Mr. MORPHY: Mr. Chairman, I have listened with great interest to the remarks of the hon. member for Westmorland (Mr. Copp). I regret that there are only four of his colleagues on that side of the House who have thought it worth while to be present to listen to his statements. For he has made a very strong impression upon my mind. We at the other end of the country have been taught that the Government, in the Intercolonial, was a spendthrift, throwing away the people's money in useless and extravagant works—branch lines and others. The hon. gentleman has paid to the Government, not designedly, I think, a compliment in accusing them of stinginess in dealing with this road. It is pleasant to me to be disillusioned. I myself had begun to think, from the charges which had been made, that the Government were frittering away the public money on this road. But the hon. gentleman has absolutely convinced me that such a suggestion has no foundation and that, if anything, the Government have been too stingy in running the road and in affording the accommodation which the hon. gentleman thinks the people should have. It settles my doubts on the question when I was inclined to think the other way.

Mr. GRAHAM: But I do not recall that the hon. member for North Perth (Mr Morphy) made any such charge against the Government.

Mr. MORPHY: I say I was in doubt, in fearful doubt. But the hon. gentleman (Mr. Copp) has dispelled my doubts. I congratulate the Government on their careful, prudent, economical administration of the road.

Mr. COPP: Does that refer to the wages?

Mr. MORPHY: I am coming to that. I was with the hon. gentleman; I thought he made a very good point there. I understand that under the wise administration of this Government a surplus is at last in sight on this great railroad instead of the usual deficit. I do not think it is altogether fair for the Government to claim that surplus if it was gained at the expense of the working-man. I am inclined to agree with the hon. gentleman. In these times when everything a man has to use in daily life is higher in price, and especially now that the road is on a better basis through the unfortunate circumstance of the war, resulting in increased traffic, it might be a time for the Government to repeat its generosity to the men. I am not saying that they have been too generous. I think the Government are to be commended inasmuch as they made that advance to the men, apparently, without any request being made for it. That, it seems to me, shows an advance in sentiment on this subject for which the Government is to be commended instead of condemned. If the road through the connections made, and also through the fact of these seventy-five engines having been taken to swell the traffic of the road which otherwise would not have been received, these matters should be considered. I do not think the hon. gentleman made a strong point when he instanced the case of one car of lumber—a purely isolated case. Perhaps the man did not give the right address and the car is now lying in Toronto.

Mr. COPP: It may be collared. They will be lucky if they get it out of Ontario.

Mr. MORPHY: I have heard it said that when a man goes around declaring that he is extremely honest, it is better to watch him. I do not think the reflection comes with good grace from my hon. friend when he assumes that a car going into Ontario will be "collared." I believe that the people of Ontario are as honest, or nearly so, as those of other parts of the country. As to this question of running the train, I am not in a position to discuss it, but I thought the hon. gentleman's argument weak. The Government cut the train off because past experience showed that it did not pay, and to cut off the train meant to save money for the people. And the hon.

gentleman had the Canadian Pacific railway to fall back upon, so he did not suffer anything.

Mr. REID: He had to pay $6 extra.

Mr. MORPHY: Members of Parliament, so far as that is concerned, may well be asked to make a little sacrifice for the country. The Government might consider the personal loss to the hon. gentleman, but that question and the question of the labouring men are the only points on which I could agree with him.

Mr. COPP: It is hardly fair for the hon. gentleman to say that I referred to the case for any personal reason. I used it only for an illustration.

Mr. MORPHY: I had no intention of using that argument.

Mr. COPP: I did not think any hon. member would take that view of it.

Progress reported.

On motion of Mr. Reid, the House adjourned at 11.39 p.m.

Thursday, May 4, 1916.

The House met at Two o'clock, the Deputy Speaker in the Chair.

VACANCIES.

Mr. DEPUTY SPEAKER: I have the honour to inform the House that I have received communications notifying me that the following vacancies have occurred in the representations, viz.:

Of Edward Arthur Lancaster, Esq., member for the Electoral District of Lincoln, by decease; and

Of James Reid, Esq., member for Electoral District of Restigouche, by decease.

I have accordingly issued my Warrants to the Clerk of the Crown in Chancery to make out new Writs of Election for the said Electoral Districts respectively.

EXCHEQUER COURT ACT AMENDMENT.

Hon. C. J. DOHERTY (Minister of Justice) moved for leave to introduce Bill No. 99, to amend the Exchequer Court Act. He said: The purpose of the Bill is simply to extend the jurisdiction of the Exchequer Court so as to enable it to determine questions purely and simply of value. In the past there have been instances where the situation that arose was either that some party or parties put before the Government or some department of the Government a claim with regard to which there could be no room for debate or discussion as to the existence of the claim, but which was of such a nature that the quantum to be paid could not be agreed upon and was not easy of determination, or that it having been deemed proper that certain property or properties belonging to the Crown should be disposed of by sale or lease or otherwise, the parties concerned and the department concerned were not able to determine what would be the precise value. The purpose of the Bill is to add a clause to the Exchequer Court Act enumerating the matters with regard to which that Court shall have jurisdiction and to add a clause giving it jurisdiction for the purpose of determining the value in cases such as I have referred to. The present difficulty is that in such cases there is no case proper that comes under any of the cases enumerated in the existing section.

Motion agreed to, and Bill read the first time.

SHELL CONTRACTS.

ROYAL COMMISSION OF INVESTIGATION.

Mr. F. B. CARVELL (Carleton, N.B.): Mr. Speaker, I desire to move the adjournment of the House, and before doing so, I want to state that I have given you very short notice. I have given the leader of the Government no notice at all, and I realize that I am perhaps trespassing upon the good nature of the House in taking this course, but my reasons are as follows: A matter occurred this afternoon at the sitting of the Royal Commission when Mr. Johnston was prohibited from cross-examining witnesses on the ground that the scope of the commission was not broad enough to permit of his doing so. I wish here in the most emphatic manner to state that I do not wish to be considered as casting any reflections whatever upon the decision of the commissioners. I simply want to state the facts as accurately as I can. Mr. Johnston rather persisted in the matter, and finally the commission made the statement that it might be advisable to apply to Parliament in order that further powers might be given to them. The only way that I could do so would be to move the adjournment of the House in order to discuss the matter, and the discussion on that motion, as my hon. friends know, would

be a discussion only of the matter itself and, of course, would not decide what might take place in the future. I did not leave the rooms of the commission until ten minutes past one o'clock and I had no time whatever to see anybody. As the House met at two o'clock, I simply handed to Your Honour a very rough draft of my proposal and I had no opportunity of communicating the matter to my right hon. leader or to the Government side of the House.

Mr. ROGERS: I may say in general terms, that, of course, there would be no objection to the adjournment of the House being moved for the discussion of any question of public importance. My hon. friend presents a statement of what he claims to be the facts as presented at the commission about one o'clock——

Mr. CARVELL: Before noon.

