of $345,220,000, but we fell short of that to the extent that our cost was $303,125,000. Let me point out that the British Government does not regard the price as the most important matter. Fortunately, or unfortunately, I regarded the price as a very serious matter, and my object from start to finish was to get the price down to the lowest figure profitable to the manufacturers. But the British War Office does not so regard it. What they want, first of all, is the proper quality; they are not particular in war time as to the price so long as they get the proper quality. In all those cases, it will be found that every reasonable effort was made by General Bertram and Colonel Carnegie to ascertain the price not only in the United States, but in Canada. They visited every part of the Dominion, and every part of the United States where anybody offered shells, and, in the circumstances, these officers did their duty, I am satisfied, absolutely squarely, as will be shown later on.

4 p.m.

We are told that in the contract for the fuses there was a commission of $1,000,000. Well, that is only 10 per cent on the whole transaction, and these gentlemen had to assume the risk of German outrages, of a change in prices, as well as other risks. I tell this House to-day, what will be proven before the Royal Commission in a day or so, that not one firm on the continent of North America could be induced to touch the No. 80 fuse at the price which was offered, and there is not one firm that is making a dollar out of the No. 80 fuse. In any event, the British Government have expressed their entire satisfaction with the firms which obtained these contracts by giving them directly through Morgan, additional contracts amounting to 4,000,000 fuses in one case, and 1,000,000 fuses in another; that is No. 80 British fuse. And these are the two mushroom companies that have been talked of before this House.

My hon. friend from Richmond endeavoured to make a point out of the advance of $1,500,000. Let me point out to this House, what will be proven before the Royal Commission, that the usual advance made by the British Government is not 15 per cent, but 25 per cent; and I learn from the Shell Committee that the gentlemen from the United States, who accepted those contracts, fought, and almost threw up the contracts, because they were cut down to 15 per cent in the matter of an advance, instead of getting the usual advance of 25 per cent. As has been pointed out, that advance was secured by the strongest guaranty trust company on the continent of North America.

There was another point made about the division of profits. I know nothing about that, and I do not know that anybody else does except what can be learned from the contract which was purported to be read by the hon. member for Richmond (Mr. Kyte). He speaks of 40 cents a fuse on inspection, but like many of those rainbow affairs, by the time these gentlemen get through with their contracts there will not be many 40 cent pieces to divide amongst them. However, that will all come out; I know nothing about it whatever. I may point out further that the Canadian Car Company, of Amherst, had a contract for several million shells which was secured through the instrumentality of Colonel Allison and Colonel Mackie for the Russian Government, the contract being for 2,000,000 rounds of completed shrapnel shell at $15.75 each. The price in the Morgan contract with Great Britain for

the Russian Government for, not 2,000,000 shells, but 7,500,000 shells, was $15.65, but that was minus the powder tube, which I am assured, costs $2. Then there is a difference in price between the United States fuse and the Russian fuse of from 75 cents to $1. In other words, the Russian shell, made through the Morgan Company, cost $18.65, whereas the Russian shell made through the Canada Car Company is costing only $15.65.

The Canadian Car and Foundry Company advanced over $3,000,000 before a fuse was delivered, the American Locomotive Company over $1,500,000 and the American Car Company over $1,500,000. The Scoval Company, of Waterbury, Connecticut, were the only makers of fuses in North America prior to the war, and they positively refused the Shell Committee. To this day they will not make the Mark 80, and hesitate to undertake the making of any fuse that contains aluminum. Scovals were offered $4.50 by the Shell Committee for British fuses, but they would not touch it. The Canadian Car Company contract for 2,500,000 fuses should have been completed by March 31, 1916. On this date less than 100,000 fuses had been delivered. American manufacturers say that the International Fuse and Arms plant is one of the most extensive and best equipped plants in the world. When the American Ammunition and International plants succeed in getting their graduation and powder ring established, they can increase two or three thousand daily up to their maximum of from 15,000 to 20,000 per day. The graze fuse is a detonator. The General Electric Company had 40,000 rejected last week. The inspector assures me that sixteen car loads also were rejected. The International Steel and Ordnance Company were to make first deliveries of detonators in December, 1915, but it will be May or June before they make their first deliveries, and the Canadian Car Company, sub-contractor, is helping them out in the meantime. Now, I propose to give a brief summary to show how these deliveries are being made by the United States companies of time fuses, not detonator fuses. It is as follows:

Company.	Kind of Fuse.	Date of Contract.	Contract date first delivery.	Total Contract.	Deliveries to date.
Can. Car & Foundry Co.	Russian	March 15..	July	2,500,000	95,000
American Car Co.	American.	August 15..	Dec. 15.	1,000,000	None.
Bartlett—Haywood	"	" 15..	" 15.	1,000,000	"
Eddystone Amm. Co	"	" 15..	" 15.	1,000,000	"
Scoval Co. on Bethlehem Co.	"	" 15..	" 15.	2,000,000	"
Bethlehem Co.	"	" 15..	" 15.	1,000,000	"

American Locomotive Company were five months behind in making their first delivery.

Now, if I may be permitted, I shall pass on and take up the remarks of my hon. friend from Richmond once more. At page 2376 of Hansard, of March 28, he says:

> There is also an agreement in September, 1915, between J. Wesley Allison, of Canada, Eugene Lignanti and Benjamin F. Yoakum, of New York city.

I am assured that, when the hon. member stood up in his place in this House and professed to read from an agreement, he knew there was no such agreement in existence. He goes on to speak of the various companies concerning which I know nothing.

Then he speaks of the Southern rifle deal, relating to a contract for 500,000 rifles between the Vickers Company and Colonel J. Wesley Allison, which would amount to $8,500,000. I confess to some knowledge of that particular rifle deal. It concerns 600,000 rifles. The 500,000 of these rifles which are in question, had been shipped in 1913. I am not raising the question whether they were or were not shipped before that, but they were shipped by the German Government to Brazil. It had been hinted that the situation existing between the United States and Brazil at that time was not conducive to good feeling. It was known that there were 700,000 ex-German soldiers settled in Brazil, Paraguay, Uruguay and the Argentine Republic. These rifles were shipped out in 1913 and they are there to-day. Every effort was made on behalf of the British Government, I understand, to secure these rifles, but in vain. I was appealed to and asked semi-officially to report on the feasibility of getting these rifles. I have no hesitation in saying that I very soon pronounced it to be one of those

rainbow-chasing affairs which are to be found in every street, in every city in the Dominion, or on the North American continent, or in the world. First, they would be asked five cents a rifle, then they would be asked ten cents, then there would be another advance, and the agents of the German interests who were holding those rifles were simply taking all the money they could get out of the various people who were anxious to get them; but they had no intention, so far as I could ascertain, of delivering up those rifles. Without going into the whole story, the rifles were never obtained and they are there yet. So that, when my hon. friend says that this was agreed to he does not say that they got them.

Then he speaks of another deal concerning 140,000 rifles, known as the Allison Southern rifle deal. It will be found that this was even more visionary than the first one. I objected to these rifle deals; I reported directly against them; and, if it is true that Allison was in them—and I do not know whether he was or not—I reported directly against his best interests and accordingly took away the amount that it is stated Allison was to get. If Allison, as it is stated, was to get $1.25 out of each rifle, I robbed him of $1.25 each on 600,000 rifles in one case and on 140,000 rifles in another.

Then, the hon. gentleman says that there were negotiations pending with the Providence Chemical Company, of St. Louis, for the sale of 5,000,000 pounds of picric acid. It might as well be understood first as last that whenever any man, I care not whether he was black or white, French or British, or of any other race—or German Canadian—appealed to the Department of Militia and Defence, representing a firm that was straightforward and competent to do the work, I had no hesitation, nor had the Prime Minister—I think I am justified in using his name in that regard—in backing that concern to bring trade to Canada from any part of the Empire or the world. Therefore, not only did we do that, but when I found that exorbitant prices were being charged the British Government or the Canadian Government, I used my best endeavours to have these prices reduced to what was fair and reasonable. At the time I am speaking of, the prices being paid for picric acid, as I was informed, were exorbitant, and an effort was made in England by members of the British Government to have those prices reduced by bringing in other competitors. The result was, not that this gentleman sold anything, but that he forced the parties who had been negotiating with the British Government to reduce their prices down to lower and proper figures. That is what I had in my mind when I stated that through the instrumentality of this gentleman millions upon millions had been saved to the British Government; because it is well known in this House that I have been asserting from the beginning of this war, that if the war is going to be won, it is going to be won by dollars and cents and munitions. Flesh and blood cannot run up against steel and shrapnel shell and high explosives with any hope of winning the war. Therefore I have maintained from the start, I maintained it long years ago—and I in consequence incurred odium and the enmity of certain gentlemen in Canada—that this war was coming on, and that it was our duty to get ready when commodities were cheap. I realized that Germany had every warehouse within her borders filled from cellar to garret with rifles and munitions of war, and that is borne out by the facts, for they have not yet caught up to those supplies which they had made before the beginning of the war. I pointed out that they had these munitions made cheaply, and that the nations that fought them would have to produce their supplies in a hurry, with unskilled labour, and under very adverse conditions, and that the prices which would be paid by the British, the French, and the colonies, would of necessity be abnormal, being those of war-time. I declared then that every dollar that could be husbanded should be husbanded in order that the final result of victory for liberty might be assured. I had therefore no hesitation in endorsing our saddlery men, our shirt manufacturers, our boot manufacturers, our clothing manufacturers, our producers of every kind in Canada, who had commodities to sell and who could provide these commodities for the British Government at fair prices.

The hon. member for Richmond in the course of his speech was asked some questions:

Sir Robert Borden: Is the hon. gentleman reading from an agreement or from a brief?

Mr. Kyte: I am reading from a statement I have prepared.

Sir Robert Borden: Would he be good enough to send over any of the agreements he may have read as he finishes with them?

Mr. Kyte: I will send over everything that the right hon. gentleman is entitled to have from

me. The Munitions Board is not very ready to give us information; I do not think we should hesitate to stand upon our rights in regard to this matter.

Sir Robert Borden: I was not asking the hon. gentleman to depart from any rights. I was merely asking, as a matter of courtesy, if he would have any objection to sending over the agreement he has read.

Now, they say that an equivocation is worse than a falsehood.

Mr. Kyte: We have sent over one document already.

If the inference from that is not that he was reading from an agreement, I do not understand the use of the English language. Further on he speaks of a contract with the Electrolytic Metals Company, of which I never have heard that I am aware of; and then he goes on to say:

I have here a summary of the amount that was actually divided between Yoakum, Lignanti, and Allison.

Then he went on to read a list of commissions that, I understand, turned the head of the House of Commons, the figures were so magnificently large. All rainbow! I am assured by my counsel, who has been in New York awaiting my arrival, that he has examined these, and that not one dollar of this stuff has ever been divided or ever will be divided.

After referring to a contract with one of the ammunition companies, in regard to which I know nothing, the hon. gentleman speaks of the Edwards Valve Manufacturing Company, a matter that will come before the commission, and then he goes on:

Out of a contract negotiated between the Canadian Vickers and Allison for 500,000 rifles, known as the Allison Southern rifle deal for $8,500,000, Yoakum and Allison receive $625,000.

I am informed that it is unlikely that one dollar was ever received by them, or that one dollar will ever be received by them. He says:

Then, out of a contract negotiated between the Canadian Vickers and J. W. Allison to sell 140,000 rifles, and known as the Allison Southern Rifle deal, Allison and Yoakum receive $1.25 per rifle, or $175,000, less one-eighth paid to Lignanti.

Not one dollar has ever been received or ever will be received. And yet a gentleman, representing a free constituency in the Dominion of Canada, knowing that he had no data whereon to make these statements, stands up here and makes to this House and this country these abominable misstatements.

Mr. SPEAKER: Order. I am afraid the hon. gentleman is exceeding the rules of debate.

Sir SAM HUGHES: I accept the ruling. I retract the word "abominable." The hon. gentleman goes on to refer to a contract for 2,500 tons of picric acid, which, he figures, paid a commission of $262,500. Not one dollar was ever contracted for, not one dollar was ever received for this contract. This House and this country are told that these men pocketed these huge sums, and there is not a particle of truth in the statement.

Then, the Finance Minister (Sir Thomas White) speaks. They even wakened him up with the sound of these big figures—and he does not deal in small sums. They roused him from his slumbers, and he asked a question:

Sir Thomas White: Would my hon. friend state the contracts from which these commissions are to be derived?

And the answer of the hon. member for Richmond followed, and will be found at page 2378 of Hansard:

Mr. Kyte: I have read them.

Sir Thomas White: Are they contracts of the Shell Committee?

Mr. Kyte: Not all of them.

Sir Thomas White: My hon. friend will realize the difficulty of following such a complicated statement as this.

I should think so.

Sir Thomas White: Does my hon. friend suggest that the commissions to which he has been referring are to be derived under contracts with the Shell Committee?

Mr. Kyte: Not all of them; I think there are three with the Shell Committee.

The hon. gentleman (Mr. Kyte), as reported at page 2380, says:

The hon. member for Carleton found fault not only as to non-deliveries, but as to the prices being exorbitant and altogether unjustifiable.

Let me point out that there is only one firm on the continent of North America that has been able to compete with these two firms that began under such adverse conditions. I have read the great list of other firms that have not yet delivered one solitary fuse. And as to the prices, so far as the No. 80 British fuse is concerned, the hon. gentleman cannot find a firm in the United States or Canada to take a contract and guarantee deliveries, in lots of a million, at the price accepted by these concerns. The American fuse is 75 cents to $1 cheaper than the No. 80 British fuse—these are time fuses I am speaking of. In regard

to the graze fuse, the No. 100 detonating fuse, I have nothing to say; I never heard of it definitely until after the contract was made. When the original order came from the British Government, an agreement had been made, as already referred to in this House, for these fuses. They had no detailed, specific plans for the No. 100 fuse. They knew that the price in Great Britain was nearly $4—something like $3.60 or $3.72. I do not know anything of the details, but am merely giving an explanation to the House as I have it; and it was found that this detonator or No. 100 fuse could be made somewhat more cheaply, and it is being made somewhat more cheaply to-day.

When in England I read an extract from a German paper relating to present conditions. The Germans claim that since the outbreak of the war they have added a population of 55,000,000 to their domain. They claim that they have annexed Belgium almost entirely, the northern portion of France, nearly all of Russian Poland, nearly all of Galicia, and all of Servia; that Bulgaria is with them and also Montenegro, Roumania, the Adriatic provinces, and Albania, and that they have formed an alliance with Turkey. I had the honour years ago in this House of Commons of pointing out that that was the ambition of Germany, namely, to rule from the North sea and the Baltic to the Adriatic, the Aegean, and the Euxine. They have seized and they control to-day all the vast resources, agricultural, mineral, and manufacturing, of those countries that I have named. They control the rich industries and mines of Belgium and of France, at Lille, Armentières, and all those great industrial centres which our boys can see every day from the trenches. In Russian Poland they have possession of vast mines and manufacturing establishments. In Galicia they control very rich oil fields and the other industries there. In Servia they have abundance of copper from the mines there. Bulgaria, with her vast resources, is with them, and I see from recent statements in the press that Roumania has come to an agreement to furnish Germany with millions of tons of farm produce. Every day, they claim, the grandest railway train in the world runs from Berlin to Constantinople, and the vast resources of the Turkish Empire, in men, materials, and produce, are at their disposal. Every morning shows that the German submarines are not idle, and the commerce of the Allies is disappearing from the face of the waters. Such is the situation, according to the Germans. Yet, after an absence of four or five weeks, I find, on my return to Canada, that two hundred of the ablest men in this country, members of the House of Commons, instead of being out helping on the cause, are sitting here listening to piffle of that description.

Sir WILFRID LAURIER: Mr. Speaker, I have just one word to say in regard to the facts and materials which have been presented to the House by my hon. friend the Minister of Militia. When my hon. friend left for England the motion which I had made asking for an investigation into all the operations of the Shell Committee was still pending before the House. The Government had from the start taken the attitude that this investigation should not be granted and that they would not, for reasons with which the House is familiar, favour such an investigation; in fact, that they would oppose it. But, when my hon. friend from Richmond (Mr. Kyte), in the course of the debate, after my hon. friend had left for England, brought to the attention of the House contracts made by the Shell Committee with two American concerns, which the hon. member for Richmond characterized as mushroom companies, for the manufacture of some 5,000,000 fuses at a price of $4.50 each, and stated that the approval of this contract had attached to it the signature of my hon. friend the Minister of Militia, the Government thought that they would, at all events in so far as that operation was concerned, change their attitude and grant a commission of investigation. .The Prime Minister informed us two days afterwards that he had advised His Royal Highness the Governor General that a commission should be appointed, and that he had communicated with the Minister of Militia asking him to return at once. The situation in the eyes of the Government, therefore, was very grave, inasmuch as it necessitated the return of the Minister of Militia. When the hon. gentleman came here to-day, as the commission had been granted, as therefore his conduct in this matter was to be investigated in the terms laid down by the Order in Council, we expected that my hon. friend would explain his connection with it; that he would inform the House how it had happened, what were his intentions, what were his motives, and what he had in mind when he made those contracts. My hon. friend has

to-day discussed almost everything connected with the motion which was pending when he left, and which has been disposed of since, but he has said very little about his connection with those contracts for time fuses. He has not chosen to explain the circumstances under which the contracts were given. In fact, if I have understood him correctly, he has rather hinted that the contracts had been made without his participation. If that inference is correct, he has not explained to us how his signature and his approval is attached to them. The only reference which he made to the contracts was to explain why he had given them to two foreign firms, the information being that Canadian manufacturers had been urged again and again to enter upon the manufacture of fuses and shells and that they would not do so. He insisted that he was in a manner forced to go to the United States because the Canadian firms had been deaf to his repeated appeals in that regard. That is a matter for investigation. But, Sir, my hon. friend has chosen to go into other contracts—steel, boots, shoes, Colts revolvers, and so on.

I have to express my regret that he did not think it advisable to refer also to a contract which has been brought forward prominently in the press with regard to the disposal of small ammunition It has been alleged in the press that his department has sold fuses and cartridges, manufactured by the Government for the benefit of the country, to a private firm. This matter is in the air to-day, it is demanding attention, and I am surprised that my hon. friend did not refer to it, since he chose to go into other matters than this one.

Sir SAM HUGHES: I shall be more than delighted, at any time, at any place, in this House or out of the House, if my hon. friend wants any data on that subject, to give him everything he wants.

Sir WILFRID LAURIER: If that was the intention of my hon. friend, he has lost a fine opportunity of carrying it out. The information is desired not only by myself. The press has talked about it and has given the views of the community on the subject—not only the Liberal press, but the Conservative press as well.

Sir SAM HUGHES: I must say that I never heard of it.

Sir WILFRID LAURIER: It may be; I assume that my hon. friend has not heard it. At all events, if that is the case, he will have an opportunity of giving an explanation. At this moment I do not want to deal with the matter in any way; it is not fair for me, or for the hon. gentleman, or for the House, that the matter should be discussed to-day.

I regret that my hon. friend has gone into matters which will come before the commission. But one statement particularly struck me in the references made by my hon. friend, and with regard to it I think the House is entitled to some information. My hon. friend told us that it is not his intention to act as Minister of Militia pending this investigation, and that he is turning his department over to the Prime Minister. I should like to ask my right hon. friend the Prime Minister to inform us what is the exact condition of things—whether or not my hon. friend the Minister of Militia is still in the Government, and, if he is in the Government, why he is not administering his own department?

Right Hon. Sir ROBERT BORDEN (Prime Minister): The Minister of Militia is still a member of the Government. He has asked me to undertake the administration of his department while he is occupied with the investigation which has been granted at the instance of hon. gentlemen on the other side of the House. Has my right hon. friend concluded his remarks?

Sir WILFRID LAURIER: I have.

Sir ROBERT BORDEN: I desire to say that, with regard to the matters to which the right hon. gentleman has alluded, and which are now under investigation, the Minister of Militia and Defence has assured me that he not only desires, but intends that the investigation shall be full and complete to the end, and that he is prepared from now henceforth to place his time at the disposal of that commission in order that the most searching investigation may be made. I sent a telegram on Friday last to Sir William Ralph Meredith, which I communicated to the Hon. Mr. Justice Duff—I had heard that the commission had not been organized—desiring them to undertake the organization of the commission and to proceed with the inquiry at the earliest possible moment. I received a telegram in reply from Sir William Ralph Meredith, on Saturday I think it was, informing me that the commission would meet to-morrow and would then organize and continue the investigation

with every possible expedition until it is completed.

I do not know that there is anything further in the observations of my right hon. friend that demand comment at the moment, except this: The Minister of Militia and Defence had had no previous opportunity of making reply in respect of certain matters with which certain hon. gentlemen on the other side sought to connect him. Many allegations were introduced with regard to enormous profits supposed to have been made by Mr. Allison, which were not connected, so far as I am aware, with the Shell Committee, or with the Minister of Militia and Defence, or with the Government in any shape, form, or manner whatsoever. The allegations of the hon. member for Richmond were entirely new to me in respect of nearly all these matters, but they were introduced in such a way as to endeavour to connect the Minister of Militia and Defence with the supposed enormous profits. Therefore, notwithstanding the criticism of my right hon. friend, I think it was a perfectly proper thing for the Minister of Militia to make the observations which he did make in reference to the supposed contracts in order to dissipate the idea that he had any connection with them, or that any such contracts were, as a matter of fact, ever made, or any such profits ever realized. It seemed to be the object of hon. gentlemen on the other side of the House, at a most critical time in the history of this country and of the Empire, to swell up an enormous sum of supposed profits, and by veiled insinuation to connect the Minister of Militia and Defence with them. I am free to say that there never was a Royal Commission recommeded and granted, for inquiry into the conduct of a minister of the Crown, that was based on such slender and slight foundation of charge or assertion as the Order in Council and the commission issued in pursuance of it in this case. In recommending that course to His Royal Highness the Governor General, I went beyond the pledge that I had given to the House. I went beyond that pledge because I realized the impression which hon. gentlemen on the other side of the House were endeavouring to create by suggestion and insinuation, and because I was determined that these insinuations should be probed to the bottom. Let me assure my right hon. friend and gentlemen on the other side of the House that they will be probed to the bottom by this commission, and that no effort on the part of this Government will be wanting to that end. In making that assertion to this House I am expressing the determination and conviction of every one of my colleagues, and especially of the Minister of Militia and Defence himself. To-morrow this matter will proceed before the tribunal which has been selected, and while that investigation is being carried out the Minister of Militia and Defence will give his whole time and his whole energies to the investigation of the facts and the determination of the truth. I am prepared, at his request, although it is a very great burden in addition to responsibilities already sufficiently onerous, to undertake to give my attention to the affairs of his department in order that the efforts of this country in doing its part in the great conflict which the Empire is carrying on may not be stayed and that our great common cause may not suffer from lack of attention or effort in that department. That is the whole situation, which we expose frankly and without any hesitation to the members of this House and to the people of this country.

Mr. E. M. MACDONALD: (Pictou): At the request of my hon. friend the junior member for Halifax (Mr. A. K. Maclean), who was forced to leave the House and who was mentioned by the Minister of Militia in connection with a conversation the minister had with him previous to his going to England, I desire to state that the Minister of Militia had spoken to the hon. member for Halifax and asked him whether he thought the Opposition would agree to allow him to get his Estimates through quickly in order to enable him to leave for England. He replied to the hon. Minister of Militia that he could not tell him, and suggested that he should see the leader of the Opposition. He affirms that he made no undertaking with regard to any matter as a result of that conversation. I desire to say with regard to myself, for the hon. Minister of Militia mentioned my name, that the minister spoke to me with regard to his going to England.

He discussed with me certain matters which I need not mention here, and he asked me whether I would see the right. hon. leader of the Opposition in regard to the question whether any matters would come up affecting him. I told him I would not see the right hon. leader of the Opposition; that, if he desired to hold any com-

munication with those upon this side of the House in regard to any matter of that kind, he would have to see the leader of the Opposition himself, and I was aware that he did so.

I understood the Minister of Militia to say, in response to my leader, with reference to the question of small arms ammunition, that he was prepared to deal with that question. I would ask him to take occasion to deal with that question at an early day, as there has been some slight difficulty in getting information in regard to the matter in his absence.

Sir SAM HUGHES: I will remove every difficulty, and the hon. gentleman's most ardent wishes shall be gratified. So far as concerns the tittle-tattle of discussion between the hon. junior member for Halifax (Mr. Maclean) and myself, that is nothing. I had already seen the leader of the Opposition when I saw the junior member for Halifax; but that does not matter. The gentlemen were very courteous; I am not finding the slightest fault. The leader of the Opposition said that, so far as he was concerned, he knew of nothing coming up, and he was very nice. The hon. member for Pictou (Mr. Macdonald) was also very nice; I was delighted with him for once in my lifetime.

DEATH OF PRIVATE D. CURRY.

On the Orders of the Day:

Mr. KYTE: I desire to call the attention of the Acting Minister of Militia to some complaint with respect to the illness and death of Private Dugall Curry, at St. Joseph's hospital, Glace Bay, during the past week. It is alleged that Private Currie did not receive the medical treatment he was entitled to from the medical officer in charge of his regiment, and it is alleged that, owing to that neglect and the consequent delay in receiving medical treatment, his illness was increased and possibly his death resulted. I should be glad if the acting minister would make inquiry.

Mr. KEMP: I will draw the attention of the Prime Minister to the matter and he will likely give an answer to the hon. gentleman to-morrow.

RECRUITS FOR THE ROYAL NAVY.

On the motion of Sir Thomas White (Minister of Finance) for Committee of Supply:

Mr. E. M. MACDONALD (Pictou): I wish to direct the attention of the Minister of the Naval Service to an article in to-day's issue of the Montreal Daily Mail. This House will recall that, at an early period of the session, I ventured to press upon the attention of the House the fact that it is very desirable that in this great war Canada should play some part upon the sea as well as upon the land. I felt that, coming from a portion of the Dominion where our men were accustomed to following vocations on the sea, it would be more easy to obtain men who would volunteer for naval service than to obtain volunteers for service on the land. I see in the Daily Mail a despatch from Ottawa to the effect that the English Government have asked the Canadian Government to take steps to recruit men for service in the navy, and that a deputation, headed by Lord Alfred Guinness, is on its way out from England to interview the Government with regard to this question. It was urged by hon. gentlemen opposite, when I mentioned the matter, that such a thing as recruiting men in Canada to serve in the navy would be entirely unnecessary, that they were not required, that England did not need in her navy any one from this country. Will the Minister of the Naval Service tell us if this despatch is correct, and if it is the intention of this Government to proceed to call for recruits to serve in the British Navy?

Hon. J. D. HAZEN (Minister of the Naval Service): Mr. Speaker, some time ago, when I spoke to the motion for papers referred to by my hon friend, I referred to the fact that the British Government had asked us if we could obtain the enlistment of about 200 men capable of taking charge of motor boats. They asked us to have it made known that they would enlist a certain number for that purpose, and to receive applications; and they said they would send out a commission from the Admiralty to make selections from the number offering. We have done that. We have advised the Admiralty of the fact and we are informed that the Hon. Rupert Guinness and another gentleman are now on their way here to consult us in regard to that matter. I may say further that they have intimated that they are willing, if we can get volunteers for the purpose, to take into the British navy a certain number of men who would enlist at the British rate of pay and subject to British conditions. That infor-

mation was furnished to us only within the past few days, and we are now taking steps to make that fact known so that any of our seamen who are anxious to enlist in the British navy will be able to make application to us, and when the Hon. Rupert Guinness arrives here the matter will be submitted to him. I suppose that the newspaper item to which my hon. friend refers is something along that line, but I have not yet seen it.

Hon. WILLIAM PUGSLEY: As my hon. friend from Pictou will not have another opportunity to speak, I shall read the despatch which appears in the Montreal Daily Mail. It is a despatch from Ottawa as follows:

Canada to recruit for British Navy.

Ottawa, April 17.—The British Admiralty wants recruits in Canada for the navy and a recruiting party headed by Hon. Rupert Guinness is on its way across the Atlantic. The party will be in Ottawa in the course of a few days. Only seafaring men are required as recruits and the rates of pay, pensions and separation allowances will be those in force in the Royal Navy.

It is expected that the Canadian Patriotic Fund will take care that the emolument to the dependents of the Canadian sailors will be made up to the standard of the militia.

The limit of age is 40 and the period of engagement will be the duration of the war. Persons resident in the maritime provinces who wish to join should as a preliminary step send their names and addresses to the Superintendent H.M.C. dockyard, Halifax; those resident in British Columbia, Alberta and Saskatchewan to the Superintendent H.M.C. dockyard. Esquimalt, and those in the remaiing provinces to the Secretary Department of Naval Service, Ottawa.

Beyond the regular naval service the recruiting party wants recruits for the auxiliary patrol service of the Admiralty. This is a motor boat service which has turned out to be one of the most valuable of the navy.

That information would seem to be somewhat more definite and authentic than the remarks of the Minister of Marine and Fisheries would lead one to suppose. It would rather seem as though some one in Ottawa, probably connected with the department, had more information as to the mission upon which these gentlemen are coming from England than my hon. friend the Minister of the Naval Service himself.

Mr. HAZEN: It is exactly the information which I have given the House.

Mr. PUGSLEY: No. While the Minister of the Naval Service puts the idea of recruiting sailors for the Admiralty as secondary to the question of getting men to man motor boats, this article puts the question of recruiting for the navy ahead as being the supreme matter in regard to which this commission is coming from England and the question of manning motor boats is one of an entirely secondary character.

While upon my feet, I wish to express my regret at the half-hearted way in which the Minister of Naval Service speaks of the idea of recruiting Canadians for service in the British navy. He says that any persons desirous of entering the Admiralty service will be requested to send in their names, and will be given an opportunity of serving. I think that from the beginning of the war this Government has been remiss in its duty in not encouraging our young men to offer their services to the British Admiralty. Of course, we on this side of the House have always been in favour of starting a Canadian navy, which would be of assistance both to Canada and to the Empire. Failing that, I think, as many other hon. gentlemen on this side of the House think, that this Government ought to have taken hold of the question in a whole-hearted and enthusiastic manner. We have thousands, scores of thousands, of young men in Canada, living on the shores of the Great Lakes, who are accustomed to navigation; thousands of young men upon the coasts of both the Atlantic and Pacific oceans; thousands of young men engaged in the fisheries, who would be delighted to have an opportunity of entering the service of the Admiralty. But, from the very beginning of the war until now, they have received no encouragement, and to-day the remarks of my hon. friend the Minister of Marine and Fisheries are made in a half-hearted way. He says that if the British Government want our young men, and they want to go, they will be allowed to go; that permission will be given to them to serve the Empire in this splendid service. I do not think that that is the right spirit in which this question should be approached. This Government should have entered into an arrangement with the British Government to enable our young men to receive in the naval service pay commensurate with that which our young men serving in the army are receiving, and should have encouraged them to enter the Admiralty service. It should always be borne in mind that our young men engaged in the naval service of the Empire would be engaged in the service of Canada, for Canada is almost in the centre of the Empire, and what benefits the Empire

benefits Canada. Every effort has been put forth, with enthusiasm and with zeal, to encourage our young men to serve in the army; but no similar effort has been made to encourage them to serve in the navy, and that is a branch of the service in which, as I have said, many thousands of our young men would feel it an honour to serve.

I am glad that hon. gentlemen opposite are coming to reason. Perhaps the minister will allow me to say, without offence, that I trust they will wake up to the necessities of the situation. We know how hampered this Government has been. I know what has hampered it, and every member of this House, and the people of this country, know what has hampered it in regard to doing anything to assist in the naval service of the Empire. They know that this Government pledged itself before the elections of 1911 to abstain, as far as possible, from having anything to do with the naval service of the Empire. I trust that the gentlemen who are coming from England will be able to do something to wake the Government from its lethargy, so far as this important branch of the service is concerned, and that something really beneficial will result from the efforts of the committee who are proposing to visit Canada.

CANADA'S TRADE AND COMMERCE.

On the motion for Committee of Supply:

Sir GEORGE FOSTER (Minister of Trade and Commerce): I am going to ask the House this afternoon, before taking up my Estimates, to listen to a short statement which I think may be of some interest in connection with the trade and commerce of the country. I am not making any apology for asking the House to listen to me for a few moments on this matter, as I think it is one of very great importance, and one to which, probably, neither side of the House has devoted that amount of time, energy, and attention which 224 representatives of Canada, comprising business men, men of capacity, men of influence, men of ripe and extended views, men of great experience in commercial and business matters, might have found it profitable to devote.

I do not believe that any of us in this House, or that any one in the country quite appreciates the tremendous transition which is to take place in this country some time soon when war ceases and peace commences, a transition rendered necessary because of the diversion that has taken place along certain lines since the war began. At the risk of repeating something of the sentiments, if not the words which I have already expressed in this House, I am going to call the attention of the House to a few prominent features of the situation.

What has happened in this country since August, 1914? The happenings have been gradual and, therefore, they have not impressed themselves upon our minds with the same force as if, instead of being gradual, they had come suddenly. But they are none the less important and none the less grave because they have been gradual.

5 p.m. Up to the present time, 300,000 adults have been drawn from the fields of industry, from the factory, the business house, the farm, the mine, and the fisheries. These have been abstracted from productive work in these lines, and if this war continues for a year, or a year and a half more, 500,000 adults will have been been abstracted from productive work in this country. Now, if the Minister of the Interior had come to this House two years ago and stated that he could promise that within a year there would be an immigration into this country of men like ourselves, representing an addition of 250,000 adults to the working forces of Canada, he would have made a statement such as had never been made in Canada, or in any other country in the world. And if he had followed that up with the statement that in the succeeding year there would be an immigration of men like ourselves, knowing our institutions, understanding our laws, familiar with our social, intellectual, and moral habits, adding in the course of two years 500,000 working adults to the productive power of this country, that would have been a statement surpassing in interest and gravity the one to which I have just alluded. But does it make any difference whether the statement shall be made in that form or shall be in the inverse form, that in two years during which this war shall have been carried on 500,000 adults shall have been abstracted from the productive forces of this country? That is the first point to consider and it is one which I would like the country to consider very carefully.

More than that, during those same two years something else has been taking place. There has been a diversion from productive, beneficent labour into lines of labour and work which are not beneficent and productive, but which are malefficient and hurtful. Tens upon tens of thousands of

men have been diverted from normal and beneficent, productive work in this country and have been set to the work of making munitions of war for the purposes of the destruction of life and property. In this destruction of life and property, the only redeeming thing which can be said about it is that they are defending the life and liberties of the Empire and fighting for the cause of human freedom and liberty. But from the economic point of view, my argument stands that this diversion has taken place. Something more has taken place in that time. Not only has there been this diversion and abstraction of productive labour, but there has been no compensating inflowing current of immigration. To a young country like our own, a country situated as Canada is, that is one great source of growth and advancing strength and prosperity. Outside of the natural increase, and coming from suitable sources, the strength and prosperity of the country are enhanced by an inflowing population, adults and others, which mingles itself with, and becomes co-operative in the production and development of the country. For these two years of war a very small amount of that current has flowed in and Canada is bereft of the invigorating and progressive force and enterprise which are derived from such sources. But, in addition, capital and equipment and capital for the purposes of equipment have been diverted to and employed in the work of making munitions of war and therefore is not employed in normal productive industries. This is a factor which has also to be reckoned with. In addition, financial conditions will have been so changed that when peace comes we shall be met with a different situation as regards enterprise and industry from that which existed before the war. Money will be harder to get, interest will be higher, the cost of Government and of administration will be enhanced and all these are factors in the obtaining of capital and in the working out of enterprises for which capital is necessary.

Now, you say that this labour, or a great deal with it, will return. Let us consider some factors in regard to this. Of these 500,000 adults who will have gone from our country some, unfortunately, will never return. That will be human energy entirely lost to this country. Another considerable portion of those who return will be totally, or partially, disabled and will therefore be, in one way, a burden which we will all love to bear, but yet an economic burden upon the country; or they will be reduced in point of worth and efficiency in the productive work of the country. The men who come back after two years of the life in the trenches, with all the strain, the nervous and physical shock, the endurances and privation of war, will be different from the men they were before they went to the war. Will these men quickly settle down to normal operations? Will they be as effective as they were before? Any way there will be a period, more or less lengthened, during which there will be a process of adaptation and of change from the old—though it is only two years old—to the new and something like the normal conditions that preceded it.

Now, this is just a rough statement of the facts upon one side of the case. Are we thinking about this situation which faces us when the war stops? The moment the war stops the doors of every munition factory will be closed and the help that was gathered, and which worked therein, will have to find some other employment. When the munition factories stop, the thousand and one subsidiary operations which spread themselves through the length and breadth of the country, connected by more or less subtle threads with the dominant work of forming munitions of war, will also come to a standstill, and these two working together will bring about a period during which reversion to normal, adaptation to circumstances as they then exist, will eat up time, will confuse and disturb energy and will have its effect upon the economic condition and development of the country. These are the things that face us. Whilst we are glad to see the munition works doing their part in supplying the Empire with that which is necessary, whilst we are glad to have the money which comes as a sequence to the employment, yet all this is not beneficent and productive work and when it stops—yes, before it stops—well before it stops—the people of this country should be putting on their thinking caps, sizing up the situation and getting ready for the inevitable and important change that is to come. The first duty of this House and of the people of the country is simply to face that situation, to get right down before it, face it, think it out and be prepared with plans and organization as to what shall be done when the time arrives. That is the first duty of us all. In the next place,

will you allow me, Mr. Speaker, to call your attention to another phase of the question, and that is: what are the practical things that can be done and to what extent are we doing these practical things?

And now I make an acknowledgment to the House: that is, that I feel the duty and necessity of saying a few words about my own department, the Department of Trade and Commerce. I have not projected that department nor myself before this House nor before the country; I have been very modest with reference to the work that was going on. I have come to the conclusion that I have been a little too modest and that maybe my department has not taken that place in the minds of hon. gentlemen to which it is rightly entitled. I do not speak in this way from any personal vanity, or any personal regret; but I would like the people of this country and the members of this House to know something of what we really have been doing; and I speak in order that my department may not only have their sympathy but also their active help and co-operation. So, I know, Mr. Speaker, you will pardon the allusion that I am about to make to my own department.

One of the things that I think we ought to do, and may well do, is to take stock of the situation in Canada as it will probably be when peace comes. What is it in the Dominion of Canada that we shall consume, that we shall find necessary for our daily wants? To what extent can that be produced in Canada, and to what extent must we depend upon outside countries for these supplies? First—and I am not going to labour the point, for I wish to finish my remarks by six o'clock—I think that the thing we ought to do is to sit down and take stock of the resources and of the wants of the country. And with this idea—that, knowing what we require, and knowing how much is produced by ourselves at the present time, and for how much of it we have to depend upon foreign countries, we may, in a business way, set ourselves as Canadians to the solution of the problem of our wants. And I think the most accurate statistics that it is possible to have on that subject should be within the departments in Ottawa, and more especially within my own department, and should be there for the use of the House and of the business men of the country—information, comprehensive, accurate and fresh, as the foundation for the active work of dealing with this problem.

The next thing I think it is necessary for us to do, and which my department is trying to do, and I think is pretty effectively doing, is to find out in what fields outside of Canada goods that are made in Canada, and the products raised in Canada, may find sale and consumption. There are business enterprises and aggregations of capital which may better busy themselves with the home market of Canada, and with that only. There are other aggregations of enterprise and capital which may better busy themselves entirely in providing for the foreign markets. And there are other aggregations of capital and enterprise that may most economically combine both, and, making a base of the home market, extend their trade to the supply of foreign countries and thus diminish the incidence of overhead and general expenses upon their total trade. So, my department, while I have had charge of it—and as it commenced before, and I hope will continue—is particularly occupied with that problem.

Through what media? In the first place, we have the medium of the Trade Commissioners whom we now have in every important district of the United Kingdom, in the overseas dominions, and in such foreign countries as it has seemed best, up to the present time, to enter. These trade commissioners are, I believe I can say without exaggeration, doing their business on the whole excellently well, and some of them deserve all the praise that can possibly be given them for the energy, the capacity, and the success with which they are carrying on their work. These trade commissioners are diligently engaged, from the first of January to the thirty-first of December in every year, gathering information in the districts to which they are accredited and the areas to which their work applies. They are gathering that information judiciously, and not simply sending in anything which would make a paragraph or a report. They send in weekly and monthly reports, and these reports are carefully edited and published in our bulletin, and in that form sent out weekly to now some 6,000 or 8,000 of selected business men in the different parts of Canada. It has been a source of great gratification to me to receive the kind words and hearty endorsation of business men in every part of Canada, testifying to the interest with which these bulletins are regarded as welcome, helpful and profitable visitors to their offices and their homes. But the trade commissioners are assisted, and the scope of the whole system is widened by the privilege which we have,

the right we have at the present time as Canadians, to call upon the commercial intelligence branches of the British consular service in every part of the world. These officials are not only instructed from the Foreign Office, but from the communications I have had, they are willingly and cheerfully throwing themselves into the work, and providing us with such information as they think will be of use, such information as is asked of them by Canadian merchants and by my own department. So, special reports asked for by my department are obtained from all these countries upon special subjects, from the intelligence department of the British consular service. That gives us a much wider scope than if we had simply our own trade commissioners. Then, there are special and travelling commissioners. As the House will probably remember, I appointed a special commissioner to the West India Islands, who spent nearly a year and a half in those islands, went through them thoroughly, possessed himself of the information which was there to be obtained and which was particularly adapted for the purposes and the needs of Canada, and has lately published a report. I do not know whether all members of this House of Commons have seen it or not, but if any member would like to see it I would be glad to put it in his possession. It is a book upon the West Indies, and it embodies the result of his travels, his observations, and his advice with reference to trade.

Mr. PUGSLEY: What is the name of the commissioner?

Sir GEORGE FOSTER: Mr. Watson Griffin. Within the last few months I have also had prepared a resume of the distinctive energies of Canada in production, both natural and industrial, a sort of vade mecum for our outside commissioners, people in foreign countries, British consuls and others into whose hands we put it, destined to answer this question: Is there anything that you want to know about Canada? If there is, here is a book in which you will find something in reference to it. If you want more information, you will know where to apply for it, and get it in detail.

Mr. LEMIEUX: Can we get that book?

Sir GEORGE FOSTER: That book has just been put through the press, and members of Parliament will have a copy of it placed in their hands. It is not for general distribution in Canada; it is for the purpose of helping and aiding our correspondents and business men in foreign countries who want to know for instance, where asbestos is found, and obtaining similar information in reference to any of the natural or the industrial products of Canada.

During the last year one of our best trade commissioners has spent five or six months in Russia, going through the country from west to east, from Petrograd to Vladivostock, and he has made his observations and gleaned his information from every part of that country. He has embodied that information in reports which have been published in the Bulletin, and those reports have been collected in a small volume. To-day Mr. Just is in Petrograd as our chief trade commissioner in Russia, and within a few weeks another trade commissioner from Canada will take up his headquarters at Omsk, in the farther east; and those two gentlemen, with efficient sub-workers at several points, will cover the Russian area in the endeavour to get information with reference to Russian trade and send it to us for distribution.

I have adopted a system of training subcommissioners. Young men who have gone through the universities, or through the colleges or the schools, who are well educated, and have shown excellence in certain lines of economic and business pursuits, have been taken into the department and have been trained in the departmental work so as to get the home view, as it were, of these matters—trained with reference to tariffs and customs regulations. They have then been given travelling commissions through different parts of Canada, under instructions to make for themselves a thorough examination into different lines of industries and businesses and report to the minister thereon. They have visited the exhibitions, the factories and the producing centres in order to get that information. After having passed through a drill of a year and a half or two years in that way, they are going to foreign or outside fields. One of them, a graduate of McGill, will be the commissioner at Omsk; another will take up a position in another district; and a third, a university graduate from Toronto and a clever young man, is now studying the Italian language in connection with his drill in Canada, and I design him to undertake in Italy the work of getting that same information and of acting as our trade commissioner there.

This year, in response to an appeal from British Columbia, whose lumber interests were somewhat disorganized and confused, I asked the British Columbia people to pick out for me the man who they thought would be best suited for the work of travelling over the world in the interest primarily of Canadian lumber, with reference particularly to the western coast. They gave me their man, a university graduate, a very clever young man who had had training in forestry work in British Columbia. He is now making a tour of the world, commencing with the United Kingdom, and visiting France, Belgium—such part of it as is left—Russia, South Africa, India, China, Australia, New Zealand, and the South American continent. He is on the latter part of his travels, and his reports, full of information and of suggestions, have been published in the Weekly Bulletin; and, when they have been finished, they will be collated in a pamphlet or volume by themselves. Not only has he been looking into the matter of lumber conditions and possibilities, but he has also had an eye to general trade conditions, and his reports have embraced that side of the question as well as the lumber side. In Great Britain I appointed a general trade commissioner, with a special knowledge of fruit questions, who works in collaboration with the agricultural department, and who is engaged in gathering information and sending us reports in reference thereto.

At the present time I am contemplating the sending of a special trade commission to the United Kingdom, to France and to Italy. These will be different from our trade commissioners. I am trying to select four or five business men of Canada—men of capacity, of practical experience, to a certain extent of expert knowledge in the different lines of industry to which they are or have been attached—who will form an honorary commission. Their expenses will be paid, a secretary will be provided for them, experts in different large lines of industry will accompany them; and their duty will be to go to those three countries and look specially for new openings which are possible owing to the changed conditions brought about by the war, openings which would have been impossible two years ago, but which now, temporarily in certain cases, and permanently, I believe, in many cases, will be open to the industries and products of the Dominion of Canada. These men will make a thorough inquiry, they will have the best opportunity for doing so, and they will prepare an exhaustive report on those fresh points of view which have come into existence within the last few months, owing to the problems and the conditions imposed by the war. That, I think, will be very important for this country, and the result will be very beneficial to the future expansion of our trade.

Then I have been for the last two years looking thoroughly into another branch of work in connection with the Department of Trade and Commerce, which, I think, is no less important, and which in the future will be of very great interest and benefit to us. I think the time has come in Canada when we should establish a bureau of commercial information, which shall stand in Canada as the clearing house for commercial and business information with reference to foreign countries and to our own country as well. I have looked into these commercial museums and bureaus of information in different countries. Perhaps the one I have in mind will be formed on a plan different somewhat from those that exist in Japan and in other countries, particularly in the United States, where the conditions are much on a parity with ours. I think I can better express my aim by reading the ideal placed before us in the establishment of a bureau of industrial information, and which when complete will:

1. Answer all enquiries for information respecting commerce and industry, home and foreign—a clearing house for commercial intelligence.

2. Exhibit samples of home manufactures in actual and photographic form, and statistics thereof.

3. Exhibit samples of goods in vogue for consumption in foreign countries of such kinds as might be made in Canada, and statistics related thereto.

4. Exhibit samples of imported goods of such kinds as might be made in Canada, with statistical information relating thereto.

5. Exhibit samples of natural resources, serving as material for manufactures, in Canada and in the Empire, with statistics relating thereto.

6. Exhibit the processes of manufactures and industries in Canada.

7. Exhibit, in diagram, the resources, production, and trade of Canada; our lines of transport, internal and external.

8. Co-ordinate the scientific and engineering forces and factors of Canada along the line of research and technical re-

quirements intimately connected with production and distribution.

One of the revelations of the war has been that there lie within the British Empire raw materials the command of which, when the war broke out, would have had a profound effect upon the progress and prosecution of the war. The Empire woke up to find that in many most important particulars its own raw materials were within the hand and clutch of the enemy, and were being and had been exploited by them, forming an important base of supply and a means for offensive action in the way of the manufacture of munitions, and thus tending to aid the enemy and injure the Empire. One thing that will come out of this war, I think, is that the various parts of the Empire will be drawn so closely together in economic interest and their minds will be so devoted to the development of the great estate within the bounds of the Empire itself that the best energy and enterprise and capital of the Empire will be mobilized for the exploitation of its own boundless resources of raw material, and these will be kept primarily for the use of the Empire, whatever may be left over for other countries afterwards. So a part of the work of this bureau of industrial information will be the collection and description and representation of the raw resources of Canada and of every other part of the Empire.

Such a bureau as I mention would exhibit also the processes of manufacture and industry in Canada itself. To-day the stranger who visits our shores must travel from British Columbia to Sydney before he can get a visualized idea of what we make and how we make those things which we do produce. It is possible, with no very great expense, to have in this central museum, distinctly visualized to the visitor, whether he be from a foreign country, or from our own country, the processes of manufacture and industry in this country. Pictorial representation is in these times taking on the efficacy of a fine art. It is a wonderful co-operator and helper in getting together in small space what otherwise could not be seen without extended travel, much time, and great expense. This bureau will not be simply for people outside the country. Our own people in Canada have, in some cases, almost as little idea of what we do produce in this country as people from outside, and it would be a wonderful eye-opener and stimulant to our people if they could pass in review occasionally something of the kind that I have tried to describe.

Then, there will be exhibited also in that establishment, in diagram, the resources and productions and trade development of Canada, and our lines of transport, both internal and external. An attempt will be made to co-ordinate the scientific and engineering factors of Canada along the lines of research and technical requirements intimately connected with production and with distribution. I think this is of prime importance to us in Canada. There is to-day in our universities, in our colleges, in scientific societies, and in individual laboratories, excellent resources and ability for chemical research, for all that kind of research which transfers from the laboratory to the factory what is absolutely necessary for the factory at this time, and what will be more necessary for the factory when the period of unexampled competition comes within three or four or five years from now. Science, knowledge, and information are as essential to a well-ordered and successful business as they are to the profession of the doctor or the engineer or any scientific man. Germany's great point of vantage was that her technical and scientific instruction had advanced to such a pitch and had disseminated itself so widely that it worked itself into the very grain of Germany's production and made them the powerful competitors that they were. Britain, Canada, Australia and other countries must not merely take a leaf out of Germany's book; they must sit down before that question and solve it by bringing the aid of scientific research, of engineering capacity, of technical power and expertness into the region of the farm and the factory and the business establishment, and incorporating and bringing together those essentials which ought never afterwards to be disjoined. Such a commercial bureau of information as I have attempted roughly and briefly to describe can, without any very great expense, be brought into existence in Canada, and prove of great help and of great instructive and stimulating power to the business and industrial life of Canada in the future.

Then, I think something else should be done, and should be done soon. It may be that I have been criticised for not thinking that it should have been done sooner, for I have had many statements and suggestions made to me on that score. Men have written to me and men have said to me: What is your department doing all

this time? Should you not get people together, and should you not have them thinking, making plans, mobilizing for the work of the future? Now, I looked upon that in a somewhat different light from some other people. My view was that there was a time at which such an attempt would have been premature. But things have developed by the very force of necessity. The work of Canada had first to be devoted to the furnishing of munitions and war supplies. That took all the energy, and, for the time being, all the thought, all the enterprise, and all the capital, that could be got. The demand was less in normal lines, and consequently less enterprise could successfully be devoted to ordinary production. The time has now pretty well arrived when we can see far enough through the mists to enable us to make up our minds fairly well as to what future conditions will be, and hope has so far come into the dominant position as to lead us to think that we are getting somewhere near the end of this war. So I believe that now, outside of all these aids and all this work which we have been carrying on, outside of what the manufacturers' associations have been doing, outside of what boards of trade have been doing, and what individual business men in this country have been doing, the time has come when we ought to sit down together in council, and when the business men of this country ought to exchange ideas, formulate plans, and take measures to mobilize and systematize the industry, the business capital, and the business enterprise, which are to attack the problems of the future. So what I propose to do is this, within a reasonable time to call together a convention of the business men of Canada, from the Pacific to the Atlantic—men in every kind of business, the captains of industry, the experts in industry, the scientific men in industry, the engineering men in industry, the transport men, the banking and financial men representatives of all kinds of enterprises and industries; to have them sit down together in conference here in the city of Ottawa for three or four days in a heart-to-heart talk about these matters, and to come not unprepared to give definite views with reference to different phases of the great industrial and economic questions which are looming up before us, and which must be solved by us. At that convention I propose to have the report of this commission of which I spoke a while ago; and I propose to have here also the permanent Canadian trade commissioners in other countries, who are gathering information for this very purpose, and who will be on hand to give that information to the people who are assembled.

That, in brief, outlines a line of action which, I think, may well be undertaken, and which my department is undertaking. For all of that I must ask this House for money. For all of that it is requisite that we shall have added ability. But added ability and money for purposes of that kind constitute a demand with which no reasonable man in this country will find fault. There is nothing outside of the problem of its defence, with which it is more necessary that this country should busy itself than the problem of production and distribution of products. That is the problem of trade and commerce, which must be founded on production, with which it is twin sister, and most intimately connected. I have been taunted sometimes with being too economical in my department. I believe in economy; I hate extravagance.

Mr. PUGSLEY: Hear, hear.

Sir GEORGE FOSTER: I hate the idea of taking money from the people's pockets, putting it into the people's treasury, and then spending it for that which is nought and worse than nought.

Mr. PUGSLEY: Hear, hear.

Sir GEORGE FOSTER: But I do believe that there is nothing which this House or this country, if reasonably asked, would deny to the departments and to the ministers who wish to engage in the kind of work where money goes to its proper objective, and is actually needed.

Mr. PUGSLEY: Hear, hear.

Sir GEORGE FOSTER: And where that proper objective is likely to result in benefit to the public interests.

Mr. PUGSLEY: Hear, hear.

Sir GEORGE FOSTER: How my hon. friend rolls his sturdy form in front of me as I make that declaration, as if to say: "That is hard for you chaps on that side of the House." How was it for my hon. friend? The tu quoque argument is not worth a snap of your finger; but large men like my hon. friend from St. John (Mr. Pugsley) sometimes use it and sometimes laugh it, and sometimes give it representation as my hon. friend has just done, as much as to say: "We on this side have never let money go aside the proper objective."

Mr. PUGSLEY: Hear, hear.

Mr. LEMIEUX: Hear, hear.

Sir GEORGE FOSTER: They know very well that they have. They know very—

Mr. PUGSLEY: Just make a comparison.

Sir GEORGE FOSTER: All the same, just as I state it I believe it. I have stated it before and I will state it again; and I do not think I come with an empty plea, or a plea that will be refused—

Mr. GRAHAM: An empty treasury, though.

Sir GEORGE FOSTER: —by the House or by the country, when I ask that the coffers of the Trade and Commerce Department be a little more generously filled up than they have been. I leave you my administration in the past from 1911 up to the present time. The books are there, my reports are there, my work is there.

Mr. LEMIEUX: Hear, hear.

Sir GEORGE FOSTER: And all of you are quite welcome to go and examine every bit of it. I have not done all I have tried to do; I have not done all I wanted to do; but I have tried to manage my department in a fair, reasonable, and economical way.

Mr. PUGSLEY: Hear, hear.

Sir GEORGE FOSTER: But there comes a time when economy must be given a little different translation. That time has come now in my department, and I am going to ask my colleagues, and afterwards this House, to be a little more generous to my department for the next few years which are to come.

Mr. PUGSLEY: Will they be in the supplementaries?

Sir GEORGE FOSTER: Yes, they will be in the supplementaries; that is where these things come. I have wearied the House probably longer than I should have done—

Some hon. MEMBERS: No, no; go on.

Sir GEORGE FOSTER:—But I felt it my duty to lay these things before the House and to enlist the sympathy of men on both sides of the House in this matter; and if I can have the extreme pleasure of having hon. gentlemen on both sides of this House, after this brief sketch of what I propose to do, give me the benefit of their criticisms, I shall feel greatly indebted to them. If something that I have in view now can be better done, let me have it. On this side the House, or on the other side, let us at least take up this question, a mighty and tremendous one, and one which I have very inadequately brought to the attention of the House. Let us take it up, put aside our party prejudices and our party shibboleths for a moment, and come right down to a good hearty committee-of-the-whole conference upon what is best to be done, and how it can be done, under present conditions, in reference to the development and the distribution of our country's products.

[Sir George Foster.]

Hon. RODOLPHE LEMIEUX: I agree with almost every word my hon. friend has uttered this afternoon, but I would like him to supplement his remarks by declaring that the business commission which he is going to appoint and send abroad will be of a non-partisan character.

Some hon. MEMBERS: Oh, oh.

Mr. PUGSLEY: That is dissented from.

Sir GEORGE FOSTER: I know that if I gave my hon. friend warning ahead it would be a shock to him, but he will see what the commission is to be when I announce the names.

Mr. PUGSLEY: I have listened with a great deal of pleasure to my hon. friend the Minister of Trade and Commerce. He has certainly given us a very valuable and informative address. When he stated that he intended to enlist the sympathy of his colleagues as well as the sympathy of the other members of this House I thought I would like to have a well-secured dictaphone under the council table when my hon. friend was pressing his colleagues to support him, and especially when he was impressing upon them the necessity of economy in the other departments of the Government, in order that he might have a little more money to carry out the important projects which he has in view. There is the difficulty with the hon. Minister of Trade and Commecre; he never brings to bear upon his colleagues his great ability and what ought to be his surpassing influence. If he does we fail to see any results. My hon. friend has come to this House on more than one occasion and talked eloquently and forcibly of the necessity of economy. You, Sir, have heard him say in stentorian tones that he abhorred extravagance and believed in econ-

omy. How often has he told his colleagues that he abhorred extravagance and believed in economy? The Estimates brought down to this Parliament in these war times amount to the enormous sum of $189,000,000. Think of it, Sir, an estimated expenditure of $189,000,000 in a country with a population of about 8,000,000. Can we believe for a single moment that the Minister of Trade and Commerce can sit dumb while his colleagues are putting forward demands upon the treasury of this country for millions and millions of dollars? If my hon. friend had sought to use his influence—and he could use it if he tried—he ought to have been able to produce a different result, and it would not have been necessary for him to take a slap back at his colleagues twice during this session when he talked about economy and insisted upon the necessity of a more rigid supervision over the expenditure of public moneys. In that veiled manner my hon. friend has made two strong attacks upon his colleagues in the Government.

At six o'clock the House took recess.

The House resumed at eight o'clock.

Mr. PUGSLEY: I regret to notice that the questions which have been so ably presented by my hon. friend the Minister of Trade and Commerce do not seem to attract that attention on the part of hon. gentlemen opposite that one would expect. Therefore I would hardly hope, in view of the slim attendance of hon. gentlemen opposite, that the things which he has presented will command their very deep or earnest consideration. I had hoped that some one or more hon. gentlemen opposite would have taken advantage of the occasion to rise in their places and express their views in regard to the proposed economies which have been so ably presented to the House by the Minister of Trade and Commerce. I regret to have to observe that in my opinion he would find very little support from that side of the House. These young gentlemen —these young spendthrifts—who are sitting on the treasury benches beside my respected friend the Minister of Trade and Commerce do not seem to have the same regard for the sacredness of the treasury, or the necessity of saving public moneys, as has the Minister of Trade and Commerce.

The matters which have been presented are very important; but in this connection I cannot help observing that we have had two extraordinary and rather contradictory speeches from the treasury benches this afternoon. My hon. friend the Minister of Militia and Defence (Sir Sam Hughes), in which I think I am quite right in describing as the extraordinary statement he made to the House, deplored the fact that Germany had been so successful in this war that she had added 55,000,000 of population to her dominions, that she had acquired a number of countries, such as Serbia, Poland and Galicia, and that now she had a splendidly equipped railway running from Berlin to Constantinople. The hon. gentleman appealed to the members of this House, in tones which seemed to show how deeply he was affected, and he deplored the fact that in this dreadful state of affairs two hundred members of this House were wasting time on such piffle as the question of the waste of some $80,000,000 in connection with the purchase of shells and the taking of large commissions in connection with the letting of the most improvident contracts which were given in the United States for fuses. He seemed to feel that the end of the war was by no means in sight, but that the question was so serious that the representatives of the people should not be discussing questions which ordinarily would engage their attention, but that they ought to be overlooking the faults of the Shell Committee, the Minister of Militia, and the members of the Government, sacrificing their own views as to whether it is right and proper, and giving their whole assistance to the Government in carrying on the war.

My hon. friend the Minister of Trade and Commerce, on the other hand, takes a roseate view of the situation. He has a vision that enables him to see the end of the war. The hon. gentleman is so pleased with the prospect that he even contemplates calling together the business men, manufacturers, and other classes of people of Canada in the very near future. He is going to have a great banquet in the city of Ottawa, I presume, in connection with the convention he proposes to hold. Well, it is a roseate view that my hon. friend seems to have, and I can picture the delightful time that they will have at that convention and banquet. It would be worth going 3,000 miles even to hear the eloquent speech which my hon. friend will deliver on that occasion.

Mr. REID: Hear, hear.

Mr. PUGSLEY: It certainly would.

An hon. MEMBER: Hear, hear.

Mr. PUGSLEY: While it is pleasant, in one aspect of the case, to find that the minister has such a roseate view of the future, there is one thing that is a little deplorable, and that is that the minister seems to have been touched with the microbe which has been afflicting the other ministers, and he feels now that we on this side of the House should join with hon. members on the other side of the House and encourage him to bring down Supplementary Estimates giving him all the money that he desires to carry out his roseate ideas. I am beginning to despair somewhat of even the Minister of Trade and Commerce. Has it not seemed pitiable that the minister should be seeking in all quarters of the world to advance the trade of Canada, that he should be educating young men from the universities, that he should be educating one especially, to advance the interests of Canadian trade and commerce in Italy, sending others to the West Indies, sending these gentlemen to all parts of the world to seek to secure trade for Canada, while right down here to the south of us, Sir, is a great country with a hundred million people affording to the people of Canada every opportunity for trade, every opportunity for the advancement and promotion of commercial intercourse that any people would desire, a country whose trade, so far as Canada is concerned, even durng the period that this Government have been in power, and when they have sought by every means at their command to hamper and prevent trade with that people, has yet advanced by leaps and bounds. In the year ended March 31, 1915, the trade of Canada with the people of the great republic to the south of us surpassed by about $170,000,000 the trade of Canada with all the rest of the world put together. What a marvellous showing that affords of how trade can be developed if you seek trade with people with whom you will naturally have commercial intercourse. Let me give the House the figures for the year ended March 31, 1915:

Total imports of Canada..	$ 629,444,894
Total exports..	490,808,877
Total foreign trade..	$1,120,253,771

The total trade of Canada with the United States during that year was $644,026,253, and the total trade of Canada with the rest of the world was only $476,277,518; so that we had about 170,000,000 more trade with the United States than with all the other countries of the world combined, Great Britain included. Yet, notwithstanding these facts, the minister has not told us to-night that he has done anything to encourage trade between Canada and the republic to the south of us. He has not told us what action this Government has taken with respect to that trade. If he had told us, it would have been a story of trying to hamper trade instead of encouraging it. You know as I do, Mr. Speaker, that the great hope of this country depends upon the development of our fertile, wonderful Northwest. There in the three Prairie Provinces of Manitoba, Saskatchewan and Alberta you have a country which would make not one European empire but which is large enough and wealthy enough in resources to make three European empires. And yet, knowing, as these gentlemen do, knowing as in his heart the Minister of Trade and Commerce must know, that the best means of developing that country, the best means of getting immigrants into that country, the best means of enabling to grow up there a large and contented population, is to give to the producers of the West free access to the markets of the great American republic, this Government has persistently refused to place upon the statute-books a law which would open the markets of the great country to the south of us to the farmers and cattle-growers of our western lands, a step which would be the means of advancing to a far greater extent the commercial development of this country than all the commissions and all the emissaries that my hon. friend could send to all the countries of the world. And yet they claim that they are in favour of increasing our trade.

Mr. BLAIN: Does the hon. member think that the Canadian people made a mistake in 1911 when they voted against reciprocity with the United States?

Mr. PUGSLEY: In my judgment they did make a mistake. But the results have not been so disastrous to the people of Canada as they would have been had it not been for the fact that the Democratic party in the United States were victorious in the last election and to a large extent opened their markets to our people. As a result of this we are able to send our lumber into the United States free of duty, the duty on oats has been reduced from fifteen cents to six cents a bushel, the duty on cattle has been vastly reduced.

Mr. TURRIFF: It has been taken off; and the same with hogs.

Mr. PUGSLEY: The duty has been taken off, and so has the duty upon hogs, as my hon. friend reminds me. The result has been that our exports to that country have been enormously increased and we have not felt the disastrous effects which would otherwise have come to the people of Canada as the result of their refusal to accept the agreement which had been made with the United States. Not only does this Government refuse to place upon the Statute Book a law which would admit United States' wheat and wheat products free of duty, and would thereby open to the people of Canada a free market for our wheat, but in the new tariff which last year they placed upon all products indiscriminately they imposed a heavy tax upon American products, and during the present session they went further, and, in respect of a most important part of the food supply, of which only some 200,000 bushels was imported into Canada—I refer to apples—they imposed a tariff against imports from the United States which is nine hundred per cent greater than the duty the United States imposes on the same article going from Canada into the American republic. In every respect these gentlemen have sought to hamper the trade which is natural to the Canadian people, the trade which could be most easily developed. They have been seeking in all quarters of the world, sending their emissaries across the Atlantic and across the Pacific to cultivate a trade difficult to obtain, while hampering and hindering that which is at our very doors. They forget that the inexorable law of supply and demand must make an enormous demand in the United States for Canadian products, a trade which has grown in the face of difficulties which have existed in the past. They forget that we have close to the Canadian border great cities such as Portland, Boston, Baltimore, Washington, Philadelphia, New York, Cleveland, Chicago, Milwaukee, St. Louis, Minneapolis, and St. Paul—and so I might go all the way to the Pacific ocean—where there are millions of people consumers of products who would be glad to obtain the products of Canada both of the East and of the West.

Well, my hon. friend has told about what he proposes to do, and has given us a very interesting story. It shows great effort, on paper. It shows that many stenographers have been employed in the arduous work he has had to do with; it shows great thought, and, so far as can be said of a scheme on paper, I do not know but that it reflects great credit on the Minister of Trade and Commerce. And he has told us that he is in favour of encouraging industrial and technical education in this country. He has not said that in so many words, but he has told us how much good the chemist may do to advance production in Canada. Has he never heard of the report of the Commission on Technical and Industrial Education, a report made by most experienced men and strongly in favour of the very thing the hon. gentleman advocated this afternoon?—a report which was submitted to the Government shortly after this Administration came into power, but which they have not acted upon up to this moment, but have pigeonholed it, declining to bring it into operation. How long have they been in power? Judging by results, one would say they had been in power only a few days; but judging by the Auditor General's Report one can see that they have been in office for years, for they have left a record in the public expenditure which only a number of years would enable any Government, however, extravagant to make. They have been in office for some four years, and not one single step they have taken to encourage in Canada industrial and technical education. The Minister of Trade and Commerce comes before Parliament this afternoon and suggests that it would be well to encourage the study of chemistry in Canada—as if he had never heard of the report of the Commission on Industrial and Technical Education. Would not you think that, instead of talking, instead of writing reports, it would be desirable to do something of a practical nature and to bring into operation some of these things which my hon. friend professed to be so anxious to see inaugurated in Canada?

But there is something else that he has forgotten. He did not give us one word about the important Economic and Industrial Commission of which his colleague, Senator Lougheed, is chairman, and which has been working for a number of months in an endeavour to solve the very problems which the hon. Minister of Trade and Commerce, in his very eloquent speech of this afternoon, presented. That commission is housed in a mansion on Vittoria street, formerly the home of Mr. Manuel, one of Ottawa's millionaires. In this magnificent house they have been housed for a considerable period, and there, I am told, they have numberless clerks, and have already spent many thousands of dollars working on the very problem which the Minister of Trade and Commerce presented to us this

afternoon as entirely new. I think he had better consult with his colleague the President of the Council, the Hon. Mr. Lougheed, and not entirely ignore the work that this commission is doing. Heaven knows it is costing the country enough, but it is only one of the eighty odd commissions which this Government has appointed since it came into power. Surely my hon. friend, with his long experience and his great ability, ought to be able to work out such problems himself; or, if he cannot do that, he ought to be able to work them out with the assistance of his colleagues. But he is going to have a commission also to work at the same thing, and then, when he gets it organized, he is going to have this conference and a right good time right here in the city of Ottawa, and he is not going to wait until the war is over, because he now sees the end of the war in sight. My hon. friend has asked us to meet with him here in friendly intercourse almost as a joint committee of this House to talk these things over and endeavour to arrive at a decision as to what will be best for Canada, but when the hon. member for Rouville (Mr. Lemieux) asked him if he would treat the matter from a non-party standpoint there arose a buzz of protest from behind the hon. gentleman which prevented him from giving an assent to the proposition of my hon. friend from Rouville. Whether the war is on or whether the war is not on, this Government is partisan first, last, and all the time, and we need not expect very much from it.

My hon. friend says that conditions are going to be very different after the war is over, and that we must get to work now and have these commissioners and have this conference, and, I suppose, have this banquet and talk this thing over. My own idea is that we should win the war first. I would far sooner see the time of this House taken up in trying to expose wrongdoing and trying to prevent graft and the waste of millions upon millions of the money of the people of Canada and of the British Empire than in discussing theoretical questions which will not become practical until the war is over. My hon. friend has great fear, however, that the industries of Canada will be affected to a large extent by reason of 250,000 of our young men being taken from Canada to fight the battles of the Empire. My hon. friend also deplores the fact that while industries have been created, yet they are not being used for a good purpose, and says that ordinary industries are to promote the peace and happiness of mankind, while the industries which have been started in connection with the manufacture of munitions of war are really for the injury and the detriment of mankind. Was my hon. friend the Minister of Trade and Commerce here when the Minister of Finance made his Budget speech, in which he spoke in glowing terms of the great increase which had taken place in the trade of Canada since the war began, of the wonderful development which had taken place, of the thousands of men who were being employed? The Minister of Finance fairly gloated over the present situation and said that to-day Canada was prosperous. One would almost think he would like the war to go on forever, because then Canada would have a flowing revenue and men would be employed and the taxes could be paid, because people would have the money coming in from munitions to enable them to pay the taxes. I rather agree with my hon. friend the Minister of Trade and Commerce. I think it is deplorable that this condition of affairs should exist, and we ought not to boast of what has been the result of it from a financial standpoint so far as this country is concerned, and we ought not to take pleasure or pride in it as the Minister of Finance and many other gentlemen on the opposite side did. Of course, it ought always to be remembered and pleaded in excuse and palliation for the Minister of Finance, that before the war broke out our industries from the Atlantic to the Pacific were paralysed, that men were out of employment; that the wheels of industry had stopped, that the factories had closed and the chimneys were smokeless, and that the war did start up new industries and did give employment to many people. I am not, however, one of those who despair of things righting themselves very quickly when the war is over, whether it should be over in the near future or at a somewhat later date. While it is true that many thousands of our young men will come back maimed and disfigured and incapable of taking their places in the industrial life of Canada; while it is true that many thousands more have already laid down their lives upon the battlefields of Europe and that many thousands more will, I fear, lay down their lives before this war is over; yet it should never be forgotten that the training which those thousands of young men have obtained and will obtain makes them better, physically

and morally, and when they come back they are likely to be better citizens than they were before they went away. There is no training which is better physically and morally for a young man than the training of a soldier, and I believe that when they do come back they will soon take their appropriate places in the industrial life of Canada, and that it will not take long to settle the problem which will face us in the future. I do not despair of our country rapidly going ahead again and soon reaching the wonderful stride which it attained in the years when the party led by my right hon. friend who is now leader of the Opposition was in power. When he came into office there was great depression; but, by the adoption of energetic and progressive policy, the wonderful resources of our western country were made known to the people of the United States and of Europe, and it was not long before immigrants from the Old Land and from the new began to flock to Canada, not by thousands, not by tens of thousands, but by hundreds of thousands. We have in our western country the same rich lands that we have ever had. We not only have the millions of acres which have been settled upon, but in that country there are from seventy-five to a hundred million acres of land still unsettled, still belonging to the Crown, among the most fertile and most splendid land that can be found in any part of the world. And all that has to be done is for a Government progressive enough to take steps for the settlement of these lands, to make their wonderful advantages known to the people of the outside world; and when peace comes, immigrants will again come into ou country by the hundreds of thousands, as they came in the years gone by. That will bring prosperity, that will bring peace, that will bring hope and inspiration, to the people of Canada. I, Sir, have no fears for what the future may bring forth, and I desire to repeat that, instead of indulging in those theoretical ideas which the Minister of Trade and Commerce seems to have in his bonnet, and for which he is asking the opportunity to spend money while the war is on, we should wait until the war is won, and then the people of Canada will soon adapt themselves to the situation, and you will see an era of prosperity again spreading over this country.

My hon. friend the Minister of Trade and Commerce is going to have a great commercial bureau, situated in Ottawa. While I am not quite sure that that would not be desirable at some distant time, I think that the matter of our voting unanimously, as the minister has suggested, a considerable sum of money at this late day in the session in order to carry out these ideas might very well be postponed until different conditions prevail throughout the country.

I had thought, Mr. Speaker, that my hon. friend would have had something more practical to present to us to-day than that which he has suggested. He knows that since this war began the necessity for a Canadian mercantile marine has increased week by week and month by month. He knows well—because he comes from a province where even the most ignorant are aware of this—that in the not distant past Canada was one of the great ship-building and ship-owning countries of the world. He knows that in the city of St. John, from which I come, it is not so many years since we could see at least 1,200 men working in the shipyards of Courtenay bay. He knows that shipbuilding was carried on up the St. John river, on the Kennebecasis river, on the north shore of the province, on the magnificent Miramichi river, where ships of the world, almost, could lie at anchor. He knows that the people there have the instinct for shipbuilding. He knows that if there is anything which the Empire requires to-day for its success in this war it is more vessels to carry the products of the overseas dominions to the markets of England and the Allies. He knows that, as a result of the destructive submarine warfare, the merchant marine of Great Britair has been declining to an alarming extent, and that upwards of 2,000,000 tons of mercantile shipping belonging to the Empire have been sunk. He knows that many people in this country outside of Parliament have been urging upon the Government the necessity of doing something for the promotion of shipbuilding. Yet, Sir, with this knowledge, my hon. friend comes to Parliament and talks about his emissaries, about his commissioners whom he is sending to all parts of the world to encourage trade and commerce, about the bureau which he is going to establish on behalf of Canadian industries, about the convention which he is going to have before long in Ottawa. He talks about all these things, but upon the great question in which the people of Canada and the people of the Empire are so vitally interested, my hon friend remains silent. When I ventured to bring this question to his attention a few days ago he told me that when he should come again with his Estimates he would ask our advice with

regard to ship-building. When my hon. friend intends to ask our advice, I do not know, but let me tell my hon. friend that unless this Government take hold of this important question at once and do something in a practical way for the encouragement of ship-building in Canada, they will be committing a crime against the people of this country and against the people of the Empire which no administration of the department, no matter how good that administration in other respects may be, can condone or expiate before the people. In the presence of the Minister of Marine and Fisheries, who would properly have this important subject in hand, I say that to-day Canadian ship-building is hampered as it should not be by the duties which this Government imposes upon engines, boilers and other machinery which enters into the building of ships. If he would remove the duties upon these articles and give reasonable assistance and encouragement to ship-building, it would not be many months before shipyards would be established in Canada, before many keels would be laid and many vessels turned out which would be an ornament to Canada and of material assistance to the Empire. I am not alone, Sir, in this demand for the encouragement of ship-building. Hon. gentlemen opposite act as if they were under the impression that no man in Canada thought that ship-building should be encouraged or undertaken in this Dominion except my unworthy self. They act as if the words which I speak are not worth listening to, and they pay no heed to what I say. Let me tell them that they will hear before long the voice of the people of Canada demanding that they should take action. There is no reason why they should not take action. I have it upon the most reliable authority that if they would give proper encouragement, steel shipbuilding would be undertaken in the province of Nova Scotia. I know that there are people interested in shipbuilding, who, if reasonable encouragement were given, and the duties on machinery taken off, would engage immediately in the building of wooden vessels furnished with auxiliary power, which would be of enormous assistance in transporting food products from Canada to the markets of the old world. Sir, this Government have done nothing, in spite of the fact that the Minister of Trade and Commerce has seen the freight rates upon our wheat, upon our cattle, upon our lumber and upon everything which Canada has to send to the markets of the old world going up month after month since the war began, until to-day the carriage of these products costs the producers and consumers together a thousand per cent more than it did before the war broke out. Is there not something in that state of affairs that will appeal to hon. gentlemen opposite and make them take hold of this practical question instead of devoting their attention to theoretical questions which are of no practical importance?

I apologize to you, Sir, and to the House for taking up so much time with reference to these matters, particularly at this late date in the session. As a member of this House I felt that the remarks of my hon. friend the Minister of Trade and Commerce were deserving of some attention. I was not able to agree with him that the course which he outlined was one that ought to be pursued for the advancement of trade in Canada, and for the industrial development of our country. I regret to have to differ from him at this time, he made such a kindly appeal to us to work with him. I would love to work with my hon. friend. If he would only come down to us with some broad progressive policy based upon true lines of Canadian development I should be glad to work with him, but so long as he continues not to be influenced by those grand and beneficent considerations which are had in regard by men who would like to see our foreign trade developed; so long as he simply looks to the keeping of a home market; so long as he does not look abroad, particularly to that country with which we would naturally trade and with which, if proper encouragement were given, our trade, amounting to hundreds of millions, as it does to-day, would still further advance by leaps and bounds; so long as he follows these lines I regret that I am not able to agree with my hon. friend or to act with him.

Mr. H. H. STEVENS (Vancouver): I would not delay the House at this late date in the session by continuing this discussion had it not been, first, for the fact that the Minister of Trade and Commerce has delivered in the House this afternoon one of the most masterly presentations of the trade problems facing Canada and the Empire that has been delivered in Canada since the outbreak of the war.

The Minister of Trade and Commerce, as on other occasions since the outbreak of the war, presented his proposals not only

in a non-partisan way, but in a manner which showed that he has given the problem the deepest consideration from a national and economic standpoint. In terms entirely free from partisanship he invited the co-operation of the House, and particularly of the leading members of the Opposition, whose experience has made their advice valuable, to co-operate with him and with the Government and the House generally, in an attempt to solve these enormous problems. My hon. friend from St. John (Mr. Pugsley) a few moments ago took to task hon. gentlemen on this side of the House because we did not rise in support of the Minister of Trade and Commerce. But, Sir, the hon. member himself was actually wiggling in his seat for three or four minutes before my hon. friend concluded his remarks, and was on his feet before the hon. minister had actually taken his seat. I hasten to take this opportunity of expressing not only my approval, but my gratitude to the minister for introducing the subject in the manner he has. In my estimation there is no greater problem facing the Dominion of Canada to-day than the problem of what we are going to do to reorganize the nation's industrial and commercial life after the conclusion of this war. My hon. friend from St. John says that when these young men come back from the front, with the training and discipline which results naturally from a military life, they will again fall back into their places in the industrial life of Canada. This is the first time I have heard, in recent times, from the lips of an hon. gentleman claiming the experience, and at the same time having to a large extent the respect, shall I say, of the people of Canada, for his ability at least, such a sentiment as that. The hon. gentleman knows, if he knows anything at all, that when there is a disruption of trade caused by a great war lasting for a period of years, men do not fall back into their places again. If he wants a few examples I shall give him some that occurred during the few months prior to the opening of the session. Between September and January, there returned to my city a large number of men wounded and incapacitated for further military service. Three particular cases which came to my notice impressed on my mind the gravity of this problem, which the hon. member laughs at and brushes to one side as a simple proposition. The first was a young bank clerk who returned from the front to Vancouver. He came to my office and asked what would be done for him. I asked him what he did before the war. He said he was a clerk in such and such a bank. I said: There should be very little difficulty in your going back to your old position. He said that he did not want to go back to the bank, that he was out of the bank now and never wanted to go banking or clerking again; he wanted an outside job. Would my hon. friend thrust that man back into his former position? My hon. friend knows that the mere fact of this man having served the Empire would arouse sympathy for him if any such attempt were made. Then a young man came to my office and I asked him the same question. He said he was a farmer. I said: That is splendid, because I know where there is a demand for young men on farms. He said: Not much, I have had all the farming I want, I want a city job.

Mr. PUGSLEY: He must have been after a Government job.

Mr. STEVENS: He was after a Government job; and I may tell my hon. friend that I recommended him and about 30 others for Government jobs. And further to gratify my hon. friend in his little gibe, I have adopted the policy in Vancouver that no one but a returned soldier gets a Government job, and, if my hon. friend does not agree with that policy, he may as well say so. So far as patronage is concerned, if that is what the hon. gentleman wants to introduce at this time, I would not give a snap of my fingers if all the patronage in my riding were undertaken tomorrow by a commission. Patronage has no attraction for me; it is the curse of public life. But that is the situation and the facts, that these men come back to Canada with their former ideas disrupted and changed; they have been taken out of the ruts they were in before and they are going to demand a different outlook in life. The return of 250,000 or 300,000 of these men will have a very serious effect upon the affairs of the country, and so I say that, in my estimation, the greatest problem facing Canada to-day is the problem of re-adjustment at the conclusion of the war. The hon. member for St. John says: Oh, let us wait, there is lots of time to deal with this, let us first win the war. Oh, he says: I would sooner sit in this House and expose graft than indulge in the consideration of such profound economic

problems as those proposed by the Minister of Trade and Commerce. Certainly he would rather do that, scandal mongering, the digging out of alleged and supposed graft, has more attraction to my hon. friend than the consideration of these great problems. It makes my blood boil—I may be young, while my hon. friend may be ancient in his seat—but it makes my blood boil to sit here and waste the time of this House week after week, and month after month, what at? A lot of pettifogging, alleged scandal. Ninety per cent of the charges made by hon. gentlemen opposite are absolutely foundationless. I have not the slightest objection to any hon. gentleman in this House, be he a member of the Opposition or a supporter of the Government, rising in his seat during these strenuous times and calling the attention of the House to well-established irregularities. But the wasting of the time of the House seems to me to be a serious evil, and many hon. gentlemen opposite deplore it as much as I do, because they have told me so with their own lips. You do not hear them talking on these petty graft scandals. I say they deplore the attitude assumed by some hon. gentlemen opposite in this matter, at a time when the House should be paying attention to these great problems. My hon. friend called the supporters of the Government a group of young spendthrifts. I had under my hand the other night, a list of the figures of the hon. gentleman's department prior to the accession to office of the present Government, and I think that any comparison of the records of the two Governments in this respect must result favourably to the present Government. Take, for instance, the Public Works Department, of whose spendthrift policy we have heard so much from my hon. friend. He has moved that certain Estimates be cut in two, willy nilly, whether they are needed or not. As a matter of fact, the Minister of Public Works saved on his appropriation last year upwards of $12,000,000. Instead of making false criticisms, it would come very much better from the lips of the hon. member for St. John and others if they would hand out a little commendation once in a while when the Government does perform a good act. Take, for instance, the fitting up of this building. Within three days of the fire we were in here, comfortable; and we have been comfortable ever since. What has it cost? The whole fitting up of this building was done out of the savings of last year's appropriation on the maintenance of Government buildings. The sum of $39,000 was all that was spent in the fitting up of this building, and the work was done in a remarkably short time.

Then the Minister of Trade and Commerce gave a detailed statement showing the activities of his department which, through the whole regime of my right hon. friend who leads the Opposition, was a dead letter, an absolutely useless department, a sinecure. My hon. friend the Minister of Trade and Commerce has given us a splendid resume of what his department has accomplished, and is accomplishing. My hon. friend from St. John (Mr. Pugsley) said a moment ago: Here we have right south of the line the greatest market in the world, and, instead of bothering ourselves with the foreign markets in Europe, why do we not develop that market. Does my hon. friend consider that the market of Russia to which the hon. Minister of Trade and Commerce is giving particular attention now, is a market to be ignored? There is a country with 170,000,000 people, comparatively undeveloped; a country that will demand in the next few years more railroad steel, more construction steel than any other country in the world; a country which requires certain natural products that we have in abundance, such as silver, copper and lead, and from which we can import many valuable articles which we can not and do not produce at home. It is a country which may be reached by both our seaboards with equal facility, through Archangel and the Baltic ports on the Atlantic side, and through Vladivostock on the Pacific side; a country which is open to our trade, waiting for development, and having a population of 170,000,000. My hon. friend the Minister of Trade and Commerce sends one of the ablest trade commissioners the department ever had to investigate the trade of that country; he makes excellent reports, and all he receives by way of support from hon. gentlemen opposite, if the hon. member for St. John speaks for them, is sneers and ridicule. I am surprised at the attitude of hon. gentlemen opposite. I did expect that the remarks of the Minister of Trade and Commerce would have some support from them.

My hon. friend from St. John actually blames the Government for the high freight rates on the Atlantic and Pacific oceans. This Government—he did not say so in so many words, but the insinuation was there, and that is about all we get nowadays, in-

sinuations, innuendoes, and allegations of one kind or another—this Government sat idly by while the freight rates on the various ocean routes were going up by leaps and bounds. Everybody knows perfectly well that it is because of the withdrawal of tonnage from the usual trade routes for the transport services of the war, and because of the fiendish submarine policy of Germany, that freight rates have gone up. There were one or two sane remarks made by the hon. member from St. John, and these were in connection with shipbuilding. I do not agree with him that a great deal could be done to stimulate shipbuilding in Canada. But in connection with steel shipbuilding, we must bear in mind that so far as steel plates and ship-angles are concerned at the present time, it is a very difficult thing to get them at anything like reasonable prices owing to the large demand in other parts, and owing also to the amount of steel that is being used for munitions, and for other purposes connected with the war. But a great deal could be done immediately to stimulate the building of wooden vessels with cheap auxiliary power. On the Pacific coast, we have peculiar facilities for this class of industry. We have the timber; we have the trade waiting for ships to carry it, and if we had the tonnage we could to-day be shipping millions of feet of lumber to the markets of the world.

9 p.m.

Mr. PUGSLEY: Hear, hear.

Mr. STEVENS: I certainly agree with my hon. friend that this is an opportune moment for dealing with the question of shipbuilding.

Mr. PUGSLEY: The hon. gentleman could not help agreeing with me.

Mr. STEVENS: I have been in favour of it for a great many months; in fact, for a number of years. I give my hon. friend credit for the few remarks which he made on that subject at the end of his long and rather rambling speech, as giving something of value.

Mr. PUGSLEY: It was only rambling in comparison with my hon. friend's excellence.

Mr. STEVENS: Then my hon. friend charged the Government with having placed on the statute-book duties which made it difficult to carry on the shipbuilding industry. Nearly all the material used in shipbuilding comes in free with the exception of boilers and engines. As my hon. friend knows perfectly well, boilers and engines can be made with the greatest success in Canada.

Mr. PUGSLEY: Does my hon. friend agree with me, as all shipbuilders agree, that the very best engine that is used for auxiliary power is what is called the Deisel engine, and does he not know that that is not made in Canada?

Mr. STEVENS: Some of them are made in Canada; they are making internal combustion engines in Vancouver.

Mr. PUGSLEY: Not the Deisel engine?

Mr. STEVENS: Yes, the Deisel engine, or the ordinary internal combustion engine. I have not the slightest doubt that they can be made in Canada. However, that is a point which we could discuss in an intelligent and friendly way, and not in the hypercritical way adopted by my hon. friend. It is a question of encouraging shipbuilding and possibly of removing the duty on that class of engine, and I would like to see the Government look into that question and see whether it would be reasonable or possible to do something along that line.

Just a word or two upon the proposals of my hon. friend the Minister of Trade and Commerce. He proposes to hold a convention. My hon. friend from St. John says that the minister is going to hold a huge banquet, and that certain people are going to enjoy a feast, and so on, which was an entirely unfair and improper way of referring to the suggestion of the Minister of Trade and Commerce. The minister proposes to hold a convention of the leading industrial men of Canada, experts in the various industries, and nothing could be more desirable than to get together those men who are experts in their various lines. Then, some of the problems with which we are faced to-day could be intelligently discussed, and a policy looking to the best interests of the country as a whole could be mapped out. The Minister of Trade and Commerce has already sent throughout the various countries of the world commissioners to gather information and data so that our merchants, our captains of industry, our manufacturers, could have an intelligent idea of the needs of other countries. I know from my own slight experience that one of the difficulties that has faced the manufacturer in Canada has been a lack of clear, definite and accurate

information as to the requirements, wants, wishes and whims of the people of foreign countries. We cannot go on doing as some of the old English manufacturers did, and thrust our type of manufactures upon other countries. We have to study the markets, and give the people of other countries the line of goods, or the type of article, that they want, not the type that we want to give them. Therein lies the success of many of the manufacturers south of the line. They try to manufacture an article which is attractive to the people to whom they hope to sell, and that is where we have been lacking in Canada up to the present time. The Minister of Trade and Commerce proposes to rectify that chronic error in our industrial life, and to give the manufacturers of Canada an intelligent idea of what is required by the various foreign countries. In this regard I think he has done and is doing excellent work, and, instead of receiving the criticism and sneers which have fallen from the lips of my hon. friend from St. John in such unctuous terms, he should have received commendation and assistance. I noticed that when my hon. friend the Minister of Trade and Commerce was speaking, the hon. member for Rouville (Mr. Lemieux) seemed to respond, and I am under the impression that before this discussion ends, he will rise up to a little higher plane than his colleague from St. John, and will offer, on behalf of the Opposition, some real assistance and advice. It is not often that a minister of the Crown, Tory or Grit, comes to this house and says: I do not know it all, and I would be very glad to have your suggestions and constructive assistance. That is what the Minister of Trade and Commerce says, and, in view of his long experience, such a statement coming from him should have some effect upon hon. gentlemen opposite. I hope, Sir, that the results of the proposals will be that for once this session we can drop these picayune peccadillo politics and partisan views and indulge for a little while in a real discussion on commercial lines.

Hon. RODOLPHE LEMIEUX (Rouville): Mr. Speaker, I hope to not detain the House more than I should with the few remarks that I intend to offer. I am glad that in the speech delivered by my hon. friend from Vancouver (Mr. Stevens) he should have found at least one good feature in the observations of my hon. friend from St. John (Mr. Pugsley) a moment ago. As long as my hon. friend from St. John criticised the Government mildly he was doing something very wrong, in the judgment of the hon. member for Vancouver; but when my hon. friend from St. John tackled the question of shipbuilding, then my hon. friend from Vancouver found that for his own province, for his own port, perhaps there was something more than rambling remarks in the speech of the hon. member for St. John—that there was in it something constructive which had been carefully evaded by the Minister of Trade and Commerce (Sir George Foster).

Be that as it may, I wish to say at once that I have listened with great pleasure to the speech delivered this afternoon by the Minister of Trade and Commerce. I do not know if anything practical will result from the remarks he has made; I hope something practical will emerge from the discussion. The hon. gentleman will allow me to say what Lord Lytton said once of a great parliamentarian who, like the Minister of Trade and Commerce, was able to sway a public audience. After having listened to this great orator, Lord Lytton, in his poem, "Saint Stephens," described his eloquence as follows:

Then did I know what spells of infinite choice
To rouse or lull has the sweet human voice.

My hon. friend has the sweet human voice, and he has the peculiar faculty of winning the plaudits of those who are his fortunate listeners. But, Sir, this is not poetry, this is a trade. I expect, in spite of all, that something constructive will emerge from the statement he has made to-day. As he well said, this war will not last. I hope it will soon be ended and that it will end victoriously for the Allies. When this war is ended, new conditions will arise in this country and the world. The most important thing for us who are not in the fray, not in the trenches, is to do our duty, not only to our country, but to the Allies, by organizing the conditions which economically should help the Allies and ourselves.

Nothing can better help our country or our Allies at this juncture than the practical development of our trade. It is true that all our industrial plants are actually employed, it is true that there are war orders distributed from the Atlantic to the Pacific, but as was stated the other day in the House, this has brought about a fictitious prosperity in the country and my hon. friend the Minister of Trade and Commerce was right this afternoon when he warned us that this prosperity, being fictitious,

could not last. If we do not at the present moment, or in a few months, collect our thoughts, the aftermath may be disastrous. Our industries will be dislocated and in the period of reconstruction which is going to follow the declaration of peace, the country will not be prepared to face the realities which will confront it. The duty, therefore, of the Minister of Trade and Commerce, and of the department over which he presides, is at the present juncture to organize for the future, economically speaking, and to assist in capturing for Canada her legitimate share of the world's markets. My hon. friend threw out the suggestion that we should have a round table conference and give to the questions arising out of that conference our best thoughts. For my part, I can assure the hon. gentleman that he will get my best support in studying the organization of this country in view of the reconstruction period that is to follow the war.

I was, however, rather surprised that in the course of his eloquent and able speech my hon. friend evaded an issue which, it seems to me, should have been foremost in his thoughts. I refer to the preferential trade policy betwen the Motherland and the dominions. I do not propose to say that I am committing myself to that policy, because I understand that there will be in a short time a conference between the Allies and the dominions, but I would have expected from the hon. gentleman, who has always been a convinced—shall I say a consistent—adherent of the idea and the principle of closer co-operation between the Mother Country and the dominions, that he would have given us the benefit of his views upon that subject. I remember that some years ago my hon. friend delivered in England, perhaps in Scotland, a series of addresses in favour of that policy. I remember that during the last campaign, and since the last campaign on many occasions, the hon. gentleman has been the protagonist of the policy of preferential trade between the Mother Country and the dominions. Let me here express my sincere regret as a Canadian that in the Paris Conference Canada is not to be officially represented by a Canadian. I am in good faith in making this statement. I am not ready to say that I would favour a preferential trade policy as between the dominions and the Mother Country, but I am ready to listen to any reasonable argument upon the question, and to accept any solution which is favourable to the interests of my country and the Motherland. But, Mr. Speaker, I should have expected that the Canadian Government would have been represented in that conference, and that my hon. friend himself, would have been our delegate. No abler, no more eloquent Canadian could have represented the interests of Canada than the present Minister of Trade and Commerce. Look at what has been done by Australia. The Prime Minister of Australia left his country, crossed the Pacific ocean, went to the United States—

Sir GEORGE FOSTER: He did not touch the United States.

Mr. LEMIEUX: He went to Honolulu.

Sir GEORGE FOSTER: And from there to Vancouver.

Mr. LEMIEUX: He went to Honolulu, thus touching United States territory, and there he gave an interview which I read. I followed him very closely from the day he left Australia. He came to Ottawa, and had several conferences with the members of the Cabinet. From here he went to England. Many of the English papers, and perhaps many in the British Government, did not relish the idea of Mr. Hughes asserting his rights as an Australian to represent directly his country at the Paris Conference. But I admire the pluck of the man. He stood to his guns, and to-day he is the accredited representative of his country at the Paris Conference. True he goes to Paris as an Imperial Privy Councillor, but will not he represent the interests of his country at the Paris Conference more than the interests of Great Britain? Yes. And our country, so proud—our country, the largest and the oldest of the overseas dominions—our country which took such a prominent share in the establishment of the Colonial Conferences, will not be represented. My hon. friend (Sir George Foster), or the Prime Minister (Sir Robert Borden), or at least our representative in London, Sir George Perley, should have directly represented Canada at that conference. But be that as it may, I was surprised that in his remarks bearing on the development of the trade of this country my hon. friend should have avoided speaking of the question which is engaging the attention of his electors in Toronto, of a large number of the people of the province of Ontario, and a large section of the Canadian community generally, namely, the

question of a preferential policy between the Mother Country and the overseas dominions. I am in receipt of a resolution adopted by a meeting of representative farmers, manufacturers and business men, held in Galt, Ontario, on the 11th of April, 1916. I shall not ask the House to afford me time to read the entire resolution but let me read the conclusion, the prayer which is contained in the resolution. My hon. friend will see that it raises an issue which cannot be ignored:

Therefore be it resolved that this meeting of farmers, manufacturers and business men, representing the counties of Waterloo, Brant and Perth, place itself on record as of the opinion that, next to such an organization of her resources in men, money and material, as will best conduce to a speedy and successful termination of the war, Canada's paramount duty is so to organize public opinion at home, and to assist in organizing public opinion abroad, that there may be consummated with as little delay as possible:

1. A series of preferential tariffs between all parts of the British Empire that will give the greatest practical encouragement to inter-imperial trading.

2. A series of reciprocal tariffs, between all nations that are allied against the Central Powers in the present struggle, by means of which the trade of the countries concerned will be conserved as far as practicable for their mutual enjoyment.

3. An agreement among all the Allies to give favourable tariff treatment to neutral countries.

etc., etc. Sir, I am surprised that my hon. friend should have ignored that question. This was the occasion for him to refer to it. I hope that before this session passes we shall hear from him on this subject. I have always thought that this proposal of a reciprocal tariff between the Mother Country and the dominions was not feasible, and that, perhaps, it would in some way injure the Mother Country and injure the dominions with other nations of the world. But I am open to conviction. This war has changed radically views and opinions that were entertained before it began—

Sir GEORGE FOSTER: And conditions.

Mr. LEMIEUX: —and conditions, certainly. I say that I am open to conviction on the subject. But I should have expected that a master, like my hon. friend, would have given to the House the benefit of his views on that question. But probably we shall hear from him later on.

The question of transportation has reached, as the hon. gentleman will admit, an acute stage in our country, due, of course, to the loss of so many ships since the beginning of the war, and also to the requisitioning of so many of our ships by the Admiralty. I commend to my hon. friend an article which was published a few days ago in the By-Water Magazine, written by the well-known authority, Mr. Wolvin, on the enormous amount of money which has been paid by Canada to the United States for lake and ocean transportation. He refers especially to the shipment of our grain, and says:

To move this grain from United States ports to foreign purchasers undoubtedly required 500 steamers, each of which in stevedoring charges, supplies purchased, and repairs made, would average a cash outlay in port of $1,200, or a total of about $600,000.

So we find that we have calmly turned over in cash to our neighbours to the south:

Lake vessels	$4,125,828 00
Railroads	6,143,061 81
Port charges	519,147 06
Ocean vessel port disbursements	600,000 00
	$11,388,036 87

Present indications are that the wheat, oats and barley now in our western provinces, the remainder of our wonderful 1915 crop, will contribute just about the same number of dollars to the United States, making a grand total from the 1915 crop of about $23,000,000.

And here is the crux of the whole question:

This "real money" can be retained in Canada only by the greatest protection to her lake vessels, increased railroad and ocean port facilities, and an assured supply of ocean vessels trading from Canada. Our statesmen at Ottawa are keenly alive to this loss which we are suffering every day, and I feel sure will develop our Eastern Canadian facilities so as to properly care for this great tonnage of grain from the West and will make every effort to the end that Canada may have a proper supply of her own ocean tonnage.

In that connection I was reading the other day from a New York paper the synopsis of a book, "The National Issues of 1916," which has just been published by Mr. Charles N. Fowler, who has been chairman of the Banking and Currency Committee of the House of Representatives at Washington. Mr. Fowler believes that of all economic and commercial issues in the United States the question of ocean transportation is about the biggest. He clearly and convincingly gives all the facts of the maritime history of the United States to show that whenever they had a discriminating duty against imports brought there in foreign bottoms, they always had a superb merchant marine, and whenever they lowered or removed those duties, their ships disappeared from the seven seas. He advocates the imposition of an additional duty on all goods which

are not brought or carried to the United States in American bottoms. He shows beyond question that an extra ten per cent of import duties imposed upon all imports coming to the United States in foreign bottoms would give the United States in their oversea trade what their shipping laws and regulations have given them in their coastwise trade—the finest shipping on the waters of the globe. Mr. Fowler says that in the next presidential campaign in the United States this will be one of the great issues.

My hon. friend from Vancouver expressed regret at the reference made by my hon. friend from St. John to our trade with the United States. We may have our respective views on the question of trade between Canada and the United States; we may differ as to the limited reciprocity as was advocated during the last campaign; but can we ignore this fact that Canada after Great Britain is the best customer of the United States and that after Great Britain the United States is the best customer of Canada?

I was reading a moment ago about the United States shipping. In that same paper there is an article on the trade to be developed between the United States and Latin America. As you are aware Sir, since the Pan-American Congress there has been in the United States quite a party favouring closer trade relations with the southern republics. This paper dismisses any hope of a very large trade between the northern republic and the southern republics. The reason is very obvious. The editor says:

> Grant that we want to sell everything we can sell in the Latin Americas; grant that we ought to make earnest efforts to broaden our markets there; yet how can any man in possession of the cold, hard facts, bearing on this question, blind his eyes to the impossibility of ever making a Latin-American consumer a buyer of our commodities or a user of any service we can offer, as we can make a man who is more like ourselves, whether in Canada, Great Britain, Germany, South Africa or Australia? Think of Canada, with a population only approximately what the population of New York city is! Canada buys more from us—buys it in years of peace and buys it in years of war—than all the Latin-American countries, with all their vast populations put together. Given the opportunity on anything like even terms, she always will. Again, the reason is fundamental. The people there are like us. They live as we live. They want what we want. They use what we use. Why, Canada, with one-tenth the population of the German Empire, has been even a greater customer of the United States than all the German peoples in Europe! What, then, is the use or the sense of misunderstanding where our best and richest markets are and must be?

This is common sense, and surely no one will be offended when, perchance, somebody on this side of the House urges upon the Government the necessity of bettering our trade relations with the great republic to the south of us.

The move taken to-day by my hon. friend the Minister of Trade and Commerce is quite logical. Men have done of late what he recommended the other evening that some of us should do; they have put on their thinking caps. For instance, the report published by the Ontario Commission on Unemployment shows conclusively that the intellectual men of Canada are on the qui vive. I find in that valuable report the reason why there should be at the present time an organization to develop our trade with foreign countries. I find there the evidence given by the general manager of the Bank of Montreal, one of the ablest financiers of Canada and indeed of the Empire, Sir Frederick Williams-Taylor, who estimates the total outstanding indebtedness of Canada to Great Britain alone to be £545,546,849.

Mr. EDWARDS: At what date?

Mr. LEMIEUX: 1914. To this must be added our indebtedness to the United States at that time and the total foreign borrowings of 1915 and 1916.

Sir George Paish, another authority on finance, stated that the Canadian people owed Great Britain and the United States not less, in round figures, than £600,000,000. It is evident, therefore, according to these two authorities, that the total foreign indebtedness of Canada, public and private, is not less at the present time than $3,000,000,000. I now quote the view expressed by the commissioners:

> It is necessary, therefore, after taking into consideration the new capital coming to Canada in the form of imports, to find annually a market for $140,000,000 of exports in excess of imports to provide for interest charges alone. There are some considerations which modify but do not substantially alter this statement. If our exports do not provide for this, it simply means that to the amount of the deficiency we are living on borrowed capital or accumulating arrears of interest.

The commissioners point to some remedies for this condition. For instance, they recommend better banking facilities, consideration of the questions relating to foreign tariffs and transportation, technical training, greater knowledge of modern

languages and of what may be properly termed the economics of foreign trade.

Just a word about modern languages. My hon. friend the member for Vancouver spoke of the possibilities of better trade conditions with Russia, that great country which is now an ally of Great Britain and France. May I tell my hon. friend—and this is a plea for bi-lingualism—that if an Anglo-Canadian not conversant with the Russian languages or dialects—because there are many Russias in the Greater Russia—is to represent us in order to establish better trade relations over there, he will meet with difficulties, because the only foreign language spoken freely in all the large centres of Russia is the French language. I say this en passant, so that my friends in the House may understand how important it is for us, Canadians to be conversant with more than one language.

In connection with the very able report of the Ontario commission, which came to the conclusion that in order to provide employment for the unemployed and to meet the conditions arising after this war we should develop our trade with foreign countries, I may say that in Great Britain also, this question has of late been very prominent. Not later than in the month of January last a motion was made in the British House of Commons by Mr. Hewins, and the very question which was presented to the House this afternoon by the Minister of Trade and Commerce, was also discussed in the British House. Mr. Hewins moved:

> That with a view to increasing the power of the Allies in the prosecution of the war, His Majesty's Government should enter into immediate consultation with the Governments of the Dominions in order with their aid to bring the whole economic strength of the Empire into co-operation with our Allies in a policy directed against the enemy.

I would commend this debate to those of my fellow-members who take a special interest in the trade question, because in these speeches, especially in those delivered by Mr. Hewins, Mr. Chaplin, Mr. Fell and Runciman, you will find most interesting data and facts.

For the moment I wish, Mr. Speaker, to say a few words about the trade possibilities between Canada and France, one of the great Allies. My reasons for confining my remarks to Franco-Canadian trade are obvious. First of all, as I have stated, France is the great ally of Britain. A hurricane of glory has swept over France. She has fought the enemy since the beginning of the war in a way which, by her heroism and by her undaunted courage, has elicited universal admiration. Besides, we should bear in mind that one-third of the population of this Dominion is of French descent. We have had two treaties with France, one which was negotiated some years ago by the late lamented Sir Charles Tupper, and another which was negotiated only a few years ago by Mr. Fielding when he was Minister of Finance. We have an oceanic service with that country which, I believe, could be improved. I hope that when the war is over and when new steamers are built my hon. friend will exact from the Allan Company a better and more modern service between Montreal, Quebec, Halifax and St. John and Havre. Sir, France is anxious to trade with us; she is willing to buy from us. If you look at the latest figures published by the Department of Trade and Commerce, you will realize how wonderfully our trade with that country has increased.

In 1896, the total trade, imports and exports, between France and Canada, amounted to $3,364,313; and for 1915, the total imports and exports were $22,847,315. This is a wonderful advance, and shows how France is anxious to trade with us. I know that people will say that these conditions arise from the war, that France is buying from Canada war munitions. But, Sir, I am informed on the highest authority that we can maintain our trade at at least that figure between Canada and France after the war is over, because France is grateful to Canada, grateful not only for the noble part Canada has taken in the war, for the blood which has been freely given by her sons on the plains of Flanders yesterday and to-day, but grateful also for the gifts that have been made from every city, from every town, from every hamlet of Canada, to the suffering peasantry of France. Yes, France is and will be grateful. It so happens that the Republic is represented to-day in Canada by one of the ablest consuls-general this country has ever had in the diplomatic service. I refer to Mr. Bonin of Montreal who was conseiller d'ambassade, and who is a far-seeing statesman. He is an arduous worker who knows exactly the economic conditions of both France and Canada, and he has been doing his best to foster those conditions since the war began. Consider the importance of that Franco-Canadian trade. 20 years ago it was about $3,500,000 a year, total imports and exports, and last year it was nearly $25,000,000. It is the imperative duty of Canada to maintain that trade,

and to do whatever is possible to promote it in the future.

What was our trade with Germany? In 1896 that trade, total imports and exports, was $7,212,000; and in 1914, the year before the war, it was $19,119,000. I do not know that many people in Canada, that many people in the Empire, will be willing to develop trade relations with Germany after the war, and if we can transfer our orders from Germany to France, we will only be doing a patriotic duty. I was rather painfully surprised last year, when the first war loan of France was launched, that this loan was not better appreciated by our banking institutions in Canada. There is an old saying in Europe that was applied to France before the war, and I suppose will be applied to her after the war: France is the creditor of all nations, and is the debtor of none. My hon. friend the Minister of Trade and Commerce, who is versed in finance and who knows the credit of all European countries, is aware that this is true. Every country in Europe was more or less a vassal to France, from a financial point of view, and if there is anything to be regretted it is that France was far too free and to generous in her foreign investments. Yes, I was surprised that when France offered some of her coupons on her national loan to the banking institutions in Canada, the response was not very generous. Perhaps there were reasons for that. The Government and the banking institutions had probably in mind that we would have our own domestic loans, and that we had to provide in some way for the needs of the British exchequer. At all events, I express this regret, and I wish to state most explicitly that there is no nation in the world, with the exception perhaps of Great Britain, which stands higher than France in regard to national credit. You may ask me, and the Minister of Trade and Commerce may ask me, what Canada could buy from France. I would simply mention a few articles that Canada could buy from France instead of buying them from Germany as we have been doing in the past, such as wines, drugs, chemicals, scientific instruments, and above all, l'article de luxe, what is commonly called l'article de Paris, which has been insidiously replaced in many markets of the world by the shoddy goods of Germany with the false labelling "article de Paris." Our importers and their agents should see to it that the commercial world is not humbugged, as it has been in the past, with the shoddy goods of Germany falsely labelled "article de Paris." But what is now important for Canada is to know what she can sell to France. The list which I am about to read I take from a French review dealing especially with this question of our better trade relations with France. Although it has been often said that there is no sentiment in business there is already in France a very pronounced movement in favour of the expansion of commercial relations with the Allies, and particularly with Canada.

The desire, as much as the necessity, after the war, to substitute for the Austro-German trade direct commercial relations with the Allies, either by the creation of preferential tariffs, by the signature of commercial treaties, or by the direct action of commercial leagues having for their special object the severance of all trade relations with Germany, will contribute in a great measure to the aforesaid expansion, which, as regards Canada, will be here the more pronounced that we can furnish and manufacture an immense quantity of the items which were formerly bought in Germany.

In the review which I hold in my hand, it is shown that during the year before the war broke out France got from Germany manufactured goods and raw products, to the value of $250,000,000. Now, Sir, France will require from Canada, and is ready to receive from Canada these raw products and manufactured articles: Wood pulp, horses, live stock, frozen meat and fish, cheese, flour, hay, leather, saddlery, shoes, asbestos, steel, building material and rolling stock for railways and all sorts of tools and implements which, during the war, have been exported from Canada to France will certainly continue to be exported, and to the aforesaid articles must be added the goods which France used to buy from Germany and which she now knows she can have in Canada. As I have stated, the exports from Germany into France amounted to $250,000,000 per year before the war, and there is no reason why a large proportion of that trade should not henceforth be given to Canada. In addition to the above products and articles, the following items may now readily find a market in France: Agricultural implements, steam excavators, dredges, road ploughs and horses, concrete laying machines, steam rollers, etc; railway material and rolling stock, spare parts for locomotives, straight and bent axletrees, steel in bars, locomotive tires, cars and vans; locomotive fire grates,

bolts with or without nuts, manganese bronze tubes, coupling chains and hooks, nails, brads and staples, copper tubes, copper wire, bars, and plates, cast iron locomotive cylinders, cast iron and cast steel pieces, steel and copper grate plates, cross-head leaders, brass plates and wire, moulded brass pieces, springs, flat spiral and screw, buffers, smoke tubing with covered welding, weldless tubing, stretched tubing, copper tubing, railway ties in any quantity, I am informed; wood and steel flat cars and freight cars for standard and narrow gauge tracks; construction handcars, steel in bars and blocks, profiled steel, beams, corner plates, air compressing machines, electric and compressed air drills, electric apparatus, hardware and plumbing sundries; wood and iron working machines, chucks, planers, drilling and countersinking machines, tackles, cranes, pulleys, etc.; wood and pulp, iron, steel, copper, nickel, asbestos, coal and phosphates; horses and live stock; wool and woollen garments, underclothing and hosiery; leather, shoes, saddlery, harness, belts; butter, eggs, cheese, canned fish and meat, frozen fish and meat, ham, pork, lobsters, crab fish, salmon, codfish, sugar, maple syrup, molasses, condensed milk, flour, hay; furs, green and dressed skins; paper, naphtha, soap, tobacco, artificial manures, twine and cord, trunks, carriages; raw and manufactured rubber, grain, alcohol, photographic implements, furniture, fishing nets, hemp and flax thread, brushes, pins, cotton goods, etc., etc.

The above list was handed to me by the Secretary of the French Chamber of Commerce in Montreal, and the Consul General of France in Canada wishes to call the attention of every manufacturer and of every industrial firm in Canada to these articles, because he is anxious that Canada should get the preference in French trade.

A few months ago the French Government delegated to Canada and the United States a mission composed of several members of the House of Representatives. The mission was headed by M. Maurice Damour, who has occupied a very high position in the financial world of France. For some years M. Damour was, if I mistake not, Chairman of the Committee on Foreign Commerce in the House of Representatives in Paris. I was present when he addressed the Board of Trade in Montreal and later on a meeting of merchants and manufacturers on the 23rd December last. On that occasion, he said that as France had been taken unawares by war, she did not intend to be taken unawares by peace, and for that reason she was sending trade commissioners abroad in order to seek other markets in place of those she had sought before, and in order to trade with people other than those with whom she had traded before. He called our attention to the fact that the northern part of France having been invaded, all her industries in that part, and the best at that, had been practically annihilated. He said that, for instance, the textile and metal industries were crippled, and that France required the raw material from Canada in order to enter upon her period of reconstruction. He said they would require agricultural implements for moto-culture to replace farm hands. So many yeomen have given their lives on the battlefield that moto-culture will replace the use of farm hands in a large degree in agricultural France. He said that for years the French manufacturers had bought, for instance, their asbestos from Berlin, whilst Berlin was importing asbestos directly from Canada. He said: "We must not make that mistake in the future." After that meeting, a cablegram was addressed to the Premier of France, M. Aristide Briand, which read as follows:

> The economic associations and the representatives of the industrial and commercial forces of Canada assembled to receive the mission of Maurice Damour, deputy, acclaim his hearty statements. They address to the eminent head of the French Government their sentiments of gratitude and their faithful devotion to great and beautiful France, and to affirm their will of maintaining to-morrow on the economic field the fraternal union which binds them to-day to France in the struggle for the certain triumph of the cause of right and civilization the Canadians decide to repay soon to the Old Country, whose fervent souvenir they will cherish, the visit made by the Damour Mission which has opened with success the most brilliant future to the economic relations between Canada and our dear and glorious France.
>
> Benson,
> President of the Board of Trade.

Mr. Speaker, a delegation met my hon. friend on the 15th of January. There were representatives of the Board of Trade, the Corn Exchange, of the banking institutions and of the transportation companies. The object of that interview with my hon. friend the Minister of Trade and Commerce was to promote trade between Canada and France and with that object in viey they asked him to send repre-

sentatives to France to attend the Exposition de Lyon. My hon. friend properly said that, as only a section of Canada was represented in that delegation, he could not at the present time see his way clear to granting the request. I agree with him. There is something more urgent than the Exposition de Lyon. I understand that a commission composed of business men will visit France, and possibly the other allied countries, in order to systematically promote better trade relations.

But I wish to draw his attention to a matter which I regard as of greater importance. There is at present in France, a movement on foot towards the reconstruction of cities and towns that have been destroyed during the war. I hold in my hand the programme of a large and important committee which has been formed in France in order to organize a Reconstruction Exposition. This Reconstruction Exposition is under the high patronage of the president of the French Republic, and the ministries of commerce, industry, postal and telegraph service, agriculture, interior, public instruction and arts, the general council of the Seine and the Municipal Council of Paris. It is to be held in Paris during the months of May, June and July, 1916. What is the object of the Exposition? I wish I could address myself to the industrial communities of Canada and to our manufacturers, in order to impress them with the importance of that Exposition. It will advertise to the world what are at the present moment the needs of France for the reconstruction of its devastated cities, towns and villages.

The Americans have not been slow in responding to the call which has been made to them by the committee to which I have just alluded. American manufacturers have formed a national committee, and they are preparing to send out delegations to all those engaged in industrial activities in order to capture as far as possible the trade which that reconstruction will necessarily create. The exposition will open on May 16 in the Terrace of the Tuileries Gardens and in the halls of the Jeu de Paume, which the ministry has been good enough to place at the disposal of the exhibitors. The programme is to be divided into four groups. In the first group will be found the essential organs of a modern town, the plan for arrangement and extension, and plans for reconstruction, everything concerning the æsthetics and hygiene of a city, the precautions to be taken with a view to the absolute respect of local styles, the variety of which lends such charm to French towns, the preservation of historic monuments and of any particularly beautiful natural site, etc. The second group will contain buildings in general, public edifices, dwelling houses and rural and industrial construction. In the third group will appear modern methods of and materials for construction, with examples of what has been achieved. Lastly, the fourth group will be specially devoted to legislation governing the arrangement, the construction, the improvement, and the beautifying of cities. The American manufacturers know that their chance is there, and quick as they are to realize their opportunities, they have launched an appeal to the business men. I wish that that appeal had also been made by my hon. friend the Minister of Trade and Commerce to the Canadian manufacturers. I claim that our Canadian manufacturers, Tories as they are generally—

Mr. GRAHAM: Oh, not all.

Mr. LEMIEUX: Not all—are keen, progressive, capable, and quite able to hold their own against the American manufacturers. I hope that my hon. friend will yet make a special appeal to them, so that they may get their share in the immense reconstruction business which France expects within the next few years. Let me quote just a few paragraphs from the appeal made by the American manufacturers:

> We regard this as the greatest opportunity American manufacturers ever had to establish themselves in the commerce of Europe. The habitations of 35 millions of people are more or less damaged or destroyed and everything must be replaced. The highways are destroyed, the streets of cities are destroyed, all the public service systems, such as water, sewerage, gas light, electric light have been destroyed, factories, dwellings, farms, everything. The labourers need every kind of tools and implements by the millions, used in building and refurnishing these institutions. Furthermore, the neutral countries have been in the habit of buying from countries now engaged in war, and their markets are entirely bare. These countries find themselves not independent, and each one is seeking to make it so.
>
> Hence they all want to get vast quantities of up to date machinery to manufacture the things they formerly have gotten from the countries now at war. It will require the full capacity of all the American factories for many years to meet these needs, provided they exhibit samples here that are satisfactory to the buyer. I may add that the American goods are more popular in Europe than any other, but it is practically impossible to get them.

Now is the opportunity for the Canadian manufacturers.

> Practically everything, except things to eat or to wear, are desired in this exposition.
>
> To illustrate the demand and the readiness with which goods offered are taken, let me say that we are already asked to make prices and submit samples for the restoration of one city, which will cost 150,000,000 francs, another 250,000,000 francs, another, 600,000,000 francs
>
> The exhibits will be admitted free from all duties, and arrangements will be made with the French consul at the point of shipment to so stamp the goods on their departure.

Again I urgently call the special attention of the Minister of Trade and Commerce to that circular, and ask him to have it distributed amongst the manufacturers and business men of Canada. Their opportunity is excellent, having regard to our special standing in France.

Mr. Speaker, I will not take up the time of the House further, except to say this: There is some confusion in certain minds as to the business ability of the French people. People are apt to believe that the French people are only able to make savings. Sir, the French are a wealthy people because they make savings, but they become wealthy because they are industrious. It is by hard work that they make their savings profitable. It is said that the French export trade does not bulk large in the bluebooks. Let me answer in the words of one of the ablest French statesmen, an ex-Minister of Foreign Affairs, who visited Canada a few years ago, and who has been one of the most remarkable writers before and during the present war, who was one of the fathers of the Entente Cordiale—I refer to Mr. Gabriel Hanotaux. Speaking of the trade of France with the world, he said it could be crystallized in one simple expression, "small tonnage and large profits." We do not export coal from France, says Mr. Hanotaux, but we export diamonds—small tonnage, large profits. We do not export cotton, he says, but an artist in Paris will buy a small canvas, put a frame around it, and with a few strokes of his brush he will sign his name—Cormon, or some other—selling it afterwards for 500,000 or perhaps 1,000,000 francs—small tonnage, large profits. That is the commerce of France, coupled with her genius, expressed in words.

But, Sir, to conclude it all, and regretting that I have taken so much time, let me say that I expect my hon. friend the Minister of Trade and Commerce, who has such command of the English language, but whom I suspect to be French at heart—I would say that even to his electors in Toronto—

[Mr. Lemieux.]

An hon. MEMBER: He speaks French well.

Mr. LEMIEUX: He speaks it well; he is a university graduate. Yes; I expect that he will do his best to promote trade between Canada and France. He may well be proud of what has been achieved, not only since the war but before the war, for our trade with France has increased wonderfully within the past five years. The time has come to capture more of that trade, to keep it in the channels which it has entered, and so to maintain between Canada and the old motherland of one-third of the Canadian people, now the faithful ally of Great Britain, the happiest relations that can exist.

Mr. S. F. GLASS (Middlesex East): I have a question to ask the hon. member for Rouville (Mr. Lemieux), but did not put it while he was speaking, as I did not wish to interrupt him. He quoted from a circular sent to the members of this House portions of a certain resolution, but he omitted the preamble and certain clauses. I presume that the fact that he presents these resolutions to the House, and places a portion on Hansard, may be taken as indicating that to some extent they met his approval. But I would like to read a clause in the preamble and also a portion of the resolution which the hon. member omitted. Possibly there may not have been reason for omitting these, but I think they would form a valuable contribution with the rest, as showing the opinions of these representative farmers, manufacturers and business men who met in Galt:

> And whereas it would seem to be feasible for the Allies, by means of customs tariffs and otherwise, to reserve their great consuming markets for their mutual enjoyment, and to the exclusion of the enemy, thus serving the double purpose of hastening their own economic recovery, while retarding that of the Central Powers.

The hon. gentleman said he would not delay the House by reading the whole resolution, but he read the third clause and passed over the fourth as "etc, etc." The fourth clause says:

> An agreement among all the Allies to subject the products of the Central Empires to such surtaxes and other disabilities as will effectually restrict their competition in the markets of the Allies.

I wanted to ask my hon. friend why these parts of the preamble and of the resolution were omitted by him in reading this circular.

Mr. LEMIEUX: I might very well have read the fourth clause. I read from this circular just to show the necessity of Canada taking part in the economic conference at Paris. I regretted the absence of a Canadian delegate at that conference.

There was, however, no thought on my part of avoiding this issue, and I did not say that I committed myself to the preferential trade policy. I am, however, willing to listen to such an idea as my hon. friend the Minister of Trade and Commerce has presented, and to any arguments in favour of it. I stated that theories that were roseate and that had captured men's hearts and heads before the war would crumble to pieces after the war. I even expect some of my Tory friends to be free traders after the war. Therefore I am open to conviction, but I sincerely regret that Canada shall not be represented at that Paris conference and shall not give expression to her views.

Mr. J. G. TURRIFF (Assiniboia): Mr. Speaker, unfortunately for myself I was not in the House this afternoon when my hon. friend the Minister of Trade and Commerce made his speech. I can, however, quite agree with the remark made by my hon. friend from Vancouver (Mr. Stevens), that it was a most eloquent and able speech. My hon. friend the Minister of Trade and Commerce has the faculty of making good speeches and of giving expression to good ideas. Unfortunately, however, his colleagues do not always seem to agree with him, or at least they do not back him up to any considerable extent. Not long ago we listened to one of the most eloquent speeches ever heard in this House delivered by my hon. friend, I think, on the Budget, when he spoke of the advisability of cutting out political patronage and of having a public committee appointed to deal with all requests for the expenditure of public money before the items were placed in the Estimates. That was a very fine idea, but it does not seem to have been impressed very strongly upon his colleagues, because the Estimates have been coming down in department after department, perhaps not quite as large as in the last year or two, but extremely large, and one minister after another has been asking for millions of dollars which they claim they do not expect to expend during the current year.

My only reason for saying a word on this occasion is this, that I understand that my hon. friend the Minister of Trade and Commerce is proposing to expend a considerable sum of money in looking over the whole face of the earth in an endeavour to find new outlets for trade between Canada and other countries with which we are not trading at the present time. I quite agree with the general proposition that it is very desirable and necessary for Canada to secure additional trade if at all possible; but the point that I particularly wish to impress upon my hon. friend is that in every case where he will send commissioners to secure additional trade with Canada, that trade is secured at a great cost. In every case, particularly if you secure a trade arrangement with any foreign country at a distance, in addition to the expense of securing that trade, you have to subsidize steamship lines to carry it, so that the taxpayer of Canada has to put his hand into his pocket and out of any profits that are made from the trade he has to pay for securing ships to carry the freight backwards and forwards between Canada and whatever country the trade arrangement has been made with. Let us take the case of the trade arrangement that my hon. friend made with the West Indies. It is very good in its way, but it has not amounted to much, and it has meant a heavy expense. If we trade with our own sister colonies, Australia or New Zealand, we have to grant large steamship subsidies. If my hon. friend secures additional trade arrangements with other countries, there will be large expenditures in subsidies in order to make that trade possible. What I want to point out in particular is that right at our own door for the asking more trade can be done in one week than can be done in a year with any other country with which my hon. friend can form a trade arrangement after paying sweetly to get it. Right at our own door is a population of between ninety and a hundred million people who are wanting to trade with us, who are already trading with us to a large extent, who are doing more trade with us than Canada is doing with the whole world. Canada, with a population of about 7,500,000, buys approximately twice as much from the United States as the ninety or a hundred million people buy from us and we have to pay the difference by trade with other countries. Those people want to buy from us. My hon. friend could enable them to do so by a turn of the hand, and it would be of great advantage to the people of Canada. In many parts of Canada the people have

almost unanimously been asking for freer trade with the United States, and we could have it without hurting any portion of this country. Yet my hon. friend and his colleagues absolutely refuse to extend the trade of Canada where it can be carried on for nothing and still give splendid results and be profitable. The people of the United States are probably the richest people in the world at the present time. During the past two years that this war has been waging they have made thousands of millions of dollars on account of the war, and they want to buy our goods, whereas practically every other country to which my hon. friend can go in order to make a trade arrangement has become more or less impoverished by the war. I do not for a moment mean to say that if my hon. friend made a trade arrangement with any of the nations that are now engaged in this war, it would not pay for the goods it bought. No doubt it would do so; otherwise it would not buy the goods. But what I want to point out is that we have right at our own door a hundred million people wanting to buy our goods.

Mr. EDWARDS: Wanting to buy what?

Mr. TURRIFF: All the natural products that can be produced on any piece of land in any part of the Dominion of Canada from the Atlantic to the Pacific.

Mr. COCKSHUTT: What are they to do with them?

Mr. GRAHAM: Look at the trade returns.

Mr. TURRIFF: We need not care what they will do with them. Surely my hon. friend does not need to worry about what they will do with the implements he manufactures if they buy them and pay cash for them. It does not matter to him whether they plough the ground with them or whether they leave them out on the ground to rot. If they buy the goods and pay cash for them, what more does my hon. friend want? Here we have a hundred million people wanting to buy our goods, offering to buy them, wanting to better our trade relations, to get our goods in and pay for them, and what more can any one ask for is something that I cannot understand. So far as we in the West are concerned, we produce practically only the natural products of the soil. The prairies are not a manufacturing section of Canada. I believe that for centuries we shall not be a manufacturing country out there, for the simple reason that the cost of living is higher in that part of the country than it is in Eastern Canada, and that we have not the raw materials. The advantage of shipping in the raw material and paying freight on it as against bringing in the manufactured goods is not sufficient to overcome the extra cost of manufacturing. In most things, at all events, we shall not be manufacturers in the West; we shall be producers of natural products—wheat, oats, barley, flax, cattle, horses, sheep, hogs and everything that is produced on the farms. We shall sell these things and buy our manufactured products from the manufacturers in Eastern Canada if we can get them anything like as cheaply as we can get them elsewhere.

Mr. BLAIN: What about Winnipeg as a manufacturing city?

Mr. TURRIFF: Winnipeg does some assembling and manufacturing.

Mr. BLAIN: It ranks third among the manufacturing cities of Canada.

Mr. TURRIFF: I know perfectly well what the trade returns are, but Winnipeg is not a manufacturing city in the sense that Montreal and Toronto are. There are certain things that we manufacture in the West; Winnipeg will be a large assembling point. But even if we do some manufacturing, our main business will be agriculture and its associated industries. We shall sell those products wherever we can sell them to the best advantage and we shall buy the manufactured products that we use to the extent of hundreds of millions of dollars, thus making the western country the best market for the Canadian manufacturer. What does the Canadian manufacturer want? To my mind, if he took the proper view of the matter, he would want to put the western farmer in a position to get the best price for what he grows and produces. What does the western farmer do with his money? He does not bury it. He sends it into the towns and villages near where he lives; from there it goes to the wholesalers in Winnipeg and from there it goes East to pay for manufactured goods. Why not give the Canadian farmer in the West the best advantage that you can give him so that he will be a better customer for the Eastern manufacturer than he can possibly be so long as you circumscribe his market? The Canadian farmer is not asking for protection. He is not asking that duty be imposed on any one thing that he grows. No farmers' organization in the Prairie Province will ask that duties be placed on

anything that the farmer produces. What they want is to have the duties all taken off the goods they are producing. Give them the free market, and that is all you need worry about. They will sell where they can sell to the best advantage; if they can sell better across the line they will do so, and thus be able to expend more money in goods manufactured in Eastern Canada and be a bigger asset to Canada as a whole and to the Canadian manufacturer in particular. To give them this market would be a general advantage to Canada. It was said four years ago during the reciprocity campaign that we would pay too much for the American market for our farmers' produce. Well, there is an opportunity now to get that American market without paying anything for it. Supposing my hon. friends across the floor of the House were right four years ago—I do not think they were, but never mind that now. At the present time they can get the American market for wheat and all wheat products and potatoes by simply putting them on the free list. The western farmers, and to a large extent the eastern farmers, want to see that done, because it would mean an increase in the trade of Canada each year to the extent of tens of millions of dollars. My hon. friend the Minister of Trade and Commerce could bring that about at once if he and his colleagues wanted to do so. They would not have to spend a dollar; they would not have to give any steamship subsidies. Why will they not do it? My hon. friend is anxious to send men all over the face of the earth to try to make little trade arrangements that would not amount in a year to what the extra trade with the United States would amount to in a week. Why this course has not been followed is something that is very difficult to understand. Four years ago our friends across the floor of the House maintained that the putting of cattle on the free list would mean the ruination of Canada. But a little over two and a half years ago the United States put cattle and hogs on the free list, with the result that practically every hoof that has been exported by Canada has gone to the United States. Why? Simply because we can get more money for our cattle there than we can get by sending them to Liverpool. Have my hon. friends across the floor of the House observed any lack of loyalty on the part of the prairie provinces since they commenced to sell their cattle and hogs in the United States? Do they think that it has had a bad effect on Canada in any way? If they do, why do they not put a stop to it? They know very well that that state of affairs has been in the interests of Canada, and they know, too, that it would be very much in the interests of Canada if that trade were increased. My hon. friend the minister is in the frame of mind to try to increase Canada's trade. My recommendation to him is that instead of spending all this money in sending men all over the world to try to secure some doubtful trade—all good enough in its way—he should begin by getting the trade that is right at his door, and which can be secured for nothing. Surely that is common sense; surely that is reasonable. It is what the people are asking for; it would not hurt any one, and it would be a very great advantage along the lines that my hon. friend is working on. It very often happens that what we can get for nothing, or with very little effort, is not appreciated. My hon. friend thinks that if he can make a trade with some nation 10,000 miles away at a cost of a quarter of a million or half a million dollars by way of subsidies to steamships to carry the goods back and forth he has achieved something of great value to the country and of great credit to the Government. It is true that this trade would be of advantage to the people of Canada. I do not want to curtail my hon. friend, or interfere with him in any way so far as getting the trade of the outside world is concerned, but what I appeal to my hon. friend to do is, first, to get the trade that is right at his door, and that he can get without paying anything for it. Why does my hon. friend refuse? I cannot think of any other reason than that it is done at the instigation and on the advice of the manufacturers of Canada. I may be wrong in that, but I can think of no other reasonable reason why my hon. friend should refuse to give us the American market where it is possible to get it. I have no doubt that in addition to wheat, wheat products and potatoes, my hon. friend could have a large number of other natural products added to the list, and in doing this he need not touch manufactured articles at all, or interfere with the Canadian manufacturer in any shape or form.

In regard to the building of ships, I wish to impress on the minister that, according to reports in the Old Country papers, both the Government and private interests are urging that special efforts be made to increase the building of ships in the Old Coun-

try. Great complaint is being made because in one particular town where ships are built, there were 157,000 hours of work performed and over 15,000 hours lost by the workingmen. The article to which I particularly refer went on to point out what a tremendous loss that was to the nation, and where they were going to land if this war kept on. It is an unfortunate thing to have to say that during the last week practically five ships a day were sent to the bottom by German torpedoes and mines, 33 for the week. That is going pretty strong. I doubt if the British shipbuilders, in addition to keeping up and increasing the strength of the navy, are going to be able to keep up the tonnage of freight boats if the Germans can continue to sink them at that rate. These, of course, were not all British ships, but the destruction of neutral or Allied ships interferes just as much with the carrying of goods from Canada to Great Britain as if they were all British ships that were sunk. I see that they are building large ships in the United States. The other day a ship whose keel has not yet been laid was sold at auction on the Pacific coast. It is to be a ship of 7,500 tons. The report did not say whether that was registered tonnage or carrying capacity. The ship was sold for $600,000, yet it will not be built until the coming summer. We in Canada ought to be able to build ships as well as they can in the United States and it would appear to me to be good policy on the part of the Government to take this matter up in earnest. I am sure that if the Minister of Trade and Commerce will do that he will do that he will find out that we on this side of the House, while we may criticise—and I am sure that a considerable amount of criticism is good for any Government—our criticism will not interfere with the Opposition assisting the Government to any extent that may be possible in securing a method or system by which we can go on and build some ships in Canada. My own feeling is that we should take off every vestige of duty on everything that goes into the construction of a ship, and then we would offer a permanent inducement to the shipbuilders of Canada to go into the business, a very great inducement over and above what they have now. If something along this line is done, we may be able to help make up the wastage. I was glad to hear that the Minister of Trade and Commerce was in hopes that the war would end at an early day, that the end was in sight. Listening to his colleague the Minister of Militia, one would come to the opposite conclusion, because the Minister of Militia explained to the House what Germany had accomplished; and whatever we may do in the near future, it is unfortunate that we have to say so, but the fact remains that we have not yet started to drive the Germans back. They are gaining ground to-day in France; we have not driven them back. The Russians are driving the Turks back, but the German army has not, so far, been driven back. I do not think that means that we will not win in the end, but we have a long, hard task ahead of the Empire and of the Allies, and if we delay too long in starting to provide ships to keep up commerce between Canada and Great Britain, if vessels are to be destroyed at the rate of five per day, it may turn out that next fall, when we have our wheat and other farm products and other products that the British Empire needs, to send across, there will not be ships enough to carry our produce across at any price. I think that something ought to be done along the lines of securing trade that is offering to us near at home. I trust the minister will consider this matter, and I know that if he sets his mind to it, with the experience he has had and the ability he has, he will accomplish something; and I am also quite sure that we on this side of the House will be willing and ready to tender any assistance that it is possible for us to give.

Mr. J. W. EDWARDS (Frontenac): The hon. member for Assiniboia (Mr. Turriff) calls to my mind a couplet which runs:

> The lightning bug is brilliant, but it has'nt any mind—
> It wanders through creation with its headlights on behind.

Mr. TURRIFF: That is very clever.

Mr. EDWARDS: I do not want to say, or to be understood as saying that the hon. member for Assiniboia is like the lightning bug in not having any mind. He has a mind, of a kind. But I think I might be excused for saying that the last line of that couplet does apply to the hon. gentleman very aptly—that his headlights are on behind. If the hon. gentleman from Assiniboia has forgotten some of his past history, there are members of this House who have not forgotten, and there are some of us who still remember that this same gentleman who gets up now and talks about making everything free as the air we breathe, taking the duty off agricultural implements,

is the same man who, in 1907, not only voted against reducing the duty on agricultural implements, but got up in his place in the House and spoke against any reduction in the duty on agricultural implements, putting himself on record as one of those expressing the unquestioned view of the western farmer, that the western farmer in 1907 did not want the entire duty taken off agricultural implements. Now he says he is expressing the view of the western farmer. What changes have taken place in the western part of this country? Has the western farmer changed his mind in regard to the duty on agricultural implements? Or is the changed attitude of my hon. friend due to the fact that he is now sitting to your left instead of to your right? On that occasion the hon. member for Souris (Mr. Schaffner) moved for a reduction in the Fielding tariff, and the hon. Minister of Finance of the Laurier Government, the Hon. Mr. Fielding, rose and argued very strongly that it would be a very wrong thing to expect men to accept the motion of the hon. member for Souris, and reduce the duty on agricultural implements; and, like a good, stalwart, loyal supporter, the hon. member rose and said that he thought this was certainly right. He said: "Do not reduce the duty; the farmers in the West do not want the duty reduced." Now, when this same gentleman gets up and preaches along the lines he has taken since the change of Government, we have a right to take his statements cum grano salis—with a good liberal supply of salt at that.

The hon. gentleman says that there are 100,000,000 people across the line who are anxious to buy our products, who are craving our Canadian products. He says that they removed the duty on cattle. If they took the duty off Canadian cattle they had a purpose in view. I would suppose that their purpose was that they wanted the cattle to come into the United States, and, if I am correct in my reasoning in that respect, I would suppose that the reason they do not take the duty off wheat is that they do not want the wheat to come in to the United States to the extent that they wanted the cattle to come in. But is the United States the natural market for Canadian farm products? I know that that assertion has been made repeatedly by hon. gentlemen opposite, but, in my judgment, the United States is not the natural market for Canadian farm products. I say that the Minister of Trade and Commerce is justified in sending out his trade commissioners seeking to enlarge our markets and to encourage trade with countries across the seas. I say that the West Indies, for instance, are a natural market for many of Canada's farm products, because these farm products are not indigenous to the West Indies. The natural markets for our products are those countries where these products do not naturally grow, not countries like the United States, where they have a surplus of these products. In what condition do we find the United States, so far as farm products are concerned? It is not starving for Canadian farm products; it is our greatest competitor in the markets of the world in these products. What country, of all the countries in the world, to-day produces the greatest amount of wheat for export? Am I not absolutely right when I say that the greatest wheat-producing and wheat-exporting country in the world is the United States? Large as our export was of last year's crop, it was small, indeed, compared with the exportable surplus of wheat in the United States. In the production of wheat the United States ranks first among the countries of the world. As an exporter of wheat the United States ranks first among the countries of the world. In the production of corn the United States ranks first among the countries of the world. It produces, I venture to say, as much corn as the rest of the countries of the world put together. In the production of oats, and in the exportable surplus of oats, the United States is far and away ahead of Canada. I venture the assertion that the United States to-day exports a larger quantity of meats than any other country in the world. Yet the hon. member for Assiniboia (Mr. Turriff) tells us that the United States is the natural market for Canadian wheat when the United States exports more wheat than any other country.

Mr. TURRIFF: And oats.

Mr. EDWARDS: He tells us that the United States is the natural market for our oats, though it is a large exporter of oats. He says that the United States is the natural market for Canadian meats, though the United States exports more meats than any other country in the world to-day. The hon. gentleman will not attempt to deny my statement in that respect.

Mr. TURRIFF: Is my hon. friend asking a question?

Mr. EDWARDS: I am making a statement. I said that the hon. gentleman would not deny my statement that the United States is the largest exporter of meats in the world. Does he wish to deny that?

Mr. TURRIFF: If the United States is the largest exporter of oats, it is a very large importer of Canadian oats, on which it pays a duty, and of cattle also, though they get the cattle free.

Mr. EDWARDS: The hon. gentleman does not deny my statement.

Mr. TURRIFF: No, it is true.

Mr. EDWARDS: Very good, then we agree on that?

Mr. TURRIFF: Yes.

Mr. EDWARDS: I did not think he would deny it. I repeat that the hon. gentlemen said that the United States was the natural market for Canadian meats.

Mr. TURRIFF: Yes.

Mr. EDWARDS: I say that that statement is illogical in view of the fact that the United States is the largest meat exporting country in the world.

Mr. TURRIFF: They buy our cattle.

Mr. GRAHAM: They also buy our raw material.

Mr. EDWARDS: If the hon. member for South Renfrew will take the trouble to look at the figures for the last two years he will find that, immediately after the duty was taken off cattle, there was a rush of cattle from Canada to the United States, but he will also find that that rush did not continue and that there was a considerable falling off.

Mr. TURRIFF: Where are they going?

Mr. EDWARDS: I maintain that it is illogical to say that a country such as the United States, which is unquestionably one of the greatest, if not the greatest agricultural country in the world, a country which has an exportable surplus of farm products, is the natural market for our farm products. Instead of being the natural market for Canada, it is our chief competitor in the markets of the world.

Mr. COCKSHUTT: It is the unnatural market.

Mr. EDWARDS: As my hon. friend says it is not only not the natural market for Canada, it is an unnatural market. The natural markets for the products of this country are, I repeat, those countries which do not produce the same kind of articles, and the best kind of trade that we can develop is with the countries which will take articles from us which they do not produce, and which will sell to us articles which we do not naturally produce. That is the proper basis of trade.

But hon. gentlemen opposite, with their famous reciprocity agreement which they wished to place upon this country, proposed to throw Canada open to the surplus production of all the agricultural countries of the world. That is what they proposed to do, and had the people of Canada not voted them out of power, had the people of Canada endorsed that policy, what would it have meant. It would have meant that the farmer of Canada would have been certain of one thing: that he would always receive for his product the lowest price paid in any country in the world, because, if the price of any farm product in Canada became high enough to be an inducement to the farmers of the Argentine or of the United States, or of any other country to send their products here, their products would be sent here. The price of our farm products would have been reduced to the lowest possible level and kept there if the reciprocity pact had been carried into effect. In 1911, after giving the matter very careful consideration, the people of the Dominion said that they did not want anything of the kind; and while hon. gentlemen opposite, like the hon. member for Assiniboia, may try to make himself, and others, believe that the people of Canada want reciprocity, I venture to say that neither he, brave as he is in regard to trade matters, nor any other member who sits beside him, will venture to test the opinion of this House by a resolution on that matter, much less to test the opinion of the country, and make it an issue. They know that the people have decided on that, and the hon. member for Assiniboia knows, as other hon. gentlemen opposite know in their hearts, in 1911 the people of Canada decided wisely.

11 p.m.

Mr. TURRIFF: No, I do not.

Mr. EDWARDS: He knows that they decided in their best interests. There is no doubt about that; the hon. member knows it perfectly well.

The hon. member for Assiniboia referred very briefly to the question of this great war. He quoted the optimism of my hon.

friend the Minister of Trade and Commerce and he characterized my hon. friend the Minister of Militia and Defence as being somewhat pessimistic. He added to-day his own opinion to the effect that the Germans were getting the better of this war. I do not agree with him for one moment. I do not believe he could find, if he were in a position to canvass the opinion of the people of Germany, that even they would agree with him. They do not think they are getting the better of the war. In a great war there are three factors which must be taken into consideration—men, money and munitions. If the war is short you may exclude the question of money and assume that both parties to the war will have enough, but if the war continues for any length of time, money will be a factor and money is one of the most important things in this war. At the beginning Germany had it over France, Russia and England in so far as men and munitions were concerned. That is the reason why she was able to make the wonderful advance she did make on the eastern front as well as on the western front, but during the last six or eight months the situation has entirely changed. While it is true that the line is practically where it was some months ago—

Mr. TURRIFF: That is all I said.

Mr. EDWARDS: But the hon. gentleman left an impression that I want to dissipate if I can. While it is true that the line is practically where it was a few months ago, it is also true that the Germans have not been able to carry on their offensive and advance on the western front, because in the meantime, or within the last few months, England and France have been enabled, not only to bring up men, but to bring up munitions, and in men and munitions, they are on an equality with Germany and are holding her there. The same thing is true of the eastern front as regards the contest between Russia and Germany. If you look at the whole situation, notwithstanding that Germany holds most of the Belgian territory which she has taken, notwithstanding that she temporarily holds her position in France and has overrun Serbia, the position of Germany and Austria in this war has become gloomier. While that is the condition on land, that is not the only phase of the question. The greatest blow which has been struck at Germany in this war has been struck by the British Navy in tying up the German Navy behind the forts of Kiel, in scattering German commerce and in driving it from the seas.

The hon. gentleman spoke of the British vessels which had been sunk by German torpedoes, and he intimates that possibly—if this continues, we may not have enough vessels to take our wheat—where, did he say?—not to the United States, but to take our wheat across to England. No matter what the price might be, we must have enough vessels, he says, to take our wheat across to England. If that is true for us, it will be true for the United States too. They would not have any chance to take their wheat across. Will the hon. member for Assiniboia get up and say that in a case like that, if we had not access to the British market, our natural market for wheat would be in the United States, where they would have millions and millions of bushels tied up that they could not get out to the markets of the world? Will he argue that? If he will not argue that, how can he logically maintain his position? But, while my hon. friend speaks about the possibility of boats being sunk, why is it that our Canadian wheat and the wheat of the western farmers is getting across the ocean to the markets of the world? It is because Britain has freedom upon the sea; it is because the British Navy rules the sea, and I cannot sit down without reminding the hon. member for Assiniboia that he was one of the men who stood up in this House and did his part to prevent the Dominion of Canada from making that navy stronger than it is to-day, and assisting it to protect our products on the way from Canada to the markets of the world.

Mr. GRAHAM: Mr. Speaker, this debate seems to have got away from everybody, or everybody seems to have got away from it. My hon. friend who has just sat down (Mr. Edwards) has discussed the Navy. I do not think he has missed any question that has been up in the House during the last year. I intend to make a few remarks on the proposal of my hon. friend the Minister of Trade and Commerce (Sir George Foster) in reference to the development of the trade of Canada and the machinery he proposes to use. I was once asked, while discussing the departments of the Canadian Government with the then Prime Minister, what department I considered the most important. I did not mention the Finance Department, I did not mention the Department of Agriculture, although these are very important, but I said to him that I thought the

department that gave the greatest scope to a man with a heap of energy was the Trade and Commerce Department in a young country which is really just beginning its development. However, I will refrain from making any comments until the Supplementary Estimates come down, as I understand my hon. friend has almost induced his colleagues to let him have a vote in the Supplementaries for this purpose. I must say that notwithstanding all the theories that have been spun to-night, and I do not say it disrespectfully in connection with what has been said or thought by any of you as to trade within the scope and the lines of a preferential tariff, when the department or the members of any convention, get down to the real question, they will discover that the representatives of Canada, and rightly so, will insist upon the position that they will not give up any of their rights to manage their own affairs as they see fit even though that view may not harmonize with somebody else's idea. Generally speaking, the theory is good, that when you come to take up some measure which is new, you will not allow the people of any other country, even a country in the British Empire, to control the conditions under which you manage your affairs, but these conditions will be controlled by Canada as they have been in the past. However, this is a large subject, and I am afraid I might make a speech if I continued along that line. I will keep my remarks until the supplementary estimates are up.

Mr. F. N. McCREA (Sherbrooke): Mr. Speaker, there is a matter that I think my hon. friend the Minister of Trade and Commerce (Sir George Foster) might deal with, and perhaps he could do so much more easily than he could deal with the question of navies and shipbuilding to-night. Canada produces a small quantity of hemlock tan bark, but, she produces more than can be used here. There has been an embargo placed upon the export of that commodity under an Order in Council which was passed about a year ago but which was only put into effect about a month ago. Whilst there is not a very great quantity produced, there is more than there is sale for in Canada. In the part of the country I come from, there has been business for more than fifty years in the shipping of bark to the United States. But this embargo was put into force about a month ago and the export of the stuff is held up. And there is no sale for it in Canada. I think that the Order in Council must have been put in force without consideration, because I cannot see any good purpose that is going to be served by prohibiting the export of tan bark. It cannot be shipped to Europe in the form of bark. At one time, in the province of Quebec, there were quite a few extracting works which reduced the bark to a liquid form so that it could be shipped anywhere without great expense for freight. But these works have disappeared, as also have many of the tanneries that formerly used bark. Consequently there is only a small quantity used in Canada. Unless the embargo is removed the stuff will waste, for it is not an article that will keep for any great length of time. I think that probably this matter is under the charge of the Minister of Customs, but I should fancy that the Minister of Trade and Commerce, who is interested in doing everything necessary and possible for facilitating the handling of the Canadian products, would also be interested. I trust the hon. minister (Sir George Foster) will give it his attention and will try, if possible to remove this embargo. Of course, if there is any good reason why it should not be removed, we will have to put up with it. If the Government can have it removed, it will be of benefit to us, and will hurt nobody.

Sir GEORGE FOSTER: Have any representations been made to the Customs Department or to my department on the subject?

Mr. McCREA: Yes, to the Customs.

Sir GEORGE FOSTER: I have not heard of it. I will make a note of the matter.

Mr. McCREA: I have a letter from Mr. McDougald, who says that the embargo has been put on and could not be removed. I do not think he has considered the matter very carefully.

SUPPLY.

The House in Committee of Supply, Mr. Rhodes in the Chair.

Trade and Commerce—Trade commissioners and commercial agents, including expenses in connection with negotiations of treaty or in extension of commercial relations; miscellaneous advertising and printing, or other expenditure connected with the extension of Canadian trade, $150,000.

Mr. GRAHAM: I presume that when the supplementary estimates are under con-

sideration there will be ample opportunity to discuss this question?

Sir GEORGE FOSTER: The same discussion can take place.

Mr. GRAHAM: I do not see any reason why this should not pass.

Mr. THOMPSON: Have we any trade or commercial agents in South America?

Sir GEORGE FOSTER: Yes, we have a representative in Buenos Aires. The former and actual commissioner of trade there was Mr. Poussette who was one of our experienced trade commissioners and who was changed from South Africa to that point about four years ago. But Mr. Pousette went overseas and the work of the department in Buenos Aires is being done by Mr. Webb, who also is a very efficient man. That reminds me that today I had a letter from a very prominent Canadian who has just made a tour of the Argentine. I had given him letters to Mr. Webb, and he had called upon him. He was very cordial in his praises of the services Mr. Webb performed for him and gave a very flattering idea of the worth of his services to Canada. When the war is over, Mr. Poussette will take his place again. In addition, we have the services of the British consuls in all South America. Two years ago Mr. Poussette made a tour of the states of South America, and consulted personally the consular agents. We have found his report of great value.

Mr. THOMPSON: I followed with great interest the discussion which has taken place. I feel very strongly that Canada, in the very near future, will have a golden opportunity to reach out and get her share of the world's trade. Our interprovincial trade, of course, has been a great factor in our economic development; but we have built our transcontinental railways, subsidized our steamships, dredged our harbours, lighted our coasts, all with the ultimate idea of making our country one of the great trade routes of the world. And I think that just now, with war in progress and the sympathies of our Allies with us, we cannot do better than project our ideas regarding trade in the future with neutral countries and with our Allies. I have always thought that we have never got our full share of the South American trade. Germany has had a very large percentage of it; Great Britain has had a large percentage of it; France has had a very considerable percentage; but Canada, I feel, has never had as great a share of South American trade as we should have had. In the countries that lie adjacent to the Equator, I believe, there is great opportunity for exchange of products with Canada. Brazil, for instance, offers a large field for the exploitation of our extra-territorial commerce. They grow many things which we want, and we grow many things which they want, pulpwood, for instance. It is generally considered that we have enormous resources in our forests for the making of pulp, and I believe that Brazil imports a large quantity. The woods indigenous to the soil of Brazil, we are told, are not suitable for the making of pulp. That is one item, which, I think, the Minister of Trade and Commerce should investigate. I understand that there is an opening there in a larger way than in the past for the sale of our fish. Many of our manufactured products might find a market in Brazil. I am glad to know that we have a trade agent in the Argentine. Though that country and ourselves compete in many things, still there are articles which we can exchange with mutual profit. I hope the Minister of Trade and Commerce will be seized—as I am sure he will be—of the importance of cultivating as far as possible the exchange of products between Canada and the republics of South America. There is a great opportunity right now, and I believe that our neighbours in the United States are exploiting those markets in South America to-day, and I hope that we shall get our full share from now on as we have not had that full share in the past.

Progress reported.

On motion of Sir George Foster, the House adjourned at 11.35 p.m.

Wednesday, April 19, 1916.

The House met at Three o'clock, the Speaker in the Chair.

QUESTIONS.

[Questions answered orally are indicated by an asterisk.]

CANADIAN PAY AND RECORD OFFICE, LONDON.

Mr. MACDONALD:

1. How many persons are employed in the Pay and Record Office, in London, England, in addition to the commissioned officers?
2. What is the average cost per month of the operation of said office?

Sir ROBERT BORDEN:

1. N.C.O.'s and men, 915; of this number about half are men who have been invalided, sick or wounded, from the front. Civilian clerks: male, 99 over military age, or unfit for military service; and 264 females.

2. For month of January, $96,200.

Mr. DEVLIN:

1. Is there a Canadian Pay and Records Office in England? If so, how many officers are employed in it, and how many men?

2. What was the total number of officers and men of the Canadian force in England and France up to the end of March, 1916?

3. Is there a Pay and Records Office in connection with British War Office?

4. If so, how many officers and men are employed in it?

5. What is the total number of the force of the British Army?

6. Are the officers in the Canadian Pay and Records Office in England paid according to rank, or do they get special pay?

7. Do they get anything extra for allowance?

Sir ROBERT BORDEN:

1. Yes. Officers, 50; N.C.O.'s and men, 915; of this number about half are men who have been invalided sick or wounded from the front. Civilian clerks: male, 99 over military age, or unfit for military service, and 264 females.

2. 134,838.

3. Yes, by latest available information in Army List there are 38 pay and record offices in the United Kingdom. The duties, however, performed by the British pay and record offices differ in several important respects to the Canadian pay and record office. The latter, in addition to the same duties carried out in British pay and record offices, also has charge of all officers' accounts and records, and includes a large audit staff which audits all expenditure before accounts are forwarded to Canada. Both these duties are performed by separate offices and staffs in the case of the British army. The work of the Canadian office is still further increased by having to furnish complete information to the Militia Department in connection with all casualties, in addition to supplying information to the War Office and to relatives of Canadian officers and men in England whereas in the case of the British offices, they only have to deal with the War Office and units, etc., in the United Kingdom, and have nothing to do with records or accounts of officers of the army.

4. No information, but from inquiries made in England last October, it was ascertained that the staff required to deal with the pay and records of the British Expeditionary Force was higher, in proportion to the total strength of the army, than the staff of the Canadian pay and record office was to total strength of Canadian Expeditionary Forces overseas.

5. No information.

6. Officers are paid according to appointment for which special rates of pay and allowances are prescribed by Order in Council.

7. All allowances are included in special rates, except allowance in lieu of rations at 50 cents a day, the same as other officers receive.

PUGWASH SPUR LINE.

Mr. MACDONALD:

1. What has been the total cost of the spur line of railway built from the main line of the Intercolonial railway into the brickyard at Pugwash, N.S.?

2. What has been the total amount of freight arrived from this spur line?

Mr. REID:

1. The Pugwash spur was built to the brick and tile plant, on the west side of Pugwash harbour, at the request of the Nova Scotia Clay Works, Ltd., they guaranteeing to ship not less than 6,000,000 bricks per year for a term of 15 years, to pay an extra or shunting charge of 20c. per thousand bricks, and to bring in at least 60 cars of coal each year for a period of 15 years, upon which they agreed to pay 20c. per ton as an extra or shunting charge. The cost of this spur line was $79,432.97.

2. Total Intercolonial earnings on freight delivered from this spur, $1,026.79.

THE VALE RAILWAY.

Mr. MACDONALD:

1. What amount has been expended on the Vale railway since it was taken over by the Government?

2. What has been the receipts from the operation of said road since the date of operation?

3. What has been the cost of operation?

Mr. REID:

1. Since the Government made a tentative agreement for leasing the Vale railway, it has expended $6,925.52 in operation and maintenance.

2. $5,245.98.

3. The cost of operation of this section is included in the answer to No. 1.

MAIN STREET SUBWAY, MONCTON.

Mr. COPP:

1. What was the total cost of the Main street subway, Moncton, N.B.?

2. How much was paid for right of way and

for damages in connection with said subway constructions?

3. To whom were such payments made?

4. Have any such claims been made to the Railway Department that have not been paid? If so, by whom and for what amounts?

5. What has been the cost of the different concrete sidewalks laid on and in connection with the Moncton station yard during the past three years?

6. What was the cost of the concrete sidewalks along Main street, Moncton, N.B., leading to and through said subway?

7. If the concrete and other bridge work in connection with said subway was let by contract, what was the contract price, and what, if any, amount has been paid contractors over and above the contract price of same?

8. Is the Government aware there are said to be other dangerous level street crossings in the city of Moncton? If so, how many, and is it the intention of the Department of Railways to eliminate same in the near future?

9. Were the grades on streets approaching the subway changed from the original plans regarding same? If so, in what particular?..

10. Have damages been paid?. If so, how much for the properties east of Archibald street, in front of which the street has been lowered from one to ten feet, caused by the construction of said subway?

11. What was the total cost of concrete work in connection with said subway?

Mr. REID:

1. $132,673.21.

2. Nil.

3. See answer to Number 2.

4. Claims for abuttal damages have been presented as follows: George V. Steeves, $1,000; Edward O. Steeves, $5,800; M. Francois Hogan and Margaret E. Hogan, $6,000; James D. LeBlanc, $12,000; Henry S. Armstrong, amount not named; W. McK. Weldon, amount not named.

5. 1,121.06.

6. $3,444.38.

7. The contracts for the concrete and other bridge work in connection with subway are at schedule prices for the different items of work.

8. When financial conditions improve it is the intention of the department to complete the elimination of level crossings in the city of Moncton, in accordance with the arrangement made between the management and the city.

9. The rates of grades not changed.

10. No.

11. $30,411.18.

ENLISTMENTS IN CANADIAN EXPEDITIONARY FORCES.

Mr. EDWARDS:

1. How many officers, N.C.O's and men have enlisted in Canada for overseas service during January, February and March of 1916?

2. How many enlisted from each province during the first three months of 1916?

3. How many enlisting from each province were, respectively, British subjects born outside of Canada, French Canadians, German Canadians, and English Canadians (that is, Canadians of English, Scotch, Irish or Welsh descent)?

How many of these enlisting from each province during the first three months of 1916 were, respectively, Methodists, Presbyterians, Roman Catholics, Anglicans and other denominations?

Sir ROBERT BORDEN:

1 and 2. Enlistments of N.C.O's and men for overseas service with the Canadian Expeditionary Force for January, February and March, 1916:

No. Military Dist.	Jan.	Feb.	Mar.	Total.
1. Ontario..	4,071	2,561	2,622	9,254
2. Ontario..	7,669	7,785	6,981	22,435
3. Ontario..	3,035	3,409	3,595	10,039
4. Quebec..	1,537	1,414	2,284	5,235
5. Quebec..	423	495	542	1,460
6. Maritime Provinces..	1,915	1,757	3,639	7,311
10. Manitoba and Saskatchewan.	5,375	4,831	8,736	18,942
11. British Columbia and Yukon.	3,384	1,821	1,547	6,752
13. Alberta..	1,803	2,585	2,759	7,147
Totals..	29,212	26,658	32,705	88,575

3 and 4. This information is not yet available.

NEW BRUNSWICK AND PRINCE EDWARD ISLAND RAILWAY.

Mr. COPP:

1. How much has been paid on account of the purchase price of the New Brunswick and Prince Edward Island railway?

2. How much of said purchase price remains unpaid?

3. How much interest has been paid on the purchase price of said railway, and to what date is said interest paid?

Mr. REID:

1. Amount paid on account of the purchase price of the New Brunswick and Prince Edward Island railway, $180,000.

2. Amount of purchase price unpaid, $90,000.

3. Interest paid on purchase price, $19,186.30; interest paid to August 1, 1915.

PELAGIC SEALING COMMISSION.

Mr. BARNARD:

1. What was the total cost of the commission to inquire into the question of compensation to sealers, for damages caused by reason of the compulsory cessation of Pelagic Sealing in the North Pacific Ocean?

2. How much, if any, of the said cost has been charged against the funds received from the United States, under the Sealing Treaty between the United States, Japan, Russia and Canada.

Mr. HAZEN:

1. $35,546.93.

2. None.

ASSISTANCE TO FAIR ASSOCIATIONS.

Mr. PAQUET:

1. Did the Federal Government ever grant any subsidy for the construction and repair required for exhibitions in rural counties?

2. What are the circumstances under which the Federal Government grants subsidies to exhibitions?

Mr. HAZEN:

1. No.

2. The conditions governing federal aid to fair associations may be briefly stated as follows:

Fair associations whose shows are open in all classes to the whole of Canada, and which have paid out in the utility classes of live stock and poultry at their last preceding show the sum of $5,000 or over, will be given a grant equal to 50 per cent of the actual amount paid out, the maximum grant to any show not to exceed the sum of $5,000.

Fair boards, when making application to the Live Stock Branch for this grant, must forward a certified and properly subscribed statement of the auditor's report of all prize money paid out at the last show in the classes previously referred to; as also a copy of the proposed prize list for the succeeding year. For the purposes of this grant, the prize list must be approved by the Live Stock Commissioner. All pure bred live stock exhibited at shows which receive the benefit of this grant must be registered, in the name of the exhibitor, in the Canadian National Live Stock Records. In all questions of policy or matters of dispute the decision of the Live Stock Commissioner shall be final.

UNOPPOSED MOTIONS FOR PAPERS.

Mr. Sinclair.—For a return showing a list of the decoders and censors employed at Halifax since the war broke out, together with the names, dates of employment, total amount paid, by whom recommended, and former employment of each.

Mr. Sinclair.—For a return showing a list of all medicals and chaplains appointed by the Department of Militia and Defence in the military division of Nova Scotia, since August 4, 1914; together with the name, post office address, date of appointment, rank, present position, whether in Canada, England, or at the front, rate of pay and total amount paid each, since the beginning of the war. Also the names of any who have withdrawn from the service, with the date of such withdrawal.

Mr. Boyer.—For a copy of all letters, petitions, correspondence and telegrams exchanged between the Government, its district engineer, and all other persons, concerning either the construction or repairing or purchase of the wharves at the following places: Ile Perrot Sud, the Church in the village of Ile Perrot, the village of Vaudreuil, Pointe Cavagnole, Hudson, Rigaud, Graham, Pointe Fortune, and Ile Perrot nord. Also a copy of all specifications and reports already brought down at my request in relation to the documents prior to and since 1904, and a statement of the amounts that have been paid for such construction or repairs, and to whom they were paid.

Mr. Boyer.—For a copy of all letters, petitions, correspondence and telegrams exchanged between the Government, its resident engineer, and all other persons, concerning the dredging work done at the following places: Ste. Anne de Bellevue, Pointe Fortune, Ottawa river channel between Ile au Foin and Ile à Paquin, Graham channel, Rigaud channel, Hudson heights channel, Hudson, Como, Pointe Cavagnole, channel at Vaudreuil village, Dorion Bay channel, Ile Perrot Church, Ile Perrot Sud wharf, and Ile Perrot Nord wharf. Also a statement of the amounts paid to different persons, companies, etc., for such work, the dates, etc., and a copy of the estimates already brought down at my request, the whole since 1904.

Mr. Devlin.—For a return showing who, if any, is director of recruiting and organizations in England for the Canadian service; his name, and his duties; how many are employed upon his staff; and what are the total expenses of his staff.

THE BATTLE OF ST. JULIEN.

COMMEMORATION OF ANNIVERSARY.

On the Orders of the Day:

Right Hon. Sir ROBERT BORDEN (Prime Minister): I desire to ask the indulgence of the House for a few moments while I draw attention to the approach of an anniversary which will always be memorable in the history of Canada. In a few moments I shall have the honour to propose a motion to the House which I have asked Sir Wilfrid Laurier to second.

The Canadian forces now at the front hold to-day a position of honour in the line which the Allies are maintaining in France and Belgium. We in Canada, far removed from the scene of war, surrounded by the conditions of peace to which we have always been accustomed, can hardly appreciate or realize the situation which confronts the people of France and of Belgium, and indeed the people of Great Britain. There lies the long-extended battleline, there the manhood of these two nations defend their country; and there, as I have said, the Canadian forces in the British lines hold a position of honour, which they will maintain in a manner worthy of the best traditions of this country.

Let me recall for a very few moments what has transpired since the commencement of the war so far as the action of this country is concerned. You will remember that the first Canadian force which crossed the Atlantic was the Princess Patricia Regiment, which went to the front in France

or in Belgium about the end of December, and which distinguished itself on many a battlefield by achievements that will always be remembered by the people of Canada. Last July I had the honour of seeing what was left of that regiment. The ranks had been depleted—in fact, had been decimated; but the spirit of the men and of the officers was as dauntless as it was on the day on which they sailed from Quebec.

At the commencement of October the first Canadian division crossed the seas, and about the middle of February they went to the front. I suppose that nearly every hon. gentleman in this House had the privilege of seeing that force while it was assembled at Valcartier. In actual warfare they were nearly all untried; so far as military knowledge and experience were concerned, they were new men, men without previous military experience for the most part. They went to the front in February. Perhaps they did not realize that there was to come to them in the very early future a test such as might have daunted the bravest and most experienced veterans. The story has been well told of that great event. It can never be completely told, as hundreds of instances of individual heroism can never be recorded, because the men who know of these incidents and who took part in them lie under the sod in France or in Belgium. To-day let it be enough to remember that, although their trenches were obliterated by artillery fire, although they were assailed by awful methods of warfare hitherto unknown and unused amongst civilized nations, although one of their flanks was exposed, and they were attacked by overwhelming numbers, they never retired except under direct orders, and from first to last they did not lose one Canadian gun. There is therefore little wonder that, when on the afternoon of Sunday, the 25th of April, 1915, two British brigades came forward to pass through their lines and to make a counter attack, these Englishmen, hundreds of whom were going forward to certain death, paused for a moment to cheer their Canadian comrades, and to say "All hail" to Canada. Well did these Canadians merit the tribute universally accorded that but for them the onrush of the Germans might not have been stayed, and that the events of the past year might have been very different from those which we have known. Canada's heart will always be thrilled when the memory of those days is recalled. The same valour, the same determination and the same tenacity characterized the Canadians at Festubert and Givenchy. Our hearts are saddened day by day with the long lists of casualties which come to us; but the spirit of the Canadian people is as firm and as undaunted and the response of the men of Canada is as ready as in the days of August and September of 1914.

Up to the present time we have enlisted in Canada about 310,000 men; and in the period between the first day of January and the 15th day of April more than 100,000 Canadians came forward to do their part in this great struggle. That recital of itself is enough to convince us that the spirit of Canada is as firm and its determination as unshaken as it ever has been since the commencement of this war.

The military organization of this country was unfitted to undertake so great a task as that which has been accomplished; and I am and always have been ready to concede that but for the whole-hearted support of the Canadian people, and but for the splendid spirit which has animated them, men and women alike, since the commencement of the war, it would not have been possible for this Government or for any Government to do what has been achieved.

The anniversary draws nigh; the war still continues. Perhaps a year ago we may have imagined that events would have shaped themselves otherwise and that the situation would be different to-day from that which now confronts us; but, although the task during the past year has made itself manifest as much greater than we centemplated at the beginning of the war, still we are ready with the same response, and in no part of the Empire is there a firmer spirit than in Canada, nowhere a firmer resolve to do our duty to the end. The determination of the people of this country is as inflexible and as unshaken as ever.

We are approaching the anniversary of the day on which the first great test came to the Canadian troops at the front. How shall we honour those who survive? How shall we honour the men, whether in the British islands or in this country, who have rallied to the colours and who are keen and eager in their desire to go to the front and do their part? As for the men who have survived this test, can we better honour the memory of their achievements than by flying upon all the public buildings of Canada and upon all the buildings which are available for that purpose from the Atlantic to the Pacific the flag of our

country for which they have fought, and will still fight?

What of those who fell? Do I hear someone say that for them we should fly the flag at half-mast, and not at the head? Not such is my conception, Mr. Speaker, and I believe that we shall best honour their memory also by flying at the head that flag for which they made the supreme sacrifice and which symbolizes the ideals of justice and liberty which Canada, in common with the whole Empire, maintains in this war. The memory of those who have fallen will always be a tender and revered but yet a proud memory in the hearts of Canadians, and for them, as well as for those who survive, I conceive this to be a fitting tribute by the people of Canada. So, I have the honour to propose the following resolution, seconded by Sir Wilfred Laurier:

Resolved that this House desires to place on record its admiration and pride in the valour and heroism displayed by the Canadian Expeditionary Force at the front and its profound appreciation of their service to Canada and to the Empire.

That the spirit which animates the Canadian people in this conflict has found its highest expression in the achievements of Canadians upon the battlefields of France and Belgium; and as the anniversary draws near of the first great test to which the Canadian troops were subjected and in which they so splendidly distinguished themselves, it is fitting that there should be a suitable commemoration throughout the Dominion of the service thus rendered to the Empire, to the allied nations and to the world.

That this House commends the proposal that on the 22nd, 23rd and 24th of this month flags should be flown at the head on all public buildings throughout this Dominion and that the Canadian people be invited to commemorate thus the momentous events of a year ago in token of Canada's determination to do her part until the efforts of our Empire and the allied nations shall have been crowned by an honourable and lasting peace.

Right Hon. Sir WILFRID LAURIER: When our young volunteers crossed the ocean, to take their part and the part of Canada in the war, which was then and is still going on, and when we realize that alongside the French soldiers and the soldiers of Great Britain they would have to face the best-equipped troops in the world, troops which in the last half-century have ever been victorious, there was in many Canadian hearts apprehension at the thought that they were to encounter such dangers. It is a well-known fact in the history of nations that young soldiers, whatever be the stock from which they have sprung, have always undergone a severe ordeal at the first shock of battle. It would have been folly to have expected that our young soldiers would show the steadiness of veterans. But history has already recorded that, where we expected these young men to act like young and raw recruits, they really acted in a manner which was not excelled by the veterans of the British or of the French army. One with a Canadian heart could not but be thrilled at the news that came to us that these young soldiers on a certain day had beyond all doubt saved the honour of French and British arms, and not only that, but had saved the day for the cause of civilization. It has been established that on the occasion to which my right hon. friend has just referred, in the three days of the battle, when the lines had been lost to the French troops, after they had for the first time come in contact with the poisonous gases, it was the Canadian troops who came to the rescue, re-established the lines, and snatched victory from the very jaws of defeat.

The proposition of my right hon. friend that the Canadian people should remember that day is one that must commend itself to us all. What should be the form of that commemoration? In what manner should we Canadians express our testimony to the valour of our soldiers on that occasion? The proposal which has just been made by the Government, I think, must commend itself to every one. There are many ways in which this occasion might be commemorated, but the best way, I think, is that proposed by my right hon. friend: to unfurl upon the first anniversary of the battle the banner under which they fought on the soil of France for the cause of civilization. Let the banner rise, let it float at the top of every mast and at the top of every steeple throughout the length and the breadth of the land, there to be looked upon with pride by every Canadian, and with the knowledge that it is supremely the banner of freedom, of justice, and of power.

Motion agreed to.

COLONEL DAY.

On the Orders of the Day:

Sir ROBERT BORDEN: The hon. member for Richmand (Mr. Kyte), inquired yesterday if Colonel Day is still in charge of the 185th Battalion at Broughton, N.S., where the regiment is at present training. The Adjutant General states that from re-

cords at Militia Headquarters, Lieutenant-Colonel F. P. Day is still in charge of the 185th Battalion, C.E.F.

DEATH OF PRIVATE D. CURRY.

On the Orders of the Day:

Sir ROBERT BORDEN: The hon. member for Richmond (Mr. Kyte) inquired yesterday as to the death of Private Dougall Curry at St. Joseph's hospital, Glace Bay, during the past week, and as to the medical treatment which was afforded him. A telegram was sent to obtain the information, but no reply has yet been received.

CENSORED DOMESTIC LETTERS.

On the Orders of the Day:

Mr. KAY: I wish to bring the attention of the Postmaster General to the manner in which his censors are dealing with the mail.

Sir WILFRID LAURIER: Hear, hear.

Mr. KAY: I have here a letter from the Canadian Bank of Commerce, posted at the town of Bedford, and addressed to me at Phillipsburg, eight miles away. This letter has been censored. I called up the manager of the Canadian Bank of Commerce at Bedford on Monday, and he told me that on the 10th of April a letter addressed from the Union Bank, Quebec, to the Canadian Bank of Commerce at Bedford, had been censored. He further said that a letter posted on April 12 from his bank, that is, the Canadian Bank of Commerce, at Bedford, to the Canadian Bank of Commerce, Ste. Catherine street, City Hall branch, Montreal, had also been censored. I think the people of this country and the members of this House are entitled to know who is doing this censoring, and why it is that our domestic letters are being opened in this manner. Possibly the Prime Minister would be good enough to bring this matter to the attention of the Postmaster General.

Sir ROBERT BORDEN: I shall be very glad to direct the attention of the Postmaster General to the matter. Some complaints have come to me of departures from absolutely plain instructions which I know were given three or four days ago with regard to correspondence, not within this country, but from the United States. I cannot conceive how such mistakes should have happened, in view of instructions that I know have been given. It is my purpose this afternoon, in the absence of the Postmaster General, to send for Dr. Coulter to direct his attention to these matters, and to endeavour to bring it to pass that mistakes of this kind shall not occur in the future. I concur with my hon. friend in the view that they are entirely inexcusable.

CASUALTY LISTS.

On the Orders of the Day:

Mr. BUCHANAN: A few days ago I brought to the attention of the Acting Minister of Militia the system adopted in reporting casualty lists. It has been represented to me that it is impossible to identify men under the system followed since then. When the next of kin is given, the address may be in England, Ireland, or Scotland, and it is impossible for newspapers in Canadian cities to identify men who have enlisted from those cities. Of course the newspapers desire to identify local men. I have a letter from a newspaper editor in Calgary saying it is impossible to identify men in that way. It has been suggested that the department should resume the old system of giving the names of the battalions, with the understanding that the newspapers would not publish the battalions, but could use this information for purposes of identification.

Mr. KEMP: I was Acting Minister of Militia when my hon. friend brought this up a few days ago; and I thought the arrangement then made was satisfactory. However, I will assist the Prime Minister in bringing the matter to the attention of the proper authorities of the Militia Department with a view to improving it still further, if it can be done, while at the same time carrying out the intention of the order that was first issued.

BOUNTIES ON ZINC.

On motion of Sir Thomas White (Minister of Finance), the House went into committee, Mr. Rhodes in the chair, to consider the following proposed resolution:

Resolved, that it is expedient to authorize the payment out of the Consolidated Revenue Fund of a bounty of two cents per pound on zinc or spelter, containing not more than two per cent of impurities, produced in Canada from zinc ores mined in Canada; provided the standard price of zinc or spelter in London, England, at the time of production is less than £36.19.3 sterling per ton of two thousand two hundred and forty (2,240) pounds, when the bounty payable shall be an amount equal to the difference between such standard price per ton and £36.19.3 per ton. Further provided, that in no

event shall bounty be payable when the price received for zinc or spelter by the producer is eight cents or more per pound, and that no bounty shall be payable on zinc or spelter to the producer during the continuation of the war, and in no event on zinc or spelter produced after July 31, 1917.

Further resolved, that the total amount payable under the provisions of any Act founded on these resolutions shall not exceed the sum of $400,000.

Sir THOMAS WHITE: It may be helpful to the committee if I give a brief explanation. Provision is made for the payment of a bounty not exceeding two cents a pound on zinc or spelter produced in Canada from zinc ores mined in Canada. The legislation will not apply when the price received for zinc by the producer is eight cents or more per pound. It will not apply during the period of the war, or after July 31, 1917. That is to say, the legislation is confined to the period between the termination of the war and July 31, 1917. This legislation is in pursuance of a promise which was given by the Government in August of last year to producers of zinc in Canada with the object of providing for the refining of pure zinc in the Dominion. An extraordinary condition prevailed at that time, and, as a matter of fact, still prevails. After the outbreak of the war an unusual demand arose for zinc. To give the committee an idea of the character of that demand, I may say that in 1914 the export of zinc in pigs, bars, plates, and sheets from the United States amounted to only 4,000,000 pounds, whereas, in 1915, the exports had risen to 256,000,000 pounds; that is to say, the demand for zinc from the United States, where the zinc of this continent has been refined, was increased sixty-fold in a period of one year. The price rose from about 8 cents a pound, which was, I think, the price prevailing before the war broke out, to 40 cents a pound in 1915. It was brought to our attention last summer by the Shell Committee that the Canadian manufacturers of brass cartridge cases were unable to obtain pure zinc for their purposes. At that time no zinc was being refined in Canada, with the exception of that being produced by a small experimental electrolithic plant at Trail. The output of that plant was about one thousand pounds, or half a ton a day. As the result of the shortage in zinc, and of the inability of our manufacturers to obtain the necessary supplies for the manufacture of brass cartridge cases, there was a great delay in their output, and the matter became quite serious. We took it up with the view of seeing whether any action on our part would prove an incentive to the zinc producers of Canada, the Consolidated Mining and Smelting Company at Trail, and the Weedon Mining Company of Quebec, and others, to establish plants to provide zinc in Canada at reasonable prices for the purposes of the Shell Committee. After several conferences the Government determined upon this legislation, and, accordingly, a promise was given to the zinc producers in Canada. As the result of that promise, the Shell Committee was enabled to make a contract with the Consolidated Mining and Smelting Company of Trail for 8,000 tons at the price of 15 cents per pound, with an option upon 8,000 additional tons at a price of 12½ cents per pound.

In consideration of the undertaking which the Government gave to introduce this legislation providing for a bounty, the Consolidated Mining and Smelting Company undertook to put in the necessary plant to produce zinc at the rate of 25 tons per day, beginning not later than five months from the date of the acceptance of their offer by the Shell Committee. In a word, therefore, the result of the promise which was given by the Government to introduce this bounty legislation, is that the Shell Committee, and the manufacturers of brass cartridge cases in Canada, have been enabled to obtain domestically a supply of pure zinc at 15 cents per pound at a time when pure zinc was selling in the United States at 40 cents per pound. I think that the price of pure zinc in the United States to-day is about 30 cents per pound. I do not think that any further explanation is necessary, as the resolution is fairly plain in its terms.

Mr. DEVLIN: In view of the promise of the bounty, have many manufacturers given the assurance that they will manufacture this smelting zinc?

Sir THOMAS WHITE: There were two companies I have mentioned, the Consolidated Mining and Smelting Company at Trail, and the Weedon Mining Company in the province of Quebec. I am not aware at present of any others, but we made the announcement broadcast through the press, and sent a copy to all those engaged in the zinc mining industry in Canada.

Mr. GRAHAM: There will not be much paid under this legislation at present?

Sir THOMAS WHITE: I am glad my hon. friend has raised that point. I overlooked

mentioning the reason why it was considered necessary that this bounty should be given. It was this: the producers of zinc were unwilling to establish an expensive plant in view of the possibility of the war coming to an end soon. They were quite content with the price which could be obtained during the war, but what they feared was that if the war should come to an end in the early future, the price of zinc would at once drop and an expensive plant would become unprofitable. They were content to establish their plant should the war last as long as the 1st of July, 1917; so that the contingencies which they had in mind have been provided for in the resolution before the Committee.

Mr. DEVLIN: Did they ask for any advance on their contract?

Sir THOMAS WHITE: At the outset—I am speaking now from recollection, but I am certain that I recall accurately—there was a proposal that the Government should make an advance for the purpose of defraying a part of the cost of the plant. That was not regarded favourably, and the bounty resolution took its place as being more satisfactory.

Mr. SINCLAIR: Is it understood that the output of the mines, or the product of this industry, will be confined to Canada or to the use of the Allies during the war?

Sir THOMAS WHITE: The legislation is general in character, but the Shell Committee was, as I stated, able to make a contract for 8,000 tons at 15 cents per pound at a time when the price in the United States was 40 cents per pound, with an option upon a further 8,000 tons at a price of 12½ cents per pound. I was assured by the Shell Committee at the time that the arrangement which they had made was perfectly satisfactory to them, and, so far as I have been able to learn, there is now no danger of the manufacturers of brass cartridge cases being short of pure zinc.

Sir WILFRID LAURIER: We had legislation of this nature some years ago. Has it expired?

Sir THOMAS WHITE: My right hon. friend is probably thinking of lead.

Sir WILFRID LAURIER: Did that legislation not apply to zinc also?

Sir THOMAS WHITE: My right hon. friend may be right, as his memory is usually good, but I do not recall that it applied to zinc. There is legislation relating to lead very similar in character to this; that is to say, it provides for a bounty on a sliding scale.

Mr. GRAHAM: As I understand it, this merely guarantees to the producer a certain price to a certain date; that is, that the zinc will not go below a certain price. If it remains at a price of over 8 cents per pound, the producer will get no bounty, but should the war cease before 1917, and the price recede to 6 or 7 cents per pound, he would get a bounty.

Sir THOMAS WHITE: Yes.

Mr. J. G. TURRIFF (Assiniboia): I would ask if this is the beginning of a movement on the part of the Government of Canada to deal with the question of handling Canadian ores in Canada, or is it merely a small matter dealing with the production of zinc and guaranteeing a certain price to the zinc manufacturers. It seems to me that this war has shown us that we are very much behind the times in Canada in our general methods of dealing with our mineral products. There is no question that Canada is one of the richest countries in the world in respect to minerals, and there is no doubt also that during the years that we have been mining and shipping our ores abroad, chiefly to the United States, to be handled, we have lost millions and tens of millions, and, I suppose, hundreds of millions of dollars.

Consider what has occurred in the Cobalt country since the camp was discovered some twelve or thirteen years ago. There was charged, on the average Cobalt ore, over $200 per ton to the men who took out the ore and shipped it. There were no proper facilities for dealing with the ore in Canada. The mine owners had to pay the freight on the ore to New York and he had to take practically what was given to him. All the Cobalt ore carried a large percentage of nickel and cobalt, both of them extremely valuable metals, and in most cases the owner of the ore not only did not get anything for the nickel or the cobalt, but if there was more cobalt than nickel, or more nickel than cobalt, he was paid nothing for either, but he was fined so much a ton because the refiners claimed that it cost more to smelt or refine the silver product on account of the presence of these other metals. In many cases the loss of nickel and cobalt amounted to a great many dollars per ton. There is absolutely no shadow of a question that the two big smelt-

ing concerns in the United States saved all these by-products and got an extra profit out of them over and above the large amount that they charged the owner of the ore for taking out the silver. In most cases the ore would run from 1,500 to 6,000 ounces of silver to the ton, but the owner only got 93 or 94 per cent of the silver, and he did not get anything at all for the by-products in the ore, which in many cases amounted to $5 or $10 per ton.

I would like to take this opportunity to point out that something should be done to improve this situation. It is a matter worthy of consideration as to whether the Government should not give some assistance to put the necessary plants up in Canada where all Canadian ores could be treated without having to send them abroad. The same thing applies to nickel, only very very much more so. I

4 p.m.

was taken to task in this House because I make the statement some weeks ago that our nickel ore produced by the Canada Copper Company, a subsidiary of the American Nickel Company, was sent in the form of matte to New Jersey and there refined by the International Nickel Company, which is largely a German concern, and that a great deal of our nickel was going to our enemies during this period of war. I pointed out that we had no possible control and that we could not control the nickel once the ore, or matte, went outside the boundaries of Canada. The hon. the Solicitor General (Mr. Meighen) took me to task for the statements I had made, sayng that they were all wrong and that I was wrong in particular as to the amount of money that the International Nickel Company was making. My hon. friend the Minister of Finance (Sir Thomas White), a few days after that, confirmed to a large extent my words, because he showed that the International Nickel Company was making twice as much as the Solicitor General had stated. I want to draw the attention of the House to something that was said in the British House of Commons on this subject at that time. I have here a sessional paper containing speeches delivered in the British House of Commons dated January 18, 1916. I want to read one or two short extracts from a speech made by Mr. Hewins, who is a very prominent member of the British House, and who was a member of a commission appointed to look into this matter some time ago. Here is what he says in part about the way in which our ores are handled:

[Mr. Turriff.]

Let me take one important question which plays a very important part in the whole scheme of German finance—I mean the control of our raw material and especially of the shipment of the ore produced in the British Empire. I do not wish to go into any lengthy details about this important scheme, but whether you take the zinc concentrates in Australia, nickel in Canada, or the whole series of metals, I am really giving way no secret when I say they are virtually controlled by German syndicates and have been for years. One of the most effective branches from that point of view of German activity for many years past, in support of the European system which I have described, has been to provide for the security of her manufactures by securing this control, and everybody knows at the present time that, if you once smash the power of these German syndicates, you inflict a most severe blow, not only upon the economic power of Germany, but in particular on those financial methods which they have applied and still apply to support their policy.

I believe the Government are fully acquainted with the development of this important question in the Empire. If I am not mistaken, as long ago as last December twelve months, the Australian Commonwealth approached the Government on the subject. I am speaking entirely from memory, but it certainly was something like that. In Canada measures have been taken in regard to this particular case, and I do suggest that one of the first things the Government might do is not to act alone but to act in consultation and collaboration with the Dominion Government to see that these resources of the British Empire, of which in many cases we have almost a monopoly, are no longer exploited in the interests of our enemies, and we should tell the Germans quite frankly that this state of things is going to cease once and for all. I agree no nation can say, or would dream of saying, that we will for all time make a monopoly of the raw materials which we produce in our Empire. We cannot say that but I think we are entitled to say that the resources of the British Empire shall be held, controlled, manipulated and used by Britishers first and foremost. Very few things would excite more interest and enthusiasm in the Empire than a definite resolve on the part of the Government that at once and forthwith steps shall be taken to secure that result.

If that does not confirm every word, and more than every word, that I spoke in regard to our nickel going to the United States, its going to Germany, and its being controlled by Germans, then I do not know where you could get more confirmation. I thought that when we were on this subject it would be a good time to bring this matter to the attention of the Government. I am doing it partly for the purpose of proving that what I said a month ago was practically correct, but more particularly, that a better state of affairs might be brought about in Canada, so that in the event of another such war as this breaking out we should not be in the position we are in to-day. Minerals are of the utmost importance in manufacturing war material of different kinds, and

if, when this war broke out, we had prevented our Canadian nickel going to Germany, prevented them from using it in making battleships, big guns, small guns, and rifles, we should have been in a position almost to cripple Germany. But we were not in that position until a month or so ago, when after I brought this matter up in the House the Government stopped, to a certain extent, the export of nickel to the United States. But the Government should go further. This war will be over, I hope, in the near future; it will be over before very long, anyway, and we could take this step now as a war measure. Now is the time, when we have an absolute monopoly of nickel, to see that it shall be refined in Canada, and if all our nickel was refined in this country we should be able to control its export in time of war. Assistance of this kind could be given by the Government at a very small cost, and I trust the Minister of Finance will take the matter up with his colleagues, and see if the Government cannot make a beginning along the lines I have suggested.

Mr. R. F. GREEN (Kootenay): I desire to say just a word or two in connection with the proposal for giving a bounty on zinc produced in the Dominion of Canada. Some twelve years ago, I think it was, the Government then in power, under the leadership of Sir Wilfrid Laurier, were wise enough to introduce a measure granting a bounty on lead produced within the Dominion. The giving of that bounty has had a very beneficial effect on the lead industry of our country. It has given the producer the assurance of stability so far as the market is concerned, and it has not cost the Government a great deal. If my memory serves me right, the amount that was originally set aside for bounty purposes was $5,000,000, and the period within which it could be earned was five years. At the end of the five years during which the lead producer was probably experiencing the worst time since the bounty was first given, something like half the $5,000,000 was still unearned. The period was extended for another five years, and at the end of that time there was still left just a little short of $1,000,000. The present Government extended the period still further, until the balance of the bounty should have been earned. I repeat, the bounty has been of great benefit to the lead industry in this country. The Government's promise to give a bounty upon zinc has also had a beneficial effect, enabling zinc producers to establish works for the production of zinc in Canada. I trust the Government will see its way clear at the expiration of this period, if not before, to devise some scheme to enable us to establish zinc production works in Canada large enough to refine all the zinc produced within the country. When those works are established we shall, if they are of the proper kind, be able to compete in the markets of the world. We are producing to-day a certain amount of refined zinc in Canada, and will continue to produce it just as long as the prices remain high, say over eight cents a pound. I am sorry to say, however, the present method of producing zinc in Canada is not so economical as the method in which it is produced in the United States. It has been produced in the past in the United States, Belgium and Germany, by what is generally known as the Belgian process.

Our zinc has been produced by the electrolytic process, which will always be more expensive than the Belgian process. The Belgian process is the cheapest known process in the world to-day. As I understand it, the zinc is driven off in fumes; those fumes are gathered in long flues of one description or another, and the old bag process enters very largely into it, the flues being choked with ordinary bagging, in which the zinc is collected as the fumes cool. That is a very economical way, and will always be cheaper than the electrolytic process. I hope the Government will find some way of assisting the refining of zinc in this country, so that eventually all the zinc we produce will be refined in Canada, and I trust with the hon. member for Assiniboia that the same policy will be followed with regard to nickel, copper and other metals. The hon. gentleman mentioned that producers at Cobalt lost when a certain percentage of different ores were present in their first raw product. I am afraid that will always enter into the question. Most of the lead, silver, zinc and other ores produced in my part of the country were at one time treated at the large smelters in the United States, where they were treated on the same basis as the United States ores, and the situation, so far as zinc ores are concerned, is very similar to that outlined by the hon. member for Assiniboia. I might say that our lead ores contain a certain percentage of zinc, iron, silver-lead, and other metals, and any of these lead ores containing over 10 per cent of zinc are penalized to the extent of 50 cents a unit per ton, and as

the hon. member for Assiniboia pointed out with regard to nickel, not only are they penalized for the zinc contained in the ore, but they get nothing for the zinc contents and are paid only for the silver-lead contents. The same practice is followed with regard to American ores, mined in American mines and smelted in American smelters. Therefore, any assistance that this Government would give would not do away with that particular handicap, because that is a condition that must be overcome. If there is a certain percentage of material that is foreign to the one that is being treated or to the bulk of the material of which the ore consists, that must necessarily be removed in some way before the ore can be treated, and therefore there must of necessity be a penalty after that maximum percentage has been reached. Another reason why I think the Government should encourage the reduction of ores within this Dominion is because in my opinion, we should take care of all our natural resources that we can possibly handle; that we should polish them up and put them in the highest possible state of perfection so that we can market the finished product, thus getting the greatest value out of them. In that way not only would we obtain a higher price, but the money spent in refining and finishing the ore would be spent in the Dominion amongst our own people and would be the means of establishing large industries in this country, and after the refining process was completed, we could sell the finished product in the markets of the world. I hope that the Government will take steps to ensure that every pound of crude metal produced in Canada is refined in the Dominion and placed on the markets of the world as the finished product.

Mr. NESBITT: Apparently, by the resolution, the hon. gentleman is proposing to give a bounty only when the price is below a certain fixed figure, which means that below that figure the smelting company or corporation that proposes to undertake smelting can not make the business pay. My hon. friend (Mr. Green) has told us about using up the raw material in this country. Everyone in the mining business wants to use the raw material in this country if he can get a market for the finished product. Our natural resources have been in existence since the glacial period, and what the people want before they put their money into these industries is a market for the product. The Government, as I understand it, cannot afford to build up a market for zinc or spelter; the smelting companies have to find their own markets all over the world. I would like to ask the minister why, if we have zinc ores in the West, it is necessary to give a bounty so as to enable those who mine zinc ores to make a profit. My hon. friend (Mr. Green) and my hon. friend from Assiniboia (Mr. Turriff) talk about the enormous quantities of raw material in this country. Why is it necessary to give a bounty if there is such a profit on these things, because we all know that this year spelter has reached an enormous figure? We all know that spelter has risen in price from six cents to twenty-eight cents a pound. I want to see if I am right in my proposition that the reason the minister proposes this resolution is that the corporation or whoever is going to go into the manufacture of spelter cannot make a profit under a certain price, and that to guard against the spelter going below that price he is going to give them a bounty of two cents a pound so that they will be in a position to mine at a profit.

Sir THOMAS WHITE: I am sorry my hon. friend was not in the House when I made what I regarded as a very full explanation. I shall, however, be glad to go over the same ground again.

Mr. NESBITT: Briefly, please.

Sir THOMAS WHITE: Last summer, when we gave the promise respecting this legislation, the only zinc being refined in Canada was by a small experimental plant at Trail which turned out about a thousand pounds or half a ton a day. They employed the electrolytic process. The war created such a demand for this zinc that the exports of zinc products from the United States increased sixty fold and the price rose as high as forty cents a pound. It was brought to our attention by the Shell Committee that the Canadian manufacturers of brass cartridge cases could not obtain pure zinc for their work, and there was great delay in consequence in their output. We called a conference of zinc producers, two companies being represented, as well as the Shell Committee and representatives of the Mines Department at Ottawa, and the whole situation was considered pretty carefully. The producers were unwilling, owing to uncertainty as to the duration of the war, to make a large investment. They were apprehensive that, if

the war should come to a sudden end, the price of zinc would drop to 5 or 6 cents a pound, and that they would lose their investment in their plant. It was to guard them against that contingency that we promised this legislation. My hon. friend will see from the resolution that the operation of the measure is confined to the period between the conclusion of the war and July 31, 1917. They felt that if the war lasted as long as that they would make sufficient profit in the meantime to justify them in the establishment of their refineries. As a result of the action taken by the Government, the Shell Committee was enabled, on behalf of the Imperial Government, to enter into a contract with the Consolidated Mining and Smelting Company at Trail for 8,000 tons of zinc, at 15 cents a pound, to be produced at the rate of 25 tons per day. This was a reduction of 25 cents on the then prevailing price, with an option of a further 8,000 tons at 12½ cents a pound. The object, therefore, was to ensure the zinc producer of the continuation of price for such period as would justify him in establishing his plant.

Mr. NESBITT: Then they satisfied you that they could not produce spelter at 6 cents a pound?

Sir THOMAS WHITE: There is a very limited market in Canada for zinc and spelter, and with the expense of the electrolytic process it was quite clear that there was no chance whatever of their making a large investment for the purpose of going generally into zinc production unassisted by bounty legislation. In answer to my hon. friend from Assiniboia (Mr. Turriff), I may say that this legislation is of a temporary character. It arose out of a situation in which there was a real shortage of zinc in Canada. The larger question to which my hon. friend from Assiniboia and my hon. friend from Kootenay have referred is one of the most important in Canada; that is to say, the treatment in Canada of Canadian ores. It is by no means as simple a proposition as appears upon the surface, because many considerations enter into the question which are not obvious at first sight. One of them is touched upon by the hon. member for North Oxford. The question of tariffs also plays a certain part. It is perfectly plain, however, that since the outbreak of the war there has been a growing feeling in favour of the refining in Canada of Canadian ores, especially those products which may be needed in time of war. I think that not only Canada but the Empire has come to realize as never before that situations may arise in which the nation that produces within its own borders the materials necessary in war times has a decided advantage in war. It is a question that will engage more and more the attention of the public and of legislators as time goes on. We are in the midst of war; our expenditures are very heavy, and they will increase, as I have stated on more than one occasion in this House. But the whole question of our mineral production and of the finishing in Canada of our mineral products is one that will engage my most earnest attention and the attention of the Government within the next year or two. It is clear that Canada has immense mineral resources, capable of almost unlimited development; and, so far as I am concerned, I shall certainly not be wanting, and I believe the Government will not be wanting, in giving consideration to a policy which will lead to the development of those resources.

Mr. NESBITT: The community that I represent are very strongly opposed to bounties—whether wisely or unwisely I would not like to say at the moment. If my hon. friend means by "the encouragement of production from raw material in Canada" that the Government are going into the bounty business again, I think he will find very keen opposition from the farming community of the country.

Resolution reported and concurred in.

Sir THOMAS WHITE thereupon moved for leave to introduce Bill No. 94, to provide for the payment of bounties on zinc produced from zinc ores mined in Canada.

Motion agreed to, and Bill read the first time.

SUPPLY.

The House in Committee of Supply, Mr. Rhodes in the Chair.

Prince Edward Island railway, $613,100.

Mr. PUGSLEY: The hon. member for Kings, P.E.I. (Mr. Hughes) was obliged to leave by the train. He asked me to request the minister to allow this matter to stand.

Mr. REID: We usually have an understanding that one item should be allowed to stand, and that on that item the hon.

gentleman can discuss the Prince Edward Island railway, or canals, or anything relating to the department.

Mr. PUGSLEY: One item will be allowed to stand?

Mr. REID: Yes.

Mr. PUGSLEY: Before we go on with the discussion of this item, perhaps the Acting Minister (Mr. Reid), would be good enough to let me know as to the correspondence concerning the operation of the Transcontinental railway by the Grand Trunk Pacific. The hon. gentleman said that he would look into the matter and bring down the correspondence.

Mr. REID: Certain of the correspondence was brought down.

Mr. PUGSLEY: That only relates to the change of grades, but the Acting Minister will remember that in previous sessions I called attention, as I did this session, to the fact that when the late Government was in power the president of the Grand Trunk Pacific Railway Company had offered to take over the Transcontinental by sections as completed, to put on rolling stock to the satisfaction of the Government, and operate the road to the satisfaction of the Government; the accounts were to be audited by Government officials, and, if there should be a profit upon the operation, that profit would go to the Government, and if a loss the Government would bear the loss, but it should be added to the cost of the railway upon which the company would pay interest. It is upon that subject I wish to know if there has been any correspondence. The Minister of Railways assured the House that he would take up that subject and see if the Grand Trunk Pacific Railway Company was still prepared to enter into such an arrangement.

Mr. REID: The arrangement for the taking over of the uncompleted sections, if I understand aright, was made with a view of taking over the different sections before the road was completed.

Mr. PUGSLEY: Yes, under the statute there is provision for it.

Mr. REID: Before it was completed. But before that was done, they came to a decision to appoint Sir William Whyte as an arbitrator, and on his arbitration they took over the portion between Winnipeg and Superior Junction. That was done under the award of Sir William Whyte. Of course, that is passed and gone, and the road was completed, so far as the Government was concerned, and the Grand Trunk Pacific was asked to take over the whole road as a completed road. That was in March of 1915.

Mr. PUGSLEY: Was that by letter?

Mr. REID: Yes, the correspondence was brought down. I have here, in addition, the final letters in which the Grand Trunk Pacific were asked and refused to take over the road. Perhaps I had better read these last two letters. The letter from the minister is as follows:

25th March, 1915.

Dear Mr. Chamberlain:

As intimated to you in previous correspondence the eastern division of the National Transcontinental railway is completed within the meaning of section 20 of the agreement between His Majesty the King and the Grand Trunk Pacific Railway Company, dated 29th day of July 1903, scheduled to the National Transcontinental Railway Act, chapter 71, of 3 Edward VII, and the said division is ready for operation.

I find a reference in your correspondence to certain additional works still under construction by the Transcontinental Railway Commission, which additional works it was contemplated by the commission and by your company would ultimately be used in connection with the road as now completed. The Government, however, having been advised that the eastern division, for purposes of operation, has been reported by the chief engineer of the Transcontinental Railway Commission as completed and ready to be leased, is of the opinion that it is in the public interest that such lease be now entered into. You will readily understand that were any other interpretation as to date of completion to be placed upon the agreement with your company it would mean the postponement for a very considerable length of time of the taking over of this extensive line of railway by the Grand Trunk Pacific, with results that might be incompatible with the public interest. Such a postponement would be to a date very hard, if not impossible to determine, as in one sense a railway can never be said to be complete. The responsibility for such a postponement I must decline on behalf of the Government to take.

The Government has under section 15 of this agreement ascertained the cost of construction, in the manner therein provided, and in so doing have included only such expenditure as has gone into work on the eastern division as now completed and ready to be leased.

I therefore request that the lease referred to in sections 6 and 20 of the above mentioned agreement be entered into. The Government has had prepared a form of lease embodying the provisions required to be included in the same by statute and by agreements between your company and the Government. The rental reserved is based on the cost of construction ascertained as aforesaid. This lease I now hand you on behalf of the Government. You will observe attached to the form of lease is a Schedule B, which schedule should contain a description of the rolling stock marked and assigned by the company to the eastern division of the National Transcontinental railway. I trust that such

rolling stock as the statute directs has been provided and assigned accordingly, and as particulars of the same are now not in our possession, I would request that the schedule be duly filled in by you.

On behalf of the Government I beg to request that this lease be executed by your company and assuming that the schedule as so filled in will represent rolling stock fulfilling the conditions of the agreement, and provided and assigned as therein set out, I undertake that this lease will be promptly executed on behalf of the Government.

It has been and is my desire that there be nothing contained in the lease as drafted and now presented not strictly provided for by statutory requirements, and nothing omitted directed by statute to be included. This desire I believe is lived up to in the form of lease enclosed. Should, however, in your opinion the form contain any feature to which reasonable objection can be taken, or omit any necessary provision, I am prepared on behalf of the Government to confer with your company and to endeavour by every proper means to come to a common basis, and I will make every effort tc do so consistent with the requirements imposed on us by statute.

That you may have before you the method by which the cost of construction, and consequently the annual rental, is arrived at, I am enclosing you a copy of the report of our auditors thereon and of the schedules thereto annexed.

Yours very truly,

(Sgd.) F. Cochrane.

E. J. Chamberlin, Esq.,
General Manager,
Grand Trunk Pacific Railway,
Montreal, Que.

The reply to that was dated April 27, about a month later, and is:

Grand Trunk Pacific Railway,

Montreal, Canada, April 27, 1915.

Dear Sir,—I duly received your letter of 25th ultimo enclosing certain documents, including a form of lease of the eastern division of the National Transcontinental railway, which you requested should be executed by this company.

After giving your communication and enclosures careful consideration, I beg to state I cannot see my way to ask our directors for authority to execute the lease. Among the reasons which have influenced me in reaching the decision indicated are:

(1) The great increase in the cost of construction of the eastern division beyond that in contemplation by the parties at the time the agreement of July 29, 1903 was entered into.

That the cost as now computed and upon which the company is asked to pay interest by way of rental is greatly in excess of that estimated in 1903, appears to be admitted. How this largely increased cost has been occasioned has been the subject of investigation by a commission appointed by your Government on the 29th day of January, 1912. The report of that commission was submitted to Parliament last year. I do not think I need do more than call attention to it and to the official record of the debate which followed its submission. I might however, add that to my mind this large excess of cost over the estimate might have been to some extent avoided had our view of the meaning and intention of clause 7 of the agreement of July 29th, 1903, been accepted. That clause, as you are aware, provided that the construction of the eastern division should be subject to the joint supervision, inspection and acceptance of the chief engineer appointed by the Government and the chief engineer of the company. In order that full and practical effect might be given to this provision, the company suggested at the outset that all contracts should contain a clause declaring that the expression "chief engineer" meant the chief engineer of the Government and the chief engineer of the company acting together, and provide that payments to contractors should only be made upon the joint certificate of both engineers. Our suggestion, was however, not adopted. Mr. Gordon Grant, chief engineer of the Transcontinental Commission would seem to appreciate the purpose of clause 7 by asking as he did in his letter of 2nd February last that Mr. H. A. Woods, our engineer, should sign jointly with him a formal acceptance of the line.

The cost was further added to by the imposition of a duty upon steel rails shortly after the agreement of July 1903 was entered into.

(2) The non-completion, up to the present of the eastern division in accordance with the provisions of the agreements of July 29th, 1903 and February 18th, 1904.

The company takes the view that the eastern division is not yet completed in accordance with the agreements. The claim of the Government to the contrary rests upon Mr. Grant's statement to that effect, which, however, is not acquiesced in by Mr. Woods. Mr. Grant admits that large sums must yet be expended before the line will be completed. I refer to his letter of March 24th last to Mr. A. Bell of the Department of Railways and Canals, with which he submitted statements showing estimated expenditures for work still uncompleted amounting to several million dollars. The letter addressed to you by Messers Bell and King on the 24th ultimo also shows quite clearly that they do not regard the line as completed. In that communication they say:

"The estimated cost of the line when all the works now under way are completed, which completion is contemplated on the 31st December, 1916, will be $179,586,877.35 as set out in statement "A" hereto annexed....The above amount may, of course, be very largely increased by reason of court decisions."

The following paragraph appears in their letter to you of the 23rd ultimo:

"We beg to call your attention to a letter received from the Solicitor General, a copy of which is hereto attached, from which it appears that the 'cost of construction' of the eastern division as completed on the 31st December, 1914, within the meaning of section 20 of the agreement scheduled to the Act of 1903 should not include expenditures made on and in respect of certain works which were still under construction. The result will be that the 'cost of construction as a basis upon which to ascertain the rental to be paid by the Grand Trunk Pacific Railway Company at this date will be very considerably less than the actual cost upon completion of the said additional works now under way."

If, as appears from the foregoing, it is intended that the company shall eventually pay interest upon the cost of the works still under construction, those works must necessarily be regarded as part of the eastern division, other-

wise the company would be under no such obligation in respect of them.

I would also point out that if the company were to accept the proposed lease we would be called upon to at once assume those payments in connection with Winnipeg terminals which under the agreement of March 1, 1907, between His Majesty, the Canadian Northern railway, and the Company, are to be assumed and borne by the Government until the lease of the completed eastern division has been entered into and its operation undertaken by the Company. The amounts involved are by no means inconsiderable.

(3) The several portions of the eastern division were not constructed in accordance with the Act of 1904, or with sound business principles and as the result, the completion of that portion most useful to the Company and to the country and first required, namely, between Winnipeg and Cochrane, was delayed, to the great prejudice and loss of the Company.

The Company has throughout asserted its claim for loss of revenue by reason of this delay, and takes the position that such claim should be considered and dealt with before it is called upon to execute the lease.

As early as 1908, and at frequent intervals subsequently, the late Mr. Hays called the attention of the Government to the fact that delay in the construction of that portion of the eastern division would mean serious loss to the Company, and referred to section 10 of chapter 24 of the statutes of 1904, which provided that the work of construction of the eastern division should be commenced simultaneously at Moncton, at Quebec, at the junction of the eastern division with a branch to North Bay, and at Winnipeg. Notwithstanding Mr. Hays' remonstrances against delay, the completion of the portion of the line in question has been much delayed, as a result of which the Company has for a number of years not been able to handle over its line and the Grand Trunk railway the large volume of traffic moving between Ontario and the West. In the meantime, interest on the cost of the Company's line west of Winnipeg has had to be paid and to be charged to capital, whereas but for the delay referred to a very considerable portion of that interest could have been earned. For the same reason the earnings of the Company's branch from Lake Superior Junction to Fort William have been greatly reduced. The actual loss to the Company and to the Grand Trunk resulting from this lack of all rail connection between Ontario and the West amounts to a very substantial sum indeed, and I submit that our claim in respect thereof should be fully dealt with and adjusted before the Company is asked to assume the heavy obligations under the proposed lease.

I beg to remain,
Yours faithfully,
E. J. Chamberlin.

The Hon. Frank Cochrane, M.P.,
Minister of Railways and Canals,
Ottawa.

Mr. Cochrane replied in the following words:

29th April, 1915.

Dear Sir,—I beg to acknowledge the receipt of your letter of April 27, stating that you cannot see your way to ask your directors for authority to take out a lease of the eastern division of the National Transcontinental.

Yours truly,
(Sgd.) F. Cochrane.

E. J. Chamberlin, Esq.,
President Grand Trunk Pacific Ry. Co.,
Montreal.

I think that is all the correspondence.

Mr. PUGSLEY: Then we may take it for granted that there is no correspondence showing any inquiry on the part of the Government as to whether or not the proposal made by Mr. Hays to the late Government, to which I called the attention of the House, had been met. There is no correspondence dealing with an interim lease, pending the completion of the whole line?

Mr. REID: I understand that, unless anything of that kind was burned, there is no correspondence.

Mr. GRAHAM: I would point out that the first reason given by the Grand Trunk Pacific is based on the brief placed in their hands by this Government in the form of the Lynch-Staunton report, which is what I told the Government would happen. They paid $100,000 for a report which provided the Grand Trunk Pacific with a brief and with an additional reason why they should not take over the line. They cite the report and the speeches of members of the Government, and of those supporting it, in favour of their contention that the line cost more than it should have cost, and, consequently, they would not take it over. That is one reason. The second is one to which we have referred several times, that is, that the road is not yet completed. There is no question that the road is not yet completed under the meaning of the statute or of the agreement. Sir William White said that the shops were part of the eastern division of the Transcontinental, but the shops at Quebec are not yet completed. There is a vote for the completion of the works of the eastern division of the Transcontinental this very session, so that there is no possible escape from that contention of the Grand Trunk Pacific.

The other contention, that the road has not been constructed under the joint supervision of the company and the Railway Commission, is not well founded. I submit that the records will show that if there was a sinner, in the matter of joint supervision, it was the Grand Trunk Pacific, and not the Railway Commission or the Government. One of the chief difficulties we had was—I think I have stated it before—

that in the time of the late Mr. Hays the Grand Trunk Pacific declined at first to make inspections and to approve or disapprove of certain portions of the road as the contractors completed their work. For example, a large contractor would have a certain portion of the line to build, and he would employ many sub-contractors. When the sub-contractor completed his work, and the chief contractor submitted it for approval, it was altogether unreasonable to allow a matter of that kind to stand. It had to be decided, because the men had to get their pay, the sub-contractors had to be paid, and the chief contractor had to get his pay from the Government. The company took a great deal of urging before Mr. Hays consented to have those differences of opinion decided every thirty days, and to have the approval or disapproval of the engineers. It is not true that the work was not carried on under joint supervision, and I make the statement that, outside of some things that were referred to arbitration under the Act, the Grand Trunk Pacific approved of every foot of work done and of every dollar expended up to the time that the late Government went out of power. Consequently, there is no foundation for that objection. I may explain to the committee what the method was. Under the agreement, the road was to be constructed under the joint supervision of the chief engineer of the Grand Trunk Pacific to meet the chief engineer of the Board of Railway Commissioners. At one time I think it took me longer to get them together and then not the chief engineer, but the assistant chief engineer, Mr. Wood, was sent.

I do not know whether the company is hanging anything on the difference between the chief engineer and the assistant, but the company sent the assistant. These men met together and when they could not arrive at a decision it was referred to a board of arbitration composed of these two and a third who was, as a matter of fact, Sir Collingwood Schreiber, who is in the Government service. The difficulties I pointed out a few moments ago were, first, the delay of the company in meeting the commission, and, next, of the Government in approving or disapproving of the work of construction. After a good deal of discussion, some of which was more or less heated, as will be remembered by those who were then members of the Government, the Grand Trunk Pacific agreed that these difficulties, if difficulties there were, should be settled every thirty days in order that the work of construction could go on. Where the work was approved payment could be made and where there was a question it could either be referred to the arbitrators or put on one side for further consideration. Their contention in that respect is not well founded, because in every case of importance, except those that were before the board of arbitration, and some of those had been decided, the chief engineer or the assistant chief engineer of the Grand Trunk Pacific, had approved of every bit of work done.

I submit again that the Grand Trunk Pacific were not in a position, under their agreement, to take over the road as it was offered to them, and I will tell the committee why. It was to be taken over under an agreement which, as in the form of a statute, was ratified by the Parliament of Canada. It was also ratified by the board of directors and by the shareholders of the Grand Trunk Pacific Railway Company. If the road was not completed, as I think the Grand Trunk Pacific had a right to say it was not under the statute, then they could not, through their president, enter into a lease without the consent of the directors and, I believe, the approval of the shareholders, because it then became a new agreement. The minister will see that Mr. Chamberlin says in his letter that he could not recommend the directors to enter into a lease because he had to report that the road was not completed. If that road had been completed under the statute, without any question, he would have reported that to the directors and they would have given him instructions to lease the road under these conditions. I think the Government have made a grave mistake, first, in making changes in the line—the seriousness of which I will not discuss, as they have been discussed before—and in making any changes at all which gave the president of the company an excuse for not taking over the line. If my hon. friend looks at the correspondence he will discover that when the changes were being made in the curves and grades, the president of the company wrote to the Government stating that if the changes were made he would not take over the line. The Government made a mistake at that time in accepting the advice of the engineers, or those who were responsible for that advice, and in persisting in making these changes, because that was the first intimation that the Government had that the company would not take over the line.

Next, there was no semblance of a com-

pleted line at Quebec under the agreement. There was a certain agreement, and under that agreement is was expressly provided tl at the work must have the joint approval of both the company and the commissioners. The changes at Quebec have not yet been agreed to by the Grand Trunk Pacific. I have had all the correspondence up to a certain time, perhaps preceding the correspondence read to-day. In that correspondence there were references made to certain talks, but it always came back to the point where the Grand Trunk Pacific officials backed away from approval, and the correspondence is rather against approval than in favour of it. That being the case, of course it was clear that the Grand Trunk Pacific were preparing, in so far as they were concerned, not to take over the line. I think the Government made a serious mistake in not proceeding according to the agreement, completing the road and getting the approval of the Grand Trunk Pacific, because the company had intimated that if the plans were deviated from they would not take over the line.

I do not know that I shall say anything more. I think it was a great mistake. The country has suffered by reason of there being no operation of the Grand Trunk Pacific east of Cochrane as there should have been. West of Cochrane there is a fair tri-weekly passenger service from Toronto. Those two travel on the line say that the service is excellent. Commercial men who travel on the line to the West have told me that they get an excellent service over the Grand Trunk Pacific from Toronto all through the West. The roadbed is a marvel to railway men who travel over it, the trains are well run and the accommodation is excellent. But, east of Cochrane there is practically no service. The point I raise is that if the line had been completed according to the agreement, the Grand Trunk Pacific could not have evaded taking it over. Then you may say that they could not afford to run it. There was a clause in the agreement which provided against just such a contingency as that. It was provided that for seven

5 p.m. years after the completion of the line the Grand Trunk Pacific was not to pay the Government any interest, which contemplated a small business for a certain number of years. Having to pay no interest, the Grand Trunk Pacific would have been in such a position that they could have run trains merely at the cost of operation. Then the public would have been in this situation all the way from Moncton to Cochrane, a section which is practically neglected now, that they could have compelled the Grand Trunk Pacific to give a fair service. The company are not so compelled, and they take refuge behind the plea that there is no traffic. That view would not have held with the Board of Railway Commissioners, because in Canada, where roads have been publicly aided, even if the traffic is light, they must accommodate the public. A company cannot stop running trains, even on one of our old lines, if the reasonable accommodation of the public is interfered with. The Board of Railway Commissioners have compelled companies, which did not want to run trains, to give a service because the public was suffering by the stoppage of these trains. I think again that the Government have made a great mistake in having left a loophole for the Grand Trunk Pacific by enabling them to say that they had not completed this line according to the agreement, because if they had they would have been in a position to have compelled the company to take over the road, and the people would have been having the benefit to a much greater extent, particularly east of Cochrane, of the vast investment of money that has gone into this great enterprise. The object of the construction of the line is being defeated. East of Cochrane there is only a local service. Quebec is on a side street and not on the main line at all. East of Cochrane it is merely a local service, and, instead of being a part of the great continental railway that it was intended to be, it is being used merely as a local road, with occasional trains, and no service worthy of the name is being given. That refers also to the Maritime Provinces, and I might express the opinion that it is useless to spend the millions which are being spent in Halifax, St. John, and at other points for this great ocean to ocean service if it is not going to be conducted as a through line.

Why develop Canadian ports at Halifax, St. John, Quebec and Montreal, if we are not going to do our best to bring the traffic of the West to them? What happens and what must happen in winter? The Government is running the line from Toronto in connection with the Grand Trunk, and it runs over the Temiskaming and Northern Ontario. Any freight which comes down, and as to which the Grand Trunk has any say, will not be taken over the Transcontinental

from Cochrane east. It will be brought from Winnipeg to Fort William down to Cochrane, then to North Bay, and then, if it has to go east, the Grand Trunk will take care of it at North Bay, and turning east at Scotia Junction, send it on to Portland or Boston, and not to a Canadian port. That will not be serving the object for which this vast amount of money was expended. I had not the honour of being in the House when this measure was put through, but I have read the debates, and everybody knows that a great deal hinged on the development of the ocean ports. While the road was being constructed my hon. friend will remember that time and again we discussed methods of making the Grand Trunk Pacific, when it took over the line take the traffic to Halifax and St. John. But now, when the Government, and not the Grand Trunk Pacific, has got the road, it does the very thing we tried to prevent the Grand Trunk Pacific from doing. It is handing over a large portion of the traffic destined for east of Cochrane to Scotia, and it then finds its way to American ports, as the Grand Trunk has no interest in taking it to Halifax or St. John, or even to Quebec. Whatever the Government intends to do, ought to be announced to the public at once. There is great dissatisfaction in the eastern part of Canada over the way this line is being managed. Whenever I discuss this matter the minister says he thinks I am after the manager. The manager and I are as good friends as the minister and the manager, but he thinks I am all wrong, and I am just as absolutely sure that he is all wrong, and we leave it at that. I am not after the manager at all. We must never look at this road from the point of view that it was intended solely for present needs, or to accommodate merely a part of the people of Canada. This road was constructed by all the people of Canada, and we have no right, particularly when the Government is managing it, to direct the traffic at a point half way along the line, and give those on the eastern end of the road no benefit whatever. Quebec is greatly disappointed and so will Halifax and St. John be if the present method of carrying on the road is persisted in. It is said that along the road east of Cochrane there is nothing to induce operation, but we must remember this, and the members from Ontario will bear it in mind, that when the Temiskaming and Northern Ontario road was first spoken of, a great many people laughed at the idea of building a road into a country of rocks, where there never would be any traffic; but the construction of that line has resulted in the opening up and development of the richest deposit of silver ore in the world, as well as cobalt and other minerals. We do not know what may be found along the line of the Transcontinental east of Cochrane, but we do know, on the authority of the Prime Minister of Ontario, that there is along the line of the Transcontinental land of as good a quality as can be found any where in the world, and the only way to let the people know what we have in this hinterland of Ontario and Quebec is to take them along the Transcontinental. What is the good of building the road there and then practically shutting it up? Let the people travel along the line east of Cochrane and get acquainted with the newer parts of Ontario and Quebec, and then we shall see these new parts opened up and developed, and, it may be, the discovery of some hitherto unknown valuable mineral productions. It is the duty of the Government, even more than of the company, to see that this is done, and I again urge the Government, now that they have taken over the road, to see that the line east of Cochrane is not made merely a local line, but that a service is at once established so that a man can board the Intercolonial at Halifax for Moncton, and there be attached to a train that will land him in Prince Rupert, if he desires to go by the Grand Trunk Pacific. That is what the line was intended for, but so long as we keep the eastern portion of the road closed, everybody east of Cochrane is deprived of the benefit for which he pays his taxes, just the asme as people in any other part of the country.

Mr. REID: As regards the non-completion of the line, and that being a reason why the Grand Trunk have not taken it over, the hon. gentleman understands that that objection might be raised at any time for all time to come.

Mr. PUGSLEY: Not at all.

Mr. REID: They could always say that the road was not completed. I think myself that they did not want to take over the road last spring on any terms, and the best evidence of that is that the Grand Trunk Pacific came to us a year ago and asked for assistance for the western portion of the line. The hon. member says that if the road had been completed so that the com-

pany could have taken it over under the lease, the Railway Commission could have compelled them to operate the road. Now we know from experience, and they know, that to operate the road from Winnipeg to Moncton will mean a serious loss every year for a number of years to come. That being so, how could we force them to operate the eastern portion, supposing they had taken over the road, when they had just received a large amount of money to assist the western end of the line. At all events the Minister of Railways and Canals was satisfied, and the correspondence bears him out, that the company would not take over the road at that time. But, be that as it may, it is perhaps not worth while discussing just now. What I wanted more particularly to deal with was the hon. gentleman's remarks regarding the operation of the road. Everybody agrees that the road between Cochrane and Winnipeg has been operated satisfactorily, not only to the people along the line, but to the general public as well. With reference to that portion of the road between Cochrane and Moncton, I think I stated the other evening that conditions there were not the same as west of Cochrane. I admit that it is not a satisfactory service east of Cochrane, and the Government never intended the service to be left in that condition. When the road was taken over, without an engine, car, or equipment of any other kind, we had to take some 75 engines off the Intercolonial and many cars as well. It has been a very difficult matter to get the equipment that is necessary to operate the road from end to end in a way that would be satisfactory to the public. I think I also stated that the Department of Railways and Canals had been trying to arrange a through train service from Halifax and St. John—I am not forgetting St. John, as the hon. member states—to Winnipeg.

Mr. GRAHAM: You did the other night.

Mr. PUGSLEY: Even for small favours we are thankful.

Mr. REID: I also stated that the service between Halifax and St. John and Winnipeg would be arranged at the earliest possible date.

Mr. PUGSLEY: What date is that, may I ask?

Mr. REID: I am just coming to that if the hon. member will be patient. I discussed the matter with the general manager of the road and he told me we would have a through train service between Halifax and Winnipeg, and, of course, that means through to Prince Rupert.

Mr. PUGSLEY: You did not ask him about the through service from St. John.

Mr. REID: Halifax and St. John. I overlooked St. John again.

Mr. PUGSLEY: You overlook St. John pretty frequently.

Mr. REID: I must not do that. The people of St. John are very fine people; they treated me well when I was there, and I would not like them to think for a minute that I have forgotten them.

Mr. PUGSLEY: I think you told them on one occasion, if I remember aright, that if they thought Mr. Pugsley had not made large enough provision for harbour improvements to come to you as Minister of Customs and you would give them millions and millions more.

Mr. REID: The hon. member will remember that since that statement was made, we have been trying to economize.

Mr. PUGSLEY: Things have tightened up pretty considerably.

Mr. REID: We expect to be running a through train service from Halifax and St. John to Winnipeg on or about the 1st day of June.

Mr. PUGSLEY: Of this year?

Mr. REID: Yes, that is what I meant. We expect to run a through passenger service, with pullman cars attached.

Mr. PUGSLEY: Will that be a daily or a tri-weekly service?

Mr. REID: I have not gone into that, but it is altogether likely that we shall run a tri-weekly service. We will, at least, run a service that will be satisfactory. We have ordered cars and we are trying to get more power as soon as possible, and I think that what we have done so far and the arrangements we have made for a through service ought to be satisfactory to the House and to the country. So far as the freight for Quebec and St. John and Halifax is concerned, the hon. member knows that we have been carrying quite a large quantity of freight through to Quebec and to St. John and to Halifax over the Transcontinental via Quebec, where we have a ferry that takes the cars over, and until the bridge is completed, of course, we must use—

Mr. GRAHAM: Does not my hon. friend remember that the other day, when he was making a statement about the Intercolonial, he said that freight coming from the West was handed to the Intercolonial at Quebec, and that that was the reason of the congestion? Is it not a fact that the reason why the Intercolonial receipts are so swollen and there is so much congestion is that the freight that comes over the Transcontinental to Quebec is handed to the Intercolonial and does not continue its journey over the Transcontinental?

Mr. REID: My hon. friend, of course, understands the Railway Department better than I do, as he has had considerable experience in it. The Intercolonial railway has a first class equipment, one that could handle any quantity of freight or passengers between Quebec and Halifax and St. John over the entire system. Then the Transcontinental system was handed over and attached to the Railway Department. There was at once taken away from the Intercolonial 75 engines and a large number of cars to run on the Transcontinental. We had not a single engine or any car at all that we could put on that road between Quebec and Moncton. We could not rob the Intercolonial of any more engines or cars.

Mr. GRAHAM: Could you not run them right through?

Mr. REID: No, because they were required between Winnipeg and Quebec. We had not nearly enough power to get the freight to Quebec; but by getting that freight to Quebec and overworking the Intercolonial equipment, we were able to handle that freight through. That may have been one reason for swelling the Intercolonial earnings; but the hon. member knows that, having taken every engine that we could get to work west, we could not take over any more to put on the Transcontinental. We did use a part of the Transcontinental from Lévis down, using the Intercolonial engines, and if we had had cars and sufficient power to use both lines, we would have used them and we would have received earnings from them. I think that is a fair answer to give to my hon. friend. There is no great advantage in swelling the earnings of the Intercolonial. We want to use both lines to the advantage of the public and of the Government railway system as a whole. If we get the equipment that is already ordered, there should not be any delay of any freight between Quebec and the lower provinces when we have both lines running, and both lines will be used to ensure that the freight is carried through. The whole trouble has been that there has not been enough equipment. If we can get the passenger service and the equipment ready for the 1st of June, I think the public will be satisfied.

Mr. PUGSLEY: Reading the correspondence and listening to the statement of the minister as to what is on file—and I presume he has brought here everything which is of importance—I think it is very clear that the Grand Trunk Pacific are absolutely in the right in reference to the completion of the contract, in claiming that the time has not yet arrived when they can be called upon to enter into a permanent lease for the operation of the road. It might be just as well to read some of the important portions of the correspondence so that they may appear upon Hansard. In this connection I wish to charge upon this Government that, in my opinion, for the purpose of in some way discrediting the late Government, of in some way making it appear, as the Solicitor General stated to the House when the matter was under discussion at the last session, that the Government had not been careful in making such an agreement with regard to the Grand Trunk Pacific which that company could be forced to live up to, and being desirous of being able to say, as they have been repeatedly saying to the people in this country that, owing to some weakness in the contract, this Government had not the power to compel the Grand Trunk Pacific to enter into a lease, and that that company had defaulted in their agreement, this Government, influenced by that desire, have deliberately asked the Grand Trunk Pacific to do what they knew that company were under no obligation to do. They have not approached the matter in a way in which a government ought to approach any important question such as this. They have not said to the company: we will perform our part of the contract and then we will expect you to perform yours. But, before this road was completed, before the contract had been finished on the part of the Government, the Minister of Railways asked the company to enter into a lease which it was not under any obligation to enter into, and which, as the president said, he could not properly ask his directors to authorize.

Mr. REID: I may remind the hon. member that all that is in Hansard of last year?

Mr. PUGSLEY: And it will do no harm to put it on Hansard again.

Mr. REID: No objection.

Mr. PUGSLEY: As one member of the House, and representing that portion of the Dominion which feels that it is being wronged day after day by the action of this Government with respect to the Transcontinental, I feel it my duty to put the matter again before the public and to press it upon their attention in the hope that this wrong may yet be righted. All parts of Canada are interested in having the Grand Trunk Pacific Railway Company undertake the operation of the line from the Atlantic to the Pacific. It is not a matter only for St. John, Halifax and all other important towns in the Maritime Provinces, but the city of Quebec, and a large portion of the province of Quebec and a large part of Ontario, and indeed the whole Dominion, is vitally interested in having one operation of this system, and not a divided operation with the Government in control of the eastern and the company in control of the western portion.

Take the statement of the auditors, Messrs. Bell and King, who, apparently, were appointed by the Minister of Railways to deal with this question of the cost of the road. In the letter which is contained in the return, and which is dated 23rd March, 1915, they say:

> We beg to call your attention to a letter received from the Solicitor General, a copy of which is hereto attached, from which it appears that the "cost of construction" of the eastern division as completed on the 31st December, 1914, within the meaning of section 20 of the agreement scheduled to the Act of 1903, should not include expenditures made on and in respect of certain works which were still under construction. The result would be that the "cost of construction" as a basis upon which to ascertain the rental to be paid by the Grand Trunk Pacific Company at this date will be very considerably less than the actual cost upon completion of the said additional works now under way.

Here was a contract for the completion and equipment of this line from Winnipeg to Moncton. In March, 1915, the Solicitor General seeks to advise the company that the road may be operated, and therefore it must be deemed to be completed, even though most important works regarded both by the Railway Commission and by the company as necessary to the completion of the line are still under construction, involving an additional cost of several millions. So, you have a clear admission that the road was still uncompleted and the work was still going on. But the question apparently was whether the rental was to be paid on the basis of the cost at that date or upon the cost with the additional works under construction. Of course they held that if a lease was to be entered into at that time it should be on the basis of the cost up to that date, leaving the cost of the works uncompleted to be arranged for later. There is a letter from the Solicitor General dated 11th March, 1915, in which he admits, from the statement of the chief engineer, that the Leonard shops were not completed, nor the branch line to those shops, nor the Quebec joint terminals. How could a road be said to be completed until its joint terminals in one of the great ports of the country which it was designed to reach have been completed, I fail to understand. Yet this gentleman who occupies the important position of Solicitor General is trying to make the auditors and the chief engineer believe that the road may be completed under section 20 of the agreement, even though these important terminals which were to form an essential part of the Transcontinental line have not been completed and will cost several millions yet to complete. Nothing could be more absurd. There could be no greater evidence that the Government were simply humbugging, so far as the Grand Trunk Pacific was concerned, and seeking some excuse to proclaim to the country that they had made default to their contract, when it was this Government that had made default, not only in altering the grades but in not completing the line under the contract.

Then we find Mr. Gordon Grant admits that these very important parts of the work have not yet been completed. He admits that in a letter dated March 10, 1915. We have a letter from the Solicitor General on the 6th of March, in which he refers to the statement of Mr. Woods and says that it is to be noted that Mr. Woods appears to base his refusal—that is his refusal to sign

> —upon the claim that the road at present cannot be said to be completed within the meaning of section 20 of the agreement scheduled to the National Transcontinental Railway Act 1903. Mr. Woods, I presume, had in mind certain portions—

—not of certain work outside the agreement or outside the Transcontinental line, but

> —certain portions of the works—

That means certain portions of the Transcontinental line.

—which at present, or rather on 31st December, 1914, the date up to which audit is being made, may be said to be under construction. I have always understood, both from yourself and from the commission, that although there are such portions that are still under construction the same are not essential, for the immediate operation of the entire line.

We may say with respect to any railway that you can operate it even without station houses. You can operate a railway without a telephone or telegraph line, if you are careful, if you do not run more than ten miles an hour and keep a good lookout. You can operate a railway without water tanks, if you carry portable tanks with the trains to supply the engines with water. You may operate your line with one locomotive and one train, if you are willing to run trains one way one day and back the next. But if your contract requires station-houses every ten miles, terminals at the ports where they ought to be provided —if you are to have all the equipment which belongs to a first-class railway, then, though you might operate your railway, it cannot be said to be completed until the terms of the contract have been carried out. That is what Mr. Woods, the Chief Engineer of the Grand Trunk Pacific, stated and that is what the Solicitor General admitted—that portions of the work were still under construction. And portions of it are under construction to-day; the minister is asking in these very estimates for $1,500,000 to pay for the construction of the Transcontinental line. Yet notwithstading, these gentlemen have—may I be permitted to say—the assurance to tell the members of this Parliament and the people of this country that the Grand Trunk Pacific have made default in their contract and therefore the Government has been obliged to take over the operation of the Transcontinental line.

I never heard of any pretense put forward by a Government which had less foundation to rest upon than the pretense which the Government has been putting forward against the Grand Trunk Pacific Railway Company. That company has never made default. After reading the correspondence from end to end, I say that they have never made default so far as the carrying out of their agreement is concerned; that the fault is on the part of the Government; and that the Government is treating both the Grand Trunk Pacific Company and the people of this country in a most unfair manner when it seeks to throw the blame upon the Grand Trunk Pacific Railway Company and to make it responsible for the fact that the Government has undertaken the operation of the line. The Solicitor General—oh, what term can I get that would adequately express what he does? Although he admits that the work of construction is still under way, he asks the Government engineer if he will be good enough to state that, in his opinion, the eastern division was, on the 31st September, 1914, completed so far as was essential to the efficient operation of the entire line at that time. Even although the specification had not been complied with, even although the work of construction was still under way, yet, in order that these gentlemen might get a little kudos for themselves, and throw some discredit upon the late Government and upon the company which the late Government, through this Parliament, created, and make the people believe that the company was in default, the Solicitor General asked the chief engineer to be good enough to state that the road was completed, when he had before him positive evidence that the road was not completed, but that the work of construction was still under way.

Then we come to Mr. Chamberlin. We will see the ground on which he bases the refusal of the company to enter upon the lease. He says, in a letter of February 15, 1915:

Dear Mr. Cochrane,—I beg to acknowledge your communication of the 3rd instant, in regard to the provisions of the agreement of 29th July, 1903, relative to the providing of equipment for the eastern division. In reply I would call your attention to clause 20 of the agreement, which, as you will see, provides that when completed the said eastern division shall be leased to and operated by the company for a period of 50 years.

Clause 22 also indicated quite clearly that the equipment of the value of $20,000,000 to be provided, of which $5,000,000 worth is to be supplied for the operation of the eastern division, is to be the first equipment "for the completed road." I do not understand that the Government claims that the eastern division is as yet completed in accordance with the agreement, and your other letter to me of the 3rd instant bears me out in this. That being so, you will, I think, agree that it would be improvident and unwise on the part of the company to proceed to acquire under the present unfavourable conditions, equipment involving the expenditure of so large a sum, and which, pending the completion of the line, and to a very great extent, at least, not only remain idle, but materially decrease in value.

Now, is that not a reasonable letter? Is that not just such a letter as any prudent official, having charge of the interests of

the railway company, would write to the Government. He says:

I do not understand that the Government claims that the eastern division is as yet completed in accordance with the agreement and your other letter to me of the 3rd instant bears me out in this.

This letter of the 3rd I shall read later on. Mr. Chamberlin here positively states that Mr. Cochrane had written to him on the 3rd of February, 1915, a letter in which he admitted that the road was not completed in accordance with the terms of the contract. I find here another letter from Mr. Grant to the Solicitor General, under date of February 15. In it he says, among other things:

I enclose herewith Mr. Woods' letter to me, of the 11th instant, refusing to sign the acceptance and refusing to acknowledge the line as completed.

Surely nothing could be clearer than the ground upon which the company is putting its refusal, namely, that it is the Government that is in default, that it is the Government that has not completed the line—but always intimating that, when the Government carries out its part of the agreement, the Grand Trunk Pacific Company will be prepared to carry out its part in good faith, and to enter upon the agreement. But, Sir, can you blame a company, can you blame the president of a company, whose duty it is to guard the interests of his shareholders, when he refuses, before the road is completed and before it could be operated in such a way as to earn to the fullest capacity which a completed line would be able to earn, to enter into a lease under which, within a certain period after the lease was signed, the rental must necessarily be paid, and which would involve large obligations upon the company? It was his duty to stand out until the contract was completed upon the part of the Government. He would have been negligent in his duty towards the shareholders, he would have been guilty of a gross breach of duty towards the shareholders whom he represented, if he had departed from the original agreement and bound the shareholders prior to the time when the agreement provided that they should be bound. On the 11th of February, 1915, Mr. Woods, the chief engineer, writes to Mr. Gordon Grant a letter in which he says:

This is the first intimation I have ever received that even the Government considered the line fully completed.

Mr. REID: The word "fully" is in there.

[Mr. Pugsley.]

Mr. PUGSLEY: Surely. How can you have a line completed if it is not fully completed? If it is not fully completed, it is only partially completed, is it not? If it is not fully completed, it is partially completed, and yet my hon. friend says: Oh, no, the line is not fully completed, yet it is completed. I think it would require a Philadelphia lawyer, ten Philadelphia lawyers, to explain what the minister means by the distinction between a line being completed and being fully completed. I am unable to discover any difference. This line is either completed or it is not completed. If it is completed, then it is fully completed. If it is not fully completed, it is only partially completed. I can see now what is the trouble with these gentlemen. They have been of the impression that the line might be completed even although it was only partially completed, and, this line being partially completed, they thought they had a right to call upon the Grand Trunk Pacific Railway Company to enter into the lease. Well, I am sorry for the minister if he has been led away by this definition, which must have been given to him by the Solicitor General.

Here is the letter of the Hon. Mr. Cochrane, dated the 3rd of February, 1915. This is a most interesting letter as showing what perhaps he meant by partial completion as distinguished from completion:

3rd February, 1915.

Dear Mr. Chamberlain,—With further reference to my letter of 23rd January in which I enclose a statement of the cost of construction of the eastern division of the National Transcontinental railway, I beg to point out that it is not intended that the item therein inserted as necessary to cover the completion of certain works shall be included at the present time in the amount on which interest should now be calculated.

What may be incomplete is not at the present time an essential portion of the National Transcontinental railway, and it is only upon the cost of the work as completed that it is proposed to calculate the interest.

What work? The work of building the Transcontinental railway, and that part of the work of building the Transcontinental railway which is not yet completed is, he says, in his judgment, not essential to the operation of the line. As I have said, the same remark might be made with regard to the station houses, the houses of the section men, the water tanks, the telegraph and telephone lines and other things which enter into the equipment of a first-class line of railway. The statement is made by the Minister of Railways and Canals (Mr.

Cochrane) that the works which are not yet completed form part of the work of construction of the Transcontinental railway. They were included in the specifications, and form a part of the railway, and he admits that they are not yet completed. My hon. friend from South Renfrew (Mr. Graham) calls my attention to the fact that on a reference to the workshops at Transcona and at Quebec he found that both formed an essential part of the Transcontinental railway.

I would like to know what is really underneath this business. It certainly strikes me as a most singular thing that when the Minister of Railways merely acknowledged receipt of the letter sent by the president of the railway company, as long ago as April 15th, setting forth the grounds, which in his mind are sufficient, for not entering upon the lease, showing that the road has not been completed, that the specifications have not been lived up to, and calling attention to the excessive cost of the road, based, of course, on the report of the two commissioners who were appointed by the Government. We have no evidence of any negotiations; no evidence of any attempt to meet the views of the Grand Trunk Pacific Company in any way; no evidence of a desire to leave the question to arbitration. Without anything further being said on the subject, this Government makes arrangements to operate the Transcontinental railway itself. That is what the correspondence shows, and it looks to me as if Mr. Gutelius, the general manager, who has the ambition to extend Government operation all the way to Winnipeg, and who may look toward Government operation all the way to the Pacific coast, was the influence behind the Minister of Railways. Or it may be that the Minister of Railways himself is wedded to Government operation, and would like to get rid of the Grand Trunk Pacific and assume charge of this road from east to west. Whatever the reason was, it strikes me as a most extraordinary thing that, without making any reply to that letter, and without attempting any negotiations with reference to it, the Government assumes the operation of this road.

In the remarks which I have made I have felt it my duty to find fault with the Government for the way in which they have treated the Grand Trunk Pacific in regard to these important letters. Let me ask the Minister of Railways if it is not possible to impress upon the Government the desirability of making arrangements to enable the Grand Trunk Pacific to enter upon the operation of this line If there are any questions still to be settled, let them be taken up and settled. If it will take six months or a year to finish the line so that the Grand Trunk Pacific may enter upon operation, let arrangements be made as I think they could easily be made, to go on and complete the line. Let it be arranged that the seven year period will begin to run from the time the road is completed, so that no injustice will be done to the Grand Trunk Pacific in that regard. Let some arrangement be made under which the Grand Trunk Pacific Railway Company will undertake and carry on the operation of this Transcontinental line all the way from Winnipeg to the Pacific ocean. That is the only way in which we can have a proper service. We do not want divided operation in Canada; divided operation is contrary to the spirit and to the letter of the agreement which was entered into when the contract for the Transcontinental railway was executed. We know that there were many people in this country who thought that the Transcontinental line should have its eastern terminus at North Bay. There were many people who thought it would not be of any great advantage to extend the line east of North Bay, that being the point at which the Grand Trunk Railway system would join the Transcontinental railway. But those of us who are interested in the development of Canadian ports, both in summer and in winter, and in having the traffic of Canada carried through Canadian channels, took the ground—and to that view my right hon. friend who then was leader of the Government (Sir Wilfrid Laurier) was strongly wedded—that it should be an essential feature in connection with the new Transcontinental line that, as far as possible, all Canadian traffic should be carried through Canadian channels and pass through Canadian ports to and from the markets of the old world.

In the contract it is provided that all traffic which is not otherwise routed shall be carried through Canadian channels. I do not believe that the people of Canada would ever have thought of engaging in this great enterprise if that had not been an essential feature of the scheme. What is this Government doing now? It is proposing, I believe; it is hoping, I believe, that the Grand Trunk Pacific Railway Company will not enter upon the operation oif the eastern division. If that hope is

realized, the Grand Trunk Pacific Railway Company, closely allied as it is with the Grand Trunk Railway Company, will have every possible interest to carry its traffic, not through Canadian ports, but through American ports, and the grand patriotic idea which was at the bottom of this vast undertaking will be wholly defeated. Hon. gentlemen ought not to forget that the Grand Trunk Railway Company have a line running all the way from North Bay in the province of Ontario, through Ontario into Quebec to the city of Montreal, and from Montreal east to the port of Portland in the state of Maine. They have large terminals there, they have made great developments at that port, and it would be very convenient for them, and, from many aspects, very desirable for them to carry Canadian traffic to the port of Portland in the state of Maine. That is why, as I have said, the late Government determined that they would have the line constructed, not simply from Winnipeg to North Bay, but from North Bay to Moncton, passing through the city of Quebec, and that there should be imposed upon the Grand Trunk operating the eastern division as part of and in connection with the Transcontinental system, so that they would be interested in carrying their traffic through Canadian channels and Canadian ports.

Now, to come back to this Government, I hope they will realise the importance of this question, that they will take it up and endeavour to solve it as speedily as possible. It will be infinitely better for the country, even at some sacrifice, even if they have to make an effort to meet the views of the Grand Trunk Pacific, that the Government and the country should come together and that at the very earliest possible day the Grand Trunk Pacific Railway Company should operate this whole line from the ports of St. John and Halifax through Quebec and all the way to the Pacific ocean. My hon. friend knows very well that there are advantages in many other respects in having only the one system of management, only the one transportation company to deal with, and only one operation between the two oceans. What would the Canadian Pacific have been, in so far as the development of Canadian trade is concerned, if they had stopped at Winnipeg and some other company had operated the line between Winnipeg and the ports of the Atlantic ocean? It would not have been, even to the very slightest degree, the wonderful factor in Canadian development which that transcontinental railway has been in the past. I believe that the same remark will apply to the Grand Trunk Pacific Railway Company. Get them to engage at once in the operation of the line; make an arrangement with them, a reasonable arangement, such as I know it will be possible to make, for this operation; let them become interested in the development of traffic along the line; and you will have a growth and a prosperity infinitely greater than you will have if you continue this operation by the Government, an operation which for a number of years must necessarily be temporary, because no one can say but what, if this road is completed under the terms of the contract, the Grand Trunk Pacific will then be in a position to take over the road or enter into a lease, and the Government will be ousted from the operation of the line. Therefore my hon. friend must see that the operation by the Government must be of a temporary character, and neither the Government nor its general manager will be interested in developing traffic along the line, in encouraging the establishment of industries and in giving a good service as the company will be interested, because whatever traffic and development there may be in the immediate future will inure in the end to the benefit of the company, which, when the road has been completed, will demand that a lease be made and will enter upon the operation of the line.

Mr. REID: I do not like to interrupt the hon. gentleman, but as it is six o'clock, and as there is an arrangement that we shall adjourn until Tuesday next, I would ask the hon. gentleman if he would leave the balance of his remarks until Tuesday, and I would also ask the leader of the Opposition if he would concur in one item passing now and allowing the other items to remain until Tuesday.

Mr. PUGSLEY: If the minister will say to this committee that the Government will take up with the Grand Trunk Pacific Company the question of settling the basis on which the company shall operate the road I will have no more to say; I will not take any more of the time of the House on this question. But if the hon. gentleman will not do that I will not promise just how long a time I am going to take up, because it is of great importance. My hon. friend knows very well how important it is to the people of eastern Canada and the Maratime Provinces.

Mr. REID: I always enjoy the remarks of my hon. friend, and I would do anything to encourage him.

Progress reported.

On motion of Mr. Reid, the House adjourned at 6 p.m.

Tuesday, April 25, 1916.

The House met at Three o'clock, the Speaker in the Chair.

DEATH OF PRIVATE D. CURRY.

On the Orders of the Day:

Sir ROBERT BORDEN: Inquiry was made in the House on the 18th instant with regard to the case of Private Dougall Curry, who died at St. Joseph's Hospital, Glace Bay. The following telegram was sent to the General Officer Commanding, Military District No. 6, Halifax, N.S.:

Reference late Private Dougall Curry who died at St. Joseph's Hospital, Glace Bay, and your telegram dated 21st instant: what was cause of delay in notifying Captain Calder of admission of Private Curry to hospital? Give name of person responsible for Captain Calder not being notified promptly. Urgent.

(Sgd.) Adjutant-General.

The reply was as follows:

Reference death of Private Dougall Curry, St. Joseph's Hospital, Glace Bay. Patient first complained eight p.m., April 2; was kept in bed and seen daily by Captain Munro, battalion medical officer. Felt himself improving until April 5, when within a few hours he became worse. At five p.m. was sent from Broughton by special train to St. Joseph's Hospital, Glace Bay, in charge of an orderly who had a note from Captain Munro asking for patient's admission to hospital. Patient arrived in hospital 7 p.m., April 5. Captain Calder, who attends military patients in hospitals, Glace Bay, was not notified until noon next day of patient's arrival in hospital. Captain Calder states that the delay in seeing Dougall Curry in St. Joseph's Hospital had nothing to do with patient's death as it was a case of tubercular meningitis. Medical Board also reports that case was tubercular meningitis.

A medical board was also assembled in this case, and its findings were as follows:

This board, in view of the above, is of the opinion that Private D. Curry died of tuberculous meningitis.

(Sgd.) W. E. Hodgins, Major General,
Acting Adjutant-General.

ENLISTMENT UNDER AGE.

On the Orders of the Day:

Mr. CARVELL: I desire to ask the Premier, as the Acting Minister of Militia, if any policy has been adopted regarding boys who have enlisted who are under age or who are very much under the age of eighteen years. I have here a letter, which I will send over to my right hon. friend, from a lady living in the county of Victoria, who lays a very serious complaint against the recruiting officer at Andover. She claims that her boy was inveigled into joining the army at fifteen years of age, and that when the recruiting officer was told over the telephone that the boy was only fifteen years of age, he stated that the boy had told him he was eighteen and that he had as good a right to believe the boy as to believe his mother. The boy was signed on, and now he wants his discharge, and his mother is anxious to have him discharged. I do not want to mention names. I believe this matter has already been brought up by the hon. member for Two Mountains (Mr. Ethier), and I do not know exactly what decision has been reached. If any policy has been adopted, I would like to know what it is, and I would like if the Prime Minister would reply in regard to the letter, either publicly or confidentially, as he sees fit.

Sir ROBERT BORDEN: I have not had my attention directed to the subject recently, but I have always understood that the policy is not to enlist boys under eighteen years of age. If that is not the policy, it ought to be the policy. I will take up the case to which my hon. friend has drawn my attention and see that steps are taken that the boy who is of the age of fifteen years or under eighteen shall be discharged and returned to his parents.

Mr. CARVELL: That is very satisfactory. I did not want to read the letter and make it public; but the Prime Minister, when he reads it, will understand the reasons why I brought the matter up.

REBUILDING OF PARLIAMENT BUILDINGS.

On the Orders of the Day:

Mr. ROGERS: May I once again direct the attention of the House to the rebuilding of the Parliament Buildings? Good progress is being made with the preparation of the plans, and we are now ready to give more detailed consideration to the carrying out of the work, and it has been suggested that the committee to be appointed should be increased to four from each side of the

House. I have no objection to the suggestion, and if it is agreeable to the Prime Minister and to the right hon. leader of the Opposition, I shall be very glad to have the names of four from each side of the House.

Sir ROBERT BORDEN: I have already intimated to the Minister of Public Works the names of three of my colleagues. I told him, when my attention was drawn to the matter about a week ago, that I would name a fourth, and I did so. Therefore, so far as we are concerned, we are ready to confer with the Minister of Public Works. If my right hon. friend would name four gentlemen from the other side of the House, the work could be taken up at once; and it seems to me, in view of the hope, somewhat remote, that we may have the buildings ready for next session, that no time should be lost.

Sir WILFRID LAURIER: I will send the names to the Minister of Public Works this very day.

CENSORED MAIL MATTER FROM THE UNITED STATES.

On the Orders of the Day:

Mr. CARVELL: I desire again to call the attention of the Postmaster General through the Premier to the present status of the censoring of correspondence coming from foreign countries into Canada. There is at present experienced in this country an enormous amount of difficulty in transacting business, which I think every member of this House must have observed if he has talked with his constituents during the holidays. I find that it takes usually about a week to get an ordinary business letter from Boston to the province of New Brunswick, when it ought to take about a day and a night. I saw it stated in some newspapers during the recess that the censorship was to be discontinued after Wednesday of last week, and I know of one letter passing between Canada and the United States which was not censored, but I have found others which have been censored since then. If the Government claim that they are compelled to carry out this work of censorship, I suppose the public have nothing to do but submit; but I would like to have a pronouncement from the Premier upon the subject.

Sir ROBERT BORDEN: We are not compelled to carry it out, because it is a matter which the Government of this country has the right to determine. Secret documents of an important character were sent to us by the Imperial Government. If I am not mistaken, my right hon. friend who leads the Opposition (Sir Wilfrid Laurier) has been made acquainted with the terms of that communication. We felt, under the circumstances, that if it was reasonably possible we should comply with the request that was made. There has been an earnest endeavour on the part of the Postmaster General and his officials to have it carried out in an effective way and with the least possible disturbance and delay. The magnitude of the task, I understand, has been very great, it having been undertaken without the assistance of any additional officials. If I am not mistaken at certain of the offices to which mail for the United States must be sent for censorship—technically called exchange offices, I believe—it has been necessary to deal with some 250,000 letters a day. Considering the enormous number of letters which have thus to be dealt with, the number of complaints that have come to the Government have not been very great. Undoubtedly mistakes have been made, and sometimes they have been made the second time even after they have been pointed out and the instructions made more emphatic.

Mr. CARVELL: If the Prime Minister will permit me—would not he tell the House at what points in Canada this censoring takes place? Does it take place in every little country post office?

Sir ROBERT BORDEN: No. There are these exchange offices to which I have referred. Mail for the United States originating within a certain district is sent to Toronto, originating within a different district is sent to Montreal, and so on with other places. All the work of the censorship takes place at these exchange offices and not at the office of origin. In the same way letters from the United States addressed to any point within a certain district go to Montreal, and others to other exchange offices, from which, after being censored, they are sent to their destination. It is at these exchange offices, which have been called upon to handle such an enormous number of letters, that the errors and delays have taken place.

Mr. CARVELL: I thank the Prime Minister for the information he has given the House. I am sure it will relieve a great

deal of anxiety that has been felt all over Canada because of the fear that letters may have been opened by practically any country postmaster. While I am on this subject, I would like to suggest that some mark be put upon a censored letter to show that it has been opened by an official of the department. As things are now, the letter is simply slit open and then a piece of paper market "censored" is pasted on the envelope. Any body could go to a newspaper office and get thousands of such slips printed. So any country postmaster, or any one having access to postal matter, could open correspondence and having done so mark it "censored," and there would be no means of knowing by whom it was done. If our correspondence must be censored, means should be taken to give us assurance that the censoring is done by officials of the department. I can understand, after the Prime Minister's explanation, that, as letters have to go to central clearing offices, there might easily be delay. Before I sit down I would like to point out that it is almost impossible to conceive of the necessity for censoring letters of members of Parliament and well-known business concerns carrying on their ordinary business. But, if there be a good reason for it, I think the Government should tell us what it is.

Sir ROBERT BORDEN: For the purpose of identification, every person employed in the work of censorship has a number. When he censors a letter and puts on the slip, he must put on his number, which indicates to the department that he has censored the letter. I am not sure that this system has prevailed from the first; but in consequence of the errors that were made it was found necessary to adopt means that would show who was responsible for errors, and this is the plan adopted, as I am informed by the Postmaster General. The Deputy Postmaster General has informed me that the procedure followed in censorship in this country is the same as that followed in Great Britain.

PUNISHMENT OF PRIVATE SOLDIERS.

On the Orders of the Day:

Mr. W. E. KNOWLES (Moosejaw): I desire to call the attention of the Prime Minister, who is the Acting Minister of Militia to a matter of importance. We have in Moosejaw the 128th Battalion. There is a generally-accepted belief that the following incident occurred in that battalion. It is reported on such authority that I believe it to be true; but it is not impossible that it is only a rumour: that a short time ago the officer commanding inflicted a punishment upon a private who came under his displeasure by suspending him by the arms for an hour or so until the boy fainted; and that a similar mode of punishment has been adopted by the same officer in other cases. I have looked into the matter as carefully as I can, though, of course, anything occurring in military circles is closely walled about. It looked so serious that it seemed to me to be my duty, the boy having no other recourse, to call the attention of the Government to the matter. Different public bodies in Moosejaw have taken it up, but have failed to get the light on the subject that would easily be afforded in any matter non-military. If the facts be as reported, the barbarous bully who would inflict such punishment should be removed; and if the report be not true, it should be contradicted at once, so that a rumour so prejudicial to recruiting may be set at rest. I would ask the Prime Minister to take the matter up, by telegraph if that course commends itself to him, and have it settled one way or the other.

Sir ROBERT BORDEN: I can hardly believe it possible that any such incident could have taken place. But it will be my duty, of course, to make inquiries. If the hon. member for Moosejaw will send me a memorandum, giving me the name of the commanding officer, and of the private who is said to have been punished in this way, it will facilitate the investigation.

SUPPLY.

The House in Committee of Supply, Mr. Rhodes in the Chair.

Prince Edward Island railway—bridges, etc., $613,100.

Mr. CARVELL. I wish to direct my hon. friend's attention to the present status of the negotiations with the Government of New Brunswick regarding the St. John and Quebec Railway. My hon. friend the Minister of Public Works, in the absence of the Acting Minister of Railways, gave us a great deal of information on this matter—information so valuable that it has created quite a stir in the province of New Brunswick. I do not want to be uncomplimentary, but I sometimes have a little doubt whether we could get as much information from the minister himself; I think possibly he would have been a little more reserved. Now that we have got that information from the Min-

ister of Public Works, would my hon. friend tell me whether there has been any change in the status of the arrangements between the Government of Canada and the Government of New Brunswick concerning the construction and operation of that railway? Before he answers I may tell him that, as I understand the information given by the Minister of Public Works something like a month ago, the Government has gone back on its pledge to operate that road and pay 40 per cent of the gross earnings to the province of New Brunswick. That may be putting it very bluntly, but no other language would express it as well as these words. On different occasions from 1911 to 1914 legislation was passed in this House agreeing that if the province of New Brunswick would construct a railway from Grand Falls to St. John the Federal Government would take it over and operate it as part of the Intercolonial, paying to the province 40 per cent of the gross earnings. We were told by the Minister of Public Works that the Federal Government would not carry out that legislation, on the ground that it was hardly a fair arrangement so far as the Dominion of Canada was concerned. We were told also that, under an agreement between the two Governments, the Government of New Brunswick was not to construct the road from Centreville to Andover. It seems to be admitted all round that the branch at Grand Falls was abandoned long ago. It was agreed also that the Government of New Brunswick was not to construct bridges across the St. John river at the Mistake, or across the Kennebecasis river; that it was to build the road along the west side of the river, possibly to Westfield or to Welsford; and that it was to build a branch to Vanceboro from some point on the railway north of Fredericton, the exact point not being given—the only place named by the Minister of Public Works was Meductic. I do not think that could be the intention of the Government; it would be utterly nonsensical to build a branch to Meductic.

Sir GEORGE FOSTER: Meductic Falls?

Mr. CARVELL: No, to the village of Meductic, some ten or twelve miles above the Falls. The Minister of Trade and Commerce knows the place.

Sir GEORGE FOSTER: The Grosvenor place.

[Mr. Carvell.]

Mr. CARVELL: That is the place. Of course, a road could be built from there, but the difficulty is that we should be compelled to build 25 or 30 miles on American territory in order to strike the Maine Central, so I think that idea will have to be abandoned. I have stated to the acting minister the substance of the information given us by the Minister of Public Works on a former occasion, and I would be much obliged if he would tell the committee the actual status of the negotiations and agreements at the present time.

Mr. REID: I was sorry that I could not be present when the matter was brought to the attention of the House by the Minister of Public Works. I had made arrangements to be away that day, and unfortunately could not be here.

Mr. CARVELL: I find no fault whatever with the acting minister.

Mr. REID: I expect to bring in some legislation in regard to this railway in the course of a day or two, and a discussion of the matter might perhaps take place at that time, if that would be satisfactory to the hon. member. I can explain to him, however, in a few words, the situation so far as I understand it without the papers being before me. The hon. gentleman will remember that the original intention was to build this railway from Grand Falls to, I think, Rothesay on the Intercolonial, and then into St. John. At that time bridges were to be built over the rivers, the cost of which was estimated at about $1,000,000. Afterwards it was represented to the Government that these bridges would cost some $3,000,000. The hon. gentleman will remember that a Bill was introduced and passed by which the Government agreed to build these bridges.

Mr. CARVELL: I remember that very well.

Mr. REID: Since that time there have been changes in the railway situation in New Brunswick. At that time the Grand Trunk Pacific was to operate the Transcontinental through to Moncton, and the St. John Valley railway was to make connection between the Grand Trunk Pacific line and the city of St. John. For that reason the line was to be built to Grand Falls. When the Government took over the Transcontinental, so far as St. John was concerned it was not necessary to build between Andover and Grand Falls, as this would be parallelling the Canadian Pacific

railway, and as the Intercolonial had connection with the Transcontinental at McGivney Junction.

Mr. CARVELL: Then I understand that the branch from Andover to Grand Falls has been absolutely abandoned.

Mr. REID: I cannot say that; that would be for the New Brunswick Government to take up and determine. So far as we are concerned, any negotiations had up to the present are in respect of the line to Andover, but there is no reason why the matter should not be taken up at some future time if it should be thought advisable. What I mean is that, so far as the connection between St. John and the Transcontinental is concerned, we have it by running over the Gibson road, I think they call it, and connecting at McGivney Junction. As I understand the situation, a passenger can connect with the Transcontinental by going over the St. John Valley road to Andover, and then over the Canadian Pacific railroad to the Transcontinental.

Mr. CARVELL: That is almost correct. At the present time there is no connection between the Canadian Pacific railroad and the Transcontinental. Of course, one may be effected.

Mr. REID: The situation up to the present, so far as the St. John Valley road is concerned, is this: the road has been under construction for some time, and the Department of Railways and Canals, as I understand it, have taken over each portion as it was completed and operated it pending the completion of the connection into St. John.

Mr. CARVELL: But they are not paying the 40 per cent.

Mr. REID: I refer to the portion from Centreville to Gagetown. The understanding at the time, if my memory serves me rightly, was that they were to pay the 40 per cent and the 60 per cent for a certain time. That arrangement remained in effect until about the beginning of this year, when the Minister of Railways and Canals took the matter up again with the New Brunswick Government, and made an arrangement that the Intercolonial authorities were to operate that section pending any new arrangement that might be made with the New Brunswick Government.

Mr. CARVELL: I think my hon. friend is in error. As I understood him, he stated that when those different sections were completed they were operated up to the beginning of the present year under the original arrangement providing for the payment of 40 per cent to the Government of New Brunswick. That is not correct; I have a statement to the contrary. A special arrangement was made by the Government of New Brunswick with the Intercolonial authorities about the beginning of 1915, by which the latter were to operate, and I do not know what percentage of profits, if any, were to go to the Government of New Brunswick. But, if any loss was incurred, the Government of New Brunswick was to pay one-half of it, which is certainly not carrying out the original arrangement. That is one of the things of which we in the province of New Brunswick complain so bitterly.

Mr. REID: Perhaps I am in error, so far as 1915 was concerned, as I had nothing to do with the negotiations, and perhaps I had better let that part of the matter stand until I get fuller information. But, commencing on January 1, 1916, the arrangement, as I understand it, was that the Intercolonial was to operate the sections when completed, and that whatever arrangement was made it would be retroactive, commencing on the 1st of January, 1916. I have been myself conducting negotiations with some members of the New Brunswick Government, with reference to this matter, and the information was given by the Minister of Public Works. The correspondence is in Hansard, so that it is not necessary for me to go into that any further, except to say that, when I bring down this measure, it will show that we will take over the road and pay 40 per cent and 60 per cent from the 1st of January, 1916. We will operate the section between Centreville and Gagetown after it is completed, and other parts, as completed, will be taken over on that basis, until the road is finished to Westfield. When the Andover section is completed we will take it over on the same basis.

Mr. CARVELL: What about the branch connecting the St. John Valley road and the American system at Vanceboro?

Mr. REID: The hon. member says Vanceboro.

Mr. CARVELL: I will change that to any point on the Maine Central.

Mr. REID: If we were to connect with the Maine Central at Vanceboro there is a bridge that could be crossed. That is at

the terminus of the Maine Central in the United States. Of course, the Canadian Pacific railway runs to Vanceboro. If we connected at Vanceboro we would have to build about forty-five miles of railway in Canada. We have had a proposition to connect with the Maine Central at another point, Meductic, which would mean that only twenty-five miles of railway would require to be built in Canada, while the Maine Central would have to build about 15 miles on the American side. Negotiations have been going on to have a connection in that way, which would probably serve the purposes of the Transcontinental better than a connection at Vanceboro. I do not know what the final conclusion of the negotiations will be, but there is a possibility that the connection may be made, not at Vanceboro, but at some other point. The portion from Centreville to St. John will be completed this fall, I understand.

Mr. CARVELL: This fall?

Mr. REID: Between now and January. At all events, the date is set in the agreement, and it strikes me that it is within the next eight or ten months that they are to be at Westfield. There are a good many reasons for changing the original arrangement. It would probably take two or three years to build those bridges, and the cost would be a least $3,000,000.

Mr. CARVELL: Mr. Maxwell puts it at $2,000,000.

Mr. REID: The hon. member will agree with me that our experience in this House has been that very few public works are completed within the estimate of the engineers; at least that has been my experience.

Mr. CARVELL: It may be the minister's experience.

Mr. REID: The hon. member has been here a good many years, and I think it has been his experience also. At any rate, that is the situation so far as I know it. When the matter comes before the House again, I will see that the hon. member for Carleton, N.B., has an opportunity to discuss it.

Mr. CARVELL: That is quite satisfactory.

Mr. GRAHAM: These Estimates amount to $19,000,000. The acting minister has told us that he intends to introduce legislation in regard to the St. John Valley railway. Would not this be an opportune time for the acting minister to tell the committee frankly what other legislation, besides that dealing with the St. John Valley railway proposal, he or any other member of the Government intends to introduce during the present session? It is persistently rumored in the press that the Government is going to bring down measures providing for aid to two railways and more than aid to a third one. In the Estimates here, we have a peculiar item providing for a subsidy, not brought down in the usual subsidy bill but brought down in the Estimates. That, to my mind, is done to cover up the retreat of the Government, so that they may be able to tell various people who have applied for subsidies that the Government are not bringing down any subsidy Bill, the same object is achieved as would be under such a Bill. What I think the Government ought to do now, before the Railway Estimates go into the House, is to tell the House frankly what further amounts they propose to give to any company or companies, or what amounts they have promised to give during the present session? The acting minister will readily see that if this estimate for capital expenditure were $40,000,000 instead of $19,000,000 it would make a difference in the Estimates going through. Unless the Government tell us this, we might pass the Estimates, and then they would be in a position to say to the House: "We have got the ordinary estimates of $19,000,000 through, and now we propose, in another measure, to obligate the country to a very much further amount." Do not the Government think that it would be wise and fair that they should tell the committee exactly what legislation they propose to bring in, and what the whole amount of any further obligation of the country to these railway companies would be? I read this morning in the press that aid would be given to the Grand Trunk Pacific, the Canadian Northern, and the Quebec & Saguenay. If the press knows about it, and it seems to, is it fair for the Government to ask this House to plod along in the dark and vote $20,000,000 of Railway Estimates here, while at the same time the minister keeps up his sleeve three other Bills that perhaps will impose an obligation upon the country of more than $19,000,000. Let us have it all at once so that, while discussing these Estimates, we may know what further amount the Government is going to ask the House to provide for during the present session.

Mr. REID: As far as the St. John Valley road is concerned, the bringing in of this Bill will save the country an expenditure of some $3,000,000. The intention was, as I explained to the hon. member for Carleton (Mr. Carvell), that when the last arrangement was made to build the bridges across the Kennebecasis river. Under this new arrangement we do not have to build the bridges and we save their cost. As far as the subsidy to the Edmonton, Dunvegan and British Columbia railway is concerned, the hon. member will recollect that last year there was great pressure to have this railway extended through a portion of Alberta. There was a lot of grain to be moved, and in order to assist that section it was agreed to give them this subsidy for a number of miles. As I understand, there was an enormous quantity of wheat raised in that district, and the advantage has been very great. It was put in there for the reason that if no other subsidies were brought down, this subsidy would have to go in this way, unless we brought down a special subsidy Act. As far as any further legislation is concerned, I may say that I have not heard of any more being discussed or being brought down at the present time.

Mr. GRAHAM: How far does the present extend ?

Mr. REID: It extends up to this time.

Mr. GRAHAM: Or to the end of the session?

Mr. REID: Up to this time. As to something having been published in a newspaper with regard to this matter, all I have to say is that you cannot always believe what the newspapers say; at least I do not always believe it. But, so far as these Estimates are concerned, even if we pass them, there is no possibility of their getting through without the hon. memoer knowing whether any further legislation will be brought down. The hon. member knows as well as the rest of us that the Grand Trunk Pacific and the Canadian Northern have had a great deal of difficulty in carrying on their great enterprises. The war has put them into a very serious position; but whether there will be any other legislation I cannot say, for the reason that it has not been taken up yet and dealt with by the Government.

Mr. NESBITT: I am surprised to hear the hon. gentleman say that you cannot believe everything you read in the newspapers. But, when the hon. member says he does not know whether there is any further legislation to be brought down in reference to these railways, I think he is asking us to draw on our imaginations considerably, because it is generally understood not only in the newspapers, but outside of the newspapers, that there will be further legislation on behalf of the Canadian Northern and the Grand Trunk Pacific. I thoroughly endorse what my hon. friend from South Renfrew (Mr. Graham) says, that if there is going to be further legislation in reference to railways, this is the time to let us know. In the first place, we are anxious to wind up the session, and, in the next place, it is necessary for us to know at some time and we might as well know now as at any other time and be prepared for it. If the rumour that we will be asked to vote more money to the Canadian Northern or the Grand Trunk Pacific is correct, it would be well to take that into consideration at the same time as the other estimates. We have an item here of $3,000,000 for the Hudson Bay railway. If we are going to be asked large amounts of money for some other purposes, surely we can do without certain amounts in the items that we are asked to vote here, because we have actually to limit the amount of money that we vote this year for various purposes. These things may be required and they may not be required. Personally speaking, I do not think the Hudson bay item is required, but I am afraid that the majority of members on both sides of the House do not agree with me in that respect. At the same time we have to cut our coat according to our cloth to a certain extent. No business man would consider the expenses of part of his business without considering the whole. If he did he would not be long in business. Why the Government should not adopt the same policy, and why they should not give us their confidence as to what they expect us to vote, is more than I can understand. The acting minister must know if there is to be any further legislation brought in, and, if so, I cannot understand why he does not let us know now—because we hope this session is not going to last all summer—just what assistance to railways he will expect us to vote. We could then consider all these items at the same time, and probably get the minister to curtail some of the items he is asking us to vote now.

Mr. TURRIFF: Did I understand the minister to guarantee that if we put through this subsidy for the Edmonton, Dunvegan and British Columbia Railway, no further railway aid legislation would be brought down this session?

Mr. REID: As far as I am concerned, I have no other subsidies under consideration at the present time.

Mr. GRAHAM: A rose by any other name would smell as sweet.

Mr. TURRIFF: The minister knows very well that he has not answered my question. He knows that the Government had expected this session would be closed by this time or shortly after, and he knows perfectly well whether or not any further subsidies are to be asked for, and what railway legislation it is proposed to bring down this session.

Mr. KNOWLES: I do not think they know that.

Mr. TURRIFF: If they do not know that, they should not be there.

Mr. KNOWLES: They have to fix the hon. member for Calgary (Mr. R. B. Bennett) first.

Some hon. MEMBERS: Carried.

Mr. TURRIFF: They all say "carried" to fixing the hon. member for Calgary. I think the suggestion of the hon. member for South Renfrew (Mr. Graham) is a very sensible one. Before we pass that $19,000,000 item, I think we should know exactly what railway assistance the Government proposes to give this session—what they propose to do with regard to the Grand Trunk Pacific, the Canadian Northern railway, and the Quebec and Saguenay railway. Until we have that information I think we should be amply justified in postponing consideration of these items, and I would suggest that some other minister go on with his Estimates until my hon. friend or some other member of the Government is in a position to come down and say: "We propose to give such and such assistance to such and such a railway;" and if no assistance is to be given, the House should be given that assurance. But, with no information before us as to what the Government intend to do in the matter of railway legislation between now and the end of the session, which we all hope will be in the near future, it is asking a great deal to ask the members of this House to vote this $19,000,000, and I would suggest that we postpone consideration of the matter until the Government is in a position to give the House the information we have asked for.

Mr. REID: It was the intention to take up the Estimates of some other department this afternoon, and it was in order to accommodate certain hon. gentlemen who could not be present at another time that I took up my Estimates to-day. If there is any objection to passing any of these items, I am willing to let them stand; but, as there are many that hon. members wish to discuss I see no reason why we should not go on and discuss them now. If we do not do that, some hon. members might not have an opportunity later on of discussing them. With regard to future legislation, the answer I gave the hon. member just now explains the position at present.

Sir GEORGE FOSTER: I would suggest that what has been said by my colleague the Acting Minister of Railways and Canals might be taken into account. It seems that hon. gentlemen do not want all the Estimates to go through until they have been given certain information they desire, but I see no reason why some of these items should not be taken up and discussed and perhaps passed. There is no particular objection to holding an item or two for a general discussion and for eliciting any information that is desired; but at this time of the session, when we want to get all the business done as rapidly as possible, I think there is some force in the suggestion of my colleague that we should go on with some of these items.

Mr. GRAHAM: Ordinarily that would be the part of wisdom. The difficulty is that to these items, which are all large, there will probably be added other items, in the way of Bills, either providing for the expenditure of large amounts of money or increasing the obligations of the country to railway enterprises of more or less significance. If this were an ordinary case I should have no objection at all to getting rid of some of these small items; but the point is this. The press tells us that these items will be augmented very materially, and, until we know what these further items are to be, I do not think we should be asked to vote these large amounts. I would suggest that the acting minister tell the House now

4 p.m.

what other railway legislation is to be brought down which will further obligate the country. That information may bear on the discussion of the items before us, many of which are large, such as the Hudson Bay railway, the National Transcontinental, and the Welland canal. If we are to undertake other large expenditures in addition to these, it is only fair that the House should know what they are going to be. We are a little dubious as to what may happen. The Government has seen fit to slip in a subsidy amongst the ordinary Estimates, which is establishing a precedent. Hon. gentlemen know that subsidies are invariably brought down in what is know as a Subsidy Bill—separate altogether from the Estimates. Each item is discussed on its merits, if the House sees fit, and a separate Act is passed. A year ago the Government assured a lot of applicants that no Subsidy Bill would be brought down; but here, in the Estimates, not in a Subsidy Bill, they are providing for the payment of a subsidy of $384,000. If this practice is to be followed, a dozen subsidies could be placed in the Estimates. Under the circumstances, then, I think it would be wise for the Government to put their cards on the table and tell us what they propose to do in the way of aid to railways. We shall then be prepared to discuss intelligently the items before us, and perhaps we may have to cut some of them down if the other expenditures are to be large. I repeat that this is not an ordinary case of taking up the items one by one, and allowing one or two to stand on which all the information can be given. If we pass all the other items, the information as to these subsidies will not help us out of the difficulty.

Sir GEORGE FOSTER: There is force in some parts of what my hon. friend says, while in other parts there is not quite so much force, if he will allow me to say so.

Mr. PUGSLEY: There is a great deal of force.

Sir GEORGE FOSTER: Item 110 introduces a new principle, that is, voting a subsidy as a Supplementary Estimate.

Mr. GRAHAM: That was not my point. My point was that the Government may bring in half a dozen subsidies as Supplementary Estimates.

Sir GEORGE FOSTER: If they do they cannot surprise you with them, as they will be brought down in the regular way.

Mr. GRAHAM: In an irregular way.

Sir GEORGE FOSTER: There are, however, a number of items, which, whether others are brought in or not, have, to put it mildly, to be passed, because the work must go on. For instance, with reference to the Prince Edward Island railway, there are items for strengthening bridges, original construction, surveys and inspections, increase of accommodation and facilities, also a small amount to provide for the car ferry. That is an old matter, and this vote is to carry to completion and to operate what has already been agreed upon by both sides of the House. Then there is an item to bring the New Brunswick and Prince Edward Island railway line up to Intercolonial railway branch line standard.

Mr. GRAHAM: We passed that the other night.

Sir GEORGE FOSTER: Then there is the item to bring the International line up to the Intercolonial branch line standard.

Mr. GRAHAM: We have already passed a number of the items which my hon. friend has mentioned. These are yet to be passed: numbers 103, 106, 107, 108, 109, 110, 118, 120, 123.

Sir GEORGE FOSTER: The different items in item 103 are all ordinary items for carrying out a policy which has already been agreed upon in reference to the car ferry. Item No. 106, the Hudson Bay railway, is also an old subject. That item is to carry out what has been under progress for a considerable length of time, and the work must be proceeded with, I suppose, unless the House comes to the conclusion that we are to stop operations on that road. The same is true of item No. 107, National Transcontinental railway.

Mr. GRAHAM: My hon. friend, if he keeps on, will make out too strong a case.

Mr. PUGSLEY: I thought the Transcontinental was completed a long time ago.

Sir GEORGE FOSTER: Unless my hon. friend wishes to push the matter as far as not to allow anything to pass, because he is afraid that something else may be put in the Supplementary Estimates—which is not very brave of my hon. friend—I think we should make some progress with these items.

Mr. GRAHAM: The Minister of Trade and Commerce is not putting the matter quite rightly. I did not say "for fear that

something may be put in the Supplementary Estimates." I said that that could be done. There are yet to come before the House three railway measures asking for aid.

Mr. ROGERS: Are you sure of that?

Mr. GRAHAM: The Government press will have to be muzzled if that is not true.

Sir GEORGE FOSTER: That will be a hard operation.

Mr. LEMIEUX: That announcement by the Minister of Public Works will send the stocks down to-morrow.

Mr. GRAHAM: In the hope and full confidence that that additional legislation will be introduced, several things are taking place every day. The chief point that I raised was this: we shall be here only a short time, we all hope. We ought, therefore, to know now what the railway legislation is to be, particularly that part of it which will put the country under further obligation. If it were early in the session that these Estimates were up, it would be a different matter, but there cannot be more than a few days between the passage of these items and the introduction of that railway legislation. The Government, therefore, ought to give us an idea of their programme in reference to railway legislation so that the members will know what they are asked to vote for railway purposes including the Estimates. I would suggest that we discuss this Prince Edward Island railway item for a little while, and then perhaps the Government will be in a position to give us their programme in regard to railway legislation.

Mr. KNOWLES: Last fall it was announced that the Government had made a rate of six cents per bushel, or ten cents per cwt. on grain shipped all-rail from Armstrong to the East. So far as I know, no statement has yet been made in regard to that, just as no statement has yet been made in regard to the commandeering of wheat, anxiously as we have been looking for it. We would be pleased to have a statement from the minister as to the policy and how it worked out.

Mr. REID: I explained that matter the other evening in the hon. member's absence, but I will do so again. The Minister of Railways (Mr. Cochrane) made a rate of six cents from Armstrong to Montreal and Quebec during the season while navigation was closed, and so far as the Transcontinental is concerned that rate is still being kept in force between Armstrong and Quebec. A quantity of grain has been carried over the Transcontinental during the season between the closing of navigation and the opening.

Mr. KNOWLES: What was the reason for giving that special rate?

Mr. REID: It was in order to relieve the congestion in the West by taking the grain East. There was a very large crop, and the elevators at Fort William and Port Arthur were filled.

Mr. PUGSLEY: Did it relieve the situation?

Mr. REID: Eight million bushels were carried over the Transcontinental.

Mr. PUGSLEY: That is a mere bagatelle.

Mr. REID: I think it was quite a help to take out 8,000,000 bushels. I do not know whether the member from the West will agree with my hon. friend.

Mr. KNOWLES: Where did the grain go to?

Mr. REID: To Quebec, St. John, Halifax and Montreal. Some was shipped through to St. John for export.

Mr. KNOWLES: Via Quebec?

Mr. REID: Yes.

Mr. KNOWLES: How much?

Mr. REID: I cannot tell off-hand.

Mr. KNOWLES: Approximately? That is a very important matter.

Mr. REID: I can get the figures. I know there was grain shipped to the elevator at Quebec for storage until the opening of navigation.

Mr. KNOWLES: What is its storage capacity?

Mr. REID: One million five hundred thousand bushels. Some went to Halifax for export, and of course a lot went to Montreal for export.

Mr. KNOWLES: What went to Montreal does not concern us, because it would not go by the Government road.

Mr. REID: All the ports were congested.

Mr. KNOWLES: How much grain went to Halifax and how much to St. John for

export? What route did it go by, and what was the rate from Winnipeg to the shipping point?

Did six cents carry it to the seaport? If not, how much did it cost to carry the wheat from Winnipeg to the seaport? Can the minister state now what that rate was?

Mr. REID: I have not these rates before me. But six cents is the summer rate to Montreal, and that rate would be added to if the grain had to be sent to Portland, St. John, or Halifax. But the six-cent rate must have been quite a help, I should think, because it mean that they got the summer rate from the closing to the opening of navigation. The rate from Winnipeg to Armstrong is similar to that from Winnipeg to Fort William.

Mr. KNOWLES: Yes.

Mr. REID: The hon. gentleman will see that this was equalizing the rate between Winnipeg and Montreal. The six-cent rate would be practically the same as that by rail to Port Arthur and thence by vessel to Montreal, and thus it should have been a great advantage to those who were able to ship during the winter season.

Mr. PUGSLEY: Is it not true that there is really no elevator system to speak of in connection with the Government system of railways? The elevator at St. John was burned down two years ago, and not a step has been taken to rebuild it. St. John formerly had good elevator accommodation. There is no elevator accommodation whatever in connection with the Transcontinental. So, while the rate was given to Quebec, there was no encouragement to shippers, no facilities were provided for handling the grain at the seaport. The result is that little advantage was taken of the rate. The minister speaks of eight million bushels as though it were a large quantity. With proper elevator accommodation and train service the Transcontinental ought to have carried ten times as much. Why, there is over ten million bushels of wheat, on the Goose Lake Branch of the Canadian Northern alone, hung up during the season to the very great loss of the farmers. Yet, the minister talks about eight millions as a large quantity to be carried over the Transcontinental, one of the finest railways in the world—at least it is one of the finest so far as it was carried out under the auspices of the late Government. If the Government had got to work at the proper time, had rebuilt the St. John elevator, and had enlarged the elevator accommodation at Halifax and Quebec, the Transcontinental might have been made a real factor in the transportation situation. Surely, before these Estimates pass, the Government ought to give an explanation of their want of activity, their want of foresight, their want of attention to the necessities of the case. I think the suggestion of the hon. member for South Renfrew (Mr. Graham) is one that ought to be acted upon. The Minister of Railways coming before this Parliament is like a board of directors coming to consult the shareholders—we representatives of the people are here on behalf of those who have to bear the burdens. The minister tells us: I want you to vote $19,000,000 for various works to be carried on. The people, through their representatives in this Parliament, say to the Government: When you are asking for these vast amounts of money you ought to show your hand, you ought to lay your cards upon the table, and let us know what further obligations you are going to ask us during the present session to bear. The hon. member for South Renfrew says that the rumour is widespread and the statements made are specific and positive. And to enforce what he said, I saw the statement to-day in the Toronto News. If there is a newspaper in Canada that is close to this Government, that finds a resting place in the very bosom of many prominent members, it is the Toronto News. I believe the editor of that newspaper enjoys with reference to this Government a stronger position than Colonel Allison enjoyed with the Minister of Militia. The editor of the News is the guide, philosopher, friend and adviser of this Government.

Sir GEORGE FOSTER: And biographer?

Mr. PUGSLEY: He wrote biography in the days before sin had spread so widely over this country and before many good men had been led astray, the editor of the Toronto News among them.

Mr. REID: What about yourself?

Sir GEORGE FOSTER: My hon. friend knows all sides.

Mr. PUGSLEY: I will tell my hon. friend something about that. I was once a Conservative; but it was a long time ago. My hon. friend knows that there was then the same inactivity with regard to transportation, the same want of attention to

the maritime ports as there is unfortunately to-day; so that many good Conservatives fell away from my hon. friend. Much as they like him personally, yet politically they could not quite stand him, because he did not seem to have that regard for the interests of the country that he should have had. It was about that time too that I took to reading my Bible very carefully. I found that in the old biblical times there were two parties, there was the Liberal party and the party that stood in the place of the Tories of the present day. They were called churls at that time. And I found that the Liberals, even in those old days, had a reputation and enjoyed a popularity for their virtue which has remained with them even down to the present time. I am sorry to see that the party of my hon. friend, the party opposed to the Liberals are not given a very good character in the Bible. I have great faith in the good book. I recommend my hon. friend to read it. If he likes, I will call his attention to passages which he will find particularly interesting.

Sir GEORGE FOSTER: The hon. gentleman might quote, just as a test of his knowledge.

Mr. PUGSLEY: I would ask the Acting Minister of Railways why it is that although the Government elevator at St. John was burned down at least two years ago, no steps have been taken to rebuild it. To my mind, it appears inexplicable, especially in view of the fact that, immediately on the outbreak of the war, the Government urged upon the farmers of the West the need of increased production, and, to that end, the planting of more land in grain. Of course, that implied an undertaking on the part of the Government that, so far as it was concerned, it would do everything possible to have the grain sent forward as cheaply and expeditiously as possible and would afford every facility for transportation.

It strikes me as very inexcusable that the Government should allow that important plant in connection with the Government railway system to remain unbuilt. I should like to know, also, why the Government took no steps to provide elevator accommodation in connection with the Transcontinental railway. The other day the acting minister stated that the Transcontinental was completed away back in September, 1914, even though it was only partially completed. By some peculiar process of reasoning the minister seems to think that a railway—or house, I suppose, or store—might be completed when it was only partially completed. However, that was the view the Government took, and from that time to the present they have provided no elevator accommodation in connection with the Transcontinental railway. I think the minister ought to explain that. In view of the fact that the minister is unable to deny the rumours that are being circulated in the press that Parliament will be called upon to assume further obligations on behalf of the people, he ought, as would be the act of a prudent minister, to say to us: We will not ask you to pass these items just now. We will wait until we can lay before you all the obligations which you shall be called upon to assume on behalf of the people, and we will ask you to consider with us whether we shall have the means, through direct and indirect taxes and other sources of revenue, to provide for these other burdens, as well as all the amounts which are included in these Estimates; we will consider the whole matter carefully and in the best interests of the people. Does the minister not see what madness it would be for us to vote $19,000,000 if next week we shall be called upon to assume on behalf of the people obligations amounting to $20,000,000, or $30,000,000, or $40,000,000 in respect to other railway companies? It seems to me that the suggestion of the hon. member for South Renfrew—the suggestion of a prudent member of Parliament, who represents some of the people who are to bear these burdens—is reasonable and should be adopted. I should be glad if the minister will explain why the elevator accommodation has not been replaced upon the Intercolonial, and why it has not been enlarged in view of the necessity of providing for increased transportation of grain; also, why no elevator has been provided in connection with the Transcontinental?

Mr. SCHAFFNER: In reference to the question asked by the member for Moosejaw (Mr. Knowles), may I ask the minister how the Government came to undertake to secure this low rate for carrying wheat? Were they requested to do so by any set of men or by any association? I would ask also if they have carried all or nearly all the grain that has been offered in connection with this low rate to Quebec?

Mr. REID: The arrangement to which the hon. gentleman refers was made by the

hon. Minister of Railways himself. As I understand it, it was represented to him that there was such a large crop that the Fort William and Port Arthur elevators would not be able to hold all the grain that the railways could carry to them. It was shown to him that the lake-and-rail rate from Port Arthur to Montreal was about 6 cents a bushel, and he was asked if he could not put that rate in force, say from Armstrong, which would be practically the same point as Port Arthur or Fort William, during the winter season, and thus relieve the congestion in the West as much as possible. He put that rate in force, and relieved the situation to the extent of about 8,000,000 bushels of grain that were carried. More grain might have been carried if we had had fuller equipment. Taking the railway over on the 1st of July without any equipment whatever—no engines, no cars, nothing at all to operate the railway—we were forced to take some seventy-five engines off the Intercolonial and as many cars as we could spare in order to operate the line between Winnipeg and the East. With the small facilities that we had, we could not do any more than we have done. There is no doubt that many requests came from the West for operation of the Transcontinental to as great an extent as possible, in order that the grain might be carried over that line, thus relieving the situation in the West.

Mr. SCHAFFNER: Has any effort been made to get the Canadian Northern and the Canadian Pacific railway to give similar rates?

Mr. REID: I cannot say that. The Minister of Railways made the arrangements. I will find that out, though, and let the hon. member know at the next sitting. The hon. member for St. John (Mr. Pugsley) asked a question regarding the elevator at St. John. The elevator that we had there was burned down. We all realize, of course, that that elevator was not of a sufficient capacity for the Government railway system at that port.

Mr. PUGSLEY: Was it not of the same capacity as the elevator at Halifax?

Mr. REID: Yes, but I mean for the future.

Mr. PUGSLEY: The capacity was about 750,000 bushels.

Mr. REID: I understand it is the intention to have a very much larger elevator located on Courtenay bay. Of course, that is in connection with the Public Works Department, and I do not know exactly what the conditions are.

Mr. PUGSLEY: I should like to correct the minister, if he will allow me. Mr. Gutelius, General Manager of the Intercolonial railway, has said that the elevator will be built, not upon Courtenay bay but in the vicinity of the sugar refinery.

Mr. REID: I understand that the elevator is to be built near the sugar refinery out on the point.

Mr. PUGSLEY: That is not on Courtenay bay.

Mr. REID: The trackage that is necessary in connection with Courtenay bay is really a part of the elevator scheme. I realize that it is absolutely necessary to have an elevator there. It is necessary to have an elevator in the western section, near Winnipeg or Transcona. This fire, however, occurred since the war started, and we have had a great deal of difficulty so far as finances are concerned. At any rate, expenditures are so large that if we have been able to hold off anything for a short time we have tried to do so. The hon. member for St. John has been complaining very seriously about expenditures that we are making—expenditures that we cannot stop; at St. John he wishes us to make a very large expenditure.

Mr. PUGSLEY: That elevator was burned down before the war began.

Mr. REID: I think it was after the outbreak of war. It may have been just about that time. I have urged strongly that the elevator at St. John be constructed as soon as possible. We also require an elevator in the neighbourhood of Transcona, so that the grain can be weighed and inspected at that point instead of being taken during the winter months to Fort William and Port Arthur before being passed on to Montreal, Quebec, St. John and Halifax. These elevators must be built. We must have elevators at St. John and Halifax with very large capacities in order to meet the demands during the winter months.

Mr. PUGSLEY: That is what the people there have been thinking for the last two years.

Mr. REID: I cannot understand why the hon. member for St. John should object to work being done at any other point. He wants it all done at St. John. He will vote

for millions to be expended on Courtenay bay or in the building of elevators at St. John, but objects to one dollar being spent in Montreal or at any other place.

Mr. PUGSLEY: My hon. friend must take that back. The statement he has made is absolutely wrong, and absolutely untrue. I do not say that it was deliberate; the Acting Minister of Railways would never be guilty of a deliberate untruth. But the trouble with him is the extraordinary forgetfulness from which he suffers. Does he not remember that at the last session of Parliament I almost took my political life in my hands, so far as St. John was concerned, when I stated that I would favour cutting the appropriations in half. The cutting down was done all round, and when the Minister of Public Works asked me if I would consent to the appropriations for St. John being cut in half, I said that I would, and I was attacked most bitterly by the Conservative newspapers in St. John for my statement at that time. I have never hesitated to vote for all needed appropriations for other parts of the country, and while I am not afraid to stand up for my own constituency and demand justice, I have always tried to be fair. I would not regard the grain elevator at St. John as a new work at all. The old elevator was part of the equipment or plant connected with the Government system of railways. It was a necessary adjunct of the railway, and a necessary part of its plant. That elevator was burned down upwards of two years ago, I think; I am quite sure it was before the war broke out. But a new elevator would not be a new work in the sense in which we speak of hundreds of new works provided for in these Estimates. It would be a case of merely restoring a portion of the plant of the Government railway system which had been destroyed by fire. The rebuilding of that elevator is just as necessary in the interests of western Canada as it is in the interests of the port of St. John. There are elevators in connection with the Canadian Pacific railway at the port of St. John which are not entirely in the interests of, or for the benefit of, St. John. If we did not have elevators there, either the grain from the West would not be shipped at all, or it would be shipped in the winter season wholly from American ports. I am sorry to say that a vast deal of the western grain is being shipped at the present time from American ports, but, if it were not for the elevators of the Canadian Pacific railway, it would likely all go that way. The acting minister said that I ask for millions and millions of dollars for St. John. I have never done so. I remember that when the minister came to St. John, shortly after he took office, he tried to make the people believe that I had been very sparing in making appropriations for St. John, that I was not treating St. John well at all. At a banquet which was given to my hon. friend the Minister of Customs and the Minister of Public Works, my hon. friend will remember he was called upon to make a speech, and he said that he had had an opportunity of visiting Courtenay bay, that he was much impressed with the wonderful possibilities of a great harbour there. He said: "Pugsley has provided, so far as I can see, for only eighteen or twenty docks; now, gentlemen, I want you to understand that if you are of opinion that he has not provided docks on a sufficiently large scale, all you have to do is to come to me, as Minister of Customs, and I will enlarge this undertaking, and you can rely upon getting millions upon millions of dollars provided out of the overflowing revenues of the country." I merely wish to put my hon. friend right. I am sure he will be the first to apologize for the very unfair remarks which he made with reference to me.

Mr. BURNHAM: It seems to me that there is some sort of an arrangement by which the motive originally underlying this discussion should be lost sight of. We had first of all a reference which I did not quite understand by the member for South Renfrew (Mr. Graham). He suggested that the cards be put on the table. What kind of game is he proposing to play? Then we had hardly got through with that very doubtful suggestion when another hon. gentleman suggested that the Liberal party was speaking from the loins of Judas Iscariot, or made some such Scriptural reference as that. These things, however, did not suffice to obscure the illusion which both the hon. member for South Renfrew (Mr. Graham) and the hon. member for St. John (Mr. Pugsley) made, namely, that they did not wish to express their opinion on this $19,000,000 item because they wished to keep it fresh for the $20,000,000, $30,000,000, or $40,000,000 subsidies that they believe are to be brought down later on. That is, they must be quite willing to grant some of the subsidies which they pretend to object to, because they do not want to impair

the present item in the event of their being brought down; otherwise, there is no sense in their references at all. They would give the impression to the country that they are strongly opposed to any money being paid to any of those other undertakings. They back up into position, giving the people the impression that they are facing one way when as a matter of fact they are going another way. But I go further, I strongly object to giving those roads another dollar. I have objected all along, and I object now; and I know that the people object. As for the Conservative journals, especially the Toronto News, it is diametrically opposed to giving any of those roads another cent, let alone another dollar. I think it should be well understood that this is the opinion of the country. But I think the situation is dangerous, and therefore I have ventured to protest. I think it extremely dangerous that the hon. member for St. John (Mr. Pugsley) should say that in the event of this $19,000,000 item being reserved, he would be ready and willing to undertake the consideration of a $20,000,000, $30,000,000 or $40,000,000 subsidy. There is something wrong somewhere.

Mr. PUGSLEY: The hon. member for St. John did not happen to say that.

Mr. BURNHAM: I think the hon. gentleman will find that he did say so; otherwise why did he mention $20,000,000, $30,000,000 or $40,000,000 at all?

Mr. PUGSLEY: Does my hon. friend want an answer?

Mr. BURNHAM: Yes.

Mr. PUGSLEY: What I said was this: if the Government intends to come down with a proposition to impose upon the people an obligation of $20,000,000, $30,000,000 or $40,000,000, this item should stand so that the whole matter can be considered, having reference to the resources of the people and their ability to pay.

Mr. BURNHAM: Precisely so. What I say is that this matter should not be considered at all. The hon. gentleman is prepared to consider it. That is exactly the statement I am making: I am not prepared to consider it. The farmers whom I represent—and I am partly a farmer myself—are not so green as not to see through this veiled reference, this pretending to take a stand and then backing up into position so that the hon. gentlemen will be ready to be convinced at the last moment and be overawed by the Government majority, after they have put up—and I say it without disrespect—a fake opposition. I am opposed to it.

Mr. TURRIFF: My hon. friend says that he is opposed to any further assistance to either of these railways; but if the Government comes down and proposes to give them assistance my hon. friend will back it up just as every other hon. gentleman on the other side of the House will.

Mr. BURNHAM: I did not do so before; I walked out.

Mr. TURRIFF: My hon. friend was talking about backing up to a position. He backs out of a position altogether. I cannot see that he is half as courageous as his colleagues. His colleagues stay in the House and support the Government that they were elected to support, right or wrong, but my hon. friend gets out of the difficulty by walking out of the House.

Mr. BURNHAM: If he gets out of the difficulty what is the matter with that?

Mr. TURRIFF: What I rose for was to ask the minister if the rate of 6 cents a bushel that the Transcontinental railway gives from Armstrong to Montreal or Quebec is going to be continued in force during the summer as well as during the winter? I would also like to know whether there was a profit or loss to the railway in carrying wheat at 6 cents a bushel from Armstrong to Montreal or Quebec. I have always understood that that rate would give a very handsome profit on a road constructed like the National Transcontinental railway, with good grades, upon which one engine could take sixty cars loaded with 1,100 bushels each, or about 65,000 bushels, and haul them from Armstrong down to Quebec. I would like to know if the railway made a profit or a loss for the Government.

Mr. SCHAFFNER: Does the hon. gentleman know what the distance is from Armstrong to Quebec?

Mr. TURRIFF: Yes; about 950 miles.

Mr. REID: There was no profit in it; in fact, there was a loss when the wheat was taken to Montreal, for the reason that there were three railways that had to get a portion of the six cents; there was the Transcontinental, the Temiskaming and Northern Ontario, and the Grand Trunk

from North Bay to Montreal. You can see that if you have to divide that rate up, it makes a very small portion for each railway. We can carry grain from Armstrong to Quebec at a profit, but we cannot do so when the grain has to be hauled over three railways. I think we probably made a little out of taking the grain to Quebec.

Mr. TURRIFF: I am very glad to hear that grain, at 6 cents a bushel, can be carried from Armstrong to Quebec at a profit. I would expect that to be the case, because the object for which the railway was built was to carry grain out of the western country. What was the through rate during the winter from Armstrong to tidewater at St. John or Halifax? My understanding is that although the Government gave a rate of 6 cents a bushel from Armstrong to Quebec or Montreal, the through rate over the Transcontinental railway from Winnipeg to St. John was exactly equal to the old Canadian Pacific rate from Winnipeg to St. John, and that, instead of there being a lower rate, instead of it being something good for the people of the West and of Canada, it was nothing more or less than a fake rate arrived at by charging less on one portion of the Government road and charging more on the balance of the Government road.

Mr. KNOWLES: You mean that it was a gold brick?

Mr. TURRIFF: It was a gold brick, nothing more or less, and it gave no outlet for the wheat. The only advantage that there might be in it was the storage that might be secured in Montreal or Quebec. It was generally understood that when the Government gave this rate they were giving something that would be of advantage to the people of Canada. But when they fixed a rate of 6 cents a bushel for 950 or 1,000 miles, and then added to the rate for the balance of the journey so as to bring it up to the old Canadian Pacific rate and so that there should be no competition whatever, how much good were they doing to the people of Canada? That is the information I have, and I believe it is correct.

Mr. REID: I would like the hon. member to give me his authority for that statement. There is a through summer rate on the Canadian Pacific, lake and rail, from Winnipeg to St. John. It goes by Port Arthur or Fort William, then by water and rail to St. John.

[Mr. J. D. Reid.]

Mr. TURRIFF: What is that summer rate?

Mr. REID: I cannot give the exact rate. The rate from Winnipeg to Port Arthur and Fort William is the same as the rate from Winnipeg to Armstrong. Then, from Armstrong to Montreal and Quebec the rate is 6 cents, the same as the summer lake-and-rail rate. When the grain reaches Armstrong on the Transcontinental, it takes the 6-cent rate and goes to Quebec and then on to St. John at the same rate as they carry over the Canadian Pacific in the summer time, that is, the summer rate from Winnipeg to St. John, lake and rail.

Mr. TURRIFF: I understand that perfectly well. If the Government. on the Transcontinental, can carry grain from Armstrong to Quebec for six cents a bushel at a profit, why cannot they carry it at the same proportionate rate from Quebec to St. John? That seems to be reasonable. That is the only advantage that the people of Canada can obtain. There is no object in cutting down the rate on 1,000 miles of the road and doubling it up on the remaining portion. If you can carry grain at a profit, with a rate of 6 cents a bushel, for the distance between Armstrong and Quebec, surely you ought to make a better profit if you carry it down to St. John at the same proportionate rate per mile, because you will not have the stoppages and all the loss incidental to stoppages. My hon. friend said a moment ago that the equipment allowed them to handle only 8,000,000 bushels, and he spoke as if 8,000,000 was a very considerable amount of wheat. In some ways it is, but it is only one-fortieth part, or 2½ per cent of last year's crop. What was this road built for? What has the Government been doing when, after four years when the grain is there and cannot be taken out in any other way, when the business is offering and the Government road could carry it at a profit, as the minister says—what has the Government been doing in those four years that their equipment is only capable of handling 8,000,000 bushels during the winter season? My hon. friend has a great deal of explanation ahead of him to convince the people of Canada that the Government has been dealing fairly with the National Transcontinental. Here was the business offering, here was the wheat in danger of being lost—and a great deal of it has been lost for lack of storage capacity in the West—and here was the National Transcontinental, a first-class road,

built at large expense; here was tide-water at St. John and Halifax; and, according to the minister, the grain could be carried at a profit by the railway. But the grain has not been carried; the farmers have not been relieved; they have lost tens of thousands of bushels of grain; and the Government comes forward and says they are able to carry only 8,000,000 bushels. Surely the minister has some better explanation than that, because that is no explanation at all. Let me draw my hon. friend's attention and the attention of the Minister of Trade and Commerce to another thing—something that the Minister of Trade and Commerce might have done when he commandeered the 16,000,000 bushels of wheat. Some time towards the end of last October I was out West in the town of Estevan, in my constituency. The men on the market there were quoting 93 or 94 cents, I forget which, for wheat on the track; that is, a farmer could get 93 or 94 cents if he was able to get a car and loaded it up. If he could not get a car and could not get the wheat on the track, he could only get 83 or 84 cents a bushel, or exactly 10 cents a bushel less than what the wheat brought on the track. The wheat buyer is not to blame for this. If he buys wheat toward the end of October and is unable to get a car, he puts the grain in his elevator, and has to figure on storage, insurance of the wheat, and interest on the cost until the following May. That means that he is going to pay just that much less for his wheat. I say that the Transcontinental could have

5 p.m.

taken the wheat from Estevan or any other point along the line at the rate of 6 cents a bushel that the minister has spoken of as being the rate from Armstrong to Montreal or Quebec—roughly speaking, a distance of 1,000 miles—and could have carried it at that rate to St. John. It could certainly carry it at a cheaper rate than the Canadian Pacific railway by lake and rail; therefore, there is no reason why the farmer in the West should be soaked 10 cents a bushel towards the close of navigation, simply because he is not sure of being able to get his wheat out. If the Government had had the necessary equipment and facilities for carrying the grain to St. John and Halifax, the farmers would have got 10 cents a bushel more for their wheat. After all this amount has been put into the railway, apparently hon. gentlemen opposite do not seem anxious to give the railway a fair show. If the Government had been desirous of doing the right thing by the Transcontinental they would have provided the necessary equipment, the rolling stock, and the necessary facilities at tide-water, so that the grain could have been taken at any time of the year down to St. John or Halifax at the rate the minister gave last winter for the 1,000 miles. The wheat could have been loaded into the ships there and the farmers would have saved a large amount on the price of their wheat. It would have added easily 10 per cent to the price they got. Every body from the West knows that towards the close of navigation the price of wheat goes down to cover the expense of keeping it during the winter. Here was a road built for the purpose of relieving matters, and well suited for the work; and if it had had the necessary equipment and technical facilities it could have handled the wheat to the advantage of the whole country, not only giving the farmers a much better price for their wheat, but enabling the road to earn interest on its cost.

With regard to the wheat that was commandeered I think the Minister of Trade and Commerce could have bought wheat after the close of navigation at considerably less than the Fort William price. The wheat could have been hauled over the Transcontinental to tide-water, and shipped to whatever point it was destined for; and in that way, either the purchasers would have got the wheat for a lower price or the farmers in the West would have got a higher price; and the railway, built by the country at a large expense, would have had an opportunity of doing the very thing for which it was built, and of earning interest on the money that had been put into it.

Mr. KNOWLES: Is the minister going to tell the House how this rate of six cents a bushel, from Armstrong to Montreal or Quebec, or ten cents a hundred, which is the same thing, was going to relieve the situation so much? We are all very much in the dark how it could relieve it. The point is that the rate to the seaboard from Quebec, which in winter is of course ice-bound, was more than as much again as the rate from Armstrong, although the distance was not half as much as the distance from Armstrong to Quebec. The Government owns two sets of rails—the new Transcontinental and the old Intercolonial—and has every facility for giving a cheaper rate. If they were sincere—and I am not saying they were not—in their desire to get this wheat to a place of export, the minister should

tell us why they did not put in a cheap rate for export purposes. This rate to Quebec was a joke so far as export purposes were concerned.

Mr. REID: I explained that a few minutes ago. In the summer season the Grand Trunk and the Canadian Pacific railway companies have a certain rate between Winnipeg and St. John and Halifax. The lowest rate of the whole year is the rate during the summer season. What was done by the Minister of Railways and Canals was this: he estimated the rate between Winnipeg and Armstrong, which is at a point equal to Port Arthur or Fort William. Then between Armstrong and Montreal he put into force a six-cent rate, so that the farmers in the West would have during the winter season the advantage of the lowest rate they could get on any railway for lake-and-rail transportation during the summer season.

Mr. KNOWLES: Where did the grain go in the winter time?

Mr. REID: The hon. member knows that the terminus of the Canadian Pacific railway is St. John, and that during the winter time the Canadian Pacific Railway Company charges a much higher rate from Winnipeg to St. John than it does in the summer. The reason for that is that there is lake-and-rail transportation during the summer.

Mr. KNOWLES: There is no rate to St. John in the summer?

Mr. REID: There is to Montreal, and there is a rate to St. John in the winter. The farmers of the West had the advantage of the summer rate between Winnipeg and Montreal, and from Montreal to St. John they had the Canadian Pacific railway rate.

Mr. KNOWLES: What advantage did they have by using this combination rate over what they had by using the Canadian Pacific rate before your rate went into effect?

Mr. REID: When the elevators at Port Arthur and Fort William were filled the farmers of the West had to leave their grain either in their storehouses, or in the fields, or ship it over the Canadian Pacific railway or the Canadian Northern railway from Winnipeg to St. John, or to Portland, and if they shipped it over the Canadian Pacific railway they had to pay the winter rate. By shipping the grain over the Grand Trunk Pacific and the Transcontinental they had the advantage of the summer rate between Winnipeg and Montreal.

Mr. KNOWLES: What advantage did they receive by sending it to Montreal?

Mr. REID: They could send it on to St. John or any other winter port at the summer rate. Suppose a farmer had a thousand bushels of wheat to ship from Winnipeg. If he shipped it over the Canadian Pacific railway to St. John or to Portland, he would pay a high rate, because the Canadian Pacific rate is higher in the winter than in the summer. If he shipped it over the Government railways, he would get the advantage of the summer rate between Armstrong and Montreal; and the rate over the Canadian Pacific railway or the Government railway between Montreal and St. John is the same. The Transcontinental relieved the congestion in the West to the extent of 8,000,000 bushels. Hon. members complain that we did not ship out more. They say that we should have been ready to transport millions upon millions of bushels from the West. I have explained several times that we took over this road on the 1st of July; the Grand Trunk Pacific operated it for a month or two until we could get some engines and cars from the Intercolonial, but we robbed the Intercolonial of cars and engines in order to operate the Transcontinental as well as we did during the past winter. Hon. members know that it is an absolute impossibility to have engines and cars manufactured in a few days; they know that it takes several months to get equipment. We are trying to get it as quickly as possible, but a large number of cars and engines are necessary to operate a thousand miles of railway between Winnipeg and Moncton. This winter I was very sorry that we had to take seventy-five engines and a thousand cars from the Intercolonial in order to operate the Transcontinental; because if we had had those engines and cars on the Intercolonial, we would have moved a very much larger quantity of freight between Montreal and St. John and Halifax during the winter.

Mr. GRAHAM: You leased a number of engines?

Mr. REID: We leased twelve or thirteen engines from the Canadian Pacific railway and one or two from the Bangor and Aroostook railway. We did everything possible to get more engines. We had no equipment of any kind to start with, and I think we did very well with the equipment

that we were able to put on the Transcontinental.

I do not say that there is very much profit in the six-cent rate between Armstrong and Quebec, but it pays with a trainload such as I have stated. The Transcontinental has to be operated during the whole year, and in the summer months not very much freight is carried over this railway owing to the lake-and-rail transportation. When I say that the six-cent rate paid, I mean that it paid a small amount over the operation of the train.

During this year we are going to buy more engines and cars, so that when the crop is harvested, we shall be able to carry a very much larger quantity of grain than we did last year. It is only along the line of the Grand Trunk Pacific that we can assist in relieving congestion, because there is enough grain along that line to keep us busy.

Mr. WILLIAM CHISHOLM: The minister has admitted that about a thousand cars and seventy-five engines have been taken from the Intercolonial to operate the Transcontinental. What steps does he propose taking to restore that equipment to the Intercolonial? A great many complaints have been received at Moncton of the inefficient service rendered by the Intercolonial during the past year. Lumbermen, cattlemen, stock dealers, and mining corporations have been complaining that they could not get cars. The passenger service during the past eight months or so has been almost disgraceful, the engines being wheezy, broken-down affairs, worse than the horses sold in Kings county to the Militia Department; in fact, those horses were Arabian steeds compared with the engines on the Intercolonial. There has been scarcely a passenger train that has not been two or three or four hours late, and the general complaint through the Maritime Provinces is that the service has been very bad. The reason was not apparent then, but it is apparent now: The Intercolonial was robbed in order that the Transcontinental might be operated. I do not think that is fair. The people of the Maritime Provinces have a right to receive as good treatment as they have been accustomed to receive in years gone by. The Intercolonial is a Government road and the service should not be impaired in the manner it has been. The minister must have known, when he was taking over the Grand Trunk Pacific, that he would require cars and engines, and it is altogether nonsense to say that it is impossible to procure cars and engines. Had he taken the precaution he would have had no difficulty in getting them; there are many car-building establishments in the country who would have been only too glad to be employed at any time within the last two or three years. I would like to ask if he has taken any steps to restore the efficiency of the Intercolonial—which was none too good before?

Mr. SCHAFFNER: I think it would be better that the question that has already been referred to, the reduction of rate from Armstrong to Montreal, should be more fully dealt with before we go into other matters. I do not know whether the minister can say now what the rate was from Armstrong to Montreal before the reduction was made. As I understand the situation, we are paying the same rate exactly from Winnipeg to Armstrong that we paid before, that is, six cents a bushel; and, as I understand further, we are paying the same rate from Montreal to St. John that we paid before. I am not trying to support the Government in not making a greater reduction, but I wish to be fair, as no doubt they wish to be fair. If the rate from Winnipeg to Armstrong is the same as it was before, and if the rate from Montreal to St. John is the same as it was before, and if the rate between Armstrong and Montreal has been very much reduced, then certainly there must have been a reduction on the whole.

Mr. KNOWLES: No, for this reason: The freight rate to St. John is not made up by the addition of these three rates, but it is a through export rate.

Mr. SCHAFFNER: Has the through rate from Montreal to St. John been added to? Is it more than it was before the Government undertook to make this reduction?

Mr. KNOWLES: It will cost a person more now to the seaboard if he uses these rates over parts of the route, and also uses the local rate from Armstrong to Quebec.

Mr. SCHAFFNER: I understood that the rate was the same as it had been from Winnipeg to Armstrong and the rate was the same as it had been from Montreal to St. John. If, then, the Government made a reduction over a thousand miles of rail haul, there must have been a benefit to the farmers of the West.

Mr. REID: Undoubtedly, there was a large reduction. There is a through rate between Winnipeg and Montreal, which obtains now in the summer season. In the winter time the grain has to go over the railway right through to Portland, St. John, or Halifax, and on that there is a through rate. But the rate on the Canadian Pacific was higher than it was on the Transcontinental and Government railways through to St. John or,—if it went over the Grand Trunk—to Portland.

Mr. PUGSLEY: Would the minister give us the rate?

Mr. REID: I cannot give it offhand.

Mr. PUGSLEY: Does the minister have this in mind—that owing to there being no elevator accommodation at St. John, there was no way by which the grain could be shipped from that port unless it came from the east side of the Interoclonial terminus, across to the docks on the west side? Does not he know that that would have to be added to the freight on grain coming over the Transcontinental to St. John? It would be very interesting to know what rate was actually paid from Winnipeg to West St. John by Transcontinental and the Intercolonial. I think he will find that the rate is the same as the rate by the Canadian Pacific railway.

Mr. KNOWLES: The same to a cent.

Mr. REID: No.

Mr. KNOWLES: The minister is in error. The rate was lowered for a stretch in the middle of the haul. But to seek to take advantage of that would yield no advantage to the shipper. If an exporter had 10,000 bushels of grain, and decided that he would take advantage of that low rate from Armstrong to Montreal or Quebec, and then were to pay the local rate from Winnipeg to Armstrong and the local rate from Quebec to salt water, he would be out several cents a bushel.

Mr. REID: As compared with the rate between Winnipeg and St. John on the Canadian Pacific?

Mr. KNOWLES: As contrasted with the through rate to St. John, either by the Canadian Pacific or by the Grand Trunk. If the minister were to go into the shipping office of the Government railway in Winnipeg and then were to visit the shipping office of the Canadian Pacific, he would be quoted the same figures to a cent and even a decimal of a cent. The rate is 33¾ cents per hundred or 20¼ cents a bushel. Unfortunately, the minister does not know the figures, nor have I the figures by me; but the late Minister of the Interior (Mr. Oliver) and I have gone into this carefully, and we ascertained clearly that if a shipper were to try to take advantage of this lower rate he would be money out of pocket on the haul over the whole route. This is the one thing that the minister's department pretended to do for the farmers—and I do not use the word "pretended" offensively. Now, when we try to ascertain what it really means, a remarkable thing is that neither the acting minister nor the bevy of officers attending him on the floor, can tell us the through rate. One would have thought that this would be the one thing that they would have been able to state. Of course, I am not here to criticise the officers; it may not be reasonable to expect them to have this information or they would have had it.

Mr. REID: I will get it.

Mr. KNOWLES: And I hope the minister will find out how much grain went to St. John from the West and how much to Halifax, and what he paid. And would he ascertain whether the amount so paid was arrived at by taking account of the rate of six cents a bushel from Armstrong to Quebec, or was a through export rate obtained from Winnipeg, or from whatever point the wheat started from, to salt water? I am sure that not one of the minister's officials will tell him that the through rate from the prairies to salt water was one cent a bushel less over his railway than over the Canadian Pacific The minister talks about the summer rate to Quebec or Montreal. But what is the good of that on wheat that is going through in the middle of winter?—you might as well tell the shipper that his bill of lading is of a pretty colour. The story we get from the Government is that the Allies want our wheat, and we are anxious that they should get it. But the Government do not in fact promote this trade. We have Government internal storage elevators that we cannot get filled. The Minister of Trade and Commerce (Sir George Foster) has the wisdom not to get into this discussion though the matter relates in part to his department. When the announcement was made that this benign Government—and I think a great deal of the Government in some respects—would make this concession for the

benefit of the farmers, naturally the farmers were greatly pleased. But when they came to take advantage of it, they found that they had been acting under a misapprehension and that the change would not benefit them by a single cent; the figure is the same by the two railways, and there is absolutely no reduction.

Mr. PUGSLEY: A gold brick.

Mr. KNOWLES: I did not say that, though I confess the word was in my mind; but I do not wish to talk party politics in this matter. It was a gold brick that did not do anybody any harm. But, on the other hand, it did not do them any good, because it was soon found out. But there is this criticism that we have to make—if they can carry the wheat from Armstrong to Quebec at six cents a bushel and make money, or even pay expenses, it is a crime for them to charge eight and a fraction cents per bushel from Quebec to salt water. Because in doing this they are charging about one-third more for a haul of only half the distance. There is a nigger in the fence somewhere.

They either did not want the farmer to get the good price, or they did not want to make this new railway a success. They are no fools in the Railway Department. They knew when they put that rate on that the stuff would not go to the salt water; they did not want to see it go through and make a booming business over that railway. Why did they not establish just as good a rate on the Intercolonial, instead of maintaining a rate that is more than double? If they can afford to carry grain at that rate through that new country in Northern Ontario and Quebec there is no excuse for charging a rate doubly as high from Quebec to St. John and Halifax. These are points that I would like the minister to look into and to inform himself upon.

Sir GEORGE FOSTER: Hon. gentlemen on the other side are difficult to please. I suppose the Minister of Railways had not the least idea that he would be called upon to operate the Grand Trunk Pacific railway, which was not taken over, I understand, until the first of July of last year. That road was built by the Grand Trunk Pacific Railway Company, and was supposed to be operated by them; yet hon. gentlemen on the other side have been calling the Minister of Railways to book because four years ago he did not start to provide rolling stock for the Grand Trunk Pacific railway. Is that quite a fair thing to do? Surely not. Again, when the Minister of Railways tried to alleviate the situation—and my hon. friends from the West know it to have been serious—in the interests of the Western farmer, by taking from the Intercolonial railway what the Intercolonial could ill spare, a number of engines and a large number of cars, and sent them to do that Western duty for the Western farmer, then came forward a member from Nova Scotia declaring that it was a crime against nature and the Maritime Provinces that seventy-five engines, or any number of engines and cars, should be taken from the Intercolonial railway, which, to the infinite disgust and discontent and confusion of Maritime Province dwellers, was left with only wheezy consumptives. He had not the heart to allow the Western farmer to get a single bit of solace or comfort; he and his own home must be looked after, no matter what became of the farmer's wheat. That shows the infinite difficulty of pleasing everybody. I am sure my hon. friend the Acting Minister of Railways will take a little comfort from the fact that he has steered the right course. The member for Moosejaw (Mr. Knowles) contends that no good has been done to the western farmer by the moving of 8,000,000 bushels of wheat out by this line during a portion of the winter. I think that this has been beneficial to the western farmer.

Mr. KNOWLES: I did not say that it had not been beneficial; I said that the western farmer did not get the grain to the salt water any cheaper.

Sir GEORGE FOSTER: Throughout the country west of Winnipeg and west of Saskatoon there was insufficient storage for the farmers' grain, and quantities of it were lying in a more or less exposed condition, and therefore liable to injury. The elevators became filled with grain, and storage could not be extended. This 8,000,000 bushels of grain was so much extracted from the storage capacity of the West, which left a vacancy for 8,000,000 bushels to be salved and put into that storage. My hon. friend says that that did no good to the western farmer unless he got his grain into the consumer's hands; getting it down to Quebec and Montreal was of no use to the farmer of the West and did not make his position any better. I think my hon. friend is wrong in that. The grain got down at a summer rate to the elevators

of Quebec and Montreal. No greater storage charge was paid in those elevators than would have been paid, I imagine, in the western storage position. The western farmer got this 8,000,000 bushels down at a summer rail rate, partly into storage and partly perhaps into ships. This grain was taken to eastern ports and placed in storage, thus relieving the storage capacity in the West and allowing grain which otherwise would not have had storage to get storage there, and it was a relief to the situation to that extent. My hon. friend stated that this road should have been thoroughly equipped, and should have begun to draw the grain out immediately after the crop had been gathered in the West. Well, little of it would go out by that route until the season of lake navigation was at an end. When the lake season is at an end and that line of out-go is closed, then the railways take hold of it and carry it as best they can. If my hon. friend had got out 8,000,000 or 18,000,000 or 30,000,000 bushels by the last of October, or the middle of November at the latest, not one bushel of it would have got any the quicker into the hands of the European consumer, simply because there was not the ocean tonnage to carry it. I think we ought to take that into consideration. Every bushel of wheat that was necessary and called for to fill the tonnage which it was possible to bring to the Atlantic ports, whether in Canada or not, was answerable to that call. That more did not go, that more could not go, was due to the fact that there was not the tonnage to take it away. The commandeered grain has been passing out through the Atlantic ports from the middle and later port of December until the present time, and there never was a moment when more grain was not waiting for the transports than there were transports to take it. What is true of that grain is true of grain generally, and would have been true of all grain that might have been brought out by that route or by any other route to Atlantic ports, whether Canadian or more southern Atlantic ports. Even if equipment had been available and the grain had been carried, it would not have passed into the hands of the ultimate purchaser and consumer in European countries any quicker. Whatever was carried did get the advantage of being close to the seaboard and of having got there at a summer rate; moreover, it will be ready when navigation opens in the summer, and further tonnage comes to take it away. Taking all these things into consideration I think that the congestion in the West was materially alleviated by bringing out these 8,000,000 bushels of grain, thus giving place to grain which would otherwise be deprived of storage.

Mr. PUGSLEY: I do not object at all to my hon. friend trying to defend the Government for its want of foresight, for its failure to equip the Transcontinental road. He and his colleagues have to make the best case possible, and I am quite content to leave their action or inaction to be judged by the public. But I do complain of the reference which my hon. friend made to the remarks of the hon. member for Antigonish (Mr. Chisholm). I think he rather twisted that hon. gentleman's remarks and gave them a meaning which they did not bear. What that hon. gentleman meant, as I understood him, was that instead of waiting until they had to get rolling stock for the Transcontinental and robbing the Intercolonial railway of its proper equipment, the Government should have taken time by the forelock and provided a proper equipment for the Transcontinental. That is what I understood the hon. member for Antigonish to say. Was that not reasonable? This Government, under the Act for the building of the Transcontinental railway, is given the power to operate various sections of the road pending its completion, and pending the time when the Grand Trunk Pacific would be required to enter into the 50-year lease for that portion of the road. This Government ought, I think, to have done one of two things when they came into office nearly five years ago. It should have made up its mind whether it was going to operate the road pending its entire completion, or whether it should enter into an arrangement with the Grand Trunk Pacific to operate it. I have already called the attention of my hon. friend, but with very little effect apparently, to a statement which was made two, or perhaps three, years ago to the Minister of Railways in this House that the Grand Trunk Pacific Railway Company had offered to take over the road as the various sections were completed, pending the completion of the entire line; that they had offered to thoroughly equip the road with rolling stock to the satisfaction of this Government, and to operate it under the direction of the Government, and subject to examination by the accountants of the Government. They offered to hand over any profits

of operation to the treasury of the country, and all they stipulated for was that, if there should be any loss in the operation of the road, that loss should be added to the cost of the Transcontinental upon which they would be called upon to pay interest at the rate of three per cent.

I want the committee to remember that the Minister of Railways promised distinctly and positively to take the matter up with the present president of the Grand Trunk Pacific Railway Company, and that he stated that he would inform this House of the result. But from that day to this, so far as appears from the statement of the acting Minister of Railways, this Government has made no effort whatever in that direction. Therefore, what was the obligation resting upon it? The obligation was that it should provide the equipment and get ready for the operation of this line of railway. That was their duty to the great producers of the West, and their duty to the people of the whole Dominion in whose interests this great undertaking was entered upon. But this Government does nothing, although, as I have said, it has been in power now for nearly five years. Having apparently made up its mind that it was going to operate the road; having done everything it could do to prevent the Grand Trunk Pacific from entering upon its operation, and having disregarded the contract and the specifications, thus rendering it not only possible but reasonable for the Grand Trunk Pacific to delay entering upon its operation, the obligation was on this Government. Did they not know what the railway was built for? My hon. friend the Minister of Trade and Commerce spoke as if he thought it was a great thing, as if the Government was entitled to infinite credit, because 8,000,000 bushels of wheat had been carried over the Transcontinental. What was the road built for but to carry grain and all kinds of products? It seems to me that far from being entitled to any credit for carrying such a small amount of grain, for the small equipment it had, and for the poor facilities it provided, it should be condemned because it did not make the necessary arrangements and get the necessary equipment. Did the Government not know that one of the grand ideas which was put forward in connection with the Transcontinental was that it was to give a cheap rate in the winter, so that wheat and other products could be carried in winter as well as in summer, and in summer as well as in winter. That was the object in getting the low grades; that was the object in building a splendid roadbed; that was the object in going to very large expense to build the road to a very high standard instead of building it to a secondary standard. Yet we find that though this Government had apparently for a long time made up its mind that it was going to operate this road, it was absolutely without equipment, absolutely unprepared to transport the products of the West to the markets of the old world.

My hon. friend the Minister of Trade and Commerce says that there was as much wheat carried as could be carried, because vessels were not available. Here again, we find a want of foresight. Ought not this Government to have foreseen, when the war broke out, that there would be transportation difficulties? Should it not have thought that vessels would be needed? Should it not have given some attention to the question of providing a Canadian merchant marine to meet the deficiency in vessels which has taken place. Not one step did it take to meet the transportation difficulty, and to-day, after twenty months of war, with the ships of the Empire disappearing from the ocean in too great numbers for the comfort of the people of Canada and of the Empire generally, we are in the same state of lethargy; at least, this Government is as before. Not a thing has been done; not a thing is being done to provide proper transportation, and the only excuse the Minister of Trade and Commerce makes for hauling a paltry quantity of 8,000,000 bushels of grain over the Transcontinental railway, is that, even if more had been hauled, it could not have been transported to the markets of the old world. That is the excuse for not building the elevator at St. John to replace the one that was burned; that is the excuse for not enlarging the elevator at Halifax; that is the excuse for not providing any elevator accommodation at the port of Quebec. Does the Minister of Trade and Commerce know that at the port of Buffalo there is elevator accommodation for 50,000,000 bushels of grain? The grain of the West is brought there and stored preparatory to being sent over the American railroads to Baltimore, New York, Philadelphia and transported to the markets of the old world. In this country, we have spent millions upon millions of dollars on this great transportation system, and yet the only elevator accommodation we have in Eastern Canada is that provided by the small elevator at the port of Halifax, with a capacity of

750,000 bushels. After being in office for nearly five years, that is all this Government has to show: our ships declining, no effort at shipbuilding, our elevators burned down, and no steps taken to rebuild them. The elevators which were burned down having demonstrated that they were not sufficient even for the traffic of the Intercolonial, and still less for the traffic over this great Transcontinental system, no effort has been made to enlarge them, and no effort has been made to give adequate elevator accommodation at Quebec, St. John, Halifax or any other port on the Atlantic coast. The pitiable excuse that the Minister of Trade and Commerce gives is that, while it is true that we brought but a little grain, we brought little because we did not have the equipment in the way of locomotives and cars, that even if we had brought more we had no elevator accommodation. that if we had brought it to the sea coast we had no ships to transport it; so that altogether, we have been obliged to allow millions upon millions of bushels of grain to remain rotting on the prairies of the West and we have hundreds and thousands of our farmers reduced to a state almost of poverty with thousands of bushels of grain, gathered after laborious toil, for which they can get no return. That is the condition in which our western country has been left. The minister has made his apology but I do not think it is an apology which will satisfy this House or the people of the country.

Mr. TURRIFF: I would like to ask the acting Minister of Railways and Canals a question. Grain can be hauled from Armstrong to Quebec, a distance of 932 miles, at a profit for 6 cents a bushel. The mileage from Winnipeg to Armstrong and from Quebec to St. John is 961 miles. Thus, two end pieces between Winnipeg and St. John have a mileage of 961 miles and the centre piece, from Armstrong to Quebec, a mileage of 932 miles, so that these portions are practically equal. Naturally, with a long haul, without breaking bulk, you can give a little cheaper rate. Will the Government, in order to help both the railway and the farmers of the West, be willing in future to give a rate of 12 cents a bushel in the winter from Winnipeg to St. John and put up the necessary handling facilities at St. John? If you could do something like that you would do away with the great big squeeze that is made on the farmers after navigation closes. I suppose this is more or less a question of policy and if the minister is not able to give an answer right offhand, I will not be surprised, but I would ask the minister if he would find out and give an answer on another day.

Mr. REID: I have been taking up the question of providing increased elevator facilities at St. John and at a point near Winnipeg—Transcona, or some place in that locality. We require an elevatoir there so that when the grain is passing through it can be inspected and graded. I understand that those interested in the grain can raise money on the bills of lading but the grain has to be inspected first. We require an elevator there and one at St. John. We can get along fairly well with the one now at Halifax until the terminals are completed there. I have been taking that question up with the view of seeing if we cannot bring in an item in the Supplementary Estimates to cover these two points that my hon. friend has referred to. That, of course, will have to be taken up and discussed when the time comes. With reference to the question that the hon. member for Assiniboia (Mr. Turriff) has asked me about the rate, I may say that the Transcontinental was taken over by the Government in July and that my hon. friend the Minister of Railways and Canals took up with his officials the question of rates and put this six cent rate in force. He has been working along in the best way he could in order to get rates established along the Transcontinental railway that would be proper and workable in the future. I think the hon. member would hardly expect me to answer fully as to the policy of my hon. friend the Minister of Railways and Canals in regard to rates, management and operation of the Transcontinental railway. My hon. friend the minister has been very ill; he has not been able to be here—

Mr. GRAHAM: How is he?

Mr. REID: He is a little better, but he will not be able to be here during the present session, I am afraid.

With reference to the equipment, if I remember the arrangement, money was advanced for the purpose and the Grand Trunk Pacific Railway Company were to provide proper equipment for the Grand Trunk Pacific and the Transcontinental railway. They were to have a sufficient amount of equipment when the road was to be taken over.

Mr. PUGSLEY: When it was completed.

Mr. REID: When it was completed.

Mr. GRAHAM: There were bonds set apart for that purpose.

Mr. REID: Exactly. If the Grand Trunk were to take the road over, naturally you would expect that they would have provided all the equipment that would be necessary for its operation. But, when we started operation, the Grand Trunk Pacific were not able to let us have any equipment at all.

Mr. PUGSLEY: They would not get the equipment until the road was about completed.

Mr. REID: The hon. member was finding fault because we had not proper equipment. In a matter of this kind arrangements must be made for a considerable time ahead. Every one knew that the road was about completed.

Mr. PUGSLEY: No, it is not completed yet.

Mr. REID: Well, that is the opinion of myself as Acting Minister of Railways and Canals, and that must have been the opinion of my hon. friend the Minister of Railways and Canals when he notified them as he did. But they had not any equipment at all. We could not get any equipment from them. They required it all, and in the discussions which have taken place in this House from time to time, and in which members from the West have taken part, it has been stated that they did not have sufficient equipment for the Western business.

Mr. KNOWLES: I do not think anybody ever said that.

Mr. REID: It may be that I am wrong in that. That may have been said of some other railway.

Mr. KNOWLES: Just lately the Railway Commission ordered the Grand Trunk Pacific to carry a great deal of the Canadian Northern traffic.

Mr. REID: That Bill we put through had the effect of relieving the situation in the Goose lake district.

Mr. PUGSLEY: That is the road in which this Government is a partner.

Mr. REID: The Canadian Northern took the grain to Saskatoon.

Mr. PUGSLEY: The Canadian Northern has a Goose lake branch.

Mr. REID: I know, but I say that the Canadian Northern carried the grain to Saskatoon, and, under the Bill that we put through, the Railway Commission compelled the Grand Trunk Pacific to carry the grain from Saskatoon to the Transcontinental railway and the Transcontinental railway carried it through. The Railway Commission, operating under that Bill, were able to relieve the situation in the Goose lake district by having the grain hauled out and carried through.

Mr. PUGSLEY: That shows that the Grand Trunk Pacific had the equipment then.

Mr. REID: I was going to add that my information is that the Grand Trunk Pacific had not enough equipment to give the cars that they were asked for at Saskatoon; otherwise we would have carried quite a lot more grain from Saskatoon east. That is my information. We could have hauled several hundred cars more, if the Grand Trunk Pacific could have let us have them, taking away the grain from the elevators.

Mr. KNOWLES: They supplied some as auxiliaries to the Canadian Northern.

Mr. REID: Yes. The Railway Commission made the Canadian Northern put, I think, 1,200 cars on the Goose Lake division, and the Grand Trunk Pacific a number of cars between Saskatoon and Winnipeg, so as to relieve the situation as the Canadian Northern brought the grain in to Saskatoon. These companies did this willingly. If these instructions of the Railway Commission had not been given not so much grain would have been taken out of the Goose Lake district.

Mr. PUGSLEY: If the Railway Commission thought it reasonable to tell the Grand Trunk Pacific to put 1,200 of their cars at the disposal of the Canadian Northern, does not that show that the Grand Trunk Pacific was pretty well equipped? It shows that the Railway Commission thought they were much better equipped than the Canadian Northern, notwithstanding that this Government is junior partner in the latter company, and ought therefore to be a little bit responsible for its proper equipment.

Mr. REID: The hon. member is not putting the matter fairly. The Grand Trunk

Pacific did not take the 1,200 cars or one car off their own road, but used them on their own road between Saskatoon and Winnipeg. The Canadian Northern were using their cars between the Goose Lake district and Fort William, and it took a car three weeks to go from the Goose Lake district to Fort William and back. What the Railway Commission compelled the Canadian Northern to do was this. They made them use their own cars on the Goose Lake line, and rush the grain to Saskatoon, only a short distance away. The cars were kept running backwards and forwards, unloading at Saskatoon, where they connected with the Grand Trunk Pacific. The 1,200 cars, or whatever it was of the Grand Trunk Pacific were used between Saskatoon and Winnipeg.

Mr. PUGSLEY: Does not that show that in the opinion of the Board of Railway Commissioners the Grand Trunk Pacific had not only enough cars and locomotives to handle the traffic originating on their own line, but 1,200 more cars to be devoted to traffic originating on the Canadian Northern?

Mr. REID. All I have to say is that I took the matter up with the Railway Commission and urged them to get out all the grain they could. They urged the Grand Trunk Pacific to get all the cars they could and use them on their own line. With regard to the hon. member's suggestion that the Grand Trunk Pacific had a surplus of cars, all I can say is that we did our best to get some equipment from them and we did not get any.

At six o'clock the House resumed and then took recess.

The House resumed at eight o'clock.

PRIVATE BILLS.

CONSIDERED IN COMMITTEE—THIRD READING.

Bill No. 89, respecting the High River, Saskatchewan and Hudson Bay Railway Company.—Mr. W. M. Martin.

SENATE AMENDMENTS.

Further consideration of an amendment made by the Senate to Bill No. 32, respecting the Toronto, Hamilton and Buffalo Railway Company.—Mr. T. J. Stewart.

Mr. GRAHAM: What is the amendment?

Mr. REID: There is just one change in section 3 of the Bill, which reads:

[Mr. J. D. Reid.]

Notwithstanding the provisions of section two of this Act or of the agreement hereby ratified, the powers of the Board of Railway Commissioners for Canada as to the routing of traffic shall not be deemed to be thereby impaired or restricted.

The word "two" is changed to "one." That means that section 3 refers to section 1; it was evidently a mistake to make it refer to section 2.

Amendment concurred in.

SECOND READINGS.

Mr. SCHAFFNER moved the second reading of Bill No. 88, to incorporate the Manitoba and Saskatchewan Bible Society.

Mr. GRAHAM: Does this society conflict in any way with the Canadian Bible Society?

Mr. SCHAFFNER: Absolutely not. This Bill was passed by the Senate, and therefore it is likely all right.

Mr. GRAHAM: The hon. gentleman does not always think so in regard to Senate Bills.

Mr. SCHAFFNER: I think so in this case.

Motion agreed to, and Bill read the second time.

Bill No. 92, for the relief of Robert Charles Vondrau.—Mr. Scott.

Bill No. 93, for the relief of Percy Lynn Woods.—Mr. Boys.

SUPPLY.

Prince Edward Island railway, $613,100.

Mr. OLIVER: In the discussion that has taken place in regard to the railway rates over the Transcontinental which were put in force some time last winter, no reason has yet been given why there was a difference in the rate per mile between that section of the line from Armstrong to Quebec and that section from Quebec to St. John.

The conclusion to which we are driven is that the rate was left as it was left so that it should not be, in fact, a competitive rate to an open winter port. The rate to St. John over the Transcontinental was identical with the rate over the Canadian Pacific, and the difference in the rates for the intermediate sections of the line only made the difference mentioned by the Minister of Trade and Commerce (Sir George Foster): It gave the benefit of storage capacity at eastern points instead of the capacity that would be needed to keep that grain stored in the West.

Not to discuss these points at any greater

length, let me place before the committee the question in its general aspect. It appears to me to be of very much greater general importance than those who have spoken, on the Government side at any rate, seemed willing to accord it. If there is one thing upon which the future welfare—the immediate as well as the distant future welfare—of Canada depends more than upon any other, it is the increase of Western production. That, I think, goes without argument. We are today faced with the statement, made on good authority, that, instead of production in the prairie country being likely to increase during the season upon which we are now entering, the area of production will be decreased as compared with last year. Some estimates are as high as twenty per cent decrease, some only fifteen per cent; but I have not seen any estimate less than fifteen per cent. That, at a time when the country and the Empire and the world may reasonably be expected to need increased production on the part of our western prairies, is a most serious consideration. It is not for lack of industry, nor is it for lack of enterprise, nor lack of opportunity, that the productive area is in prospect of decreasing this season as compared with last. We had, last year, besides a maximum area of production, a phenomental crop. The result was an abundant return such as we have never seen before and such as, I am afraid, we need not expect again at any short interval. Had it been possible for the producers to realize upon that crop promptly and at the value that the demand in the world's market gave it, it would beyond any doubt have produced a condition of prosperity amongst the men actually engaged in production in the West and would have put them in a position to increase their production during the coming season. I am aware that there are difficulties in the way of increasing production this year that did not exist last year. But the great thing that stands in the way is that many of those who were successful beyond their expectations in producing last year have not been able to realize upon that production in time to put them in funds to go on with their enterprise this year. If I spent my money and my credit in producing an enormous crop last year, and have not been able to pay the debts I incurred in that production, I am not in a position to make extra exertions to produce a similar abundance during this coming year. It is not a question of whether I have the will or not, I have not the ability; I cannot do it, no matter how much I may want to do it. And I need not say to the House that, if I have been disappointed, as thousands of our people have been, in not being able to dispose of my crop under satisfactory conditions, I have not the heart, even if I have the ability to go on and make those exertions during the current year that must be made if the great results that we hoped for and that we need are to be achieved.

Until this present year, after the close of navigation on the lakes, it was not possible—or it was not reckoned to be possible—to bring grain forward to the seaboard. The western market was bottled up for a period of five months and was subject to such fluctuations of world prices and world conditions as might occur in the meantime. The result of that was, as was explained by my hon. friend from Assiniboia (Mr. Turriff), that every fall between the date of the harvesting of the crop and the date of the closing of navigation on the lakes—unless the crop was a partial failure—there was what was called a grain blockade, a condition of congestion caused by the farmer's desire to get his grain out before the close of navigation, thereby saving the cost of storage and the extra cost of hauling during the winter months. Obviously, the grain that did not go forward before the close of navigation had to be held until navigation opened in the spring, at the cost of storage, interest, insurance, and possible unfavourable market fluctuations. The consequence was that there was a premium on grain that could be got forward and a discount on grain that could not be got forward. As I have said, this occurred year after year; it was a necessary result of the conditions of the country whenever there was a large crop. Each year that condition of congestion meant tremendous loss to a large proportion of the producers of the West. I had the honour of drawing the attention of the Government of the day to that condition in 1911—a condition which resulted in tremendous losses during that year. It was believed that the construction of the Transcontinental railway over the shortest possible route, with the lowest possible grades and with the best possible construction, would not only increase the possibilities of traffic throughout the Dominion of Canada, but also eliminate—wipe off the slate absolutely—this condition of recurring

congestion or grain blockade. It was believed that this could be accomplished by creating a condition under which grain could be sent forward from the prairies to ocean ports all the year round at a favourable rate of freight. That was the purpose of the building of the Transcontinental railway; it was thought wise and prudent and economical to spend millions, tens of millions, even hundreds of millions, in the construction of that line in order to achieve that result. As the country increased in production, there was a corresponding increase from year to year in the disabilities resulting from the stoppage of the eastward flow of grain on the close of navigation. The time came when that road was completed. The last rail was laid in December, I think, of 1913, and in the session of over a year ago the Minister of Railways declared that the road was completed. It was stated—and the matter has been discussed since in the House—that there was a difference of opinion between the Grand Trunk Pacific Railway Company and the Government as to whether the road was completed or not, the railway company holding that it was not completed, and that, therefore, they were not required to take it over; the Government holding that it was completed and that the railway company were defaulting when they did not take it over. Briefly, that was the condition a year ago; the last rail had been laid in the winter of 1913 and the Government in the session of 1915 declared that the road was absolutely completed and was entitled to carry traffic to the full, and that the railway company that refused to take it over was actually in default. Following on the heels of that condition of over a year ago came the greatest crop that our country ever saw; came the greatest prices for that crop in the market of ultimate consumption that we have seen in a lifetime; came the greatest demand for the crop that our country had ever seen. We had the crop; we had the railroad; we had the demand, and we had the pressing and urgent necessity. This railroad is under the management of the Government itself, with all the resources of the Dominion of Canada at its disposal. Yet, under all the conditions that I have sketched, the Government tells us that they have moved 8,000,000 bushels of grain over that line to relieve the condition that existed, to establish the fact that a grain blockade, or a grain congestion, should not and need not occur in the prairie west as long as that line is in existence. This was not meeting the case as the welfare of the country and the needs of the people demanded. We are asked to believe that the Government has done its full duty, has done everything that it is possible for a government to do, when it has moved 8,000,000 bushels out of a crop of something like 250,000,000 bushels. With 50,000,000 bushels of grain to-day at the elevators at the head of the lakes, this railroad is said to have moved 8,000,000 bushels. I do not wish to speak harshly; I do not wish to take up time, but these are the conditions. When we find that the Government, in fixing the rate that was to prevail in the case of grain carried over that road, actually fixed a rate absolutely the same as that which had prevailed in previous years, before the railroad was constructed at all, we cannot reach the conclusion that there was an earnest desire on the part of the Government to meet the case as it actually existed. Had that road been operated from the beginning of the season; had it carried all the grain that was available to be carried, and that must be carried, or this country will suffer stupendous losses within the current year —because we must turn that grain into money in some way—had that been done there would have been a distribution of money in the western country that would have been largely to the benefit of that country directly and of the eastern country in the ordinary course of business, and there would have resulted a further increase of the acreage of production during the season that we are now entering upon if the men or the means to put that crop in could be secured. Whereas ordinarily every man would have used every exertion of which he was capable in order to increase his acreage, under the discouragement that he has suffered he will not use the same exertion even if he have the ability—and he will not have the ability to the same degree.

We have in this country three great Transcontinental railway systems. Two of those railway systems are supposed to be lame ducks. There are people in our country who hold that these two railway systems—I speak of the Canadian Northern and the Grand Trunk Pacific—are in advance of the needs of the country; that they are institutions not that lift the country along, but that have to be lifted along by the country; that they are a burden rather than a benefit to the nation as a whole. Whatever the condition may be at

the present time, no man who has a proper idea of the extent and value of the Dominion of Canada can do other than believe that at some time in the future there will be every need for these two railroads. What I want to point out is that, if it is a fact that these two roads, or one of them, is not earning interest on its bonds, is not paying its way, is not carrying itself along, it is not because the traffic is not there, it is not because there is no demand for the products. Surely we cannot say that the Grand Trunk Pacific is a failure because there is no business for it, or because it was built ahead of time, when there is in our elevators at the head of the Lakes to-day 50,000,000 bushels of grain seeking an outlet, and in the elevators behind that, another 50,000,000 bushels of grain seeking an outlet, all of which grain, given rolling stock and management, is available for shipment to the seaboard at the same rates as would be charged on the Lakes during the season of open navigation. It is not because we have to wait for the business. The business is there; the grain is there in the West, and it is wanted across the water. We want to get it there, but it has been lying in the West while we had the rails on which to haul it to the eastern coast.

Mr. BURNHAM: What about ocean tonnage?

Mr. OLIVER: I do not know anything about ocean tonnage.

Mr. BURNHAM: Would it not be as well to know something about it?

Mr. OLIVER: What difference does it make when the grain has to get to the seaboard?

Mr. R. B. BENNETT: There are no elevators at the seaboard.

Mr. OLIVER: If it cannot get to the seaboard, it cannot be turned into money.

Mr. BENNETT: There is no storage at the seaboard, and no tonnage.

Mr. OLIVER: Is my hon. friend going to tell us that the grain lying in the elevators at Fort William and further west has no value? Unless there is tonnage, it will have no value.

Mr. R. B. BENNETT: It cannot be done in a day, or in a month. The grain will be just as safe in the storage elevators at Fort William as if it were lying on cars at Halifax and St. John. There are no storage elevators there, and there is no tonnage. It is only a question of when the grain can be moved.

Mr. OLIVER: So long as the grain is in the elevators at Fort William and further west, it is practically of no cash value.

Mr. BENNETT: Oh, yes, it is, 80 cents on the dollar.

Mr. OLIVER: Precisely; it is of value because the people who pay for it believe that it can get tonnage. It ought to have the tonnage.

Mr. MORPHY: Stop the war.

Mr. OLIVER: Does the war keep the grain in the elevators?

Mr. R. B. BENNETT: Eighty-two ships have been sent to the bottom within the last ten days.

Mr. OLIVER: My hon. friend cannot have it both ways; either that grain can be taken across the ocean, or it cannot be taken.

Mr. BENNETT: It cannot be taken all at once.

Mr. OLIVER: Then, if it cannot be taken across the ocean, it has no value.

Mr. BENNETT: It will ultimately be taken across the ocean, not all at once.

Mr. OLIVER: If it can be taken across the ocean, it might just as well have been rolled on wheels during the past winter as kept lying at Fort William; and the railroads could have been earning money instead of losing money during that period. There is no other way for it. The grain has to be brought forward. It does not have to lie at Fort William until the shipping trust of the Great Lakes can get their fingers on it. There is no necessity for that; it could have been rolled over the railroad tracks to the ocean ports during the winter at the very rates which the Government put in force, so far as Quebec was concerned, but which they refused to put in force between Quebec and St. John.

Mr. R. B. BENNETT: I am sure my hon. friend would not want to add to the congestion at the terminals by loading up cars with grain, thereby congesting all the traffic to and from Halifax and St. John. He knows that there is limited storage accommodation at Halifax and St. John, and I am sure that he does not mean that cars should be loaded up with grain at these ports, thereby congesting the traffic and preventing other traffic from being handled.

Mr. OLIVER: I mean this, that the grain lying at Fort William has to be got forward, or it has not. It has to be got forward if you are going to turn it into money. I say that we have the railroads to carry it. We have to get it across the ocean some time, and it has to get to the seaboard some time, and it might just as well have been going to the seaboard during the winter as have the railway companies which might have hauled it go bankrupt because it is said they have no business to do. It goes throughout the world that Canada has built railroads for which she has no traffic. The traffic is there, and the country is suffering because it has not gone forward. That is the puzzle which this Government has to solve. That is their business, and I desire to place the responsibility for that condition exactly where it belongs.

Mr. R. B. BENNETT: My hon. friend should blame the empires of Europe.

Mr. OLIVER: The empires of Europe want wheat. My hon. friend says that there are no facilities for storage at the seaboard.

Mr. BENNETT: Not for large quantities.

Mr. OLIVER: Why are there not facilities? Is it not elementary that there must be storage facilities at the seaports if grain is to be transported?

Mr. REID: Why did you not build elevators when you were building the Transcontinental?

Mr. OLIVER: We did not need them until the Transcontinental was finished.

Mr. REID: It takes years to build them.

Mr. OLIVER: The Government of the day knew when the Transcontinental railroad was to be completed, and they completed it. This Government declared that the road was completed a year ago, and surely it knew that elevators were needed to store and handle grain at the seaboard. I did not wish to bring this into the argument, but if it comes to that, there is no argument about it; that is where the responsibility rests. What I want to emphasize is that we have the produce, and we have the traffic for transportation; and if the roads that are available for carrying that traffic are not utilized, it is not the fault of the country, and it is not the fault of the roads; nor is it the fault of those who conceived and carried out the idea of having such railroads and of having such an outlet to the seaboard all the year round for the producers of the West.

Sir GEORGE FOSTER: I have listened with a good deal of interest to the speech of my hon. friend. Though I am sorry to take up any time, it strikes me that a proposition, put just as my hon. friend has put it, for consumption in this country, and particularly in the West, ought to be analysed at about the same time that it comes from the lips of the hon. member. I am afraid that, whether he wished to put it in an unfair way or not, either he has not got to the bottom of the whole question and does not understand fully all the conditions, or, if he does, he has not taken the trouble to place them in their proper perspective. I want quietly to make two or three remarks in reference to some of the things that my hon. friend has discussed. He has declared that there has been a year of unrivalled production in the West, a year, probably, such as will not be seen again for a long period; a big crop has been realized; and when he puts these two propositions, a great productive year and a big crop, my hon. friend lays the foundation for the argument which follows. But the first part of his argument commences with an "if." It is not laying down an absolute premise; it is not stating an actual fact; it is a supposition from the very start. He says if there could have been a quick realization on the heavy crop in the West at real world values at that time, such and such would have been the result, the people would have had their money, and they would have had heart then to go into production for the succeeding season. But does not my hon. friend know, a reading and thinking man as he is, that the supposition with which he started the argument was an absolute impossibility? That "if" never could have been got out of the conditions at that time. If there could have been a quick realization at the then present world values, certain things would have taken place! Now, what I want to say is that that supposition could not have been turned into fact. World conditions made it impossible to do so. Suppose there had been a quick and sudden rush in order to bring about that realization, into the markets of the world of 200,000,000 bushels of wheat from the Northwest, in the short period of which he speaks, I would like to ask him to think what the result would have been upon the world prices. There was more wheat in

the world than was raised in our Northwest. There was all through the world a bumper crop, one of the largest crops the world has ever garnered. More wheat was raised by the world last year than was necessary for the world's existence, taking into account all the waste and all the consumption outside of the waste; and, if the Northwest, by some magic power, could have landed 150,000,000 or 200,000,000 bushels of its wheat crop in the European capitals and markets within six weeks of the time at which it was reaped, what would have been the position, what would have been the price, what would have been the realization? The problem for solving ultimately in reference to the Northwest is the problem of storage and of equable, reasonable, moderate selling, and until that problem is solved the best conditions cannot be obtained for the West. So much in reference to that.

My hon. friend then leads up to a conclusion that he wants the West, the House, and the people of this country to take, and it is that, although this has been a problem insolvable up to a certain time, the Grand Trunk Pacific was to make it solvable, and that when that road had been laid down and put into order for carriage such a condition would no longer exist, for the road would take the place of the lake carriage when the ice had seized the waters, and would bear out that surplus from the west in a continuous stream and a stream large enough to quickly exhaust the source at the other end. My hon. friend knows that that could not take place. Suppose we take his own calculation that there were 120,000,000 or 150,000,000 bushels of grain in the Northwest, in storage and in the farmers' hands, at the time that the lake waters were closed by the ice and you had the Grand Trunk Pacific with the best roadbed, the heaviest rails and the best equipment; would that have solved the difficulty for the people of the Northwest and enabled them to come to that quick realization of world values which would have set them up? My hon. friend has simply to take his leadpencil and a piece of white paper and calculate what it means to draw 150,000,000 bushels of wheat, together with other grain, over the track of a railway. Suppose you take out 500 cars per day in the winter season. It is a good road and a good bit of haulage if every train will take out fifty loaded cars. If every train took out fifty loaded cars, and each car carried 1,000 bushels, 500,000 bushels would be taken out by 500 cars, running every day through the winter season, which would be an achievement worthy of any great carrying road. But with 500 cars daily, with their half million of bushels, it would have taken 300 days to have carried out the 150,000,000 bushels, and there are not 300 days in the four winter months which intervene between the last of December and the opening of navigation upon the Great Lakes in April.

Another point which my hon. friend must see, which his practical knowledge must make him thoroughly aware of, is this: You have not only your commodity to sell, but you must have at the other end some man who is willing to buy that commodity from you, and there must be a means of getting that commodity from the hand of the seller to the hand of the purchaser, or else you have a very difficult problem intervening. I am going to make this statement, and I would like my hon. friend and the members of the committee to think it over: if it had been possible to have transported that grain out of the West—that one hundred and fifty extra millions of bushels—by means of this road within three months time, you would not have had, comparatively speaking, one single bushel more of that wheat in the European markets than you have to-day, because every bushel that has been asked for to fill the tonnage that was possible to be obtained has been at the call of the tonnage and more waiting on every railway and in every port on the Atlantic seaboard. If you had shipped 100,000,000 or 120,000,000, or 150,000,000 bushels, and sent it down to the Atlantic seaboard, where would it have found its resting place? It would have caused a congestion and embargo in this whole country which would have tied up the available rolling stock of the railways and would have prevented them from carrying the merchandise products and goods which were absolutely necessary to be carried. Where would he have put that 150,000,000 bushels of grain if he had brought it down to the Atlantic seaboard in the months of January and February? No storage room for it in Montreal; that would have been soon filled. No storage room for it in Quebec; the storage capacity there is limited, and would have been soon filled. No storage capacity in St. John or Halifax beyond a comparatively small and trifling amount. No storage at Portland, at New York, at Boston or at Baltimore, to have

received a single bushel of that grain, for the storage facilities at these ports are not large, and were more than taken up by the United States grain, which, from Buffalo to the extreme West, crowded down on the railroads, causing embargoes and blockings and congestion, until it was backed up, and backed up clear out to the Western prairies. When you take these things into consideration, what way on earth was there for my hon. friend's view to be realized? If this road had done its duty, as he says, and had taken out that 150,000,000 bushels of grain in January and February it would not have realized to the people of the West one single dollar more than it did realize resting in its resting places, and for two reasons: first, because the purchaser was not there to buy, and secondly, because there was not transport between the producer and the purchaser sufficient to have carried the grain to him if he had been disposed to buy it, as in many cases he was. Neither was there any storage room in the ports of Great Britain, even if ocean tonnage could have been got to take it across the ocean. All the wheat and flour that has been necessary for the food of civilians and the food of the armies has been sent there for those purposes. These things can be turned into actual money only in proportion to the consumptive demand, and the world is not able to eat up in three months the resources that are to do it through the whole year. Consequently, the producer, the purchaser, and transport have all to be taken into consideration as factors before that ideal thing which my hon. friend said would have produced such a change in the West can be brought about in practice. I say these things simply that the people in the West may have alongside the statement of my hon. friend some of these restraining, restricting and counteracting statements which I think will enable them to understand the position better. I do not know that I have any more to say on that; that is all I intended to say at the start; that is all that I will say.

Mr. OLIVER: I do not wish to prolong the argument, but I am afraid my hon. friend hardly appreciates the importance of the argument he has made. According to the statement of the Trade and Commerce Department, we had 50,000,000 bushels in the elevators at the head of the lakes on the 7th of April. I fancy that there is further west, behind those elevators, not less than another 50,000,000, or perhaps 100,000,000 bushels.

Sir GEORGE FOSTER: Probably 100,000,000.

Mr. OLIVER: We are putting in our crop now, and shall be harvesting it in September, in about five months. Are we to believe that we shall not be able to dispose of that 150,000,000 bushels between now and next harvest? That is the conclusion we are bound to draw from what the minister has said. He speaks, no doubt, from information, and if his conclusion is correct the condition is much more serious than I had contemplated. We cannot have it both ways; we cannot have increased production and increased wealth, and, at the same time, a decreased market. If we cannot get the market, we cannot sell the stuff, and we need not produce it. I quite bow to the minister's argument and to his information, but to my mind he has proved too much. I cannot accept his argument for the reason that I do not want to. I say frankly that I cannot bring myself to believe that that is our position, namely, that we have grain on hand that we cannot get rid of between now and next harvest. If this our position it is very serious. However well entrenched my hon. friend may be, I am going to take the contrary position and maintain that we have not yet overstocked the world, and that there are means, or we ought to find means, to bring to market the produce that we have available.

Sir GEORGE FOSTER: If my hon. friend is in that position and feels badly about it, I had better administer a little solace to lighten his mind, and not allow him to go up against the dead conclusion that I did not come to, and do not wish him to come to, that there is no hope for the coming crop because the intervening surplus cannot be got rid of in the meantime. My whole argument has been directed to what my hon. friend started out with, namely, the realization within two or three months of the value at world rates of that 150,000,000 bushels which is now in the West, so that the blood current could come back and vivify the veins of the West, and start them in to the work of the present season. I say—and I maintain it because I believe it to be actually true—that as much wheat has been carried as could possibly have been carried if there had been 200,000,000 bushels more waiting at sea-board during

9 p.m.

that intervening time. Now there are certain conditions which lighten the matter. In the scarcity of tonnage, the distance that a boat travels is of importance, and if it is possible for a boat by travelling a shorter distance to make two or three voyages where otherwise she should make only one, and carry exactly the same cargo, that is so much in favour of the nearer country which has produce to sell. In that respect Canada has a great advantage; it lies on the main tracks of ocean commerce and trade, where the vast majority of the world's vessels are going to and fro, and its distance from European centres is 2,500, 3,000 or 3,500 miles. In that respect Canada and the United States, in comparison with the Argentine, another large producer, and especially in comparison with Australia, which has been a very large producer this year, have the advantage of the shorter distance. Now, tonnage is growing scarcer every day. Do not let us deceive ourselves. Tonage is scarcer to-day than it was yesterday, and will be scarcer to-morrow; it will be scarcer next month than it is this month; it will be scarcer day after day and month after month till this war ceases. It is impossible, however much you may desire or pray or objurgate, to get rid of that condition of things. Now, Sir, what happened? The Australian Government undertook by Governmental intervention to procure all the surplus wheat of Australia, and became the sole charterer of vessels to take that surplus to Great Britain. She made advances to the farmers upon their grain with that idea.

But what has become of it? Where you have to make an 8,000-mile voyage to Australia for a cargo of grain the difficulties become greater than where you have to make but a 3,000-mile voyage across the ocean in order to get an equal cargo of grain. To-day the tonnage is not going to Australia, and the necessities of the wheat market in the old country will be met, first of all, by those countries that are closest to it and that have the reservoirs of wheat.

Another advantage that Canada has over the United States is this, that the Canadian wheat of last season was, on the average, infinitely better in quality than the American wheat, and whilst some of the American wheat, by virtue of its poorer quality and lower price, is going in certain directions, those who want the best wheat are coming to Canada for it, and are finding it in Canada. Therefore, in the next few months, when the supply has to be largely kept up , there is an opportunity for Canada to dispose of her surplus and to get her shelves cleared before they are filled again by the coming crop.

Mr. OLIVER: Canada was, during the past winter, in exactly the same position in which she will be during the coming summer.

Mr. PUGSLEY: I am not quite able to follow my hon. friend. In the first speech with which he favoured the committee he said that if you take the full capacity of the railroad, running ten trains a day, it can take out only 500,000 bushels per day, and it is going to take 300 days to transport the wheat of which my hon. friend speaks.

Mr. R. B. BENNETT: Not going to, but would take.

Mr. PUGSLEY: That is the same thing. A thing that will take is going to take.

Mr. BENNETT: Now we have water carriage.

Mr. PUGSLEY: My hon. friend the member for Edmonton (Mr. Oliver) rebuked the Minister of Trade and Commerce for presenting such a dark picture, saying that it was very discouraging for the farmers of the West if they would still have last year's crop on their hands when the crop of this year was harvested. Then the Minister of Trade and Commerce said: "Oh, in the next two months the farmers will be able to get last year's crop cleaned up." The two statements strike me as exceedingly inconsistent. What is the use of speaking about the enormous advantage Canada possesses by reason of the better quality of her grain, by reason of her nearness to the markets of the Old Country, if this Government does not take steps to provide requisite transportation facilities, both on land and on the sea, and also the requisite storage facilities? You may have all the advantages of a fertile soil and of excellent grain; but unless the farmers can get the grain properly taken care of and cheaply transported to the markets of the world, all the natural advantages will be of no avail.

Mr. R. B. BENNETT: Do you suggest that the Government should go into the shipbuilding industry?

Mr. PUGSLEY: I do indeed. It almost makes one shudder to have the Minister of Trade and Commerce tell us to-night: "Ocean tonnage is scarce to-day; it will be

scarcer next month; it will be still scarcer the month after; it has been growing scarcer since the war began." Yet up to this, I think the twenty-first month of the war, this Government has taken no steps whatever to increase the ocean tonnage of Canada. Is not that fact enough to make one shudder?

Sir GEORGE FOSTER: Do not shudder.

Mr. PUGSLEY: I cannot help it. My hon. friend may think it is a light matter—

Sir GEORGE FOSTER: You do not.

Mr. PUGSLEY: It is a serious matter for the people of this country; it is a serious matter for the farmer out on the Western prairie, who works there day after day from sunrise to sundown putting in his crop—

Sir GEORGE FOSTER: That is not the time he works; he works before sunrise and after sundown.

Mr. PUGSLEY: —suffering all the hardships of the lonely life on the prairie, to find, after he has harvested his great crop, that, owing to his not being able to get his grain to the market, it is rotting in the fields and he is losing thousands upon thousands of dollars. That is not an exceptional case. There are hundreds of people who are in exactly that position. The minister speaks of ten trains a day. Let me tell him that he will find many railroads on the continent of America which are hauling twenty trainloads a day.

Mr. R. B. BENNETT: With a double track.

Mr. PUGSLEY: No, with a single track. It is the easiest thing in the world for a railroad to run twenty trains a day on a single track. There would be no difficulty at all for a railroad with a track like that of the Transcontinental to run twenty trains a day, and, instead of 500,000 bushels, a million bushels could be taken out a day. With the three great railroads in the western provinces, properly equipped, you could take out 3,000,000 bushels a day, so that in sixty days you could take out 180,000,000 bushels of grain. What did this Government do? According to the showing of the Minister of Trade and Commerce, they hauled out during the past winter what with ten trains a day could be hauled out in sixteen days. That is the extent of the wonderful assistance which the Government have been trying to make the people believe they were giving the farmers of the West.

[Mr. Pugsley.]

Unless we have transportation on the ocean, the Government can get all the grain to the seaboard and yet have accomplished only half its purpose; if the Government does not have proper storage facilities in its elevators, it can only half assist in the proper development of the West; and I do not see how any one can disagree with me when I say that the Government in respect of these matters has wholly fallen down. What does the Minister of Trade and Commerce say to the fact that, at the great port of St. John, which was the first port to take a forward step to divert the traffic from Portland in the state of Maine to Canadian seaports and through Canadian channels, and which has developed the winter-port trade very rapidly during the past twenty years, although the elevator connected with the Government railway system was burned down over two years ago, this Government has not yet replaced it? What does he say to the fact that the only storage in connection with the Government system of railways, including the Transcontinental, is the one small grain elevator at Halifax, with a capacity of 750,000 bushels? What does he say to the fact that 80 per cent of the grain of the Canadian West has gone this year through American ports? What does he say to the fact that at least 60 per cent of that grain is housed in the elevators at Buffalo, if my information is correct?

Mr. ROGERS: It is not correct.

Mr. PUGSLEY: What percentage has gone through there?

Mr. ROGERS: A little over 50 per cent—nearly 60 per cent all told.

Mr. PUGSLEY: That is getting pretty close to 60 per cent.

Mr. ROGERS: You said 80 per cent.

Mr. PUGSLEY: The attention of this Government has been called to the absolute necessity of having storage facilities east of the Great Lakes and on the Atlantic coast. Sir William Van Horne, over and over again, spoke of the necessity of carrying out this policy. Yet, as I have said, notwithstanding that these facts were brought to the notice of the Government, no step whatever has been taken to increase the elevator capacity in the East. If the Transcontinental had been properly equipped with rolling stock, or if the Government had handed that road over to the Grand Trunk Pacific on the terms on which it had been arranged by the late Government that they should take it over in sections as completed,

it would have been able to haul, not eight million bushels but forty or fifty million bushels, and that without the slightest difficulty. Then if the Government had provided storage capacity, grain could have been stored at Quebec, Montreal, St. John and Halifax, and, as the ships were available from time to time, it could have been sent forward to the markets of the world. If the Government had taken the steps that I think they ought to have taken, and that I beg them to take even at this late date, to send our grain forward to the markets of the world, the problem will be nearer to a solution than it is. The situation to-day is not by any means a satisfactory one. The Government ought to give thought to the question, instead of treating it lightly, and laughing and jeering at the suggestions made for improvement and development. Even though the thoughts I express may not be of the loftiest character, they might bring their great minds down to the practical, and endeavour to settle this question, to the very great advantage of the people of Canada.

Sir GEORGE FOSTER: My hon. friend has asked me three questions, and I am quite willing to answer them. It may be that then he will not shudder so frequently and so obviously as he has been doing when reciting this terible condition of things. The statement is made that there is not sufficient storage at St. John, Halifax and Quebec. I just want to say this—and the hon. gentleman knows that what I have to say is true—that, as far as relieving the situation this year is concerned, any additional storage which could reasonably have been provided in St. John, Halifax and Quebec, would not have made one iota of difference as regards the quantity of grain actually delivered in Europe from Canada—not one iota. In this Dominion of Canada, there is elevator storage for about 150,000,000 to 165,000,000 bushels of grain. It is not a good argument, it is not reasonable, to say that you must have all this storage, or indeed a majority of this storage, at the seaports themselves. The all-year seaports on our Atlantic coast are not the places where the big storage capacity is provided, or where it is best to provide it. These ports are for transfer purposes, not for storage purposes. In order to transfer quickly and well you must have a certain storage capacity in proportion to the vessels that come there seeking for loads. But you do not need more storage capacity than this, and it is better to have your grain stored in the interior than at the ports themselves, it is less costly and less burdensome to the port itself and in every way better for the distribution of the grain. Now, it will not be pretended that for transfer purposes it would have been necessary to provide at St. John additional storage for more than 2,000,000 to 3,000,000 bushels. If you had had that all these months since the close of navigation, you would not have shipped one bushel more out of St. John than actually has been shipped, because there never has been a time when a vessel came for a cargo of grain and the grain was not there for it. The reason why more was not shipped is that it was not possible to get tonnage for it. The commandeered grain that has been passing out from this country since the last of December and up to the present time, and which will not all be out probably until the middle of May, has been carried under transport conditions directed by the Governments of Great Britain, Italy and France. And Great Britain, Italy and France, those powerful Governments, have not been able to provide more ships for that commandeered grain than there was commandeered grain at the seaports ready to put into the vessel.

Mr. PUGSLEY: Was the commandeered grain going to Italy or to England?

Sir GEORGE FOSTER: To Italy mainly, a portion of it to France, and a portion to Great Britain.

Mr. PUGSLEY: But the bulk of it to Italy?

Sir GEORGE FOSTER: Yes, and when that is cleared out of the way, the bulk of it will go somewhere else unless Italy wants more, as she probably will. You are up against certain conditions, and it is foolish, it is no argument at all, to say that any particular individual or any particular government is responsible for these conditions. The greatest problem these nations have to solve to-day is the problem of tonnage for the supply of the army and of the people, but particularly for the supply of the army. You are up against a condition which neither the Canadian Government, nor any other government in the world, is able to cope with successfully. We have simply to live out these conditions and make the best we possibly can of them; and it is assertion and only assertion, for

my hon. friend to say that the Government is responsible for an insufficiency of tonnage at these ports to carry the grain of the Northwest. The Government is not responsible for it, and no government, however powerful it might have been, could have made better headway than this Government has made against the conditions which have existed for the last twelve months.

Mr. PUGSLEY: If to do nothing is to make progress, then the Government has been exceedingly successful; for it has done —and I defy contradiction—absolutely nothing since this war broke out for the encouragement of shipbuilding in Canada, or the establishment of a Canadian merchant marine. It has done nothing in any direction whatever. The minister says that tonnage has become scarcer month by month—

Mr. R. B. BENNETT: Does the hon. gentleman seriously suggest that vessels could have been built since the war began?

Mr. PUGSLEY: With proper encouragement we could have had some steel ships completed. We could also have had—I am told on good authority, at least—two hundred wooden vessels built, each with a capacity of from four to five thousand tons, and equipped with auxiliary motive power so that it could make a trip across the Atlantic in about double the time occupied by an ordinary tramp steamer. These vessels would have been of enormous benefit. In the United States they are being built and used with very great success. It is hardly necessary to say that this would have relieved the stringency of the situation enormously. In a conversation that I had with him, Mr. McNichol, for a long time general manager of the Canadian Pacific railway, spoke of the very great necessity of having large storage capacity east of the Great Lakes. In Buffalo, as I have said, they have a storage capacity of about 50,000,000 bushels. What would be the difference between the desirability of storage at Buffalo or east of the Great Lakes and that of having it at ports on the St. Lawrence, or the Atlantic? The idea that elevators upon the seacoast are intended for transfer purposes proceeds upon the assumption that vessels would be constantly coming to take away the grain as it arrived by train. Would it not, therefore, be just as desirable to have large storage capacity at the seacoast as it is to have it east of the Great Lakes?

[Sir George Foster.]

Mr. OLIVER: I could not follow the argument of the Minister of Trade and Commerce when he suggested that within the next few months the position in regard to ocean transport was going to improve. Canada is to-day geographically situated where it was a year ago; whatever advantage we ever will have we have had during the past winter. If it is a fact—and there is no doubt that it is—that tonnage is getting scarcer from day to day, our position will be that much worse during the months to come than it was during the months that have passed. I see no relief for the situation that confronts us through the facts placed before us by the Minister of Trade and Commerce. With regard to elevator capacity, the hon. minister says that it is not necessary to have elevators at ocean ports. Well, our greatest ocean port is Montreal, and we have a very large elevator there.

Sir GEORGE FOSTER: My hon. friend must not put it in a manner more extreme than I did. I did not say that it was not necessary to have storage facilities at ocean ports. What I meant to say was that ocean ports are chiefly for transfer purposes, but that a reasonable amount of storage is absolutely a safety and an assurance even at transfer stations.