Mr. ROGERS: —when Mr. Johnston was refused the right to cross-examine certain witnesses in connection with the investigation, but my hon. friend can quite understand that we have not all the facts before us. We have not the exact statement as made by the commissioners and the reasons given for their refusal, and I think my hon. friend should at least be satisfied to allow the matter to stand until to-morrow when we shall be pleased to facilitate any proposal he wishes to make with respect to the adjournment of the House for the discussion of the matter, as we shall then have a report before us.

Mr. DEPUTY SPEAKER: Order. I find on referring to the rules of the House that section 39, subsection 2, says:

Leave to make a motion for the adjournment of the House (when made for the purpose of discussing a definite matter of urgent public importance) must be asked after the ordinary daily routine of business (rule 25) has been concluded, and before notices of Motions or Orders of the Day are entered upon.

Therefore it will be a little later on in the proceedings of the House before the hon. member can ask for leave to move the adjournment.

Mr. CARVELL: The routine proceedings have been completed.

Mr. DEPUTY SPEAKER: We have not yet come to the Orders of the Day. Subsections 3 and 4 of the rule are as follows:

(3) The member desiring to make such a motion rises in his place, asks leave to move the adjournment of the House for the purpose of discussing a definite matter of urgent public importance, and states the matter.

(4) He then hands a written statement of the matter proposed to be discussed to the Speaker, who, if he thinks it in order, reads it out and asks whether the member has the leave of the House. If objection is taken the Speaker requests those members who support the motion to rise in their places, and, if more than twenty members rise accordingly, the Speaker calls upon the member who has asked for leave.

Mr. CARVELL: I do not wish to ask you to make a ruling at all—

Mr. DEPUTY SPEAKER: Order. (Reading): "The hon. member for Carleton desires the leave of the House to move the adjournment of the House to discuss a matter of urgent public importance, namely, the enlargement of the scope of the Meredith-Duff inquiry." I suppose the hon. gentleman refers to the Royal Commission.

Mr. CARVELL: Yes. That was written in a great hurry.

Mr. ROGERS: I can only repeat what I said a moment ago, that, in view of the fact that the House would not be in possession of the facts of the case and the actual statements made by the commission giving their reasons for the refusal, whatever they may have been, I think my hon. friend from Carleton will appreciate that he should not press the motion until to-morrow, when, I assure him, everything will be done to facilitate the bringing of it before the House with a view to having the discussion he desires.

Mr. CARVELL: Of course I could not refuse the request of my hon. friend the Minister of Public Works, put in such a pleasant tone as he has put it to me; but I would like to impress upon the House the importance of having this matter decided very early. We can quite see that the whole investigation, or at least a very large part of the conduct of the investigation is held up, pending the decision of that question. For instance, the witness under cross-examination was Sir Alexander Bertram, whose examination was delayed or postponed until this matter should be decided. The same question will arise, I think I am safe in saying, in the case of two-thirds or three-quarters of the witnesses that may be called. Therefore, if it is to be decided at all, it must be decided quickly. However, if the minister thinks it cannot be discussed to-day, I want to be reasonable, and I comply with his request. I would make this suggestion, however, that possibly an arrangement might be made by which it could be discussed after eight o'clock this evening.

Mr. MEIGHEN: May I ask the hon. member a question? Does he intimate to the House that the commission themselves expressed the desire that their powers should be enlarged?

Mr. CARVELL: I would not go that far. The commission made the suggestion that the application be made to Parliament.

Mr. MEIGHEN: Of their own motion they counselled that application be made to Parliament?

Mr. CARVELL: The commission themselves made the suggestion of their own motion that if—I want to use the words as nearly as I can,—if Mr. Johnston desired to go into these matters it would be proper to apply to Parliament.

Mr. MEIGHEN: That is very different.

Mr. CARVELL: I want to tell the hon. gentleman that I am not trying to deceive the House, and I do not think it necessary to have any nasty insinuations thrown across the floor. We may as well understand that from the beginning.

Mr. ROGERS: In view of the fact that provision has been made for the printing of the evidence taken by the commission day by day, I think we should not go on with this matter until to-morrow. We shall then have the printed evidence and hon. members will then have before them the exact statement of the commission, and there will be no question between this side of the House and hon. gentlemen opposite as to the facts. I do not think it would be in the interests of the recommendation made by my hon. friend to undertake the discussion to-day.

Mr. CARVELL: Do I understand from the minister that to-morrow the matter can be discussed?

Mr. ROGERS: Yes.

Mr. CARVELL: That is quite satisfactory.

QUESTIONS.

[Questions answered orally are indicated by an asterisk.]

WAR SUPPLIES IN PRINCE EDWARD ISLAND.

Mr. J. J. HUGHES:

1. From whom is the Government purchasing supplies for the troops located at Charlottetown, Summerside and Souris, P.E.I.?

2. From how many persons or firms did the Government receive offers for these supplies?

3. What prices is the Government paying for the supplies they are purchasing at each of the above mentioned places?

Mr. ROGERS:

1. From the following firms: DeBlois Bros., Dominion Canners Ltd., Estate C. D. Rankin, Grady, John, Great London and China Tea Co., Holman Ltd., R. T., Holman Ltd., F. J. Hughes & Co., Ltd., J. J., Kelly, Wilfrid, Kinkletter, F. M. Matthew & McLean, McDonald, Augustus, Pickard & Co., A., Prince Edward Island Hay & Produce Co., Saunders, Newsome & Co., Smith & Co., E. D., Sterns Bros., Stewart, D., Strong & Co., F. W., Wetzells Ltd., Wood Harry J., and Lidstone, W. J.

2. Twenty-eight tenders received; 61 firms were invited to tender.

3.

STATUS OF ENLISTED INDIANS.

Mr. WILLIAM CHISHOLM:

Have Indians, 21 years of age and British British subjects, who enlist as soldiers in the present war, the right to vote at a Dominion election held during the war?

Mr. DOHERTY: It has not been the practice to answer questions of law. Section 1, however of An Act to enable Canadian Soldiers on Active Military Service during the present war to exercise their electoral franchise, provides:

1. Every male British subject of twenty-one years of age or upwards serving in the military forces of Canada in the present war (hereinafter called volunteer), who, within six months immediately preceding the date when he was appointed to or enlisted in such forces, had been resident in any electoral district in Canada for a period of not less than thirty days, shall be entitled to vote in the electoral district in which he was last so resident in the manner hereinafter set out, notwithstanding his absence from such electoral district or from Canada: Provided that if any person was, at the time he was so appointed or enlisted, qualified to vote in any other electoral district in Canada he shall vote in such other district only.

—and makes no exception of Indians.

WAR SUPPLIES AT WINDSOR, N.S.

Mr. A. K. MACLEAN:

1. From whom is the department purchasing supplies for the Canadian Expeditionary Forces located at Windsor, Nova Scotia?

2. Were tenders asked for the same? If so, in what manner were they published or made public, and on or about what date?

Mr. ROGERS:

1. From the following: Dominion Canners, Ltd., T. Upton Co., Ltd., Walter F. Card, Geo. W. DeWolf, Wentworth Stores, Wentzells, Ltd., Great London & China Tea Co., Wm. Neilson, Ltd., and Canadian Milk Products Co.

2. Yes; tenders for meat were invited by circular letter, dated December 15, 1915, from 6 firms; 2 tenders were received. Also for jam from 15 firms; 6 tenders received. On December 30, the G.O.C., M.D. No. 6, was directed to obtain tenders for bread and groceries. On January 6 he forwarded 7 tenders for bread, groceries and straw. On March 2, 1916, tenders for tea and coffee were invited by circular letter from 18 firms; 8 tenders received. On March 22, 1916, tenders for bacon, lard, butter and groceries were invited from 17 firms; 1 tender received.

FARNHAM EXPERIMENTAL FARM.

Mr. BOIVIN:

1. Who has charge of the Government Experimental Farm at Farnham, Quebec?

2. What are the names of the persons employed by him upon the said farm since the first of January, 1914?

3. What salary has each of the said employees received?

4. What balance, if any, is due to the said employees for work and labour performed prior to January 1, 1916?

5. Why has said balance not yet been paid?

Mr. HAZEN:

1. Mr. Omer Victor Chevalier.

2 and 3. Amounts paid from January 1, 1914, to March 31, 1916: H. Gariepy, $17.25; D. Marchesseault, $19.50; G. Archambault, $19.50; W. Gariepy, $36; G. Tetreault, $935.90; I. Clouatre, $863.90; L. Georges, $19.50; A. Savarais, $24; L. E. Lorquet, $1,662.50; Y. Lorquet, $17.50; L. Tetreault, $78.40; A. Fournier, $21.30; J. Morris, $1.50; Alphonse Benoit, $15.80; H. Messier, $45.60; V. Tetreault, $182.40; J. Forgues, $6.40; J. Thurston, $9.60; E. Perreault, $14.80; E. Brouillette, $150; J. Lamarche, $59.75; E. Blaine, $14.40; P. Lapierre, $70.35; A. Champagne, $42.60; C. Thurston, $107.44; A. Tetreault, $203.20; A. Dandelin, $30.40; B. Lamarche, $38.40; C. A. Rainville, $3; R. Portelance, $231.30; H. Ruelle, $15.19;

A. Messier, $8; D. Gariepy, $107.20; J. Fontaine, $14.40; N. Paquette, $26.50; M. Menard, $17.50; A. Maille, $9.60; J. Adam, $70; J. Messier, $1.89; A. Millette, $41.60; E. Milette, $27.20; O. Bessette, $39.55; G. Gladu, $43.20; A. Lapierre, $20.80; E. Cardinal, $19.20; E. Pepin, $21.40; A. Loiselle, $106.69; J. Copal, $37.50; A. Thibault, $37.50; W. Deslorier, $6; N. Lussier, $12; P. Butler, $9; H. Menard, $2; E. Fournier, $28; E. Martel, $21; P. Fontaine, $16.36; L. Menard, $40; E. Lepeltier, $185.10; C. Benoit, $81.28; J. Desroches, $25.60; J. Courtemarche, $30.40; H. Thurston, $58.88; H. Lamoureux, $27.20; P. Lemoire, $271.10; E. Aldridge, $28.80; E. Tetreault, $16.00; H. Clouatre, $38.08; L. Lorquet, $34.08; N. Nolin, $9.60; A. Bertrand, $11.68; D. Benjamin, $9.28; E. Gaboriault, $3.80; S. Ouellette, $1.70; H. Zaize, $3.33; H. Marchessoult, $2.05; G. Dubois, $3.53; O. Deveau, $3.95; J. Gendron, $1.27; O. Horbec, $1.29; L. Lacaille, 76 cents; A. Lapatrie, $2.20; A. Domay, 85 cents; W. Racicot, $1.39; W. Leduc, $1.19; O. Renaud, 9 cents; L. P. Comeau, $125.94; N. Lasnier, $2.81; E. Couillard, $1.62; J. Buttler, $1.70; C. Drouin, $3.12; E. Boulais, $1.72; O. Clouatre, $3.49; A. Seguin, $4.05; J. Marcier, $3.04; O. Lamoureux, $2.85; A. Benoit, $4.98; A. Jarly, $4.04; E. Bessette, $1.85; E. Desloriers, 85 cents; E. Ouellette, $2.09; J. Sirmond, 81 cents; R. Landry, $1.57; L. Lequin, 89 cents; H. Fontaine, $3.01; E. Arbec, $3.74; R. Gariepy, 42 cents; O. Leduc, $8.52; D. Gaudreau, $2.20; J. Simard, $1.13; C. Loisel, $2.87; V. Charron, $2.26; N. Leduc, $3.93; J. Murphy, $3.58; H. Forguet, $28.07; A. Archambault, $1.66; L. Cardinal, $3.81; W. Lapatrie, $4.13; E. Miller, $2.18; A. Blain, $1.77; O. Lepeltier, $12.38; H. Granger, $10.00; L. Drouin, $9.50; R. Monty, $10.00; H. Decelle, $10.00; W. Gendron, $2.50; L. Arpin, $20.00; L. Carr, $6.00; W. Benoit, $11.76; Chas. Russell, $26.25; H. Pelletier, $22.50; O. Dupont, $6.75; C. Wilby, $6.75; H. Leroux, $12.75; H. Vadon, $13.50; J. Chouinnard, $7.50; H. Robert, $20.00; J. Galipeau, $20.00; L. Demers, $7.00; L. Donseareau, $6.50; T. Quintin, $66.00; E. pere Wilby, $27.00; T. Wilby, $3.00; H. Dandurand, $89.00; E. Morasse, $53.68; P. Dupont, $3.00; O. Duquette, $22.50; W. Dome, $19.50; A. Cardinal, $37.00; A. Lapointe, $48.50; A. Roy, $20.25; J. N. Bessette, $55.42; L. Bessette, $5.65; T. Dubuc, $44.00; W. Dubuc, $35.10; H. Dupont, $8.25; P. Morasse, $15.00; P. Laflamme, $1.26; H. Brodeur, $8.34; L. Pelletier, $19.41; P. Fournier, $8.80; J. Fournier, $31.49; E. Michaud, $18.16; J. Lafrance, $12.75; A. Laflamme, $6.22; S. Dachaud, $5.32.

4. None.

5. Answered by No. 4.

MOSES MITCHELL.

Mr. MICHAUD:

1. Was Moses Mitchell appointed a valuator in reference to land expropriated by the Dominion Government for the Valley Railway at Fredericton, N.B.?

2. If so, what amount was paid by the Government to Mr. Mitchell for his services in this connection as a valuator or otherwise?

Mr. REID:

1. No.

2. Answered by No. 1.

J. J. BEHAN.

Mr. ROSS:

1. Is J. J. Behan, of Kingston, Ont., employed in any department of the Government? If so, in what capacity, and what is his salary?

2. How long has he been so employed?

Mr. BLONDIN:

1. No.

2. Answered by No. 1.

PAYMENTS TO A. C. ST. AMOUR.

Sir WILFRID LAURIER:

1. What is the salary paid to Mr. St. Amour, Superintendent of the Soulanges canal?

2. What additional sums, month by month, have been paid to him by the Government since his appointment?

Mr. REID:

1. $1,700 per annum.