Mr. OLIVER: I would think it is absolutely a fact that there is a necessity for elevator capacity, even storage capacity, in some degree, at an ocean port. In fact; the Government is building an elevator at Vancouver, having that point in view. The Government, therefore, is stripped of any justification for not having adequate elevator facilities at St. John, Halifax and Quebec. Since this Government has been in power it has built three very fine interior elevators in the Prairie West which until the present time have found no serious usefulness. It would have been just as competent for them to have built at the ocean ports the elevators that they put up at Moosejaw, Saskatoon and Calgary. With all due respect, I think they would have served a more useful purpose at these ocean ports.

Sir GEORGE FOSTER: I do not think that.

Mr. OLIVER: My hon. friend knows that until the last two or three months these elevators had not served any purpose at all.

Mr. SCHAFFNER: Why did the farmers not use these elevators more?

Mr. OLIVER: Because they were not needed.

Mr. SCHAFFNER: Why not?

Mr. OLIVER: Because they were not; that is all. Why should a man pay for hauling grain to an interior elevator and have it remain there if he could get the grain forwarded to the ocean port?

Mr. SCHAFFNER: I thought they could get their money, or a large part of it, if they got their grain to these interior elevators?

Mr. OLIVER: If they could forward to an ocean or lake port just as well, certainly they were going to do it. The only possible usefulness of these interior elevators would be in the case of an unfavourable season, when it would be necessary to have the grain dried—in this case their drying plants would be useful—and where there was a prospective congestion or blockade at the close of navigation, in which case the railroads would have a short haul to the interior elevator instead of going down to Fort William. But with an open road all the year round to the Atlantic ports, that condition did not and should not arise—as a matter of fact, would not arise if the lines to the Atlantic ports were operated as it was intended that they should be operated. There could not be any fall congestion, because the conditions in the fall would not give rise to it.

Mr. SCHAFFNER: Then it was not a good policy to build these elevators?

Mr. OLIVER: There is no doubt that until within the last two or three months the money spent upon these elevators was thrown away, for they were not used. Conditions might arise through unfavourable seasons which might cause the elevators to be very useful. They are being used now, but the reason they are being used is because the grain is not being carried forward to the ocean ports. We have the trackage facilities, but apparently we have not the rolling stock, or we have not the intent or desire to send the grain forward. The hon. minister contends that if we got it forward we could not ship it. Well, if we had it forward we would have that much of the work done, and be in that much better position to ship it when the opportunity arrives. However, the serious point is this: if circumstances were such during the past six months as absolutely to prevent our grain from going forward across the ocean, unless conditions—if conditions are blamable—do not become very much more favourable than they have been in the past we are not going to be able to get rid of what we have before our next harvest comes on. That is a very unfortunate condition, and again I say that I decline to accept the position of the hon. Minister of Trade and Commerce on that point.

Mr. REID: I think we all agree that at the ocean ports we should have quite a lot of elevator capacity. Of course, we must have, and will require as soon as we can arrange it, larger storage capacity at St. John and Halifax, but the fact of our having such a large storage capacity in Montreal, which, no doubt will be increased from time to time, assists us so far as the ports of St. John and Halifax in the winter are concerned, because we can store large quantities of grain at Montreal, and then in the winter move it to St. John and Halifax. I shall be in a position at another sitting to give more information with reference to the rate question that we discussed this afternoon. I stated that I did not know what the arrangements were when this rate was made by the minister himself, but I have made some inquiries since the matter was brought up. To-morrow I shall take it up with the general freight agent of the Intercolonial and be able to give more details. As I understand it, the advantage of that arrangement was this:

In the summer, the rate is 6 cents per bushel from Fort William to Montreal. In the winter time, over the Canadian Pacific Railway and, I presume over the Canadian Northern railway too, the rate is 12 cents per bushel from Fort William to Montreal. The rate say from Winnipeg to Fort William is 10 cents per 100 pounds. The advantage was this: any farmer shipping, say, from Fort William to Montreal over the Canadian Pacific railway would pay 12 cents per bushel in the winter time, and 6 cents from Winnipeg, say, to Fort William. That would be 18 cents. Over the Transcontinental he would pay 6 cents per bushel to Armstrong and 6 cents per bushel to Montreal or Quebec, so that the farmer shipping from the West on the Canadian Pacific railway or the Canadian Northern at their regular winter rates would pay 18 cents per bushel from Winnipeg to Montreal or Quebec while over the Transconti-

nental he would pay 12 cents, thus saving 6 cents per bushel.

Mr. PUGSLEY: What is the rate from Montreal to St. John by the Intercolonial, compared with the rate from Montreal to St. John by the Canadian Pacific railway?

Mr. REID: The rates we are talking about are through rates.

Mr. PUGSLEY: Is it not true that while the Government has lowered the rate on a portion of the line, the total through rate on the Government system of railways from Winnipeg to St. John is not less than the rate on the Canadian Pacific railway.

Mr. REID: The rate is, as I have said, lower by 6 cents per bushel.

Mr. PUGSLEY: For what distance?

Mr. REID: I have just explained that the through rate on the other roads to St. John would be 6 cents per bushel more.

Mr. PUGSLEY: Let us have this matter understood. Does the minister state positively that the rate on the Government system of railways from Winnipeg to St. John is 6 cents per bushel less than the rate on the Canadian Pacific railway?

Mr. REID: What I said was—

Mr. PUGSLEY: That is what the minister said.

Mr. REID: Let me answer the question in my own way.

Mr. PUGSLEY: We want to have this cleared up. We say that the Government has simply made a pretense of lowering the rate for a short distance. What I ask the minister is—it is a plain question, if he will pardon me—will he state that the rate on grain during the past winter from Winnipeg to St. John over the Government system of railways was 6 cents per bushel less than the rate on the Canadian Pacific railway.

Mr. REID: If the hon. member will allow me, I will answer that question, in my own way. In the first place, I said that if he would wait until to-morrow, until I could get the information, I would be able to answer.

Mr. PUGSLEY: That is better, but the minister pretended to answer.

Mr. REID: I did not give any definite answer, so far as that was concerned. I said that grain that was shipped on the Transcontinental to Montreal and Quebec for export—some of it is in store in Montreal and Quebec, and some went to Portland, the Grand Trunk having taken it to their terminal—that grain shipped for export to Quebec, Montreal, or Portland over the Transcontinental road was carried at a rate which was 6 cents per bushel less than would have been charged if it had been carried over the Canadian Pacific railway to Montreal or Quebec for export.

Mr. PUGSLEY: The Canadian Pacific Railway has no line to Portland.

Mr. REID: We are talking about grain for export, and that is the information I have at the present time, that the rate over the Transcontinental is 6 cents per bushel less than the rate on the other roads. There was not any grain shipped to St. John because we have no way of storing it there. We could not take it over the Transcontinental and deliver it without putting it into the Canadian Pacific Railway elevator there, and the hon. member knows that the Canadian Pacific Railway elevators at St. John were taxed to their utmost capacity this year by the grain which that company hauled over its own railway system.

Mr. PUGSLEY: I understood my hon. friend to say that some went to St. John and Halifax. He says now that none went to Halifax or St. John, but that all went to Portland.

Mr. REID: Some 400,000 bushels of the 8,000,000 bushels went to Halifax. There are one and three quarter million bushels stored at Quebec, and there is a large quantity in store for export at Montreal waiting for the opening of navigation. But a large portion went to Portland; I cannot give the quantities.

Mr. PUGSLEY: The minister must see the importance of it. There must be a through rate on the Government system of railways from Winnipeg to St. John and Halifax, because St. John and Halifax are two large exporting ports. Will the minister say that the through rate on grain for export during the past winter was 6 cents per bushel less on the Government system of railways to Canadian Atlantic ports than on the Canadian Pacific Railway?

Mr. REID: I must admit again that I am not fully seized of the facts this evening, but I will get the hon. member that information. He could not expect me to have that information this evening.

Mr. PUGSLEY: I thought the minister would have it. He is making a great handle of the reduction of 6 cents on a part of the line between Armstrong and Quebec. In the winter season the great question is, what is the through rate for export to the Atlantic ports, and that is why I should have thought that the minister would have the information.

Mr. TURRIFF: Is it not the fact that the Government decided to fix that 6 cent rate from Armstrong to Montreal after consultation with the other companies, and was it not practically understood that the other roads, the Canadian Northern and the Canadian Pacific Railway, would give practically the same rates?

Mr. REID: My information is that there was no consultation, that the other roads did not give that rate, and that it was in operation only on the Transcontinental. The Minister of Railways took the responsibility of making that rate himself for this reason: we had in Montreal a very large storage capacity, and he thought that if we could fill the elevators there—I do not know the exact capacity, it may be anything from 8,000,000 to 10,000,000 or 20,000,000 bushels—that if, also, we could fill the elevator at Quebec, which has a capacity of 1,500,000 bushels, the farmers of the West would get the advantage if they paid the same rate that they would have to pay in the summer by shipping it to Port Arthur, lake and rail. They would not ship their grain in the winter time if they could possibly avoid it, because it would cost them the winter rates on the Canadian Pacific Railway or the Canadian Northern, which would be 6 cents more than if it were carried on the Transcontinental. As I understand it, that was the reason which actuated the Minister of Railways. He said, we have the elevators at Fort William and Port Arthur filled, and we have in Montreal a considerable storage capacity. If we can carry the grain over the Transcontinental, and put it in the elevators at Montreal and Quebec, where there is a capacity of one and three-quarter million bushels, and the farmers can get it carried there at the same rate as they would pay in the summer time, it will be of great assistance to the people in the West.

The only reason why we could not handle more was that we had not the equipment. We took the road over on the first of July with the expectation that we would get our proportion of equipment that the Grand Trunk Pacific was supposed to have on hand for the Transcontinental, but, on the contrary, we got none. We took that road over without a particle of rolling stock. We did the best we could by taking rolling stock from the Government railway system. We have ordered rolling stock, but it will be eight or ten months before it is delivered. You cannot get cars for months and months after the order is given on account of the scarcity of raw material. During the last year or two the policy of railway companies has been to build steel, instead of wooden, cars, and it is difficult to get the material. However, the minister did order cars, we are ordering more, and we are doing our best to get sufficient equipment to meet all the necessities of the road. Taking the condition as we found it, it does strike me that it is not bad work that has been done by the Minister of Railways since the road was taken over. We hope we will get the road as well equipped as the Intercolonial was at the time we took the Transcontinental over, and that we will have it in such shape that we can move the grain in larger quantities and avoid the trouble we had with grain being exposed last winter. If we can get the necessary equipment, with the great storage capacity we have at the head of the lakes, at Montreal, in the West, where three elevators were built last year, at Quebec and in Ontario, where the elevator capacity has been increased very materially within the last few years, and with the elevator capacity that we must have at St. John and Halifax, I think we will be able to handle the crop fairly well. This is a big question and one which requires a great deal of consideration, and will call for considerable expenditure. At St. John, where the elevator is supposed to be built out on the point near the sugar refinery, tracks will have to be laid and other work done. I admit that there has been quite a delay in the building of that elevator.

Mr. PUGSLEY: Quite an inexcusable delay.

Mr. REID: I do not agree with the hon. gentleman in so far as that is concerned. I agree that it is necessary to have the elevator there, and as soon as possible. But war conditions have been such that many works of great importance, such as the one mentioned, has had to wait.

Mr. PUGSLEY: The Minister of Finance said that all necessary works that could not be called new would be carried through to completion.

Mr. REID: I have had this matter up and I am in hopes that it will only be a short time until we have an elevator in St. John.

Mr. BURNHAM: I should like some one to put in a word for the building up of Canadian industries. I have heard of nothing but wheat. We cannot eat wheat, nobody can eat wheat, but we all eat flour. We could reduce our elevator capacity, and the facilities for moving wheat, by half, by turning the wheat into flour. But, we allow the industry, flour-making, in Great Britain and elsewhere to be built up at our expense while we are trying to get our raw product transported across the ocean and carried elsewhere. Why is it that some method cannot be devised, why is not the impulse to manufacture strong enough in this country, why do we not repress this tendency to freedom of trade, which is so absurd, and why is it that we never think of developing our own country? Let us bend all our energies towards turning our wheat into first-class flour, and then try to send that elsewhere, and not keep calling for enormous storage capacities half of which, as a matter of fact, would not be required, if we had our ideas properly developed in regard to our own industries, and in regard to giving the people of this country something to do, and we would be saved that expense, which in itself is tremendous.

Mr. GRAHAM: I am afraid that my hon. friend is wrong. He often is right, but I think he will have to go a step further. We do not eat flour; we eat bread and biscuits, and he will have to carry his argument down to the manufacture of the flour into bread and biscuits if he is going to carry his idea out to its logical conclusion. I was glad to notice that the Acting Minister of Railways and Canals answered the Minister of Trade and Commerce so effectively. I was almost going to say that he had done it more effectively than it was done on this side of the House. The Minister of Trade and Commerce argued that the proper place for the wheat just now is in the elevators and elsewhere in the West. The Acting Minister of Railways and Canals rather discounted that by arguing that the Government had done a great deal by transferring a lot of it to Montreal and Quebec. I think the Acting Minister of Railways was right in saying that that was a good idea; but I am not so sure that he was quite right in saying that they had carried that idea into practical effect. The minister's figures must surely be wrong. I cannot conceive of a statement that only 400,000 bushels, out of 8,000,000 bushels, went to a Canadian port.

Mr. REID: No, I did not say "went to a Canadian port."

An hon. MEMBER: To Halifax.

Mr. GRAHAM: I should have added in winter. I should have added to a winter port. You said that 400,000 went to Halifax and none to St. John.

Mr. REID: No.

Mr. GRAHAM: A great deal of it went to Portland. I cannot see how my hon. friend, having a Government line from the West, did not even fill the elevator at Halifax once. He tells us that we ought to have more storage capacity at Halifax; yet, out of the 8,000,000 bushels, he did not ship 750,000 to Halifax. That rather bears out something that was said in the discussion the other night, and which was that the way the railway has been managed has made it practically imperative that a large portion of our western wheat should be carried to an American port. The road has been operated in a practical way to Cochrane, but east of that as a side line, a local road, and not with any regularity. An excuse was given why proper operation has not taken place. The result has been, just what the minister has said to-night, that a large proportion of the 8,000,000 bushels that came from the West over that road has been handed to the Grand Trunk at Cochrane. The Grand Trunk has brought it out over the Toronto and Northern Ontario to North Bay, from there over its own line to Scotia Junction, then east to Montreal, and from Montreal to Portland. Now, until the Government takes hold of this line east of Cochrane, and gives it a service at least approximating the services west of Cochrane, the result cannot be otherwise than that in winter a large proportion of our western wheat will go to American ports. That is altogether subversive of the policy behind the construction of this line. The Grand Trunk cannot begin to haul as big a load over its line from North Bay to Montreal as can the Transcontinental from Cochrane to Moncton; there is no question about that. I am safe in saying that the Government railway from Cochrane to Moncton, with no more than two short pusher grades, can haul in one train twice as heavy a load as can be hauled over the Grand Trunk from Scotia

Junction east. If the Grand Trunk can afford to take that traffic from Cochrane to North Bay, and from there to Scotia Junction, thence to Montreal, and from Montreal to Portland, over a comparatively inferior line, surely the Government line with its magnificent roadbed ought to be able to haul the grain to our Canadian ports at a cheaper rate. I am suprised that only 400,000 bushels got to Halifax. If there was no tonnage to be had, the Government should at least have filled up the Halifax elevator out of that 8,000,000 bushels.

Mr. REID: The hon. member knows from many discussions we have had in this House that the Intercolonial has been taxed to its utmost capacity from the close of navigation up to the present time, carrying troops and war supplies, and there have been complaints throughout the whole system because we could not furnish cars for local traffic. The Intercolonial could not have done more than it did during the last season. The grain was stored in the elevators at Montreal and Quebec, and how could we take it to St. John or Halifax when we had not the power or the cars?

Mr. GRAHAM: It struck me that as 400,000 bushels had been taken to Halifax, the elevator there might have been filled. It would have taken only about 350,000 bushels more to fill it.

Mr. REID: It was not stored there; it only went through the elevator.

Mr. GRAHAM: There was no tonnage there.

Mr. REID: Yes, there was tonnage, but not a very great deal. I say the Intercolonial was taxed to its utmost capacity, and could not have hauled that 8,000,000 bushels. But give the Government a chance to get equipment for both roads, and then the grain will be moved over the Government railways to the elevators at Montreal and Quebec, and to the ocean ports. Grain has to have some outlet. The
10 p.m. Canadian Pacific railway was taxed to its utmost capacity at St. John, and as the grain had to be shipped to England we could not help it going through American ports.

Mr. OLIVER: Is this item of $1,500,000 for equipment for the Transcontinental?

Mr. REID: No. I have a memorandum here showing that the $1,500,000 is made up as follows:

Filling wooden trestles, $350,000; fencing, etc., etc., $100,000; unsettled grading contracts, $500,000; right of way and Quebec terminals, $500,000; boilers and power house equipment, Leonard shops, $50,000. There are three trestles on the line just west of Superior Junction, (that is, the 10 miles of line constructed by the Grand Trunk Pacific Railway Company and subsequently acquired by the Transcontinental Commission) that it may be advisable to fill this coming summer. They were constructed in 1908, and must now be either renewed or filled. There are other wooden trestles between Graham and Winnipeg that were constructed in 1907 and 1908, that it may be advisable to at least partially fill up this coming summer. It costs considerable money to organize equipment for trestle filling, and it is a question, when once organized and at work, whether it is not more profitable to complete the job at once. I am of opinion that $360,000 will be sufficient for this class of work between Superior Junction and Winnipeg for the season of 1916. As all trestles on the line east of Superior Junction are of more recent date than those west of that point, they should not be filled for some years to come.

Considerable fencing will be required between Hervey Junction and La Tuque, a distance of 50 miles, as the country is settleing up. The same applies to the country east and west of Cochrane and the country adjacent to the Wabigoon river west of Graham, but it is possible that the above-mentioned amount will not be expended, as this will depend largely on whether the anticipated amount of settlement takes place or not.

The unsett'ed grading contracts amount to: Grand Trunk Railway Company, $1,500,000; unsettled contractors' claims, $203,000. The above is a matter of adjustment, and it is impossible to state definitely what the final result will be.

Many of these right-of-way questions in Quebec and vicinity are now in the Exchequer Court for adjustment. In other cases, they may be settled without having recourse to the courts. I am of opinion that the sum of $500,000 will be sufficient for the adjustment that will be affected within the fiscal year.

Mr. GRAHAM: Surely the acting minister can see now what he has done. He has read some detailed items of construction, which show that the filling of trestles, fencing, etc., has not been completed Under the original contract the Grand Trunk Pacific was to be fenced. The minister admits the whole case about the road not being completed. However, we can discuss that on the Transcontinental item. Can the minister say how much of this 8,000,000 bushels went into the Quebec and Montreal elevators respectively?

Mr. REID: I am informed that 6,250,000 bushels went to Montreal, and 1,750,000 bushels to Quebec. A portion of the grain that went to Montreal elevators has been shipped out to Portland, but we shall not know the exact quantity till spring.

Mr. PUGSLEY: I have always understood that steamships are very glad to get grain to use in place of ballast, and I know that some years ago vessels going to New York would carry grain just for the sake of having it as ballast. I should think that the ships coming to our Canadian ports in winter would be glad to get grain to store in the hold.

Sir GEORGE FOSTER: They got all the grain they wanted to carry.

Mr. REID: The quantity of war supplies that had to be shipped was so great that nearly all the vessels had cargoes of that nature.

But they got all the grain that they wanted to make up their cargo, not as ballast but at very high rates. For years the rates for ballast have been very low; but, of course, owing to the scarcity of tonnage, there was such a congestion of freight that they could get nearly all the freight they wanted.

Mr. PUGSLEY: Is the Government taking steps to secure tonnage?

Mr. REID: The question of securing tonnage does not come under the Railway Department. It comes under the Department of Trade and Commerce, and the next time that the Estimates of the Department of Trade and Commerce are before the House, perhaps the minister will be able to reply to that question.

Mr. SINCLAIR: The minister has given us a great deal of information, but there is one point on which he has not thrown very much light. He has admitted that the scarcity of rolling stock on both the Intercolonial and the Transcontinental is a serious matter, and I know that the business people of the country are anxious about it. Would the minister be kind enough to take us into his confidence and tell us what he has done in regard to providing cars and engines?

Mr. REID: There are quite a number of engines and cars under order. I gave instructions some time ago to have the specifications ready, and I expect within a few days that tenders will be called for for a very large quantity of cars and engines and other equipment necessary. In order to help us out, we purchased the equipment of one of the contractors.

Mr. GRAHAM: What contractor was that?

Mr. REID: O'Brien and McDougall. We purchased from them 25 engines, 400 cars, and a quantity of other material—all the plant necessady for construction and keeping the railroad in repair.

Mr. GRAHAM: It was pretty well worn out.

Mr. REID: I am informed that it was in good condition. The 25 engines and 400 cars have come in very useful. We expect, however, to have under order within the next few weeks all the cars and engines that we can get made in this country between now and next fall.

Mr. GRAHAM: Ordinary wooden cars or steel under-frames?

Mr. REID: What we intended making was the steel cars, but we had in view the building of say 500 wooden cars to keep us going, as we can get those much quicker than the steel cars.

Mr. GRAHAM: Steel under-frame?

Mr. REID: Yes. The reason that there was a shortage of rolling stock on the Intercolonial was, as I stated this afternoon, on account of our taking a quantity of equipment to put on the Transcontinental.

Mr. GRAHAM: Would the minister mind bringing down a report showing what he purchased from O'Brien & McDougall and what he paid?

Mr. REID: I will send my hon. friend a copy of the detailed account.

Mr. SINCLAIR: I hope the minister will not delay very much longer in getting his specifications out and calling for tenders, because it is slow work building steel cars. Every one knows that a sample car has to be built, that the stock has to be procured ahead, and that it takes months to get started on a contract of that kind, because some of the large car plants in the country are busy on war material. I regret that the minister has let the whole winter pass without having his contracts entered into. If he really intends to get anything done that will serve us for the coming season, he should not be so far behind as at the present time to be only calling for tenders.

Mr. REID: I have been pressing this matter with those who have to get the specifications out, and they tell me that within the next few days we shall be able to call for tenders, and we expect to get the first 500 cars in July.

Mr. GRAHAM: Do you build any cars at Moncton?

Mr. REID: We only do repairing work there.

Mr. GRAHAM: You build some engines there?

Mr. REID: Yes, but we have a contract for nearly all those outside. We do a little of that work at Moncton.

Mr. PUGSLEY: Is there not sufficient capacity at Moncton, in those magnificent shops, which are well equipped and where you have the very best machinery? It was understood, when those shops were erected, that cars would be built there.

Mr. REID: As I stated a minute ago, those shops are being run to their fullest capacity with repairs and so on. When the men are not employed on work of that kind they work at the building of cars. My information is that the shops at Moncton, owing to heavy repair work during the last year, are working to their fullest capacity. They are not holding off any work; all the work that can be done there is being done at the present time, but it takes the whole plant to keep the equipment in order.

Mr. J. J. HUGHES: Is the minister quite certain that it is the scarcity of cars that has placed the Intercolonial in such a position that it is not able to take care of the traffic? It is inconveniencing the people very much.

Mr. REID: That is the reason—because we had to take equipment from the Intercolonial to put on the Transcontinental between Winnipeg and Quebec, as at the start we had no cars at all on the Transcontinental. Had we not had to do that we would have been in a much better position on the Intercolonial.

Mr. HUGHES: It is the opinion of some people in the Maritime Provinces who have some knowledge of the matter that it is not entirely the scarcity of cars that is bringing about this unfavourable condition, but that it is to some extent due to the management. To illustrate this point, in Halifax on Saturday last a wholesale merchant informed me that on the 8th of April a loaded car for him left Montreal and on the 23rd of April he could not find any trace of it.

Mr. REID: That is easily explained. There have been cases on the Intercolonial, as well as on other roads, of local freight having had to be put on a siding or in the yards and kept there for days in order to allow the through traffic for the war to go forward. Ammunition and supplies for war purposes had to have the right of way.

There is another reason that just strikes me as to why there was a little shortage. The hon. member who comes from Prince Edward Island will remember that there was some trouble because goods could not be shipped to Newfoundland. We had 300 cars at Sydney, where they were held for months because the steamers running from Sydney to Newfoundland could not take the freight. We had to place an embargo on freight for Newfoundland because the steamers could not take it across. We had to send a Government steamer, the Durley Chune, to carry two cargoes, in an effort to relieve the situation. We chartered another steamer also. All that time there were cars held up. But there were other places where we had to let cars wait. This has been an exceptional time—we all admit that. We had to use many engines in moving the troops. A troop train, being very heavy, would require two engines, and the hon. gentleman knows how many troops have been moved. That has meant taking power from the moving of freight. Besides all this, we have had to take over the Transcontinental, making it very hard to meet all requirements. I think the management has done everything possible under the circumstances.

Mr. HUGHES: Here was this car leaving Montreal on the 8th of April, routed for Halifax, and loaded with stuff that the people were waiting for, inquiring about, and ready to unload, but they could not even get information as to where it was. My information is that under the management of Mr. Pottinger the local men were able to give a good deal of information with regard to matters of that kind, but under the management of Mr. Gutelius nearly everything is done in Moncton. The statement is made that when you write to Moncton you do not even get an answer in any reasonable time. I know the conditions in Prince Edward Island. Under the former management the local superintendent had a great deal of responsibility and could give the information to the public, but now everything is transferred to Moncton and you might almost as well write to China as to Moncton, so far as getting an answer is concerned. The matter is referred from one official to another. The present management may be better in some respects that we cannot see, but it does not give the

same satisfaction to local patrons. The case to which I have referred is one that the former management would not have permitted to remain unsettled. I quite understand that a car may go astray on the railway, but surely it can be traced; at all events, a letter might be answered. A wholesale merchant in Halifax told me that this case was not an isolated one, but that similar cases often happen. There is a belief that the management is not trying to give the local people the service they have the right to expect.

Mr. REID: Our general freight agent, Mr. Hayes, is a man in whom I have a great deal of confidence, and I am surprised to hear it said that there is such a feeling as the hon. gentleman speaks of. I think it is on account of the trouble we have had this winter. But the Intercolonial is not the only road on which there have been delays. A case was brought to my attention of a complaint made of eight or ten cars that had been en route on a large system for three months and that they had not been able to locate—they had got run on to some siding, no doubt, and other freight had accumulated. Of course, even under normal conditions, cars will go astray. But from what I have known of the working of the Intercolonial during the present winter—and I have had a good deal to do with it because of the minister being away—I believe it has not been any worse in regard to delays than any other system.

Mr. WILLIAM CHISHOLM: Whatever the reason, one thing is certain, and that is that there is general criticism of the management of the Intercolonial. That criticism is not confined to the officials and the employees. The minister, no doubt, knows the attitude of the employees towards the management at Moncton, he knows that ever since the change a few years ago there has been nothing of the spirit of cooperation and good will that prevailed among the employees. He knows that even newspapers supporting the Government criticise the management. I refer particularly to a newspaper in Truro, in the constituency represented by the chief whip of the Conservative party (Mr. Stanfield), which, in season and out of season, criticises the Intercolonial management. Why it is I am not in a position to say. But we do know that there is a large staff, and the Lord knows they get good salaries, and the cost of running the service is altogether out of proportion to the cost of the service when Mr. Pottinger ran the road. Complaints are not confined to the operations of last winter, but have been general for a number of years past. There seems to be indifference on the part of the officials at Moncton to the requirements of the local trade. They seem to think they are the lords of creation and can do about as they like, and if they reply to a complaint they seem to think it an act of condescension on their part. The people along the line in Quebec and the Maritime Provinces complain bitterly about the lack of sympathy shown by the officials at Moncton. We regret that the Minister of Railways (Mr. Cochrane) has been prevented by illness from giving the attention to the service that he would have liked to have given.

Whether it is due to the fact that there are too many new men on the job, that the offices go from one man to another, and that the work is done in a perfunctory manner, I cannot say. The feeling prevails that there is very little sympathy on the part of the management, even on the part of the minister, with the railway and the people of the Maritime Provinces. Another matter that I wish to call attention to is the delay that occurs in dealing with small claims against the Intercolonial. When a small claim for a horse injured or sheep killed is sent into the department at Moncton, investigation after investigation is held; the matter goes from one man to another; the operations are even more mysterious than the Militia Department was before the war broke out. You call attention time after time to these little claims; after some time probably you get a reply, but the thing hangs fire. The delay in the Chancery case that Dickens describes—I cannot recollect the name of it—

Mr. BURNHAM: Jarndyce and Jarndyce.

Mr. CHISHOLM: The delay in connection with that case was nothing compared with the tardiness of the Intercolonial Railway in dealing with these little claims. The minister ought to prod them up a little and see that these claims are promptly dealt with. It is all very well to say that the claimants may go to court about it, but the minister knows that in connection with these little claims running from $10 to $100 the claimants do not feel like running a risk of lawsuit with a powerful defendant like the Intercolonial Railway. I submit that in all fairness these claims should be promptly dealt with; that advantage should not be taken of technicalities. More time

and money is wasted in running these things from pillar to post than would be involved in settling the claims promptly.

Mr. REID: I have not heard any complaints such as the hon. member mentions. We have a solicitor at Moncton who looks after these claims, and there is no reason why they should not be disposed of with reasonable promptness. I will draw attention to the statements the hon. member has made, and see that there is as little delay as possible in dealing with claims that may arise in the future.

Mr. HUGHES: There is a pretty general feeling that the officials who came from the Canadian Pacific railway, particularly those who were loaned, are not in sympathy with the Intercolonial. I do not know whether or not that is correct, but if it is correct it is a serious state of affairs.

Mr. REID: I do not think that is a fact.

Mr. HUGHES: There is room for suspicion there. The system has been changed since the new management took hold. Under the management of David Pottinger, who received a small salary, comparatively speaking, there were two tariffs in each year—I think this applied to the Prince Edward Island railway as well as the Intercolonial railway—a summer tariff and a winter tariff. When the tariff went into operation in the spring, every one concerned knew what the tariff would be until the fall. Now the tariff is changed quite frequently, and nobody knows how often it is going to be changed. I have spoken to station agents along the line of the railway and they do not seem to know clearly what the tariff is. Many circulars are sent out in connection with these changes. A circular will go out referring, perhaps, to section 10 of circular 82, subsection g or something like that, and it keeps a man reading pretty nearly all the time in order to be well posted with regard to the changes. The result is that a man frequently charges too much in order to be safe. The idea is that the Intercolonial is tailing along after the Canadian Pacific railway. This session of Parliament a committee has given its attention to the matter of introducing the fish business into west-Canada. Mr. Archibald, superintendent of the dining car service on the Intercolonial railway, who appeared before that committee, was asked upon what principle they charged as much in the dining cars for fish that cost five cents a pound or less as for turkey that cost from 20 to 25 cents a pound. The Government railway system could be made a good advertising agency.

Mr. REID: Did he explain the reason?

Mr. HUGHES: He said he knew of no reason unless it was that they wanted to copy the Canadian Pacific railway. There does not appear to be any originality or any responsibility in connection with this road; the only desire seems to be to copy the Canadian Pacific railway I understand that on the railway systems in the Southern States they make a specialty of putting fruit in the dining car at a very low rate in order to advertise the fruit districts. On the Hill system they make a specialty of certain kinds of potatoes that are grown in Oregon and in some of the Pacific coast states. It would be an excellent advertisement for our fish if the Government railway system should put fish on the menu card at as low a rate as possible. There is no doubt about the fact that the dining car service is good, but few men who are accustomed to eating fish will take fish if they can get turkey at the same price. I was coming up the other day on the Intercolonial and to my surprise I found that turkey could be obtained even at this season of the year as cheap as haddock. I took the haddock, which I found to be excellent. We are spending money in an effort to advertise the fish business and to introduce it into western Canada; why should the Intercolonial Railway not advertise it on their own tables? The only reason that is offered seems to be that they want to follow the lead of the Canadian Pacific Railway.

Mr. REID: You have the Prince Edward Island oysters, I believe, on the bill of fare?

Mr. HUGHES: No, it is not the oyster season.

Mr. REID: I mean during the season.

Mr. HUGHES: I suppose they have them.

Mr. REID: They are good, too, the very best in the world.

Mr. HUGHES: I think so. I see an item here for original construction on the Prince Edward Island railway. Surely that must be a misprint. If I understand the words "original construction," this item should surely be $8,000 or $18,000.

Mr. REID: No; that is an item to cover any claims. The explanation of it is this: it is a revote of amount of unexpended bal-

ances from the 1915-16 appropriation. In 1915-16 we had a vote of $800; it remains the same. Each year there are land damages and claims that have not been presented, or that have been overlooked, and, having a small appropriation, a settlement can easily be made at a reduced figure. There was not anything spent last year, and there is nothing in view, but it is just as well to have this small item in the Estimates in case anything should turn up.

Mr. HUGHES: Some years ago the Government built a piece of railway extending from a place called Cardigan to Montague, and the intention was to continue that line and connect with what is known as the Murray Harbour branch. That line has never been completed, and it ought to have been finished. The intention was to finish it, but, for some reason or another, it has not been completed. Now the war is on, and I suppose that will be another reason for not going on with it. The line between Cardigan and Montague was completed by the late Government, and the intention was to extend it so as to connect with the other branch and make it more useful than it is now.

Mr. REID: These Estimates were prepared by the Minister of Railways himself, and he does not appear to have an item for that railway. I do not understand the situation or the conditions, but there is nothing in the Estimates, and, therefore, there would seem to be no intention of going on with that work this year.

Mr. HUGHES: There is an item of $1,000 for surveys and inspection. That has been in the Estimates for a year or two, but it does not seem to have been used.

Mr. REID: During the past year the right of way surveys have been made on the island, under the vote for this purpose, to obtain records of the profile, right of way, bridges and so forth. The records will be completed this year, but it is necessary to revote the balance to complete the plans and records.

Mr. HUGHES: For two years the Minister of Railways told me that he intended to survey a proposed line of railway between Bridgetown and the main line, connecting probably at St. Peter, and passing through or near the settlement called Strathcona, but no survey has been made. Is it the intention to have anything done this year?

[Mr. J. D. Reid.]

Mr. REID: During the war we are not going on with any more new work than we can possibly help. There is no vote for that work.

Mr. HUGHES: There were surveys made last summer, were there not?

Mr. REID: No, those were for the purpose of obtaining the records of profile, right of way, bridges, and so forth, on the island.

Mr. HUGHES: I saw a number of men making surveys there every time I travelled on the railway. They called themselves engineers, and they carried tripods and surveying instruments of various kinds. I think they were having a pretty good holiday. They seemed to be young men from college, and a good many worked bareheaded, with their sleeves rolled up, and with their boots over their trousers, and there was a considerable quantity of mud on their boots. There was a local election coming on.

Mr. GRAHAM: That accounts for it.

Mr. HUGHES: It was reported that the survey was for the purpose of having the gauge of the Prince Edward Island railway widened.

Mr. REID: That was probably right.

Mr. HUGHES: If that is correct, is it the intention of the Government to proceed at once with the widening of the gauge?

Mr. REID: There is nothing in the Estimates for that purpose.

Mr. HUGHES: That is why I thought it strange that they should be making surveys last summer, if there was no intention to go on with the work.

Mr. REID: The surveys have to be made ahead.

Mr. HUGHES: That may be so, but the opinion is that the coming election had something to do with it.

Mr. REID: I do not think so.

Mr. HUGHES: It will be hard to get that idea out of the minds of the people down there, particularly when the surveys are not to be followed up by any work. If there had been an item in the Estimates showing that the survey was to be taken advantage of, and that the work was to go on, I might have thought that it was all right, but I must say I am somewhat skeptical. I am afraid that that

survey will have to be done all over again. A local election was held last summer, and there was a possibility of a Dominion election as well, and perhaps it was thought that the survey would do for both. It is one way of spending money, and of giving a holiday to young men who are sons or relatives of men friendly to the Administration. It is not a desirable way of spending money, particularly when we ought to be practising economy. It is adopting the method which was suggested some sessions ago, that the Government should dash away and spend the money.

Mr. GRAHAM: Will the minister get some information about this car ferry and give it to the committee, when the Estimates next come up? He might tell us how far we have got on with it, and all about it. I would suggest that we let the Prince Edward Island item through.

Mr. HUGHES: Will the minister say when the car ferry will be ready for operation, or when the piers will be ready?

Mr. REID: I discussed that matter with the officials a few days ago, and I understand that the car ferry will be ready this coming fall.

Mr. GRAHAM: Would it not be better for the minister to give us the information definitely?

Mr. REID: I will get that information. We have had a very interesting and useful discussion to-day, and if the committee is willing to let this item go through I would suggest that we rise and report progress.

Progress reported.

On motion of Mr. Rogers, the House adjourned at 10.50 p.m.

Wednesday, April 26, 1916,

The House met at Three o'clock, the Speaker in the Chair.

QUESTIONS.

[Questions answered orally are indicated by an asterisk.]

PAYMENTS FOR PRINTING AND ADVERTISING.

Mr. SINCLAIR:

How much was paid by the Government or any department thereof for printing and advertising during the calendar year 1915, to each of the following newspapers and companies: The Halifax Herald, the Evening Mail, the Weekly Homestead, and the Royal Printing and Lithographing Company, all of Halifax, Nova Scotia?

Mr. BLONDIN:

Department of Customs: The Halifax Herald, $14; the Evening Mail, $14; the Weekly Homestead, nothing; the Royal Printing and Lithographing Co., nothing.

Department of External Affairs: The Halifax Herald, $55.30; the Halifax Mail, $16.10; Royal Printing and Lithographing Co., $134.50.

Department of Indian Affairs: The Halifax Herald, $32.60; the Evening Mail, $14.

Department of Interior: The Halifax Herald, $2,625.65; the Evening Mail, nothing; the Weekly Homestead, nothing; the Royal Printing and Lithographing Co., nothing.

Post Office Department: The Halifax Herald, $124.80; the Evening Mail, $156.50; the Weekly Homestead, $111.10; the Royal Printing and Lithographing Co., nothing.

Department of Public Printing and Stationery: The Halifax Herald, $7,582.48; the Evening Mail, nothing; the Weekly Homestead, nothing; the Royal Printing and Lithographing Co., nothing.

Department of Public Works: The Halifax Herald, $75.40; the Evening Mail, $75.40; the Weekly Homestead, nothing; the Royal Printing and Lithographing Co., nothing.

Department of Railways and Canals: The Halifax Herald, $7,646.35; the Evening Mail, $1,281.84; the Weekly Homestead, nothing; the Royal Printing and Lithographing Co., $3,269.06.

Department of Marine: The Halifax Herald, $347.70; the Evening Mail, $335.10; the Weekly Homestead, nothing; the Royal Printing and Lithographing Co., nothing.

Department of Militia and Defence: The Halifax Herald, $183.78; the Evening Mail, $57.75 the Weekly Homestead, nothing; the Royal Printing and Lithographing Co., $356.

Department of Naval Service: The Halifax Herald, $569.88; the Evening Mail, $337.45; the Weekly Homestead, nothing; the Royal Printing and Lithographing Co., Limited, $16.

Mr. SINCLAIR:

With reference to an item of $3,705.52, charged in Auditor General's Report, volume 1, page K-61, paid to the Halifax Herald for printing, etc., was this work advertised for tender?

Mr. ROCHE: The above payment was for 102,000 "Nova Scotia" pamphlets, 64 pages and cover, with double page coloured insert map. This pamphlet, without coloured insert map, was originally printed in 1908 at $55.20 per thousand. A reprint of same being required, The Halifax Herald were asked to state their price for this work, and their offer of $3,487.50 for 100,000 being considered a fair price, they were given the order.

Mr. SINCLAIR:

1. With reference to an item of $1,000, as charged on page K-62, volume 1, of the Auditor General's Report, for ten pages of advertising matter in Evidence of Industrial Ascendency of Nova Scotia, to whom was this money paid?
2. In what paper or other publication did this advertisement appear?
3. Was this advertisement published more than once? If so, how often?
4. (a) If Evidence of Industrial Ascendency of Nova Scotia is the name of the pamphlet, who printed same, (b) how many pages and (c) how many copies were printed, and (d) what was the total cost of the preparation and printing?

Mr. ROCHE:

1. Canadian Manufacturers' Association, Halifax, N.S.

2 and 3. This publication is a pamphlet.

4. (a) Printed by Imperial Publishing Co., Ltd., Halifax, N.S.; (b) 84 pages and cover; (c) 50,000; (d) Department of Interior paid $1,000 for ten pages of advertising in this pamphlet, but has no information as to total cost of publication.

PUBLIC WORKS DEPARTMENT CLERKS.

Mr. TURRIFF:

1. How many clerks are there in the Public Works Department who belong to and are paid from the outside service vote and who work in the inside service?
2. What are the names of said clerks?
3. What salary is paid to each?
4. How long has each been in the service of the department?
5. Have all or any of these clerks passed any examination? If so, what examination and on what date or dates?

Mr. ROGERS:

1. 7.

2, 3, 4, and 5. S. Fortin; salary, $2,400; from 4th Sept., 1914; no examination.

F. G. Smith; salary, $1,800; from 17th Nov., 1914; no examination.

A. E. Cross; salary, $2,100; from 18th Jan., 1905; no examination.

Jos. Aube; salary, $1,000; from 15th May, 1911; certificate from Civil Service Commission.

J. R. Tobin; salary, $1,200; from 20th June, 1910; no examination.

H. M. Davy; salary, $2,300; from 21st May, 1905; no examination.

W. J. Hickey; salary, $1,060; from Dec., 1909; no examination.

SUPPLIES AND TRANSPORT.

Mr. DEVLIN:

1. Is there a director of supplies and transport for the Canadian service in England? If so, what is his name?
2. Where does he come from?
3. Is he a British subject? If so, by birth or naturalization?
4. If naturalization, when was he naturalized what is his rank, and when was he appointe
5. When was he appointed?
6. Why was he appointed?
7. How many officers has he on his staff?
8. How many clerks, stenographers and civilians are employed under him?
9. How many troops were in Shorncliffe and surrounding camps in July and August, 1915?
10. How many officers and men were required to carry on the work of transport and supplies, etc., for the number of troops then at Shorncliffe and surrounding camps?
11. How many troops are at present in Shorncliffe and surrounding camps?

Sir ROBERT BORDEN:

1. Yes, Colonel Alexander Duncan McRae.

2. Vancouver, B.C.

3. He is a British subject, born at Glencoe, Ont., November 17, 1874.

4. Honorary Lieutenant-Colonel, 6th Regiment, 11th September, 1912; Lieutenant-Colonel in the C.A.S.C., 21st November, 1914; Lieutenant-Colonel in the C.E.F., 11th May, 1915; Colonel in C.E.F., 1st November, 1915.

5. 1st November, 1915.

6. Such an officer was considered necessary, and the D.O.C., M.D. 10, recommended Colonel A. D. McRae as most useful in connection with the transport and supply branches of the service, particularly the former, as he is thoroughly conversant with everything connected with that work, especially in regard to horses, automobiles and motor freight trucks.

7. 24 officers.

8. 68 clerks, 12 stenographers, 1 civilian employee. (This includes 27 casualties fit only for light duty.)

9. 43,098 on 31st July, 1915; 44,950 on 31st August, 1915.

10. There was no Army Service Corps training school work done in July and August last, owing to its personnel and that of 2nd Divisional Army Service Corps being engaged in supply and transport work. This aggregated 75 officers and 1,249 other ranks. In addition, hired civilian transport was much employed.

11. 57,494 on 20th April, 1916.

WAR SUPPLIES—GROCERIES IN BRITISH COLUMBIA.

Mr. MACDONALD:

1. Who were the persons or firms who tendered for the supply of groceries called for by the Department of Militia in British Columbia?
2. What was the amount of each tender?
3. To whom was the contract awarded?

Sir ROBERT BORDEN: The hon. member was asked to give some further particulars and promised to write a letter to give such particulars. Up to this time that letter has not been received. If some hon. gentleman on the other side will remind him of it, we will have that question answered. It cannot be answered in its present form.

DR. N. P. FREEMAN.

Mr. MACDONALD:

1. Is Dr. N. P. Freeman, of Lunenburg county, employed as a medical examiner, or in any other capacity, by the Department of Militia?
2. Has he any rank in the militia?
3. Has he received any pay from said department for any services since August, 1914? If so, how much?

Sir ROBERT BORDEN:

1. Yes.
2. Yes.
3. Yes; $525.80 to 31st January, 1916.

INTERCOLONIAL RAILWAY—MEN FROM OTHER RAILWAYS.

Mr. COPP:

1. How many men have been taken from other railways and given employment on the Intercolonial railway, between the first of January, 1912, and the thirty-first of December, 1915?
2. What are the names of said employees?
3. What salaries are being paid said employees, respectively?

Mr. REID:

1. Twenty-three.

2. Engineering Department: C. B. Brown, $500 per month; A. T. McDonald, $110; F. S. Wilkins, $100; G. C. Lightner, $165; L. H. Robinson, $150; A. D. W. Cuthbert, $90; James Pullar, $90; H. T. Ruhl, $200; L. Brousseau, $140; T. L. Landers, $125; G. C. Perkins, $85; A. H. Jones, $125; J. E. Long, $225; Thos. Jas. F. King, $100.

Operating Department: J. K. McNeillie, $500 per month; A. C. Barker, $215; William Charles Roberts, $125; Wm. S. Bryne, $50.

Traffic Department: C. A. Hayes, $833.33 per month; Eugene Legasse, $105; Thomas Cree, $95; Harry Russiere, $90.

Mechanical Department: George E. Smart, $300 per month.

3. Answered by No. 2.

ADVANCES FOR SHELL OR FUSE MAKING.

Mr. PARDEE:

Were any advances made by any department of the Government to any persons or firms in Canada to enable them to start manufacturing either shells or fuses? If so, what persons or firms?

Sir ROBERT BORDEN: No.

REV. J. A. SPIDDEL.

Mr. KYTE:

1. Is the Rev. J. A. Spiddel a recruiting officer for Kings county?
2. What rank does he hold, and what pay does he receive?
3. When was he appointed?
4. What is the total amount received by him, including his expenses, for services as such recruiting officer?
5. Is the department aware that he is reported as having accepted nomination as Conservative candidate for Kings county, N.S.?
6. Is it the intention of the Government to continue to employ Mr. Spiddel in such service?

Sir ROBERT BORDEN:

1. Yes.
2. No Militia rank. $3 per diem from November 9, 1915, to January 4, 1916.
3. November 9, 1915.
4. $164.
5. No information.
6. No.

ROMAN CATHOLIC MILITARY CHAPLAINS.

Mr. LANCTOT:

1. Is there a Roman Catholic Chaplain with the 25th Regiment at the front?
2. If so, what is his name and home address?
3. If not, why was there no such chaplain sent with said regiment?
4. Were Rev. J. McPherson and Rev. R. McGillivray taken from the battalion to which they were attached? If so, why?
5. (a) Has the 64th Regiment left Halifax, and (b) who is the Roman Catholic chaplain attached to said regiment?

Sir ROBERT BORDEN:

1. No. There are no battalion chaplains at the front. All are brigade chaplains and detailed for duty by brigadiers. There is one Roman Catholic chaplain to each brigade.

2 and 3. Answered by No. 1.

4. Rev. J. McPherson was sent to the Mediterranean as the only Canadian Roman Catholic chaplain available at the time. Rev. R. McGillivray was never posted to a battalion, and is now with the 4th Infantry Brigade in France.

5. (a) Yes. (b) Honorary Captain and Chaplain P. McQuillan is Roman Catholic chaplain to the 64th Battalion, C.E.F.

Mr. LANCTOT:

1. Was there any trouble among the men of the 64th Regiment at the time of embarking for overseas? If so, what was the cause?
2. Was the 85th Regiment called out to assist the authorities? If so, why?
3. Is there a Roman Catholic chaplain now with the 185th Regiment at Broughton?
4. How many Roman Catholics are there in the 185th Regiment
5. How many Roman Catholic officers are there in the 85th and 185th Regiments, respectively?

Sir ROBERT BORDEN:

1 aud 2. There was trouble between men of the 64th Battalion and Garrison Military Police on night before embarkation, and a piquet was called from 85th Battalion, but all was quiet before the piquet arrived. A few of the men were under the influence of liquor on embarkation, but nothing serious occurred.

3. No, nor any other denomination.

4. No information. Attestation papers have been telegraphed for.

5. No information.

STONE PURCHASED FROM ERNEST DEMPSY.

*Mr. BOYER:

1. What number of tons of stone did the Department of Railways and Canals purchase at different times from one Ernest Dempsy?
2. What price per ton was paid?
3. What use was such stone put to?
4. At what date and in what year was such stone purchased?

Mr. REID:

1. 2,325.86.

2. Five cents per ton, was paid to Mr. Dempsy, and the department did the quarrying, loading and hauling at a cost of $1.72 per ton, making the total cost to the department $1.77 per ton.

3. Building protection walls along the north shore of lake St. Francis, between Coteau Landing and St. Zotique.

4. March 1 to 28, 1913; February 2 to 28, 1914, and March 3 to 25, 1916.

SHERBROOKE DRILL HALL.

Mr. McCREA:

1. Were all or any of the following persons employed as sentries in guarding the drill hall and armouries of the 54th Regiment at Sherbrooke: Alexander Goulet, Joseph Morin, David Lamontagne, Théophile Noël, Alfred Vadeboncœur, Adelard Bouffard, Cleomene Jaffroy, and Joseph Côté?
2. If so, how long did they, respectively, act in such capacity?
3. What rate of pay per day did each receive for such services?

Sir ROBERT BORDEN:

1. Our records show the following on duty: Joseph Morin, David Lamontagne, Théophile Noël, Alfred Vadeboncœur, Cleomene Jaffroy, Joseph Côté; no record of Alexander Goulet or Adelard Bouffard.

2. Joseph Morin, May 1, 1915 to June 30, 1915, 61 days $112.85; David Lamontagne, November 16, 1914 to July 31, 1915, 258 days, $477.30; Théophile Noël, August 11, 1914 to September 30, 1915, 385 days, $714.10; Alfred Vadeboncœur, November 16, 1914 to December 31, 1914, 46 days, $85.10; Cleomene Jaffroy, August 1, 1915 to September 30, 1915, 61 days ,$112.85; Joseph Côte, August 1 to 31, 1915, 31 days, $57.35.

3. The Militia Department paid $1, field allowance 10 cents, subsistence 75 cents.

UNMARRIED OFFICERS—SEPARATION ALLOWANCE.

Mr. TURRIFF:

1. Do the relatives of unmarried military officers serving in Canada in any case draw separation allowance?
2. If so, what degree of relationship is necessary to enable relatives to draw separation allowance?
3. What rate of separation allowance do they draw?
4. What officers as above haye relatives drawing separation allowance?

Sir ROBERT BORDEN:

1. Only in a few cases.

2. Officer must be sole support of widowed mother.

3. The rate provided for the rank they hold in the Canadian Expeditionary Force.

4. Those who are unmarried, have widowed mothers, and are the sole support of same.

FUEL PURCHASED FROM MR. ZEPHIRIN MARCHAND.

Mr. BUREAU:

1. What quantity of firewood did the Minister of Militia purchase from Mr. Zéphirin Marchand, of Three Rivers, during the year 1915, and what price was paid for such wood?
2. What quantity of coal did the Minister of Militia purchase from Mr. Zéphirin Marchand, of Three Rivers, during the year 1915, and what price was paid for such coal?

Sir ROBERT BORDEN:

1 and 2. Public tenders were called for wood and coal at Three Rivers, and contract was awarded to the lowest tenderer, Mr. Zephirin Marchand, at following prices:

Montenegrin Camp, Three Rivers: 75 cords softwood at $2.90 per cord, 199 cords hardwood at $3.90 per cord.

86th Regiment, Three Rivers: 21 cords softwood at $4 per cord, 60 tons grate-size coal at $7 per ton.

ALLEGED OMISSION FROM HANSARD.

Sir WILFRID LAURIER: Mr. Speaker, some days ago I called your attention to the official report of an address in this House by the Minister of Militia. I understood that the matter was to be referred to the Debates Committee. I call your attention to it again.

Mr. SPEAKER: Orders have been given to have a meeting of the Debates Committee to-morrow.

PUNISHMENT OF PRIVATE SOLDIERS.

On the Orders of the Day:

Mr. W. E. KNOWLES (Moosejaw): The right hon. Prime Minister yesterday suggested that I should give such particulars as I could about a matter that I then brought to the attention of the House—an allegation that punishment more or less of the nature of torture had been administered to certain soldiers in Moosejaw. I have a telegram giving me further information in regard to it, the names of some of the soldiers alleged to have undergone this punishment, and other minor particulars, as follows:

Anderson, age twenty; offence, off duty about April 1; on 70 minutes of first part punishment, fainted. Graham, age 19; offence, insubordination, about April 8; punishment, arms suspended above like Anderson; invalid mother in Regina dependent for support. O'Brien, young man, neglected to carry out orders about April 8; same punishment. This was supposed to be for two hours a day for several days, but inside discontent and outside rumours stopped it.

I give this information as asked for by the Prime Minister, and it confirms my own conviction that barbarous punishment, really amounting to torture, is administered to soldiers there. I would ask the Prime Minister whether he is yet able to give us any information as to the investigation which he was kind enough to promise.

Sir ROBERT BORDEN: Within an hour after my attention was brought to the matter by the hon. member for Moosejaw, I gave instructions to the Deputy Minister of Militia to obtain information by telegraph. He has not yet communicated such information to me. At that time I had not the names of the privates alleged to have been punished in this way. If the hon. member will send me the telegram he has just read I will immediately communicate it to the Deputy Minister of Militia as giving additional data which may enable him to pursue the inquiry he has already been directed to make.

Mr. KNOWLES: I shall be glad to send the Prime Minister part of the telegram I have read, or, indeed, all of it. Lest there should be any misunderstanding, I do not wish to be understood as saying that these men were suspended with all their weight on their arms. My contention would be the same if they were transfixed in that position until they fainted. I bring this matter forward and make my protest regardless of whether these soldiers were left hanging there with all their weight on their arms. In either case, if the report be well founded, I protest against it as inhuman and barbarous.

Mr. SINCLAIR: There is account of a similar punishment at Trenton in Nova Scotia, published in the Nova Scotia papers. I do not know whether or not that is the usual military punishment, but the indignation is so great there that, according to the newspaper statement, after the officers had started the punishment they refrained from it and allowed the man to be released.

Sir ROBERT BORDEN: Can the hon. gentleman give me the number of the regiment and the name of the man who was punished?

Mr. SINCLAIR: No, I cannot do that. It was at Trenton, N.S. The statement is in the Eastern Chronicle, which is on file in the reading room.

Sir ROBERT BORDEN: Does my hon. friend know the number of the regiment?

Mr. SINCLAIR: I can ascertain that for the right hon. gentleman.

Sir ROBERT BORDEN: If my hon. friend will direct my attention to the particular number of the Eastern Chronicle in which this article is to be found, so that I can advise the Deputy Minister of Militia and Defence, I shall have that inquired into also.

Mr. SINCLAIR: I will do that.

PRINTING OF ELECTORAL LISTS.

On the Orders of the Day:

Hon. RODOLPHE LEMIEUX: I am asked by several candidates in the coming provincial election in Quebec whether it is possible to have printed electoral lists. Some people say they are printed and some say they are not. The other day I inquired about the county of Rouville, and the

Secretary of State was kind enough to send me a typewritten copy of the list, for which I am very thankful. Would the hon. gentleman say whether it is possible to have the printed lists?

Mr. BLONDIN: Most of the lists are ready now.

Mr. LEMIEUX: Printed?

Mr. BLONDIN: Typewritten, for the use of members of the House of Commons. Those that are not ready now will be ready a couple of days hence.

CAMPBELLTON-GASPE SERVICE.

On the Orders of the Day:

Hon. CHARLES MARCIL (Bonaventure): Is the Minister of Trade and Commerce in a position now to give an answer to the question I put yesterday about the service between Campbellton and Gaspé?

Sir GEORGE FOSTER: I have been able to secure a vessel which will make weekly trips from Campbellton to Gaspé and from Campbellton to Paspebiac, one service through to Gaspé and one service through to Paspebiac each week.

Mr. MARCIL: What is the name of the vessel?

Sir GEORGE FOSTER: The Elaine.

Mr. MARCIL: What is the tonnage, and what the subsidy paid?

Sir GEORGE FOSTER: I cannot give the exact figures with reference to the tonnage, but I can say that the tonnage provided is amply sufficient for three or four times the amount of traffic that has developed along that route during the last four or five years.

CANADA'S TRADE AND COMMERCE.

OCEAN TRANSPORTATION AND RATES.

On the motion for Committee of Supply:

Hon. Sir GEORGE FOSTER (Minister of Trade and Commerce): Before the House resolves itself into Committee of Supply, as intimated previously, I am taking occasion to say a few words with reference to questions involving transportation rates, control of rates and such like, which were discussed while the Estimates of the department were under consideration. In the remarks that I propose making I shall try to look at all sides of these knotty and troublesome questions which have been thrust upon us largely by conditions arising from the war. I am going to make what little contribution I can make to a discussion of these points, with the idea of interesting the House and of provoking suggestions and opinions which will tend to explain if not to solve the conditions under which we are labouring.

In the discussion of these matters by gentlemen on the other side of the House, the Government has been held responsible for several things. Mainly it has been held responsible for the increase of freight rates across the Atlantic, for scarcity of tonnage for Atlantic transport, and for utter neglect or negligence in respect of both these matters. Although most of the members of this House may be thoroughly conversant with what I shall bring out this afternoon, and may, therefore, look upon it as being an iteration of what is already known, I am convinced that such is not the case amongst the people at large. These questions with reference to freight rates, control of freight rates, and transport across the Atlantic are not easily understood by the majority of the people, and consequently, in view of the statements that have been made as to what the Government has not done, there may easily be raised in their minds the presumption that things could have been very different from what they are if the Government had taken an active interest in these matters or had been possessed of capacity to deal with them. A good deal of this will probably be old matter to many of you who sit in the Chamber this afternoon; but I am addressing my remarks not only to the members of the House, but to the public outside, in the hope that a little more light may be thrown upon the matters under consideration.

The scarcity of tonnage is the key to the whole situation. Rates have advanced because of the scarcity of tonnage, and they have advanced in proportion as this scarcity of tonnage has become more pronounced. The lack of transport and the control of rates is connected with the general transport of our products overseas. How has this scarcity of tonnage which, as I say, is the key to the whole position, been brought about? In the first place, the commercial marine of the world has been sadly confused and hardly dealt with. The mercantile marine which belonged to the Teutonic nations has been absolutely swept from the seas. A

large proportion of it has been kept in home ports, mainly in Germany and in Austria; a large proportion of it has been interned in neutral ports where it happened to be when the war broke out or where it happened to find refuge shortly after the outbreak of war in order to avoid capture. When you put these two elements together you account for the disappearance of a very large proportion of the commercial tonnage of the world—tonnage which was absolutely and immediately abstracted from carrying capacity and power. Then, too, there has been the destruction of enemy tonnage through the activities of the war. Ships have been sent to the bottom; ships have been destroyed in different ways. When you take this into account you have one great factor accounting for the scarcity of tonnage which has been felt all over the world; because this commercial tonnage of the Teutonic nations went everywhere and was not confined to any one or two routes. These had been so developed by Germany during the last fifteen or twenty years that German lines of communication extended to every quarter of the world.

The next factor in producing scarcity of tonnage is the weight of work that has to be performed by the commercial marine of the allied powers and of the neutral nations, in supporting the active operations of the war. The transports and naval vessels of the allied powers have been engaged in the transport of troops and munitions from the bases of supply to the fields of action, many of them in taking care of that ceaseless stream of war traffic between Great Britain and France, and a large portion of them in caring for those distant operation which are being carried on in every part of the world by the British and allied nations. These operations have been conducted on an extensive scale in the Mediterranean, in the far East and in South Africa, and they have made a very great demand on commercial tonnage. In proportion as the war has extended and has developed in intensity and in the numbers of men engaged, particularly on the part of the British Empire, the naval transports have proved unequal to the added work and the call upon the British commercial marine has been accentuated and made greater, month by month, and year by year. Supplies and troops have had to be transported to the scene of the war from far distant countries,—New Zealand, Australia, South Africa, and the dependencies of Great Britain all over the world. Owing to the great length of the voyages in such cases the demand upon the mercantile marine is very much greater than where the troops and supplies have to be transported only a short distance. No one, without actual investigation, can comprehend the amount of commercial tonnage that has been required to carry out this work. Not only have multiplied munitions of war had to be carried from far distant countries, very largely from the United States, but it has been necessary to provide transportation for immense quantities of supplies, food, provisions of all kinds and great numbers of horses and mules. It must also be remembered that Great Britain has had to look after not only her own wants but she has had to supply commercial tonnage for France, Italy, and other Allies. So, when we sometimes feel almost like finding fault because Great Britain requisitions ships which are engaged in mercantile operations, we must take into account not only the vast needs of Great Britain for her own purposes but also that she has to supply commercial tonnage to a very large extent for the war purposes of her Allies.

It must be remembered, also, that at all times during the war, and particularly of late, there has been a certain destruction of tonnage by the enemy. It would surprise any member of this House if he were to total up the quantity of commercial tonnage which has been destroyed by mines within the two years of the war, and, of late, by enemy submarines. Outside of all accidents and casualties common to the sea there have been these influences which have taxed to the utmost the commercial tonnage, not only of Great Britain, but of the neutral countries as well. Coincident with the destruction and internment of tonnage there has been going on in Great Britain and in the allied countries a certain amount of shipbuilding. It would not be far from the truth to say that the tonnage built for commercial purposes since the war began has been sufficient to offset the destruction by mines and submarines, and by casualties, and even with, perhaps, a slight surplus up to within a very recent period. I think the truth is that just now the new shipbuilding from month to month will hardly replace the actual destruction of tonnage by warlike operations.

Added to that destruction of tonnage there has been a demand for the carrying of products unprecedented, possibly, in the

history of the world. There has been a very abundant harvest in the world; there have been enormous productions of munitions of war; there have, therefore, been tremendous calls, not before equalled in the history of the world, for tonnage to carry these products of peace and necessities of war across the seas. That tremendous call, acting in conjunction with the scarcity of which I have spoken, could only have the one result, namely, that the rates of carriage have been greatly advanced. This increase in rates has been directly in proportion to the call for service, and the inability to secure transports.

We would not measure up the whole position unless we also took into account that not only has there been this scarcity of tonnage and this destruction of tonnage, but that there has been a diminution of the efficiency of tonnage, which it is very important to remember. For instance, the congestion and the confusion arising therefrom in the great ports of the world has reduced the efficiency of tonnage, in some cases by one-half. Havre, during the first months of the war, presented such a congested condition that ships which went there and which, in the ordinary course of traffic, would have entered and unloaded and come out of Havre within two weeks or four weeks at the utmost, have been delayed there month after month before they could even get berthing. That same congestion has taken place in the British ports and in the Italian ports as well as in the French ports, and that congestion, and the consequent idleness of ships which have been prevented thereby from coursing the ocean, have reduced the efficiency of the commercial marine by a factor which looms large in the proper understanding and solution of the question. To-day that inefficiency is not so pronounced as it was, but it is still a very important factor in the matter. A troop ship is loaded with troops, provisions, munitions of war, and is sent to a far-distant base. She is out of control not only of the Naval Department but of the Board of Trade. She is in a far-distant port, she is on army service, she is kept there, and she is used in proportion to the exigencies of the army requirements at that port and at that time. It is not possible for her to be unloaded and she is not unloaded. Or she may unload part of her cargo and may not unload the other part, because quick despatch does not chime in with military and army necessity at that time, which is the prevailing consideration at that port. I just mention these things to show what it is, over and above all the other prominent reasons for scarcity, that has accentuated that condition and does accentuate it to this day. In view of these considerations, to say that any Government, or any corporation, is responsible for the increase in freight rates, is to make an assertion which cannot be proved, and which is unreasonable. The history of the increase in rates, to repeat myself just to that extent, has been pari passu with the scarcity of tonnage, a scarcity brought about by the causes to which I have alluded. Up to the time that war broke out vessels were carrying wheat from Montreal to Liverpool, not as ballast or anything of that kind, but on a commercial basis, for 6, 7 and 8 cents per bushel. To-day the rate on wheat carried from our Atlantic ports to Liverpool runs up to between 40 and 45 cents per bushel. Deals that were carried at profit for 35 shillings per standard now pay three hundred. Looking at the great disparity in these rates, it is natural for a man to say that they are exorbitant rates which ought not to be allowed and ought not to continue. But what remedy do you find for it? There is a world-wide call for tonnage, there is cargo awaiting these ships at any port at which a call can be made, and it is impossible under these conditions to regulate the rates of freight. They are determined only by the call for carriage measured by the capacity of the tonnage to meet that call. Canada has not suffered more than other countries in this respect; in fact, I do not think it has suffered as much. The same great increase in rates has taken place all over the world. If you take the rates and compare them, you find that Canada is in this respect in as favourable a position, if not more so, than any other country in the world.

To speak for a single moment in reference to the control of freight rates, you can control a land-carriage system, the railways, for instance, because that is a fixed system, and it is within your territory and your jurisdiction. But there is no fixed system on the ocean. A vessel finds ports and docks in every quarter of the world. There are no terminals to be arranged for by a tramp vessel or by any other vessel; she finds an open track for herself in any part of the sea she wishes to traverse, she is perfectly free to range the world over, and perfectly competent and able to find loading and dockage facilities in any quar-

ter of the wide world that has goods for transport. Internationally, it is impossible, without an agreement between all nations, to have control over these rates, and no matter what efforts have been put forth—and they have been put forth by the United States, by Great Britain and other countries—up to the present day there have been no systems found by which these ocean rates can be effectively controlled.

But you say that Canada ought to control them—especially on the subsidized services. Canada can say that any vessel going out of her port shall not charge more than a certain amount per bushel to carry wheat to Liverpool or to any other port. Canada can say that if she chooses, but what will happen? The vessel which has it put up to her at Montreal, St. John, or Halifax, that she shall not charge more than a certain rate per bushel on wheat to be carried, simply says: "Very well; then I will not carry the wheat; I will simply go down to Portland, or Boston, or New York, or Baltimore, or to the Argentine, or to Australia, or to New Zealand and I will be subject to no such restrictions there." That is assuming that it is an unsubsidized vessel. It is absolutely impossible to say what the rates shall be for vessels of this kind sailing out of a port in Canada, for the reason that there is no absolute necessity for these vessels to trade with Canadian ports. If Canada were a country which had a commodity calling for transport, which was noted, and which could not be obtained at any of the other ports in the world, then Canada could lay down a condition of that kind and enact laws to enforce it. But that is not the case, and an attempt to impose such a restriction would only have the effect of driving away tonnage which would otherwise come.

But you say that you ought to be able to control the rates of subsidized vessels. In the contract with every vessel that we subsidize in Canada there is a clause requiring the minister to approve of the rates, but with world conditions entirely changed, and when rates have gone up all over the world from, say, 8 cents a bushel for wheat to 45, in Canada, and to 70, to 75, to 80 cents a bushel in other countries, what would happen with even subsidized vessels if we were to undertake to keep them much under, the general world rate? It would be more profitable for them to leave the subsidized service of Canada and go to ports where they would be subject to no conditions, carry freight at current rates, and thereby make more money for themselves. To a certain extent we have even under these conditions kept rates on the subsidized steamers within bounds, and to-day I think on all the subsidized lines the freight rates are lower than on the unsubsidized lines. But the control that you can exercise over even these must be a moderate and sensible control, and must be measured in the main by the general world conditions of carriage, and particularly the conditions arising from scarcity of tonnage.

What I have said lays the matter before the House and the country in a reasonable way, I think, and men must ask themselves whether or not, upon those conditions, the Government in power has been lax or negligent or inefficient, because it has not reduced the rates or prevented them from rising. How could the Government act? The Government, we have been told, should provide vessels. Taking into account the fact that the British commercial marine amounts to about 4,000 steamers, and that the commercial marine of neutrals added would make that 4,000 a much greater tonnage—and it is this vast amount of commercial tonnage combined that is doing the carrying of the world—in view of these conditions, to what appreciable extent would the chartering of a half dozen or a dozen vessels of moderate capacity affect the general carrying conditions of the world, or to what appreciable extent would it relieve even the Canadian situation? Let us bear in mind that if the Government of Canada chartered or purchased vessels we should not thereby be adding one single ton to the carrying capacity of the world. It would be simply a transference from one route of carriage to another and different line of carriage, it would simply be a transference from one owner to another without adding in the slightest possible degree to the total carrying capacity of the world. Let us see what happens when the Government charters, we will say, two, three, or four vessels. The Government must then adopt some method by which the vessels will be operated. If the vessels are operated by those from whom they are chartered, and we pay the charter fee, the vessels come under the control of the Government. Suppose three vessels, with a carrying capacity of 5,000 tons each, we will say, or a total of 15,000 tons are in the hands of the Government. They can carry but an infinitesimal portion of what Canada wants carried. You say that the Government should charter these

vessels and run them at a lower rate of freight, in order to give to Canadian shippers and producers the advantage of that lower rate. Now, when we have these three vessels with a combined carrying capacity of 15,000 tons, we have Canadian shippers and producers with hundreds of thousands of tons of produce to be shipped. To which one of those shippers will you allocate those vessels at a low rate of freight? You cannot discriminate. The wheat man wants the wheat carried; the lobster man wants the lobsters carried; the cheese man wants the cheese carried; the manufacturers want their products carried, and so on with the asbestos man and the paper man: all have equal rights to be considered. How are you going to discriminate between the lines of goods you will carry at a lower rate, and provide no tonnage for other lines at a like rate? How are you to discriminate between the parties who own the line of goods you decide to carry? Take wheat, for instance. You have a carrying capacity of 15,000 tons. To what wheat shippers will you go and say: here is a chance for you to get 5,000 tons of freight carried at a lower rate than you can get it carried by another ship. You would discriminate in favour of one and against others in that way. Your only refuge is to maintain the normal rate, and let your ships carry all that you can possibly pack into them at that rate, so that no one will be discriminated against. I do not see any other way out of it. That faced me immediately I went into the market to attempt to charter vessels. I could not accede to the demand that in chartering a vessel I should bring the rate down, because then I should be faced with this problem who is it that you are going to favour and carry his goods at a lower rate, while hundreds of other men about him cannot get a chance on your ship at that lower rate? That was the difficulty and it was impossible to face it successfully on any other ground than this: that you charge the current normal rate, and let whoever might be able take advantage of that much space on your ship. That is the position that I think some of us fail to take into account when we ask the Government to charter vessels to bring down the rate, and engage, so far as we possibly can, in the carrying of what, after all, would be an infinitesimally small proportion of the freight offering. The very same difficulty is met in the purchase of vessels. There seems to be no escape from the position that, if you are to help out in this emergency by purchasing or chartering vessels, you can do it under present conditions only by charging the current rates; and if you are to submit to that condition, then somebody else might just as well charter those vessels and put them on the route as the Government. Nothing is gained in the matter of carriage capacity, nothing is gained in the matter of rates. The Government did face that difficulty, and did make very serious and general inquiries into the possibility of chartering vessels; but it was met with these conditions, which made it difficult for the Government to act beneficially. And, what was the necessity of incurring responsibility unless some good could accrue?

Leaving that branch of the subject for a moment, one very marked criticism has been made—I have seen it thousands of times, in the papers, in platform speeches, and I think it has been made in this House by members on either one or the other side—and it is this: A man in the West today sells his grain—taking grain as an illustration—in Winnipeg at a dollar, we will say; it can be sold for more than a dollar, but we will take that figure. The statement is made that he has to pay 45 cents for the grain to cross the ocean, plus whatever it takes to get the grain from Winnipeg to the ocean, which we will assume to be 20 cents. There is 20 and 45 cents that the man has to encounter before his bushel of grain can be delivered at Liverpool, and the statement is very commonly made that but for these iniquitous rates the western farmer would get very much more for his wheat at Winnipeg; that is, he would get the difference between the old transporation rate and the present rate, which would be in the neighbourhood of 45 cents per bushel.

The argument is made and the lesson is sought to be taught that on account of those high freight rates the western farmer gets that much less for his wheat, and that if the ocean rate were brought down from 45 cents to 10 cents, the western farmer would have the difference of 35 cents to put in his pocket. My hon. friend (Mr. Turriff), who is looking at me, may be guilty of having used that argument himself; he smiles as though he were; but if he is not guilty of it, many people are, and I could almost vouch, if he heard any one putting forward that argument in the West, he would not sweat very much in an endeavour to get him away from that argument. On the other side, in Liverpool you have the

man who wants the bushel of grain. He says: Grain is so much at normal value in Winnipeg; but I have to pay 65 cents on that bushel to get it to Liverpool; if that rate were reduced 45 cents, I would have the difference to put in my pocket because I would pay that much less for the bushel of grain when it was delivered to me at Liverpool. Now, you cannot have the thing both ways. My own opinion expressed before the House to-day is that it is a case in which the consumer pays, if not every red cent of it, almost every red cent of it. The man who has to have the flour made from the grain and who consequently must have the grain at Liverpool, has to surmount that chasm between the place of production and the wharf at Liverpool where the grain is to be delivered to him, so that he has to pay the expense of having it delivered to him at that point. I do not know whether my remarks will go so far as that deadly criticism, that somewhat partisan criticism which is smiled at by my right hon. friend (Sir Wilfrid Laurier) and which is actively presented by many of those who sit behind him. If only it does go that far, I hope it will have the effect of getting people to look all around the situation.

Sir WILFRID LAURIER: The freight then is of no consequence?

Sir GEORGE FOSTER: The freight is of consequence in one respect, but the freight, to my mind, makes no difference as regards another and important part of the question which I have just been discussing. There is no doubt that the freight adds to the ultimate cost. If there is a piece of neutral territory with a man on one side with a bushel of wheat in his barrel, and if he says to me: you can have that wheat if you pay me $1.09, and if some intervening factor on that neutral territory puts up a charge of 45 or 65 cents before that bushel of wheat can be delivered into my hands, then I say that if I want that wheat I have to satisfy the claims of the man on the neutral territory and pay the charge that is necessary to have the wheat transferred from the other side of the neutral territory to my side. That, however, is another form of the argument which I have been trying to advance.

My hon. friend from St. John (Mr. Pugsley) has been very profuse in his criticisms of the Government. He has said that the business of the Government was to provide transportation; that they have not provided it; that they have been heartless; that they simply smile and laugh at the difficulty. That, of course, as my hon. friend knows, is persiflage. He says that the Government have done nothing and that therefore upon them you must vent your indignation. I think I have said sufficient to make it apparent, to reasonable people at least, that there are two sides to this question, and that there are to-day conditions and difficulties with which we are confronted which create the trouble, and that the trouble will be with us until the cause of it is mitigated by peace and the conditions which follow peace.

4 p.m.

My hon. friend says: If the Government had been alive and awake to the situation they could have procured vessels. I have dealt briefly with the question of chartering and purchasing vessels. Let me come now to the other question. The only way in which real relief can be given in this whole matter of transportation is by bringing new tonnage into operation; that is, by building ships. To charter vessels or to purchase vessels that are already in service is simply a transference, and neither would add to the carrying capacity. The addition to the carrying capacity will and can only be made and relief can only be afforded, other conditions remaining, by building new vessels and putting them into the transport service. In regard to that, says my hon. friend, you have been lax; the Government either has not seen its duty, or, having seen it, has not performed it. There are some difficulties in the way of building. It is all very well for us to be wise after the event; but in the whole course of this war, in the management of the war, in the preparation for the war, in everything in connection with it, all anticipations have gone by the board, and with every party to the war controversy—less with the German power than with any other because for fifty years it was preparing itself for all these things—anticipations have been trundled over time and time and time again. What was at one period of this war thought to be sufficient provision for anything that could come up, has, in the course of one or two or three or four months proved itself to be away below what the actualities of the case, as they have developed, demanded. Therefore it is quite a fair argument to use with the War Office, or the Admiralty, or with any other body, that this war has been of

such a kind that it has upset all reasonable calculation of provision for occurrences that would be likely to take place. If on August 1, 1914, this Government could have put itself in the point of view that it has to-day, it could have bought vessels and chartered vessels at very low prices, and it could have made over and over again its money put into those vessels and done probably a real service to the carrying trade of the Dominion. But the Government had no more knowledge of what would be the condition of things as they developed in the progress of the war than had any human being. Consequently it is not a fair criticism to say: You should have foreseen this and provided for it years ahead. When the exigency and the conditions which make the exigency are upon us, how do we stand with reference to shipbuilding? My hon. friend says: If you have a mind to, you can call for tenders and you can build steel ships and wooden ships now. There are certain conditions that we have to take into account. A Government is asked in the midst of this emergency to build vessels. Let us see what that means. In point of cost of material, you would be building those vessels at the peak price. You would be building vessels which, in the time that it took to finish them, might have found the period of peace to have intervened and a great slump to have taken place in the cost of building. It is somewhat of a responsibility for the Government to take millions of the people's money and put it into either the purchase or the building of vessels at the peak prices of to-day, prices which, so far as competition is concerned, might put them entirely out of the market should prices be reduced by the coming of peace. The Government did not purchase the vessels; they did not build them. Further, my hon. friend seems to think that all you have to do is to give an order at night and the next morning you will find a vessel afloat and ready for a cargo. That is impossible. You cannot go into any shipyard in Canada to-day and make a contract for two steel vessels to be delivered earlier than late in the fall of 1917. This is 1916, and early in the summer. To go into the market and contract for a vessel costing from $750,000 to $1,000,000, which can be delivered to you only late in the fall of 1917, will not afford much relief in the present emergency.

[Sir George Foster.]

We tried also to get wooden vessels built. To parties who might be able to build wooden vessels, we said: "Tell us what amount of tonnage subsidy you will take and construct wooden vessels of a capacity which will be economical, say 2,000 to 2,500 tons." That proposal was considered, and I will give the House the results. We received only one answer, which was to this effect: "We will undertake to build wooden vessels of the capacity you name, if you will pay us a subsidy for construction of $6 a ton a year for fifteen years, or, in all, $90 per ton." That is the offer we got; it is an offer we did not accept. Even had we accepted it we could not have brought these vessels into service before the early or middle part of next year.

Mr. PUGSLEY: The offer was $6 a ton spread over fifteen years?

Sir GEORGE FOSTER: No, it was $6 a ton a year for fifteen years.

Mr. SINCLAIR: Gross ton?

Sir GEORGE FOSTER: No, ton dead weight.

Mr. PUGSLEY: Does the hon. gentleman know that that sum would build a ship of that kind many times over?

Sir GEORGE FOSTER: Well, where does the hon. getleman get to now?

Mr. PUGSLEY: I will get twenty men in St. John to make an offer.

Sir GEORGE FOSTER: Well, why does not the hon. gentleman do it?

Mr. PUGSLEY: The hon. minister has not come down with any proposition

Sir GEORGE FOSTER: The hon. gentleman has been something of a promoter, and has large moneyed connections. He has seen the difficulties about tonnage; if he thinks there is money in it, why has he not in some way interested himself and his friends in making a proposition for this shipbuilding? But no proposition has come from him; he has satisfied himself with criticising and finding fault, and has not put within the reach of the Government a single proposition that would be reasonably acceptable. Let me tell the House how the man looks at it to whom you talk about a tonnage subsidy. In order to build wooden vessels I have to make certain preparations, and for that purpose put in certain money; and I cannot turn out a vessel until seven, eight, or ten months from to-day. I get my wooden vessels built. But

you do not give me any assurance that the vessel-building business in this country will not by that time be absolutely different from what it is to-day—that peace will not have intervened with all that that involves. That contingency is ahead of me, and I cannot afford to go into the building of wooden vessels except with a very heavy tonnage subsidy to protect me from possible loss. That is the way this man reasons. Capital, under present conditions, is chary about going into the building of vessels with the uncertainties that face it within the next year or year and a half. The position has been so difficult that we have not received one single reasonable offer for the building of wooden vessels.

We have an offer for the building of steel vessels, and the general terms of that offer I will state to the House. Two steel vessels could have been built for this Dominion Government at a rate of $125 to $135 per ton, with delivery in the middle part of the year 1917. That is the best offer we got for steel tonnage. The amount asked for, of course, is very large; but the time of delivery is also a factor in the case which must be considered. What we must do in Canada is to divide this thing into two. There is a period of emergency, and there will be a period to succeed this emergency. Having canvassed, to a certain extent, the emergency period, let me now say a few words with reference to the work of shipbuilding in Canada on the basis of permanency, that is, with reference not to the present emergency but to the conditions and the needs of the future. It goes without saying, to my mind, that a country of such large productive capacity as Canada, and with production constantly increasing, occupies an undesirable position if it does not produce and have at command a very considerable commercial tonnage for its own use. That becomes apparent in times like this when, with no commercial marine, the country is at the mercy of the disturbing conditions of war. Altogether, it is a fair axiom that a country with the producing capacity of Canada ought to have a reasonable and growing mercantile marine; and I believe that Canada can have it. It ought to have it, for these potential reasons; it ought to have it because commercial tonnage taken year in and year out, is a profitable investment for a country. Great Britain's wealth is largely built up on the earnings of her commercial marine. Holland, and formerly Belgium, are notable examples of the wealth that comes to countries from large commercial marine, employed year in and year out, having their periods of prosperity and their corresponding periods of adversity, but bringing on the average a good return to the country in earning power. Canada as well ought to try in some way or other to build up a good commercial marine. How is it possible to do that? One may say: let capital run its own course; if capital sees that it would be profitable to invest in building commercial tonnage for Canada, it will do it; on the other hand, if it cannot see its way clear to do that; if it feels that it should depend upon the carrying capacity of outside vessels, it will take its chance in the open market of the world and charter or procure its tonnage as it has necessity for it. I believe that this argument should go along the line of a country having a good, strong, commercial marine of its own, and I do not think you can bring that about by leaving the matter entirely to corporate and private enterprise without some form of aid. Now, what are the forms of aid which can be given? There is a tonnage construction subsidy, whereby for every ton of capacity of vessels built in Canada under certain conditions the Government—the Treasury, the people generally might pay a certain amount in order to give an impetus, at least in its early stages, to the building of a commercial marine. That is one method that can be employed, and it has its disadvantages. In the first place, a vessel that you subsidize by tonnage construction subsidy may be in your employ a year after the vessel is built or it may be sold and be in some one else's employ thereafter. This is liable to happen unless you hedge the subsidy around with conditions requiring that the vessel shall make itself available for Canadian trade, and that stipulation is difficult to append to a simple tonnage subsidy agreement.

There is a scheme which has been adopted and which has in it, I think, a good deal of merit; I am going to give the outlines of it this afternoon, but I shall first call attention to what the United States Government is now proposing. Last year a Bill was introduced in the United States Congress for the promotion of shipbuilding in the United States. This year the Bill has been modified, and the lines of the present Bill, which has the administration behind it, and is being pressed in the United States, are something of this kind: an appropriation of $50,000,000 is to be made and

secured upon Panama canal bonds; that $50,000,000 so secured is placed in the hands of a committee, or commission, consisting of certain members of the United States Cabinet, a naval architect and other persons chosen by the President, with the assent of the Senate, and these men so selected are to be thoroughly conversant with shipping matters and shipbuilding. This governmental commission is in charge of shipbuilding under this scheme. It says what kind of vessels shall be built, how they shall be built and their tonnage, and it has general direction over such matters. The shipbuilding which is carried on under this scheme—and this includes purchases of vessels—is subject to these conditions. This commission shall have charge of shipping matters so far as they relate to that proposition, and they have also the right to license vessels trading to the United States and to control rates as far as possible. That $50,000,000 being at their disposal, they may enter into contract with parties to build or purchase vessels in the United States, and to purchase vessels outside of the United States, these vessels to be placed upon the United States register of tonnage and to become United States vessels. Entering into contract with these parties for the purchase or building of ships, the commission is empowered to subscribe stock to these ships, in building or in purchase, taking care always to have a majority of the stock so as to enable them to keep the control. On that basis the whole proposition, outside of the financial aid which is given, looks at the acquisition by the United States—by building in and out of the United States and by purchase out of the United States—of vessels on certain standard lines, which vessels shall be built or purchased and operated under the regulations of this commission. They have also in the United States a mail contract law, by which vessels of twenty knots and upwards get $4 per mile on approved routes for carrying the mail, while vessels of sixteen to twenty knots get $2 a mile. These are the propositions which are to-day before the United States Congress looking to the upbuilding of a commercial marine in that country.

The Chamber of Commerce in New York, which is a very influential body, has criticised that scheme, and has put forward another scheme. I purpose giving that scheme in brief to the House this afternoon, and in order to bring it down directly to ourselves I will translate it into the form it would take if it were applied to the Dominion of Canada. Applying to Canada that scheme, which was debated and unanimously approved by the New York Chamber of Commerce, it would work out something like this: You would appoint in the Dominion of Canada a commission consisting, we will say, of three members of the Cabinet whose departments are interested—for instance, Commerce, Navy, and Finance. The Government side of that commission would be the ministers of these three departments. Add to these a naval instructor and three practical and experienced men in shipping matters, selected by the Government, and you have the commission which would operate in Canada. That commission would have general oversight and direction of the classes of vessels to be built under the scheme; how they should be standardized, how they should be manned, everything in connection with them, and, to the extent that it would be possible, the regulation of the rates as well. That committee would then be empowered to enter into contracts with shipbuilding companies, to build according to the plans and regulations laid down in Canadian shipyards, and the builders of the ships would be allowed the difference between the cost of construction in Canada and in European ports, that difference having been carefully ascertained by the commission. The object would be to enable the Canadian shipowner to have his ships built in Canada with exactly the same cost to himself as if he had them built in a European port. If the tonnage could be built in a European port at a certain percentage per ton cheaper than in Canada, then the subsidy for construction would be that difference in cost, whatever it was, so as to put the Canadian shipowner on an equality, in the after competition, with his competitor who had ships built in European snipyards. The time during which this should be carried out would be limited to a period of say 10 years, so that during that 10 years this operation of building would go on. Then the commission would be empowered to enter into contracts with the ship owners, when the ships were built, and to guarantee to the owners the difference in cost of operating the ships under the Canadian flag and under a European flag, that subsidy to continue for the life of the ship. The commission would possess itself of accurate information on the difference both in cost of construction and in cost of operation, and would pay that

difference, and that difference alone. In that connection we should place at the disposal of the Commission the sum of $15,000,000 or $20,000,000, and empower that commission to guarantee the bonds upon the ships built up to 50 per cent of the value of the ships. Such bonds would be 5 per cent bonds, and the Government Commission would get one-half of one per cent on those bonds returned to its treasury for its work and its supervision.

What would that mean? It would mean that for 10 years you would have shipbuilding tried out under the advantage of a bonus equal to the difference in construction cost in Canada and the difference of operation cost; the latter subvention to extend to the life of the ship. Capital would be attracted and induced to invest in steamships owing to the Government guarantee of bonds, which would, of course, be given under a proper amortization scheme by which those bonds would be provided for and paid off during a certain period.

On the Great Lakes you will find a very large and prosperous American mercantile marine, and I am told that almost every vessel in that fleet has been built under a guarantee of bonds, not a guarantee by the Government, either state or federal, but on that same system; and I am informed that those bonds are considered so good a security that banks, including savings banks, are anxious to get them, and that, in the late history, at least, of those transactions, there has not been an instance of failure with reference to the amortization of the bonds or to the security in any way. But we must recollect that lake marine business is a very different thing from ocean tonnage business. However, that is simply an illustration of what has been done along that line.

Let us see what would be the advantage to be obtained if that system were carried out? In the first place, the Government would make its equitable, yearly contributions, not on a supposed or an imaginary or a favoured basis, but on the actual difference of cost of construction and operation. And, in the next place, it would guarantee bonds of the ship to one-half its value, getting back one-half of one per cent, with arrangements for proper amortization. If you take the history of lake shipping, there is fair ground for stating that system that would work out satisfactorily and successfully. It is impossible to say what the subsidy would amount to in actual figures; the only certainty we would have being that it would amount to the actual difference and to no more and no less. In that way, if it worked out successfully, at the end of 10 years you would have a very substantial commercial ocean marine and you would have the certainty of its operation for 20 years from the time that each steamship went into actual service. By such a plan capital would be attracted to that kind of investment, to which our people in Canada are not very much used; and if you could bring it about that capital would become interested, as construction went on capital would more and more come in, so that the private capital of the country, without Government aid, would afterwards be able to look after its commercial marine. You would have a valuable earning power, proportionate to the amount of tonnage, which would accrue to the people of this country. Our people would have the advantage of the expenditure of money for wages and materials in connection with these ships, and I am assured that if such a policy, based on permanent conditions, were inaugurated in this country, Canada would make the steel necessary for the building of those steel ships, and that we would thus have the benefit of a further development of the steel industry. We would derive many other advantages, which I shall not take time to enumerate, but which would come from a more or less steady supply of ocean tonnage, somewhat commensurate with the needs of a great producing country, requiring large ocean transportation facilities.

I am sorry that the short tale I started to tell has developed into a longer tale than I had supposed it would. You turn to me and say: "That is all very good, but what does the Government propose to do?"

Mr. PUGSLEY: Hear, hear.

Sir GEORGE FOSTER: I am simply coming to this committee, as I have come without very much encouragement on two previous occasions——

Mr. PUGSLEY: From the Government.

Sir GEORGE FOSTER: I came once and put a proposition before the House in an absolutely businesslike and non-partisan way and I asked my hon. friends on the other side to give us, the Government and the House, the benefit of their suggestions and their criticisms? What did I get? The hon. member for St. John (Mr. Pugsley) went back to Genesis, the first chapter of

it, and he detailed every book in the political bible until he came to the Apocalypse, interspersing his observations with numerous criticisms of the Government for its malfeasances and negligence. Then, I had to endure the excruciating agony of having the hon. member for Assiniboia (Mr. Turriff) get up after that—when I was chuck full of what I had got from the hon. member for St. John—and take up the free wheat problem. He dealt with the history and conditions of the free wheat problem, from the time he started until he sat down. It was a fine speech from his point of view, and contained many fine things, but the House had gone over that half a dozen times before and my hon. friend from Assiniboia had debated it on every imaginable opportunity which had arisen. However, I had the single solace of hearing from the hon. member for South Renfrew (Mr. Graham) who did say that when I came down with my Estimates upon that question he might be able to give me some suggestions. I hope he will, because it will relieve the monotony of desert barrenness in helpful suggestion which I have heretofore found on the other side of the House. We are, more or less, business men on each side; we have our views; I have put this discussion of the question before you, and I ask you for your views about it. If you have some further plans, bring them out. Do not be so niggardly as to keep in your back pocket everything that is useful to the country in its time of need, because you feel that you might make something out of it for yourselves ten or twelve years from to-day when you get into power. It is the duty of patriots on both sides of the House to now bring forth their talents, not to keep them hidden in their napkins, and to give us their views as to what ought to be done at this time and under these conditions. May I take my seat with the hope that hon. gentlemen opposite will not again cite Genesis, Exodus, and the Apocalypse, and that we may be spared free wheat just for this solitary occasion, and get the benefit of their experience and opinions on the subject we have been discussing.

Mr. PUGSLEY: Mr. Speaker, if I accomplished nothing else, I am very glad to think that I induced the Minister of Trade and Commerce to read his Bible pretty carefully last night. I assume he has been devoting a good deal of attention to it, because he has discovered the particular chapter to which reference was made by myself in a somewhat jocular way. My hon. friend referred to a certain proposition which he said he had received for the building of wooden vessels and when I ventured to suggest across the floor of the House that I thought that proposition was an unreasonable one, in the sense that the bonus asked for the building of wooden vessels was entirely too great, my hon. friend asked me why I did not make a proposition. He said that I was connected with financial men. Well, now, did it not strike him that he was making very light of a most important project such as the furnishing of vessels at the present critical time? I would have been of the opinion that the Government, during the twenty-one months that this war has been in progress, and knowing as they ought to have known from the very beginning that tonnage was growing scarcer month by month, would have given such thought to this question that they would have been prepared to have brought down to this House a suggestion of their own as to what ought to be done, not to create a mercantile marine ten years from now as the minister intimates he is thinking of, but for the present time when the war is on, when we need tonnage, when ships are being destroyed, when they are growing scarcer every day, and when increased tonnage is absolutely essential to enable the products of Canada to be carried to Britain and her Allies. That is what I would have thought my hon. friend would have suggested, but all he tells us now is that there are difficulties in the way. This war, it is true, has brought enormous difficulties to the Mother Country and to the overseas dominions but the statesmen of the Empire have met those difficulties as best they could. No doubt mistakes were made, no doubt loss will occur if the war should end within a year or two, no doubt there will be large sums of money expended which, if anybody knew with certainty that the war would be over within a short time, would not be expended. My hon. friend says there are difficulties in the way of building ships because if the war should cease in a year or two, there might be a slump in the cost of shipbuilding and in the rates of freight, and therefore there would be a loss. We are preparing and equipping, so the Government tell us, and nobody finds fault with them for that, an additional army of 250,000 men to send to the front. That vast number of men cannot be sent forward for a

year from now at the very least. Many millions of dollars will be expended in their equipment and in getting them ready and if the war should be terminated in six or ten months from now I suppose the minister would say that the money would be wasted. But is it an improvident thing to go ahead on the theory that the war may last and that all the energies of the country should be put forward to make all necessary preparations to meet whatever the future may have in store for us? Are our munition workers to stop making shells because the war may be over sooner than expected? There may be hundreds and thousands and millions of dollars expended in the making of shells and other munitions of war which possibly may not be required and which probably would not be required if the war should cease. Is it suggested by the minister that in that case it is quite provident for the Government to go ahead and not be deterred because the war may cease sooner than some people expected it would? But, in regard to the carrying trade of our country, in regard to giving opportunities for getting the products of Canada to European markets at reasonable rates, the minister says: "Let us do nothing for fear that this war may end sooner than we expect and the money might be lost."

To my mind the minister, while attempting to defend himself and his colleagues from the charge of want of foresight and of neglect to provide for the transportation interests of the country, has confessed that they are guilty not only of neglect but of want of foresight. The minister has sought to excuse the Government for their neglect. The minister has admitted that when the war broke out the Government had abundant opportunities to buy and charter vessels at low prices and that they would have been able to put these vessels into the carrying trade of the country very much to the advantage of Canada and of the producers of our country as well as, I suppose, to the advantage of the consumers upon the other side of the water. But he says they did not do it and what is his excuse, Sir? It was because we did not know when the war would end; we did not know how long it was going to last. All calculations, except the calculations of the people of Germany, were set at naught. The Germans prepared for this war but apparently, the minister says, we did not know of it. Do you think that is reasonable, Mr. Speaker? Those of us who have been in this Parliament know that when war broke out this Government at the short session held in August, 1914, made the statement that Germany had been preparing for fifty years for a European war, and that her preparations had been enormous. Then, Sir, would you not have thought that the exercise of a very little amount of judgment would have told the members of this Government that this war was a great struggle that might last for more than a year, and would you not have thought that in view of the great uncertainty as to when the war would terminate, it would have been the part of prudence for this Government to have bought and chartered vessels wherever it could get them, and put on our trade routes as large a number as they thought the transportation interests of the country called for? Would not that have been the prudent thing to do? Would it have been any more than evidence of that reasonable foresight which gentlemen who have charge of the affairs of the country should exercise? But the minister admits that the Government did nothing, and he seeks to argue that if they had bought or chartered vessels they could not have accomplished very much for Canada, because as the tonnage became scarcer and the demand for vessels increased they would have had to charge the same rates that private companies were charging. They would have had to charge the normal rate, the minister says; otherwise they would have been obliged to show favouritism to one shipper over another. That certainly is a most extraordinary argument. According to that argument the Government, having the interests of the people of Canada at heart, could never keep down the cost of transportation when the demand for transportation increased. According to that argument, there being a great demand on the Canadian Pacific railway for carriage of goods, all its trains and all its resources being used for the purpose of transporting traffic, if the Canadian Pacific chose to double, treble and quadruple their rates, the Government would have to double, treble and quadruple the rates on the Government railways to meet the increased rates that the Canadian Pacific railway and other private railway companies were charging. Is not that the logical result of the argument which the minister puts forward? Why, from my slight knowledge of affairs, I would say

that the great object of having Government-operated railways is to keep down the rates to what is reasonable and fair profits. Does not the minister see that the very fact of the Government railway keeping down its freight rates compels the private railway companies to reduce their freight rates, or to keep them within reasonable limits, as otherwise the traffic would be carried by the Government railways? If this Government when war broke out had chartered or bought, at the low rates which the minister says were available to the Government, fifty or a hundred steamers, and put them into the carrying trade at reasonable and fair rates, it would have been an enormous factor in preventing the private shipping companies from increasing their rates. All that the Government ought to look for would be that the rates would give a reasonable and fair return upon the money invested. But what is the result to-day? These great shipping companies are making one thousand per cent more than they were satisfied with before the war broke out—one thousand per cent more than reasonable and fair profits upon the capital they have invested. And the minister tells us to-day that even the great shipping companies that are subsidized by this Government—even the Canadian Pacific Railway Company and the Allan Steamship Company, which receive a subsidy of $1,000,000 a year from this Government—have been permitted to increase their rates one-thousand fold beyond what is reasonable and fair. And the minister allows them to do it, because he thinks they might take their ships away somewhere else if he did not give them a free hand in increasing their rates just as they pleased. I am unable, I regret to say, to follow my hon. friend. I am unable to recognize that he has been able to give the slightest possible excuse for the failure of this Government to charter or buy the steamers which he says they could have bought at low prices when the war broke out. I am unable to acquit him and his colleagues of want of foresight. I think they should have recognized that the war might continue for a very considerable period. The minister has given a graphic picture to-day of the great difficulties which have arisen in connection with ocean tonnage. He has told you, Sir, of all those difficulties; but they were difficulties which were not unknown to you or the members of this House. They are not difficulties which could not have been foreseen by the members of this Government. Did not the minister know when war broke out that vessels would be required to transport for the use of the armies of the Allies the products of those countries which produced grain and cattle and other natural products. Did he not know that there would be a great demand for vessels to transport these goods? Did he not know that the Allies would naturally look to America for large quantities of ammunition, clothing, boots, shoes, horses and of everything else required by the armies at the front? Did not the minister foresee that? If he did not why didn't he? Did not he and his colleagues look forward to just that state of affairs which has arisen to-day? If they did not, why didn't they? Were they of the men who thought this war was going to end in six weeks? Was the Minister of Trade and Commerce like the Minister of Militia, who thought this war was going to be such a simple affair that Germany could be beaten by the Canadians alone, without any assistance from England or France, as he stated on one occasion when he was interviewed in New York on his return from the old country? Did the minister look on this as a trifling war that would terminate in a few weeks and would not be likely to produce the results which he sees to-day and which are becoming worse and worse as the war goes on? I am obliged to say this because the minister sought to defend himself and his colleagues from the charge of want of foresight and from the charge which I ventured to make against the Government for not doing what they ought to have done in the way of providing for the transportation of the products of Canada to the markets of Europe. I am unable to see that he has made any defence whatever, and I think the confession he has made to-day that the Government could have acquired by charter or purchase at low prices ships which would have been of great advantage to Canada, is a confession that the Government are guilty of the charges which have been brought against them.

The minister says that if the Government had gone into this business it would not have solved the difficulty, because they would have had to follow the example of the private companies and squeeze everything they could exact out of the producers or the consumers of the country. As to that, I think most men who give any thought to the subject will differ entirely from the Minister of Trade and Commerce. Then the minister says that the next thing

to do and the only other thing which might be done in order to increase the tonnage, would be to engage in the business of shipbuilding, and, he says, that is a serious matter also, because we cannot tell when the war will end. The minister has stated that if the Government were either themselves to undertake the building of steel ships, or to encourage others to build, if a steel vessel were laid down to-day she could not be ready until the fall of 1917. I doubt very much whether the minister is correctly informed on that. I believe that vessels of five, six, and seven thousand tons have been built upon the Great Lakes in less time than the minister states. I believe that at the new shipyards at Port Arthur one of the very finest vessels navigating the lakes was built in less time than that, and I would like some evidence that the minister has received his information from reliable sources before I would be ready to accept it without reserve. But, supposing that his statement is true; if the Government had commenced when the war broke out they might have had to-day a large number of steel vessels ready to be placed in commission and to do their work as a factor in the transportation of Canadian produce. With regard to wooden vessels, which, of course, can be built much more quickly than steel vessels, I am told that $60 per ton would be a good price for building them, even at the high prices which prevail to-day. The minister states that a fair size for a wooden vessel is about 2,000 tons. He may be right in that, but I had the impression that it might be desirable to build wooden vessels of larger tonnage.

Sir GEORGE FOSTER: 2,000 to 2,500 tons.

Mr. PUGSLEY: Put it if you like at 2,000 tons. The minister said that he had an offer from one person to build a wooden vessel for a bonus of $6 per ton per year spread over a period of fifteen years. The minister did not state from whom he received that offer, nor did he state what inquiries were made of practical shipbuilders in Canada as to the terms upon which they would be willing to build wooden vessels. What would that proposition mean? A bonus of $6 per ton on a wooden vessel of 2,000 tons would be $12,000. If that amount were spread over fifteen years, it would mean a bonus of $180,000 for a vessel which, at the very highest prices prevailing to-day, would not cost over $120,000; in other words, it would be asking $60,000 more than the cost of the vessel. We all know very well that at the present time, and probably for a number of years to come, those vessels will be able to earn very large profits, and that is why I stated that the suggestion which was apparently made to the Minister of Trade and Commerce was a most

5 p.m.

unreasonable one, and that if this Government were bona fide in putting before the people of this country the idea that they were willing to give assistance for the building of wooden ships as well as steel ships, I could not imagine for a single moment that they would not receive much more reasonable offers. Not very long ago a gentleman in the city of St. John with experience in shipbuilding and in the operation of ships told me if reasonable encouragement had been given, including taking off the duties on the machinery necessary for providing auxiliary power, men could be found who would engage in the building of wooden vessels, and that it would not be very long before a large number could be turned out. Two hundred wooden vessels, with a capacity of 2,000 tons each, would mean a very great addition to the mercantile marine of Canada. Even if you had 100 vessels, that would mean a tonnage of 200,000, and in the course of a year those vessels would be able to transport from Canada to the markets of the Old Country and to bring back upwards of 2,000,000 tons of produce, which would be a large quantity and would prove of enormous assistance. The total cost of those vessels, if my information is correct, would not exceed $10,000,000; and, in view of the necessity of increasing the production of Canada, and in view also of the necessity of getting a market for that production, and of getting it to that market at a reasonable rate, would it be unreasonable that the Government, for the purpose of making a start on a mercantile marine in Canada, should appropriate $10,000,000 of the sum of $200,000,000 which Parliament is voting for war purposes, for the purpose of increasing transportation facilities or of carrying out any other object which the Government may think reasonable in view of the conditions which exist? What we want to do, it seems to me, is not to look forward to what may be done in five or ten years from now, after the war is over, but to consider what shall be done now to relieve the present necessities. The minister, if I understood him aright, has argued that after all the Canadian producer is not injured very much by the high freight rates. He argues very eloquently that the

farmer gets, under any circumstances, a reasonable price for his grain. I suppose he would argue that the buyer gets a reasonable price, and that the freight on the railway and across the Atlantic is added to the cost to the consumer. My hon. friend may be right as to that, but I do not think so. One might argue as well that, if the milling companies earn enormous profits so that they are able to pay, not only a dividend upon their preferred stock which represents actual capital, but enormous dividends upon their common stock which represents no capital at all, but only water, that does not come out of the wheat producer but out of the people who consume flour. I would rather think it comes out of both the producer and the consumer. If the miller would be content with a less profit, the consumer would pay a less price for the flour and the former would get a higher price for his wheat. We know that hundreds of the tramp steamers which are upon the Atlantic to-day pay for their cost in two or three voyages, and it seems to me therefore that those extra and unnecessary profits are paid both by the consumer in England or other European countries and by the producer of the grain in Canada. If you reduce the rates of freight you are conferring a benefit not merely upon the consumer but upon the Canadian farmer. It does seem to me that the minister is hardly justified in saying that the Canadian producer does not suffer from the increased rates. Take the case of lumber. When war broke out there was a very good demand for lumber in Europe, but, except in the case of lumber which is specially required, the high rates of freight have checked that demand, and so people in different parts of the province of New Brunswick are not able to send their lumber forward at prices which would enable them to pay the high freight rates.

I do not wish to take up more time than is necessary. Nor do I wish to unduly criticise this Government, for I realize that they have many difficulties to contend with. But I do hold very strongly that they have not given to this question of transportation the care and attention which they ought to have given to it. I do not think the Government is doing credit to itself, nor has it measured up to the responsibility it owes to the people. The minister does not present any policy which his colleagues have approved of and to which he can ask the concurrence of this House, but he comes here as an individual member of the Government and asks us to make suggestions and give him the benefit of our opinions. Let him come down with a scheme for building up a Canadian merchant marine—not, as I have said, for building vessels ten years from now, or five years from now, but at the present day—and he will find support. Mistakes have been made, and, in the end some money may be lost. But the object is so important and the benefits to accrue from increased tonnage operated under the control of the Canadian Government are so great, as, I think, to justify us in running some risk of making mistakes. I say again that if the minister will come down with a matured policy which can be put into operation without unnecessary delay, I for one—I cannot speak for others—will be prepared to give that policy my heartiest support. It affords me no pleasure to criticise my hon. friend under present circumstances and in the trying position in which he is placed. But he comes to us with a statement that he gets no sympathy from the members of this House,—he speaks as if he gets no sympathy from his colleagues, as if he were "ploughing his lonely furrow." He turns his back upon his colleagues and in effect says: "I get no sympathy, no support, no encouragement, from the men by whom I am surrounded;" and he looks over to us with an appealing glance in his eye and asks us to stand by him and not only give him support but tell him what he ought to do under these trying circumstances. Let him come down to-morrow with a policy for engaging at once in the building of ships, both steel and wooden, to the number really necessary to meet present conditions and to take the place of the waning ocean merchant marine as far as Canada is concerned, and he will receive from us, even if he does not receive it from his colleagues, earnest consideration and hearty sympathy such as, I am sure, will warm the cockles of his heart. And from many private members on the other side of the House, I am sure, he will receive support and sympathy.

Mr. W. F. MACLEAN (South York): I wish to compliment the Minister of Trade and Commerce on the broad-gauge speech he has made this afternoon on this important question. It is true, his speech is open to criticism in some respects; but in the few minutes I shall occupy I shall not devote myself to criticism so much as to an expression of my delight with the

way in which the minister has brought this proposition before the House. He has appealed for national consideration of a great national question; he has appealed to the Opposition and to all the members of the House practically to go into Committee of the Whole to deal with the transportation question, especially with the question of ocean transportation. The minister made another notable speech this session. I did not happen to be here on that occasion. He made an appeal to this House to do away with the system of patronage, and asked the Opposition and the whole House to take that matter into serious consideration. I think he is proceeding on the right lines. We have had too much party government in this country, and in view of the present crisis we ought to have more national government and less party government, and we ought to try to deal with these great problems from a national point of view. I cannot but recall what happened in this House when the Naval Aid Bill was before us. I made an appeal then to the House, pointing out that the opportunity was then afforded for the two parties to co-operate in working out a system for the defence of the Empire. We were not successful in that; the proposal was practically abandoned at that time. My contention to-day is that, the great problems which this war has created cannot be solved by a single party, and will not be solved unless the House and the country approach them as a nation from a national point of view and irrespective of party. And if you apply this to part of a question you must apply it to the whole question. If the minister asks for the co-operation of the whole House and the whole country in regard to transportation by sea, the same course must be followed in regard to transportation by land. My contention, therefore, is that the only solution of these problems of transportation is the co-operation of both parties in the adoption of a national policy supported by a national Parliament. We cannot deal properly with the railway question now before the country if we deal with them from the party point of view. We are confronted by the most serious problems in connection with railways that we have ever had before us; for the fact that these problems have arisen, both parties may be responsible. If that is the case, we ought to correct our mistakes by dealing with these matters from a non-partisan standpoint. Unless both parties co-operate in considering these problems, as was pointed out by the Minister of Trade and Commerce to-day, we should not be able to solve them. In the matter of transportation both by land and by sea we must arrive at some kind of united policy; the country expects us to deal with these questions from a non-partisan point of view. The member for St. John city made a rather reasonable suggestion to-day, although the method suggested had a tendency to be somewhat partisan. I understood him to intimate that he and his friends were disposed to co-operate in matters of this kind. While not much has been done in the House in the matter of national co-operation concerning these questions, there is a good deal of feeling in the country in favour of that idea. There has been co-operation of parties in the Mother Country with a view of solving the difficulties that have arisen; if they have not quite succeeded over there, I believe that at least they have improved the condition of affairs. None of these questions can be approached and settled in any other way than by some kind of co-operation. Will the question of Civil Service reform in Canada ever be settled by each party in this House putting up the record of the other and pointing out the mistakes of the other in connection with that matter? No; you will arrive at a new and progressive measure only by some kind of co-operation. The remarkable thing about the speech of the minister to-day is not that he did not quite come forward with a substantive policy for dealing with the transportation problem so far as ocean traffic was concerned, so much as it is that he came forward with an appeal to both parties to co-operate in their efforts to deal satisfactorily with the question of shipbuilding. I simply want to content myself with saying to-day that, having regard to the great problems now before us, we should not be doing our duty to this country or to the Empire if we do not have this co-operation. Further, if there is to be co-operation in connection with shipbuilding and transportation at sea, there must be co-operation in connection with railways and many other things.

Speaking on broad lines, what is the solution of the transportation problem in Canada? It is that we must have a national policy with regard to railways, which means public ownership of our railways; and we must have a national policy with regard to transportation at sea. To my mind the difficulty will have to be approached by

national ownership or national control of ships, very much along the lines outlined by the minister to-day. Great evils have arisen from the manner in which transportation has been carried on in the past, especially through the operations of private monopolies. Private monopolies have taken advantage of the public on every occasion in the past, and they will do it in the future. A proper national policy supported by all the people would build up a transportation system both by land and sea that would seek to serve the public rather than to take advantage of it. The greatest advantage that has ever been taken of the public has been by the shipbuilding and ship owning interests of Great Britain. They have soaked the public right and left in transportation charges. It has been argued that because these ships were privately owned and operated under a different flag they could not be controlled by Canada. I have never subscribed to that doctrine. I do not agree that we should lie down before them; that we should not seek to control them by some kind of legislation. That may be an expensive and roundabout way of doing it, but it is a comparatively easy thing to start a national policy on the line of national ownership, or national control of shipbuilding, and in that way bring immediate relief to the transportation conditions in this country. As I pointed out in this House when discussing the railway question some time ago, what is the use of our appointing a Railway Commission to regulate railway rates if we cannot also regulate the charges at sea by the ship monopolies? All the advantages—if there were advantages—accruing to the people from the subsidies paid in connection with the construction of railways, and from the passing of the Act creating the Railway Commission have been taken away from them by reason of the fact that the shipbuilding interests have been allowed to charge what they liked in connection with transportation at sea. As a consequence rates were increased not a thousand-fold, as the last speaker said, but to an amount from four to eight times as high as the rates that formerly obtained. I do not quite agree with the minister when he says that the consumer paid the larger portion of the increase on these rates. Perhaps what he intimated was that the increase was equally divided between the consumer and the producer. In any case, if we had had national control of the rates at sea as well as by land, especially in connection with ocean transportation systems, we should be able to give the Canadian producer the best advantage that he possibly could get both by land and by sea—by land especially—and we should be able to give the consumer also the best advantage that he could get. After sixty years of railroad building and experience in matters connected with shipping, the public cannot obtain that measure of advantage to which they are entitled otherwise than by national ownership and national control on new and progressive lines. There has been a failure up to date, no matter how much we have spent in getting improved transportation in this country. The United States, judging by the evidence brought forward this afternoon, are coming to the idea that they must have a national system of transportation by sea. If they are to have it by sea they must have it also by land. This all goes to show that the trend of public opinion these days is that relief from high transportation charges, whether by land or by sea, must come by national ownership; it will never be attained as long as private control of monopolies prevails on this continent. Owing to the war, England has taken over her railways, and has practically commandeered all the ships at sea for the service of the public. But the trouble is that the number of ships is rapidly declining owing to attacks and destruction at sea, and we do not know when that is going to end. So it is up to the Government and up to the House, in view of this condition of affairs, to inaugurate forthwith some kind of national policy, or party policy if we must have it, looking to the establishment of a great Canadian merchant marine. One reason why I supported the idea of naval aid four years ago was that it would have started a great shipbuilding industry in this country. While it would have been primarily and in the first instance for the building of war ships, it would have ended in the production and the building of a commercial marine. That did not quite come then. It should have been started four years ago, before the war came on. But the war is on now; it is in its second year, and the best judges say to-day that next year will not end it. Then, I say, the responsibility is on the Government to inaugurate forthwith a policy in the direction of encouraging shipbuilding in this country.

Mr. PUGSLEY: Hear, hear.

Mr. MACLEAN: It must be not only an encouragement to get the ships built,

but to control them when they are built, and to consecrate them to the trade of the country and the development of that trade. What is the use of inviting settlers to come to the great Canadian West, to locate there and to develop the land, if the transportation charges are to be so heavy that they will absorb all of the products of the farm except enough to keep the farmer on the land. We are not going to settle our lands, we are not going to get the right people there and to have them develop our country as it should be developed, no matter how much we spend on an immigration policy, unless the Government and Parliament, representing the people of this country, control the system of transportation both by land and sea, absolutely. We have tried private ownership of railways now for 60 years and what have we got to show in the way of rates? We have a magnificent service which has been of great benefit to the country. But as regards rates our conditions are not at all what they should be. We have three transcontinental lines, it is true, but for the same amount of money a much better service could have been secured if the transportation question had been handled from a national point of view. We would thus have avoided the duplication of construction and, a still worse evil, the duplication of service. Of the three transcontinental lines now existing there are miles and miles that are mere duplication and which are practically a waste of money. We have the other problem before us and must deal with it, perhaps this session, that is the problem of the unnecessary duplication of service. We have failed in regard to railways, and we will fail in regard to ships unless we have a real national policy, which implies co-operation. I do not care how this great reform is effected. You may say that under our system it must be by party Government. But is party Government to exist forever in this country, after the fruits we have had from it in the past? Is there not a need and a call for some kind of co-operation? We are asked now for co-operation in regard to the war, at the most critical point in the world's history. Well, if co-operation is necessary in time of war, are we not to have it in time of peace in regard to trade and transportation, the development and the settlement of the country, and in dealing with financial problems, including banking and currency? I compliment the minister on his speech. I know it has the weakness that it has not presented a constructive policy. But the minister has gone so far as to say: We are prepared to sit down together and consider the question. That is not a bad policy. Judging from what I can read of the past, good results have followed where men have sat down and joined together and decided on a policy that meant progress for the whole nation. I hope there will be some expression of opinion on this problem, although perhaps not here to-day. The leaven is working and it can be seen in the country; you can see from the press what the people are talking about. They know that we have had too much politics and too much partisanship in the past, and they know that partisanship has not produced very favourable results. The Americans, after their experience with party Government and partisanship are getting rather tired of it. All the evidence goes to show that, in the new time after this war, the only thing possible for a nation is national organization of its resources and its transportation, its educational system, and everything of that kind. A nation will not be in it from this day forth unless it is nationally organized and unless it abandons the mistakes that have grown up in the past in dealing with public problems. New times, new methods and nationality must be the governing idea in dealing with these great questions. While I throw these statements out, just off the bat as it were, they are convictions that I have reached after careful study of the conditions that have existed here and in other countries. I believe that, if we are to be a nation fit to play our part under the new conditions that will obtain and are already in sight, we shall be able to do it only by listening to such appeals as the Minister of Trade and Commerce (Sir George Foster) has made to-day and on other occasions. He recently warned us of the danger of the excessive influence of party considerations in the matter of patronage, and a great many other things. We are all to blame for conditions as they exist to-day; both parties are to blame, the public are to blame. But the public expect a change. They expect relief from somebody, or perhaps from some new party that will arise in this country, some new, national party that will have a real national programme and some kind of national leadership, and that will appeal to all the people of Canada for a cessation and abandonment of the present method of working out our problems and will ap-

proach them on the newer and broader lines which have been indicated here to-day. The public expect it, and the public will not be satisfied with this Parliament and with our political institutions unless they are modified and changed to some extent, in the direction I have indicated.

Mr. J. G. TURRIFF (Assiniboia): With much of what my hon. friend (Mr. Maclean) has just said I have a great deal of sympathy. I think that after this war is over we may have less partisanship than we have at present. I am prepared to give my hon. friend (Mr. Maclean) this much credit, that in many cases what he advocates to-day is the policy of the party in power to-morrow. His policy may not be taken up within a few months or even years, but we have seen the adoption by the party in power of more than one of the principles he has advocated.

The hon. the Minister of Trade and Commerce has taken me to task for bringing up the subject of free wheat, and he has said that I have brought it up very often. I can only say to my hon. friend that I have not brought it up any oftener than he has dodged it, for he has dodged it every time it has been brought up. Hearing the Minister of Trade and Commerce speak this afternoon, you would think it was a crime for one of the representatives of a million and a half, or two millions of people, on the prairie, whose principal business it is to grow wheat, who are looking for a market for their wheat to bring this question up, and to bring it up again, in the effort to secure a solution of it. This is a question that it is up to the Government to deal with and it will always be before the Government until it settled. Therefore, no representative of the West is to blame in the slightest degree if he does bring this question up again and again until we get a settlement and a right settlement. My hon. friend makes a statement that is very far from the fact when he says that the freight rate does not affect the farmers in the West, that it does not matter whether the freight is high or low, he gets the same price anyway and that it is the consumer across the water who pays the extra freight on the wheat that the farmer grows. I have been a grower of, and a dealer in, wheat in my time and I know that if you are on the market buying wheat at any point on the prairies where wheat is grown, and the freight at Fort William suddenly goes up, we will say from three to five cents a bushel, just as quickly as the message can be flashed over the wires, down goes the price of wheat to the farmer two cents a bushel. That happens in every case; you cannot get away from it. How is the merchant going to pay the same price for wheat if it costs him two cents a bushel more to send it across from Port Arthur to Montreal? He has to reduce the price paid to the farmer. The freight has everything to do with the price that the farmer gets. Under the present circumstances, occasioned by the war, the freight on wheat across the ocean has gone up from five cents a bushel to 35, 40 and 45 cents. I am not going to be so extreme, or unreasonable, as to claim that if the freight was suddenly brought down to a normal rate the farmer would get all the advantage of that reduction. I do not think he would under the circumstances, but it certainly would be greatly to his advantage if the rate came down. He would not get it all but he would get part of it. You can lay it down as a principle which cannot be got over that the cost of freight on wheat between the farm which produces it and the city of Liverpool, or Chicago, or New York, or Minneapolis, or any place where the wheat happens to be sold, is and will always be, one of the most important factors. If my hon. friend the Minister of Trade and Commerce says that it makes no difference to the farmer what the rate is, he will find that he has very few followers in the West who will subscribe to his doctrine. During the past ten years there has been a wonderful change in the knowledge of the farmer on those particular questions relating to the marketing of his crop, to freight rates and everything in connection with the sale of his wheat. He is as well posted in a general way as most men in Canada and just as well posted along the lines of his own business as are other men along the lines of their own particular business.

My hon. friend has dealt at considerable length, very moderately, with the question of tonnage, but there were two points that my hon. friend avoided, or overlooked, in his discussion that I thought would have had a bearing on the subject and would have been well worthy of mention by my hon. friend. If we are going to secure the building of ships in Canada, would it not be well to put all the material that goes into the building of these ships on the free list? Would not that be the easiest way to pay a part of the bonus, if a bonus is necessary, to secure the building of ships? Would it not be easier to

simply take the duty off the material that goes into the ships than to pay an extra bonus per ton in connection with the building of ships? There is another factor that would enter very largely into the question of securing tonnage to carry the produce of our farms from this country across the water, and that is the question of securing return freight. If my hon. friend said: We will take off the extra 7½ per cent that we put on British goods last year, that would induce trade between Canada and Great Britain, and therefore there would be more tonnage to carry our wheat and other products to the Old Country. It seems to me that that would be a cheaper way of securing tonnage than offering a bonus. If you pay a bonus on tonnage, what will be the result? Take the case of the farmer, and this applies equally to every man who is a consumer, and we all are consumers. The farmer has to pay the extra duty on goods coming from the Old Country. Then he has, in addition, to pay for the bonus on the building of ships, and in that way he is paying double. In the case of the western farmer, who is refused the right to sell his wheat in the best market, or to have the choice of selling his wheat where the market happens to be best at the time, has to pay three times to secure that extra tonnage. If my hon. friend, instead of just taking off the extra 7½ per cent put on last year, would come down with a definite policy, supported by his colleagues, and say that in order to encourage tonnage to come to Canada, and in order to avoid paying a special bonus to secure that tonnage to carry the products of Canada to the Old Country, we will put British goods on the free list—

Mr. BURNHAM: Would my hon. friend be good enough to say if he would advise anybody to go into the West, settle down and start growing wheat?

Mr. TURRIFF: If the Government would come forward and say: We will put British goods on the free list—

Mr. BURNHAM: That is not the point.

Mr. TURRIFF: Well, then, I misunderstood my hon. friend.

Mr. BURNHAM: I want to know, with the state of things as it is now, if he would advise people to go into the West and start farming, or chuck the whole thing up?

Mr. TURRIFF: That is, if goods were put on the free list?

Mr. BURNHAM: Now, at the present time.

Mr. TURRIFF: My hon. friend is very pessimistic. The West is all right.

Mr. BURNHAM: Answer the question.

Mr. TURRIFF: I would advise my hon. friend to settle in the West.

Mr. BURNHAM: What's the trouble?

Mr. TURRIFF: The trouble is that the Government will not give us the best market for our wheat. My hon. friend would have to work if he came out West, but he is a husky looking man.

Mr. BURNHAM: You have knocked your own case on the head.

Mr. TURRIFF: I do not wish to be diverted from my argument. I was saying that if the Minister of Trade and Commerce would put British goods on the free list, there would not be nearly so much difficulty in getting tonnage to carry our products to the Old Country, because that would be an inducement to shipping to come to Canada. If the Government would do that, my hon. friend would not have to ask questions about people going to the West. If people could get their goods right and sell their products in the best market, you could not keep them out of the West with a club. Free wheat does not mean that all our wheat would go to the United States. If the argument of hon. gentlemen is sound, that the Canadian price is better, our wheat would never go to the United States, not one bushel of it. But if we had that extra market, we could take advantage of it exactly as our cattle raisers in the West do. Cattle enter the United States free now, and practically all our cattle are going there, simply because they fetch a higher price than in eastern Canada or across the ocean. Money counts with the farmer when he is selling his cattle, and it would count when he was selling his wheat. If he could get a better price at home he would not sell outside.

I entirely agree with the Minister of Trade and Commerce that a country should have a mercantile marine of its own, to carry products to and from the country. The question is, how best to bring that about. I have never been much of an advocate of bonusing industries, but a bonus has this advantage: you know exactly what you are paying. And when it is a question of giving a bonus or putting a duty on an article that is produced in Canada I prefer the bonus, simply because it is more easy

to regulate, and everybody knows exactly what is being paid. But I do not know that a bonus is the best way to secure a mercantile marine. It may be; I do not profess to know very much about this subject; but I think it rather unreasonable for the minister to come here without any proposition whatever to offer to the committee, and then ask my hon. friend from St. John to outline his proposal. Let the minister work out a proposition that will receive the assent of his colleagues first of all, and then submit it to the House, and if it is reasonable I am sure it will receive considerable support from this side of the House. But I do not think it is up to the Opposition to work out a plan for the Minister of Trade and Commerce. I do not say that we should not be able to satisfy him, because I have a pretty good opinion of his reasonableness—a much better opinion than I have of the Government as a whole. But while the minister might agree with a proposition coming from this side of the House, his colleagues might not, and it is for that reason that a proposal of this kind should be put forward by the Government in power, and have behind it the weight of the Cabinet's approval.

I have said what little I wanted to say, and I do not apologize to anybody for bringing up the question of free wheat. I shall bring it up just as often as I think necessary, and shall keep on doing so until we secure that boon for the western farmers; it would be a boon not only to the West but to the whole of Canada and would hurt nobody. I should like to see the minister take a tour through the West, not meeting out-and-out supporters of the Government in the large cities, but attending a few of the farmers' big conventions, the Grain Growers' and the United Farmers' conventions for instance. Let the minister get their view on the free wheat question, and he will soon find that his colleague the Solicitor General was very far from the mark when he said in the House that he was satisfied that ninety per cent of the agitation for free wheat was political, and the other ten per cent mistaken economics.

SUPPLY.

The House in Committee of Supply, Mr. Rhodes in the Chair.

At six o'clock the committee took recess.

The committee resumed at eight o'clock.

[Mr. Turriff.]

Mail subsidies and steamship subventions—ocean and mail service between Canada and Great Britain, $1,000,000.

Mr. OLIVER: Before six o'clock there was a general discussion in regard to ocean rates and freights, and I presume the minister does not object to that discussion being continued on this item.

Sir GEORGE FOSTER: Not at all.

Mr. OLIVER: Can the minister tell us what amount of grain has gone across the ocean during the period between the close of navigation on the lakes and, say, the middle of this month?

Sir GEORGE FOSTER: That question is pertinent to this item, but the whole question of grain carriage, transference, routes, everything like that, will come up when we take up the item covering the grain system in the West. I intend to take that item up to-morrow, when I will have my notes here and will give full information. The hon. member is perfectly in order in asking a question on this item, because a good deal of grain does go by this route.

Mr. OLIVER: The Minister of Railways and Canals was not altogether clear in his explanation yesterday as to the disposition that had been made of the grain carried forward on the Transcontinental during the past winter.

Sir GEORGE FOSTER: That will come under railway transportation.

Mr. OLIVER: If it were convenient for the minister to get that information from his colleague it would be of great advantage to have it.

Sir GEORGE FOSTER: I want to get that information myself, so that we shall have it when the item comes up.

Mr. OLIVER: I had it in mind to give some consideration to those questions that were discussed this afternoon on the basis of the information for which I was asking just now. That information, however, will be quite acceptable to-morrow, when the matter is up for discussion.

Sir GEORGE FOSTER: It will be up to-morrow or the next day.

Mr. OLIVER: Following the argument of the minister when he set out the reasons for the present lack of shipping facilities, I remember that he laid considerable stress on the fact that on the outbreak of war the mercantile marine of Germany and Austria was automatically eliminated from the

carrying traffic of the world, that is, all except such portion as was under seizure in British ports which, I presume, was turned to use in due course. Since then, some of that shipping which was interned in the ports of Portugal has been dealt with in the same way, and I think Italy has done the same with enemy shipping interned in her ports. I do not know what proportion of the total mercantile marine of the two central empires was comprised in that which was interned in the ports of Great Britain and her Allies, but it must have been a considerable percentage of the total, so that that part is not now out of commission by reason of the war. That part of the mercantile marine of the two central empires that remained in their own ports or is interned in neutral ports, of course, is out of commission; but on the other hand the traffic business of the two central empires, of the Turkish empire and, in large measure, of the Russian empire is also out of commission. Therefore, the loss in shipping facilities to the Allied and neutral nations is not nearly as great by reason of the war as the case as presented by the minister would indicate, because, whilst we have lost the shipping, the business is not there to be done by that shipping owing to the blockade. I emphasize this phase of the case for the purpose of establishing what appears to me to be the most serious and deplorable feature of the present condition of trans-Atlantic traffic, and that is that, having given full credit for all the legitimate reasons arising out of the war as an influence in increasing ocean freight rates, I am compelled to the conclusion that the great reason is the fact that the owners of shipping on the Atlantic ocean have taken advantage of the necessities of the world as it stands to-day and are so using the power that is in their hands as to create and constitute a menace to the Allied powers and to civilization at large. In my opinion, the owners of shipping on the Atlantic, to say nothing about any other part of the world, are to-day in the strongest and the most conscienceless combine that the world has ever seen, especially when all the circumstances are taken into consideration. When we are discussing this question, it is worth while to realize that the conditions that we face are not altogether natural, but artificial, and, being artificial, permit of drastic treatment that would not be in order were the conditions as to ocean rates the natural result of the general world conditions arising out of the war. I will admit that there is a certain percentage of reason for the increase in freight rates; but, taking everything that the minister has said at its full value, I still cannot admit that that constitutes a sufficient reason for the increase in ocean freight rates on the short haul between Canada and Great Britain of three, four, five, six, eight or ten hundred per cent that has taken place since the war began. The increase is out of all proportion to the change of conditions. A great part of the cost of ocean transport is the wages of men employed and the cost of the support of those men. Sailors' wages have increased, and the cost of living has increased. But the wages have not increased more than one hundred per cent—I doubt that they have increased fifty per cent—and the cost of living has not increased more than one hundred per cent; yet we are face to face with an increase of from eight hundred to a thousand per cent, and for this, for my part, I can find no justification.

That brings me to this point: that while I am not favourably disposed towards the minister's suggestion of a future policy of subsidized shipbuilding in Canada, I am of the belief that present conditions are such that if Canada, as a part of the great alliance, and the Mother Country are not to be absolutely strangled in this war by reason of the rapacity of owners of shipping on the Atlantic, some drastic and immediate measures will have to be taken to supply the mutual needs of Canada and Great Britain. Up to the beginning of the war, there had never been a complete shipping combine; there had been partial combines, limited combines; but in the period since the beginning of the war, in effect the whole shipping business of the Atlantic has become a combine, and it is merely a question of how much these people can get without regard to the service that they render, knowing that the absolute necessities of the case, life or death for the whole country on either side of the Atlantic, depends upon their say-so. They have their hands on the throat of civilization and they are strangling it to death. The minister was at some pains to explain that the producer did not pay the freight; he was strongly of the opinion that the consumer pays the freight. But whichever pays the freight, the allied world is carrying that additional load. The shipping people are taking it out of the allied world beyond what would be fair and just under all the circumstances, and are stupendously increasing the burden which has to be carried, without proper

justification. I do not wish to argue at any great length the point of who pays the freight, because it is not material to the argument I am making; but my impression is that, the circumstances being as they are, it is the Canadian producer who pays that freight. One reason why I believe that is this. When the freight was lower and when the price of grain at Liverpool was not so high as at present, the Canadian producer received a higher price for his wheat; but since that time in 1914, the price in Liverpool has increased but the price in Canada has gone down, while the cost of transport across the ocean has gone up. It seems to me there is no question that, had the cost of transport across the ocean remained the same, we in Canada would have received the benefit of that increase in the price of wheat in Great Britain. But whether we lose or whether the consumer loses, we know that we are stupendously handicapped in this terrible struggle by reason of the fact that freight rates across the ocean have been so greatly increased.

The minister asked the House, and asked the Opposition, to give their best opinion as to what should be done under these circumstances. I do not know that that, under our system of government, is exactly the business of the party of the Opposition. Having become seized of the existence of a certain condition, it is the business of the Government to find means to meet that condition. If our discussion were to run along that line, I should be compelled to follow in some degree the argument of my hon. friend from St. John (Mr. Pugsley) and to say that, had the responsibility rested on this side of the House, notice would have been taken at an earlier day of the conditions as they then existed, and due preparation would have been made to meet these conditions as they now exist. My hon. friend will see that we do not get anywhere when we begin to argue in that way, because that is not a matter that is capable of proof, either one way or the other. But we can, I think, reach this agreement, that the condition that exists could have been measurably met, or, at any rate, it would have been right and proper to take steps to meet it when it began to arise or when it became evident that it would arise. That, however, is not what I want to say.

What I want to say is this, that we in Canada, as well as the people of the United Kingdom, are faced by a terrible crisis, as I am given to understand the situation to be, in regard to the cost of transport and the facilities for transport from this side of the Atlantic to the other.

We are faced with a crisis which will have to be met without delay. While I would not wish to be considered for a moment as agreeing to a permanent policy of subsidized shipbuilding such as my hon. friend suggested to-day, I would say that in view of the crisis which we are facing I would be prepared to support the Government in almost any measure they saw fit to take, if it was feasible, in order to meet that condition of affairs and to give transportation across the ocean with assurance as to accommodation being available at reasonable rates. War conditions being as they are, I do not think that we are well advised in making calculations as to what may take place after the war. My impression is that the conditions to-day are such that the best thought of the allied nations, this Dominion included, should be brought to bear upon the single object of winning the war. If and when we win the war, we shall be in a position to lay our plans and take consideration of the future, but until the war is won the first essential is that it shall be won, and won under circumstances that will leave no question as to the result or as to the winning. I know that many great minds in Canada have given much thought to what we will do after the war. I repeat that in so far as these ideas draw us away from the concentration of our best minds upon the winning of the war, to that extent they are not really to our benefit. We had better put these things aside for the present and concentrate our thought and attention on winning the war.

Mr. J. H. SINCLAIR (Guysborough): I had intended before the Speaker left the Chair to say a few words on this question, but I was called out of the House, and perhaps this would be as good a time as any to express briefly my views on the subject. I was pleased to hear that the minister had decided to take some action on this very important question. It is not a new question in this House. I have had the honour of sitting in this House for twelve years and I do not think that a single session has passed without a discussion on shipbuilding. Although the subject has been looked at from all angles it is apparent that up to the present time no decision has been reached.

It is not a party question, and I trust that it will not become a party question.

It is purely a business question, and I see no reason why both sides of the House should not deal with it as such and endeavour to reach some conclusion. Coming from the province of Nova Scotia, I take a special interest in this matter. We look back upon the time when our province was a great shipbuilding province. It is not a great while ago since we were able to boast that no country in the world, not even Great Britain, had as many tons of shipping to its credit per head of population as the little province of Nova Scotia. We lost that proud position, and we began to lose it very shortly after 1867. You will remember that soon after Confederation a high tariff was introduced into Canada in place of the old 10 per cent tariff that we used to have in Nova Scotia. One of the reasons, according to my view, why we were driven out of the business of shipbuilding was because this high tariff increased the price of production. It cost more to build the ship, and when she was launched she had to compete with the whole world; she had to compete with the ships built on the Clyde, and on the Humber, and elsewhere in Great Britain where everything is cheap and where they have made such great progress in this industry. Another reason was the change from wooden to iron ships. In those days we built wooden ships successfully, but when the change took place from wood to iron and then from iron to steel, we had our own difficulties to meet. Our people who had money in the shipbuilding business took their money out and invested in the industries which promised large returns under the national policy, but many of them were disappointed and lost their money. The question now arises: can we get back to a workable system; can we get again the old supremacy on the sea that we have lost? Every Nova Scotian is ambitious in that direction. We like to look upon ourselves as a maritime people, sweeping the seas and carrying cargoes from far-off countries. That has been the tradition of the province in the past, and it has not yet died out. I am sure that in the province from which I come any steps that can be taken to waken the shipbuilding industry will be welcomed. I am sorry that the Minister of Trade and Commerce has not seen fit to come to us with some kind of a clean cut proposal from the Government, which if we thought was genuine, we could look upon seriously and give our views on. But if it is only talk, if it is only a discussion which is not intended to end in anything, there is little use in our taking very much interest in it. We have had so many of these illusory suggestions in the past that we would like to feel that this time the minister is leading us to a bona fide movement with regard to this matter. We are not able to forget that in 1909 the Minister of Trade and Commerce made a great speech in this House in which he drew a delightful picture of what was to happen in the years to come when we should embark on naval construction in this country and when the construction of mercantile ships would follow. We believed him at that time; we thought that his forecast was correct, and he was able to win the assent of both sides of the House, but for the last six or seven years the minister has been busy trying to explain away the position that he took on that particular occasion. If there is one man in Canada who is responsible for our failure in that matter it is the Minister of Trade and Commerce himself. I am sorry to have to say that, but we must speak the truth on matters of this kind.

Sir GEORGE FOSTER: Speak the truth as we see it.

Mr. SINCLAIR: I am glad, however, if he is going to turn over a new leaf; if he is going to make a sincere and honest effort to blaze the trail for the country in regard to this important matter. We would all be very pleased if the picture drawn for us by the Minister of Trade and Commerce could be realized, and I quite agree with my hon. friend (Mr. Turriff) that the question has become so urgent that it demands immediate attention from the Government. I do not agree that it is on the Atlantic alone that this trouble exists. The high rates prevail not only in the North Atlantic, but in the Pacific, in the South Atlantic, and all over the world. The ship owners can secure just as profitable trade in carrying cargoes from the Argentine to the Mediterranean as from Halifax to Liverpool. The peculiarity about the ocean shipping business is that the ship owner has the whole world for his market; he is asking only for the market price. When there is a cargo to be carried it is put up in the exchanges in the big cities like London and New York, and the ship owner who undertakes to carry that cargo for the lowest figure will get it, and bidders are there from all over the world.

Wherever the cargoes are owners of vessels in that part of the world are represented at the exchanges in London, or wherever the business is done, and the cargoes are carried at the market price. I do not think that any one can substantiate the theory put forward by my hon. friend (Mr. Oliver) that there is a combine.

Sir GEORGE FOSTER: Hear, hear.

Mr. SINCLAIR: I do not think there is any combine. The world's shipping trade is too large a business for a combine to be formed. The whole world is interested.

Mr. W. F. MACLEAN: Is there not a North Atlantic combine?

Mr. SINCLAIR: I do not think so.

Mr. MACLEAN: I think there is.

Mr. SINCLAIR: At least I do not know of any. I never heard of any.

Mr. MACLEAN: The Canadian Pacific Railway is in it for one.

Mr. SINCLAIR: I do not see what advantage it would be to have a combine in the north Atlantic. There was, a few years ago, a shipping company in New York that was said to be endeavouring to combine all the shipping of the country; but that fell down, and at the present time I do not think there is any large company that controls the rates in any way. If there is I am not aware of it; but perhaps my hon. friend has better information. If he could enlighten us on that matter, I should be interested. There is in the whole world about 50,000,000 tons of shipping and the British Empire owns about 20,000,000 tons of that shipping. I am now talking of gross tonnage. The next largest owner is Germany. Germany has over 5,000,000 tons, and the United States also has over 5,000,000 tons, a very large part of which is coasting tonnage. Of course, the whole German tonnage is now tied up. The United States has very little deep sea tonnage. In Canada we have quite a respectable tonnage, but in Canada, under our system, we count everything in the tonnage, the little boats that ply on the lakes, the scows, and all these small craft.

Mr. GRAHAM: We have big boats on the lakes.

Mr. SINCLAIR: Yes, but they are all put in the one list, and they form the tonnage of Canada, which is about 700,000 tons or perhaps a little more. Very little of that is ocean tonnage. We have some ocean tonnage, and while the minister was speaking on that point I thought of interrupting him to make a suggestion. He said there was nothing the Government could do to affect the rates. I felt like suggesting that they could have done what the Government of Great Britain did which commandeered the tonnage that they required for war purposes and for commercial purposes, and forced the owners of that tonnage to turn in and work for them, and the owners are now carrying cargoes for the British Government at about one-third what they could get in the market if they were free to go and work for the ordinary merchant. That is to say, the British Government give on tramp vessels about 12 shillings per ton per month, whereas an owner can earn from 35 shillings to perhaps 40 shillings a month in the market if he was free from the requisition of the British Government. The British Government in that way have controlled the rate of a certain amount of the tonnage of Great Britain, I think about 33 per cent, according to the last statement I saw. The Canadian Government could have done the same thing. They could have commandeered all the boats that are registered in Canada and turned them into the Canadian service, to do the work of Canada at a reasonable rate. The way the British Government arrived at their rate was by taking an average of the profits of three years prior to the war and making a certain allowance for the increased cost of manning the ship and the increased insurance. They fixed a rate on that basis, and the traffic on all commandeered vessels is controlled by that rate.

Mr. BRODER: Do not the English Government run all risk of the vessel being lost?

Mr. SINCLAIR: Yes, in a sense. The ships are all insured under a system which the English Government have organized with certain companies in London, and they pay the insurance so that if a ship is sunk by a submarine or lost in any way the owner gets the value of his ship. They also make some provision for the increased cost of the running of the ship, so that it works out fairly well for the owner, while the British Government have the advantage of getting their work done at a fair and reasonable rate. My hon. friend could have done that,

but he failed to do so. He also, as I understand, allowed the British Government to commandeer Canadian ships, which I do not think should have been permitted by the Canadian Government. Ships registered in Canada should be under the control of the Canadian Government, and if any commandeering or requisitioning is to be done it should be done by our own Government. We are loyal to Great Britain; we are willing to help in this great struggle, and we are helping; we are sending our best to the other side, regardless of money, regardless of life; we are willing to do our full share in winning the war. At the same time, we do not expect the British Government to come here and order us to send our men overseas; we want to send them voluntarily. We have free government in this country, and I should expect our Government to take the stand in regard to this matter of commandeering ships that an independent, free Government should take, and to say: No, if any requisitioning or commandeering of Canadian ships is to be done we will do it ourselves, and if it is necessary to turn our ships over to the British authorities in order to help in the war we will do it, but we will control every ship that is under Canadian register. That is the position the Canadian Government should have taken.

I said a moment ago that we had not been able, during a great many years, to make any progress worth while in the building of ships, and I attributed that to two reasons. One of those reasons has disappeared. We have now in this country a great steel industry. We are able to produce steel in large quantities. We have rolling mills in which we can roll steel to produce the ships. We have a large number of skilled men who are able to do the work. We have all those things in Canada now that we did not have twenty years ago. But we still have high protection; that stays with us, and in my view we shall not be able to compete with free trade Great Britain in ship building unless something is done to assist the Canadians who embark in this business. Take France, for example. The people of France have an extensive coast line, and they have always been very anxious to be the owners of a mercantile marine. No Government has done more than the French Government in that direction. They have paid large bounties, they even paid so much a mile for the voyage that the ship makes on the ocean, in order to induce the French people to embark in shipbuilding. They have spent vast sums of money, but they have had no special success in France. They do not own to-day much more than about 2,000,000 tons of shipping out of 50,000,000 tons that are owned by the maritime nations throughout the world. Two million tons is all they have been able to put on the water with all the protection that they have given in France. What is the reason? The reason is that France is a highly protective country, and everything is so expensive that they cannot build a ship, launch her and compete with the rest of the world in that business. Hon. gentlemen must not think that it is all easy sailing in the shipping business. Before the war ship owners were having a very hard time of it, and many of them had to go under. In many cases they did not make more than 5 per cent on their money, and their property was disappearing or becoming less valuable year by year. That is what happened during all the years of hard times before this spurt came on. If you are going to embark in the shipping business you must be prepared for a dull spell as well as for a profitable time, and in order to do that you have to build your ships with as little capital as possible, because you have to pay dividends on every dollar that you put into it. If it is going to cost the Canadian more to build the ships than the Englishman, or the Scotchman, he must get that money from some source, and that is the question the Government have to settle.

The scheme they have in the United States, and which was put forward by the Minister of Trade and Commerce to-day, does not seem to be a practical one. No capitalist will want to embark in partnership with the Government. I understood him to say that under that scheme, which is proposed before the United States Congress to-day, the Government would provide the largest part of the capital, that the Government would require to own the controlling interest in the capital that would be put into the ships, and that they would invite private enterprise to go in with them. I venture to say that capitalists, or those engaged in private enterprise, will not embark in business with the Government. The experience of the United States is like our own. The Government have not been successful in managing commercial matters. I fear they will not be successful in this

and I do not think that the scheme will be found workable.

The last proposition made by the minister strikes me, without having had much time to consider it, as more likely to be of some use. I hope he will follow it up and work it out if he can. There is great activity in the United States at the present time in the matter of shipbuilding. The United States own about 5,000,000 tons of shipping already. They have, within a year, reduced their tariff. They have made it easier to embark in the shipbuilding business. They have never paid any bounty, but they have opened the registry in the United States to foreign shipping, which is of great value.

Sir GEORGE FOSTER: For seven years.

Mr. SINCLAIR: For seven years. Any man who chooses can go abroad, buy a ship, bring her to the United States, register her under the American flag and sail her as an American ship. He could not do that until recently. That has increased the tonnage of the United States largely during the last year or two. From the last statistics I have seen, and which are contained in the Report of the Department of Commerce for the present month of April, it appears that there are 360 vessels on the stocks of the United States of an aggregate tonnage of 1,067,856. You can see that there is great activity in the United States in reference to the question of shipbuilding, and I am inclined to think that if the United States reduce their tariff and become practically a free trade country she would very soon become a rival of Great Britain on the seas. She was a rival of Great Britain away back about the middle of the last century, before she adopted high protection as her policy.

Sir GEORGE FOSTER: This new tonnage is almost entirely coastal.

Mr. SINCLAIR: I believe it is very largely coastal and, of course, in the coasting trade of the United States they have a certain amount of advantage. They confine the coasting trade of the United States to American bottoms. A foreigner is not allowed to take any part in the coasting trade. There is also another matter that has an important bearing on the question. They allow great freedom in the selection of officers. A ship up to 700 tons is not required to have certificated officers in the United States. That gives a good deal of freedom to the smaller class of coasting vessels and it enables them to carry on a business that they would not be able to do if they were subject to our laws. If you look over the Canada Shipping Act you will find that it is a most complicated statute, containing about one thousand clauses, many of which are grandmotherly clauses that should be struck out as they only hamper the business. That is a matter I wish again to draw to the attention of the minister. Notwithstanding all the discussions we have had here, the Government have not taken any action towards revising the shipping laws of this country and making them a little more in accord with modern business conditions. I have pointed out to the Minister of Naval Affairs (Mr. Hazen) that our ships are hampered by being prevented from going on southern voyages further than 5 degrees north latitude. I have brought that question to the attention of the Government on various occasions but they have taken no action. This is not a matter connected with the deep sea trade but it is a matter of great interest in connection with the coasting trade. It is a matter that should be dealt with, but up to the present the Government are adverse to making that change. It has been placed before them on various occasions. There is a Bill before the House at the present time which has passed its second reading but which can get no further unless it is made a Government measure. It simply asks that coasting vessels shall be allowed to engage in the southern business, and perhaps the most profitable business is to be found on the coasts of the Argentine Republic and Brazil. Under the present regulations a coasting vessel is allowed to go no farther south than 5 degrees north latititude and the consequence is that owners are withdrawing their ships from Canadian registry and are registering them in Barbados and other British possessions in order that they may be able to carry on their business. This should not be the case but unfortunately it is. Some sixty or seventy large sailing vessels, belonging to the Maritime Provinces, during the past few years have been withdrawn from Canadian registry altogether and have been registered in Barbados. They have been taken away from the Canadian flag because the Canadian Government refused to allow them to engage in the southern business. There is no reason in the world why they should not be allowed to do so.

It is much easier navigating in southern waters than in northern waters where they are allowed to go, but for some reason that has not been explained to the House or the country, the Government still adhere to the old policy of preventing Canadian coasting vessels going farther south than 5 degrees north latitude. This is a matter that the minister should deal with if he is desirous of keeping ships under the Canadian flag and building up our coasting trade.

I do not want to weary the House, but this question of tonnage is of great importance. Our trade is growing enormously but tonnage is not growing. Ten years ago our total trade—that is our exports and imports, leaving out gold and bullion—was $458,000,000, approximately, while to-day it is $959,000,000, so that our trade has doubled within ten years, while during that period our shipping has not increased at all. The consequence is bound to be stagnation, as far as Canada is concerned. We have stagnation to-day with regard to our wheat and our lumber, and instead of doing something for ourselves we are like a lot of children crying to the Old Country to give us tonnage to carry our wheat across the ocean. It is high time the Government woke up and dealt with this question, and I feel certain that any practicable scheme put forward by the minister would meet with the support of hon. members of this House.

Mr. W. H. BENNETT (East Simcoe): I wish to make a few remarks on the question now under consideration, namely, assistance by the Government in some manner or other towards shipbuilding in Canada. I assume that any assistance given would be equally applicable to ships on the Great Lakes as on the Atlantic and Pacific coasts. It is to be regrettaed that a large quantity of our Northwest grain has gone through to Buffalo in the past. I saw it stated in to-day's papers that the hon. member for St. John had alleged that some 80 per cent of our grain for export had gone through Buffalo while the Minister of Public Works stated that it was somewhere around 50 per cent. Speaking for myself, I heard the statement frequently made last fall that about 75 per cent of our Northwest grain for export went through Buffalo; indeed so great was the quantity that went through that port that at the close of the year there was no less a quantity than 30,000,000 bushels of export grain lying at Buffalo in vessels which were waiting to take their turn at the elevators.

At the outset I want to point out the great disadvantage under which Canadian registered vessels labour on the Great Lakes. Contrast the position of two vessels, one owned by an American and registered in the United States, and the other owned by a Canadian and registered in Canada. With the New Year the large American freighter, or any American freighter as far as that is concerned, lying at some point near Buffalo is loaded with coal for either Duluth or Port Arthur. The Canadian vessel has the same privilege of taking coal up, but after the first run of coal is through, and after the grain at the head of the lakes either at Duluth, Port Arthur or Fort William has been carried east, a lull comes in the trade for the Canadian vessel. The American vessel is pressed into the ore carrying trade, and any man who ever stood at Detroit or Windsor and saw that wonderful procession of huge freighters passing by, all bearing the American flag, must have been impressed with the enormous ore carrying trade these American boats do. The Canadian vessel is debarred from that trade because all the ore that is carried from the North is taken from the Missanabie range or from some point on Lake Michigan, and it would be a contravention of the coasting laws for a Canadian vessel to engage in that trade. There are, it is true, some iron industries on the lakes, the one at Hamilton, for instance, requires a certain amount of iron ore, and the iron ore it uses is in the main carried by Canadian vessels, but while the Hamilton concern is relatively a large one, yet the quantity of ore it uses during the whole season can be supplied by two or three vessels. The result is—and I have frequently seen this—that at Midland, Goderich, and other lake towns, Canadian vessels are tied up during the summer months while American vessels are carrying ore. That of course is a great handicap on the Canadian lake shipping.

Another point to be remembered is that the growth of the Canadian vessel in carrying capacity has been comparatively small. While I do not profess to give the exact figures, I think I am well within the mark when I say that to every vessel of Canadian registry on the Great Lakes there are in all probability forty or fifty American vessels, and the American vessels are also of much greater tonnage. The experience has been such that no man will invest his

money to-day in a vessel of two or three thousand tons, and for the reason that the average 100,000 bushel boat, commonly known as a canaler, which passes through the Welland canal and on to Montreal, travelling night and day, has of necessity to employ a night and day crew. Contrast a vessel of that class with a vessel like the Grant Morden, owned by the Canada Steamship line. These two vessels leave Port Arthur or Fort William side by side. The Grant Morden's crew is very little larger than the crew on the 100,000 bushel boat, and at the prevailing rate of about five cents a bushel the Grant Morden picks up a freight of about $25,000, while the 100,000 bushel boat picks up only about $5,000; that is to say, except for the extra expense the larger boat has on account of coal and a few more deck-hands, the Grant Morden makes five times as much money as the smaller boat. The inevitable result is that the small Canadian boat is going off the Great Lakes, as has long since happened under the policy followed by the American vessel owners. Any person conversant with the subject knows that there must be dozens of vessels under American register that can carry from 400,000 to 500,000 bushels of wheat. If we are to have a Canadian lake trade it can be done in only one way, and that is by supplying the vessels. This would mean not only the giving of employment to Canadians on Canadian vessels, but this major and far greater fact, that the grain would be carried on Canadian railways. The Canadian Pacific have established at Port McNicoll, in the riding I have the honour to represent, elevator accommodation for about 5,000,000 bushels, and they contemplate still greater accommodation in that respect. They have built to a point near Peterborough what may be considered to be one of the best railways in the whole of Canada, a railway with an almost perfect grade. When I tell the House that one locomotive can haul 70 cars, each carrying 1,500 bushels, or a load of 100,000 bushels, I think hon. gentlemen will agree that there is not another railway in Canada that can do that at the present time. It is indeed a wonderful road. By the establishment of what is known as their Lake Shore line, the Canadian

9 p.m.

Pacific railway are able to carry the bulk of their grain on the Peterborough line to Glen Tay. The whole business of the Canadian Pacific railway to-day is directed to the end of carrying grain in Canadian bottoms, and all grain carried from Port Arthur and Fort William to Port McNicoll or to a Canadian port must be carried in Canadian bottoms, as it would be a contravention of the coasting laws for American vessels to engage in that trade. The Grand Trunk have apparently taken Midland as their chief point on the Georgian bay, by reason of the fact that it has a good harbour and is their closest port to Montreal. They have there elevator accommodation for about 5,000,000 bushels. If we are to have Canadian trade on Canadian vessels and on Canadian railways, there is only one way in which it can be brought about, and that is by the introduction of more Canadian vessels. As an instance of the prejudice against the owning of Canadian vessels, I may say that the Canada Steamship Company has their largest vessel, the name of which I have forgotten for the moment, registered, along with many others of their ships, in the United States. They have done this so that the boat can engage in the ore trade during the summer months, which she would not be allowed to do if she were of Canadian register.

At Montreal we are handicapped owing to natural conditions. It is only late in the fall that there is a great rush of grain, and after about the 15th of November there is no navigation down the St. Lawrence river, not because it is not possible, but because of the excessive insurance rates which then make transportation by that route almost prohibitory. The result is that the trade is diverted to Buffalo, and it is rather startling to learn that between 60 and 80 per cent of the wheat of the Canadian West shipped out for export went by way of Buffalo instead of over Canadian railways. How can this handicap be gotten over? I heard a gentleman who is very prominently connected with one of the transcontinental railways state that it would have been much more in the interest of his railway company if they had had at the southern end of the Georgian Bay canal some of the elevator accommodation which they have at Fort William and Port Arthur, because the Canadian Pacific railway in that case would have the trade through to St. John, and the Grand Trunk would have the trade through to Portland, in which case the bulk of the transit would lie between two Canadian points, namely, the point on the border and Midland, or any other point at which they might have

their elevator accommodation on the shores of the Georgian Bay.

The construction of ships in Canada has had its trial, and what has experience proven? A large company erected a magnificent plant at Port Arthur, but I do not think there has been a vessel built at Port Arthur in the last four or five years, although I have been pleased to note from recent reports in the press that they have now under contract the building of two canallers. Although one or two million dollars was invested in that plant, I do not think any large steamer has been built since the Noronic was built some years ago. At Owen Sound, at Sault Ste. Marie and also in my own town, Midland, the construction of drydocks has been projected for a number of years, by bonuses and otherwise. Those projects, however, have all gone to the wall owing to the fact that capitalists did not see the possibility of thos ventures proving financially successful. There are at Collingwood two drydocks, five or six hundred feet in length, which I believe are capable of accommodating the largest boats on the lakes. I am not speaking disparagingly of the owners of these docks; I believe the conditions were adverse to them. There is, however, the fact that the docks are there and that they are first-class docks, fully and thoroughly equipped with the most up-to-date machinery; and had they the business of constructing ships afforded them I have no doubt they would be a financial success. Hon. gentlemen may think that once an iron vessel is constructed, that is all the work that has to be done upon it and that it has no further use for a drydock, but the fact is that there is a great deal of money earned by drydock companies repairing vessels. Were it not for the repairs made in drydocks, and were the drydocks solely dependent upon new construction, there would not b many drydocks in the country.

As I understand the suggestion of the minister which he has placed before the House in order to get an expression of opinion, the first point is, that if a vessel is constructed in Canada and if it costs more than a similar vessel built in Great Britain, the difference in the cost will be given to the Canadian investor. The Canadian vessel at present suffers a great handicap not only on account of American competition, but on account of British competition. After the South African war I remember that there appeared on the Great Lakes a fleet of ten vessels called Turret ships because of their peculiar construction. After that war arrangements were made between the British Government and the Government of South Africa for a better steamship service, a combination of freight and passenger boats, and as a result those Turret ships were brought to Canada and sold. While those vessels would carry from 100,000 to 120,000 bushels of grain and a vessel built in Canada would carry about 100,000 bushels, I believe that some of them were laid down in Canada for under $40,000, whereas the Canadian vessel carrying that quantity of grain would cost $100,000. Those vessels, being of iron, were perfectly dry and served the purpose of carrying grain, although, of course, repairs had to be made on them from time to time. In this way the Canadian ship-owner not only had to compete with the American ship-owner, but he knows not the moment when, with trade dull in the old country, competing British vessels may be brought on to the lakes, on the assumption that they are of such a length that they can go through the Welland canal, and at the close of navigation be taken out again to trade along the Atlantic coast. The large vessel that will carry from 300,000 to 500,000 bushels of grain is the only vessel that can be built in Canada to make money on the lakes. Hon. members will have noticed in the last few days that what was known as the St. Lawrence Navigation Company, of Toronto, sold four vessels to the Canada Steamship Company on an agreement that the stock was paid for at $180 a share, although a few years ago that stock could have been picked up at $120 a share. Had those vessels been small vessels carrying 90,000 to 100,000 bushels, the Canada Steamship Company would not have been anxious for them, but one of them had a capacity of 400,000 bushels and two others were not far behind that. That goes to prove that the class of vessels that must be built on the Great Lakes to be successful financially must have a capacity of from 400,000 to 500,000 bushels. Such vessels must be built with an almost flat bottom, and until the St. Lawrence canal locks are lengthened to say 500 feet, those vessels will never be able to leave the waters of the upper lakes, although they would be able to go into lake Ontario after the Welland canal is improved. The cost entailed in that enlargement of the St. Lawrence canals will be so great that, I fear, this country will not be willing

to contemplate it within the next fifty years. What does that bring us to? In the first place, you must have a large vessel to carry grain on the Upper Lakes if you are going to make money—and unless that vessel can make money no man will invest in it. And in the next place that vessel cannot be taken out of the Upper Lakes in winter, it must lie lifeless, and, instead of a money-maker, it will be a money-loser. What are we going to do about it? Are we going to let the Americans carry the balance of the grain and make it an even one hundred per cent to Buffalo? They have the advantage of taking it out in the winter months by way of Philadelphia, New York, or other points along the coast, while we are driven to bring it to some point on Georgian bay and carry it out by way of the Grand Trunk to Portland or by the other line to Halifax or St. John—and we all know how we are handicapped on account of the great mileage to Halifax, St. John, or Portland. We must have vessels on the lakes if we want to control the trade; and so I was pleased to hear the minister say that he hopes to see that done. My hon. friend from Guysborough (Mr. Sinclair) spoke of the question of steel production in relation to shipbuilding in Canada. I assume that in Sydney, with their enormous production, and probably also in Hamilton, if vessel building on a large scale were guaranteed in this country, they might go into the manufacture of shipping plates. But the manufacture for the few vessels building to-day in Canada would be the height of absurdity; no people with capital would invest in it. I understand that this business of rolling plates is a very variable business, so variable indeed that I have known Harland & Wolff, the great British shipbuilders, to carry over through Midland shipping plates rolled in Chicago and then take them to England for use in building ships. That, I assume, was when shipbuilding in Britain was very brisk, so that they could make a profit even paying freight for that long distance. So far there has not been a large amount of ship construction in Canada. I venture the statement that only one kind of vessel will be built in Canada for the future, and that will be the large vessel that cannot possibly pass through the Canadian canals and go out to sea, and, as it will be tied up during the winter months, it will be greatly handicapped. The Canadian vessel is handicapped in every way you look at her. Take, for instance, the question of coal. It is true large quantities of coal are taken up to the head of the lakes at Port Arthur and Fort William, for I assume that all the coal going as war west as Winnipeg is carried to the head of the lakes by vessel. The Canadian vessel has no monopoly of that trade, for it is no contravention of the coasting law to carry that freight from Cleveland or some other point on Lake Erie to a Canadian port. Then, at a point called Byng Inlet, a little north of Parry Sound, on Georgian bay, the Canadian Pacific handle an enormous quantity of coal. They have splendid appliances for handling it, and they carry it from Byng Inlet to Fort William and from Fort William back towards Toronto. That is American coal and consequently the carriage of it is not restricted to Canadian vessels. These are handicaps that will always be faced by Canadian vessels. With the hope that shipbuilding in Canada may be promoted, I trust that at an early day the Government may be pleased to enact legislation along the lines suggested by the Minister of Trade and Commerce. I will not refer to the other phases of it and to the advantage to the country that they would bring. But I do believe that the payment of the difference between what the vessel would cost if constructed in Great Britain and what it would cost if constructed in Canada would have a good effect, and for that reason I would welcome with the greatest possible pleasure such a proposal as has been indicated.

Mr. LOGGIE: I just wish to refer to one phase of the suggestion made by the Minister of Trade and Commerce regarding this country paying the difference in cost between a vessel constructed here and constructed, say, in Europe. It would be necessary to provide for the case of wooden vessels as well as steel vessels. In the case of steel vessels, I think, the minister should find out the cost per ton of a vessel built on a certain specification on the Clyde and the cost of the same vessel in the United States—because I assume that a vessel could be built in Canada as cheaply as in the United States. Having arrived at this difference, I think it would be better to give a bounty per ton yielding the same amount instead of agreeing to pay the difference in cost. In effect it would be the same, but, to my mind, the carrying out of the proposal would be

easier. In regard to wooden ships I should say the reasonable thing would be to find out the cost per ton of a vessel of a certain specification, say in Riga, and also the cost in say Bath, Maine, for I assume that we can construct a wooden ship as cheaply as it can be constructed in the United States. Or, no doubt, the minister could find out what would be the actual cost of construction in Canada. Then, I think it would encourage wooden shipbuilding all over the Maritime Provinces if the plan I suggest were followed and a bounty per ton were paid. I am not sure that the minister will think that practicable, but I am confident that if you give a shipbuilder in the Maritime Provinces a bounty per ton equal to what the minister has suggested, the work will be more easily overtaken and the plan more effective in encouraging the industry. When the minister addressed the House in 1909 on the subject of the navy he declared strongly that he wanted something tangible. I regret that he did not insist that the contracts entered into for the starting of a great shipbuilding plant in the city of St. John were not carried out. I have no doubt whatever that if that had been done we should have the ships afloat to-day and the same plant engaged in mercantile shipbuilding. But we must forget the past and lay hold of the opportunities before us to-day, when an increased mercantile tonnage is absolutely necessary in the interests of this great dominion that sends so much of its products across the ocean.

The minister ought to take this matter up seriously and get down to something tangible, so that a man who wants to build a 500-ton vessel will know how much aid to expect from the Government. Hundreds of Riga vessels, built in Russia, have been plying in the river in my county since the war started. They are vessels of 400 to 600 tons register, not as large as the ordinary vessels of British register, and they are very useful in the timber trade. Before the war these vessels did not ply very much across the ocean, because they were engaged in the Baltic trade. Perhaps they are rather small to make the ocean trade profitable, but the principle remains the same; you must put the Canadian builder in as good a position as the man in Riga who puts capital in a vessel and sends it here to compete for our trade.

Mr. TURRIFF: In the early part of the session the Minister of Marine stated that the Government had secured from the British Government for the Atlantic trade between Canada and Great Britain three enemy vessels that had been captured and taken to Great Britain. I would judge from what the minister said this afternoon that if those vessels are still carrying freight between Canada and Great Britain, they are charging the ordinary freight rates.

Sir GEORGE FOSTER: Three sailing vessels were got hold of. One sank, another foundered, the other one got to this side and her charter was revoked.

Mr. TURRIFF: By whom was her charter revoked?

Sir GEORGE FOSTER: By the British Government, from whom we chartered it. She was a very small vessel and the amount that she could have carried would not be very great. The British Government required her for their own use, and we let her go.

Mr. OLIVER: Last fall a very strong campaign was carried on in a number of Government papers in the West on behalf of action by the British Government in the commandeering of vessels for the carrying of Canadian grain to Great Britain. Demand to this effect was made upon the British Government, who were held responsible by these newspapers supporting this Government for just the same condition that my hon. friend to-day objects to his Government being held responsible for by the Opposition. The campaign was carried on for some considerable length of time, until it developed into a measurable degree of hostility to the British Government for its inaction in the matter. Am I to assume that the British Government will not take such action as was spoken of and urged at that time, am I to assume that the Canadian Government will not take action to commander vessels as was suggested by the hon. member for Guysborough? In fact, has the Government any project or proposal having in view the object of actually facilitating and cheapening the transport of grain across the ocean during the present season?

Sir GEORGE FOSTER: Whatever may have been stated as matter of discussion or of controversy in the papers looking towards bringing influence to bear on the British Government to commandeer vessels and send them out here to carry Canadian

wheat, I do not think there ever was any very strong ground for the hope that that could have been done. If the British Government had bought grain in Canada for their own purposes, they would have had fair reason for obtaining vessels to carry it over. But the proposition to commandeer vessels and send them to carry grain from Canada to Great Britain for commercial purposes would be followed by a similar demand from Australia and New Zealand or any other country that might have a surplus. I think anyone who would consider this proposal would hardly expect the British Government to carry it out. Similarly, as to the statement made by one of the hon. gentlemen opposite that the Canadian Government could have commandeered Canadian vessels and set them at certain kinds of work, I do not consider that a feasible proposition. Canadian vessels have been carrying everything that they could possibly carry, taking Canadian products from Canadian ports. They could not have stowed any more into their holds if they had belonged to the Government than they did in the possession of the companies themselves.

Mr. OLIVER: The answer is, then, that there was never any probability of the British Government taking the action that was suggested in these newspapers, and there is now no possibility of the Canadian Government taking such action?

Sir GEORGE FOSTER: No one can tell what may happen, but as things are at present there is no intention of doing that.

Mr. OLIVER: Aside from the somewhat tentative suggestions made by the minister, has the Government any other proposal to deal with the present situation, which, I am bound to say, from what the hon. minister told the House to-day and yesterday, is certainly a critical situation?

Sir GEORGE FOSTER: The Government is very seriously considering the whole question, and before the session ends it may be able to lay some proposals before the House. I have nothing to speak of about that now. The hon. member for Edmonton carried on a discussion with reference to this matter, and traversed ground which was interesting. I listened to his remarks very carefully. We have been a long time in debate on this matter and I do not care to traverse the ground again, but I do not want my hon. friend to think that I was not interested in the remarks he made. With some of them I agree. I think that more careful examination into some of the others would scarcely lead me along the same line as my hon. friend.

Mr. TURRIFF: The hon. member for Guysborough (Mr. Sinclair) pointed out that the British Government in commandeering vessels pay a certain price, which he says is a very good price, so that the vessel owners are doing fairly well. If our Canadian vessels are charging ten times the normal price, which is an unreasonable profit for them to be taking from the people of this country, it seems to me that this Government would be absolutely justified in commandeering those vessels and fixing a price at which they would make double or treble the profit they would make in ordinary times. That is a phase of the question well worthy the attention of the Government. If things become worse and worse, as appears likely, we have no guarantee that, if it is left absolutely to the consciences of the owners of vessels, they will not next year charge double what they are charging now for the carriage of wheat or other products across the water. Would it not be feasible for the Government to commandeer these vessels in order to bring some relief to the producers?

Sir GEORGE FOSTER: It is to be borne in mind that when the British Government commandeers vessels it is not commandeering them for commercial purposes. It commandeers for purposes of war alone. It commandeers them to do what is necessary, in order to carry munitions, provisions, troops and so on. The British Government has not commandeered a single punt in order to carry on commercial business. In fact it is not a parallel case. I am not able to say what compensation is given by Great Britain on vessels commandeered for war purposes. I know that Great Britain pays generously for every vessel commandeered. But I should be surprised if, when Great Britain commandeers vessels and uses them, she is not paying very close up to the rate of freight prevailing at the time the commandeering is done. I agree absolutely with the member for Guysborough (Mr. Sinclair) that there is not at the present time a combination of shipowners which causes this condition of high rates. Whatever there

may have been amongst shipping companies before the war, the war has cut in like a sledge hammer and knocked them hither and yon and there is no possibility, to my mind, and I think there is no indication of anything like a shipping combine which forces the hand of the Government. Let us take the cases of two of the largest companies. Of the vessels owned by the Royal Mail Steam Packet Company, nearly 80 per cent have gone out from the possession of that company and have been commandeered by and are used by the British Government. Of the vessels owned by the Elder Dempster Company, another widely established owning company, 75 per cent or more have been requisitioned by the British Government. Then no British vessel to-day can trade without license from the Board of Trade, so that the British Government has its hands upon—but for war purposes—the British commercial marine. My hon. friend from Guysborough spoke of Canada not allowing the British Government to commandeer Canadian ships. Well, when war is on and Great Britain wants a ship, so far as I am concerned, she shall have it. I am not going to stand up for one single half minute when the British Government say necessity calls, when the troops need food and fodder, and cavil as to rights or anything of that kind. I may say first, that when vessels from our merchant mercantile marine have been commandeered by the British Government, it has always been after negotiations and communications between the two Governments. But I hope the day will be distant when we shall, any of us, want to prevent the taking of a vessel. When the vessel is necessary the commandeering has got to be done.

Another thing: a man gets up in this House and raises a hullabaloo because somebody has cut his letter open when he should not have done it, under a censorship which has been asked from us for Imperial war purposes by the British Government; another man raises another hullabaloo because there is not a vessel at a certain point to carry what he wants carried. I should like to put the words of the hon. member for Edmonton (Mr. Oliver) right before every one who raises that kind of a row, namely that the first thing to do is to carry this war to successful conclusion. And if it is necessary, in order to do that, that lobsters, and wheat, asbestos, and pulp paper have got to stay and wait for carriage, let them wait. I think we make a mistake, sometimes, when we criticise the British Government so much in connection with matters of this kind.

Mr. OLIVER: I am always glad to see evidences of Christian charity in this House, and I am glad to know that the Minister of Trade and Commerce is thoroughly satisfied that there is not any combine amongst the ship owners of the Atlantic at the present time, a combination which, if it exists, certainly is a combine the effect of which is to operate against our winning the war. I say I am glad that he is of that opinion; but I regret that it appears to me that the weight of evidence is entirely against him.

Sir GEORGE FOSTER: Where is the evidence?

Mr. OLIVER: The evidence is an increase of 1,000 per cent in freight rates, which, I think, is all the evidence any of us want that this has come to a point when the shipping interests in the Atlantic are making potential war upon our country. When according to the statements made by the minister yesterday, our wheat needed in England just as we need the money, has been tied up in our country, when it is impossible to get it across the Atlantic, even at the stupendous rates that are being paid. This is a condition that is of tremendous danger to the Empire and to the winning of the war, and we must not ignore it; at least we are not doing justice to ourselves or to the cause in which we are engaged if we do not realize that, just as the submarines of Germany expect to win the war for their Empires by cutting off the access of wheat to the British Islands, so that agency which, during this past winter, by reason of its high rates and its handling of this business, has kept our wheat from going over, has been aiding the German submarines in their project of starving the British Empire. We must realize the situation as it is, as we have to face it, as we know that our enemies realize it. Their whole hope, ever since they started their submarine campaign in the early part of 1915, has been to starve Great Britain. And I say that that alleged peaceful agency which increases freight rates 1,000 per cent, which fails to meet the needs of transportation, is in effective alliance, whether directly intentionally or not, but in effect it is in alliance with and giving assistance to the German submarines in their effort to starve the United Kingdom.

Sir GEORGE FOSTER: There may be an effect which is a very strong one and a

very striking one, but that does not carry out the argument or tend to prove the assertion of my hon. friend, that this effect is brought about by a combine. The simple, solitary Norwegian, who boasts his one vessel and has no more idea of what a combine means than a child of five years of age, owning that vessel, and having it, can get the highest rate on the market. He does not have to combine with the monopolist or with the great capitalist. Every man, every small company, every private owner who has a ship—all he has to do is to go on the market and ask where he will go for his load. He will find his load there and he will find his price for it. Everybody knows that he is getting a mighty high rate and making more than normal profits. Nobody is going to say he is not, but there are two things to think of. In the first place, a vast amount of the tonnage that is ploughing the seas and getting these big rates is chartered tonnage. Any one can test the market by going to the market to-morrow and trying to charter a vessel for any particular route and he will find out what he will have to pay. I venture to say that the man who charters that vessel will find that by the time he pays the cost of the charter and the expenses as they are at the present time he is not making any more profit out of the chartered vessel than he would have made in normal times three or four years ago and probably not as much. I expected to have had two or three statements bearing actually on the ship chartering business and I will have them before we get through with the discussion. If there is a man who owns a vessel to-day and keeps it running, that man is making money hand over fist but he makes it because there is a need, a call and because there is a man standing in Australia, in New Zealand, and in every quarter of the world, with his hand open and the money in it holding it out and saying in the face of that freight rate: Come and get this load, here is your money the moment you come. You do not need to have a combine to bring about that condition when you are dealing with the necessities of the world to-day.

Steam service from the opening to the closing of navigation in 1916, between Gaspé Basin and Dalhousie or Campbellton, $20,000.

Mr. MARCIL: Would the minister give me more particulars of that item?

Sir GEORGE FOSTER: I want to drop $5,000.

Mr. MARCIL: How much is to be paid?

[Sir George Foster.]

Sir GEORGE FOSTER: $15,000.

Mr. MARCIL: For a fortnightly trip?

Sir GEORGE FOSTER: For two trips a week between Campbellton and Gaspé and return, or between Campbellton and Paspebiac and return.

Mr. MARCIL: What is the name of the steamer?

Sir GEORGE FOSTER: The Elaine.

Mr. MARCIL: Is that a St. John boat?

Sir GEORGE FOSTER: St. John or Halifax—Halifax, I think. I beg to move that item No. 79 be reduced by $5,000.

Item as amended agreed to.

Steam service between Sydney, N.S., around the east coast of Cape Breton to Hastings and return to Sydney, via the Bras d'Or lakes, $5,500.

Mr. GRAHAM: I suppose you will not object to the member making a few remarks somewhere about this?

Sir GEORGE FOSTER: We will have one or two supplementary items and there will be an opportunity.

Supervision lake and ocean freight rates, $6,000.

Sir GEORGE FOSTER: With that item passed I reserve one item, which takes in the grain business. I will take that up either to-morrow or next day, and the commandeering business will be discussed on that.

Mr. GRAHAM: Was an attempt made to secure supervision of ocean freights some time ago? I think the Chairman of the Railway Commission visited Europe and had some negotiations. Could the minister tell us what the result of these negotiations was?

Sir GEORGE FOSTER: The matter was very ably presented by the Chairman of the Railway Commission, and it was discussed between himself, the Board of Trade, and some of the British ministers. The whole subject was, at the request of the British Government, left to the Dominions Royal Commission and the Dominions Royal Commission made that one of the subjects of their inquiry in each country as they passed through. Unfortunately, their labours were interrupted when the war broke out.

Mr. GRAHAM: You were on that?

Sir GEORGE FOSTER: I was on that. A portion of the work in reference to Can-

ada remains to be done. In the meantime the matter stands there. Under the present war conditions there is no possibility of it being taken up.

Salaries, rent, wages and contingencies under the Canada Grain Act—further amount required, $35,000.

Sir GEORGE FOSTER: As the main item on the grain business is retained, there will probably be no objection to passing this. I will explain the whole thing when we come to the main vote. On Thursday I will take up the one remaining item under the Grain Act.

Mr. OLIVER: This item is a supplementary vote for last year?

Sir GEORGE FOSTER: Yes.

Mr. OLIVER: It is a very considerable supplementary. A word from the minister might show us what the reason of the extra expenditure was.

Sir GEORGE FOSTER: There was a considerably larger amount of grain that had to be inspected, weighed and cared for.

Mr. OLIVER: It was simply increased traffic?

Sir GEORGE FOSTER: Yes.

Department of Finance and Treasury Board —contingencies—clerical and other assistance—further amount required, $5,000.

Mr. PUGSLEY: Is this supplementary, something that was not anticipated?

Sir THOMAS WHITE: Yes. On account of the war loan we have had to engage a large amount of extra temporary help.

Departments Generally — contingencies—care and cleaning of departmental buildings—further amount required, $10 000.

Mr. PUGSLEY: This requires some explanation. The war cannot account for this.

Sir THOMAS WHITE: The war is responsible for it in a large measure, because there has been an increased number of buildings occupied by the Government. The total number now occupied is 64. Since last year's Estimates 11 additional buildings have been occupied by the Government. My hon. friend understands that this item largely represents the wages of charmen and charwomen who take care of the additional buildings.

Mr. PUGSLEY: I really think that during the war, when so many civil servants are leaving the departments and going to the front, it ought to have been possible to get along without any additional buildings. With the exercise of reasonable economy I think that would have been possible. I can understand that in times of peace, when the country is prosperous, the Government might like to give the civil servants as much room as possible, perhaps to save the necessity of two clerks occuping one room giving each a separate apartment. But why it should be necessary, during this period of stress, to rent 11 additional buildings I am at a loss to understand. I think on reflection the minister must see that the desire to rent buildings from friends who may have had them to rent has been more potent with the Government than the necessity for increased accommodation.

Sir THOMAS WHITE: I am sorry I cannot agree with my hon. friend. As I pointed out the other night, the war has cast additional burdens upon almost all departments of the Government, and it has been necessary to provide additional space. The staffs of many departments have necessarily been greatly increased.

Mr. GRAHAM: What wages do you pay these poor women?

Sir THOMAS WHITE: One of my first official acts was to raise their pay from 75 cents to $1 for a portion of a day.

Mr. PUGSLEY: A good idea.

Sir THOMAS WHITE: My hon. friend would be surprised at the number we have on the waiting list. There are many people interested in securing work for these poor women for a portion of a day. It is rather lowly service, but it is worthy—

Mr. GRAHAM: And clean.

Sir THOMAS WHITE: Clean in the moral sense, and in the physical sense, too. They are very worthy women. It seems an anomaly this item should be
10 p.m. under the Finance Department, but I am told it was placed there to avoid the possibility of patronage.

Mr. GRAHAM: The information given you could not have been well founded.

Miscellaneous—to provide for the expenses of commission to prepare plans relating to the cities of Ottawa and Hull—further amount required, $2,800.

Mr. GRAHAM: Has any definite action been taken following the commission's report on the making of Ottawa and Hull into

a federal district, somewhat on the line of Washington?

Sir THOMAS WHITE: My hon. friend is aware that an honorary commission was constituted for the purpose of preparing plans for the beautification and improvement of the cities of Ottawa and Hull. The members of the commission were Sir Herbert Holt, Sir Alexander Lacoste, Mr. Frank Darling, Mr. Home Smith, and the mayors of Ottawa and Hull. They did a great deal of work themselves, especially Mr. Darling, and engaged architects and engineers, and consulted town planners in the United States. After giving the work a great deal of care and attention they presented their report, which I am happy to say has, so far as I can learn, met with the general approval of the cities of Ottawa and Hull. The report is very comprehensive, and its object is to devise a scheme by which the two municipalities and the Dominion Government, the railways and the public utility companies, may all work together looking to a greater Ottawa and Hull in the future, as the federal capital of Canada. My hon. friend asks what action has been taken. The report has only been recently received. The drawings are on exhibition, and if my hon. friend has not already seen them I would suggest that he take the opportunity, because I am sure he will find them very interesting indeed. After the session is over it is my intention to look into this report very carefully, and go over the ground. My hon. friend is no doubt aware that a committee has been appointed by the city of Ottawa for the purpose of interviewing the Government with a view to giving consideration to the plans. Some large questions were raised in the report, notably the federal administration of the Ottawa district. That is a matter which would have to receive very careful consideration, not only by the Government, but by the other bodies interested. I am unable to say anything further except that I am gratified at the way in which the report has been received, and I am satisfied that if all parties will work together we shall, in the years to come, have a capital which will be a credit, in an artistic sense, to the Dominion. A great deal has been done in the planning of various cities throughout the world, Washington being a conspicuous example of what can be done by working to a plan. In Abraham Lincoln's time Washington was a very insignificant city indeed, but to-day it is one of the most striking cities in the world.

Mr. GRAHAM: And one of the cleanest.

Sir THOMAS WHITE: Washington, of course, has a better administration and Washington also had the advantage many years ago of a town planner or architect, and the result is the Washington of to-day.

Mr. LEMIEUX: And he was a good Frenchman, too.

Sir THOMAS WHITE: I spoke of the artistic nature of the plans, and I do not know from whom we would be more likely to obtain artistic plans than from a distinguished representative of the race to which my hon. friend belongs. However, this is a start which has been made by the Government getting a plan to which all parties can work, and I think the result will be good. Personally, I desire to give the matter a great deal of attention.

Mr. LEMIEUX: As a resident of Ottawa, I am pleased to hear that my hon. friend will take some interest in this town planning movement. I have glanced at the report published a few weeks ago and I had occasion to discuss this exhaustive report and plan with one of the leading authorities in the United States who was in Chicago a few weeks ago as one of the guests of the Railway Engineering Association, Mr. Brunner, an architect of the city of New York, and one of the leaders in the movement for town planning in the United States. At present he is engaged in the town planning movement at Cleveland. Mr. Brunner, who by the way delivered on that evening a very able address on the relative position of engineers and architects, told me that in his judgment that report was a most remarkable one and that the Government had been very fortunate in securing the services of the gentleman who made the plans.

The allusion I made a moment ago to the engineer who made the plan for the city of Washington came to my mind because we have had lately in Montreal a very distinguished French bishop, Monseigneur L'Enfant, who has preached for several Sundays at Notre Dame church. He is a descendant of Colonel L'Enfant, who at the time of the Revolutionary period settled in the United States. He had come with Rochambeau and Lafayette, and he was selected by the authorities of the new republic to lay out a plan for Washington.

He made the plan; it was accepted, but unfortunately he died very poor. He never received a cent for the work that he did for the Republic, although he might have benefited by the expropriations.

Coming back to Ottawa, I may say to my hon. friend that although the plan of the commission is not yet accepted as decisive and final, it is to be expected that it will be finally accepted. My hon. friend and the Government should insist that the municipal authorities at Ottawa should respect the suggestions which are made in that report. I brought to the attention of the House the other day the question of the height of the new buildings in Ottawa. In the report it is recommended that the buildings should not exceed 110 feet in height, and to please a very enterprising gentleman of this city, the city council or the board of control a few weeks ago altered a resolution which had been adopted a few months before following on the lines of the report that the height of the buildings should not exceed 110 feet, and gave permission to that enterprising citizen to build to a height of 130 feet. Since then I notice that the building license has been withdrawn and that the city council will not allow any permit to be given for buildings exceeding the height suggested in the report. The Government, however, should have an understanding with the city of Ottawa that the general features of the plan be accepted as final by the city although the Government is not ready to take action on the report. On the whole, I think the Government are to be congratulated on having obtained such an excellent report on what is destined to be the model capital of a great Dominion.

Mr. GRAHAM: I suppose then the Government is not considering the suggestion made to them some months ago that the capital might be removed to Winnipeg?

Sir THOMAS WHITE: We have not had the matter under serious consideration.

Mr. PUGSLEY: Will the minister pardon me if I propose here to ask a question which perhaps would not be raised if this were the only amount in the Supplementary Estimates? I find that the Supplementary Estimates amount to the very considerable sum of $4,485,537. The minister will remember that in his Budget speech he stated that while the Main Estimates showed a proposed expenditure of $189,000,000, yet in making provision for the coming year he thought that the expenditure would not be over about $160,000,000. I may say to my hon. friend, who was not in the House when I was speaking on the matter, that I took occasion to call the attention of different ministers whose Estimates were under consideration to the assurance which had been given by my hon. friend the Minister of Finance, and I was not able to ascertain from any minister except the Minister of Public Works that there would be any substantial reduction in the Estimates of the various departments, and the reduction which the Minister of Public Works stated he would be able to make amounted to only $10,000,000. There is a great difference between $10,000,000 and $29,000,000. The Minister of Finance might now, as we are getting near the end of the session, desire to put himself right with the country by telling us how the other $19,000,000 was accounted for.

Sir THOMAS WHITE: I do not admit the necessity of putting myself right with the country, because I think I am usually in that happy position. I may say to my hon. friend that upon three separate occasions when he was absent from the House, I took up the matter to which he has drawn attention, namely, the difference between the estimated expenditure for the coming year and the Estimates, and I pointed out that there were always lapses in connection with Estimates varying from 5 to 20 per cent, and I gave instances to show that during the years of the late Administration it was a usual occurrence to have five, ten, or fifteen million dollars of Estimates unexpended at the end of the fiscal year. For example, when the present Government took office in 1911, the Estimates amounted to about $158,000,000, but the expenditure for the year was only $135,000,000, a difference of $23,000,000. My hon. friend might say: Why were the Estimates so large if your expenditures were only $135,000,000? One reason was that the Supplementary Estimates were very large. At that time they were looking for an election.

Mr. GRAHAM: Does that occount for these?

Sir THOMAS WHITE: I will not say that. If my hon. friend will look at the Estimates and expenditures for the previous year, and the year before that, he will find a similar condition of affairs, but

not quite such a disparity. My hon. friend, in dealing with the question, said that the Estimates amounted to $189,000,000 and that I estimated the expenditure at $160,000,000, and he asked: Where does the $29,000,000 come in? He assumed, of course inaccurately, that the $29,000,000 represents items that will not be gone on with at all. My hon. friend knows very well that lapses occur. There will be in the Estimates many items that will not be gone on with, but in many cases the work will be gone on with, but the amounts that stand opposite those items in the Estimates will not be completely expended. The result will be that $160,000,000 will be approximately the expenditure for the coming year I desire to put this before my hon. friend because I hold strong views as to what the Government will do in the way of retrenchment in time of war. When this war broke out, I was very glad that we were handling a large programme of public works, because there was a very serious dislocation of business, and when there is a serious dislocation of business it is a great advantage in preventing unemployment that there should be a fair programme of public works under way. That was the condition and therefore we refrained at the outbreak of the war from discontinuing expenditure upon public works. I think that was a proper policy at the time; but during this year and so far as I can see for the year that is to come, because the end of this war is certainly not yet in sight, there will be practically no unemployment in Canada. On the other hand there is a demand for labour skilled and unskilled and that demand is likely to increase. The public expenditures in connection with the war are large, and therefore there is not the necessity for public expenditures in the interest of employment. When I say public expenditures, I mean, of course, useful public expenditures. Therefore the policy which has been laid down by the Government and to which I have referred in the last two Budget speeches is, that while we should go on with works that are under contract, we should not proceed with new works unless such new works are indispensable in the public interest. In a country such as this there are always works which are necessary in the public interest. For example, take the elevators to which my hon. friend sometimes refers. In connection with the grain business, the movement and the storage of the grain, expenditures have to be made for elevator accommodation. Expenditures have to be made on the Intercolonial for rolling stock and expenditures have to be made at various points in Canada for purposes more or less immediately connected with the war. Those expenditures we are making, but a number of expenditures which will be made for public works in times of peace are not being made during the war. There are many items in the Estimates which have been voted—some of them for two years—that will stand in abeyance in the meantime. If the war should come to an end, and if the financial situation and the economic conditions were such that we should feel justified and warranted in proceeding with those expenditures, why, of course, I think it would be proper for us to do so, but as I have stated they will stand in abeyance in the meantime.

Just to show in a word the position for the coming year, because it is a matter which daily engages my attention, I being more intimately connected with the question of providing money than any other, I may say that whereas two years ago, that is to say for the fiscal year, 1914-15, our expenditures were about $187,000,000, for the coming year our expenditures will be $160,000,000, as my hon. friend has stated. There is a difference there of some $27,000,000. But included in the expenditures for the coming year is a very large item representing interest on our increased debt. Two years ago the interest charges upon the debt of Canada were about $14,000,000 or $15,000,000, but this year's Estimates include an item for interest of $37,000,000, a difference of some $23,000,000. Then there will be the outlay for pensions. When my hon. friend takes into consideration the fact that the $160,000,000 includes some $25,000,000 of expenditure necessitated by increase in the public debt and by expenditures on pension account, he will see that the comparison is really between $135,000,000 of expenditure for the coming year and $187,000,000 for two years ago. I may say that that $135,000,000 is about the same as the expenditure for 1911, notwithstanding that our trade this year is the greatest by far in the history of Canada, amounting to some $1,400,000,000. So, I think it goes without saying that the Government is exercising every possible economy. We realize the burden of the war and that that burden will increase—that it will be heavier six months hence than it is to-day, and probably heavier next year than this year. Therefore we are

on common ground in desiring to keep down our expenditures. But it has seemed to me unwise for us (as I stated, my hon. friend not being in the House at the time) to discontinue work upon, let us say, the Quebec bridge. There would, of course, be great loss in connection with such a structure partially completed, and the plant is on the spot. Then, the Welland canal work is under contract. The general estimates are less this year than last, and we are doing all we can to keep down expenditures. But I do not think it would command public approval if we were to discontinue expenditure on such works as I have mentioned. In the same way the National Transcontinental railway had to be completed, otherwise there would have been great loss. My hon. friend (Mr. Pugsley) frequently brings to attention the necessities of St. John, in which he is interested. I have always observed that he is a great advocate of economy in the abstract, but when it comes to the concrete he will always bring before the House expenditures which he thinks ought to be made. Now, with regard to the Supplementary Estimates for 1915-16 to which we have called attention, they are very moderate, $4,485,000.

Mr. PUGSLEY: Can the minister give us any idea how much the Supplementary Estimates for next year will be?

Sir THOMAS WHITE: I cannot say offhand, but I think they are comparatively small because we are pursuing the policy I have indicated. In connection with the Supplementary Estimates for 1915-16, now before us, my hon. friend will observe that there are several large items. For instance, there is the relief for seed grain, $1,550,000. That has already been provided for by Governor General's warrants, and this Estimate is not strictly or legally necessary, because a Governor General's warrant is a perfectly legitimate means of providing funds. But I thought it well—and it is an innovation—to include in the Estimates amounts raised by Governor General's warrants in order that the House may have before it the total expenditures made. Then we have a further item for working expenses of the Intercolonial amounting to $1,500,000. The scope of the operations of the Intercolonial has been largely increased by the war. On the other side of the Intercolonial account will be found a very gratifying increase in earnings, in fact I have been surprised and much gratified that the earnings have been so large within the last year or so. So, this amount is by no means wasted but is a necessary expenditure in connection with the Government road. Having regard to all the considerations I have mentioned, I am sure that my hon. friend from St. John (Mr. Pugsley), with his usual fair-mindedness, will agree that he has been entirely mistaken as to the Government pursuing a policy that even savours of extravagance, and that we have exercised the most rigid economy since the outbreak of the war. The hon. gentleman himself has been a Minister of Public Works, and looking over the Estimates that he presented to the House in the past, as I have done, I have never found any evidence of that economical spirit which he now exhibits from time to time. But I do not charge that against him, for this is war time and I quite agree with what I conceive to be his view, that in war time, so far as the ordinary expenditures of the country are concerned, it is the duty of the Government to exercise all possible economy consistently with carrying on the business of the country. But there is a point beyond which if you carry economy you become parsimonious and the public interest undoubtedly suffers. There is another feature which I touched upon on one or two occasions in the House, and it is this:

It must not be assumed that while the war is on, the expenditures of departments of Government other than the Militia Department, which, of course, is immediately concerned with the war, will if an economical policy is observed, be necessarily less than they would be in times of peace. My experience has been that in nearly all departments since the war broke out there is an added burden by reason of the war. Take the Customs Department, for example. In connection with the collection of revenue and with the embargo upon various classes of goods and commodities much additional work is entailed. A great deal of additional work has been thrown upon the Commissioner of Customs; I was talking to him about it yesterday. In other departments, my own, for example, the work has increased very greatly and the expenditure has increased correspondingly. Men are working day and night at the same salary that they received before—working uncomplainingly and zealously in the interests of the department, of the Government and of the country at this time. Nearly all the

staffs are increased. We have endeavoured, so far as we have been able to do so consistently with proper administration of the public business, to cut down our ordinary and capital expenditures since the outbreak of the war.

Mr. PUGSLEY: The reference which the Minister of Finance has made to the necessity for building elevators to give accommodation for grain even during war times is an unfortunate one. It happens that in connection with the whole system of Government railways there is only one small elevator with a capacity of 750,000 bushels, and this Government apparently has given no thought to the matter of providing increased storage accommodation in connection with the Intercolonial railway or the Transcontinental railway, which the Government is operating. At the port of St. John, one of the two chief winter ports of Canada, where the grain elevator formerly operated in connection with the Intercolonial railway was burned down some two years ago, no step has been taken to build a new elevator. I say that this reference of my hon. friend was unfortunate, because his colleague the Acting Minister of Railways rather sought to make the excuse that while the war is on he did not think it desirable to rebuild the elevator, though he said that as soon as possible after the war is over steps would be taken to that end. My hon. friend says that in the year 1911, during part of which the Liberal Government was in power, the actual expenditure was $135,000,000. That included, he says very truly, all the expenditures in connection with the items that were contained in the Supplementary Estimates of that year, which were, as he says, pretty large, as well as those in the main Estimates.

Sir THOMAS WHITE: I think my hon. friend misunderstood me. I did not say that the $135,000,000 included the items in the Estimates. I said that the Estimates, including the Supplementaries, were $158,000,000.

Mr. PUGSLEY: And the expenditure was $135,000,000. My hon. friend said that the total Estimates, main and supplementary, amounted to $158,000,000, while the actual expenditure was $135,000,000. These were times of peace, plenty and prosperity. This Government came into power towards the middle of that fiscal year, when prosperity was abounding in the country. The reflex action had not taken place. There was every reason why the Government should go on with all necessary public works. For the coming year, notwithstanding the dreadful condition of distress which prevails throughout this country, affecting practically all classes of people except those engaged in the manufacture of munitions of war, this Government comes down with main Estimates to the amount of $189,000,000, or $53,000,000 more than was expended out of main and supplementary Estimates in 1911. That is an enormous increase; it is double the total revenues of Canada at the time of Confederation. The minister has not come down with his supplementaries; he says they will be comparatively small. If he means that relatively to the Estimates of this year, they will be comparatively small, certainly they will run up to quite a number of millions of dollars, and to the $189,000,000 would have to be added the total amount contained in the supplementary Estimates. I am a little suspicious, if the minister will pardon my saying so, when the minister cannot tell us what his Supplementary Estimates for the current year will be. He must have given them very careful consideration by this time, because if it had not been for certain unexpected disclosures and for certain demands by various railway companies, prorogation would probably have taken place before Easter. When the minister at this late date in the session cannot tell what the Supplementary Estimates will amount to, it gives rise to the suspicion that they will be considerably larger than he would like to let the committee know at this time. The hon. gentleman spoke of myself when I was Minister of Public Works; he is not able to see, in looking back over the Estimates, that I was very economical. At that time my hon. friend belonged to a party that was economical; therefore he would view my Estimates through the glasses of economy. But if he would look at them to-day he would find them very economical as compared with the expenditures of his colleague, the present Minister of Public Works. The total expenditures of the Department of Public Works during the last three years of the late Government were only about $37,000,000 as against a little over $80,000,000 during the first three years that the present Minister of Public Works had full charge of that department. What does the minister think of that? He says that I was very extravagant. What does he think of the action of the present Government in expending in the Department of Public Works during a certain period two

and a half times as much as was expended during a similar period when I had the honour of having charge of the department? My hon. friend says that this Government has not gone on and made any great increases in expenditures, notwithstanding the fact that the trade of Canada amounted to $1,400,000,000. Does the minister put the enormous amount of that trade forward as a reason why the Government would have been justified in going on with great expenditures, just as if these were glorious times of peace and as if that trade was the result of peaceful development of the country? Surely not. Does not the minister know that the enormous trade of $1,400,000,000 is the result of war conditions? Does he not know that it is the result of the enormous demand for clothing, provisions, and all kinds of supplies needed at the front? Does he not know that included in that are the supplies sent forward by this Government to supply our own men? That they all go in and fill up the total amount of the trade of this country? Does he not know that all the money that comes in in payment for the manufacture of many of these war supplies and so on, not only for our own men but for the Allies, goes to swell up the imports, and that these altogether make up this $1,400,000,000 ? Much of that trade results from unfortunate circumstances of which no Government ought to be proud, and by which no Government ought to be made happy. Yet the minister at times cannot help boasting of this enormous increase of trade, and he takes it as an evidence of proper and legitimate and desirable prosperity on the part of the people of this country. That very condition, the fact that we are sending away, for the use of our men at the front, these vast quantities of goods, ought to be an incentive to greater economy. The fact that we have before us the evidence of the ravages which this war is making, not only upon the Allies but upon Canada, the way in which it is sapping the energies and taking away the prosperity of the people, ought to make us more economical than if there was no war. I hope the minister will not talk any more about the economy of this Government. Think, with 8,000,000 of people this Government is coming down with a proposed expenditure of $189,000,000! I have asked the minister how he accounted for the $29,000,000 difference. We have asked every minister whose Estimates have been before us, even the Acting Minister of Railways and Canals, and with one accord, with one voice, they all, in effect, said that the Minister of Finance did not know what he was talking about, that they were going to expend practically every dollar contained in the Estimates of their different departments. That is why I call the attention of the Minister of Finance to the fact that he is $19,000,000 out of the way, according to the evidence which we have before us from the various ministers whose Estimates have been discussed. The only minister who gave us the slightest aid, who sought to bolster up the credit or reliability of the Minister of Finance, was the Minister of Public Works, and to the extent of $10,000,000 he acted like a man, he stood right at the back of the Minister of Finance. But every other minister went back on him with the exception of the Minister of Marine, who threw off about $5,000.

Royal Mint—further amount required, $13,000.

Sir THOMAS WHITE: The Royal Mint has had a great deal of additional work thrown on it this year for the Imperial Government. I am not at liberty to give details, but of course any expenditure which we make will be returned in the charges which are made by the Mint for their services.

Unforeseen expenses, expenditure thereof to be under Order in Council, and a detailed statement to be laid before Parliament within fifteen days of next session, $40,000.

Mr. GRAHAM: Do we get that statement always?

Sir THOMAS WHITE: Yes, within fifteen days after the opening of each session a statement of the unforeseen expenditure item is laid on the table.

Grant to the National Battlefields Commission—

(a) For expenses of administration, $7,200.
(b) For maintenance of the National Battlefields Park, $26,560.
(c) For maintenance of Martello tower No. 4, $400.

Mr. GRAHAM: Could the minister tell us anything about that Battlefields Commission? My right hon. friend the leader of the Opposition takes a great deal of interest in it and usually asks a series of questions about it.

Sir THOMAS WHITE: This year I asked them to confine their expenditure practically to maintenance. There is really no new work being carried on. They have cut down their Estimate.

Mr. GRAHAM: There is an increase of $11,560 over last year.

Sir THOMAS WHITE: There was another item in last year. Their Estimate is undoubtedly cut down. It ran as high as $100,000. The total amount for this year is about $37,000. There must be some item left out, or not embraced in a, b and c, because, as I have said, they are keeping their expenditure down to a maintenance basis. When the war broke out I asked them to go slow on that work.

Mr. PUGSLEY: But you have an increase of $11,560.

Sir THOMAS WHITE: There is some item that is not mentioned in the Estimates for this year. But if my hon. friend is interested especially in the matter I will be glad to allow the item to stand and get a full explanation. It is much less than last year.

Mr. GRAHAM: I would like to have it stand that the leader of the Opposition may have a chance to say something in regard to it. He may not want to make any comments on it, but he takes a deep interest in it, and it is one of the items that he probably will have something to say upon. I will call his attention to it in the morning, and if he does not wish to have any discussion upon it I will tell my hon. friend (Sir Thomas White) and he can bring it up and put it through.

Sir THOMAS WHITE: Very good.

Grant to the Medical Council of Canada, $15,000.

Mr. PUGSLEY: How is that expended?

Sir THOMAS WHITE: It is paid over to, and expended for the purposes of, the Council. This grant dates back two or three years. At that time they were considering the matter of a uniform qualification for physicians throughout Canada. I made inquiry and I found that it is entirely required for the purposes of the Council. There may come a time when it will not be required, or when so much will not be required, but it seems to be necessary now.

Contribution to aid in carrying on the work of the Astronomical Society of Canada, $2,000.

Mr. PUGSLEY: I think that might very well be dropped this year. It is not large, but what is the urgency of it during war time?

Sir THOMAS WHITE: My hon. friend has nothing of the Philistine in him, and, after all, we must continue to assist some of these societies. It is a very small grant and for a very worthy object.

Royal Academy of Arts, $5,000.

Mr. PUGSLEY: How is this expended?

Sir THOMAS WHITE: By the Academy for the promotion of its objects. It is the annual grant which has been made for years past.

Mr. PUGSLEY: Where are the headquarters of the Academy?

Sir THOMAS WHITE: I think in Montreal, but if my hon. friend is interested I will allow the matter to stand and get full information.

Mr. PUGSLEY: I might tell my hon. friend why I am interested. I find here a great many items of a miscellaneous character which could all stand over, or all be omitted, without the slightest injury to the public service. I do think that in these war times they ought to be allowed to stand. Take the grant to the Medical Council as an illustration and which amounts to $15,000; the minister cannot tell the committee what is done with that. Surely if that grant is made just to pay the expenses of a meeting they might defer their meeting for one year or until the war is over.

Sir THOMAS WHITE: It is for examinations.

Mr. PUGSLEY: The medical councils of the different provinces carry on the examinations.

Sir THOMAS WHITE: But this is for the whole Dominion and for all the provinces.

Mr. PUGSLEY: It would not take anything like $15,000 to pay the expenses. Then take these other societies—the Astronomical Society, and the Royal Academy of Arts; these items could stand over without the slightest injury to the public service. They all run up to a large sum. We have to take some action in reference to these items. We may offend somebody by doing so but it is our duty. It is not a matter of $2,000, or $5,000 or $15,000, but it runs into hundreds of thousands of dollars and if the minister would look these items over carefully he can see where a saving of hundreds of thousands of dollars can be made. These amounts have nothing to do with public works, they have nothing

to do with ordinary labouring people who need employment but they are largely for scientific and social purposes. They are on a par with the $100,000 which was voted for the Geodetic surveys and which are no more needed to be kept there than a horse requires to have five legs.

Sir THOMAS WHITE: Carried.

Mr. PUGSLEY: "Carried," says the minister. No effect on the Minister of Finance at all. Can he not find his way to moving to strike some of these items out?

Sir THOMAS WHITE: I cannot believe my hon. friend is serious, because he is an intellectual man and should have sympathy with these scientific objects. It is not only the tangible and material that we should be interested in, but we should not lose interest in science, literature and art even though war is on.

Contribution to McGill University towards the maintenance of a Regional Bureau for Canada, for the International Catalogue of Scientific Literature, $2,000.

Mr. PUGSLEY: What is the object of this?

Sir THOMAS WHITE: This grant has been in the Estimates for some years. My hon. friend can understand the importance of having these scientific publications properly catalogued.

Grant towards the erection of a monument to Samuel de Champlain at Orillia, Ont., revote $7,500.

Sir THOMAS WHITE: This monument has been in the hands of the statuaries for some time, and the $7,500 will be required almost immediately to pay for the work. The item might have stood over had the work not been commenced.

Towards meeting any deficiency arising in connection with the erection of the Champlain monument, Ottawa, $3,000.

Mr. PUGSLEY: What is the obligation with respect to this?

Sir THOMAS WHITE: This is in connection with the monument at Nepean Point. The Dominion Government made a grant towards that monument, and there were also a number of private subscriptions, but on account of the war a certain number of these subscriptions could not be collected. They were all made in good faith, and would have been paid but for the war. A year ago it looked as if we should have to put in a much larger item than this $3,000, but since then some contributions that were not expected have come in, making the deficit now about $3,000.

Mr. PUGSLEY: I suppose it goes to the sculptor?

Sir THOMAS WHITE: I am not quite sure, but if it does, it is serving a very worthy purpose, for the sculptor must be paid.

Mr. GRAHAM: I think for the peace, harmony and good-will of the Minister of Finance and his successor, the different bodies that get these grants, small though they be, should send information with respect to them to the Minister of Finance. He is compelled to handle these Estimates in the House, but is afforded little or no information with respect to them. Doubtless when the grants were originally made there were good reasons for them, and the reasons were given. I think the different associations should be asked to send in a memorandum of what they do with the money.

11 p.m.

Sir THOMAS WHITE: I think there is a good deal in what my hon. friend says. These applications for grants are looked into very carefully by my deputy, and we receive, I suppose, about twice as many applications as appear here. The one that appear in the Estimates are those about which no question arises, the different bodies doing good work and being altogether worthy. I am inclined to think that the information my hon. friend has in mind is in the department, but of course neither I nor any other minister would carry these details in his head, knowing that if any serious question arose about them in committee the information could be obtained from the department.

Progress reported.

On motion of Sir Thomas White, the House adjourned at 11.08 p.m.

Thursday, April 27, 1916.

The House met at Three o'clock, the Speaker in the Chair.

THE DEBATES COMMITTEE.

Mr. SCHAFFNER moved:

That the first report of the Select Standing Committee on the official report of the Debates, recommending that it be granted leave to sit while the House is in session, be concurred in.

Motion agreed to.

MANITOBA AND SASKATCHEWAN BIBLE SOCIETY.

Mr. SCHAFFNER moved:

That, in accordance with the recommendation contained in the eighth report of the Select Standing Committee on Miscellaneous Private Bills, the charge of $200 levied on Bill No. 88, letter X of the Senate, intituled, an Act to incorporate the Manitoba and Saskatchewan Bible Society, be refunded.

Motion agreed to.

QUESTIONS.

[Questions answered orally are indicated by an asterisk.]

VICTORIA TRANSFER COMPANY.

Mr. TURRIFF:

How much was paid to the Victoria Transfer Company, of Victoria, B.C., for services rendered to the various federal departments at that city for the years 1912-13, 1913-14, 1914-15, 1915-16?

Mr. CASGRAIN:

Customs Department:

Year.	Amount.
1912-13	nil.
1913-14	nil.
1914-15	$136
1915-16	91

Marine Department:

Year.	Amount.
1912-13	$ 76 20
1913-14	72 01
1914-15	199 32
1915-16	96 95

Militia and Defence Department:

Year.	Amount.
1912-13	nil.
1913-14	$ 82 80
1914-15	1,183 82
1915-16	1,988 76

Naval Service Department:

Year.	Amount.
1912-13	$331 05
1913-14	473 30
1914-15	330 40
1915-16	112 15

Public Works Department:

Year.	Amount.
1912-13	$ 8 70
1913-14	85 30
1914-15	179 05
1915-16	13 33

Post Office Department:

	Under permanent contract.	Under temporary arrangement.	Total.
1912-13	$903 84	$1,513 50	$2,417 34
1913-14	903 84	2,253 00	3,156 84
1914-15	903 84	1,648 95	2,552 79
1915-16	884 14	1,537 10	2,421 24

The service to the railway stations is performed under permanent contract, service to the different wharves under temporary arrangement. Owing to the frequent changes in the running of the steamers and the consequent irregularity of the service, it is not possible to make permanent contracts for the services between the post office and the wharves.

These services at Victoria have been operated in this manner for over fifteen years.

R. ROBSON BLACK.

Mr. A. K. MACLEAN:

1. Has R. Robson Black been appointed inspector of Cadets in Nova Scotia? If so, at what date?
2. What has been his military experience, his personal or technical qualifications for such position, his rank, and his rate of pay?
3. How much has he been paid for such services since his appointment?

Sir ROBERT BORDEN:

1. He has been detailed to perform the duties, temporarily, of Organizer and Inspector of Cadet Corps, Military District No. 6, from the 18th January, 1916.

2. Prov. Lieut. (Supy) 14th Hrs, 24-8-11, G. O. 111-15. (Detailed temp. as O.I.C.C., 6th Div., 28-1-16, M. O. 66-16). Qualifications: Lieutenant, Infantry, M. O. 485-15. Captain, Infantry, M. O. 542-15. Field Officer, Infantry, M. O. 21-16. Pay $5 per diem; allowances, $1 per diem. Total, $6 per diem. This is the ordinary pay of an Inspector of Cadets (see Article 470, P. & A. Regulations, 1914.)

3. To 31st March, $444.

OKANAGAN INDIAN RESERVE.

Mr. OLIVER:

1. Has a right of way through the Okanagan Indian reserve been purchased by the Canadian Northern Railway Company?
2. If so, what was the price?
3. When was the money paid?
4. To whom was it paid?

Mr. ROCHE:

1. Yes, by the Canadian Northern Pacific Railway Company.

2. $4,695.15.

3. 28th September, 1914.

4. To the Department of Indian Affairs; $4,219.19 was paid out by the department to individual Indians for improvements on

right of way, and $475.96 was placed to the credit of band funds.

ALLEGED ENLISTMENT OF FOREIGN LABOURERS.

On the Orders of the Day:

Mr. H. H. STEVENS (Vancouver): I would like to draw the attention of the Government, particularly of the Minister of the Interior, to a rather serious matter in connection with a statement alleged to have been made by the American Consul in Vancouver. I shall read a despatch from Portland, Oregon, that appears in a Vancouver paper, which will explain the situation pretty fully:

Portland, Ore., April 18.—The charge that American labourers are being induced to migrate to Canada on the promise of lucrative employment and then are forced by the pressure of the authorities and of the circumstances by which they find themselves surrounded to enlist in Great Britain's overseas army, is made by the United States Department of Labour Bureau of Immigration in a bulletin which was issued here to-day by the local immigration commissioner.

Quoting from the report of the American consul-general at Vancouver, B.C., the bulletin says:

"Special efforts are being made to induce every foreigner of military age to enlist for the overseas service and it is practically impossible for an American to secure employment in any capacity. Several thousands of Americans have gone from British Columbia to the United States during the past year, a majority of whom went for the reason they were unable to do business or secure employment and some because of the endeavour on the part of the authorities to enlist them for military service."

Then the grossly false and misleading statement is made that thousands of men are idle in Vancouver, and that a propaganda is being carried on in the United States to induce Americans to emigrate to Canada for the ostensible purpose of securing employment, etc. The statement made by this American Consul-General at Vancouver that the Canadian military authorities are using undue pressure to force foreigners to serve in what he calls Britain's overseas army I characterize as absolutely false. I wish to draw the attention of the Government to this statement, and to the indignation of the people, particularly of my own city of Vancouver, in regard to the matter. An editorial appearing in the Vancouver World of April 19, referring to this despatch, is in part as follows:

There is only one course for the citizens of British Columbia to pursue in the case of Mr. Robert E. Mansfield, the American consul here —that is demand his immediate recall.

In asserting that American labourers are being induced to come to Canada on the promise of lucrative employment and are then forced by "pressure of the authorities" to enlist in what he erroneously styles "Great Britain's Overseas Army," the American consul states what is absolutely false, what he must know to be false and what is an insult to every true Canadian. The World yesterday invited Mr. Mansfield to explain his assertion, but he declared he had "nothing to say."

So far from labourers being invited to enter British Columbia, they have been specifically barred out.

The American Consul knows this fact as well as any one. That he should make such a statement as "a propaganda is being carried on through the press and other channels in the United States to induce Americans to migrate to Canada for the ostensible purpose of securing employment", but really in order to be pressed into "Great Britain's Overseas' Army", is so preposterous that it carries its own refutation with it.

The people of Canada—and of British Columbia in particular—are always glad to welcome the official representatives of our great neighbour to the South. Almost without exception they have upheld the traditions of their office and conducted their affairs with fairness and courtesy. It has been left for Mr. Mansfield to asperse this country and to misrepresent conditions here in the most glaring fashion. His recall will be the best solution of the very painful situation in which he has placed himself.

I wish to bring this matter to the attention of the Government and to ask if any steps have been taken, or any representations made to the Government at Washington with a view to securing a correction of these statements, which are grossly misleading and libellous, so far as the province of British Columbia is concerned, and, I believe, are wilfully and maliciously false.

Hon. W. J. ROCHE (Minister of the Interior): Mr. Speaker, this matter was brought to my personal attention for the first time yesterday, owing to an article that, I believe, appeared first in the Chicago Tribune as the result of an interview with the United States Immigration Commissioner in that city, based upon a circular which he states he received from Washington to the effect indicated by the hon. member for Vancouver. Immediately on hearing of this article the Superintendent of Immigration communicated with our immigration agent at Vancouver, and asked him to interview the United States Consul General in Vancouver as to the accuracy of the statements attributed to him. He did so, and the United States Consul General in Vancouver refused to either confirm or deny the statements until he saw the particular specified articles based on the statements attributed to him. Since that time our agent has been more than once communicated with, and asked to again interview the Consul General in Van-

couver, and to obtain his confirmation or denial. The statements contained in the article are certainly not warranted by the facts, or by the conditions in the province of British Columbia. We have communicated, also, with the United States Immigration Commissioner in Montreal, who does not at all agree with such articles, and has communicated his views on the matter to his Government at Washington. I understand that a circular was sent out from Washington, said to be based upon reports made by the Consul General located at Vancouver, but as far as unemployment is concerned in British Columbia and Vancouver, our reports are to the effect that comparatively little unemployment existed there. During January and February, which would be the most likely months, in the midst of winter, for unemployment to prevail, only 285 individuals had applied to the city for relief. This is not more than a normal number during any winter in normal times, in a city the size of Vancouver. I should be very sorry, indeed, to think that the consul representing the United States in Vancouver would be the author of these misrepresentations, and it is only right to afford him a final opportunity of denying or confirming the statements, which, no doubt, by this time have been placed before him. We have had a great demand in western Canada, as well as in eastern Canada, for farm labourers, and the propaganda we have been carrying on in the United States in order to secure these men has been twisted and distorted by interested parties in the United States, to prevent their people from migrating to Canada, warning them that if they came to this country they would most likely be subject to conscription, and might be pressed into the army for war purposes. Such are the representations we have had to contend against in the United States for some time past. However, in a day or so, probably to-morrow, we shall have fuller information on the subject. In the meantime we are endeavouring to correct this erroneous impression.

QUEBEC AND SAGUENAY RAILWAY.

On the Orders of the day:

Mr. GRAHAM: During the debate on the Quebec and Saguenay railway the other evening, in an aside remark which I made, and which evidently did not escape the sharp ears of the press gallery, I referred to the road as the Forget-Choquette railway. To this Senator Choquette takes strong exception, and he assures me that he has no financial interest in the Quebec and Saguenay Railway Company. I make this explanation in justice to him.

BANK LOANS TO FARMERS.

BANK ACT AMENDMENT—SENATE AMENDMENTS.

On the motion of Sir Thomas White for the first reading of amendments made by the Senate to Bill No. 33, to amend the Bank Act:

Mr. GRAHAM: What are these amendments?

Sir THOMAS WHITE: The Senate has made three amendments of a very minor character. The most important amendment provides that in addition to advertising the sale of the pledged live stock in the newspapers, a notice should also be posted at the post office nearest the place where the sale is to be made. The other amendments are of minor consequence, one of them being to meet the analogy of procedure under the Civil Code. The other is merely a verbal change.

Mr. GRAHAM: I presume that the first amendment, which is to increase the efficiency of the advertising of sale, is of chief importance.

Sir THOMAS WHITE: The amendment reads:

> Notice of the time and place of such sale shall appear in a newspaper published in or nearest the place where the sale is to be made, and a notice shall be posted in writing or in print of the time and place of such sale in or at the post office nearest the place where the sale is to be made.

Amendment concurred in

Sir THOMAS WHITE: Subsection 19 of section 2 of the Act provides that the bank shall have authority, in the event of default, to take possession of, seize, and sell the live stock. The words "seize and sell" have been struck out, and the following substituted:

> or seize such live-stock and before or after such taking possession of or seizure, to sell.

I think the change was made at the instance of Senator Beique, who, I understand, is a gentleman of high standing at the Bar, and it is evidently to meet the analogy of procedure under the Civil Code. I see no objection to it.

Amendments concurred in.

BOUNTIES ON ZINC.

Bill No. 94, to provide for the payment of bounties on zinc produced from zinc ores mined in Canada—Sir Thomas White—read the second time, and the House went into Committee thereon, Mr. Rhodes in the Chair.

On section 2—bounty on zinc produced in Canada when price is less than £36 19s. 3d. per ton:

Sir THOMAS WHITE: I have an amendment to propose. I move that in line 7, after the word "spelter," the following words be inserted: "in cakes, blocks, or pigs."

Sir WILFRID LAURIER: What is the object of this amendment?

Sir THOMAS WHITE: The section under consideration provides that when the standard price of zinc or spelter is less than £36 19s. 3d. per ton of 2,240 pounds, that is to say when the price of zinc is below 8 cents per pound, the bounty shall be payable. There is a difference in the price of zinc or spelter in cakes, blocks, and pigs, and that of zinc in the sheet. It is the intention of this legislation that the price in question should be that of zinc in cakes, blocks, and pigs, and not of zinc in sheet. Sheet zinc is much cheaper than zinc in cakes, blocks, or pigs.

Mr. NESBITT: That is so far as the bounty applies to the minimum price.

Sir THOMAS WHITE: Yes:

Mr. OLIVER: If it is sheet zinc, and the bounty is on zinc, unless it is specifically excluded, it would come under the provision for the bounty.

Sir THOMAS WHITE: I do not quite understand the point my hon. friend is making. The bounty will apply when the price of zinc in cakes, blocks, or pigs falls below 8 cents per pound. Then there is a provision that the zinc or spelter shall contain not more than two per cent of impurities. It must be produced in Canada and the zinc ores must be mined in Canada. The price of zinc in cakes, blocks, or pigs is higher than the price of zinc in sheets, and it is only when the higher price falls below 8 cents per pound that the bounty will apply, and then it is to be paid upon zinc or spelter containing not more than 2 per cent of impurities, and produced in Canada.

Mr. NESBITT: Under this amendment, we do not apply any minimum price to sheet zinc.

Sir THOMAS WHITE: We are not dealing with sheet zinc. As I have said, the price of sheet zinc is lower than that of zinc in cakes, blocks, or pigs, and it is when the latter price falls below 8 cents per pound that the bounty is payable. I think the Bill is all right.

Mr. OLIVER: I did not have the Bill before me, but I thought the point should be called to the attention of the minister. If he is satisfied that the words are apt for the purpose, I am perfectly satisfied.

Section, amended as proposed, agreed to.

Bill reported and amendment concurred in.

SUPPLY.

The House in Committee of Supply, Mr. Rhodes in the Chair.

To cover unprovided items, 1914-15, as per Auditor General's Report, part B, page 3, 1914-15, $228,664.18.

Sir THOMAS WHITE: When this item was under consideration last evening, the hon. member for South Renfrew (Mr. Graham) asked me to place upon Hansard an explanation of it. My deputy minister has given me this memorandum on the subject:

In the Supplementary Estimates for the fiscal year ended 31st March, 1916, recently brought down in the House, there is an item: "To cover unprovided items 1914-15 as per Auditor General's Report, Part B, page 3, 1914-15, $228,664.18."

At the end of each fiscal year, when the expenditures under the innumerable appropriations are finally adjusted, it has always been found that here and there throughout the service there have been small over-expenditures. These are all reported in the Auditor General's Report as indicated in the item above, and a sum inserted in the supplementary estimates at the next session to legalize the total amount of these over-expenditures. While in the total appropriations of a department there may be large amounts unexpended, if there is any over-expenditure in a sub-head of the total vote, such over-expenditure is reported by the Auditor General.

The total amount of $228,664.18 is made up of amounts from 43 cents upward. In large and varied services these over-expenditures are discovered too late to enable a supplementary estimate to be taken for the year's accounts in which the outlay has been made. For example, in the accounts of 1914-15, which were not closed until long after the session of 1915, it was impossible to get a supplementary estimate at the time the over-expenditure was discovered. Frequently, too, the circumstances change between the taking of an estimate, and the expenditures occur in such a way as to effect the sub-votes to which an outlay is

charged. The unprovided items are all set forth in detail in the Auditor General's Report, as indicated in the vote in the Supplementary Estimates.

With this explanation the item might be allowed to pass.

Grant to the National Battlefields Commission, $34,160.

Sir THOMAS WHITE: The hon. member for South Renfrew asked that this item be allowed to stand until to-day. I pointed out last night that provision had been made for maintenance only. A question was asked, I think by the hon. member for St. John, as to why there was an increase in this item. I might point out that the Estimates for 1915-16 included an item of $100,000 to be expended in laying out and constructing a park on the battlefields of Quebec, and other items covering expenses of administration, and maintenance of the Battlefields park and of the Martello tower. This year, on account of the burden of the war and the desire to keep expenses within bounds, we have asked the Battlefields Commission to curtail their expenses as much as is reasonably possible, and as a result we have the estimate contained in this item. It is not the intention of the commission, I understand, to acquire new property during the coming year.

Sir WILFRID LAURIER: This commission has done excellent work so far, and work of extreme importance towards preserving the history of the Plains of Abraham. Every stranger coming to Quebec inquires where Wolfe's army landed, and where the battle took place. At present it is impossible to get access to the spot where Wolfe's army landed, because you have to go through private property belonging now to Les Dames de la Congregation. I know that the commission has it in mind to acquire a piece of property on which to construct a road along the cliff up to Wolfe's Cove, where the troops landed and climbed up to the Plains. Of course this will cost money, but not very much, and although we must economize in those times, I think my hon. friend will agree with me that the longer we postpone acquiring this property, the more we may have to pay for it. I hope my hon. friend will place in his next Estimates the small sum necessary to acquire that land.

Sir THOMAS WHITE: I am very glad indeed to have the benefit of the views of my right hon. friend, and I shall be very glad to give the matter my attention. After all, a few thousand dollars is neither here nor there in Dominion finance, and I am entirely in sympathy with having the work completed. As my right hon. friend says, the place to which he has referred is historic, and there is no desire on my part to curtail the work of the commission. On the contrary I have supported them ever since I have been minister, and our relations have been entirely satisfactory. I had the opportunity some time ago of going over the work, and I was very much impressed with what had been done. I shall be very glad to see whether we cannot act upon my right hon. friend's representations.

Public Works—Cow bay (Port Morien)—repairs to breakwater, $2,200.

Mr. PUGSLEY: I would just like to say this, for fear that the minister may take our silence as a consent to the passing of all these Estimates, that I and others upon this side of the House have stated our objection, and I do not think it is necessary further to press the objection to these items, but I will give notice that when the resolutions come up for concurrence, there will be a motion moved that the total amount of the Estimates be reduced by $10,000,000. It will save a great deal of time to make that statement.

Mr. ROGERS: My hon. friend has already made a motion for the reduction of the Estimates.

Mr. PUGSLEY: Not for the total amount.

Mr. ROGERS: I hope he is not going to press a second one.

Mr. PUGSLEY: My intention is to move one on concurrence.

Mr. MARCIL: Does the minister contemplate spending all these various amounts or are they put in the Estimates merely for effect?

Mr. ROGERS: Probably my hon. friend was not here the other night when we discussed that particular point.

Mr. MARCIL: I do not want the minister to go over it again; I just want a brief statement.

Mr. ROGERS: My hon. friend will observe that in a number of cases the same amount appears in the three columns and in such cases there is no intention of spending anything. The appropriations were put in before the war broke out and they are allowed to remain.

Mr. MARCIL: I made this remark because I was not here the other night. I regret that as regards my own constituency with a coastline of over 200 miles not a single dollar has been put in the Estimates for repairs or anything else.

Mr. ROGERS: I do not remember my hon. friend asking for anything on behalf of his constituency or suggesting the need of anything.

Mr. MARCIL: Repairs are needed all along the coast.

Mr. ROGERS: I have not heard of them.

East river improvements, $231,000.

Mr. NESBITT: That is a large amount. Is it supposed to complete the work?

Mr. ROGERS: Yes.

Porter's lake—boat channel to Three Fathom harbour, $10,000.

Mr. SINCLAIR: Will the minister be good enough to explain the expenditure at Porter's lake?

Mr. ROGERS: This revote of $10,000 is to be employed in the excavation of a boat channel between Three Fathom harbour and Porter's lake, to prevent the overflow of the lake during the freshet season. The work will be 3,300 feet long by 30 feet wide at the bottom, which will be at the elevation of low water, giving a depth of six feet at high water.

Mr. SINCLAIR: Is the level of the lake the same as the level of the sea? Is the minister certain that all the water will not run off the lake after the channel is cut?

Mr. ROGERS: Porter's lake is a long and narrow sheet of water lying nearly north and south, and situated about the middle of Halifax county, or about fifteen miles east of the provincial capital. It is about seventeen miles in length, from one-quarter to one-half a mile in width, and the water is a good depth for almost its entire extent. The lake discharges directly into the Atlantic through a beach of gravel and sand from a hundred to two hundred feet wide, and up to about thirty years ago this outlet was navigable for schooners drawing about six feet of water, but has become impracticable owing to its gradual filling up by the sand and gravel of the beach under the action of heavy seas. The normal elevation of the lake, while it was discharged freely by the original outlet, was about one foot below high water ordinary spring tide, or five feet above low water ordinary spring tide. Spring tides rise six feet.

Mr. SINCLAIR: Does that mean that the minister will have one foot of water after he dredges the channel?

Mr. ROGERS: No, six feet.

Mr. SINCLAIR: Does it mean six feet of water at high tide? If five feet runs out after the channel is cut, there will be one foot left.

Mr. ROGERS: We shall have five feet at low tide and eleven feet at high tide.

Mr. TURRIFF: Can the minister state what amount of trade is carried on in that harbour?

Mr. ROGERS: Considerable traffic was done from Porter's lake when the outlet was navigable, and there was an export of timber, cordwood, general farm produce and fish. This has ceased and fine farming lands are lying practically fallow owing to the lack of access to the market.

Mr. WILLIAM CHISHOLM: Is it intended to go on with this work this season?

Mr. ROGERS: No, not this year.

Mr. CHISHOLM: If I am in order, I desire information with regard to several votes for public works in Nova Scotia. There is a vote of $12,300 for harbour improvements at Tracadie. What is proposed to be done there?

Mr. ROGERS: This is a revote. The money is required for the construction of the following improvements: A block and span wharf with creosoted substructure, 222 feet in length and 16 feet in width, and having a block twenty feet square at the outer end, estimated cost, $4,000; also a breakwater 804 feet in length, in three sections, estimated cost $7,000; also reconstructing the superstructure of the cribwork wharf for a distance of 136 feet, estimated cost $2,600; total, $13,600.

Mr. CHISHOLM: When did this item first appear in the Estimates?

Mr. ROGERS: I am afraid that I have not that information here. It has been there for some time.

Mr. CHISHOLM: Is it the intention of the department to go on with the work during the coming season?

Mr. ROGERS: No.

Mr. CHISHOLM: Is it intended to go on with the work at Cribbin's Point this season?

Mr. ROGERS: No.

Mr. CHISHOLM: Were tenders called for for the work at Breen's Pond last year or in any other year?

Mr. ROGERS: No.

Mr. CHISHOLM: Were tenders called for for the work at Delorey's Beach?

Mr. ROGERS: No.

Mr. CHISHOLM: That item is not in these Estimates. I observe that the Auditor General's Report shows an expenditure of $1.58 at Breen's Pond and $1.58 at Delorey's Beach, and $31.37 at Tracadie. Of the appropriation for Tracadie $14,268.63 was left unused. As to Delorey's Beach, which the minister will remember, is ancient history, there was $1.58 spent. The minister may recall that there was a by-election in Antigonish some years ago, and before the Estimates were prepared it was announced to the public that an appropriation would be available and the money would be spent.

Mr. SINCLAIR: On whose authority?

Mr. CHISHOLM: On the authority of the secretary, I suppose. The minister was in Winnipeg at the time. One Buskard wrote a letter stating that an appropriation for this work would appear in the Supplementary Estimates. As a matter of fact, the Main Estimates, to say nothing of the Supplementary Estimates, had not even been considered at that time. But the letter was written and was used in the constituency. Why is it that the appropriations for these several works were not used? Why were not the works gone on with?

Mr. ROGERS: These are like a good many other items in the Estimates. Since the outbreak of the war we have been economizing as much as possible. That is the explanation with regard to the last two years at all events. I should have to look up records not at present before me as to the period before the war.

Mr. CHISHOLM: What is the meaning of the expenditure of $31.37 for improvements at Tracadie, also $1.58 for Breen's pond, and $1.58 for Delorey's beach?

Mr. ROGERS: I have not the explanation of these small items here, but I shall be glad to have it sent to my hon. friend.

[Mr. Rogers.]

Mr. CHISHOLM: Perhaps I may give the minister the explanation. Tenders were called for before the war broke out, and these amounts, I think, were paid for printing. I asked a question in the House at the beginning of the session, if tenders had been called for, and received an answer in the negative. I think the department is mistaken, as tenders were called for before the war broke out, but, for certain reasons, a contract was not awarded. I think the minister will find that that is the explanation.

Mr. ROGERS: That is not in accordance with the information I have from my deputy. I shall be glad to have the matter looked up. The deputy minister believes he is correct in the statement that no tenders were called for, and that seems to be borne out by the records before me.

Mr. CHISHOLM: These items have been in the Estimates since four years ago. I understand that it is not proposed to go on with any of these works during the coming season?

Mr. ROGERS: No.

Nova Scotia—Yarmouth harbour—improvements, $64,000.

Mr. SINCLAIR: I wish to draw the attention of the minister to the item for Cole harbour wharf, $8,300. That item has been in the Estimates for five or six years. A wharf at that point, which is intended as a shipping place for vessels carrying cargoes to and from Charlo's cove and Larry's river, as well as Cole harbour, is very much needed by the people of that locality. I have drawn the attention of the minister, and also of his predecessor, to the necessity of building this wharf. Every year since my hon. friend's party has been in power I have inquired about this matter, and I was told on various occasions that the work would be attended to later. They say that the Sultan of Turkey is not very easily moved in the matter of granting reforms. When the young Turks ask for changes in the Government and improvements in the administration they usually get the answer: "Please God, to-morrow." That is the kind of answer I have been getting from the minister, and his predecessor, in connection with this important work. I hope that this item will not remain in the Estimates forever without being spent. It is the only item in my constituency that has appeared in the Estimates for a number of years. I represent

one of the largest fishing counties in the province of Nova Scotia, where improvements on the coast are very much needed. Any improvements that have been carried out, though not great in number, have been of great service. Some works were built by the late Government that have been of considerable advantage to the fishermen on that stormy coast, giving them protection from the sea for their boats and a steamer service to take their products to market. My hon. friend can hardly realize the importance of a small wharf to this district; I am afraid he does not realise what harm he is doing to the progress of that country by not going on with important works of this kind. This is the only item for that county that the minister has been generous enough to retain in the estimates. Most of them were put in before his party came into power, and afterwards were ruthlessly struck out without any explanation and without any promise of doing anything in the future. For some reason this item has remained in the estimates, but the money has never been spent. I know that the minister's department is scarce of money, but small expenditures are made in most of the counties and I would suggest to him that this amount would not be too much to spend to afford facilities to this long line of coast which are so much needed by the fishermen of that locality.

Mr. ROGERS: I understand and appreciate the interest that my hon. friend has in this particular work. From what I know of this district, undoubtedly it is important, according to its size. As an evidence of my appreciation of that, I may say that very shortly. before the outbreak of war we attempted to start this work; we had purchased land with the view of going on immediately. As my hon. friend understands, however, since the outbreak of war we have been very slow in proceeding with any of these works. Perhaps this work is in a little better position than some items in the estimates to the extent that the land has been purchased. We will go on with the work at the earliest possible date.

Mr. WILLIAM CHISHOLM: Have any steps been taken to acquire land near the wharf at Malignant Cove, in Antigonish county. A petition was sent by the fishermen of that locality to the Minister of Marine and Fisheries. The Department of Marine and Fisheries quite properly said that this matter did not come within the scope of their duties; that it was a matter for the Public Works Department to deal with. A copy of the petition was sent to the Minister of Public Works, and about the 30th of March last I received an acknowledgement of it. What is required is the securing of land along the wharf and breakwater down there so that the fishermen may have a place upon which to haul their boats and dry their nets. The cost would be small, and if the minister could make terms there would be no difficulty in expropriating the land.

Mr. ROGERS: There is no amount in the estimates to provide for the carrying out of such a suggestion as my hon. friend has made, and I have no record of the matter here. If the amount involved is as small as the hon. gentleman states, and if the purchase is as necessary as he thinks it is, I should be glad to see what I can do. My deputy is taking a note of the matter; we will take it up to-morrow.

Mr. CHISHOLM: I think a mistake was made when the wharf or breakwater was built there that sufficient land was not secured at the time. The fishermen are handicapped by reason of the fact that they cannot haul their boats up there; the owner of the land is somewhat disagreeable with them. The acquiring of land for this purpose would not cost more than $100; probably the cost would be less than that.

Mr. ROGERS: We will look into it to-morrow.

Mr. SINCLAIR: In the absence of the hon. member for Pictou I would like to know what progress is being made with the East River dredging. This work, which is of great importance in that locality, seems to be getting along pretty slowly. It started five or six years ago, I think, and is still in progress. Most people think that the time has come when it ought to be completed. I see that there is a vote here for that work; I would like to know whether the work is being carried on and whether it is intended that it should be completed during the present season.

Mr. ROGERS: I feel that we have made very great progress indeed with the East river work. We have come down to the point now that we have called for tenders for the lock gates. This amount which we are asking for will be sufficient to complete the work, and it is going on as rapidly as possible.

Mr. SINCLAIR: This will complete the work?

Mr. ROGERS: This is supposed to complete the work.

Brudenell—wharf reconstruction, $2,000.

Mr. ROGERS: I move that this item be reduced to $500. The work progressed more favourably than was expected, and $500 is all we shall require. This will complete the work.

Mr. HUGHES: This is a re-vote. Was anything spent last year?

Mr. ROGERS: Yes, we spent $1,500 last year.

Harbours and rivers generally—repairs and improvements, $14,000.

Mr. HUGHES: A considerable extension was made to the Souris breakwater over a year ago. In what condition is that work at the present time?

Mr. ROGERS: We have no item in the Estimates in connection with it, and therefore I have no detailed information before me. If my hon. friend wishes any information we can supply it to him from the department.

Mr. HUGHES: Is this $14,000 intended to make repairs there?

Mr. ROGERS: This $14,000 would cover all necessary repairs in the harbours and rivers in Prince Edward Island.

Mr. HUGHES: Does the minister intend to put anything in the Supplementaries for Souris breakwater?

Mr. ROGERS: I do not think so. I do not recollect anything.

Mr. HUGHES: The extension to the breakwater cost about $144,000 and a very short time after its completion a considerable portion of it was carried away by a storm of no unusual violence, which would indicate that there was something wrong. The work is now in such a condition that if it is not attended to serious injury may result and all of the money that has been expended may be lost.

Mr. ROGERS: I recollect that there was a certain amount of difficulty there, but I was under the impression it had been corrected. I shall have it looked up and let my hon. friend know what the facts are.

Mr. HUGHES: I wish to bring to the minister's attention the general condition of affairs in his department in Prince Edward Island. The fact I have pointed out in connection with Souris breakwater is an indication that there is something wrong. When a work of that kind, costing that much, would not stand more than a few weeks or months after completion, there is at least ground for suspicion. We have this condition of affairs, that under the former management there were three men in the minister's department in Charlottetown doing the work, and there are now seven—and there are eight men on the pay roll.

An hon. MEMBER: What does the eighth man do?

Mr. HUGHES: The eighth man is superannuated. He was chief resident engineer at the time of the change of Administration. He was a very capable man and his assistant was also a good man. Why Mr. Hegan, the resident engineer, was removed has always been to some extent a mystery. Mr. Hegan had been in the service for many years; I think he was appointed away back in the '90's, and I presume he had given satisfaction. He had conducted the business of the department in a businesslike way. But his method of doing business was not satisfactory to some people when the change took place, and it was publicly stated by a man who had considerable interest in politics that he would be removed, and he was removed. He was superannuated while still able to do his work. Several appointments were made. The assistant, Mr. Hyndman, who, I think, is a good man, was made chief. Mr. Hegan was removed from office and several additional appointments have since been made, yet the work is not as well done now as in former years, and it is costing a great deal more. For instance, when Mr. Hegan was there he looked after all the dredging done in the province. But the change of Government took place and a superintendent of dredging was appointed.

Mr. ROGERS: We are probably doing a great deal more work there.

Mr. HUGHES: No, you have the same number of dredges and you are not doing the work as well.

Mr. ROGERS: I doubt that.

Mr. HUGHES: There are too many men employed. Mr. McDonald was appointed superintendent of dredging, but there was really no work for him to do. When he came to the office there was no room for

him. Yet to my surprise Mr. McDonald now has an assistant; Mr. O'Brien has been appointed his clerk. Mr. Hegan was doing all the work himself. As a matter of fact, one gentleman in the office, who went to lay off the work for dredge No. 9, at Grand river, laid off the work for the captain of the dredge and staked the ground and put up the beacons; but he put them in the wrong place, and the captain of the dredge was working in the wrong place for some weeks until Mr. Hyndman came down and discovered the mistake. But in the meantime all the work of the dredge had gone for nothing. That is an instance of the work not being as well done as formerly. If the captain, who is an experienced sea captain and who had brought vessels into that harbour on more than one occasion, had been left alone, he, as a practical man, would likely have dredged in the right place, but, of course, having an engineer over him, he had to follow instructions.

Mr. ROGERS: What is the engineer's name?

Mr. HUGHES: There are so many in the office that I don't remember; I think there are seven, all told.

Mr. ROGERS: I think there are only three in the office.

Mr. HUGHES: With regard to the breakwater at Souris, of which I have spoken, it is a serious matter that a work of that kind should break away shortly after completion. There was surely some fault connected with the construction. My impression is that there are so many men employed, and so few who are efficient that the work is not properly done.

Mr. A. A. McLEAN: I wish to correct my hon. friend. He has stated that there are seven men in the office, seven or eight, I think he said. I know for a fact that there are only three men in the office. When he exaggerates to that extent with respect to one small item I am afraid we cannot give very much weight to his other statements.

Mr. HUGHES: I must put my hon. friend right. On the 12th April I asked this question:

> How many men are employed by the Public Works Department in Charlottetown, P.E.I.
> What are the names of the men so employed, what positions do they fill, and what salary does each receive?
> What is date of each man's appointment?

And this was the answer:

> W. E. Hyndman, district engineer; R. H. Nicholson, sr., assistant engineer; H. E. Miller, clerk; J. C. Milford, draughtsman; John White, general foreman; John N. McDonald, inspector of dredges; and William O'Brien, clerk.

That makes seven, so that my hon. friend who is right beside the office is not well informed. Either he has given incorrect information to the committee, or the minister gave me an incorrect answer.

Mr. A. A. McLEAN: The statement my hon. friend made was that there were eight men in the office. There are only three in the office. There are several outside men. The foreman has always been there, and he is not in the office; he travels through the country. The inspector of dredges, who was appointed about two years ago, has done excellent work. Captain McDonald is as good a man as there is in the Maritime Provinces, or outside of them, and his work has been very satisfactory.

Mr. HUGHES: I did not make any reflection upon Mr. McDonald. I made the statement, which is true, that Mr. Heagan was doing all that work himself under the former Administration, and he did it well. My hon. friend will not say that Mr. Heagan did not attend properly to the work, and he attended to his other work at the same time. Therefore there was no necessity for Mr. McDonald's appointment. Now, Mr. McDonald has an assistant or clerk, a Mr. O'Brien, but I question very much whether the work is as well done as it was formerly, and I have stated my reason for so thinking.

Mr. ROGERS: I am afraid I cannot give my hon. friend much information as to details. I will be glad to take up the question of the breakwater, and to supply the information which he asks for. I do not have it here. In respect to the number of men employed, the list from which my hon. friend read, as presented to the House, is probably a correct list, but my hon. friend behind me (Mr. McLean) is also probably correct in his statement by reason of the fact that the hon. member (Mr. Hughes) included the foreman of the work and some one else who were undoubtedly outside the office. That would account for the difference between them with regard to the number employed.

Mr. HUGHES: The minister is drawing upon his imagination. As a matter of fact, under the former Administration, three men

did the work, and, as a matter of fact, there are seven men doing the work now, while there are eight men on the pay roll.

Mr. ROGERS: They are doing three times the work though.

Mr. KYTE: I did not happen to be present when the Estimates for Nova Scotia harbours were under consideration, and I would ask the Minister of Public Works if he has had any request for improvements on the harbour at Glace Bay?

Mr. ROGERS: We did some dredging there not long ago, but I have no recollection of any request recently, and the deputy has no recollection of any.

Mr. KYTE: I have a letter from a citizen of Glace Bay which, as the minister knows, is a very important centre for shipping coal. It has a large population and has therefore to import large quantities of necessaries throughout the year. At the present time the people there are very much handicapped by the fact that the depth of the water in the harbour does not permit the entrance of vessels even of a very light draught. This gentleman writes me as follows:

I think some eight years ago, the Dominion Government spent about $25,000 on the harbour at Glace Bay. Small as this amount was, it was perhaps sufficient at the time to enable light craft to make their way in and out of the harbour. Since that time, the harbour has been allowed to look after itself, until, at the present time, there is barely eleven feet of water at the entrance. The piers are in the last state of dilapidation, the wood-work in a rotten state, and the ballast between the crib-work has been allowed to wash into the harbour itself. This, mind you, is the condition of a harbour that, within my own recollection, was able to boast of 28 feet of water; and where steamers of 4,000 tons could load coal, I, myself, have seen five steamers at one time in this harbour. To-day, I was speaking to a captain who has a schooner of 150 tons. He says that next year he will be unable to make this harbour. The channel will be so filled up. And what this captain says, all other captains maintain. Not being able to get our produce by water, you can realize how vital the matter becomes.

This should not be a thing of politics. Has the attention of the Government ever been called to it? Has the engineer of the Marine and Fisheries Department ever reported it? Have the Public Works Department engineers inspected the harbour in the past three years? Is it the Government's intention to absolutely abandon the harbour?

I quite understand that the Minister of Public Works has not been able to expend as much money in the Maritime Provinces as heretofore, but I point this out for the purpose of urging him at the earliest possible moment to have a report made by the engineer of his department; and out of the general vote for dredging in the Maritime Provinces I hope the minister will find it convenient to apply a portion towards deepening the harbour so that the people in that community will have the advantage of water communication which will facilitate the transportation of the necessaries they require. As I have said, it is an important port for the shipment of coal, and whereas a few years ago, steamers of 4,000 tons were able to load there, now small schooners are able to enter the harbour only with very great difficulty. I am sure that there is no port in the Maritime Provinces that is more deserving of consideration than the port of Glace bay.

Mr. ROGERS: I am reminded by my hon. friend's reading that letter that this question was up some time ago. The difficulty is that the piers belong to the coal company, and not to the Government, and, of course, the coal company will look after any repairs that may be necessary. I am inclined to think that we have already made some arrangement with regard to dredging. I will let my hon. friend know later on what the facts are.

Mr. KYTE: The fact of the Dominion Coal Company having some interest in the piers did not prevent the late Government from assisting in harbour improvements there. I think the Minister of Public Works might very easily arrive at a similar arrangement with the Dominion Coal Company to improve the harbour facilities.

Mr. ROGERS: We are improving the dredging.

Mr. HUGHES: Did the minister get any letter or petition from any parties asking for dredging in Bay Fortune harbour, P.E.I.?

Mr. ROGERS: I have no recollection of any such request.

Mr. HUGHES: I should like to call the minister's attention to the situation at Little Sands. A year or two ago a wharf was built there, and shortly afterwards a storm carried away the inner portion connecting with the shore. The Government left it in that condition for quite a while, and the fishermen using the wharf put planks on it so that they could get their fish ashore, as it was impossible to take a team out until the wharf was repaired. Just a few days before the provincial election word came that the wharf was to be

repaired, and a number of men were engaged and a large quantity of lumber was purchased. The election was held, but all the men engaged were not employed; that was a breach of contract. The effort to repair the wharf synchronized with the holding of the election. When finally the repairs were made the work was not done properly, as it was late in the season, and the money expended was practically lost. The wharf is almost useless now. The foreman is understood to have received word from the department that substantial repairs will be made this spring, but I do not see anything in the Estimates for it.

Mr. ROGERS: If there is such an item it would be in the Supplementary Estimates.

Mr. HUGHES: The repairs will be made, I suppose?

Mr. ROGERS: I cannot say until I look at the Supplementary Estimates.

Mr. HUGHES: You would not leave the wharf unfinished.

Mr. ROGERS: I would not think so.

Mr. TURRIFF: I think the minister has given only a very vague explanation of why more men were put on in the case cited by my hon. friend. The minister did not say how much more work was being done. My hon. friend from Prince Edward Island says that they are doing no more work, and that the work is not so good. Be that as it may, the minister engages seven men to do the work that was done by four men four or five years ago, and I presume their total pay will be just about double. And this is done at the very time when we are told to practice economy. It is just this sort of thing that is increasing the expenditure of every department fifty or seventy-five per cent more than it was a few years ago; and there is no more work being done, and less revenue coming in. If some attempt is not made to establish an equilibrium between revenue and expenditure, where are we going to land? This is just one instance of how the Government is increasing the number of its employees. To-day we have some 12,000 more than we had four years ago, and we can see now where they are, scattered all over the country, where they are absolutely unnecessary. Does not my hon. friend think that in these times only four men should be employed to do four men's work. We shall never economize so long as we engage seven men to do four men's work. Unless the Government realize the position the country is going to be in on account of this war, and cut down their expenditures as much as possible, the finances of the country are going to be in worse shape year after year. Here is a concrete case of an increase of seventy-five per cent in the number of employees, and I am sure not a member of this House believes that increase necessary. I urge my hon. friend to see whether he cannot cut down the number of employees to a reasonable figure.

Mr. A. A. McLEAN: That statement has been made by the hon. gentleman several times in my hearing. Let me say with regard to my own province that Prince Edward Island exported in 1915 fifty per cent more than it exported in 1905. I have those figures from the transportation company that does most of the business in my province. Do you expect, Mr. Chairman, that the amount of business we are doing to-day can be done by just the same number of men that were employed ten or twenty years ago? Ten or fifteen years ago we had three dredges in Prince Edward Island; they were controlled by men living in St. John, who probably visited Prince Edward Island only once in the season, and the whole business was left to the captains, who did practically as they pleased; they neglected their duties and practically no dredging was done. When this Government came into power I asked the minister to appoint a local inspector of dredges. He appointed Captain John A. McDonald, an expert dredgeman, and now the dredge captains are compelled to do the work; they are not allowed to loaf as they did previously to 1911. The people of Prince Edward Island are better satisfied with the dredging than they have ever been before, and I think the appointment of this inspector was the best move the Government ever made, as far as Prince Edward Island is concerned. In fact, it should have been done years ago, because the business was increasing and our harbours and rivers required to be dredged.

Mr. SINCLAIR: This abuse exists not only in Prince Edward Island, but throughout the whole of Canada. The proof was laid before the House in a return that was brought down last year, but the return did not cover the whole period of the present Administration. The Department of Public Works is one of the worst departments in this respect. I am glad that my hon. friend

from Kings P.E.I. (Mr. J. J. Hughes) referred to that case, but it is well to remember that the record is very bad throughout the whole of Canada. From the return I find that, since the present Government came into power up to the date of the return, which I think is dated about eighteen months ago, in the inside service, the number dismissed is four, the number resigned, 24, and the number of new appointments, 124, making an increase of 96; in the outside service, the number dismissed is 507, the number resigned, 701, and the number of new appointments, 1,877, making an increase of 669, a total increase of 765 officers in the department during the present Administration. If you allow these officers a salary of $1,000 a piece, that means a total expenditure of $765,000. It is no wonder, therefore, that the expenditure in the Department of Public Works has increased so enormously during the present Administration. If my hon. friend will refer to the Public Accounts, he will see that during the last year for which the late Administration was responsible, that is the year 1910-11, the total expenditure in the Department of Public Works chargeable to Consolidated Revenue Fund was $8,621,431.25, whereas, during the year 1914-15, the total expenditure was $19,343,532.35, an increase of over $10,000,000, so that the expenditure has been more than doubled. The enormous increase in the number of officials, of course, accounts for a part, but only a part of the increase. When we consider that about three-quarters of a million dollars additional is paid out for the wages of new employees in this department which is not doing nearly so much work as was done formerly, it is certainly an abuse that the minister can scarcely justify.

Mr. ROGERS: I am rather surprised at the statements of my hon. friend in respect to the increase in the number of officials in the Public Works Department. It is true there has been a certain increase, but my hon. friend must bear in mind that during the past four years there has been a great development which has necessitated such increases as have taken place. My hon. friend quotes some figures—I do not know where he gets them.

Mr. SINCLAIR: I get them from the official blue-book published by my hon. friend.

Mr. ROGERS: He quotes the figures probably of the expenditure of the department, which, he says, in 1910-11 amounted to $8,000,000. I have before me only the figures covering the total expenditure in 1911 under the former Government amounting to $14,338,000, and, of course, the expenditure has increased rapidly from that time on until the outbreak of the war since when we have undertaken to reduce the expenditure very largely from year to year. It is true that there is a necessity for an increase in the service. In the inside service at Ottawa we have an additional number of buildings to look after, necessitating the employment of elevator men, etc. As far as the outside service is concerned, the number of public buildings that have been erected in various parts of the country has necessitated the employment of caretakers and others. The additional amount of dredging, etc., that is being carried on has necessitated the employment of extra help. I do not think, however, there is any ground for the statement that there has been any extravagance so far as the Department of Public Works is concerned.

With regard to Prince Edward Island, I may say that we have been doing a great deal of work down there. My hon. friend will agree with me that the building of the Souris breakwater is probably the biggest public work that has been done in Prince Edward Island for a long period of time, and that work has been going on recently necessitating the employment of additional help. We have been doing a good deal of dredging in Prince Edward Island, and, I am sure, a good deal more work than was done under the former Administration, and properly so, because there was a demand for it and a general development such as was common to the rest of Canada, and Prince Edward Island was getting its full share. I am sorry my hon. friend has found reason to complain, because I would not wish to have in my employ any man who was not earning his wages. I will make a close examination of the statement of my hon. friend, and if it is found that we have on the Prince Edward Island pay-list any person who is not earning his wages, I will see that that is corrected. For the moment, however, I have no reason to believe that such is the case, because we are very careful in that regard.

Mr. SINCLAIR: If my hon. friend wishes to know where I got my figures, I may say that I have here a Blue Book called "Consolidated Public Accounts for the fiscal year ended March 31, 1915," printed by J. de L. Taché, Printer to the King's Most Excel-

lent Majesty, 1916. On page 71 he will find a comparative statement of the expenditures on account of Consolidated Revenue Fund for the various years beginning at Confederation and ending at the last fiscal year. In column 6 he will find the figures that I have given.

Mr. ROGERS: I am not disputing the figures given by my hon. friend. I pointed out to him that I had before me only the totals of Consolidated and Capital Fund Expenditures, and that my hon. friend was quoting from the Consolidated Fund Expenditures, which makes a difference.

Mr. HUGHES: The hon. minister says that the department is doing more work in Prince Edward Island now than it did some years ago under the late Administration. The hon. minister does not make that statement of his own knowledge, and he is not sure that it is correct. I am pretty confident that it is not correct, and I will look up the works and convince the minister that there was more work done in Prince Edward Island, at all events during the last few years of the late Administration, than is going on at the present time. I am quite satisfied as to that.

Mr. ROGERS: I shall be glad to have a statement prepared for my hon. friend just to see who is correct.

Mr. HUGHES: I shall be glad to see it.

Mr. ROGERS: I will ask the department to prepare it.

Mr. HUGHES: The hon. member for Queens (Prince Edward Island) made some statement which at the moment can neither be proved nor disproved, but the accuracy of which can be judged by the fact that the hon. gentleman said that only as many men were employed now as were employed under the old Administration. He did not know the facts until I read out the figures and gave him the names of the men employed now. Then he was convinced that he was wrong.

Mr. A. A. McLEAN: I am not convinced that I am wrong.

Mr. HUGHES: The hon. member has made a statement that reflects very seriously upon the captains employed upon the dredges at the present time, and he has made a statement that is not true in so far as the captains who were employed some years ago are concerned. He says that he suggested the appointment of a superintendent of dredging to keep the captains from loafing, and to see that they did their work properly. That, I think, is quite a reflection upon the men employed at present. I do not think that a superintendent of dredging was needed for that purpose. The men who were doing the work, and who were removed by the present Government, were men of whom no man in Prince Edward Island would say that they loafed, or did their work improperly—I am satisfied the junior member for Queens, P.E.I. (Mr. Nicholson) would not say that of them.

Mr. ROGERS: He did not say that anybody was loafing.

Mr. HUGHES: Yes, he made the statement that the superintendent of dredging was appointed to keep the captains of dredges from loafing as they did under the previous Government, or words to that effect. Did not the minister hear that?

Mr. ROGERS: No.

Mr. HUGHES: Then his hearing is defective.

Mr. ROGERS: No.

Mr. HUGHES: That is the statement that was made, and if it is not changed it will appear that way in Hansard. The hon. gentleman may not have desired to make that statement; perhaps he made it without thinking of what he was saying. But the statement is not correct; the captains employed under the previous Government were honourable men, who did their work and did it as well as it is being done now. I believe that the captains employed under the present Government do their work well. But there are too many officials appointed. I shall be glad to see the return showing the number appointed and the quantity of work done in Prince Edward Island some years ago and now. I make an application now for dredging in Bay Fortune harbour, during the coming summer. It is very much needed, and will be of great advantage to that place. Will the minister look into that?

Mr. ROGERS: I do not see any mention of that harbour in the Estimates.

Mr. HUGHES: I know that.

Mr. ROGERS: I will look into it.

North lake—boat harbour, $24,000.

Mr. HUGHES: Does the minister intend to spend that money this year?

Mr. ROGERS: No.

Mr. HUGHES: Why?

Mr. ROGERS: It is on a par with the other items: they are simply revotes and have to stand until the conclusion of the war.

Mr. HUGHES: Were tenders called for for this work last summer?

Mr. ROGERS: Yes.

Mr. HUGHES: Were they called for in May or in June?

Mr. ROGERS: In June. We had six different tenders, all of which
5 p.m. were too high according to the estimate of the engineer and were not accepted.

Mr. HUGHES: They were below the engineer's estimate I think.

Mr. ROGERS: Apparently one was. But while we intended last spring to carry on certain works, we found that in view of the expenditure for the war it was necessary to cut out other items, and every day economies of this kind were made. This is not any different from others.

Mr. HUGHES: But the war was going on in June last, and was then nearly a year old and our expenditures because of it were increasing. Yet the minister added to the expense by calling for tenders though he did not intend to go on with the work.

Mr. ROGERS: Yes, we intended to go on with it then or we would not have called for tenders.

Mr. HUGHES: And then for the sake of $24,000 the minister decided not to go on.

Mr. ROGERS: We had a general rule on the subject, and dropped many others as well as this.

Mr. HUGHES: Did the department drop many others for which tenders had been called?

Mr. ROGERS: Oh, yes. We prepared in the spring a programme of work regarded as necessary to be carried out during the summer, and this improvement was evidently one of those to be undertaken. But some difficulty arose about the title to the property that delayed us, or otherwise it might have been gone on with. The district engineer states that at the time of making the survey the property owners affected by the new opening to be made were asked to sign an agreement relieving the Government of responsibility for any damage that might be caused to their property by the work, and with one exception they refused to sign. So he did not advise going on with the work until some understanding with the property owners was arrived at.

Mr. HUGHES: Yet in the face of that report the minister decided to go on with the work, and so he must have decided to settle that question.

Mr. ROGERS: We were in hopes of having the matter adjusted. But we were ready to take any excuse last year for not going on with work.

Mr. HUGHES: And the expense of calling for tenders will be just that much money lost.

Mr. ROGERS: It may not be lost. We may be able to go on.

Mr. HUGHES: But the minister said that the tenders were too high.

Mr. ROGERS: Yes, but I will have to have a report of the engineer on that.

Mr. HUGHES: There is another reason for not going on with the work.

Harbours and rivers—New Brunswick—Bathurst—harbour improvement, $85,000.

Mr. TURGEON: Is it expected that the expenditure of this sum will complete the work of dredging at Bathurst?

Mr. ROGERS: I would not like to give my hon. friend a definite answer. He well knows that the dredging work at Bathurst has been a very important undertaking, and a very large one, in view of the development going on at that point. There have been very pressing demands for increased dredging. We have spent, as my hon. friend knows, a very large sum of money in connection with that work, and are in hopes that this amount will be sufficient to meet the requirements at all events of the present year.

Mr. TURGEON: What is the depth of water at low tide?

Mr. ROGERS: Seventeen feet.

Mr. TURGEON: What is the width of the channel?

Mr. ROGERS: The original plan was 250 feet, but we are doing only about 200 feet at the present time.

Mr. PUGSLEY: When were the plans made for this dredging at Bathurst?

Mr. ROGERS: I have not anything here that would show that.

Mr. PUGSLEY: When I was minister, at the urgent request of the people of Bathhurst and also at the request of the hon. member for Gloucester I had plans prepared for the work of dredging Bathurst Harbour and the work was commenced and carried on during the period that I was minister. Has the work been carried on along the lines of the plans which were prepared at that time?

Mr. ROGERS: The work that we have under consideration was started in 1913, so far as my recollection goes.

Mr. PUGSLEY: What is the nature of that work?

Mr. ROGERS: The dredging of the channel and the work on the outside harbour.

Mr. PUGSLEY: It is the same class of work as was going on then?

Mr. ROGERS: The same class of work, yes.

Mr. TURGEON: It is a continuation of the work that was commenced under the preceding Government in 1910 and carried on in 1911.

Mr. ROGERS: I do not think any work was done on the inside harbour before that time.

Mr. TURGEON: The plans had been made, but dredging was confined to the outside harbour. There was no use commencing work on the inside until vessels could get in from the outside harbour.

Mr. PUGSLEY: There must be plans in the department for the complete work?

Mr. ROGERS: There may be.

Mr. TURGEON: I believe my hon. friend has followed the plans made by Engineer Voligny with perhaps some improvements as the development of the work proceeded.

Mr. ROGERS: I am glad to know that my hon. friend feels that this work is satisfactory.

Mr. TURGEON: It is, I must say. I give the minister credit for having attended to this work, which is very pressing. Large interests have suffered through waiting for a good harbour at Bathurst. Every year we have shipments of 40,000,000 feet of lumber, and the development of the pulp and paper business will necessitate not only ample harbour facilities, but deep water as well, so that large vessels can be brought in. If the amount stated is not sufficient, I would suggest that the minister increase the amount at once so that everything possible may be done during the summer to enable larger ships to come in.

Mr. ROGERS: For the present the pressing work is that of the turning basin. The ships are able to get in now, but there is no way of turning to get to the pulp mill. We are making provision for that turning basin. An item appears in the Supplementary Estimates for the past year, in addition to what appears in the main Estimates, to provide the necessary amount to complete that work this year. We are going right on with it.

Mr. PUGSLEY: I am glad indeed that the minister is continuing this work which was commenced during the time that I was minister. I took occasion to go to Bathurst and look into the question very thoroughly. I am satisfied that there is no more important public work so far as harbour development is concerned than that which is being carried on there, and I am very glad indeed that it is being proceeded with in such satisfactory manner.

Mr. McCURDY: May I ask the minister what his plans are with regard to Port Hood harbour development?

Mr. ROGERS: This, like other matters, has been deferred owing to war conditions. It will be taken up as soon as conditions permit.

New Brunswick—Campbellton—deep water wharf accommodation, $50,000.

Mr. PUGSLEY: What is being done at Campbellton?

Mr. ROGERS: We are not going on with the work there at present. It is one of the matters that are standing.

New Brunswick—Cape Bald — repairs to breakwater—pier, $1,500.

Mr. COPP: What work does the minister propose doing in connection with the Cape Bald breakwater?

Mr. ROGERS: The amount is required to continue construction of the protective work along the outer face of the approach to pierhead, composed of reinforced concrete caissons filled with ballast, and for general repairs. Estimated cost, ten caissons at $40, $400; labour and services of

diver, $200; concrete and stone filling, $400; general repairs, $500.

Mr. COPP: What was spent last year?

Mr. ROGERS: $3,500.

Mr. COPP: Is there a foreman who has charge of the work all the time, and who looks after the repairs?

Mr. ROGERS: John W. Brien, foreman.

Mr. COPP: Is it from his report that my hon. friend is speaking?

Mr. ROGERS: No, from the report of the district engineer, Mr. Stead.

New Brunswick—Dorchester—to complete wharf improvements, $3,000.

Mr. COPP: Is that new work, or just to complete?

Mr. ROGERS: This is just to complete.

Mr. COPP: $12,000 was spent last year?

Mr. ROGERS: Yes.

Mr. COPP: The contract was for $12,000?

Mr. ROGERS: The contract price was $15,000.

Mr. COPP: Was that to extend the wharf there, or to build a new one?

Mr. ROGERS: This amount of $3,000 is asked for by District Engineer Steed to complete payment on the contract for the reconstruction of the old railway wharf, lately completed to rebuild a short section at the upper end of the old wharf, and to remove the yearly accumulation of mud from the vessel beds in front of the old and new wharfs.

Experimental Farm below Fredericton—wharf, $5,000.

Mr. PUGSLEY: What is the object of this wharf?

Mr. ROGERS: It is for the use of the Dominion Experimental Farm below Fredericton and about 20 families living within a radius of one and a half miles from the proposed site. It will also be used by the Fraser Lumber Company, whose mill is one mile above the site. The experimental farm is three miles below Fredericton on the west side of the St. John river. The exports will consist principally of farm products, and it is estimated that $10,000 will be shipped annually from this place. I think, on reading the estimate before me, that this is a work that could very well stand for some time.

[Mr. Rogers.]

Mr. PUGSLEY: Yes, I think so. There is a railroad running right through the experimental farm.

Green Point (Beresford)—breakwater, $10,000.

Mr. TURGEON: Does the minister intend carrying on this work this year?

Mr. ROGERS: No, not this year.

New Brunswick—harbours and rivers generally—repairs and improvements, $40,000.

Mr. COPP: What work is intended to be done under that item?

Mr. ROGERS: This is a general vote which is taken for each province to provide for incidental repairs that may be required during the year.

Mr. COPP: The minister has no special expenditure in mind which would be included in that vote?

Mr. ROGERS: No.

Tracadie—to construct breakwater and breastworks, $3,500.

Mr. TURGEON: What does the minister intend to do at Tracadie this year? Will this work be proceeded with?

Mr. ROGERS: This vote of $3,500 is required for the construction of two breakwaters and breastworks. I do not think we will commence it this year.

Mr. COPP: Has the minister had any application or correspondence with regard to repairs to the Sackville wharf in the county of Westmorland?

Mr. ROGERS: Yes, I think we have.

Mr. COPP: What does my hon. friend propose doing in regard to it?

Mr. ROGERS: I have not any information here to give to my hon. friend.

Mr. COPP: I wish to bring to the minister's attention the unfortunate position in which Sackville is placed in regard to wharf accommodation. We have had very poor wharf accommmodation there for a number of years. A great effort was made to induce the Government to make some repairs, or to build a new wharf. About 1909 or 1910 we got an appropriation and a new wharf was constructed at a point some distance from the site of the old wharf, which had practically tumbled down so that it was impossible for vessels to tie up at it. At the time of the construction of the new wharf there was some friction, as is usually the case where there is any change in the site of a wharf. However,

the wharf was constructed on the new site, 400 yards lower down the stream, at a point where there is a sharp bend, so it is possible for vessels to start out into the stream so as to avoid the difficulty of making the sharp curve in the river on a strong tide. Something like $40,000 was expended, and a very splendid wharf was constructed at this site. It was about completed at the time of the change of Government. A few people in the town were small enough to allow their politics to influence them to oppose any road being made to the wharf, and for some time we had no road. Finally a road was constructed to the wharf. But there is still no railroad accommodation. The result is that last year or the year before some pressure was brought to bear upon the Government and they made some small repairs to the old wharf, but these repairs were only sufficient to enable small vessels to come to the old wharf. The result is that captains in charge of large coasting vessels that formerly came to Sackville and delivered and took on cargoes, refused to go there owing to the lack of proper wharf accommodation. It is impossible to ship out timber from the old wharf or to handle the large amount of timber that formerly came in by that wharf, going to the adjoining town of Amherst. We have really no wharf accommodation, and practically this new wharf is going to pieces without being used.

It seems to me that it is time the Government took this matter up. I think the feeling which arose has been dissipated, and I do not think there would be very strong opposition now from the minister's political friends. It was only a few who caused the feeling. Some arrangement should be made between the Department of Public Works and the Department of Railways and Canals so that that wharf, which was intended for the public service, should give the people in that community some advantage for the money that was expended upon it some years ago. Under present conditions it is not worth a five-cent piece to the people of Sackville.

Mr. ROGERS: How far is the railway from the wharf ?

Mr. COPP: The railway runs right along, and there is a little spur of perhaps 300 of 400 yards. I think there is a plan in the Railway Department. Owing to a little local jealously the matter has not been taken up in a business-like way. It is a splendid wharf, and, while Sackville does not claim to be a very important community, the town is a growing one and a large amount of lumber is carried for export over the N. B. & P. railway now owned by the Government. At present we have not an outlet for the shipping of that lumber, because the larger schooners will not go to the old wharf. The result is that the shippers have to take the lumber to Dorchester, or Shediac, or somewhere else, where they can load the schooners. I would ask the minister to take this matter up, look into it, and see if some reasonable arrangement cannot be made to give the people of that portion of the province of New Brunswick proper access to the wharf.

Mr. ROGERS: From what my hon. friend has stated, it does seem too bad that a wharf costing $40,000 should be lying practically idle for the lack of the necessary connection. I have no knowledge of the local conditions, or of the disturbed feeling which he says exists there.

Mr. COPP: It is not serious.

Mr. ROGERS: I will be very glad to take the matter up with the Railway Department. I presume that a portion of it would come under the Railway Department, and we would have to make some arrangement with it to provide the necessary connection. The deputy has taken a note of the matter, and we will take it up with the Railway Department and see if we cannot have it adjusted.

Harbours and rivers, Quebec—Baie St. Paul, repairs to wharf and retaining wall, $6,500.

Sir WILFRID LAURIER: Is that a new work?

Mr. ROGERS: Yes, we will spend that amount this year.

Cap Chat—extension of training pier, $7,500.

Sir WILFRID LAURIER: I presume that that amount will not be expended this year?

Mr. ROGERS: No, that stands.

Cap Rosier—breakwater pier, $10,000.

Sir WILFRID LAURIER: That will not be expended, I presume?

Mr. ROGERS: That stands.

Chandler— wharf, $25,000.

Sir WILFRID LAURIER: That is in Gaspé, is it not?

Mr. ROGERS: Yes.

Sir WILFRID LAURIER: Chandler is the new name for Pabos, I understand. What is the nature of the work?

Mr. ROGERS: There are two proposals in connection with this particular item. One is that there should be an extension of the old wharf, and the other is that a new wharf should be built. The report states that $25,000 is required for the construction of a cribwork wharf 1,380 feet long, by 32 feet wide, with a depth of 32 feet at low water. There will be 49,959 cubic yards of cribwork at $2.75 per cubic yard, a total of $135,866.72. It is a very large expenditure, but nothing has been undertaken as yet.

Sir WILFRID LAURIER: I am aware that it will be an expensive work, but the Government has not decided yet whether it is going to put up a new wharf, or repair the old one.

Mr. ROGERS: That has not been decided yet.

Mr. LEMIEUX: Chandler is a new name. A very enterprising American firm from Philadelphia has started there a very large industry, the manufacture of sulphide pulp. I visited the place last summer. They are employing some 800 men at the mills, and I understand that they intend to double that number in the course of the coming year. The pier in question was begun a few years ago. There was an old pier which is used by the fishermen, but the new pier, which was commenced, has not yet been completed. The intention of the company is to ship the pulp from that point. At present, thanks to the Gaspé railway, they ship their pulp from Gaspé basin. This means to them a large expenditure, but they were very pleased to use what facilities they had at Gaspé to ship their pulp to the United States where they have large orders to fill This company has built during the last two years 12 or 15 miles of a railway which goes deep into the woods, and they have built their line as far as the present landing pier. I called the attention of the minister some time ago to the fact that until last year the vessels which they used could anchor near that pier. With the trade increasing as it has increased during the last few months, this pier should certainly be extended. There is an alternative plan, and the engineer of the Department was kind enough to ask the company to point out which of the two would be more in their interests, and I understand their answer will be given shortly. The company have expended at Chandler something like $5,000,000 in buildings and other works, independently of the Gaspé railway. The railway that has been built in the last few years is a private owned one. The company has made of that little fishing village a town. I was struck when I visited it last fall to discover a town where a few years ago there were only a few fishermen's huts. I think the Government would do well to consider whether it would not be more in the interest of all parties concerned to accept the plan suggested by the company, rather than that of the engineer of the department. The large amount of capital invested by the company stimulates business throughout the whole district. I think the company's plan would be of great service to the public generally.

Mr. ROGERS: There appears to have been some misunderstanding about the two proposals. The pier that my hon. friend says the company would like would represent a very heavy expenditure, something like $135,000, but in view of the important work that is being carried on by the company—probably as good a work as is being done by any similar company in Canada—there is perhaps some responsibility upon the department to assist them in getting the necessary accommodation. I am in hopes that when we get the report, we shall be able to meet the company's wishes by extending the present pier. If we can make satisfactory arrangement we may have to expend some of this vote this year in order to help the company, which has a large amount of capital invested.

Mr. LEMIEUX: I am informed that the alternative plan will be much less costly than the plan outlined by the engineers of the department, and the expenditure will be in the interests of the public.

Grosse Isle Quarantine Station—extension of wharves, $50,000.

Sir WILFRID LAURIER: Is that to be expended this year?

Mr. ROGERS: I do not think so.

Harrington harbour—extension of wharf, $3,000.

Mr. ROGERS: As this work has been completed, I move that this item be struck out.

Motion agreed to.

Hospital Bay—Magdalen Islands — breakwater, $2,000.

Mr. LEMIEUX: Is this a new wharf?

Mr. ROGERS: This money is to be expended upon the construction of cribwork and a breakwater. When completed the structure will be 700 feet long, and will consist of nine isolated triangular cribs.

Ile Perrot South—wharf, $1 500.

Sir WILFRID LAURIER: Is this to complete the work?

Mr. ROGERS: Yes.

Mr. LEMIEUX: Has the Government received a petition or a formal request that facilities be provided for the travelling public, either by the construction of a bridge for pedestrians or through some arrangement with the two railway companies, between the island of Montreal and Isle Perrot, and Isle Perrot and Vaudreuil? Anyone travelling from the island of Montreal to Vaudreuil has to have his automobile or carriage ferried across the river in a scow, and involves great delay and trouble. I know that in years past efforts have been made by several associations to get the Government to provide a bridge, and it seems to me that if overtures were made to the Canadian Pacific railway and the Grand Trunk their bridges might be used for this purpose. Has the Government ever considered this question, and if so, what decision has been reached?

Mr. ROGERS: We have had petitions and requests on numerous occasions, and the matter has been especially brought forward by the hon. member for Jacques Cartier (Mr. Descarries), who is very insistent in season and out of season in pressing the necessity for such work as my hon. friend has described. Unfortunately, however, we have no power under which it would be possible for us to build such a bridge. The construction of a work of that kind has never been undertaken by the Public Works Department. It is true that we build bridges across interprovincial rivers, but we do not build bridges across a river all of which is in one particular province, because that comes within the jurisdiction of the Government of the province in which the river is. It will be impossible for me to undertake this work, because I have no power to do it. If my hon. friend (Mr. Lemieux) would assist me in trying to persuade the Senate to pass our Highway Bill, then I would undertake to promise him to take up this matter immediately, because I know how much this accommodation is required for the Island of Montreal.

Mr. LEMIEUX: It is true that at that point the river is exclusively under the jurisdiction of Quebec, but at the same time the bridge would be a means of uniting the two provinces, because it is practically the only route to Ontario.

Mr. ROGERS: It is hard to draw the line.

Mr. GRAHAM: The Dominion could give a grant to the province.

Mr. MARCIL: The hon. member for Jacques Cartier has a much more ambitious scheme than that; a scheme that we heard of during the last Chateauguay election. He wants a committee to be appointed to consider the using of the Canadian Pacific railway bridge from Lachine to Caughnawaga as a means of connecting the island with the south shore and also the bridge of the Canadian Northern at Isle Bizard. But really, badinage apart, the whole scheme is very important for the island of Montreal which is practically isolated from the mainland in the west and northwest. If you wish to leave the island of Montreal by automobile or carriage, you have to cross the river by means of the old fashioned scow. If the minister can find a way out of the difficulty, he will be doing a great service to the people in that locality.

Mr. ROGERS: I quite agree that the hon. member for Jacques Cartier is a very ambitious representative, and properly so, because he represents a very ambitious constituency, and everything that can be done must be done to assist that hon. member and his important constituency.

Mr. GRAHAM: The fact that a certain Highways Bill was not passed all the way through Parliament should not be given as an excuse why the Dominion Government will not consider reasonable propositions that might or might not have come under that particular scheme. The Highways Bill was started on its career for a very different purpose from that of building bridges; it was started on its career in the county of Renfrew for the purpose of promising good roads to many municipalities. Men were sent into that county to tell the people that if they did certain things they need not look to the Provincial Government for aid, they could come down to Ottawa and they would get their roads built independently of the provincial aid.

Mr. LEMIEUX: They were injecting a little poison into pure politics.

Mr. GRAHAM: As a matter of fact there is nothing in the world to hinder this Dominion from bringing in a Bill to aid the Provincial Government to build bridges.

Mr. ROGERS: That is what the Highways Bill provided for.

Mr. GRAHAM: That Bill provided for highways. If the Minister of Railways had proposed right away to take the entire grant for a year to build two bridges, he would likely have been opposed by other parts of the province that were entitled to some part of the money for highways. Even if he had a dozen Highways Bills, special provision would have had to be made for special work, because it would not have been practicable to take the entire grant that would go to Quebec or Ontario and expend it all in building two bridges which would serve only a small proportion of the people. There is nothing to hinder the Dominion Government from making, if they wish to do so a special case of these bridges and joining with the Provincial Government, the latter doing its full share in the building of the bridges which, although they do not technically connect the two provinces, would be practically, so far as the highway is concerned, interprovincial bridges, because to get from Ontario to Quebec along the St. Lawrence, one has to cross those two stretches of water mentioned by the hon. member for Rouville. When the time comes for the bridges to be built, as it will very shortly, I think the Minister of Public Works will see that it will be necessary for him to take the matter up as a separate project, no matter whether it be by a Highways Bill or not.

Mr. ROGERS: What my hon. friend has suggested is exactly what was provided for by the Highways Bill, because the Minister of Railways, in whose department the matter was, said that he could not expend a dollar of the money allotted to a province under that Bill without the approval of that province, and I am sure the Government of the province of Quebec, recognizing the importance of the bridges named, would be very glad to give consideration and assistance in every way possible to the carrying out of the construction of those bridges. If I remember aright, the amount which was to be given to the province of Quebec was a pretty large sum and it would probably more than cover the cost of building the bridges as suggested by the hon. member for Rouville. However, this is probably ancient history and I do not think anything can be done in the meantime.

Mr. LEMIEUX: In the meantime, would not my hon. friend study that feature of the scheme as to whether or not the two railway companies could be induced to consider the feasibility of utilizing their respective bridges for pedestrians? I quite realize that any bridge to be built there would cost an enormous amount of money, and I do not see why the two companies could not come to terms with the Ottawa Government and possibly also with the Quebec Government and make arrangements to bring this matter to a head. I can assure my hon. friend that the question has become an acute one not only for the county of Jacques Cartier but for the whole island of Montreal. As my hon. friend from South Renfrew has stated, although the river at the point where I suggest the bridge should be built is exclusively within the boundaries of the province of Quebec, yet it is the meeting point of Ontario and Quebec. I am quite sure that the people of Ontario would appreciate the construction of the bridge or the adaptation of the two railway bridges for highway purposes just as much as the people of Quebec. I would urge my hon. friend to consult the two railway companies as to whether they would not make an arrangement.

Mr. ROGERS: I may say, that is now being done. The hon. member for Jacques Cartier (Mr. Descarries) had it up some time ago, and he is taking it up with the railway companies. I expressed my willingness to join him and see what can be done in that connection.

Lachine wharf, $11,000.

Mr. MARCIL: Will that be built this year?

Mr. ROGERS: No.

At six o'clock the committee took recess.

The committee resumed at eight o'clock.

Quebec—Laprairie—protection works, $80,000.

Mr. LANCTOT: Before this item is voted I would like to say a few words regarding the protection wall at Laprairie. I may say, in the first place, that I am in favour of the expenditure. Will the minister be good enough to tell this committee the amount

of money paid to date to the contractors, Messrs. Duranceau and Poupart? Is there any money due to those contractors; if so, how much? I would like to know, also, the cost of the plank road built last spring, the amount of money paid to Arthur Dufort, the foreman, and the amount paid to Messrs. Viau and Lafrançois. These men were kept on the temporary road to replace the broken planks. I would like to know, also, the amount paid to Duranceau and Poupart to put up the bridge on the St. James river last spring. Did the hon. minister receive tender from Messrs. St. George and Carney, of Montreal, for the making of a macadam road instead of a plank road during last April or May? Is it the intention of the minister to proceed with this work this coming season? If so, will it be by day work or by contract? I assure my hon. friend that if he gives that work to the same contractors good results will not be obtained, because they are not qualified for such work. As I told my hon. friend before in this House, Mr. Duranceau is a tinsmith and Mr. Poupart is a retired farmer. Neither of them know anything about this kind of work. I would suggest to my hon. friend the name of a good contractor in my riding, Mr. Chagnon, who has been connected with concrete work in Montreal for the last forty years, and is well qualified to do that kind of work. I met him last week in the town of Laprairie, and he told me that he would enlarge the dyke by ten feet, fill these ten feet with earth, make a six-mile concrete wall and a good macadam road for the sum of $80,000. Will the minister tell the committee whether out of this $80,000 which he asks to be voted any money is to be paid for amounts due to the contractor? I hope the minister will see his way clear to get away from politics in connection with this work. I do not blame the minister as much as I do the member who has had the patronage in the county of Laprairie for the last four years. The minister knows well that Mr. Rainboth of Aylmer, who is a well qualified engineer, tendered for that work at $70,000.51. The tender of the other men, Duranceau and Poupart, was higher by a couple of thousand dollars. Anyhow, they did not sign the contract at that figure; the contract was given at so much a yard, and the result is that nothing has been done, although the department have expended from $80,000 to $100,000, and this year asks the sum of $80,000 to start the work again. As I have said, I do not blame the minister, but I do blame the one who had the patronage for trying to get votes out of this matter. I suppose he was trying to get that work done during the election. After the Liberal Government went out of power in 1911 five-twelfths of the amount voted, $27,000 was spent, and the balance was spent in the next year. During the election in Quebec a local man had the patronage and one of his supporters in the riding appointed at least twenty men as foremen in connection with this work. Some of them were disappointed because they did not get $3 a day as foremen—that could not pass here in Ottawa. A few received $3 a day, and the others $2. They were idle all day; they did no work at all, and as much money was spent in paying the foremen as was paid to the ones who did the work. I have heard many of my friends say that it was a pity that such a farce should go on in a riding so close to Montreal. I do not want to blame the minister for all that, because he does not know; but if anything of that kind happens again I shall come to Ottawa and tell him what is going on in Laprairie.

Mr. ROGERS: I appreciate the remarks of my hon. friend in respect to the question before the committee. This, as my hon. friend well knows, is a very important work. It is the main highway between New York and Montreal, and other points, the main highway over which all people travel with their automobiles between the United States and Montreal. I must confess that this very important undertaking has not been carried out as I had hoped that it would be and as I certainly believe that it should have been. In my opinion the blame should be attached not so much to the contractors as to the engineers who made faulty plans in connection with the undertaking and who have been dismissed for the mistakes they made in connection with the preparation of these plans. I shall be glad to give my hon. friend all the information that I possibly can. I understand that the amendment asked for in the Estimates is quite sufficient to complete the work and make it a very passable highway, satisfactory to all. The estimated cost of completing the work is as follows: Plans on price of contract, $23,600.46; plans on agreement of temporary road, $850; rebuilding of inner wall, $11,000. (That is the part that gave way through the faulty plan of the engineer, this

causing the difficulty and trouble which arose); erecting the parapet, $23,000; three additional culverts, $5,000; additional inclined roadways, $11,000; extra for asphalted macadam $5,400, a total of $79,850.46. In view of the fact that this dyke is a link of a very important international highway, extensively used by tourists from Canada and the United States, the roadway on top of the dyke cannot be opened to the public until the whole of the work has been completed. This dyke is being built in order to protect the town of Laprairie against heavy annual damages caused by ice shoves and floods, and also to afford better communication with Montreal. These floods have been caused, at least partially, by the construction of different public works which have had the effect of narrowing the flowing section of the St. Lawrence below Laprairie, such as the Victoria bridge abutments and piers, the Mackay guard pier, and the Verdun dyke. The total estimated cost of the work is $158,953. The total amount paid to the contractors up to August 18, 1915 is $56,920. Work on the contract was stopped owing to lack of funds, the vote of $20,000 made last session having been used partly for the construction of a temporary plank road, pending the completion of the contract. The work done during the past fiscal year consisted of the following: (a) 700 feet of the 15-foot road bed was laid and 2,226 tons of crushed stone delivered on the site of the work. Inspector, A. Dufort, at $3 per day. (b) A macadamized roadway, 6,500 feet long, was constructed in order to temporarily accommodate the traffic during the spring season. Stones, already delivered, were spread on the work and covered with crushed stone. Foreman, Roch Lefebvre, at $3 per day. (c) Construction of a plank roadway alongside the dyke for a length of 6,500 feet. This was necessary in order to accommodate the traffic during the construction of the dyke. An Order in Council was passed, December 4, 1913, granting authority to accept the tender of Messrs. Alphonse Duranceau and Noe Poupart, of Laprairie, Que., at unit prices (entailing an approximate expenditure of $72,678.73) for the construction of a protection dyke at Laprairie, Que. Contract No. 9,909, amount $72,678.73 (schedule of prices); contractors, Duranceau, A., and Poupart, Noe, Laprairie, Que., date of contract, January 21, 1914; date of completion, 18 months from 6th December, 1913. The Department of Public Works decided to commence the construction of this work with the last 1,400 feet (the whole work comprising 8,000 feet) and to have this length of the dyke completed within six weeks from the notification of the acceptance of the tender, the intention being to connect, this fall, the provincial road from where it ends along the route of the King Edward highway, as laid out, with the point where it joins the Old Road. This temporary roadway was necessary to accommodate the traffic during the construction of the dyke which was being built on the existing roadway.

District Engineer Michaud, in a report dated 18th April, 1913, states as follows:

In 1910, the Government decided that some steps should be taken to improve these conditions, and the sum of $10,000 was expended to raise the shore road six feet above its ordinary level from the town of Laprairie towards St. Lambert and use this dyke as a roadway. 3,000 feet of this was filled with earth and riprapped on the shore slope during the year 1910-11.

During the fiscal years 1911-12 and 1912-13, the work was continued and mostly completed for a distance of 7,900 feet to an average height of 13 feet above extreme low water. The shore side of the dyke was partly riprapped and cemented.

The flood of the spring 1913, which was 4 feet above this protection dyke, scored out the side slope which had not been riprapped, and damaged the road bed generally to a great extent.

In order to ensure a greater protection and build a more permanent dyke which must necessarily be the highway out of the town of Laprairie during the flood period, and a link of the King Edward VII Road from Rousse's Point to Montreal, which is undertaken by the Provincial Government with the aid of interested municipalities, the work already performed should be considerably extended. It will be necessary to raise the dyke 4 feet above its present level, macadamize the top on a width of 24 feet riprap and cement both slopes in order to secure permanency of all surfaces exposed to flood.

All the low shore exposed on the Laprairie basin for a length of 7,900 feet would be permanently protected, and free access in all times of the year would be provided for the town.

The Victoria bridge and the construction of the guard pier, as well as the execution of large works in the harbour has considerably narrowed the channel of the St. Lawrence river running past the island of Montreal.

The effect of this has been to heap up the ice at Laprairie and along the banks of the south shore of the river, and cause the water to overflow, resulting in great damage.

This is the engineer's report. I think I have covered the points about which my hon. friend has asked. If not I shall be glad to supply him with any further information which he regards as desirable or necessary. It is unfortunate that the work has not been as successful as it should have been and as I should have liked to have seen it, but there have been great

difficulties, due first of all largely to the fault of the engineer who made the original plans in a faulty manner, for which he suffered the penalty of dismissal. I cannot find any ground for complaint against the contractors, who have endeavoured to fill their contract. If my hon. friend has any information to the contrary I shall be glad to have it, because I recognize the importance of the work and the necessity of having it completed at the earliest possible moment. We found it necessary, owing to the delay, to erect a temporary roadway to accommodate the traffic during the past year; and I am glad to know that the temporary roadway so made was satisfactory. The amount now placed in the Estimates is supposed to complete the work, and I do not anticipate any further difficulty. We expect that the road so completed will give satisfaction to my hon. friend and to all the people of that locality. As I understand, many municipalities are directly interested in the success of this work. In addition to that, the fact that it is an international highway, necessary to accommodate the traffic between the cities in the United States and the city of Montreal, renders its successful completion a matter of great national importance.

Mr. LANCTOT: The minister has not given the amount paid to Messrs. Duranceau and Poupart to erect the bridge last year for the temporary roadway. I have been informed in this House that some $3,000 or $4,000 was paid for this work. I presume that something was paid to the firm for erecting the bridge in 1915. I also asked the minister how much money was paid to Messrs. Lefrancois & Viau. These men were working on the plank road all summer. I do not suppose they were doing that for their pleasure; they were receiving something, and I suppose they were employees of the Department of Public Works.

Mr. ROGERS: Mr. Lefrançois was paid $2 a day. I have not the number of days.

Mr. LANCTOT: And what about Mr. Viau.

Mr. ROGERS: I have no mention of that name.

Mr. LANCTOT: I know that both of these men were employed on that road, as I have passed there many times on my way to Montreal. I do not say that they were working all the time, but they were supposed to be working and I have no doubt they received their salaries. Did the minister receive a tender from Messrs. St. George and Carney for the building of a macadamized road instead of a plank road, during April or May last? I was told that St. George and Carney sent in a tender of about $9,000 to make a macadamized road instead of a plank road. It would have been a greater benefit to the people of the locality to have a macadamized road instead of a plank road, because a plank road will not last very long. I am sure it will not last throughout this coming summer. The minister did not tell the committee whether it is his intention to start the work in May.

Mr. ROGERS: As soon as it is possible to start the work we will certainly do so, and we will have it completed as early as possible. That is what we are asking the vote for.

Mr. LANCTOT: If the work does not go on this summer, the people will say it is an election road.

Mr. ROGERS: They cannot say that; we have already spent too much money on it.

Mr. LANCTOT: This work has been going on all the time just for election purposes. The minister said it was the fault of the engineer. That may be, but the department has a foreman there who was appointed by the Government, a man named Dufort, who is paid $3 per day. Was he doing his duty in not reporting to Ottawa how the work was going on? What is the use of having a foreman if he does not do his duty? When the Government took office, Mr. Michaud was the local engineer, and the Tories in Montreal went to his office and told him that they would put him out. He told me so himself. They told him that the Tories were now the masters in Montreal. I do not say that Mr. Michaud did what he should have done. Mr. Michaud should have done his duty first, and then they could have put him out next day. That would have seemed right to me, but the politicians went to Mr. Michaud and told him that he was no longer master in the district of Montreal. The minister states that the local engineer did not prepare his plans. He did prepare his plans, but the contractors did not follow the plans, and Mr. Michaud could not make them do the work according to the plans. The foreman was there, and he should have telegraphed to Ottawa and told the depart-

ment what was going on; but he did not do so. The department is paying a foreman who did not do his duty.

Mr. ROGERS: I confess that I have not very much fault to find with what my hon. friend has said. Mr. Michaud, the late engineer, has now passed away, and I do not care to discuss in detail the circumstances surrounding the difficulty which arose in connection with this matter. It is true that we have a foreman there, but, as my hon. friend will understand, a foreman has very little to say, as against the engineer, who prepares the plans; he is simply there to see that the work is carried out.

Mr. LANCTOT: When the foreman is there, and a man puts a stone 12 inches on one side, and 6 inches on the other, and puts some earth in to fill it up, he should know very well that the stone will not stand. That was done at Laprairie; I saw it myself.

Mr. ROGERS: I am bound to accept the statement of my hon. friend. If he saw that done it was a very bad piece of work on the part of the foreman, who should be condemned.

Mr. LANCTOT: The then local member, Mr. Patenaude, saw it too.

Mr. ROGERS: I will call him to account for it at once.

Mr. MARCIL: How much is the work going to cost altogether?

Mr. ROGERS: About $150,000. We will have it completed this summer. I understand that we are going to have a magnificent job when it is completed, so far as the information we have at present goes to show. It is a very important work, and it is very unfortunate that there was fault in the original plan. We have had difficulty with the work all the way through. However, the fault is now corrected, and the work will be completed at the earliest possible date. We are going to use the temporary road until such time as the work is completed. The road we built last year has proved as satisfactory as could be expected. That temporary road is in good shape, I understand, this spring, and will be suitable for the traffic until such time as we have the work completed, which, I trust, will be before very long. We are going to put on a special force to hurry the work along.

[Mr. Lanctot.]

Mr. MARCIL: I am glad that the minister realizes the importance of this work, because, as a constant reader of the Montreal newspapers, I have heard more about that road during the past two years than about any other work in Quebec. There is a large amount of American and Canadian travel that way, and it is notorious that the road near Laprairie is—I do not know what parliamentary term I could use to describe it. The road there is a connecting link between the city of Montreal and New York, and the sooner the minister can complete the job the better. He can do no more useful work around Montreal than to finish it as quickly as possible.

Mr. GRAHAM: This piece of road is important in a good many ways. It is not only important; it is notorious. It is not only important to the city of Montreal, but its completion will be very important to all the towns and cities in the province of Quebec owing to the fact that the Provincial Government is pushing along a system of highways in that province that is reaching to the city of Quebec. A great many tourists by automobile will come not only from New York, but from various cities via Montreal, and will finally land in Quebec as the end of their tour. I have discussed this matter with a good many New York people who shied off from Montreal during the last couple of years on account of this piece of road. They would go as far as Saratoga and then turn into the mountains to Lake Placid, and down the other way and back to New York, instead of coming to Montreal, though many of them left home with the idea of visiting Montreal. They were warned not to tackle this piece of road, because they would have to get horses to haul them out. I understand that a good many of the farmers in that district did a good summer's work last year in hauling out automobiles. I think the Automobile Association of Montreal waited on the Government once or twice in regard to the matter. I know that some of the officials have abused me about this road. Once or twice I almost concluded that I was still in office. Last year I think I discussed the matter on this item for a few moments. One thing appeared to me to be very strange, if true. I was told by an official of the Automobile Association that the Quebec Government had offered their road-making machinery to hurry the work along, but that this offer was declined and the construction of the road is costing

a great deal more in consequence. I was told that on several occasions in Montreal, and the minister will know whether the statement is correct. If it is it would show that there has been a serious oversight which will prove rather costly and retard the completion of the road. I think it is safe to say that the city of Montreal, on account of the state of this road, has lost within the last two years—the temporary road helped out a little last year—not thousands, but hundreds of thousands of dollars in tourist traffic. Tourists would set out with Montreal as their objective, but would turn aside when they learned about this road. I am sure that anything the minister can do to hurry up the completion of this road will be welcomed by the people not only of the city of Montreal, but all along the line east of Montreal right through the city of Quebec. Some of our people down there go south for their holidays, but not so many, I imagine, as come from the other side to visit Montreal and other Canadian cities.

Mr. ROGERS: This is the first I ever heard of the offer which my hon. friend states was made by the Quebec Government. It may have been made to the engineers, but it never reached the department to my knowledge.

Mr. GRAHAM: The Automobile Association of Montreal is my informant.

Mr. ROGERS: I never heard of it before. This road along the bank of the St. Lawrence river has been very difficult to construct, the chief difficulty being with the water washing out the walls. I do not at all agree with what my hon. friend has said about the city of Montreal losing so much money, for the temporary road we built last year was entirely satisfactory.

Mr. GRAHAM: I was speaking of the year before.

Mr. ROGERS: The year before was when we started the work, and of course we could not be expected to finish it right away.

Mr. GRAHAM: Something or other went wrong and delayed the work.

Mr. ROGERS: The temporary road we put in last year was entirely satisfactory. I know that the Montreal Automobile Association was satisfied with it. I admit that prior to last year we had difficulties with the road, but the temporary road will be quite able to take care of the traffic this year until the main road is completed; and we will have the road completed as rapidly as possible. I will undertake to put a special engineer in charge of the work to see that it is done in the best possible manner.

Mr. DECARRIES: (Translation.) Mr. Chairman, I had many occasions to pass along that road which has acquired quite a notoriety, and judging from what I saw personally, the reason for the delay in completing the work is not due to a lack of equipment, as stated by my hon. friend from Laprairie, but, as mentioned by the Minister of Public Works, to the plans being inappropriate. As I took frequent trips along there in automobile, I noticed that this artificial highway, which is at least 15 feet high, is really a stone wall built with stones gathered from all over and set one above the other. The walls were perpendicular, the space between being filled up with earth and all kinds of rubble. With the spring thaw and freshets, those stones of course fell on each side and the road collapsed. The Government is not to blame; a plan had been drawn, which the minister expected to be satisfactory, as it had been prepared by an engineer of some repute. The plans were carried out, with disastrous results. I also would ask the Government to complete this work.

Mr. MARCIL: (Translation.) Will it be completed on the same plans as the old structure?

Mr. DECARRIES: (Translation.) I do not think so; experience has shown that the walls should not be made perpendicular, as they would certainly crumple down. The minister stated that the road would be built along lines approved of by competent engineers, and it is absolutely necessary to have it completed at once.

My hon. friend from Laprairie wished to know whether it would not have been better to build a concrete road along that highway? But why a concrete road?

M. LANCTOT: (Translation.) I never said anything of the kind.

Mr. DECARRIES: (Translation.) I should like my hon. friend to repeat what he said.

Mr. LANCTOT: (Translation.) I said that as a protection for the elevated road, a concrete riprap ought to be built.

Mr. DECARRIES: (Translation.) I I understood you to say that instead of a wooden road, you would rather see a macadamized road.

Mr. LANCTOT: (Translation.) Yes, as a temporary road alongside.

Mr. DESCARRIES: Why then build a concrete road alongside the elevated road which will be soon completed and will offer a splendid highway? Why a concrete road at the foot of the other one? It would be a perfectly useless and unjustifiable expenditure. As pointed out by the minister, the wooden road is excellent; I frequently drove a car along the road and I say that it is in good shape for the present. Of course it will not last for years and years; the wood will rot and the road will become impracticable, but while the wall is being erected that wooden road is all right. All the autos drive along as fast as they wish, sometimes speeding faster than the law will allow.

Hon. Mr. MARCIL: How long is the road?

Mr. DESCARRIES: I do not exactly know, but it begins a little to the east of St. Lambert and runs close to Laprairie. It must be about one mile long; but the member for Laprairie is better acquainted with the road than I am. At any rate what I am saying is for the purpose of showing that the fault does not lie with the Government. Quite otherwise; the Government by that work is giving the people of Montreal and surrounding counties, and to the travelling community of the province a road that will take them from Montreal right across the different parishes of the county of Laprairie even to the United States with the greatest comfort. The road, which is known as the King Edward VII Road is quite a beautiful highway, and becomes part of the road system which the province of Quebec is building, and I think the county of Laprairie has been particularly favoured by the Government in getting from them that bit of road.

For my part, as member for the county of Jacques Cartier, I should gladly see the Government spend some hundred thousand dollars in my county to open up new communications between the counties of Jacques Cartier and Vaudreuil either by building a road between the bridges or one connected with the Canadian Pacific and Grand Trunk bridges that cross the river between Sainte Anne and Vaudreuil. Here again there is room for improvement, and I hope that before long the Government will see its way to granting my request and give the necessary help towards the construction of the road, as it is the only point where communication can be established between the island of Montreal and the mainland, to cross from the province of Quebec to Upper Canada. Another road could be built between Lachine and Caughnawaga.

Mr. GRAHAM (Text): You were not here this afternoon.

Mr. DECARRIES: (Translation.) A bridge could be built in conjunction with the Canadian Pacific bridge, as was done for rigs along Victoria bridge.

At any rate, I hope to have an opportunity before the end of the session, to ask the Government some grant for those works, but, in the meantime, I congratulate the Government on what they have done for the Laprairie-Napierville road.

Mr. LANCTOT: (Translation.) I see that the hon member for Jacques-Cartier did not understand the gist of my remarks. He is inclined to enconomy. Economy is, indeed, a good thing and I approve him, but he made a mistake in stating that a concrete road would be too expensive. I never spoke of a concrete road but of a macadamized road, with broken stone, such as are built in the county of Laprairie. Is the member for Jacques Cartier aware that the wooden road in question costs at least fifteen to sixteen thousand dollars, and that a macadamized road would not have cost more than nine thousand dollars?

Now, the member for Jacques Cartier—although a lawyer—ought to know that a macadamized road lasts a great deal longer than a wooden road.

Mr. DECARRIES: (Translation.) Will the hon. member allow me to say that the wooden road is but a temporary makeshift and that if a macadamized road were built it would make it a permanent road in a way.

Mr. LANCTOT: (Translation.) Evidently the hon. member is bound not to understand me. He ought to know that an elevated road is always dangerous and that when the elevated road has been built, and we have the opportunity of using the lower road back and forth, to prevent meeting, it will be better than if we must all use the higher road. The hon. member might come into my county, and he will be made to understand by the people of Laprairie that what I say is nothing but common sense and that it would be folly to spend a whole lot for a wooden road which will have to be replaced next fall, unless the minister defers building the protecting wall until after next summer.

I do not know that I am mistaken, but I heard my hon. friend the Minister of Public Works say, in answer to my hon. friend from South Renfrew (Mr. Graham), that he never had any communication from Quebec about that road. It happens that I have under my hand copies of some correspondence which passed between Mr. Caron and the Minister of Public Works himself, and I will read it to the House.

Mr. GRAHAM: Who is Mr. Caron?

Mr. LANCTOT: Minister of Highways of the province of Quebec, now Minister of Agriculture. This is the correspondence:

Quebec, 21st October, 1913.

The Hon. Robert Rogers,
Minister of Public Works,
Ottawa.

Dear Sir,

Will you let me call your attention to the fact that there is still a large amount of work to be done, to complete that portion of the King Edward VII road under the control of your department in the parish of Laprairie.

No work of any importance has been done this summer and there is no probability that the road will be completed for the beginning of the summer of 1914.

It is not my purpose to reflect in any manner on the reasons which have prevented the work to proceed during the last summer. I wish only to state that the provincial part of the road is very near completion now and will probably be finished in two weeks time if we have fair weather.

The provincial government has spent a large sum upon this road and we are very anxious to have it completed for the beginning of next year, in order to accommodate the large tourist travel which will come from the border.

I thought that perhaps you would welcome an offer from my department to complete the road next spring. We have five of our outfits on the ground. Our contractor is there also with a large plant.

I think we could finish the embankment this fall and easily complete your part of the road for the end of June next if your department is willing to enter into an agreement as to the cost with my own department.

I am sure that you sincerely desire to complete this road as soon as possible and we are ready ourselves to co-operate with your department to attain this end if you care to consider our proposition.

Truly yours,

(Sgd) Jos. Ed. Caron.

Office of the Minister of Public Works of Canada, Ottawa,

October 27, 1913.

My dear sir,

I have your letter of the 21st instant in reference to the construction of the King Edward VII road in the parish of Laprairie, and in reply to the same I might state that the department called for tenders for this work recently and that a recommendation is now before council to award the contract. The contractor undertakes to perform the work in question this fall. Were it not that the proceedings had reached this stage I would have been pleased to take up with your department the work in question.

Your sincerely,

(Sgd) R. Rogers.

Hon. Joseph D. Caron,
Quebec, P.Q.

I would like to know if the minister remembers having received that letter and having sent that reply.

Mr. ROGERS: I have no recollection of the correspondence which my hon. friend has just read, but which of course, I quite accept as being correct. The correspondence is not in line with what was said by my hon. friend from South Renfrew, that an offer was received from the Quebec Government to supply the plant necessary for the carrying out of the work, which plant I understood him to say was offered while the work was going on. The correspondence which my hon. friend has read speaks for itself. The point in this particular matter was this: The Quebec Government were building the King Edward VII highway, and it was necessary for the Dominion Government to undertake this link at a point on the St. Lawrence where we have encountered a great deal of trouble owing to ice-jams and flooding which has caused the delay. My hon. friend a moment ago spoke of the macadamized road and suggested that we should have a macadamized temporary road instead of a plank road, and that we should continue them both. I do not see the necessity of having a double road, and I am glad to see that my hon. friend from Jacques Cartier (Mr. Descarries) bears out what I stated this evening, that the temporary road was entirely satisfactory during the past year to every one who had occasion to use it. Now, my hon. friend from Laprairie-Napierville states that this temporary plank road has cost something like $15,000. I am afraid he is in error because the contract was let for $4,000.

Mr. LANCTOT: Not $4,000 for the plank road, but for the road opened in 1914. The plank road built last spring cost more than $4,000, I am sure.

Mr. ROGERS: The figures I have before me show that a contract was let for a temporary road for $4,000, and we require an additional $850.

Mr. LANCTOT: The first contract was let at $4,000 for the building of a temporary road, in 1914; and the $850 is to pay Duranceau & Noe Poupart for the building of

a bridge last spring, if I understand correctly. But the plank road was made by day work, not by contract; and I can assure my hon. friend that it cost over $15,000. Now, while I am on my feet I might as well answer the minister. The money spent by the Department of Public Works, or by any other department, is spent for the benefit of the people and not merely to please the department. If you build a plank road for $15,000, you have a good road for one year; but you can build a macadamized road for $10,000 that would be there for all time. So, it seems to me that, for the good of the people, it would be better to have the macadamized road than the plank road. I am not a lawyer but only a farmer, and I understand things that way. When I spend money I want to get, if possible, something that will last for years and not only for six months. I think it will take a good many lawyers to prove me wrong in that. Let any of these hon. gentlemen come to my riding and discuss this matter with me—the Minister of Inland Revenue (Mr. Patenaude) for one.

Mr. ROGERS: The hon. gentleman will remember that there was a very pressing necessity for immediate arrangements to be made for the passage of traffic: the public were suffering for the want of the connection between Montreal and the United States and elsewhere. To construct a macadamized road would have taken a long time, while we were able to lay down the plank road very quickly and so supply the missing link. That is the reason that a temporary plank road was made instead of a macadamized road. My hon. friend may be correct in his figures of cost; I am not going to dispute what he says, for I have not the exact figures before me.

Mr. MARCIL: Was the road made by day work?

Mr. ROGERS: Yes.

Mr. MARCIL: Why not by contract?

Mr. ROGERS: We were in too big a hurry; we needed a road in a very short time. I am not sure of the exact cost, but I will supply it to my hon. friend if he desires. Now that the plank road has served its purpose to the entire satisfaction of the public, and will serve until the permanent highway is completed, there is no reason to have two roads as one is quite sufficient for the traffic. I think my hon. friend will agree with me.

[Mr. Lanctot.]

Mr. LANCTOT: I have just a few words to add to what has already been said. The minister says it would take a longer time to build a macadamized road than a plank road. Of course—two weeks more. But is not he aware that we had been in the mud for three years previous to the building of the plank road? And does not he know that in our province as the fall season comes on even a dirt road is pretty good and we get along all right? St. George & Carney told me that this six thousand feet of road could be built in five weeks. Well, suppose you could build a plank road in two weeks. Then we should have to wait three weeks more to have a road that would be good for all time. Is there a man in this House who will tell me that, if the interest of the people is to be the ruling consideration, it would not have been better to make that permanent road?

Mr. DESCARRIES: Who is the owner of the land on which that temporary road is built?

Mr. LANCTOT: I understand that it is owned by the Beaudry estate and that Mr. Leblanc, Lieutenant-Governor of Quebec, has an interest in it.

Mr. DESCARRIES: If you build a permanent road you will be obliged to purchase that land.

Mr. LANCTOT: The city of Laprairie could expropriate that little strip of property and build a road that would be good for all time; don't let that worry you.

Malbaie—to complete pier, $17,000.

Mr. GRAHAM: It appears that $17,000 was voted last year and this is
9 p.m. a revote of $17,000. Yet it is said that this is "to complete."

Mr. ROGERS: Yes, that is a mistake. This work has been completed, and I move that the item be struck out.

Motion agreed to and item struck out.

Murray Bay—to complete wharf improvements, $4,200.

Mr GRAHAM: To what extent does the Department of Marine and Fisheries repair wharves? What is their limit?

Mr. ROGER: Their limit is from $50 to $100.

North Timiscaming—wharf, $10,000.

Mr. GRAHAM: This work stands?

Mr. ROGERS: Yes.

Mr. GRAHAM: No work has been done on this wharf?

Mr. ROGERS: Nothing.

Mr. MARCIL: I heard some very serious opposition on the part of the Conservative party some years ago against building Dominion wharves on inland waters. Has the policy of the department been changed in that respect?

Mr. ROGERS: This wharf is at the head of the lake, and appears to be necessary.

Mr. MARCIL: I do not say that it is not necessary, but the Conservative party when in opposition opposed the building of Dominion wharves in inland waters, contending that these were purely provincial works. Is it the policy of the present Administration to build Dominion wharves in inland waters?

Mr. ROGERS: I am afraid I would not be an authority on that question. I have never been in opposition, and I hope never to be.

Mr. GRAHAM: That is the best confirmation we have had of the rumour that my hon. friend is soon to be exalted to another position. I will not object if he is, on his own account. The question raised by the hon. member for Bonaventure is one that created a good deal of discussion in the House at one time. After all, we have got to the point where we do shut our eyes perhaps, to certain niceties as to the line of demarcation between provincial and federal authority. Navigation to a large extent is under the Federal authority. Timiskaming and its chain of lakes are very important waters, connecting with the Ottawa river by various outlets. On behalf of the Opposition and the late Government, I am glad to see that the present Minister of Public Works eschews the works of his predecessors when they were in opposition. I maintained then, as I do now, that there are circumstances and conditions under which it would be no infringement of provincial prerogative for the Federal authority to step in and build on these larger lakes, particularly where navigation is of an important character and of no small dimensions, wharves for steamers of a considerable size, quite a number of which operate during the season of navigation.

Mr. MARCIL: I may say that that was the policy adopted by Mr. Tarte when he was Minister of Public Works; he started to build these wharves on lake Timiskamin. His policy at that time was stoutly condemned by members of the Conservative party. I am glad to see that the present Minister of Public Works has adopted a more progressive and enlightened policy in that regard.

Mr. ROGERS: I am pleased to know that I am a follower of the late Mr. Tarte in this respect. If this was his policy I am glad to subscribe to it, recognizing his progressive work as Minister of Public Works and the manner in which he contributed to the development of the various public works in connection with the department over which he presided.

Mr. GRAHAM: Montreal papers please copy.

Petite Rivière Est—breakwater, $19,000.

Mr. MARCIL: Has any work been done in connection with this breakwater?

Mr. ROGERS: No.

Mr. MARCIL: Will anything be done this year?

Mr. ROGERS: No, I do not expect that anything will be done this year.

Rimouski—harbour improvements, $150,000.

Mr. MARCIL: What has been done here?

Mr. ROGERS: This is undoubtedly a very important work. I will read the statement for my hon. friend:

This amount of $150,000 is required to continue the harbour improvements at Rimouski. The improvements consist of a timber structure filled with stone, built parallel to the western and northern face of the present wharf, the whole length of the cribwork aggregating 1,458 feet, to be seated in a trench previously dredged to a depth of 25 feet below low water the dredging of a tidal basin 1,100 feet by 600 feet to a depth 25 feet below low water; and the filling of the space between the old and new works. Estimated cost, $350,000. This work will promote the development of trade in the district. Several important saw, pulp, and other mills are greatly in need of these improvements to facilitate their shipping trade. These improvements will also procure deep water accommodation and shelter for vessels frequenting the harbour and will make Rimouski a very good port of refuge, being protected by St. Barnabe Island and by the wharf. The work was requested by the Board of Trade of Rimouski in a resolution dated February, 1912.

Expenditure 1914-15, on contract No. 10,016	$ 55,781 29
Expenditure 1914-15, inspection, etc	2,106 84
Probable expenditure 1915-16	111,000 00

Total probable expenditure up to March 31, 1916.. .. ..$178,888 13

Appropriation, 1915-16, $50,000. The appropriation for 1915-16 will be over expended by $60,000.

Probable Cost of Work.

Amount of contract No. 10,016..	$355,445 50
Probable expenditure to March 31, 1916..	178,888 13
	$176,556 37
Amount asked for to complete 1916-1917..	250,000 00
Total probable cost..	$426,556 37

The work done during the present fiscal year consisted of the sinking of 600 feet of caissons. The dredging of the caisson berth has been completed. The superstructure of 300 feet of the caisson sunk last year has been commenced. Inspector, A. Pineau, $3.50 a day, for looking after the work.

Mr. MARCIL: Do I understand it is contemplated to spend $350,000 at Rimouski?

Mr. ROGERS: That is the total amount.

Mr. MARCIL: To increase the wharf and make a tidal basin?

Mr. ROGERS: Yes.

Mr. MARCIL: Is there anything to justify an expenditure of that kind at the present moment—the minister cannot have been there lately.

Mr. ROGERS: No, I have not. This improvement at Rimouski has been under way for some time. Rimouski is an important point for the landing of ships. My hon. friend knows that some of the largest ocean liners frequently land at Rimouski, and there has been general complaint that we did not have the necessary wharf accommodation there. This work has been under way now for about two years, and it will take some time to complete it. It has been discussed in the House several times, and in my opinion very few works of the kind are more necessary than the building of the harbour at Rimouski.

Mr. MARCIL: Is Father Point to be abandoned altogether? No passenger boats ever stop at Rimouski. What depth is sought to be obtained there?

Mr. ROGERS: A depth of 25 feet at low water, and the filling in of the space between the old and the new work.

Mr. MARCIL: What was the tonnage at Rimouski last year and the year before?

[Mr. Rogers.]

Mr. ROGERS: As far back as 1911 thirty-two ocean vessels, of an aggregate tonnage of 56,757 tons, took their cargoes at Rimouski, although the depth of water at low tide was only fourteen feet. That has been the difficulty at Rimouski, and therefore it did not get the trade to which it was entitled. Ocean liners represented that as the depth of water was only fourteen feet it was impossible for them to go there. It is expected that after the completion of this work the trade of Rimouski will develop very rapidly, and that within a very short time it will probably more than double.

Mr. MARCIL: What becomes of Father Point?

Mr. ROGERS: We are not doing anything at Father Point in connection with this scheme. It is just left in its present condition.

Mr. MARCIL: Is it intended that Rimouski is to become a port to rival Quebec or Montreal, or is it to be a local port of call? There is no business at Rimouski to justify an expenditure of this kind. No sane man in the province of Quebec would attempt to justify that.

Mr. ROGERS: My hon. friend will understand that there is a very large lumber business there, and, in addition, Rimouski has always been used as the landing point for the ocean mails.

Mr. MARCIL: The steamers do not go to the wharf.

Mr. ROGERS: They could not go to the wharf with a depth of fourteen feet.

Mr. MARCIL: It would be a great loss of time for a steamer to call at the wharf.

Mr. ROGERS: Now that we are affording twenty-five feet of water at low water, the ships will be able to land, and it will add to the convenience of the people not only in the Rimouski district, but all over Canada, by giving them their mails twenty-four hours or more sooner than by the present arrangement.

Mr. MARCIL: I am glad the minister is satisfied with his present scheme, because I do not see anything to justify it. No steamer going from Quebec or Montreal wants to waste time going into Rimouski. They simply stay in the offing and drop the mails, and pick up their pilots at Father Point. As to the lumber trade, 25 feet of water is more than is required for any sailing vessel or any lumber steamer

going in there. I think the minister is going altogether beyond the requirements. I remember as a boy, in the days of Sir Hector Langevin, that Rimouski was the favourite spending spot in the province of Quebec. More money has been wasted in the harbour of Rimouski, to my knowledge, than in any other port in Quebec, and I do not see anything to justify the present expenditure. How much is to be spent during the present year?

Mr. ROGERS: We will probably spend the amount of the estimate, $150,000.

Mr. MARCIL: There is to be no economy at Rimouski this year?

Mr. ROGERS: I am afraid my hon. friend really does not appreciate the importance of the work.

Mr. MARCIL: Not to that extent.

Mr. ROGERS: I am afraid he does not appreciate the importance of the work to the entire people of Canada, who will get their mail from 24 to 36 hours earlier than they would if this work were not carried out. It is a very important piece of work from that point of view, if from no other. Then, too, passengers going to Europe can take their ship at Rimouski 24 hours later than they otherwise could. It is going to be of the greatest possible convenience to the people of Canada, and it has been strongly pressed on us and is considered as a necessary work. It is true that, in the past, ocean liners could not land at Rimouski and had to pick up their pilots at Father Point, and therefore the port of Rimouski has been neglected to that extent. This item is in the Estimates for the very purpose of remedying that condition.

Mr. MARCIL: Has the Marine Association of Montreal, or any of the large shipping companies, asked that work of this kind be done?

Mr. ROGERS: There has been an expressed desire on the part of everybody I have discussed the matter with for improvements there. They are regarded as a very pressing necessity.

Mr. VERVILLE: Did I understand the minister to say that the depth at low water would be 25 feet?

Mr. ROGERS: Yes.

Mr. VERVILLE: How will it be possible for a steamer carrying mail and freight to land at that wharf with a depth of only 25 feet?

Mr. ROGERS: That is at low water.

Mr. VERVILLE: I understand that, but suppose that a ship gets in at low water; how will it be able to draw up at the wharf with a depth of only 25 feet of water?

Mr. ROGERS: There are many ships that do not draw 25 feet of water.

Mr. VERVILLE: Not many mail ships.

Mr. HUGHES: The minister knows that every ship must have two or three feet of water more than her draught before she can move.

Mr. ROGERS: From 19 to 20 feet is what they usually draw.

Mr. HUGHES: A ship cannot be steered unless she has a few feet of water more than her draught.

Mr. ROGERS: If 25 feet is not deep enough we will go deeper.

Mr. MARCIL: As the result of the accident to the Empress of Ireland, what is the rule in regard to the calling of ocean steamers at Rimouski? Do the new rules not keep away those steamers from Rimouski?

Mr. ROGERS: That question can be answered by the Marine Department. I am not familiar with the rules and regulations as to landing; my business is to supply a wharf to permit of that landing, and that is what I propose to do at Rimouski, believing it to be in the public interest.

Mr. H. BOULAY: (Translation.) Mr. Chairman, I wonder whether my hon. friend from Bonaventure (Mr. Marcil) has grasped the question. I fail to see on what grounds he finds exorbitant the expenditure now being made in the harbour of Rimouski; for he knows just as well as I do that it is one of the most important harbours on the lower St. Lawrence.

For many years past, the port of Rimouski has been the centre of an active trade in lumber, and the proposed improvements would enable ships to load right at the wharf. Heretofore, ships had to take on their cargo of lumber three or four miles away from the wharf, which entailed on the shippers the use of lighters. It is known, besides, that the Price Company has several establishments in the counties of Matane and Rimouski, and, every year, several of their

vessels are plying to and from the port of Rimouski. Here is therefore a requirement of the lumber trade. As regards the mail boats, even should these improvements be carried to completion, they would still be unable to reach the Rimouski wharf; to attain that object, some dredging and deepening of the channel would be necessary. Then again, those improvements would allow of vessels such as the Lady Evelyn, for example, with a draft of twenty feet, and which lands the mails and passengers from the transatlantic steamers, to reach the wharf under all conditions of tide. Moreover, the contract was granted previous to the outbreak of the war, and the work must be carried through. My hon. friend from Bonaventure was not so particular, when his friends were in power, about requesting the construction of wharves in his constituency at distances of every four or five miles. He is not in a position to obtain such favours just now, and that explains the bitterness of his remarks.

The people of the county of Rimouski have been neglected for a number of years, and it is only right that this Government should see to it that we are protected and that we get the improvements which the trade has been in need of for so long a time.

Mr. MARCIL: What the hon. member has said confirms what I stated, that this wharf will never be used by any of the ocean steamers, owing to the depth of water. Apparently it is to be used merely by smaller boats for the shipment of timber to the Price mills and other mills situated around Rimouski. It would be purely for local traffic. The only excuse given for this expenditure is that the county of Rimouski was neglected for a long time before the present Government came into power, and it is claimed that now is the time to make up for that neglect. It is also said that the work was started before the war broke out and that it must be completed. There is no other excuse for it. The hon. member for Rimouski took exception to my criticism because of the expenditures that had been made in my constituency. These expenditures were very moderate. The expenditure of $50,000 on this work is only the beginning. If we had time to calculate what has been spent on the harbour at Rimouski since the days of Sir Hector Langevin, this House would be amazed. If the members of this House were to visit Rimouski harbour and see the condition which it is in at low water they would come back convinced that this expenditure is a waste of money. I do not say that nothing should be done at Rimouski; far from it. I think a fair amount of money should be spent for local purposes, but to talk of making Rimouski a rival of Montreal or Quebec, or to imagine that the ocean steamers coming from the other side and intent on reaching Quebec or Montreal as soon as possible to land passengers and freight, will lose time in calling at the wharf at Rimouski, is perfect moonshine. I am surprised that the minister claims that the shipping authorities on the St. Lawrence have asked for any improvements of this kind for ocean liners. I would like to get an authorative statement on that point, because I have always understood that the owners of the great liners object very much to the numerous stops they have to make. They have to stop at Father Point for the pilot, at Rimouski for the mails, and at the Quarantine station to get a clean bill of health. Then they used to stop at Quebec, and by the time they reached Montreal the cost of the trip up the St. Lawrence was so great that they objected to it. The minister is attempting to pass this work for the general advantage of Canada, but it is nothing more than a work of local utility, and I think that, in view of the crisis through which we are passing, the requirements of the port of Rimouski could have been met by a much more moderate expenditure. I do not blame the energy shown by the hon. member for Rimouski. He has been very active in the matter, but all things considered, I think the minister would have done justice to Rimouski by putting in the Estimates one-quarter of the amount which he now asks the committee to vote.

Rivière du Loup, en haut—Lock and dam, improvements, $50,000.

Mr. MARCIL: Will anything be done here?

Mr. ROGERS: No, not this year.

Mr. MARCIL: Is there any general scheme under way? This has also been described as a port of great importance.

Mr. ROGERS: This amount of $50,000 is required for the construction of harbour improvements at Rivière du Loup. The proposed improvements will consist of an approach, pier and dredging; the approach to be constructed first and to form a separate contract. It will consist of two parallel lines of close-faced stone, filled timber cribwork laid 200 feet distant from the shore

outward, 610 feet long on the west and 700 feet long on the east side.

Both lines of cribwork to be 17 feet wide on top, the rear faces to be benched, and the space within to be filled with approved material. The top surface to be concrete macadam, laid on a stone surface.

Mr. MARCIL: Is a channel being dug to let the boats get into the wharf?

Mr. ROGERS: We are dredging alongside the wharf first.

Mr. MARCIL: What is the depth of water there?

Mr. ROGERS: About 20 feet.

Mr. MARCIL: Why is this being done at Rimouski and not at Rivière du Loup?

Mr. ROGERS: We had let the contract for the work at Rimouski before the war broke out. Furthermore, we regard Rimouski as a most important point.

Mr. MARCIL: What trade is intended to be developed at Rivière du Loup, transoceanic or local?

Mr. ROGERS: Largely coal for the Intercolonial, and timber.

Mr. MARCIL: Is Rivière du Loup still a calling place for steamers of the Canadian Steamship Company and other lines plying down the St. Lawrence?

Mr. ROGERS: Some of them call there, putting in at the Intercolonial wharf, as the other is not suitable.

Mr. MARCIL: Do the Government steamers for Murray Bay call there?

Mr. ROGERS: I could not say.

Rivière du Loup en haut—Lock and dam $10,000.

Mr. MARCIL: Is that part of the same work?

Mr. ROGERS: It has nothing to do with it. This is for a lock 400 feet in length by 35 feet wide, on the eastern bank of the Riviere du Loup. A dam with six waterways is to be constructed to regulate the flow of the river.

Mr. MARCIL: No work has been done yet?

Mr. ROGERS: No.

Rivière Laguerre—improvements, $15,000.

Mr. ROGERS: This is in Huntingdon county; nothing has been done on this yet.

Mr. MARCIL: Is the object of the work to prevent the flooding of farms?

Mr. ROGERS: It is to build a canal from Riviere Laguerre through the marshy lands southeast of St. Anicet, south of Port Lewis and west of Ste. Barbe and St. Stanislas.

Mr. MARCIL: This is to prevent the flooding of the farms in the district. The work has been asked for for many years.

Mr. ROGERS: Yes. Nothing has been done yet, and nothing will be done on this work this year.

Mr. MARCIL: This would have been a good place to make an exception in these war times, for the English name of this river is the War river. The farms in this district are flooded every spring, and as the Government are urging the farmers to increased production I think they might very well take some of the money they propose to waste at Rimouski and use it on this work in Huntingdon county, which is one of the most fertile districts in Quebec.

Mr. ROGERS: We are not sentimental enough to be influenced by names.

Mr. MARCIL: This would be a very practicable work, if I may judge from the Trade and Commerce Department pamphlet.

St. Alphonse—addition to wharf, $25,000.

Mr. MARCIL: Has anything been done here?

Mr. ROGERS: Nothing will be done this year.

Ste. Anne des Monts—Landing pier, $35,000.

Mr. GRAHAM: $60,000 seems to have been expended here.

Mr. ROGERS: Yes, and $35,000 is required to complete the construction of the landing pier.

Mr. MARCIL: What is the total cost?

Mr. ROGERS: $115,000.

Mr. MARCIL: What business is expected to be done at Ste. Anne des Monts?

Mr. ROGERS: It is largely lumbering and fishing. There are two mills there, but I could not say just what size they are.

Mr. MARCIL: I would advise the minister to take a trip through that locality this summer, and when he sees the size of Ste. Anne des Monts and the business that is done there—steamers calling there

only about once a fortnight—he will wonder why such an extravagant amount is being spent there in war times, when everything in sight is being taxed, and when next year's Budget will probably be double this year's. If the minister would visit the place I think he would be a little more inclined to be saving next year.

Mr. ROGERS: It is quite a good sized place, with 3,000 population.

Mr. MARCIL: I am not objecting to the size of the town, but to the size of this item, which is not warranted under the circumstances.

Ste. Anne de la Pocatière—wharf extension, $6,700.

Mr. MARCIL: Has anything been done here?

Mr. ROGERS: No and nothing will be done this year.

Ste. Anne du Saguenay—extension of wharf, $10,000.

Mr. MARCIL: Will anything be done there this year?

Mr. ROGERS: Yes we are going on with this work. The estimated cost is $10,000.

Ste. Cecile du Bic—wharf extension and harbour improvements, $13,000.

Mr. MARCIL: Has anything been done here?

Mr. ROGERS: No.

Ste. Croix—extension to wharf, $5,000.

Mr. FORTIER: Is it the intention of the Government to build this wharf? The minister has promised to do the work three or four times since he took office.

Mr. ROGERS: The proposed extension would necessitate cribwork structure 300 feet long, 200 feet of which would be 20 feet wide and the other 100 feet varying from 20 to 30 feet in width. The estimated cost was so very high that we did not feel justified in going on with the work. The estimated cost of the work, according to the engineer, is $41,580, and as that is a very large sum, the work has been delayed.

Mr. FORTIER: This work was commenced seven or eight years ago, and this amount to finish the work has been in the Estimates since this Government took office. The Government had an opportunity of finishing the work before the war broke out, and the minister promised me three times that he was going to call for tenders, but nothing as yet has been done.

Mr. ROGERS: My hon. friend can understand that we are not calling for many tenders, and on account of present conditions we are delaying works that we consider even more important than this one. Hence this work has been delayed. Had the war not overtaken us, the work would have been gone on with two years ago; but since the war broke out we have been trying to get along with as little expenditure as possible, and this is one of the points that is suffering on that account.

Mr. FORTIER: I differ with the minister in regard to the importance of the work, because this wharf serves some five or six parishes, as the farm products and merchandise is taken from this wharf to the markets at Montreal and Quebec. It is the only way by which the farmer can get his products to the market.

Mr. ROGERS: I can quite appreciate what my hon. friend has to say about the importance of the work from a local standpoint; but in view of the fact that we are delaying works that we regard as even more important, notwithstanding what my hon. friend has to say, than this one, it happens to be in the list of those that are delayed. My hon. friend, I am sure, can appreciate the reasons why we did not go on with the work two years ago. We will go on with it just as soon as possible, because there is no doubt, as my hon. friend has stated, that it is an important work from a local point of view.

Mr. MARCIL: Ste. Croix is the outlet for the whole county of Lotbiniere. I have noticed many times in going to Quebec that the market boats from that region are very large and carry an immense amount of farm produce. Therefore, I think the small sum of $5,000 is really required, but in view of the generous treatment which Rimouski is receiving, I think my hon. friend should grant this small sum.

Mr. ROGERS: If $5,000 would complete the work, I would be very glad to expend the money, but unfortunately it would not.

Mr. FORTIER: Is the minister going to try to do something this year so as to complete the work as soon as possible?

Mr. ROGERS: I am afraid it will be impossible for us to do anything this year, because that $5,000 would not be of any

value so far as the completion of the wharf is concerned. It would take about $40,000 to complete it as it should be, according to the report of the engineer, and I do not think we could recommend the expenditure of that large sum of money for the wharf. I would not regard it as being of sufficient importance for the expenditure of that amount. If $5,000 would complete it, I would be glad to see the work carried out. $32,000 has already been expended on the wharf.

Mr. FORTIER: The people in my riding are under the impression that the minister is delaying the work until the next election. I may say to the committee that I do not want the construction of a wharf to be delayed. I recommend that the committee pass the item.

St. Germain de Kamouraska—wharf, $10,000.

Mr. GRAHAM: Has anything been done there?

Mr. ROGERS: No.

Mr. GRAHAM: I suppose it is among the items on which nothing is going to be spent this year?

Mr. ROGERS: Yes.

St. Irénée—addition to wharf, $10,000.

Mr. GRAHAM: I suppose this is in the same class?

Mr. ROGERS: Yes.

Mr. GRAHAM: There is a great horse-breeding farm down there.

Mr. ROGERS: I did not know that.

Mr. GRAHAM: You have not followed the live stock situation in the country.

St. Jean, Island of Orleans—wharf extension, $23,400.

Mr. GRAHAM: Some money has been expended on that wharf. Is this amount to complete it?

Mr. ROGERS: No. We have not started it. This amount is just to survey the ground.

Mr. GRAHAM: It is in the same class as the others then?

Mr. ROGERS: Yes.

Ste. Petronille, Island of Orleans—wharf, $20,000.

Mr. MARCIL: What is this for?

Mr. ROGERS: Nothing has been done.

Mr. MARCIL: Has a survey been made?

Mr. ROGERS: No.

Mr. MARCIL: It is a most remarkable state of affairs—two large works of that kind and nothing done; both items revoted several times.

Mr. ROGERS: This is just like every other item that we are passing in this way. The delay is due to present conditions.

Three Rivers—repairs to wharf, $20,000.

Mr. GRAHAM: This is a new item altogether?

Mr. ROGERS: The money is to be expended.

Mr. MARCIL: Is that to complete the wharf or to do some dredging?

Mr. ROGERS: To repair the wharf at Three Rivers.

Mr. MARCIL: Has the wharf been damaged by usage or by ice or how?

Mr. ROGERS: It has been damaged by usage. The wharf at Three Rivers is used to a very large extent for coal shipments.

Valleyfield—wharf, $5,000.

Mr. MARCIL: Is that a new wharf?

Mr. ROGERS: It is an extension to the wharf at Valleyfield.

Mr. MARCIL: Nothing urgent about it?

Mr. ROGERS: I do not think so.

Mr. MARCIL: Before leaving the Public Works Estimates for Quebec, I would like to ask the minister if anything has been done in Paspébiac. Last year an agreement was arrived at between the Department of Public Works and the firm of Robin, Jones and Whitman by which the department undertook to spend two or three thousand dollars on a wharf belonging to that firm. Has that work been done since last year?

Mr. ROGERS: No, the work has not been done. The deputy informs me that there has been some delay in the transfer.

Mr. MARCIL: Will the work be carried on this season?

Mr. ROGERS: I do not think so.

Harbours and Rivers—Ontario, $1,051,800.

Mr. GRAHAM: We have here a number of items applying to places near together—Bowmanville, Brighton, Cobourg, Oshawa, Newcastle.

Mr. ROGERS: To set my hon. friend right, I may say that wherever the three amounts, revote, expenditure for 1916-17, and expenditure for 1915-16 are the same, these works are to stand for the coming year.

Mr. GRAHAM: What I wanted to ask was whether these harbours are now Government harbours altogether. There was an agitation some years ago with respect to these several harbours to have them taken over by the Government, and if I remember well most of them were taken over from private individuals and made Government harbours, and, as a consequence, considerable expenditure was necessary on wharves and other improvements.

Mr. ROGERS: I think the hon. gentleman is practically correct.

Mr. MARCIL: I was not here when the Minister of Public Works made the statement which he has indicated in his reference to the three amounts. Can he give us a plausible explanation of why these items are voted if the work is not to go on?

Mr. ROGERS: I am sorry my hon. friend was not here when I explained that matter when my Estimates were first taken up, but I may repeat it in a word. Each of the works for which there is an appropriation in the Estimates was regarded as a necessary work, and the vote was asked for in good faith and with the hope of carrying out the work. At the outbreak of the war we announced in good faith that these works would not be carried out during the continuance of the war; but we retained these votes in the Estimates as evidence of good faith, and as indicating that we proceed with these works as soon as possible after the close of the war.

Fighting island (Detroit river)—improvement to channel, $57,000.

Mr. PARDEE: Can the minister give some idea of what this improvement is?

Mr. ROGERS: The purpose is to dredge an alternative channel. District Engineer Lambe states that the object is to double track the existing deep channel in the Detroit river by widening and deepening certain parts on the Canadian side of Fighting island in order to relieve congestion of traffic in the American channel. The result would be the making of a channel with a minimum width of 300 feet and a minimum depth of 21 feet, which will be of immense benefit and assistance to traffic passing at this point.

10 p.m.

Mr. GRAHAM: There is an agreement, I suppose, between the two Governments on this subject?

Mr. ROGERS: This is all on the Canadian side.

Mr. PARDEE: That work will not be done this year?

Mr. ROGERS: No.

Mr. PARDEE: Why put in the item?

Mr. ROGERS: For good faith, as I have explained. This has been in for some time.

Mr. MARCIL: I am sorry the Minister of Public Works did not hold the portfolio of Public Works at the beginning of this Administration. I do not wish to go back into past history, but our late friend and former member for Jacques Cartier, Mr. Monk, was then Minister of Public Works, but there were several items for public buildings and other improvements in my constituency that had been put in in good faith, but they were struck out and faith was not kept.

Mr. ROGERS: That must have been a mistake.

Fort Frances—wharf, $5,000.

Mr. GRAHAM: I think I am right in saying that the International Waterways Commission or some other international body had under consideration the question of boundary waters in this vicinity, and there has been some difficulty as to the water-power development. No doubt, the Minister of Public Works will remember the points involved. Can he tell us if an agreement has been arrived at?

Mr. ROGERS: The International Joint Commission have had this matter in hand for some time. They have been giving it special consideration very recently and have had engineers from both sides of the line making surveys. I understood a few days ago that they were getting close to the point of final decision as to the height of the waters of the Lake of the Woods, which is the point that affects Fort Frances. Everything was proceeding in the most satisfactory and harmonious manner and the final decision was expected in the near future

French River dams—repairs and maintenance, $3,000.

Mr. GRAHAM: Quite a large work was undertaken in connection with the French river, if I mistake not, which was announced in a general way to be part of the Georgian Bay canal scheme. The eastern terminus of that work for the time being was to be North Bay, at the east end of lake Nipissing. What has been done along the line of the development of the French river and lake; what is the nature of the work, and how much has been expended upon it?

Mr. ROGERS: I will read the information for my hon. friend:

This dam was constructed to regulate the discharge of Lake Nipissing, so that during the fall or low months the water level of the lake may be maintained about elevation 643·5 or about half way between mean summer level and high water. This will serve the purpose of facilitating the handling of the logs at the different mills on the lake, and also provide a constant depth at the various wharves and harbours where the department has made improvements by dredging. A contract for this work was awarded to J. F. Boyd of Sault Ste. Marie, in January 1911; contract price $13,365, but he gave up his contract in November, 1912. The work was completed by the department and the dam in working order by the first of October, 1913. Total cost of dam at Little Chaudière Rapids, $27,719.77. The only departmental work in the locality is the French River Dam Big Chaudiere, about 5 miles away. This dam is at present under construction. The French River dam is situated across the west channel of the Little Chaudiere rapids at the outlet of Lake Nipissing into French River. There is no town near the site of the dam. The nearest towns are Sturgeon Falls and North Bay, each about 42 miles distant.

Mr. PUGSLEY: Could the minister state why the contractor was permitted to give up the contract?

Mr. ROGERS: I do not know; I have no information here as to that.

Mr. GRAHAM: Perhaps I did not make my question sufficiently clear. There is another item in the Estimates of $400,000 for the large development work in connection with what we call the French River scheme. My hon. friend will remember that it was announced that that was the beginning of the Georgian Bay canal project. That is what I have in mind; perhaps the minister has not that information with him to-night?

Mr. ROGERS: I have not the information here, but I shall be glad to get it for my hon. friend.

Mr. GRAHAM: In the recent negotiations that took place between the Ontario Government and those connected with the Seymour Power Company, including the Sun Life, I have been told that the sale included certain rights that the Seymour Company had on the French river. I am unable to find out from the Railway Department from whom the Seymour Company got these rights. The Minister of Railways said that he could find no information in the department in connection with the matter. When the negotiations were in progress one of the parties informed me that the French river property apparently stood in the way of the transfer at first, and finally it was included. Perhaps the information as to from whom the Seymour Power Company or the Sun Life secured the rights on the French river may be in the Public Works Department.

Mr. ROGERS: The deputy informs me that he has no knowledge of it. I am sure that I never heard of it; it is certainly not in our department.

Mr. GRAHAM: It is possible that these power rights originally belonged to the Ontario Government, and that these people got their original leases from the province.

Goderich—harbour improvements, $90,000.

Mr. GRAHAM: When will that be completed? That is one of our chief lake harbours.

Mr. ROGERS: This amount of $90,000 is required for the following works: the completion of the extension to the southwest breakwater, contract with Mr. William Bermingham, $74,000; general repairs to the superstructure of the existing structure, $5,000; placing stone riprap for the protection of the river breakwater, $5,000; inspection contingencies, etc., $5,000; total, $90,000. The work will be completed before long. My hon. friend knows the importance of the Goderich harbour better than I do. It is a very necessary work. It has been going on for some time, and this completes it.

Mr. PUGSLEY: When I visited Goderich some time ago the work of constructing these concrete breakwaters was under way. The breakwaters were constructed in one place and floated into position; then the gates were opened so that the concrete was sunk to the bottom. The scheme had been adopted on the American side in the case of a number of harbours,

and I am curious to know how these concrete breakwaters have stood.

Mr. ROGERS: So far as the information of the department goes, they have been entirely satisfactory. They are built in boxes, floated to the required point and sunk. They have given entire satisfaction; we have rectived no complaints with regard to them.

Hamilton—harbour improvements, $250,000.

Mr. GRAHAM: Will that complete the Hamilton improvements?

Mr. ROGERS: This is a new scheme at Hamilton; it has not been started.

Mr. GRAHAM: $60,000 has been expended.

Mr. ROGERS: The amount spent was for the revetment wall that was built there last year.

Mr. GRAHAM: How much will it take to finish the whole job?

Mr. ROGERS: It is going to be a large proposition to complete the programme that the town of Hamilton has laid out—$250,000 or $300,000.

Mr. GRAHAM: $250,000 will not complete it.

Mr. ROGERS: It will not complete it, but it will do the necessary work until we are able to reach it. I do not expect we will be able to reach it this year. We are going to do the surveying, and have it all in good shape.

Mr. GRAHAM: It will make a beautiful harbour when completed.

Mr. ROGERS: It is undoubtedly a very desirable location, so far as the city of Hamilton is concerned.

Mr. GRAHAM: Hamilton does a good business there.

Mr. ROGERS: And they are getting in a lot of outside industries to be built around this particular locality.

Ontario—harbours and rivers generally—repairs and improvements, $65,000.

Mr. MARCIL: Is work in connection with the Georgian Bay canal scheme to be stopped altogether during the war, and is this small vote merely for maintenance?

Mr. ROGERS: The item passed a moment ago completes the work that has been undertaken in connection with the French river, and that is as far as we are going at the present time, beyond the research for information that is being made by Mr. Sanford Evans and these associated with him. The interim report of that commission, which I placed on the Table of the House a few days ago and which my deputy informs me will be ready for distribution in about 10 days, is replete with valuable information, and I am sure that if any hon. member will read the report he will find that we are receiving a good return for the labour that is being expended in connection with this research. If any hon. member will visit the office of Mr. Sanford Evans and those associated with Queen street, I can assure him that he will find Mr. Evans' conversation as to the Georgian Bay canal and the opportunities for development in that region to be of the very greatest interest. We have not yet reached a point where any definite conclusion or recommendation is made.

Kingston—harbour improvements, $120,000.

Mr. PUGSLEY: What is the nature of the improvements to be made at Kingston?

Mr. ROGERS: This amount is required to complete the improvements in this harbour, which consist of improving the wharves and roadway approaches, under contract with the Thunder Bay Construction Company. Two steel truss roadway bridges and one steel bascule bridge are to be constructed, under contract with the Hamilton Bridge Company. These improvements were originally asked for by the Kingston city council, by the Dominion Marine Association and by the Kingston Board of Trade. In 1913-14 $55,000 was spent and in 1914-15 $104,000. The work of constructing the wharf roadway was transferred to the Thunder Bay Construction Company shortly before the beginning of the year.

Mr. PUGSLEY: What will be the cost of the bridges?

Mr. ROGERS: $114,000.

Mr. PUGSLEY: I have seen in the papers, and I have also had other information, that there has been some difficulty in connection with what is known as the Cataraqui bridge. Is this the same bridge?

Mr. EDWARDS: This is the same bridge. This was originally a wooden bridge, built very many years ago, from one shore to the other with an ordinary swing bridge over the canal part. That is being replaced by a permanent structure which is filled in for all the distance except three openings

over which there are two steel truss bridges, and a bascule bridge for the passing of boats. It is all one structure, with three openings.

Mr. PUGSLEY: Will the minister say why the very exceptional course has been pursued of building bridges wholly within the boundaries of a province? It is contrary to the usual practice, all such work being left to the municipalities and the provinces.

Mr. ROGERS: I agree that the building of bridges is an unusual undertaking for the Dominion. It would not have been done in this case were it not that this is a combined wharf and bridge that will be of great advantage to the Royal Military College, in which the Dominion has such interest. It was owing to this condition that some years ago this work was undertaken. It has not yet been completed.

Mr. PUGSLEY: Was the bridge that occupied the site of the new bridge originally a toll bridge owned by a private company?

Mr. EDWARDS: Yes. This bridge was originally a company bridge, and was owned by what was called the Cataraqui Bridge Company. The city of Kingston held part of the stock in that company, and when it became apparent that a new structure would have to be built, and when harbour improvements were contemplated, the city bought out the stock that was held by the private company. The Government had been using the bridge and paying some $1,400 a year for its use for military purposes. The building of this structure, as I understand it, was part of the general scheme for harbour improvements. That was the reason why it was filled in, the filling in taking the place of a wooden structure and acting as a breakwater, or protector, of the harbour to the east. One might say it is right at the entrance of the lake.

Mr. PUGSLEY: All I asked was whether this bridge was owned by the private company.

Mr. EDWARDS: At one time it was owned partly by the private company.

Mr. PUGSLEY: I only wanted to know if it was the same bridge.

Mr. EDWARDS: I hope I have made myself clear.

Mr. PUGSLEY: Absolutely clear.

Mr. EDWARDS: I presume I may exercise my privilege as a member to speak to this work irrespective of what my hon. friend might want to know. I think that this structure is different from an ordinary bridge. I do not think the Government is open to criticism for building this bridge. It is a structure which is absolutely necessary in connection with the harbour improvements. It is taking the form of a bridge or roadway, for that is really what it is. In other words, if a bridge had been constructed anywhere else than where this work is going on; if, for instance, the structure had been placed further east, the Government would have been obliged to build a breakwater. So it is really a breakwater that is being constructed, and it takes the form of a roadway having three openings covered by bridges.

Mr. PUGSLEY: My hon. friend is wrong when he suggests that I was criticising the building of the bridge. I only asked the minister to explain the exceptional circumstances, which no doubt exist in this case, to justify a departure from the ordinary rule. When I was at Kingston some years ago, I inspected the harbour, and met with a good many of the principal people of Kingston, and I was impressed with the strong claims resting upon the Dominion Government. But, if I remember rightly, what influenced me most was the fact that the bridge led to the military grounds, to the property which is owned by the Government, and I thought that that was a good reason for treating the work differently from an ordinary bridge. I would ask the minister whether or not there has been some trouble in connection with the construction of the bridge, whether a number of dismissals have taken place in connection with it.

Mr. ROGERS: There were errors in connection with the work, and on the part of the engineer, Mr. Pense, which caused considerable difficulty. Mr. Pense was dismissed as the result of an inquiry. The information in his plans was inaccurate, but it has been corrected, and the difficulties are past. If my hon. friend wishes a detailed statement of the circumstances we will be very glad to supply it.

Mr. PUGSLEY: Perhaps the deputy will furnish it to me.

Leamington—repairs to wharf, $1,500.

Mr. NESBITT: Will this vote finish the work?

Mr. ROGERS: Yes.

Port Dover—harbour improvements, $50,000.

Mr. NESBITT: Nothing has been done at Port Dover yet?

Mr. ROGERS: No.

Manitoba—Red river—improvements, $11,000.

Mr. NESBITT: What are the improvements at Red River?

Mr. ROGERS: This is for an ice-breaker.

Mr. MARCIL: I notice that there has been a lot of flooding in the Red River district this year. Is any protection contemplated to prevent such flooding in future?

Mr. ROGERS: The question has not arisen up to the present.

Red river—St. Andrews lock and dam—improvements, $15,000.

Mr. PUGSLEY: Has the elevated roadway, which was contemplated when I was minister, been completed?

Mr. ROGERS: It has been completed, and is very satisfactory.

Winnipeg harbour—wharfs, $35,000.

Mr. PUGSLEY: This is for wharfs in Winnipeg, itself, I suppose?

Mr. ROGERS: In Winnipeg itself.

Sturgeon river—improvements, $9,500.

Mr. NESBITT: This is only a creek. What work are you doing there?

Mr. ROGERS: We are making the river navigable.

Mr. NESBITT: You could not navigate anything bigger than a shingle on Sturgeon river.

Mr. ROGERS: It also serves for drainage purposes. This amount is required for the removal of weeds and log jams, and the construction of a dam on the Sturgeon river. There is a growth of weeds in the Sturgeon river that requires to be removed, and also a log jam in the same river, in the vicinity of Devil's lake, Onoway, and Lac Ste. Anne that will also have to be removed in order to create a current and thereby reclaim haylands for the settlers. The dam is proposed to be built about one mile east of St. Albert, a village on the Sturgeon river, and is for the purpose of raising the water in the river and in the Big Lake, a couple of miles west of the village, so that navigation for pleasure craft may be had at any time during the open season. The work is necessary in the interest of navigation on the Sturgeon river, which under the existing conditions is at a very great disadvantage, and it has been asked for by the district engineers.

Fraser river—improvements, $450,000.

Mr. ROGERS: This is for dredging and the completion of the North Arm Steveston jetty.

Mr. PUGSLEY: It occurred to me when I had the pleasure of visiting Vancouver a few years ago, when I was minister, that there was a magnificent opportunity for creating a harbour on the north arm of the Fraser, where there is a very great frontage of land well adapted to the establishment of industrial enterprises. I do not think the expense of making such improvements as would be required would be very great. I understand that a board of harbour commissioners called the North Fraser Board of Harbour Commissioners, has been created, and I am informed that some plans have been submitted to the Government for approval, going in the first instance to the Department of Marine and Fisheries. I think it would be desirable to encourage as far as possible the operations which the Board of Commissioners have in mind, not authorizing, of course, any very great expenditure at the present time. Will this $450,000 be limited entirely to the jetty, or will it be used in connection with the dredging of the north arm of the Fraser in the vicinity of Burnaby, Point Grey, and South Vancouver, which are the three municipalities, I think, more especially interested.

Mr. ROGERS: We have had a petition from the North Arm people, but in view of the amount of work that we are doing in Vancouver and Victoria, we did not feel that we could take on this extra work just now. The matter is under consideration, and as soon as we feel justified in the expenditure of a further sum of money on the Pacific coast, we shall take up the work.

Mr. GRAHAM: I promised the hon. member for Edmonton that I would ask that one item be allowed to stand, so that he might have an opportunity of speaking on these Estimates.

Mr. ROGERS: That will be all right; he can speak on any other item.

Stewart—repairs to wharf, $1,700.

Mr. GRAHAM: This work is under contract?

Mr. ROGERS: Yes, and in progress.

Stickine river—improvements, $10,000.

Mr. GRAHAM: What is going to be done on that river?

Mr. ROGERS: Owing to obstructions in the form of snags, etc., it has been impossible to run the steamers more than one trip a year on this main artery of travel for prospectors going from the coast into the Interior of northern British Columbia. This amount is required for clearing the obstructions and making the river navigable. The work will benefit the whole interior.

Mr. GRAHAM: Will $10,000 complete the work?

Mr. ROGERS: It will enable us to make a start.

Mr. GRAHAM: Which end are you going to start at?

Mr. ROGERS: The mouth of the river.

Surf inlet—repairs to wharf, $6,800.

Mr. ROGERS: I understand from the officers of the department that this amount is not required, and I therefore move that the item be struck out.

Mr. PUGSLEY: That is an important locality; large operations are going on there now. Perhaps the wharf has been entirely washed away. Is that the reason for striking out this item?

Mr. ROGERS: There is no justification for the reconstruction of this wharf. The only people who use it are a few prospectors and one large mining company, which is at present developing a gold mine seven miles from the wharf. The report I have here says:

I consider that a wharf would be unnecessary at the present time. The amount of $6,800 was included in my Estimates for the ensuing year to cover the construction of a wharf at this point, but I would respectfully request that it be cancelled in view of what I have just learned of conditions in that locality.

Mr. PUGSLEY: I happen to have met only a very short time ago the president of the company which is proceeding as rapidly as possible with the construction of a mill, the creation of water-power, the development of electricity, and the expenditure of $750,000 or $1,000,000 at this very place. When that report was made, it might have been justified, but I do not think it will be justified now. My information is that the company intend during the coming summer to employ in the vicinity of 500 men, so that the work would be entirely justified. Some few years ago a wharf was built there by the Government, and I understand that this vote is simply for repairs. I would like if the minister would reconsider the matter, because I think it would be quite a disappointment to these capitalists if they found that the Government was not disposed to give them any encouragement even to the extent of repairing a Government wharf. The result, I am sure, will be that they will have to spend the money themselves, because they have the capital; they are arranging for a large development, and they are actually at work to-day. They will require to take in a large quantity of machinery which, of course, they cannot take in unless they have wharf accommodation. Perhaps the minister would allow the item to stand, and then he can treat it like other items and go on with the work or not, as he may be advised later. I am sure my hon. friend from Vancouver (Mr. Stevens) has heard of the company which is proceeding to operate now on a very large scale.

Mr. ROGERS: The action that I am taking is on the recommendation of our engineer who, in December of last year, recommended that it was not necessary to have this item in the Estimates, and therefore we are asking to have it struck out. I have also this letter dated the 25th of February, 1916, written by G. B. Hull, the district engineer:

Department of Public Work, Canada.
District Engineer's Office.

Prince Rupert, B.C., Feb. 25th, 1916.

Sir,—I have the honour to acknowledge receipt of your letter of the 17th inst. regarding my reports as to wharf at Surf Inlet, B.C.

A request for an appropriation to repair this wharf of $6,800, was made in September 1915, between that time and my report of December 21, the Tonopah Belmont Development Company bought all the land and mineral claims near the location of this wharf. They now control the foreshore on both sides of this inlet for a distance of a mile on each side. Previous to this time there were several people in the vicinity of the wharf, and the wharf was a public necessity, but since the Tonopah Belmont Development Company have taken over the mineral claims and the land even the lumber men have left and they are now the only occupants. I intended, and thought I had, made it clear in my report of December 21, but in reading it over I see that I have not done so, although I had requested in my report that the recommendation for an appropriation be cancelled.

The Tonopah Belmont Development Company is a very wealthy American mining Company

with large capital, and who intend erecting, not only a wharf, but stamp mills, power plant and residences near the location of this wharf, and they are plenty able to provide for themselves without the expenditure of any public money for their benefit; and as matters stand now a wharf built at this point would be practically of value to themselves alone. It is for this reason that I requested the cancellation of the Estimate sent in in September.

Fisherman running into this place for refuge do not need a wharf as the anchorage is good and will protect at all times from storms, and there is no doubt that should they desire to tie up the Development Company will have no objection to their doing so to the Company's wharf after it is constructed.

I am informed by the manager of this company that they intend filing their plans almost immediately for the approval of this structure.

J. B. Hunter, Esq.,
Deputy Minister,
Department of Public Works,
Ottawa.

Therefore they are undertaking the work themselves.

Motion agreed to.

Harbours and rivers generally, $40,000.

Mr. GRAHAM: I suppose this is an item to do things for which you have no regular appropriation?

Mr. ROGERS. Yes.

Mr. GRAHAM: It covers work throughout the whole of Canada.

Mr. ROGERS: Yes.

Mr. PUGSLEY: After you exhaust every other appropriation you resort to this one? It is a sort of reserve fund?

Mr. ROGERS: Yes.

Mr. GRAHAM: It is the court of last resort.

New dredging plant—Ontario and Quebec, including Victoria island shipyard, $35,000.

Mr. GRAHAM: What will the new dredging plant include?

Mr. ROGERS: Construction of new tug to replace Marie Louise, $6,000, the hull and boiler of this tug have been condemned by the officers of the Department of Marine and Fisheries; track extension for derrick hoist from wharf to machine shop at Victoria island shipyard, $3,000; lengthening large shipways at Victoria island shipyard, $2,000; installation of a hand elevator, and altering shop for storage purposes at Victoria island shipyard, $1,000; one Daniel's plane, or equal, with motor at Victoria island shipyard, $1,500; one circular saw, complete, motor driven, at Victoria island shipyard, $1,000; four 25-ton Norton ball bearing jacks for Victoria island shipyard, $400; six oil tanks, 60 gallons' capacity each, at Victoria island shipyard, $300; one double end punching shear for Victoria island shipyard, $2,250; to provide improvements to different units of dredging plant fleet in Ontario and Quebec, $10,000; amount approximately required for unforeseen improvements to the Victoria island shipyard, $7,550; total, $35,000.

Mr. LEMIEUX: May I call my hon. friend's attention to the fact that dredging is needed at the entrance to Ha Ha bay on the river Saguenay? There is a large pulp mill established there. I understand that the company is building a large pier out of their own sources and they expect that the Government will help by doing some dredging. I am told the dredging is very much needed at the present time because they have four ships loading at this period of the year and they ship pulp to England, France, and the United States. If they could use the Government wharf which is near at hand, they would not require that dredging; but after several years of experience they find that the ordinary traffic on the river, the Richelieu company's boats and the other boats, tax the capacity of the wharf and they therefore have decided to build a wharf themselves, and they require a little dredging there. They expect the Government to start work as soon as possible in order that they may be able to ship their pulp to Europe and the United States. I would urge upon my hon. friend to take up the matter immediately.

Mr. ROGERS: This matter has already been discussed in the department. There is a pressing necessity for the dredging that the hon. gentleman suggests, and an engineer has been sent to make a report. As soon as that report is received I shall be glad to supply the information.

Mr. GRAHAM: I have a suggestion to offer. In dredging generally there has been a reduction from $2,307,000 to $1,703,000. The item for slides and booms generally is $5,000, the same as last year, and the item of Dominion bridges generally is $5,000, which is very small. The interprovincial bridge across the Ottawa at Hawkesbury, for which $80,000 is asked, will probably not be gone on with, and the same with the international bridge over the St. John river. Unless some hon. gentlemen wish to discuss some of these matters, I suggest that

after a word about the vote proposed here for the North Timiskaming bridge over the Quinze river, we might pass all down to and including item 150, and adjourn. What does the minister think of that proposition?

Mr. ROGERS: That will be quite satisfactory. The North Timiskaming bridge is over the Quinze river, and it is estimated that $55,000 will complete it.

Mr. GRAHAM: Is the Quinze river in Quebec or in Ontario?

Mr. ROGERS: It is in the province of Quebec.

Mr. GRAHAM: And I see that the Quebec Government is to contribute $15,000. So here is a precedent for carrying out works on the plan to which I called attention this afternoon. The structures at Ste. Anne's and Vaudreuil would be in the same position.

Mr. ROGERS: This North Timiskaming bridge is only about a mile from the boundary.

Mr. GRAHAM: But it is not so much of an interprovincial nature as bridges at Ste. Anne and Vaudreuil would be. This is a precedent for what I suggested this afternoon—the building of works of importance by co-operation of both Dominion and Provincial Governments even though the works be all in one province.

Mr. ROGERS: It is quite possible, of course.

Mr. GRAHAM: I would suggest further, with the minister's consent, that item 151 be taken up, as one of our friends from Prince Edward Island wishes to say a word upon it.

Telegraph and telephone lines—Prince Edward Island—for half cost of reconstruction of telegraph lines jointly owned by the Anglo-American Telegraph Company and the Dominion Government, $17,000.

Mr. HUGHES: Is this work to be done during the coming summer?

Mr. ROGERS: This is a jointly-owned line, as my hon. friend understands, of the Government and the Western Union. We have been awaiting an arrangement with the Western Union which, I understand, has now been arrived at and the work is proposed to be carried out at once.

11 p.m.

Mr. HUGHES: Has the Anglo-American sold to the Western Union, or has it sold to the Great Northwestern?

Mr. ROGERS: To the Western Union.

Mr. HUGHES: This is the land line?

Mr. ROGERS: Yes.

Mr. HUGHES: The Government is bearing half the cost of reconstruction, and there is a subsidy as well, I believe, of $8,000 or $10,000.

Mr. ROGERS: There is a subsidy for the cable service between the mainland and Prince Edward Island, but not for this particular reconstruction.

Mr. HUGHES: These people are very economical in their service in some places on the island.

Mr. GRAHAM: In their service or in their rates?

Mr. ROGERS: The purpose of the vote is to correct that.

Mr. HUGHES: For instance, the company gets the services of operators free, for the railway station masters act as operators, and the only compensation given is that the telegraph company carries the railway messages free. In the town where I live the company is so economical that they will not even provide a boy to carry the telegraph messages, but the railway officials have to deliver the messages whenever they get time from their regular duties. I should think that a company that is receiving so many advantages ought to be compelled to give a better service. And when the last train has left—I think the latest train is about six o'clock—the station master closes his office and you cannot get a message through afterwards. Sometimes he generously keeps the office open when he knows that there is business to be done, but the company give him nothing for the extra work. I call the special attention of the minister to that. I think something should be done to compel the company to give a better service. At Charlottetown, perhaps, they give a service more suitable to the place, and at Summerside. But at Souris, for instance, where there is a good deal of business done and where a considerable portion of the time of the railway officials is taken up with telegraphic work, as I have pointed out the company will not even provide a boy to deliver messages but throws that work all upon the railway officials.

Mr. ROGERS: The object of this vote is to correct the very conditions to which my hon. friend refers. The details that are being worked out now will give an extended telegraph service to the locality and provide also for the delivery of messages as my hon. friend has suggested. Such service as is given by the telegraph lines in other portions of the Dominion will be applied in Prince Edward Island as well.

Mr. HUGHES: Will an extended service be given at Souris?

Mr. ROGERS: Yes.

Mr. HUGHES: That is much needed.

Mr. ROGERS: Delivery of messages will be provided for and other details of a similar character.

Mr. PROULX: I would like to ask the minister if he intends to have anything done this year with regard to the construction of the interprovincial bridge across the Ottawa river at Hawkesbury?

Mr. ROGERS: No, I do not think it will be possible to do anything this year.

Mr. PROULX: I understand that a contract has been awarded for the construction of the substructure?

Mr. ROGERS: No, the contract has not yet been awarded. My hon. friend is aware of the fact that there has been a great deal of pressure for the construction of this bridge. It has been the desire of the department to proceed with the work, but there was some delay in the beginning of 1914, and from that time on we have not undertaken to let the contract, much as we have been pressed to do so, and much as we appreciate the necessity for this bridge. I hope that the time will not be far distant when we shall be able to carry out this work, but I would not like to promise it for the coming summer.

Progress reported.

On motion of Mr. Rogers, the House adjourned at 11.12 p.m.

Friday, April 28, 1916.

The House met at Three o'clock, the Speaker in the Chair.

The Speaker informed the House that he had directed the Clerk of the House to lay upon the Table the reports of the Librarians of Parliament and of the Civil Service Commission in the matter of an increase of salary to Mr. Alfred Carter, accountant of the Library, together with His Honour's recommendation in the matter.

[Mr. J. J. Hughes.]

OMISSION FROM HANSARD.

DEBATES COMMITTEE REPORT.

Mr. SCHAFFNER presented the second report of the Select Standing Committee appointed to supervise the Official Report of the Debates, as follows:

House of Commons,
Friday, 28th April, 1916.

The Select Standing Committee appointed to supervise the official report of the Debates beg leave to present the following as their second report:

Your committee have had under consideration the question of the accuracy of the report of a passage in the speech delivered by the Honourable the Minister of Militia and Defence on the 2nd March ultimo, which read as printed:

"There was no quarrel between that gentleman and myself as to who should dictate the patronage. The trouble was that I found something not exactly square and I did not care whether he was Grit or Tory, his head came off."

Your committee, upon inquiring into the matter, have found that the reporter, in the haste of transcription, accidentally omitted certain words, and that the accurate report, according to the reporter's notes, should read:

"There was no quarrel between me and the other gentleman as to who should dictate the patronage. The trouble was I found the fellow grafting, and when I found something not exactly square, I did not care whether he was Grit or Tory, his head came off."

All of which is respectfully submitted.

(Sgd.) F. L. Schaffner,
Chairman.

THE DAVIDSON COMMISSION.

On the Orders of the Day:

Mr. PUGSLEY: When may we expect the report of the Commission issued to Sir Charles Davidson to inquire into the purchase of various materials and supplies, submarines, etc.? It is stated in the newspapers that Sir Charles Davidson has handed a portion of the report to, among others, a clergyman, who was requested to look over it and give his opinion with regard to the purchase of submarines. If the report is ready to be handed out to private individuals, it surely ought to be submitted to this House. I have been told—I do not know how accurate my information is—that Sir Charles Davidson is ready to submit his report, and has offered to submit an interim report to the Government, but there has apparently been no expression of a wish on the part of the Government to have that report. That may or may not be true, but the min-

ister will be able to tell me when we may expect an interim report at least, giving the proceedings to date.

Sir GEORGE FOSTER: The report is pretty nearly concluded, and we may expect it to be finished almost any day. I do not suppose my hon. friend would take exception to the course pursued by the commissioner in trying to elicit all possible information in reference to a subject in which my hon. friend is interested, the purchase of submarines. In some respects a clergyman ought to be able to give information about such an engine of destruction, but whatever was shown to the clergyman was shown with an idea and a desire to elicit information from the witness in reference to some remarks or strictures that he had passed, based upon newspaper reports, and it was to complete, and to complete on a good basis, the evidence of the witness, that that portion of the report was handed to him. There was nothing improper in that.

Sir WILFRID LAURIER: Was my hon. friend consulted by the commissioner? He seems to know a great deal.

Sir GEORGE FOSTER: I take my information from the newspapers, and from some remarks I have heard about the House.

Mr. PUGSLEY: My point was that if the report is in such a condition that an interim report can be shown to private individuals, it certainly ought to be submitted to this House, because Parliament is the body which is first entitled to receive the report of the commission and the evidence which has been taken by that commission.

Sir GEORGE FOSTER: My hon. friend could argue that on the interim report. It was a page of the evidence which was shown to this witness, in order that he might be enabled to sustain or to withdraw or restrict the statement he had made with reference to the transaction, a statement which, I understand, he made on newspaper reports.

SASKATCHEWAN RIVER WATER SUPPLY.

On the Orders of the Day:

Mr. KNOWLES: Will the Minister of Public Works tell us how the matter stands with regard to the gathering of data in connection with the supply of water to certain towns from the Saskatchewan river? There was, I think, a commission which undertook to gather data as to the cost, etc., of bringing water from the elbow of the Saskatchewan to different towns, including Regina and Moosejaw. The minister made some public utterance on the matter some time ago.

Mr. ROGERS: I have not in mind at present the exact standing of the matter. It has not been up for consideration for some little time, but I will be glad to look it up and give the hon. gentleman any information we have in the department.

ADMINISTRATION OF THE GRAIN ACT.

On Committee of Supply being called:

Sir GEORGE FOSTER: Before the House goes into Committee of Supply I propose to make a short statement with reference to an item which is to be submitted in Committe of Supply—the vote for the administration of affairs under the Canada Grain Act. I do not intend to take up much of the time of the House in doing so, but I have found, in my experience, that when we get into Estimates the committee drifts off into some particular line of controversy, and the Estimates for a most important service may pass through the committee and be finally disposed of while no connected idea of what that service is is brought out by the questioning or is presented to the committee. So that, just for a few moments, I beg the indulgence of the House while I refer to this grain system of ours, which, in a way, is a most wonderful and important development.

When I took charge of the department in 1911, we had the Manitoba Grain Act and part 2 of the Inspection Act, under which the grain business of the West, in so far as it came under the supervision of the Government, was carried out. Besides that legislation, there had been examinations and reports of commissions with reference to a revision or consolidation or reenactment of the Grain Acts so as to bring them more into conformity with the necessities of the situation and with the growth of production in the West. Very valuable information had been gained before that in this way, as I have said, and in 1912 Parliament entered upon the work of perfecting that legislation, and the Canada Grain Act, much as it stands now, was the result of its labours. On the whole,

I think that Parliament was successful, by the co-operation of both sides of the House in a very friendly and frank way, in attaining a legislation which has stood the test of the four of five years which have passed, and has stood it well. Some more or less important amendments were made to the Act two years ago, and with these amendments the Act stands as it was passed in 1912. Under that Act, from 1911 to the present, a very large development has taken place.

The fundamental feature of that Act, as contrasted with the Act which preceded it, was in placing the administration of the grain system in the hands of a commission, with headquarters at Fort William, instead of, as under the old method, trying to administer the Act from the department here in Ottawa. Three gentlemen were selected who, I think, have justified their choice, and who, from 1911 to the present, have been continuously and busily engaged in the administration of that Act.

Mr. SPEAKER: I observe that there is no objection on the part of any hon. gentleman to the statement which the hon. minister is making, but I must draw the attention of the House to the fact that there is no motion before it.

Sir GEORGE FOSTER: I think we had better go into Committee, so that I may finish my statement. I seem to have got one day behind this week.

SUPPLY.

The House then went into Committee of Supply.

Sir GEORGE FOSTER: I was going on to mention the fundamental changes that were made in the legislation passed in 1912, and I was speaking of the formation of the board as one of the chief of those changes. Besides the administration of the Grain Act in the way of licensing, certification, weighing, and inspection generally, power was given to the board to construct elevators, and under that power action has been taken which will be detailed a little later. So that the Grain Board with its newly constituted powers had something more to do than simply to administer the clauses of the Grain Act referring more particularly to the carriage and inspection of grain.

Under votes of Parliament that have been granted, they have carried out those extraordinary duties in the construction of a large addition to our storage and elevator system. Looking at it, as it is now, it seems to me that Canada is one of the best equipped countries in the world, having regard to its population and its general resources. Outside of the United States of America, this is really the foremost country in the world in point of elevator equipment, not only as to capacity for storage, but as to the distribution and situation of the elevators, extending as they do from one coast to the other and being strategically, as it were, placed at the chief points for the reception and shipping of grain. Starting at Halifax, you have a storage capacity, small in extent, of 500,000 bushels; coming to St. John, you have a storage capacity of about 2,000,000 bushels; coming up then to Quebec you have a storage capacity of a little over 1,000,000 bushels; and at Montreal you have a storage capacity of 5,000,000 bushels. Then, you enter upon the large storage districts of our country, extending through the whole of Ontario, with the great heart and centre at Fort William, then stretching over the Northwest, until finally, at the harbour of Vancouver, the last finished of the series built by the Government is now just about ready for operation. It may surprise the House somewhat—it would one who has not looked into these matters— to know that the total storage capacity for grain in the Dominion of Canada is 172,000,000 bushels, which is a very large proportion of the total grain production of Canada that is liable to come under storage and transit conditions.