2. Statement showing amounts paid monthly to A. C. St. Amour in addition to his salary from date of his appointment, 25th November, 1911, to 1st April, 1916:

Disbursements cover moneys advanced by the superintendent to meet express charges, cleaning of office, etc., for which he was reimbursed.

HOUSE OF COMMONS.

SATURDAY SITTINGS.

Hon. ROBERT ROGERS: I beg to move, seconded by Mr. Doherty, the motion standing in the name of the Prime Minister (Sir Robert Borden), as follows:

That on and after Saturday next, the sixth instant, and on Saturdays until the end of the present Session, the House shall meet at two o'clock in the afternoon; and the order of precedence on Saturdays shall be the same as on Thursdays.

Mr. GRAHAM: I would suggest to the hon. gentleman leading the Government, that he do not propose this motion to cover next Saturday. The reason is that a great many members, believing that this would be the last free Saturday they would have, have made arrangements to go home and fix up business to stay here through next week, at least until the session is concluded. In addition to that, there is a good deal of correspondence in connection with the two railway propositions which hon. members wish to digest, and for this they have no time but Saturday. I would suggest that the motion be changed to refer to a week from Saturday.

Mr. STEVENS: I would like to ask the Government and the leader of the Opposition as well to give a little consideration to some of us who have been in the House continuously since the 12th of January. We never get an opportunity to go home, and I think it is rather unfair that the session should be prolonged and that continued absence from our business and our families should be forced upon us. I think there is a little consideration due to those members who are here all the time, and who do not go home for two or three days every week.

Mr. KYTE: I desire to register a very mild protest against the unnecessary prolonging of the session. We have been sitting here now for a good many months. I think it has been in the minds of many hon. members on both sides of the House that this motion would be moved to-day, or that it ought to be moved. I cannot conceive of any good excuse or reason which can be urged to prevent the House from expediting the business of the session so that we may arrive at the earliest prorogation possible.

Mr. ROGERS: In answer to the hon. member for South Renfrew (Mr. Graham), I may say that this motion was proposed by reason of the fact that, as he can see, there is evidence on both sides of the House of a strong desire that the session should come to an end. The Government are doing everything possible to facilitate the work and to meet the wishes of the members on both sides of the House with the view of bringing the session to an end. I hope my hon. friend will see that the desire of hon. members on both sides of the House is respected to this extent and that we shall endeavour to get on with business on Saturday. If my hon. friend wishes the railway proposals to stand, we can take up other matters in connection with the Estimates, and clean up the work which is still left. By that means we should be able to close the session next week. If hon. gentlemen are well disposed to the carrying out of the business of the House, there is no reason at all, that I can see, why it should not be possible to prorogue in a week or ten days.

Mr. GRAHAM: I was not speaking for myself at all, but for several members who have spoken to me in regard to this very motion. While hon. members opposite are not saying anything, those who are opposed to it are saying something. With reference to the expedition of business, I say that there has never been a session during which I have been in this House in which the Estimates have gone through with so much expedition as they have this session. There can be no doubt about that. The minister will remember that there is one very important item of legislation which is constantly before the public and the press,

and which has not yet been brought down. We have begun to sit at two o'clock on week days, and now it is proposed to sit on Saturdays, and that piece of legislation is not yet before the House. I submit that even before we decided to meet at two o'clock the programme of the Government, as is customary, should have been laid before the House. Then we would have known what business was to be transacted. As it is, we do not know. A new Bill was brought down to-day by the Government, an amendment to the Exchequer Court Act. I do not think it is very serious, but to-morrow there may be half a dozen new Bills brought down.

Mr. STEVENS: The Prime Minister gave notice of that Bill three or four days ago.

Mr. GRAHAM: He mentioned in a discussion that there would be an Exchequer Court Bill, but that does not alter the effect of my statement. The Prime Minister may say to-morrow that a Bill will be brought down the next day. The Government ought to tell us what its programme is, and then we can sit mornings, nights, and Sundays, if necessary, if the Government want to get through. If it be true that the Government is keeping back an important piece of legislation till the last moment, I do not think it is fair to the House to rush the business through on Saturdays until they tell us their programme. It has always been done heretofore.

Mr. ROGERS: There may be some ground for my hon. friend's statement in respect to further legislation, and while I am anxious that this motion should be agreed to, as I trust it will be, my hon. friend can depend upon it that the Prime Minister will make a statement to-morrow of all the legislation that is to be brought before the House.

Mr. GRAHAM: I hope we can depend on everybody being here on Saturday.

Mr. ROGERS: I hope so.

Mr. HUGHES: The members from the East and West have to be here.

Motion agreed to.

VACANT SEATS.

On the Orders of the Day:

Hon. CHAS. MARCIL: May I ask the Minister of Public Works whether it is the intention of the Speaker to issue his writs for elections in the counties of Lincoln and Restigouche? Restigouche adjoins my constituency, and, as the people there have been disfranchised for several months, they are interested in knowing whether it is the intention of the Government to bring on an election.

Mr. ROGERS: The matter has not been considered at all, and therefore it is impossible to give my hon. friend a definite answer.

SUPPLY.

The House in Committee of Supply, Mr. Rhodes in the Chair.

Mr. SINCLAIR: While we are waiting, I would ask the Acting Minister of Railways and Canals to read the report of the Marine and Fisheries Committee, which refers to improved facilities on the Intercolonial, and so be in a position to inform us, when we come to discuss that report, whether or not he will accede to the proposals of the committee.

Mr. REID: I will read the report, and shall be glad to give the hon. gentleman the information desired.

Trent canal improvements, $40,000.

Mr. GRAHAM: I asked the Minister of Public Works from whom the Seymour Power Company rented certain powers on the French river.

Mr. ROGERS: I think those powers were leased from the local Government.

Mr. REID: I discussed that with the chief engineer, and he told me it was from the local Government and not from our department.

Mr. GRAHAM: It would be interesting, in view of what has taken place lately, to know whether it was the Federal or Provincial Government that leased those powers. I am inclined to think it was the Provincial Government, and that they are simply getting back the powers which they themselves leased.

Board of Railway Commissioners for Canada —to pay expenses in connection with cases before them, $25,000.

Mr. REID: That is the usual annual vote for that purpose.

Mr. SINCLAIR: I noticed in the press some time ago that an application had been made by the Canadian Northern Railway for permission to reduce the rate on, I think, oil in some parts of the West; that complaint was made by the other rail-

ways against the reduction, and that the Board of Railway Commissioners refused to allow the Canadian Northern Railway to make the reduction. It was an unusual position for the board to take. I have always supposed that if a railway was ready to carry goods at a reduced rate, the Board of Railway Commissioners would allow it to do so. I was a little surprised to see that statement in the press. Could the minister tell me anything about it?

Mr. REID: I saw that statement in the press. As the hon. member knows, the Board of Railway Commissioners have a power to fix rates on the several railways. When the Board fix them the railways must put them in force to the public. They have the right, as I understand the law, to prevent the railways from making rates lower than the figures at which they fix them. I suppose this was done in order that no injustice might be done to some other railway. A large corporation, like the Canadian Pacific or the Canadian Northern, might fix lower rates to injure some smaller railway, and for that reason the Board of Railway Commissioners have power to see that no injustice is done to any railway operating in or near the territory through which another railway passes. That is the law, as I understand it.

Mr. GRAHAM: I know something about that case. It was not a rate on oil; it was a rate given to the Standard Oil Company, or the Canadian branch of the Standard Oil Company, to carry to the West an amount of manufactured steel for the purpose of the construction of buildings to provide a distribution plant in the Prairie Provinces. This steel came in from across the line and the company made application for a rate which would approximate the manufacture in transit rate, just as wheat is given a rate, allowed to be unloaded, made into flour, and then taken in. Application was made to the Board of Railway Commissioners for the disallowance of the rate given. If it had been a universal rate which applied to any appreciable amount of business, the Board of Railway Commissioners might not have given the same decision, but it was evidently in the nature of a rebate to a particular company for a particular amount of business and so against the intendment of our Railway Act and absolutely against the principle of the Inter-State Commerce Act by which rebating is made a crime. I think the Board of Railway Commissioners took the ground that practically, if not technically, it was a violation of the spirit of the Act in that it gave special privileges to one company which practically could not be taken advantage of by any other company.

Mr. SINCLAIR: When I drew the attention of the minister to the matter I did not have the reference, but I have it now and perhaps it will do no harm for me to read it to him:

In a decision given out Saturday, the Railway Commission refused to allow the Canadian Northern railway freight rate cut on steel from Toronto to Regina.

I was mistaken when I said it was oil.

Mr. GRAHAM: It was an oil company.

Mr. SINCLAIR: It had something to do with oil then.

The rate was a special one given the Imperial Oil Company, which is building a big refinery at Regina. The crude steel is being obtained in Pittsburg. American railways offer a rate of 75 cents from Smoky City to Regina. The company is having the steel fabricated at Sarnia and is shipping it to that point and from there to Regina. The G.T.R. and C.P.R. held out for a rate of $1.04. The oil company was looking for a 75 cent rate and the C.N.R. accommodated them with a rate of 58½ cents per hundred pounds from Toronto to Regina. With the local rate from Sarnia to Toronto, this made a through rate of 75 cents from Sarnia to Regina.

There was a united kick from the older railways, backed up by Winnipeg manufacturers. For the first time, perhaps, the Railway Commission refused to allow a railway to reduce its rate.

You will see that the American railways were willing, provided the material was fabricated in the United States, to ship it to Regina for 75 cents a hundred, but the Canadian railways held out for $1.04. The Canadian Northern, for some reason, were not willing to do it for less than 75 cents. I see no reason why they should not have been asked to carry the goods at the rate the American railways were ready to give them. However, that is the case.

Board of Railway Commissioners for Canada —maintenance and operation of, including $800 for Clyde Leavitt, as chief fire inspector, $178,350.

Mr. GRAHAM: What are Mr. Leavitt's duties in connection with the commission?

Mr. REID: Mr. Leavitt is the chief fire inspector for the commission. His duties are in connection with fires along the railways which the commissioners are obliged to investigate.

Mr. GRAHAM: They do not give him any money for doing that kind of work.

Mr. REID: $800 is what the Chairman of the Board of Railway Commissioners recommends.

Mr. GRAHAM: He possibly has some other position and this is to be paid him by the commissioners?

Mr. REID: He is employed in the Interior Department and this is in addition to his salary in that department.

Mr. GRAHAM: Both departments pay him.

Mr. REID: Yes.

Mr. GRAHAM: I remember that certain powers were given the Board of Railway Commissioners with reference to the prevention of fires. The Board, if I remember correctly, in connection with an agreement with the railway companies and the Chairman of the Conservation Commission, issued some orders in reference to fire protection along different lines. The Canadian Pacific burn oil going through the mountains.

Mr. REID: Yes.

Mr. GRAHAM: That was suggested by the Board of Railway Commissioners and the British Columbia Government, and I understand that really an order was not issued. In connection with the construction of the Transcontinental through New Brunswick, I think Mr. Flemming came to Ottawa, there was a consultation and we arrived at a decision by which the Transcontinental and the New Brunswick Government acted in unison for the protection of forests during the construction of the railway. That railway was taken over by the Government and it passes through some very valuable property in New Brunswick and in other provinces as well. What steps are the Government taking in reference to the protection of forests in the country through which the Transcontinental is operating?

Mr. REID: The several provinces have their own fire protection service. The hon. gentleman knows the system which is in force on the Intercolonial railway. I think they have tank cars located at different points that they can run along the line and then sectionmen are supposed to watch for fires. In a part of New Brunswick, and in Quebec, there was a private company which owned a large forest and they were paid a certain amount by the Transcontinental Railway Commission and, I think, by the New Brunswick Government, the company paying a certain portion of the cost. This matter came before me some time ago, and a return was brought down the other day on the subject. We are following the same policy on the Transcontinental since we took it over, as on the Intercolonial; the one policy applies to the whole system. We have tank cars located at different points, and we are not paying anything for outside protection against forest fires occurring along the line.

Mr. GRAHAM: There has been enough timber lost in Canada through forest fires to keep us running for a good many years, and we are only now beginning to wake up to the necessity of being more careful. The Government, which has now a pretty big mileage under operation, ought to be a model in its precaution against fires occurring along the line of railway. The Interior Department with their fire rangers assist the Government in this respect. If I remember correctly, legislation was passed some years ago, at the instance of the Board of Railway Commissioners, and with the consent of all the railways, after consultation requiring the leading railways to station men at certain intervals along their road solely for the purpose of protection against fires. By a little expenditure in this direction a great amount of money may be saved. In British Columbia alone there has been destruction of timber to an extent that, at present prices, would startle the world. I think that what gave rise to the legislation was the number of complaints that had been made against the various railway companies, including the Intercolonial, for having started so many fires. I admit at once that I think the Intercolonial is blamed for a good many fires for which it is not responsible.

Mr. REID: That is right.

Mr. GRAHAM: I should not like to admit that the Intercolonial has caused all the fires of which it has been accused. A good deal can be done, and I imagine is being done to prevent forest fires, by using improved smoke-stacks, careful firing, and all that kind of thing. A few years ago the private companies, and possibly the Intercolonial, endeavoured to run their trains with engines of too small a capacity, with the result that at the least bit of an incline open went the door, the coal was shovelled in, and a streak of sparks, and fire almost, shot out of the smoke-stack. I suppose that to-day the

Board of Railway Commissioners insists upon the latest improvements being used by the companies, particularly in districts where there is valuable timber, and I think that that is one of the most important duties the Board of Railway Commissioners could have at the present time.

Mr. REID: There is some legislation empowering the Board of Railway Commissioners to give special attention to protection against forest fires throughout Canada, and I agree with the hon. member that it is a matter of great importance. The forests of Canada are a great asset, and everything should be done to protect them. I believe that the present regulations are good, and are being acted upon. I remember discussing this matter of fire protection with the Hon. Mr. Cochrane and Mr. Gutelius, and Mr. Cochrane gave instructions that the same precautionary measures were to be taken on the Transcontinental as on the Intercolonial. There should be only one system of fire protection for the whole Government railways. Some one suggested to me that the question of fire protection on the Government railway system should be under the Board of Railway Commissioners. I did not care to take that matter up until the minister was here. My own view is that if you are putting the question of fire protection under the Board of Railway Commissioners you may as well put the whole thing under them.