Passing from that, which is the general view, we have all kinds of elevators amongst those that I have mentioned. We have the private elevator; we have the hospital elevator for taking care of the sick grain of the country and nursing it back to health and substance again; we have the mill elevator for the convenience of the mills scattered through the country; we have the public elevator and the terminal or transfer elevators at the several ports. The Government elevators form a very considerable part of this whole system. Last year there were inspected of the grain of the country, at Winnipeg, 183,000 cars, amounting to 305,000,000 bushels, or a little over twice as much as was inspected at Winnipeg in the preceding year. That measures the activity of the grain industry and of the grain transit business through a centre like Winnipeg, which is the great debouching point for grain that is raised in the West, and which will remain so to a large extent, with the exception of what may be taken off

through western exits either towards the far East or via the Panama canal to European markets.

The Government elevator system commenced with the building of the terminal elevator at Fort William. I may say just in passing that the Government-controlled-and-owned elevators have a total capacity of 22,500,000 bushels, and that those that have been built and are operated under the Grain Board have a capacity of 14,000,000 bushels at the present time. As I have just stated, a big terminal elevator, with a capacity of 3,250,000 bushels, was built at Fort William, and has been in operation now for about three years. In the succeeding year the policy was adopted of having a number of internal storage elevators constructed, and the points that were chosen were Saskatoon, Moosejaw, and Calgary, with transfer port elevators, one at Vancouver and the other at Hudson bay, to be ready for work when that route, if it becomes a grain route to Europe, is opened up. The Government elevators are the most up-to-date of any elevators in the world. They are built on the most approved plans, they are all operated by electricity, they are all equipped with the latest and most effective drying machines, cleaning machines, and apparatus and choppers for the dockage, so as to chop or grind this refuse in a way which will destroy its fecundity and therefor diminish the weed troubles which might arise as it is being used throughout the country as fodder for stock. These Government storage elevators perform the office of furnishing to the people, where they would not otherwise have them in any degree, or to a very limited degree, opportunities for the treatment of grain that becomes damaged, for the cleaning of grain, for the drying of grain, and for the putting into condition the dockage and refuse which is fed to stock.

There is also this added benefit which has arisen from the Government elevators in the interior. Up to the time of the establishment of these elevators, the farmer at Red Deer, for instance, if he sold his grain, had to wait until that grain found its way to Winnipeg, was inspected there, and the certificate of its grade and weight came back to him at Red Deer. That might consume anywhere from 14 days to a month. In the meantime, he had no document upon which he could go to his bank and get advances on his grain. The fact that at Moosejaw, Saskatoon, and Calgary, which are now inspection points, this grain may be inspected and weighed and almost immediately thereafter the man may get his certificate and may take it to his financial man or bank and get advances upon it, is a very great benefit to the farmer.

In the matter of cleaning, it is surprising to find the quantity of dirt which is carried and paid for, if you sum up the total transit of grain from the place of its production to the ultimate point of its disembarkation. Whatever good arises from the cleansing of grain, in the way of making it a more saleable product, or in the way of preventing the cost of the carriage of useless material, which accrues to the farmers in the various districts and the producing centres, comes from the facilities which are given by these storage elevators.

These storage elevators, and the terminal elevator, involve an outlay of capital of $5,500,000; or it will be about that when the finishing touches are put upon the Vancouver elevator which, as I have said, is now about ready for work. That expenditure of $5,500,000 has resulted in providing a storage capacity of 14,000,000 bushels, with the incidental advantages of which I have spoken. It is gratifying to know that, as the people come to find what service may be rendered by these Government elevators, they are taking advantage of them. Last year and this year, I think I may say, the revenues which have been derived from the elevators have exceeded by a fairly good amount the expenditures which were necessary in order to have them carried on. The total revenues from the Government elevators last year were a little over $800,000; so that you see the whole matter forms quite an important business in itself.

In order to carry on the operations of that system, the department has, under the Board of Grain Commissioners, about 496 employees at work during the busy season. In 1912, the first year of the operation in the West under the new Grain Act, the number of permanent employees was 79; last year, 1915-16, there were 98; so that there has not been a very large increase in the number of permanent employees when we take into account the fact that whereas in 1912 there was only one elevator, in 1915-16, four elevators were being operated, which of course required a larger force. The increase in the number of employees is of the temporary class, who are employed chiefly during the busy period of the grain season. Under the Grain Commissioners and the Chief Inspector there are detachments of deputy inspectors, samplers, and trackmen, extending all through the sys-

tem; and, if one could visualize at any one time in the busy season the work of those men and the tremendous current of grain which passes under their supervision, and every bushel of which has to be inspected, certificated, and weighed, one would get a very pleasing idea of the busyness of the grain industry of the great West and of the country as a whole. These few remarks are all that I intend to make with reference to the general system.

I come now to another point, that is, to explain very briefly what has been asked from the beginning of the session, the commandeering of grain in November last. I have laid on the table of the House, and the members have it in their possession, a statement which covers all the essential facts; and those who have studied that statement will have the most of the information that I am able to give them this afternoon. The main circumstance which led up to the commandeering of the grain was the very large, and, to a certain extent, abnormal crop of wheat and of oats which was raised in Canada last year. The Government has been, in the different departments and as a whole, constantly on the alert for every opportunuity to direct the attention both of the British Government and of the allied Governments to the opportunities which they might have in Canada of providing for themselves those necessaries both as to food and other equipment which they needed for the work and sustenance of the war. This year not only had Canada a very large crop of grain, particularly wheat and oats, but the production of the world was very large. Our neighbours to the south had their bumper crop—a larger crop than had ever before been reaped in the United States. Australia, which the year before had had a failure in her wheat crop, and had been obliged, as also had New Zealand, to import grain from far-distant countries, Canada included, last year had a bumper crop of wheat, a very large amount of which was available for export. Therefore the Government, in pursuance of its policy of being alive to the necessities of the case and the opportunities that might occur, was especially anxious to call the attention of Great Britain, which had more knowledge of Canada, and of the allied governments of France and Italy, which had not so much knowledge of this country's capabilities, to the possibility of their supplying their wants from Canada and to the advisability of their throwing as much of that trade as they possibly could into the hands of Canada, which was supporting the war. Not that we wished to be paid in any way for what we were doing in reference to the war; but, naturally enough, if supplies were to be bought, we urged that due regard should be given to allied countries which were especially well situated to supply certain lines of demand. Negotiations running over two or three months were constantly in hand, and at last on the 23rd of November an order was received, practically from the Allies' commission, but through the British Government, asking the Canadian Government to procure for them a large quantity of wheat. The cablegram was received from the Secretary of State for the Colonies, the Right Hon. Bonar Law. It is well to remember the date, because nothing could be done towards filling the order until it came to hand. Whatever negotiations were under way, whatever prospects were held out, not a step could be taken to procure a single bushel of grain until the definite order to procure the grain was received.

Sir WILFRID LAURIER: That order has not yet been laid upon the Table.

Sir GEORGE FOSTER: In the memorandum which I laid upon the Table, I mentioned the fact and, I think, the date, and I said to my right hon. friend that the cablegram which covered the order traversed to a certain extent the previous negotiations and covered a wider range than the order, and that it was not thought wise to lay it upon the table of the House, but that if my right hon. friend wished to see it I would be very glad to let him peruse it. That is the way in which that matter stands at the present time.

Mr. OLIVER: Would the minister have any objection to giving us now his summary of the purport of the cablegram which constituted the order, eliminating those parts which have nothing to do with it?

Sir GEORGE FOSTER: The purport of the order, in so far as it affects Canada and the purchase of wheat by Canada, can be summed up in a very few words. It was an order to purchase a very large quantity of wheat.

Mr. OLIVER: A given quantity?

Sir GEORGE FOSTER: The given quantities which were to be bought at that time were preceded by negotiations which looked towards other quantities, and this first

purchase was as a commencement and, in one way, as a reserve to be drawn upon as it was needed; so that the meaning and significance of the order, looking to preceding negotiations, was that we were authorized immediately to commence purchasing. There was the desire not only to have the grain purchased, but to get it just as quickly as possible. The urgency of the order together with the date at which it came, the 23rd of November, made it necessary for the Government to act quickly. The 23rd of November brings you pretty close to the very active season of shipping, pending the close of navigation on the lakes. The Government had to decide how the purchase should be made.

Right here let me say frankly and decidedly that the British Government did not dictate to the Canadian Government any method to be employed in procuring that grain,—I suppose they never thought of such a thing. All we were asked to do was to purchase the grain. There are three ways in which the grain might have been purchased. Judging from remarks I have heard in the House it seems to have been thought by some, and it may be thought still, that the better way would have been to have gone to the West and buy direct from the individual farmers the grain that was required. I think a little consideration will make it clear that that would not have been a wise method to pursue. In the first place, it was not possible. We could not have sent to the farmers of the West a number of buyers and by any possibility have got the grain to Fort William before the closing of lake navigation; and that, if there were no other consideration, precluded the adoption of that method of purchase. Another method of purchase was to select brokers and have them buy on the grain exchanges the amount required, some 12,000,000 bushels more or less. The first objection to that is that you pay a large commission. The Government was in the place of the purchaser and to a large extent trustee for the purchaser, and, consequently, it was its duty to buy the grain at the very best possible price.

Mr. OLIVER: Did the order convey any statement as to price?

Sir GEORGE FOSTER: Nothing. Then, as to the use of brokers; if the business had been done through only one broker difficulty would have arisen, and if more than one broker had been employed competition would have arisen. The moment a government begins to purchase grain on the exchanges, no matter how secretly, there is telepathic connection which makes the information common in a very short time, and then the knowledge that the Government is purchasing and that brokers are competing for grain for the Government causes an increase in the price and may lead to a very large increase. A year before this operation, European governments commenced buying grain in Canada and the United States. They bought openly. As a result the market went wild and the prices rose rapidly, away beyond any actual value. Those prices, of course, could not be maintained, but they were very uneconomical and expensive to the countries that were buying. Taking these things into consideration, and after having taken the best advice they could get and studying the question for what time was allowed them—for there was not much time left—the Government came to the conclusion that the fairest way all round was to take possession of the grain by commandeering it. As a result of their decision, on the 27th of the month they sent an order to the Government elevators at Fort William and the public elevators in eastern Canada and the Government-controlled elevators, to retain all wheat in store at that hour, of the grades of No. 1, No. 2, and No. 3, and reserve it for the use of the Government. That was done, and as a result 10,300,348 bushels of these grades was commandeered at the head of the lakes and 3,321,458 bushels in the eastern elevators, a total of 13,621,806 bushels. The price which was current on the day when the commandeering order passed was the price paid for that grain, $1.04⅜ for No. 1 Manitoba, and proportionate prices for No. 2 and No. 3. The market before that had been on the upgrade, not violently, but still upwards. That being the case, I think we are justified in concluding that every man whose grain was taken stood to lose nothing on the money he had invested in the grain. If he were not a speculator, if he were not holding for a profit, if he were disposed to be just the seller for the day, he received a fair and equitable price for his grain. He had an honest price, whether he got a speculative price or not. There is this consideration also, that the grain which was bought was held mainly by middlemen. Had the Government gone on the market and bought grain from day to day at ascending prices, the man who bought the

grain at lower prices would have been the one to profit by the increased price brought about by the purchase. But, in commandeering, that state of affairs cannot obtain; you commandeer and you have the grain on the instant and at the current price of the day. After the buying of a large quantity of grain by the Government, even by the commandeering process, the idea gets abroad that possibly more will be bought. In any case, a very large quuantity has been taken out of the market and out of the hands of the holders, and these people must go back to the primary source, to the farmer, to replenish the store. Then, whatever increase in price takes place in commandeering, or shortly after, while the re-purchase is going on, redounds to the benefit of the producer, or primary holder, that is, to the farmer himself. I grant that difficulties have to be met, and would have had to be met under any form of purchase; but, taking all things into consideration, I believe that the method followed was the best for the Allies. They got the grain at the current rate of that day, at one equable and honest price, and had to pay nothing by way of increased valuation which would have taken place if the grain had been bought on the instalment plan from day to day on rising prices. So that the Government performed its duty as trustee of the allied nations by getting the grain for them without paying a commission price, at the current rate of the day, and without the risk of any increasing prices which might be due to the buying of grain by the Allies in the market.

An additional reason why haste was a factor in the arrangement when that grain was commandeered was that as much as possible of the grain should, in the interests of the allied nations, be got out before the freezing up of the lakes and at the cheapest possible rate of carriage. That also was a factor in determining the Government to commandeer the grain. When the grain was commandeered, difficulties arose: we knew that they would arise; but it was possible to mitigate those difficulties. The first difficulty was this: if 10,000,000 bushels of grain taken by the Government, which was in store at the head of the lakes awaiting an opportunity to utilize the short period of lake transit which was left to it before the closing of navigation, had remained in the hands of the Government, any person who had wished after that date to take advantage of lake transit would have had to commence by a re-purchase, which on the most rapid arrangement would have made him late by days and perhaps by weeks in getting to Fort William and making ready for transit by the lakes. Some method, therefore, had to be arranged by which there should not be a stoppage of the outflow of the grain by the lakes for the limited period of lake traffic that remained. That difficulty was got over in a way that is usual at Fort William and at such places. The grain commissioners loaned that grain to those who had vessels in readiness and who wished to get their grain out to the United States lake ports or to the eastern lake ports of Ontario, keeping the bill of lading, a perfect security, under the condition that the grain was to be replaced within ten days. Some 7,500,000 bushels were thus loaned, and from the morning of the day after the commandeering when that system was adopted, to the night of Tuesday, 10,000,000 bushels took water at Fort William—a record output in the history of the lake ports. No barrier, therefore, was opposed to the quick and ready transit of grain by the only water route which was available for a short period of time. Every bushel of this grain was restored and got into transport condition at the head of the lakes within ten days from the time that the loan was made. Thus was that difficulty overcome.

4 p.m.

The next difficulty that arose was this: Nearly all the eastern millers of Ontario had grain in the eastern elevators or at Fort William—almost entirely in the eastern elevators—which they expected to get quickly by the lake route in order to keep their mills going. The mills do not hold much in reserve. Indeed, many of them hold scarcely anything in reserve; they hold it in the elevator and take it out from day to day or from week to week as they require it. When this grain in the eastern elevators was commandeered the supply of the mills was entirely cut off. In order to keep the mills supplied with grain and to provide against the closing of the mills, many of which were engaged on contracts for flour for the allied Governments, we adopted this arrangement; we unconditionally released all grain that was commandeered in the eastern elevators, upon the deposit with the Government of a guarantee by the millers that the grain had been bona fide contracted for and that it was to be ground

up in their mills and used for no other purpose. We released about 1,900,000 bushels of grain from the commandeer; that grain went into the hands of the millers, and the millers' operations went on just the same as if there had been no commandeer. This provided for that difficulty. It reduced the total quantity of commandeered grain by that amount; but you could not go into these elevators and commandeer a portion of the grain; you had to commandeer the whole, and the total commandeer was a little more than was necessary for the supply of the allied nations for the months of December and January.

Mr. KNOWLES: How much would have actually supplied the requirements of the Allies for the two months that my hon. friend mentions?

Sir GEORGE FOSTER: I could not tell my hon. friend how much. Purchases are still being made on account of the Allies.

Sir WILFRID LAURIER: By the Government?

Sir GEORGE FOSTER: No, not by the Government.

Mr. KNOWLES: The minister referred to two specific months, and said that a certain amount was too much.

Sir GEORGE FOSTER: I did, because certain quantities were to be delivered each month.

Mr. MARCIL: Did this commandeered grain leave the country by Canadian ports?

Sir GEORGE FOSTER: I will come to that in the course of my narrative.

Mr. W. M. MARTIN: I understand the minister to say that the reason for the commandeering of about 13,000,000 bushels of grain was the urgency of the occasion. He says that 7,500,000 bushels of the grain that was commandeered was loaned to the shipping companies and a further 1,900,000 bushels as loaned to the millers. That would leave 3,000,000 bushels for the use of the Allies. If that was all the Allies required for six months, why was the commandeering not confined to that 3,000,000 bushels?

Sir GEORGE FOSTER: I think the answer to that is very easy. Before a single ship could be sent or ordered to be sent to an Atlantic port, there had to be a certainty that the grain would be there for it when it came, and it was impossible to buy grain and send it down to the seaboard in driblets. It was absolutely necessary that there should be a certainty of an ample supply of grain in order that the Allies might intelligently arrange for its transportation. It is true that 7,500,000 bushels were loaned out of the Fort William elevators, and loaned for a period the utmost limit of which was 10 days; but that was not subversive in the least of the system which the Allies would put into operation for carrying their grain. Even if, on the day of the commandeer, and when a cablegram went that so much grain had been secured, the Allied Governments had been able to send ships out, the ships could not have reached Atlantic ports before the return of the grain that had been loaned and its gradual movement to the Atlantic seaboard. The difficulty that arose was along this line: Bona fide contractors, with the Old Country purchasers for grain, found that by this commandeer the grain which they had contracted for with those purchasers, and for the transport of which cargo space had been taken—and the cargo space itself was coming across the ocean and must be met here—could not be procured, and that, if the commandeer remained upon that grain, and there was no condition under which they could fulfil their contract except by going back to the West, purchasing a new supply, and bringing it down to the seaboard, much of it necessarily having to come by rail, it would have been quite impossible, in many cases, for them to have carried out their contracts on time, and the vessels would have had to wait in port to be loaded, with heavy demurrage. The arrangement made to overcome that difficulty was this: To the man who had a bona fide contract with British purchasers and who showed the evidence of that contract, we released the quantity of grain required to fill that contract, and he gave us his undertaking and deposited his guarantee that he would return that grain, in store, at a certain time. Under that arrangement no difficulty of any moment arose with reference to the bona fide contract men who were exporters of Canadian grain to the British market. Some trouble and some confusion was no doubt caused; but at the same time I must say, in justice to both grain holders and grain buyers, in Winnipeg, in Montreal, in Toronto, all along the line, that, although they would have preferred that the commandeer had not taken place, they took it in good spirit.

They fell in with our plans and did not object very strongly. There was, on the whole, a hearty co-operation with the Government in the carrying out of the arrangements that made it possible for them to keep their contracts.

Mr. KNOWLES: The minister said the grain was loaned to people having contracts. What was the limit of the time for which it was loaned?

Sir GEORGE FOSTER: That grain was to be returned at different dates, and those dates were, as nearly as possible, arranged in connection with our knowledge of the possibility of vessels coming to receive it, and being able to get here at certain dates.

Mr. KNOWLES: Did all of that grain have to be returned before the close of navigation?

Sir GEORGE FOSTER: No. Very little of the export grain could be returned before navigation closed. That grain would have to be returned after navigation closed, and returned in store at Fort William, which was done. So that those three arrangements which I have tried to explain, carried out in connection with the commandeer, caused the least possible confusion and derangement of the grain trade, and, on the whole, I think it has worked out exceedingly well.

I know that some criticisms will come. One criticism will be founded upon a question which will be asked: Has all of this grain gone out yet? I answer to that: No. Then the further question will be asked: Why were you in such a hurry to get the grain on the 27th day of November if it has not all been carried out up to this date? This much I shall say, that there has been always more grain ready for loading than could be carried by the ships provided by the Allies to transport it from our ports; and the balance of the grain will probably not leave our ports before the middle of May, when the last of it will be taken out from the port of Montreal. Just about the time of the commandeering of the grain, the difficulty of obtaining tonnage for the Allied powers for the operations of the war and other operations subsidiary to them became acute; and, although Italy, one of the allied powers, was in great need of that grain, in dire need of it—because Italy, before the war had been declared, had carried on a very brisk trade with Germany and had sold a large proportion of her wheat to Germany, so that when the war was declared between Italy and Germany—Italy came into the war—

Mr. MARCIL: Italy and Austria. Italy is not at war with Germany.

Sir GEORGE FOSTER: Anybody can sleep on that who wishes. It does not appear to me that they are very friendly with each other.

Sir WILFRID LAURIER: They could buy and sell though.

Sir GEORGE FOSTER: In a technical point of view, no war has been declared. That is true. But, in the other point of view, Italy is doing her level best to destroy the cause of the Teutonic Allies, and doing it with a bravery and a consistency that has not been excelled by any nation which has been engaged in the war. So that, intervening, was this extreme scarcity of tonnage; and, although there has been necessity for the quickest possible transit of that grain, it has been impossible for them to provide the vessels necessary more speedily than they have done. Three-fourths of that grain has already left the Atlantic seaports, and probably a little more than one-fourth remains yet to be taken out. Now, I think that is all the statement I have to make with reference to the commandeering.

Sir WILFRID LAURIER: For whose benefit was the wheat bought?

Sir GEORGE FOSTER: As I think my statement shows, the wheat went into the hands of the Allied Commission in London. That is a commission on which representatives from Italy and Russia and France and Great Britain sit. There may be some others on it, but these are the principal representatives, and they are under the presidency, or chairmanship, of a British official. That Allied Commission purchases supplies of every kind necessary for the war, or for the sustenance of the people engaged in the war. They have their methods of finance arranged in conjunction with Great Britain, and they sit there as a commission, receive bids, make contracts, and make purchases, and they do this in common session. The moment that the grain commandeered was in our possession it was handed over, at exactly the cost and charges that were incurred, to this Allied Commission, and from that time it has been under their charge as to its disposal. They asked the Department of Trade and Com-

merce to undertake the supervision of that grain from the point where we procured it to the seaboard, and to see that it met the ships at the different ports. My department undertook that supervision and has been carrying it out.

Mr. MARCIL: Are these Canadian ports?

Sir GEORGE FOSTER: They are not all Canadian ports. Wherever the Allied Commission, which is providing the vessels, could get a vessel to go most conveniently and most economically, they asked us to send the wheat, and this wheat has been provided and loaded at ports from Baltimore in the South to Halifax and St. John in the North.

Sir WILFRID LAURIER: The commission has purchased also in the United States.

Sir GEORGE FOSTER: I do not think that that commission is purchasing very much in the United States, but the Allied Governments are making purchases in the United States. I think these purchases are very largely through other agencies.

Sir WILFRID LAURIER: Has this commission purchased any wheat in Canada besides what the Government purchased for it?

Sir GEORGE FOSTER: I think I may say that before that time, and since that time, the countries represented on that commission have purchased in Canada, and purchased very largely.

Sir WILFRID LAURIER: I see by the correspondence brought down that France purchased direct in Canada without the intervention of this commission. I know—it is public knowledge—that the Allied Governments have been purchasing largely in Canada. What I want to know is whether that commission has purchased in Canada from private parties in addition to what was purchased through the Government.

Sir GEORGE FOSTER: Yes, the commission has purchased, and is purchasing.

Mr. MARCIL: Is this the only occasion on which the Government was called upon to commandeer?

Sir GEORGE FOSTER: My hon. friend must not put it in that way; he must not say that the Government was called upon to commandeer. The Government was not called upon to commandeer; it was called upon to purchase. Commandeering was resorted to a year ago, or a little more, when a quantity of oats was secured in that way for the French and British Governments, I think.

Sir WILFRED LAURIER: The action taken by the Government in the month of November last, at the end of the season, was absolutely exceptional, and no such action should be taken by a government except under exceptional circumstances. A government should not interfere so as to dislocate trade in any way, or to raise an obstacle to the ordinary channels of trade unless there is an absolute necessity for doing so. So far as my information goes, and I think it is perfectly accurate—it is within the knowledge of everybody—no government anywhere ever commandeered any commodity except for the purpose of immediately supplying the people for consumption. There may, perhaps, be circumstances where a different course has been pursued, but, as a rule, no commandeering of any commodities ever took place in any country unless there was a possibility of famine in the particular commodity, and the government saw that the people were suffering. In this instance, the Government received information, as my hon. friend says, on the 23rd of November last that the Allied Nations were wanting wheat. In the statement which he places before the House my hon. friend proceeds as follows:

> Early in the autumn of 1915 when it became evident that Canada, in common with the United States and Australia, would have large surpluses of wheat for export, representations were made to the British Government with a view of interesting it and the Allied Governments in the purchase from Canada of a generous portion of the large quantities they would undoubtedly require.

That was certainly a very commendable action on the part of the Government—to try to enlist at once the good-will of the Allied Nations and to see that they supplied themselves in Canada with a commodity of which we had a large surplus. Then my hon. friend goes on to say:

> These representations were successful and on November 23, instructions were cabled to the Canadian Government by the Secretary of State for the Colonies to purchase a large quantity, delivery to begin in December and continue for the following months.

It would have been sufficient to draw the attention of the Allies to the fact that we had a very large crop in Canada, and then to leave the ordinary channels of trade to supply the necessities of the Mother Country and the Allied nations. The Government, however, thought they would go into the business themselves; they became pur-

chasers of wheat for the benefit of the Allied nations, and the result of their efforts was to secure the magnificent quantity of 13,000,000 bushels. That was all they could do or all that they attempted to do. When there was a surplus available for sale of at least 100,000,000 bushels of wheat in the month of November, my hon. friend, by the method he adopted, secured 13,000,000 bushels. Was there any necessity for that action? What purpose was served, or what benefit accrued to anybody from it? What reason was there for dislocating trade, as it was dislocated at the moment—so much so that two days afterwards my hon. friend was obliged to see that that man got his quantity and that other man got his quantity, that the shippers got their quantity, and the millers their quantity—what was the reason for such action if the object could have been accomplished just as effectively by the ordinary methods of trade, which would have been far better than the the extraordinary methods followed by the Government. My hon. friend has attempted to justify himself, and I do not think that he has made out a case at all for resorting to this extraordinary process. He said that the wheat was bought without any commission, but every purchaser is prepared to pay commission where the ordinary methods of trade are followed, and there is no reason at all why the ordinary methods of business, which are legitimate, should not have been followed. There is no reason why. The only excuse for it is that it was a case of necessity. My hon. friend is aware that at the time this extraordinary, this despotic, action was taken by the Government, there were serious complaints coming from all over Canada from men in the business that the Government were interfering with their legitimate operations, and up to this day I have not heard a single good reason why this extraordinary action of the Government was taken. I submit that there was no excuse for the Government to interfere, and that these operations should have been left to the trade. At the very moment when my hon. friend was taking this extraordinary action, the French Government, as appears from the correspondence which my hon. friend has brought down, was a purchaser of grain in Canada, and my hon. friend seized part of the grain which belonged to the French Government, and which had been purchased on their behalf by the Hudson Bay Company. Was there any reason why my hon. friend should not have employed either the Hudson Bay Company or other operators rather than by arbitrary action to take hold of the grain that was on the lakes and in the hands of the operators at that time? Whilst in times of war we are not disposed to be critical, at the same time I submit very sincerely that there was no justification whatever for such action.

There is another thing: I do not see why the whole of the correspondence has not been brought down. My hon. friend knows the rule of this House, that if a public document is quoted it must be laid on the Table. My hon. friend said that there were some parts of the correspondence that were confidential. Anything that is confidential I do not ask for, but what is not confidential should have been brought down for the information of the House. That is the rule that has always been followed. The whole of the correspondence has not been brought down. I see by the return that an Order in Council was passed on the 4th December last. This order in council was afterwards cancelled and was replaced by another one which is in these terms:

> The minister further reports that the action which he has taken for the above purpose is set forth in the telegrams, copies of which are hereto appended, and that the instructions given in the messages signed by the Minister of Marine and Fisheries, the Minister of Railways and Canals and the Solicitor General were sent after consultation with him and at his request in pursuance of the proposed appropriation and control of the wheat aforesaid.

The last paragraph of this Order in Council, which was passed on the 8th December, is in these words:

> The minister recommends that the Order in Council P.C. 2873, respecting the appropriating of wheat, passed on the 4th day of December, 1915, be repealed.

That is to say, they first passed an Order in Council on the 4th December, and four days afterwards, on the 8th December, this Order was repealed and replaced by the one to which I have alluded. The first Order in Council was not brought down. I suppose it is not very material, but still the order of the House was to bring down all the correspondence, and in this the order of the House has not been carried out. Then, here is something that appears to be very strange. There is another Order in Council passed on the 8th January, in which it is stated that the Minister of Trade and Commerce and the Minister of Finance recom-

mend that " in order to in part effectuate the provisions of the Order in Council of the 4th December, 1915, ratifying the appropriating " of wheat and so on, a certain disposition be taken. But the Order in Council of the 4th December had been already repealed. On the 8th January, in order to effectuate the Order in Council of December 4, an Order in Council is passed, notwithstanding the fact that the Order in Council of December 4 had been repealed. I just make these comments, because it seems to me that the whole thing is very irregular. Whilst I am not disposed to insist upon the irregularity of the proceeding, still it is a thing which ought not to be repeated. The last statement made by my hon. friend showed that there was absolutely no necessity for the proceeding. He acted suddenly, saying there was great necessity for having it done immediately. The purchase was made on the 27th November, before the close of navigation, but the wheat had not all been delivered to the allied nations that purchased it.

Sir GEORGE FOSTER: That is so.

Sir WILFRID LAURIER: Then where was the necessity?

Sir GEORGE FOSTER: I anticipated that criticism, and I have answered it.

Sir WILFRID LAURIER: What is the answer?

Sir GEORGE FOSTER: When my right hon. friend finishes his remarks I will answer him.

Sir WILFRID LAURIER: Now he gives us the excuse that it was impossible to secure tonnage to expedite the shipments. Everybody knows that, but if my hon. friend had not the tonnage to expedite shipment there was no necessity for any such hurry to commandeer the wheat. If there was to be any benefit to anybody on account of the condition of the wheat market, certainly the vendors, the producers, were entitled to it.

Sir GEORGE FOSTER: I have no fault to find with the remarks of my right hon. friend in the way of criticism at this moment, not in the least. If he had been leading a government at that time, and the circumstances had developed exactly as they did, and it had come to the point where action was necessary, he might not have had acted in the same way that this Government did, but his Minister of Trade and Commerce might have adopted a different method of procuring action along the lines which he has indicated would have been best, and might not have taken the method which we took. It is simply a question of the judgment of the purchasing authority—the Government in this case—as to the conditions at the time of the purchase and the necessities of the case. Upon the conditions as they were, and the necessities of the case, this Government came to the conclusion that they must get that grain and get it at once, because it was necessary to have it.

I will take up in order what has been stated by my right hon. friend by way of objection. First, he said that commandeering should never be resorted to as a general rule, and has never been resorted to, except in the case of some great necessity in the country itself, such as lack of food, where privation, if not starvation, must ensue unless the Government commandeers, takes hold of, and feeds out gradually and by ration, as it were, what is necessary to prevent such privation or starvation from taking place. But there are other circumstances in which, upon the very same principle, commandeering might take place. I have mentioned the condition of Italy in reference to the shortage of wheat. The shortage of wheat in Italy at that time was absolutely acute. The information was before the Government that Italy needed a certain quantity of wheat, as much or more than the wheat which was commandeered, and that they needed it absolutely at that time. There was no bargain that the Government here was to prepare or supply the tonnage which should carry the wheat. The necessity was there. Italy and the other allied Governments were to look after the wheat being carried, and at the time that order was given the expectation here was—and no other expectation could have been formed under the circumstances—that that quantity of wheat was absolutely necessary, would be called for, and would be taken out of the country within a very short time. Now, what I have stated, I think, is absolutely plain and fair. What I stated was that acute scarcity of tonnage supervened, which made it impossible for the Italian Government, with the aid of the British Government and the Allied Governments, to get sufficient ships to carry that wheat out at once, and Italy's needs had to be and were to a certain extent met by going to another market and getting what she wanted from another source.

Mr. W. M. MARTIN: When was the wheat shipped to Italy and how much was shipped ?

Sir GEORGE FOSTER: Wheat has been shipped ever since and is being shipped now.

Mr. MARTIN: Was any wheat shipped to Italy say, within six weeks after the commandeering took place?

Sir GEORGE FOSTER: I do not think there was.

Mr. MARTIN: By the commandeering of the wheat we did not assist any dire need in Italy, because Italy would have been in need yet so far as the action of this Government is concerned.

Sir GEORGE FOSTER: My hon. friend may think that is a criticism, but I hardly agree with him. If we had known everything, if we had known that this intervention of scarcity of tonnage would take place and that the Italian Government would not be able to get the tonnage to send for the wheat when we expected them to send for it and to get it, and if we had acted upon that knowledge, then we could have taken our time and have procured the wheat from time to time and in driblets.

Mr. W. M. MARTIN: I do not wish to interrupt the minister, but it seems to me that if the commandeering of the supply of wheat was such an absolutely urgent matter at that time, it would have been an easy matter for the Government to ascertain whether there were available vessels in which to take that wheat out.

Sir GEORGE FOSTER: It was not the duty of this Government to find the vessels. When an order comes for wheat and when there is urgency for that order, you fulfil it under the circumstances and conditions as they are at the time. If something intervenes so that the shipping cannot be found, and the wheat cannot be sent forward, that comes afterwards; it is not within the knowledge of the purchasing party at the time the purchase is made.

Mr. KNOWLES: May I ask a question?

Sir GEORGE FOSTER: Will you allow me to go on until I answer the objections of my right hon. friend ? I will take his question after I get through. He must always give way to his leader.

My right hon. friend the leader of the Opposition says every purchaser is prepared to pay a commission. He argued that the consideration that this wheat got in that way would not have to cost more to the Allied Governments was not a tenable one, because every one who purchased knew that a commission was to be paid. Well, I would not like to say that in cases of war necessity—and this was war necessity—it is good doctrine that, even if you can get wheat at a lower price by paying no commission, it is still well to adhere to the course of trade and pay a commission. My right hon. friend is on dangerous ground when he presses an argument of that kind.

My right hon. friend says that the Order in Council of the 4th of December was not brought down. There is no objection to its being brought down. After the Order in Council was passed, it was found to be defective in certain respects, and instead of passing an order just to amend that Order in Council, and leave them both with efficacy, the Government thought that the best way, as is often done, was to embody the first Order in Council in the second, with the amended portions, and pass the one Order in Council covering the whole thing. I will give my right hon. friend the first Order in Council at any time if he thinks it is necessary to have it.

Then, he made a statement with reference to the Order in Council of January 8 being based on the Order in Council of December 4, which was cancelled. Perhaps that may be technically a ground for criticism, but the Order in Council of December 4 was virtually in and formed the substance of the amended Order in Council which was passed on December 8, The Order in Council of January 8, was, I think, largely for the purpose of financing the whole arrangement. If my right hon. friend would like to know what the arrangement was, I may say that a credit was opened with the Bank of Montreal, which advanced the money necessary to pay for this wheat as the payments fell due, that the Government stood behind that loan as a guarantor of it, and that the whole of that amount has already and long since been paid off.

Now, if my hon. friend from Moosejaw (Mr. Knowles) has a question? Maybe my hon. friend wants to make a speech instead of to ask a question.

Mr. KNOWLES: I will surprise my hon. friend by not making a speech. I would like to know who initiated the whole business? Did the proposition start from this

Government or on a request from the Old Country?

Sir GEORGE FOSTER: I have already answered that half a dozen times, I think. I said as plainly as a man could say that the British Government never indicated to this Government how it should procure that wheat—whether it should buy it under commission, buy it by an agent or broker, go to the farmers and buy it direct, or how it should buy the wheat. Our order was simply to procure the wheat for them, and this Government takes the whole responsibility of the method it took to procure the wheat.

Mr. KNOWLES: I did not ask the minister with regard to details of that kind. The minister was proceeding to say that it was none of the business of this Government how the wheat could get to Italy. I thought it was an opportune time to ask him who first opened negotiations looking towards this Government being the instrument of getting the wheat across. Did this Government take the first step towards facilitating the supplying of wheat, or did the request come from the Old Country because of the dire need of Italy, and so on?

Sir GEORGE FOSTER: I think my hon. friend must have that information. The whole action was based upon the statement that with the supply that we had the Government was anxious to direct all possible purchases of wheat to this country; and from the time the crop began to be garnered until the order came we were in constant communication with reference to supplying not only wheat but other supplies and necessaries to the Allied Governments; and you may say if you like that the suggestion came from this Government to the Allied Governments asking them sympathetically to consider all possible purchases of supplies from Canada, and that after negotiations had gone on for a certain time in respect to this and many other things, this order came for the purchase of wheat.

Mr. BURNHAM: Has fault been found with the minister for not having commandeered more wheat when he was at it?

Sir GEORGE FOSTER: I do not know. Fault may have been found in a great many ways. That has not come particularly to my mind, although I do recollect now, when my hon. friend mentions it, that some persons were strongly in favour of our commandeering the whole western crop.

Mr. BURNHAM: I thought my right hon. friend was in favour of it.

Mr. OLIVER: My hon. friend has favoured the House with a speech in two parts, one dealing with the question of elevator accommodation and the actions of the Grain Commission for the Government's handling of the grain trade generally, and the second part dealing with the details of the commandeering of wheat last fall, which is probably one of the most controversial matters that could be brought up in the House of Commons. The whole question of the Government's handling of the grain trade of Canada is necessarily important in the last degree, and, being important, is necesarily controversial. If I take the opportunity of criticising the policy of the Government and its administration in regard to its handling of the grain trade generally, I hope it will not be said that I am doing so particularly from partisan motives.

Sir GEORGE FOSTER: Not at all.

Mr. OLIVER: It is desirable that there should be a clear understanding as to whether the policy pursued by the Government is the best policy or not the best policy, and, as some of us hold differing views, it is our duty to place those views before the country.

The minister spoke of the amount of elevator accommodation in Canada and expressed the opinion that very satisfactory conditions exist in this country in regard to the transportation and handling of grain. He said we were probably the best-situated country in the world in this respect, at any rate next to the United States. He said that we have a splendid system of handling grain, one of our advantages being that grain is handled under the Grain Commission and in part through elevators which are the property of the Government and are under the control of the commission. This, of course, brings up the question whether the Government has used the best judgment in the interests of the country in its location of the elevators, in the expenditure of money upon these elevators, and generally the results of their policy to the producers of the grain. I apologize for introducing a matter so controversial, but it is necessary that we should know where we are at in this matter. I am compelled, therefore, to recall to attention the fact that before the present Government took office, in the contest which resulted in their taking office, it

was declared to be the definite fixed policy of the leader of the party which is now in power,—declared from platform after platform throughout the Prairie Provinces—to take control of the terminal elevators if they were returned to power. This Government has not implemented that promise made by the present Prime Minister, then leader of the Opposition. Far from it; instead of assuming the control of the terminal elevators, by which means alone it is admitted on all hands it is possible to maintain efficient control of the handing and distribution of grain, the Government has spent a large amount of money in elevators, but not for the purpose—and not with the result—of reaching that end. They have spent large sums, not to say enormous sums, ostensibly in the direction of implementing their promise. They have built one elevator at Fort William. But we have the authority of the Minister of Trade and Commerce, expressed last year if I remember well, or, if not, the year before, that it was not possible for the Government to regulate the grain trade by its control of that elevator. So far from the Government being able to regulate the grain trade through that elevator, the minister admitted that the operation of the elevator was subject to the general conditions governing the grain trade—that is, the Government's policy at Fort William was controlled by the conditions instead of the Government controlling the conditions, which was the pledge of the Prime Minister before he became Prime Minister. In the line of attempting to meet the needs of the grain trade, but without actually implementing the promise made, the Government has seen fit to establish what are called internal elevators at three important points in the grain-producing areas of the West.

The Minister of Trade and Commerce has been good enough to place before the House very lucidly the ostensible purpose of establishing these elevators and the results expected from their operation. Everybody will be glad if these elevators achieve the purpose that the minister has laid before the House as that for which they were established. But, up to the present time, they certainly have fallen very far short of achieving either that, or, I might almost say, any other purpose. For, until this year, there was practically no grain in these elevators, and this year the grain that is in them has been, in large measure, forced into them by the regulations and control established by the Grain Commission for that very purpose. The grain is not there because it naturally flowed into these elevators; nor was it caused to flow there by anything that the minister set forth to-day; but the grain is there in large measure because the regulations of the Grain Commission and the Railway Commission have sent it there. The fact remains that the expectations, if they were as stated, have not been realized, and the expenditure made has been of very little effect. There may come a time, as I said the other night, when weather conditions may be such that these elevators will be useful as drying plants; but, as elevators for the storage of grain for export, they have not, up to the present time, served any useful purpose.

I recall that when this matter was under discussion before the expenditure was made it was indicated by the Minister of Public Works (Mr. Rogers), then Minister of the Interior, that the Government had in view at that time that such elevators would be of great advantage to the milling industry of Canada. I can easily conceive how they would be of great advantage to the western milling industry, or even to the eastern milling industry; but as to their being of advantage to the producer, the bulk of whose grain still must find an export market, I am sorry to say, however good the intentions may be, the results have not been what were expressed.

The Government has spent money in building magnificent elevators where elevators were not an urgent necessity—they may be useful in time to come, but they have not been an urgent necessity up to the present time; but it has not spent money to build elevators where, during the present year, elevators have been urgently needed, that is to say, at Quebec and at St. John. Had the elevator accommodation which is now provided in the interior of the prairies been located at Quebec and at St. John the grain could have been brought forward during the winter, stored at Quebec awaiting the opening of navigation there, or carried through to St. John and sent forward during the winter as transport offered. My hon. friend said the other night that there was not any transport to take it. Well, as I have said to him on other occasions, he proves too much. If that can be proved, then we are simply out of business, and we cannot afford to be in that position.

We needed the elevator accommodation at Quebec. We knew that we were going to need it, because we were building at enormous expense a railroad to carry grain, winter and summer, to that point. We did not provide the accommodation there or at St. John, and we have suffered. We have to-day millions of bushels of grain in the Prairie West, at the head of the lakes and west of the head of the lakes, that should have been at tide water waiting every opportunity of being taken across the ocean. Moreover, our railroads would have been employed in carrying the grain there. But because that money was not spent at the right time and in the right place upon elevators, we have the grain in the West, where we do not want it; we have not the money that we should have got in exchange for the grain had the elevators been where they ought to have been, where they would have facilitated the export of grain rather than giving benefit only to that band of philanthropists, the milling industry of Canada.

Taking the other section of the hon. minister's speech and dealing with the question of the commandeered grain of last fall. As has already been said by the leader of the Opposition, no condition on this side of the Atlantic or on the other side called for such action, if we are to judge by any precedent that has ever been set. When there was not merely an abundance but a superabundance of grain; when there was not merely a crop but a double crop; when that crop, as my hon. friend has said, was coming forward as it never came forward before and was available to anybody who would buy it and pay for it, why could it have been necessary to interfere with the ordinary course of trade by laying hands on this man's or that man's or the other man's private property, to his detriment and to the detriment of the country at large? The hon. minister has given us absolutely no reason to-day for the action that was taken except that the Government was following the policy which it has consistently pursued since the beginning of this war: to be ready at any time and under all circumstances to hamper and hinder and injure the farming industry of the country under the pretense of that injury being for the welfare of the Empire or the good of the Allies. There was no more reason for commandeering this wheat than there was for prohibiting the export of wool or of horses, for preventing British and French buyers from purchasing horses in Canada or for doing any of the other things that the Government have done, to hold up the farmer and detract from the profits that he would naturally make. I speak of this matter feelingly; it is a serious matter. When this same Government that seizes the farmer's wheat in the elevator without justification or cause of any kind is asked why it did not seize the steamers to carry that wheat across the ocean, they say that that would be impossible; that that would be contrary to all rules of business. Why, they say, the British Government did not do that; the Governments of the Allies do not seize vessels to carry wheat

5 p.m.

across the ocean, except for war purposes. They do not, my hon. friend says, interfere with the ordinary course of business. But my hon. himself interfered with the ordinary course of business. He had no hesitation in commandeering the farmer's wheat and disarranging the business of wheat carriage from the West to the Atlantic coast. He did it without justification from any point of view, without even the request, as he has admitted to-day, without even a suggestion from those who desired to secure the wheat. They did not ask this Government to seize the property of this or that or the other citizen of Canada for their benefit; they never made such a suggestion. Let me call attention to this fact—though it is not pleasant to do it. Statements were given out in the newspapers when this commandeering took place—and we are bound to believe that these statements were given out in some way by the consent of the Government—that the commandeering took place at the request or order of the British Government. That was the idea that was spread broadcast throughout the Dominion.

Sir GEORGE FOSTER: Who spread it?

Mr. OLIVER: Newspapers supporting my hon. friend.

Mr. MEIGHEN: Not one of them. Has the hon. gentleman a quotation?

Mr. OLIVER: It is a fact; there is no argument by which—

Mr. MEIGHEN: It is not a fact.

Mr. OLIVER: Yes, it is.

Mr. MEIGHEN: Oh, no.

Mr. OLIVER: My hon. friend had better not butt in; he has not been doing himself much good by that lately. A plain fact is a plain fact. I am not holding the Government directly responsible. I am not saying that the Government put it in the Canada Gazette, but I am saying that newspapers supporting this Government did spread that idea broadcast, and I cannot think that they did it without having some indication from the Government that warranted them in doing it. To such an extent was that idea spread—my hon. friend will not deny this—that the British Board of Trade cabled to Canada to deny that the British Government had anything to do with the commandeering of that wheat.

Mr. BURNHAM: Does the hon. gentleman know for a fact that that was cabled?

Mr. OLIVER: Certainly: it became necessary for the protection of the good name of the Government of Great Britain for the Board having authority in the matter to cable to this side of the water to deny that they were responsible for that action. It may seem a light thing to my hon. friend to interfere with the business that relates to agriculture when it seems such a tremendous thing to interfere with the business of shipping, or nickel, or any of these other matters. But I want to say—and this is why I am speaking so strongly—that inasmuch as the agricultural industry is the principal wealth producing industry in this Dominion of Canada, it not only is entitled to every advantage that this Government can give it in the way of administration, but it is entitled not to be interfered with in any detrimental way unless the gravest reasons can be brought forward for that interference, no such reasons having been brought forward in this particular case.

It was most unfortunate that this seizure of wheat at Fort William should have been made within the last few days preceding the close of navigation. The minister has said that it was because the close of navigation was so near at hand that it became necessary to seize the wheat. Well, if it was necessary to seize the wheat because the end of the season of navigation was near, it was necessary that the seizure should have remained on that wheat and that the seized wheat should have gone forward while navigation was open. But, inasmuch as the wheat seized was, in large proportion, afterwards released, his argument that it was necessary to seize because the close of navigation was approaching falls absolutely to the ground. He said that during the few days following the seizure a larger amount of grain took water at Fort William than during any similar period in the history of the country. That is probably true; but it is also true that there was either one or two days when grain did not take water. There were only 8 or 10 days in which grain could take water, and the seizure of the grain held up that grain for that time. Much more grain would have taken water had the seizure not taken place. The minister rested his case practically on the near approach of the close of navigation. That was the chief reason why it was necessary to seize instead of buying—in order to get the summer outlet for the grain. But long after navigation closed, as the Minister of Railways told us the other night, the Government itself, over its own railroad, gave a rate on grain to Montreal absolutely identical with the summer rate. Thus the minister is left without a shadow of a ground of reason for seizing the grain at the time he did. The grain could have been bought at any time, and could have been brought forward at any time during the whole winter at exactly the same rate as it was being shipped out at Fort William on the day it was seized. There was therefore no reason why that grain should not have been bought in the ordinary course of trade, so far as facilities for bringing it forward or the cost of transportation was concerned. In the ordinary way it would have reached its ultimate destination. As a matter of fact it has not yet reached its destination, although the course of trade was interfered with.

When in Winnipeg recently I asked a gentleman connected with the Grain Exchange what estimate was placed on the losses of dealers owing to the disarrangement of the market. He said the amount was variously estimated, but that the minimum was $200,000 of direct loss to the men engaged in the grain trade in Winnipeg and the western country owing to the action of the minister. I ask the minister if he thinks it was right to disarrange the trade of our country to an extent sufficient to cause a loss of $200,000 to men who my hon. friend says were speculators. Well, they were speculators; there is no doubt about that. So is every man who buys a stock of groceries and puts it into his store and sells it out again. The grain

trade of Canada and of the world is carried on by speculators. They are just as necessary a part of the grain business of our country as the elevators or the railroads or as my hon. friend's grain commissioners. There must be men to buy and sell grain or grain will not be bought and sold, and when the minister lightly suggests that because it was grain dealers who lost the $200,000 it is a matter of no concern to the people of the country, I can only say I cannot agree with him. The grain trade is in the hands of the grain dealers in large measure; just as the Grain Commission controls the direction of the trade in a certain way, just as the railroads carry the grain and the elevators handle it, so the grain dealers are the men through whose hands it passes.

Mr. WRIGHT: I understood the hon. member to say that the grain commandeered was owned by the farmers who had shipped it to Fort William in cars. The hon. member now says that the bulk of the grain was owned by grain dealers and not by the farmers.

Mr. OLIVER: I do not wish to be understood as having said that the grain commandeered belonged to the farmers. I was speaking of the general situation. That is a matter with which I shall deal later. The grain crop goes through the hands of the grain dealers. If the grain dealers dropped $200,000 by reason of the interference of the Government, they will see that they are insured against any further contingency of that kind by taking it out of the farmer in any future business transactions. As a matter of fact, the hon. member for Q'Appelle (Mr. Thomson) pointed out this session that since the grain was commandeered there has been a greater spread between the track and street prices than before, simply because the dealer was insuring himself against any further interference by the Government in the transactions of the grain trade.

Mr. BURNHAM: Then the speculator did not lose. That proposition has gone by the board.

Mr. OLIVER: The speculator says he did lose. Part of the grain that was in the elevators at Fort William and that was seized belonged to the farmers, part of it to the millers, and part of it to dealers.

Mr. WRIGHT: In about what proportions?

Mr. OLIVER: I understand that about 3,000,000 bushels belonged to the farmers. That was grain that had been shipped to Fort William in car lots by the farmers who produced it. It is a remarkable fact that it was 3,000,000 bushels that was held by the Government. Nearly 2,000,000 bushels was returned to the millers and seven and a half million bushels was returned to the dealers, but 3,000,000 bushels was held by the Government—the 3,000,000 bushels that belonged to the farmers.

Mr. WRIGHT: Surely.

Mr. OLIVER: Surely. And on the 3,000,000 bushels that belonged to the farmers the farmers lost the benefit of the advance in price to which they were entitled, and which they would have received if the Government had not seized their wheat. The Government loaned back to the dealers and back to the millers, but they did not loan back to the farmers.

Mr. BURNHAM: Was that all the wheat they had?

Mr. OLIVER: No.

Mr. BURNHAM: Then, why did they not sell the other wheat?

Mr. OLIVER: The reason why they did not sell all their wheat was that the Government did not facilitate the transfer of that wheat to the Atlantic seaboard. They have the wheat on their hands yet, but not that particular 3,000,000 bushels. It is a remarkable fact that the amount of wheat which the Government held synchronized with the amount of wheat which the farmers had in the elevators, and while the handling of the grain of the miller and the grain dealer was facilitated, the farmer simply lost without recourse, and he has no recourse yet. I think it is only right to point out that, in this case, as in other cases I have mentioned, the Government has absolutely disregarded, not only the interests, but the elementary rights of the greatest of our wealth-producing industries. It has set up from time to time that it has done these things in the interests of the prosecution of the war, but, in this case, if I may so, it has been caught with the goods. It commandeered wheat on the plea of urgency, and it has that wheat yet, and those on whose behalf it commandeered the wheat have not taken it away and have not furnished the transportation to take it away. Could there be anything with less excuse and less reason than the action which this

Government took; could there be less ground for blaming the war conditions or the needs of the Allies?

Mr. WRIGHT: Might I be allowed to make a comment or two upon some of the statements made by the hon. member for Edmonton? (Mr. Oliver). As a matter of fact we have absolutely no proof, beyond his assertion, as to the amount of grain which was held by the farmers. From the little knowledge I have of how grain is handled in the western country, I say that there is a comparatively small amount of grain held by the farmers in the elevators at Fort William. Occasionally we meet a farmer of a speculative turn of mind who has become wealthy by growing grain in a large way, a man perhaps owning 50,000 acres, and he will handle his grain as an ordinary grain dealer. A few men of his kind may have had grain in the elevators at Fort William, but the average farmer working a section, or a half-section or a quarter-section does not, as a rule, have very much grain in the elevators at Fort William, or anywhere else, except at home where he may have a little stored waiting for the price to rise to the point at which he can safely sell it. He will use the elevator in his home town to some considerable extent, but I have not known many cases where a farmer would ship his grain to Fort William and hold it there. If the men engaged in the grain business have suffered as seriously as my hon. friend from Edmonton would suggest, the grain probably belonged to a man in the grain business and not to the farmer in the West. If a large quantity was held by the farmer, it would certainly mean no loss to the grain dealer, because he would have nothing to do with it; he would have advanced no money upon it, and would therefore have no claim upon that grain.

My hon. friend protested against the Government commandeering that grain and not taking it away immediately to the Atlantic coast. I ask, what difference would it make whether it was in the elevators at Fort William or down at the Atlantic coast, when it could not be shipped out of the country? What possible difference could it make to the grain dealer?

Mr. OLIVER: What earthly purpose was served by commandeering the grain if it was not possible to get it forward?

Mr. WRIGHT: We will suppose that a gentleman in the Old Country wired an order to a grain dealer at Fort William to buy him so much grain. The grain dealer secures that grain, and he sends it as far as Fort William and has it stored on the order of the man who has purchased it. He has done his duty; he has complied with the terms of the order. It is then up to the man in the Old Country who has ordered that grain to get it away, to provide the accommodation across the Atlantic so as to allow the grain to go forward. If this Government, at the request of the people of the Old Country, secured so many million bushels of grain, I think they complied with the requirements of the case; they secured the grain. It may be a question, as the hon. gentleman indicates, whether they took the wisest course, or not. That is a question for debate.

Mr. OLIVER: Hear, hear.

Mr. WRIGHT: But I think they performed their duty when they secured the grain, and we have the positive assurance of the minister that it has gone forward as fast as it could be removed from the Atlantic coast. What more could have been done? I ask any reasonable man in this House, or in this country, whether the Government has not done all it could do? I do not think that the farmer in the West has suffered loss to the extent of a five-cent piece, and I do not think the dealers have lost very much by the action of the Government. They might have lost if the Government had been in a position to take away the grain at once. They might have suffered some annoyance from delay in replacing the grain taken away. But when it was found that the grain could not be removed immediately they were allowed to take some of the grain and to replace it at Fort William at a later date when it would suit the Government to have it removed to the Atlantic seaboard. Consequently, they suffered no loss. In fact, I do not see how anybody suffered loss. I think the farmers of the West, as a class, got a better price for their grain, following the action of the Government, than they would have got had the Government not taken that action, because the very fact that the Government stepped in and was storing grain had the effect of putting up the price. The price went up, and remained up for some considerable time as the result of the Government's action, and then it dropped back to the normal, and it has been lower ever since.

Mr. OLIVER: I understood my hon. friend to say that the action of the Government in commandeering the grain raised the price throughout the West?

Mr. WRIGHT: Yes.

Mr. OLIVER: Then had the Government not better commandeer a little more and raise the price again?

Mr. WRIGHT: If the hon. gentleman suggests that I have no objection at all.

Sir GEORGE FOSTER: Does my hon. friend make that suggestion?

Mr. OLIVER: If the Government can raise the price substantially on 100,000,000 bushels of grain by commandeering 10,000,000 bushels we all agree that they should do so.

Mr. WRIGHT: The fact of the matter is that the price of grain went up, but when the grain could not be got out of the country the price began to fall. Compared with the price at Liverpool, I say that owing to the action of the Government the price was higher in the West than it was before, and than it is to-day.

Mr. OLIVER: Will the hon. gentleman not urge the Government to heave it up again, to commandeer another 10,000,000 bushels?

Mr. WRIGHT: I leave that to the hon. gentleman, who seems to have the well-being of the farmers of the West at heart. Why does he not take action?

Mr. OLIVER: Because I do not think that the action of the Government had the effect which my hon. friend says it had.

Mr. WRIGHT: The hon. gentleman is quite entitled to his opinion, and I think I am entitled to mine, and I think I know as much about the grain business as the hon. gentleman. I do not think that very much fault can be found with the Government for taking that action. I admit that it is a question open to debate, and every man is entitled to his opinion. In my opinion it was the wisest course to take in order to be sure of obtaining that much grain, because, if it had been left to be purchased in small quantities, as the hon. gentleman thinks it ought to have been, they might not have secured the grain as easily as they did. I do not see what good would have been accomplished by taking any other course and I do not see any point in the objection that the hon. gentleman has raised. I think he is actuated more by a desire to find fault with the Government than by any other motive.

Mr. OLIVER: May I ask my hon. friend this? He considers that the action of the Government in commandeering the wheat raised the price and thereby conferred a benefit on the country—the farmer.

Mr. WRIGHT: I did not say on the country; I said on the farmer.

Mr. OLIVER: On the farmer; but the reason given by the minister is that buying the grain in the ordinary course of business at that time would have raised the price.

Mr. MEIGHEN: I cannot say that I am surprised that the action taken by the Government in this case has met with the opposition of certain hon. members on the other side of the House. My experience of recent months has been that the more commendable the action the more violent and direct is the opposition. My imagination would fail me were I to try to conceive of any course this Government could take that would not be described by the hon. member for Edmonton (Mr. Oliver) as an attack upon the farmers of the West. If we commenced a system of distributing public money to each farmer individually, we would be met with a complaint by the hon. member that we were robbing the farmers of western Canada.

Mr. OLIVER: No harm in my hon. friend trying it.

Mr. MEIGHEN: But my hon. friend's argumentative attacks are often transparent fallacies. My right hon. friend the leader of the Opposition (Sir Wilfrid Laurier) takes the ground that the course adopted by the Government was an extraordinary one and could only be justified by extraordinary causes. I do not know that I can take any exception to that pronouncement. The leader of the Opposition, while by the accident of fate, he has passed through the world as a Liberal, is to those of us who know him best, and I think to the country as a whole, well understood to be about the most pronounced Conservative, in the right meaning of the term, that there is in Canada. If this Government does strike out upon new and strong lines in any matter, the first and the last to oppose is the leader of the Opposition. When we seek to ground our course on the plea of emergency, he is the loudest in disap-

proval, and sets to work to show, not always with success, that no such emergency exists. In the case of the appropriating of the wheat, the Government were faced with the necessity, as it appeared to them from the documents in hand, of procuring a large amount of wheat in a short time with the probable necessity, through their agency or otherwise of procuring a larger quantity in a short time in the future. This appeared to us in definite form on the 23rd November. The courses open to us have been mapped out, and I do not need to relate them at length. But the Government could not go into the market, through an agent, and procure the wheat within the time limited unless with results which we deemed would be inconsistent with our duties as agent and trustee. The Government, under the circumstances, selected men acquainted with the business whose advice would be valuable. The advice of these men was obtained, and not only under the circumstances were we able to obtain it as to the course to be pursued in respect to the actual purchasing of the grain, but as to the difficulties that would be met with in the purchasing of it by other means and as to the best method of solving those difficulties. The preponderance of view was that the proper course, consistently with our duty as the agent of the allied commission, and to the producers in Canada was to take the grain by appropriation. The views obtained were obtained in a confidential way as should be done in these cases. Two of the men whose views were so given have seen fit to state in part what they said to the Government and not to state the rest of it, but even with that I do not feel compelled to go farther and put the whole position assumed by these men, and assumed by the others who were called in, in reference to the matter, upon record. It may become necessary later on.

Mr. KNOWLES: Is it true that one of the largest and most reputable commission houses in Canada stated that they could get the grain without any extraordinary means?

Mr. MEIGHEN: It is quite true that there was scarcely a commission house in Canada that was not ready to buy the grain at the usual rate of a cent a bushel. It would be a very strange commission house that would not be anxious to do that, but I am justified in saying this, in answer to my hon. friend from Moosejaw, that there was not one who did not readily agree that for the Government to go into the market and get the grain that was required would result in the inflation of the market——

Mr. OLIVER: Hear, hear.

Mr. MEIGHEN: The hon. member for Edmonton says "hear, hear". I know what he has in the back of his head—that had we gone about it by the means of sending of agents into the market the farmer would have received the benefit. No one denies that the farmer would have got the benefit just as he has it now. But there is one result which would have accrued, which has not by our method accrued, and that is that immense profits which would have gone to the middleman, who is usually the object of jealousy and attack on the part of the hon. member for Edmonton and other members of the Opposition, would have been extracted from the pockets of the Allies for whom we were acting. The hon. gentleman does not say "hear, hear" to that, but he knows it.

Mr. OLIVER: Grain is handled for a certain commission, a percentage of half a cent a bushel, and I suppose the buyers would have bought it on that commission.

Mr. MEIGHEN: No doubt they could have bought it, and they would have been very glad to have done it. It will be observable to hon. members in this House that after villifying the middlemen, and all who look like middlemen, if it is necessary for the purpose of opposing the Government of the day, the hon. gentleman can quite readily assume the role of the champion of middlemen and agents. He says, and the leader of the Opposition backs him up in this assertion, that every purchaser is ready to pay a commission, and consequently the Government should be ready to let the commission man come in and get his commission on every purchase.

Mr. W. M. MARTIN: Would it not have been possible, without employing any commission men at all, to have done exactly the same thing that you did in the purchase of seed grain—employ the men in your own department to purchase that grain, they getting their salaries and no commission?

Mr. MEIGHEN: That undoubtedly would not have been possible. The only way to have got it otherwise would have been to have employed some one to get it

on the market and pay the usual commission.

Mr. TURRIFF: You had Wesley Allison.

Mr. MEIGHEN: I have no doubt that had these hon. gentlemen been in power that is just the course they would have pursued. I am going to the heart of this question; I am going to discuss it seriously, as it deserves.

Mr. KNOWLES: And it needs discussion.

Mr. MEIGHEN: It needs discussion and it will get discussion. Hon. gentlemen say that we could have pursued the course of putting an agent, or agents, into the market and commissioning them at so much per bushel to buy the grain. It is argued that the amount procurable was not large proportionately to the amount traded in at that time on the grain exchanges. In one sense that is true, but not in any sense that means anything in relation to this discussion. It is true that grain is traded in by the millions of bushels on the Grain Exchange. The same grain is traded in perhaps ten, perhaps fifty, perhaps a hundred times, and consequently the whole volume of trading is very great. The thirteen or fifteen million bushels, as in this case that we have in mind, might, before it ultimately reached a purchaser for export, have been traded in ten or a hundred times. But the purchase for actual export and use of thirteen or fifteen million bushels is a very large transaction, even in relation to the trading of the Grain Exchange. It may represent five, ten, or twenty times that amount of trading in volume as the grain in the usual way of trade proceeds. Now, I think I have made that clear.

There was not one of those who were called to give their opinion on the case, and who should have been qualified to give that opinion, who did not agree that it would have been utterly impossible to conceal the principal behind the agent, and to avoid, in part at all events, the result which accrued the year before—an inflation of the market to the benefit of the dealer and speculator in grain, and to the disadvantage of the consuming public and the Allied Commission. It was felt at the time that there would be some dislocation in regard to contracts already entered into, and means were canvassed by which that could be reduced to the minimum. The advice of those men was taken upon that and was followed, and I think they and the country are to be congratulated upon the thoroughness of this work and the success which attended the reducing of that dislocation to a minimum. That, of course, appertained to the dealer alone, a man who is entitled to be treated fairly by Governments as by all, and that was the principal objection—may I go further and say the only objection—urged against the course taken by the Government by those called in. No obejction against the course taken was offered by any one called in to advise the Government, and no objection, except for political reasons, could be urged to-day by any one except as it affected the middlemen, the dealers, and the speculators.

Mr. OLIVER: Who were the parties whom the hon. member consulted?

Mr. MEIGHEN: Two of them the hon. gentleman knows; the others were eastern men. Personally I have no objection to giving the names; but, as the matter concerns the Department of Trade and Commerce, and as they were called by the minister, I will leave him to decide whether or not he will give their names.

Mr. OLIVER: In all cases they were dealers or speculators.

Mr. MEIGHEN: Oh, no. The hon. gentleman seems to know who they were, but he wants to ask in order, if possible, that the names may be published.

Mr. OLIVER: We know perfectly well that Mr. Crowe of the Winnipeg Grain Exchange and Mr. Crerar of the Grain Growers' Grain Association were consulted by the hon. gentleman, and they are dealers and middlemen.

Mr. MEIGHEN: Yes, and the objections were solely from that viewpoint; nor was it suggested by any one, nor would it be suggested to-day, except for purely political reasons, that from the point of view of the producer, the farmer, any possible objection could be taken.

Mr. OLIVER: Did the hon. member or any of his friends consult the western farmers on the subject.

Mr. MEIGHEN: I do not think that the association for which the hon. gentleman often stands up will stand beside him when he says that Mr. Crerar, of the Grain Growers' Grain Association, in no sense represents the western farmer. I am led to believe that he, in his position as representative of the Grain Growers' Grain Association, and his institution exist for the benefit of the western farmers.

Mr. OLIVER: And Mr. Crerar advised against this seizure.

Mr. MEIGHEN: Mr. Crerar did not advise against the seizure from the point of view of the farmer. So far as his advice and criticism went, they were based solely on the interference that would be caused to the trade in the hands of the middleman and the speculator. If I were to tell the hon. gentleman all that was said from the point of view of the farmer, I am sure it would be no comfort to his argument this afternoon. From the point of view of the farmer every consideration advanced was in favour of the commandeering.

Mr. OLIVER: It is only fair, when the hon. member brings authorities to bear upon the subject, that he should state what those authorities said.

Mr. MEIGHEN: I will be just as fair, and fairer, I think, than some of the speakers who have preceded me in this debate. The opinions of the gentlemen I do not intend to state, nor to give their names, further than they have given them themselves. The minister may do so if he desires.

Now we come to the actual results of the commandeering. To purchase in the open market, as to purchase by the method taken, would, as can be easily understood by any one acquainted with the trade, clearly bring about an increase in price; but as to which method would have the greater effect it was difficult to measure. Both methods would very likely bring about a rapid increase in price. To have adopted a method of purchasing in the open market within the time desired would immediately —all were agreed on this and all agree today—have resulted in something of the nature of an inflation in price. I ask hon. gentlemen opposite and also hon. members on this side: Would this Government, commissioned as a Government to act as the trustee of the Allied Commission, have been justified in taking a course which would have added to the value not only of all the grain in the West, but of the grain sought to be purchased in store and brought about a largely inflated price for the benefit of those who held it in store and for the loss of those for whom the Government were acting?

Mr. OLIVER: It did not seem to bother the Government very much in the case of shells and fuses.

[Mr. Meighen.]

Mr. MEIGHEN: The hon. gentleman is anxious now to get on to the subject of shells and fuses. Some of his friends are just as anxious to get off the shells and fuses. Now we are discussing the question of wheat, and I intend to keep to it.

Mr. KNOWLES: I think honestly the hon. gentleman is sorry that he ever touched the wheat last fall.

Mr. MEIGHEN: The hon. gentleman may decide what his opinions are; I presume he will give me the prerogative of deciding mine. I am discussing the effects of the course taken. The effects of the course we did not take would have been clear; it would have added at once very largely to the value of the grain in store to the benefit of the grain speculators. It is really refreshing to hear the hon. member say that some speculators told him that the loss to those men was $200,000, and that he thinks that we committed a great wrong. It seems to me that it is only about three weeks since the hon. member argued here that they were a band of ringsters, a combine to extract money from the western farmers by depressing the price of wheat. Now he weeps tears because he finds the course we pursued took $200,000 from their profits for the benefit of the Allied Commission. For myself, I do not think it did. They failed to make the money they otherwise would have made; there is no doubt about that, and they may regard that as a loss. They would have made the money if we had taken the course of buying in the open market all the grain they held in store for speculation; and that may be how they measure their loss. If we had put commission merchants into the field to buy, every cent of rise in the price per bushel would have meant $130,000 out of the pockets of the Allied Commission and would not have meant a dollar in the pockets of the farmers of Canada beyond what by the rise actually took place. The course we pursued had the effect of raising the value of the wheat back of the elevators in Fort William in the hands of the farmers and unsold; it had the effect of raising the level of markets all the way westward. The other course would have had that effect also; but this course did not have the effect of raising the value of the grain in the hands of the speculators and taking it out of the pockets of the Allied Commission, whereas the course my

hon. friend recommends would have done that.

Mr. OLIVER: What we were recommending was that they should leave trade to follow its own course when there was no urgency.

Mr. MEIGHEN: The course the hon. gentleman recommends would have put money into the pockets of the speculators of whom he is the champion this afternoon, and would have taken it out of the treasuries of the Allies. But the money that went to the owners of grain, by reason of the rise in value of the grain after the commandeering, went into the pockets of the farmers, and they have got it.

Mr. OLIVER: Could the hon. gentleman raise the price again?

Mr. MEIGHEN: When new cases arise we will consider the circumstances and will be governed by the same considerations that governed us before, and I may tell the hon. gentleman that he has said nothing in this debate that will be considered worthy to enter into the discussion of that matter.

Mr. OLIVER: Seeing that the Allies have not got much of the wheat yet, it seems likely they will not deal with the Government again.

Mr. MEIGHEN: The hon. gentleman is complaining now on the part of the Allies. They got their grain at $1.04\frac{3}{4}$, whereas his method, according to his own argument, would have given them the grain at $1.30, or something like that.

Mr. OLIVER: They have not got it at all.

Mr. MEIGHEN: They have got it so far as our delivery is concerned.

Mr. OLIVER: But they cannot eat your delivery.

Mr. MEIGHEN: Had not the hon. gentleman better go across and help them? We have fulfilled our contract. Now, if the hon. gentleman has anything pertinent to the argument to interject I have no objection to be interrupted, but surely he does not think that he deceives me by complaining of the conduct of the Allies and attributing that to this Government. We took it for granted—and we have no reason yet to think we were misled—that the Allied Commission desiring the grain within a very limited time and would be able to take deliveries and get them over. No doubt the Allied Commission believed they could do so; there is no question they had reason to believe they could. But the exigencies of war are beyond the exact measurement of even the Allied Commission, though possibly not beyond the exact measurement of the hon. member for Edmonton. The exigencies of war they were not able to take with accuracy into consideration and adjust their conduct exactly to them. Events arose, doubtless, which they had not in contemplation, and they were not able to get the grain across—which was their part of the work—within the time they had anticipated. But our end of the bargain was fulfilled, we lived up to our end of it by getting the grain for them and getting it at a fair price, the market price. That was the fulfilment of our duty to the Allies for whom we were acting.

Mr. KNOWLES: How much did the Allies ask should be secured for them?

Mr .MEIGHEN: Hon. gentlemen have asked that ad infinitum, and they have been told it, so far as we can tell it, by the Minister of Trade and Commerce. The order that was given us was filled. There were other messages and negotiations preceding the order which affected the necessities of the order as actually given, and which made it our plain duty to have that order filled within a very limited time, and, to that end, to get the grain by the expropriation method. Any other method would have inflicted upon those for whom we were acting a severe loss from which the farmers themselves would have gained no benefit beyond what they have gained by the method adopted.

Mr. KNOWLES: I desire to correct the statement of the hon. minister. I did not ask the Minister of Trade and Commerce before what the quantity was. I did ask as to the time. Of course, if the minister does not care to tell the amount, that is all right.

Mr. MEIGHEN: The question was asked and answered, and I thought it was the hon. member from Moosejaw who asked it.

Mr. KNOWLES: I was not here when the question was answered, and perhaps the hon. gentleman will tell me what the answer was.

Mr. MEIGHEN: The amount is represented by the amount delivered.

Mr. KNOWLES: But how much did they ask the Government to secure?

Mr. MEIGHEN: The figures are on record—some 13,000,000 bushels were actually commandeered.

Mr. KNOWLES: Did the Allies ask for 13,000,000 bushels or what more did they ask for?

Mr. MEIGHEN: The amount they got represented what they asked for.

Mr. KNOWLES: The hon. gentleman does not need to answer if he does not wish to do so.

Mr. MEIGHEN: Has the hon. gentleman understood that it was 13,000,000 bushels?

Mr. KNOWLES: Did they ask for 13,000,000 bushels?

Mr. MEIGHEN: I do not recall the exact wording of it, but it was put within such limits that the amount we actually procured for them in this way fulfilled the order. The hon. gentleman knows that it is not possible to place on record the communications that passed in regard to that matter between this Government and the Allies; if not he has not any adequate sense of his responsibilities as a member of Parliament. These communications, as one can well understand, contain statements of fact and apprehensions which should not be made public, and no man with a proper sense of duty would ask that they should be made public.

Mr. KNOWLES: Surely you can make that much public.

Mr. MEIGHEN: That much has been made public.

Mr. KNOWLES: When?

Mr. MEIGHEN: In the House—now. How often does the hon. gentleman want an answer? The order was given in such terms that the grain procured at the time amounted to a fulfilment of the order as to the grain required and as to the time. I do not see that any more is pertinent to the case. It is argued that there was a dislocation of trade, and a peculiar twist of reasoning was gone through by the hon. member for Edmonton (Mr. Oliver) that all the grain except that received from the farmers we gave back—that the farmers had three million bushels and the dealers and millers had seven and a half million bushels, and that we gave back the grain to the others, and we kept that of the farmers and have it yet. The grain we gave back was returned within ten days, or rather it was not given back at all but merely loaned in order that there might be no stoppage in the fulfilment of orders and the outflow of grain at Fort William. It was all done under contract, duly secured, for the return of the grain in the same channel, and it was returned—and that is all there is to this assertion about delay. And not only that, but by the centralization and control exercised at Fort William by the adoption of that method, greater speed was made than ever was known before in the history of that port. The hon. gentleman has complained of a delay of a day or two. There was no delay; there was no cause for delay. I know that the order was given on Saturday night and the following morning, on request from Fort William, I myself instructed them, on behalf of the Government, that there should be no delay whatever in the loading of any vessel or in the pouring out of the grain through the funnel at Fort William.

Mr. MARCIL: Was this the only order received from that commission?

Mr. MEIGHEN: No, other orders have been received at various times, perhaps not from this special commission.

Mr. MARCIL: How were they dealt with?

Mr. MEIGHEN: I do not recall whether it was in pursuance of a foreign order or not, but we did on a former occasion commandeer another class of grain. Other orders have been filled by purchase, but in those cases there was time enough to make purchases without unduly affecting the market and without loss to those for whom we were acting.

I was dealing with the question of delay. By means of the organization and centralization of control in the department, so far from there being any delay in the pouring through of the grain, there was expedition, there was facilitation, there was a saving of time. Within a period of four or five days after the commandeering of the grain, there was a larger issuance of grain from Fort William than ever before in the history of the port. Let me give, as it were, a picture of the method followed. Fort William is like a great funnel through which the western grain pours. After the commandeering, the grain continued to pour through that funnel as before but expedited by the fact that the Grain Commission controlled the vessels into which the grain went, and were able to see to it that each

vessel was loaded fully at one elevator, instead of passing from elevator to elevator. The grain continued to pour through that funnel with greater expedition than it had come through before. But while it was doing so such grain as was necessary to fill orders went to the fulfillment of those orders, and the remainder of the grain as it entered the funnel was appropriated to the purposes of the Government order. That is a picture of what actually took place. There was virtually no dislocation in that regard. There was great fear of dislocation. There was, indeed, very great apprehension, particularly on the part of grain dealers in Winnipeg, that it would not be possible to meet these difficulties in any adequate way, and that these dealers stood to suffer great loss. But when they were apprised of the actual method adopted to adjust the situation and to meet all their legitimate demands, they were one and all loud in their approval of it. I wish to endorse what the Minister of Trade and Commerce says in regard to these men. It was our desire to keep down their losses, to keep down even their apprehension, to the lowest possible point. It was their desire, I believe, to meet us in every way that they could, even if they felt that it would be at a loss to themselves. They did meet us in a proper spirit; they assisted the Government by every means in their power in the carrying out of the appropriation in such manner as to result in the least possible discomforture and inconvenience. I believe also that the farmers of the West, except, possibly, a few who may be of the same mind as hon. gentlemen opposite, or too much under their influence, have approved the course adopted.

Mr. W. M. MARTIN: I would like to ask the minister if he has any information as to how much of the grain in the elevators belonged to the farmers?

Mr. MEIGHEN: I cannot give the exact figures, but I am glad the hon. gentleman mentioned that. Very careful inquiries were made before the appropriation took place as to about what percentage would be unsold in the hands of the farmers. The figure that was generally adopted —indeed, I think it was the only percentage that was suggested—was twenty-five per cent. I think the Estimates given were all about the same; it has worked out something like that. There have been complaints that grain that really had not been appropriated at all was paid for by grain companies at the commandeered price, on the representation that the grain was included in the appropriated grain. It may be—indeed I think it is a fact—that grain that was never really appropriated and that still remained the property of the farmer was represented—perhaps innocently in some cases—by grain dealers as being appropriated and was settled for by the grain dealer with the farmer at the appropriated price. We have had complaints along that line. In fact, the Grain Commission, whose duty it has been to follow up such cases wherever complaint was made, have compelled grain merchants in many cases actually to pay to the farmer the additional price because they had settled on the representation that the grain had been appropriated, although it had not been appropriated at all. The final outcome of it all is this: about 3,000,000 odd bushels of farmers' grain and about 10,000,000 odd bushels of speculators' grain were appropriated at Fort William. All of it was paid for at the market price. Previous to the date of appropriation the market had been a slightly rising one. Whether it would have continued to rise an hour longer, no human being could say. It might have fallen the very next day; we cannot tell—it might have risen. At all events, previous to the appropriation the price had been rising, and $1.04⅜ was paid for No. 1 Northern wheat. One would almost think, to hear hon. gentlemen opposite argue, that to appropriate grain was to commit some awful injustice; that to buy grain or anything else at the market price was doing the owner or proprietor of the grain very serious injury. There is no doubt the fact that unless circumstances otherwise demand it is the right of an individual to choose his own time of selling, but to say that serious injury or any injury is done is to exaggerate the facts. I have heard it argued by hon. gentlemen opposite—I think by the hon. member for Edmonton—why do you not expropriate the manufacturer's product? You expropriate the product of the farmer; why not expropriate that of the manufacturer? Well, there are some manufacturers in this House and I put to them the question whether one of them would not be very glad if the Government came along and expropriated all his product at the market price? Would there be a happier day for him in the whole history of his manufacturing career?

Mr. OLIVER: Not if on a rising market.

Mr. MEIGHEN: If on a rising market, neither he nor any one else knows whether the market will rise for another hour. If he does know it, he is able to go on the market and buy against his belief and make money on the rise. However, I do not say that it would be the part of any farmer to go and buy against it. He got the full value of the grain that he had in store the day that it was appropriated, and he got more than that: he got the added value to every bushel that he had behind, and I do not think there were many farmers in western Canada of those who had grain in store who did not have several bushels behind for every one that they had in store. He got the profit that accrued by reason of the increment of value added to what he had left, and he got a fair price for every bushel that he sold. So that, taking it all in all, the farming community of Canada, by virtue of the course taken, were the gainers not by thousands, but by hundreds of thousands—yes, by millions. They would have been gainers also had we taken the other course. The speculators were not by our method losers. On the other hand, they were not the gainers that they would have been if we had taken the course suggested by hon. gentlemen opposite. They were not the gainers at the expense of our principals, the Allied Commission in Europe. That is what I conceive to be good Government business; that is the course a good Government should pursue. Where it can eliminate the middleman it should do so; where it can act for the benefit of its principals, it should, as any other agent do so faithfully and firmly. That is what we did in this case; we did it to the advantage of the producers and to the advantage of our principals, and they are the parties whose interests we were bound to have in mind.

At six o'clock, the House resumed and then took recess.

The House resumed at eight o'clock.

PRIVATE BILLS.

CONSIDERED IN COMMITTEE—THIRD READINGS.

Bill No. 76, for the relief of Christopher Sinclair.—Mr. Douglas.

Bill No. 79, for the relief of Hope Fothergill Baily.—Mr. Thoburn.

Bill No. 92, for the relief of Robert Charles Vondrau.—Mr. Scott.

Bill No. 93, for the relief of Percy Lynn Woods.—Mr. Boys.

Bill No. 88, to incorporate The Manitoba and Saskatchewan Bible Society.—Mr. Schaffner.

Bill No. 82, to incorporate The Fire Insurance Company of Canada.—Mr. Nesbitt.

SUPPLY.

The House in Committee of Supply.

Mr. J. G. TURRIFF (Assiniboia): Ever since the House assembled in January last we have been waiting with a good deal of curiosity to know what reasons would be given by my hon. friend the Minister of Trade and Commerce for the unusual course that was taken by the Government in commandeering the wheat required for the Allied countries. We certainly expected that there would be some good reason behind the action that would justify the Government in dislocating the trade of the country to the extent which it did, but when my hon. friend the Minister of Trade and Commerce, and his colleague the Solicitor General, the two ministers who were interested in carrying the transaction through, gave their explanation before the Committee to-day we found that they had really no excuse to give other than that in their judgment the course which they took was the best in the circumstances. My hon. friend the Solicitor General, complained that there was nothing that the Government could do that would satisfy the Opposition. I am prepared to agree with the hon. gentleman that we cannot expect much from this Government that we on this side of the House would be able to agree with. One reason that was given by the hon. the Solicitor General, and one which he seemed to think would cover up everything else, was that, by commandeering 13,000,000 bushels of wheat last November, the Government raised the price of wheat to the farmer in the West. Let us look into this for a few moments to see what justification, if any, there is for that statement on the part of the Solicitor General. At the time that the wheat was commandeered, there were at least 200,000,000 bushels of wheat in the West to be sold.

My hon. friend suggests that the action of the Government in taking 13,000,000, out of 200,000,000 bushels, had the effect of raising the price of wheat and making every bushel that the farmer had worth more than it was before. You might as well say that if a dozen farmers brought in 200 bushels of potatoes to sell on the Ottawa

market, and one householder in Ottawa bought thirteen bushels, that would put the price of potatoes up all over Canada, because the percentage would be the same. That is only one of the absurdities of the argument of hon. gentlemen opposite. You must remember that the price of wheat went up all over the United States at the same time. As a matter of fact, our Canadian market simply followed the trend of the market of the United States. For many days prior to the 27th November, when the minister commandeered this wheat, the price had been advancing, and surely no man in his senses would say that, because my hon. friend took 13,000,000 bushels off the market by commandeering it, or in any other way, he had put up the price on the 200,000,000 bushels in Canada and on the 700,000,000 or 800,000,000 bushels in the United States. The 13,000,000 would be about one per cent of the wheat that was affected. And our hon. friends offer that to the farmers of the West as an excuse for the action the Government took in commandeering this wheat, and try to get out of an awkward corner by attempting to make the farmer believe that the action they took has given him a better price. It is not possible to tell absolutely what my hon. friend had in his mind when he did this. I would be inclined to believe that the minister did what he thought was the very best under the circumstances. I am inclined to believe, also, that his colleague, the Solicitor General, thought he was going to pull off a good political stunt. At that time there was a good deal of agitation for free wheat, provided I may be allowed by the Minister of Trade and Commerce to mention free wheat again in this House this session. There was considerable agitation at that time for free wheat, and the Solicitor General took this view of the matter: Now, here is an opportunity to commander 13,000,000 bushels of wheat. Usually just as navigation is closing for the season there is a drop in the price of wheat. Of course, my hon. friend had to take some chances, because for a considerable time the price of wheat had been going up; but as soon as navigation closes the price usually drops down. The Solicitor General, I imagine, expected to find himself in the position that the Government had commandeered a certain amount of wheat, a large percentage of which was owned by the farmers in the West, and as these particular farmers would have received an enhanced price for their wheat, it would have shown the acuteness of the Government and that the Government were working in the farmers' interests. Unfortunately for the calculations of my hon. friend, if that was his view, the very opposite took place. The commandeering of this wheat, instead of enabling my hon. friend to make political capital, has acted as a boomerang. The price of wheat kept going up, and the farmers who had wheat stored at that time, and who had to take the price that was offered with no option in the matter, are the men who have suffered and are complaining bitterly about the way they have been treated.

The minister said to-day that it was perfectly right that the farmer, generally speaking, should be allowed to decide his own time and to use his own judgment as to when he would sell his wheat and what price he would take for it. No one is complaining that the price received for that wheat was not a fair price. It is a pretty fair price—$1.04¾ at Fort William for No. 1 Northern. But surely the farmer had the right to say whether he would sell that wheat at that price or not. If my hon. friend had offered to buy that wheat from the farmers very many of them would have sold probably at that price. But there were hundreds of farmers who had wheat down there, and who did not want to sell at that time. These were men who had got their threshing done, had sold a car or two of wheat to settle up the accounts connected with the threshing, the store accounts, and the account for growing the crop. They expected that the price of wheat would go up, and they had shipped their wheat down to Fort William intending to hold it for the spring market. You must remember that a farmer cannot hold wheat in his home elevator. No country elevator, whose business is to handle wheat, not to store wheat for a long time, will allow itself to be filled up by holding the wheat there. A farmer puts wheat in the elevator on the understanding that the elevator has the right to ship that wheat down to the head of the lakes and put it in storage there. It does not make any difference to the farmer; it does not cost him any more to store it at Fort William than it does at the home point. He is quite agreeable to that, and if he wants to hold the wheat until the following spring, or to take advantage of any advance in price during the winter, he puts his wheat in storage at Fort William or Port Arthur. If he desires to sell all he has to do is to sign his certificate, hand it over to the

buyer, and get his cheque for the amount. I want to assure the Solicitor General and the minister that there was a great deal of that wheat held by the farmers. It was acknowledged to-day in the House that there was something like 25 per cent owned by farmers. My information is, and I got it from a prominent member of the Grain Exchange who was in a good position to know—and if I am astray in my figures, the minister, who probably knows exactly, can set me right—that there were over 5,000,000 bushels of this wheat belonging to farmers stored there and not sold on that day. Those farmers have lost quite a sum of money. A number of farmers in my constituency have brought the matter to my attention. One of them whom I ran across down here a month or so ago told me that he had three cars of wheat at Fort William, the wheat was commandeered, and at the time he was speaking to me the loss was about $750. Another farmer in the vicinity of Frobisher had 10,000 bushels of wheat in store at Fort William that he was holding for spring, and at the time he wrote to me about it he could have sold for $1.25 a bushel, whereas the price he got from my hon. friend was $1.04¼, so that he was out $2,500 on the transaction. There are scores and hundreds of farmers throughout the prairie country who have suffered just in the way that the two I have instanced have suffered. I imagine that none of those farmers would object to having his wheat commandeered if it had been a necessity in connection with the war, a necessity for Great Britain or for Canada, or even for any of the Allies of Great Britain; but the position they take, and naturally so, is that this was done without any justification; that the minister could have procured his 13,000,000 bushels of wheat without causing a ripple on the wheat market and without dislocating or disrupting the trade or causing any inconvenience for anybody connected with the trade.

One of the ministers stated this afternoon that the Government had taken advice on this matter. We do not know all to whom they applied for advice, but we know that Mr. Crowe, one of the most prominent grain buyers in Winnipeg, and Mr. Crerar, President of the Grain Growers' Grain Association in Winnipeg, advised against the course which the Government took; at least, they said so in interviews which were published in the newspapers and which I have never seen contradicted. Mr. Richardson, of Kingston, probably the largest grain dealer in Canada, stated that his advice was absolutely against it, and that grain could have been purchased without interfering in any way with the trade, without hurting anybody, and without raising the price. Mr. Richardson instanced one occasion on which there was only 4,000,000 bushels of Kansas red spring wheat on the market, of which his firm had purchased 2,500,000 bushels without raising the price a fraction of a cent. At the very time that my hon. friend commandeered this wheat, wheat was pouring into Fort William at the rate of two or three million bushels a day; so that the question was only one of a week's receipts, and, by giving a broker an order to buy it quietly, the wheat could have been purchased without causing any disturbance whatever.

The Minister of Trade and Commerce stated that you could not buy from the farmers. I do not think that is correct. On the very day that my hon. friend commandeered that wheat, there were millions and tens of millions of bushels of wheat throughout the West, every elevator where the grain had been threshed being practically filled to its capacity at the end of November. As I pointed out the other day, my hon. friend could have bought that wheat, because the market price for wheat in the elevators of the West was practically ten cents a bushel less than the market price for wheat on the track ready to be taken to Fort William, for which the price of $1.04 was paid. It would have been a boon to the country to have taken that wheat out of the elevators in the West, and it could have been taken out by the National Transcontinental and been landed at Portland or at St. John, provided that the Government had given the same rate over the whole route as over the part from Armstrong to Quebec, and in that way they would have procured the wheat at a lower price for their customers, the Allied Governments. Yet my hon. friend or his colleague this afternoon laid great stress on the duty of the Government to buy this wheat at the best possible price, I think, for the Kingdom of Italy. In that case, why did they buy November wheat on the 27th of November? Why did they not buy December options? At that time December wheat was six or seven cents a bushel less than November wheat; and, as the minister apparently knew that they did not need the wheat then, he could just as well have bought the wheat to be

delivered a little later, and secured it at about seven cents a bushel cheaper, if he was working so hard in the interest of Italy, which was to get the bulk of the wheat. To prove that my hon. friend did not need the wheat then, I may say that no sooner had he commandeered the wheat than there was such a rumpus raised by the dealers and the millers that he immediately, out of the 13,000,000 bushels, turned back 7,500,000 bushels to be replaced later on. Therefore he could just as well have bought December wheat and paid that much less for the people for whom he was purchasing.

Another statement made this afternoon was that there was the utmost need of haste to meet the dire necessities of Italy, who, previous to going into this war, had sold herself short of wheat, and therefore had to get a great deal more, and that as a consequence the Government could not wait an hour, but must immediately commandeer the wheat. That sounds very well, but it does not bear analysis. At the ordinary rate of consumption of wheat by people who use wheat flour, the people of Italy from November 27 to the present time would have consumed about 120,000,000 bushels of wheat. That is taken on the basis of seven bushels per head of the population, which would be a fair average for a country of English-speaking people. Italy, however, may not use so much wheat; she may use more of other kinds of grain or of fruit. Let us suppose that she uses only two-thirds as much wheat as English-speaking nations, that would still leave about 80,000,000 bushels that she has consumed from November 27 to the present time. If there had been the necessity for haste which one would judge there was from the way in which this Government undertook to procure the wheat, Italy would many months ago have had at the various ports sufficient tonnage to take 15,000,000 bushels of wheat across the ocean. Therefore the argument that tremendous haste was necessary does not hold good for a minute. As my hon. friend from Edmonton pointed out this afternoon, this wheat was no sooner secured than the Government undertook to satisfy the millers and the dealers. The large millers were given all the wheat they needed, and the dealers were given wheat to fulfil their contracts, but no farmer was given the option of taking his wheat back and making other disposition of it. The farmers were left out of the deal. There were, however, a good many small millers who suffered very much from this high-handed manner of dealing with the wheat.

Take the case of the small miller in the East who had made contracts for 10,000 or 20,000 bushels of wheat. That wheat is in the elevator at Fort William awaiting shipment. The commandeering takes place. These mills have no contract for the delivery of flour to any of the allied countries, therefore they do not come under the rule which would allow them to borrow their wheat back from the Government. But these mills have contracts with buyers, bakers and flour dealers all over the country. When they bought wheat they sold flour to a similar amount—that is the practice with the miller. So, in this case, the miller had bought his wheat and, on the basis of the price he paid, had sold his flour. The Government steps in and takes his wheat, and he has to go on a rising market and buy at an advance of five or ten cents a bushel, and yet he must sell his flour at the price at which he contracted to sell it. In this way many small mills through the country have lost large sums. The men who got out all right are the big millers and the big dealers—which is what usually happens in the transactions made by hon. gentlemen opposite; the smaller dealers, and the farmers particularly, get no consideration whatever, nor have they power to help themselves in such a case as this. Did I understand the Minister of Trade and Commerce to say that when the allied Governments ordered wheat they ordered oats also?

Sir GEORGE FOSTER: No.

Mr. TURRIFF: Probably I got that confused with the statement he made that oats had been commandeered once before. There is one point I would like cleared up. Would the minister say just what part of this 13,000,000 bushels of wheat was shipped out of Fort William before the close of navigation?

Sir GEORGE FOSTER: I have not the exact figures before me, but I think it must have been about 7,000,000 bushels.

Mr. TURRIFF: Then, do I understand that the rest of the wheat is still at Fort William?

Sir GEORGE FOSTER: That would not necessarily follow.

Mr. TURRIFF: Was there a special rate on it by rail? Perhaps the minister would

say whether there was a rate on it of six cents a bushel from Fort William to Quebec.

Sir GEORGE FOSTER: I do not think there was any rate of that kind.

Mr. TURRIFF: I found it a little difficult to harmonize the statement that approximately three-quarters of the wheat commandeered had already been shipped to the allied countries with the other statement that only about one-half had been shipped out of Fort William before the close of navigation—unless, of course, it was sent down at the high Canadian Pacific rate by land during the winter months. At all events the Government has apparently had enough of commandeering wheat, and the allied countries have apparently had enough of ordering wheat through the Government; both are apparently satisfied to leave each other alone for the future. The minister stated this afternoon that these foreign countries were still buying wheat in Canada; but, as I understand, they have not ordered any more wheat through the Government. I think that in that they show wisdom. Evidently the whole transaction did not prove very attractive to them, even though the Government was not charging any commission —of which a strong point was made this afternoon. Apparently these allied governments are satisfied that when they want wheat it is better to go to an ordinary dealer and buy it in the ordinary way. I am very glad these governments have come to that conclusion, because, in spite of the argument of the Solicitor General (Mr. Meighen) and the hon. member for Muskoka (Mr. Wright), I am satisfied that the commandeering of the wheat did not raise the price of wheat by a fraction of a cent, and so did not benefit the farmers. On the other hand, the farmers who had not sold their wheat, but had it in storage, lost, probably, half a million dollars on the wheat they had.

An hon. MEMBER: Carried.

Mr. TURRIFF: It will be carried, but there is no hurry. We know perfectly well that the Minister of Trade and Commerce brought this matter up to-day to kill time, and that is all right. The minister is not crying "carried," because he does not want it carried just now, and so his friends had better wait with patience. It will be carried in good time and probably whenever the minister wants it.

Mr. WRIGHT: The hon. gentleman says that the Minister of Trade and Commerce introduced this to kill time. The hon. member himself is aiding and abetting the minister in that?

Mr. TURRIFF: I plead guilty to the charge. I do not object to help the Minister of Trade and Commerce. I would rather help him than any other man in the Government, or than any man behind him. But, as hon. members opposite are anxious to get through with this, and as probably the purpose has been served now that we have spent some time over it. I will not speak at much greater length, but will give some hon. member opposite an opportunity to do what neither of the ministers, apparently, was able to do—give a reasonable reason for the action of the Government in commandeering this wheat.

If any hon. gentleman opposite can suggest some reason that will satisfy the men who owned the wheat, they will be accomplishing something worth while. According to my hon. friends opposite—according to the minister, at all events—the commandeering of one per cent of the wheat that was on the market put the price up to from 25 to 30 cents a bushel within a month afterwards. The hon. member for Edmonton, I think, this afternoon suggested that if that was the case, why should not the Government commandeer another quantity of wheat and put the price up? The price has gone down about 15 cents a bushel during the last two or three months. Very soon the farmers of the West will begin to haul out the wheat that they have not yet marketed. If this commandeering of wheat raises the price, my hon. friends would have a good opportunity between now and the time this wheat is hauled to do something more for the farmer. But I imagine that the Government will not attempt it again; they have had enough in this one effort, which was acted as a boomerang.

During this afternoon something was said —I want to bring this to the attention of the Minister—about an investigation being made by the Grain Commission into cases where dealers had settled with farmers on the basis that their wheat, stored at Fort William and Port Arthur, had been commandeered, whereas it really had not been commandeered at all. If settlement were made on this basis a month after the commandeering, there would be an approximate difference in the price of 25 cents a bushel, and the dishonest dealer would have an opportunity of robbing the farmer to that ex-

tent. It seems to me that that is a pretty serious matter. A great many farmers may, without knowing anything about it, have been treated this way by questionable dealers, and I think it would be well worthy of the attention of the Board of Grain Commissioners to find out the amount of wheat commandeered was owned by the farmers in the elevators at the head of the lakes. I know that my hon. friend would not want to see any one cheated in that way, and if this course were adopted the Government could be sure that no farmer in the West was getting unfair treatment. I hope that in future, when this Government is called upon to secure wheat for any of the Allied Governments, they will, instead of commandeering it, put some one upon whom they can depend on the market to buy wheat in the usual manner, and avoid disrupting trade in the manner that it was disrupted in the month of November last, to the advantage of no one and to the great disadvantage of the farmers in the West.

Mr. W. M. MARTIN (Regina): I wish to make a few remarks on some of the questions raised by the Minister of Trade and Commerce this afternoon, not so much with regard to the commandeering of the wheat as with regard to the policy that has been pursued by this Government since 1911 on the question of terminal elevators. The minister apparently takes a great deal of credit to himself and to the Government for the establishment of the Grain Commission and the general policy

9 p.m. that has been followed since the establishment of that commission with regard to terminal elevators in Canada. The minister is no doubt aware that the Grain Act which he introduced in the beginning of the year 1912 was exactly the same Grain Act, with one or two exceptions, the chief of which I shall mention in a moment, as that which had been introduced into the Canadian Senate during the reciprocity session of 1911, but which never got as far as the House of Commons. However, the grain men and representatives of farmers' organizations in the various provinces of the West appeared before the Banking and Commerce Committee of the Senate and a general agreement was arrived at as to what the Grain Act should be. In 1912, after the present Government assumed office, the minister introduced a Bill, which so far as the Grain Commission and the principle of Government control is concerned, was exactly the same act as that which had been practically passed by the Canadian Senate under Liberal administration in the year 1911. Whatever success, therefore, has come from the Grain Act as at present existing and the system of Government control may largely be attributed to the fact that under Liberal administration there were men who knew something about the situation and were able to cope with it. I must say that I believe that the system of Government control in connection with the grain situation in Canada has proved fairly successful. In the sessions of 1909, 1910, and 1911 the question of Government control and Government ownership and operation of terminal elevators was discussed in this House. On two different occasions members of the then Opposition from western Canada moved resolutions in the House of Commons in favour of Government ownership and operation of terminal elevators. The last resolution, moved in the winter of 1911, was to the effect that the Government should acquire by lease, expropriation or otherwise—these were the very words used in the resolution—the terminal elevators of Canada. The question before the House of Commons on that occasion was not the establishment of one Government elevator, but the acquiring by lease, expropriation or otherwise of elevators throughout the country. That was the policy of the men who now occupy the treasury benches. In the sessions of 1909, 1910 and 1911 the policy advocated by members of the present Opposition, then supporters of the Government, was the policy of Government control that was carried out in their Grain Act of 1911 and adopted by this Government when it came into power. I remember hearing the present Prime Minister in the city of Regina in the month of July, 1911, during the recess in the reciprocity session of this Parliament. In the western newspapers he was reported as expressing himself in exactly the same way as he expressed himself on the platform in the city of Regina. He said on that occasion that if the Conservative party were returned to power, if he were leading the Government of this country, the Government would take over the terminal elevators throughout Canada. How has this Government fulfilled that pledge? I am not saying that I was in favour of that policy. I was always in favour and am now in favour of a system of Government control of terminal elevators. But the members of the present

Government, then in opposition, promised the people, on public platforms as well as on the floor of Parliament, that they would take over, own and operate the terminal elevators of this country. I believe the people of this country expect that any political party that is elected to administer the affairs of Canada is bound to carry out in some degree at least the pledges that its supporters make to the people while they are carrying on an election campaign, particularly those planks of their platform that they vote for in the House of Commons. I venture to say that the present Minister of Trade and Commerce voted for Government ownership and operation of terminal elevators in the House of Commons on more than one occasion. If he did not it was because he was not present, because every other member of his party did and the members of western Canada particularly from Manitoba, were one and all in favour of Government ownership and operation of terminal elevators. In so far as the carrying out of that policy is concerned all the Government did was to establish one terminal elevator at Fort William. It is true that they established an elevator at Vancouver and interior elevators in Saskatchewan and Alberta, but, so far as any effect on the grain trade or on the general grain situation is concerned, all this Government has done is to establish one Government terminal elevator at Fort William. They might just as well have allowed a private company to build that elevator for all the effect it has had on the grain trade. That was done as a sop to the people of western Canada, in order to show that the Government were going to fulfil their pledges. Take the interior elevators established in Alberta and Saskatchewan—at Saskatoon, Moosejaw, and Calgary. I never heard any demands from the people of western Canada for the establishment of those elevators. Certain it is that the Grain Growers' organization of Saskatchewan or the United Farmers of Alberta never asked for the establishment of any interior storage elevators. Experience has proved during the last two years that except when there was an exceedingly big crop, and when the railways took the position they did this year by placing an embargo on the shipment of grain east of certain points, the interior elevators are of little use, because the people will not use them. In the Calgary elevator, in January, there was something over 200,000 bushels. In Moosejaw a very small percentage of the space was filled at that time and the same situation existed in Saskatoon, although to a lesser degree, because there was a little more grain in that elevator in January and February than in the other two. But the people will not use these elevators unless they are forced to do so. They were forced to do so this winter on account of the exceedingly large crop, and on account of the fact that the railways could not haul out the grain because they would not accept shipments for eastern points. But I venture the opinion that in an ordinary year the interior elevators would be of very little, if any, use. Take the terminal elevator at the city of Vancouver. I wonder if the minister imagines that that elevator is of any use at the present time. I have not information as to how much grain there is in it at present, but only a very small percentage of the space was filled in January and February of this year, according to the information I have. I am informed by men who know traffic conditions of the Pacific that there will have to be an entirely new class of boat constructed for Pacific traffic through the Panama canal before you can handle any grain through the Vancouver elevator. I am informed that no boats of the type that carry grain on the Atlantic now exist on the Pacific. If that is the case I do not believe, and I do not believe that the minister believes, that the Vancouver elevator will be of any practical use for the next ten or fifteen years. I say it was built simply on the system that goes in this country, the system of party patronage, which the minister so eloquently condemned in this House a short time ago, and I agree with everything he said on that occasion. The only reason for the construction of the Pacific coast elevator was the demand of the Conservative party in Vancouver. That is the opinion generally expressed throughout the West. We have had an absolute about-face on the part of the Government on this question since the days when they were in opposition. All the western Conservative members, especially those from Manitoba, have simply turned their coats on this question of terminal elevators. They were, one and all, in favour of the Government operation of terminal elevators, just as we used to hear the Solicitor General championing the rights of the western farmer with respect to a lower tariff in this county—yet at every oppor-

tunity since this Government came into power the tariff has been increased, and the Solicitor General has on each occasion been one of the first to champion the increase. Instead of being the champion of the western farmer now, he has lost sympathy with the western people in general, because not only the western farmer but the western resident in general is interested in these matters. The Solicitor General and other Conservative members of Parliament from western Canada in this House, since they came into power and got near the treasury benches, have simply turned their coats on this question which so largely affects the people of the West.

The commandeering of wheat has been so ably discussed by the hon. member for Edmonton (Mr. Oliver) and the hon. member for Assiniboia (Mr. Turriff) that I hesitate to take up the time of the House, and particularly of the Government, by dealing with it at further length. I agree with what was stated by the hon. member for Assiniboia about the present situation in Parliament. I have been trying to find out what we have been here for since the Easter holidays.

Sir GEORGE FOSTER: Hear, hear.

Mr. MARTIN: I am glad that the Minister of Trade and Commerce agrees. If he would get his colleagues together and get them to agree to some kind of railway legislation, so that we could have it before us and know what we were doing, we might be out of here in two or three days. As it is we may be here for two or three weeks. There was no reason for our coming back here after the Easter holidays. The Minister of Trade and Commerce or any other member on that side of the House may attempt, if he likes, to blame the Opposition for the present condition of affairs. I say that the Government of this country is responsible for what goes on in this House. We are waiting to-day for a line of Government policy in regard to the railway situation, a very serious situation, but we have heard nothing of such a policy. Is it possible that the Government cannot agree on this question and place something before the House which we may consider and then get back to our homes, where we ought to be.

In regard to the commandeering of wheat, if the Minister of Trade and Commerce, as he has stated to-day, was convinced that there was an urgent need—and no doubt there was an urgent need—for this grain among some of the allied nations, particularly Italy. If the people of Italy were in dire need at that time, they must be either starving or starved to-day, if they are still waiting for the Canadian grain. It appears to me that before the wheat was commandeered in this country, two conditions should have existed. One, I think, existed according to the Minister of Trade and Commerce, that was the condition of dire need. The other circumstance that should have existed was transportation facilities for the carriage of the grain. Otherwise there was no reason for adopting such a high-handed method to get a sufficient quantity of grain to satisfy the Allies. Why did not the Minister of Trade and Commerce or the Government find out if these means of transportation existed? The hon. Solicitor General (Mr. Meighen) says it was the business of the British Government and the allied powers to see that the boats were there; that it was none of our business; that all we had to do was to grab so much wheat and say: Now it is there, come and get it. I say that before the Government took such high-handed action and went aside from the ordinary channels of business, they should have satisfied themselves first of the condition of dire need, and secondly, that the means of transportation were available to take the grain for the Allies' Commission. The second condition certainly did not exist and yet the Government commandeered some 13,000,000 bushels of wheat. That, to my mind, is the case in a nutshell. And what is the condition of affairs to-day? According to what has been stated by the minister to-night, some 7,000,000 bushels of the commandeered grain has actually gone across the Atlantic. The other 6,000,000 or 7,000,000 bushels is still in some elevators in Canada. The minister says it does not follow that because it has not all gone out of the country it is still at Fort William. It may be that the men who borrowed the grain have not yet seen fit to fulfil their obligations and return it to the Government, as the minister said, in ten days. I have not heard the minister say that that is the case; I am only suggesting that possibly they have not returned the grain which they borrowed from the Government. In so far as this question relates to the price of wheat, nobody in this House, nobody in this country, believes for one minute that the commandeering or purchasing of 13,000,000 bushels of grain in a market of 300,000,000 bushels

had any effect whatever on the price. I suppose that if the price had gone down, the Government would have said to the farmers in the West: Your wheat was needed and you have got an increased price anyway. But the commandeering had no effect on the market. The price did go up, but not half as much as it did a year ago. The Government says it increased the price of wheat. No person imagines that the purchase of a very small quantity of the total wheat crop of western Canada would have a cent's worth effect on the price of the whole production. The Solicitor General says that before they decided to commandeer the wheat they consulted a good many grain men, but the hon. member for Assiniboia has pointed out that three of those men, who apparently were consulted, have stated that they advised against it. I presume that they advised that the grain might be procured by the ordinary methods of business, by having somebody purchase it. The Minister of Trade and Commerce said that there were three ways by which the grain might have been procured. First, it might have been purchased directly from the farmer; secondly, it might have been procured through a broker, and, thirdly, it might be commandeered. I think there is another method by which it might have been secured, namely, by making use of the Grain Commission, which is a very efficient body, or through some person associated with the Grain Commission. If I am not seriously mistaken the Grain Commission with its staff of officers could have procured that grain without the payment of one cent to a middleman. That would of course have satisfied the hon. member for Portage la Prairie (Mr. Meighen). When I listened to the discussion this afternoon, it seemed to me that there was a great difference between the method adopted by the Government, and the reasons given for its adoption, and the method adopted in the purchase of seed grain for the farmers in the West during the season of 1915. To-day, the Government says it was very anxious to save commission to the middleman. It is all anxiety on behalf of the prospective purchaser. It was not the Minister of Trade and Commerce who purchased the seed grain; if he had had to do with it I am confident that it would have been handled in a much more efficient and economical manner than it was. I contend that it was done in a most wasteful manner. In 1915 it was the vendor of the seed grain that the Government was anxious about, the man from whom the Government would select 200 or 300 bushels out of perhaps 3,000 bushels. That was the man about whom the Government was anxious, the vendor of the grain, and not the prospective purchaser, who, in the spring of 1915, had to pay $1.50 for his seed grain. In the session of 1915, after I had investigated the grain market prices during the months of January, February, and March, 1915, and of November and December, 1914—I got the prices from Fort William, and the average price paid by the Government in each one of those months for the seed of the western farmer—and I proved that the average price paid by the Government in each of those months was higher than the ordinary price at Fort William, after making allowance for transportation charges, by from ten cents to twenty-six cents per bushel. It was not the prospective purchaser then whom the Government was anxious about, but, as I have said, the vendor. I am very glad that the Minister of Trade and Commerce did not employ the same officials, or the same class of men, to purchase the grain commandeered for the allied countries as were employed in purchasing the seed grain for the western farmers in 1915.

Mr. W. A. BUCHANAN (Medicine Hat): I want to deal with a matter concerning the province of Alberta, particularly the southern part of that province. It is in regard to the location of the internal storage elevator at the city of Calgary. I happened to deal with this matter when I spoke on the Budget, but the hon. Minister of Trade and Commerce was not in the House at the time, and I would like to repeat some of the observations I made then. My contention is that the location of the elevator at Calgary was absolutely unwarranted. The explanation offered by the minister, in reply to a question I asked earlier in the session, was that the Calgary elevator was not intended to be, and is not, favourably situated for shipping grain east to Fort William. There is no question that it is not favourably situated for shipping grain east to Fort William. I maintain that the expenditure of money on an elevator in the province of Alberta could have been made to serve both western and eastern shipments of grain if the elevator had been located further south, on the Crow's Nest branch of the Canadian Pacific rail-

way, and I will try to offer to the minister what I think are substantial grounds for that argument. Calgary, as the minister knows, is practically on the border of the wheat-raising area of the province of Alberta. From Calgary north, the farming is practically of a mixed character. From Calgary west it is ranching, and from Calgary east there is a considerable amount of grain grown. In the southern part of Alberta there is a great proportion of the wheat-raising section of the province. Any farmer east of Calgary shipping to the head of the lakes, and desiring to use an internal storage elevator would, if shipping by the main line, use the elevator at Moosejaw. If a farmer shipped along the Goose Lake branch of the Canadian Northern railway, he would use the elevator at Saskatoon, but in the extreme southern part of the province, shipping east, he would also have to go to Moosejaw and use the elevator there if he so desired, because it means a back haul to ship to Calgary.

I understand that the minister maintains that the elevator at Calgary was intended solely for shipments westward, that is by the Pacific. If that was the reason, an elevator could have been located at the city of Lethbridge, which would have served the shipments east to Fort William, and, at the same time, have served shipments west by the Pacific. But the Government insisted on having that elevator for the province of Alberta located at Calgary where it could not possibly serve for some time shipments to the Pacific coast. That elevator was constructed and placed in operation before the Panama route was opened, before it was even declared feasible for grain shipments. It was placed there solely for the purpose of handling shipments by the Pacific when there was no guarantee that shipments could be made by that particular route. I think that the Government can be charged with making a fatal error in the location of that elevator in the province of Alberta. I am going to use the name of my own city not for selfish reasons, but because I believe that the location of that elevator at Lethbridge would have served shipments east and shipments west. The city of Lethbridge is practically the centre of the wheat growing area in the extreme southern part of the province of Alberta, and in that extreme southern part I think it can be safely said that 80 per cent of the wheat raised in Alberta is produced. All the railroads run into Lethbridge. The farmers could have shipped their grain there and used the internal elevator at Lethbridge, and it would not have meant a back haul, whereas, to use the elevator at Calgary, under ordinary conditions, means a back haul for the farmers of a great proportion of the wheat-growing section of the province of Alberta. I asked how much grain the Calgary elevator had handled from the date of the opening till December 31, 1915, and the answer was that the total amount, including all grains, was 185,455 bushels. Then I asked how much the elevator had handled from 1st January to the 14th January in this year, and the answer was that the total amount handled was 248,367 bushels. This elevator has a capacity, according to the minister, of 2,500,000 bushels. That was all the grain that was sent to the elevator up to the 14th January. I admit that since that time there has been a considerably larger amount of grain going into the Calgary elevator. This was not because the location of the elevator warranted the grain going there, but because the rates were reduced at the elevator—practically removed—the Canadian Pacific also made a reduction in rates in order to get the grain into the elevator, and an embargo was placed upon grain going out of Alberta to eastern points. All of these things forced the grain into the Calgary elevator. But that was an unnatural condition, due to the action of the railways and to that of the Grain Commission in reducing rates. My charge against the Government is that this elevator was located at a most undesirable place with reference to the wheat-raising area of Alberta when it was placed at Calgary. It should have been placed in the extreme southern part of the province, and it might then have served 80 per cent of the grain-raising parts of the province for shipments east and west. The elevator was placed at Calgary, I believe, against the best judgment of the Grain Commission. I believe it was placed there for purely political reasons, and on account of the patronage system which my hon. friend the Minister of Trade and Commerce has condemned, and which I condemn. I believe that if the constituency which I represent had been represented by a supporter of the Government the elevator would have been placed in that constituency. An argument can be presented in favour of the location of an elevator in that constituency, but there can be no argument in favour of the location of such an elevator at Calgary, except on the theory that it is intended to serve the western

route. But the western route is not in existence at the present time. I would like the minister to state to-night how much grain has been shipped by the western route during the last twelve months. The shipments are going east and will go east until the conditions warrant them going west, or until it is established that the Panama route can be used, or until we have a market in the far East. I think the minister has learned of the opinion of the farmers in Alberta. I asked a question later on this session as to whether he had received any representation from farmers in Alberta about another elevator in that province. The minister stated that he had received a great many petitions signed by farmers asking that an elevator be placed at the city of Lethbridge in the southern part of Alberta. He knows that the opinion of the farmers is that an elevator should be placed there. I doubt very much whether the Government ever had representations of any kind from any organization of farmers, or from any individual farmers, in favour of locating the elevator at Calgary. I think I have given good reasons why the elevator should have been placed in the southern part of the province, and in support of my argument that it was a mistake to locate the elevator at Calgary. If the minister has any other reasons for the decision of the Government to place the elevator at Calgary, I would like to hear them during the course of this discussion.

Sir GEORGE FOSTER: If my hon. friends from the West who are interested particularly in the question are through, I do not want to do them the discourtesy, nor myself the disadvantage, of not replying to some of the points that were raised by each. Two of the most ingenious things I have heard put forward to-night were put forward by the hon. member for Assiniboia (Mr. Turriff). He evolved an absolutely new idea—I do not know whether he has patented it or not—as to why we were talking about the commandeering of grain and about western grain conditions in the House to-night, and the brilliant conclusion at which he arrived was that the Minister of Trade and Commerce was anxious to kill time—so he brought this up. I do not think I have to do more than to mention that to show the extreme ingenuity of my hon. friend and to indicate on what very slight grounds he can build such a substantial structure as he has set up. Then again, he was still more ingenious, if possible, in another way. In spite of the arguments that he had brought forward, he felt still that his case was weak and so he made it as strong as possible by his final argument along that line. He said that we would do nothing for the farmers, we would not give them back their wheat, and then he thought it a brilliant idea to couple the Ontario millers with the western farmers' wheat. We would not do anything for these small millers he said, but we would fill up the elevators of the big millers in Ontario. I may tell my hon. friend that if he will come to my office to-morrow morning I will be very pleased to show him a list of the mills in Ontario, under exactly the conditions that he has spoken of this afternoon, which required very small amounts of grain to keep them going. The large portion of the grain that was released to the millers of Ontario was released to the men who wanted 10,000, 20,000 or 40,000 bushels to keep their mills going to bread their districts and carry out the obligations they had entered into to deliver flour to their clientele from week to week and month to month. That disposes, I think, pretty well of the two famous arguments of my hon. friend which he evolved like an Egyptian wizard out of nothingness, so to speak. But then he had another idea. If a man receives a definite, positive order, to buy wheat to a certain extent, to be delivered at a certain time, that time being as early in December or even in November as possible, then, instead of buying it on that order, he should go into the option business and buy options for the succeeding months. In that way he might get the wheat a little cheaper and do something for his clients. But the unfortunate part of the argument is that the client did not want a December or a January option bought. The client wanted wheat bought at a certain time and in certain quantities. My hon. friend knows that if you buy a December option, the possibilities are that you will not get your wheat until the very last day of December. You run that risk anyway, and a man takes advantage of his option with the idea that he may make something by carrying it to the very last day. Suppose we had bought December options and that at the end of December we had 10,000,000 or 12,000,000 bushels, how would we have brought that out and where would it have been at the present time? I do not think that my hon. friend's suggestion was a very good one.

The hon. member for Moosejaw (Mr. Knowles) made certain remarks. If my hon. friend had been here when I made my remarks immediately after we went into Supply, he would quite well have understood that I did not claim for myself as minister of the department, nor for the Government, all the credit or even a very large part of the credit, for the enactments which now form the Canada Grain Act. If my hon. friend will read Hansard when it comes out to-morrow, he will find that I expressly mentioned the preceding legislation and what had been done, and stated that the legislation of 1912 was a re-construction or re-affirmation, with certain added features, of the legislation which had already been on the statute book or prepared for enactment. I was not trying to take the credit for that Act in its entirety or even in great part to the present Government; I did not pursue the argument along that line. What I did say was that some new features were introduced that were important, and I then went on to point them out.

My hon. friend from Regina (Mr. W. M. Martin) stated that the Vancouver elevator was placed there absolutely as a matter of party patronage. I probably know as much about the Vancouver elevator as my hon. friend does, and, if I had listened particularly to the voice of party patronage, mighty strongly impressed upon me, the elevator would probably not have been at Vancouver to-day, but at some other place. There was, from beginning to end, no thought of party patronage in the placing of that elevator. Rightly or wrongly, we started out with the idea that when the Panama canal was constructed there would be a very available route open all the year round for the passage of the increased production of wheat and other grain in the Northwest by Vancouver, through that canal, and so on to Europe. And so I believe it will come. I have faith in that route, or I would not have helped to have an elevator placed either at Calgary or at Vancouver. I believe that will be a great grain route in the future. It has this advantage, that where one side of Canada is blocked, so far as ocean traffic conditions are concerned, for a large part of the year, there you have an outlet to the Pacific ocean for whatever may develop in the far East and for the Panama canal trade, and that outlet is open every day in the year. The Vancouver elevator was placed where it is as the complement of that policy which we had designed and which we were carrying out. That policy may have been a wrong policy or may not, but the Vancouver elevator went as a sequence of that policy, and as an attachment, as it were, to the Calgary elevator.

A suggestion was made that maybe the trouble with reference to the grain arose because it had not been returned either by the parties who had borrowed it or by the parties to whom it had been released or who were exporting wheat to the Old Country. I think I stated this afternoon that every bushel of that grain had been returned, and it was returned absolutely on time as stipulated, in some cases earlier than the time stipulated, so that there was nothing that took place in those two transactions that was not according to the conditions that were imposed and honourably carried out. Furthermore, there is not a bushel of that grain now in western elevators; all of it is in the East waiting for the vessels that are to take it out.

My hon. friend from Medicine Hat (Mr. Buchanan) had something to say with reference to the location of the elevator as between Calgary and Lethbridge. In so far as he gave the facts with regard to petitions and to grain production, he stated them exactly as they are. Lethbridge is a large grain centre. A wonderful transformation has taken place in southern Alberta; that country, which a few years ago, it was supposed, was not worth five cents for grain, and would all have to go to grazing and cattle and stock raising, suddenly developed into a great grain-producing district that astonished even the people of Lethbridge and of that part of Alberta, and for the last few years at least has produced large quantities of grain. My hon. friend is exactly right when he says that the southern part of Alberta would find Lethbridge very much in its line for shipments east; but it also finds Moosejaw in its line for shipments east, the elevator at Moosejaw being available for that purpose. For shipments east it has little, if any, use for the Calgary elevator. But that elevator was meant for shipments west, not for shipments east, and was built partly as a feeder to the transfer elevator which was afterwards to be erected at Vancouver.

At least two of my hon. friends have broken out into the strongest arguments against internal storage elevators generally. My hon. friend from Edmonton (Mr. Oliver)

said that instead of spending the money for one or any or all of these internal storage elevators, the money should have been expended to put up elevators at St. John, Halifax and Quebec, and he developed his argument that if we only had had elevators there last year, great good would have been accomplished. I think I made it as plain as could be when I spoke here a day or two ago, and I think I made it plain again to-day; but, if not, I will make it plain now, that if you had had all the storage capacity of the three elevators at Moosejaw, Saskatoon and Calgary, down either in Quebec or St. John or Halifax, or distributed between them, you would not have got one bushel more of western wheat on to the markets and into consumption in Europe than you have this year without those storage elevators there. I do not want to be misunderstood in that. I believe that a port like Montreal should have pretty large storage facilities, and a port like Quebec should also have good storage facilities, because they are both transfer positions; but there is an advantage to have at those two points, in readiness for the spring opening of transport out by the Atlantic, large storage facilities, so that whatever can be carried down of the surplus of wheat during the winter season by the railways will find a resting place there and be ready for the spring opening. The conditions, however, this year were such with regard to transport by the ocean that no amount of storage at those ports would have helped the Atlantic situation to any extent. Do not let us be too hard on those storage elevators in the West. They were not built for one year or two years; they were built for permanent use. Things are in their growing condition in the West. Closer farming conditions, greater additions to the wheat-producing area, will be constantly going on in the West, and I believe that these storage elevators perform a good office at the present time and will more and more come to commend themselves and prove beneficial to the wheat-growing interests in their districts, but even up to the present time they have not done so badly. I ask the attention of my hon. friend to the Calgary elevator. He has stated—and it is to some extent true—that extraordinary conditions this year have drawn more wheat into Calgary than might come under different conditions. The Calgary elevator, up to a late date, had received 1,729,916 bushels, and shipped 352,720 bushels—a movement of a little over two million bushels. The Saskatoon elevator has received 6,841,874 bushels of grain, and has shipped out 4,274,000 bushels—over eleven million bushels have passed in and out of that elevator this year, and the work is still going on. As to Moosejaw, unfortunately I have not the exact figures, but I think it has had a movement of close upon eight millions of bushels of grain this season up to the present time. True, this is an abnormal year. But it is well to have some provision for abnormal years. This year has been abnormal in the greatness of production, but we had an abnormal year once when bad weather and other unfavourable conditions caused a deterioration of a vast amount of grain. In times like either of these, these elevators will save millions of dollars to the grain-producing interests of the West. So, even if they have to depend for full action upon abnormal conditions yet, year in and year out, they will satisfy, I am sure, a certain want in that country, and will prove very useful in their day—and I hope their day will be a long one. Other remarks were made by my hon. friend, but I am sure that both of us are pretty well agreed that we have talked long enough and killed enough time on this particular phase of the discussion.

Mr. BUCHANAN: I understood the minister to state that if the Alberta elevator had been located at Lethbridge it would have served shipments east only, meaning that it would not have served shipments west. And he said that the elevator at Calgary is of no service for shipments east, meaning that it was intended only for shipments west. But I contend that if the elevator had been located at Lethbridge it would have served shipments west even better than at Calgary, and at the same time would have served shipments east, which the Calgary elevator cannot do. Lethbridge is on the Crowsnest branch of the Canadian Pacific. The company has constructed a branch from the Crowsnest line through the Windermere valley to Golden, on the Canadian Pacific, reducing both the grade and the mileage, and giving a through route by the Crowsnest Pass and the Windermere valley to Vancouver and other Pacific ports. With such a location Lethbridge would have been a better place for the elevator as a means of serving western shipments than Calgary, and it would have been in a position to serve shipments east also. Another thing

to be remembered is that the Canadian Pacific is building practically another through line from Winnipeg and Lethbridge to the coast, known as the Lethbridge-Weyburn line, opening a large country in the southern part of Alberta. All the grain could go west if desired, and if shipment east was desired it could go as well by that route as by the main line. Besides that, Lethbridge is in the heart of the wheat growing section of Alberta. When you go north to Calgary you are in an area where mixed farming almost wholly prevails, and from which hardly any shipments of grain are made. South of Calgary it is almost purely wheat raising country. I think the minister is wrong in stating that the Alberta elevator if located at Lethbridge would have served the east almost wholly. It would serve the west as well as Calgary, but would have served both, and not the west only.

Mr. OLIVER: The day before yesterday I was in the beginning of asking the minister for information in regard to the grain situation: first, in relation to the 11,000,000 bushels transported over the Transcontinental, and then, generally, the situation of the grain in the country—how much of the total crop was sold in the country and where it was located, and how much had gone across the ocean? I think the minister said that the question might well have been discussed at that time, but that he would be ready on another occasion when the item was under discussion to give the information. If he has the information, I shall be glad if he will give it to me.

Sir GEORGE FOSTER: As to the 11,000,000 bushels hauled over the Transcontinental, I am not able to give my hon. friend the information as to where that lies or how it was distributed. But I have not forgotten that I said I would try to get that information, and I will get it if the Minister of Railways, who also promised the information, does not get it. At any rate, we will have the information here on Monday. As to the other, speaking generally, if my memory serves me well a bulletin was issued last week by the statistical branch of my department which gave about the location, within a very short time, of the grain in the country. I cannot remember exactly the quantities, but I think that at the head of the lakes——

Mr. OLIVER: I remember, there were 50,000,000 bushels of all grains at the head of the lakes on the 14th of April.

Sir GEORGE FOSTER: I have information here that is rather interesting bearing somewhat on the subject referred to. The Dominion elevator at Port Arthur received this season 19,600,000 bushels, and made shipments of 16,619,000, up to April 14, 1916. That is, it handled, in and out, about 36,000,000 bushels of grain. The terminals at Fort William had receipts of 228,000,000 bushels of grain, and handled out 190,000,000 bushels of grain.

Mr. OLIVER: Grain or wheat?

Sir GEORGE FOSTER: That is all grains. Wheat was shipped from Fort William to United States lake ports, 77,800,000 bushels to Buffalo and 20,700,000 to the other United States ports on the lake, making altogether 98,500,000. To the Canadian lake ports 41,800,000 bushels were shipped, and to Montreal 823,271, a total of 42,600,000 bushels. That is to say, during the last season 70 per cent of the grain went out via Buffalo and nearby United States ports, according to that calculation. I find that 63 per cent of the 183,365 cars that were inspected, embracing a little over 300,000,000 bushels, graded No. 1 northern and better, and 80 per cent graded No. 3 northern and better. That was an extraordinary showing for the crop of wheat in the West this year. This year, with its quality as well as its quantity, the grain of Canada, particularly that of the Northwest, has made a name throughout Europe, especially among the allied nations, that will be very beneficial in future transactions. The British, French and Italian Governments have all been pleased with the quality of the grain that they have got. As I mentioned in the committee once before, it is vastly superior to the quality of the wheat from the United States. I do not mean to say that they have not a quantity of very superior wheat, but the quality of their wheat this year does not in excellence grade up to ours.

10 p.m.

Mr. OLIVER: The fact is—without desiring to give the hon. minister information in regard to his own business—that the United States does not export its best wheat, while Canada does.

Sir GEORGE FOSTER: It exports some of its best wheat

Mr. OLIVER: That is why they want free trade.

Sir GEORGE FOSTER: I am afraid I have not the particular information that my hon. friend asks for, but I will be sure to get it.

Mr. OLIVER: What is the estimated total production of wheat in the three Prairie Provinces last year?

Sir GEORGE FOSTER: Up to the end of October 15, 1915, the total production for Canada was estimated at 336,258,000 bushels, of which the Northwest Provinces produced 304,200,000 bushels. Of oats, the total for Canada was 480,000,000, in round figures; the Northwest Provinces produced 305,000,000. Of barley, the total for Canada was 50,800,000; the North-west produced 33,000,000. Of flax, the total for Canada was 12,604,700, of which the Northwest Provinces produced 12,537,000.

Mr. OLIVER: Of this total production of 304,000,000, only 139,000,000 bushels are accounted for as having passed east of Fort William?

Sir GEORGE FOSTER: My impression just now is that the estimates that passed through my office the other day gave about 80,000,000 as still in the farmers' hands.

Mr. OLIVER: Of courses, there is a good deal in the interior elevators.

Sir GEORGE FOSTER: Yes.

Mr. OLIVER: Then my figure is correct, is it not; 97,000,000 to United States points and 42,000,000 to Canadian points makes 139,000,000 in all?

Sir GEORGE FOSTER: That is about what it was.

Mr. OLIVER: That would leave a little over half the crop, more than 150,000,000 bushels still west of the lakes?

Sir GEORGE FOSTER: The estimate might be a little large now; it is coming out pretty rapidly.

Mr. OLIVER: Is there any estimate of the amount required for local seed and feed?

Sir GEORGE FOSTER: I have not the estimate here, and I would not like to make the calculation. I will send my hon. friend the information.

Mr. OLIVER: I find, according to my account here, that over 160,000,000 bushels were still west of the lakes on the 14th of April. Deducting 20,000,000 for seed and bread, that leaves 140,000,000 still for export. Of the 142,000,000 that went forward east, 97,000,000 went to United States ports. Of the 42,000,000 that went forward to eastern ports, how much crossed the ocean during the period from October 15 to April 14?

Sir GEORGE FOSTER: I will have a statement made out and see that my hon. friend gets it. I am not able to give it to-night.

Mr. OLIVER: What I want to know is how much wheat passing through Canadian ports has crossed the ocean since the first of October, 1915, in order that one may judge approximately what the prospects are for getting tonnage to carry the balance of our export surplus, which we desire to dispose of before our next crop becomes available.

Mr. TURRIFF: As against the $725,000 expended in connection with the running of the whole grain business, what were the receipts from inspections and general revenue under the Grain Act?

Sir GEORGE FOSTER: The revenue that is derived, as my hon. friend knows, comes from the car inspection fee of 50 cents for each car; the weighing fee of 30 cents for each car; the in-registration fee, when the car goes into the elevator of 4 cents; and the cancellation fee of 4 cents. Those added together amount to 88 cents. That is what might be called the actual fees in connection with the administration of the Act. The other revenue is really earnings, that is for service given, such as might be given by a private elevator owner. At the terminal elevator at Port Arthur, for instance, there are the following items: storage, $159,518; cleaning, $4,994; drying, $8,299; bulkheads, a small amount; sale of screenings, $24,000. Then there are some other smaller items. You must add to or subtract from that revenue the overage or shortage at the end of the year. In our own elevator we had an overage in flax to the value of $26,816. I made particular inquiry as to how we came to have that overage, and the commission informed me that that overage in flax is due to the very fine methods employed in screening it and getting out from what is in other elevators waste, real value. At the Saskatoon elevator some of the items of revenue were: storage, $46,575; cleaning, $20,604; drying, a small amount; screenings, $1,000; grinding screenings, $2,686; packing

for the seed grain, $12,268. The total revenue from that particular elevator was $91,453.

Mr. TURRIFF: If my hon. friend would give me the total revenues.

Sir GEORGE FOSTER: I have not them made up. That, however, gives the sources of the earnings.

Mr. BUCHANAN: Has the minister any record of shipments of wheat by the western ports last year?

Sir GEORGE FOSTER: I do not think there were any large shipments of grain via Vancouver. Some grain did go west for Japan and South America, and there may have been some other for the far East, but it was a small quantity .A considerable shipment was put through for New Zealand. A portion of the grain purchased for New Zealand was shipped via Vancouver and went through, having been sacked at our elevator at Moosejaw. As my hon. friend knows, not only was traffic through the Panama canal disorganized by the war, but the Panama canal itself has been closed for months on account of land slides.

Mr. BUCHANAN: Does the minister know whether it will be possible to ship grain via the Panama canal without sacking at Vancouver?

Sir GEORGE FOSTER: Of course you can never be positive about anything until you have made the experiment, but if grain can be shipped from the Argentine to London, passing through the tropical belt without harm, I do not see why the short passage through the Panama canal should injure grain in good condition. That is the impression of some of the best grain men.

Mr. OLIVER: Could the minister give me the annual consumption and production of wheat in Canada east of the Lakes?

Sir GEORGE FOSTER: I have not the figures here, but I can send my hon. friend the whole statement in print. I would refer my hon. friend to the monthly bulletin of statistics published by the department.

Mr. OLIVER: I do not think that the figures I have asked for are contained in the very interesting statistics published in the bulletin.

Sir GEORGE FOSTER: I suppose we can never get at the exact consumption of grain in the East or West. You have to make an estimate, and generally it is estimated that about six bushels to the head is a generous consumption.

Mr. OLIVER: The situation as to general transportation seems to me to be very serious. About 42,000,000 bushels of grain has come to eastern Canadian ports. A large proportion of that will necessarily be for local consumption. If one-quarter of it was for local consumption, that would leave us with 30,000,000 bushels seeking ocean transport, and the information the minister has given to the House is to the effect that it has not been able to secure ocean transport. If that is the result of the transport business for six months, what is going to happen to us when we have to get rid of 140,000,000 bushels in the succeeding six months?

Sir GEORGE FOSTER: Of course, a great deal of the wheat that went via Fort William to Buffalo and the other lake ports, that is 95,000,000 bushels, has, I suppose, found its way by this time to ocean ports, and a large proportion of it probably has gone over.

Mr. BURNHAM: Would the minister express his opinion of what the future of agriculture with regard to the cultivation of wheat is likely to be, in view of the fact, expressed in print, as coming from those best able to judge, that last year 20 per cent more wheat was raised in the world than was needed for consumption?

Sir GEORGE FOSTER: The hon. member has put a very large question to me, but there is one method of solution; let us try, all of us, to do the best we can to raise as many more mouths as possible to take care of the extra consumption.

Mr. BUCHANAN: The minister has been giving us lots of information to-night, and I would like some more before we arise. Is it the intention of the Government to establish more than one storage elevator in the province of Alberta? That is all I ask; I will not ask where it is to be placed.

Sir GEORGE FOSTER: I will tell my hon. friend this: I have had a great number of petitions, and a good deal of correspondence, and I have taken the position that the elevators that we have already built—at Saskatoon and Moosejaw—in connection with the east, and the Hudson bay transfer elevator on the northern route, when it is opened, together with the terminal elevator at the head of the lakes, complete what was in our minds at the time when the policy was laid down.

Then the Calgary elevator, with the transfer elevator at Vancouver, completes that end of the policy. It was not part of that policy that we should erect interior storage elevators in the West wherever they might be useful. I know that that is quite an easy road for the man who wants storage to travel on. He says: Here is a district which has much more production than storage capacity; you have a storage elevator at Moosejaw; why do you not put a storage elevator down here. We are trying to keep on the track of linking up all the storage elevators with the transfer elevators at the ports, and along that line the policy at the present time has been carried out as far as we had anticipated. Even supposing that it was not war time, it would scarcely seem possible for us to anticipate a further expenditure of money for storage facilities, leaving that to corporate and private capital to take up. The Transcontinental railway with the Intercolonial railway having a great service, has to supply certain storage facilities, and more storage facilities are necessary in connection with that road than exist at the present time, so that there will be an extension of Government building—to what extent I do not yet know—in connection with railway transportation. But I suppose that when we cease to hope we cease to live, or to put it the other way, hope on as long as you live.

Progress reported.

On motion of Sir George Foster, the House adjourned at 10.27 p.m.

Monday, May 1, 1916.

The House met at Three o'clock, the Speaker in the Chair.

REPORT.

Annual report of the Topographical Surveys Branch for the year ended March 31, 1915.—Mr. Roche.

FIRST READING OF SENATE BILL.

Bill No. 96, for the relief of David Whimster Rhodes.—Mr. Boys.

MOUNT ROYAL TUNNEL AND TERMINAL COMPANY.

Hon. J. D. REID (Minister of Railways and Canals) moved the first reading of Bill No 95, respecting rentals payable to the Mount Royal Tunnel and Terminal Company, Limited.

[Sir. George Foster.]

Mr. GRAHAM: This is a Government Bill; will some one on the Government side explain?

Sir ROBERT BORDEN: As I understand it, this is really a declaratory Bill to make perfectly plain the provisions of an Act passed about two years ago, and as to which some legal point has been taken.

Motion agreed to, and Bill read the first time.

PRIVATE SOLDIERS.

On the Orders of the Day:

Sir ROBERT BORDEN: I am informed by the Deputy Minister of Militia and Defence that Private Wallace, whose case was brought to the attention of the House by the hon. member for Carleton (Mr. Carvell) has received his discharge, being under age. With regard to another matter which was mentioned, the case of Private Dougall Curry, there has been received a further telegram dated 26th April, and addressed to the Adjutant General from the General Officer Commanding the Military District. The telegram reads as follows:

> Reference headquarter telegram of 24th Capt. Calder states delay in seeing Dougall Curry caused by not getting word from hospital until noon following day. Impossible to say what person or persons are exactly responsible for this delay. Formerly one of hospital staff always notified him when military patient was admitted. In this case nurses say they did not know whom to notify. Captain Munro states he was unable to get St. Joseph Hospital by telephone till 11 a.m. following day owing to the line being out of order.

With regard to the case mentioned by the hon. member for Moosejaw (Mr. Knowles), I am informed by the Deputy Minister of Militia that a telegram has been sent to the commanding officer requesting an immediate investigation and report by wire. I am also informed, with regard to the case mentioned by the hon. member for Guysborough (Mr. Sinclair), that an investigation has been ordered and is now in progress.

Mr. KNOWLES: I presume the officer to whom the telegram was sent in the matter to which I referred was an officer at Winnipeg?

Sir ROBERT BORDEN: I really could not say at the moment.

Mr. KNOWLES: Surely not the officer who was implicated, in case the rumour is correct?

Sir ROBERT BORDEN: The report that came to me was that an investigation in the ordinary course had been ordered. I shall ascertain as to the character of the investigation and the person by whom it is to be made.

Mr. KNOWLES: The Prime Minister said that a wire had been sent to the officer asking for a report. I presume it goes without saying that the report will not be made by the officer upon whom I have made my observations.

Sir ROBERT BORDEN: If I remember the memorandum I had before me, it spoke not only of a report but of an investigation.

EMPLOYEES OF SOULANGES CANAL—CHARGE OF PARTISANSHIP.

On the Orders of the Day:

Sir WILFRID LAURIER: I am informed from the county of Soulanges that at the convention which took place last week for the selection of a Conservative candidate in the pending provincial election, the superintendent of the canal, his whole staff, and the employees of the canal, attended the convention and took part in it. I have always understood that the policy of this Government was that there should be no offensive partisanship on the part of employees of the Government, and I call the attention of my right hon. friend the Prime Minister to the matter.

Sir ROBERT BORDEN: I will direct the attention of the Acting Minister of Railways and Canals to it at once.

EXTENSION OF TERM OF PARLIAMENT.

On the Orders of the Day:

Hon. GEORGE P. GRAHAM: On Friday last, in the absence of the Prime Minister, I inquired what had become of the joint resolution of the two Houses of Parliament praying that an amendment be made to the British North America Act providing for the extension of the life of Parliament. Would the Prime Minister give us some information with regard to that matter?

Sir ROBERT BORDEN: It was sent forward at once by the Governor General. I also wrote Sir George Perley, enclosing copies of the debates on the subject that had taken place in this House and in the Senate, that he might be afforded any necessary information as to the grounds upon which the resolution had proceeded. I understand that it is in progress over there, but I do not know what progress has been made. Everything that was necessary to be done, as far as the Government is concerned, has been done.

FENIAN RAID BOUNTY.

Mr. BOIVIN: I wish to ask the hon. Acting Minister of Militia and Defence if applications for the Fenian Raid bounty will be considered if made prior to the expiry of the delay fixed by the Government, which, I think, was on the 31st July last, but from persons who were unable, before that date, to make the required proof.

Sir ROBERT BORDEN: I cannot give my hon. friend an answer at the moment, but I will make inquiry of the deputy minister as to what the policy of the department has been, and give an answer as soon as possible.

QUESTIONS.

[Questions answered orally are indicated by an asterisk.]

TRANSLATORS IN SECRETARY OF STATE'S DEPARTMENT.

Mr. ETHIER:

1. How many persons are employed by the Secretary of State's Department as translators, apart from the official and permanent staff?
2. What are their names, occupations, residences and salaries?
3. Is one Arthur Sauvé so employed as a special or other translator?
4. If so, is the said Arthur Sauvé the member for the county of Two Mountains in the Quebec Legislature?
5. Who recommended him as translator, and on what date?
6. What is the character of the documents that have been sent to the said Arthur Sauvé for translation at his home?
7. What amount has such translation cost, and how much has the said Arthur Sauvé received to date on account of such translation?

Mr. BLONDIN:

1. There are no persons employed in the Department of the Secretary of State of Canada as translators.
2. Answered by No. 1.
3. Arthur Sauve is not employed by the Department of the Secretary of State of Canada.
4, 5, 6 and 7. Answered by No. 3.

ENLISTED CIVIL SERVANTS—SEPARATION ALLOWANCE.

Mr. PARDEE:

Do the wives of civil servants who have enlisted, whether as privates or officers, receive a separation allowance?

Sir ROBERT BORDEN: No, unless the civil service foregoes his Civil Government salary, in which case he would draw all military pay and allowances.

WAR SUPPLIES—PURCHASES IN ALBERTA.

Mr. BUCHANAN:

1. Who were the persons employed in purchasing horses, hay and oats in Alberta for the Department of Militia?
2. How much were they paid in each case?

Sir ROBERT BORDEN:

1. Lieut.-Colonel A. D. McRae.
2. Pay of rank and expenses.

NEW RICHMOND WEST POST OFFICE.

Mr. MARCIL:

Has the Postmaster General decided to reopen the New Richmond West post office? If not, why not?

Mr. CASGRAIN: The question of the reopening of the New Richmond West post-office has been under consideration. As far as can be at present ascertained, there does not appear to be any urgent necessity for reopening this office. The department has obtained the opinion of 86 householders, the majority of whom are in favour of rural mail delivery. Fifteen families located on range 5 have not yet been visited. They are, however, said to be in favour of rural mail delivery since they are far from any post office at all. The former patrons of the New Richmond West post office ask that the office may be reopened to be served by special courier from New Richmond as heretofore. They do not accept as satisfactory any supply thereof by the rural mail delivery courier. All the patrons of the New Richmond West post office, with the exception of 10, though residing immediately on as well as being within the scope of letter carrier delivery, could easily subscribe for boxes if they are so disposed.

EMPLOYMENT OF ROBERT E. STEDMAN.

Mr. W. M. MARTIN:

1. Was Robert E. Stedman employed by the Army Service Corps at Regina at any time since the commencement of the war? If so, in what capacity was he employed?
2. What wages did the said Robert E. Stedman receive, and what were his duties in such employment?

Sir ROBERT BORDEN:

1. Yes, as private in No. 20 company, Canadian Army Service Corps.
2. $1.10 per diem pay and 75c subsistence.

LEVIS DRILL HALL.

Mr. BOURASSA:

1. How much per toise did the stone used for the military drill hall sidewalk at Lévis cost?
2. By whom was such stone supplied, and what amount was paid therefor?
3. How many toise of stone were supplied for the said sidewalk?

Sir ROBERT BORDEN:

1. No price asked for per toise.
2. Jos. St. Pierre; amount paid, $862.50.
3. No price per toise, but price per cubic yard obtained from Jos. St. Pierre was $1.50.

UNOPPOSED MOTIONS FOR PAPERS.

Mr. Oliver.—For a return showing all transactions entered into by the Government of Canada to clear up squatter's rights to the Banff Hot Springs; together with a statement of payments made on such account, and to whom paid.

Mr. McCrea.—For a copy of all Orders in Council, departmental orders, and of all correspondence in respect of the embargo on the export of tan bark from Canada to United States.

Mr. Graham.—For a copy of the lease made by the Militia Department, or other department of the Government, with Lindsay and McCluskey, for a building situated in the town of North Bay.

Mr. Michaud.—For a copy of all correspondence between the Minister of Justice, the mayor of the town of Edmundston, N.B., the police magistrate of the said town, and others, in reference to one Antoine Levesque.

Mr. Buchanan.—For a copy of all papers, telegrams, letters and other documents in connection with the decision to locate an interior storage elevator at Calgary, Alberta.

Mr. Buchanan.—For a copy of all correspondence and papers relating to the change in the location of the post office at Roseberg, Alta.

Mr. Devlin.—For a copy of all papers, correspondence, documents, petitions and communications between the Post Office Department and the postmaster, or any other person, in connection with the Aylmer, Quebec, post office, received or sent by the department since October, 1911, relating to complaints, changes or dismissals and appointments to the said post office.

Mr. Ethier.—For a return showing the names of the tenderers for the different mail carrying contracts in connection with the rural mail delivery recently established in the county of Two Mountains; the amount of each of such tenders, the name of each tenderer to whom a contract has been granted, and the price to be paid to him; if there were any contracts given without tender; if so, to whom, for how much, and on whose recommendation; if any indemnity has been allowed to mail conductors for the transportation of rural mail boxes; if so,

to whom, and for what amount; if any indemnity was allowed to any mail conductors who had discontinued the service before the expiration of the three months' notice required by the contracts for the carrying of mails. if so, to whom, and for what amount?

WAR LOAN—$250,000,000.

On motion of Sir Robert Borden (Acting Minister of Militia), the House went into committee to consider the following proposed resolutions, Mr. Rhodes in the Chair:

1. That it is expedient to provide that a sum not exceeding two hundred and fifty million dollars ($250,000,000) be granted to His Majesty towards defraying any expenses that may be incurred by or under the authority of the Governor in Council during the year ending the 31st day of March, 1917, for:
   (a) The defence and security of Canada;
   (b) The conduct of naval or military operations in or beyond Canada;
   (c) Promoting the continuance of trade, industry and business communications, whether by means of insurance or indemnity against war risk or otherwise;
   (d) The carrying out of any measures deemed necessary or advisable by the Governor in Council in consequence of the existence of a state of war; and
   (e) Payments made for the said purposes during the fiscal years ending respectively the thirty-first day of March, nineteen hundred and fifteen and the thirty-first day of March, nineteen hundred and sixteen, in excess of the amounts authorized by the War Appropriation Act, 1914, and the War Appropriation Act, 1915.
2. That the Governor in Council be empowered to raise by way of loan, temporary or otherwise, such sums of money as are required for the purpose of making any payment authorized by any Act founded on these resolutions.
3. That the principal raised by way of loan under this Act and the interest thereon shall be chargeable on the Consolidated Revenue Fund.

Right Hon. Sir ROBERT BORDEN: Before the consideration of this resolution is taken up in the ordinary way, it is desirable that I should give some explanations which may naturally be expected at this stage. In the first place I desire to point out that the work of the Department of Militia and Defence before the war began was of an insignificant character and volume, as compared with the work it has been called upon to undertake since August, 1914, and particularly during the past year, when our forces have been so greatly augmented. Before the war the organization of that department was designed for dealing with a permanent force of about 3,000, which was under arms during the whole period of the year, and the training of from 50,000 to 60,000 men, for varying periods, usually from twelve to sixteen days during the year. The organization was adequate for that purpose; and the Headquarters Staff was organized for dealing with a somewhat larger force in case of war. The organization, however, was entirely inadequate in the first instance for the tremendous strain which was thrown upon it by the events of the war. We all recall that within six weeks after the war broke out a force of 33,000 men was mobilized at Valcartier camp, organized, trained, and equipped ready for active service. It went overseas early in October, 1914, with a surplus of guns and ammunition which were placed at the service of the Imperial Government.

The necessities of the war have, from time to time, called for very large increases in our forces, and as the Orders in Council authorizing these increases have been laid on the table of the House in printed form, and are available to hon. gentlemen, I need not recount them. The enlistments have proceeded upon a scale far beyond what any of us had in mind in August, 1914. Up to the 15th of April of the present year the total number of men enlisted was 309,616, of whom 102,455 joined the colours between the 1st day of January and the 15th day of April.

If we compare the organization which the Department of Militia and Defence has been thus called upon to undertake, with the military organization of the whole Empire before the war broke out, we shall have some adequate idea of the burden and the responsibility imposed upon the Government of this country, and especially upon the Minister of Militia and Defence, and the officers of his department. For example, the establishment of the British regular army, according to a statement which has been handed to me by General Gwatkin, Chief of the General Staff, amounted, before the war, to 127,368 men in Great Britain; in India (including only British troops) 77,317 men and distributed in different parts of the Empire other than the British Isles and India, 49,076, or a total of 253,762.

That constituted the regular army of the United Kingdom; but to that of course must be added the establishment of native troops in India. Excluding the native troops in India, it will be seen that the total forces of the Empire, as organized in the United Kingdom, were some 60,000 less than the number of troops which have been enlisted in Canada for active service overseas and otherwise, since

the commencement of this war. The annual military expenditure of the British Government before the war amounted to £28,200,000, or roughly, $140,000,000. The military expenditure of India amounted to £21,000,000, or about $100,000,000. Hon. members will thus understand that the Department of Militia and Defence has been called upon to undertake in recent months the recruiting, organization, equipment, and arming, and the transport from time to time overseas, of a military force which very considerably exceeds the total military force of the United Kingdom at the outbreak of the war. It is difficult, perhaps, to impress upon any hon. gentleman, who has not been brought closely in touch with the organization which this involves, the tremendous labours which have been entailed, especially upon the Minister of Militia and Defence and the officers of his department by reason of that very great undertaking. In many cases, absolutely new organizations had to be established. More than that, the men who were called upon to establish these new organizations were, in some cases, without training adequate for the purpose and had to grope, as it were, at first, in undertaking what became necessary during the war. After they had learned the needs of the situation themselves, they were called upon to instruct and train others in the constantly increasing organization of the department. It might be worth while to make hon. gentlemen acquainted, to some extent at least, with the character of the organization thus established which is based, of course, upon the organization that previously existed.

The Chief of the General Staff, General Gwatkin, is the first military member of the Militia Council, and has under his direction and control some fifteen or sixteen services all of which I need not name but to some of which I should refer. In the first place he has under his direction, through the Director of Military Operations, all offensive and defensive operations and plans therefor; the strategical distribution of military forces; the collection, compilation, and distribution of intelligence; and the administration of the corps of guides. Through the Director of Training and Staff Duties, he has control of local defence schemes and plans of concentration; training of all arms; military attachés; organization, administration and instruction of the general staff, including appointments thereto; supervision of instruction at schools of instructions; courses of military training at universities. Through the Director General of Musketry, he has charge of musketry training of the militia, and organization and administration of rifle associations. Through the Assistant Director of Signalling he has charge and control of signalling instruction in all its branches.

The Adjutant General's branch is of course a very important service, in connection with the raising of the very large forces that have been mobilized during the last eighteen months. Under the Adjutant General is, in the first place, the Director General of mobilization, who controlled a very small establishment before the war broke out. Under the direction of Colonel R. J. Gwynne, Director General of mobilization, are a great many different services, to some of which I may refer. They include war organization; preparation of war establishments; mobilization, including the general consideration of administrative action necessary to give effect to the approved policy regarding mobilization, co-ordination of military arrangements regarding mobilization, and of orders regulating such arrangements; localization of units; formation and disbandment of units and corps, and executive action in connection therewith; allotment of units to formations on mobilization; all matters relating to drafts; estimating and preparing drafts of all arms; and placing units and drafts of all arms under orders for embarkation.

The Adjutant General's staff has been enlarged by the appointment of an Assistant Adjutant General No. 1, and an Assistant Adjutant General No. 2. The duties which come particularly under the direction of Adjutant General No. 1, Lieut.-Col. C. S. McInnes, are, among others; the appointment of recruiting officers; allotment of recruiting areas in conjunction with mobilization; dealing with requests and recommendations for recruiting expenditures; recruiting problems generally in connection with officers commanding military districts who are authorized so far as possible to organize their districts in accordance with local conditions and requirements; preparation of enlistment regulations and all matters relating to attestations, etc. It is to be observed also, in connection with the duties of this officer, that, owing to the large number of new units authorized from time to time, and owing to the creation of special units, such as pioneer battalions, tunnelling companies, foresters, etc., numerous applications are made from time to time in all parts of Canada. A general regula-

tion has been established against transfers, but the exceptional cases are necessarily numerous and for various reasons. This officer has also under his immediate charge the active militia and Canadian expeditionary force employed on guard duty in Canada. Guards are being employed during war time for internment camps, for garrisons, for certain munitions plants, armouries, etc. At one time, the active militia called out on active service for such duties numbered upwards of 13,000. This has now been reduced, with considerable effort, to less than 10,000, and it is hoped that a further reduction may yet be made in the number of the active militia so employed. Returned soldiers are employed wherever possible, and the Canadian expeditionary force troops are also used to some extent when this does not conflict with the necessary training for overseas. Questions relating to the employment and withdrawal of such guards are continually arising, and are dealt with in conjunction with the branch of the Chief of General Staff where garrisons are concerned, with the Master General of Ordnance in connection with munitions plants, and with the General Officer Commanding internment operations as to internment camps. There are also, in so large a force, numerous questions continually arising with regard to discharges for medical unfitness, inefficiency, and for special reasons. These questions are required to be referred to headquarters. The work has been decentralized as far as possible in order to enable discharges to be carried out and pay to cease at the earliest possible date without the delay formerly involved by a reference to headquarters in all cases.

At the same time, considerable work is still involved in connection with many matters, such as the discharge of minors and American citizens, the bringing back of non-commissioned officers and men from England to Canada for discharge to take commissions, etc. The administrative arrangements in connection with the discharge depots at Quebec and St. John, which have been established for dealing with members of the Canadian Expeditionary Force returning from England, are dealt with by the Assistant Adjutant-General, No. 1. A large amount of new work has also arisen in connection with this department in co-ordination with the branch of the accountant and paymaster general, with the director general of medical services and with the Military Hospitals Commission. As the soldiers who go to such homes are still kept on pay and subject to military discipline, this branch is interested and involved in work relating to them until their final discharge from the service.

This department has charge also of a very important matter in respect of returns which must be prepared, consisting not only of parade states of the permanent force, as heretofore, but also of full details of the strength and location of the Canadian Expeditionary Force in Canada from time to time, and returns of recruiting, discharges and transfers. All matters of discipline are also dealt with by this department, not only those relating to officers, but those relating also to non-commissioned officers and men; also courts martial, courts of inquiry in connection with the Judge Advocate General, as well as questions relating to fraudulent enlistments and deserters. This department has charge also of the organization and administration of those schools or gymnasia which have recently been established since the commencement of the war, which include instruction in bayonet fighting and physical training. The administration and control of the corps of Military Staff Clerks and Staff Orderly Service is also in charge of this department. The personnel in this service has more than doubled since the commencement of the war. This department takes charge also of administrative arrangements relating to camps and camp staff, in conjunction with other branches interested. It has also control of billeting arrangements of the Canadian Expeditionary Force, which it takes up in conjunction with the Director General of Supply and Transport. A considerable amount of work has arisen in connection with the billeting of men during the winter months in the places where recruited. This branch has charge also of all questions relating to furlough of non-commissioned officers and men, whether in Canada or returned from England, and the inspection of such men; also the preparation of records dealing with regulations governing furlough for harvesting, seeding, or other agricultural work. It is also concerned with garrison and regimental institutes and canteens, and has control through a special inspector appointed to investigate the same.

Many other subjects are referred to in the memorandum placed in my hands at my request, but it is not necessary to bring them to the attention of the committee at the moment. I may add, however, that

steps have been taken and machinery has been provided for the purpose of co-ordinating the work of this branch of the Canadian Expeditionary Force in Canada with similar work which is necessarily carried on in Great Britain and in France.

I now take up the work of the Assistant Adjutant General No. 2, Lieut.-Col. Palmer. The memorandum that I have before me contains the information that since the war no change has been made in the organization of this division, but it has been expanded to meet requirements as far as possible. The work has been increased by the provisional appointments of officers to units of the Canadian Expeditionary Force and by the large number of new appointments to the Canadian Militia, as all officers before joining a unit of the Canadian Expeditionary Force, if they do not already belong to the Canadian Militia, are appointed to some unit thereof. There are now some 11,000 or 12,000 officers in the Canadian Expeditionary Force. The Assistant Adjutant General No. 2 has himself dealt with all provisional appointments, promotions and retirement of officers in the Canadian Expeditionary Force and all correspondence relating thereto. As units of the Canadian Expeditionary Force sail for England, lists of officers are mailed in duplicate to His Royal Highness the Governor General; the Secretary of the War Office, London, England; the General Officer Commanding Canadians, Shorncliffe; the Officer in charge, Canadian Records, London, Eng.; the Director of Recruiting and Organiation, Folkestone.

The next part of the organization to which I direct attention is the administration of the medical branch. It is not necessary to advert to what that organization was in time of peace. The general organization remains practically the same throughout Canada. The Central Army Medical School has been discontinued, as well as the Central Laboratory of Hygiene, the work carried out by these organizations being now dealt with in military districts. Civil hospitals have been largely utilized throughout Canada for the care of the sick, as the military hospitals available were not sufficient for the sick in troops mobilized. The Central Medical Stores remain in operation, and all technical medical equipment for overseas units is supplied through them. The arrangements for the purchase of medical supplies generally has been somewhat changed, as the War Purchasing Commission now carries out all such purchases.

The Permanent Army Medical Corps has sent overseas most of its officers and nursing sisters and a number of non-commissioned officers and men, leaving, for the most part, the carrying out of the medical services in Canada to the Army Medical Corps.

The organization of the Army Medical Corps remains the same, with the exception that the dental surgeons are now no longer a part of the Army Medical Corps, but are a special corps.

All medical officers are now appointed to the Army Medical Corps, and are not of the regimental service. Medical units of the active militia have been kept on foot, but increased efforts have been given to securing personnel for overseas medical units.

Voluntary aid detachments have been formed and registered as applied for.

The general scheme of the organization has provided sufficient machinery to carry on the medical services in Canada, but a great deal of inconvenience has been experienced owing to the medical officers most experienced in military matters having been sent overseas with the earliest contingents. Newly appointed officers have been called upon to fill posts for which they have had little training.

Training depots for the Army Medical Corps, to provide reinforcements for the overseas Canadian Army Medical Corps have been established in military districts 1, 2, 4, 10, 11, 13. In addition to providing reinforcements, they assist in carrying on the medical services, especially in places where a medical officer of the Army Medical Corps is not available.

Civilian medical practitioners have in many cases been utilized to carry out the medical examination of recruits. There has been no lack of officers, nursing sisters, and men for this branch of the service.

The establishing of the Military Hospitals' Commission really creates a new division of the medical service, and had this not been established the Medical Service would have had, to a large extent, to carry on the work which that Commission is now performing. The organization of the medical services was such that the securing of sufficient personnel and alloting them to various duties has been more necessary than the establishing of special new divisions.

The duties of medical officers, as far as

Canada is concerned, compared with the duties of medical officers in time of peace, have been very greatly increased, and with special reference to the care of troops on active service.

The selection of officers for various duties has been made with due regard to their special qualifications and experience, but, in most cases, personnel of all ranks has had to be trained for the duties to be performed.

In speaking of the co-ordination of the Service in Canada with the services overseas, the following observations are to be made from the report which I hold in my hand:

The machinery at present utilized to co-ordinate the work of the medical services in Canada with that overseas has been the medium of letters, cables, reports, etc., passed between the office of the Director General of Medical Services and the Director of Medical Services, Canadian Expeditionary Force. In every case where problems arising in Canada appear to have any bearing on those overseas, the Director of Medical Services, Canadian Expeditionary Force, is communicated with.

I shall now allude briefly to the report regarding the Canadian Army Dental Corps.

The Canadian Army Dental Corps service is divided into two branches, the one dealing with the services necessary to the recruit on enlistment and the soldier in training; the other with the casualty branch or that dealing with the returned, wounded, and invalided soldier.

I have been informed, not only from this report but during my visit overseas last summer, that the value of the work of this corps can hardly be over estimated. It is a service I believe, to which not very great attention was given in the British establishment before the outbreak of the war, and I am informed that there is less attention paid to this subject by the British military authorities than has been thought desirable in this country. The report goes on to observe:

In the early months of the Corps' existence its time was largely taken up wth the first branch, viz., treatment of recruits and soldiers in training, but, as is inevitable in a war of this kind, the casualty branch has been increased by leaps and bounds, while the former service has not been lessened in the smallest degree.

With regard to the evolution and development of this corps, the report continues:

With the proportion of men rejected on enlistment, greater, for dental defects, than for any other cause, the need for just such a unit as the Canadian Army Dental Corps impressed itself on the authorities. So important have been its services that the disability existing at first, in regard to enlistment, has been entirely removed and tens of thousands of men are serving in the trenches to-day who owe their presence there to these very services.

The personnel of the Corps has increased from the modest beginnings of 57 to the number of almost 1,000 to-day. New divisions have been created overseas and a corresponding increase in our Corps takes place with each new division. The total personnel for each new division is 96. The duties cover dental services to every unit in the service, wherever permission can be obtained to post Canadian Army Dental Corps officers.

No provision had been made at the inception of the Corps for its services to be utilized in Canada, and this has been since done, and the Canadian force now consists of nearly 400 all told.

Practically all the administrative work falls on the office of the Corps Headquarters, Ottawa, and the difficulties of administration in a unit whose territory extends from Victoria, B.C., to Great Britain, France, Cairo in Egypt, and Salonika are easily discernible.

Dental history sheets have been provided so that where a man goes overseas before having his work completed, the uncompleted portion is carried out on his arrival over there.

Mr. MARCIL: Would the right hon. gentleman give us some information about the transfer to the Government of France of Canadian hospitals in France? I saw by a newspaper report the other day that Sir George Perley, the High Commissioner for Canada, had gone to France to be present at the ceremony of transferring these hospitals.

Sir ROBERT BORDEN: In the answer I am about to give I shall not speak of the hospitals which form part of the regular establishment of an army in the field. We have, of course, hospitals of
4 p.m. that character, which have been established in France from the first. I saw no fewer than five of them when I was in France last summer, and nearly all, at that time, were near Boulogne. But in addition to that we have three hospitals to which probably my hon. friend alludes. One of them, under the command of Colonel Mignault, is at St. Cloud, and that hospital has been placed entirely at the disposal of the French Government. It is true that Sir George Perley went to France to be present at the opening of the hospital, and I think that occasion was also honoured by the presence of the President of the French Republic. That hospital has been placed entirely at the disposal of the French Government to be used for French soldiers who have been wounded at the front and require hospital care.

Mr. MARCIL: The Canadian staff is retained?

Sir ROBERT BORDEN: Oh yes. The staff is entirely Canadian; in fact entirely French Canadian.

Mr. LEMIEUX: Is that not the gift of the Canadian Government to the French Government?

Sir ROBERT BORDEN: Yes, that is the gift of the Canadian Government to the French Government. The arrangements were made for it last summer while I was overseas.

Mr. LEMIEUX: Is there not also another hospital at Dinard?

Sir ROBERT BORDEN: There is also another hospital at Boulogne and one at Dinard. Of the three hospitals, the one at St. Cloud is a French-Canadian hospital, as I have explained. The officers, surgeons, every one connected with it, are from the province of Quebec. That hospital has been accepted by the French Government and is maintained by the Government of Canada. There are two others to which my hon. friend perhaps alludes, at Boulogne and Dinard. One of these is a hospital which was organized by the University of McGill, and the other one is a French-Canadian hospital, organized somewhat along the line, I suppose, of the hospital at St. Cloud. So there are these three hospitals, in addition to the regular establishment of military hospitals necessary for the purposes of an army in the field. I am very glad indeed that they have been established. I am sure that not only the British Government but the French Government as well have received their establishment with a great deal of appreciation, and I am also confident that their work will be up to the highest standard, and will reflect credit not only upon those who are responsible for their management but upon this country as a whole.

Mr. LEMIEUX: The reason I mentioned Dinard is that I have received letters from a French friend, who is also a friend of Canada, being a large investor in the West, and he speaks most highly of the Canadian hospital at Dinard. He says it is a most creditable institution.

Sir ROBERT BORDEN: My experience of the Canadian hospitals that I had the honour to visit while I was overseas, corresponds entirely with what my hon. friend has just said. I do not know that there are anywhere in Europe to-day hospitals better organized or better equipped than the hospitals established by Canada, including the three I have alluded to.

The next branch to which I shall refer is the Record Office. I have very voluminous reports here with regard to that branch. It is difficult to appreciate the enormous amount of work which devolves upon that particular office unless one is brought closely in touch with it. In time of peace the Record office itself has an establishment of four clerks. It has now an establishment of 360 clerks. The separation allowance branch had no organization before the war; that branch has now a staff of 270. To illustrate the amount of work that some of these departments have to perform, I was informed to-day by the Accountant and Paymaster General that in connection with the assigned pay and separation allowances, no less than 5,000 cheques have to be issued daily, while 1,000 letters have to be written daily. Then there is the Contracts Branch. In time of peace it consisted of a personnel of 30; this has been increased to 250, all of whom are working very hard, as I am informed. The Accountant's Branch in time of peace had a personnel of 35; to-day is has a personnel of 108. The Superintendent of Stationery Branch in time of peace had a personnel of 10; to-day it has a personnel of 24. At the outbreak of war all these branches had a personnel of 79. To-day they number 1,042. In many of these branches, a great deal of the work has to be done at all hours of the day and night. For example, the separation and assigned pay branch is obliged to work in three shifts of eight hours each; because the work has to proceed during the whole 24 hours.

However, I was going to speak of the work of the Record Branch more particularly. I must omit the greater part of the report which I have received, but there are a few details to which attention should be directed. The staff works in two shifts; the day staff from 8.30 a.m. to 5 p.m., and the night staff from 5.30 p.m. till midnight, and often later, when the work of the office requires it. Each section is in charge of a clerk specially selected to supervise its work, who is assisted, when necessary, by other senior clerks.

It is further observed that when the troops proceeded to France and the casualties commenced to come in, it became necessary to engage a special staff of typists for night work, owing to the fact that practically all cablegrams reporting casualties

reached the department after 6 p.m. The next of kin in each case are informed of the casualty by telegram, and an arrangement has been arrived at with both telegraph companies to report to the Record Office when delivery had been made, thus ensuring that no information relating to any casualty is communicated to the public press until the next of kin has received notification. For some months the work of the Record Office was carried on under great difficulties, owing to the fact that the available space in the department was very limited, and this handicap was felt severely when some 6,000 casualties were reported at the battles of St. Julien and Langemarck. Notwithstanding this, however, by working until between 3 and 4 a.m. each day, they were handled at the rate of not less than 500 per day. The particulars on each attestation paper are recorded on a card, so as to render the information readily accessible, not only for the purpose of furnishing information to the next of kin, but also to enable inquiries from all parts of the Dominion, which average 150 per day, to be promptly answered. At the present time over 200,000 index cards have been written and filed in alphabetical order.

The discharge documents of men who have been returned to Canada as medically unfit, undesirable, etc., are recorded and filed alphabetically. The particulars in each case are recorded on a card as well as entered on a form specially drawn up for the purpose, which is placed on each man's file, so that the necessary information is readily available for any one who deals with the case. Lists of men discharged in the different districts are received at headquarters daily. These lists are carefully checked and compiled, and a copy is furnished each day to the Military Hospitals Commission, to several branches of the Canadian Patriotic Fund, and to different large firms and companies who are retaining their employees on their pay rolls whilst overseas. A cable is received each week from England giving the names and classifications of all men who are to be returned to Canada as medically unfit, undesirable, or for other cause. Copies have to be made and forwarded to the different officers commanding military districts, to the Military Hospitals Commission, to discharge depots, and to several branches of the Canadian Patriotic Fund, as well as to various staff officers at headquarters. As the number of men enlisted increases, and casualties increase, so does the work in this section increase correspondingly. At present the average number of letters sent out daily is 300, and this number is considerably augmented after each important engagement in which Canadian troops have taken part.

With regard to personal effects and wills, up to a month ago, that is, prior to the organization of the Estates Branch, all questions relating to personal effects, wills, etc., including the distribution of property, were dealt with in the Record Office. An arrangement was made with all express companies operating in the Dominion, to transport in Canada, free of charge, the personal effects of deceased soldiers. There is now, however, a special branch which deals with the estates of deceased soldiers, and which is carried on by competent men and under adequate supervision.

With regard to missing men: at the present time the Record Office is dealing with the cases of men who have been missing for a period of six months or over. The number reported missing, whose next of kin reside in Canada, is about 500. A letter has been written to the next of kin, in each case, asking if any information has been received, from any source, which would lead to the belief that the soldier is still alive. In addition to the letter to each next of kin, a communication is addressed to the officer in charge of records, England, with the view of obtaining like information. From time to time lists of men who are prisoners of war have been prepared and issued to different societies formed especially to look after their welfare. We have taken upon ourselves the responsibility of arranging, through Sir George Perley, that any supplies of necessaries, which may be required by prisoners of war or persons interned in enemy countries, shall be provided for them, and we have received many grateful letters from these unfortunate persons acknowledging the excellence of this arrangement.

Inquiries from insurance companies are very numerous and they include the furnishing of death certificates and certified copies of attestation papers. Extracts have to be made from burial reports, giving the exact date and place of burial and particulars as to the location of the grave, and forwarded to all concerned.

I also have a memorandum in regard to the Pensions and Claims Board, but as that subject is under consideration by a committee of the House I do not think it

necessary to go into it more fully at the moment.

I shall allude very briefly to the duties of the Quartermaster General. The Quartermaster General is responsible for a great number of services among which are the following:

(1) The organization, administration and technical training of all transport, remount, railway supply, barrack, ordnance and veterinary services.

(2) Settling the reserves of food, clothing, equipment, general stores and material to be held in depots, garrisons or mobilization stores, and the scales of such articles to be in the possession of the troops.

(3) The patterns of clothing, equipment and ordnance stores.

(4) Holding and issuing all military stores.

(5) Compensation for injuries to animals or material.

(6) Selection of officers for employment in the above services.

(7) Arrangements for postal services.

(8) Advising and assisting the Deputy Minister, Militia and Defence, in making arrangements for contracts for the above services.

(9) Preparation, jointly with the Finance Minister of estimates for the above services.

There is a statement in this report as to the personnel of the staff which I need not read. The duties of the various administrative heads who are connected with this branch may be briefly referred to. For example, the Director General of Supplies and Transports, among 19 different administrative duties, of which he is in charge, deals with the following:

Appropration and occupation of barracks, hospitals, offices, armouries, drill halls, etc.

Supplies of food, forage, paillasse straw, fuel and disenfectants. Questions as to the amount of water or light allowed in barracks, and of the supply of oil, carbide, etc., for the production of light in barracks and camps.

Supply arrangements in connection with mobilization and defence schemes.

All questions in connection with transport and conveyance of stores.

Provision, repair and administration of transport vessels.

Arrangements for the execution of postal services in war, and in camps (when necessary).

This branch is represented in each district by an assistant director of supplies and transports, who is, in most instances, an officer of the Canadian Permanent Army Service Corps, and who is in charge of the above services in his district. He is assisted, wherever possible, by a small detachment of officers, non-commissioned officers and men of the Canadian Permanent Army Service Corps. The Assistant Director of Supplies and Transports also commands and administers the Active Militia companies of the Army Service Corps in his district who are employed in the annual training camps in carrying out the necessary administrative services. There is also a statement of the other officers connected with the service whom I need not specifically mention at the moment. In addition to the duties already enumerated, this director has performed all work in connection with the chartering of ships for the conveyance of troops overseas and the passing of the accounts in connection therewith.

There is a Director of Supplies and Transport in England, whose duties there are analogous to those of the Director of Supplies and Transport here, viz.: The feeding and transportation of the Canadian troops in England. He has also charge of the Army Service Corps reinforcements sent from Canada from time to time from which the wastage both in officers and men at the front is supplied. This officer is attached to and comes under the control of the General Officer Commanding Overseas Canadians.

There is also associated with the Quartermaster General's department the general directorship of clothing and equipment. The Director General has charge of some twelve administrative matters but there are only three of them that I need mention:

All questions in connection with clothing and necessaries, such as mobilization reserves, thefts, losses and scales of issues.

Preparation of estimates for clothing and necessaries.

Disposal of worn-out colours, clothing, etc.

Then there is the Principal Ordnance Officer who has charge of ten services, only three of which need be referred to:

The administration, distribution and corps training of the Canadian Ordnance Corps, and inspection of the same.

Preparation of War Office requisitions and contract demands for all clothing and necessaries.

The maintenance of reserves of stores and of mobilization stores.

The principal duties of the Canadian Ordnance Corps are the receiving, storing, accounting for and distribution of all clothing, necessaries, stores, guns, ammunition, vehicles and all other warlike stores except those of a technical medical nature. The corps is also charged with the maintenance and repair of the above stores, etc.

The director of stores has charge of eight different services, to only three of which I shall allude:

The preparation of annual and other estimates for all equipment and general stores required for the militia during time of peace and

for the Canadian Expeditionary Force during war. The provision of all such equipment and stores, e.g., personal equipment of soldiers, camp equipment, harness and saddlery, tools, signalling equipment, and materials, barrack and hospital stores, miscellaneous stores, etc.

To arrange for the selection, approval and sealing as standards of all patterns to govern future supplies and to provide specifications for same.

Preparation of mobilization store tables and the revision from time to time to govern issues of equipment to units in the field; and the compilation of tables and other regulations governing issues of equipment and stores to the permanent and non-permanent militia, Rifle Associations and Cadet Corps.

There are also the duties of the Headquarters Branch of the Mechanical Transport Section, Canadian Permanent Army Service Corps. It has charge of twelve services to only a few of which I shall allude:

Administration of Headquarters Detachment, Mechanical Transport Section C.P.A.S.C., including the Mechanical Transport School of Instruction.

Inspection of motor trucks, cars, ambulances, motorcycles, bicycles and spare parts for same.

Motor trucks. The chasses, tires, bodies, cowls, tool boxes, etc., are received from the various manufacturers and are assembled into complete motor trucks for shipment overseas.

Local transport. In conjunction with the testing of motor trucks for overseas, an average of 150 tons per day departmental stores are handled by this branch between the various railroads, inspection rooms and Ordnance stores.

School of Mechanical Transport instruction for officers being sent overseas, previously carried on by the training depot at Toronto, is now directly under this branch and carried on at the Victoria garage.

That gives a very rough and imperfect estimate of the work that is being carried on under the direction of the Quartermaster General.

I next come to the work of the Master General of the Ordnance. The organization of this branch resolves itself into two divisions or directorates, supervised by (1) Director of Artillery, (2) Director General of Engineer Services. In regard to the organization since the war I have the following observations in a report from Brigadier General Elliott:

No changes in the organization have been made since the commencement of the war, except that the Master General of the Ordnance also performs the duties of the Director of Artillery, the latter officer being on service in France. An Inspector of Artillery Stores, with an assistant, has been added to the branch. The work has increased enormously but the present staff has so far been able to cope with it by working much longer hours.

The development that has taken place since the commencement of the war is divided into two main branches: (1) the mobilization and training of the various units and drafts of engineers for overseas; (2) Engineer Services—construction and maintenance of military works and buildings as in peace time, with the addition of housing of troops mobilized in Canada in winter, and fitting up their training areas in summer, as, for example, at Valcartier and the various training camps in Ontario, Manitoba, Saskatchewan, Alberta and British Columbia.

The total trained and sent overseas amounts to 322 officers and 6,321 non-commissioned officers and men. For this purpose an Engineer Training Depot was organized in Ottawa, where all non-commissioned officers and men were sent from districts to be trained before proceeding overseas. The officers are drawn from the existing peace units of engineer and regimental lists.

In addition, a School of Signals is attached to the Training Depot to train and provide the signal units and drafts.

In addition to the duties carried out by the Engineer Services in peace time, much extra work has been entailed in the arranging for housing of troops in winter, fitting up large training camps, which continue for about five months, and the construction of certain fortifications, defence lights and munition buildings not otherwise provided for. To co-ordinate the work of this branch in England and in France in its relation to the Canadian Expeditionary Force, an Engineer Training Depot has also been organized at Shorncliffe, England, to further train and make up the engineer units for the front.

Owing to the immense drain on engineer personnel, the staffs have been reduced to a minimum, and this entails a greatly increased amount of work at Militia Headquarters. Nevertheless, the difficult and responsible duties have been satisfactorily carried out by all ranks, more especially that of housing of the troops.

Then there is a Small Arms Inspection Branch at Quebec, charged with the duties of inspection of all materials for the manufacture of small arms and ammunition, also machine guns, instructional and other stores. They have the custody of sealed patterns, specifications, samples, standard gauges, drawings, and models of all stores to be inspected. They conduct firing proofs of small arms and small arms ammunition. Inspections are also carried out at factories.

So far as the Dominion arsenal at

Quebec is concerned, the personnel consists of a superintendent, one assistant superintendent, and one medical officer; also a supernumerary staff consisting of chemist and staff, including laboratory foreman, and foremen of the different departments of the arsenal. Since the commencement of the war, in addition to the work devolving upon it in time of peace, the arsenal has manufactured a greatly increased quantity of field gun ammunition and stores in connection with the inspection and proof of War Office ammunition; also material for the training of the Expeditionary Force. On account of the large amount of additional work devolving upon it the supernumerary staff has had to be increased.

With regard to the work of the Accountant and Paymaster General, there are now five divisions in this branch. The following table shows the number employed in each on three different dates, viz.: August 1, 1914; January 1, 1915; and April 1, 1916:

	August 1, 1914.	January 1, 1915.	April 1, 1916.
Accounts division... ..	14	25	50
Pay audit division.....	10	25	70
Separation allowance and assigned pay division..	..	42	250
Stores audit division...	11	13	15
Pension division.. ..	..	..	7
Total	35	105	392

At the outbreak of war in August, 1914, there was a Permanent Force of 3,000 troops, and the total Militia expenditure was at the rate of nearly $12,000,000 a year. There are at present 300,000 troops in the field, and the expenditure has increased to $250,000,000 a year.

There were no radical changes to be made in the system of carrying on the work, but rather a quick expansion of the one in operation; and the great difficulty at first was to find trained men. There were but few of these to be found, and the only solution was to get the best available, and train them.

Regimental paymasters have been a source of trouble from the start, and still are, but as we have now a number of trained and experienced paymasters we are using some of these as instructors and inspectors, and in this way the situation is improving, as inefficient regimental paymasters are soon discovered and either given instruction or relieved of their duties altogether.

The chief paymaster, Canadian Expeditionary Force, London, England, is treated the same as a district paymaster in Canada. He is provided with funds through the High Commissioner, but reports to the Paymaster General, and accounts directly to him for all expenditure.

One or two observations as to the very great stress that has been imposed upon the officers of the department might be useful at the moment. A pretty full memorandum on this subject was prepared in December last. It is very lengthy, and when a copy of it has been prepared, I shall be glad to lay it on the table of the House, but there are one or two extracts I might read to the committee. The Director of Contracts, speaking of the very urgent work of great magnitude that was imposed upon his branch at the outbreak of war in connection with the hurried despatch of the first contingent, says:

> All this work for the first contingent was therefore disposed of by the ordinary staff, with some additional inspectors and half a dozen additional junior clerks. Of necessity the usual methods, the ordinary safeguards and precautions were not always practicable. In peace time goods were bought usually after competitive tenders had first been obtained, unless the purchase was under a previously made contract still in force. In the early days of the war competitive tenders took much valuable time; sometimes they were got by telephone, occasionally they had to be disposed with. In general, every possible short cut was taken to ensure the prime object—delivery of the goods in time. The hours of work were extended to the uttermost—the working day varied from 10 to 20 hours, and the average must have been at least 70 hours weekly for many months. The continuous strain of working at long tension under great pressure and with the knowledge that the time was far too short to allow proper attention to be given any transaction, even the most important, taxed the nervous and physical strength of all to the limit. Under these circumstances some irregularities were unavoidable, and it is surprising that so few occurred.

He goes on:

> The months of February, March and April (of last year) were times of absolute paralysis and congestion. The various parliamentary and other committees of inquiry and investigation absorbed practically all my time and that of the most valuable of my assistants, either in attendance thereon, or in preparation of papers and information called for. The work of the branch remained, perforce, at a standstill; although the necessity for it continued unabated. The arrears thus accumulated took months to overtake, after work was resumed and the staff had been enlarged.

To give an idea of what had been imposed upon his branch at the first, the following partial list of clothing, etc., purchased since August 1, 1914, will serve to

give some idea of the magnitude of the business:

Greatcoats, 229,100; cloaks, 70,500; serge jackets, 401,500; serge trousers, 298,000; flannel shirts, 650,000; suits underwear, 732,000; service shirts, 278,000; service trousers, 205,700; sweaters, 398,225; socks, 1,969,100; forage caps, 313,000; puttees, 474,800; caps, comforter, 515,000; blankets, 746,500; boots, 670,000.

These fifteen items alone have an approximate value of $15,929,845. For the making of uniform clothing, 9,566,000 yards of various materials have been bought, received, inspected, and re-shipped to the various manufacturers of clothing. These are only a few items amongst thousands dealt with. The value of warlike and other stores bought, as distinguished from clothing, is as great or greater than the clothing; and their range and variety is much greater.

He goes on to deal with the subject of British and foreign contracts. Between August 1, 1914, and May 1, 1915, stores and equipment for British and foreign Governments were bought to a total amount of $11,563,180. A very considerable part of this was for the French, while $1,450,000 was for the Russian, and the balance for the British Government. The contracts in all cases were made in the branch; the supplies inspected and the accounts certified for payment. It will be observed that the foreign business alone was in value three times as great as the ordinary ante-bellum work of the branch for the same time. His summing up is as follows:

The war suddenly increased the work from ten to fifteen times; and this had to be disposed of by a staff absolutely undermanned at first and never large enough during the whole period now under review, and hampered by lack of time, lack of space, and many other hindrances to prompt and satisfactory despatch of business.

There are one or two observations I would read from the report made by the Accountant and Paymaster General:

To the layman the work of paying an army may seem a simple task, and it would be simple if it consisted merely of paying men a fixed rate once a month as in the case of large corporations. Owing to the fact, however, that the Government assumes a sort of paternal charge over the soldier, clothes, feeds, houses, and pays him, and also in a way provides for his family, the work is not so simple as it might appear; and where desertions and discharges are extremely numerous, as was the case for the first few months, and regimental officers, including the paymaster are more or less inexperienced in their duties, there is bound to be care and worry for those in charge of the work. Add to this the difficulties resulting from having to issue part of the soldier's pay in Ottawa to his dependents and the balance to the soldier himself in England and France, and the work becomes extremely complicated and the correspondence enormous as the pay officers at Ottawa and London have to keep each other advised of the state of each soldier's account. For this purpose it is necessary to open a ledger account with each soldier and also one with each dependent. Some idea of the work may be had from the number of cheques issued from the pay office at Ottawa which total now eighty thousand a month.

This report was made in December last. I stated the number at 125,000 a moment ago; that is the number now.

As already stated a great deal of difficulty has been experienced as a result of having to employ inexperienced regimental paymasters. Until these officers become trained in their work and attend to it properly there is bound to be trouble for all concerned. Not only must the paymaster be efficient but the regimental officers must be efficient as well and give him their co-operation. This is often lacking in the early stages of the organization of a regiment, and, as a rule, some months elapse before the work goes smoothly. Naturally pay work is not considered the most important by regimental officers in a crisis like the present, when the great object is to make the regiment fit for the firing line; hence, at first, there is more or less lack of attention to pay matters and men are discharged or allowed to desert without notifying headquarters of the fact.

So it may happen that cheques are sent to men who may have been discharged or may have deserted, or their dependents may receive cheques, because proper information has not been given.