3 p.m.

Mr. GRAHAM: Do you mean the Intercolonial?

Mr. REID: The whole Government system.

Mr. GRAHAM: I did not suggest that.

Mr. REID: No, but that is how it strikes me. The minister and I think that if the present law in regard to fire protection is good for the private railway companies it is good for the Government railway system, and if it is carried out on the Government railway system I think that should meet the wishes of all concerned. That, I understand, is the system that is being carried out on the Government railways. Our own employees are doing the work, but in addition to them we have protection from the Interior Department, which, to a certain extent, looks after forest fires throughout the Dominion.

Mr. GRAHAM: Their work is mostly in the West.

Mr. REID: Probably it is. Then each local Government has its fire rangers and fire protection service, so that not only the Dominion Government, but the local Governments and all the railways realize the great importance of protection against forest fires, and are doing what is necessary in that respect.

Mr. MARCIL: What system is employed for protecting the railway property itself, in case a fire breaks out at the station?

Mr. REID: There is no fire insurance.

Mr. MARCIL: Is there any protection against fire?

Mr. REID: It must depend, of course, upon the local service in any municipality. If fire should break out, say, in any of the small stations along the line, we have no special fire protection.

Mr. MARCIL: The matter would be all right in a town where there is a fire engine, but there are numerous places along the line where there is no municipal fire protection whatever.

Mr. REID: At large places we have our tank service and hose from our tanks along the line, but in small places where there is no special fire protection service, we could not do anything other than have, say, a chemical extinguisher.

Mr. MARCIL: A couple of years ago an arrangement was made with the people at Matapedia and the railway by which they could use the water of an old reservoir, and at the time I asked that more hose be put into the station in case fire should break out on the Intercolonial or in the village. The place is huddled up close to the Intercolonial property and there have been a couple of fires there in the past. The last complaint made last year was that the hose in the station was not long enough to reach the houses in the village. The Minister of Railways promised at that time that he would look into the matter. I also asked him if arrangement would be made with the residents of the localities by which they could use the water for domestic purposes.

Mr. REID: I was present when the matter came up. I gave instructions to the general manager to see that the hose was supplied and that the wishes of the hon. member should be carried out. I have since heard no complaints. The fact that the hon. member has brought the matter to my attention will also bring it to the

attention of the people, and if there is any difficulty, I shall be glad to see that the hon. member's wishes are carried out.

Mr. NESBITT: I notice an item of $800 for a fire-inspector. What does this inspector do?

Mr. REID: This fire inspector receives only $800 from the department, but he is also an employee of the Interior Department. Parliament passed an Act giving the Railway Commission powers in regard to fire protection along the lines of railway so that the commission has power to issue an order as to what a railway must do in that regard. This man has been appointed chief fire inspector.

Mr. NESBITT: While the commission does not control the railway companies it has power to order certain things to be done by the management of those railways.

Mr. REID: By the railway companies themselves. The commission may order the Canadian Pacific or the Canadian Northern or any other railway that comes under its jurisdiction to do certain things towards fire protection along their line of railway.

Mr. NESBITT: But the commission cannot give such orders to the Government railways?

Mr. REID: No, because the Government railway system is not under the Railway Commission in any way and never has been.

Mr. GRAHAM: Some months ago the Board of Railway Commissioners made an order for a union station at Toronto. Can the minister tell us what progress is being made with that station? I admit that it is a little difficult at the present time to get money for the purpose, but this is a joint station in which more than one railway is interested. If ever there was a place where strangers risk their lives in getting on or off trains, it is in Toronto. My hon. friend from North York (Mr. Armstrong) knows his way about the Toronto station and he does not get lost; but if I were to hand in my bill to the railway companies for taking strangers in and out of that building, I would have a comfortable living for the rest of my life. You may be standing right beside a train wondering how you are going to get through it to your train and suddenly it will move away. Perhaps the next time a trainman will break a train up in two sections four or five cars down At other times you will have to climb in between cars in order to get to your own train. I can readily understand the difficulty at the present time of hurrying on the matter, but it has been announced during the past few months that work has been proceeding on this new station. Can the minister tell us what the companies are doing or how far they have advanced towards carrying out the order of the Board of Railway Commissioners?

Mr. REID: There has been a delay for a long time in regard to the Toronto railway terminal question. There is no place in Canada where a proper station and adequate terminal facilities are required so much as right in Toronto. Trouble arose over the plans, the cost, and so on, and after a great deal of delay, the matter was finally agreed on by all concerned. I have been urging for a long time that the railway companies should come to some arrangement because we wanted to build an examining warehouse and customs office adjoining that property and we could not start with it because the railways could not get their plans right. However, their plans were approved last fall, and perhaps the hon. member will remember—it was announced in the press—that Mr. Leonard was appointed manager of the terminal company formed to construct that station. I know that the contract has been awarded to Peter Lyall and Sons, Limited, and they have instructions, as I am informed, to proceed with the work and to carry it through to completion as quickly as possible. As the plans have been definitely settled, we can now go on with our work. Probably there will be no difficulty in the future about the station at Toronto. The investigation that we are likely to have into the railway systems of Canada will give good results in regard to stations of that kind. In our large cities there are terminals which not only are an inconvenience to the public but mean an unnecessary expenditure of money, and it seems to me that the terminals in such centres should be all in one place. In Montreal, the Canadian Pacific, the Grand Trunk, and the Canadian Northern have their own terminals and they are all spending a great deal of money on terminal facilities. At another session, we shall have a report in regard to such matters and it will be of great advantage to the public in the future.

I can assure the hon. member that the contract has been let for the Toronto station and the railway companies have in-

formed me that they will push forward the work as fast as possible.

Mr. GRAHAM: Has the Grand Trunk Railway Company made any claim on the Government to assist them in defraying the expense of such reconstruction as they have undertaken of their station in Montreal?

Mr. REID: No application has been received, so far as I know.

Mr. GRAHAM: For a good many years there was an arbitration board to settle certain difficulties between the Grand Trunk and the Intercolonial. It seemed to be almost a perpetual board. I think that it lasted so long that one or two of its members died before a report was made. Is that board doing anything now? Are these vacancies filled?

Mr. REID: No, it died a natural death.

Mr. GRAHAM: The difficulties were straightened out?

Mr. REID: All straightened out; no difficulties at all remain.

Mr. GRAHAM: I am afraid there are still difficulties. Reverting to the station at Montreal: the situation there is something like that at Toronto and it has not been modified by the recent fire. I think the Board of Railway Commissioners had the matter of elevating the tracks in Montreal under consideration. Did they give an order about the Montreal station at one time?

Mr. REID: They have investigated, but nothing has been settled.