These cases, however are becoming more rare and every means is being taken to obtain at Ottawa speedy notification of discharges and desertions. The old method of paying the men in cash has, as regards the troops in Canada, been discontinued, and cheques are now issued instead twice a month. While this system is somewhat cumbersome and entails more work than the other, yet it prevents irregularities and enables headquarters to keep a perfect check on paymasters. These latter are not allowed to draw cash from the bank, and the cheques issued to them do not go back to them from the bank but are sent to headquarters.

There is a great deal more information of a similar character with regard to all branches of the Department of Militia and Defence, but I have given enough to make hon. members realize the very great magnitude of the task which has devolved upon the Government in connection with the organization required by the war.

Now, with regard to the distribution and strength of the forces that have already been raised. Overseas, elsewhere than in Great Britain, there are approximately 65,000 men. It is understood that we have at the front three divisions, which include all lines of communication units, includ-

ing hospital depots. We have in Great Britain at the present time approximately 70,000 men. I would like to say in this connection that there has been very earnest effort on the part of the Minister of Militia during the past four or five months, and an equally earnest effort on my own part, since I have been acting in the department, to procure the consent of the War Office to sending our men forward more rapidly than in the past. As a result, I believe that we have despatched during the months of March and April about 30,000 men. And, in reply to a communication which I myself sent to the War Office on Thursday or Friday last, to which I requested very earnestly an answer as early as possible, I have now received permission to increase the number of battalions in Great Britain to fifty-two. This will involve the despatch to the other side of a very considerable additional number of battalions in the early future. I have not been unmindful of the fact that there seemed a discrepancy between the number of men we were keeping here in Canada and the number we have in Great Britain and the number we have actually fighting at the front. As has already been explained more than once the Government of Canada was subject to certain limitations in connection with forwarding men to Great Britain and. from there to the front. In the first place, we desired to have our men equipped, as far as possible, before they went forward, and it was absolutely necessary that they should first receive a certain amount of training. During the past three or four months there has been some difficulty in providing accommodation for the troops in Great Britain, and, then again, there has been delay in sending troops forward on account of not always being able to secure transports when required. However, the best has been made of the situation, and I am convinced that in the future troops will go forward more regularly and in greater numbers than during the first three months of the present year. It should be borne in mind that during the last nine months of 1915 our forces did go across at the rate of about 2,000 per week, if I remember correctly. That average, however, was not maintained during the first three months of the present year. Then, besides that, we have in Canada, let us say, about 135,000 men, or a total of effectives of 270,000. I set down for non-effectives, casualties, wastage, etc., about 30,000, and I set down for the militia in Canada, doing garrison and outpost duty, about 10,000. This brings the total to the 310,000 men which I mentioned as having been enlisted. I may say that the troops in Great Britain at the present time are being inspected by General Lessard. He had been at the front on leave of absence and before returning to Canada it was thought desirable that he should make inspection of troops over there.

Mr. LEMIEUX: I had understood that General Lessard had obtained leave of absence, but that he was not officially connected with the department over there. I understand from the right hon. gentleman that General Lessard has been inspecting the troops?

Sir ROBERT BORDEN: He is now engaged in that work in Great Britain.

Mr. LEMIEUX: Since when?

Sir ROBERT BORDEN: Since about ten days, I think.

Mr. LEMIEUX: I thank the new Minister of Militia for what he did.

Sir ROBERT BORDEN: The arrangement for the inspection was made after consultation with the Minister of Militia and with his entire concurrence. In fact he thought it a very desirable thing that the inspection should be made by General Lessard.

Mr. LEMIEUX: Hear, hear. The news will be hailed with pleasure by all Canadians.

Sir ROBERT BORDEN: A difficulty has arisen in connection with the supply of drafts and reinforcements; I think hon. gentlemen will understand at once what it is. When it is proposed to organize a battalion at any point in Canada, the most capable officers are selected—men, if possible, with initiative and a good deal of energy, who will throw themselves wholeheartedly into the work of recruiting the battalion, and be likely to bring it up to its full strength as soon as possible. As the officers are selected and the battalion organized, associations spring up between the officers and the men through the fact that the men are usually recruited from one particular locality, and there is a most natural desire on the part of the officers and men that the battalion shall go to the front as a unit and not be used for drafts or reinforcements. The result is that when it is necessary to fill the ranks at the front after an engagement, or to supply drafts

to fill up battalions in Great Britain which have been much depleted, there has been a great deal of reluctance and more or less murmuring on the part of the officers and men at being separated from each other and allocated to other battalions. Some arrangement by which difficulties of that kind will be obviated altogether, or at least reduced, is now under consideration in the department, and I hope that eventually we may arrive at some scheme which will make the difficulties less in the future than they have been up to the present time.

I have procured from the Deputy Minister of Finance a statement of expenditures up to the present time.

Mr. LEMIEUX: I understand that a battalion is made up of 1,100 men?

Sir ROBERT BORDEN: About 1,140 or 1,160 men.

Mr. LEMIEUX: Including the officers. What is the proportion of drafts to be levied after a battalion has left and who looks after the drafts? I understand that each battalion must have its drafts in Canada.

Sir ROBERT BORDEN: I am not quite sure of the precise method that is adopted in Great Britain. I suppose that the officer at the front, after his battalion has been depleted, applies to the officer commanding the Canadian forces in Great Britain for the number of men necessary to bring his battalion up to strength again. Many battalions have been raised in different parts of Canada which have recruited 200 to 500 men above full strength. These men have gone forward to Great Britain, and, as I understand, have been used to make good the depletion in the ranks of Canadian reserve battalions in England, according as drafts have gone to the front.

I was proceeding to say that the war appropriation was not to be used solely for the Department of Militia and Defence. It was an appropriation couched in practically the same language as that which is now on the Order Paper. There have been payments to several departments of the Government out of the war appropriation, and the books of the Finance Department up to April 30 show the following results:

Militia and Defence, $146,679,117.38; Justice Department, $1,142,250.36. (Chiefly in connection with internment prisoners.)	
Dominion Police. (Additional police engaged and work in connection with intelligence, and precautions against damage apprehended in this country from alien enemies coming from some other country)..	$ 199,859 24
External Affairs..	10,228 62
Public Works..	94,414 04
Naval Service	4,132,201 74
Railways and Canals..	204,529 20
Indian Affairs..	1,901 21
Secretary of State	21,119 75
Governor General's Secretary's office..	8,399 34
Privy Council..	17,319 08
Inland Revenue..	1,970 00
Trade and Commerce..	11,257 60
War Purchasing Commission.	24,118 58
Finance Department..	73,671 16
Auditor General's office..	5,109 46
Labour Department..	1,071 19
	$152,628,537 95
Less Agriculture Department..	433 32
	$152,628,104 63

Mr. A. K. MACLEAN: That is to April 1?

Sir ROBERT BORDEN: To April 30.

Mr. MACLEAN: That is 13 months.

Sir ROBERT BORDEN: It is of course desirable to reduce in every possible way the very great expenditure which is necessitated by the war, and I have asked the various heads of branches in the Department of Militia and Defence for a report upon that subject. The major part of the expenditure naturally consists of the pay and subsistence of the men, and the provision of uniforms and equipment and stores of various kinds which are necessary for the purposes of the war. So far as these are concerned, and they form the vastly greater part of the expenditure, we could not expect to reduce the expenditure very much, but there may be some minor matters in respect of which reductions can be accomplished. If there is any such possibility we shall not fail to avail ourselves of it.

With regard to recruiting, representations have been made to us from various quarters urging the necessity of some further system. We have received a delegation which very strongly pressed upon the Government the necessity of a complete registration of the manhood of Canada, and eventually of conscription. We have not had an opportunity of giving adequate consideration to this proposal, but the Department of Militia and Defence has endeavoured, particularly during the past six or nine months, so to guide recruiting that the agricultural, commercial and industrial strength of Canada shall not be unduly weakened. It is, of

course, impossible for a country like Canada to raise 310,000 men without any inconvenience to the various industries, such as agriculture, manufacturing, and the various commercial activities of the country, but we have endeavoured to arrange with recruiting officers that where a very large number of men have been taken from a district which is a centre of a particular industry of importance to the country, recruiting in that particular place shall be so directed that the industry in question shall not be unduly hampered. So far as agriculture is concerned, a general order was passed by the Department of Militia giving permission to the men enlisted in all parts of Canada to engage in agriculture during a certain period this spring, to assist in ploughing and seeding. Representations were made to us, on behalf of some agricultural interests, that in some parts of the country this permission was not being availed of to a very large extent. So, upon my suggestion to the Deputy Minister of Militia, an instruction was sent out to the officers commanding the various battalions directing them to encourage and even to urge the men to assist in this work, which is of the highest possible importance, as we all agree that agricultural production should, during this war, as indeed at all
5 p.m. times, be brought up to its highest limit. We have endeavoured to relieve the situation, so far as possible, by such means.

I have detained the committee at very considerable length, but I think not without some advantage, in making members of the House acquainted with the very great magnitude of the work which is being carried on and with the very valuable services which have been rendered to this country by the officers of the Department of Militia and Defence. I have found them inspired throughout by a splendid spirit of earnestness and devotion to the public interest. It is almost impossible for hon. members of this House who have not been brought closely in touch with the activities of the department, to realize the enormous burdens of responsibility and of work which have been undertaken by the officers of the department, which have been assumed by them without a murmur or complaint, and which have been carried out, I believe, in a manner which reflects credit not only upon them but upon the administration of public affairs in this country. In common with all the people of this country, they have been called upon for a certain sacrifice, and they have made that sacrifice cheerfully and patriotically.

The spirit of our people has been so splendid that no words of mine are needed in commendation of it. Who would have imagined, in August, 1914, that in less than 18 months more than 300,000 men in Canada would have flocked to the colours? The difficulty has been not to obtain enlistments, but to provide uniforms, equipment, arms, and all the necessaries for war. But more than that, we in Canada, in common with all the citizens of the Empire, can congratulate ourselves upon the splendid courage and endurance which our men have displayed at the front. It was a supreme test to which they were subjected. They had not been trained to arms as had the forces of the enemy whom they went to encounter. Few of them had had any military training before the outbreak of war. They went to the front and they met the very best troops that Europe could produce. They met the forces of the enemy, in the first instance, under the most trying conditions that could be imagined.

It would be impossible, I believe, for any man now within the sound of my voice to realize the test to which the Canadian troops were subjected on the 22nd April, 1915. I have said before that only those who have seen in the hospitals, men still suffering, months afterwards, from the effects of that gas attack, could realize what it meant to the Canadian forces who were subjected to it. They not only endured that, they remained in the trenches and held them, held them not only in the face of that attack, but in the face of overwhelming numbers, and they did not retire, not a man of them, until they received orders to do so, and some of them did not retire even then. To-day the men at the front, unless I am misinformed, are holding one of the most important and perilous portions of the line in France or in Belgium. We can rest assured, from the spirit which was shown a year ago, that the Canadian troops who hold that line will hold it to the end, and, while we mourn the casualities which bring sorrow to so many homes, we know that in the outcome the Canadian troops at the front can be relied upon to do their duty. We are all conscious of the sacrifice which this struggle for liberty and the preservation of our institutions demands, and although Canada is conscious, from the Atlantic to

the Pacific, of that tremendous sacrifice of life and of resources, she faces the future with undaunted eye and with a firm heart.

Mr. A. K. MACLEAN (Halifax): I desire to ask the Prime Minister a few questions for information, as I did not wish to interrupt him in the course of his remarks. I am sure that hon. gentlemen on this side of the House will cordially endorse the appreciation, just delivered by the Prime Minister, of the Canadian forces. I quite agree with the right hon. gentleman when he stated that considering the fact that our soldiers were inexperienced in the art of war they have accomplished great deeds, and have reflected great credit upon our country. I am sure that Canadians all look forward to a continuance, during the balance of the war, of the same courage and distinction on the part of the Canadian troops as we have witnessed in the past.

The right hon. gentleman has given us a very great deal of information this afternoon, which I am sure the House will receive with pleasure, and which will be valuable to the country. I quite appreciate the fact also, that the Department of Militia had very suddenly thrust upon it a vast amount of labour, and I agree with the Prime Minister in saying that a great deal of credit is due to that branch of the public service for its splendid work during the past 18 months or more. Sometimes, however, I feel that there has been such an amount of extra work pressed upon that particular department that possibly there has been, in regard to details, a lack of organization, that has not been to the advantage of the country. I was glad to hear the Prime Minister state that he had asked the various heads of the branches of the Militia Department for a statement showing where, if possible, they could minimize expenditures on the war credit vote. I think that this matter might very well engage the serious consideration of the Government. I do not think that the country would be too critical as to small details of war expenditure, but, in the main, they will expect from the Government an oversight and direction in respect to war expenditures that will make them feel that their interests are being protected.

As was pointed out last year, a special responsibility rests upon the Government, as a body, in respect to war expenditures that does not attach to them in connection with expenditures by departments. In the latter case, ministers come to Parliament and designate in the Supply Bill the various detailed amounts which they ask Parliament to vote, but in the case of the resolution before the committee, a flat vote of $250,000,000 is asked for as a war credit vote. There are no details given, Parliament surrenders to the Government its control over the expenditure, and expects it to exercise that oversight as to detail which Parliaments usually exercise in respect to supply votes to the various departments of Government. The expenditures made by the Militia Department, or by any department, in connection with the war, are therefore under the responsibility of the Government as a body, and that responsibility does not rest upon any one particular minister, or upon any one particular department. Last session of Parliament, on the occasion of the consideration of a resolution similar to this, I gave to the committee a statement, or a minute of council of the Lords of the Treasury in England as to the system that should be followed in respect to war expenditures, and I would like to know from the Prime Minister whether that system is followed rigidly, as we were promised last year. The principle there laid down is that in the absence of estimates, or details of general war expenditure, each department should furnish to the Treasury Board, or to the Government, a detailed statement of probable expenditure during the forthcoming year, and that no expenditures should be made by any department without the authorization by Order in Council of the Treasury Board or of the Government. I should like to have some information from the Prime Minister as to whether that system is followed. Further, under the terms of the minute of the British Treasury Board, it was ordained that, not only the war credit vote, but the ordinary war and naval credits also should be expended in that manner. The reason is obvious. It is almost impossible to distinguish between expenditures made by the Militia Department, or the Naval Department, as to what are ordinary, or peace, expenditures, and what are war expenditures. I would say that all expenditures made by the Naval branch have reference, in some degree or other, to the war. Therefore, I think it would be a very wise course for the Government in the future, if it has not done so in the past, to insist that these ordinary militia and naval expenditures be authorized by the Government, or by a committee of the Govern-

ment, or by some proper authority, whatever that may be. I do not wish to elaborate this point as I discussed it fully last year. I think we had the assurance of the Government that it would not shirk its responsibility in respect to the oversight of all war expenditures and that nothing should be left to the entire initiative of any department. It is true that war expenditures must be initiated by some department, but before the authorization is made they should be considered by the Government, and before any expenditure is actually made, it should be seen that the authorization has also been duly made. I said that there is a distinction between a credit vote and the ordinary parliamentary vote in the form of the Supply Bill. Inasmuch as Parliament surrenders its control absolutely over the $250,000,000 that is to be voted by this resolution, it is only fair that Parliament should receive all possible information from the Government before the resolution is passed.

It is needless for me to say that hon. gentlemen on this side of the House will unhesitatingly vote the amount asked for by this resolution and accelerate its passing. We are as much interested in it as are the members of the Government and therefore I venture the suggestion, and the request, that the committee should be furnished with a statement showing the probable nature of the expenditures to be made out of the amount mentioned in the resolution. At page 49 of the printed memorandum, No. 2, which has been placed before Parliament, I find a detailed statement of the expenditures since the beginning of the war down to December 31, 1915. I think it would be well if the Prime Minister would submit to the committee a statement on that basis showing the particulars, as far as they can be obtained, of the proposed war expenditure of this year. I think that not only the Militia Department should furnish this information to the Government to transmit to Parliament but that the other departments ought to do the same thing. I should like to say, because it is possible I omitted to do so before, that other departments, such as the Department of Justice and the Department of Trade and Commerce, which are expending war moneys should also have from the Government an authorization before engaging in any expenditure. I also think that they, as well as the Department of Militia and Defence should, as far as they can, furnish us with particulars of the expenditures which they propose to make during the year.

That is all I have to say in a general way regarding these expenditures. There are a few questions I should like to ask the Prime Minister, and the information can be given later in the day. I, of course, wish to reiterate, in case I have not already made myself clear, that the committee should be furnished by the minister with a statement showing the particulars of the proposed expenditure for this year. There is one matter upon which I should like some information and that is the operations of the War Purchasing Commission. I understand that that body makes pretty nearly all the purchases required for the Department of Militia and Defence in connection with the war. I would like to know if in all cases the system of tender and contract is carried out by that body. I understood the right hon. gentleman to say this afternoon that such was the practice. Before the Public Accounts Committee a few weeks ago a statement was made by the Director of Contracts that there was a patronage list in connection with purchases made by that commission. I was somewhat astounded to hear that statement, because I had hoped that such was not the condition of affairs. If there is an occasion when we should be delivered from a system of patronage it is in connection with the spending of public money for the prosecution of the war. If it is true, as stated by the Director of Contracts, that a patronage list exists in the Militia Department, and is used by the War Purchasing Commission, then I say that such condition should not exist and that such patronage list should be immediately abolished. The public should have that assurance from the Government. I may be making an argument that may be very easily answered, because I rather gather from the expression of the right hon. gentleman who leads the Government that he is under the impression that my remarks are hardly apropos, because the Purchasing Commission does not use a patronage list. However, I should like to have a statement from him as to what is the practice of the commission, because we have the statement of the Director of Contracts that such a list does exist.

Further, statements have been made during the present session by many hon. gentlemen on this side of the House indicating the introduction of partisanship and patronage into war expenditures in some localities in Canada at least. I am sure it was not gratifying to members of Parliament or to

the country to learn of these facts. I do not propose saying anything further upon that point other than to emphasize the fact that if any portion of these war expenditures is made upon the basis of patronage it is absolutely indefensible and the country is entitled to an assurance from the Government who are collectively responsible for the proper expenditure of this amount that no such things did occur in the past and that they shall not occur in the future.

I noticed in the press recently that there was a surplusage of officers in the Canadian Overseas Forces. I have also been informed that the officers training schools throughout Canada are to be suspended very shortly, on May 1st, I think, owing to the fact that we have now more officers than we actually require. I am referring to this particularly because, rightly or wrongly, I am under the impression that there is an unnecessary expenditure in this direction. There are in England to-day many Canadian officers who went overseas with their regiments, and there is now apparently no service for them to perform. Again, we have had returned to Canada officers who went overseas but who were discharged, or at all events, returned to Canada, on the ground that they were incompetent or unnecessary in the overseas' forces; and in many cases I believe these officers are still retained by the department and, I suppose, still receive their pay. I was glad to hear the Prime Minister say that the Government and Parliament should make an effort to minimize war expenses as much as possible, for we all realize that our expenses on account of the war are mounting rapidly, and fast assuming such proportions that we shall be faced with a serious financial responsibility in the future. I therefore venture to suggest that a very great saving might possibly be made by the reduction of these officers in the Canadian forces, if they really are not necessary. I would make this further suggestion: better judgment and discretion should be exercised in the selection of officers than has been the case in the past. I know that in Canada there have been placed at the head of regiments men who were never militia officers and who had never taken an officer's training course—men who had never evidenced any capacity for leadership, and who, in the judgment of the public who know them, were unfitted for the positions which they held. If there is a surplusage of officers—and that objection should be removed if it does exist—surely we must have some men who have had either some experience at the front or some militia experience, and I think these should be given the preference in the selection of officers. I do not make these remarks in any censorious spirit, on the contrary I want to pay my tribute to the man who dons the uniform in this great crisis, and who is willing to make the sacrifice of going overseas and doing the very best he can. I feel that way myself, because it will not be my privilege to offer myself for service in this great war. Notwithstanding my admiration for their self-sacrifice, I have no hesitation in making these observations in respect to officers for the overseas force, particularly if I am correct in believing that a large number of them are unable to perform any service because there is no service for them to perform. I have no hesitation whatever in urging upon the Government, or the department responsible for the selection of the officers commanding regiments that it is proposed to send overseas, that only men who have had some experience or have some natural capacity for the position should be placed in command of regiments.

There is just one other matter to which I wish to refer before taking my seat, and that will be in the nature of a question to the Prime Minister. I should like to know whether war expenditures are submitted in detail to the Government periodically. On page 35 of the printed memorandum No. 2, the monthly expenditures since the beginning of the war are shown. Possibly they have been prepared just recently for the information of Parliament. Is it the practice of the spending departments to submit to the Government monthly statements of their expenses, and an estimate or requisition giving details of any expenditures they propose to make?

Sir ROBERT BORDEN: As regards my hon. friend's question relating to the requirements of each departmeent, I have given him a statement of what has been spent during the past year, and I can get the information in detail as to the requirements of the different departments for the coming year. That can be given to the committee, a little later on. As regards patronage lists in connection with the War Puchasing Commission I had never heard of any until my hon. friend mentioned it to-day and I do not believe that any such lists exist. I sent out just now for the chairman of the War Purchasing Commission, but I find that he is not in town.

When he returns I shall ask him to give full information on this subject.

As far as the surplusage of officers is concerned I cabled for some information on this subject a few days ago and I shall be glad to give it to the committee when I receive it. The Canadian establishment is, I believe, somewhat different from the British establishment by which our men are governed when they go to the front. Where a regiment in Great Britain becomes practically broken up through the necessity of sending drafts to the front, a surplusage of officers may occur from time to time. As regards officers in Great Britain, I understand from the deputy minister that although there may be a surplusage so far as the regular authorized establishment is concerned, all the officers are employed in someway while in Great Britain. In fact I remember seeing a telegram in response to an inquiry a few days ago, to the effect that there were only two officers in Great Britain who were not attached to some unit there. Although the number may be above the recognized establishment, if the information which I have given just now is correct, all those officers are employed and made useful in some way.

My hon. friend speaks of sending to the front only officers of experience and capacity. I hope no one thinks that we have enough officers of military experience for these three hundred thousand men.

Mr. A. K. MACLEAN: I intended to make reference entirely to regiments recruiting in Canada.

Sir ROBERT BORDEN: We do not possess in Canada men of military experience according to the standard my hon. friend has set up. The best we have been able to do is to take men who are inspired by a patriotic desire to serve in this war—some of them have had a little military experience in training camps, perhaps, some of them have had none at all, but they come forward—and we judge of their capacity as best we can. It is absolutely impossible for any man, my hon. friend or any other, to know just to what extent any officer, when he is put in command of a regiment, or brigade, or division, at the front, is going to develop the qualities of leadership and capacity which are necessary for the command of such units. Men comparatively inexperienced are necessarily sent to the front after such training as may be possible in this country and in Great Britain. It ought to be a source of very great pride to all of us that, with very few exceptions indeed, the men who have had to contend with the difficulties arising from inexperience have made good, as they have made good, during the past eighteen months. Some of them have come back through physical unfitness to stand the awful strain imposed upon them at the front. A great many have come back invalided through wounds received or diseases contracted. The men who have come back have been utilized, as far as possible, for the training of units in Canada, so that these units may have the advantage of the knowledge and experience gained by officers who have been at the front.

So far as the war expenditures and the Government's control over those expenditures are concerned, nothing has been paid out of the war appropriations granted by this Parliament—except in the early months of the war as to which I gave an explanation last year—that has not been previously directly authorized by by Order in Council. No department of Government has this appropriation at its command; the appropriation was not so granted by Parliament; it was not granted to any minister, but to the Government as a whole. Therefore, a minister, whether the Minister of Militia and Defence, the Minister of Naval Service, or the Minister of Justice—with reference to internment operations—must come to the Government, and the reports of Council show why payment from the war appropriation is asked and for what purpose. That is done in every case. We have passed thousands of Orders in Council of this kind during the past eighteen months. That was not absolutely the case in the first two months of the war. As I explained last year, some payments were made without previous authority of Council by the Department of Militia and Defence. With regard to these payments, we had them all collected and put in a report, which was submitted to the Treasury Board. The Treasury Board spent days upon them and went over them carefully, and finally an Order in Council was passed giving subsequent authority for payments already contracted, and which had to be contracted unless we were disposed to greatly delay the desptch of the first contingent.

The Minister of Justice, for example, may desire that a further sum of money shall be placed at the disposal of Major General Sir William Otter in respect of internment operations; he submits a statement, not absolutely in

detail, but of a general character, showing for what purposes the last appropriation has been paid—so much for food, so much for clothing, so much for other things, the money having been paid out under the supervision of Major General Otter—and showing that, from the experience of the past, there will be required for the next three months a certain sum of money. An Order in Council is passed placing a certain sum at his disposal, and stating in explicit terms that, so far as supplies are concerned, they must be purchased under the War Purchasing Commission, and under the Order in Council establishing that commission. The same is true of the Department of Naval Service, or of the Department of Militia and Defence. I trust I have made myself clear. I shall be glad to answer any other question.

Mr. W. M. MARTIN: In the session of 1914 we in this House, irrespective of party, voted the $50,000,000 asked for the purposes of carrying on Canada's part in the war. In the session of 1915, we voted $100,000,000 just as readily. We are now called upon to vote $250,000,000 and this we intend to vote in just as generous a manner as on the previous occasion. I wish to refer briefly to one or two matters and first to recruiting. I am not able, perhaps, to give any suggestions to the Government that would assist in stimulating recruiting, and possibly for that reason the minister may think that I have not much to say, but I have observed one or two things about recruiting the knowledge of which by the House, I think, would do no harm. I am afraid that throughout the part of the country in which I live no system is followed in connection with recruiting. It may be that the Government has found difficulty—no doubt it has—in mapping out a general plan to cover the whole of Canada. Recruiting appears to be left entirely to each community and the city in which I live handles it for that part of the country. We have a recruiting committee and the same plan exists, I suppose, in many other places both in western and eastern Canada. I believe these local committees look after recruiting very well. Another feature that occurred to me is the scattering of recruits in small batches in small towns which I do not think is in the best interests of the recruits. When I was coming down to Ottawa on the Canadian Pacific railway a few days ago, I saw at the divisional points on the north shore of Lake Superior, a few recruits at every station. On inquiry I found that these were some of the towns where twenty-five men had been recruited and were stationed. These men cannot possibly get the training they would be given in a larger centre or at some concentration camp. I venture to believe that they should not be scattered in this way, but rather that they should be sent to some place where a large number of them would be collected and where they would be given the training they ought to have before they cross the water. In these small places there is not the equipment for efficient training, nor can the Government maintain in every one of these places an efficient training officer who can train two hundred men as easily as he can train twenty-five.

Another question raised in my part of the country is whether or not the recruits taken out are all physically fit. The information I have is only general, and I can not give specific instances, but that information is to the effect that, in the anxiety of officers to fill up a battalion, a large number of men are being recruited who are not physically fit and who, in the last resort, when they get across the water, or perhaps even before they leave Canada, will have to be rejected. I think it is a mistake to take men into a battalion if they are not physically fit, because their places will have to be filled later, when, perhaps, it will be too late to give the new men the proper training. There is another matter which I wish to bring to the attention of the minister—and I do so with a good deal of hesitancy. I doubt very much whether some of our militia officers in certain parts of the country have the feeling of responsibility that they should have when put in charge of such a large number of men. The 1,100 men forming a battalion are really wards of their officers; the officers occupy the same position towards them for the time being, at least, as the schoolmaster or teacher in a college does to the boys who are put under his charge. I question very much whether on all occasions the officers do have the sense of responsibility that they ought to have in regard to the men who are put under their charge. I know an instance that occurred in the city of Regina. A young boy named Darrach enlisted with the 68th battalion there. The boy's home was in the city of Regina; his parents lived there. He was at home over Sunday; on Monday he became ill. Al-

though the distance from the barracks where he was stationed to his father's office was not more than a mile or a mile and a half, no word was sent to the parents. On Tuesday he became worse; on Wednesday he was put in the hospital, and still no word was sent to his parents. On Friday, just a few minutes before the boy died, the parents were communicated with by some person in the hospital, but before the father could reach the hospital the boy had died. Naturally the parents in their bereavement, not having been advised of the boy's illness, felt very bitterly towards some of the people in charge of militia matters in the city of Regina, and one cannot blame them very much for feeling the way they did. I mention this matter largely for the purpose of indicating that the officers on that occasion should have taken some little precaution to advise the parents of the boy's illness. Occurrences of that kind will not stimulate recruiting in any community. Parents will not allow their boys eighteen, nineteen and twenty years of age to enlist if they think that the boys will not get proper care. I do not know whether the boy got proper medical attendance or not; I assume that he must have got proper medical attendance when he was in the hospital. The point where the military men were apparently at fault—I heard no defence of the matter at all—was that no communication was sent to the parents. As I have said, I hesitate a good deal to mention these circumstances to-day, largely on account of the fact that the 68th battalion, of which this boy was a member, very recently went to the front, and any person who might be able to make a defence of this case is not here to do so.

I wish to emphasize the point brought up by the junior member for Halifax with regard to the question of patronage. I have heard it stated in the House by the Minister of Militia that there was no patronage list in the Department of Militia. Well, I can only say this: The Militia Department and the Government have allowed the matter of patronage in connection with militia supplies to drift into the hands of local patronage committees. Although all persons, Liberals and Conservatives alike, are doing their share in the matter of enlisting and recruiting, sending their sons to the front—both parties in equal degree, I think—and contributing to patriotic and Red Cross funds, no person but one who is on a certain side of politics in parts of the country with which I am familiar can get anything to do at all. Surely, when all the people of the country are spending all the money they can afford and doing all they can in the interests of Canada's part in this war, it is time to instruct these local patronage committees to leave party patronage alone and deal with matters on a business basis.

Mr. BURNHAM: With regard to one observation that the hon. gentleman made, I am quite convinced that he is entirely wrong. When men enlist they must be taken out in green squads and handled by non-commissioned officers. They cannot be taken out in large numbers; they are taken out in green squads whether at headquarters or in the outlying villages, and they have to spend a certain time there until they are licked into shape before they can be taken to Barriefield or some other place and put into a large body such as a battalion or brigade for the purposes of manoeuvres. The reason this plan was adopted, I am quite sure, is that squad drill is the beginning; it is the only possible way that a green man can learn anything. Non-commissioned officers, such as sergeants and corporals, are scattered throughout the country for that purpose. You could not take a great mob of green men and put them together at some large centre and go through large manoeuvres right off—it would be ridiculous; it could not be done. With regard to patronage, I was somewhat interested in that question, because Canadians—I do not know whether they do so more than any other people—have to fight against a tendency in the country to look to the loaves and fishes. Some people are inordinately green; we all know that.

Some hon. MEMBERS: Hear, hear.

Mr. BURNHAM: They have to be fought against by both parties. They are without shame and entirely shameless. We have seen lots of them. They are only too eager to cut your throat if they can possibly do it. They do not make their objections in connection with those things that could be freely and openly and effectively answered; they always take up something by which they can stab you in the back. Our only answer to these people is to give them a good kicking. They are not worthy of being fought in the good old British way, with the fists; they should be simply spanked. Intellectually, and especially

morally, they are children. As a matter of fact, some people—I am not speaking of my own locality, you may rest assured—have more or less criminal instincts.

Mr. W. M. MARTIN: Where did you get your experience?

Mr. BURNHAM: I was out West two or three years ago.

Mr. MARTIN: You have some political friends out there.

Mr. BURNHAM: However, it is not necessary to enlarge upon the point; we know that it is a fact. Out of curiosity, I endeavoured to find out if there was any patronage in the war purchasing and other departments, and I found out that there was not.

Some hon. MEMBERS: Oh, oh.

Mr. KYTE: Where did you look?

Mr. BURNHAM: There is no question, Mr. Chairman, that there is only one way of doing business, and that is the business way. Tenders should be called for, and the public should be notified; then every thing is above board. If that has not been done, I have been unable to find out the contrary. I quite agree that if it has not been done, most certainly it ought to have been done.

Mr. TURRIFF: I wish to refer to the matter brought up by the member for Regina with regard to the men being taken into the different battalions who are absolutely unfit. Men are taken in for some reason or other, in many cases because certain officers are anxious to get their company or battalion recruited to full strength in order that this may be to their credit and that they may secure permanent appointments. There are many cases where men are recruited and given uniforms, although they could not possibly pass the usual rigid examination that a man is called upon to undergo before he goes to the firing line. The result has been that in many cases men have been enlisted and trained for six months or a year, and then, on a more rigid examination before being sent to the front, have been rejected. This involves a tremendous and useless expense to the country. I knew that this was taking place, and my own knowledge was confirmed by the statement of a gentleman who went over with the first contingent as a junior officer and returned as a lieutenant colonel a year ago. He said that in some cases men who were suffering from some physical disabilities concealed those disabilities when enlisting, that they were not discovered by the medical examiners, and that, becoming tired of trench life after one or two months, these men made known their physical disabilities, and so were relieved of duty and sent home. In many cases these men had some injury, or had suffered from illness through their exposure in the trenches, and so they will become charges upon the people of Canada so long as they live. I would urge that the examination at enlistment be made much more rigid.

Mr. SCHAFFNER: I think the hon. member will find that the present system is to examine the men very closely on enlistment, and not to examine them again. I know that to be the practice in my district.

Mr. TURRIFF: I am aware that there has always been an examination of the men on enlistment, but in some cases where commanding officers are anxious to fill up their regiments men are accepted who are absolutely unfit physically, and who could not pass a rigid examination. While there has undoubtedly been some improvement, there is still room for further effort and further improvement along that line.

Mr. BURNHAM: Is the hon. member aware that the regulations call for all of those things? The fault must lie with the examining officer.

Mr. TURRIFF: That may be. I have no doubt that if all the regulations were lived up to things would be better. I am not bringing this matter up with any intention of complaining, but I am anxious to effect improvement and to save money. Could the Prime Minister, after eight o'clock, give us any idea of the cost per man of the maintenance of our army in the field, including supplies, munitions and everything?

At six o'clock the committee took recess.

The committee resumed at eight o'clock.

Mr. E. M. MACDONALD (Pictou): The terms of this resolution, as has already been stated by hon. gentlemen on this side of the House, will be received without opposition; in fact, will be received with full accord in pursuance of the policy which has been adopted by men of all parties since the beginning of the war, of uniting, irrespective of political affiliations, to do all we can to help the Mother Country. In this connection, I would like to take

exception to a statement made by my right hon. friend the Prime Minister this afternoon as to there having been some wonderment, or doubt, before the war began as to whether Canada would be able to contribute as many men as she has contributed to the fighting forces. I do not pretend to be a prophet in any sense, but I always felt that there could never be any doubt whatever as to the attitude of the Canadian people when the interests of the Empire were at stake. Those of us who come from people who have lived for two or three generations in Canada know that among the Canadian people there has always been the feeling that the little island which constitutes the seat of Empire was the home land, and although our patriotism may not have been very demonstrative, there was always the certainty that, under the conditions which prevail in Canada, under our democracy, and with the full realization of the issues of this war, there would be a response on the part of the people to whatever extent might be necessary to aid the Empire. I therefore assert that there need never have been any doubt whatever as to what Canada's response would be. There was certain to be a recognition of the conditions, and a gathering round the banner with that enthusiasm which we have seen manifested in all parts of this country. When it is said that it is a matter of particular wonderment that within three months of the outbreak of war, 30,000 men rushed to the colours, I would like to point out that no man and no party is entitled to any particular credit, and that the wonderment has no justification whatever. The response simply proved the latent patriotism of the people of this land and was an expression of the realization of the tremendous issues at stake and of the people's attachment to our constitutional fabric. They rushed to the standard, just as their forefathers did in the days of yore, as a matter of course. They responded to the call of the Empire, and the proposition of sending them overseas was a mere matter of detail which could be worked out, as a matter of detail by any Administration or by any minister capable of attending to the business of the country.

I do not make that remark in any harsh or complaining spirit, but I think it is only right in the Parliament of this country we should have a full recognition of the fact that the Canadian people, with their aspirations and ambitions, were there, ready for the call; that they came of their own free will, that they went to the front, and are going and will go, to whatever extent the necessities of the situation demand. Recognizing these facts, realizing that the Government had to take the responsibility of administering the affairs of this country in war time, I say that the same spirit which actuated the men who volunteered, actuates hon. gentlemen in this House on both sides, without difference and without question. Hence it is that, with a free hand, we have given to the Government everything that they have asked for in the way of financial aid, and now this resolution comes to us and is received in the same spirit. While that is so, however, it is only right to say that the Canadian people expect from the Government a special regard for wise economy in the administration of affairs, and an honest administration in dealing with the expenditures which are committed to its care. Though a strict accounting is not looked for at this stage, the Government may rest assured that the time will come, and perhaps come speedily, when war's alarms are over, when a strict accounting will be demanded.

With regard to such questions as relate to the administration of affairs, and more particularly to the preparations for war, an idea was expressed to me recently with reference to the mobilization of troops, which, though it may be too late for the Government to seize, might, I think, have been recognized earlier. All through this country, from one end to the other, we had a militia organization built up. In some districts there was a very strong interest and an intense local spirit manifested, and it seems to me that it is one of the unfortunate things connected with the mobilization of our troops that we have absolutely destroyed, so far as this war is concerned, if not forever, any spirit of enthusiasm in the ranks of the militia corps in this country. The men who have gone to fight cannot come back and say that they went from the 28th, the 38th, or 78th Militia Corps, and when, in the days to come, we seek to perpetuate, as we must perpetuate in this country, a system of militia organization, there will be an entire lack of that enthusiasm for the old militia associations from which the men went to fight, because these militia corps have lost their identity altogether in the battalions that have been formed. We have heard references this afternoon to the number of officers who have qualified, and as to their selection for the particular corps in which they have served or are serving. The idea

which I am putting forth now, came to me from a gentleman in the Prime Minister's own constituency. Only a week ago a man who had been a very prominent militia officer pointed out that in the constituency of my right hon. friend there were a number of militia regiments which had existed for a great number of years, and included in them were a number of men who were anxious to go to the front. These regiments were employed on garrison duty in the old city of Halifax, and are still so employed. Would it not be much better, he said, in order that the future interests of the militia in this country might be preserved, to have used those regiments and their officers as a recruiting corps from which could have been gathered the men from whom drafts could be made, or to have used them in connection with the mobilization of the first contingent that went over. As it is to-day, with the tremendous number of casualities that are taking place on the other side, we are reaching the point when we will have to supply the gaps by further drafts, and the situation is that the identity of the old militia regiments has been absolutely lost. It may be that there were military necessities which required that battalions should be formed in the way that they were formed, but one would suppose that a militia regiment, with its corps of officers, who, by previous association and by training in militia camps or otherwise, are qualified, would naturally be the first men to be called to go to the front. Though the hon. gentleman, who has been the Minister of Militia, has always claimed to be a special friend of the Canadian militia, he has absolutely disregarded those conditions. It may not have been possible for all the officers of a militia regiment to go, but as many as could go should have been taken, and their places filled by volunteers. Then you would have had an esprit de corps, and a condition in which interest in the militia would have been preserved, an interest, which, as I said, has been entirely lost.

With regard to the system of recruiting that has been adopted, I desire to call attention to the situation in the province of Nova Scotia. The right hon. gentleman knows of a member of his own family, Colonel Borden, whose unique and special efforts with regard to recruiting in Nova Scotia deserve special mention in this Parliament. I doubt if the personal influence of any man in this whole Dominion has been exercised in any sphere with such success and to such a degree as has the influence of Colonel Borden in our province. During the winter, on account of the marvellous rapidity with which men flocked to the banner of the 85th Regiment, those who were interested in recruiting in our province conceived the idea of using this eloquent and trained officer as a man who would be able to make an appeal to our citizens, and to organize what would be known as the Highland Brigade, the 85th Regiment being distinctively a Highland regiment. He went up and down our province with the fiery cross, and, as the Highland chieftains did in days of old, called the clansmen to the banner. But he would have to organize, in starting this brigade, three other regiments, the idea in the minds of many of our people being that in conjunction with the 85th, we would have a Highland brigade representing our province at the front under Colonel Borden. In some way or other, through the mysterious sinuosities that characterize the Militia Department, the boys who had come with the enthusiasm which had been engendered by his leadership, were told there is not going to be any Highland brigade; the 85th is going over alone. I am not going to say anything harsh or explicit about the personnel of the commanding officers of any of the other associated regiments. It is not necessary that I should do so, but I do say to my right hon. friend that the boys of Scotch blood, and of other kindred nationalities in our province, who were called to the standard as a result of the enthusiasm engendered by Colonel Borden, believed that they were to form part of a Highland brigade which was to go from our province, and my right hon. friend should see to it, in view of the local situation, that there should be a Highland brigade sent from Nova Scotia. Mark you, Sir, we have not had the most favourable conditions in Nova Scotia to call out enthusiasm for recruiting. I am not going to dilate upon the unfortunate episode which was discussed here last winter with regard to the 17th Battalion; I need not do so, and my right hon. friend knows it. There are other incidents in connection with regiments which have gone over from Nova Scotia that have not been calculated to arouse the pride or enthusiasm of our people, but the young men, having come out with enthusiasm and loyalty and gathered around Colonel Borden with the idea that the four regi-

ments were to go over as a Highland brigade, I say to the Prime Minister, now that he is Acting Minister of Militia and Defence, that he should see that all obstacles to their going are removed and that a Highland brigade be formed, because, unless he does so, he will find that it will create a sense of disappointment throughout the province and a lack of enthusiasm when the call comes again, if it does come, for more recruits.

I do think that there ought to be a more intimate connection between the Militia Department and the people who are engaged in recruiting. In one of the recruiting efforts that took place in our province, we were told that although the band of a certain regiment, accompanied by its commanding officer, was going out to look after men, the few recruiting agents in that province would not undertake to pay the travelling expenses of that band. Local people were asked to contribute towards that purpose, even to feed them when they were on tour. That occurred to my knowledge in my own constituency. Of course, that is a matter of detail, but at the same time it means that somewhere in this marvellous organization, about which we have heard so much, and about which so much credit is claimed, not with any right, on account of the reasons I gave at the beginning of my remarks, there is something wrong. This sort of thing naturally chills the enthusiasm of our people. If we are going to have recruiting, let us have it looked after in a proper manner. Such absurd conditions as that ought not to be permitted. It may be, of course, that an incident of that kind arises from the action of some subordinate but more care should be exercised in the matter of recruiting. Everybody in this country who is interested in the war, and who is anxious to see its successful completion, and to see Canada playing her part, must realize that if you are going to interfere with the highest ideals of the men who are going to this war as volunteers you are simply hampering the cause that you want to succeed. You can go into any part of the Dominion and tell men to forget the smaller issues of life and rise to an appreciation of their higher duty and the possibility of the greatest sacrifice, but if you are going to complicate that with conditions which absolutely explode any thought of idealism in regard to the matter the result will be unsatisfactory. That applies in regard to recruiting. It also applies in regard to the question of patronage. My hon. friend told us to-night that there was no patronage in the War Purchasing Commission. I will tell him how it works out. You have a proposition to recruit men and billet them in a certain locality. The quartermaster of the particular regiment is told in some mysterious way that when he goes into a particular section he must consult the man who has the patronage and therefore, when he goes to that district, he parcels out the supplies among men who are dictated by the man who has the patronage. This is not perhaps of great importance but it grates harshly on the sensibilities of the man who is actuated by idealism. I have had it occur in my own constituency where no attempt whatever has been made to call for local tenders. What difference does it make after all who sells the sugar, or the meat, having regard to the higher conditions, but when you go into a small locality where people are making their living out of this business and where a man is made to realize that because he happens to be a Liberal he must be kept out of the opportunity of tendering for supplies, how much enthusiasm, how much idealism are you apt to get from him? I will tell what occurred in my own constituency. A company was billeted in my own town. An officer of the 106th Regiment goes to the gentleman who has the patronage and proceeds to parcel out these things without asking anybody to submit tenders. I called the attention of the Acting Minister of Militia to it, not for any purpose of my own, but because the matter was remarked about among the people, and he promised to call for tenders. He did so eventually. Why was it necessary for me to have done that? Why should not he, in the first instance, have issued instructions that it was the duty of the officer, on going into any locality, to post up notices inviting tenders? It seems to be a small matter and personally it does not make any difference to me, but my right hon. friend knows that when you are dealing in high ideals and you bring in small, tu'penny ha'penny politics, you cannot continue on the higher plane and that is where the shoe pinches. The same thing occurred in another constituency just as it has occurred all over Nova Scotia. The way in which patronage in regard to militia matters has been handled in the county of Cape Breton is a disgrace to the Administration and I ask my right hon. friend to look into it.

A matter was called to my attention within the last two days which I wish to bring to the attention of the right hon. gentleman. This is not a matter possibly that has to do with militia business but it is in reference to the question of hospitals. The gentleman who has the patronage there was going around to find out if this Government was going to take charge of the hospitals so that he would be able to dictate the men who should be employed in these institutions. I would ask my right hon. friend, for the credit of our province, to make some inquiries in regard to the gentleman who has the patronage in the county of Cape Breton and see whether or not this is the kind of idealism to hold out before the Canadian people.

Sir ROBERT BORDEN: What kind of hospital was it?

Mr. MACDONALD: It was under the Hospital Commission, and this gentleman was inquiring whether or not this hospital was going to be taken over by the Government, with a view to making recommendations as to the people to look after it. The conduct of the gentleman who has the patronage in Cape Breton county is known all over the province of Nova Scotia, and my right hon. friend had better inquire into it.

There have also been cases of ill treatment of soldiers, and I wish to call my right hon. friend's attention to the case of Pte. Chapman in my own constituency. He was one of a company of the 106th Regiment in charge of the Nova Scotia Steel Works, and on account of being absent without leave, was strung up by the hands under the direction of the commanding officer of the company. This fact became known to the men in the works, which are in close proximity, and they went in a body and demanded that the man be taken down. He was taken down; otherwise there would have been a very unpleasant time. An investigation has been held locally by the people interested. I can see no reason why any Canadian should be treated in that way when he is under military discipline in any of our towns. I know that in the face of the enemy drastic measures can be taken to punish a man, but when the men are in our cities in Canada the most refractory case can always be given in charge; there is always recourse to imprisonment. But to string a man up by his hands for such an offence as being absent without leave, is something the people of this country will not stand for, and one very unfortunate thing about it is that it has a most injurious effect upon recruiting.

Sir ROBERT BORDEN: Is that the same case mentioned by the hon. member for Guysborough?

Mr. MACDONALD: Yes, Pte. Chapman, of a company of the 106th Regiment in charge of the Nova Scotia Steel Works. I happened to be in my county the other day and heard of the case, and I am calling these matters to the attention of my right hon. friend because this affords an opportunity we have not had hitherto.

My right hon. friend has referred to the giving of commissions, which was brought up by the hon. member for Halifax. Of course, I know it is difficult to deal with these commissions altogether apart from favoritism. The party in power will, of course, listen to the requests made by its political friends; I can see that it is difficult to evade that. But in some constituencies the process of log rolling to get commissions is going on continually. I do not suppose my right hon. friend, with his burdens of office, has any occasion to deal with these matters at first hand, but I can give him instances of this sort of thing. I should prefer to do it privately, however, as there is no necessity for doing it in open Parliament. But my right hon. friend must realize that there have been abuses of that kind, and the hon. member for Halifax was perfectly justified in mentioning the matter. There is no question about it. Men suddenly become patriotic Canadians, and develop into paymasters, quartermasters, and holders of other non-combatant positions of every other kind, and the only evidence that you can possibly find why they should have been appointed is that somebody had pull and got them there. Nobody ever charged these men with exhibiting any great enthusiasm in the past for the body politic or for the preservation of the rights and liberties of the people. Their sudden appearance in positions of this kind, which do not call for personal exposure on the battlefield in the face of the enemy, indicates a public spirit that has developed a little too rapidly to be considered entirely honest. A certain amount of that kind of thing, I suppose, cannot be helped, but if it can be helped, it ought to be. I am speaking from the highest possible motives, and not with a desire to be partisan in my criticism. I know the gentleman who

has the patronage in my county has gone to certain gentlemen and said: I can get you made a major, or colonel, or something else. I have known men, particularly this gentleman from Cape Breton that I have referred to, trying to remove men who were politically dangerous to him, by offering them commissions of one rank or another. So long as it is possible for that kind of thing to be done, what is the use of talking idealism to our people, or asking a man to come out and fight for liberty! Men are being granted commissions in exactly the same way as postmasters, or mail-carriers are being appointed—bringing the thing down to absolutely common clay. Surely this matter is deserving of some attention, and should be looked into.

The weakness of the medical officers is a thing I have had occasion to call attention to before. This, in our province, is largely a matter of political patronage pure and simple. I know an order was issued by the Militia Department not long ago changing the system, but it all rests with the colonel of the regiment as to who shall examine the men. A young man in Nova Scotia with a good old Scotch name, Findlay MacMillan—

Mr. BURNHAM: Have you any Canadians down there, or do the people down there all come from other countries?

Mr. MACDONALD: They are a good deal better than my hon. friend from Peterborough.

Mr. W. H. BENNETT: He has enlisted.

Mr. MACDONALD: My hon. friend from Peterborough belongs to the Paymaster Brigade, sitting down here in uniform and not doing a bit of work. I like to see men in uniform go out with their corps. We are all getting tired of my hon. friend's diatribes. This young man Findlay MacMillan was very anxious to serve his country. After being examined by the local doctor in New Glasgow, who passed him and told him he would have no difficulty in getting to the front, this young man sold his farm and everything belonging to him, and was sent down to Halifax to join the regiment. The doctor at Halifax discovered that his was a case of what is known as flat feet; that is, his instep had fallen. The doctor said he could not be taken, and the young man was ordered to return home. But he had sold his farm and everything he had, and had no place to go to. My attention was called to the matter to-day in a letter from a friend of his, who described the situation as most unfortunate. There is evidence of incomplete medical inspection. Then there are cases of men who have been sent overseas and have had to be sent back from England. This young man, Findlay MacMillan, was told by the doctor that he was all right, and he joined the army at considerable material loss to himself. He has now lost his ambition to go to the war, because he would not be allowed to go, and he is compelled to stay at home, with his occupation gone and with no home life. I do not know what remedy to suggest in this particular case, but I can give my right hon. friend all the facts, and I think they are worth inquiring into. I do not mean to say that the medical officer deliberately passed him in the first place, knowing he had flat feet, but that is just one example of improper medical inspection in the first instance.

Another thing I would take the liberty of asking my right hon. friend is that he should tell the House frankly what the attitude of the Government is in regard to returning money subscribed for machine guns. I think the House and the country are entitled to a full explanation of how that matter came before the people. Every one was startled at the announcement made by Senator Lougheed, then in charge of the Department of Militia and Defence, calling upon the people to contribute money to provide machine guns. Parliament had voted $150,000,000 for the very purpose of providing equipment, clothing, and other things including machine guns. For the moment I was at a loss, so far as my own constituency is concerned, to understand why the Government was asking the people to come to their relief in this matter. The newspapers, in the enthusiasm of the moment, called upon every one who was a patriot to subscribe to this fund. But what did Parliament vote $150,000,000 for if the people were to be appealed to to put their hands in their pockets for the purpose of providing machine guns?

Sir ROBERT BORDEN: To what appeal does the hon. gentleman allude?

Mr. MACDONALD: To the appeal made in the Halifax Herald, for instance, my right hon. friend's own paper, asking all the people to contribute to this fund, and indicating those who did not contribute were unpatriotic and disloyal.

Sir ROBERT BORDEN: An appeal made by the Government?

Mr. MACDONALD: Senator Lougheed who was then, I think, acting Minister of Militia, had written a letter, which was published in that paper, calling upon the people to respond to this appeal. That appeal was made throughout our province, and certain municipalities passed resolutions in view of the demands made, appropriating money for this purpose. Patriotic organizations and individuals also contributed. I think we are entitled to know whether the Government intends to return the money thus obtained. I put a question on the Order Paper asking a statement of the Government policy in regard to this matter. The Prime Minister answered me that he had given an answer to the question. I looked up Hansard, to which he referred me, and got very little satisfaction. What we want to know is whether the Government will return to the municipalities and individuals this money which should never have been taken from them. And right here let me say a word in regard to this matter of people going up and down the country getting up subscriptions for this, that, and the other thing. The Government, through the Department of Militia, or some other department, should exercise supervision with regard to this. I was asked by some very estimable gentleman to join a delegation to wait upon the Minister of the Naval Service to ask the Government to give a subscription to the Seamen's Fund of Great Britain. I said at once that I would do nothing of the kind, for coming from one of the provinces by the sea I knew something of the conditions, and I knew that this was not a war fund at all. There does not exist in Great Britain such machinery as we have, to provide marine hospitals and to care for sailors. Some well-intentioned person had started this propaganda by which everybody in Canada was to be asked to contribute to this fund and the Government was to be asked to make a special contribution; but the fund is purely local in its character and is dealt with entirely by people on the other side of the water. I was glad to find that my hon. friend the Minister of the Naval Service (Mr. Hazen), in discussing this matter before the Pension Committee, agreed absolutely with the position I had taken. This is an illustration of the kind of appeals that are being made all over Canada today. I feel that it is the duty of the Government to have some supervision over these appeals, which, no doubt, are made by well-intentioned people, to the generosity of our folks who, thinking they are contributing to some good cause, give a lot of money to objects some of which ultimately turn out to be of no value. Take, for instance, the appeal made at the beginning of the war for a hospital ship, which movement was started in Toronto. Those who understood these matters knew there was no real advantage in that movement, and yet over $100,000 was raised. And so it goes on. I ask that those municipalities and individuals who so wish should be refunded the money they contributed toward the purchase of machine guns. It would be just as reasonable to start a public subscription to buy rifles, or clothing, for the troops. It is a regrettable thing that these subscriptions should have been asked for apparently under official sanction.

In connection with this war vote, I wish to call the Prime Minister's attention to a situation which exists in our province with reference to what might properly be called a naval matter, the commandeering of ships. Newfoundland has made the very strongest representations to the Mother Country with regard to what they allege to have been discrimination in the commandeering of ships, and these representations, I understand, have had some effect. Here in Canada what is the result of this commandeering? In regard to our coal companies, the total number of ships engaged in the coal trade between Nova Scotia and Montreal have been commandeered, and yet, you can go out and charter vessels at enormous rates which sail under the British flag. Why should that be? Why should this coal industry in our province be seriously interfered with; why should the city of Montreal be put to a disadvantage through not being able to get coal from Nova Scotia, and why should the American coal people be given a chance to get a foothold in the Montreal market, by the removal of the ships engaged in the coal trade while there are ships flying the British flag which can be chartered at very high rates?

Canada is doing her level best in this war. The very best of our men have gone to the front. And in discussing this matter, we should never forget the splendid enthusiasm exhibited by the women of Canada, which is even greater than that of the men. The women have been called upon to make great sacrifices in giving up sons and husbands and dear ones—and the son is generally dearer to the mother than to the father. The devotion of our women

will never be forgotten. The people of Canada have made marvellous sacrifices, and are prepared to make more. But we must realize that, as far as possible, we should keep our house in order, we should keep an eye to the future. If there is, as I say there is, a condition under which one of our greatest industries is being paralyzed for want of ships, if there are other vessels available which could be commandeered, those other vessels ought to be taken first.

This resolution provides for expenditures in the Naval Department. I am sorry to see that the hon. Minister of the Naval Service (Mr. Hazen) is not here. I am sure that I voice the sentiment of every hon. gentleman on this side of the House when I say that our hearts go out to him in sympathy on account of the death of his boy. Such an event as that saddens every one and stills the voice of faction. I am sure that every hon. member in the House extends to my hon. friend the deepest sympathy in the great loss he has sustained.

I was proceeding to refer to the Naval Service. I am glad to see that within the last week or two we have been getting evidence of the truth of the statement which I made earlier in the session; that Great Britain needed men upon the sea. I was told in this Parliament since the House opened this session that Great Britain did not need men upon the sea. I know the facts, and I knew that I was correct. We have been glad to see men wearing the blue uniform of the navy amongst us; it is evidence that Great Britain does desire men on the sea, and these naval men are recruiting for that purpose. If the Minister of Naval Service were here I would ask him at the earliest possible date to make a statement, as to the kind and number of men that Great Britain wants from us, so that the facts may be placed properly before those who are in a position to respond to the call. I am quite sure that that call for men for the navy will be responded to by our hardy and brave sea-faring Canadians in as great degree as the call for men to serve the Empire on land.

I noticed the other day an advertisement in some of the local papers which purported to come from my hon. friend the Minister of Finance, encouraging the people to patriotism and production and embodying some other propaganda. It is a desirable thing, of course, to patronize the press of the country, but I would like to know from my right hon. friend whether or not expenditures in that line and in connection with the pamphlets we have seen in regard to the subject come out of this vote? I am quite sure that the people who live on the farms need no incentive to produce all they can, and that there will be no lack of response from all classes of our people in regard to this question of production. One of the strange features of the war is that the agriculturists of Canada are able to get higher prices than they ever got before for all staple lines of production. So it is with most of the other things that enter into the necessaries of life. These things wil be produced, and I do not know that it is evidence of economy that there should be any special publication of books to call forth the most ordinary business efforts from the agriculturists or from any other class of people in our country. The idea that has been promulgated, that the people of Canada were not ready to assist the Empire in this war in every possible way, is a delusion. While Canada was not playing a brass band at the front door before the war, shouting her patriotism as some other colonies or nations were, she was ready to assist the Old Land whenever necessity arose. No pumping up of enthusiasm was necessary; no political efforts were required in order to get a response. Freely and generously from every province of this great Dominion the boys came forth and have gone to fight. The same feeling of devotion exists in connection with our industrial and agricultural life, and I am quite sure that everything that is necessary will be forthcoming, to the extent of our resources, and that it will come without any particular pumping or fostering or unnecessary expenditure.

I have endeavoured to bring to the attention of my right hon. friend some matters that seem to be of importance in connection with this resolution, and I submit them with the hope that they will receive his fullest consideration.

Mr. LEMIEUX: The hon. member for Pictou has just mentioned the fact that officers of the British Navy are here recruiting for the British Admiralty. I am very pleased to hear that. In connection with the Navy, I wish to inform my right hon. friend that I clipped from one of the New York papers a few days ago the following:

San Francisco, April, 27.—According to unconfirmed advices received at the Mare Island Navy Yard today, the American power schooner Oregon, owned by the Crowley Launch and Tugboat Company of San Francisco, has been

seized by the British cruiser Rainbow in the Gulf of California.

The Oregon sailed from San Francisco last June, under charter to the German firm of Linga and Company of Mazatlan. At that time she carried a cargo of lumber. It was understood the vessel was to be used in the west coast trade. Nothing is known here of her recent movements.

I would like to ask my right hon. friend if that report is confirmed? If it is, it is one other exploit on the part of the much despised Canadian navy. As one of the fathers of that navy, I rejoice greatly that the Rainbow and the Niobe are proving true to their fathers.

Mr. J. J. HUGHES (Kings, P.E.I.): I wish to say a few words upon the resolution now before the committee, and particularly with regard to my own province. I am under the impression that the percentage of recruiting in the province of Prince Edward is not as large as in some of the western provinces of Canada, but the reason is very easily understood. The province being purely agricultural, the young men, as soon as they come to manhood, go either to the United States or to western Canada in large numbers, leaving just enough men at home to work the farms. Consequently, those of military age and ability are not as numerous there as they are in some of the other provinces, particularly in the West, where they get the young and the healthy, the strong and the energetic from the other provinces and from the Old Country as well. Notwithstanding that fact, however, I believe that the percentage of recruiting in the province of Prince Edward Island is very good. Moreover, the people subscribed liberally to every appeal that was made to them. In that connection I wish to refer to the appeal that was made on behalf of the fund that was needed to buy machine guns. When it was stated that the troops at the front were handicapped to a very great extent by not having a sufficient number of machine guns, the people thought that if they would subscribe money to that fund the defect could be remedied. An appeal went out at that time, from the Acting Minister of Militia, Senator Lougheed, that it would be very acceptable to the Government and the Militia Department if money should be obtained for that purpose. To show how that appeal was received in the province and even in the town from which I come, the people of the town provided money to purchase three guns. One man subscribed enough to purchase a machine gun; he happened to be in a position to do so easily. Another citizen in very moderate circumstances, feeling the necessity of doing everything he could, subscribed for another gun. Then the town provided another, and this citizen who, as I say, is in very moderate circumstances, gave $300 more for the second gun. Everybody subscribed, even the school children, who offered their small savings of fifty, sixty, or seventy cents, or a dollar. In a very short time sufficient money was subscribed for three machine guns. It has been the same with every other fund, the Belgian relief, the Red Cross, the Patriotic fund, the Field Army Service fund, every fund was subscribed to generously. I think that, instead of showing organization in the Militia Department, the appeal for funds to purchase machine guns shows a lack of organization. It should not have been necessary for the department to appeal to the patriotic impulses of the people in order to provide money to purchase one of the most necessary articles for troops at the front.

With regard to the patronage list, to which the Prime Minister referred this afternoon, the right hon. gentleman no doubt thinks he is stating the facts. But, as a matter of fact, he is far astray; he is misinformed, because so far as Prince Edward Island is concerned, and I presume conditions are very similar in other provinces, there is nothing but a patronage list. A Liberal has no more chance of providing any supplies for the troops stationed at local headquarters than if he were a man belonging to a foreign country. I have now a question on the Order Paper, and if it is answered satisfactorily and truthfully I shall be able to give names that I am sure will satisfy the Prime Minister of the accuracy of my statements. I say truthfully, because I find that questions which I put on the Order Paper and which were answered earlier in the season were not answered correctly, and I have the proof under my hand. On February 3, this question was answered by the Minister of Militia and Defence:

Mr. J. J. Hughes:

1. What procedure is followed to obtain supplies for the troops at local headquarters?

2. Are tenders asked for by public advertisement, or is there a patronage list, and are the parties whose names are on the patronage list asked to submit offers?

3. Is there a patronage list for Prince Edward Island?

4. If so, who prepared the list for the Government, what are the names and addresses of the parties on the list, and who recommended these names to the Government or the purchasing committee?

Sir Sam Hughes:

1. The practice followed in making contracts for supplies to the troops at the various mobilization centres throughout Canada varies according to circumstances. If there is time enough before the supplies are required, tenders are called for by public advertisement, usually by posters put up in and about the town where the troops are to be stationed. When the time is too short to allow this to be done, tenders are obtained by circular letter or telegram from Ottawa, addressed to dealers of the locality concerned. Names of dealers are supplied by War Purchasing Committee. In some cases where the time is very short, the officer commanding the district is authorized to procure tenders from local concerns and transmit them, by mail or telegraph, to Ottawa for approval. No application from responsible parties for permission to tender is refused; and tender forms and necessary information are supplied to all such applicants. In all cases, the lowest tenders received are accepted.

2. Answered by No. 1.

3. No.

4. Answered by No. 3.

That is a very satisfactory explanation; but, strange to say, according to letters I have received from reputable people, not a Liberal has been found to provide any supplies in the carrying out of this arrangement. Let me come down to a concrete case. I shall take the article of milk. On the 16th of February this question was answered:

Mr. Hughes:

1. Where is the milk obtained that is supplied to the troops at Charlottetown, P.E.I.?

2. Is it fluid or powder milk, and what price is paid for it?

3. How is powder milk made, and is there any cream in it?

Sir Sam Hughes:

1. From J. Tobin & Co., Halifax, N.S.

2. (a) Powder milk. (b) 14½ cents per pound.

3. (a) By a superheated process . (b) Powder milk which is the solids of milk with the water evaporated containing 23.8 per cent of fat which returns to its original element by the addition of water.

Parties who obtained some of that powdered milk had it analysed in Charlottetown and found that it contained no fat at all, although this answer says it contained 23 per cent. I had a sample of it analysed here at Ottawa by Mr. C. H. Robinson. His report was as follows:

9 p.m.

Central Experimental Farm,
Ottawa, March 16, 1916.

J. J. Hughes, Esq., M.P.,
House of Commons,
Ottawa, Ont.

Dear Sir,—In the absence of Dr. Shutt I beg to hand you my report on the sample of milk powder forwarded by you on the 6th instant.

[Mr. J. J. Hughes.]

	Analysis.
Moisture	2.86
Fat	2.44
Protein	35.09
Ash	7.44

The undertermined consists almost entirely of milk sugar.

The analysis corresponds to that of powder made from skim or separated milk. One pound of this milk powder added to nine pounds of water would give a milk closely approximating in composition to that of skim or separated milk obtained from dairymen.

Yours respectfully,
C. H. Robinson,
Assistant Chemist.

There is a factory in Charlottetown that manufactures condensed milk.

Sir ROBERT BORDEN: Where did the hon. member get that report?

Mr. HUGHES: From Mr. C. H. Robinson, assistant chemist at the experimental farm.

Mr. LEMIEUX: You should have got Borden's condensed milk.

Mr. HUGHES: This factory at Charlottetown makes condensed milk which is sold all over Canada, and is used in construction, mining and lumber camps. It is whole milk and is sold at from 10 to 11 cents a pound, yet that factory could not supply a pound of milk to the troops at Charlottetown, while the department were buying skimmed milk in Halifax at 14½ cents a pound. They were not personæ gratæ to the Patronage Committee. I am informed by reputable people that hardly a Liberal in Charlottetown is supplying anything to the troops, and I understand that the same condition prevails at Summerside.

Sir ROBERT BORDEN: Was there not a public call for tenders?

Mr. HUGHES: I do not know about that.

Sir ROBERT BORDEN: I am informed by the Deputy Minister of Militia that there was a public call for tenders.

Mr. HUGHES: I do not know what the tenders call for. I saw one of the forms of tender, and it called for powdered milk. I do not know whether that was the form used in this case or not; if it was, of course, that factory could not supply it, because it does not deal in that class of article. It deals in a much better article, and could supply it at a lower price, at, as I have said, from 10 to 11 cents per pound. At the town of Souris, where 150 soldiers are located, I understand that the officers in charge made some inquiries of different

people with regard to supplies, and, as a matter of fact, Conservatives are supplying the articles. I am told—I cannot state positively whether this is correct or not, although I have the information from a reputable source—that it has been found that the supplies are about 20 per cent short of weight, and if that can be done—and I am given to understand that a somewhat similar condition exists in other parts of the province—and favoured parties can supply short weights of course they can put in low tenders.

Mr. MORRIS: Can you give us the names of any parties who supplied short weights?

Mr. GRAHAM: They must have been among the men supplying the goods.

Mr. HUGHES: I wish to draw the attention of the Prime Minister—

Mr. MORRIS: I have asked the hon. gentleman a question; I have asked whether he can give us the names of any of those farmers who are supplying short weights.

Mr. HUGHES: I have a question on the Order Paper asking for that information, and as soon as I get it I will give it to my hon. friend.

Mr. McKENZIE: Appoint a commission.

Mr. HUGHES: In connection with the Militia Department, advertisements have been published asking for students for the Militia College at Kingston. This is in connection with the war and I have here a particular instance of a Liberal newspaper published in Charlottetown which was not allowed to publish that advertisement. That paper, I know, took an active part in promoting everything connected with the war, publishing freely notices calling meetings for recruiting purposes, and notices in connection with subscription funds, and doing everything that every other newspaper in the province did. In fact, there were no party lines drawn, so far as the people were concerned. Liberals and Conservatives alike have been eager and anxious to do their bit all over the Dominion, and it is the same in the province of Prince Edward Island as in other provinces. And yet this advertisement, calling for young men to attend the Military College, which is supported by the people, for the purpose of qualifying themselves to defend their country in case of need, was withheld from this newspaper. I can give the names in this instance, but I presume the officers of the Milita Department are well aware that I am stating a fact.

In regard to the medical officers employed in connection with the Army Service, I have this to say: A medical man in Charlottetown, who held a position in the active militia, and whose son or nephew has already given up his life in defence of his country, has not been allowed to examine a single recruit for active service. He has been turned down, although he was an officer in the active militia before the war broke out. These are some of the things that are being done all over the country.

Something has been said here to-day with regard to the surplus of officers in the Old Country and in Canada. I have information to the effect that there are about 600 officers now in Great Britain who are not employed. I might as well state how I came by that information. Just a few days ago, in the Queen Hotel in Halifax, I happened to be sitting at a table when two officers were discussing the matter. They put it in this way: They said that there were 600 Canadian officers "canned" in Great Britain, 600 officers who had nothing to do. They appeared to know what they were talking about. They also said that there were enough officers in the Dominion of Canada to supply an army of one million men, many of them striplings, some of them boys of from 18 to 20 years of age, who would have nothing to do, and for whom there was no possibility of employment; mere boys who could not be placed in charge of troops. A peculiar condition of things, in this connection exists even in this Parliament where we see men in khaki who evidently are not going to the front. Early in this session I myself had an invitation to become an officer. Now, there would be no more chance of my going to the front, or of being of any use as an officer, than of taking a trip to the moon.

An hon. MEMBER: Hear, hear.

Mr. HUGHES: I would be just as qualified as some men who sit in this House in khaki, and who are in receipt of pay as officers as well as of their indemnity as members. According to a return brought down, their wives are also in receipt of a separation allowance. That is a matter which should receive some consideration. Is there any limit to the demands that are to be made upon the war appropriation fund? If there are 500 or 600 officers in Great Britain who are on the pay roll and

who are doing nothing there; if there are enough officers in Canada to supply an army of a million men, all of whom are on the pay roll, and if there are men sitting in this Parliament who will never by any possibility go to the front, who know they will not go, who never expected to go, and who are in receipt of pay while their wives receive a separation allowance, is it reasonable to suppose that when the people know these things they will be as generous with their subscriptions to the war funds as they would be if these matters were conducted properly and honestly and economically as they ought to be. Taken individually, these things are perhaps small, but in the aggregate they amount to a good deal.

There are things that ought to be looked into. I am going to give you concrete cases. The Prime Minister is not well informed when he states there is no patronage list in this country. He stated this afternoon that as far as he knew there was no patronage list, and in that he may be correct, but I say again that he is not well informed, because every man who reads that statement will know that it is not correct. The patronage list, in so far as the war is concerned, is just as active as it is in regard to any civil matter in the Government service. It is so in the province from which I come, and I presume it is so in other provinces.

An hon. MEMBER: No.

Mr. HUGHES: Perhaps not. Well, so much the better. The patronage system should not prevail in any province. The whole of the people of Canada are doing all in their power to win this great war. Liberals just as well as Conservatives, are volunteering, going to the front, they are willing to shed their blood, willing to sacrifice their lives, willing to do everything in their power, and patronage should have no place in a matter of this kind. Now that the Prime Minister is taking a more active part in the expenditure of the money appropriated for war purposes than he has done heretofore, we will probably have a better condition of affairs. I heard that a paymaster at one of the headquarters in Ontario, whose accounts were examined and found not to be correct, was sent to Great Britain as a paymaster at a greatly increased salary.

Sir ROBERT BORDEN: Who was he?

Mr. HUGHES: The information will come a little later.

[Mr. J. J. Hughes.]

Some hon. MEMBERS: Oh, oh.

Mr. HUGHES: I understand he is a member of a family that is near to the Minister of Militia and Defence. These are conditions which are existing in the country. It is time for a change, it is time that an improvement should be made, because every person in my province knows that I am stating facts. I regret to have to state them. We will look for better things if the Prime Minister pays more attention to these matters than he has been able to pay in the past.

Mr. A. B. COPP (Westmorland): I do not intend to take up very much time of the committee, but I would like to say a few words in regard to the resolution that is now before the House to provide for the war appropriation for the coming year. In doing so I do not desire to assume the role of a critic or to say anything that would seem harsh or unnecessary in regard to the carrying on of our part of the war. But I do want to draw the attention of the right hon. the Prime Minister (Sir Robert Borden), who is now looking after the Department of Militia and Defence, to some matters that I think are of interest to the people as a whole, and which are of interest to the Government of which he has the honour to be the head. Much has been said this afternoon, while this resolution has been under discussion, in regard to matters that have come to the attention of hon. members in different parts of the Dominion concerning the carrying on of the war insofar as Canada is concerned. One particular criticism was brought to the attention of the committee to-night of which I heartily approve, and that was in regard to the officers that are being appointed to carry on recruiting and to train and control the men in the regiments —I will not say throughout Canada, because I do not know if this criticism will apply to all parts of the country—but I will say down near my own home in the Maritime Provinces. We all know that a very large number of men have been appointed to responsible positions in connection with the training of recruits and the raising of battalions, without due regard to their military qualifications. These men are selected—I do not want to say without any regard to their fitness for the position—but I do know of many instances where men have been selected and placed in charge of battalions who have not had the slightest military experience before they

put on the King's uniform, and have been made captains and quartermasters in different battalions in the Maritime Provinces. I do not say this because I have any personal feeling against these men. They may be imbued with the most patriotic sentiments, but while that may be true it does not impress the country; it does not impress the young men; it does not impress the men whom we are seeking to enlist in the Canadian army that officers should be selected from people of this class. They are selected from three standpoints, and three standpoints alone—social influence, financial influence and political influence. That is the way selections are made of officers in the Maritime Provinces very largely.

Sir ROBERT BORDEN: In which category are those which you refer to?

Mr. COPP: Pardon me?

Sir ROBERT BORDEN: I thought you spoke of a number of Italians having been appointed.

Mr. COPP: No, I said "in raising battalions." I did not say that any Italians had been appointed. I doubt very much if the Italians would have sufficient social or political influence to warrant their appointment to these positions in any battalions or any other place.

Mr. DAVIDSON: I understand that the hon. member for Pictou (Mr. Macdonald) has a son who is an officer in a Nova Scotia battalion. To which class of influence does he owe his position?

Mr. COPP: I do not know to which class, but I understand that that young man had been in the militia for a number of years, that he had had considerable experience and that he was qualified for a commission before the war broke out.

Sir ROBERT BORDEN: You do make some exceptions?

Mr. COPP: Yes. I am sincere in what I am saying to this committee to-night. I am saying absolutely what I believe to be true and with a proper regard to the spirit in which the war should be carried on. I am not here to say that there have been no Liberals appointed but I am here to complain that there have been a large number of officers appointed in the Maritime Provinces who have not had the slightest experience and who are no more fitted to be majors, captains or quarter-masters than I am, and I have not had the slightest experience in the world. My hon. friends have mentioned a number of things in regard to the treatment of soldiers who have been punished for lapses in conduct. As far as I am personally concerned I admire the man who takes upon himself the duties of citizenship and enlists as one of our soldiers to go forth and do his part in this war. I admire and respect that man. I believe, however, that you cannot carry on a war, or properly train soldiers without a certain amount of discipline. It is absolutely necessary that there should be proper discipline, but while I admire discipline I detest military snobbishness, and there is a great deal of that in this country at the present time. Just because a man happens to be an officer and holds a little higher rank than somebody else has, he has no right to abuse his authority in the way a number of military officers are doing in this country. The punishments that have been meted out to soldiers in the ranks have been reported in the newspapers, and are absolutely true.

Sir ROBERT BORDEN: What was the character of the punishments?

Mr. COPP: It was spoken of in the House here to-day—a man strung up by the arms for example.

Sir ROBERT BORDEN: Has the hon. gentleman any other instances of that kind?

Mr. COPP: I have no instances of that kind to give. I am not speaking from my own knowledge of the harsh treatment some of the privates receive from their officers. The point I am making is that the privates are very often treated as if they were far below the officers. We are all Canadians, and the private may come from just as good a family and have just as good blood in his veins as the officer who happens to have been chosen through influence; and simply because an officer has that influence is no reason why the private should be abused and trampled upon, as they are in many training camps throughout the country.

With regard to this vote, I am sure there is not a member of this House but who intends to vote it cheerfully. At the same time I think it devolves upon us, as representing the people of this country, to demand that the money shall be honestly and reasonably expended for the purpose for which it is intended. No one, I am sure, could have occupied a seat in this House for even so short a time as I have, and heard the evidence given at meet-

ings of the Public Accounts Committee, without coming to the conclusion that the money that has been voted for war purposes during the last two years has not all been expended with that degree of care that should have been exercised. A number of instances have been given, and to-night I wish to draw the attention of my right hon. friend to an expenditure which has been much talked about in the province of New Brunswick, near my home town. I know the location very well; it is in the constituency of my hon. friend the member for Cumberland (Mr. Rhodes), and I may say that we live very happily together in adjoining towns. If the statements that have been made by a large number of people in that constituency, and that have appeared in the press, in regard to the expenditure of a sum of money last year in the preparation of a building for the billetting of the soldiers in that particular town are true an investigation should certainly be held, to ascertain whether or not this large amount of money was, not to use a harsher term, absolutely wasted. If the reports in regard to the expenditure of that sum of money in the constituency of my hon. friend are true, and if his attitude on patronage is what he publicly stated it to be at the Forum the other night, then I must congratulate him for having had a very sudden change of heart in regard to the patronage system. I hold in my hand a reputable paper published in the province of New Brunswick, which makes very serious charges with regard to the expenditure of public money in the county of Cumberland, for the purpose of fitting up a building to accommodate the soldiers who were in training there in the year 1915. The editor of this paper is a responsible gentleman, both financially and otherwise, and claims to have made a careful personal examination into the matter. Several times he has demanded an investigation, and is prepared to prove his statements. I shall read a few of the charges he makes, but I might first of all say that although we have plenty of lumber close to Cumberland county, while the lumber that was used in this building was purchased some distance away, in the county of Hants, and brought over two railway lines to Amherst. We must not forget that there were already two public buildings in Amherst which could have been used—the armoury and the winter fair building. However, they fitted up these barracks for the soldiers at the extraordinary cost of between $25,000 and $30,000. The soldiers remained in the building only a few months, and last winter it was dismantled, and the soldiers quartered in another place. If this is true it was certainly an extravagant expenditure, to use no harsher term. After the building had been fitted up, then arose the question as to provisions, groceries, meats, and hay and oats, because horses were to be billeted there as well as soldiers. The Prime Minister said this afternoon that he had not heard there were any patronage lists. He did not say there were none; I am sorry he was not able to say that. If he had attended the meetings of the Public Accounts Committee this session he would have heard the Director of Contracts state under oath that there was a patronage list in the Militia Department, and that it had been prepared shortly after the election of 1911, and that the material required by the department was purchased from persons whose names appeared on that list. Whether he was mistaken or not, I cannot say; I do not know anything to the contrary; but I can tell the Prime Minister that if he does not know that there are patronage lists, he is not aware of what takes place in different constituencies throughout the country when supplies and provisions are purchased for the maintenance of the troops. I know what takes place in my portion of the country.

Mr. MORPHY: Does the hon. gentleman mean to say that these supplies are not all purchased subject to public tender?

Mr. COPP: They are not purchased subject to public tender. Further, in certain localities the patronage is not merely confined to the Conservative party, but it is confined to an inner ring of that party, the ordinary Conservatives being excluded, and only a very select few allowed to tender for supplying the troops.

As an illustration, would you be surprised, Mr Chairman, to know that the contract for coal in the town of Amhurst was given to an ice cream and oyster vendor who never handled coal in his life before. That is the charge made by the newspaper which I hold in my hand. Let me read portions of a long article on this subject:

> A resume of the rumours, which are current, not only in Amherst but elsewhere throughout the Maritime Provinces, and which seems to justify the demands for a parliamentary or a special investigation into the facts will be found in the statement contained herein.
>
> * * * * * * * * * * * *

Among the amounts paid were $7,355 for lumber bought from the Brooklyn Lumber Co., of Brooklyn, N.S., of which Company Mr. E. N. Rhodes, M.P. is said to be President and Senator Curry, a Director. This lumber, much of which, it is reported was shaky hemlock, was brought from Brooklyn in Hants county, over the Midland railway to Truro and from there to Amherst over the Intercolonial. It was freighted 75 miles before it reached the boundary line of Cumberland, which is known as a big lumber producing county. Why? Do the names mentioned furnish an answer?

For heating and lighting the buildings, the Canadian Car and Foundry Co. was paid $2,000. For plumbing there was paid $2,360, for cook-ranges $1,380 and incidentally $1,663 was paid to the foreman of the job, who was not a carpenter nor a builder, but a Conservative on the inside. He was only engaged on the work about five or six weeks. No man could get a day's work unless O.Ked by the Tory Patronage Committee.

* * * * * * * * * * * *

Public tenders were never called by advertisement it is reported.

There was a farce of private tendering.

Even these forms of tender it is said, were only to be had at one office, and only by those not only of the right political stripe but within the ring.

For instance, a leading hay dealer of Amherst, who happened to be a Liberal, tried to get a chance to tender on the hay (to be provided for the horses.) He was told

That $17 a ton would be highway robbery and anyway he could not get a chance to tender because he was of the wrong political stripe. Within a week the contract for hay was awarded to one of the ring at $21 per ton.

One of the leading meat supply firms of Amherst desired to tender for the beef required. One of the members of this firm was a strong supporter of Mr. Rhodes at the last election, but he was not in the ring and although he made repeated applications for a chance to tender on the beef he failed to get an opportunity of doing so. He was told by one of the ring that beef should be supplied for about eleven cents a pound, but within a few days the contract was awarded to the same man who got the hay contract at the price of fourteen cents per pound. This gentleman made a contract with the Harris Abbatoir Company of Hamilton, Ont., to supply him with beef required at ten and a half cents a pound delivered in Amherst. As there was used between 1,500 and 2,000 pounds per day it can be seen that there was a profit of somewhere between $52,50 and $70 per day in beef alone.

There are several large bakeries in Amherst and although their proprietors had worked hard for Mr. Rhodes at the last election and spent their time and money in his interests they were outside of the ring and were passed by. The contract was given to a wholesale grocer.

The contract for vegetables was given to this same wholesale grocer at an extravagant price (although he was not engaged in the vegetable business) and who sub-let it to a lesser member of the ring.

The contract for coal was given, without tender, to the proprietor of an ice-cream parlor and oyster saloon, who up to that time had never been engaged in the coal business but the price he received was encouraging to say the least.

Now, even suppose that these statements are incorrect, some investigation should be held, for these allegations go forth to the country and if they are incorrect they do a great injustice to those in charge of these matters. But the people are very sensitive in regard to the expenditure of these war appropriations. They might not care for a few dollars in regard to ordinary expenditures; but when they realize that day after day and week after week they are called upon at every street corner to subscribe to good causes in connection with the war—and they are glad to give what they can afford to give—and when they are told that money is being squandered and wasted, not to use a harsher name, in patronage contracts given to friends of the Government, the contrast between the sacrifices they are making and the unjust advantage which others are gaining arouses the keenest dissatisfaction. The people expect a square, honest, careful expenditure of the money voted by this Parliament to the Government for the carrying on of this war. The Prime Minister this afternoon said that he did not know of any patronage list from which provisions were purchased for the Militia Department. Now, saying nothing of the past, however unfortunate it may be that we have been extravagant—for the past is gone—I would ask the Prime Minister to go a step further and say that if there is a patronage list at the present time there should be no patronage list in the future, so far as concerns the expenditure of the money passed under this resolution. I have felt it my duty to call the attention of the committee to instances of what is believed to be extravagance in the expenditure of money voted for the war. I hope that in the future greater care will be exercised and that we shall have a better report in regard to the expenditure of the money now to be voted than we have had in regard to the money voted in former years.

Mr. EDGAR N. RHODES (Cumberland): I could have hoped that my hon. friend from Westmorland (Mr. Copp) who has had some twenty or twenty-five years' experience in public life, off and on, would have had the kindness to advise me of his intention to speak about the way matters have been administered in the constituency of Cumberland which I have the honour to represent, particularly in view of the cir-

cumstance that being chairman of committees I am debarred from taking an active part in the debate. I certainly should not have spoken under ordinary conditions, but I could not sit quietly in the chair and listen to wild, outrageous, and absolutely unfounded assertions as I shall be able to show them to be. I cannot at the moment speak from the documents, for I have not them with me, but I might have had them here had I had notice that I should be called upon to deal with these charges. The hon. member has been entirely misinformed. When troops were first brought to Amherst, there was a certain urgency in the matter of securing tenders as it was supposed that the troops would be brought there at an earlier date than they were. At that time, a supply officer of the Department came and left with me certain tender forms, asking me to submit these to various contractors in my constituency. Now, I wish to state the case exactly as it happened. I made particular inquiry of him as to whether this was the method which had obtained in the department, and he told me it was the method that had obtained for many years. I wish to assume entire responsibility for the manner in which these contract forms were at that time distributed. I took care, having regard to the system which had obtained in this country, that these tenders were handed to my political friends and not to my political opponents. I am not here to defend that system. I deplore the patronage system. I believe that it is a canker which is eating into the body politic of this country and I am willing to assist in every possible way in an attempt to eradicate it. That was the system which obtained, however, and I took care that tender forms were at that time placed in the hands of those who had been my political supporters. That is what hon. gentlemen opposite would do; that is what hon. gentlemen opposite have done; that is what I did, having regard to the circumstances, and knowing that that was the system which had obtained up to that time. But I did not approve of the system—and I have discussed the matter since on various occasions with different responsible officers of the Militia Department. Excepting those contracts which were awarded in the first instance, every contract in the constituency which I have the honour to represent has been awarded on open contract and by competition. As an evidence of that let me say that the very man whom the hon. member for Westmorland referred to a short time ago as not receiving a contract in the first instance is to-day the meat contractor in the town of Amherst, and he was a violent opponent of mine in the last political contest, but I find no fault with that. I have had absolutely nothing whatever to do directly or indirectly, with the awarding of contracts in the constituency of Cumberland since that first and only case. Troops have been quartered in the town of Springhill for several months. I wish to tell the hon. member for Westmorland that I do not know the name of a single contractor in the town who is supplying foodstuffs to the troops. At the request of the War Purchasing Commission, which did not receive a sufficient number of tenders in response to advertisements which were posted in public places in Springhill, I gave the name of every merchant in that town, Liberal and Conservative. The statement that I make in respect of the town of Springhill is absolutely true in respect of the town of Amherst; I do not know who the contractors are in Amherst to-day. I happen to know something about the meat contract because of some peculiar conditions that arose, and in regard to which I made particular inquiries. I was not consulted in any shape or form with respect to the awarding of contracts, and I state my absolute belief that they were awarded after competition and to the lowest tenderer.

My hon. friend drew some evidences of mirth from some hon. gentlemen on his side of the House by stating that a certain coal contract had been awarded to an ice-cream vendor, a man, he said, who had never been in the coal business. This ice-cream vendor, to my certain knowledge, has been in the coal business for at least ten years. He sells coal to the public in the town of Amherst to-day and he has done so in the years gone by. I do not think because a man happens to sell a few quarts of ice-cream or any other commodity that he should be debarred from selling coal. It seems to me that the two important considerations are: Was the coal of good quality, and was it sold at a fair price?

I notice, too, that the hon. member for Westmorland skated on thin ice when he discussed the question of lumber supplies. He did not tell the committee that the company which supplied lumber was one of which I am president and in the stock of which I hold a fifth interest. I do not think that this is a matter to be hidden. As a matter of fact, it is well known that

I am in the lumber business and have been for a great many years. I was very glad indeed to find out, for the first time after the contract had been awarded, that a contract had been given to the company of which I am president. I am in the lumber business and I do not see why, becauses I am a member of Parliament that the company with which I am connected should be debarred from doing a certain amount of legitimate business, provided the company has lumber to sell and sells it at a fair price. I do not purpose going into that matter further than to say that the lumber was, I believe, of fair quality and that it was sold at a fair price. By reason of its being dried in the open air it really had to be purchased from that company at that time, having regard to the fact that a large quantity was required at a season of the year when that quality of lumber could not be purchased from mills which had sold and shipped their whole cut.

I want to make the assertion positively, so that there can be no misunderstanding in respect to it, that so far as the constituency of Cumberland is concerned—I can speak only of that constituency, because I have not been concerned with outside constituencies—every contract for supplies is awarded on open tender and absolutely without respect to a man's political qualifications. I do not think the hon. member for Westmorland would have made the rash statements that he did make if there did not happen to be within the precincts of the building to-night one of the most prominent Liberals in my constituency. The hon. member for Westmorland has probably had a prod from him; that gentleman wished to take home with him some statement that Rhodes was getting a little bit of criticism in the House of Commons. There is in the constituency which I represent a newspaper which was founded solely and entirely for partisan purposes; I refer to the Amherst Guardian an out and out Liberal sheet. That paper, published in my constituency, has not published any such statements as are published in the paper which my hon. friend has read. He reads from a paper which is published in his constituency, some 50 miles from the town in which I live. That paper would not dare publish such statements in the constituency in which I live. The hon. member made an appeal here to-night, as if, perforce, he were being shut off in the matter of investigation. Does he not know that the Prime Minister did something that was never heretofore done in the Dominion of Canada—never done, so far as I know, in any British country before? He established a Royal Commission, with a roving commission, travelling up and down the length and breadth of this country and inviting people to lay charges against the Administration. That commission was in the province of Nova Scotia, and I myself caused an editorial to be published in the Amherst Daily News, a paper which is friendly to myself, inviting any one who had a charge to make in that constituency to bring it before the commission. Did they do so? Not at all. Then, does my my hon. friend forget that there is a Public Accounts Committee in the House of Commons? It is the easiest thing in the world for him to have these various matters investigated, and I may say that I shall be only too happy to assist him. If there is anything wrong in the manner in which this Government business has been conducted in my constituency, I want to know it, not for partisan purposes, but in the public interest, and I am just as anxious to know it as my hon. friend is. I repeat that I shall assist him in full measure if he will cause these matters to be brought before the Public Accounts Committee; I welcome an opportunity of having them investigated.

Troops were brought to Amherst in the first instance, and they were quartered in the building of the Canada Car and Foundry Company. I have no interest in the Canada Car and Foundry Company; I do not own a dollar's worth of stock, nor does any member of my immediate family. I have no interest directly or indirectly in it, except that I happen to be local solicitor for the company—I say that only in passing. I wanted to see troops brought to Amherst because of the peculiar conditions at that time. Following the industrial depression, large buildings suitable for the accommodation of troops were vacant, and the quartering of a regiment in the town at that time would have been of great local benefit. Amherst is strategically located as the geographical centre of the Maritime Provinces; the military authorities at Halifax were only too happy to see the troops brought into Amherst, and I was only too happy to lend my assistance to their being brought there. They were given the use of the buildings of the Canada Car and Foundry Company, without the cost of one dollar by way of charge. The company have asked to be reimbursed for certain expenditures to which they were put, but there has been no charge for rental of the

buildings used by the troops. Insurance rates, which were of a favourable character, were raised, and the Government is being asked to pay the difference between the insurance rate which the company pays in ordinary times and the increased rate which was demanded by reason of the occupation of the building by the troops.

Mr. COPP: Does the hon. member know what it cost to put the building in condition?

Mr. RHODES: I think it was somewhere in the vicinity of $26,000. However, the answer is open to my hon. friend, because this matter has been the subject of various questions by him, and I think others during this and the previous session. But it must be borne in mind that while the winter fair building was available for the use of the troops at that time, the military authorities then decided not to use that building for this reason: Quarters were being fitted up at that time for the 22nd French-Canadian Battalion, which came from Quebec, and also for the 6th Mounted Rifles, and for the use of the 6th Mounted Rifles it was necessary to have a building where 750 horse stalls could be built for the accommodation of their horses. There was not room in the winter fair building for the two regiments. If they had used the winter fair building it could only have been used for one regiment. There was no building within a mile of the winter fair building which could accommodate the horses, and as there were available two buildings within a distance of some 50 or 60 feet, which are part of the works of the Canada Car and Foundry Company, one of those buildings was used for the accommodation of the men and the other for the horses. The military authorities were thus compelled to select the buildings of the Canada Car and Foundry Company at that time. This year the winter fair building has been used, for the reason that no accommodation for horses was required, and it was well adapted as a barracks for the men. Furthermore, it was owned by the town of Amherst, and it was given rent free, with an understanding on the part of the town that it would be available for the uses of the Government until the war is over. The abandonment of the quarters in the buildings of the Canada Car and Foundry Company did not involve any loss; in fact, even with the additional cost of fitting up the winter fair building, the Government will be in pocket, for the reason that the extra insurance and the various incidental charges of watchmen and that sort of thing would make the continued occupation of the Car and Foundry Company's building far more expensive than to pull out the fittings, as was done, and transport them to Aldershot to be used for military purposes. Let me point out that while the cost of the equipment of quarters in the building of the Canada Car and Foundry Company was something like $26,000, that cost included accommodation for one full regiment of infantry, a squadron of cavalry, and in addition, 750 horses; that the buildings that were fitted up this year—that is the winter fair buildings—were fitted up for the accommodation of one infantry regiment alone; and if my hon. friend will look at the returns which he has before him, he will observe that it cost more to fit up the buildings this year for the one regiment of infantry than it cost last year for the regiment of infantry, the squadron or cavalry, and the horses, combined. So he need not draw any comfort from the circumstance that a large sum of money was spent in buildings owned by the Canada Car and Foundry Company.

10 p.m.

I do not know that I have covered all of the ground which has been gone over by my hon. friend, but I wish to do so. I do not wish to avoid any detail, and if there are any questions in connection with the matter which the hon. gentleman wishes to raise, I should be glad if he would do so.

The hon. member criticised the awarding of a contract for hay and fodder. I have only this to say with respect to that contract, that I was responsible for its having been awarded. It was given in the manner I have indicated, being one of the first awarded. I saw that it went to one of the most responsible and honourable farmers in the constituency, a man in whom I have entire confidence. My hon. friend criticised the prices, but he did not tell the committee that the Government did not buy a pound of hay, let alone several hundred tons, with the result that this farmer, on this contract, lost something over $1,000. I have been importuning the Militia Department for nearly a year asking them to compensate this man for his loss on the contract, and I believe that I have them convinced that he has a just claim and that he will be paid at least a portion of his loss. So far from having made any profit on the contract, he made a loss of the amount I

have mentioned. My hon. friend also says that one prominent Liberal was told that he could not get a contract because he was a Liberal. I would like to know who made the statement; I would like to have names.

Mr. COPP: I read it in the newspaper.

Mr. RHODES: Yes, but about three-quarters of what you read in the papers was not true.

Mr. COPP: That may be.

Mr. RHODES: And the other quarter was a very substantial looking structure built out of a very delicate fabric; there was a very small modicum of substance in any of the statements which the hon. gentleman read from the newspaper. I do not know that I need take up the time of the committee at greater length except to say that there is no good purpose to be served by making wild statements in the House. If the hon. gentleman has any ground for believing that anything is wrong in connection with the awarding of contracts, his remedy is open and he can have it out in the Public Accounts Committee to his heart's content, and I for one, just as well as my hon. friend for Westmorland, will welcome the opportunity of seeing these various matters investigated.

Mr. COPP: My hon. friend has taken us very fully into his confidence, in regard to the awarding of contracts in Cumberland county. If it was a proper thing to give notice of my intention to bring up this matter, I offer my apologies for not doing so, because I certainly did not know that it was customary on referring to a small matter like this to give any particular notice. I brought it up, not because I had the slightest feeling in regard to the matter. My hon. friend and myself have always been personally very warm friends, and I trust we may remain so. I brought this matter up because it had been brought to my attention, as I said at the outset, by a very reputable and responsible public journal in the countty of Westmorland, in New Brunswick. The editor of this journal is, both financialy and in every way, responsible to answer for any charges that he makes in regard to public matters. I distinctly stated that I was taking my information from the newspaper that had published the statements and I was bringing it to the attention of my right hon. friend the Prime Minister for if it was true it was a disgrace and a shame that the money had been so wasted by extravagance in the carrying on of the work in the adjoining county of Cumberland. I wish to say to my hon. friend that if it was not true it should be cleared up because it was attracting a great deal of attention in that quarter and was being used in a manner very detrimental to the Government as well as to recruiting in that portion of the country. But my hon. friend from Cumberland arose in his place and said that he was going to dissipate this allegation entirely and to show that what I said was absolutely made out of whole cloth and really had no foundation in fact. Let me say to my hon. friend that in the very first words he uttered he admitted the very charge I made.

Mr. RHODES: I will assume that the hon. member wishes to be fair. I said that, following the custom of the Militia Department in the past, contracts over a year ago had been awarded. What is the date of the newspaper from which my hon. friend has read.

Mr. COPP: It is with reference to the billeting of soldiers in 1915.

Mr. RHODES: I have stated that for over a year contracts have been awarded in my constituency upon open tenders. Not a word does my hon. friend say about that.

Mr. COPP: If my hon. friend will have patience, I will say a word about that. I want to say a word or two about the statement which he made that what I said was absolutely without foundation. He made the admission that those contracts for the hay, and for the provisioning of the camp, were made by himself in the way in which this paper states they were made, without regard to tender, and given to his own political friends. That is what the hon. gentleman said.

Mr. RHODES: The first contract was made by tender and contract, but the tenders were not publicly advertised. They were not given publicity, but the contracts were made upon tender.

Mr. COPP: I will accept my hon. friend's word that it was made on tender, but the only people who were allowed to tender were the political friends of the hon. gentleman.

Mr. RHODES: Yes, in the first instance.

Mr. COPP: That is what I was talking about. That is the charge which is made

in this paper, that it was in the first instance. My hon. friend says that tenders were called for and that contracts were awarded, and he excuses himself on the ground that it had been the practice of the former Government to act in the same way.

Mr. RHODES: I said the practice of the department; I did not mention Government at all.

Mr. COPP: The practice in the department, if my hon. friend wishes to play upon words. Let me point out that when tenders were called for by the department in the past it was in time of peace, and not in time of war. Let me go a little further. If he wants to hide behind the statement that it was the practice followed by the Militia Department under the previous Government, let me ask him if that is a sufficient excuse. He admits that it is wrong; he admits that he has changed it, and, forsooth, because I draw the attention of the committee to the fact, he says I have made a statement that is without foundation in fact. I appeal to this committee; I ask my hon. friend, and I ask the people of this country whether or not the charges made by the newspaper which I have read are not absolutely admitted by the hon. member for the county of Cumberland.

Mr. RHODES: The effect of the hon. member's statement, as it would appear in the press to-morrow, would be that the practice of this Government was not to award contracts by tender and contract or by the publication of tenders, but that it was the practice to award contracts under a system of political patronage, which is entirely and absolutely untrue.

Mr. COPP: I will come to that. I do not want to take the least advantage of my hon. friend, or to allow anything to go out to the public press that is not absolutely correct. I do not wish to do any injustice to my hon. friend. I read extracts from an article in the Moncton Transcript which referred entirely to the billeting of soldiers in the winter of 1915, and my hon. friend admits that at that time the contracts were let upon tenders from his political friends. We are agreed upon that particular phase of the matter. My hon. friend now says that he has changed that practice.

Mr. RHODES: I did not say that I changed it.

Mr. COPP: It has been changed.

[Mr. Copp.]

Mr. RHODES: Yes.

Mr. COPP: I presume my hon. friend had something to do with the change. He would recommend it, I suppose. Did he approve or recommend the change?

Mr. RHODES: I thoroughly approve of it.

Mr. COPP: My hon. friend will not go so far as to say that he recommended it, but he approves of it. I did not speak of what went on during the past winter. I am glad to have the admission of my hon. friend that in the county of Cumberland the old system is not being followed now. But he must not forget that while he may play a little upon words, facts are stubborn things. When he says that he does not know of a single individual in the town of Springhill who is supplying provisions for the soldiers billeted there, does he mean that his patronage committee do not know?

Mr. RHODES: In the first place I have no patronage committee in Springhill. In the second place, I wish to be frank, it will be news to me if any of my political supporters have influenced the letting of contracts in the town of Springfield in the slightest degree. I know that every man in the town of Springhill, Liberal and Conservative alike, has had equal opportunity to tender for supplies, and I would be very much surprised if the lowest tenderer did not get the contract in every instance.

Mr. COPP: That does not answer my question.

Mr. RHODES: Put it again, and I will try to answer it. I thought I did answer it.

Mr. COPP: You said so far as you know.

Mr. RHODES: I cannot go further than that. What more can I say?

Mr. GRAHAM: He means that your knowledge might go further.

Mr. COPP: The hon. gentleman says he does not know of any case, and I accept his word, but probably there are many things going on in his county of which he does not know. I would like to ask whether he has not a patronage committee in his county?

Mr. RHODES: I have not, and never had a patronage committee in my constituency.

Mr. COPP: Nor any one acting for him?

Mr. RHODES: I consult my friends constantly, daily, with respect to matters

affecting my constituency that are not matters of patronage at all.

Mr. COPP: I would ask whether my hon. friend's law partner did not have something to do with the political patronage in his county?

Mr. RHODES: No doubt he had.

Mr. COPP: Then in common parlance would my hon. friend not say that his partner was a dispenser of patronage when he was not there? I want to be perfectly fair. When my hon. friend tells us that there is no dispenser of patronage in the county of Cumberland—well, I live very close to that county and have been there and have consulted some of the very men who claim to be dispensers of patronage.

Mr. RHODES: Who?

Mr. COPP: My hon. friend's law partner.

Mr. RHODES: Did he claim to be the dispenser of patronage?

Mr. COPP: Yes. Is it not correct? Does my hon. friend claim that he is not the dispenser of patronage?

Mr. RHODES: I do not know that any particular purpoose can be served by catechising me with respect to my relations with the gentleman referred to. In the first place he is not my partner; I presume my hon. friend refers to the gentleman who was at one time my partner.

Mr. COPP: Until very recently.

Mr. RHODES: Until the beginning of the year. I did not consult him any more frequently than I did many other men in my constituency, and I am not aware of his handling patronage in any particular degree. I do not believe that he has been consulted with respect to one of those contracts. I wish to be frank with my hon. friend. The situation is this: The contracts are awarded by the War Purchasing Commission, and I shall be very much surprised if they are consulting anybody with respect to the awarding of those contracts. They have not consulted me, and I think that if they had to consult anybody it would be me. The only contact I have had with the commission was, as I have said, when I gave them a full list of names of the merchants in the town of Springhill for the reason that no sufficient response had been made by the merchants to the public call for tenders.

Mr. COPP: My hon. friend has not satisfied me, nor, I think, the committee, as to whether or not this man, or some one else, up till very recently at least, looked after patronage matters.

Mr. RHODES: I tell my hon. friend that I do not believe that Mr. Sterne has been consulted in the slightest degree with respect to the awarding of those contracts.

Mr. COPP: Do not cover up this thing; let us get at the facts. What I have said is based on my knowledge of Cumberland County and upon information that I have. I have had business relations with Mr. Sterne. Surely my hon. friend would not attempt to make us believe that he had not some one in the county of Cumberland to look after the dispensing of patronage

Mr. RHODES: We were discussing the question of purchases by the Militia Department. I am consulting Mr. Sterne every day with respect to appointments in my constituency. Only to-day I recommended the appointment of a returned soldier as a letter carrier in Amherst. I do not know the man's religion or politics. I wired Mr. Sterne to know if he thought this man would be suitable for the position, and he wired back "yes." I know the man, I have known him for a number of years, but I do not know his religion or politics.

Mr. COPP: Does not that exactly prove what I say, that Mr. Sterne is the dispenser of patronage and that he is referred to by my hon. friend whenever an appointment is made? My hon. friend applies to him in connection with the appointment of this man. He had to get Mr. Sterne's recommendation before he appointed him. I am not making any charges, but I have a suspicion in my own mind that Mr. Sterne had found out that this gentleman who was appointed recently would be very acceptable to my hon. friend in Amherst. My hon. friend says that recently all contracts have been let by tender and to the lowest tenderer.

Mr. RHODES: I believe so.

Mr. COPP: That being so, I want to congratulate my hon. friend upon having taken that course in regard to war expenditures, particularly because if there are any expenditures in regard to which no patronage should be allowed they are the expenditures in connection with this war. My hon. friend apparently would like to have this committee believe that because there was no hay purchased, the statement I made was absolutely incorrect. I told the committee, when I referred to it, that they expected to have

horses billeted there, and contracts for hay were let. I did not attempt to deceive the committee by saying that there was any hay supplied, because I knew better than that. I knew there was no hay supplied. In fact, my hon. friend was being importuned to make up for the loss because some of his friends did not get an opportunity to supply hay and oats. But still the fact remains that a contract for hay was made and my hon. friend admits that the price was to be $21 per ton at Amherst.

Mr. RHODES: I did not admit that; I did not say anything with respect to the price at all.

Mr. COPP: Was not $21 a ton the price?

Mr. RHODES: It may have been—I have not the figures before me—but I did not mention the price.

Mr. COPP: Well, the statement was made that it was $21 a ton and if my hon. friend does not know, surely we may take it for granted that that was the price at which the hay was contracted for. My hon. friend knows as well as I do that at that time $21 a ton was $3 or $4 more than hay was being purchased for.

Mr. RHODES: I do not know anything of the kind.

Mr. COPP: Then I may inform my hon. friend that $21 a ton was $3 or $4 more than the highest price the farmers were being paid for hay at that time. He says that he had that contract let himself to his own political friends at $21 a ton with the expectation that a large quantity of hay would be used for billeting horses and remounts at that place during that winter. The principle involved is what I am talking about and what I am trying to impress upon the Prime Minister is that in the expenditure of this war vote he should see to it that no patronage is allowed to creep in or that any excessive prices are allowed to friends of the Government when supplies are purchased. My hon. friend also claims that I have made these remarks because there is a prominent Liberal from Amherst here. That was the first intimation that I had that there was a prominent Liberal from Amherst here, and I shall be very glad to see him, but his presence has nothing to do with my remarks upon this question, I simply brought the matter to the attention of my hon. friend in the most candid manner feeling that extravagance had occurred in the past and hoping that it would not occur in the future. My hon. friend says that the cost of fitting up the Canada Car and Foundry building for troops was some $26,000.

Mr. RHODES: State the figures approximately.

Mr. COPP: That is approximately correct. There is a building that was fitted up for troops and for only five months at a cost of $26,000; it cost another large amount of money to demolish it and fit up a building somewhere else. When this building was fitted up for the billeting of soldiers during five months of the winter, why was it necessary to dismantle it and go to the expense of fitting up another place in the same town for the billeting of soldiers? If that is reasonable, if that is good business, then I admit that I do not know anything about what good business is. After this large expenditure had been incurred for fitting up and arranging the building I cannot understand why it was necessary to tear it down after one winter's use and go to expense in fitting up another place.

Mr. RHODES: Probably the prevailing reason was that the building was not available for continuous use. It was being used this winter for the construction of cars, not to as large an extent as it was, but in part and it is being used now for that purpose.

Mr. COPP: If this building was only going to be wanted for one winter it was hardly necessary, even though it gave to my hon. friend's company a chance to supply a certain amount of lumber, to fit it up. It does not seem to have been good business enterprise, even although the lumber was supplied by my hon. friend's company, to fit this building up when it was only going to be used for five months. My hon. friend asked me to bring this matter before the Public Accounts Committee. It is not necessary to bring it before the Public Accounts Committee because he admits the charges in regard to the letting of contracts and that is what this whole newspaper article and argument are about. No word has been said about the letting of contracts during this past winter and I have not heard anything with regard to it? If he had pursued the course that he tells the committee he has pursued, he would be able to tell us that contracts had gone to the lowest tenderer. If my hon. friend had pursued that course no fault could be found with him. But my hon. friend says that a commission went

down through the Maritime Provinces last summer, that invitations were held out to parties having charges to make against the Government, or any department of the Government, to go and make their charges, and they would be investigated.

Mr. RHODES: That is right.

Mr. COPP: That may be true. But what better position should we be in to-day if that Commission that went through Nova Scotia had investigated these charges and taken evidence? We should not have known anything more about it than we do to-day. We have no report from that Commission as to the charges they did investigate in Nova Scotia; we know nothing whatever about it. My hon. friend from Cumberland has admitted that the charges made by the Moncton Transcript are absolutely correct. While he admits he did wrong—

Mr. RHODES: No, I do not.

Mr. COPP: If it was not wrong at first it would not be wrong now. My hon. friend took great credit to himself just now that tenders had been called for in every instance, and contracts let to the lowest tenderer. If you read between the lines you could see that he was taking great credit to himself for that, because it would have been discreditable to do the business in any other way. I repeat, the charges have been admitted by my hon. friend, and I trust that, now he has apparently resolved to do better in the future, his example will be followed by all the other members from the Maritime Provinces.

Mr. MICHAEL CLARK (Red Deer): I intervene in this discussion with some reluctance, because I have a very great question in my mind as to whether this discussion should really be taking place. I think, Sir, there is room for grave doubt whether we are not losing our sense of proportion in the greatest crisis that has ever been passed through by this country, by this Empire, by the world, and by the world's prospects of the advance of civilization. I intervene from a strict sense of duty, and because I think it would be unfortunate that a vote of this magnitude in connection with a war of this magnitude, should pass without a note of clear support of the Government at this crisis, coming from this side of the House.

I come from a province where up to the present moment we have recruited 2,656 more men than make our quota towards the 500,000 at which the Government is aiming. That is a fact of which, as an Albertan, I am reasonably proud, and that is a fact for which I find the explanation, if it is to be found, in this: that the people of Alberta are not so much concerned where the sugar is being got for the troops, as they are in getting the troops and beating the Germans.

I listened with very great care to the statement of my right hon. friend the Prime Minister from beginning to end. I listened to it calmly, and as I listened I was proud to be a citizen of Canada, and proud to be a citizen of Canada because of what the present Government of Canada has done in connection with this war. There were certain things which loomed up before my mind as I listened to that statement, and the first thing with which I was impressed was the magnitude of the burdens and the responsibilities which came upon the Government of a small portion of the British Empire with the swiftness and the suddenness that we know characterized the commencement of this war. It was my privilege, as it was my honour, at the beginning of the war, and as it has been more than once since, to express what was my clear convictions then, and what is equally my clear conviction now; that the head of this Government and the Government itself and the majority of its supporters were seized at once with the importance of the issues, and bent their whole energies to the task of contributing a proper quota on the part of Canada to the successful prosecution of the war. That was my conviction then and it is my conviction now, and I am clear in my own mind that history will record—whatever may be the petty political fortunes of party in this country at the next or any other election—I am confident that the impartial historian will record that my right hon. friend who leads the Government has from the day the war-cloud burst kept a single eye to the winning of the war, and has not been led aside or diverted from that purpose by any small motive or any small consideration whatsoever.

The next thing that loomed out in front of me as I listened to the statement of the Prime Minister was the point that was referred to by the right hon. gentleman himself, and that was the tremendous task which had fallen upon a large and momentarily increasing number of the staff of the Militia Department, and of the loyalty

and devotion—which often, as the Prime Minister said, must have carried their nerves to the racking point—with which every member of that staff must have done his duty. The Government and the staff of the department had splendid support from another consideration, which was raised by the Prime Minister, because the spirit that animated the Government and the spirit that animated the staff of the Militia Department was, and is, I believe, Sir, the spirit of the great majority of right thinking people in this country.

There was another thought that came to me, and it was the thought of gratitude, that though we have had this stupendous task thrown suddenly upon our Government, and especially upon the Militia Department, and though our people have had to make sacrifices and share in the carrying of the burden, yet we have such a magnificent heritage in this country, and our liberties are so protected by the flag under which we live, that none of us within this land has had to go with one meal less, none of us has had to go with any fear as to what is coming to us or coming to the Empire. I am grateful that I am in that position. I am thankful to the men at the front who are achieving this for us, and this, after all, is the greatest consideration. That is the greatest consideration that was raised in the Prime Minister's speech. We all echoed every sentiment he expressed as he recalled the way Canadians stood in the breach a year ago, and the way they are prepared to stand to-day and shed the last drop of their blood for the flag, for the Empire, for the world's liberties, the world's future, and the world's civilization. In the presence of these considerations I may be allowed to express a doubt whether the points that have been raised in discussion are calculated to help in the accomplishment of that great task—whether they are not calculated to hinder. If there had not been grounds for criticism the Government would not have been human. Humanity is fallible. It is said that the man who does not make mistakes never makes anything. If the Government had not gone into this war with the intention of making something, of helping to achieve the victory that we know is coming; if they had not gone into it animated by the spirit that makes for victory, they might not have made mistakes, but they would not have helped much in bringing about that victory. We are told, "You cannot make omelets without breaking eggs." It is one of the misfortunes of war that it brings greater profits even to the farmers, to the sons who are left at home while the other sons are sacrificing all they have at the front. Mistakes? Of course. And critics? Of course. Said Byron:

> A man must serve his time to every trade.
> But censure—critics all are ready made.

For my part, in such a crisis in the history of our Empire and of the country, as a private individual citizen who happens for a moment to have a seat in Parliament, I have no time for criticism. My talk, and such effort as I am able to exert, have been from the beginning behind the clear-eyed purpose of the Prime Minister, and they are so now; and so, I believe, are the thoughts and efforts of the people of Canada. For I do believe this: that whatever criticisms are to be offered, whatever reputations are to be made or lost, this is not the time for these things. This is the time to stand under the flag that we all love, and for the greatest cause that ever animated our people and our people's allies, and behind a Government of whom history will record that, on the whole, it has done well. It is for us to stand for that cause and under that flag until victory rests upon our banners. It is because the people of this country believe that the Prime Minister and his Government and the majority of his supporters have taken that attitude and are determined to occupy it to the end, with a single eye to victory for a cause that far transcends the squabbles of party—it is because the people believe this, that I believe they are behind the Government until the war is won.

Mr. A. A. McLEAN (Queens, P.E.I.): I believe we all feel that the hon. member for Red Deer (Mr. Clark) has struck the right note, and that he has expressed the feeling of the people of Canada. As he has said, this is not the time for such criticism as we have had. I had a letter yesterday from a young man at the front, and he told me that he had just come in from the trenches. He told of the fearful sights he had seen, with dead men all around him, and he asks: "What are you doing in Canada; what are you doing in Parliament? We are fighting like blazes." And for what? Is it for anything material in the carrying on of this war—is it for anything material at all? Take, for instance, the statements made by the hon. member for Kings (Mr. Hughes). He said there was nothing but partisanship in the conduct of the Militia Department in relation to

the soldiers in Prince Edward Island. I represent the largest constituency in that province, and I have never heard a word uttered with reference to partisanship. I know that from one end of Prince Edward Island to the other there is perfect harmony, that every man, woman and child is doing his or her best to forward the interests of Canada in this great war for the liberty of the world. The hon. member for Kings made one statement which, I think, should not be passed over by me; he said that no Liberal doctor is allowed to examine a soldier, and he referred to the case of a doctor whose nephew or brother had been killed. The man to whom he referred is evidently Colonel Warburton. In Prince Edward Island we have had a great number of men go to the front. In the last battery that went, Dr. Warburton examined nearly all the recruits. In previous batteries, of which there have been two or three, Dr. Warburton examined all. But in the last battery that was raised another doctor was given his turn. Dr. Warburton is not dissatisfied with the treatment he has received. He is a retired officer and the men who did the examining of the last battery are men in the active militia. It would seem that to the mind of the hon. member for Kings it is an unpardonable thing that the Conservative party should have successfully carried out Canada's share in the conduct of the war. Had they made mistakes that would have been to the advantage of the Liberal party, but because they have conducted affairs honestly they have been unpardonably wrong in the eyes of the hon. gentleman. There was another statement of the hon. gentleman (Mr. Hughes) to which I wish to refer, and that is with reference to the officers who have gone with the several contingents. Of the officers who have gone to the front, as well as those who are with the battalions now in Charlottetown, the majority have been Liberals. Nobody had anything to say against that. Though I am a Conservative I never had anything to say against the appointment of a Liberal officer. All that is wanted is that the officer shall be competent to fill the position to which he is appointed. That is what all Canadians want, that and nothing else. We do not want politics in military affairs, we do not want to put a Conservative in a position of command if he is not competent to command, and that has not been done in the province of Prince Edward Island.

Now, with regard to the supply of groceries and other things for the soldiers in Prince Edward Island, let me say that these contracts were given after call for tenders. I understand the contracts have been given to the lowest bidders. I have not made any inquiry as to who got the contracts, it is no part of my business; I never interfered in it one way or the other. I do not think that any of my Liberal-Conservative friends in my constituency took any interest in it. All they wanted was to get as many good men as possible and to send them to the front to do their duty for the defence of the Empire.

Hon. FRANK OLIVER: (Edmonton) I wish to ask a few questions in regard to matters more or less directly connected with the subject now before the committee, and I will do so later if this is a suitable occasion to secure information with regard to matters of detail.

Sir ROBERT BORDEN: There are a few matters about which inquiry is made, and I will speak very briefly with regard to these and then take up what the hon. gentleman (Mr. Oliver) wants to know. If I am not able to give the information he requires, I shall have inquiry made, so that the information may be available at a later stage.

Mr. OLIVER: My intention was to ask questions with regard to matters of administration, but I will forego that for the moment. The hon. member for Red Deer has introduced a new note into this debate. Up to the present time, as I understood it, no question had come before the committee as to any lack of support to the Government in its proposals before the House. I understood that there was absolute unanimity in willingness to vote the money and support the Government. But there has been discussion in committee, as is right and proper, as to matters of detail. Some of these matters might be of greater importance and some might be of lesser importance, but I submit that all this discussion was with a view to securing greater advantage and a greater efficiency in the proposals of the Government, in its administration and in its expenditure. If my hon. friend takes the position that because this country is at war the Government must be supported in everything, right or wrong, good or bad, and that that must be done with a view to securing success in the war, I can only say to him that in my humble judgment that is the wrong way to secure success. Success will never be achieved by that means.

Mr. MICHAEL CLARK: Can my hon. friend quote a phrase from what I said that would indicate that as an opinion of mine—not a phrase?

Mr. OLIVER: My memory is not good for details, but I gathered from the enthusiastic applause with which his remarks were received that that was their import, to our friends on the other side at any rate.

Mr. COCKSHUTT: I should say that the silence on your own side would indicate that.

Mr. OLIVER: I think my hon. friend (Mr. Clark) said very specifically that he had not time to criticise or assist in criticism of the Government at this present time. He declared that the Government was doing the best that could be done, or if it was not, it was to be excused for not having done that very best. My appreciation of the position is this: while we recognize the stupendous responsibilities that have been placed upon the Government of the day by the outbreak of war; while we recognize that the conditions call for every support that is possible to be given to the Government in the discharge of those responsibilities, the very fact of the greatness of the responsibilities that are on the shoulders of the Government lays the responsibility upon the shoulders of members of the Opposition to take their proper part as critics of the action of the Government, and they cannot divest themselves of that responsibility by saying yea and amen to everything that is put before them by the Government. There has not been captious or partisan criticism of the Government during this debate. There has been no unworthy criticism of the Government or its administration. What might seem to be trivial matters may have been considered, and some important matters may have been considered, but I ask this committee, who is to say that a matter which tends to affect the mind of the people at this particular time is a trivial matter? Let it be small in material importance, if you will; if those who are discharging the responsibilities of government in this country are not dealing fairly or squarely or honestly or with a sufficient sense of their own responsibilities, is that the way to win the war? Is that the way to get that unanimous support that we must have in order to win? That is not my appreciation of the situation. We on this side of the House are elected to this position for the purpose of criticising the Government. That is our business, the country looks to us to see that the actions of the Government that are open to criticism shall be criticised on the floor of this House, and we as members of the Opposition will be doing far less than our duty if we fail to make that criticism when it is called for by the circumstances. The civilization of the world is to-day in danger. It is in danger because it is being attacked by the greatest organization of military efficiency that the world ever saw. How is civilization to be protected? Are we to meet efficiency with inefficiency? Unless we meet efficiency with efficiency, civilization goes down; and we cannot have efficiency unless in this country of free government we have fair but free criticism. We look across the water and we see a Government in power in Great Britain relieved during a period of a year or more from the ordinary vicissitudes of parliamentary debate, of opposition, of criticism. It is not for us at this distance to criticise what has been done over there, but I think no one will come to the conclusion that the experiment has been to the advantage of the Empire or the Allies or the cause of civilization. I say it would be deplorable for the part Canada is to play in this war if we in this country took such a position as has been taken over there. I do not suggest for a moment that I am here to criticise what has been done there. They have their special responsibilities, and we on this side are not in a position to say how best they may meet them. But the fact remains that the dispensing with political criticism in the Parliament of Great Britain has not resulted in success for the Allies; and we cannot expect that if we are to take the position that my hon. friend (Mr. Michael Clark) has suggested here to-night, we would have any better results. We have a duty to perform, and we must perform that duty. Our appreciation of the matter is this: in the discharge of our responsibilities as critics of the Government of the day we are doing our part to win the war just as much as the Government is doing in discharging its responsibilities. I hope my hon. friend will pardon me if I do not agree with him, but my view is that if we took the position that he has outlined for himself, we would certainly not be doing what we should do to secure success; and that way failure lies. Efficiency is what we want. Efficiency is what we must have. We need efficiency to the last limit, and we can only get it in the

administration of the country's affairs, as in any other line of life, by the friction that comes of mind against mind by criticism and discussion of important matters.

The Premier in giving to the House a statement the other day of the number of men enlisted and their location, spoke of the casualties and of the wastage. He said that the casualties amounted to something over 20,000 and the wastage to about the same or a little more. What is the exact meaning of wastage?

Sir ROBERT BORDEN: It would include all men who, for any reason whatever, are discharged from the service after having been once enlisted, for example, men who, upon a second examination, are not permitted to go to the front; men who are invalided from disease or any cause before going to the front; men dismissed from the service on account of misconduct or crime, deserters and minors.

Mr. OLIVER: The proportion seems to be very high. It is a serious matter, and the statement of the Prime Minister would seem to indicate fully the truth of the suggestion from this side of the House of looseness in the medical and other examinations in taking on recruits. Such figures show anything but careful and competent administration of the work of enlistment. Take the case mentioned by the honorable member for Pictou (Mr. Macdonald), where a man sold his farm for the purpose of enlisting, after having passed a preliminary medical examination, and was subsequently rejected because he could not pass a second examination. That man found himself without employment and without his farm. That is only a sample case. There are hundreds of such cases throughout the country. Every such case, of course, leaves a sore spot. It is a case of injustice. Something has been done that should not have been done, and a citizen of this country has suffered an injustice that he should not have suffered, and would not have suffered if proper care had been taken in the enlistment. Last session I had occasion to say to the Minister of Militia that notices had been sent out in the part of the country in which I live, calling on men to offer their services. Men left their farms, travelled hundreds of miles, after giving up their positions, but were not able to enlist because the authorities would not take them on at that time, so that these men were left stranded in the cities for months until a new opportunity was given to enlist. This is not good management; it is not creditable to the country or to the administration. With all due respect to the honorable member for Red Deer (Mr. M. Clark) this is not the way to win the war.

Reference has been made in this House to the change in the method of publishing the lists of casualties Formerly the battalion or corps to which the injured men belonged were published. Recently that has been eliminated, with the result that very many heartrending mistakes occur. Is the change in method a decision reached by the Militia Department or by the Imperial authorities?

Sir ROBERT BORDEN: It is a decision reached by the Imperial authorities. Some statements were set forth in the documents, that I did not think it desirable to publish. I therefore handed the documents to the right hon. leader of the Opposition a few days ago. I should be very glad if my hon. friend would look at them before they are returned, or if they are handed back to me I shall send them to him. The effort has been made to obviate the difficulty alluded to by giving the residence but not the battalion, in so far as it can be made out.

11 p.m.

Mr. OLIVER: Recently the list unfortunately is very long. When there was an index of battalions it was easy to follow the lists; but when there is no index of battalions, in case there is a duplication of names, as the ordinary reader does not know anything about the numbers, mistakes are apt to occur. Unless there is some better reason than I can possibly conceive, it seems to me that the interested public are put at a disadvantage for no very good reason. Perhaps it would be possible for the Prime Minister to inform the House in a general way what the idea is.

Sir ROBERT BORDEN: The idea which the War Office has in mind, and which it supports by a memorandum, which was transmitted to us through the Colonial Office, is that giving the casualties with the numbers of the battalions gives certain information to the enemy which it is undesirable to afford.

Mr. OLIVER: Of course, I am not responsible for the conduct of the British

armies in the field, but I am one of the people of Canada who have some interest in the armies in the field, and I am going to say upon my responsibility as a member of tne House of Commons that I do not think that the advantage compensates at all for the disadvantage. Of course, we have to accept the situation as it is.

Sir ROBERT BORDEN: We hardly felt like taking the responsibility of declining to accept a very strong representation, which, as we understood, had behind it the support of the Commander-in-Chief and the General Staff at the front.

Mr. OLIVER: In expressing my opinion I am exercising a privilege, which, I appreciate, could not very well be exercised by the Government. In connection with the publication of the casualty lists there is another feature to which I wish to draw attention. The list, as published, is a number of days, say three, four, or five days, or a week behind the actual facts. The other day I received a telegram from a man in Edmonton giving the name of his son, who had been wounded, and wishing me to get particulars as to his condition. He had been wounded, I think, on the 8th of April, and it was not until at least a week after that date that the young man's name appeared in the casualty list, indicating that the casualty list does not represent the losses of the immediately preceding day, or, indeed, of any particular day.

Sir ROBERT BORDEN: That is quite true, so far as the immediately preceding day is concerned. But my hon. friend must remember that the information has to be picked up, in the first place, under the fire of the German batteries at the front, amid all the confusion and strain which are incessant under the conditions which prevail at the front. The identification number of the man must be obtained; sometimes he may have lost his life in a situation which renders it impossible to get near him at the moment. Delays are absolutely inevitable. After that has been done the information has to be transmitted to London, and then across the Atlantic. The code messages must be deciphered; the man's number must be compared with the records we have here, and a telegram must be sent to his immediate relatives. It must also be ascertained that the telegram has been delivered, and then, and not until then, can the information be made public in the press.

Mr. OLIVER: I quite appreciate the difficulties of getting the information. It would not be possible, we will say, to get the list of casualties of to-day for publication to-morrow, but the casualties take place on a certain day. That day is known, and it seems to me that there is no reason why the date of the casualty should not appear in the list when published. That is to say, it should appear that the casualties took place, say, on a Thursday or on a Friday, or some other particular day. As a matter of fact, at the present time, the casualties appear without either the name of the battalion, or the date. The lists give an absolute minimum of information without, as it seems to me, any good or sufficient reason. Remember that it is not the British Government, nor the British War Office, that is interested in these casualty lists; it is the people of Canada, and the people of Canada would like to know from day to day what their losses are, and if the losses on a certain day are such and such, they would like to know that these losses were on that day.

Sir ROBERT BORDEN: I can conceive that the military authorities at the front might not regard it as a prudent course to indicate the precise number of casualties that had occurred in the Canadian forces on a particular day. I can easily conceive that they might take that in view. However, that may be, I do not think they ask us to pursue a different course from that pursued on the other side of the Atlantic. So far as I know, the method of making public the casualties is precisely the same there as here.

Mr. OLIVER: I am going to take the liberty at this time, and on this occasion, to express the view of the Canadian people who are interested—I am taking the liberty of saying that it is the view of the Canadian people. The Canadian people are interested in these casualties more than anybody else, and I claim that they are entitled to be considered in regard to the matter of their publication. The impression on my mind is that these casualties are fed out, so to speak, judiciously —in the opinion of those in authority—with the view that they shall not alarm the public by giving too large numbers on any particular occasion. That is to say, those who at the moment have

authority in these matters do not, in their wisdom, think that they can trust the public with a knowledge of their losses from day to day. They are afraid to trust the public. They treat the people who are offering their fathers and brothers and sons as a sacrifice in the Empire's cause as if they were not to be trusted. They do not deal with them honestly and fairly and above board. They do not say: yes, on a certain day such and such a thing occurred, and such and such casualties were suffered. They say: we are in control; we are afraid to let you know, and we will only give out just as many casualties as we think ought to appear on a particular day. I am speaking on my responsibility as a member. I am not criticising this Government. But I say that that is not fair; it is not right, it is not good business. It is not the way to win the war for the Government, or for those who are in control of military affairs, to maintain an attitude of distrust towards the people upon whom they must absolutely depend, and who must absolutely trust them for success. If they do not trust the people, the people cannot trust them. If they do not trust the people to the extent of telling the truth in regard to that matter, which is so close to their hearts, the people cannot trust them in their administration of affairs. I go further, and say that, in my humble judgment, the dissemination of information by the military authorities has been used very much more to deceive and mislead the people of their own country, and to cover up their own incompetence, than to mislead the enemy.

Sir ROBERT BORDEN: Is my hon. friend referring to the action of the department here?

Mr. OLIVER: No, I do not know whether it is the department here or the department there. Whoever it is, they are not treating the people who are making the sacrifices with fair consideration; they are not giving them their confidence, and it is not being done for the good of the Empire; because everything that detracts from the confidence of the people in the conduct of military affairs certainly does not tend towards the people giving their support. There are many other matters that I wish to deal with, but as I understand the Prime Minister wishes to make a reply to what has been said, I will postpone what I have to say further to some other occasion.

Hon. RODOLPHE LEMIEUX: I wish to congratulate my right hon. friend the Prime Minister upon having appointed officially General Lessard. The people of Quebec are very jealous of their heroes, and they are in that connection very conservative in a way. They are proud of them, whether in politics, in religion, in literature, in the arts or in military matters. General Lessard is one of them. Will my right hon. friend, who is a friend of the province of Quebec, listen to my candid advice? General Lessard has gone to the front to inspect officially troops, and no better man could have been selected; in fact, it was a surprise, and indeed a matter of regret, that his services should have been ignored since the beginning of the war. But, I did not rise to criticise. When his task on the other side is completed, I would ask my right hon. friend to give us back General Lessard in the province of Quebec, and I make bold to say that under General Lessard, Quebec will raise more battalions, because the province has confidence in his military efficiency, in his capacity, in his judgment. Fathers and mothers will be quite ready to confide their sons to the leadership of such a distinguished military officer.

I say this because there has been criticism in the press of the various provinces of Canada as regards recruiting in Quebec. I sincerely regret that there is not a happier feeling existing between the French-speaking population and the English-speaking population in Canada; I mean in the back concessions of the country. We have our own extremists, and my English-speaking friends have their own extremists. I am always reminded of the opening sentence in Lord Durham's report, which runs as follows: "I came to Canada in the expectation of finding one country and one people; I found two countries and two peoples." Since the beginning of the war there has been, generally speaking, bad feeling as regards the attitude of the province of Quebec, and if I speak of that particular subject this evening it is because I think it is relevant to the issue, and because I wish to, if possible, clear the sky.

It has been stated that the French-Canadians were not enlisting as they should. Let me make on this subject a frank statement to the committee. There are surely people with heads on their shoulders who read the daily papers. Every morning since the famous battles of Langemarck and St. Julien, the roll of honour is published in

those daily papers, and I can find in it the names of the young English-speaking Canadians and of the young French-speaking Canadians who enlisted with the first contingent. In this morning's Le Canada among those in the casualty list I read the names of Paul Adrien Lambert, Lachine; Charles Richard, Montreal; Louis Savard, Quebec; Edouard Goulet, Trois-Rivieres; Joseph Mongeau, Sorel; Hormisdas Berthiaume, St. Eugene; Romulus Bourget, Montreal. If any one takes the trouble to scrutinize the list every day he will find that there is quite a galaxy of young men from my own province who on the battlefield are doing their duty to their country, to their King and to the Empire. Let me pay my respects to the British-born in Canada. They have done wonderfully well. They responded to the call as true Britons should respond wherever they may live. If I speak of the British-born in this way it is because in connection with the figures I intend to give the committee, I must make a distinction between the British-born, the Anglo-Canadians and the Franco-Canadians, in order to be fair and just to the people of my own native province who are being accused in some parts of Canada of shirking their duty in this war. If my right hon. friend will give us General Lessard he will find that the habitants of Quebec will respond cheerfully. I have already invited my right hon. friend to visit the province of Quebec, but he could not accept the invitation on account of his sessional duties, but if my right hon. friend, who commands the respect of my province, as he commands the respect of the country, will come to Quebec with my right hon. friend who leads the Opposition (Sir Wilfrid Laurier), and with some of his ministers, we on this side of the House will join with him and we will make an appeal and thus swell the number of the existing French-Canadian battalions.

Coming back to the British-born: When the first contingent left Quebec, the figures were as follows: There are 33,000 soldiers gathered at Valcartier, and I say in passing that all credit is due the Government and the Department of Militia and Defence for the mustering of our yeomanry within such a short interval. Of the 33,000 soldiers who left Valcartier with the first contingent, 26,000 were British born.

Sir ROBERT BORDEN: Where does my hon. friend get his figures?

Mr. LEMIEUX: From Senators Mason's statement in the Senate the other day. Of that 33,000, 2,500 were French-Canadians who had responded to the call of duty and 4,500 Anglo-Canadians. I may be told that 2,500 is not a large number, but in speaking of recruiting in the province of Quebec, we must bear in mind certain facts, and I am glad that I am addressing myself this evening to leaders of the people from all provinces in Canada. First of all, Quebec is a self-sustaining province; she is the only province of the Dominion which does not receive any influx of immigration from abroad. Quebec receives no immigration from the British Isles, no immigration from the United States, no immigration from France, and practically no immigration from Belgium.

Mr. WRIGHT: Where do all the Jews and foreigners in the city of Montreal come from?

Mr. LEMIEUX: I was speaking of the French-Canadians—not that I despise the Jews and foreigners in Montreal; for after a while they cease to be foreigners, and become naturalized and just as good Canadians as my hon. friend and myself. I am not speaking of what we call the foreign element, but of the native born French-Canadians. The increase in population of French Quebec, if my hon. friend prefers that description, is due solely to her birth-rate, and we are rather proud of that. It is not so with the western provinces, or the great province of Ontario, to which flock nearly all British immigrants who come to Canada. In Ontario the trend is from the farms to the city: in Quebec, as all those who know the province will realize, the trend is in the opposite direction.

I hate to prove anything by the law of averages, but what I am stating now I state in good faith, and in order to dispel any prejudices that may exist in the minds of the people. I think I shall be able to prove to the satisfaction of the committee and of the country at large that Quebec is not below her proper proportion of recruits at the present time. Do not forget, that Quebec is above all things a rural province. We are being urged to increase production. Not later than two days ago I received a voluminous pamphlet urging the people of Canada to go in for more production, and still more production; and only this afternoon we were told by the Prime Minister that production was an imperative, yes, even an Imperial duty. If he did not use that expression, that is what I gathered from his remarks. The farming population in Quebec is primarily

needed on the farms. Bear in mind the appeal that is now made from the platform and in the press, in the province of Ontario and other provinces, for more farm hands. In the province of Quebec, with the exception of the city of Montreal, the city of Quebec, the city of Sherbrooke, and to a certain extent, the city of Three Rivers, our population is entirely rural.

What has the province of Quebec done in the way of recruiting since the beginning of the war? Let us face the facts without any prejudice, bearing in mind the situation as I have described it in good faith. I have stated that with the first contingent there were in round numbers 2,500 French-Canadians, and my right hon. friend will, I am sure, agree with what I am now going to say. In many battalions, in the Maritime Provinces for instance, and in Northern Ontario, and the western provinces, there was quite a large sprinkling of French-Canadian volunteers. The other day Mr. Mageau, the local member for Sturgeon Falls, stated through the press, that in a battalion organized in Northern Ontario at least 40 per cent were French-Canadian volunteers; and those who are familiar with conditions in my province and the facility with which the French-Canadian absorbs other races, know that in many other regiments there are any number of Ross's, Scotts, Warrens, Camerons, Campbells, who would be very surprised if you addressed them in English, because their language is French. So that, in addition to the 2,500 French-Canadians in the first contingent, at least 1,000 were sprinkled through the various English speaking regiments of Northern Ontario, and eastern and western Canada. Since a year and a half ago we have had a recruiting movement amongst the yeomanry of the province of Quebec, in which our public men are taking an interest. We have requested the Militia Department to favour the formation of French-Canadian units. I am glad to say the Militia Department gave a favourable answer to our request. I quite understand that there should be only one badge of nationality in this country—Canadian nationality. But look at what takes place in the Old Country. You have there the Irish Fusiliers, the Welsh Fusiliers, the gallant Scotch Grenadiers, and the English crack regiments. You cannot do away with these racial characteristics and affinities; they are deep-rooted, they are part of the soul of men of any nationality. At the beginning of the war I urged very strongly upon the Minister of Militia that not only should we have French-Canadian units commanded by French-Canadian officers, but that the various corps should also have their own national uniforms. That, I confess, was a hobby of mine, and, perhaps, I was wrong. I advocated it to promote the cause of recruiting. We have at the present time in Quebec thirteen French-Canadian units or battalions. Some of them are at the front, others are in course of formation, and others are ready to start. I have said that 3,500 have already gone, and that is a modest figure. Then we have these other thirteen units of 1,100 per unit.

Mr. MORPHY: How many are filled up?

Mr. LEMIEUX: Nearly half of them are filled up.

Mr. MORPHY: How are the others?

Mr. LEMIEUX: They are doing pretty well. I will give an instance. Yesterday I met Colonel de Salaberry. I may say, en passant, that I was instrumental in having Colonel de Salaberry brought from the front, where he had served with distinction. I appealed to the Minister of Militia, and said: Here is Colonel de Salaberry, the grandson of the hero of Chateauguay. He has served well and faithfully. Now we want a good name, we want a great name to induce our young men to follow the colours. The minister brought back Colonel de Salaberry, whom yesterday I met at church. Colonel de Salaberry has not been here more than four weeks, and he has already recruited 300 men. Three months ago. as the Prime Minister will remember, I asked him to give me a letter, which letter was read in Montreal at a public meeting to promote recruiting for the Desrosiers-Asselin regiment. Colonel Derosiers had been at the front. He was called back and started to form a regiment with Major Asselin. They had not one recruit three months ago, and to-day, I am pleased to inform the committee and the country, the Desrosiers-Asselin regiment is almost completed. Three months of recruiting, three months of organization and work, has brought the battalion together. I think that within two months, when perfectly drilled and trained, the men will be anxious and eager to leave for the front. Now, let me give a list of our thirteen French Canadian units:

1. 22nd Battalion, under Colonel Gaudet, at the front.
2. 41st Battalion, Lieut.-Colonel Archambault, at the front.
3. 57th Battalion,Colonel Paquet.
4. 69th Battalion, Lieut.-Colonel Dansereau. Just left for the front.
5. 150th Battalion, Lieut.-Col. Barré.
6. 163rd Battalion, Lieut.-Col. Desrosiers.
7. 165th Battalion, Lieut.-Col. Daigle.
8. 167th Battalion, Colonel Readman—an English name, mark well, but a French-Canadian.
9. 178th Battalion, Colonel Girouard.
10. 189th Battalion, Colonel Piuze.
11. 206th Battalion, Colonel Pagnuelo.
12. 230th Battalion, Colonel De Salaberry.
13. 233rd. Battalion, Colonel Leprohon.

Then there is the stationary hospital under Lieut.-Col. Mignault, to which my hon. friend (Sir Robert Borden) alluded to in very kind words this afternoon. Let me say, in passing, that speaking as one who has French blood in his veins, I thank the Prime Minister and the Canadian Government for the noble gift they made the old Mother Country, in providing a Canadian hospital for those wounded in France. There is also the stationary hospital under Colonel Casgrain, and the one that left a few days ago under Colonel Beauchamp. There is also a corps of engineers which left several months ago under Major Janin. Unfortunately Major Janin perished with the Arabic.

Mr. MORPHY: Is that the whole list?

Mr. LEMIEUX: I have given the whole thirteen battalions.

Mr. MORPHY: I thought the hon. gentleman said thirty.

Mr. LEMIEUX: Assuming 3,500—a very low figure—as the number of those who went with the first contingent, then add these thirteen regiments—

An hon. MEMBER: Battalions.

Mr. LEMIEUX: I should have said battalions. I am not a military man, although I have at the front a nephew who married a nice English-speaking girl from Ontario, and to whom I cabled "Good for you, you have settled the bi-lingual question." These thirteen battalions will number at least 14,000 men which, added to the number of those with the first contingent will make 17,500. I do not include the hospitals and the others I have already mentioned. But I say this to the right hon. Prime Minister and to my English-speaking friends on both sides of the House: give us General Lessard and let the Prime Minister and his ministers and the public men on this side of the House make a proper appeal to the province of Quebec, let the press of Canada be fair and generous, and I make bold to say that the old province of Quebec will respond nobly to the call of duty, King and flag.

Hon. GEO. P. GRAHAM: As we are all anxious that these resolutions should be reported to-night I trust the committee will bear with me for a few minutes. It is possible that I may not be here when the matter comes up in committee in the form of a Bill, and I would like to say a few words now. I do not think it requires any effort on my part, speaking in the absence of the leader of the Opposition, to reassure the Government, if that be necessary, that they have the hearty co-operation of every member in this House, no matter on what side he sits, in everything that is necessary to be done until victory finally comes to the cause which we all think is the noblest cause for which man ever contended. As to criticism, I think the Prime Minister invited criticism. Having been a member of a Government myself, let me quietly tell the members of the House who have not had that trouble on their hands, that although they may not think it, Governments like criticism. It is not an admission of weakness on the part of a Government to invite criticism. The Government would not dislike it if some of their own friends would criticise occasonally, and in this I speak from experience. Criticism enables a Government to stand off people of both political parties who ought to be stood off. Some criticisms may seem in Parliament to be of small importance, but nothing that tends to improve conditions can be called a small matter. I have taken considerable part in recruiting in my own weak way, and those things that we in Parliament regard as small are really the things that affect recruiting in the different localities. What is not a large matter to us sitting here to-night is mountain high in some localities when you appeal to the people on recruiting, or on behalf of patriotic founds. We must not however, lose sight of the magnitude of the war or forget the sense of proportions. Towering above all these things is the one great object we have in view, which is that Canada shall do her part, as she has been and is doing and will continue to do, until victory comes to the Empire. That is what we must keep in

view, and if I had time I would elaborate it, and say that even if we were not part of the British Empire, I would not feel that I was a good Canadian citizen doing my duty to my country, if I did not take some part in this fight for the betterment of world conditions.

The hon. member for Rouville has spoken of our fellow-citizen in the province of Quebec. Remember, we have many French Canadians in Ontario and throughout the West. I do not like to discuss these things, because we are Canadians, one and all, and in each doing his own duty, we will find that we have enough to do. Let us do our best in our own locality in the sphere in which we exert influence, and the results gained cannot but be good. If it be true that the recruiting in Quebec has not been what some people say it ought to have been, the men who have gone must have been of the real kind of stuff and worthy of the front ranks of any fight, because when we read the casualty lists we find French Canadian names dotted all through them. I say again that the men who have gone from the province of Quebec have not only brought lustre to their own province and to the land of their forefathers, but have brought credit and renown to the Dominion of Canada and to the British Empire as a whole. It would not be out of place for me to say as one not of French Canadian but of Irish descent, a word about the situation, as it may affect Canada, that has arisen in the land from which my forefathers came. In the present crisis John Redmond has proved himself a patriot of the right sort, a man who has won for himself greater distinction, if that be possible, than heretofore he enjoyed; a man who will have a bright page in the history of this Empire when it comes to be written in future years. He said recently, in condemning the outbreak in Dublin, that these foolish men were encouraged not only by Germans and German sympathizers, but by some misguided individuals on this continent. I think it will not be out of place for me to say, being of Irish descent, that there must be no mistake in the old land about the fact that in this case America does not include Canada. I know that I am justified in saying that from one end of Canada to the other the men who came from Ireland or whose fathers or grandfathers came from Ireland are true and loyal to the British flag. No people in the British Empire will condemn more strongly the outrages of misguided men in the city of Dublin, than will the Irishmen who have found a home in Canada.

I want to say this on behalf of the Militia Department. I myself have annoyed them terribly, although I think the Government will not say that I have criticised their conduct unduly in the House. It is better for the Government, it is better for the Prime Minister that criticism should come, if it is of the right kind, and the Prime Minister was wise in inviting criticism. We are passing to-night a resolution for the raising of $250,000,000. Who will say that we have engaged in undue criticism if in one day we pass in this House a resolution giving the Government a credit for that enormous sum. There is no desire on the part of any person but to get what is best out of the money we are expending, so that satisfactory results may come from its expenditure. I say that I have annoyed the Militia Department incessantly about things that they may have thought small. I am afraid, with all due deference to some of the speakers to-night, that I have annoyed the Department with things as small as some people think the criticism was to-day. But what may seem small here is big in some localities. I sent my complaints to the Militia Department, whether the information I received was good, bad or indifferent. Being personally acquainted with the deputy minister, I have loaded him with a great deal of material that he may have thought useless and cumbersome, but I have always received most courteous treatment. When representatives of the people in Parliament take some pains in these matters, the people appreciate that the Government and its supporters and the members of the Opposition are here to do the very best they can under these very serious conditions which confront us. Members sitting to our right and left, in front of us and behind us, are startled every time the telephone rings, jump every time a telegram is handed to them, are almost afraid to see an official of the Militia Department coming toward them, lest he have some bad news.

The situation has come home to us; members representing constituencies in this House have those dearest to them in the trenches, their lives hanging in the balance. Some have paid the highest tribute they could to their love of country, and it is with deep regret we have seen that a minister of the Crown has to mourn the loss of a dear son. It is a serious time, a serious situation. Whatever differences we

may have had, have sunk into insignificance in the one great task we have in hand. I have, in going through the country endeavouring to do something in the way of assisting in recruiting, been asked a question that has been asked here to-day, and in a measure I answered it myself by my experience. I have been asked: Why should men without experience be given commissions as officers. There are in localities in Canada men who are not military men, men who have had no military training and who, on the field might be failures; but as men holding the respect of the communities in which they live and having the power of organization and the ability to attract men to them, they make better recruiting officers than any general you could send into a community. Many of these officers, I imagine, will never go the front; I do not think they would be useful there, nor could they be trained in time to take charge of actual operations in the field. But until such time as the battalions are ready to be taken charge of for fighting purposes, these other men without training, are the very best men that can be secured to rally the recruits. I have several instances in my mind. In the city of Toronto, there is what they call the Sportsmen's Battalion, the officers of which have never had any military training, but they recruited that battalion with wonderful rapidity. That has occurred in several places, and I have entirely altered my mind as to the necessity of a man having military training to get together a battalion, because many officers who have never had military training have shown themselves best able to get together the men, who can then be trained by experienced military officers.

This resolution is for a large amount of money, and while it is a sad duty to vote it, still that sadness must be tempered by the consideration that we are glad in Canada that we are able to vote it, and we are doubly glad that there is no dissenting voice to our voting it from one end of the country to the other. It is divided into several parts and "the defence and security of Canada," is the first. We have all read in the newspapers lately items which give a certain serious aspect to that section. We have read recently of a plot unearthed in the city of New York for the destruction of the Welland canal and for other depredations in Canada. Money is necessary for the defence of Canada in Canada. Even those, of whom there are very few, who still insist that they should not go outside of Canada to serve the country, might possibly be put to work to do all this Canadian duty. We might take them on their own ground and put them to work defending Canada under this section.

12 midnight.

Mr. EDWARDS: They would not do much good.

Mr. GRAHAM: I should not like to say that.

Mr. MORPHY: You have to furnish the foe first.

Mr. GRAHAM: Let not my hon. friend be so sure. As I was remarking, a plot was exposed in the city of New York, which if carried out, would have done an immense amount of damage not only to Canada but to the Empire. Perhaps the hon. member has read also a confession by a man in New York who said there was another plot to gather together a certain number of men near the Canadian border and rush them across. They could not have accomplished anything; they could have been taken care of if they had come across the line, and I have very grave doubts if they would have been allowed to cross. It is necessary that certain money should be devoted actually to the defence of Canada in Canada, and I was making the suggestion that if it be necessary, the very few men in certain parts of Canada who insist that they are ready to fight but would not go outside of Canada to fight, should be utilized for that service.

Mr. EDWARDS: With Choquette for leader.

Mr. GRAHAM: This resolution also provides "for the conduct of naval or military operations in and beyond Canada," which includes, of course, all the operations in which we are engaged, and which are of mighty import. The vote also provides for: "Promoting the continuance of trade, industry and business communications, whether by means of insurance or indemnity against war risks or otherwise." This is not the most unimportant section of the resolution because if the trade or the industry of Canada in its various parts were to fall down, we might become a burden to the Motherland and the Allies, instead of an aid to them because, on the continuance of our trade and industry, as far as we possibly can continue it, rests our financial progress, and without that financial stability we might be a burden instead of an aid. Money expended along those lines is second in importance only to the money spent in buy-

ing munitions and paying for the men at the front. The resolution also provides money for: "The carrying out of any measures deemed necessary or advisable by the Governor in Council in consequence of the existence of a state of war." This section is one of some considerable importance. Then the resolution says:

> Payments made for the said purposes during the fiscal years ending respectively the thirty-first day of March, nineteen hundred and fifteen and the thirty-first of March, nineteen hundred and sixteen, in excess of the amounts authorized by the War Appropriation Act, 1914, and the War Appropriation Act, 1915.

At the beginning, of course, no person had any idea that the war was going to be of such magnitude or that the expenditure was going to be of such huge proportions, but now, we are prepared to accept almost anything. This clause must mean that the Government has found itself obliged to expend a good deal of money, by Governor General's warrant I presume, in excess of the amount provided in 1914-1915.

Sir ROBERT BORDEN: There have been no Governor General's warrants.

Mr. GRAHAM: The money was expended in excess of the vote.

Sir ROBERT BORDEN: Yes. At least liabilities have been incurred. I think they came to about $10,000,000 more than the amount provided in 1914-15 and to about $50,000,000 more than the amount provided in 1915 and 1916, the reason in the latter case being, of course, that the establishment was increased very much beyond the number estimated for when we voted the $100,000,000 last year.

Mr. GRAHAM: I was not finding fault with the money being expended; I was referring to the method in which I supposed it had been expended, and I was going to say that I hope that in the future— and I hope that the future will be very much restricted—the vote we are making now will be fully ample to meet the requirements without being over-expended. Of course if the necessity arises, Parliament will uphold the Government in any expenditure necessary, but it will be wise to make the amount as large as we think will be needed so that the Government may not be put in the position of over-expending the appropriation. These are things that struck me as I was reading the resolution. No matter what we may think, this is a very important resolution. It involves an enorous amount of money, and while we are anxious to put it through and expect to put it through in a very little while, it is wise that we should understand it and understand what is expected to be done, always keeping in mind that it is efficiency we are after and not carping criticism. I might ask the Prime Minister whether, when the Bill is in committee, he will be able to give us information as to the probable expenditures under the various heads in the resolution, or whether the Bill founded on the resolution will be subdivided in that way. I am not asking for that information to-night, because it would involve too much detail, but when the committee comes to deal with the Bill founded on this resolution I presume that questions will be asked, and the Government should be in a position to give us an idea of what is likely to be the subdivision of expenditures for the coming year.

Let me say, in conclusion, that no matter what party they may belong to—I do not care from what country their fathers or grandfathers came, or how long they have been here; no matter what the differences of opinion may be, or what criticism may be made of what the Government has done, or has not done, let all the people of this country understand; let the people of the Empire fully understand, as they do; let the Allies understand, and, above all, let our enemies understand that the Canadian people are as one behind the Government until this war is won and victory crowns the cause to which we are all so devotedly attached.

Sir ROBERT BORDEN: I appreciate very much what has been said by my hon. friend who has just addressed the committee, and who has given evidence that he understands the very great responsibilities which have devolved upon the Government in the conduct of this war. Responsibilities have come upon us, especially during the past year, with the vastly increased establishment of the military forces, which no one of us could have anticipated in August, 1914. Not only has the magnitude of the war proved greater than we supposed at that time, but its probable duration will also be much longer than any of us then imagined. I am also very grateful to the hon. member for Red Deer (Mr. Clark) for his appreciation of those responsibilities, and for his tribute to the purpose of the Government in what it has done towards making our part in this war effective. Probably no one who has not been brought

closely in touch with those responsibilities can adequately appreciate what they have been. Therefore, a word from any hon. member of this House testifying to his understanding of what the burdens of Government have been during the past eighteen or twenty months is very acceptable to those who have had to bear the weight of those responsibilities.

While I do not in the least suggest that the discussion has been too long—I would not have been surprised if it had lasted more than one day upon the resolution itself—nevertheless, some of the matters which have been dealt with were of a rather trivial nature, as has been observed, although they may loom very large, as the hon. member for South Renfrew (Mr. Graham) has said, in the immediate communities which they concern. So far as the responsibilities of the Government are concerned, I hope it will be understood, not only by the members of this House, but by the country, that the various transactions and affairs carried on through an enormous territory in this country are in many cases absolutely beyond the direct control of any member of the Government, or, for that matter, of any departmental officer. Naturally such transactions cannot be dealt with by a wholly centralized administration in a country which extends nearly 4,000 miles from the Atlantic to the Pacific, and which is composed of a great many scattered communities.

In the first instance, I should like to refer to the question of patronage, which has been discussed by a good many hon. gentlemen on the other side of the House. Let me affirm to the members of this committee, and to the country, that, so far as I am concerned, and so far as the Minister of Militia is concerned—he has had mostly to do with them—there has been absolutely no desire or intention on the part of the Government to deal with these matters from any party political standpoint. In the early months of the war the question of contracts was brought to my attention by an hon. gentleman who owns allegiance to the party which is represented on the other side of the House, and I told him at that time that it was not seemly or desirable, whatever the practice might be in ordinary conditions, that such matters should be dealt with from a party political standpoint. I am in a position also to affirm, on behalf of the Minister of Militia, that that was precisely his own view. Indeed, on many occasions, on countless occasions, I might say, during the past 18 or 20 months the reproach has been made to me personally, and it has been made with regard to the Minister of Militia, that party considerations had been absolutely put aside, and that the conduct of this war by the Government had been of such a character as to discourage some members of the Conservative party. These reproaches have even been carried to the extent of suggesting that military officers who had been appointed by the Minister of Militia and Defence were using the positions, which he had entrusted to them, for the purpose of injuring or discrediting the Conservative party. I have always said in reply to such representations that these officers had been selected for the reason that they were efficient, and because the Minister of Militia and Defence believed them to be the best men for the particular positions entrusted to them, and that I was not disposed, nor was the Minister of Militia disposed, to attach importance to representations of that kind. It is possible that in a number of localities persons affiliated with the Conservative party may have endeavoured to make use of patronage in regard to some of the matters complained of, but, so far as any information which has come to me is concerned. I believe that the hon. gentlemen who have put forward those views in this committee have been rather misled in the instances referred to, or that the cases have been very much exaggerated.

My hon. friend from Regina (Mr. Martin) referred to recruiting in small communities, and he doubted the expediency or value of that system which has been pursued during the past winter by the Minister of Militia and Defence. The minister discussed with me and with his other colleagues the method before it was put into operation. and it was his idea that keeping men a certain number of months in the community in which they were recruited would accomplish two purposes. In the first place, they would be under the eye of their immediate relatives, under the eye of the mothers and the fathers of the boys during the early months of their training. Their parents and immediate relatives would know the associations into which they were brought and would probably have greater confidence in sending them forward to camps at a later date if the early preliminary training took place in the communities where these young men lived. In the second place, he had in mind,

whether rightly or wrongly, that such training for a few months would be equally as valuable as it would have been if the method suggested by the hon. member for Regina had been pursued. As an illustration of that, may I point out to my hon. frind from Regina—whose remarks were put forward in a very reasonable way, and whose criticism, if it can be called criticism, was of a character that the Government will always welcome—that I see every day from my office window in the eastern block, men being trained upon the lawn of Parliament Hill and I see them being trained in squads of about eight. I have seen that going on day after day and for a time I wondered why it was so done. But I think I appreciate the reason for it, namely, that the first training which the soldier must receive is what is called squad drill and that can go on equally well in the community where a few men are recruited as in larger camps.

With regard to the criticism that has been made of the medical inspection, I have sought information from the Deputy Minister of Militia and Defence and he has informed me that our inspection in Canada is equally as strict as that in the United Kingdom. It may be that too much zeal on the part of recruiting officers has led to some influence being brought to bear on the medical men who examine these recruits; I will neither affirm nor deny that because I do not know. I understand, however, from the deputy minister that after these men are sent to camp, as they all will be sent to camp, a further medical examination takes place, and then very possibly some of the men who have been accepted by the local medical officers may be weeded out. It would be difficult to devise a method by which incidents of that kind would be entirely avoided. We have to select the medical men in different parts of the country. There has been some suggestion that they are selected on account of their political affiliations. I venture to think that that cannot possibly be correct and I will give an illustration in my own constituency. In many cases, as I know, in Nova Scotia men are selected not by the Department of Militia and Defence but by the local recruiting associations. There was a gentleman in my own constituency, a man honoured by those who are his friends politically and by those who are opposed to him, a man who has been in practice for forty years or more in the locality in which he resides. There is also in the same locality a young man, a member of an old and well known family in that particular district, who has been in practice only two or three years, whose family has been recognized as the champions and leaders of Liberalism in that district for a great many years in the past. When it became necessary during the past year to select a medical officer for the examination of recruits in that district, the man selected was not the physician who had been practicing for forty years and who was honoured and respected by all and who happened to be a Conservative, but the young man of two, three, or four years' standing who happened to belong to about the strongest Liberal family in the district. I should think that an illustration of that kind would convince hon. gentlemen on both sides of the House that the selection of medical officers has not been conducted in so far as the Militia Department is concerned, with any regard for political affiliations.

Then the statement has been made, that in some cases a sufficient sense of responsibility has not impressed itself upon the officers commanding regiments or engaged in recruiting regiments. My hon. friend from Regina gave a reference to the case of Private Robert Darragh whose family, most unfortunately, were not made acquainted with news of his illness. I shall have that matter inquired into. As far as commanding officers of regiments are concerned, when well founded representations are made to the department that any officer is not discharging his duties with competence an inquiry is made by the Adjutant General. An hon. member on the other side of the House within the past week wrote me a letter representing that a certain commanding officer was not filling the bill, if I may use that expression, and that the particular regiment which he was recruiting would not be effectively organized or properly trained unless some change were made. The course which I took is the one which, I believe, has been taken in all such cases by the department. The matter was referred to the Adjutant General to whose branch such matters naturally appertain, and he was instructed to send a special officer for the purpose of inquiring into the organization and probable efficiency of that battalion if it should continue under the command of that officer. The complexity of these matters that daily

present themselves to the officers of the Militia Department, and to the minister whoever he may be who is entrusted for the time being with the administration of the department, is very great indeed and probably beyond the conception of those who have not been brought personally and closely in touch with it.

My hon. friend from Pictou (Mr. Macdonald) referred to some matters. I was rather surprised to hear him express the view that I had been taking undue credit to the Government, or to the department, with respect to what has been accomplished in this country. It has been my duty on a great many public occasions——

Mr. MACDONALD: I was not speaking of the personal attitude of my right hon. friend because I did not accuse him of having made that statement, but I was referring generally to the claim that was made to the effect that the way we had responded to the demands of the war was a matter of wonder. I said that it was not a matter of wonder.

Sir ROBERT BORDEN: That is another matter and I will come to it in a moment. It has been my duty on many different occasions to point out, as I am glad to do now, that without the splendid spirit of the Canadian people, and the equally splendid support that they gave to the Government, it would not have been possible for any Administration to accomplish all that has been done in the past twenty months. Let there be absolutely no doubt about that. My observations were made rather for the purpose of impressing on the members of the committee, and upon the people of the country, the very great magnitude of the task that had been undertaken with the support of the Canadian people, and to express the belief that that task had been discharged in a manner fairly creditable to this Dominion and to its people. In regard to the number of men who have been enlisted, my observation was to the effect that not one of us would probably have believed in August, 1914, that within eighteen or twenty months 310,000 or 320,000 men would have rallied to the colours of this country, or that there would have been occasion for them to do so. It is all very well for us to-day, with all this accomplished by the Canadian people, to say we had no doubt upon the subject; but I venture to think that if we had looked forward in August, 1914, to the enlistment of 310,000 or 320,000 Canadians within the period that has intervened, we could hardly have believed that it would have been accomplished with the expedition and efficiency which we have witnessed.

My hon. friend also alluded to a supposed lack of enthusiasm because the militia units did not go forward as such. I have not found any lack of enthusiasm by reason of that or by reason of anything else. The mere fact that more than 102,000 men have rallied to the colours in the first three and a half months of this year indicates that there is no lack of enthusiasm in any part of this country; and as far as militia units are concerned, there has been no reason why any militia regiment should not organize a regiment for overseas service. That has been done in several cases. It has been done, I am informed, by the 89th Rimouski Regiment and by the 65th Regiment of Montreal. The Grenadier Guards of Montreal, the 5th Royal Highlanders, the Victoria Rifles, the 48th Highlanders, the Mississagua Horse, the Queen's Own, the 10th Royal Grenadiers, the 90th Battalion of Winnipeg, the 55th Irish Rangers and other militia regiments have raised or are raising overseas battalions with the parent regiment.

My hon. friend from Pictou also alludes to the work of a gentlemen who bears my own name, Colonel Borden, and I entirely agree in the appreciation that he has expressed of Col. Borden's work. He seemed to have some apprehension about the Highland Brigade. Let me tell him that those apprehensions are entirely groundless. The only question about the Highland Brigade and the 85th Regiment is this: The 85th Regiment was organized by Col. Borden, and is now fairly well trained and practically ready to go to the front. The only question to be determined is whether, inasmuch as the 85th Regiment under the command of Colonel Borden was really ready to go to the front and had been organized for a considerable time, and having regard to the further fact that if the regiment was retained in Nova Scotia it would be very useful, not so much in the organization, but in the training of three other regiments which had been recruited there—the question is whether, having regard to these considerations, it would be better in the public interests for the 85th Regiment to go immediately to the front, or to remain in Nova Scotia, going to Aldershot or some other central point, and assist in training the new regiments which had really been raised through the efforts of Col. Borden in co-relation with the 85th, which he commands. The Chief of the

General Staff has been consulted about that, and I understand that Col. Borden himself has been sent for, and his opinion will be considered before any decision is arrived at.

My hon. friend referred to recruiting officers, and their inability to pay for a band. I really do not know anything about details of that kind. I do not suppose it would be proper to pay for a band unless there was some authorization for it from the Department of Militia and Defence. Recruiting has been carried on in many parts of the country by voluntary effort, and the Government is most profoundly grateful, and I think the people also ought to be profoundly grateful, to the men who, night and day, have been devoting their energies to this good work. It has been done to a very great extent in a voluntary way, and possibly it may have occurred that some of these voluntary associations have not been able to give an undertaking that the Department of Militia and Defence would pay certain expenses. All that, however, simply shows due regard for the public interests, to the end that public money shall not be expended except under adequate sanction

The hon. member for Pictou speaks of cold water being thrown on idealism by reason of the improper distribution of contracts for supplies. I do not quite agree that the idealism of the people of this country is influenced by considerations of that kind. He speaks of some gentleman in Cape Breton having undertaken to bring the affairs of the Hospital Commission into a question of patronage.

Mr. MACDONALD: No. The question was whether or not the Government was going to take a certain hospital, in which event he was going to prepare a list of employees whom he would recommend.

Sir ROBERT BORDEN: All these hospitals are regulated by a commission of gentlemen who have been appointed without regard to their political affiliations, and if there is any gentleman in Cape Breton or elsewhere who imagines that the Hospitals Commission is administering its affairs with a view to political patronage, all I can say is that that gentleman will find himself very thoroughly mistaken in the end.

Mr. MACDONALD: I am not complaining about the Hospitals Commission.

Sir ROBERT BORDEN: With regard to the obtaining of commissions through favoritism, my experience of these matters has been that the Minister of Militia and Defence has sought to get efficiency, and has been guided by that consideration alone. One hon. gentleman opposite, I am not quite sure who it was, indicated that the Government might be subject to criticism whichever course was pursued. For example, if a Conservative was appointed to a particular commission, the allegation would be made that it was done through favouritism, and if a Liberal had been selected for the command, the allegation would be put forward that the commission was offered for the purpose of getting the man out of the way, and clearing the political atmosphere.

With regard to machine guns, about which my hon. friend from Pictou has made some inquiry, I do not understand that there was such an appeal made by the Government as he suggests. Let me state what the situation was. The Government of the province of Ontario, for example desired to make some contribution to the war through the Federal Government. They suggested and desired machine guns, and we accepted their proposal in the same spirit in which it was put forward. The matter was fully explained to the public in a letter which I wrote to the Government of Ontario, and which I believe was made public by that Government at the last session of the legislature. A gentleman, a splendid patriotic citizen of this country, who had lost a very near relative in this war, came to the Government nearly a year ago and desired to make a contribution of $100,000 as a memorial, so to speak, of the sacrifice which his brother had made in giving up his life in this war. He was especially desirous that that sum should be utilized by this Government in the purchase of machine guns, and if the regulations of the War Office would permit it, that those guns might be added to the ordinary establishment of regiments in the British service for our Canadian forces when they went to the front.

Mr. LEMIEUX: Was that Mr. James Carruthers?

Sir ROBERT BORDEN: No, it was Mr. Huntley Drummond, of Montreal. We assented also to that. Then the matter was taken up in the press, and appeals were made. At that particular time a great deal was said in the press as to the vast importance of machine guns at the front. The Government had not been idle in the meantime. I remember, I think it was in October, 1914, when I was attending to the affairs of the Department of Militia and Defence for about a week, it was represented to me that unless a certain proposal that

was made to us with regard to the provision of machine guns was accepted at once, we might lose them altogether. The number of guns in question was 250. I directed that the guns should be ordered at once, and they were ordered the same day the matter was brought to my attention. Further orders were given during the autumn and winter, and very considerable orders during the spring and summer of 1915. The Government had in mind the necessity of machine guns throughout. But when this campaign was made by the press in various parts of the country, patriotic people all over Canada were naturally very much interested and enormous sums of money were subscribed and very large amounts paid in. If I remember well the total amount of subscriptions paid in was nearly $800,000. When I returned from Great Britain the matter was brought to my attention and I made a public announcement in the city of St. John as to what the desire of the Government was. I have not the words before me, but I made it clear that so far as the provision of machine guns was concerned, that should be defrayed from the public treasury, and I expressed the hope that those desirous of giving of their means for patriotic purposes would contribute rather to the Patriotic Fund, the Canadian War Contingents Association, the Red Cross Fund and other movements of that kind. I found it necessary to make three or four public statements before the movement came to a standstill. Then the question was, what should be done with the money that had been paid in? After very careful consideration we arrived at the conclusion that it would not be desirable, or even possible, to repay those sums. In a few cases request was made of the Government that sums contributed should be repaid. In all such cases the same answer was given and the reasons explained why, under the circumstances, the Government thought it undesirable to begin repayment of these sums. One reason was that a portion of the money had been applied to the purpose for which it was given, and we did not see that it would be useful or desirable to entertain any request for repayment.

My hon. friend from Pictou has also spoken of the commandeering of ships, and with a great deal of what he has said I desire to express my concurrence. I can assure him that this Government has not been behind hand in placing before the Government of the United Kingdom all the considerations he has expressed, and in several instances at least we have induced the British Government to reconsider their determination to commandeer vessels engaged in the local trade of Canada. For very good reasons we took that stand. It is quite impossible for a committee of the Admiralty in London, upon which the Government or the people of Canada have no representative, to be thoroughly aware of the local conditions in this country, to be thoroughly aware of the interests of our people and their dependence upon water communication. All this has been put forward in very cogent terms, and on a very great number of occasions during the past four or five months that very subject has been the cause of urgent communication from the Government of Canada to that of the United Kingdom.

I join my hon. friend from Pictou in his tribute to the women of Canada for their splendid spirit of devotion and self-sacrifice in this war.

The hon. member referred also to recruiting for the naval service. I regret that I am not able to give information on that subject, but the Minister of the Naval Service, no doubt, will do so.

The hon. member was inclined to criticise the efforts put forth by the Department of Agriculture and the Department of Finance to impress upon the people the importance of production and the necessity for saving. I do not think that an admonition of that kind is out of place, notwithstanding the view of my hon. friend to the contrary. I recollect being very much impressed by a remark made to me by a representative sent by the Government of Denmark to this country a few years ago, I met him for a few moments on Parliament Hill, and, in the course of a short discussion, I asked him: What is it that has impressed you most during your visit to this country up to the present moment? He answered: "If I may be perfectly frank with you, the thing that has most impressed me in this country during my visit is the awful waste that goes on in Canada from the Atlantic to the Pacific." I think that increased production, the desirability of saving and the elimination of waste ought to be impressed upon the people of Canada during this war, and in my judgment the Department of Finance and the Department of Agriculture have made no mistake in the movement for that purpose which they have initiated.

So far as cruel and unusual punishments are concerned, I entirely agree in condemnation of such methods. The Deputy Minister of Militia and Defence informs me that there is no warrant for them in the militia regulations. Every necessary investigation will be made—an investigation is being made at the present time,—and if it is found that the allegations made in this House with regard to this matter are well-founded, then the necessary action must of course follow.

My hon. friend from Kings, P. E. I. (Mr. Hughes) brought up matters with which I shall not trouble the House to any great extent, but I desire to say a word or two about some of them. As to powder milk, I am informed that the analysis to which exception is taken was made by the Dominion Analyst, and the department thought themselves entitled to rely upon it; also that the ration of which powder milk formed a part was determined by the Army Service Corps, and that tenders were called for in the usual course.

With regard to the advertisement of the Military College, he said that a newspaper somewhere in his province had not been permitted to publish it. The Deputy Minister of Militia and Defence informs me that the publication was restricted to a few papers, and that many Conservative newspapers have applied for permission to publish it and have been refused.

The hon. member says that " 600 canned Canadian officers "—to use his expression embodying some wild misinformation of which he has become possessed—are to be found in Great Britain at the present time. I am informed that a certain number of officers in Great Britain are what is called " supernumeries," but all are attached to some unit and all are employed.

Some hon. member on the other side, I think it was the hon. member for Kings, P.E.I. (Mr. J. J. Hughes) criticised members of this House who have put on uniform in the endeavour to do their duty as loyal, patriotic sons of this country. My hon. friend is sufficiently answered by the hon. member for South Renfrew (Mr. Graham), who points out that, even where men do not possess the military knowledge and experience which would enable them to go to the front, or even where they are beyond military age and could not face the physical endurance required of them if they should go to the front, nevertheless they can give real and valuable service to this country by devoting their energies in the communities where they reside to promoting the enlistment of battalions which will go to the front. It seems to me that such efforts are not to be condemned, but are to be commended.

My hon. friend from Westmorland (Mr. Copp) spoke of many matters as to which answer has already been made by the hon. member for Cumberland (Mr. Rhodes.) I will not pause to deal further with them. There was no wish or sanction on the part of the Government for any departure from well recognized and proper methods of administration in the county of Cumberland or elsewhere.

My hon. friend the member for Rouville (Mr. Lemieux) spoke of General Lessard having been ignored since the outbreak of this war. I must take exception to that statement, because General Lessard has been engaged in the discharge of exceedingly important duties. I do not believe that any man at the front has had responsibilities that are more important or that have been discharged more adequately than those assumed by General Lessard in his position as Inspector General. I know of his work in the province of Ontario, and I believe that he has rendered most valuable service to Canada and the Empire in the discharge of his highly important duties as Inspector General. The hon. gentleman has spoken of the assistance which General Lessard could render to the cause of recruiting in the province of Quebec; I should be very glad to take all that into consideration. I pay a tribute also to the gallant and loyal citizens of French origin from the province of Quebec who have gone to the front and who have in very many cases notably distinguished themselves. I paid the same tribute to them when I had the privilege of being in France and Belgium last summer. I had the honour on that occasion of congratulating some of them upon the fine service which they had rendered to this Dominion and the whole Empire.

My hon. friend the member for Edmonton (Mr. Oliver) spoke of certain matters as to which I gave him answer at the moment, except in one respect. He suggested, indeed, he asserted, that the lists of casualties were being dealt with by some authorities—I am not quite sure whom he intended—not with the view of giving information to the public as it ought to be given at the earliest possible moment, but with the view of political expediency and in order to cover up the shortcomings of those who are responsible for the conduct of this war. I desire so far as this Government is

concerned to repudiate in the strongest terms consistent with Parliamentary usage any such statement as that. I am informed and I believe that the casualties are published in this country as speedily as possible consistently with the considerations to which I alluded when answering the hon. member for Edmonton. It is necessary in the first place that the next of kin so far as they are known shall be notified. The telegrams are decoded, the men are identified, all the detail that is necessary is dealt with, and after all that has been done the casualties are published at the earliest possible moment. So much is this the case that the staff of the Department of Militia and Defence which is charged with this duty remains at work until four or five o'clock in the morning whenever these casualty lists come in. The idea is to give notice to the immediate relatives of those who are killed or wounded, and when it is ascertained that that advice has been given to the immediate relatives, not a moment's time is lost in making the casualties public.

I do not know that there is anything further with which I need trouble the committee at the moment. In conclusion, I hope hon. gentlemen on both sides and the people of the country will at least give those responsible for the administration of public affairs, under these circumstances of great strain and urgency, the credit of believing that they are inspired by a fixed resolve to do their duty. So far as I am concerned and so far as my colleagues are concerned, we have devoted ourselves to the great common purpose, which is of the highest possible import not only to this country but to the Empire and to the world, with all the energy that in us lies.

Resolutions reported and concurred in.

On motion of Sir Robert Borden, the House adjourned at 12.55 a.m., Tuesday.

Tuesday, May 2, 1916.

The House met at Three o'clock, the Speaker in the Chair.

SUPPLEMENTARY ESTIMATES FOR 1916-17.

A message from His Royal Highness the Governor General transmitting Supplementary Estimates for the year ending March 31, 1917, was presented by Sir Thomas White (Minister of Finance), read by Mr. Speaker to the House, and referred to the Committee of Supply.

WAR LOAN—$250,000,000.

Sir ROBERT BORDEN (Acting Minister Militia and Defence) moved for leave to introduce Bill No. 97, for granting to His Majesty aid for military and naval defence.

Motion agreed to, and Bill read the first time.

MILITARY DECORATIONS.

Sir ROBERT BORDEN: A list of decorations, medals, etc., awarded to members of the Canadian Expeditionary Force was received some time ago and a copy of the same was laid on the table of the House on the 12th April. It was afterwards ascertained that the list so received contained certain errors. It was therefore checked by the Records Office with the London Gazette to the above date, and I lay upon the Table the corrected list.

HOUSE OF COMMONS.

SITTINGS AT TWO O'CLOCK.

Sir ROBERT BORDEN: It has been suggested to me by some hon. gentlemen on both sides of the House that it might be more convenient, and would tend to the equal expedition of business, if, instead of arranging for morning sessions, the House should meet at two o'clock. I am ready to accept that suggestion if it meets with the approval of the House, and therefore, if there is no objection, I would propose the motion on the Order Paper in that amended form:

> That on and after Wednesday next, the third day of May, and until the end of the session, this House shall meet each day at two o'clock in the afternoon.

Sir WILFRID LAURIER: I understand that the Government have nothing further to bring down?

Sir ROBERT BORDEN: I do not think there is anything more of an important character. There may be one or two trifling measures. I recall to mind possibly a slight amendment to the Exchequer Court Act. It is to meet a difficulty that my right hon. friend encountered—

Sir WILFRID LAURIER: There is no objection at all. Any matters of that kind would not count. I had in mind important legislation. There have been persistent rumours that the Government was contemplating railway legislation. I see that in the Estimates that have just been placed

upon the Table there are appropriations for the Grand Trunk Pacific and the Canadian Northern. I presume this is the legislation the Government had in contemplation, and nothing more.

Sir ROBERT BORDEN: That is the legislation contemplated.

Sir WILFRID LAURIER: And no more railway legislation of any kind?

Sir ROBERT BORDEN: I am not quite sure about that, but if there should be I do not know that meeting at two o'clock would greatly interfere with the discussion of it. Nothing has been decided upon up to the present time.

Sir WILFRID LAURIER: I understood my right hon. friend to say a moment ago that nothing more of consequence would be brought down—only an amendment to the Exchequer Court Act and things of that character. If that be so, there is nothing more to be said. What I wanted to know was whether we were to expect any more railway legislation of an important character.

Sir ROBERT BORDEN: Nothing has been decided upon so far. The only thing that has been decided upon is what I mentioned to my right hon. friend a moment ago.

Sir WILFRID LAURIER: The motion as amended by my right hon. friend is not so objectionable as a motion for morning sittings would have been, but my right hon. friend knows that as a general rule the mornings are not taken until we know what the programme of the Government contains in the way of important legislation. We resort to the morning sittings only when the business remaining to transact is not of a contentious character, though it may be important. At present on the programme of the House there is nothing of any consequence, barring the resolutions which have been brought down to-day and the measure relating to the war loan. As to the war loan there is no contention on our side; it will be scrupulously looked into, but not in any contentious spirit. But I will not say that of the very important resolutions that have been brought down to-day. I see that it is proposed to give further aid to the Grand Trunk Pacific and the Canadian Northern. These resolutions must have been the result of negotiations between the Government and the respective companies, and there must have been important and voluminous correspondence between the Government and the two companies in regard to it. The only suggestion that I have to make to my right hon. friend is that before we change the programme and meet at two o'clock in the afternoon we should have that correspondence. I hope it will be brought down immediately.

Sir ROBERT BORDEN: I understand that the Minister of Finance will be able to lay on the Table to-morrow any documents that are available.

As my right hon. friend has observed, we are not proposing to make any very important change. Some hon. members, to my certain knowledge, would be very glad to see the House meet at two o'clock in the afternoon instead of three, as a general rule. I departed from the proposal to hold sessions in the forenoon because there was a feeling, possibly well grounded, among some hon. gentlemen on both sides of the House that we should really get through more business by beginning at two in the afternoon than at eleven in the morning, as the latter would necessitate hon. members coming a long distance from their various places of residence in the city to this Chamber as at present located, and then going back home at one o'clock, and returning again for the afternoon sitting. So I thought the proposal which I have made would tend to an almost equal expedition in the despatch of business, and would at the same time meet the convenience of hon. gentlemen on both sides of the House.

Sir WILFRID LAURIER: After the statement of my right hon. friend, the correspondence respecting these appropriations will be brought down to-morrow, I have no objection to the motion.

Mr. GRAHAM: I should like to make a suggestion to the Prime Minister, and it is perhaps worthy of the consideration of the House. During the session we are sitting here night after night—at least, some of us are—

Sir ROBERT BORDEN: A few of us.

Mr. GRAHAM: Sitting here night after night is wearying work, and a man cannot do as good work the next day as he could if he had had the ordinary hours of rest. At one time I had the honour to be the leader of the Liberal party in the province of Ontario when the late Sir James Whitney was Premier, and without any undue

publication we made an arrangement by which we sat only three nights a week during that one session. The result was that the members were all fit for work the next day, the business was just as well done, and the session was no longer than it otherwise would have been. I would suggest that it would not be a bad idea for the Government to try an experiment of that kind next session, perhaps having the programme in better shape when the House meets, and cutting out the night sessions partially, and nearly all of the late hours.

Sir ROBERT BORDEN: Does my hon. friend mean that the Legislature met earlier in the day?

Mr. GRAHAM: We met at exactly the same hours and I think the business went through just as rapidly. Possibly some of us did not speak at so great a length as we do now. At all events, the business went through, and the session was no longer than when we were accustomed to sitting every night.

Mr. ROGERS: You had no Maritime Province affairs to deal with.

Sir ROBERT BORDEN: If we could get into a reasonable frame of mind in regard to business, and possibly cut out some matters of rather a trivial character that are frequently brought up and consume a good deal of time, I daresay the proposal of my right hon. friend might result as he anticipates; but of course the number of members in this House is very much greater than the number in the Ontario House, and members naturally have regard to their usefulness and the importance of the constituencies which they represent. I am afraid it would be rather difficult to get through the business of the session by sitting only between the hours of three and six. In the United States they meet in the forenoon.

Sir WILFRID LAURIER: They meet at twelve o'clock.

Sir ROBERT BORDEN: And I do not believe they sit in the evening, as a rule.

Sir WILFRID LAURIER: Very seldom. The hours are from twelve to six.

Sir ROBERT BORDEN: If any such consummation as that could be brought about, I am sure that no one in the House would welcome it more warmly than I should, because, while very late sessions are trying upon all members of the House, and especially upon those who remain to the end, they are naturally more trying upon members of the Administration than upon any other members of the House, as my hon. friend from South Renfrew will have realized during the time he was a member of the late Administration. I shall be very glad to consider what he has in mind, and if it should be thought desirable that we should meet earlier in the day, and hold committee meetings in the evenings, as far as I personally am concerned, I shall be very glad to try the experiment.

Mr. MARCIL: If the House does not sit at night there is no reason why the committees should not meet earlier in the morning, or why the business of the House should not be transacted between two and six in the afternoon. Experience has shown that the afternoon sittings are the ones at which most business is done, and if the evening sittings were cut out the committees could meet at nine-thirty or ten in the morning, and get through by twelve or half-past, and the House could meet at two and go on till six or even seven, if necessary.

Motion amended as proposed, agreed to.

PRIVILEGE.

MR. KYTE'S SOURCE OF INFORMATION.

On the Orders of the Day:

Mr. KYTE: I desire to say a word or two on a question of privilege. I notice in the Montreal Gazette of to-day's date the following despatch:

> A feature of the testimony to be taken by the Royal Commission investigating the Kyte fuse contract charges which is being awaited with interest in Ottawa is that which will show from what source the member for Richmond obtained the information on which he based his series of allegations as to million dollar commissions. There has been considerable speculation ever since Mr. Kyte's speech, in which he read an alleged contract for the division of huge commissions among Messrs. Yoakum, Cadwell and Bassick, as to the source from which the contract came. It has already been stated, and has not been denied by the Opposition, that no such contract has ever been executed. It is now understood, however, that information was obtained from a firm of German-American lawyers in New York, and how Mr. Kyte obtained possession of it is the mystery to be solved. That statement is being freely made in the corridors that it was the firm in question which was the source of his information, and if this is the case it is of interest that the same firm has never had any hesitation in acknowledging its strong pro-German sympathies. If this is brought out in evidence there will be little sympathy for Mr. Kyte in Canada.

That article contains two statements which I desire to contradict in the most

emphatic terms. The first is as to whether or not a contract actually existed between Yoakum, Cadwell and Bassick for the division of the $1,000,000. I state most emphatically that my information is that a contract signed, sealed and delivered between these parties does exist. As a matter of fact, its existence was not denied by the hon. Minister of Militia and Defence when he made his speech in this House in reply to me. As to the second statement, with respect to the source of my information, I desire to say that my information came from sources as loyal to British interests as those which are associated with the Montreal Gazette. I do not make the statement with any desire to be offensive towards or to impugn the loyalty of any person associated with that newspaper. I think it is important that this denial be placed upon record at the earliest possible moment, and, as the evidence comes before the Royal Commission from day to day, it will be time enough for the Montreal Gazette, or any other newspaper, to comment upon the value of it.

THE BILINGUAL QUESTION.

On the Orders of the Day:

Mr. MARCIL: In the absence of the hon. member for Kamouraska (Mr. E. Lapointe), I would ask the Minister of Justice if he would kindly complete the return which he has brought down with respect to certain legislation of Ontario re the bilingual schools. The hon. member for Kamouraska would like to have the Order in Council with the report made by the minister upon which it was based, as well as the correspondence exchanged with the Government of the province of Ontario.

Mr. DOHERTY: I understand that all that I was asked for was the petitions, and they were produced by the Secretary of State. I shall be happy to bring down the Order in Council.

Mr. MARCIL: And the correspondence exchanged with the Ontario Government.

Sir WILFRID LAURIER: I have not yet seen the Order in Council.

Mr. DOHERTY: I will bring down the Order in Council, with the report on which it is based. I did not understand it had been asked for.

ALLEGED CAPTURE BY RAINBOW.

On the Orders of the day:

Mr. LEMIEUX: May I ask the hon. Minister of Marine and Fisheries if he has read the despatch which I read to the House yesterday about the capture of a German ship by the Rainbow? I would like to know if the statement is true.

Mr. HAZEN: I believe that some vessel was captured by the Rainbow. There is in the department some information about the matter, and I will get it for my hon. friend.

Mr. PUGSLEY: Was it a German vessel?

Mr. HAZEN: I am not sure whether it was a German vessel or not, but it was a vessel carrying goods for the enemy.

Mr. LEMIEUX: The despatch stated it was an American vessel, but flying the German flag.

INQUIRY FOR RETURN.

On the Orders of the day:

Mr. EDWARDS: Three months ago I asked for some information in regard to certain expenditure at Fort Henry and the Royal Military College. Part of that information should come from the Militia Department and the rest from the Department of Public Works. I understand that both departments have prepared their answers, but they have never reached this House. I think I have been fairly patient in regard to the matter, and I would like to have the information.

Sir ROBERT BORDEN: I do not think, so far as the Militia Department is concerned, that my attention has been directed to the matter. I will make inquiries and endeavour to expedite the information.

SALE OF SMALL ARMS AMMUNITION.

On the Orders of the day:

Mr. MACDONALD: Yesterday the right hon. Premier laid on the table a return relating to small arms ammunition. In the memorandum apparently prepared by the minister for submission to Council there is no Order in Council, and I would like to ask the right hon. gentleman whether an Order in Council approving the sale was ever passed.

Sir ROBERT BORDEN: No Order in Council has ever been passed. The subject came up in the absence of the minister,

and it was delayed until his return. As the papers were asked for in the House, and as certain allegations were made by the right hon. the leader of the Opposition, the matter stood in that way until the papers were brought down.

Mr. MACDONALD: I might call attention to the fact that the memorandum which was apparently submitted to council was dated January 5, 1916, two months before the minister went away, and there was ample time to obtain an Order in Council if one cared to be obtained. In addition to that, the memorandum speaks of the fact that assurances were given that the ammunition sold to Col. J. Wesley Allison was to be used for testing purposes, and also that assurances had been given that no commissions were to be paid. There do not appear within the file any letters or any documents that would indicate that any such assurances were given in writing. Will the right hon. gentleman see that the return is completed in those respects?

Sir ROBERT BORDEN: If there are any other documents that are relative to the matter I will see that they are brought down. My impression is that everything has been brought down which touches the matter mentioned in the order.

Mr. MACDONALD: The minister has filed a memorandum in which he says that assurances were given. I assume that, if those assurances were considered of any value, they would be in writing.

Sir ROBERT BORDEN: I am not sure that there are any assurances of that kind in writing. I will make inquiry and ascertain.

CANADA TEMPERANCE ACT AMENDMENT.

On motion of Hon. C. J. Doherty (Minister of Justice), Bill No. 90, to amend the Canada Temperance Act, was read the second time, and the House went into committee thereon, Mr. Rhodes in the Chair.

Mr. DOHERTY: As hon. gentlemen will see on looking at the Bill, the sections of the Canada Temperance Act proposed to be amended are sections 120 to 124 inclusive, and also sections 127 and 139. As regards the amendments to sections 120 to 124 inclusive, they consist merely in the insertion in the existing sections of the Act of words intended to impose upon persons to whom the sale of liquor is permitted under the Canada Temperance Act in a Canada Temperance district the prohibition enacted by the Bill which recently went through this House in aid of provincial legislation, namely, the prohibition of the sale of liquor for the purpose of its being sent into any part of a province to be used in violation of any prohibitory law in force in that province.

As hon. gentlemen understand, the Bill to which I have just referred, which passed this House, had to do with the selling of liquor for the purpose of its being sent from one province into another. The effect of the bringing into force of the Canada Temperance Act in a district or portion of a province being to oust from that particular district or portion of the province the provincial legislation, that particular portion or district, as regards prohibitory legislation, is in the same position as though it were outside of the province. It was thought, therefore, that to be consistent the same rule should be laid down with regard to the sale of liquor in cases where it is permissible under the Canada Temperance Act, as was laid down with regard to the sale of liquor in one province to be sent into another province for use in violation of the law of that province. This covers the amendment proposed to be made to the four sections: 120, 121, 123 and 124. These are the four sections of the Canada Temperance Act which grant permission under certain restrictions to sell liquor within the district in which the Act is in force. The effect of the amendment is to add the further restriction that it should not be sold unless it is to be sent outside of the district in which the Canada Temperance Act is in force, and not into any other portion of the province to be there dealt with in violation of the provincial law in force therein.

Mr. PUGSLEY: Has the minister given any thought to the subject of the suspending of the operation of the Canada Temperance Act in a province which has adopted provincial prohibition? I recently received a very strong letter from a gentleman in the city of St. John who has taken a very warm interest in the prohibition movement, and he is of opinion that the operation of the Canada Temperance Act should cease in a province which has adopted total prohibition for the province. I can see the force of that, because it is not desirable to have a conflict of laws in any province. I would think that where the Provincial Legislature brings into force a prohibitory

law, ipso facto that should suspend the Canada Temperance Act.

Sir GEORGE FOSTER: Is it not true that the Act as passed in the province of New Brunswick does not come into force this year, and that Scott Act counties will have time to repeal their Act if they wish to do so? The same suggestion was made to me as was made to my hon. friend but it struck me that the people in a Scott Act county might feel that their Act was better than the one which had been passed by the province. After their having, by exercise of local option and a vote upon it, got what they wanted, it would seem to be arbitrary that we should take that away from them without any expression of opinion being possible from the people of the county itself. That, I thought, was an objection to the suggestion made to me along the line of the suggestion that my hon. friend has just mentioned.

Mr. PUGSLEY: If the Government has given thought to the subject, I have nothing further to say. The matter was brought to my attention by a gentleman who is very sincere in the matter of prohibition, and I thought it well to bring it to the attention of the minister.

Mr. DOHERTY: I had similar representations made to me as were made to the hon. member for St. John and my colleague the Minister of Trade and Commerce. I did give consideration to the matter; I had an opportunity of discussing it with at least one gentleman who was very much disposed to support the proposition. What occurred to me was what my hon. friend the Minister of Trade and Commerce has already pointed out and further, that several provinces are introducing new prohibitory legislation and that this House has passed an Act in aid of prohibitory legislation. It seemed to me wise that we should not at once, anticipating the working of these laws, cut off the application of the Canada Temperance Act. There was the objection suggested by my colleague the Minister of Trade and Commerce; furthermore, this consideration presented itself to my mind and rather appealed to me: the legislation of one province might, to those interested in the cause of temperance in that province who were in districts where the Canada Temperance Act was in force, appear more effective than the Canada Temperance Act. That might, perhaps, not be the case in another province and with regard to other districts, so that it seemed to me that it would be wiser to allow the new prohibitory legislation of the province to go into operation and to allow the Act that this House has just passed to go into operation, with the view that after experience people would probably be in a better position to determine which of the two systems, the Canada Temperance Act or provincial legislation, was preferable. Then we might legislate to make some provision enabling parties in districts where the Canada Temperance Act was in force to express in some way their desire to have it done away with before we would proceed absolutely of our own authority to do away with it. The latter course involves, as the hon. Minister for Trade and Commerce has pointed out, our taking away from people something that they voted that they wanted, without opportunity for consultation with them or of learning their desire in the matter.

Mr. PUGSLEY: I understand that by this Bill it is proposed to provide practically the same penalties for taking liquor into Scott Act counties as are provided for taking it into another part of the province where the prohibitory law is in force?

Mr. DOHERTY: That is not quite what is intended. The four sections of the Canada Temperance Act that are dealt with are sections that permit certain classes of people and for certain restricted purposes to sell liquor, and the object of this legislation is to bring those persons under the restriction that they must not allow it to go into any other portion of the province to be used in violation of the law of the province. The Canada Temperance Act area is, for the purposes of the liquor law, taken out of the provinces, so to speak, and persons who are permitted to sell liquor in that portion of the province are not governed by the provisions of the provincial law. The purpose of the added restriction is to prohibit them, in the exercise of the limited right of sale, which is granted them by the Canada Temperance Act, from selling liquor to be sent into another part of the province to be used in violation of the provincial law.

Mr. PUGSLEY: Would there be the same penalties against a wholesale dealer or manufacturer in any province of Canada sending liquor into another province for special use in a county where the Canada

Temperance Act is in force, as would apply in another part of the province?

Mr. DOHERTY: There is already in the Canada Temperance Act as it stands a prohibition against sending liquor into the Canada Temperance Act district. Under section 117 of the Canada Temperance Act, as amended in 1908, it is prohibited for any person:

> To send, ship, bring or carry, or cause to be sent, shipped, brought or carried, to or into any such county or city, any intoxicating liquor.

That is to say, into a county or city where the Canada Temperance Act is in force. So that, so far as protecting the Canada Temperance Act districts from the importation of liquor is concerned, the Canada Temperance Act already protects them. The purpose of these amendments is to protect the remaining portions of a province, which are not under the Canada Temperance Act, from liquor sold within a Canada Temperance Act district being sent into those portions of the province, to be used in violation of the provincial law there in force.

Mr. PUGSLEY: Let me put a concrete case. In the Act recently passed by this House there is provision for enforcing a penalty in the province from which the liquor is sent. Suppose the liquor is sent from Quebec into a county in New Brunswick where the provincial prohibitory law is in force, but where the Canada Temperance Act is not in force, can that manufacturer, or that wholesale dealer, be prosecuted in the province of Quebec under the law passed at this session?

Mr. DOHERTY: No, because the law passed this session was one in aid of provincial legislation, not in aid of the Canada Temperance Act. The Canada Temperance Act, as I have said, already makes it an offence to send liquor into any district in which the Canada Temperance Act is in force. It does not contain that provision enabling prosecution to be brought elsewhere than where the offence was committed. There is not any special provision in the Canada Temperance Act as it stands with regard to the place of prosecution.

Mr. PUGSLEY: That presents very clearly and very strongly an argument in favour of suspending the operation of the Canada Temperance Act in a province where provincial prohibition is brought into force. Otherwise I am afraid that there will be a very great deal of confusion. For instance, suppose a manufacturer is proceeded against in the province of Quebec for sending liquor into the province of Prince Edward Island. His answer will be: it is true that I sent liquor into Prince Edward Island, but it was destined for a county where the Canada Temperance Act is in force. Then the prosecution would fail in the province of Quebec. You are going to have a lot of legal difficulties arising and a very considerable amount of confusion in connection with the prosecution of offenders, and I should think—I am not going to press this view, but I throw it out as a suggestion to the minister—that where provincial prohibition has been brought into force it would be better to have the one law applying to the whole province rather than to have one law applying to a part of the province where the Canada Temperance Act is in force and another applying to the parts of the province where the Canada Temperance Act is not in force. I think myself that for greater certainty and for greater ease in the enforcement of the law, it would be better to suspend the Canada Temperance Act in those provinces where provincial prohibitory laws have been brought into force.

Mr. DOHERTY: I hardly think we would be justified, in anticipation of the operation of laws that have not yet come into force, in taking away from counties the Canada Temperance Act, which in some cases they have adopted within the last few months. That is the case notably in Ontario. We have had no information from those counties that they want to have taken away from them the very thing that they, by their vote, expressed a desire to have. I do quite realize that there would be advantages in having a province all under one law, and I think it is rather to be anticipated that that condition of affairs will come about. But I do not think that this is quite the moment to attempt to bring that about. It would be premature to do so. I think we can quite safely leave consideration of that question until we have had some opportunity of seeing the newly proposed laws in operation.

Mr. LOGGIE: I understood the minister to say that the Canada Temperance Act would be so amended that we could punish those who sent liquor to any county from another province.

Mr. DOHERTY: The only reason we did not amend the Act so that we could do that

is that the Act already does that. The provision of the existing Canada Temperance Act is:

From the day in which this part comes into force (the following things are made offences): No person shall, except as in this part specially provided, by himself, his clerk, servant or agent. . . . (c) ship, bring or carry, or cause to be sent, shipped, brought or carried, to or into any such county or city, any intoxicating liquor.

So that you have an absolute prohibition in the law as it now stands against anybody in the Dominion of Canada sending any intoxicating liquor into a county or city in which the Canada Temperance Act is in force. Clearly there was no need to amend the Act to bring about that result. It is true, as I said to the hon. member for St. John, that we have not the special provision enabling the offender to be prosecuted except in the particular place where the offence is committed, but in that regard the Canada Temperance Act is only in the position in which it has been, and there never has been any suggestion that there was a weakness in that direction.

When we came to pass the Bill, which was passed, it did seem to us that because we were dealing with a matter which in all cases was what one might call an interprovincial offence, it was wise to make the special provision which we made. But I should fancy that in a large number of cases, where it is a question of sending liquor into a district under the Canada Temperance Act, you will have it sent in from the neighbouring counties that are not under the Canada Temperance Act, but which are in the same province. Probably when that Act was enacted the same necessity for such a provision did not occur to those who drafted it as occurred to us with regard to the other Bill. There will remain, even if this Bill is passed, that difference between the two situations.

Mr. LOGGIE: Do I understand the minister to say that the shipper, who is obliged under the Act that has already been passed to label the liquor sent into a province that has provincial prohibitory legislation, is obliged to mark the liquor which he sends, say, from the province of Quebec into the county of Northumberland the same as he would be required to mark if it were going into the province of Ontario. I refer to districts where the Canada Temperance Act is in force.

Mr. DOHERTY: I have not before me the exact text of that Act, but it seems to me that we are falling back into a discussion of the Act that was passed. If that Act, as passed, does not cover the case in its terms—and I am free to admit that my impression at this moment is that it does not—this act will not produce the necessity of labelling in that particular case. But the Act, as it is passed, will apply to all sending of liquor from one province into another when in the province there is any prohibitory law. I am not quite certain whether it says any provincial prohibitory law or simply any prohibitory law.

Mr. SINCLAIR: Will the minister tell me whether there is any provision to preserve the rights of those who are now in the courts with regard to offences committed against the Act which he is repealing? The minister will remember that a period of three months is allowed to bring a prosecution, and offences may have been committed that have not yet been prosecuted in Scott Act counties. Sometimes they are not even found out for a couple of 4 p.m. months. Will the right to prosecute those offences lapse when the old Act is repealed by this Act? I understand that the old Act is absolutely repealed by this Act, and that new provisions are substituted. The minister will see my point. I feel interested in the matter owing to the fact that my county is a Scott Act county, and I know that prosecutions are occasionally brought. I would like to know whether this Bill would disturb the cases that are now in the court or take away any rights that exist.

Mr. DOHERTY: There is no real repeal. What is done here is to add something to the old Act, only it takes the form of repealing the section and of enacting exactly the same section with the additions. I think there has been a general consensus of opinion in the House that it is more convenient to draft legislation in that way, because, in the Bill before the House, the members see exactly the section as it will be when amended. But the effect is exactly the same as if we had said that section 120, for instance, of the Canada Temperance Act is amended by inserting certain words. There is no moment of time during which the disposition as it stood before without the addition that we are making, is not in force. It is repealed and substituted simultaneously by exactly the same disposition, while a further disposition is added, so that there is no lapse of time during which, whatever was an offence under the Canada Temperance Act, as it stood, ceases to be an offence.

Mr. SINCLAIR: That is quite true. It is a legal point, of course, but what struck me was that if a prosecution is brought in court under the Act of 1908, that Act being specially mentioned, and when the case comes up for trial it is found that there is no Act of 1908 but instead an Act of 1916, the point may be one which a lawyer would make. He might say that the prosecution was invalid. I think it is usual to provide that existing rights will not be interfered with.

Mr. DOHERTY: If there was any real repeal I would agree with the hon. gentleman, but there is no real repeal here. The Act of 1908 still continues in force. What is done is to say that section 127 of the Act of 1908 is repealed, and the same provisions are substituted, so that everything that was in the Canada Temperance Act remains the law.

Mr. SINCLAIR: It is exactly the same.

Mr. DOHERTY: With something added. There is something more that is the law, but everything that was in is still in. We have created another offence; that is all.

Mr. MARCIL: I am sorry that I was not present when the amendments were made to the other Bill, but out of the mass of amendments some doubt has arisen which I would like to clear up. In the province of Quebec, where municipalities have adopted prohibitory legislation to the extent of refusing to grant licenses, and, on top of that, where the county council has also refused to grant any license and has passed a resolution covering the whole county, is there anything in the new legislation which will prevent liquor from being brought into that county for any purpose whatever?

Mr. DOHERTY: No, not for any purpose whatever, but for any purpose which the provincial legislation prohibits.

Mr. MARCIL: The provincial legislation prohibits the sale.

Mr. DOHERTY: Then nobody can bring liquor into that county for the purpose of its being sold, but if the provincial legislation permits one to have liquor, then, under the Act which was passed, there would be nothing to prohibit the sending of it.

Mr. MARCIL: Then so far as the province of Quebec is concerned, out of 44 constituencies that have adopted prohibition, the Dominion legislation will have no effect whatever?

Mr. DOHERTY: It will certainly prevent any man who wants to use liquor within the province for the purpose of violating the law having it sent in for that purpose. We have not undertaken, and I have never suggested that we were undertaking to impose upon any province, or upon any part of a province, more prohibition than it wanted. All we pretend to do is that we will not let the outside man bring about within the province a violation of the provincial law. I would like, with the permission of the committee, to amend the clause for the purpose of making an amendment to an additional section. The clause itself provides, as will be seen, for the repealing of a certain number of sections and the substitution of something else. There is another section of the Canada Temperance Act which I desire to amend. It is section 136 and it provides for the right of search upon a warrant for that purpose being obtained. The section as it now stands provides that the search may be carried out in the daytime only. It has been represented to me from very numerous sources that the presence in the Canada Temperance Act of that limited right of search during the daytime presents a very serious obstacle to its effectiveness. I desire to amend the section which provides for the right of search by striking out the words "in the daytime." I beg therefore to move:

That clause 1 be amended by inserting the following words after "twenty-seven" in the ninth line on page one:—"Section one hundred and thirty-six and form R";

That the following clause be inserted immediately after clause one hundred and twenty-seven on page three:

136. If it is proved upon oath before any judge of the sessions of the peace, recorder, police magistrate, stipendiary magistrate, two justices of the peace, or any magistrate having the power or authority of two or more justices of the peace, that there is reasonable cause to suspect that any intoxicating liquor is kept for sale in violation of Part II of this Act, or of The Temperance Act of 1864, or is stored, warehoused, or kept for delivery, in violation of Part II of this Act, in any dwelling house, store, shop, warehouse, outhouse, garden, yard, croft, vessel, building, or other place or places, such officer may grant a warrant to search such dwelling house, store, shop, warehouse, outhouse, garden yard, croft, vessel, building, or other place or places, for such intoxicating liquor, and if the same or any part thereof is there found, to bring the same before him.

"2. Any information under this section may be in form Q and any search warrant under this section may be in form R".

And that the following form be inserted immediately after clause one hundred and thirty-nine on the said page three:

Form R.

Form of Search Warrant.

Canada
Province of
District (or county, or as
the case may be) of

To all or any of the constables or other peace officers in the district (or county or as the case may be) of.....

Whereas K. L. of.....in the said district (or county, or as the case may be) of..... (yeoman) hath this day made oath before the undesigned one of His Majesty's justices of the peace in and for the said district (or county, or as the case may be) of..... that he hath just and reasonable cause to suspect and doth suspect that intoxicating liquor is kept for sale (or is stored or is warehoused or is kept for delivery) in violation of Part II of The Canada Temperance Act, in the (dwelling house, etc.,) of one P. Q. of.....in the said district (or county, or as the case may be) of ..... These are therefore, in the name of Our Sovereign Lord the King, to authorize and require you, and each and every of you, with necessary and proper assistance, to enter into the said (dwelling house, etc.,) of the said P. Q. and there diligently search for the said intoxicating liquor; and if the same, or any part thereof, shall be found upon such search, that you bring the intoxicating liquor so found, and also all barrels, cases, boxes, packages, and other receptacles of any kind whatever containing the same before me to be disposed of and dealt with according to law.

Given under my hand and seal at..... in the said district (or county, or united counties, or as the case may be) of..... this.....day of..... in the year of Our lord.....

(Seal) W.S.

A justice of the peace in and for the said.. ....."

Section as amended agreed to.

Bill reported, read the third time and passed.

GOVERNMENT RAILWAYS SMALL CLAIMS ACT AMENDMENT.

On motion of Hon. J. D. Reid, Acting Minister of Railways and Canals, Bill No. 91, to amend the Government Railways Small Claims Act, was read the second time, and the House went into committee thereon, Mr. Rhodes in the Chair.

On the preamble:

Mr. J. J. HUGHES: I think the Bill should be amended by making it retroactive so that it would apply to the Prince Edward Island railway from the time the first Bill was enacted.

There is no question but Parliament thought that the Bill passed in 1910 applied to all Government railways; that is obvious from the discussion that took place at the time. It would be an anomaly to have the Bill apply to the Intercolonial railway and not to the Prince Edward Island railway, simply because the Intercolonial railway happened to be mentioned in the Bill and the Prince Edward Island railway was not. I know one case, at all events, where the complainant in a suit was non-suited just because the Prince Edward Island railway was not mentioned in the Bill. Lawyers on the island have told me that they have advised other parties who have consulted them in regard to bringing suits not to enter on an action because the Bill did not apply to the Prince Edward Island railway. Now, this is an injury to the people of that province. It is putting them in a different position from the people of New Brunswick, Nova Scotia, and Quebec, and I presume that it was not the intention of Parliament to pass legislation of that kind. In order to provide a remedy I would ask the committee to make the Bill retroactive, so that these people will be in the position they would have been in if the intention of Parliament had been carried out in the first instance. I therefore beg to move, seconded by Mr. Turriff, that Bill No. 91 be amended by adding thereto section 2, as follows:

The said Acts shall be deemed to have applied to claims arising out of the operation of the said railways, branches and ferries, on and from the respective dates at which the said Acts were passed, and shall apply thereto in the same manner and to the same extent as they apply to claims arising out of the operation of the Intercolonial railway.

Mr. REID: I was asked some days ago by the Prince Edward Island members to introduce an amendment to the Small Claims Act, bringing the Prince Edward Island railway under the Act. In 1910 the Act for the adjudication of small claims arising in respect of the operation of the Government railways was passed, section 2 of which reads as follows:

Subject as hereinafter provided, any claim against His Majesty arising out of the operation of the Intercolonial railway and not exceeding in amount the sum of two hundred dollars, for damages alleged to be caused by negligence, or made payable by statute, may be sued for and prosecuted by action, suit or other proceeding in any provincial court having jurisdiction to the said amount over like claims between subjects.

In 1913 an amendment was made increasing the amount from $200 to $500. When this matter was brought to my attention I

took it up with officials, and we thought it well that the whole Government railway system should be included, instead of having an amendment relating merely to the Prince Edward Island railway. If the Act is good for the Intercolonial and good for the Prince Edward Island railway it is good for the other parts of the Government railway system, and it is was with that idea in view that I introduced the amendment to the Government Railways Small Claims Act. I certainly could not agree to my hon. friend's suggestion to make the Act retroactive and apply to any suits or actions since 1910, and if he presses his amendment I would rather withdraw the Bill and let it stand until another session, when I could look into it further. Under the circumstances I would ask that the Bill go through as I have introduced it.

Mr. PUGSLEY: Is the minister's objection that he does not wish to make valid any suits that have already been brought? Would he have any objection to allowing this Act to apply to actions brought in the future in respect to claims that have arisen before the Act came into force; in other words, make the Bill retroactive as to procedure?

Mr. REID: My object in introducing this amendment is to make the Act apply to any suits or actions brought in future against any part of the Government railway system. For instance, there may be claims against the Transcontinental. Any claims arising in future will be dealt with under the law as it stood before this Act was passed. I think it would be unfair to make the Bill retroactive and apply to cases that have already been disposed of. It does seem to me that as this Bill has been on the Order Paper for quite a while the hon. member might have done me the courtesy of sending me a copy of the amendment he proposed to make; this is the first time I ever heard of it. I have tried to carry out the wishes of the members for Prince Edward Island by having the Act apply not only to the Prince Edward Island railway, but to the whole Government railway system. I would rather have the Bill stand than have it amended at this time, as my hon. friend suggests.

Mr. PUGSLEY: It seems to me that the minister is not drawing a proper distinction between the mode of enforcing the claims and the giving rise to the claim itself. I do not understand that my hon. friend from Kings wants to have any different law applied to the right of action; what he wants is that the remedy which is afforded by this Bill shall apply to causes of action which may have arisen before this legislation comes into force as well as to those which may arise afterwards. Take the case of a man who has a perfectly just claim against the railway. Before this legislation comes into force, an animal has been killed on the railway. Because the owner happens to live in Prince Edward Island, why should he be compelled to bring his suit in the Exchequer Court of Canada where the costs would amount to ten times the value of the animal? Why should he not be permitted to avail himself of this cheap remedy and use the provisions which have been made for the enforcement of the collection of small claims? Surely the minister might go that far, not in any way to alter the cause of action, nor the circumstances which would give rise to a claim, but only as to the mode of enforcing a claim. I understand that is all the member for Kings wants. The minister should not refuse to accept the amendment just on account of any pique or resentment against the hon. member for Kings because he did not let him know before that he was going to move the amendment. The amendment is so simple in its character that the hon. member assumed that the minister would at once grasp the justice and the reasonableness of it and would allow it to be passed.

Mr. REID: The Act of 1910, as it was introduced, was not made retroactive.

Mr. A. A. McLEAN: It is only a matter of procedure. Supposing a person has a claim against the Government for damages for negligence, he must, before the passing of the Act of 1910, commence proceedings in the Exchequer Court. Under the Act of 1910 he has a very simple remedy in the courts of the province, and that Act was of great benefit to the people who had claims against the Government. When I came here in the early part of this session, I was requested by certain people who had commenced suits in the courts to ask the Government to amend the Act so that the remedy would apply to all claims which had arisen since 1910. I was told by one of the legal officers of the Crown, who had something to do with the drafting of the Act of 1910, that the omission to include the Prince Edward Island railway was a mistake; that they overlooked it, and they thought that the words "Intercolonial railway" in the Act and the words "Govern-

ment railways" in the preamble included all the railways controlled by the Government. It was evidently a mistake, and I would ask the minister, if he is not inclined at the present time to pass the Bill as I first asked him to introduce it, to apply to all claims, to let the matter stand for a day or two and give it further consideration.

Mr. PUGSLEY: Is the hon. gentleman in favour of the amendment?

Mr. McLEAN: Yes. I was the first man who spoke to the minister about this legislation and I asked him to make it retroactive. A suit was commenced by a friend of mine in Charlottetown who thought that the words "Intercolonial railway" included the Prince Edward Island railway: but when he got into the court he found that the definition of the words "Intercolonial railway" in the Railway Act meant the railway as it existed in the provinces of Quebec, Nova Scotia and New Brunswick. When, however, the law officers of the Crown were drafting the Small Claims Act of 1910, they thought that the Intercolonial railway included the Prince Edward Island railway, and for that reason I would ask the minister to let the matter stand until he gets further information from the law officers connected with the Railway Department.

Mr. PUGSLEY: If the Act of 1910 in any way spread the liability of the Crown or in any way broadened out the right of action, then I would say that the minister might very well hesitate, but it does not do that; it applies only to the mode of procedure. Section 2 reads:

> Subject as hereinafter provided, any claim against His Majesty arising out of the operation of the Intercolonial railway, and not exceeding in amount the sum of $200 for damages alleged to be caused by negligence or made payable by statute, may be sued for and prosecuted by action, suit or other proceedings in any provincial court having jurisdiction to the said amount over like claims between subjects.

Upon consideration, I think the minister will see that it is reasonable that if a man has a claim not exceeding $200, which arose last week or last month, he should be permitted to bring an action for that claim in an ordinary court of law just the same as he could bring it if the damages arose upon the Intercolonial railway. No harm can come to anybody; the Crown can not suffer; the Crown can have no advantage by refusing to have the amendment pass unless it is an advantage to the Crown to compel the people to go to the expense of commencing suit in the Exchequer Court where the costs might amount to ten times the value of the property destroyed or injured as the case might be. If any fundamental principle was involved, if there was any attempt to enlarge the right of the subject, to give him a claim that does not exist, it would be a different matter, but this amendment provided only as to the court into which the litigant may go for the purpose of enforcing his claim against the Crown. The minister might fairly consent to enlarge the scope of the Bill by accepting the amendment moved by the hon. member.

Mr. REID: As the Bill does not seem to be satisfactory to the members from Prince Edward Island, I think we had better let the matter stand. I beg to move:

> That the Committee rise and report progress.

Mr. HUGHES: As the minister seems to think that I have shown him some discourtesy by not mentioning the matter to him before to-day, I may say that yesterday I asked the Prime Minister when this Bill would likely be taken up and he was unable to give me an answer. The Acting Minister of Railways was absent yesterday, and I could not see him, and not knowing that the matter was coming up to-day, I did not think it was important to see him specially. I may say I mentioned the matter to him some little time ago. Further than that, I introduced a Bill having the retroactive feature in it, and the minister, or at least his law officers, would have an opportunity of seeing that. I understand the senior member for Queens (Mr. McLean) has stated that in the early part of the session, he said to the minister that it would be desirable to have legislation of that kind made retroactive. Therefore, for all these reasons, the minister was not taken unawares.

Mr. REID: I do not doubt what the hon. member for Kings, P.E.I. (Mr. Hughes) says, but I have no recollection of its being represented to me that the Bill should be made retroactive. The member for Queens, P.E.I., tells me that that statement was made to the Solicitor General, so that I knew nothing of it. The hon member for Queens, P.E.I., spoke to me at the beginning of the session and asked me to have this Bill amended to cover Prince Edward Island. With that end in view I asked the law clerk of the House of Commons to prepare the Bill, bringing not only Prince Ed-

ward Island, but all parts of the Government railway system under the Act of 1910.

Mr. HUGHES: The minister will remember that I spoke to him two or three times about legislation of this kind.

Mr. REID: Across the floor of the House?

Mr. HUGHES: No, in the corridor; whenever I had opportunity of speaking to the minister.

Mr. REID: The hon. gentleman never mentioned the retroactive part of it.

Mr. HUGHES: Yes, I did. The minister, having a great deal to do, has forgotten that part of it, but that was the feature that I was particularly anxious about. The only object of the Bill is that the people of Prince Edward Island be placed in the position that they would be in if the intention of Parliament had been correctly set forth in the first Bill that was passed. The only object of this amendment is to rectify the error that was made in the first Bill.

Mr. PUGSLEY: It ought to be borne in mind that, as legal gentlemen know, a statute which provides for a mode of procedure is in effect retroactive even though the statute does not say so, because procedure is regarded as different from the right of action. Therefore, I think the minister should consent to remove the doubt and make this procedure applicable to existing claims.

Mr. HUGHES: Will the minister say when he will likely consider the matter again?

Mr. REID: No, I cannot say.

Mr. PUGSLEY: The committee will have leave to sit again?

Mr. MARCIL: Does the minister intend that this Bill shall apply to the Transcontinental railway in the province of Quebec?

Mr. REID: Yes, it applies to all Government railways.

Mr. McKENZIE: Before the minister finally makes up his mind to strangle this Bill, I suggest that if the Bill is a good measure, although it be not retroactive, it should be allowed to pass. I am sure that the province of Prince Edward Island should prefer legislation making the old Act applicable to Prince Edward Island from the date of its passing to no legislation at all. It could be amended so as to make it retroactive at a later date, if that should be thought desirable. It would be too bad to deprive all the claimants along the long stretch of Government railways which we have now, and which we did not have in 1910, when the first Act was passed, of the simple remedy that this legislation gives them, simply because the minister refuses to make it retroactive in Prince Edward Island. I do not suppose that any one along the line of the new roads is asking that this Bill be made retroactive, and it will be well to give the people along these lines the benefit of this legislation. I think the minister should insist upon the legislation passing as it is; it can be amended later if thought desirable.

Mr. REID: I think the legislation should pass as it is. I certainly am opposed to making it retroactive.

Mr. PUGSLEY: The minister was not so opposed when the question of taxes came up.

Mr. REID: I am talking now about this Small Claims Act.

Mr. PUGSLEY: A horse of a different colour.

Mr. REID: If satisfactory, we will have the Bill passed now as it is. If not, I cannot say when I will consider it again.

Mr. MARCIL: The minister realizes the importance of having the Bill passed not only for the Prince Edward Island railway but for the Transcontinental railway in Quebec. We voted money here the other day for the purpose of building fences, and so on, along the new sections in Quebec, and towards the West. Settlers are coming in there, and claims may be arising every day. It is only fair that settlers along the line of the Transcontinental should have the same treatment as that accorded to those who have settled along the Intercolonial or the Prince Edward Island railway.

Mr. REID: I am willing to let the Bill go through, but I will not agree to make it retroactive on the Transcontinental and on the Prince Edward Island railway. I think it would be a great advantage to the Transcontinental and the Prince Edward Island railway to have this legislation on the statute book. It is good legislation for the Intercolonial railway; therefore, it is good legislation for all Government railways. This would apply to all Government railways.

Mr. HUGHES: Why should not the people of Prince Edward Island be put in the

same position that the people of Nova Scotia, New Brunswick, and Quebec were placed in some four or five years ago?

Mr. REID: I cannot say why the Bill was made to apply to the Intercolonial railway only.

Mr. HUGHES: That was a mistake.

Mr. REID: The hon. member sat in this House in 1910.

Mr. HUGHES: The hon. member was here also.

Mr. REID: Other hon. gentlemen from Prince Edward Island, friends of the hon. member, were here in 1910, when this Bill went through, and they never raised a voice against it. They were willing that the Bill should go through this House as it did in 1910.

Mr. HUGHES: Thinking it applied to Prince Edward Island.

Mr. REID: Without its applying to Prince Edward Island.

Mr. HUGHES: No.

Mr. REID: The Bill of 1910 did not include Prince Edward Island.

Mr. HUGHES: The matter was brought up in court, and it was discovered that there had been a mistake.

Mr. PUGSLEY: The very title of the Act of 1910 is misleading and shows that a mistake was made. The heading is—Chapter 26 of the Acts of 1910:

> An Act to provide for the adjudication of small claims arising in respect of the operation of the Government railways.

It is not limited to the Intercolonial. Then, when we come to the first section, it says: "This Act may be cited as the Government Railways Small Claims Act," showing that a clear mistake was made in drafting the Bill. It was intended to apply to all Government railways. It was a clear mistake made in 1910, and if the minister is going to correct it, why not do it right; why half correct it? He gives twice who gives quickly; in the same manner, he does a good thing twice who does it quickly.

Mr. REID: The hon. member was here in 1910, as well as other members.

Mr. PUGSLEY: And admits that a mistake was made.

Mr. REID: The first section says:

> Subject as hereinafter provided, any claim against His Majesty arising out of the operation of the Intercolonial railway—

Mr. PUGSLEY: Read the title.

Mr. REID: The title does not count in the Act.

Mr. PUGSLEY: Yes, as showing the intention.

Mr. REID: If the title was part of the Act, why was that not considered in the courts?

Mr. PUGSLEY: The title shows that the mistake was made in the enacting part of the Bill. It showed clearly that the intention of everybody was that it should apply to the Government railways. It was not limited to the Intercolonial, because the title is an anomaly if it applies only to the Intercolonial.

Mr. EDWARDS: Is it not possible the mistake was made in the title?

Mr. PUGSLEY: Not likely.

The CHAIRMAN: There is a motion before the Chair which is not debatable. The hon. member for Kings, P.E.I. (Mr. Hughes) immediately rose and said: "By the consent of the committee, I should like to say a word to the committee;"—and there have been words from so many members that I hardly know where to intervene. But as it is my duty to administer the rules as I deem them to exist, I must either request that the motion be withdrawn or insist upon putting it to the committee.

Mr. REID: I am willing to withdraw the motion if the committee are willing to take the Bill as it is. If not—

The CHAIRMAN: Mr. Reid moves that the committee rise, report progress and ask leave to sit again.

Mr. PUGSLEY: What does the hon. member from Prince Edward Island (Mr. Hughes) say?

Mr. HUGHES: I would prefer to have the Bill as it is, rather than not have it at all. But as I said, at the request—

The CHAIRMAN: I must respectfully draw the attention of the committee to the circumstance that I have ruled that the motion is not debatable.

Mr. REID: If the hon. member will withdraw his amendment, we will pass the Bill as it is. I think that it is in the interest of all the people living along the road.

Mr. HUGHES: If the minister has decided that he will not accept the amendment, I will withdraw the amendment if there is nothing else to be done.

Mr. REID: Then I withdraw my motion and he withdraws his amendment.

The CHAIRMAN: I understand that the hon. minister withdraws his motion that the committee rise, and also that the hon. member for Kings withdraws his amendment.

Bill reported.

Mr. REID moved the third reading of the Bill.

Mr. HUGHES: I wish now to present the same amendment. I move that the Bill be not now read the third time, but that it be referred back to the Committee of the Whole House for the purpose of considering the amendment which I offered.

Mr. SPEAKER: Mr. Reid moves that the Bill be now read the third time; to which Mr. Hughes, Prince Edward Island, moves in amendment that the said Bill be not now read the third time, but that it be referred back to the Committee of the Whole for the purpose of considering certain amendments.

Mr. REID: Mr. Speaker, while we were in committee the hon. member withdrew his amendment and said he would not press it, that he was willing that the Bill should go through as I introduced it. Taking the hon. member at his word, the committee passed the Bill and it is now before us for the third reading. I certainly think it is breaking faith with members of this House—

Some hon. MEMBERS: Order.

Mr. REID: —to introduce an amendment in this way, and I certainly cannot accept it. If members opposite think that this is fair, after our agreeing in committee that the Bill should pass as reported, I thing it is much better to withdraw the Bill.

Mr. HUGHES: I wished to make a few remarks in the committee, but the chairman ruled that I was out of order and this is the only way in which it was possible for me to make these remarks. I want to say to the minister, and to say in all sincerity, that I much prefer the Bill as it stands to having no Bill at all. At the same time I must say again that it is very unfair indeed, in my judgment, for the minister to insist on passing it in this way, very unfair to the people of Prince Edward Island who have claims against the Government railways, who have brought these claims on the advice of counsel, thinking that the Act was all right, who have been non-suited, and who have now no remedy unless they take up these claims in the Exchequer Court. Men with small claims cannot go to that expense. I cannot for the life of me see why the minister should refuse to allow these men the simple method of procedure under this Bill. The Government could not be injured, no interest in Canada could be injured, no one could be injured.

Mr. SPEAKER: I wish to call attention to rule 21, which says:

> A reply shall be allowed to a member who has moved a substantive motion or the second reading of a Bill, but not to any member who has moved an order of the day, not being the second reading of a Bill, an amendment, the previous question, an adjournment during a debate, or an instruction to a committee.

I understand that the hon. member has moved an amendment, and consequently, according to this rule, is not entitled to speak now.

Mr. HUGHES: Is not the third reading before the House?

Mr. SPEAKER: No, an amendment.

Mr. PUGSLEY: The amendment is that the Bill be not now read a third time, but that it be referred back to committee. The hon. member is proceeding to give reasons why it should be referred back.

Mr. SPEAKER: The hon. member should have done that when making the amendment. Now he is making a reply. He moved an amendment and the Minister of Railways answered.

Mr. PUGSLEY: You are taking the ground that he had already spoken once.

Mr. HUGHES: I thought I would have to wait until the amendment was read before being allowed to speak on it.

Mr. SPEAKER: The amendment was that the Bill be not now read a third time but be referred back to the Committee of the Whole not in order to consider an amendment, but to examine it de novo. The question is on the amendment.

Mr. PUGSLEY: I trust the Minister of Railways will not feel that he ought to withdraw the Bill simply because the member for Kings moved an amendment. You see that the effect of that would be to de-

prive any member of the House of freedom of thought or of action. I am sure the Minister of Railways would not want to do that. He is not a man who would want to apply the lash to this House, particularly to both sides of the House. He might try it on one side, but he would not like to try it on this side too. See what the minister proposes to do. He says to the hon. member for Kings: "If you dare to press this amendment, if you dare to ask this House to vote upon the amendment, I will withdraw the Bill; much as I value the Bill, much as I think it would be in the public interest if it passes the House, if you venture to move an amendment I will withdraw it." It seems to me that the better way for the minister to do would be to allow the vote to be taken first, and then, if the amendment is carried, the minister can say: Well now, the amendment having carried and I not approving of it, I will not press the Bill to the third reading but will withdraw it. Surely he should allow us to vote on the amendment of the hon. member for Kings (Mr. Hughes) and not make a threat against us as he has done. I am sure the minister will realize that is hardly the kind of threat that should be made to members of the House. With regard to the amendment itself, I wish to repeat what I said in committee, that it is evident a mistake was made in 1910 in not making this Bill applicable to all the Government railways. There was no possible precedent that could influence Parliament in having one law prescribing a mode of procedure in respect to claims against the Intercolonial Railway and another law in respect to claims arising in connection with the Prince Edward Island Railway. Both railways are owned by the Government, and both are under the same management; therefore, the same law should apply to both, so far as claims are concerned. That is the first reason. You cannot conceive of any reason why any distinction should have been made. Secondly, it was obviously intended to apply to Government railways, for that is the title of the Act, " to provide for the recovery of small claims against the Government railway system," or words to that effect. If it had been intended to limit the Act to the Intercolonial Railway, the title would have been an Act to recover small claims against the Intercolonial Railway; but it does not say that; it refers to claims against the Government railway system. Then the first section of the Act, which declares what the title shall be, repeats almost the same words, showing clearly, as I have said, that whoever drafted the Bill was under the impression that the words " Intercolonial Railway " included all branches operated in connection with the Government system of railways, including the Prince Edward Island Railway. Therefore it seems to me that it is reasonable that the mistake which was made in 1910 should be corrected. The minister pointed out that I was a member of Parliament at that time, but that does not make any difference. No man could be more ready than I to admit that I was a party to the mistake which was made by Parliament at that time. I have no doubt whatever that it was a mistake, and as a member of Parliament, and as a member of the Government at that time, I am prepared to take the responsibility of that mistake upon my shoulders as one of the parties to it. But if I was a party to the mistake I ought to be the first to try to remedy it. There is no earthly reason why the amendment proposed by the hon. member for Kings should not be passed. I hope that even yet the minister will be able to accept that amendment; if not, let us take a vote upon it, and if the amendment is defeated, the Bill will go to the third reading. If the amendment happens to be carried, I hope that better views will prevail with the minister and that he will allow the Bill to go through with the amendment.

Mr. MORPHY: Is there anything in the way of limitation with regard to the prosecution of claims?

Mr. PUGSLEY: Do you mean as to time?

Mr. MORPHY: Yes.

Mr. PUGSLEY: I do not think so.

Mr REID: We understood in this committee that the amendment was withdrawn, and if a vote is to be pressed I would ask that the Bill be withdrawn altogether.

5 p.m.

Mr. KNOWLES: Personally I am opposed to the withdrawal of the Bill because it is one which interests the employees and residents alongside the Grand Trunk Pacific railway so far as it is operated by the Government. In northern Ontario, especially, the people are far from law offices and the settlers are without means to prosecute their claims, and it would be a very serious thing for them if the Bill were withdrawn and they had to go through the cumbersome procedure of getting a fiat before they could sue. Either the minister thinks that this

is a good Bill, or he does not. I will give him the benefit of the doubt, and assume that he thinks it is a good Bill. Why then does he not want to have the Bill passed? We all agree that it is a good Bill, so far as it goes; there is no doubt about that. If the amendment is defeated, the House will be unanimous in passing the Bill, or what is left of it, but why, for the sake of punishing the hon. member for Kings or the hon. members on this side of the House, or for the sake of getting us in wrong with reference to legislation which the minister heretofore thought was good legislation, the Bill should be withdrawn is something I cannot understand. More than that, I question whether it is within the power of the minister to withdraw a Bill at this stage. The fact that a man is the father of a child does not mean that he can strangle that child, and I question the propriety and the legality under the rules of the House—of course I defer to your judgment, Mr. Speaker—of a motion to take away from us a Bill which we cherish, so far as it goes, and which we are endeavouring to improve. I object to the Bill being withdrawn and urge that it be proceeded with.

Mr. MARCIL: I remember very well the circumstances under which this Bill was passed. The constituency which I have the honour to represent is traversed by the Intercolonial railway, and the farmers living alongside the railway had been urging the Department of Railways and Canals for years to come to their relief by enabling them to prosecute their claims, for the loss of a cow or of a horse, and small claims of that kind, without obtaining a fiat and going to a lot of expense and annoyance. The Government consented to bring in a measure to enable such claims to be prosecuted before the ordinary courts, limiting the amount. No member of the House imagined that this treatment was to be meted out only to the people living alongside the Intercolonial railway. We all admitted that it should be extended to the people living alongside the Government railways generally. There is no reason in the world why the people of Prince Edward Island should be excluded from the benefit of a measure of this kind. It was passed by the House to relieve the farmers who were living alongside the Government railways. I am sure that it was altogether unintentional that the Prince Edward Island railway was omitted. The title of the Bill showed that it was intended for the relief of people living alongside the Government railways generally.

Mr. A. A. McLEAN: The omission of the Prince Edward Island railway was not the fault of the people of Prince Edward Island; it was the fault of the law officers of the Crown; there is no doubt about that. There can be no doubt in the mind of any member that the man who drew that Act believed that it was to apply to the Prince Edward Island railway. In the body of the Act, however, the reference is to the Intercolonial railway, and when the judge, who recently tried a case in Prince Edward Island, looked up the definition of Intercolonial railway he found that in the Railway Act it applied to the provinces of Nova Scotia, New Brunswick and Quebec only. But that was not the belief of the law officers of the Crown who drew the Act. I have particular knowledge of that fact. I have been informed by one who knows that the law officers believed that the Prince Edward Island railway was included in the Act, and were astonished that a judgment had been given to the effect that the Act did not apply to that railway. I think it is only fair that this Bill should be amended in some way so as to make it apply to all claims which have arisen against the Prince Edward Island railway since 1910. After all, it is only a matter of procedure. If it is not amended those people who have claims against the Prince Edward Island railway will be under the necessity of going to the Exchequer Court and of filing petitions of right, and will be put to great expense. I hope the minister will take the matter into consideration, and I have no doubt that he will arrive at the same conclusion as my colleagues and the hon. member for Kings county have arrived at. This Act was intended to apply to Prince Edward Island and the people who drew it believed that it did apply. It is nothing but right and just that this amendment be made making the procedure apply as if this Act had been passed in 1910.

Mr. REID: In order that the matter may be in proper order before the House, I beg to move in amendment to the amendment that the order for the third reading of Bill No. 91 be discharged, and that the Bill be withdrawn.

Mr. PUGSLEY: That motion is not in order; it is not an amendment. It negatives a motion which the hon. member has already made and he cannot do that.

Mr. SPEAKER: When there is a motion for the House to go into Committee of Supply only one amendment can be made. It is then forbidden to move an amendment to the amendment. but in this case I think it is permissible to move a sub-amendment.

Mr. PUGSLEY: The point is that this is not in the nature of an amendment. The minister has already made one motion for the third reading of the Bill. There is an amendment that the Bill be not now read a third time, but that it be referred back to the committee for the purpose of making a certain amendment. Then, the minister, the same member who moves that the Bill be now read a third time, undertakes to amend his own motion by moving that the order for the third reading be discharged. I submit that it is clearly out of order.

Mr. SPEAKER: I think the point of order is well taken, because the main motion was made by the hon. Acting Minister of Railways and Canals, and consequently he is presenting a sub-amendment to amend his own motion.

Some hon. MEMBERS: Question, question.

Mr. MACDONALD: I may be permitted to say a word in regard to this matter. This legislation was introduced in 1910, when Sir Allen Aylesworth was Minister of Justice. I personally had pressed upon him, and also upon the Minister of Railways of that day for a long period of time previous to that, the propriety of providing for some simpler method by which the claims of parties living along the Government railway or the Intercolonial railway, as it was then called, should be submitted to some local tribunal and disposed of. The then Minister of Justice took very serious exception, as a matter of law, to the taking out of Exchequer Court of any cases in which claims were made against the Crown by virtue of the old principle which always applied in actions against the King. Towards the end of the session, with very great reluctance, he assented to the introduction of a measure which was submitted to him, but confining the jurisdiction of the court to the jurisdiction of a claim amounting to $200 only. If hon. gentlemen will look over the statute they will find that that is so. The Minister of Railways and Canals of that day, the Hon. Mr. Graham, accepted the measure, the principle of which was that the small claims arising along the line of the Intercolonial railway should be disposed of in this way. There was no thought of making any distinction between the Prince Edward Island railway and the Intercolonial railway as such. Later on, the phrase, "The Government Railways of Canada," was adopted by an amendment of the Act, but the intention of every one connected with the measure of 1910 was that a new policy should be laid down by which, instead of driving claimants to the Exchequer Court with all the expense and difficulty that would attend upon such a procedure, jurisdiction should be conferred upon the county courts along the line of railway, so that, in regard not merely to the Intercolonial railway but to all Government railways, these matters should be disposed of in that way. That is the history of the manner in which this measure was introduced, and I think the minister ought not to raise the technical point when it was a mere matter of phraseology that caused the Prince Edward Island railway to be omitted from the Act at that time.

The House divided on the proposed amendment of Mr. Hughes:

YEAS:

Mr. A. K. MACLEAN: Not noticing the absence of my pair, the hon. member for Shelburne and Queens (Mr. McCurdy), I inadvertently voted, and I desire now to recall my vote.

Mr. MARCIL: I was paired with the Minister of Justice (Mr. Doherty). Had I voted I should have voted for the amendment.

Mr. LEMIEUX: I was paired with the Postmaster General (Mr. Casgrain). Had I voted I should have voted for the amendment.

Mr. SEGUIN: I was paired with the hon. member for Chambly and Vercheres (Mr. Rainville). Had I voted I should have voted for the amendment.

Mr. COCKSHUTT: I was paired with the hon. member for Norfolk (Mr. Charlton). Had I voted I should have voted against the amendment.

Mr. DEVLIN: I was paired with the hon. member for North Renfrew (Mr. G. White). Had I voted I should have voted for the amendment.

Mr. McCOIG: I was paired with the Minister of Labour (Mr. Crothers). Had I voted I should have voted for the amendment.

Mr. McKENZIE: I was paired with the hon. member for Lunenburg (Mr. Stewart). Had I voted I should have voted for the amendment.

Mr. PUGSLEY: I was paired with the Minister of Marine and Fisheries (Mr. Hazen). Had I voted I should have voted for the amendment.

Mr. W. CHISHOLM: I was paired with the hon. member for Annapolis (Mr. Davidson). Had I voted I should have voted for the amendment.

Mr. KNOWLES: I was paired with the hon. member for Comox-Atlin (Mr. Clements). Had I voted I should have voted for the amendment.

Amendment negatived:

Main motion agreed to, and Bill read the third time and passed.

SUPPLY.

The House in Committee of Supply, Mr. Rhodes in the Chair.

Telegraph and telephone lines, Quebec—improvements to repair service, $3,000.

Mr. LEMIEUX: Is the Government still the owner of the telephone line in the county of Charlevoix running from a point near Murray Bay to Chicoutimi? If the minister will let me know how many miles of that line the Government controls. I shall then air a little grievance I have.

Mr. ROGERS: I have not the information here, but I can get it for my hon. friend. The Government have not sold any telephone lines for many years.

Mr. LEMIEUX: The reason I mention it is that a business man with whom I am more or less connected was complaining the other day that it was practically impossible to be heard on the long-distance line between Montreal and Chicoutimi, on account of a subsidiary line. As this subsidiary line does not belong to the Bell company I thought perhaps it was a Government line. It is really in bad order; I am not referring to the poles, but to the wire, which is not up to the long-distance standard. My hon. friend might perhaps inquire whether the line belonging to the

Government on the north shore below Quebec is in proper order, whether a report has been made lately concerning its inefficiency and whether repairs could not be made so as to facilitate business between Montreal, Quebec, and the Saguenay river. I have heard some people simply shrieking over the line from Montreal to Chicoutimi in order to make themselves heard, simply on account of the bad condition of the wire. I do not know that this is a Government line, but it is certainly not the Bell line, and I do not know of any subsidiary company. Perhaps my hon. friend will see what can be done to improve matters.

Mr. ROGERS: My hon. friend will appreciate that it is impossible for me to give him any information at the moment, but I shall be very glad to inquire into the matter.

Harbours and rivers, Saskatchewan and Alberta—Sturgeon river improvements, $9,500.

Mr. OLIVER: How much was spent on improvements in the Sturgeon river last year?

Mr. ROGER: We did not spend anything there last year. This amount is required for the removal of weeds and log jams, and the construction of a dam on the Sturgeon river. There is a growth of weeds in the Sturgeon river that requires to be removed, and also a log jam in the same river, in the vicinity of Devil's lake, Onoway, and Lac Ste. Anne that will also have to be removed in order to create a current and thereby reclaim hay lands for the settlers. The dam is proposed to be built about one mile east of St. Albert, a village on the Sturgeon river, and is for the purpose of raising the water in the river and in the Big Lake, a couple of miles west of the village, so that navigation for pleasure craft may be had at any time during the open season. The work is necessary in the interest of navigation on the Sturgeon river, which under the existing conditions is at a very great disadvantage, and it has been asked for by the district engineer.

Mr. OLIVER: Can the minister say how much money has been spent altogether upon this project up to the present time? He says that nothing was spent last year, but there have been expenditures in previous years.

Mr. ROGERS: I have no record before me of any expenditure on this particular work. There may be something in the department, but it was not last year nor the year before, or I would have had it before me.

Mr. OLIVER: There has been some expenditure on the same Sturgeon river, although it may have been under a different heading or have been given a different description. I had occasion to bring to the attention of the minister, by correspondence and also at a previous session, the complaints of certain farmers owning land along the stream whose fences had been taken down and whose bridges had been blown up by the officers or employees of the department in the work of improving the navigation. I supposed that this vote was simply a continuation of that work.

Mr. ROGERS: I have nothing to show that here, but I shall be glad to get the information from the department for the hon. gentleman; if there is any there at all. I will ask the deputy to send it to the hon. member.

Mr. OLIVER: The point is that there was money spent, I do not know what amount, on a project that, while we are all glad to see money spent in our constituencies, is unique in this, that while it purports, according to the statement made by the minister, to lower the level of the water in one lake in order to create hay land, it includes a project to raise the water in another lake, and thereby flood hay land, I presume to, at any rate, a corresponding degree. While I do not wish in any way to discourage the idea of money expenditure, especially in that particular constituency, I would respectfully suggest to the minister that he look into this matter somewhat carefully, and find if there is not some other place where an equal expenditure could be made with better results than draining the hay land of one lake and flooding the hay land of another. I would think that under all the circumstances it would be in the interest, not only of the treasury, but of the country, to leave the matter severely alone if there is no other object to be attained, and, I am bound to say, I do not know of any other object to be attained. I am aware that the people who own hay land at the outlet of lake Ste. Anne would be pleased to have that hay land drained by the lowering of the level of the water, but I am not at all sure that the people owning shore front on lake Ste. Anne at other points would be pleased to have the level of the water in the lake lowered, thereby giving them a frontage of mud, whereas at

the present time they have a frontage of water. The minister would be well advised to go over this whole project again, and, unless there is some better reason for it than has as yet been given, it would be well to leave it alone. I do not wish either to prevent the expenditure of money in the Edmonton constituency or to guard the Government against mistakes; but this is such an obvious case that I do not think I would be protecting myself if I did not take the opportunity of drawing attention to the fact that the proposal, as stated by the minister, is to drain the one lake and to raise the other, clearing hay land in the one case and flooding it in the other. My interest, of course, was principally in regard to the improvements which had been made to the course of the river in past years, and which had brought the officers of the department in collision with the owners of the land in connection with the matter of fences and bridges, and I wanted to know what the status of the project was, that is, whether the Government had still in mind the making of this little water course a channel by interfering with the rights of the farmers who owned land on both sides of it.

Mr. ROGERS: This is one of the items that we do not intend to spend during the coming year, so that we shall have plenty of time to look into the matter.

Mr. OLIVER: In that case I would certainly advise the minister to look carefully into it.

Mr. ROGERS: We will have another report made.

Mr. TURRIFF: Will the minister say how an item such as this appears in the estimates at all where apparently the member for the constituency thinks it an absolutely absurd manner of expending money? Can the minister say who applied to have the work done.

Mr. ROGERS: It was recommended by the district engineer at Edmonton.

Mr. SINCLAIR: I have never before heard of such a proposal as the draining of land by the Dominion Government unless there is some question of navigation connected with it. It appears to me that the proposal is altogether irregular. It would be a different matter if the minister were embarking upon a project of draining all the swamps and low places in the country.

[Mr. Oliver.]

Mr. ROGERS: The dam is proposed to be built about one mile east of St. Albert, a village on the Sturgeon river, and is for the purpose of raising the water in the river and in the Big Lake, a couple of miles west of the village, so that navigation for pleasure craft may be had at any time during the open season. The work is necessary in the interest of navigation on the Sturgeon river, which under the existing conditions is at a very great disadvantage, and it has been asked for by the district engineers. The estimated cost is $9,500. St. Albert village is located about ten miles north of Edmonton on Sturgeon river. The river and Big lake are a considerable attraction for campers and boating parties from Edmonton, and this attraction will probably be increased next summer, as a suburban electric railway has been built to St. Albert, and no doubt large industries will be established at Lake Ste. Anne. Both points are located in a well-settled farming district.

Mr. SINCLAIR: Does the report give the depth of the water?

Mr. ROGERS: I am just reading the report of the engineer.

Mr. NESBITT: Is the minister going to spend the money this year?

Mr. ROGERS: No.

Mr. NESBITT: In that case, what is the use of discussing it? I have a grove on my farm to which the people come very frequently. There is a river which is crooked, and it would be a great advantage if the minister would straighten it, so that the people could indulge in boating.

Mr. ROGERS: Will there be an electric railway there?

Mr. NESBITT: I will have one built. The people drive up in their motors and camp in the grove. I think the case is as good as the other one, only there are no weeds to pull up because the bullfrogs have got them all cut out.

Mr. OLIVER: With regard to the item of $3,500 for an office and dwelling at Dunvegan, is it the intention of the minister to place this office at the river bank, or where the present office is located?

Mr. ROGERS: This amount of $3,500 is required for the purchase of a site and the erection of an office at Dunvegan on the Peace river line. The estimated cost is $3,500. It is asked for by District Superintendent Macdonald who, in a telegram dated March 6, 1912, states as follows:

Present quarters at Dunvegan are inadequate; a building similar to one under construction at Grouard should be provided. As the cost of the material delivered would be somewhat higher, an appropriation of $3,500 would be required.

Superintendent R. C. Macdonald, in a letter dated Nov. 8, 1915, states the following:

Having reference to the appropriation of $3,500 for an office dwelling at Dunvegan, at the request of the Conservative Association permission was given to have this appropriation diverted to a building at Waterhole.

Nothing has been done; the matter stands.

Mr. OLIVER: This is not at all in the same class as the other expenditures that I was mentioning. There is a peculiar geographical condition there that I think attention ought to be drawn to. The valley of the river is about 800 feet deep. It is a navigable stream, and the stores of the Hudson Bay Company and Revillon Bros., the steamboat landing, of course, and the ferry crossing, are down at the river. The telegraph line crosses there, but the telegraph office is on the hill 800 feet above the river and a mile or two back from it. It is not as far away as Waterhole is, but unfortunately it is too inconveniently situated to be of any benefit to those navigating the river. I would be inclined to believe that the proper place for the telegraph office is at the river crossing, at the ferry, where it would be of convenience to the people crossing and going up and down the river. There is a rented telegraph office at Van Rena, eight miles or so from Dunvegan. This office is in charge of a farmer, who, I assume, gets a small salary for handling the business. With the office at Van Rena for the accommodation of the adjacent upland territory, and Waterhole being not inconveniently situated from there, if the Government is going to erect a permanent building the proper place would be in the river valley, at the ferry crossing, where the business places are located.

Mr. ROGERS: We will have that looked into.

Md. OLIVER: There is an office called Van Rena, is there not?

Mr. ROGERS: We have no note of that here.

Mr. OLIVER: It is a rented office. There are telegraphic facilities at Van Rena which serve a reasonable radius of upland country, extending, I suppose, as far as the place called Waterhole. There does not seem to be necessity for two offices so close together, especially when that leaves the valley without a telegraph office.

Mr. ROGERS: How far is the valley from Waterhole?

Mr. OLIVER: About five or six miles. It is the difference in level that has to be considered: what is on the hill is not convenient for anything in the valley and what is in the valley is not convenient for anything on the hill. To have two offices on the hill and none in the valley seems to be hardly a fair division.

Mr. ROGERS: I will have it looked into before we make any expenditure.

Mr. KNOWLES: I understand that when the shortage of money occurring by reason of the war was fully impressed on the Government, they did not enter into any new contracts for the erection of public buildings. May I ask whether that policy was put in force decisively and in clean-cut fashion as of one date throughout all Canada, or was it put in force at one time in some places, and later in others?

Mr. ROGERS: When war broke out we did not decide definitely not to go on with public buildings for some time, but as conditions grew more pressing and as our expenditure in connection with the increased number of troops recruited at various places kept creeping up, we kept on refusing more largely, every day almost, the extension of public buildings. I do not know that there was any specific date, but in the year 1915, the latter part of it, at all events, we were very definite in our refusals to go on with any public buildings.

Mr. KNOWLES: With regard to tenders that were in a few days prior to the breaking out of war, were these accepted and contracts closed?

Mr. ROGERS: We had a number of tenders in; a large number of them we did not go on with. Wherever we could possibly find an excuse for not proceeding with the work, we have not gone on with it. Wherever there was evidence that the locality could get along without it, we have delayed the expenditure.

Mr. KNOWLES: That policy was put in force, then, to a degree, at any rate, from the hour that war broke out?

Mr. ROGERS: Not so much in 1914. We did not then think that the war was going to be so serious.

Mr. KNOWLES: With regard to tenders that were in, say, by the first of August, before war broke out, were they all accepted and the contracts closed?

Mr. ROGERS: Oh, no, they were not all accepted.

Mr. KNOWLES: I do not understand, then, how the minister can say that it was not until after end of 1914 that there was any embargo on the construction of public buildings.

Mr. ROGERS: Well, there was a considerable embargo, but not so complete as it was made later.

Mr. KNOWLES: I suppose where the hon. minister found the pressure of his friends or his enemies to be strong enough, he went on with the work; otherwise he did not.

Mr. ROGERS: We do not do that sort of thing.

Mr. KNOWLES: I would not think any less of the minister if he did. We are all human, and the minister is not yet ready for wings. If that was not the guiding star, then what was? In some places work was gone on with despite the war, until the pressure became so strong that a general policy was adopted. What was the guiding principle during this transition stage, if it was not political influence or anything of that kind, as the minister says?

Mr. ROGERS: We were guided by the position of each locality and the necessity for public buildings. Very few public buildings have been gone on with since the outbreak of the war. In some cases tenders had been called for and contracts let, and we were perhaps more considerate of those than of others where tenders had not been called for. But there has been no definite or fixed rule.

Mr. OLIVER: I see two items here—Grand Prairie office, $3,500, and Dunvegan office, $3,500. Is it the intention of the Government to make any expenditure at either of these offices this year?

Mr. ROGERS: We have an idea that we should go ahead with them. They are marked as items to be proceeded with, and there is a pressing necessity for them.

Mr. KNOWLES: The minister said that they were considerate of those buildings for which tenders were called before the war. I take the case of the Prince Rupert public building. Tenders were to close in June, but the time was extended for some reason and the contract was not let. The time for receiving tenders, as originally set, expired early in the summer. This was an important building, to cost somewhere between $60,000 and $90,000. A very large sum has been expended for a site, such as it is, and the minister is paying out money every month to pump the water from it so that he will not be sued for damages for maintaining a nuisance. Why was that building stopped?

Mr. ROGERS: Of course, it is not the only one. But let us take Prince Rupert as a fair sample. That would be one of the first places where we would delay construction, because the population is not very large and is of rather a floating character; and when war broke out the population became rapidly less. So I think we were perfectly justified in delaying the construction of a public building there, under present circumstances.

Mr. KNOWLES: Could the minister let us have a list of the cases in which at the time of the outbreak of the war tenders were called for and not accepted, and have not since been accepted, and the other cases where tenders were in and were accepted despite the war?

Mr. ROGERS: I think we could get a statement of that sort.

At six o'clock the House resumed, and then took recess.

The House resumed at eight o'clock.

PRIVATE BILL.

SECOND READING.

Bill No. 96, for the relief of David Whimster Rhodes—Mr. Boys—read the second time, and referred to the Committee on Miscellaneous Private Bills.

SUPPLY.

The House in Committee of Supply, Mr. Rhodes in the Chair.

Mr. OLIVER: At six o'clock I asked the minister if it was the intention of the department to proceed with the construction of dwellings and offices at Grand Prairie and Dunvegan. I understood him to say

that these were expenditures that were listed to be made?

Mr. ROGERS: Yes.

Mr. OLIVER: I notice that the amounts are similar in the three columns, and that is why I asked whether the expenditures were to be made. Grand Prairie may now be considered a fixed point. The railroad has been built to Grand Prairie City, which certainly seems to be a proper and desirable place at which to establish permanent office accommodation for the government telegraphs. The Dunvegan Railway Company are not, I understand, establishing a commercial telegraph system. They propose to operate by telephone, which leaves the commercial business for the government lines. Therefore, it seems quite in order, now that Grand Prairie City has become a railroad point, and indeed, a railroad terminus, that the Government should make that expenditure upon permanent offices there.

At six o'clock I was speaking with regard to Dunvegan. The situation there is not at all the same as at Grand Prairie. The office, as at present situated, is entirely inconvenient. It is not convenient for anybody, and it is a Government building. It is not a large building, though quite adequate for present purposes, but it is not conveniently situated; it was placed where it is now, I think, in promotion of townsite speculation, which, of course, has fallen entirely flat. At the moment, there is no railroad development on the north side of the Peace river, and, until there is railroad accommodation, permanent points of business cannot be established. Therefore, it would seem to me that, unless there was plenty of money available to meet all demands, it would hardly be the part of wisdom to make an expenditure for a permanent establishment at a point that might in the end, and within a year or two, be left aside from railroad facilities which might be established nearby. There is a prospect of railroad construction on the north side of the Peace; it is a prospect which we hope will be realized, but it is not an immediate prospect, and, until it becomes a definite prospect, it would seem to me to be hardly wise to make a large expenditure on a permanent building at a place that might practically be of no value after the railroad was constructed.

I have this suggestion to make to the minister. For the time being telegraph facilities can be maintained without any larger permanent expenditure than has been made at present. On the north side of the river there is as I have said a toll office at Van Rena. I do not know whether there is an office at Waterhole. There is an office at the top of the hill overlooking Dunvegan where it is not convenient for any body, and there is no office at the fort in the valley where the Hudson Bay and Revillon Bros. are. That could be established as a toll office without going to any capital expenditure, waiting the time when, by the construction of the railroad, permanent centres of business on the north side of the river will be established.

By reason of railway construction, a new centre of business has been established on the south side of the river, that is to say Spirit river. Spirit river is practically at the junction of the Grand Prairie branch with the main line of the Dunvegan railway. For the time being, it is the terminus of the main line of the Dunvegan railway. It is situated about 15 miles south of Dunvegan itself, in the centre of a very fertile piece of country, and is rapidly becoming a business centre. Of course, if the minister has plenty of money to spend north of the river as well, I would be very glad, and would not like to put any restriction upon the expenditure. But if he has only $3,500 to spend on permanent telegraph accommodation in that vicinity, I would certainly suggest that Spirit river, having become an important railroad point, is the place that should receive that accommodation at the present time. It has become a fixed centre of business by reason of railway construction, and therefore the minister could rest thoroughly assured that an expenditure made at that point would be of permanent value and would not by any possible chance be left as it were on the side track and of little value in proportion to the expenditure made. I urge the building of an office at Grand Prairie. I suggest the giving of accommodation at the actual site of the fort of Dunvegan in the river valley, and that any permanent expenditure of this character be made at Spirit river.

Mr. ROGERS: I quite appreciate the importance and the immediate necessity of providing a building at Grand Prairie by reason of its definite location and of the definite condition existing there. I agree in great measure with what my hon. friend says regarding the location at Dunvegan, by reason of the fact that apparently it is not a definite centre yet. There are Water-

hole and the Crossing, two points which might have temporary accommodation. As far as Spirit river is concerned, if my hon. friend will look at the Supplementary Estimates that came down to-day he will see that we are providing for a building there for immigration, and I was in hopes that we would be able to use a portion of it, temporarily at all events, for the telegraph and telephone services. It will supply the needs of Spirit river this year, at all events, or until we are able to go on with something more permanent. As far as Dunvegan is concerned, we will not spend any money unless we are able to locate at a point that is going to be a definite centre for all time to come, something we have not been able to do up to the present moment. So far as Grand Prairie is concerned, we are going ahead. At Spirit river we will go ahead with the immigration building and find accommodation temporarily for the office there. In the meantime we will not settle anything with respect to Dunvegan.

Mr. OLIVER: If it is possible to make arrangements to have an office at the site of the old Dunvegan fort, which is in the valley of the river, it will be an advantage. I do not urge the building of an office, but now that the railway has actually reached Peace river at the Crossing, there will be a large amount of navigation up and down, in the promotion of settlement, and it would be a great convenience to have the facilities of an office at the river instead of up on the hill, 800 feet high and two or three miles back, where there is no particular reason for it.

I desire to call the minister's attention to another matter. There is a Government telegraph line from Edmonton to Athabaska and from Athabaska a branch line to Edmondville and Lac la Biche. That branch line, I think only extends to Lac la Biche Mission. Since that line was projected the Waterways railway line has been constructed. This railway is to have its first divisional point north of Edmonton, on the Hudson bay property at Lac la Biche, which is a considerable number of miles distant from the Lac la Biche Mission. The Government telegraph line that runs from the town of Athabaska to Lac la Biche Mission might very well be carried on a few extra miles to Lac la Biche railway station. That line would then be in a position to get whatever commercial business would arise at Lac la Biche and no doubt a very considerable amount of business will arise there. Under ordinary circumstances the railway company would establish a commercial telegraph system but I understand that is not their intention as they intend to operate by telephone and do not contemplate establishing a telegraph line. In that way the Government line would have whatever business there was at this now presently important and, in the near future, very much more important point. There is a minimum service being rendered by the line, which, as I understand, at present extends north of Plamondonville and Lac la Biche.

Mr. ROGERS: How many miles would that be?

Mr. OLIVER: Not more than ten miles at the outside. It would give a maximum service on a minimum extra capital expenditure. I would urge that upon the minister's best consideration. It is an extension that might be made at any time.

Mr. ROGERS: I have not heard of the desired extension mentioned by my hon. friend but I will get a report from the department and see whether it is possible to do it. We have no special vote for it and as this is only 8 or 10 miles we might be able to provide for it.

Mr. OLIVER: That was my idea. In regard to the McMurray telegraph line, I take it for granted that it is the intention to operate that line continuously now that it has been completed.

Mr. ROGERS: The Fort McMurray line —yes.

Mr. OLIVER: What are the points at which operators are to be maintained along the line between Athabaska and McMurray?

Mr. ROGERS: I am afraid I have not that information here. My deputy will send it to my hon. friend.

Mr. OLIVER: If it will be convenient the deputy might send it to me privately.

Mr. ROGERS: Yes.

British Columbia mainland telegraph and telephone lines—general repairs and improvements, $14,000.

Mr. GRAHAM: There was nothing under this item last year.

Mr. ROGERS: This amount is required for repairs and improvements to the mainland telegraph and telephone lines as follows:

Resetting poles Kamloops to Merritt 61 miles	$ 2,000
Douglas Lake line, 5 miles of poles required on this line which was run on fence posts when constructed in 1913	600
Rebuilding line from Fairview to Princeton, 64 miles. (Reset two years ago but must be rebuilt next year)	9,000
General repairs Kamloops-Vernon 75 miles	700
Resetting poles and general repairs on Marron Lake spur 10 miles	300
General repairs on Nakusp Edgewood line 57 miles	500
Extension across North Thompson river to Black Pines	300
Resetting poles and general repairs on Lumby line 16 miles east of Vernon.	600
	$14,000

Public Works — miscellaneous—Architectural Branch—salaries of architects, clerk of works, inspectors, draughtsmen, clerks, and messengers of outside service, $60,000.

Mr. GRAHAM: Is that outside of the Civil Government staff?

Mr. ROGERS: That is outside of the Civil Government staff.

Mr. GRAHAM: Who is the chief architect under this heading?

Mr. ROGERS: Chief Architect Horwood.

Mr. GRAHAM: Does he not come under the Civil Government vote?

Mr. ROGERS: These are his outside officers. Take, for instance, Charlottetown, P.E.I.: J. J. Macduff, $800.

Mr. GRAHAM: How many people would there be on that staff?

Mr ROGERS: Thirty-one.

Mr. GRAHAM: What position does our old friend, Mr. Ewart, hold?

Mr. ROGERS: He is consulting architect for the whole thing—our general walking boss. He has been of great service to us this year.

Mr. GRAHAM: Has not Mr. Ewart prepared and submitted a plan for the Parliament building?

Mr. ROGERS: Mr. Ewart has been of great assistance to the architects in the preparation of the plans, and has given them ideas that to my mind are very valuable. He also prepared a sketch plan, some of which at all events has been used. The architects consider that he has been of very great assistance. He has done splendid service in every way.

Public Works—miscellaneous — Engineering Branch—salaries of engineers, inspectors, superintendents, draughtsmen, clerks and messengers of outside service, $435,000.

Mr. GRAHAM: How big a staff is that?

Mr. ROGERS: There are 280 on the staff. It includes engineers all over Canada.

Mr. GRAHAM: It is the staff of engineers looking after public works all over the Dominion?

Mr. ROGERS: Yes, and the vote is the same as last year.

Mr. GRAHAM: Are building inspectors included in this staff?

Mr. ROGERS: No.

Mr. GRAHAM: They would be in the outside service. I do not mean special inspectors.

Mr. ROGERS: This vote has to do with harbours and rivers, and has nothing at all to do with inspectors on public buildings.

Mr. W. CHISHOLM: How many engineers are in the province of Nova Scotia?

Mr. ROGERS: There are five districts there. The one I can recall at the moment are North Sydney, Halifax and Shelburne.

Mr. W. CHISHOLM: I notice in the Auditor General's report for the year ending March 31, 1915, that the cost of the office at Antigonish was $14,689.18, and the one at North Sydney $11,593.64, or a total of $26,282.82. In 1909 and 1910 there was one office for the Island of Cape Breton and the counties of Antigonish, Pictou and Guysborough, the office for the whole district being in Antigonish. A few years ago another office was established at North Sydney. I find that for the year 1909 the total cost for the whole district of the Island of Cape Breton and the counties of Antigonish, Pictou and Guysborough was $8,409.68 (p. 310-V Auditor General's Report). For the year 1910 the cost was $10,384.86, and for 1911 $13,632.80. The average cost for the whole district for the three years 1909, 1910 and 1911 was $10,782.45. The cost for the whole district at the present time—there are now two resident engineers' offices in the district—is $26,282.82, an increase of over 150 per cent. It is well known that during the years 1909, 1910 and 1911 the engineers in that district were kept pretty busy; wharves, breakwaters, and harbours required a great deal of attention and there was a large amount of work to be done. In those years, when business was booming and work was being carried on, the

average yearly cost was only $10,782.45, while the cost in the last year for which we have the Auditor General's report and during which, as the Estimates show, there has been practically no work done in the counties I have referred to in the way of improvements to harbours, wharves, breakwaters and such like, has been $26,282.82. I should like the minister to explain how it is that the cost has gone up so enormously, while the work has been going down practically to a minimum? There has been really nothing for the engineers to do; the breakwaters and wharves are allowed to tumble into the dock, and yet the cost has increased. As there has been no new work the engineers could simply turn in the same reports they made the year before. I should like the minister to explain how it is that the expense of looking after that section of the country last year,—$26,282.82—when there was no work doing, is so very much greater than the average cost for the three years 1909, 1910 and 1911, when a great deal of work was being done?

Mr. ROGERS: The increase is due to the fact that shortly after this Government came into power a new district was formed at North Sydney. Prior to that, the North Sydney district was looked after by the engineers stationed at Antigonish. This new district formed about 1911, accounts largely for the increased expenditure to which my hon. friend has referred.

Mr. W. CHISHOLM: I could readily understand that the fitting up of buildings and offices and the cost of heating and lighting them would cause an increase, but the expenses I have referred to have nothing at all to do with the buildings. I am referring to an increase in the salaries and expenses of the engineers when they are out on duty. When two offices were opened it was only natural to expect that the number of engineers and assistants in each office would be very much smaller than when there was only one office. They surely would not have to double the staff simply because they opened a new office. For the district attended to by the engineer for Antigonish, we will say, that is, the counties of Antigonish, Pictou and Guysborough, surely not such a large staff would be required as was required to look after those three counties and the whole island of Cape Breton as well. But the fact is that the office at Antigonish alone cost $14,689.18 last year, as against an average for the three years 1909, 1910, and 1911, of $10,782.45, before the change was made. One would suppose that when the two districts were created and the two offices established, the expenses of the Antigonish office would have fallen off very considerably, as the territory to be looked after was not nearly so large, and the work had been reduced practically to a minimum. Instead of that we find that the cost of the North Sydney office alone was $11,593.64 or more by $1,000 than the cost of the Antigonish office when it attended to the whole island of Cape Breton as well as the three counties of Antigonish, Pictou and Guysborough. So the explanation of the minister cannot be accepted as explaining this increase. To recapitulate, when the whole island of Cape Breton and the three counties of Antigonish, Pictou and Guysborough were under one engineering district, with a central office at Antigonish, the average cost previous to 1911 was $10,782.45. In 1911 the district was divided and two offices were established.

We find that the cost of the Antigonish office alone was $14,689.18 last year, or nearly 50 per cent more than when the whole island of Cape Breton was attached to the Antigonish office. We find, also, that the cost of the North Sydney office of looking after the island of Cape Breton alone was $11,593.64, or nearly $1,000 more than the average cost when it was all in one district. The explanation of the minister is unsatisfactory in that regard. Surely an increase of 150 per cent should not take place.

Mr. ROGERS: My hon. friend can readily understand that when you establish a new district the engineers in charge of that district feel themselves as important as the old ones, and look for the same condition of affairs, and, of course, there is naturally a large increase as soon as a new district equal to the old one is established. That accounts, so far as I can see, for the increased cost. I have not before me the detailed figures which my hon. friend appears to have, because I have not had occasion to look the matter up.

Mr. WILLIAM CHISHOLM: Will the minister explain to what extent the salary of the resident engineer was increased when he took charge at North Sydney, as compared with the salary he was receiving

when he was assistant engineer at Antigonish?

Mr. ROGERS: We do not appear to have the details of any increases. The chief engineer at Antigonish gets $2,700; the chief engineer at North Sydney gets $2,500.

Mr. CHISHOLM: What did the latter get when he was assistant engineer at Antigonish?

Mr. ROGERS: We are not sure about that. The deputy thinks he got $2,100.

Mr. CHISHOLM: That is an increase of only $400, and yet the total increase is, as I have stated, $16,000. The fact of the matter is that the office at North Sydney and the office at Antigonish are filled with office-seekers irrespective of what work there is to be done. The office at Antigonish has to-day more employees than it had when that office had to look after the whole island of Cape Breton and the counties to which I referred. The office at North Sydney has to-day as many employees as Mr. Milledge had when he had charge of the whole district. They fill the office with office-seekers irrespective of the necessities of the case.

Mr. ROGERS: Probably you were not doing the same amount of work then.

Mr. CHISHOLM: There is no work to be done there. As the minister knows, they are doing nothing. The amount of money spent in Antigonish, Guysborough, and Pictou counties, outside of East River, Pictou, is a negligible quantity, and has been for the last two or three years. They did not require all that staff. Assistants and assistants were appointed when they were really not needed.

Mr. SINCLAIR: In Guysborough county not a blow has been struck for the last four years.

Mr. ROGERS: A lot of money has been spent.

Mr. SINCLAIR: Not a single dollar has been spent in Guysborough county on public works during the last four years. Only one wharf has been built since this administration took office, and that has been humbugged so that it is of no use. The site was changed so that the boats could not reach the wharf on account of there not being a sufficient depth of water. That is the only thing that the department during the present Administration has done in my constituency, which forms a large part of this territory. I sympathize with the attitude taken by my hon. friend, although the trouble is not confined to the offices in eastern Nova Scotia. I pointed out the other day that it was general throughout the Dominion, and I gave the statistics supplied by the department itself showing that, taking the whole Dominion, the increase in the staff is enormous. The minister has not yet justified that increase and I question if he can.

Mr. ROGERS: I have no recollection of my hon. friend ever presenting any desire on the part of the people of Guysborough for the expenditure of any money by the Public Works Department.

Mr. SINCLAIR: I am afraid my hon. friend's memory is not good.

Mr. ROGERS: My hon. friend the other night undertook to support the statement of the hon. member for Kings, P.E.I., (Mr. J. J. Hughes) in respect to increased expenditure, additional staff, and so on, but I did not then have the figures before me. I took occasion, however, to look up the matter in order to see what justification there was for the statements made by those two hon. members and one or two more, and I shall be very glad to supply my hon. friend with the information in order that he may better understand the administration of the Department of Public Works which he undertakes to condemn. During the last three years of the late Government, 1909-10, 1910-11, 1911-12, $330,000 was spent in Prince Edward Island. It is true that a certain increase has taken place in the number of employees, but during the three years, 1912-13, 1913-14 and 1914-15, we have spent in Prince Edward Island $764,178.59 or $434,178.59 more than was spent in the three previous years. My hon. friend from Kings said the other night that they had only one man in the office of Mr. Hegan. I have looked up the record and I find that at that time there was a Mr. Hegan, a Mr. Hyndman, a Mr. Miller, a Mr. White and a Mr. Matthews, or five men. We were condemned the other night because we had eight employees during the last three years, although the increased expenditure in that province for that period amounted to $434,178.59, which, I am sure my hon. friend will agree, justifies the appointment of two or three additional employees. I desire to be fair in the statements which I make in respect to the department, and I always endeavour to give hon. gentlemen opposite full and complete information. I have not the in-

formation which my hon. friend from Antigonish has asked for to-night, but as in the case of my hon. friend from Kings, P.E.I., I shall be glad to look the matter up, and I venture to say I shall be able to supply him with a statement that will justify the department and the statements that I have made. I am sure my hon. friend from Guysborough understands the necessity of increased help when one is spending $434,178.59 additional to assist in the betterment of conditions in a province like Prince Edward Island.

Mr. SINCLAIR: I am not familiar with the expenditures in Prince Edward Island, and I am not in a position to discuss them; but it seems to be useless to appeal to the minister for economy or for reduced expenditure, because he is actually boasting that in the last three years he has spent over $400,000 more in Prince Edward Island than was spent by the former Administration in the previous three years. He looks upon it as a creditable thing to have done during the hard times when it was found difficult to borrow money. I think his memory must be short in regard to the other matter to which I referred, because I have frequently asked him for improvements along the coast line of my constituency. I made an appeal to him in this House not more than two or three days ago in regard to the wharf at Cole harbour, and I did my best to induce him to spend money that had been voted by the former Administration and had been kept standing ever since, although the public work at that place is very much needed.

I have not bothered the minister very much about public works, but I have presented several requests to him, and have always failed to move him. So far as my constituency is concerned, I see no necessity of keeping a large staff at Antigonish or anywhere else as long as the minister maintains the attitude that he and his party have maintained in regard to expenditures in my constituency; that is, they are not making any. The minister has not given any explanation as to the large increase in his staff throughout the Dominion. The figures as to the staff of the Public Works Department, which were furnished, I assume, by that department, showed last year an increase of some 700 employees since the present Government took office. If you allowed these 700 new employees a salary of $1,000 each, that means $700,000 a year which is taken from the people of this country in order to find places for friends of the Administration. Everyone knows that the expenditures in the Public Works Department during the last two or three years have been very small indeed in the Maritime Provinces. The items are kept standing from year to year and almost nothing is done; in the meantime, the number of employees has enormously increased. Can there be any justification, after making allowance for dismissals, deaths and superannuations, for an increase in the staff to the extent of 700 persons? I do not think there can be. $700,000 is a very large sum of money to add to the yearly expenditure of one department.

Mr. WILLIAM CHISHOLM: The minister has certainly the virtue of consistency. It is not surprising to members of Committee that he should boast of the increased expenditure in Prince Edward Island. As against $11,807,035 expended in 1910-11 under the late Government, $29,283,316 was expended in 1914-15, during eight months of which there was war. Undoubtedly that is an enormous increase. You find also that there was an increase of $1,291,979 in the expenditure of the year 1914-15 over that of the year 1913-14. The minister, therefore, is quite consistent so far as expenditures are concerned; he has a right to boast of how he makes the money fly. I do not want to be in the same position as the hon. member for Guysborough; I do not want the minister to taunt me hereafter by saying that we did not ask for appropriations in Antigonish county. We realize that the war is on and if the minister practices economy in every other part of the country, we are quite satisfied if during these critical times we are denied the conveniences that are afforded by wharves and breakwaters, but we expect to be treated as other parts of the country are treated. I may remind the minister that on December 28, 1912, when he wrote a letter through his secretary to the man in charge of the patronage in Antigonish country, he promised that an expenditure of $200,000 would be made in that county. He has not kept that promise. The money has not been expended; the same items have been in the Estimates year after year. The people have been waiting patiently, longingly, hopefully, I was going to say—no, they have lost all hope. They have come to the conclusion that the minister intended to use this letter merely for election purposes—there was a by-election on in the constituency at that time.

If the minister has money to expend I would remind him that he is in honour bound to redeem that pledge that he made. It is true that it amounts to $16 per head of the population of Antigonish and to about $85 per voter. Although that is a large amount, the minister promised it; the pledge is there. The letter reads:

> Your letter of the 24th instant, addressed to the Minister of Public Works, received, and in accordance with your request I am enclosing you herewith a list of the items which have been placed in the Supplementary Estimates for Antigonish county for 1913-14.

It is true that the Supplementary Estimates were not prepared at that time or for some months afterwards. It is true that the main Estimates were not prepared at that time; yet that letter was sent broadcast all over the country and there were people who believed that the minister was sincere in making that promise. Practically nothing has been spent; the promise has not been kept. The minister told me the other evening that it was not the intention to spend any money down there this year. The same was the case last year and the year before, these items were in the Estimates, but not a dollar was spent. I make a modest demand that the minister carry out his pledge, and I hope that I shall not be taunted as the member for Guysborough has been taunted on the ground that he did not ask for anything. I would ask the minister to refer to the letter which he wrote; he will find the items there. I have no doubt that he recognized the propriety of the expenditure, or he would not have made the promise that he did on that occasion.

Mr. ROGERS: The statement of my hon. friend is additional evidence of my great regard for the representations of hon. members in the House. Shortly after the letter to which my hon. friend refers was written, when the House reassembled, such strong opposition was presented by the member for Antigonish in regard to these items that I hesitated and am hesitating still. Judging from the statements made by the hon. member on that occasion, I felt that a mistake had been made.

Mr. GRAHAM: In writing the letter.

Mr. ROGERS: If any person is to blame, I am sure that my hon. friend will be willing to share the blame with me in respect to expenditure in Antigonish county. He dealt with the matter so fully during the session after that famous letter was written that great care has been exercised to see that no expenditures should be made that would grate upon the feelings of the hon. gentleman or disappoint him in his desires and hopes as the official representative of the constituents in that county. I think that my hon. friend will be good enough to share at least to some extent the blame in respect to the non-fulfilment of the promise made at that time.

Mr. WILLIAM CHISHOLM: I am surprised that the hon. minister should take the course that he has taken. He adopted the same course in replying to the remarks that I made in 1913 on this question. It would be called, in common parlance, a bluff, but the bluff did not work on that occasion. Let me quote the words I then used, so that we may see how much justification there is for the statement of the hon. minister that I threw cold water on the proposition to have these moneys expended. I quote from Hansard:

> It is quite true that these items amount to a large sum in bulk even without taking into consideration the dredging and other repairs referred to in that letter. These supplementary estimates alone amount to $195,000—$16 for every man, woman and child in the county, or $81 for every vote polled in the election. It is true these sums bulk large. But, as I have pointed out, if those had been voted and expended last year or the year before as they should have been, the vote would not have bulked so large in the estimates of this year. But that is not the question; you should not consider what it amounts to for each individual, what you should consider is: Are these works necessary and proper? I submit that these works should be built. Let me ask the minister then, that when the estimates are brought down every one of these items will be found there and that the money will be spent. It is right and proper that the money should be voted and spent. He owes that to the people; he owes it to himself; he owes it to the reputation of Senator Girroir. It is true that the Conservative workers in that county had to drink a cup of humiliation that was filled to the brim. If the Minister of Public Works wishes to give an antidote to the political poison these people had to drink, he will see to it that all those items are provided for in the estimates.

Is that language that indicates that I was opposed to the expenditure of these moneys? On the contrary did I not endorse every single one of the items and ask the minister to spend the appropriation? I urged and importuned the minister to spend the money, and yet he stands up this evening and in that calm, bland, assuring way of his, states that in deference to my remarks in regard to these Estimates, he did not expend them. Is that not the most absurd thing you ever heard of?

Mr. MACDONALD: I was not here the other night when the Public Works Estimates were up. Would the minister tell me the position of the work on the East river, and whether the depth of water in the upper lock is sufficient to permit vessels to pass up to Trenton and New Glasgow, or whether there is any change in the plans?

Mr. ROGERS: There is no change in the plans. Vessels will be able to go up to New Glasgow. There is some dredging to be done at the entrance and on the way up to the point where we are now preparing for the lock gates. My hon. friend will see an item in the Supplementary Estimates which finishes all the work. Tenders are being called for the lock gates.

Mr. MACDONALD: Were not the tenders called for some time ago?

Mr. ROGERS: A short time ago, but they have not yet been considered.

Mr. MACDONALD: Does the minister expect the work to be completed this year?

Mr. ROGERS: That is our intention and our hope.

Mr. MACDONALD: And this vote in the Supplementaries of $66,000 is to complete it?

Mr. ROGERS: Completes everything.

Mr. MACDONALD: Will the work, when completed, include a channel to deep water and the construction of locks to enable vessels to be taken up to the town of Trenton? Is that the general scope of the work?

Mr. ROGERS: As I understand it, it includes a channel as far up as New Glasgow.

Mr. MACDONALD: Trenton is not as far up as that.

Mr. ROGERS: It is to go to New Glasgow.

Mr. MACDONALD: Where is the dredging to be done?

Mr. ROGERS: At the entrance. I know there was a report the other day that there was a necessity for some dredging, but not a very large amount.

Mr. MACDONALD: Nothing has been done in the way of improvements farther up the river, above the town of Trenton. The dredging of which my hon. friend speaks is below the locks, and in order to facilitate the entrance to the locks from the deeper water of the harbour.

9 p.m.

Mr. ROGERS: That is correct.

Mr. MACDONALD: Is there any proposition to go on and dredge the river from Trenton up to New Glasgow, which is above where the improvements are now being made?

Mr. ROGERS: I was not aware that any dredging was required between Trenton and New Glasgow. We have not with us the report which we had the other evening, but I shall be glad to send my hon. friend a copy of it.

Monument of His Late Majesty King Edward VII, $10,000.

Mr. LEMIEUX: Where does the minister intend to erect that monument?

Mr. ROGERS: It is proposed to erect it at the corner of the East block, overlooking Connaught place and the post office.

Mr. LEMIEUX: I wish to congratulate my hon. friend and the Government upon the decision arrived at. The old rival of England, France, has erected in Paris and Nice, two cities which in his lifetime the late King Edward visited, and where he was facile princeps, if I may use the expression, monuments in his memory. His late Majesty was perhaps more beloved in France than in any other country in the world, although he was the most popular sovereign of his time. I may say that he was a benefactor to humanity, the father of the entente cordiale between France and England. It was just and fair that a monument should be erected in his memory in old France. The citizens of Montreal, a few months after his death, decided that a monument in his honour should adorn Phillips Square, and I am pleased to say that the artist on that occasion fairly exceeded his own reputation by giving us a splendid statue of the old King. It is a work of art which is admired by all who come to Montreal, and I am glad to learn that the Dominion Government have decided to have this statue erected at a very central place, so that the sight of that monument may be a real inspiration for all Canadians who love France, who love England, and who love Canada and the British Crown.

Mr. ROGERS: I am very pleased indeed to endorse all that the hon. member has said, and to join with him in the view that the name of our late honoured King

Edward should never be mentioned in any assembly without the highest possible feeling of respect and admiration for the great services he rendered to the Empire and to the world. I am glad to say that I was one of those present at the unveiling of the monument in Phillips Square, Montreal, and certainly I appreciate the great work that was done by the artist in preparing that monument. It is a credit to the artist and to the city of Montreal, and a source of pride to all who realize the importance of cherishing the memory of our late beloved King Edward. I am glad to know that the location which we have selected for the monument in Ottawa is one which meets with the approval of my hon. friend. I trust that we shall have the same success that they had in Montreal, and shall have a monument that will be a credit to the city of Ottawa and to the Dominion of Canada.

Mr. LEMIEUX: Is the minister going to ask Canadian artists to tender for this monument?

Mr. ROGERS: We have had a competition already, and Mr. Allward has the contract.

Construction and operation of water storage dams on the Ottawa river and tributaries, surveys in connection therewith, and settlement of land damages, $115,000.

Mr. PUGSLEY: I would ask the minister if the work of providing storage dams upon the upper Ottawa and its tributaries has been successful. When the project was started I was Minister of Public Works and I took a very great interest in the work, believing it would be of great advantage. I would like to know whether my expectations have been realized, and whether the dams have had the effect of steadying the flow in the Ottawa and of giving a greater depth of water during the dry season, which was one of the principal objects of the undertaking.

Mr. NESBITT: Will the minister explain what these storage dams are for?

Mr. ROGERS: They are for the purpose of storing surplus water.

Mr. NESBITT: For drinking purposes?

Mr. ROGERS: No. For the navigation of the Ottawa river it is necessary to store the water from the heavy freshets and preserve it in order to have continuous navigation on the river.

Mr. PUGSLEY: And for increasing the water-power on the Ottawa.

Mr. ROGERS: Yes, for increasing the water-power also. I am glad to be able to inform my hon. friend from St. John that the arrangement made some years ago has proved very satisfactory. We have had continuous navigation that would not otherwise have been possible. I look upon this as a splendid work, which has rendered great service to the city of Ottawa especially, and to transportation and navigation on the Ottawa river.

Mr. PUGSLEY: I am very glad to hear that. It is a matter of great importance.

Mr. HUGHES: A few evenings ago, when the Estimates of the Department of Public Works were under consideration, I pointed out to the minister the large increase in his staff that had taken place in Prince Edward Island. He said he was under the impression that the department there was doing far more work now than it did some years ago, and that he would have a statement prepared, a copy of which he would give to me. I understand that the minister has already referred to that matter tonight, but I happened to be out of the Chamber at the time, and perhaps he would kindly send me a copy of the statement.

Mr. ROGERS: I will do so.

International Commission, river St. John, N.B., $7,000.

Mr. PUGSLEY: Is this about finished?

Mr. ROGERS: This finishes it. I presented the report to the House the other night.

The National Gallery of Canada, including the purchase of paintings by the Board of Trustees, $25,000.

Mr. SINCLAIR: Does the minister intend to spend this amount this year?

Mr. ROGERS: Not if we can help it.

Mr. SINCLAIR: I do not think there is very much need for buying paintings for this gallery at the present time, or during the ensuing year.

Monument to Lady Latour at St. John—contribution, $5,000.

Mr. LEMIEUX: There is evidently an error in the title given to Madame Latour. I think that "Madame" should be substituted for "Lady." She was undoubtedly a lady, but she had no such title.

Mr. ROGERS: I beg to move that the word "Madame" be substituted for the word "Lady."

Motion agreed to.

Georgian Bay Ship Canal Royal Commission, $25,000.

Mr. LEMIEUX: I would ask the minister to see that the interim report on the Georgian Bay canal is translated into French. The reason why I suggest that is that the people of Montreal, and in the Montreal district generally, are very much interested in that project. I am quite sure that my hon. friend from Jacques Cartier (Mr. Descarries) has received many requests for it from his constituents, who take a great deal of interest in that project. The sooner we have the translation the better.

Mr. ROGERS: I am glad that my hon. friend has mentioned that matter. I quite appreciate the necessity of printing the Georgian Bay Canal Report in French. The deputy minister informs me that we have already provided for French copies.

Telegraph and telephone lines—Saskatchewan, $44,000.

Mr. OLIVER: Might I have the minister's permission tc revert to a little matter in connection with the northern telegraph lines again. I just wish to say that there is a system of Government telegrapn lines extending in the north country long distances. Of course it is not a money making institution but these lines are of very great benefit in the development of the country, and one way in which their usefulness would be increased would be as a means of transmitting news from these outlying points to the business centres. The suggestion I take the opportunity of offering the minister is that he arrange a rate on press messages from points on the Government system in the north that would be less burdensome than that prevailing at the present time. There is, I believe, a reduced rate for news matter but it is on a basis that makes it decidedly too burdensome to be carried out. It must be understood that news from Fort McMurray or Fort St. John will not carry as heavy a tariff as news from New York or the seat of war. It has to do with matters of trifling general importance, although of very great importance to the people interested and of very great importance in the development of the country, but still not of such importance that a newspaper could afford to pay a very large amount for the use of the lines. These lines are not overworked and it would be undoubtedly in the interest of the greater usefulness of the system, of the development of the country and the bettering of the conditions generally, if a press rate proportioned to the conditions were established so that the people on the outside could have the advantage of knowing what was going on in the north, thereby circulating interesting news, advertising the north country, drawing attention to it and promoting its settlement.

Mr. ROGERS: We have such a rate as my hon. friend suggests in connection with the Yukon service. This was brought to my attention a short time ago, and I have already taken the matter up with Mr. Keeley, the head of the telegraph department, with a view of trying to adopt a similar plan in the Peace river and north country, where we have our telegraph and telephone lines. I will take it up to-morrow, and urge that the suggestion of my hon. friend shall be carried out far as it is possible, because I think it is very desirable in war time that they should have a service up there in order to get the news as rapidly and cheaply as possible. We will do everything we can to meet that situation.

Mr. OLIVER: Has an office been put in at Beaver Lodge on the line from lake Saskatoon to St. John and Hudson's Hope?

Mr. ROGERS: I do not remember that. My deputy will find out and let my hon. friend know.

Mr. OLIVER: When I was there last summer, although the wire passes through the settlement, in which there is a store, post office, blacksmith shop and an illustration station of the Department of Agriculture and which is to a certain extent the nucleus of a village with a very prosperous settlement, there was no telegraph office and the people had to go 20 miles to the nearest office at lake Saskatoon and much further in the other direction. If an office has not been established there I would urge that the matter be taken up. I am sure that an arrangement could be made with some of the local people to take the office and it would be a very great convenience to the people of the settlement and be of great use in the promotion of settlement in that area.

Mr. ROGERS: We will take note of it.

Mr. OLIVER: It is a very important settlement in the Peace river country and it forms the western part of the Grand Prairie settlement which is about 25 or 30 miles west of Grand Prairie city. It is on the line of telegraph from lake Sask. atoon to Pouce-Coupé, St. John and Hudson's Hope.

Mr. ALFRED THOMPSON: I rise to supplement the remarks made by my hon. friend from Edmonton (Mr. Oliver) and to say that I took that matter up with my hon. friend the Minister of Public Works some time ago, and that he was good enough to assist us in getting a war news service for the Yukon. It was very much appreciated, and in these outlying districts to which my hon. friend from Edmonton refers, we who live in cities, cannot appreciate the advantage of having the news from day to day over the wires operated by this Government. I am glad to know that my hon. friend from Edmonton is bringing this matter to the attention of the minister in behalf of the Mackenzie Valley because a news service of this kind will be very much appreciated in these outlying districts.

Mr. W. M. MARTIN: I see there is an increase in the Saskatchewan vote of $7,000.

Mr. ROGERS: New offices are being established and extensions made.

Mr. MARTIN: What I am trying to find out is whether there have been extensions to the line to the value of $7,000 over the Estimates of 1915-16. The cost of maintenance last year was $37,000, and this year we are voting $7,000 more for maintenance, and I want to know whether any new lines have been built.

Mr. ROGERS: We have now a central office in Saskatoon, whereas formerly Saskatchewan and Alberta were bulked together. We thought it wise to make this change.

Mr. HUGHES: There is an error in the statement the minister has sent me giving the number of employees in his department in Prince Edward Island. The names of Mr. McDonald and Mr. O'Brien, who are now in the service of the department, do not appear in this memorandum, and as there is one error in it there may be others, particularly in the figures. If the minister would let me have a list of the works that have been constructed under the management of his department in the province of Prince Edward Island for the periods he used in his comparison I should be much obliged. He is certainly astray as to the number of employees.

Mr. ROGERS: I do not think I am astray. We were dealing with the engineering department in Prince Edward Island, and I supplied the names of those connected with that department. Mr. McDonald and Mr. O'Brien are connected with the Dredging Department, not with the Engineering Department. A good deal of dredging has been done there lately.

Mr. HUGHES: Mr. Hegan did the work that McDonald and O'Brien are doing now, in addition to carrying on other work that fell to him as the engineer of the department. Mr. Hegan was the engineer who looked after the dredging before Mr. McDonald and Mr. O'Brien were appointed. Consequently, these two men are additions to the service.

Mr. ROGERS: My hon. friend is mistaken; the dredging was looked after from St. John before.

Mr. HUGHES: The minister is in error. There was a superintendent of dredging at St. John, who visited Prince Edward Island perhaps once or twice a year; but Mr. Hegan was the man who actually did the work. The superintendent at St. John was a supernumerary, and had practically nothing to do with the dredging. I know he was supposed to have some kind of general oversight over the work, but it was Mr. Hegan who did the work that McDonald and O'Brien are doing now.

Mr. MORRIS: Perhaps I might be allowed to say a few words on this item with regard to independent telephone companies throughout Canada, particularly one in the province of Quebec. These companies are receiving no recognition from this Government. I have felt in the past that if ever I had the opportunity of bringing the matter before the House, I would call the attention of the Government to the work these companies are doing; they are of great benefit to our country. In the counties of Chateauguay, Huntingdon, and Beauharnois we have the Farmers' Independent Telephone Company. This line is in operation for 150 miles, and is giving splendid service. The line is absolutely independent; it is receiving no support from this Government or any one else; and I feel it my duty, as a representative of a rural district, now that other institutions

are receiving so much aid, to call the attention of the Government to what this telephone company is doing. The farmers could not get the telephone service they wanted, and so they got together, and without any assistance from the Government or anybody else, furnished the capital, and built the line; they did this in opposition to one of the greatest corporations there is in our country, and I think the service they have rendered to the farmers in my constituency should be recognized by the Government. The company has received no assistance from the Government or anybody else. But, like the Canadian Northern at the present time, it is perhaps in a little difficulty. The proposition is a big one for the farmers when they get no support from any one. We are doing this work absolutely on our own responsibility; we have asked nothing from any one; and I feel that the Farmers' Independent Telephone Company should be recognized, because what the farmers are doing is in the public interest. Previous to the organization of that company there were, away in the back concessions, many men who did not know what was going on. Now they have simply to ring the telephone bell in order to learn what is happening in the outside world. They will know to-morrow what has transpired here to-night, and my friends at all events will rejoice to know it. I am not coming here begging; we did not come to this Government nor to the Government of Quebec begging; we went down into our pockets and furnished what was necessary. Unfortunately an hon. member opposite who has helped us out in this matter is not here, but I am here as a representative of that county, an important county in the province of Quebec; I am representing an independent people. The proposition is a difficult one, and it is up to this Government to come to our help. All we ask of them is a little encouragement in a public work that I feel is worthy of this Government and of the country.

Mr. McKENZIE: I must congratulate my hon. friend from Chateauguay (Mr. Morris) on his very eloquent and splendidly presented speech. I am sorry he did not tell us earlier in the speech the amount that he wanted, because I am sure we would all agree to give it to him. I am sorry I have not very much hope that he will get much money from this Government. I have looked through the Estimates and I see nothing there for Chateauguay. Some things were done for that county some years ago, but there is nothing visible anywhere in these Estimates.

The hon. gentleman has spoken to the minister of things the like of which have never happened before, and I take this opportunity to mention to the minister for about the twentieth time something about something else the like of which has never happened before.

The county of Victoria is another rural district which I am proud to represent just as my hon. friend is proud to represent his constituency. We both represent rural constituencies, and therefore have a bond of union and a somewhat sympathetic feeling in regard to farming districts. I wish to bring to the notice of the minister something that happened with regard to telegraph lines in the county of Victoria in February, 1912. I brought it to his notice before and received plausible smiling promises that something would be done; but I am afraid that those promises, like many others of this Government, have gone the way of all flesh—nothing has come of them. We have in the county of Victoria a Government telegraph system which is of great service to that county. We have no railway communications there, and the telegraph line is really the only connection we have, particularly during the winter season, with the pulsations of the outside world. Private as well as public business goes over that line, and therefore it is of supreme importance that it should be properly conducted; that the messages should pass through the hands of independent men who will take care of the secrets that are thus put into their possession. At the time of the election in 1912, the whole system, some 120 miles or more of telegraph line, was placed entirely at the disposal of the Conservative candidate. All the ramifications of that line, all the officers, and everything connected with it, were for at least three weeks or a month placed entirely under the control of the Conservative party. Everything that was said on our side of the line was open to the public; we might as well have posted our telegrams on the side of a barn as to hand them to any of those agents, because every one knows what we were sending. The chief operator in the business, who is still the prime mover of the whole system, took upon himself, without any authority from the department—I say that in fairness to the minister—to place the whole system as it was at the disposal of the Conservative party. Since then he has given evidence under oath in the election

trial, and that evidence is at the disposal of the minister. He swore that he took upon himself to place the service at the disposal of the Conservative party and that, while tons of literature were going over the line, he never collected one cent for it. Although he is still in office, the money has never been returned to the department, and nothing has been said about it. Is it fair to the public in the county of Victoria, who are paying their money for service over that line, that such a man should be handling their business, private and public, and some of it necessarily political? Is it fair that a man of that character should be able to say that he was never asked to make any return of the money? From that day to this the money has never been returned to the department, and it was put at the disposal of our opponents in the election. The matter is getting old, but no change has been made. The day is not far distant when we shall have another local election in the province of Nova Scotia.

Mr. ROGERS: Can you give us the date?

Mr. McKENZIE: I can assure my hon. friend that it will be within the next six months. That will give my hon. friend plenty of time to put this telegraph line in proper order, so that he has no excuse. To my hon. friend, who is not only Minister of Public Works, but Minister of Elections as well, we with confidence appeal, that the proper machinery be provided, that that telegraph line be used properly, and that no man dare in future under his administration to use the property of the Government in such a high-handed and improper manner as it was used on the occasion to which I have referred.

Mr. ROGERS: I deprecate what the hon. member has had to say with respect to the use made of this line by whoever the gentleman was in charge of it, and especially his statement that this gentleman admitted on evidence that he had thrown the line open for the opponents of my hon. friend. That to my mind is a very serious condition, and one of which I myself will certainly complain. I will take notice of what my hon. friend has said, and I assure him that when his local elections come on he may depend absolutely upon the line being safe for the sending of messages. I will see that proper men are being put there, men worthy of confidence, so that my hon. friend need not be afraid to use the line for any telegraphic communications that he wishes to have with his friends in the various portions of Victoria county or elsewhere. I certainly believe that the telephone and telegraph lines should be managed in the interests of the public, and that the most absolute secrecy should be maintained in connection with their operation. Complaints of this kind are not confined to the Government lines in Canada. I myself have had occasion to complain, with respect to the larger lines in the Dominion, that very serious leaks had taken place. I think that this is a good notice to serve on all telegraph and telephone lines in Canada to the effect that this circumstance is observed by gentlemen on both sides of the House. As far as our power to deal with it goes, I shall be glad to join in seeing that it is corrected, and that all lines in Canada, whether under the control of the Government or not, shall be required to exercise that care for their messages and respect for their customers that they should exercise.

Mr. W. M. MARTIN: I was not in the House the other night when the public buildings of Saskatchewan were dealt with, and I assume that I have permission to refer to one or two matters connected with these public buildings before this resolution carries. I want to ask the minister a question with respect to the construction of a proposed armoury and drill hall in the city of Regina. In 1911, before the late Government went out of power, an Estimate was passed for the construction of an armoury in that city, and plans were actually prepared. The understanding was that we should get exactly the same kind of armoury as was proposed to be built and has since been built in the city of Edmonton. The years 1912, 1913 and 1914 came and went, and each year an item was put in the Estimates for the construction of that armoury and drill hall in Regina. The war came on in the month of August, 1914, and we were faced with the condition that we had no accommodation for soldiers in Regina. The city itself very kindly provided the winter fair building there, which has been used since August, 1914, and is being used at the present time for recruiting purposes. If the Government had done its obvious duty in 1912, 1913 and 1914, we would have had some means of properly accommodating the numerous soldiers who have been recruited in the city of Regina and the surrounding country. I am not finding fault with the min-

ister for not building this armoury since 1914. I recognize the great desire for economy on the part of the minister and his department, and of necessity he could not very well have constructed an armoury in the city of Regina since the war began. But I do criticise the minister and the Government for not having taken some step to construct that armoury and drill hall prior to the commencement of the war. There is a very well defined rumour in the part of the country from which I come that the minister will not construct anything at all in the city of Regina. I must say that in that respect he has not treated that city very lavishly. I do not know why, because whenever he comes there, which he does not do very often, we try to use him properly. I can say also that if the minister sees fit to come there again, we shall try to use him properly. But as the representative of that city I think I am justified in finding a little fault with the conduct of the minister in connection with the construction of the proposed armoury and drill hall. I would like to know if the minister has any explanation to offer for not having taken some steps to construct that building the first three years that he was in office as Minister of Public Works?

Mr. ROGERS: My hon. friend probably understands that the Public Works Department undertakes the construction of armouries in the various cities of Canada when urged to do so by the Department of Militia and Defence. I have no recollection of what caused the delay in so far as Regina is concerned. I am sure that if the necessity for the immediate construction of the building had been represented to us by the Department of Militia and Defence, we would have gone on with it as we did with buildings in various other places. This is not a matter of which we have full control in the Department of Public Works. I confess that when I was in Regina last autumn I did recognize the necessity for an armoury in that city, in view of the large number of soldiers who were enlisting and preparing to serve their country. I am pleased to recognize here, as I did in the city of Regina, the generous treatment accorded to our soldiers by that city in their contributing the winter fair building. In all my travels I have not witnessed a more perfect location or more comfortable quarters than those which our soldiers were enjoying in the city of Regina. I appreciate the kind reception that I received from the civic authorities there; I am sure that I can have no other feelings but those of the very kindest towards that city. I shall be glad at all times to lend any assistance that I possibly can in the public interest in the matter of the construction of the buildings that are required for the public services. Regina is a growing place and deserving of everything that can be done, and as soon as we are operating again in the way of construction of public buildings, in so far as they come within the control of my department, there is no doubt that Regina will receive the fairest possible consideration at my hands.

Mr. W. M. MARTIN: What the minister says may be all right, but to the chief question that I put there is no answer at all. In 1911, an estimate was passed in the House for the construction of an armoury and drill hall in the city of Regina. That was before the late Government was defeated. Plans were actually prepared in the Public Works Department—I saw them myself—by which we were to have exactly the same kind of armoury as they were getting in the city of Edmonton. The city of Edmonton got their armoury, and we got nothing. I do not know how the minister can explain that. He says that the fault was with the Minister of Militia and Defence. I asked the Minister of Militia and Defence in this House in 1912 or 1913 what steps were being taken in connection with the construction of an armoury and drill hall at the city of Regina, and whether it was true that plans had been prepared in the year 1911. He answered yes, it was true, and that the reason why they had not gone ahead on the old plans was that those plans were not considered ample or good enough for a city of the importance of Regina. As a matter of fact, at that time we were perfectly satisfied to get the same kind of armoury as they were getting in the city of Edmonton. During 1912, 1913 and 1914 this matter was absolutely neglected by the Government—whether by the Militia Department or the Department of Public Works, I care not; the fact is that the Government was negligent in its duty in the matter of providing accommodation for recruiting in Regina. I am not criticising the Government for not building during the past two years. From the statement of the minister I do not imagine that he has any intention of proceeding in the immediate future.

With regard to the question of the con-

struction of a Customs examining warehourse in the city of Moosejaw, I see that there is an Estimate of $90,000 for this building. Do I understand that this $90,000 includes the cost of the purchase of a site?

Mr. ROGERS: That, I understand from the deputy, includes the site, but I do not remember the facts.

Mr. MARTIN: If it includes the site I do not know what the $90,000 is now in for, because the site for the customs examining warehouse in Moosejaw was purchased two years ago, and must surely have been paid for before this.

Mr. ROGERS: In that case this would not be for the site, but for the building.

Mr. MARTIN: The site for the customs examining warehouse at Moosejaw cost in the neighbourhood of $62,000. It was purchased from a strong party friend of the minister in that city. I do not know if the minister is acquainted with him. That property was purchased by this gentleman not very many months before at $39,000 or thereabouts, and the statement is made throughout that part of the country that the condition on which this particular man was allowed to sell was that he would make a contribution to the Tory newspaper in Moosejaw of $5,000. That is a matter which the minister should investigate. I have not any direct evidence that that is the case, but I am satisfied it can be proved if it comes before a proper committee of this House. It is generally believed in Moosejaw and Regina. Will the minister investigate and see if there is anything in the rumour?

Mr. ROGERS: It is evident that it is impossible for me to satisfy my hon. friend in so far as Regina is concerned. So far as I can recollect the facts, an armoury was proposed some years ago in Regina, but, unfortunately for the province of Saskatchewan, there are four great centres, Regina, Moosejaw, Saskatoon and Prince Rupert, all rivals for first position, and there was always a difficulty owing to the division of territory and the rivalry of these great centres. Then there was the further fact that Regina and the territory tributary to it as a military district, belonged to district No. 10, with headquarters at the city of Winnipeg. I do not know how it would be possible for any one to have been more fair to Regina than I have been. After my visit to Regina last year, when I had an opportunity of seeing the conditions, I continuously urged on the Department of Militia and Defence the advisability of dividing district number 10 and establishing a headquarters at the city of Regina. It is seldom that a member representing a constituency such as it is my privilege to represent, the city of Winnipeg, takes such a position as that. I have taken every care to do everything I possibly could, in the common interest of all, for Regina and other cities in Saskatchewan. I conclude that the reason why an armoury was not built at an earlier date was this division of territory, coupled with the fact that Regina was on the outskirts of military district number 10, which extended as far east as Fort William, Winnipeg being its centre. We have established in Saskatchewan a military district for that province, with Regina as its centre, which I think was a creditable move on the part of the Government. It was one which from the very first I urged on the Minister of Militia and Defence, with the result that it was accepted and carried into effect.

As to the purchase of the site at Moosejaw, I have no knowledge of the circumstance; in fact, I do not really know whether a site has been purchased or not; but in view of the statements the hon. member has made, I will make inquiry and ascertain what facts it is possible for me to secure.

10 p.m.

Mr. W. M. MARTIN: The minister speaks of the establishing of Regina as the headquarters of a military district. I am very glad the minister had something to do with making Regina the headquarters of a military district. The citizens of Regina appreciate that very much. But it is a peculiar thing that the militia business of the country is under the charge of the Minister of Militia, and when I spoke of the non-completion of the armoury, the Minister of Public Works blamed the Minister of Militia or the Militia Department.

Mr. ROGERS: I did not say that.

Mr. MARTIN: The Militia Department has to shoulder the onus for an armoury not being constructed.

Mr ROGERS: I did not say anything of the kind.

Mr MARTIN: But when it comes down to the question of establishing a military

centre, for which somebody deserves some credit, obviously it must be the Department of Militia, because that department controls affairs of this kind. But the minister chooses to say he did that himself. Where anything occurs for which some one should be blamed, the minister places the responsibility on the Militia Department; but where credit is to be given for anything that is done, the minister takes that credit to himself.

Mr. ROGERS: I did nothing of the kind. The hon. gentleman should not make statements which are not in accordance with the facts. I said nothing of the kind, and nothing approaching it.

Mr. MARTIN: I can understand pretty well the English language, and if the minister did not say that I have no quarrel with him; but I am satisfied that is what his words meant. A site for a public building was purchased by the Department of Public Works in Swift Current in March, 1914, and the Government paid $25,000 for it. Any person living in western Canada knows that in March, 1914, and throughout the year 1914, the real estate boom had burst and a financial stringency was upon us. This particular site, lots 19 and 20, block 55, in the town of Swift Current, had been bought some time previously by the man who sold it to the Government, Mr. Mountain, and on January 13, 1913, he registered title in the land titles office, and swore that the value of one of these lots, lot 20, was $6,000; and two years previously, in registering title to lot 19 in plot 55, he swore that its value was $1,300. I do not pay much attention to the valuation given in 1911, because that was some years ago; but in 1913 this very man who sold the two lots to the Department of Public Works for $25,000, swore that the reasonable value of one of them was $6,000, at a time when the real estate boom was at its highest. Property in the first six months of 1913 was higher than at any time before or since, in all parts of Saskatchewan. It was at this time that Mr. Mountain swore that the value of one-half this property was $6,000. The next year the value of property decreased by leaps and bounds, still he sold it to the Government for $25,000. If that is thought by the Government to be an economical way of purchasing sites, they are much mistaken; and the great majority of the sites purchased in Saskatchewan are on exactly the same basis: the Government have paid in each case from 25 per cent to 50 per cent too much for them, to my personal knowledge.

Mr. ROGERS: In view of the fact that the Government of the province of Saskatchewan had purchased a site in Swift Current some time previous to the date when we purchased the site in that city, and in view of the inflated price which they paid, we found very great difficulty in securing a site at a normal price. We exercised very considerable care and reduced the price very much in comparison with that paid by the Government of the province of Saskatchewan for the site they purchased, and with regard to which my hon. friend understands a great deal more probably than he would make clear to this Committee. I do not propose to deal in detail with that matter however, because it does not concern the committee. But I do say that care was taken in the purchase of a site at the price named by my hon. friend in connection with the Department of Public Works, and I am satisfied that we had the best judgment and the best advice of our officers in the province of Saskatchewan in arriving at the price which was paid by the department. I remember well the difficulty we experienced by reason of the abnormally high price which had been paid by the Government of the province of Saskatchewan in the purchase of a site close to the one purchased by this department.

Mr. W. M. MARTIN: The hon. minister always takes a fall out of the Government of the province of Saskatchewan. I do not know why he should be so much interested in the Government of that province. I know both of the properties in the city of Swift Current referred to. The property purchased by this Government is two blocks further east from the property purchased by the Government of the province. I am not here to discuss the prices paid by the Government of the province of Saskatchewan, but I know that as between the two properties, that purchased by the Provincial Government was more valuable than the property purchased by this Government and it is better located from a business standpoint.

Mr. ROGERS: That is not our information.

Mr. MARTIN: Then the minister has not got the proper information. For the site purchased by this Government for post-office purposes, if that is what is meant by the public building mentioned in these Estimates,—I understand that it is; if I am

not correct the minister will put me right—this Government paid at least 50 per cent too much to this man. I do not know what system the minister follows in ascertaining what properties are available for sites in the various towns. I presume it is left largely to some local patronage committee.

Mr. ROGERS: It was left to Mr. Mallard, of Regina; the hon. gentleman probably knows him.

Mr. MARTIN: Anything that Mr. Mallard would recommend to the Government would be perfectly bona fide. He is an official who has been employed by the Government for a good many years.

Mr. ROGERS: We purchased on his recommendation.

Mr. MARTIN: If the minister purchased on his recommendation he got very good advice. But that does not alter the fact that the Government purchased from this man that property for which no person in the world would have paid $25,000 at that time. The property purchased by the Government of the province of Saskatchewan was purchased in 1913, before the boom in real estate had broken, and there was a vast difference between the values in 1913 and those in 1914. The minister probably knows that by bitter experience in connection with real estate that he has in Winnipeg. Nobody knows better than he that it was in the beginning of 1914 that the real estate boom broke, and he cannot justify the purchase of that site by dragging in the name of the Government of the province of Saskatchewan.

The minister says he has done a great deal for the city of Regina. As a matter of fact, he has done nothing at all for that city. He takes credit to himself for having made Regina the headquarters of the military district, but he did not do that; it was the Minister of Militia who did it.

Mr. ROGERS: That is right.

Mr. MARTIN: Apart from that, what has the minister ever done for the city of Regina during the past four or five years? He has placed two or three items in the Estimates; he has purchased two sites for buildings from political friends in that city. One site was purchased as early as 1913 for a customs examining warehouse, but not a sod has been turned up to the present day, and there is no indication of a building. He purchased from another political friend a portion of the old Leader building for the office of the Receiver General, and I see that a large amount of money was set aside to pay for that building. However, I understand that the Exchequer Court has not decided what value should be placed upon it. That is all the Minister of Public Works has done for the city of Regina. I do not know why he should have his knife out for that city. He does not come to Regina very often. I remember that he came in 1912 with a great blare of trumpets. The whole front page of the local Conservative newspaper was filled with an announcement of what the minister was going to do for the city. It was just before the provincial election, and I presume that if another provincial election comes along the Minister of Public Works will visit Regina again with a greater blare of trumpets. But since 1912, on only one occasion has the Minister of Public Works deigned to put in an appearance in the city of Regina. He passes that way going west to other cities, and I can assure him that if he stopped off he would find the people even more friendly to him than before.

Mr. ROGERS: That would be impossible.

Mr. MARTIN: I hope that, when the minister comes west, he will not forget to drop off at Regina. We will entertain him as well as any city in the Dominion.

Mr. SINCLAIR: Will there be any further Supplementary Estimates for public works in Nova Scotia?

Mr. ROGERS: There will be no more than are in the Estimates placed on the Table to-night.

Mr. SINCLAIR: They are all in now for the present session, are they?

Mr. ROGERS: Yes.

Mr. SINCLAIR: The reason I ask is that certain active politicians in Nova Scotia are using the minister's name and the name of his department for the purpose of obtaining political support by promising additional public works. There was a convention of the Conservative party in the county of Inverness a few days ago, and it was attended by Mr. A. B. Crosby, of Halifax, who is well known to the minister.

Mr. ROGERS: A very good man.

Mr. SINCLAIR: On that occasion he undertook to make a speech, and he is

reported in the Conservative paper to have said:

> He assured his hearers that the defeat of the Murray Government was an absolute certainty and that Inverness would be in the right column. He gave his pledge to the audience that Gallant and McLean, whose election was a foregone conclusion, would have his cordial co-operation and support in securing subventions in the way of public works and railway construction for this noble county of Inverness.

Mr. ROGERS: He was talking about railways.

Mr. SINCLAIR: Railway construction does not come within the Department of Public Works, but public works do. The minister will notice that Mr. Crosby undertook to make a prophecy without having the knowledge that is necessary for a prophet. He stated that the Murray Government was to be defeated, and that after its defeat he was going to influence the minister to give—

Mr. ROGERS: Railways.

Mr. SINCLAIR: Public works. Now, it appears that my hon. friend does not intend to give any public works to the county of Inverness for the present year. Mr. Crosby is depending on subventions; he has no policy. He does not pretend to have any public question to put before the people. The only thing he referred to was subventions, which he expected to get from the Minister of Public Works, but the minister now tells us that he does not intend to give any subventions; so I presume the prophecy will have to go along with the failure to get subventions.

Mr. OLIVER: Might I draw the minister's attention to a matter of which I spoke on a former occasion? I happen to be a member of the special committee appointed to discuss pensions, and during the discussions of the committee the matter of dealing with permanently disabled men has come up. This will require the establishment of permanent institutions, which means the erection or acquiring of buildings. I suggested to the minister that, in view of the events now occurring, there is every necessity for provision being made at an early date for this contingency that must be faced. I think the minister said that the matter would be taken up and if possible provision would be made in the Supplementary Estimates. I do not see anything in the Supplementaries, and I take this opportunity of again bringing the matter to the attention of the minister and of urging that it is a matter of very pressing importance, and that there should be no avoidable delay in making suitable provision. I would say that in each section of the country provision should be made for the care of those who are so seriously disabled as to be a burden on relatives, if they have relatives, and of those who have no relatives, and who would be in an even more unfortunate position.

Mr. ROGERS: We will appreciate the importance of providing for the returned and disabled soldiers, but my information at the present moment is shortly this, that the committee who have been looking into that matter find that returned soldiers, when they come to a city like Winnipeg, or Edmonton, generally like to find their way to their own old homes from which they started out. While in some of the larger cities there are a number who require special care and provision to be made for their comfort and keep, it is surprising how few after all by comparison are in that position. When they land they are always apparently very anxious to go back to the location from which they came and they usually have some friends or connections waiting to receive them and make them comfortable. It is true that in some of the larger cities, and probably this need will increase from time to time, provision is necessary for returned soldiers, but we have felt that under the present conditions it is possible to secure rented buildings that will be very suitable and will provide the necessary accommodation. Every care will be taken to see that in every single instance provision shall be made for the care and comfort during convalescence of every returned soldier who is not able to find a comfortable home. The various Provincial Governments have taken an interest in this matter and are endeavouring to secure employment for returned soldiers and to assist in every possible way in co-operation with the Dominion Government. Everything possible will be done in conjunction with the provinces to add to the comfort and care of our returned soldiers.

Mr. OLIVER: Certain information came to the committee that I fancy has not been put before the House and cannot have reached the Government generally. While it may be in some degree premature, I feel that I shall be excused for placing it before the committee at the present time. It is in regard to those who are afflicted nervously or mentally and who now receive care in

lunatic asylums. An expert appeared before the committee and gave his opinion that such a course was very detrimental and that it was in the last degree important that men suffering in this way should not be in the environment that necessarily surrounds them under present circumstances. It is suggested that there should be accommodation provided for such cases where they would have special treatment and be under special conditions. He advised that under those circumstances there would be a very large proportion of complete recoveries, whereas, under present circumstances, his opinion was that many cases that, under favourable conditions, might recover, would become chronic and therefore hopeless. I am taking this opportunity, possibly somewhat out of order, to bring the matter as pointedly to the attention of the Government and of the Minister of Public Works as I can, as I am sure that everybody will agree that this gentleman's opinion is entitled to very great weight; and, if the opinion he expresses is correct, certainly no action can be taken too quickly or too thoroughly to meet the views that he placed before the committee.

Mr. ROGERS: I can quite understand what my hon. friend says in respect to this condition. Let me give him an idea of the situation in the city of Winnipeg, and I am sure that similar conditions will be found to exist in other cities, especially in western Canada. At Winnipeg we have made provision in the immigration shed for the reception of returned soldiers. We have a small hospital in the immigration building with twenty or thirty beds where returned soldiers suffering from nerve trouble receive treatment. That provision was made for returned soldiers for the first day or two after they arrived. The committee in charge of this work at Winnipeg have secured Deer Lodge, which was a hotel previous to the introduction of the prohibition measure in Winnipeg and which is a very suitable place containing about 100 beds, and such invalided soldiers as my hon. friend refers to are being cared for at Deer Lodge. This place has been provided in order that invalided soldiers may find rest and quiet. Those who are strong and do not need as much care remain in the immigration shed at present. But the same condition will apply to the various cities in western Canada. Most of the hotels in different places throughout the western provinces that are comfortable and suitable for such a purpose, are available at a very cheap rental and my hon. friend and the country can depend upon it that every care will be taken of invalided soldiers and that provision will be made in order that those who are incapable of looking after themselves, and especially those who are suffering from nerve trouble, may have rest and quiet.

St. John Harbour—improvements, $1,000,000.

Mr. PUGSLEY: This, I suppose, will include certain works which are still going on on the western side of the harbour, and also the work at Courtenay bay. I should be glad if the minister would make a short statement with regard to the work at Courtenay bay, and for this reason: Owing to the fact that the agreement which has recently been come to between the provincial Government and this Government in regard to the Valley railway cancels the original contract for the construction of the railway all the way from St. John to Grand Falls by what is known as the eastern route, so far as the last 30 miles of the road nearest to St. John are concerned, there is an apprehension on the part of a good many people in St. John that it is not intended to utilize, to any large extent at all events, the facilities which it was proposed to provide at Courtenay bay. When the plan for the development of Courtenay bay was laid out some years ago, the late Mr. Hays, who was president of the Grand Trunk Pacific railway, was consulted with reference to the terminals there, and he gave his hearty approval, being of the opinion that the new Transcontinental railroad would require at St. John all the facilities that could be provided at Courtenay bay; and he was very much averse, from a railway standpoint, to being compelled to use the facilities which the Canadian Pacific are now enjoying upon the western side of the harbour. I should be very sorry indeed if the Government contemplated either discontinuing or curtailing the work of development at Courtenay bay, and I am sure it would be a very great disappointment to the people of St. John. I think it would be well if no changes were made in the plans, so far as the development of Courtenay bay is concerned. Perhaps the minister might make a short statement to reassure and encourage the people of St. John.

Mr. ROGERS: I do not think that any proposed changes in the railway situation in the province of New Brunswick will in

any way affect the development of Courtenay bay. On the contrary, the proposals that have been presented will have the effect of stirring up, if that were possible, the Department of Public Works in order to prepare for the reception of traffic as soon as the road is completed. There is no doubt in my mind that the connection of the Valley railway and of the Transcontinental will be with Courtenay bay. My hon. friend will agree that both sides of the House thought the original contract for the development of Courtenay bay was very desirable, but, unfortunately, the principals engaged in the work became absorbed in other undertakings, and latterly, on account of war conditions and their other enterprises, they have not devoted that attention to their contract which is desirable in the public interest. As a result, we expect to transfer the contract in the very near future, in order that the work may be gone on with as rapidly as possible, and we hope that the successors to the present contractors will make much better progress than has been made during the past year. This arrangement for transferring the contract has been practically completed, and when it is consummated I do not think there will be any delay in going on with the work. A considerable amount of work has been done on the breakwater, and in excavating for the dry dock. Nothing has been done in regard to the wharves as yet, because it is claimed that a sufficient amount of dredging must first be done to enable the men to carry on the work at low tide; but these are matters of detail. Generally speaking, the work is not as far advanced as we should like, but we are hopeful that under the new arrangement the work will be gone on with more rapidly, and will be completed in sufficient time to take care of the rapidly increasing trade of the port of St. John. I fancy there is a great deal more shipping at that port to-day than ever before, and we are fortunate in having the wharves on the west side to take care of the increased traffic, pending the completion of the Courtenay bay development work. I again assure my hon. friend that every effort will be made to complete the work as rapidly as possible.

Mr. PUGSLEY: I am very glad to hear the reassuring statement which the minister has made. Of course, the House will understand that the question of making proper improvements at the port of St. John is one not merely of local interest but of national importance, because St. John at the present time is one of the two important winter ports we have in Canada. It is of course of the very greatest national importance that Canadian exports and imports should pass through Canadian seaports and that as much as possible Canadian traffic that now goes to American ports should be diverted to the seaports of our own country.

If I might venture to do so, I should like to make just one suggestion to the minister. During the session I have on more than one occasion called the attention of the members of the Government, particularly the attention of the Minister of Marine and Fisheries and the Minister of Trade and Commerce, to the desirability of doing at once something in Canada for the encouragement of shipbuilding, so that, to as great an extent as possible provision might be made for the carrying of Canadian products to the markets of Europe, particularly in view of the necessarily great scarcity in ocean tonnage, which is becoming apparent from month to month and even from week to week. At St. John, as in many other places, of course, there are wonderfully good opportunities for the carrying on of shipbuilding. If the plans which I had prepared when I was minister, having reference to the development of St. John, had been carried out, there would at the present time have been a dry-dock with a ship repairing plant, and my idea was to be as liberal as possible in the specifications for the ship repairing plant so that with very little extra expense shipbuilding might also be carried on. As my hon. friend knows, this was the case with the Vickers-Maxim plant situated near Montreal, where some shipbuilding has been carried on since the war began. For instance, the building of submarines has been undertaken there. At the dry-dock and ship-repairing plant at Port Arthur, in addition to ship repairing, very considerable shipbuilding has been carried on. In connection with this work at St. John—and I do not speak from any sectional standpoint, because the same thing might be done in other sections of the country—I would urge that as soon as possible some arrangement be made whereby, in connection with the dry-dock and the plant which would necessarily be established in connection with it, some provision might be made for shipbuilding; if not for ships of a large size, for ships of

reasonable tonnage, ranging from three thousand to five or six thousand tons, suitable for the transportation of goods across the Atlantic. I think the matter is somewhat urgent, and I have hopes and indeed believe that the Minister of Public Works is alive to the necessities of the situation and will be be disposed to do anything he can to give encouragement along those lines. I bring the matter to his attention, at the same time regretting the fact that so many years have been lost since the late Government went out of office. I do not think at all of holding my hon. friend the minister responsible. The circumstances have been unfortunate, but I think that something ought to be done in the way of encouraging shipbuilding, and there is a very excellent opportunity at Courtenay bay, where these improvements are now being carried forward.

Mr. ROGERS: I am afraid I cannot agree with my hon. friend that anything has been lost by the downfall of the late Government in so far as shipbuilding or anything else in Canada is concerned. I am not, of course, very familiar with the question of shipbuilding, because that matter is in the hands of the Minister of Marine and Fisheries and the Minister of Trade and Commerce; but I know that they have been paying considerable attention to the question during the past few months, and I have had the privilege of attending several meetings with them and discussing the matter in some detail. I can assure my hon. friend that the matter is receiving the most careful attention possible, and I am hopeful that in the near future action will be taken with a view of going on with the shipbuilding industry at one, two or three points in Canada. I quite agree that St. John would be a desirable place, and according to the plans originally adopted for a dry-dock there, I think my hon. friend will admit that we are making as much progress as is possible under the circumstances. I will undertake for the Department of Public Works, to urge the completion of a dry-dock as soon as possible; I will at all events carry out my end of the work and prepare for shipbuilding. At Port Arthur we are now ready for shipbuilding or ship repairing, and I hope that in the near future we shall be ready also at Vancouver. We have a dry-dock at Prince Rupert, and I trust that before long we shall have one at Victoria and one at Vancouver. There is a desire on the part of the Government to inaugurate a policy of shipbuilding as soon as it is possible to reach it, and every care and consideration is being given to the subject by the Minister of Trade and Commerce and the Minister of Marine and Fisheries along with one or two of the other ministers.

Mr. WRIGHT: I wish to call the attention of the hon. member for St. John (Mr. Pugsley) to the fact that there is a war on, and that nearly every night he has been putting forth efforts to induce the various ministers, when presenting their Estimates to the committee, to practise economy. If he would put forth a little effort to reduce the vote for St. John say by $25,000 or $50,000, I am sure we on this side of the House would assist him in that regard.

Mr. PUGSLEY: For the gratification of my hon. friend I may say that St. John is very patiently bearing its share of the burden so far as cutting down expenditures for improvements is concerned. The expenditure this year as compared with that of last year has been reduced by $500,000. I am not able to point to many other places in Canada where the people have consented to such a large reduction, and the people of St. John have consented very patiently and loyally to that reduction.

Mr. SINCLAIR: Will this complete the work at St. John?

Mr. ROGERS: No.

Mr. SINCLAIR: How much does the minister expect to spend to complete it?

Mr. ROGERS: The contract is $7,500,000, of which we have spent about $2,500,000.

Mr. SINCLAIR: I would like the minister to tell the committee about this dry-dock at Halifax. Is it owned by the department or by private people?

Mr. ROGERS: The present dry-dock is owned by private parties. We are proposing a first-class national dry-dock there.

Mr. SINCLAIR: Is this for a new dry-dock, or for repairs to the old one?

Mr. ROGERS: For a new one.

Mr. SINCLAIR: Will it be owned by the Government?

Mr. ROGERS: Yes.

Mr. SINCLAIR: Where is it?

Mr. ROGERS: In Tuft's cove in Bedford basin.

Mr. McKENZIE: That is on the Dartmouth side?

Mr. ROGERS: Yes.

Mr. SINCLAIR: Is it for naval purposes?

Mr. ROGERS: Largely, yes. The Admiralty requested that we give consideration to the erection of a dry-dock at Halifax.

Mr. MACDONALD: How far is it from the town of Dartmouth?

Mr. ROGERS: Right beside the Intercolonial.

Mr. MACDONALD: The Intercolonial runs along the waterfront all the way.

Mr. ROGERS: It is up near the neck of that bay.

Mr. MACDONALD: The Narrows?

Mr. ROGERS: Yes.

Mr. SINCLAIR: I presume this is preliminary to embarking on the construction of a Canadian navy.

Mr. ROGERS: This is preliminary, yes.

Toronto harbour improvements, $600,000.

Mr. GRAHAM: During the last year or so there has been a great deal of discussion about these harbour improvements. The minister, of course, does not forget the difficulties that have been encountered by the department in the work in the Toronto harbour. If I remember correctly, some dismissals of officials engaged in the inspection of this work took place. A good deal of the work was improperly done and had to be replaced. I believe that an investigation was held, and the contracting firm, the Canadian Stewart Company, I think, were asked to rebuild a portion of the work. A big loss was entailed on account of the work being inefficient. Will the minister tell us what the investigation was, the result of the investigation, and the position of the Government as to the contract and the contractors?

Mr. ROGERS: A contract was let for the works at Toronto to the Canadian Stewart Company, Limited, who were the lowest tenderers. We had dismissed several of the inspectors whom we found at fault in not reporting defects in the work. We appointed two engineers and Mr. Roger Miller to make an investigation, which they did in a thoroughly full and complete manner and to the entire satisfaction of the Harbour Board of Toronto and of the City Council, who are taking a very great interest in the work. They recommended that a certain portion of the work be entirely rebuilt. The contractors have agreed in writing to do this entirely at their own expense, so that it will not cost the country a dollar. The contractors are making the necessary improvements and rebuilding the work in accordance with the report of the commission of which Mr. Roger Miller was the chairman. Everything is now started again, and I am satisfied that the work will be carried on in a satisfactory manner. Our engineer in the first place apparently was not suitable; he did not look after the work as he should have done. He was an old employee of the department, but for some reason or other he did not give the care to the work that it absolutely required. This has been corrected, however, and as the contractors felt that they were in fault they agreed to put the work in proper shape and to carry it out in accordance with the recommendations of the commission. This is being done and the work will go on as rapidly as possible. The Harbour Board of the city of Toronto are lending their assistance and giving supervision to the work. Every precaution is being taken to care for the interests of the work and to see that it is carried out in a manner satisfactory to the city of Toronto and to the department.

Mr. GRAHAM: What was the value of the work that they have to reconstruct?

Mr. ROGERS: Several hundred thousand dollars.

Mr. NESBITT: The other day I saw a pamphlet issued by some of the papers in Toronto saying that they proposed spending $24,500,000 on the harbour there. Is this Government supposed to spend all that, or does Toronto pay part?

Mr. ROGERS: About $5,000,000 is our part of that work.

Mr. SINCLAIR: Is the harbour of Toronto controlled by a commission, or is it under the control of this Government?

Mr. ROGERS: A commission.

Mr. SINCLAIR: It strikes me that we are drifting into a very extravagant policy with regard to these large expenditures on harbours. I see here $7,500,000 for improvements in harbours, and the committee are not giving very much attention to what these improvements are to be or why we are voting this large sum of money. A few years ago when we voted money for the

harbour of Montreal we took very good care that security was given. The shipping business of the port of Montreal paid the interest, and the aid given was no special liability on the country. But we now seem to be putting a million here and a million there all over Canada, on the Pacific as well as on the Atlantic. The position of Canada appears to me to be different from that of any other country that I know of. The harbours in Europe are under the control of local harbour boards. At Glasgow, for instance, the Clyde Trust looks after the harbour; they borrow money on the security of their property at a very low rate of interest. They do the dredging and build the docks and the shipping business of the port pays for it. We are apparently embarking on a policy which, if continued, will involve the country in the expenditure of very large sums of money. I do not know whether it is the policy to collect anything from the shipping business or whether we are to get any security for all the millions that we are putting in the harbours on the coast. Would the minister tell us in a few words what the policy of the Government is in regard to these very large expenditures?

Mr. ROGERS: In view of the fact that the Canadian people have devoted great energy to the construction of a national Transcontinental railway in order to develop traffic and trade, it becomes the duty of this or of any other Government to see to the development of our national ports. In many cases assistance is given to these works by the city where they are located. Considerable assistance, I believe, has been given at Halifax.

Mr. MACDONALD: Halifax gave nothing.

Mr. ROGERS: Did they not assist in some way in the earlier days?

Mr. PUGSLEY: I do not think so.

Mr. ROGERS: I know that in the case of St. John the people contributed very largely some years ago to the development of their national port with a view of attracting the trade of the country to it. St. John is looked upon as our great winter outlet, at all events for the western provinces, and it was the duty of the Government to undertake the construction, for example, for the harbour improvements at Courtenay bay. A contract was let for something like $7,500,000, the works in connection with which are now in course of construction. The only regret we have is that this work has not been carried on more rapidly. Take the port of St. John as an example. That port is in a very congested condition to-day. Two or three times more shipping is being handled there to-day than at any previous time in its history. We are behind in the development of our national ports. The same thing applies to Quebec. Quebec is a great port and one on whose development a very considerable sum has been spent. It is a port that properly should be developed and will continue to be developed, by the Government of the country. That principle has been recognized by both Governments in the past, and I am sure will be in the future, as the trade of our country grows. Then take the port of Montreal. What my hon. friend has said of that port is quite correct. But I do not know that ports developed in this manner really save very much money in the end to the Canadian people, as the charges incidental to the handling of freight through such a port as that are somewhat of a drawback to the general interest. The same thing applies in the case of Toronto, which is a great inland shipping port and a very large and growing city, the second largest in Canada. There are at Toronto great possibilities for the development of an inland port. An estimate has been made by those interested in the city for the expenditure of something like $24,000,000, and the Government of Canada are contributing only $5,000,000 in connection with the portion of the work they have undertaken. Then at Port Arthur and Fort William, where we have probably the largest shipping port in the Dominion of Canada to-day, a great deal of money has been spent in the past and, of necessity, large sums will continue to be spent from year to year at that port because the industries are developing there. We have large elevators at Fort William and Port Arthur, and a great amount of dredging will be required from time to time to keep up with the development of the trade. Similar conditions exist in Vancouver. This is probably the second largest ocean port in Canada to-day, yet very little money had been spent there until a few years ago. It will be the duty of the Canadian people to contribute a considerable sum to the assistance of that particular port as a national port.

The development of our national ports is properly the duty of the Canadian Government and of the Canadian people, and must be carried on if Canada is to become the

great country we expect it to be. It is not a matter of assistance to particular localities, not a matter of local conditions in Halifax, or in St. John, or in Quebec, or in Toronto, or in any other place; it is a matter for the common good of the whole people of the Dominion of Canada, who are interested in the development of the traffic of our country. It is for this purpose and to this end that large sums are being spent to keep pace with the development of trade at these ports through the construction of the different transcontinental railways we have already built. For example, we will have to assist to some extent in the development of a port at Prince Rupert, to meet the requirements of the terminus of the Grand Trunk Pacific at that point.

Mr. GRAHAM: It is a fine natural harbour.

Mr. ROGERS: A very fine natural harbour, a splendid harbour in that sense. All of these are works that are necessary in the public interest, and the only fault that could be found by the Canadian people generally and those interested in the traffic and in the development of our country, is that we are rather behind in the development of our national ports than in advance of the requirements. My hon. friend must bear in mind that it will be necessary, for some years to come, for this Parliament to be called upon, session after session, to vote large sums of money to provide the necessary assistance to develop those ports in order to keep pace with the growing traffic and growing conditions that are bound to follow in the course of the development of a young and growing country such as our Dominion of Canada.

Mr. SINCLAIR: My hon. friend has made an interesting speech, but he has not answered my question. I do not wish to be understood as opposing the development of our national ports. I feel as much interested in that question as my hon. friend, and I should be very glad to support any policy towards that end, and have always done so. What I wanted to know from my hon. friend was whether the Government has any policy on which they spend and propose to spend these large sums of money. Is it all done by rule of thumb, or are we to have any system about it? Are we going to develop one port and leave out the others, or are we going to insist on the port itself bearing some part of the expense of its development? I think we should. I think the system my hon. friend refers to as being followed in the city of Toronto is a good one. He says the development of that port will cost $24,000,000, and that $5,000,000 of that money will be furnished by this Government. If that is the basis on which the expenditures are to be made I have no objection. That is about one dollar in five furnished by this Government. But is that the policy in Quebec and Halifax? We are told that Halifax as a city has not contributed anything towards the development of that port. The city of Montreal has contributed large sums towards the development of the harbour of Montreal, and the city of St. John has likewise contributed to the development of the harbour of St. John in a large measure. Has the Government any policy to cover the whole question? Will they formulate any policy such as we have in regard to the subsidizing of railways? When a railway comes to the Government for a subsidy the Government tell the company that if it will build a railway costing $15,000 a mile the Government will contribute $3,200 a mile; if the company builds a railway costing $20,000 or $25,000 a mile, the Government will double that subsidy. We know then what our liability is, and I think we should have some system of that kind in regard to the development of our national ports. Otherwise there will be no end to the money that will be asked for. These commissioners at the various ports will always want money, as my hon. friend says. There will be asked, year after year, millions and millions of dollars for the development of these ports. If the Government could devise some system by which part of the expense will be borne by the people in the cities at the ports, and the shipping trade will contribute a certain amount then we will be able to conduct the public business in some kind of a systematic way. The minister told us some interesting things about the development of the various ports which we all know, but he has not told us whether the Government have arrived at any system by which they are going to distribute this money in the future.

11 p.m.

Mr. ROGERS: I think my hon. friend will appreciate the fact that it would be very difficult to have any fixed policy that would have the same application at the various ports in Canada. Take the port at Halifax. It is the terminus of the Intercolonial railway, and that railway undertakes the development of the port in which it has a direct interest. In the case of St.

John, the situation is rather different. The St. John people undertook, through their own enterprise in the early days, to spend a large sum in the development of that particular port; they feel that they have contributed their share, and now that there is necessity for the development of St. John as a national port for the common good of the people of Canada, it becomes the duty of the Canadian people to contribute largely in the development of that particular port. The same applies to the city of Quebec, although there the harbour commission has the matter in hand, and is spending large sums of money in the development of that port under conditions similar, at all events, to some extent, to those at the port of Montreal. Of course, in the case of the city of Toronto, that port is not so much a national port as are the ports of St. John, Halifax and Quebec, by reason of the fact that it is an inland port. Therefore, the Harbour Board of Toronto are undertaking perhaps a larger share of the expense of developing that port. When you go to Fort William, the conditions are different. The people of Fort William and Port Arthur are not so specially interested in the development of their ports by reason of the fact that it is required for the carrying of the grain of the country, and has to be developed by the central government of the country if we are to have the accommodation for the carrying of our grain. Vancouver is a great national port, and a harbour commission has been established there. I am in hopes that we will not have to spend so much money there, and that the work will be undertaken by the harbour board and carried out by them within a very short period. They have started now, and they give promise of being a board capable of carrying out the development of that national port in a manner that will be very satisfactory to all and a credit to the city of Vancouver. So that my hon. friend can see that it would be impossible, or next to impossible, to have any set policy or fixed arrangement for all the ports. Conditions and circumstances vary at the different ports, which have to be dealt with upon their individual merits. I do not find that there is much criticism, or much jealously or complaint in regard to the treatment of the different ports of Canada. The people interested in them have studied and understand the development of the sister ports, and I have yet to hear much complaint as to favoritism, or as to larger sums being spent on the development of one port than upon another. It has been the general policy of all governments to develop the ports as rapidly as possible in keeping with the public interest and without any set plan or set policy. I do not think a fixed plan would be workable owing to the diversified conditions which prevail at the different national ports at the present time.

Mr. PUGSLEY: I am very glad that my hon. friend from Guysborough (Mr. Sinclair) brought this question up. It is well to have it discussed, and I think it was desirable that the Minister should take the opportunity to make the statement he has made with regard to our national harbours. There is one matter which, I think, ought to be kept in mind; that is, that it is desirable in the interests of Canadian trade to keep the harbour charges, anchorage dues and other charges ordinarily imposed on shipping, to as low a figure as possible. When I was Minister of Public Works, I took occasion to send Mr. Coste, who had been a long time connected with the department, to Europe, to visit the most important harbours there, and I remember he spoke particularly of the port of Hamburg, which is practically a free port where there are no harbour dues, and where the trade had grown with wonderful rapidity, largely as the result of there being no harbour dues which are generally regarded as more or less a burden on shipping. When I was minister, I adopted what I thought was a very good plan, and I am glad to see that the present minister has followed it; that is, when the Government decides that a harbour has attained such proportions as may be regarded of a national character, any expenditures upon works of that character should be placed in the capital account. That was a very good change, and it will be found on page 56 that the expenditures for Halifax, St. John, Quebec, Toronto, Port Arthur and Fort William, Vancouver and Victoria are all chargeable to capital account.

Mr. NESBITT: Why?

Mr. PUGSLEY: Because they are regarded as national harbours.

Mr. NESBITT: Is Toronto a national harbour?

Mr. PUGSLEY: Yes, Toronto is a national harbour. I think I was the first to put it in capital account, and I did so for the reason that there are large manufactories in Toronto and there is an enormous trade between that city and the prairies.

Mr. NESBITT: Why should the expenditures be charged to capital account?

Mr. PUGSLEY: For the reason that it is one of the great ports.

Mr. NESBITT: Why should any of them be charged to capital account?

Mr. PUGSLEY: I would be prepared to argue that they should be.

Mr. NESBITT: We do not own them.

Mr. MACDONELL: Certainly we own them.

Mr. PUGSLEY: The expense of improving them is such that the expenditures might fairly be charged to capital account, as distance from the expenditures on small harbours throughout the country where wharves are built. In respect to these great harbours, I think that the expenditures should be charged to capital account, and I am very glad that the minister has followed that principle.

With regard to St. John, the people there, when they were making a great fight some years ago, the first fight that was ever made in Canada to divert the traffic from Portland in the state of Maine to a Canadian port, met with great disappointment and discouragement, and they had to put their hands in their pockets and spend close upon a million dollars in providing the requisite deep water accommodation in the hope that the Canadian trade would be diverted to St. John in the winter season. The experiment proved a great success. The winter port business has developed with enormous rapidity, but in St. John we think that the harbour dues are somewhat of a burden on shipping, and we are hoping that the time will soon come when the Government of Canada will recognize that the port should be taken over and made a free port. We believe in St. John that this is the true way to develop our harbours and that when the Government recognizes that a harbour has attained proportions of a national character, and that its development is of national importance, that harbour ought to be taken over by the Government and made free. That view has been presented over and over again in this Parliament during the past 15 years, and has been generally accepted. It was favoured by the commission which was appointed under the late Government, and which made a very valuable report, and I am looking forward to the day when that idea will be carried out. I am glad to see that the Minister of Public Works the dues are sufficient to enable the har-

So far as Montreal is concerned, of course the shipping there is very large, and the dues are sufficient to enable the Harbour Commissioners to pay the interest, but, although they have a harbour commission at Quebec, and although the commissioners borrowed money, if I remember rightly, they have not been able to pay the interest, and the Government has practically, remitted the interest, and very properly so. That has been done for a number of years past, because if an attempt were made to exact the interest it would prove a very great burden on the shipping of the city of Quebec. As I have said, it is a very good rule to treat national harbours as being in the national interest, and they should be made, as far as possible, free to the general commerce of the country.

Mr. NESBITT: If we control these harbours, who gets the dues?

Mr. ROGERS: The Harbour Commissioners get the dues, and the Harbour Commissioners at the various ports are under the direct control of the Government. Whatever property they own indirectly belongs to the Government and the rates they charge are fixed by the Government.

Mr. NESBITT: Why should you charge the custom building on Sussex street to consolidated fund account, or to expense account, and charge these things to capital account? We own that building, do we not?

Mr. ROGERS: It is built out of capital.

Mr. NESBITT: Did we not pass an item for that building on consolidated fund account? You have numerous items charged to consolidated fund besides that all over the country.

Mr. PUGSLEY: Yes, but the main buildings are all charged to capital account.

Mr. NESBITT: If you build a post office does it not belong to the Government? I do not understand your system of bookkeeping. You really do not own these harbours, but you charge them to capital account.

Mr. ROGERS: We own them all.

Mr. NESBITT: You do not own Toronto harbour.

Mr. ROGERS: Yes, the Harbour Board is appointed by the city of Toronto and by this Government.

Mr. NESBITT: And the Toronto people have no control over the harbour?

Mr. ROGERS: The Harbour Board are put in charge and they control the harbour. The property they own is indirectly under the control of the Government.

Mr. GRAHAM: The city selects a number of the commissioners of Toronto harbour and the Government the other portion.

Mr. MACDONELL: A joint board.

Mr. NESBITT: What about the harbour in Montreal?

Mr. PUGSLEY: That is owned by the Government. Under the Act of Confederation all those harbours which were of a public character at the time of Confederation passed over to the Dominion.

Mr. SINCLAIR: The Government does not own the harbours any more than it owns buildings in cities. If you tie your boat up to a wharf at St. John you pay so much to the man who owns the wharf unless you go to a Government wharf. Harbours in that sense are owned by the proprietors, but the governing body is the board that is appointed by the local authorities and the Government. They are not the owners. They are simply the governing body that makes rules and regulations for the harbour, but the harbour itself and the property in the harbour are owned by the people who live in the cities, and they ought to contribute something towards the maintenance of the harbours, because they get the profit. If we spend a million dollars in improving the harbour of Montreal every man who has a tract of land on the water front receives an advantage, because his property is worth that much more. It is the same at St. John and Halifax; all these expenditures raise the value of property in the vicinity of the harbour very much and consequently the minister ought to have some policy by which these different ports shall contribute something towards their maintenance and equipment. That is the proper idea in dealing with this question. It is all very well to say that we ought to have national ports, but why should the farmer out on the western prairie pay his taxes to equip the harbour of Toronto and give additional value to property in Toronto if the people of Toronto themselves will not do anything? I do not know any good reason for it.

Mr. NESBITT: The people of Toronto are doing something.

Mr. SINCLAIR: In the case of Toronto, they are going to do something, but in some of these ports they are not doing anything and the minister does not seem to think that they should.

Mr. ROGERS: I am afraid that I cannot agree with my hon. friend. He mentions the case of St. John. It is true that if you tied your boat up at certain wharves at St. John you would have to pay something for it. St. John spent a large sum of money in the early days on the wharves referred to by my hon. friend, they are controlled by the city, and, of course, they have a right to make a collection. But it all comes back to this, that we are behind in the development of our national ports. We discuss day after day in this House the fact that a great portion of our trade is diverted to American channels. We have built three transcontinental railways in the hope of keeping our trade within our own country, but this cannot be done unless the Government undertake to meet the requirements and the development of our national ports for the carrying of freight in as convenient a manner as possible and in order to discourage shippers from diverting their traffic to American channels. That is the reason why the obligation rests upon the Government to see that out national ports are developed even more rapidly than they have been in the past and more rapidly than they are being developed to-day. If we are going to make a success of our transcontinental railways it is absolutely essential that we should have our ports and their development keeping pace with the conditions because a chain is only as strong as its weakest link. The people who are snipping over our railways do not get the accommodation, the connections and the services at our national ports that they should get and that they do get through American channels, with the result that trade is lost to the country. I agree with my hon. friend from St. John (Mr. Pugsley) that the time has now arrived in Canada when we should have a new policy in connection with our harbours. We first of all must arrange for such a development as will ensure traffic and trade passing through our own channels and when we can do that it will be time enough to sit down together and see if we can exact a sufficient charge to pay the interest on the capital which we have expended and which must be considered

necessary for the develpoment of our country.

Mr. MACDONELL: The minister has touched upon a point that is essential in the Toronto case. The opening of the new Welland canal will mean that lake Ontario will be placed upon the same traffic basis as the upper lakes and that will make the development of harbour facilities at Toronto essential. Up to the present time practically no public money has been spent on Toronto harbour——

Mr. PUGSLEY: That is scarcely correct.

Mr. MACDONELL: Very largely.

Mr. PUGSLEY: When I was minister we had dredges at work there and a very nice breakwater was built out at the island.

Mr. MACDONELL: It was only very partial work that was done there.

Mr. PUGSLEY: It was needed.

Mr. MACDONELL: Of course, it was needed. Public property was being washed away and the breakwater served a good purpose in the past but there was no real dealing with Toronto harbour in a serious way.

Mr. PUGSLEY: Yes, it was very serious.

Mr. MACDONELL: Merely to protect it but not to develop it. Now, the local harbour commission have taken the matter in hand and they are proceeding to spend a very large amount of money—quite the amount of money that was mentioned by the hon. member for Oxford (Mr. Nesbitt). This Government money is being strictly expended on harbour work. The Toronto Harbour Commission is paying out an immense amount of money, part of it on real harbour work that is generally done by the Government and part of it on collateral, adjacent works that altogether will comprise the completed Toronto harbour. The Government is not doing more than its share. The harbour commission, locally, is spending many millions of dollars on real harbour work. The opening of the Welland canal will make it necessary to have some great port on lake Ontario. That is why the trade has heretofore gone by American channels and through American harbours. Buffalo gets a very large proportion of the entire freight of the upper lakes. When this new work is completed it is expected that a very great portion of this traffic will come to Kingston, Toronto and other ports on lake Ontario. This work is essential and is being carried out in a proper manner. The Toronto people, through their harbour commission, are spending many millions of dollars, and when the work is completed we shall have a harbour that will be equal if not superior to any on the American continent. It is expected that the work will be completed about the same time as the Welland canal, if not before. With regard to harbour dues, which have been mentioned to-night, all the docks, shipping facilities and privileges of Toronto harbour will be vested in the harbour commission, and there will be no possibility, as the hon. member for Guysborough suggests, of a boat tieing up at A's dock or at B's dock and being charged dues at a more or less arbitrary rate, which, I suppose, is what the hon. gentleman had in mind. All the docking facilities will be under the harbour commission, and their charges are under the regulation and supervision of the Dominion Government. As has been stated by some hon. gentlemen, the harbour commissioners of Montreal, of Quebec, and of Toronto are under different Acts of Parliament, and their powers vary. In the case of the Toronto Harbour Commission the Government has the selection of one commissioner, and the nomination of another at the suggestion of the Toronto Board of Trade. The Toronto Harbour Commission is really a Government commission. All harbour regulations, dues and charges must be either fixed by the Government or be submitted to them and receive their approval. In view of these facts harbour conditions at Toronto will very shortly be almost ideal.

Mr. GRAHAM: Under the late Government, and before I was a member of it, I was taken to Toronto to be shown what the Government was doing there. It must be remembered by hon. gentlemen who do not know the great city of Toronto that the harbour is protected by an island which forms a natural bay or harbour. The difficulty has been with what are known as the eastern and western gaps, which are entrances to the harbour. The late Government spent a large amount of money in building breakwaters to prevent the island shore beiing washed away, and also a large amount in completing the eastern and western gaps. The entrances to the harbour are now in good condition, but it must be admitted that for years Toronto harbour was not looked after either by the city or by anybody else, and it has been notorious

among shipping men for having perhaps the poorest loading and unloading facilities of any harbour in the Dominion. Outside of the traffic to which the hon. member for Toronto has referred, Toronto is a great distributing centre for all the freight that comes by water, and that will come more and more from that whole inland country of Ontario as the harbour facilities are developed. I am strongly in favour of this vote, and I would suggest to the minister that we pass this Toronto item and then adjourn.

Progress reported

On motion of Mr. Rogers, the House adjourned at 11.35 p.m.

Wednesday, May 3, 1916.

The House met at Two o'clock, the Speaker in the Chair.

CANADIAN NORTHERN AND GRAND TRUNK PACIFIC RAILWAYS.

PROPOSED LOANS.

Hon. Sir THOMAS WHITE (Minister of Finance): In connection with the proposed loan to the Grand Trunk Pacific Railway Company, which appears in the Supplementary Estimates laid upon the table of the House yesterday, I desire now to lay upon the table the following documents:

A letter dated December 10, 1915, addressed to the Prime Minister by Mr. Alfred W. Smithers, chairman of the Grand Trunk Railway Company of Canada.

A statement showing the outstanding bonds, debentures, loans and notes of the Grand Trunk Pacific Railway Company and of the Grand Trunk Pacific Branch Lines Company, as of January 1, 1916.

A statement showing the interest payments for each month during the year 1915 upon securities of the Grand Trunk Pacific Railway Company and Grand Trunk Pacific Branch Lines Company, together with an estimate of the deficit in operation for the present calendar year.

A statement of expenses for betterments and miscellaneous purposes for the same year.

A statement showing bonds authorized, issued and outstanding, and the net proceeds therefrom; also interest payable for the years 1916 and 1917 of the Grand Trunk Pacific Railway Company and Grand Trunk Pacific Branch Lines Compay.

A statement of advances which have been made by the Grand Trunk Railway Company as of February 29, 1916, to the Grand Trunk Pacific Railway Company, to the Grand Trunk Pacific Branch Lines Company, to the Grand Trunk Pacific Saskatchewan Railway Company, and to the Grand Trunk Pacific Development Company, Limited, and the security held by the Grand Trunk Railway Company therefor.

A memorandum prepared by the Department of Finance showing the amount of the proceeds of the sales and pledges of the Grand Trunk Pacific Railway Company's securities guaranteed by the Dominion Government under the legislation of 1914, together with details of payments made to the Railway Company from such proceeds, accompanied by certified copies of the Orders in Council under which authority the payments were made from time to time.

In connection with the proposed loan of $15,000,000 to the Canadian Northern Railway, which also appears in the Supplementary Estimates, I desire to lay upon the Table the following:

Statement of all securities of the Canadian Northern Railway System outstanding as of April 15, 1916, showing the total securities guaranteed by the Dominion Government and the amounts issued, the total securities guaranteed by Provincial Governments and the amounts issued, and the total amount of unguaranteed authorized and issued securities, and the maturities of all issues.

A statement showing the amount expected to be realized from securities which were available as of December 1913, the depreciation as of December, 1915.

An audited statement of loans and liabilities.

A memorandum respecting the funded debt and fixed charges.

A memorandum respecting contractors' accounts.

A memorandum of interest payable by the Dominion and by Provincial Governments under existing legislation.

I desire also to lay upon the Table a statement showing the proceeds of the sales and pledges of the $45,000,000 Canadian Northern Railway securities guaranteed by the Government of Canada under the legislation of 1914, together with an estimate showing what would have been realized for such securities upon the basis of prices existing before the war; also particulars of the various certificates which have been issued by officials of the Department of Railways and Canals, certifying that payments might be made out of the proceeds of the securities, and showing the balance of proceeds on hand as of May 1, 1916. These statements are accompanied by copies of the certificates given by Major Graham Bell, of the Department of Railways and Canals, who audited the accounts. In connection with the certificates given by Major Graham Bell I also desire to lay upon the Table a letter which he has addressed to me respecting the audit he has made of the books and accounts of the company.

Mr. GRAHAM: I suppose that is all the correspondence there is in connection with the two proposed loans?

Sir THOMAS WHITE: Yes.

Mr. GRAHAM: I would suggest to the Minister of Finance that he have these printed as quickly as possible and distributed amongst the members, because he can readily understand we cannot discuss the matter intelligently with only one copy between us.

Sir THOMAS WHITE: I thought my hon. friend might desire that either himself or some other hon. member should look over and select from the statements that have been laid upon the Table those it was thought desirable to have printed, as was done in 1914. I quite agree with my hon. friend that the statements I have presented should be printed as they have a direct bearing on the subjects referred to, and I therefore beg to move that rule No. 74 be suspended for the purpose of enabling me to move that the documents I have laid upon the Table be printed forthwith.

Mr. NESBITT: Is there any statement showing the bonds that have priority over those guaranteed by the Government?

Sir THOMAS WHITE: All the bond issues of the system are shown in the statement I have presented.

Mr. NESBITT: The proposition in the Estimates is to pay the interest on bonds that have priority over the Government guaranteed bonds.

Sir THOMAS WHITE: I think all the other issues of the Canadian Northern Railway system have priority over the $45,000,000 mortgage which was executed in 1914. That, of course, was subject to underlying mortgages securing the bond issues of the system. I think the statement I have laid upon the Table will give my hon. friend full information, but if anything further is desired I shall be pleased to bring it down if I can procure it.

Mr. MACDONALD: Are any copies of the trust deeds that were executed at the time of the guarantee of 1914 available?

Sir THOMAS WHITE: Yes, I shall lay on the Table a few copies of the two trust deeds executed by the Canadian Northern Railway and the Grand Trunk Pacific in 1914. It will not be necessary to print any more of those.

Mr. PUGSLEY: Yesterday the Prime Minister said, in answer to a question by the leader of the Opposition, that he presumed there would be considerable correspondence in connection with the applications for these loans, and I think he said it would be laid upon the Table. Might I ask that that be done? Amongst the papers that have been laid upon the Table there is no correspondence at all in connection with the Canadian Northern Railway, and only one letter, from Mr. Smithers, in connection with the Grand Trunk Pacific Railway Company. I call my hon. friend's attention to that, and I think my right hon. friend the leader of the Opposition supposed that the correspondence also would be laid upon the Table.

Sir ROBERT BORDEN: I understand that all the correspondence has been brought down.

Mr. PUGSLEY: These are only financial statements.

Sir ROBERT BORDEN: There is a letter from the chairman of the Grand Trunk.

Mr. PUGSLEY: But nothing from the Canadian Northern?

Sir ROBERT BORDEN: No.

Sir THOMAS WHITE: There is no written application from the Canadian Northern Railway Company. The letter from the chairman of the Grand Trunk Railway Company is an important communication which sets out the position of the Grand Trunk and of the Grand Trunk Pacific.

Mr. MACDONALD: Is there included in this statement anything that would show the expenditure in paying interest so far as securities are concerned? According to the item in the Supplementary Estimates a certain sum of money is asked to be voted for the purpose of providing for expenditures made or to meet indebtedness incurred in paying interest upon securities having priority over the guaranteed securities authorized by chapter 20, Statutes 1914, and also for expenditures on construction and on equipment. Does the statement which my hon. friend has brought down contain anything in detail that would show who made those expenditures and when they were made? Apparently the appropriation is to recoup some corporation for having made those expenditures. If money has been spent on construction, or equipment, or interest since June, 1914, the statement ought to be made in concise form so that the House will know exactly what are the facts. If there have been any sales by the Canadian Northern since June, 1914, of securities which were in existence at that time or which may have come into existence since, the statement ought to show

clearly that those securities have been sold and what has been done with the proceeds.

Sir THOMAS WHITE: The statements which I have presented give full information as to the two latter points referred to by my hon. friend. The statement shows the sales and pledges of securities and their proceeds. It also shows all payments made out of the proceeds, together with the certificates upon which they were paid out. There is also a statement showing, in addition to the funded debt, the short date maturities and the temporary indebtedness of the Canadian Northern Railway Company. That shows, with details, the amount of advances upon interest and construction accounts, and it gives I think, full information as to the current obligations of the company. In other words, the statement which I have filed shows the permanent and the current obligations of the company.

Mr. MACDONALD: Exclusive of bonded indebtedness and of debenture securities, what I would like to have made clear is this: the wording of the item seems to indicate that the money is asked to be voted to repay money spent for indebtedness incurred in paying interest. Is the information furnished sufficient to make that clear?

Sir THOMAS WHITE: I think so. The company borrows money from time to time for its purposes. Its borrowings as they stand at present are shown, I think, in sufficient detail, in the statement which I have laid upon the Table.

Motion agreed to.

PARLIAMENTARY LIBRARY ACCOUNTANT.

On motion of Sir Robert Borden, the recommendation of His Honour the Speaker, laid upon the table of the House on the 28th ult., respecting an increase of salary to Mr. Alfred Carter, Accountant of the Library, was concurred in.

DEPARTMENT OF THE INTERIOR.

ORDERS IN COUNCIL APPROVED.

Hon. W. J. ROCHE (Minister of the Interior) moved:

That the following Orders in Council, laid on the table of the House on Tuesday, the 25th day of January last, be approved:

1. Orders in Council published in the Canada Gazette and in the British Columbia Gazette, between the 12th of January, 1915, and the 31st of December, 1915, in accordance with sub-section D of section 38 of the regulations for the survey, administration, disposal and management of Dominion lands within the Forty-mile railway belt in the province of British Columbia.

2. Orders in Council which have been published in the Canada Gazette, between the 12th of January, 1915, and the 31st of December, 1915, in accordance with Section 77, Chapter 20, 7-8 Edward VII, the Dominion Lands Act.

3. Orders in Council which have been published in the Canada Gazette, between the 16th of January, 1915, and the 31st December, 1915, in accordance with Section 19 of Chapter 10, 1-2 George V, the Forest Reserves and Parks Act.

4. Orders in Council which have been published in the Canada Gazette, between the 12th of January, 1915, and the 31st December, 1915, in accordance with Chapter 5 of Chapter 21, 7-8 Edward VII, the Dominion Lands Survey Act.

5. Orders in Council which have been published in the Canada Gazette, between the 12th of January, 1915, and the 31st December, 1915, in acordance with Chapter 47, 2 George V, the Railway Belt Water Act.

6. Orders in Council passed under Section 18 of Chapter 63, Revised Statutes of Canada, an Act to provide for the Government of the Yukon territory.

Hon. FRANK OLIVER: This resolution to confirm certain Orders in Council is the result of a position taken by the present Premier when leader of the Opposition, who insisted persistently on having this procedure followed, namely, that all Orders in Council passed by the Government should be submitted to Parliament for its approval. I do not know that any great purpose is to be served by this procedure beyond the fact that the presentation of the Orders gives an opportunity of informing the House in regard to their purport and, if necessary, of raising discussion regarding them. It is hardly to be expected that the House would under any circumstances reverse any Order in Council that had been passed, because such reversal would lead to great complications. An Order having taken effect from the time of its being passed, for the House to declare that it was invalid or to refuse to sanction it would, of course, create confusion that would be contrary to the public interest.

Sir ROBERT BORDEN: I do not think the question was quite one of reversal. As I remember the legislation, it is to the effect that the Orders in Council shall be in force until the last day of the next succeeding session of Parliament, but not longer, so that, unless during that session they are approved by the House, they would simply cease to have effect. It is pretty much the same thing.

Mr. OLIVER: The effect would be practically the same, that an action that had

been taken by the Government would be rendered invalid by the inaction of the House. Further, in discussing the merits of the procedure, if information is the purpose of it, I think that there is always the possibility of the House becoming informed on consideration of the Estimates of the department concerned, without the necessity of this formality being observed. The statute, however, calls for it and the minister has followed the statute, and the Orders in Council have been referred to me by the right hon. leader of the Opposition for consideration. While I would not presume for a moment to undertake to discuss the vast mass of material that is contained in these many Orders, having gone through them somewhat carefully, I may take the liberty of drawing the attention of the House and of the Government to certain points as being of more or less public interest.

Order No. 1938 grants an irrigation right in the railway Belt of British Columbia to one Layton. The terms are: $5 an acre, with $2 deduction on account of irrigation work. But Order No. 2378 grants to F. W. Anderson a tract in the same railway belt at one dollar an acre with a requirement of only 35 per cent of land to be irrigated. It seems to me there is no good reason for the difference in the treatment accorded these two enterprises under what appear, so far as the Orders in Council are concerned, to be exactly parallel conditions.

A small matter to which I may draw the minister's attention is dealt with by Order in Council of 27th February. This order provides for the destruction of predatory animals and birds in the Dominion parks, but it does not specify what animals or birds are considered "predatory." Therefore, the tourist who undertakes to exercise what he supposes is his right under this Order in Council is liable to get into trouble with the authorities just the same. I would suggest to the minister that when he permits the killing of animals within the park, contrary to the general principle of protecting animal life there, he should specify exactly what animals or birds may be killed.

An Order dated 15th June, 1915, deals with the question of motor vehicles in the parks, and provides that they may be used on roads from which they have hitherto been excluded. For a long time it was considered inadvisable that motors should be used in the mountain parks, for the obvious reason that the use of motors on the same roads as carriages might result in very serious accidents where horses were not used to the motors. Now that motors have been permitted in the parks on certain roads, now that the necessities of the case require that the privilege be extended to those who use motors, may I take the opportunity of making a suggestion to the minister. That suggestion is, that provision should be made to test the horses employed in the park, to find out whether they will or will not shy at motor vehicles. This is an important matter to those who are interested. We desire to have these parks patronized by all classes of people, we desire to have them used by motorists and also by those who drive horses. But until the horse becomes used to the motor there is the greatest possible danger to life in the use of the two vehicles on the same road. I should think it very unfortunate to restrict the use of motors. But if motors are to be used, horses should not be used unless they have, so to speak, passed an examination in meeting motors on the road.

I observe a general tendency throughout the regulations to relax conditions that were imposed in previous years. This, I think, is a very proper attitude to be taken by the department. A few years ago, when values of all kinds were rising, when speculation was rife, it was necessary that there should be restrictive regulations to prevent the public property from falling into the hands of speculators to be used for speculative purposes purely. But under the benign rule of our friends opposite the values of property in the West have declined to such an extent—and are still on the down grade—that there is no such thing as speculation now either in land, timber, coal, petroleum, or any other natural resource of which I have knowledge. Therefore, there is no necessity for the maintenance of rigid requirements in order to secure ownership that were absolutely necessary a few years ago. I do not wish to approve of an unfair administration of the law or regulations as showing favouritism, but I decidedly approve of a readjustment of the regulations according to existing conditions, which is what I find in those orders that I have noted.

There is an Order dated 17th April which rescinds a prohibition enacted by a previous order with regard to mining of coal under the right of way of the Grand Trunk Pacific railway. The former Order was passed during the construction of the Grand Trunk Pacific railway, on the application of the railway company, for the safety of the road as it was building. I notice that that

Order is rescinded on the ground that, now that the railroad has been built, it does not matter whether the mining operations are carried on or not. May I draw the attention of the minister to the fact that the purpose of the original order was to assure that the ground under the railroad track should not be undermined. But if it is undermined after the railroad is constructed, the result is just the same as though it had been undermined when the railroad was under construction. Coal seams are very close to the surface in many cases, and if the railroad has no protection in the matter it is quite possible for a man to acquire a coal right, and, by working that coal right, to absolutely wreck the railroad grade it crosses. It may be that such a case would only occur very exceptionally. But to prevent that condition was the purpose of the first order; and I must say, I do not think the minister is well advised in rescinding that order. There is no serious reason why it should be rescinded, and it seems to me there is good reason why it should be maintained.

I notice in an Order passed May 27, 1915, that the boundaries of gas leases, which, under a former Order, were required to conform to a certain base line, are now not required so to conform, the reason given being that as the lessees now do not acquire the surface, there is no reason why the boundary lines should be regular. I submit that it does not make any difference whether the right is acquired on the surface or not, it is just as necessary that the right which is acquired below the surface should be ascertainable with as little difficulty as if it were acquired on the surface. The original regulation that required the boundary lines of gas properties to conform to a certain well understood requirement is just as necessary in the public interest when the right relates only to the gas itself as it is if it relates to the surface—indeed, I think more so, because if it relates to the surface there can easily be surface marks to show where the boundaries are. When it is not related to the surface it is all the more important that every one should know where and in what direction the boundary lines are drawn.

I notice a number of grants to cemetery companies. It has been the custom to make grants of cemetery grounds to churches and municipalities, but I notice that the minister has introduced a system, or practice, of making free grants of land for cemetery purposes to companies. So long as the property is for the purpose of a cemetery it does not make any serious difference whether it is granted without charge or to whom it may be granted. But it is obvious that if a free grant is made to a company that company may later change its character and the purpose that was in the mind of the Government in granting the cemetery property may be defeated. It is perfectly right that cemetery property should be granted, and should be granted free, but I think that it should be granted free only to municipalities or churches which have a corporate existence aside from the business of running a cemetery, and which can be held to an agreement to maintain the property for the purposes for which it was intended. In one case here I notice that a part of a school section has been sold to a cemetery company. That it seems to me, is not an unreasonable proposal. If a cemetery company wishes to acquire land from the Government, it should pay for it at the price that the land is worth and should be subject to all the considerations appertaining to any other company that is doing business with the Government; it should not be on the same footing as a church or a municipality or any other public body or organization.

I notice an Order in Council of August 12, 1915, by which J. A. Fraser, of Portage la Prairie, is granted a hay lease on a quarter section of land at 25 cents an acre. I am not acquainted with the circumstances of the case, but I draw attention to it from the fact that it seems strange that an Order in Council should be required to enable Mr. Fraser to secure exclusive rights on a certain quarter section. It would seem that if one man has an opportunity to acquire grazing rights or hay rights on this quarter section, any other man should have equal opportunity. Either there should be general regulations governing the matter of hay leases or no special grant should be made to a special person. I know nothing about the circumstances of the case, but I suggest to the minister that the finding of such instances in this mass of regulations would indicate that there had been favouritism in the matter rather than a regard for the general interest.

I notice a very remarkable Order of September 17, 1915, and if it would not be out of order, Mr. Speaker, I would very much like to have the minister's explanation later of the purposes of the Order. Under this

Order the Churchill Basin Fish and Traction Company, Limited, are given exclusive rights of occupation of a right of way for a distance of 225 miles. The purpose, as it appears to me, would be to reach some fishing grounds of this company in the north. I am unable by reading the Order to understand what purpose is to be achieved by it, and I hope the minister will be good enough to give us an explanation of its purpose.

I note again an Order dated November 6, 1915, which provides for the auction sale of one school section and of a five-acre piece of another school section, the section to be at the upset price of $7 an acre and the fraction to be at the upset price of $30 an acre. No reason is given in the Order in Council for this special sale being made. It is generally the custom not to sell school lands except in areas; that is to say, the School Lands Branch come to the conclusion that the land in a certain area of townships has reached a good value and they list and put on sale by auction all the school sections within that area. The fact that a large number of sections are on sale attracts buyers and makes the sale important and tends to general success. There may be cases where there is necessity for the disposal of a small parcel of school land. It can only be disposed of by public auction, but I think it is only right that when it is considered necessary to make such disposition the reasons should be stated. No reasons are stated in this Order in Council for dealing with these two pieces of school land in this particular way, and if the minister would be good enough to take note of the matter, I should be glad to have his explanation later on that point.

I notice an Order dated December 9, 1915, the purpose of which is to give protection to the homestead entries made by enlisted men after their enlistment. There are a number of Orders in this bundle of papers making provision for the protection of homesteaders and miners and others holding rights on the public domain who have enlisted in the military forces. These orders are for their protection during the period of their enlistment, and in most cases to give them credit for the work they do for the country or the Empire, as if it were done on their homesteads. Everybody will agree that that is right and proper. This order of which I speak is in a somewhat different class. The former Orders, of which I spoke, gave protection to men who have already enlisted and made their plans of life to occupy either land or mining property, and who have given up those plans and prospects for the purpose of serving their country. This order provides that the man who has enlisted can, after his enlistment, go and make an entry for the land and be protected, and have the benefit of that land as though he had occupied it before his enlistment. That is to say, this Order in Council gives a bonus of a quarter-section of land to the man who enlists. I am not discussing the merits of the case; it may be that that is a desirable policy to pursue, but it is well that we should understand that that is what we are doing, that we are giving the man who enlists now a bonus of a homestead for enlisting without residence or practically duties, as I understand it.

It would be impossible, of course, to deal thoroughly with the vast mass of departmental work that is contained in this file. The file having been brought down, I thought it was only proper that I should draw the minister's attention and the attention of the House, to such points as I happened to be able to notice in an examination of the documents. There are many other matters that might be dealt with, but I do not think that at this stage of the session it would be wise to take up the time of the House at any greater length. But I would be glad if the minister would explain to the House the points to which I have drawn his attention. I shall be very glad to agree to the passing of the resolution.

Hon. W. J. ROCHE (Minister of the Interior): Believing that these Orders in Council would be disposed of in the manner that they have been disposed of every year when submitted to Parliament, and formally approved of, I have not been able to get the information necessary to give an explanation in detail other than is contained in the Orders in Council. I cannot therefore enter into as minute an explanation as otherwise I would have liked to make, but I will refer to a few of the points which have been raised, trusting that my personal knowledge will enable me to reply to the hon. gentleman. The only explanation I can give as to the difference between the prices charged in connection with lands for irrigation purposes in the railway belt is that there was a time when the lands in the railway belt were sold for $3 an acre with a rebate of $2 per acre on the completion of the irrigation works. But these regulations were changed so that we now sell the lands at $5 an acre

instead of $3 as heretofore. That pretty well explains the difference between the two cases, although I am not at all sure as to the dates. There might have been some special considerations in connection with these cases which I will have looked up, and I will afford the hon. gentleman the explanation later on. I quite agree with his suggestion as to specifying the predatory animals and birds in the Orders in Council. Of course, it may necessitate frequent Orders in Council, or frequent amendments in Orders in Council, but that is not a great hardship, and we can easily conform to that.

In regard to the suggestion about examining the horses that are driven in the parks to test them so as to determine whether or not they will shy at motor vehicles, I do not know whether that would be practicable or not. I doubt whether we have jurisdiction over all those horses. No doubt we have jurisdiction to a certain extent over the horses that are allowed in the parks, but I am afraid it would be rather a large order if all the horses were to be examined to see if they were afraid of motor vehicles.

In regard to the grants for cemeteries, we have been granting sites for cemeteries where it was an organized company, a municipality, or a church, that applied, but we make the express stipulation that they are not to be utilized for any other purpose, so that that will bind them down specifically to the purposes of a cemetery site.

Mr. OLIVER: I note that one of these Orders in Council refers simply to the people of Centre View, Rev. John Prior, without any suggestion that a company is being organized.