Mr. GRAHAM: The entrance of the Grand Trunk to Montreal is on the level while the Canadian Pacific railway is on the hill and the Canadian Northern under the hill—constituting three distinct kinds of entrance. It may be difficult at this stage to overcome all the difficulties that arise in the way of making ideal accommodation in Montreal for passenger traffic, but, for the convenience of the public it would be much better if, in this, as well as in other large centres, the railway passenger terminals could be concentrated. People getting off the steamer at Montreal go to the Canadian Pacific railway expecting to go right through to their destination. I have seen them, when they showed their tickets, told that they were in the wrong station and that they must go to the Grand Trunk. Of course it is only two blocks away, but when those people got to the Grand Trunk probably they found that the train had gone and they would have to wait over until the next day. Of course, it will be difficult and expensive to concentrate the passenger business in such a great centre as Montreal, but it will be a great advantage to the travelling public. I will go further and say, it would be a great convenience to the travelling public if some arrangement could be made by which tickets would be made interchangeable over the different roads.

Mr. REID: That is what I advocated.

Mr. GRAHAM: I think it could be brought about. Of course, when you approach the companies about these things you are told that there are insurmountable difficulties. But tickets are issued on the Grand Trunk and the Canadian Pacific railway that are honoured when you get to some other line. To make tickets interchangeable might cause some inconvenience, but I do not see why it should be impossible to so arrange that a man who has paid his money to the Canadian Pacific for a ticket should be able to present that ticket on a Grand Trunk train and the Grand Trunk get their pay from the Canadian Pacific. Can the minister tell me if the Railway Commission was asked to approve of the rebuilding of the Grand Trunk station at Montreal?

Mr. REID: I have made no inquiries and there is no information in the department on the subject. I see by the newspapers that the Grand Trunk are building a temporary station. I will inquire as to the point the hon. gentleman raises.

Mr. MARCIL: As I recollect it, within the last three or four months, the city of Montreal and the Grand Trunk got together and went before the Railway Board with a view to having the work gone on with. The Railway Board, while admitting the need for the work, thought it inopportune to issue an order on the subject on account of the difficulty of raising money at this time to carry on works of this kind. This subject of passenger stations is an old-standing grievance in Montreal. I recollect reporting the proceedings in the city hall of Montreal 25 years ago or more when this very subject was under discussion. The late Sir Joseph Hickson, general manager of the Grand Trunk, had a plan for raising the tracks of the Grand Trunk and building a new station. This question really takes us back thirty years or more, and things are in the same position as they

were then, except that lately the Bonaventure station was burned down—through no fault of the Grand Trunk Company—and we now have a very primitive station indeed. I suppose it cannot be otherwise under the circumstances. But I hope that something will be done before the new station is built. As the hon. member for South Renfrew (Mr. Graham) has said, there is great inconvenience in Montreal by reason of the many railway passenger stations in the city. We have the Grand Trunk station, the Windsor station of the Canadian Pacific, and now we are to have the Canadian Northern tunnel station at Dorchester street. The traveller at Montreal is bewildered by the number of railway stations. I have heard the suggestion made that an arrangement should be come to by which the Grand Trunk passenger trains might run on the upper level and the passenger business be concentrated at the Windsor station, the tracks on the lower level to be used for freight business. I do not know whether there is anything in that or not. But if the Canadian Pacific and the Grand Trunk could be brought together in the Windsor station, then, with the Canadian Northern on the other side of the square opposite St. James' cathedral, there would be fairly close concentration, and the whole would be a great improvement. There is another station, the Viger Square station, which is mainly used for traffic going to Quebec, while the western traffic generally leaves by the Windsor station. But the old idea in Montreal was to have one central station. When the Canadian Pacific railway was first started, the city of Montreal voted $1,000,000 for a station at Viger square, then considered to be in the eastern part of the city, but, some time after that a company was formed under which the railway obtained permission to build the Windsor station, and there the western traffic has been concentrated. The minister will be entitled to the gratitude of the city of Montreal if he can bring this condition of affairs to an end. If the Grand Trunk is allowed to put up a very expensive station and to raise their tracks, then the idea of having a union station in Montreal will have to be abandoned for two or three generations at least. Whatever is decided should be gone on with. Montreal has already a large population—over six hundred thousand—and when the war is over and matters fairly settled, within a few years thereafter we count on a million people in Montreal. This railway business is very urgent, and if anything can be done to improve matters it should be done soon.

Mr. REID: I quite agree with the hon. member for Bonaventure (Mr. Marcil) and have stated similar views. In arranging for terminals at Montreal there are not only three but four railways to be considered, the Intercolonial, the Grand Trunk, the Canadian Pacific, and the Canadian Northern. If it is possible to bring them together in one station, that should be done. The Grand Trunk now have only a temporary station, their station having been burned down.

I understand that the reason they have gone on with this work is that it will take at least $15,000,000 to make the terminals at Montreal and to elevate the tracks. That has not been done. It should be done if there is any possibility of the railways being brought together as suggested by the hon. member. Under present conditions there is, I believe, no possible chance that the Grand Trunk will proceed with any work of that kind during the coming summer. It is the intention to have an investigation made as to the railway situation, and I am strongly of the opinion that there should be some way of compelling the railways to join their passenger terminals together at these large centres of population, on the lines suggested by the hon. member. I do not think there is any possibility of much being done during the next few months in any of the large centres, and I am in hopes that when the next session opens we shall have a report that will place every hon. member of the House in a position to judge as to the proper method of dealing with the railway systems in Canada; and the question of terminals is of course, one of the most important features of the whole railway situation. I therefore think we can safely allow the matter to rest until the opening of the next session, and I hope that an arrangement, or perhaps some legislation, may be procured which will put the Board of Railway Commissioners in a position to deal with the question in a place, like Montreal, where the providing of proper terminals facilities would be in the public interest as well as in the interest of the different railways. The saving would, of course, be very great.

Mr. NESBITT: I suggest to the minister that he should impress on the railways the

necessity of providing in the present union station at Toronto an information bureau in a conspicuous place, or at least constables with distinctive caps, so that passengers coming off one train and desiring to take another train, may obtain information. It is almost impossible for a person to get information at the union station in Toronto and, as has been said, there is probably no place on earth where people are more likely to become bewildered. I have seen people hunting all over the place for some man from whom they could get information. I have asked about trains and have received very curt answers, so much so that I have felt almost like taking the fellow by the coat collar and shaking his head a bit.

Mr. MORPHY: What size is he?

Mr. NESBITT: It does not matter to me about the size, they all look alike to me. I want them to be civil. They are not very civil, and do not put themselves out of the way, especially for women and children. If the minister has any control over matters of that kind, I wish he would see that the three railways make some such provision as I have suggested.

Mr. REID: I agree that it is necessary in a station to have a good information bureau. There is one upstairs at Toronto now, but of course there should be one downstairs as well. I will take the matter up with the railway companies and endeavour to have them provide a place of that kind. There is a room in the Union station which, I think, would make a splendid information bureau, and we may be able to get it as we shall probably have prohibition in force by September. I will ask the railway company if they cannot make—

Mr. NESBITT: That booze joint.

Mr. REID: —into an information bureau.

Mr. GRAHAM: I think the members have a grievance against the Grand Trunk and the Canadian Pacific Railway for not running the Grand Trunk sleeping car between Ottawa and Brockville during this session.