Mr ROCHE: No doubt that was in connection with a church. Very likely they have a church, and have applied for a cemetery site in connection with it. I quite agree that the school lands stand on a different footing from Dominion lands, inasmuch as school lands are held as a trust, and it is only right that we should not grant them free. They are usually disposed of by public auction or at a valuation. In connection with the hay lease to one Fraser, I have a dim recollection of that case, and I think the explanation is that these were not ordinary Dominion lands but lands surrounding lake Manitoba, most of which were under water. But Mr. Fraser was a stock man with a large number of stock, and not having sufficient land on which to run this stock, he applied for a lease of some of the lands that had been revested in the Dominion from the province. I think that is the explanation of the lease in this case. I do not know that there was any conflicting application, and therefore there would not be any desire to show partiality to Mr. Fraser. With regard to the Churchill Basin Fish and Traction Company's right of way, I understand that that is a road that has a provincial charter, and we dealt with this charter just the same as we do with applications from other railways. An official of the department in a memorandum submitted to me said he saw no reason why he should discriminate against those having provincial charters, and only grant the right of way to those holding Dominion charters. I believe it is a road which joins with the Hudson Bay road on the way to Churchill and therefore it has a provincial charter.

Mr. OLIVER: Is it suggested that this is to be a railway?

Mr. ROCHE: Yes.

Mr. OLIVER: The reason that I drew attention to it was that I understood that it was intended to be a wagon or trail road, and I wanted to know particularly if the rights granted to the Company would prevent other people from using it.

Mr. ROCHE: It is a railway right of way. As to the sale of the school section and of five acres of another section, a municipality may ask to have a particular section put up for sale, for something in connection with municipal purposes, and it may desire to have a sale before the general sales take place because the general sales only take place once every two or three years. Our policy in regard to putting up the school lands for sale is that before the land is offered, we secure the consent of the provincial government and we submit a statement of the lands that are going to be offered for sale and of the places where the sales are going to be held. We have done that in connection with the sales which are to be held this coming summer.

With regard to the protection of the homesteading rights of those who have enlisted, I think the hon. gentleman has probably misinterpreted the Order in Council. He states that we are giving practically the same protection to the soldier who has made his homestead entry after enlistment as we are giving to the man who was the owner of a homestead prior to enlistment.

But there is a difference in our treatment of these two men. The man who had a homestead prior to enlistment has not only protection in so far as not allowing cancellation proceedings to be instituted, but he is also allowed to count as time of residence on his homestead the time that he is serving his country at the front. In the case of the volunteer who makes a homestead entry after enlistment, he is not allowed to count his time but he is protected from cancellation. I will draw the attention of the officers of the department to the suggestions which have been made by my hon. friend in regard to the manner in which some Orders in Council might be improved, and also to the other suggestions which he has made in order that they may have every consideration.

THE BILINGUAL QUESTION.

Hon. C. J. DOHERTY (Minister of Justice) laid on the Table copies of the Orders in Council and reports of the Minister of Justice in reference to the Ontario Statute passed at the last session of the Legislature, the reports dealing more particularly with certain petitions for the disallowance of the Act 45 Vic. chapter 45 of that year, and certain correspondence with the Department of Justice.

3 p.m.

QUESTIONS.

[Questions answered orally are indicated by an asterisk.]

TRURO-MONCTON SECTION.

Mr. COPP:

1. Is it the intention of the Government to change the location of the Intercolonial railway, or building a new line of railway as a part of the Government system, to and from any points on the said Intercolonial railway, between the city of Moncton and the town of Truro, for the purpose of avoiding the heavy grades now existing between said points?
2. If so, between what points on said Intercolonial railway will the diversion be made?
3. Have any proposed routes for such diversion been surveyed? If so, how many?
4. Have any reports of such surveys or recommendations respecting same been made to the Government? If so, by whom?
5. What has been the total cost to date of such surveys?

Mr. REID:

1. No.
2. Answered by No. 1.
3. Some surveys have been made.
4. No.

[Mr. Roche.]

5. $37,012.52, for double track and grade revision surveys between Moncton and at or near Truro.

PRINCE RUPERT MILITIA QUARTERS.

Mr. PARDEE:

Is the Department of Militia and Defence renting any quarters from J. E. Merryfield at Prince Rupert, B.C.? If so, what are the premises, and what rental is being paid?

Sir GEORGE FOSTER: No.

LEVIS QUARANTINE PROPERTY.

Mr. BOURASSA:

1. How much did the work done on the Quarantine property at Lévis, by J. B. Clouthier during the year 1915-16, cost?
2. What was the cost of materials used, of the work done, as personal expenses and percentages for the said J. B. Clouthier, and all outlay of any other kind?
3. What is the character of the work done?

Mr. HAZEN:

1. $8,216.80.
2.

Cost of material used		$2,778 56
Cost of work done		2,984 67
15 per cent on $4,244.52, made up as follows:		
Material	$1,259 85	
Work done	2,984 67	
		636 68
Other outlay		373 49
Under contract dated 30th June, 1915		1,195 60
Plus extras		247 80
		$8,216 80

3. Roadmaking and draining.

Note.—All the above dealings were with the firm of Clouthier & Trudel, of the village of St. Romuald, P.Q. The department had no dealings with J. B. Clouthier.

MAGDALEN ISLANDS SERVICE.

*Mr. LEMIEUX:

1. What steamer is making the service between Pictou, Prince Edward Island and the Magdalen this year?
2. Under what terms is the steamer running as per subsidy contract?

Sir GEORGE FOSTER:

1. The steamship Amelia.
2. A subsidy contract has been entered into for one year. The amount of the subsidy is $18,000.

BRITISH COLUMBIA LIGHTHOUSE SERVICE.

Mr. SINCLAIR:

1. Has the Department of Marine and Fisheries chartered a steamer during the present season for lighthouse service in British Columbie?
2. If so, what is her name, dimensions, tonnage, both gross and net, date of construction, name and post office address of present owner and rate per day?

3. Is any part of the vessel's running expenses chargeable to the department? If so, what part?

4. Were tenders invited? If so, what are the names and addresses of the tenderers, and amount of each tender?

Mr. HAZEN:

1. Yes.

2. Leebro. Length, 123.5 feet; breadth, 28.8 feet; depth, 11.1 feet; gross tonnage, 323; registered tonnage, 198; built 1908; name and address of owners, Crescent Shipping Company, Ltd., Victoria, B.C.; rate per day, $125. This vessel has been chartered by the department from time to time since 1908 as the exigencies of the service required.

3. No.

4. No.

WENTWORTH MAIL SERVICE.

Mr. MACDONALD:

1. Who is the mail contractor between Wentworth station and Lower Wentworth, Cumberland county?

2. Were tenders called for the performance of this contract in 1915? If so, who were the tenderers, what was the amount of each tender, and to whom was it awarded?

3. What was the amount paid to the previous contractor?

Mr. CASGRAIN:

1. W. M. Brown.

2. Yes: W. M. Brown, $350; Arthur Mills, $400; Lannis F. Crawford, $400. The contract was awarded to W. M. Brown at the rate of his tender.

3. $339 per annum.

FRED. S. WILSON.

Mr. MACDONALD:

1. Was Mr. Wilson, Belmont, N.S., appointed as buyer of hay for Colchester?

2. If so, what amount is paid per month to him as salary?

3. Is any commission paid to him?

Mr. HAZEN:

1. Mr. Fred. S. Wilson, Belmont, N.S., was appointed as organizer to secure hay for War Office account in connection with the compressing plant at Windsor, N.S.

2. He is paid $5 per day, plus $1.50 living expenses, plus $1.50 per day when he uses a horse.

3. No.

EAST GORE-KENNETCOOK MAIL SERVICE.

Mr. MACDONALD:

1. Who is the mail carrier between East Gore and Kennetcook Corner, Hants county?

2. What is the amount paid him yearly?

3. Were tenders called for the performance of the present contract?

Mr. CASGRAIN:

1. J. S. Blois.

2. $300.

3. It was the intention of the department, on the establishment of rural delivery in the district, to discontinue this service, but it was subsequently decided to continue it, and a temporary arrangement was made.

UNOPPOSED MOTIONS FOR PAPERS.

Mr. A. K. Maclean.—For a copy of all letters, telegrams, bills, vouchers and memoranda in connection with the repairs to the wharf at Shad Bay, Halifax county, N.S., in 1915.

Mr. A. K. Maclean.—For a copy of all letters, telegrams, bills, vouchers and memoranda in connection with the repairs to the wharf at Upper Propect, Halifax county, N.S., in 1915.

BOUNTIES ON ZINC BILL.

On motion of Sir Thomas White (Minister of Finance), Bill No. 94, to provide for the payment of bounties on zinc produced from zinc ores mined in Canada, was read the third time and passed.

ST. JOHN AND QUEBEC RAILWAY.

On motion of Hon. J. D. Reid (Acting Ministers of Railways and Canals), the House went into committee, Mr. Rhodes in the Chair, to consider the following proposed resolution:

Resolved, that it is expedient to provide as follows :

1. That the Governor in Council may grant a subsidy to the Saint John and Quebec Railway Company of $3,200 per mile towards the construction of each of the undermentioned lines of Railway (not exceeding in any case the number of miles hereinafter respectively stated) which shall not cost more on the average than $15,000 per mile for the mileage subsidized; and towards the construction of each of the said lines of railway, not exceeding the mileage hereinafter stated, which shall cost more on the average than $15,000 per mile for the mileage subsidized, a further subsidy beyond the sum of $3,200 per mile or fifty per cent on so much of the average cost of the mileage subsidized as is in excess of $15,000 per mile, such subsidy not exceeding in the whole the sum of $6,400 per mile, namely :

(a) A railway from Andover, in the county of Victoria, to Centreville, in the county of Carleton, not exceeding 26 miles;

(b) a railway from Centreville to Gagetown, in the county of Queens, not exceeding 120 miles;

(c) a railway from a point at or near Gagetown to a point on the Canadian Pacific railway at or near Westfield, in the county of Kings, not exceeding 45 miles.

2. That the Governor in Council may authorize and empower the Minister of Railways and Canals of Canada to enter into an agreement with the Government of the province of New Brunswick and the Saint John and Quebec Railway Company, subject to the necessary legislation to that end being passed by the

Legislature of New Brunswick, whereby the company shall construct up to a standard for safe operation the line of railway from Gagetown, or from a point near Gagetown, to a point on the Canadian Pacific railway at or near Westfield, on or before the first day of February, 1917, and shall complete the construction and equipment of the said line of railway in all respects up to and according to the specfications and requirements prescribed, on or before the first day of August, 1917, and shall complete the construction and equipment of the line from Centreville to Andover up to and according to the said specifications and requirements on or before the thirty-first day of December, 1918; and upon the said agreement becoming effective between the parties thereto, the Dominion shall enter into an interim lease of, as and from the first day of April, 1915, and operate, the line of railway from Centreville to Gagetown until the completion within the times hereinbefore specified of all the lines to be leased to the Dominion under the agreement, upon terms and conditions to be agreed upon; and that upon the completion of the line from Gagetown to Westfield, the Dominion will enter into a lease thereof and operate the same pending the completion of the remaining line to Andover, all in accordance with terms and conditions to be agreed upon in each case, including the forty and sixty per cent division of gross earnings hereinafter referred to; and the Dominion undertakes and agrees that as soon as the lines of railway from Centreville to Gagetown, and from Gagetown, or from a point near Gagetown to a point on the Canadian Pacific railway at or near Westfield, and from Centreville to Andover, all shall have been constructed and equipped to the satisfaction and approval of the engineer or engineers appointed by the minister, the Dominion will enter into a lease of the said lines of railway and operate the same upon the terms and conditions agreed upon and to be embodied in the said lease, for the term of ninety-nine years, it being understood and agreed that the Dominion will provide the necessary, suitable and sufficient rolling stock for the operation of the said lines of railway, and will maintain, repair and upkeep the same at its own expense during the whole term of the lease; and when the said lines of railway shall have been fully constructed and equipped as aforesaid, and the Dominion has entered into a lease of all said several lines of railway, the Dominion shall pay semi-annually to the province forty per cent of the gross earnings of the said railways under lease, including forty per cent of the gross earnings received from the operation over the line of railway of the Canadian Pacific Railway Company and over the bridge and railway of the Saint John Bridge and Railway Extension Company from Westfield to and into the city of Saint John, in case such running rights are acquired by the Company; and after maturity and payment of all debenture stock and bonds guaranteed by the province, and all bonds and other securities of the province in respect of the construction of the said railways or any of them, all rental as aforesaid shall be paid semi-annually to the company. The Dominion shall have the right to, and may withhold and apply towards the payment of rental due to the Canadian Pacific railway under any lease acquired by the Saint John and Quebec Railway Company, and also towards the payment of rental due to the Canadian Pacific Railway Company and to the Saint John Bridge and Railway Extension Company, under any lease or leases of running rights acquired by the Saint John and Quebec Railway Company, from any moneys that may from time to time be due and payable under said agreement from the Dominion to the province or company, as the case may be, and may make such payment of rentals from time to time to the Canadian Pacific Railway Company and to the said Bridge Company accordingly, and any such withholding of moneys and payment of the same for rentals to the Canadian Pacific Railway Company or to the said Bridge Company as hereinbefore provided shall be deemed payments under the agreement to the province or the company, as the case may be, in as full and complete satisfaction as if otherwise made under the agreement. Upon failure or neglect on the part of the company to acquire and secure running rights from Westfield to and into the city of Saint John as in the agreement provided, the Dominion may acquire such running rights by lease or leases in its own and sole right and pay rentals therefor, or may construct a line of railway from Westfield to and into the city of Saint John; and in such case or cases neither the province nor the company shall have any right or interest in the said lease or leases, or such constructed line of railway, or be entitled to any revenue acquired through running rights under any lease or through operation over such constructed line, and all revenue in such case or cases shall accrue solely to the Dominion. It is understood and agreed that any expenditure made by the Dominion during the currency of the leases or any of them hereinbefore referred to, as is usually carried to the debit of Capital Account by English Railway Companies, including expenditures for additional tracks, sidings, yards, buildings, alignment and grade revisions, and other facilities required for the economical and efficient handling of traffic, shall be rapid to the Dominion by the Company out of the said forty per cent of the gross earnings payable to the company under the agreement, or by debentures secured by mortgage on the said railways bearing four per cent interest, at the option of the company.

3. The Government Railways Act and the Acts heretofore and hereafter passed amending the same shall extend and apply to any line or lines of railway leased or operated by His Majesty under the provisions of the said agreement.

Any expenditure made under the provisions of the Act to be based upon these resolutions and of the said agreement, shall be paid out of the Consolidated Revenue Fund of Canada.

5. Any portion of the line of railway of the company that may be constructed upon lands acquired by purchase or lease from the Canadian Pacific Railway Company or from His Majesty, in or near the city of Fredericton, may be included for purposes of the subsidy hereby authorized as a part of the total length of the company's line.

Mr. PUGSLEY: Will the minister kindly explain this?

Mr. REID: After the resolution is passed I propose to introduce a Bill repealing Chapter 49 of the Statutes of 1912, entitled the St. John and Quebec Railway Act, and Chapter 52 of the Statutes of 1915, entitled An Act to amend the St. John and Quebec

Railway Act. The Act of 1912 provides that under certain conditions the Dominion Government shall assume a liability of $1,000,000 for bridges that were to be erected over the St. John river. This Act was amended in 1914, to increase the liability from $1,000,000 to $3,000,000. We now propose to repeal these Acts for the reason that under the new arrangement the bridges will not be necessary, as the road will follow a different route.

Mr. PUGSLEY: Where does the Act of 1914 speak of $3,000,000?

Mr. REID: I have not the Act before me, but that was the estimate at the time.

Mr. PUGSLEY: The Government assumes the liability even if the bridges cost more?

Mr. REID: The Act of 1914 increased the liability from $1,000,000 to $3,000,000, and we now propose to repeal the Acts of 1912 and 1914, for the reason that under the new arrangement it will not be necessary to construct the bridges. The Bill that I intend to introduce will provide that the route of this railway will be from Centreville to Gagetown, thence to a point called Westfield, where it meets the Canadian Pacific railway. Running rights will be obtained over the Canadian Pacific railway, and, until some other arrangement is made by which the line will be extended to St. John, the Canadian Pacific railway will be used from Gagetown to St. John. In addition, a line is to be constructed from Andover to Centreville. The original line was to be from Grand Falls, on the Transcontinental, to Gagetown, thence to Rothesay, crossing the river on the Intercolonial. Since the original work was undertaken, the Transcontinental has been taken over by the Government, and, as the Intercolonial has now connection with the Transcontinental at McGivney junction, it will not be necessary for the present to build that section between Andover and Grand Falls, as we shall have direct connection with St. John by running over the road now owned by the Government between Fredericton and McGivney junction. This changing of the route makes it necessary for us to withdraw the original resolutions, so as to provide for a subsidy on the line between Gagetown and Westfield. We discussed with the New Brunswick Government the advisability of having this road connect with the Maine Central, so that there would be connection between the Eastern States and St. John and the lower provinces. Owing to financial conditions caused by the war, and the necessity of getting our surveys ready, we are dropping that portion of the line between Andover and Grand Falls, but with this exception the arrangement as originally proposed will be carried out. Instead of going to Rothesay, we are going to St. John via Westfield, and in this change there are a number of advantages. I discussed with the New Brunswick Government the advisability of getting into St. John at the earliest possible moment. Engineers who understand the work have told me that it would probably take two or three years before we could get the bridges completed.

Mr. PUGSLEY: The bridges would take two or three years to build ?

Mr. REID: Yes. It would take two or three years to put in the foundations and have the bridges ready for operation. There is not only the question of time to be considered, but never in the history of our country have the materials entering into the construction of bridges been so expensive as at present. Iron is very dear and almost impossible to buy; cement, which is required in the foundations, is also high, and so are the other materials; labour is scarce. Altogether, we felt that it would be better to save the extra amount that we should have to pay, under present conditions, for the construction of these bridges. When this road is completed in February next—and it may be ready for operation before that time—I believe it will be of great advantage, not only to the city of St. John, but to the whole district through which it runs. and of that it will be of great assistance to the Intercolonial and the Transcontinental in getting our freight and passengers into the city of St. John. Feeling that this road was likely to give us an entrance into the city of St. John in the near future, I have been able to induce the Minister of Finance to place an amount in the Estimates for an elevator at St. John, the construction of which will be commenced at once; in fact I intend urging its completion as soon as possible in order that we may have the advantage of it next winter. This will be of benefit not only to the railway but to the people of St. John. As hon. members know, we have not had an elevator in that city since two years ago, when the elevator was destroyed by fire. At present, we intend taking running rights over the Canadian Pacific railway.

Mr. PUGSLEY: Is there any power in the Railway Act to compel the Canadian Pacific Railway Company to grant running rights, or must the matter be one of voluntary agreement?

Mr. REID: I do not know whether the Railway Act would compel them to grant running rights.

Mr. PUGSLEY: Does the minister propose to take power in this Bill to compel them?

Mr. REID: No, I am satified there will be no difficulty about it.

Mr. PUGSLEY: On what ground does the minister base that statement?

Mr. W. F. MACLEAN: Reciprocity.

Mr. PUGSLEY: This Government is opposed to reciprocity.

Mr. REID: The hon. member knows that we already have agreements by which running rights on the Government railway are granted to the Canadian Pacific railway and vice versa.

Mr. PUGSLEY: When Mr. Blair was minister, the Government refused to give the Canadian Pacific Railway Company running rights over the Intercolonial between St. John and Halifax, and I believe they have never yet been able to get those running rights. If it is a matter of reciprocity, they may make a deal.

Mr. REID: I do not anticipate any trouble in regard to those running rights. If there is any trouble, I can assure the hon. gentleman we will get into St. John at an early date.

Mr. PUGSLEY: By an independent line.

Mr. REID: The advantage we shall have by running in from Westfield is that we immediately get into the west side. In addition to that, we run right over to the east side where the Intercolonial terminals are. The Intercolonial railway had a great deal of difficulty in taking over their tracks, grain or other freight consigned to West St. John. The Canadian Pacific Railway Company charged such heavy shunting charges between West St. John and the Intercolonial terminals that our freight charges were considerably cut into. By this proposal we can run right into West St. John and over to the Intercolonial terminal.

Mr. PUGSLEY: If it is so easy to get running rights over the Canadian Pacific railway, why does the Intercolonial not get running rights from the east side to the west side, instead of paying those shunting charges?

Mr. REID: The hon. member knows quite well that I am speaking of the terminals. When we run over the eleven miles, we run right through their terminal and on to the Intercolonial; we can leave our freight cars in their own yards or at the wharf. There is no trouble about that. Taking the whole situation as I have explained it, I think it is much better that the road should be completed into St. John at the earliest possible date. It is a much better arrangement than the previous one for all concerned, and I hope, therefore, that the resolution will pass.

Mr. PUGSLEY: I regret very much that I am not able to agree with the Acting Minister of Railways in regard to this resolution, nor am I able to congratulate him or the Government on the conclusion which has been finally arrived at. It was a sorry ending to what seemed to be a great undertaking, one which was intended to make the city of St. John the chief Atlantic terminus of the Grand Trunk Pacific railway, and the new Transcontinental line which the company was to operate. I also am sorry that I have to charge this Government with having, from the very commencement of the undertaking since this Government came into power, acted, to all appearances, almost designedly, in co-operation with the Government of New Brunswick, to defeat the object originally in view. That is a pretty strong statement to make, but I think this legislation, and the facts, will justify it. Much as I regret to be obliged to make the statement, I feel it is my duty to do so.

What are the facts? When the late Government was in power, we conceived the idea that it would be a very important thing for the Transcontinental railway and also for Canada, that there should be direct connection between the Transcontinental line and the port of St. John. St. John, at that time, had attained such importance as a national port by reason of the accommodation which had already been provided there by the people of that city at a very large expenditure of money, that we believed that its success in that direction had been so marked that it would be desirable in the interest of Canada to have a direct connection between the port of St. John

and the Transcontinental railway, and Grand Falls seemed to be the point where the connection could best be made. We also felt that it would be of very great benefit to the valley of the St. John river which is a most fertile district, one of the best agricultural sections of the whole Dominion, a district which has been settled for upwards of one hundred years, but which for the most part has been without railway facilities. We thought that if the Valley railway could be constructed all the way from St. John to Grand Falls and be operated as a part of the Transcontinental system, it would be of immense national importance and would give very much needed accommodation locally to a most important section of Canada. At that time, I think in the year 1910, owing to a strong desire upon the part of the people of a large portion of New Brunswick that the Valley railroad should be built, a delegation came to Ottawa and interviewed the then Liberal Government; and after hearing the representations that were made, we arrived at the conclusion that the project was so important that it would be desirable that the Dominion Government should make exceptionally favourable arrangements for the construction of that road.

The proposition which was made to us, and to which the late Government cheerfully acceded, was that the railroad should be constructed from St. John, or from a point on the Government railway, to Grand Falls, and that the Government should enter into a lease for the operation of the completed road for a period of ninety-nine years, agreeing to keep the road in repair, and provide the rolling stock, and to pay to the province of New Brunswick, or to the railway company which should construct the line, forty per cent of the gross earnings. That forty per cent was to be applied towards recouping the province for the interest on the bonds which it proposed to guarantee, amounting, if I remember rightly, to $35,000 a mile. In 1910, the late Government was in office, there was passed by Parliament at the instance of the Government an act giving a subsidy for the line all the way from St. John to Grand Falls. That subsidy was in the ordinary form—$3,200 a mile, but with provision for an increase to $6,400 a mile, in case the cost of construction reached something over $21,000 a mile. It was also agreed that the Government should enter into a lease for the operation of the line in sections as completed. That was the condition of affairs when this Government came into office. Now, what is the first instance of departure from that contract, and of breach of faith on the part of this Government in conjunction with the then Government of New Brunswick, led by the Hon. Mr. Flemming? And here I may say that at the time it was rumoured in New Brunswick that Premier Flemming had given assurances—assurances which were quite publicly stated by those connected with the Canadian Pacific railway—that, although it was provided by statute that the line should run to Grand Falls, yet it was never intended to run a line parallel to the Canadian Pacific, but that the line would really stop at Andover. It was also looked forward to that at the southern end it should run to Westfield. So, instead of a line running to Grand Falls, to be operated as part of the Transcontinental, this would be a line beginning at a point on the Canadian Pacific at Andover and running to a point on the Canadian Pacific to Westfield, some fourteen miles from the city of St. John. In 1912, the subsidy from St. John to Grand Falls was renewed in the following words:

> For a line of railway from St. John to Grand Falls, New Brunswick, exclusive of a railway bridge across the Kennebecasis river, at or near Perry point, and two railway bridges across the St. John river, one at or near Mistake, and one at or near Andover; in lieu of the subsidy granted by chapter 51 of 1910, section 1, item 12; not exceeding 228 miles.

This is in the very wording of the statute of 1910, which was passed when the late Government was in power. While that subsidy was renewed to prevent it lapsing, in the following year we find the hand of Mr. Flemming, then Premier of New Brunswick, showing in the legislation, and carrying out what it was alleged was the assurance that had been given to the Canadian Pacific railway that the line should not be built to Grand Falls but should stop at Andover. The Subsidy Act of the previous year was repealed and the following substituted instead, as the minister will find in chapter 46 of the statutes of 1913:

> To the St. John and Quebec Railway Company, for a line of railway from Andover to St. John, New Brunswick, exclusive of a railway bridge across the St. John river, at or near Mistake, and a railway bridge across the Kennebecasis river at or near Perry point; in lieu of subsidy granted by chapter 48 of 1912, section 2, item 2; not exceeding 200 miles.

There we find the first instance of the fact that this Government and the Government of New Brunswick, the latter then led by Mr. Flemming, had decided to abandon that line of the railway which was to extend

from Andover to Grand Falls. That was the first instance of the breach of faith which we find to have taken place. In the year, 1912, the Government, of course, was confronted by the fact that the bridges had to be built and that the railway company could not build them without Dominion aid. It was provided that a bridge company should be formed and that the Government of Canada should guarantee the bonds of that company for a certain period, and also pay the interest upon the bridge bonds for a period of fifteen years. As further evidence of the fact that there was never any bona fide intention, as it appears to me and as the records show, to build these bridges or to build the line from St. John to Grand Falls, in addition to the evidence I have given to the committee we have the further fact that, during all these years and up to the present time, not a blow has been struck upon the railway north of Andover, nor has there been a blow struck upon the railway south of Gagetown. Some surveys were made of the St. John river and the Kennebecasis river, and surveyors' stakes were driven, but not one blow was ever struck south of Gagetown although it is six years since the late Government made the agreement to which I have referred, and there has since been plenty of time to build the whole railway and the bridges as well. Not a dollar has been expended in construction either north of Andover and north of Centreville in Carleton county, nor has any money been spent on construction south of Gagetown. I suppose that this Government and the provincial Government were keeping the matter open until the people of New Brunswick should be wearied with waiting and should be ready to submit to what, I believe, these two Governments have all along intended to do—to make the termini Andover on the north and Westfield on the south. This is what, after all these years of waiting, they are asking the people of New Brunswick to accept as being the final and fixed policy they have arrived at. Better would it have been had they announced this when they came into office years ago, instead of leading the people to believe, as they led them to believe in the elections of 1912, that they intended to build this line as part of the Transcontinental system from the port of St. John to a connection with the Transcontinental at Grand Falls. It is true that the Government did introduce and have passed in this House in 1914 a Bill to give further aid to the construction of the bridges. The minister says that this aid was to be to the extent of $3,000,000. No amount is mentioned in the Act, but it was declared to be the policy of this Government to build the bridges and to pay the interest upon the cost of construction for the period of some fifteen years. The minister says that these bridges would have cost some $3,000,000. Well, they would not have cost any more than they would cost now; I doubt whether they would cost very much more now than they would have cost then. Although provision was made in 1913, and in 1914 for the building of these bridges, no steps were taken to that end; no appropriation was asked for from Parliament for that purpose; the matter has remained in a dormant condition. No work has been commenced upon any of the bridges or upon any portion of the line south of Gagetown.

What was the reason why the Government in 1910 entered upon this large undertaking? We realized that the country was going to the expense of building a great transcontinental railway which was to open up a wonderful country, a country richer in resources than that portion of western Canada which is traversed by the Canadian Pacific railway. Wonderful as is that country, we realized that the new district which was being opened by the Transcontinental railway would soon be settled by thousands, nay, by millions of people, and that over that road would be carried untold quantities of our products for shipment to the markets of the old world, in the way of grain and cattle, which can be produced so satisfactorily upon our western prairies. We talked the matter over with Mr. Hays, late President of the Grand Trunk Pacific Railway Company. I well remember that there were gentlemen at that time who thought they might be able to convince Mr. Hays that it would be better to bring the line down the western side of the St. John river and utilize the Canadian Pacific railway terminals upon the western side of the harbour. To all these statements Mr. Hays replied: "You talk about our using terminals jointly with another transcontinental line. Look at Fort William, where we are establishing terminals in connection with our transcontinental system, where we have twenty-seven miles of water frontage, where we have elevator capacity of upwards of 30,000,000 bushels. If St. John is to be the freight terminus for our winter business we shall require terminals almost, if not quite, as comprehensive as those which we are constructing at Fort William." He looked over Courtenay bay,

and decided that at that place there was an ideal opportunity for developing a port such as the new transcontinental railway would require. Under the Bill which was passed through Parliament in 1910 we provided that the road should go into St. John upon the eastern side of the St. John river —that it should tap the Intercolonial at Rothesay, run into the city of St. John, and have direct and easy connection with the terminals at Courtenay bay. The Grand Trunk Pacific Railway Company had prepared a plan of their terminals upon a most comprehensive scale. They thought that they would require for very many years some fifteen or twenty docks, and ample provision was made in the plans to meet these requirements. The plans showed a very large grain elevator, a large immigration building—indeed, all those requirements and facilities which are necessary in connection with the terminals of a transcontinental railway system. I remember that the plans showed trackage extending along the Intercolonial for some three or four miles. They had in contemplation the building of machine shops and a large roundhouse; everything was designed on the most comprehensive scale. This plan is completely destroyed by the arrangement which has been arrived at to-day, and what is the excuse? The minister says that the Transcontinental line has been taken over by the Government, and that that is the reason for the change. Well, Sir, we have the statement of my right hon. friend the Prime Minister that the Transcontinental has not been taken over by the Government. As members of this House know, the Grand Trunk Pacific Company contend that they are not bound to enter upon a lease, because the contract provides that the lease shall begin when the road has been completed, and the road has not yet been completed, as the Government is compelled to admit. All that the Prime Minister has said is that pending the Grand Trunk Pacific Railway Company entering upon operation of the road the Government is temporarily engaged upon the operation of the Transcontinental system between Winnipeg and Moncton. That is the statement made by the Prime Minister in answer to a question which I put to him at the request of the people of St. John, who have recently been considering the question of the construction of the St. John Valley railway and whether it should be built into St. John on the east or the west side of the river. As a matter of law, not until the Transcontinental has been completed can this Government legally call upon the Grand Trunk Pacific Railway Company to enter upon the lease. When it should be completed the Grand Trunk Pacific Railway Company will be in a position to demand of this Government that they enter upon the lease, which is to be for fifty years from the time of the completion of the Transcontinental system. Is it not absurd for the minister to come forward with the reason that he has for the destruction of the agreement which this Government made with the people of New Brunswick? I charge breach of faith on the part of this Government—that, by their legislation, by their agreement, by their telling the people that they were going to carry out the arrangements that the old Government had made, they have induced the people of New Brunswick to take upon their shoulders an enormous burden amounting to some $35,000 a mile for the construction of that portion of the railway which has been constructed. This portion of the railway could have been built at very much less cost if it were to be used merely as a local road connecting two points on the Canadian Pacific railway. The people of New Brunswick have taken upon themselves this burden, amounting to something like $6,000,000, which is an enormous obligation for a small province with a population of only some 350,000.

My hon. friend says that it would take two or three years to build these bridges. Let me ask him, why did this Government not begin to build the bridges after the legislation of 1912, conjointly with the Provincial Government, when provision was made for them? Why did they not begin to build them when the legislation was changed in 1914? Why, having placed the legislation on the statute book, did they take no steps to carry out the pledge which they made to the people of New Brunswick that they would construct this valley road on the plans which had been originally agreed upon, and that they would build the bridges? If they had begun, the bridges would have been built by this time. Two years have passed since the legislation of 1914, four years since the legislation of 1912 providing for the construction of the bridges; yet the minister tells this committee and the people of New Brunswick that it would take three years to build these bridges; that this would delay the entrance of the Valley road into the city of St. John; that the Government deems it better to

build simply to Westfield and to get running rights over the Canadian Pacific railway. The minister holds out the hope that there is going to be a connection between McGivney Junction and the Valley road at Fredericton. That connection will be some 34 miles in length. Will he tell me what the grades of that road are, that is, between McGivney Junction and Fredericton, what the weight of the rails is, and what is the character of the roadbed.

Mr. REID: The character of the roadbed is first-class; at all events, it will be made first-class. The rails are first-class and equal to any on the Transcontinental. We intend to make the connection between McGivney Junction and St. John equal to any other part of the Transcontinental, that is, a first-class road. That is the intention. It is not the intention to make it a side road. We intend to make the road to St. John, so far as the carrying of freight is concerned, a first-class road.

Mr. PUGSLEY: I am glad to hear the minister say that. He has got to give assurances and do a great amount of work in order to recompense the people of New Brunswick, particularly the people of St. John and the St. John Valley, for the great outrage that has been done to them by the breach of faith of which this Government and the Provincial Government have been guilty. I am glad to hear him give strong assurance as to what he is going to do; but he has not told me what are the grades of the railway between McGivney Junction and Fredericton. I am told that they are very heavy, and I am also told that the roadbed is not first-class, but only second-class. The Canada Eastern is a branch line. It was bought for about $8,000 a mile, and it is in very poor condition to be used as part of the Transcontinental system.

Mr. REID: My hon. friend can hardly expect me to know all about the grades of every part of the road; but if my memory serves me rightly, the information I received was that the grades are probably a little heavy on that road, but that they are in the right direction; that is to say, that, so far as the freight going to St. John for export is concerned, the grades are in the right direction. Coming from St. John they will probably not be so good as they are going the other way. We all know that the roadbed and probably the rails on this road were not of the best when we purchased it, but we have purchased other branch lines on which the roadbed was not as good as the roadbed of the Intercolonial or of the Transcontinental. We are now trying to make this connection between McGivney Junction and St. John, and we will make it a first-class road in every way, shape and form, so that we can run our freight over the Transcontinental into St. John on a roadbed and on rails as good as are to be found on the Transcontinental. The hon. member criticises this Government for what it has done for St. John.

Mr. PUGSLEY: For what it has not done.

Mr. REID: Since this Government came into power, it has, through the influence of the Minister of Marine and Fisheries, done more for St. John than the hon. member did during the whole time he was a minister in the late Government. The Minister of Marine and Fisheries has looked after St. John, and this Government has done everything possible to improve the facilities and assist in the upbuilding of the port of St. John. The Government has been doing that ever since it came into power, and it intends to continue that policy. Evidence of it is that we are now starting to build an elevator and that we are trying to get a connection with St. John. The hon. member is one of those who object to the paralleling of railways, but to-day he advocates the building of another road side by side with the Canadian Pacific railway between Andover and Grand Falls. Can any one say why we should parallel that road, or why we should have another road running to Grand Falls when we can just as well do the work over the road from McGivney Junction, and so save the people of New Brunswick, whom my hon. friend claims to represent, from spending more money? The hon. member tries to lead the people of New Brunswick to believe that this road between McGivney Junction and St. John—

Mr. PUGSLEY: It does not run to St. John.

Mr. REID: It does, just the same as any other road over which we have running rights. If we have running rights over that portion of the Canadian Pacific railway to St. John, the connection is completed, and we can run through our Transcontinental trains. But if there should be any difficulty, as soon as we can build a line between Westfield and St. John we

will do so. The connection we are making with St. John will be of the very best in the interests of the Transcontinental and of the whole Government railway system, and will be with the view of up-building our terminals and elevators and carrying out the improvements that have been contemplated. I do not think it is fair for the hon. gentleman to try to give the people of New Brunswick any other impression when, sitting in this House, he has seen that that has been the policy of the Government right through and the policy that is being carried out at the present time.

Mr. PUGSLEY: I am very much surprised to see the unusual heat displayed by the minister.

Mr. REID: I am not in any heat.

Mr. PUGSLEY: The minister has not told me what the grades are on the railway between McGivney junction and Fredericton. He does not know much about that country, because he speaks of that connection as one between McGivney junction and St. John. It is between McGivney junction and Fredericton.

Mr. REID: And from Fredericton to St. John.

Mr. PUGSLEY: This is a branch line which this Government bought for $8,000 a mile, and it is not a first-class road. It is only a branch line running now between Newcastle and Fredericton, and that is owing to the construction of another piece of road. The Government took 14 or 15 miles of the Canada Eastern which had been accommodating the people there, because it did not think it was worth while operating, apparently. I would like to have something to say with reference to that great outrage by and by; but what I want to know now is what is the grade of the portion of the Canada Eastern between McGivney junction and Fredericton. I say that it is to-day not only a second-class road but a third-class road. I say that the total cost of that railroad which the Government bought was only $8,000 per mile, which shows that it could not have been in very great condition. The rails are light, and it is not suited to be operated as a part of the Transcontinental. The minister says he is not supposed to keep the grades in his head; but when he comes to us and asks us to undo what this Parliament did six years ago, when he asks us to justify breaking faith with the people of New Brunswick, surely he ought to know whether this piece of road can be operated with advantage as a connection between the Valley line and the Transcontinental. Does the minister not think so? Does he not think that he ought to allow this discussion to stand over until he can give some information on these grades? I am not speaking here merely for myself; I am speaking as the representative of a very important section of this country. Before I can express my satisfaction, and before this committee can express its satisfaction, with the very extraordinary departure which is being made from what has been the settled policy of the Government during all these years, we ought to know what is the condition of this line that it is proposed to operate as part of the Transcontinental railway.

My hon. friend the Acting Minister of Railways and Canals says that my hon. friend the Minister of Marine and Fisheries (Mr. Hazen) has done more for the port of St. John since he has been in office than I ever did. Well, I am not disposed to detract one iota from what the Minister of Marine and Fisheries has done for the port of St. John. All I desire to say is that the port of St. John deserves everything which the Minister of Marine has done, or can possibly do, for it, because St. John stands to-day in the position of having put its hand into its pocket and spent a very vast sum of money in order to put Canada on the right track as far as having its business done through Canadian ports and Canadian channels is concerned. St. John stands to-day before this country as the only city in Canada that has made sacrifices for the purpose of demonstrating and carrying out a great national ideal. Therefore the Minister of Marine deserves credit—I will grant that—for doing what he has done for St. John; but I do not propose to-day to be drawn into a discussion as to what the Minister of Marine has been able to do. The Acting Minister of Railways and Canals will not lead me away from the present question for the purpose of getting me into a discussion as to general improvements which have been made at St. John. No matter how much has been done by the Minister of Marine and Fisheries for the port of St. John, that affords no justification for the wilful and deliberate breach of faith between this Government and the people of that community.

The minister says that he has no doubt that he will be able to get into St. John and have a much better connection than

the one which I have suggested, and that they will get in quickly instead of having to wait. If the Government had done its duty and started to build the bridges after the legislation of 1912, these bridges would have been built already—in fact, they would have been built within two years—and the whole line might have been operated into the city of St. John and Courtenay Bay. But now the minister says that if they do not make satisfactory arrangements for running rights over the Canadian Pacific they will build into St. John—or is it they may build into St. John. Will they build in? I would like to ask the minister if they will build into St. John.

4 p.m.

Mr. REID: I said to the hon. member that we would endeavour to secure—and I have no doubt that we will succeed—running rights from Westfield into St. John, and if we cannot we will build from Westfield to St. John and make our connection with the Intercolonial railway system. The railway will run from McGivney Junction via Fredericton to the terminals of the Intercolonial railway.

Mr. PUGSLEY: I am glad that the minister says "will."

Mr. REID: I am also considering, with reference to grades, and such information as my hon. friend wants I shall be glad to get for him and have here before we go on with the Bill. The only object I have today is to get the resolution through, so that I can introduce the Bill. Then we shall have the matter in committee again, and I will be able to give all the information at that time.

Mr. PUGSLEY: I shall be glad if the minister will bring the information. One thing I want to find out particularly about this Canada Eastern line from McGivney Junction to Fredericton is with reference to the grades; I am told that the grades are quite heavy. Of course, it is quite true that the minister says it is down hill and in the right direction.

Mr. REID: That is what I understand.

Mr. PUGSLEY: I suppose they can go up the hill with a pusher engine, or extra locomotive power. It will be an interesting change for the people after the long journey on a dead level over the Transcontinental railway, when they come to McGivney Junction and find that they can slide down hill without using any motive power. They will be able to speak of that as an interesting feature when travelling down to the Maritime Provinces. Has the minister estimated at all what it will cost to get into east St. John if the Government had to build instead of getting running rights over the Canadian Pacific and from the St. John Bridge and Railway Extension Company? Remember, it will mean a new bridge across the St. John river, a new track parallel with the track of the St. John Bridge and Railway Extension Company, the acquiring of land through the city, and getting connection with Courtenay Bay. Has the minister any estimate of what that will cost?

Mr. REID: I have not the information to-day that the hon. member asks for, but I will try and have it when the Bill comes in. My whole object in taking this matter up was this. We have a railway started from Centreville to Gagetown, and I have been anxious that we should get into St. John at the earliest possible moment. The hon. gentleman said that we should have gone on with these bridges. I was not referring to the bridges originally intended to be built. It was the bridge company that was to build those bridges, not we.

Mr. PUGSLEY: But this Government guaranteed the bonds.

Mr. REID: Yes. The hon. gentleman asked why, having guaranteed the bonds in 1912, we did not proceed with the bridges at once. We were only to guarantee the bonds, and the Bridge Company could have let the contract and gone on with them at once, but it did not do so. We were not to blame for the bridges not being proceeded with as originally intended, if I understand the Act aright.

Mr. PUGSLEY: My hon. friend is right as to the Act of 1912; but this is the curious thing: I am charging both the Provincial Government and this Government with conniving—conniving is a strong word, but when you have the evidence before you—

Mr. REID: I do not think you would be accused of that.

Mr. PUGSLEY: I do not know; I would be sorry to be. The minister is so pleasant and genial that one would hardly believe that he would be a party to such an outrage as that which has been perpetrated against the province of New Brunswick in connection with this railway. There is no question about it that after years of humbug, after years of deceit—I do not charge individual

deceit—that would be unparliamentary—but collective deceit—after years of collective deceit they come back and try to put us just where the Canadian Pacific said they had Mr. Fleming in 1912. It would simply be a branch road of the Canadian Pacific, beginning at their station at Andover and terminating at their station at Westfield.

There is another difficulty. How is the minister going to utilize the Courtenay Bay terminals coming in from the west side? All the engineers of the Grand Trunk Pacific say that it would be very objectionable. My hon. friend will see that if the road were built crossing the Kennebecasis river, coming to Rothesay, and in by the Intercolonial railway, the approach to Courtenay Bay terminals would be the most natural and easy. In coming from the west side, and coming through the city, you would have to run on past and have a switchback to bring the trains and cars around the docks at Courtenay Bay. It would involve an enormous expense to approach the docks coming from the western side. That is what the engineers say. Only the other day Mr. Bouillon, the engineer of the Grand Trunk Pacific, expressed that opinion, and I know that Mr. Hays expressed that opinion in the very strongest way possible. Has the minister given any thought to that?

Mr. REID: I have taken that matter up and have been discussing it.

Mr. PUGSLEY: The minister will be able to tell us about that to-morrow. Now, when the minister asks me as to whether it would not be foolish to build a line from Andover to Grand Falls and parallel the Canadian Pacific, I say to him that the Canadian Pacific was there in 1910 and 1912 just as it is to-day. You knew the road to Grand Falls would be paralleling the Canadian Pacific in 1912, when you put through the Subsidy Act in the very terms in which it had been passed when the late Government was in power.

Mr. REID: We are operating the Transcontinental and have our connection at McGivney Junction.

Mr. PUGSLEY: I am speaking of paralleling the line between Andover and Grand Falls.

Mr. REID: It is not necessary to parallel that line now, because we have our connection at McGivney Junction.

Mr. PUGSLEY: Does the minister know what will be the cost of the bridge across the mouth of the Nerepis river?

Mr. REID: I shall have that information to-morrow.

Mr. PUGSLEY: The information is very important, for the reason that the Provincial Government has guaranteed the bonds to the extent of $35,000 a mile, and will have to look after that bridge as well. There is another thing as to which there is some slight doubt in the minds of the people, and that is as to the getting of running rights. That is provided for, but I think the Bill is defective in not providing that these running rights shall be subject to the approval of the Government of the province of New Brunswick, as well as of the Dominion Government. I think the Provincial Government ought to be a party to the terms under which running rights will be granted.

Mr. REID: There would be no objection to that.

Mr. PUGSLEY: The province guarantees the bonds; therefore it ought to be a party to the terms under which the running rights are granted.

It is stated in the resolution that the company may add to the capital expenditure the cost of additional tracks, buildings, yards, etc., on which the Provincial Government would have to guarantee the interest, and some question has been raised as to whether that would apply to any extension —for instance, the extension from Westfield to St. John, in case the Government should go on with that. My own view is that it is intended to apply to sidings only.

Mr. REID: That is all.

Mr. PUGSLEY: Perhaps the minister might make that clear. I have felt it my duty to make these observations, and if it is any satisfaction to the Minister of Railways, I might say that he has the people of St. John and of the St. John Valley and of the whole province in a bad predicament, by the way in which they have been treated during all these years. Now at last the minister comes to us and says: "We have not done anything about the bridges; it would take two or three years to build them; so if you want connection with St. John right away, you must adopt this arrangement." Of course it would be no good for me, as one member from the province of New Brunswick, or indeed for all the members from New Brunswick on this side of the House, to fight this proposition. The Provincial Government has already passed legislation confirming the ar-

rangement that has been made; so it is a case of take this or get nothing; that is the way the matter stands to-day. All the old agreements have been done away with by the Provincial Legislature, and we are called upon now to consider what shall be done. Feeling, as I do, very strongly opposed to the change in policy which has been decided upon, I have felt it my duty to express as briefly as I could the view which I hold. Having done that, I have nothing more to say upon the subject. I shall be very glad, however, to make suggestions to the minister if he is willing to receive them. One suggestion I would make is with regard to the clause about running rights. I am not quite sure but what it would be well, in an important measure like this, to put in some express provision that the company shall be entitled to running rights over that portion of the Canadian Pacific railway which lies between Westfield and St. John, upon terms to be approved, not by this Government, but by the Board of Railway Commissioners. I think that would be reasonable, because my hon. friend must see that if it is this Government's intention to stop at Westfield, and the traffic is then to be taken charge of by the Canadian Pacific railway locomotives and Canadian Pacific railway men, it will add very greatly to the cost of getting the freight to the city of St. John. And I would not limit that to the one company, because when you get to Fairville, you are confronted with another company, the St. John Bridge and Railway Extension Company.

Mr. HAZEN: That has been acquired by the Canadian Pacific railway.

Mr. PUGSLEY: Only the stock has been acquired. The road is operated entirely separately from the Canadian Pacific railway. If my hon. friend will look at the annual statements of the Canadian Pacific railway he will see that the earnings of the St. John Bridge and Railway Extension Company are kept entirely separate from the earnings of the Canadian Pacific railway, and form a distinct source of revenue from the ordinary lines of the Canadian Pacific. Therefore running rights would have to be acquired from both companies, and as this is a matter of a public character, as the Government of Canada is going to operate this line, I would suggest that it be provided that the Government shall be entitled to running rights over that portion of the Canadian Pacific railway between Westfield and St. John, and over the line of the St. John Bridge and Railway Extension Company, upon terms to be mutually agreed upon, and, upon failure to agree, the terms to be agreed upon by the Board of Railway Commissioners. I think my hon. friend will agree in view of the importance of the measure, that it would be very much better to have that provision inserted.

Mr. BURNHAM: It may be in order for me to say a word or two complimentary to the Government upon the masterful manner in which they are gradually developing the system of national highways. You will remember, Mr. Chairman, that in 1904 the issue in this country was between the Borden policy of a national railway from ocean to ocean and the narrow sectional Laurier policy which persisted and insisted upon building a portion, and the worst portion, of the National Transcontinental, and leaving the control of the whole road in private hands. It is very extraordinary to-day to hear members saying from their place in this House that they have now some of that national idea, when those very members were parties to the persecution and destruction of that idea in 1904. A great deal of credit is due this Government that, notwithstanding the rebuff they met with in 1904, they have taken up the same idea again and have developed it, presenting it to the people of this country so that it can be understood and appreciated; and beyond all doubt it will be adopted. We have in the Supplementary Estimates an item of $150,000, small it is true, but perhaps sufficient, to find out upon what basis probably two huge railways may be taken over and nationalized. That is the one ray of light in the whole situation. Year by year we have been led along, one might almost say through the Lake of the Dismal Swamp, with regard to these two undertakings.

Mr. W. M. MARTIN: Since 1911.

Mr. BURNHAM: This Lake of the Dismal Swamp was created before 1911, and we have been trying to get through it and out of it ever since, and we are now about to do so. The idea to which I am referring is the acquisition by Canada and the control by Canada of those two huge companies on the principle that national highways, or national transportation systems, or national means of communication or national utilities should be national in their char-

acter and under national control. That is the genius and the spirit of the administration of the Conservative party in Canada. They are not actuated by any a priori ideas, by any principle which they have evolved from their inner consciousness, which is not worth a cent on either side. We want the scientific principle of investigating the facts and adapting ourselves to them. That is the only modern scientific system to adopt. We do not want any more inspirations; we want treatment of facts in a reasonable and proper manner, and it is this fact, that the present Government is now coming round to; this national system that is attracting the admiration of the people and comforting them. Beaten in 1904, it arises again in 1916, notwithstanding the tremendous burden of the war, and this it is that reconciles us all to the unenviable situation in regard to those railways, that in a year or two when the first possible opportunity arises, the Conservative Government will take over and make them what they ought to be, the national instruments of the general prosperity of this Dominion.

Mr. HAZEN: I would like to say a few words with regard to the resolution of the Minister of Railways which is now before the House and upon which, when adopted, a Bill will be introduced. The matter has been already discussed in this House on a resolution for papers moved by my hon. friend from Carleton, N.B. (Mr. Carvell). I was not present on that occasion, having had to go to Washington on public business, and I was therefore unable to take any part in the discussion. As I may not be here when the Bill comes up, I would like to say a few words to-day upon the question--not speaking at all from a controversial standpoint, because I do not feel like engaging in controversy at the present moment.

The proposition made to the House by the Minister of Railways with regard to the building of this road has already been submitted to the legislature of New Brunswick. Of the 48 members who constitute that legislature, 24 represent constituencies in the valley of the river St. John, extending from the harbour of St. John at the mouth of the river, up to Madawaska. There are at present in the Legislative Assembly 23 members representing those constituencies, one seat being vacant. Concurrent legislation has been introduced in the New Brunswick Legislature, and without one dissentient voice the provincial assembly has approved the action of the Minister of Railways and the agreement which has been brought down to this House, and which was entered into after discussion between the representative of the Government of New Brunswick and Dr. Reid, Acting Minister of Railways. Of those 24 members, 3 represent the city of St. John (in which there is a vacant seat at the present time), and two represent the county of St. John, and those five members have all approved the agreement believing that the action that has been taken is in the interest of the city of St. John, just as the other members of the House without a dissentient voice have expressed the opinion that the agreement is in the interest of the province of New Brunswick. Those gentlemen have the interest of St. John and of the province of New Brunswick at heart quite as much as my hon. friend (Mr. Pugsley) has or as I have.

Mr. PUGSLEY: Are not all those gentlemen who supported the Bill supporters of the Government which introduced the Bill?

Mr. HAZEN: Whether they are supporters or opponents of the Government, I say that they have the interest of St. John and of the province of New Brunswick at heart quite as much as my hon. friend has or as I have. If anything was being done that they believed would be against the interest of St. John or of the province of New Brunswick, I have too high a regard for their patriotism to believe that they would allow party considerations or affiliations to prevent them from doing their full duty and acting in the public interest. Had they not approved the agreement, all of the members of the assembly would not have voted in favour of it and most certainly the members for St. John would not have done so. Of course, in the city of St. John, the press which opposes the Government naturally opposes the proposal and the press which supports the Government endorses the proposal, but on the other hand, that part of the press of St. John that is of a more independent character endorses the proposal made by the Minister of Railways which is unanimously supported by the legislature. In view of all the circumstances, I do not think it can be justly said that a step is being taken which is injurious to the constituency which I represent, or to the province of New Brunswick. I am satisfied that this proposal appeals to the good sense of the people of that con-

stituency and of the province, and I have heard few, if any, complaints made against it from the time the announcement on the subject was made by the Minister of Railways.

It has always seemed to me that it made very little difference to St. John or to the province, whether the railway traversed the east or the west side provided that it made a connection with the harbour that is being created at Courtenay Bay. My hon. friend tells us the opinion of the late Mr. Hays, and no doubt he tells it correctly. At that time it was believed that the Grand Trunk Pacific would operate this road and therefore the opinions of those who represented the Grand Trunk Pacific and who would be responsible for its management ought to have had very great weight with the Government of the day. It was believed that the Grand Trunk Pacific would operate that road, and over that road from McGivney Junction to St. John there was then no connection as there is under conditions that exist now. Therefore there was necessity to have a connection at Grand Falls. That necessity apparently does not exist at the present time, when, no matter what may be said, it is perfectly clear that the Grand Trunk Pacific scheme has practically broken down and that the burden and responsibility of operating and maintaining the Grand Trunk Pacific as part of the Government railways will come upon the shoulders of the Administration. If, however, it is found in the future that there is necessity for such a connection, all that will have to be done will be to get running rights from Andover to Grand Falls, a distance of twenty miles, over the Canadian Pacific railway; running rights which I have no doubt could be easily acquired, because, while the Railway Commission may have no power to give those running rights today, yet governments are more powerful than railway commissions, and if in the interest of the country those running rights should be desirable, they could easily be obtained, which would save the necessity of building another line of railway paralleling the Canadian Pacific from Andover to Grand Falls.

The Grand Trunk Pacific runs through the centre of New Brunswick from Edmundston via Grand Falls to Moncton. At McGivney Junction it crosses the Canada Eastern railway now owned and operated by the Government of Canada. From McGivney Junction over the Canada Eastern, a distance of about thirty miles, it runs into Fredericton where it makes connection again with the Canadian Pacific and the St. John Valley railway, and so to the city of St. John. So, at McGivney Junction, there is the connection between the Grand Trunk Pacific and the Intercolonial railway, and at Fredericton between the Intercolonial railway and the St. John Valley railway, the line of railway which will be operated by the Government on the forty and sixty per cent basis, thus furnishing as good a connection with the city of St. John as if the connection had been made at Grand Falls. My hon. friend (Mr. Pugsley) has suggested that the Canada Eastern branch of the Intercolonial is not up to the standard of a trunk line railway. That may be true. I do not see, however, how the grades could be very bad going from the west to the east, for the line runs down the valley of the Nashwaak river, the fall being toward the city of Fredericton, so that the grades if that should be necessary, and trains which would cross the St. John river at Fredericton, there connecting with the St. John Valley railway. But it would be a comparatively easy matter to improve the grades if that should be needed, and also to place heavier rails upon the road, such as are necessary for a trunk line. These are matters which will be attended to, and no doubt they have received the attention of the technical officers responsible for the management of the Canadian Government railways in the province of New Brunswick. Now, instead of crossing the St. John river by a bridge which will cost some $2,800,000, and also crossing the Kennebecasis over another bridge, then to run over the Intercolonial to St. John, it is proposed to save the expense of the two bridges and to build the road from Gagetown down the valley of the river St. John to a point in the neighbourhood of Westfield—and I may say that survey parties are at present at work to ascertain where the best and least expensive line can be located so as to obtain running rights over the line of the Canadian Pacific railway, into the city of St. John and West St. John. As I have said, it cannot make much difference to the city of St. John whether the road follows the east or the west side of the river, so long as connection is afforded with the new harbour at Courtenay Bay. That is what this line is intended to do. It is intended to build, if necessary, a new line from Westfield to St. John, also a bridge across the river, and a tunnel under a portion of the city of St. John to reach the present St. John station,

and on to Courtenay Bay where the new terminals are being constructed. Hon. members familiar with St. John know that there are two harbours; that on the west of the peninsula, and that on the east, known as Courtenay Bay, which is now being developed. The business to-day is being done largely over the lines of the Canadian Pacific railway to the harbour and wharves on the western side. It seems to me there is an enormous advantage in having these harbours linked together by a railway bridge owned by the Government, and by having a line of railway which will go from the western side of the river and will afford access to the docks on Courtenay Bay, making it possible for the trains of the Intercolonial, which come in on the east side, to have access to the wharves on the west side. Thus, instead of having two separate harbours, the two would be linked up by a bridge and a railway. That can do no harm whatever so far as the development of the harbour of Courtenay bay is concerned, and it may be a great advantage for the business of St. John harbour, which is increasing by leaps and bounds and will continue to develop in the future. I trust this advantage will accrue in the not very distant future, though it may be impossible to make the expenditures required for the purpose—those expenditures will be considerable—before this dreadful war is over and normal conditions are restored.

Speaking as a citizen of St. John, and as one having some interest in the community, and not as a politician, that is the view I take of this question. I have no idea of entering into a discussion as to whether or not my hon. friend and colleague from the city of St. John (Mr. Pugsley) has been able to do more as a minister of the Crown than I have. I have endeavoured to do my best for the constituency; no doubt my hon. friend did the same while he was representative of the province, and whether we may have failed or may not have failed, I think we will continue to do that in the future no matter what may happen.

This question of the St. John Valley railway has been an important one in the province of New Brunswick for many years past. At Confederation, when it was clear that one of the terms of the Union would be the building of a line of railway connecting the provinces of Nova Scotia and New Brunswick with the provinces of Ontario and Quebec, it was believed that the line of railway would follow the valley of the St. John river, a well-settled country that would afford a good deal of local business. This was, probably, the best route from an engineering standpoint by which the railroad could be carried through the province to the city of St. John. For reasons which it is not necessary for me to discuss, that route was not followed, but the route by the north shore and the St. Lawrence was adopted, and the St. John valley was left without railway communication. From Confederation down to a few years ago, railways built in different parts of the province, some of them feeders to the Intercolonial, ran in other directions, and still the St. John valley, one of the oldest and most fertile portions of New Brunswick, was left without railroad communication. Our people looked forward with hope to the time when another transcontinental railway was to be built, that it would take what seemed the natural way for a railway from the west, along the river to the city of St. John. But when the National Transcontinental was built, their hopes were not fulfilled, for, instead of going by the valley of the St. John by the short route to tidewater, the road was built through the centre of the province, through what was a wilderness, down to Moncton where there is no seaport, though the mileage constructed would have been sufficient to carry it down the valley of the St. John. The hopes of the people of the St. John valley were dashed to the ground by the action of the Government of that day. In 1908 or 1909, when I was Prime Minister of the province, a large delegation came to Fredericton and asked that steps should be taken to give railway facilities to the people along the valley.

Previous Governments had voted subsidies to lines of railway along the river, but these inducements were never sufficient to cause any one to build the road from a point above Woodstock down along the valley through the counties of York, Sunbury and Queens, and Kings, to the city of St. John. When my hon. friend (Mr. Pugsley) was a member of the Government he suggested after the Intercolonial Railway had acquired the Canada Eastern Railway that it would be well for the Dominion Government to build a branch of that road from Fredericton to Woodstock and from Fredericton to Gagetown. I think at the same session my hon. friend introduced a Bill looking towards the building of a road along the valley of the river St. John running from Centreville to Westfield, the idea being what had been in the minds of everybody

up to that time; that the road should be built to serve the people of the valley on both sides of the river. The idea of crossing the river had never occurred up to that time. My hon. friend has in his mind, I think, the idea that Mackenzie and Mann might undertake the construction of such a line in connection with their railway system. However, they did not do so. In 1908 or 1909, I am not sure which year, when this delegation came to Fredericton, I told them that the work could not be undertaken by the province with its limited resources unless we had some certainty as to the division of profits after the road was completed, but that if the Government of Canada would undertake to lease that road after it was completed on a basis of 40 per cent to 60 per cent, paying to the province 40 per cent of the gross earnings, I would be willing to ask the legislature to guarantee to the extent of $25,000 a mile the bonds of the company that would undertake to construct the road. The delegates proceeded from Fredericton to Ottawa and had an interview with the Government of the day, of which my hon. friend was a member, and the result was the inception of the present undertaking known as the St. John Valley Railway. No crossing of the river had been contemplated until the matter was taken up by the Grand Trunk Railway people; it was at their instance and at the instance of Mr. Hays that the idea of crossing the river was entertained.

This matter was very fully discussed in the House of Assembly in New Brunswick and I would like to read a few extracts from the speech of the Acting Prime Minister, Mr. Murray, when he introduced this Bill. Although this is not the chief objection to building bridges across the St. John river, the cost of building them at the present time would be a great objection because of the abnormal state of affairs that exists in Canada and the enormous burdens we shall all have to bear in connection with the war, and which I feel in a short time we shall have to bear in connection with two other lines of railway which I need not refer to at the present moment. Mr. Murray said in the House of Assembly:

> The features in favour of the Westfield route are:
>
> 1. More economical and efficient handling of traffic both to shipper and Intercolonial railway.
> 2. Less capital expenditure and provincial liability on guarantees.
> 3. Better opportunities to develop local traffic.
> 4. Completed probably twelve months earlier.

In discussing the matter Mr. Murray made reference to the difficulties that existed in connection with the building of a bridge at what is known as the Mistake. I may say that strong protests against the building of a bridge at that point were made by the lumber interests on the St. John river. I think I have somewhere in my possession a memorial that was presented some years ago by Mr. J. Fraser Gregory as president of, I think, the St. John River Lumbermen's Association, protesting that the building of a bridge at that point would interfere very much with lumber operations on the river. That is an objection, however, that could possibly have been overcome. In connection with the difficulty of securing satisfactory foundations, Mr. Murray, after referring to Maxwell's estimate of the cost, says:

> The borings on Maxwell crossing at the centre of the channel give the following results: Water, 60 feet; soft clay, 92 feet; cemented sand, gravel, 16 feet; a depth from the surface of water to rock of 168 feet, or more than 68 feet below limit for establishing a foundation by pneumatic process, and an estimate of cost of any other process is only a wild guess.
>
> The different borings made on this crossing have established the fact that a rock foundation is not available within practicable depths except a short distance from the eastern shore; the deposit of slit and sand in many places is over one hundred feet deep, which in other places is replaced by soft clay, most unstable material on which to establish foundation for a heavy bridge and the load it would have to carry, together with the extraordinary wind and ice pressure it would no doubt at times be subject to.
>
> The soundings on the alternative crossings are equally unsatisfactory.
>
> The obstruction to navigation at crossing proposed by Maxwell would be so serious, it is not unlikely that the Federal Department of Public Works would refuse to approve of the location of a bridge at that point.

Continuing Mr. Murray said that he had been at considerable pains to ascertain the deepest soundings that had been made for bridges that had proved satisfactory, and it appeared that a bridge at Omaha had piers of a depth of 114 feet, and that, he believed, held the world's record at the present time, yet, he said, the Government is asked to build a bridge the depth of piers of which could not be less than 168 feet, and with that the engineers would not guarantee it to stand when built.

He then referred to Mr. Monsarrat's reports, as follows:

> Mr. Monsarrat's plan allowed 500 feet opening. The location of a bridge at Gondola Bluff would be a serious interference to shipping; with a strong wind from Belleisle or Tennant Cove it would be impossible to get rafts turned to run the channel with a bridge at that point. This disadvantage would not apply to a bridge at Dunham's wharf, the location suggested by Mr. Monsarrat.
>
> Mr. Monsarrat on the authority of Mr. J. H.

Duggan, general manager of the Dominion Bridge Company, stated recently that the steel superstructure could not be supplied at prices quoted by Mr. Maxwell and Mr. Monsarrat had to increase his own estimate by a hundred thousand dollars to meet present cost of bridge material. Foundations proposed by Mr. Maxwell were adversely criticised by Mr. Monsarrat on the ground that the depth to which his main piers would have to go were below a point possible to be reached by pneumatic process, and in material impossible to estimate what the cost would be, altogether presenting conditions unique in bridge construction. The pier foundations suggested for the other piers were condemned as unstable and insufficient.

This statement which I have briefly quoted from the speech made by Mr. Murray in the House of Assembly, based on the reports of Engineers Maxwell and Monsarrat, shows the very great difficulties that would have to be encountered and the very great uncertainty that exists in connection with the building of a bridge the piers of which would be 168 feet below the surface of the water. Mr. Murray says that so far as he can ascertain the deepest piers to be found in any part of the world are those of a bridge in Omaha, which have a depth of 114 feet.

Mr. PUGSLEY: They have piers on the Quebec bridge deeper than that.

Mr. HAZEN: Not more than 168 feet.

Mr. PUGSLEY: Much more than 114 feet; nearer 200, I think.

Mr. HAZEN: As was pointed out by Mr. Murray, Mr. Monsarrat, who was an engineer in connection with the Quebec bridge, says that he would not guarantee the safety of such a bridge. In the opinion of Mr. Monsarrat, as of the chief engineer of Government railways, the road, from the railway standpoint, ought to be constructed on the western side of the river. This is the extract from the reports of these two engineers as quoted in Mr. Murray's speech:

Comparing the two routes to St. John, Mr. Brown makes mileage, Gagetown to Union Depot, St. John, via Westfield, 52.20 miles, via Rothesay, 51.29 miles and says further: "In comparing the two routes it will be noted that the mileage is practically the same as well as the rise and fall and curvature.

Mr. Monsarrat in his report says:

I would have no hesitation in recommending the adoption of the Westfield route.

There are many other quotations from the reports here but I will not weary the House by reading them at present. So far as public opinion in regard to this matter is concerned, I may say that, at a meeting of the Fredericton Board of Trade, a gentleman proposed a resolution disapproving of the action of the Government in changing the route from that which was originally proposed, but it was impossible at that largely attended meeting to find any one to second the resolution. It was in exactly the same language as the resolution which was moved at the St. John Board of Trade and which was carried there by a vote of only 18 to 12. Although there are over 300 members of the St. John Board of Trade, only 30 attended the meeting, 30 out of a total voting population in the city of St. John and county of about 12,000 or 13,000. So far as I am able to gauge public opinion in St. John, providing the road goes into St. John, very little importance is attached to whether it goes in by the east side or by the west side. There are some gentlemen, as there are in every community, on both sides of politics, who are influenced by their political feelings. There are others who may be influenced to a certain extent by their personal interests, but I am told that, at the meeting of the Board of Trade of St. John, there were very few, if any, of the leading business men present, and that those who voted for the resolution did not represent the sentiment of the city in regard to the matter. There is no excitement about the question at all. The people are perfectly in harmony with the Government provided that the road is connected with the city.

My colleague (Mr. Pugsley) has expressed an opinion as to the difficulty of making a connection with Courtenay Bay by coming in on the west side, and crossing the river at the falls. I do not claim to have any engineering knowledge, but I have a very good knowledge of the locality, because I have lived there for a great many years, and in my opinion there will be no difficulty whatever, and the expense will be very light in making the connection, after passing St. John Station, with the docks at the Courtenay Bay side. When it was thought that the Grand Trunk Pacific Railway Company were going to operate the Transcontinental, it was only right and proper that every attention should be paid to the wishes expressed by Mr. Hays. Now that it is clear that that road will be operated by the Government, I think that every attention should be paid to the wishes of those who are the expert advisers of the Government of Canada with regard to matters of this kind; and it is the opinion of the General Manager of the Intercolonial railway, of the Chief Engineer

of the Intercolonial railway, and of the engineers of the Government railway service that the interests of the country, the interests of New Brunswick, the interests of St. John, and the interests of the Government railways will be much better served by having the railway on the west side into St. John as set forth in the legislation now suggested by the Acting Minister of Railways. Having discussed this matter fully with those gentlemen, having endeavoured to view it entirely from the standpoint of the public interest, of the province, and of the city which I represent, I have come to the same conclusion, and I feel that it is my duty to state here that I heartily concur in the conclusion to which they have come. A little later, I think we will see, as has been indicated by the general manager of the Government railways, a railway connection between this railway and the systems of the United States; that the Government of Canada will build a road from a point somewhere between Fredericton and Andover connecting with the Maine Central railway so that the products of the Intercolonial and of the government railways in Northern and central New Brunswick may have an independent outlet to the United States. This I believe will be of tremendous advantage to the Intercolonial and to the government railway systems, particularly so far as the lumber business of the country is concerned. The general manager of the Intercolonial does not hesitate to express the opinion that a line of railway running from the St. John Valley railway and connecting in the State of Maine with the American system of railways will be a most profitable piece of railway to all the government railways in the northern and central parts of New Brunswick, and an advantage to St. John. An independent connection with the railway systems of the United States, in addition to the connection which it has now, will, I think, be one of the great advantages that will flow from the legislation which is now proposed by the Acting Minister of Railways. I say once more, Mr. Chairman, and I am speaking to-day because I may not be here when the Bill comes up, and I do not wish my absence to be misunderstood in any way, that the measure before the House has my full concurrence. I think it is very much in the interests of the province from which I come.

[Mr. Hazen.]

Mr. COPP: It is not my intention to discuss this question because it relates to a part of the province in which I am not specially interested, and does not relate to my own particular constituency. But I would like to ask the Minister of Marine and Fisheries if he has any information as to the cost of the road, if it is built from Westfield to St. John, and as to how it will compare with the cost of the connection originally proposed on the east side of the river.

Mr. HAZEN: Mile for mile, I think it would cost about the same to build the railway on the east side as on the west side. But on the east side there was a tunnel after the railway left the bridge across the river that would have been a very expensive piece of work. I believe that the cost of construction of the road—it has been well constructed, being laid with heavy rails—has been about $37,000 per mile as against about $72,000 per mile in the case of the Transcontinental through the province of New Brunswick. From Westfield into the city of St. John I presume that the cost, mile for mile, will be pretty much the same as from Woodstock to Fredericton and from Fredericton to Gagetown.

Mr. COPP: I would ask the Minister of Railways if this part of the road is built from Westfield to St. John and on to Courtenay Bay, is it the intention that it should be built by this Government or by the Provincial Government or by the St. John and Quebec Railway Company under the bond guarantee?

Mr. REID: The arrangement we are entering into is an arrangement between the New Brunswick Government and the Dominion Government, so far as the railway to Westfield is concerned only. If at any future time the matter is taken up, the Dominion Government will build if the New Brunswick Government still desires; but if the New Brunswick Government thinks it is of any advantage to continue this road, we have no objection.

Mr. COPP: I understand the minister to say that if the road is built from a point at or near Westfield it will be by the St. John and Quebec railway under the bond guarantee by the Provincial Government, to connect with the Canadian Pacific railway.

Mr. REID: Yes.

Mr. COPP: I understand that, if this Government undertakes to get running rights over the Canadian Pacific into St. John, but if they fail to get running rights, he has guaranteed this committee that they are going to build a line from Westfield into St. John. Is that a guarantee coming from this Government to build that road, or will there be further responsibility put upon the shoulders of the people of New Brunswick?

Mr. REID: This Bill provides that this railway company shall acquire running rights between Westfield and St. John. If they cannot do so, this Government will acquire running rights over the Canadian Pacific into St. John and to the terminals. This agreement is only to Westfield. From that on, if it is necessary, or if we cannot get running rights that are satisfactory, the Dominion Government will build a road from Westfield into St. John.

Mr. MICHAUD: I have listened with close attention to the discussion of this resolution. I am not so much interested in the terminus at St. John as I am in the towns of Andover and Grand Falls. These two towns are situated in my constituency and on behalf of the people of the St. John valley, I feel very much disappointed with the proposal which is now before this committee. I read in this resolution:

That upon the completion of the line from Gagetown to Westfield the Dominion will enter into a lease thereof and operate the same pending the completion of the remaining line to Andover, all in accordance with terms and conditions to be agreed upon in each case, including the 40 and 60 per cent division of gross earnings hereinafter referred to.

I understand that under this resolution, the railway will only be built as far as Andover. My hon. friend the Minister of Marine and Fisheries (Mr. Hazen) said that there is no necessity for the present to build a line from Andover to Grand Falls. I see by this resolution that there is an estimate for the building of a line from Andover to Centreville, a distance of 26 miles, and I see also by the resolution that this part of the railway will not be built for some time. I would like to ask the Acting Minister of Railways if it is the intention to build that line from Centreville to Andover this year, or next year?

Mr. REID: I may say for the information of the hon. member (Mr. Michaud) that this Bill will provide that we shall take over each part of the road as it is completed under a temporary lease, which will continue until the whole road is completed, when we will take a 99 year lease of the whole system. They have now completed the road, as I understand, from Centreville to Gagetown. We are operating that under a temporary lease. When they get to Westfield we will take a 99-year lease, or another temporary lease, until they build to Andover. The Bill gives the railway company a certain length of time to build the road between Centreville and Andover, as it does between Gagetown and Westfield. We cannot force them to start, or complete, the road until that time has lapsed. We have urged and insisted that the railway company shall get connection between Westfield and Gagetown at once, or within the next few months, in order that we can operate this line between St. John and the west by connection with the Transcontinental railway. The other road, between Centreville and Andover, we would like to see built as soon as the company can do so, but that is a matter that rests with the company. They must build the road as soon as they can, or at least within the time we have given them under this agreement. The hon. gentleman has spoken about the connection between Grand Falls and Andover. I feel myself that it is not necessary to construct

5 p.m.

that road now in so far as the Government railway system is concerned. The operating of two railways side by side for 25 miles would mean an extra expense, to say nothing of the extra cost of building the line. People can get from St. John to Grand Falls, if they so desire, by simply transferring at Andover to the Canadian Pacific. As has been stated by my hon. friend (Mr. Hazen), now is the time to get running rights between Andover and Grand Falls, and thus save the expense of paralleling that line. We do not desire to do any injustice to that section of the country. I would not favour the building of a line between Andover and Grand Falls, knowing that they already have a railway from Andover to Grand Falls, and that this would simply be paralleling the existing line for that distance. We all believe that the time has come when we should not parallel any more railways than we can absolutely help. We can perform this service by getting running rights over the existing railway.

Mr. MICHAUD: I am sorry to hear from the Acting Minister of Railways that he does not see his way clear to build the railway from Andover to Grand Falls. I

am afraid the railway will never be built from Centreville to Andover. It was understood a few years ago that a railway was to built from Andover to Grand Falls, but from what I can gather from the remarks of my hon. friend, we are not going to have that part of the line built. It was the policy of the Provincial Government to build that road from St. John to Centreville, and from there to branch out in the other direction instead of going by Grand Falls. From the observations of my hon. friend, we have reason to believe that this will be done. The people of Grand Falls have been promised by the Premier of our province that this line, in order to be completed, had to be constructed from St. John all through the St. John valley and as far up as Grand Falls. The town of Grand Falls supplies such an amount of freight each year as in the long run would make profitable a railway from Centreville to that point. I was rather amazed at the remarks of my hon. friend when he spoke about that branch from McGivney junction to Fredericton. He says that there is quite a grade and that they can haul a pretty big load because the grade is from McGivney junction down to Fredericton. In that connection he speaks of securing the right to run trains over the Canadian Pacific from Grand Falls to Andover and then from Westfield to St. John. From his remarks I gather that this St. John Valley railway will not, after all, be much of a railway. They are to secure running rights over a part of the Canadian Pacific, running rights over a part of the Intercolonial, and then running rights over the Canadian Pacific from Westfield to St. John, and this road will only be built from one point to another in order to suit people in certain parts of New Brunswick. I am sorry to have to make that statement. In 1912 it was contemplated that this road should be built as a through line from Grand Falls to St. John. Every local member along the St. John river advocated that policy. The provincial election has been carried on that policy, and we know the result. Now, we are told that they are not going to build the line, but that they are going to get a right of way for the St. John Valley Railway Company over the Canadian Pacific and the Intercolonial. We will have a kind of line that will be very unsatisfactory to the people of New Brunswick.

The Acting Minister of Railways has told us that the proposed arrangement of a terminus at Westfield, with running rights over the Canadian Pacific railway, was very satisfactory to the people of St. John. I can tell him that the people of St. John are not so easily satisfied. Not so very long ago the Premier of New Brunswick had a little trouble over this very line of railway, and his supporters had to whitewash his connection with the construction of this line. The people are far from satisfied with this arrangement, but they have to consent to it because they cannot get a better one under the circumstances.

Resolution reported and concurred in.

Mr. REID thereupon moved for leave to introduce Bill No. 98, to aid in the construction of certain lines of railway of the Saint John and Quebec Railway Company, and to confirm an agreement between the company and the Governments of Canada and New Brunswick.

Mr. PUGSLEY: I would suggest to the minister that a very good way of getting over the difficulty with regard to running rights would be to declare this work to be to the general advantage of Canada. It would then come under the Railway Act that was passed this session, and the Board of Railway Commissioners would have authority to grant the running rights. All that would be needed to bring the Bill under the Act would be to insert the words that the work was for the general advantage of Canada. Otherwise there might be some difficulty, because the company was incorporated by the Provincial Legislature and not by this Parliament.

Mr. REID: I am glad of the suggestion, and will take it into consideration.

Motion agreed to, and Bill read the first time.

MOUNT ROYAL TUNNEL AND TERMINAL COMPANY.

Hon. J. D. REID (Acting Minister of Railways and Canals) moved the second reading of Bill No. 95, respecting rentals payable to the Mount Royal Tunnel and Terminal Company, Limited.

Mr. MARCIL: What stage is the work in at the present time?

Mr. REID: I can hardly state the exact position. I understand that the main part of it is completed, and the intention is to have the whole completed at an early date. This Bill is necessary to enable the company to make their financial arrangements.

Mr. MARCIL: Is there any hope that the trains will be running during the present year?

Mr. REID: If this Bill enabling the company to make their financial arrangements passes we hope the trains will be running before winter.

Motion agreed to, Bill read the second time, and the House went into committee thereon, Mr. Rhodes in the Chair.

On section 1—whole of rents, sums reserved or payable under lease, chargeable to whole property of lessees:

Mr. PUGSLEY: Would the minister kindly explain this Bill?

Hon. ARTHUR MEIGHEN: As this is purely a legal matter perhaps I might venture to give a very short explanation. Under the Railway Act, the earnings of a company are to be applied towards certain objects in a definite order. The first application of the earnings is, I believe, towards fines, and the second, towards the payment of operating expenses.

Mr. MARCIL: Is this company a subsidiary of the Canadian Northern railway?

Mr. MEIGHEN: Strictly speaking, it is, I think, a constituent company. While it is one of the companies that is part of the Canadian Northern Railway system, inasmuch as to a small extent it operates a line, it is a constituent company. The second application of the earnings of a company is towards operating expenses. After that, the applications are towards interest upon bond issues, and thereafter, towards payments of dividends on stock. The Mount Royal Tunnel and Terminal Company is a constituent company of the Canadian Northern Railway system. It was constituted for the purpose of building the tunnel through Mount Royal, and for constructing the terminals at Montreal. In order to facilitate the financing—indeed, in order to make the financing possible—a separate company was formed, and its own bonds were issued. Consequently, they hope to be able to finance on those bonds, they being a first charge on the property of the company, and the property upon which they are a charge not being previously encumbered by all the charges against the Canadian Northern Railway itself. The rentals of the Mount Royal Tunnel and Terminal Company come from the Canadian Northern railway, from the Canadian Northern Ontario, and from the Canadian Northern Quebec. In fact, all the properties of the company were to be utilized by these three companies—the parent company, the Canadian Northern Ontario, and the Canadian Northern Quebec. They paid the rentals for these properties in proportion to the use they obtained, and the revenues that were constituted by these rentals were to be the entire revenues of the Mount Royal Tunnel and Terminal Company. A bond issue was arranged for sufficient to provide for the building, and the rentals were fixed at a figure sufficient to meet the interest and the sinking fund upon the bond issue. However, in order to make the rentals certain, they were fixed by the original Act of 1914 providing for the issue of these bonds and were made a charge against operation. Rentals are a charge against operation under the law generally, unless they go for the use of a line of railway, and inasmuch as the Mount Royal Tunnel and Terminal Company operated a short line, constituting, I believe, about 5 per cent of the enterprise, a special provision in the Act was necessary in order to make those rentals a charge against operation. Had they not operated any line at all the rentals would have been a charge against operation anyway. Consequently in this Act which this Parliament put through in 1914—I do not refer to the main Act, chapter 20, statutes of 1914, but to the Tunnel Act, a private Act, that went through in that session—a clause was inserted providing that those rentals paid by these three companies, the Canadian Northern, the Canadian Northern Ontario, and the Canadian Northern Quebec, should constitute a charge against the operation of the three companies respectively. That made the security a very ample one and made it quite a relatively easy matter to finance the issue of bonds, and it was out of the issue of bonds that the whole institution secured its funds for prosecuting the work.

Then a legal point arose later on, a point upon which there was difference of opinion. In fact, I think, at all events in numbers, the preponderance of opinion was that the Act, as it stood, had the effect that it is now desired to give to it by this legislation, but the solicitors for the bondholders took the ground, that owing to this Act of 1914 being in the nature of a private Act, it was not in its terms strong enough to overcome the general provision of the Railway Act, and that, although the section making those rentals a charge on operation had the effect of making them such as against any future

bond issue of those roads, it had not the effect of making them a charge as against prior bond issues of those roads. It was undoubtedly the intention of the statute that it should make them a charge on operating expenses against all bond issues.

Mr. GRAHAM: That original section is in the schedule here.

Mr. MEIGHEN: Yes, this is the section. In this connection it would be clear if I read the section:

> The whole of the rents or sums reserved or made payable under the said agreement or lease shall for all purposes be deemed to be, and are hereby declared to form part of the working expenditure, as defined and provided for in the Railway Act, of the lessees parties to the said agreement or lease.

The contention was that the statute, namely, chapter 28 of the statutes of 1914, being in the nature of a private Act, the effect of this clause, which was in the statute, was not sufficient to make those rentals a charge against operating expenses as against prior bond issues of those three railways. It undoubtedly was the intention that they should be. It was contended, on the other hand, that the Act was not a private one at all; that although it was printed along with the private Acts, the Interpretation Act stated that no Act was a private Act unless it was stated to be a private Act, and that consequently this was not a private Act. However, the fact that the solicitors for the bond holders held to the contrary made the objection of a very practical character, and made it impossible to complete the sale of bonds. This legislation is for the purpose of making it clear that the section in the Act of 1914 was intended to have the effect of making those rentals a charge against the operating expenses of the three railways, even as against prior bondholders. Of course, it must be clear that no one's interests are interfered with by the legislation, because there has been no issue, and there will be no issue unless it is a charge. Consequently there are no prior rights interfered with as yet. It is to make it clear that there never can be that this legislation is necessary.

Mr. PUGSLEY: Is it not a question of our interfering with the prior rights of bondholders of the Canadian Northern and the Canadian Northern Ontario? It would not be the bondholders of the Mount Royal Tunnel and Terminal Company?

[Mr. Meighen.]

Mr. MEIGHEN: No.

Mr. PUGSLEY: I have read the Bill over, and the only doubt that I have had —and it is not a very strong one under the circumstances—is as to whether we ought to pass legislation which might possibly interfere with the rights of third parties without their having an opportunity of being heard before the legislation is passed. If the Solicitor General is of the opinion that this does not in effect alter their rights, that, of course, would put it in a very different position. Then there is this to be borne in mind, that without the terminals at Montreal, the securities of the bondholders upon the Canadian Northern system would be very much impaired. No doubt it greatly improves the value of their security to have those terminals, and for those reasons I would be disposed to disregard what I thought at first would be a pretty strong objection to the legislation. I am very strongly of the opinion that we should be very careful to safeguard any private rights and not interfere with them without hearing their side of the case.

Mr. GRAHAM: I remember the discussion that arose on this very point. The legal point is too fine for me to discuss, because I would get all tangled up in the technicalities if I tried to do so. As I understand it, however, this legislation is to make clear the intention of the Act of 1914. The question raised by my hon. friend from St. John is a very important one, and I presume that the Solicitor General has fully considered it. Leaving out the legal side of the case, I think it is very important that nothing at the present time should stand in the way of the company being able to dispose of its bonds for the carrying on of this work. As has been well said, the system is now incomplete and its earning power is retarded very much by the fact that the terminals at Montreal are not completed. Once they are completed, the earning power of the road will be very materially increased. To those who are not conversant with the situation at Montreal, the necessity for the early completion of those terminals will be less apparent than they are to me, as I have been on the ground and have seen the slowness of the work. As I remember it, the intention of Parliament was to do what this new legislation proposes now to make clear.

Mr. MARCIL: I do not rise to deal with the legal phase of this matter. The hope has been expressed not only by the travel-

ling public but by residents that the railways on the island of Montreal will be electrified and the smoke nuisance thus done away with, so far as the railways are concerned. I have read statements in the press that when the Canadian Northern introduces this system in the tunnel, the Canadian Pacific and the Grand Trunk will have to follow that example with their trains generally on the island of Montreal. As the minister knows, the city of Montreal has extended very widely and at present the smoke nuisance is simply intolerable during the summer season. I would like to know whether there is any possibility or probability of the railways being electrified in the near future. Or, is that a matter that rests entirely with the Railway Board? Would this Parliament have nothing to say in the matter?

Mr. REID: The hon. member knows that this Parliament can pass a law to do anything within its jurisdiction. But Parliament has given power to the Railway Commission to adjust such matters as that referred to. In addition, there are the provincial laws governing the smoke nuisance. This is the first time the subject has been drawn to my attention and, of course, I could not give the hon. member an answer offhand. But there will be other discussion of railway matters when, perhaps, I may be able to give the hon. member some information.

Mr. MARCIL: I would like, if I am in order, to call attention also to the nuisance caused by the whistling of boats on the Lachine canal which passes through the city of Montreal.

Mr. REID: As soon as this Bill is passed, we will go into Committee of Supply and take up the Railway Estimates. I shall be glad then to hear the hon. member's remarks on the subject and, if possible, to give him an answer.

Bill reported, read the third time, and passed.

SUPPLY.

The House in Committee of Supply, Mr. Rhodes in the Chair.

Railways and Canals—chargeable to capital —Hudson Bay railway—construction of railway terminals and elevators, $3,000,000.

Mr. MARCIL: I was asking the attention of the minister to the nuisance caused in Montreal by the whistling of steamers using the Lachine canal. The canal goes through the city. It is crossed by many bridges. Many boats come down laden with grain or other cargo and the system is to give three long whistles on approaching a bridge—at least that seems to be the system so far as one can figure it out who lies long enough awake to hear what goes on. If he is not wakeful enough to follow the system, he will certainly be awakened by some passing boat. This nuisance has become almost intolerable and some means should be found to put an end to it.

Mr. REID: This is the first complaint on this subject that has come to my notice. Of course, I can understand that with so many boats using the canal the use of their whistles might become a nuisance. I will take this matter up with the superintending engineer of the canal, Mr. Marceau, and inquire as to the facts and as to whether it is not possible to have the practice stopped, or, at least, made as little annoying as possible to residents. I suppose that a vessel approaching a bridge must blow a whistle as a signal.

Mr. MARCIL: It has been suggested that the signal should be given by means of a flashlight.

Mr. REID: I am informed by the chief engineer that that has been considered, but the whistle is deemed the better signal in the interest of safety.

Mr. MARCIL: It is an awful nuisance to residents. A man, no matter how tired he may be at night, is kept awake by these long whistlings.

Mr. REID: I understand that the difficulty is that a vessel coming round a curve cannot signal by flashlight which would be seen by the man at the lock or at the bridge. A vessel coming down the canal with the wind after her might find the bridge closed or the lock gates in the wrong position to receive her if she did not whistle.

Mr. TURRIFF: The same argument was used some years ago when an attempt was made to prevent the whistling of locomotives in cities. Eventually this was stopped, and the railways have no difficulty in carrying on their business just as well without disturbing the whole city at night with their screeching whistles. Flash lights or signal lights could undoubtedly be used to notify the bridge keepers of the approach of vessels. This matter is well worthy of consideration by the department.

Mr. MARCIL: The bridge keepers could be notified by telephone that such and such a boat is on the way down; anything is better than the present system.

Mr. REID: While it would be a good thing for those living along the canal if this difficulty were removed, the main part of the city of Montreal is just east of the end of the canal, and the whistling of boats in the harbour would continue.

Mr. MARCIL: There is the difference between the river and the canal that the river is a wide expanse of water and steamers are not numerous upon it. This canal is almost in the nature of a street, and the long shrills that are repeated by the vessels at every bridge are a standing nuisance.

Mr. GRAHAM: When the minister takes this matter up he will have to deal with the Marine Association as well as with the Railway Department. The Marine Association, of course, has its own well defined rules and signals, and if vessels neglect to comply with them they are liable for any damages that may occur. Subject to that, I am of opinion that a good deal of the noise could be done away with on the canals.

Mr. NESBITT: What money has already been spent on this Hudson Bay railway?

Mr. REID: The expenditures on the Hudson Bay railway to February 29, 1916, were as follows:

Location	$ 508,157 18
Engineering (other than location)	720,191 46
Rails and fastenings	2,045,890 16
Bridges, trestles and culverts	707,423 34
Track	1,154,959 46
Grading	4,738,009 75
Other expenses	529,550 91
Total	$10,404,182 26

On the port Nelson terminals the expenditures up to February 29, 1916, were as follows:

Land plant materials and supplies	$ 892,915 98
Floating plant	859,458 57
Port Nelson pay rolls	1,550,382 29
Steamships	1,148,019 82
Miscellaneous	411,002 03
Total	$4,861,77 69

The grand total is $15,265,960.95.

Mr. TURRIFF: Would the minister explain further that item of $720,000 for engineering other than location? That seems to be a most outrageous charge for engineering since the locating of the road was done.

Mr. PUGSLEY: With the permission of the member for Assiniboia, I wish to put a question to the minister before he goes into the details of that. Before the late Government went out of office legislation was passed providing for the sale of what were called purchased homesteads, with a view to providing the money necessary, for the construction of the Hudson Bay railway. Could the minister tell me what have been the total receipts by the Government from these purchased homesteads?

Mr. REID: I am sorry I have not that information. It is with the Interior Department.

Mr. PUGSLEY: Would the hon. minister get it? It is important.

Mr. REID: I will ask the Interior Department for that information and send it to the hon. member.

Mr. GRAHAM: I do not object to the minister's sending it to the member for St. John, but I think the House ought to have it. It is a very important item in reference to the whole subject. Some people criticise the Hudson Bay railway as being very expensive and unnecessary; the western people reply that homestead lands were sold in order to build this railway and that the Dominion Government has the money. I would like to know how much money they have got.

Mr. REID: I will make a note of these questions and when we take up the Estimates again I will give the answers and have them go on Hansard.

Mr. SINCLAIR: I assume it is the policy of the present Government to apply the homestead receipts towards the construction of the Hudson Bay railway?

Mr. REID: You are getting into rather deep water, so far as I am concerned. The matter is connected with the Interior Department, and I have not gone into it. However, that is another question that I will answer the next time we take up the Estimates.

Mr. TURRIFF: My hon. friend will not get into deep water at Port Nelson.

Mr. REID: Oh yes, we will. The hon. member for Assiniboia asked me about the engineering expenses other than location. The details are as follows:

General	$118,066 15
Pas terminals	12,110 50
Pas Thicket Portage	312,279 39
Thicket Portage—Split lake	119,851 72
Split Lake, Port Nelson	157,883 70
Total	$720,191 46

The chief engineer tells me that all these railway systems figure 7 per cent as a fair and reasonable estimate of the cost of engineering services during construction. The hon. member will see that this amount is even a lower percentage.

Mr. TURRIFF: That country is very level, and once the railway is constructed, I understand that the Government will have engineers on it for inspection purposes, to see that the work is carried out according to contract. There are a certain number of engineers necessary for sections. Perhaps the minister can give us the number of engineers that have been employed there. My information is that many more have been sent out than were necessary, and that when the Government wanted to give a man a job, or wanted to take a man from another job they sent him there.

Mr. REID: I differ with the hon. gentleman. The chief engineer tells me that they have no more engineers on the staff than are actually necessary.

Mr. TURRIFF: How many are on the staff?

Mr. REID: They are all along the line, and at Port Nelson.

Mr. GRAHAM: Does this include the Port Nelson staff?

Mr. REID: No. I cannot give the exact number of engineers at present. The hon. gentleman will see that we have spent on the railway, so far, $10,000,000; I have sufficient confidence in the chief engineer to believe that he would not put on more men than are necessary, and I have the same confidence in the Minister of Railways. He has tried to keep the staff down as low as possible.

Mr. TURRIFF: With poor success.

Mr. GRAHAM: Who is the engineer in charge?

Mr. REID: There is a man named Porter in charge of the construction of the Hudson Bay railway. He is in Winnipeg. At Port Nelson there is a man named McLachlan. Mr. Porter has an assistant named Gordon.

Mr. GRAHAM: Is this the Mr. McLachlan who was formerly on the Trent canal?

Mr. REID: That is the man.

Mr. MARCIL: Is any portion of the road being operated yet?

Mr. REID: I understand that the contractor operates it until it is taken over by the Government. He is operating it in a certain way.

Mr. NESBITT: Is the whole road contracted for?

Mr. REID: Yes, right through to Port Nelson.

Mr. NESBITT: What will be the total cost of the road?

Mr. REID: Does the hon. member mean the cost under the contractor's estimate?

Mr. NESBITT: Yes.

Mr. REID: We have a contract with J. D. McArthur to do all the work. He does the grading, but does not furnish the rails which are furnished by the Government. The estimated cost of the line completed is $16,000,000, and the estimated cost of the terminals $10,000,000 making $26,000,000 as the estimated total cost of the road right through to Port Nelson and including the terminals at Port Nelson.

Mr. GRAHAM: Does that include an elevator?

Mr. REID: No.

Mr. MARCIL: What is the length of the road?

Mr. REID: 425 miles.

Mr. NESBITT: Does that estimate include the rails?

Mr. REID: Yes, I stated that that was the estimated cost of the road completed and of the terminals. In other words, the road should be completed without any further expense except that of building an elevator or elevators.

Mr. NESBITT: That estimate does not include the dredging of the channel. I am told you will have to dredge around the port.

Mr. REID: We will have some dredging to do near the docks, but, I am informed, it will not be necessary to do any dredging out into Hudson bay. The dredging that will be necessary at the docks is included in the Estimate which I have given.

Mr. TURRIFF: My hon. friend has not answered my question as to the number of engineers on that route. If he cannot give me the information at present, I would be glad if he would let me know later.

Mr. REID: I will be glad to get that information.

Mr. GRAHAM: I was under the impression that the original estimate of $26,000,000 included the cost of an elevator. There were two estimates, one, if I remember the figures correctly, of $19,000,000, and the other of $26,000,000. It struck me that the estimate of $26,000,000 included an elevator, but I may be wrong.

Mr. REID: The chief engineer informs me that at the time that estimate was made —Mr. Butler was in charge then—it did include the cost of an elevator.

Mr. GRAHAM: That was my recollection.

Mr. REID: At that time there was only a rough estimate of the cost of the railway.

Mr. GRAHAM: I think it was based on a report from Armstrong.

Mr. REID: Probably. Now that they have got the work pretty well under way, the estimate of the engineer to-day is as I have stated, and it will be necessary to build an elevator at a cost over and above that amount.

Mr. GRAHAM: The minister will see that all these things go over the estimate.

Mr. REID: There is no doubt about that.

Mr. NESBITT: I understand from people who have been up there that dredging will be required out from the wharves into the bay itself and that the parts dredged will fill up again. I understood from one party who had been there that such a lot of silt comes down from the river that it will be impossible to keep the channel open without constant dredging, and that it will be like shuffling snow because as soon as one part is dredged it fills up again. Does the minister know anything about that? I got the information from a very responsible man who is not a partisan and who had been there and should have a knowledge of what is going on.

Mr. REID: I have before me the chart of the entrance to Port Nelson. I have not looked it over, but the chief engineer tells me that we have a channel of from half a mile to fifteen miles wide with water at least 19 to 20 feet deep at low tide.

Mr. MARCIL: What is the tide there?

Mr. REID: Sixteen feet is the ordinary spring tide. The only place necessary to dredge is out at the entrance. A channel from half a mile to fifteen miles wide, and with the depth I have stated, I think, should be satisfactory.

Mr. SINCLAIR: Does the minister expect to take large grain ships up a channel which has only twenty feet of water?

Mr. REID: That is all the St. John harbour had until 1908.

Mr. SINCLAIR: But they have a very high tide at St. John.

Mr. REID: This has a 16 feet tide and 19 and 16 would make 35 feet. That is the minimum, but that would be ample for Port Nelson.

Mr. SINCLAIR: What is the length of the channel from the dock to the bay?

Mr. REID: About fifteen miles.

Mr. NESBITT: Will they go up the river fifteen miles?

Mr. REID: The distance up the estuary from Hudson bay is fifteen miles.

Mr. TURRIFF: There is a strong opinion in the minds of people down here that the channel from Port Nelson out to deep water in Hudson bay is rather narrow and crooked, that the silt brought down in the spring, and also after storms, changes the channel, and that if it is going to be navigable it will have to be continually dredged. One man who has been up there says that a vessel loaded with lumber for the department got stuck ten miles out from the harbour. I would like the minister to give us a pretty full explanation of the condition affecting this channel. I am not unduly criticising this project, because as a western man I want the route to be a success, but thousands of people in the East believe that the channel will be a very unsatisfactory one. I was glad to hear the minister state that the chief engineer says that there shall be a good wide channel. I would like to know if the channel can be depended upon year after year, or whether, if it has been dredged out one year it will fill up by next year.

Mr. REID: Would the hon. member care to take this map, showing the channel, and study it?

Mr. TURRIFF: I have seen the map.

At six o'clock the committee took recess.

The committee resumed at eight o'clock.

Mr. TURRIFF: I should like an answer to the questions I asked before six o'clock.

Mr. REID: I have discussed the matter with the chief engineer and he tells me that the channel is quite safe, with a depth of never less than 19 feet, and he assures me that my hon. friend need have no apprehension as to the sides falling in. The channel widens out from half a mile to 15 miles at the mouth, and there is a rise of 16 feet with the tide. I have here the chart prepared, I think, by the officials of the Marine and Fisheries Department. These charts, of course, are never printed until a thorough examination has been made of the waters. The engineers engaged on this work prepare charts of the waters all over the Dominion; the charts are made with great care, and are very reliable. The hon. gentleman spoke of a vessel that was wrecked at the commencement of the work. As a matter of fact, two vessels were wrecked, one of which went ashore 14 miles out from the bay. At that time we did not have the aids to navigation we have now, but apart altogether from that, there was great carelessness on the part of those in charge of the vessel. Another vessel broke away after she had got safely into the harbour, and went ashore; but her cargo was saved. With the exception of these two accidents, which we attribute to carelessness, vessels have been navigating these waters continually since the work commenced, in perfect safety. The three steamers which the Government purchased have been operated each year between the lower provinces and Port Nelson, carrying as cargo the material required in the carrying on of the work. Several vessels have also been chartered, and since the commencement of the work, with the exception of the two cases I have mentioned, there have been no mishaps, or practically none. I think my hon. friend, after seeing the chart, which I will now lay on the Table, will agree that the channel is safe, and feel justified in contradicting any rumours to the contrary he may hear in the future.

Mr. OLIVER: The minister has said that the estimated cost of the harbour improvements will be $10,000,000. Has the department a plan, showing what these harbour improvements are, their nature and extent, and what purpose they are to serve? If the harbour as it stands to-day is a good harbour, $10,000,000 seems a lot of money to spend on it.

Mr. REID: I would like the hon. member for Assiniboia to have a look at this chart.

Mr. OLIVER: In case of a storm on the bay vessels could not reach the harbour for safety.

Mr. REID: Where the 30 feet of water is, there are mud flats on each side, and these would be a protection if the tide were out.

Mr. OLIVER: If a storm arose and if the tide was out, the vessel would have to ride out the storm the best way she could.

Mr. REID: Not if she got in between the mud flats, where she would have thirty feet of water. The greatest wave is three feet over the mud flats, so that she would be pretty safe from any storm. The channel is very wide; as you go out it extends to fifteen miles wide; that is, with the depth of water that I have stated.

Mr. OLIVER: If the channel is fifteen miles wide and there is no shelter, there is certainly room to raise a tremendous sea.

Mr. REID: The channel starts at about half a mile wide, and as you go out, it extends to about fifteen miles wide; but you can get in close to the mud flats on each side, and the chief engineer says that three feet is the highest wave they have had with the great storms up in that section; so that a vessel drawing not more than nineteen feet of water can get far enough up the river to be out of any great danger in a storm.

Mr. OLIVER: My knowledge of navigation is not sufficient to enable me to argue the point. What I have in mind in discussing the matter is, that the port of Churchill is a shelter harbour, a harbour to which vessels may safely go in storms. There is deep water there, and there is not the enormous expenditure required in order to make the handling of traffic possible. What I am interested in is: What is the advantage claimed for the use of this port of Nelson, which has certain disadvantages, as against the port of Churchill which has certain obvious and unquestioned advantages? I know there is a difference in the train haul, that it is somewhat further to Churchill than to Nelson; but it

appears to me that the difference in the train haul does not anything like compensate for the difference in the advantage of having a deep water shelter harbour as at Churchill, as compared with a very questionable proposition such as exists at Nelson, because no vessel owner is going to risk his vessel on a route where the harbour accommodation is at all questionable. Every one knows that when a vessel gets near land, the shipmaster becomes afraid, and when the port is not of such a character as to lend itself to the safety and advantage of shipping, the shipping keeps away from it. That is a handicap that Nelson will necessarily have to overcome. I want to know why Nelson was chosen in place of Churchill.

Mr. REID: I suppose the Minister of Railways and Canals would probably be better able to answer that than I; but so far as Nelson and Churchill are concerned, there is eighty miles difference in the length of railway which would mean that, if Churchill were chosen, you would have to haul a train 160 miles further each return journey. That, of course, means a large expense in connection with a railway system; it means one division more, and that would be a good reason for choosing Port Nelson, everything else being equal. I understand that while Churchill is a good harbour, there is not the same anchorage for vessels as there is a Port Nelson, that is for a large traffic. The terminal question has been already discussed. The Minister of Railways sent an engineer to look over the situation in order to see whether Churchill or Nelson would be the more suitable, and the reports received by him were that Port Nelson had certain advantages, one of which I have mentioned, that it was a good harbour, and that the channel and so on were quite satisfactory. In addition to that, the minister himself made a trip to Port Nelson and also to Churchill to look after the situation; other officials of the department also examined the different places, and it was after giving the matter every consideration that Port Nelson was finally decided upon. However, rightly or wrongly, the matter has been definitely decided upon and the work has gone on to such an extent that we could not change the port now, and I do not know that there is much use in going further into the matter on that account.

Mr. SINCLAIR: I am not very clear as to what the minister means in regard to the shelter for ships. From the map, I would think that it is an exposed harbour and that a gale blowing from the northeast or somewhat in that direction would blow right into that harbour. So far as I can see, the fact of a mud bank being on each side of the channel would not be of any assistance. A breakwater would be of value and I believe that before the minister gets through with this harbour, he will have to build one. I suppose he is aware that when a ship comes in from a long voyage, it is usual to let the steam go down and to fix up the grates and get her ready for the next voyage; but ships lying in an exposed place like that would require to keep steam up in order to be safe in case a gale came up suddenly; otherwise, they might be driven on the flats. The harbour itself does not look as if there were much shelter. I am not clear as to the fact of its being narrow. Is there any bend in the river or any protection from the wind that gives the ships any shelter at that point?

Mr. REID: If the hon. gentleman will look at the chart, he will see that there are mud flats on each side. If a northeast gale came right up the channel, the waves on each side of the channel would still be very small, because it is so shallow, and there would not be such a storm in the channel as there would be out in the ocean. The hon. member knows that the tide rises and falls twice a day and it would be only a very short time before a vessel could get right on to the pier that we are building; she would not have to lie out in the channel for any length of time in an exposed position even if a storm arose.

Mr. SINCLAIR: Is there good shelter at the pier?

Mr. REID: Right at the pier she would be out of the storm altogether, because the land is on each side. I take it for granted that the hon. member is speaking about eight or nine miles from the pier that we are constructing for the vessels to tie up at.

Mr. OLIVER: There is no doubt that this Hudson Bay route is viewed with a measure of suspicion by a large proportion of the people of Canada. They have doubts as to the wisdom of the expenditure of money on the railroad because they have no faith in the navigation of the bay. There is no doubt that, looked at from a railroad point of view, the port of Nelson is the better port, but looked at from the point of view of the navigator or shipowner, unless it is an advantageous port, then all

the expenditure that is being made is thrown away and the project is discredited. It is a matter of supreme importance that the port shall be of such a character as will attract shipping and not tend to drive it elsewhere. Having beyond any question such a port at Churchill, although the rail haul would be eighty miles further, the cost of construction, at the same rate as the road is now costing, of that eighty miles, would be less than $3,000,000, whereas the improvements at the port of Nelson are going to cost $10,000,000 and may cost a great deal more than that. The point I want to make is that all this expenditure is not properly chargeable to the Hudson Bay railway and Hudson Bay route proposition. $18,000,000 would carry the railroad to Churchill and a moderate expenditure at the port of Churchill would give the necessary facilities for handling traffic at that port. There would be no question then in the minds of shipowners as to the advantage of the route, and once traffic had been established by that route, then, if business increased, you would have the time and occasion to develop the port of Nelson; but at the present time, as it appears to me, we are risking the expenditure we are making and the prospect turning out to be a success, in the effort to create a port where no port now exists. I have taken the liberty of putting this view of the case before the Minister of Railways on previous occasions, and until we are shown, by plans and specifications laid on the table of the House, a well conceived proposal for the development of an adequate and satisfactory port at Nelson, I feel that I am compelled to keep before the public the idea that the Hudson Bay route is not getting a fair chance when Nelson is being used instead of Churchill. It may be that the Government will spend enough money on Nelson to make it a suitable port, but the success of the route depends upon the possibility of port Nelson being made satisfactory to the shipping interests. It may easily be that while that can be done, it may cost too much money to do it, and unless it is done, the route is necessarily discredited. My hon. friend has said that there is no use in discussing the relative merits of Churchill and Nelson with a view to abandoning Nelson and adopting Churchill. Possibly that is true, but my effort is to impress upon the Government that, having selected Nelson to be the terminus of the railroad, they have taken upon themselves the responsibility of seeing that project through and seeing that Nelson is made a port satisfactory to the shipping interests, and that the Government which chose the port of Nelson instead of the port of Churchill must take the full responsibility for that choice, for whatever expenditure is necessary and for whatever success or failure is attained. They must not lay the burden upon the Hudson project or route, they must take the burden upon their own shoulders. If they succeed, we will certainly all give them credit and we will all be glad; but if they do not succeed, the blame must rest upon themselves and not upon the project of a Hudson bay railway and route.

Mr. REID: The hon. member is absolutely correct when he states that the harbour and entrances must be made suitable for shipowners. Any government would have to make them satisfactory to the shipowners, and that is being done up to the present time. Every shipowner who has sent his vessel to Nelson has been well satisfied with the charts that we have at the present time. Up to the present the expenditure made at Port Nelson would be the same as would have to be made at Churchill, because it covers, in a very large measure, the plant that we would have to have for Churchill. Previous to the Minister of Railways taking charge of the department, the whole Hudson bay project was investigated and decided upon by the late Administration, and it was a project that was put forward with the consent of both parties, in the interest of the West. Even if Port Nelson were to cost more money at the present time and be as suitable as Fort Churchill, I claim that it would be much better to spend that money at Port Nelson than at Fort Churchill for the reason that if we had chosen Fort Churchill which the hon. member is now advocating, we would have to haul each trainload of wheat produced in the Northwest eighty miles further to put into a vessel, and we would have to haul that train back the same eighty miles. It costs money to do that and who is going to pay for the 160 miles haulage of that train? Surely the hon. member knows that the additional cost of operation would have to be borne by the farmers in the West in the form of an increased freight rate. Does not the hon. member agree with me that if we can get a port where we can save that 160 miles haulage for all time to come, the amount that would be saved in a few years would pay probably twice as much as the whole cost of the terminus? I do not think there can be any difference of opinion on that.

The hon. member is under the impression that the Minister of Railways and Canals, from information given by his officials and any evidence that he could get, thought that development of Port Nelson would cost a great deal more than would Churchill; and the hon. member for Edmonton is of the same opinion. The Minister of Railways and Canals was to decide which of the two harbours would be of most advantage to the farmers of the Northwest, and which would cost the least money. The opinion that he had up to that time was that to build a railway to Churchill would mean an additional haul of 80 miles each way; that was one thing against it. The information that the Minister of Railways and Canals had before him at that time as to the cost of the work necessary to put the harbour at Churchill in satisfactory condition was as follows: harbour work, piers, dredging, exclusive of lighthouse and buoying, $6,675,000. The cost of the same work at Port Nelson, covering exactly the same items, was estimated at $5,065,000. I do not know whether it was the opinion of the hon. member for South Renfrew himself; at all events it was the opinion of the officials, that Port Nelson was a safe and a good harbour; that the selection of that port would save a haul of 80 miles which would have been a charge on the farmers of the Northwest for all time to come had the other port been selected. Every farmer who had grain to send could save half a cent a bushel on the carriage of that grain if it went through Port Nelson instead of Churchill, and, besides, the difference in the cost of the works at the respective harbours would be $1,600,000.

Mr. HUGHES: Who made that report?

Mr. REID: I was just reading from a report on the Hudson Bay railway, made by Mr. Armstrong in 1909, and revised by Mr. Butler. In connection with cost over and above the amount mentioned, it should be remembered that all the plant is now a charge on these terminals. The officials of the department, from the deputy minister down to every man who was sent there, did their best to get the most accurate figures. From the information I have I believe that Mr. Butler, the deputy minister at the time; Mr. Armstrong, the engineer in charge, and all his officials, came to the conclusion, from the information they could get, that Port Nelson was the right place. Mr. Cochrane sent another man there, and his report was exactly the same. Then Mr. Cochrane himself went there and examined the place, and he came to the same conclusion. Under the circumstances I do not see that any fault can be found with the decision that has been arrived at. The captains who have navigated ships there believe that Port Nelson is the right place.

Mr. HUGHES: The minister said that ship owners who sent ships there were quite satisfied with Port Nelson. For what purposes were these ships sent there?

Mr. REID: We have been running our own vessels with supplies, but prior to our obtaining these we had to charter vessels.

Mr. HUGHES: I thought the minister meant ships that sent there for commercial purposes. The men that the department sent there would be satisfied because they were getting a high price for the use of their vessels. Has any report been received from men engaged in the transportation business in Hudson bay?

Mr. REID: I would like to ask hon. gentlemen in this House if, since this Hudson Bay railway project was commenced, anyone could do more than has been done by the present minister and his two predecessors?

Mr. HUGHES: It was all done by railway men.

Mr. REID: It was all done by officials of the department, and they got the best evidence they could. Vessels of the Marine Department have been going there, and many vessels have been chartered and sent to Port Nelson with full cargoes of supplies.

Mr. HUGHES: How many of them have been lost?

Mr. REID: One was lost 14 miles away from the channel; she had got altogether out of her course. The other vessel that was lost got into port, but through carelessness she was allowed to drift from her anchorage to the shore. Afterwards they supposed that she had been set fire to. The minister in deciding which shall be the terminal port can only take the best evidence that he can get. He sends his engineers to look the ports over; they examine them to the best of their ability; he gets what information he can from vessels that have been in the locality. When a minister comes to a decision under these circumstances, taking the advice of his

deputy minister, his engineers, and considering all available information, even if it should turn out afterwards to be wrong, I claim that he has done his duty. I believe that all available information was exhausted by the present minister's predecessors in determining what port would be the best, having regard to the interests of the people of the Northwest, and I believe that the same has been the case with the present minister. The port has been decided upon, and I sincerely hope that the anticipations of everyone who has had anything to do with this decision will turn out to be well founded. We hope also that the railway will be a success. I stated in this House a few days ago that at first, many years ago, I was under the impression that this railroad would not be the success it is now expected to be, but I have changed my opinion, and I think many other would, if they had the same opportunity as I have had of discussing this matter with the officers who know the whole situation, with those who have been up there, with captains who have navigated the bay, and of hearing from the Minister of Railways and Canals his opinion of what can be done. I believe now that when we get that road in operation, the Northwest will receive benefits which some of us at the present time can hardly conceive.

Mr. TURGEON: The minister knows that I have always favoured the construction of the Hudson Bay railway, but I must say that I had always expected that Fort Churchill would be the terminus of that road. That idea is in conformity with the information which we in the Maritime Provinces gather from old seamen who have navigated Hudson bay, and from the owners of vessels who had traded there. They always expected that when the railroad was constructed, Fort Churchill would be the natural port, because there you have a natural harbour, and the conditions are safer. They looked upon Port Nelson as a problem which might never be solved. The minister said that it would have been necessary to construct some 80 miles of railway additional, if Fort Churchill had been selected as the terminus, but I am not sure that a line further west might not have been selected which could have reached Fort Churchill without necessitating the construction of the extra 80 miles of road. If the conditions are more favourable at Fort Churchill, as is stated by the old seamen who have navigated Hudson bay, that extra expense would have been compensated for by the better navigation facilities, by lower insurance rates, and so on. At any rate, the opinion of these men is that Fort Churchill would have been more advantageous than Port Nelson. Meanwhile, the minister tells us that it is too late to think of Fort Churchill. I do not blame the minister. He must have taken the best advice he could get, and no doubt it was given to him honestly, but it does not agree with the general opinion of the seamen in the Maritime Provinces. If the decision is irrevocable, I would urge upon the minister the necessity of improving the harbour at Port Nelson at any cost, so that it will render the services for which the Hudson Bay railway is being constructed. I have not unlimited faith in the period of navigation. It is limited to a period of three months in the year, but three months in the year for the West, with the development which we may expect, would be of great advantage to the grain shippers and to those engaged in cattle raising. It would give a new impetus to development in the Northwest, and enable the farmers to ship at a greater advantage than they can with the long haul to our eastern seaboard. I would strongly urge upon the minister the necessity of improving that harbour. But the decision arrived at by the department is altogether contrary to the opinion expressed by men from St. John's, Newfoundland, and by other men who have navigated Hudson bay, and who have no political interest in the matter at all. I wish to impress the minister with that fact.

Mr. NESBITT: What became of the dredge that was shipped up there? It was said that it had been broken up and was useless. I think it was shipped from Toronto. Is it in use now? While I am on my feet, might I ask if there are any reports from the men engaged in constructing the railway as to the prospect of western freight, as well as eastern freight, along the railway, or adjacent to it.

Mr. REID: The dredge referred to worked for about nine weeks last year, and it has been working since with perfect satisfaction.

Mr. GRAHAM: Something went wrong with it when it first went up there.

Mr. REID: Yes, it was damaged when it was beached for the winter, but it has

been repaired. It gave good satisfaction for nine weeks, and will do good work during the coming season. With regard to freight going west, that is a hard matter to decide. We all have our own opinions as to that. I am under the impression that there will be cargoes from the Hudson Bay. There will be cargoes of grain going direct to foreign countries—

Mr. NESBITT: That would be eastbound freight. Is there any prospect of westbound freight?

Mr. REID: There are coal, steel rails, and other products that will go West, and there is the possibility of freights from Montreal and the lower provinces.

Mr. NESBITT: I do not mean that; I mean local freight along the length of the railway, between Hudson bay and the Pas.

Mr. REID: Along the railway there is timber, and fish, and minerals. I noticed that they were getting minerals along that line, and I am informed that there is good agricultural country. The information I have is that there is a great quantity of timber and minerals, and of course there are fish.

Mr. SINCLAIR: The timber is not worth very much according to the report.

Mr. REID: For local consumption it is.

Mr. SINCLAIR: In the topographical survey report for 1916, a good deal of the timber is described as pretty scrubby, and a good deal of the land is described as muskeg. There is said to be some clay land fit for cultivation, but a great deal of it is swampy. The report says there are some whitefish and trout in the locality and that only a small amount of tillable land is found in the district covered by forest. Fishing and mining are likely to prove, the report states, most important industries. There is also a paragraph in the report which says that frost occurs every month of the year, excepting perhaps July, and that at the beginning of May, 1914, there were two feet of snow, which had not entirely disappeared before the middle of June, and the frosty nights began on August 20. So that it is a pretty rigorous climate in which to expect any agricultural settlement. According to this report, there are strips of timber on the banks of the rivers, and some clay land, but a good deal of it is swampy, and apparently the climate is very cold.

Mr. TURRIFF: As far as frost is concerned, last summer we had the largest and best crop we have ever had in the West, in Saskatchewan at all events, and there was frost in every month during the year 1915 without a single exception. It does not necessarily follow that because there may be some frost during each month it will not be a good agricultural country. As my hon. friend from South Renfrew (Mr. Graham) says, they raise very fine vegetables in the Yukon. There is a large tract of good clay land for agricultural purposes in the Burnt river country. Irrespective of the merits of the road as a through route, it will be a good colonization road and there will be a considerable amount of settlement going in on a part of the line at all events. No doubt for mixed farming it will be found suitable.

Mr. SCHAFFNER: I wish to say a word or two with regard to that question of temperature. I have made a considerable study of the Hudson bay route and I have got the best information I could upon the subject. I do not think it is necessary for me to go back over the ground to-day. I do not wish to accuse the East of any prejudice but if the people in this part of the country will just look squarely at the conditions in the West there will not be one word of opposition to the building of the Hudson Bay route or of doubt with respect to the navigability of Hudson bay and Hudson straits. What I rose to reply to was the question to which my hon. friend (Mr. Sinclair) referred about there being frost in every month of the year except one. My hon. friend from Assiniboia (Mr. Turriff) has answered that. In the three provinces of Saskatchewan, Alberta, and Manitoba there was not one month last year in which we did not have frost. Further than that, in a year when we had one of the best crops that we ever had, we had seven or eight inches of snow on the 12th June and another snowstorm on the 15th September. That is such a wonderful country that all these little obstacles do not interfere with us having good crops, nor will they interfere with transportation out of that country by way of Hudson bay and Hudson strait. It is not necessary at this late day to give proof of the great necessity there is for an outlet from the West such as that road will afford. I want to draw the attention of the House to one or two points. One has reference to the matter of growing wheat. Some people tell us that we can grow apples and fruit in the West. I have an experience since 1882

and my opinion is that while we may grow fruit, the staple articles that the farmer will grow in that country for many years, will be grain and stock. Wheat has commanded a very good price, and at the price that wheat sells for to-day we can afford, perhaps, to send our wheat over this long haul to Montreal and make it pay. I may be too pessimistic about this matter, but when you consider the tremendous amount of wheat and other grain that has to be handled you will see how important the transportation question becomes. When you consider that we have at least 126,000,000 acres that can produce grain, that to-day we only have about 20,000,000 under cultivation, and that this year we grew some 600,000,000 bushels of grain, it gives you some idea of what that country is going to produce. When our production increases and when that of all the other grain-growing countries in the world, now producing enormous quantities, increases, wheat will not naturally be at the price at which it sells to-day. Then we in this Parliament—and I do not care which Government is in control—will have to do our utmost to lighten the cost of transportation, whether by the railways or by the Hudson bay route. I do not need to point out to the committee the great difference there is between the cost of transportation by water and by land. It is much cheaper by water. I do not need to tell you that while in Manitoba we may get along, if you have to provide for the production of Alberta and the Peace river district, which everybody says will grow any amount of grain, the problem becomes still more pressing. I am going to give the figures to the committee to show the difference in the cost of getting wheat out by way of Hudson bay and bringing it down to Montreal. This is not the first railway that has met with opposition. This is not the first time that we have heard about a frozen up country. I will guarantee that when my hon. friend from Edmonton (Mr. Oliver) went out to that country he got his life insured for fear he would be killed by Indians, or that he would freeze to death and never reach civilization again. I know that to be a fact.

9 p.m.

Some hon. MEMBERS: Oh, oh.

Mr. OLIVER: Not as to the details.

Mr. SCHAFFNER: That is the way they talk about this country. There is no question to-day as to the navigability of Hudson bay and Hudson strait. My hon. friend from Guysboro (Mr. Sinclair), who comes from near Halifax, talks about the temperature, but let me tell him that the average from the 11th July until October is 62½ degrees. That mean average temperature for these four months is better than that of ten of the principal stations extending from Halifax, N.S., to Fort Simpson, on the Mackenzie river.

Mr. REID: He does not live near Halifax.

Mr. SCHAFFNER: Yes, he lives pretty near Halifax. About two-thirds of the southern part of Hudson bay may be considered to have had that temperature. The United States went through this same thing. They felt just the same as some of our eastern friends feel now—if they do feel that way—and I am afraid, from the little private conversations I have had outside, that some of the eastern people think that this is going to interfere with their business. I have every assurance in so far as I am personally concerned, and I am not an engineer, but I am just as good an engineer as many hon. gentlemen on the other side who talk about this route, that Hudson bay and Hudson strait are navigable for five months in the year. It is a very peculiar fact that no iceberg ever appears in Hudson bay, and no iceberg ever appears in the first 400 miles of Hudson strait. The only icebergs we have in that country come from near my hon. friend's country; they form off the Newfoundland coast, come up the Hudson strait about 100 miles, until the current sets in the other way and they are carried out to sea. It is a fact that there never was an iceberg found in Hudson bay or Hudson strait for the first 400 miles. There was similar opposition and criticism in the United States when the port of Galveston was opened; it was said that the Eastern States would be ruined. But what was the result? Instead of ruining the Eastern States, the opening of that port has been of great advantage to them, because it has given it has given them a tremendous market for their manufactured products.

Mr. NESBITT: I do not think anybody here is afraid that eastern Canada will be hurt.

Mr. SCHAFFNER: Why is there always so much opposition then? But I do not wish to dwell on that. Western Canada must have a road to Hudson Bay. With proper aids to

navigation I believe that Hudson Bay will be navigable but if not, it will be a serious thing for western Canada. I should like to give the House a few figures showing the comparative distances from Liverpool, and I think they will be somewhat of a surprise to a great many members. From Fort Churchill to Liverpool is 3,000 miles; from Montreal to Liverpool is 3,220. I am dealing with Fort Churchill because I have always been and still am of the opinion—I am always open to conviction—that Fort Churchill was the place to choose. I am not an engineer, and the engineers may have been able to prove that Port Nelson was more advantageous. But I have to agree occasionally with the hon. member for Edmonton.

Mr. OLIVER: It hurts, eh?

Mr. SCHAFFNER: If Fort Churchill is the better port, and engineers say it is, then to my mind the difference of 80 miles of railway is not a strong argument for changing from Fort Churchill to Port Nelson. I am rather of the impression that hon. member for South Renfrew talked of making this change when the late Government was in power. I may be wrong, but I think my hon. friend (Mr. Graham) was in favour of Port Nelson rather than Fort Churchill. From Montreal to Liverpool is 220 miles more than from Fort Churchill to Liverpool. The distance from New York to Liverpool is 3,057 miles. From St. Paul to Liverpool via New York 4,440 miles; from St. Paul to Liverpool via Hudson bay 4,096 miles. From Duluth via New York to Liverpool, 4,201 miles; from Duluth via Hudson bay to Liverpool, 3,728 miles. From Vancouver to Liverpool via Canadian Pacific railway is 5,868 miles; from Vancouver to Liverpool via Hudson bay 4,568 miles. The Hudson bay route means a saving between Vancouver and Liverpool of 1,300 miles, which ought to mean something. Now let us take the land distances. From Brandon to Montreal the distance is 1,555 miles; from Brandon to Churchill 940 miles; from Medicine Hat to Montreal 2,082 miles; from Medicine Hat to Churchill 1,076 miles; from Calgary to Churchill is 1,256 miles; from Calgary to Montreal 2,262 miles; from Winnipeg to Montreal 1,422 miles; and from Winnipeg to Churchill 945 miles.

Mr. SINCLAIR: By what route?

Mr. SCHAFFNER: By any route, Canadian Northern railway or Canadian Pacific railway. From Prince Albert to Montreal the distance is 1,958 miles; from Prince Albert to Churchill 717 miles. From Battleford to Montreal 1,094 miles; from Battleford to Churchill 876 miles. From Saskatoon to Montreal 1924 miles; from Saskatoon to Churchill 806 miles. From Edmonton to Montreal 2,247 miles; and from Edmonton to Churchill 1,129 miles. These figures have all been verified and can be taken as correct. They show conclusively how much shorter a land haul the Hudson Bay route means without entailing any greater distance by water. I am not going into this question to-night as fully as I have done in the past. I am personally convinced that the Lord placed Hudson bay where it is, to help out that great western country, and we do' not want His followers in the East to try and obstruct Him. I believe that route will be a God-send to the people of the West. We have only to turn to history to see how every enterprise has been opposed. Everybody knows what was said about the Canadian Pacific railway; but no enterprise under the sun has proved a greater success. People talked the same way about the Panama Canal.

Mr. GRAHAM: The Transcontinental will turn out the same.

Mr. SCHAFFNER: I believe it will some years hence; and since the hon. gentleman has brought up that point I will state my position. There is plenty of work for the Canadian Northern railway, the Grand Trunk Pacific, and the Canadian Pacific railway across the three Prairie Provinces. I do not think we should have had three roads built from Port Arthur east, at all events further east than Sudbury or North Bay. I am also of the opinion that there is not at the present time business for three roads west of Edmonton. But I have every confidence in my country, and I believe the time will come when those roads will all be in successful operation. This country is going to grow, and will have plenty of work for the three roads, and plenty of work for the Hudson Bay road also. I have figures for the last fifty years showing for how many months in the year the bay and straits are navigable. Without giving the figures for each year, the average time during which the bay and straits are navigable is from June 19 to November 8. I have no doubt that when we have all possible aids to navigation, the bay and straits will be navigable for from four to five months; and if we get four months during which the bay and straits are navigable it will be of the utmost

benefit to the country. I am not a prophet, but I should like my words here to-night to be remembered: It will not be very many years, perhaps within ten, when whoever is lucky enough to have a seat in this House will be wondering how any one ever had the courage to stand up in the face of Nature and say a single word against the building of the Hudson Bay railway and the navigability of Hudson bay and straits.

Mr. ROBB: The last remarks of the hon. gentleman (Mr. Schaffner), it seems to me, prove that as a grain-carrying route the Hudson Bay route will be good for only about one month in the year. He has told us that the experience of some thirty years showed that the season was from 19th June to 8th November. Now, I would submit this question to the judgment of the hon. gentleman: Who is going to send grain to Hudson bay after the 8th of November and run the risk of carrying that grain until June, at a time when the crops from the southern countries are coming into the markets of the world, and when, as everybody in the business knows, grain begins to get a little cheaper? The only profitable carrying month for grain by the Hudson Bay route will be from the time when the grain starts to move—and it does not begin to move until about October—until the 8th of November. I am not going to debate the advantages and disadvantages of the Hudson Bay route, but it does seem to me that, at this time, when Canada has such great need of money, the Hudson Bay route could well wait for a little while. Let it wait until we have demonstrated that the West can produce year after year such crops as it produced last year. It must be remembered that last year's was a phenomenal crop. For many years before that we had but a limited crop. There is one feature of this argument that appears as a perennial problem to me. For about half the session our western friends put up the argument in favour of opening the markets of the United States, and for the other half they say they want the grain to go North for export. I want to know which is right. Who is going to send grain for storage at Hudson bay, pay freight and banking charges, insurance and storage, from November until June, keeping it there until the wheat of next year's crop begins to come in?

Mr. SCHAFFNER: I thought I made that very clear. We can afford to sell our wheat a great deal cheaper when we send it by the Hudson Bay route than when we send it by Montreal, because it will not cost us nearly so much to get it to market.

Mr. GRAHAM: It may be expected that I should say a word or two upon the subject. I am not sure of the correctness of those distances given by the minister. Is the minister sure that from Pas Mission to Nelson is 425 miles?

Mr. REID: That is in the printed report.

Mr. GRAHAM: My recollection is that the distance is 410 miles, but I may be wrong.

Mr. REID: I read it from the printed report, but I have it in the memorandum given me by the deputy minister. I may just read the information it contains.

Mileage.	Miles.
Le Pas to Ticket Portage	185.5
Ticket Portage to Split Lake Junction	68.00
Split Lake Junction to Port Nelson	170.5
Total	424.00

	Miles.
Total miles of steel laid, main line	241
Total miles of steel laid, sidings	24
Total miles of steel laid, temporary track	33
Grading completed (with exception of a few depressed grades)	378
Track surfaced	225

Mr. GRAHAM: These, then, are the revised figures. I had it in mind also that it was not so far from Port Nelson to Churchill as my hon. friend stated, 80 miles.

Mr. REID: That is the official figure.

Mr. GRAHAM: My memory must be at fault. Of course, I disagree with a lot of people, but still I am in favour of the Hudson Bay road.

Mr. REID: So am I.

Mr. GRAHAM: I did not, as a member of the late Government, plunge into that project without a good deal of consideration. There are a good many drawbacks to the project; but then we are advancing in dealing with these several difficulties that arise in transportation both by rail and by water, and so I hope that some of these difficulties will be made to disappear as the years go by. It is not very long since we would have laughed at a person who would try to open navigation on the St. Lawrence a few weeks before the ice moved out in the spring—in fact they did laugh at that project at first. If any person

had told us a few years ago that one of the great European governments would send to Canada for a modern ice-breaker or two to show them how to carry on winter navigation, that person would have been laughed at. But we are advancing, and I have strong hopes that the navigation of Hudson straits will be extended for a longer term than that indicated in the reports heretofore made. The straits are not frozen up, as some people seem to imagine, the difficulty is with floating ice coming down through the straits. With our wireless telegraphy, our new methods of signalling and other improvements, it seems to me, a channel can be kept open through the straits for a longer time than formerly, even though that channel may be a little devious. But suppose the season to be short, we must remember that there is going to be a large export from the West outside of wheat. I speak particularly of stock. Those who are acquainted with the northern part of Alberta have been greatly impressed with its possibilities in dairy products. The condition in which the product is taken to market is sometimes almost as important as the freight rate or the speed. Then, those who ship live stock find that one of their great difficulties is to get the stock to the ocean port in the best condition. If the weather be warm, there is a great reduction in the value of the stock before it reaches the point of ocean shipment. But stock to be shipped from the West can be taken from a great many central points to the Hudson Bay port, being kept only about two nights and one day in the car. The nights are cool, even if the day be warm, so that the stock should be placed aboard the ship at Hudson bay in practically as good a condition as that in which it left the point of production. I believe that that will develop stock raising in portions of the West where, probably, it will prove the most profitable product they have. The same applies to dairy products; these can be sent by the Hudson Bay route retaining their original quality. I have not varied for a moment in my belief that the Hudson Bay project will be a success notwithstanding the difficulties that have arisen.

Hon. members must bear in mind that a great many things said against the Hudson Bay route have not been said, in my opinion, accidentally. That western country became a part of Canada after some struggle and some negotiation with a great company; and—I have said it before and I say it again—it is part of the policy of the Hudson's Bay Company to discourage as far as possible the opening up of a new route in that direction. I will not go into details, but that concern was a monopolist for many years and has not yet got over the habit. It has, I think, used every effort, quietly, in literature and otherwise, to discourage the opening of the Hudson Bay route.

Let me say a word about the possibilities along that railway; and in this connection let me explain to my hon. friends from the West that the people of the East are not antagonistic to the Hudson Bay scheme as a scheme; nor is there any idea in the minds of the people of the East that this route will affect their business unfavourably. For my part, I have faith in the western country to believe that it will be large enough and productive enough to give business for all the routes in the years to come. We shall have to develop a return traffic. And these things generally right themselves when we get the streams of commerce flowing. It may not be a matter of theory, but it is a matter of practice that where you sell profitably you will buy to advantage, and so you will get commerce established. So the people of the East do not object to the construction of the Hudson Bay railway and its harbour facilities. Let me instance the case of a railway in the province of Ontario. A few years ago it was decided by the Ontario Government that they would build a railway since known as the Temiskaming and Northern Ontario railway. There was not more than one man in fifty, I believe, but down in his heart thought it was going to be a great failure. That country was looked upon as a land from which the pine had been taken and that all that was left was a few lakes with some poplars, jackpine, and other pulpwood. But what has been the result of the construction of that line? It has opened up a beautiful tourist paradise into which many people go every summer and which, but for the building of that line, would never have been known. It has made known the fact that in Northern Ontario there are many millions of acres of as good land as is to be found anywhere in the world. But, further than that, the opening of this line, to the surprise of the entire world, has been the means of developing the greatest silver deposits ever known. Had not there been some cour-

age, some energy, some optimism, that road would not have been constructed, and the world would not have known of the rich possessions we have. Along the Hudson Bay railway, I am told, although a portion of it is low-lying land, muskeg, nevertheless there is some timber of more or less value. I am told that not far from the line there is some very good land. And my information during the past two weeks is that gold has been discovered within a very few miles of the railway. I am not speaking at random, for I was told of it by a man who was there and who has brought samples with him on which he has had good reports. And, no matter what may be said, I believe there is an opening for the development of a profitable fish industry in Hudson bay. So, with the outlook we have, I believe it would pay us to build that railway even if we have no export by Hudson bay. We have done that in other parts of the country that were not any more promising than this. But, when you add to all this the possibility of opening a new route of transportation to the old land, I think we are not too optimistic when we believe that it will be a success.

As to the possibility of steamers coming and going, I may say that when I was Minister of Railways I had an offer made to me of a line of railway to run there regularly under certain conditions. That never was developed because, unfortunately for the country the Government changed. But I just mentioned the point to show that there are people engaged in shipping who are willing to make arrangements to run to Hudson bay and to take a considerable chance of trade developing.

Mr. NESBITT: They would want a large subsidy.

Mr. GRAHAM: I said they offered to run "under certain conditions," but the subsidy might not be any greater than that for running to an old established port. There has been drawbacks. I understand that a great part of the work done by the minister one year was carried away by the spring freshets The minister has had a hard experience, but though he lost most of a year's work, if I am correctly informed, and though a bridge did go wrong on the construction of the railway, I do not think we ought to be discouraged

As to the two ports—and perhaps I should not have detained the committee at all had it not been for this question coming up—I did not, as Minister of Railways, come to a decision as between the two ports. Frankly, all the reports I had from the officials were in favour of Nelson, so far as I can remember. I sent one man with a staff and he remained all winter, and his report must be on file. From the investigation he made both winter and summer, his report pointed to Nelson as the best place for a permanent harbour if any great amount of trade were to be developed. I speak from memory and subject to correction. Possibly, if small trade were expected, Churchill might be the best harbour, but it was to a large extent incapable of being developed into a harbour for the large trade. I think that possibly, if I had been left in the department, I should have acted on that information—it was the only method I had of getting information. The only contract given by the late Government through myself extended from Pas Mission to Split lake. This left it open for the Government to decide finally either for Nelson or Churchill, as the railway from that point could be delivered to either. My successor seems to have made full investigation and to have decided in favour of Nelson. I am not in a position to quarrel with Nelson being the port, for the information I had led in the same direction. An official of the Marine Department has made a report —I think it was a report—in which the choice of this harbour is rather deprecated, and it may be that the whole route is not enthusiastically encouraged in that report. I do not know whether the Department of Railways has taken into consideration the report of the officers of the Marine Department in coming to its final conclusion. However, the Department of Railways must take the responsibility for the selection of the harbour. I know that it has had its difficulties. I would like the minister to tell us about these difficulties and about the work in the harbour that was carried away. I am told that the difficulty which brought about that disaster has been done away with and that the work has now been so constructed that a similar accident will not occur again. It is my opinion that the Hudson bay project is one that is well worth entering upon. Notwithstanding all the criticism and objections that have been made, I believe that in the years to come it will prove a valuable addition to our transportation facilities, and that it will be an aid to the West not only in getting out their products, but in bringing in goods in return for those products. No matter what we may say about the Railway Commission, the

public understands most thoroughly that the greatest regulator of freight rates is a water route, even if the amount of grain carried does not assume the proportions anticipated by some people this route will have a salutary effect on the rates by rail to and from the West.

Mr. REID: With regard to the damage at Port Nelson, I understand from the officials that the ice coming out in the spring did some very little damage to a temporary wharf. So far as the work at Port Nelson, is concerned, a memorandum which I have shows that. In general, all development work at Port Nelson is completed; and also the camp, including buildings, shops, municipal works, such as drainage, water supply, sanitary works, light, etc. The trackage and wharves necessary for the conduct of the work and for the reception and distribution of materials and supplies have been completed and a dry dock completed for the repair of the floating plant. The large plant essential to the carrying out of such an undertaking and which, owing to transportation difficulties, had to be shipped knocked down, has been assembled or built out of raw materials at Port Nelson. A breakwater has been constructed which serves to protect the temporary wharves and other shore works during the open season from damage by storms and to protect the large construction fleet which of necessity is laid up on the beach during the winter from damage by ice. The jetty pier leading to the site of the deep water wharves, which is part of the permanent harbour development, has been carried out about half a mile from shore, and a small amount of dredging in the main channel has been done.

Mr. GRAHAM: It would facilitate a more thorough understanding of what has been done there if the Chief Engineer could put a plan on the Table showing the locality of the docks, breakwater, etc.

Mr. REID: I shall lay on the Table a plan which will show exactly what the hon. member is asking for.

Mr. GRAHAM: When does the minister expect the railway to be completed and the harbour works put in condition for the transaction of business?

Mr. REID: We expect to get rails in to Port Nelson in the fall of 1917.

Mr. GRAHAM: Will the road be ready for traffic then?

[Mr. Graham.]

Mr. REID: We have not enough in these Estimates to enable us to have it completed and ready for traffic, but we will have the rails in, and we will complete it as fast as we can get the money.

Mr. NESBITT: Will the minister spend the $3,000,000 this year?

Mr. REID: Yes.

Mr. GRAHAM: When is it expected to have the terminals, the harbour, and the bridge completed?

Mr. REID: About 1918 we expect the road to be doing business.

Mr. GRAHAM: What is the weight of the rail?

Mr. REID: Eighty pounds.

Mr. GRAHAM: What is the ruling grade?

Mr. REID: The grade is .4.

Mr. OLIVER: Both ways?

Mr. REID: It is .6 westbound.

Mr. OLIVER: Are the rails laid to the second bridge yet; if not, how soon?

Mr. REID: They crossed the first bridge last week, and we have ninety miles of grading ready for rail up to the next bridge.

Mr. OLIVER: When is it expected to have these rails laid?

Mr. REID: They will be up to the next bridge this summer.

Mr. McKENZIE: I wish to call the attention of the minister to the case of a poor man named Thomas Maloney, who belongs to Newfoundland, and who was injured at Port Nelson last summer. He was burned on board a steamer at Port Nelson and lost the use of his hands. I had a photograph of him, and expected to be able to show it to the minister, but it was destroyed in the fire at the Parliament buildings. He was a cook on board one of the Government steamers at Port Nelson, and, by some accident, a fire broke out in the place where he was cooking, and in trying to put out the fire he was burned so badly that his hands will never be of any use to him again. He called at my office, having heard, I suppose, that I was a member of Parliament, and I found that his finger joints were all gone and that the skin that had grown on his hands was so tender that I do not think he will ever be able to do any work. I had a letter from him to-day from Newfoundland. I lost his address in the fire, and did not know where to write to him, but I have received a letter dated 23rd April in which

he complains that he is absolutely unable to do anything and has to go around looking for charity. He asks me to bring the matter to the notice of the department. He gave me the name of the doctor who attended him, and all the particulars of the case, but, as I have said, I lost them in the fire, and I am only able to give what he states in this letter. I see that in the Supplementary Estimates the Government is providing compassionate allowances for people who have met with accidents of this kind, and I trust that the minister will make inquiry as to the condition of this man. Personally, I have no doubt at all as to his condition, but as to how the accident happened I have only his word, which I have no reason to question. Both hands and arms, up to the elbows, are badly burned. He is crippled for life because he attempted to save the ship, for he might have run away from the fire and escaped injury. In fact, he nearly lost his life, and only saved himself by jumping into the water. I do not wish to name any figure, but in a case of this kind I think that something like $2,000 would be fair compensation. He is a man of about 50 years of age; he is out of business for all time, and he told me he is the father of a family of seven or eight children. I bring the case to the notice of the House and of the minister, and trust that something will be done for this poor man.

Mr. REID: The matter has not been brought to my attention until now, but my officials tell me that the accident was not in any way connected with the work of the department. He was an employee on the vessel, a cook, but according to the information of the department the facts are not as represented by the hon. member. However, at this stage, when all the Estimates are down, there is nothing more that I could do this session. The compassionate allowances referred to by my hon. friend are for the families of persons who lost their lives in the fire at the Parliament Buildings and the amounts are not very large. I understand that no compassionate allowance has been made to this man for the reason that for some time after the accident his wages, hospital expenses, and board were paid. However, I will bring the remarks of the hon. member to the attention of the Minister of Railways and Canals on his return to the department. Of course, the hon. member will realize that even if the minister did decide to make an allowance it could not be made this session without a special vote and there will be no more Supplementary Estimates during the present session, so far as I know.

Mr. McKENZIE: I would urge upon the minister to make full inquiry into the case because I believe the man was telling me the truth. I would like to have the records fully before the department, so that something may be done for him even though it should be next session.

Mr. REID: I will get the papers together and the minister can look into them if he so desires; but the information I have is that the case has already been looked into and that the department is in no way liable. It was no fault of the department that the man was injured. I understand he has a brother at Port Nelson employed by the department, and that a good deal has been done for the injured man. I will look into the case personally and get it into shape so that I may thoroughly understand it, and then I will hand it over to the minister on his return. The hon. member will have an opportunity of getting the information, and the case can be brought up again.

Mr. HUGHES: When the Estimates were under consideration a few days ago, the minister said that he would have prepared some information in regard to the Prince Edward Island car ferry terminus.

Mr. REID: I have a memorandum and I would like to see if the information which I have answers the hon. gentleman's question:

Car Ferry Northumberland Strait.

The Car Ferry "P.E.I." which is a very fine ice breaking vessel has been delivered by Messrs. Armstrong, Whitworth Company. The docking pier at Cape Tormentine is about completed. There remains some dredging to be done and additional stone must be added to the breakwater. At Carleton Point the approach pier is nearly completed. The concrete cribs for the docking pier are partly in position and partly at Shediac ready to be towed across and placed in positon as soon as the ice will permit. Further stone work is required on the breakwater, and dredging is also required in the turning basin. Work is proceeding at the bridge shops upon the steel works for the transfer bridges required to connect the piers with the deck of the car ferry. While some dredging may remain uncompleted at the end of the season, we shall be in position this fall to institute the regular car ferry service.

Mr. HUGHES: What does "this fall" mean—October?

Mr. REID: I have figured on about the first of October; it may be a little later.

Mr. GRAHAM: Better call it early winter.

Mr. HUGHES: The information which I have received from people living there is to the effect that the contractors—Messrs. Miller—is it?

Mr. REID: Yes, Roger Miller & Sons, I think, is the name of the firm.

Mr. HUGHES: I am informed they are getting along very slowly with the work.

Mr. REID: I know Mr. Miller and I knew him when he was working on the St. Lawrence canals.

Mr. HUGHES: Perhaps he was faster then.

Mr. REID: He was always considered one of the best contractors in Canada.

Mr. NESBITT: So he is.

Mr. REID: Roger Miller of Toronto. Does the hon. gentleman know him?

Mr. NESBITT: You bet I do.

Mr. REID: I would consider him one of the best contractors in Canada and if he has got along slowly I cannot understand how it would be any fault of his. He is a very hard-working man and I never heard anything to the effect that Roger Miller would delay work or not do it properly.

Mr. HUGHES: What work is the hon. gentleman discussing?

Mr. REID: The work at Carleton Point.

Mr. HUGHES: A gentleman in the other chamber from Prince Edward Island was speaking on this subject the other day and supporting the Government and I thought he had some inside information. He said he did not think the car ferry would be in operation this winter. I would be very pleased to hear that he was mistaken.

10 p.m.

Mr. REID: Of course, I cannot change his opinion but at the same time the opinion of the officials of the department, who are carrying on that work, is as I have given it to the hon. member. I feel justified in accepting the opinion of my officials.

Mr. HUGHES: The acting minister, during last session, was very confident that it would be in operation last August.

Mr. NESBITT: Well the war has been on.

Mr. HUGHES: The war did not prevent or delay the construction of the pier. However, I suppose the department will hurry the matter along and do the best it can. I see there is an item in the Supplementary Estimates for the purchase of the steamer Northumberland by the Railway Department but there is no item for the operation of the steamer. Will that be necessary or how will it be operated?

Mr. REID: The Northumberland will be a part of the railway service. We give a through rate across the straits to Prince Edward Island and the freight across on the steamer Northumberland is absorbed in the through rate. The operating expenses of the Northumberland will be part of the operating expenses of the Intercolonial system.

Mr. GRAHAM: You will divide it between that and the Prince Edward Island railway?

Mr. REID: Yes.

Mr. HUGHES: Will the Stanley perform the service between Pictou and Charlottetown?

Mr. REID: The Government have purchased the steamer Northumberland and are putting her on the route between Point du Chene and Summerside. The Stanley is running between Pictou and Charlottetown. But the Stanley could not do the freight business between these two points, and we are leaving the car ferry on that route.

Mr. HUGHES: For the summer?

Mr. REID: For the summer time to carry the freight backwards and forward between Pictou and Charlottetown. We intend to leave the Stanley and the car ferry to look after the Pictou-Charlottetown service.

Mr. HUGHES: Both steamers?

Mr. REID: Both. I do not know how they will run them, I have not the details, but they are both to be left on that route and the Northumberland will be put on the Point du Chene service.

Mr. HUGHES: And they will be operated out of the same vote?

Mr. REID: Operated exactly in the same way.

Mr. MARCIL: Are you going to carry the Intercolonial cars across to the Island?

Mr. REID: Not this summer.

Mr. MARCIL: But after you put the car ferry in operation?

Mr. REID: Yes, the intention is to carry the cars over to Prince Edward Island eventually and to widen the tracks there so that the cars can go right on.

Mr. MARCIL: No start has been made on the widening of the gauge?

Mr. REID: No, that will not be commenced until the car ferry is in operation.

Mr. COPP: I understand from the minister that he has a report in regard to the progress which is being made at the Cape Tormentine terminal.

Mr. REID: I have just read it.

Mr. COPP: When was that report made?

Mr. REID: It was made by the chief engineer for me to give to the House.

Mr. COPP: He did not say where he got the information?

Mr. REID: He has his officials there, they have wired him the information; and, in fact, information comes daily to him.

Mr. COPP: I am surprised to learn that the minister has that report from Cape Tormentine.

Mr. REID: He was there himself personally not very long ago.

Mr. COPP: I have been there very many times myself, and I have watched the progress of the work. I have been in consultation, both professionally and otherwise, with some of the contractors who are engaged in the work. I can assure the minister that he need not bother his head about making any preparations to operate the car-ferry service between Cape Tormentine and the Island this coming fall, irrespective of what he has reported. I want to ask the minister a question with regard to the item in relation to work that is proposed to be done on the New Brunswick and Prince Edward Island railway. I was not present when the item passed a few days ago. I would like to ask what work he proposes to do on that railway for which a vote of $129,000 has been taken.

Mr. REID: This is to bring the line up to the Intercolonial railway branch line started.

Mr. COPP: I wanted to know if the minister had any statemnet as to what it is proposed to do.

Mr. REID: I have not the information here, but I will have it put on Hansard at the next sitting of the House.

Mr. LOGGIE: Unfortunately I was absent on Monday last when the Railway Estimates were up, but I understand that the minister allowed us the privilege of a general discussion on any one item. I wish to refer for a moment to the result of the present method of operating trains into Chatham, because of the taking up of the rails from Blackville to Chatham Junction. I should like first of all to read what the minister said in the House in May, 1913 (Hansard, Vol. VI, 1912-13, p. 10855):

Mr. Loggie: How much will it cost to make the improved facilities at Derby Junction? It would be necesasry, I fancy, to have a station on the south side of the river at the bridge.

Mr. Cochrane : That is all included in the $128,000.

Mr. Loggie: But you will still have to have two station agents.

Mr. Cochrane : No, we would move the junction down, and would not have the extra agent.

Mr. Loggie: You will have to have a station agent on the south side of the river.

Mr. Cochrane: I know, but we would move Chatham Junction down to it.

Mr. Loggie: You are going to move that to Derby Junction, are you not?

Mr. Cochrane: No, down to where the branch line would strike.

The matter was again brought to the minister's attention in the following year, when he is reported in Hansard (Vol. V, 1914, p. 4877), as follows:

Mr. Loggie: There is a rumour afloat that the work was let in two contracts and that one of them was cancelled. May I ask the minister if any changes are proposed other than those suggested by the minister last year, namely, that the freight from the main line for Chatham would be transferred at Derby Junction? The minister said last year that the station at Chatham Junction could be moved out to Derby Junction, and there the freight would be transferred for Chatham.

Mr. Reid : There has been no change, the policy as laid down by the minister will be adhered to.

That policy was that the train was to leave Fredericton and go into Chatham via Derby Junction, and that the freight was to be transferred from the main line trains at Derby Junction, and be carried by the branch trains into Chatham from Derby Junction, instead of from Chatham Junction as formerly. In 1914 I asked the Acting Minister of Railways whether it was proposed to make any change in the contract that had been given for the construction work at Derby Junction, and on the south side of the river, and the answer I got was:

There has been no change; the policy as laid down by the minister will be adhered to.

Now, at that time the plans were for improvements at Derby Junction, and the contract had been entered into; it provided for the construction of a "Y," and of a warehouse to be used in transferring the freight. Notwithstanding that the contract had been entered into, and notwithstanding the further fact that the minister on the floor of the House had said that there would be no change in the policy as laid down. that portion of the contract was cancelled and the "Y" was never constructed. The trains that had been operating between Fredericton at one end and Loggieville at the other had forsooth to have a different destination because this promise was—what shall I say?—broken. The contract was cancelled and it was no longer possible to run the trains into Chatham unless they were pulled in with the engine reversed, that is, with the tender ahead; so that it became practically impossible to get into Chatham via Derby Junction, as we had previously been able to do via Old Chatham Junction. The result is a most unsatisfactory service for about one-half of the people of Northumberland county. I have before me a letter from a very prominent merchant of the town of Chatham, protesting on behalf of the people of the town against the service that is being given that portion of the county at the present time. I have also before me a copy of an alleged petition, signed by twenty-seven passengers, who on the 3rd of March arrived at Newcastle at the regular hour of 11.30. As the minister knows, the distance between Chatham and Newcastle is only about 5 miles on a straight line, but the circuitous route that we have to take by rail brings it to about 13 miles. These twenty-seven passengers arrived at Newcastle at 11.30; the Maritime, from the south,, arrived at 12.35; and it was 2.25 in the morning before the 27 passengers reached Chatham. In other words, it took them almost three hours to get from Newcastle to Chatham. This is not an unusual thing. One paragraph of a letter I have here, referriing to this train service, says:

> The express agent there said that this was a most usual occurrence, and that the Chatham train was held up on any excuse possible.

I might as well give you another instance which is taken from the Tri-weekly Press, in the town of Chatham:

> The delegates returning from Fredericton Wednesday evening had a sample of train service that will do them for some time. They arrived in Newcastle at 11.30 and waited until the Maritime came in a little late, or at 12.30. Then they still waited hopefully for the branch to get under way, even after it had been in Newcastle over an hour, but for some reason or another it did not pull out of Newcastle until two o'clock and the tired delegates arrived here shortly before three. They certainly deserved the kindly reception that their efforts met with in Fredericton for their trip in the town's interests was made at considerable personal inconvenience.

I have deemed it my duty to draw the attention of the minister to this matter. The service into Chatham, Loggieville, and Nelson serves nearly half of the citizens of the county, some 15,000 persons. Up to the time that this diversion was made they had a service by which such passengers would have gone on directly into Chatham, instead of having to go to Newcastle, as they have now, and then be brought back some 3½ miles before they reach Derby Junction, so that without necessity they are traversing about seven miles. So far as I can see there is no good reason why those passengers can not be sent direct into Chatham. The passengers for Newcastle either could be transferred to the local between Chatham and Newcastle, or they could get off at Nelson, where there is now a new concrete and iron bridge, so that they would be within reach of home if the train continued down to Chatham, as it did in former years. I cannot see any good reason for this change, and it was a very unexpected one. When I had this matter up before the acting minister two years ago I took him at his word that there was no change in the policy to run the trains into Loggieville from Fredericton as usual; that the contract for the Y would be completed, and that the work was, as I supposed, going on, although there were rumours abroad that the plans were changed, and that the road was to end at Newcastle instead of at Chatham. The minister will see that the distance between Derby Junction and Newcastle is 3·7 miles. A passenger travelling south must traverse that 3·7 miles going north, and he must traverse it coming back, so that every passenger travels 7·4 miles more than he did formerly and more than I can see any occasion for. Further than that, every ton of freight that comes from the south into the lower portion of the county has to travel 3·7 miles into Newcastle and 3·7 miles back to Derby Junction.

Mr. BRODER: Why do they not leave the passengers at the Junction until they come back?

Mr. LOGGIE: That is exactly what we are asking them to do. We want them to leave the passengers at Derby Junction, but that is what they refuse to do. They take them past to Newcastle, 3·7 miles distant, and then bring them back.

Mr. REID: They give them that much of a free ride.

Mr. LOGGIE: I am afraid there is not much of a free ride, but if there is, that is a loss to the Government. That is one way of doing business. Just a short time ago the minister brought up the question of hauling a train eighty miles more to Churchill and eighty miles back and he said that the additional cost of operation would have to be added to the freight rate. How does he harmonize that statement with the one he has just made? The minister will see that, according to the timetable, there are five trains daily, but one of them has recently been changing its passengers at Derby Junction, so that four trains still keep on to Newcastle and change their passengers there. If we have four trains each way daily, that would represent eight trains a day. 3·7 miles travelled by eight trains would mean 29·6 miles daily by one train. Taking 313 days, that would give 9,265 miles; or in other words, you carry one train 9,265 miles—shall I say, without any revenue? The insinuation of the minister is that it is without any revenue. I do not believe that; I think some conciliatory offer was made that there would be no extra fare between Chatham and Newcastle for furtherance, as it were, on the main line, instead of between Chatham and Derby Junction, but how long that condition will exist I do not know. You have, however, this extra mileage, taking both passengers and freight 3·7 miles north and then bringing them back 3·7 miles. If you have on each train one express car, two passenger cars and, say, ten cars of freight, or in round numbers, say 150 tons of freight carried over 9,265 miles, at one-half cent per ton per train mile, the cost of operation would be $6,948.75. Somebody must pay that. Either the Government is paying it or the consumer or dealer who is bringing the goods in is paying it. It seems to me that that is unfair, and it surely can be remedied. Surely thoese people are not to lie under this burden forever; and if it has been promised that a Y shall be constructed, is there any good reason why it should not be done? If the minister can give me any good reason for it, I shall be glad to convey it to my constituents. The whole matter is very unsatisfactory. There is a grievance on the south side of the river because the rails have been taken up and there is a grievance that the service on the south side of the river into Nelson, Chatham and Loggieville does not compare favourably with the service that we had when the trains ran direct from Fredericton into Loggieville. There is no good reason why they cannot continue running from Fredericton into Loggieville, especially because the new bridge will allow passengers for Newcastle to get off and go to their destination. But passengers, as I have pointed out, remain three hours in order to cover a distance of thirteen miles by rail, but five miles in a straight line. The minister must expect that kind of service to breed discontent. The Department of Railways and Canals is, to all intents and purposes, a public carrier, a public servant. The Canadian Pacific Railway would not allow this sort of thing to exist but would endeavour to meet the views of their customers. These passengers are clients of the Crown, and the Crown should try to give them satisfactory service. I hold that there is no difficulty in the way of meeting their views except the construction of the Y at Derby Junction. That construction was actually contracted for, but for some unaccountable reason the contract was cancelled and we were left in the deplorable condition that the passengers must lose three hours to cover five miles. Besides, is there any reason why, if the trains are on time, the Crown, in this case a public carrier, should ask me to lose about an hour extra of time if I want to travel to Moncton or St. John? They haul me four miles north and then they haul me four miles south, instead of allowing me to avoid this loss of time by getting on a train at Derby Junction. There must be some way to overcome a difficulty like that. The public should not be put under such a handicap unless there is great necessity. And I say that the difficulty would be overcome by putting in the Y at Derby Junction and sending part of the train from Fredericton to Loggieville as they used to do, and as it was their policy to do, as I have shown by the references I have made.

Mr. REID: Let me first refer to the delay that occurred on a certain day in March. Of course, I have not the details before me to-night. But I know that in

the month of March last—and the hon. member can hardly have forgotten it—throughout the whole of that part of Canada trains were delayed on account of the snowstorms. Fort twenty-six years we have never had on the Intercolonial such difficult conditions to face on account of storms. In addition, there is the special work that the Intercolonial had to do last winter because of the war. In the case referred to, the delay was caused, as stated by the hon. member, by this train waiting for the Maritime through express.

Mr. LOGGIE: Only about forty minutes.

Mr. REID: There was a delay of the Maritime express on the line running from Fredericton to Loggieville.

Mr. LOGGIE: I desire to make that clar. If the line were running from Fredericton to Loggieville, the delay in the Maritime express would not have affected the situation.

Mr. REID: The hon. member knows that in years gone by there was a train service between Fredericton and Loggieville direct, there was a service on each side of the river. The service from Fredericton to Loggieville never went to Newcastle. The rails were taken up between Nelson and Blackville, and therefore the service could only be carried on on one side of the river.

Mr. LOGGIE: The through train service was only carried on on one side of the river. If the Maritime train were late the passengers for the main line would be delayed at Old Chatham Junction. But now if trains from Fredericton would go on to Loggieville passengers for Newcastle could get off at Nelson and get home over the new bridge.

Mr. REID: If the train service is carried on between Fredericton and Chatham, or Loggieville direct, you avoid going to Newcastle.

Mr. LOGGIE: But the Newcastle passengers can get off at Nelson and go over the new Morrisey bridge to Newcastle.

Mr. REID: But they are three miles away.

Mr. LOGGIE: No.

Mr. REID: They have to change at Derby Junction.

Mr. LOGGIE: No. They get off at Nelson which is near the bridge, and they are at their homes.

Mr. REID: What I want to explain to the hon. member is, we have a train service between Fredericton and Loggieville or Chatham—via Newcastle—

Mr. LOGGIE: But it takes three hours to get from Newcastle to Chatham.

Mr. REID: Not if the connections are on time.

Mr. LOGGIE: If the train is on time it takes an hour and a half.

Mr. REID: The hon. gentleman said it took three hours.

Mr. LOGGIE: And so it did.

Mr. REID: Only in this one case. I remember a case that occurred in the month of March in this very city. A member of this House took his train at the station here at eleven o'clock at night, but woke at six o'clock to find that the train had started and had come back, and he did not reach Toronto until six o'clock the following night. The whole service must not be judged by a delay through a snow blockade. The hon. gentleman has sent me a time table which states that between Newcastle and Loggieville, a distance of eighteen miles, the train leaves Newcastle at 12.05 and arrives at 12.55—so that it takes fifty minutes. And we have four or five trains during the day. Yet the hon. member tries to make the Committee believe that it takes three hours for the train between Newcastle and Loggieville.

Mr. LOGGIE: I said it took three hours on this occasion, but in the regular way it takes an hour and a half. The train is due at Newcastle from Fredericton at 11.30, and according to the time table it is due at Chatham at 12.55. In other words, it takes an hour and twenty-five minutes to go a distance which is five miles in a straight line and 13 miles by the railway.

Mr. REID: With regard to the inquiry of the hon. member for Westmorland as to the New Brunswick and Prince Edward Island railway, the information that I have with reference to the expenditure of $129,600 is as follows:

Upon completion of the Prince Edward Island ferry terminals at Cape Tormentine, N.B., and Carleton Point, P.E.I., the bulk of the traffic between the Intercolonial railway and Prince Edward Island railway will be handled over the New Brunswick and Prince Edward Island railway.

In order to handle this increased traffic and the larger locomotives which will be required for same it is necessary that the bridges be strengthened. It is, therefore, proposed to re-

place five of them with pile trestles and three with wooden stringers, and the bridge at Baie Verte with steel spans on concrete piers and abutments, which is estimated to cost $56,500.

It is also necessary to replace old 56 pound rail with 80 pound branch line rail at an estimated cost of $69,000. Ballast is also required at points which are not now ballasted, at a cost of $3,100.

In order properly to operate this additional traffic it is necessary to have a telegraph line, estimated to cost $1,000. The total amount required for 1916-17 is $129,600.

Mr. LOGGIE: I hope the minister will promise that some change will be made to remedy the serious state of affairs to which I have called his attention.

Mr. REID: I will take this matter up with the minister and with the management with a view to seeing if the grievance stated by the hon member is one that would justify a change in the present train service, whether anything can be done to remedy the conditions.

Mr. COPP: I want to say a word or two with reference to the unsatisfactory train arrangements to which the member for Northumberland has called attention, and to the carrying on of the Intercolonial business in the Maritime provinces at the present time. A few evenings ago the member for Northumberland drew attention to the way his county had been used in the matter of railway accommodation. At the mere whim or fancy of the general manager of the Intercolonial railway, the railway accommodation which these people had enjoyed for upwards of 30 years was taken from them; the railway was torn up and the people left without proper railway accommodation. The efforts of the acting minister to-night have been in the nature of his acting as apologist for the Minister of Railways and the general manager of the Intercolonial Railway, and in that respect I sympathize with him very much indeed. The acting minister told the hon. member for Northumberland that these 15 or 20 miles of railway had been torn up and taken away because upon examination and investigation it was found that that portion of the Intercolonial did not pay. That is a very poor excuse indeed. If that same argument were used in reference to other portions of the Intercolonial railway or in reference to other railways throughout Canada, many miles of railway would be dismantled and torn up, and the people would be deprived of proper railway accommodation. During the last fiscal year there was a deficit on the portion of the National Transcontinental Railway that the Government has been operating of $86,313.70, aside from the consideration that in the operation of the road by the Government certain equipment, cars, and engines of the Intercolonial railway were used. Although my hon. friend says that it is all right to subject the country to the loss of $86,000 in connection with the operation of that part of the Transcontinental Railway, it was entirely irregular and out of reason that the railway in the county of Northumberland, proving not to be profitable, should continue in operation. It must be torn up because, forsooth, it did not pay a proper dividend upon the investment made by the Government in that portion of the railway. If we take the St. John and Quebec railway, which the Government have been operating during the past year, we find that in the operation of that road also there was a deficit of $5,955. Yet my hon. friend to-day asked this House to pass a resolution in favour of giving more aid to that railway, although he has torn up the road in the county of Northumberland, which my hon. friend has the honour to represent. The same thing is true with regard to the International Railway, which has recently been purchased by the Government as a feeder of the Intercolonial. In connection with its operation last year there was a deficit of $1,237. According to the argument of my hon. friend the acting minister, instead of purchasing the International Railway they should have stopped operation, torn up the tracks and junked the whole road. The Government paid $270,000 for the road that I have just inquired about, the New Brunswick and Prince Edward Island Railway. They immediately expended upon it about $25,000, and in the estimates that were passed the oither day a further amount of $129,000 was provided for this same road. During 8 months of last year there was a deficit in the operation of this road of $18,522.72. Under these circumstances I do not think that the minister has made a satisfactory answer to the complaint of the member for Northumberland with regard to the dismantling of the road in his constituency. When that road was torn up the people of the locality were promised that bridges would be built across the river so that the farmers would be able to get some railway accommodation by getting access to the railway on the other side of said river.

Yet this Government, in spite of the fact that the manager of the Intercolonial went there and destroyed that railway, has never given the slightest evidence of trying to

carry out the promise made in regard to building bridges across the river to give those people who have suffered the loss of accommodation some compensation. I sincerely trust that the Acting Minister of Railways will try to impress upon the Minister of Railways, the desirability of trying to persuade the general manager to do something for the benefit of that locality.

I wish to refer for a few moments to the general operation of the Intercolonial railway. My hon. friend the acting minister said to-night that it was because of a heavy snowstorm in March that the trains were late and that our friends from the county of Northumberland had the experience which has been related. I regret very much that the acting minister has not had an opportunity of visiting the Maritime Provinces and of looking into the railway situation there, for, let me tell him, and I am sure that every hon. member from the Maritime Provinces, whether he supports this Government or sits on this side of the House, will agree with me, that there is a great deal of dissatisfaction in regard to the operation of the Intercolonial railway in the Maritime Provinces. There are several reasons for that dissatisfaction. During the past few years, and I am bound to say that the complaints have not been confined to the period during which the present Government has held office, the head of the Department of Railways has endeavoured to unload a certain amount of responsibility for the operation of the Intercolonial railway on the general manager or on the board of management. I do not propose to-night to go into any lengthy argument as to what claims the Maritime Provinces can well make in regard to the operation of that railway. That has been threshed out in this House many times, and on every public platform in the Maritime Provinces, but I do say that the Minister of Railways, I care not to what Government he belongs, cannot rid himself of the responsibility for the operation of the Intercolonial railway. You may import general managers from where you like, or you may have boards of management, or what you will, but the responsibility for the operation of that road still rests upon the Government represented by the Minister of Railways. The present management of the Intercolonial is most unsatisfactory in many respects. I would suggest to the Acting Minister of Railways, if he intends to remain in charge of that department for some time, to go down to the Maritime Provinces, not on a flying trip and not with the view of letting the papers say how quickly the trains can rush along, but on a visit that will enable him to personally look into the railway situation and realize, as I believe he would realize, the most unsatisfactory condition which prevails in regard to the operation of that railway. I do not believe that it was ever the intention or the expectation of any Government that the Intercolonial railway should yield a surplus to be paid into the consolidated revenues of this country. It is all very well for the minister to tell us that last year it produced a surplus of $2,000,000. Is that correct?

Mr. REID: I said that there was a surplus, but I want to add this: The hon. member understands that if at any time the Intercolonial railway had a surplus, not only during the regime of the present Government, but throughout the 16 years when the Liberal party were in power, it went back to the Intercolonial railway; it never went into the Consolidated Revenue Fund. There was never a dollar of profit from the Intercolonial railway that went into Consolidated revenue. If there was a surplus, the Intercolonial got the benefit of it.

Mr. COPP: I quite understand that. I was going to say that it is very easy to show a surplus or a deficit in connection with the Intercolonial railway or any other public institution; it is merely a matter of bookkeeping. But if there was a surplus, no credit is due to the Government, or to the general manager, or to the officials of that road, because the surplus comes from the pockets of the people who pay the freight charges. The freight rates on the Intercolonial railway have increased very materially during the past few years. I cannot say exactly what the percentage of increase has been, but the rates have been increased from time to time, and that increase is the result of the expensive management of that railway. We all know in the Maritime Provinces, as every member of this House knows, the late manager of the Intercolonial railway, Mr. Pottinger. He was general manager for many years, and, if my memory serves me rightly, he never received more than $7,000 a year. I grant that for a time the railway did not go so far as Montreal, but, for some years after the railway was extended to Montreal, that gentleman managed the Intercolonial railway at a salary of $7,000 a year, and every-

body seemed perfectly satisfied. Eventually a change was made, and the railway was placed under the control of a Board of Management, Mr. Pottinger being one of the members of that board; and after the change of Government the board was dissolved, and Mr. Gutelius was appointed manager at a salary of $20,000 a year. I do not know whether the report is true that his salary has been increased to $25,000, but I do know that he was paid $20,000 a year after his appointment. I know also that he has brought to the Intercolonial railway a very large number of high-salaried officials from other railways. Under those conditions, it seems to me that the people of the Maritime Provinces have some reason to find fault, or, at least, to bring to the attention of the Minister of Railways the condition of affairs in regard to the operation of the Intercolonial railway. I do not propose to take up the time of the committee in discussing the question of whether the appointment of Mr. Gutelius was made in consideration of the services which he rendered to this Government in connection with the investigation of the Transcotinental railway, but I desire to draw the attention of the minister, and particularly the attention of the members from the Maritime Provinces to the fact, which is without question, that the present manager of the Intercolonial railways has adopted a policy of bringing from other railways men with whom, I suppose, he had been associated for some years in the operation of other railways, and placing them in responsible positions on the Intercolonial railway.

I maintain—and I want to put it in the strongest manner possible—that these positions should go to those who are trained on the Intercolonial railway and who are just as capable, just as willing and would make just as good a record for the Intercolonial as importations brought from the outside by the present manager. I do not propose to take up the time of the committee in discussing the Transcontinental railway as that matter will come up upon another vote. My hon. friend claims that the traffic on the Intercolonial last winter was very heavy and that is put forward as an excuse for the failure of the Intercolonial to carry the freight which was offered to it at Montreal and other points. The principal reason for this failure to handle the traffic, it seems to me, was due to the fact that upon undertaking the operation of the Transcontinental railway from Moncton west, the minister took the rolling stock and equipment from the Intercolonial and placed it upon the Transcontinental railway thus sacrificing the interests of the people of the Maritime Provinces. The freight that should have gone over the Intercolonial day after day and week after week was held up for weeks and months—I know that it was held up for over a month at least—and business men, manufacturers and people generally in the Maritime Provinces were unable to get their shipments of merchandise and other articles through to the great detriment of the business interests of the Maritime Provinces. While the department were serving the people in the western section of the country, the people of the Maritime Provinces were suffering because this rolling stock was being used for the purposes of the Transcontinental railway. I desire to show the conditions that existed in the Maritime Provinces as a result of freight being held up at different points. I have in my hand a letter written by a very prominent manufacturer in Amherst. He is not a political friend of mine, but I know him very well and I know my hon. friend from Cumberland (Mr. Rhodes) would realize that a letter from him would mean a great deal and should have consideration. I do not propose to read the whole or it, but the writer says:

> The following letter by Mr. William Knight in regard to the continual bungling and inefficiency which is characterizing the management of the Canadian Government railways appeared in a recent issue of the Moncton Transcript. It will be of special interest in Amherst not only because Mr. Knight is a prominent citizen of the town but also because he points out some of the harm which is being done Amherst industries and people by the bungling. The letter is as follows:
>
> We hear a great deal these days about loyalty to the Empire as well as to Canadian institutions. This condition is very laudable. In fact, any other stand by the individual is quite inexcusable. But I have been wondering why this spirit of loyalty does not equally apply as well to Canadian Government railways and their management.
>
> It is understood that munitions and allied freight have the right of way, which, of course, is quite correct. But is no attention to be paid to commercial freight at all? Is no effort to be made to relieve the apparent congestion? Or are Canadian industries to be allowed to go to the dogs?
>
> The Amherst Foundry Company is now closed down for lack of coke supply. A car of coke for this industry crossed the line into Canada on February 16th. Since that date nothing has been heard from it. I have tried every conceivable means to get information as to where this car has been side-tracked and why, and when we may expect to receive it in Amherst, but no information is forthcoming. Evidently

the railway management does not consider Canadian industries worth its notice, let alone the ordinary courteous treatment due to a business inquiry. Other industries are in somewhat the same condition, I understand, through similar causes.

That is a portion of a letter written by a gentleman in Amherst, and making complaint as to the condition of affairs on the Intercolonial railway because freight was being held up. The acting minister may make the same answer that he gave to the hon. member for Northumberland (Mr. Loggie), and say that it was a hard winter. But this appeared on February 16, and at that time the weather conditions were not unfavourable to getting freight through. But when you come to realize that seventy-five engines were taken off the Intercolonial railway and placed upon the Transcontinental you will readily understand why freight became congested and was held up at junction points along the line of the Intercolonial. What was true in Amherst was true in Moncton. I was in Moncton during the Easter holidays, and I was talking to a very prominent business man there, a builder and contractor, who told me that his business was entirely held up because some lumber that he was bringing from British Columbia was delayed at Montreal. He had to discharge his hands, and the work was shut down waiting for this freight to be brought forward. These are matters that should occupy the attention of the Acting Minister of Railways and the Government in the interest of that portion of the country which is served by the Intercolonial. I do not know whether the same complaints have come to other hon. members of this House; I have not only had personal complaints, but I have had numbers of letters, and I have seen complaints in the newspapers published in that portion of the country in regard to this matter. I contend, as a representative from the Maritime Provinces, that the Intercolonial to-day, as it has been ever since the present general manager has had charge of it, is run more in the interest of the Canadian Pacific than in the interest of the Government or people of Canada, or the patrons of the road. They have changed the methods and management of the road to conform to the system of operation of the Canadian Pacific. They have adopted the standard rules, as the Canadian Pacific have, and they have changed the system in dining car service, as was sworn to before a committee of this House of which I have the honour to be a member. The superintendent of the dining car service, when put on the stand recently, stated that they had changed the system of the dining car service so that it would be conducted in the same way that other railways conducted their dining car service. What is true of that is true of nearly everything in connection with the road. They have increased the freight rates to compare with those of the Canadian Pacific. The Intercolonial railway was built particularly in the interests of the people of the Maritime Provinces at the time of Confederation. When I say that I do not mean to argue that freight should be carried free. The Intercolonial should be operated so as to maintain, as nearly as possible, an equilibrium between expenditure and revenue. I believe, and so do a great majority of the people in the Maritime Provinces, that at the present time the Intercolonial is being operated just to suit the convenience of the Canadian Pacific railway, and practically at their dictation.

Another matter to which I wish to refer is the wages paid to the ordinary labourer on the Government railway system. Speaking on this point in the House the other day, the hon. member for Queens and Shelburne said:

> Mr. F. B. McCurdy (Shelburne and Queens): Drew attention of the Minister of Railways to a matter affecting a large number of employees on the Intercolonial railway. I understand that the scale of pay allowed to trackmen, ash-pit men, and that class of labour, has been $1.60 per day. In these days of much travel, when the railway is busy, and also in view of the conditions which prevail in the outside labour market, I would ask the Acting Minister of Railways if he cannot see his way clear to make a revision upward of that scale of pay?
>
> Hon. J. D. Reid (Acting Minister of Railways): With reference to the question of labour on the Intercolonial and rates of pay, I may say that this matter was taken up by the Minister of Railways and Canals with the general manager as far back as February last, and my information is that last month the wages of trackmen were increased to $1.75 a day, on country sections, and to $1.85 a day in cities. It has also been decided, commencing on the 1st of April last, to pay the coal shovellers, ash-pit men, etc., referred to by my hon. friend, at the rate of $1.70 per day. These advances have been made voluntarily by the minister and the general manager.

I suppose the minister thought that he was acting very magnanimously when he increased the wages of the ashpit men and common labourers from $1.60 to $1.70 a day, and the men on the country sections from $1.60 to $1.75 and the men in the city sections from $1.60 to $1.85 a day! Let us see whether this is a

fair rate of wages to be paid to the ordinary labourer in this country.

Mr. MORPHY: The hon. member quoted the minister as saying that a voluntary increase had been made in the men's wages. Have any requests come from the men themselves for an increase of pay?

Mr. COPP: I could not say whether there has been any special request, but we all know there have been any number of requests through their unions.

Mr. MORPHY: I understood this increase was a voluntary one on the part of the minister.

Mr. COPP: I was reading from the minister's speech. I am not one to find fault with the salaries that are paid Government officials, unless they are very very extravagant, such as the salary paid to the General Manager of the Intercolonial and some of his officers—$12,000 for instance, to one man, and $10,000 to another. I am not going to find fault with the salaries that are paid the men in the offices at Moncton. But I do wish to draw the attention of the Government to the wage the ordinary labourer on the Intercolonial railway is being paid. I maintain that he is not being paid a wage sufficient to enable him and his family to live decently and honestly in the city of Moncton or any other city in the Maritime Provinces. It is all very well to say that the man on the farm gets only $1.50 or $1.75 a day, but it must be remembered that the great majority of that class of labour own a small house, and have a few acres of land, a cow, and a few hens. They raise some of their own meat, and with all these advantages can live decently on that wage. But a man with a family, living in the city of Moncton, or any other city, who has to pay rent and taxes, educate his family, and meet the hundred and one demands that are made upon him, will any hon. gentleman say that a man can do this on $1.75 a day? I have read some parts of the report made by the Cost of Living Commission, laid upon the table of the House early in the session. Among other interesting things in that report, which was made by a commission appointed by this Government, I find a table compiled, no doubt, from evidence adduced before the commission, which gives the average cost of living for a period of five years. The commission estimated that in the year 1913 it would cost a man $9.63 a week to keep himself and a family of five; that is, I suppose, living like an ordinary, decent man should live.

Mr. MORPHY: What is the heading of that table?

Mr. COPP: I just copied out the details, but I can let my hon. friend know to-morrow. According to this table it will cost a man with a family of five a little over $500 a year to live. Now, if the $1.70 per day man, whose wages the minister has so magnanimously raised from $1.60 to $1.70, works 300 days a year—if he works every working day in the year, he can only earn $530. The $500 that the commission estimates it would cost him to keep himself and his family does not allow one cent for rent, for clothing, for education, for church and charitable purposes, or for medical attendance and things of that kind. He earns, then, $530 at the outside, and his bare living expenses, according to this table, amount to a little over $500. I have no doubt there may be some errors here and there; I do not know the gentleman who made up the statement, but if it is worth anything, it must mean that this man is going to be some two or three or four hundred dollars behind at the end of the year if he lives as an ordinary, decent, intelligent man should live. Under those conditions, if the minister is not in a position to do so himself, he should have someone work out a reasonable table and evolve a minimum wage for the ordinary labourer which will enable him to make a decent living. In the city of Moncton the working man who goes down into the ashpit in the early morning and works there for ten hours gets $1.70 a day, whereas the general manager of the Intercolonial gets his $20,000 a year with free house rent and everything else in connection with it absolutely free. Compare the condition of that labourer's child with the condition of Mr. Gutelius' child. I am not so unreasonable as to say that the general manager of the Intercolonial should not receive a larger salary than the ordinary labourer who does the inferior work on that railway, but the latter should be placed in such a position that his child can go to school decently clad and mingle with the children of the other officials of the Intercolonial or other citizens. I make that claim, whether it be right or wrong, on behalf of the labouring men on the Intercolonial. As long as I have an opportunity to raise my voice in defence of the ordinary people of this country, I will say that this matter should be taken up by this Govern-

ment in order to see that a reasonably fair deal is meted out to them. I do not propose to labour that question further; I simply want to bring it to the attention of the acting Minister of Railways. If the Government cannot see their way clear to increase the wage of the common labourer, then they should cut off something from the salary of the high officials and add it to the wages of those who are receiving a mere pittance and doing the hard part of the work.

I also want to call attention to a matter which is working havoc and causing loss to the Intercolonial, that is, the policy that has been followed by the Intercolonial of withdrawing the Ocean Limited train during the winter months. My hon. friend may say that it does not pay to run the Ocean Limited from Halifax to Montreal during the winter months. I do not see how you can figure out whether the running of a certain train pays or does not pay. An engineer who understands the working of a railway and the running of trains may be able to say what it costs per mile to operate a certain train from Halifax to Montreal. Many business men, however, might make up their accounts at the end of a week or at the end of a month and find that they had not made any money, but is that any reason why they should go out of business? They should rather put more energy into their business and make the next week or month make up for what they have lost, and pay a good dividend. The Ocean Limited has been running for the past few years and is looked upon practically as a tourist train and as a great advertisement for the Maritime Provinces. The Matapedia Valley is considered to be one of the most beautiful spots in the whole Dominion, and coming through there on the train at daylight the passengers have an opportunity of seeing that section of country that we all admire, and we feel that the operating of that train has been of great service. The Canadian Pacific and the Ocean Limited come from Halifax to Moncton as one train; at Moncton one section known as the Ocean Limited goes on over the Intercolonial to Montreal; the other section known as the Canadian Pacific goes on down to St. John and then through the state of Maine and on to Montreal. Just as soon as passenger traffic commences to drop off in the winter, the Ocean Limited is taken off and the whole traffic handed over to the Canadian Pacific Railway. What is the result? We are all creatures of habit. It is as natural for us to travel always over a certain road as it is for us to eat. If one acquires the habit of going to a certain hotel, it is the most natural thing in the world to continue going to that hotel. How then can the manager of the Intercolonial railway or the Minister of Railways, who is head of the department and who has charge of the operation of that road, expect to build up a traffic for the Ocean Limited over the Intercolonial railway, when every few months of the year that train is taken off and that traffic is handed over to the Canadian Pacific Railway? The people living along the Intercolonial are absolutely dependent upon the Maritime Express and those of us who go down to the Maritime Provinces know that it is a miracle if she is not from two to five hours late in the winter season. I think I am voicing the sentiments of every member in the Maritime Provinces when I say that when we go down there in the winter season we travel by the Canadian Pacific and pay the fare of $6 through the state of Maine rather than go by the Maritime Express, and what is true of ourselves is true of the travelling public; they will not travel by the Maritime Express unless they are compelled to and want to get up into the northern part of New Brunswick. We are advertising extensively and endeavouring to make the Intercolonial part of a great system, and when we realise that the Government have of their own volition taken over the Transcotinental railway and are going to make that a part of the Government system, it is a sin and a shame—I was going to say it was a disgrace—that they are operating the Intercolonial railway as a branch line, as an adjunct of the Canadian Pacific railway. I ask the minister to consider whether or not in future that cannot be changed and a better system evolved by which the people of the Maritime Provinces will receive better treatment and will have the Ocean Limited running throughout the whole year. If they lost a little money this year, that is no reason why the train should be withdrawn and, on the plea that there is only room for one, hand over the whole traffic to one, that one being the Canadian Pacific.

I have spoken in no fault-finding spirit. From the newspaper reports, not only in Liberal but in Conservative journals, the hon. gentleman will find that there is a great deal of dissatisfaction. I trust that if the acting minister continues at the head of the department, I, as one member from the Maritime Provinces, extend to him the strongest invitation to come down to the Maritime Provinces and see for himself the operation of the Intercolonial. Let him

come and stay a few weeks. One cannot get a grasp of the management of the Intercolonial by rushing over as ministers of railways usually do. If we are to have an Ontario man for all time as Minister of Railways, he should come to the Maritime Provinces and get some insight into affairs, some knowledge of that portion of the country. Then the people who are served by the Intercolonial may hope to have a fairer deal than they have been given under the present general manager, who has been brought from another competitive railway and put at the head of the Intercolonial, and who is operating the system to the great dissatisfaction of the people of the Maritime Provinces and in a way that I believe must redound to the discredit of the present Administration and to the minister in charge of the department.