Mr. REID: Has that car not been on? I wish it had been brought to our attention before.

Mr. GRAHAM: It has not been on this session. The Canadian Pacific Railway have also neglected to put on the sleeper that, during other sessions, lay at Broad street station at night, so that members might board the car after the House rose and awake in Montreal. That was a very great convenience.

Mr. REID: I do not think there should be any difficulty about the car from Ottawa to Brockville, as in discussing with the Grand Trunk officials the question of Pullman traffic in Canada, not long before Parliament met, the question of this car was taken up, and it is certainly a great surprise to me to learn that it has not been operated.

Mr. GRAHAM: Then in other years we had a chair car from Brockville to Ottawa over the Canadian Pacific railway. That car has been taken off on week days; it runs now only on Sundays. That causes great inconvenience to travellers. A man has to be at the station before train time if he desires to get a seat.

If he has his wife or children with him he has to go down to the station at least half an hour before the train is due to leave to get a seat, because the only first class coach is usually filled. It does inconvenience the travelling public a good deal. When a chair car is on the intending passengers go down on time and get their seats. I wish to bring another mattter to the attention of my hon. friend. At Iroquois one of the soldiers doing duty on the canal there was killed in November last.

Mr. REID: He was drowned, was he not?

Mr. GRAHAM: No. This soldier's name was Barbour, and he went to assist the lockmaster, and the crank flew around and struck him and killed him. He leaves a widow—I do not know if there are any children—who is not in very good circumstances. Application was made, I believe, to the Railway Department, or to the Militia Department, and they declined to do anything on the ground that, legally speaking, they were not liable, which was undoubtedly correct. I suppose that as a matter of law the soldier had no business to turn that crank, and he was negligent in interfering with the work of the lock-master. But he was there for the time being, assisting in putting some boats through, being glad, I suppose, to have something to do to keep him busy, and this well intended effort resulted in his death. I am not appealing to the minister on the ground of any legal right that the widow has, but I do appeal to his sympathy, and suggest

that he look into this matter and see whether or not a compassionate allowance cannot be given to this widow, who requires assistance very much at the present time. I do not claim that the widow has any legal right, but the circumstances are such that I think the Government might well consider the case.

Mr. REID: This is the first I have heard of the case, and I will be very glad to look into it. I do not think it would be possible, even if we so decided, to make a compassionate allowance during the present session. The man may be said to have been on active service, and I wondered whether an application had been made to the Militia Department for a pension. That is a matter which might be considered in a case of this kind, and I believe the Militia Department have been very liberal in such cases when men were on active service. I will take the matter up with the Militia Department. If the widow is entitled to a pension under the Militia Act, it would be much better for her than a compassionate allowance.

Mr. GRAHAM: It would be more permanent.

Mr. REID: Yes. I do not think that the payment of a certain amount would be of the same benefit; even the interest probably would not amount to so much as the pension. I will look into the case, but I would suggest in the meantime that if the family have taken no action with the Militia Department they should make an application so that it may go before the Pension Board.

Mr. GRAHAM: I doubt whether the widow would have any claim to a pension; her husband was not killed in the performance of his duty.

Mr. REID: He was killed at the locks while assisting the lock-master, and that circumstance might be considered. At any-rate I think it would be well to have the case considered first by the Militia Department. If that has already been done, I will get the report, and if they cannot do anything, I will see that the matter is taken up by the Railway Department with the view of considering whether something should be done to assist the family.

Mr. MORPHY: I do not wish to take up the time of the committee in going into details, or in discussing the abstract principles on which our railway systems are conducted; but throughout the different time tables one can find many instances showing that it is the desire of each railway company to run its own business without regard to the passengers who are carried on other railways. They do not care about the connections made from other roads than their own. There are cases in the time-tables where, say, a train leaves a junction point at 10 o'clock, and another train crosses that point say at two minutes after 10 o'clock. There is no chance of the train at the junction point waiting the two minutes to allow a connection to be made by the other train. The time tables are filled with cases of that kind, and disappointments are numerous because of the lack of some consideration being shown to the travelling public.

Mr. MARCIL: They do not co-operate in the interests of the public.

Mr. MORPHY: Not at all. The railways are run for the railway companies and not for the public convenience. To illustrate, I went to Toronto on one occasion last winter, having made an appointment at Woodstock, in the constituency of my hon. friend from Oxford. I travelled on a Canadian Northern train from Ottawa and it reached Toronto five minutes behind time, and I missed the Canadian Pacific railway train for Woodstock. I made inquiries as to when I could go on to Woodstock and was told that I could not go until night unless I went by Stratford. I commented on the situation to a gold-topped man, such as the hon. gentleman spoke of, and he was very discourteous about it. I told him that he was not there for the purpose of being discourteous, and he said that the Canadian Northern railway did not count. There were several members of Parliament there, of whom the Chairman of the Railway Committee was one, and the hon. member from North Grey another. The official told the latter that he would have to wait until night before he could leave Toronto, although he desired to get home on the Saturday to attend to his business. I took exception to the statement of the official that the Canadian Northern railway did not count, but he was so big that he scared me off, and I let it go at that. Later on he sent through another member of Parliament an expression of regret for the language he had used. I was forced with another member to go to Shakespeare on the Grand Trunk and to engage a motor car to come from Woodstock, 20 miles distant, to take us there to fulfil an appointment at one o'clock in the afternoon. I

would like to impress upon the committee the fact that experiences of that kind are more general than may be supposed. A communication should be sent from this Parliament to the Board of Railway Commissioners, whose duty, I apprehend it is, to take hold of these questions, to study the time-tables and correct such abuses so that the public may have the benefits, for the securing of which, public money has gone to these big corporations.

Mr. TURGEON: While we are ventilating grievances, may I take the acting minister down East with me for a moment? I would like to call his attention to the advantage of the through passenger services given on the Intercolonial railway between Montreal and Halifax by means of the Ocean Limited and the Maritime Express. I do not wish to criticise the action of the minister, or of the department, in taking away the service of the Ocean Limited when the traffic does not permit the running of more than one of these trains. But I do want to call his attention to the fact that if we cannot have both of these services, and if one of them must be taken away, in the public interest, in the interest especially of through passenger traffic, and in the interest of the railway itself, the Ocean Limited should be kept on and the Maritime Express taken off. All along the railway we have local express services which are sufficient, generally speaking, for the local traffic. I will explain the difference between the through service of the Ocean Limited and of the Maritime Express. If you leave the Maritime Provinces, or northern New Brunswick, by the Maritime Express, in the middle of the night, getting into Moncton at nine or ten o'clock, and Newcastle and Bathurst about twelve or one o'clock, you are on the train all day again and only reach Montreal at six or seven o'clock in the evening if you are on time. Then, it is too late for any person to attend to any business in Montreal. He has to spend all next day and wait until the morning after before he can return East. If a man leaves Moncton, or the north shore of New Brunswick, by the Ocean Limited early in the evening he reaches Montreal at eight o'clock next morning; if he is a business man he has the whole day in Montreal to attend to his business and he can take the train again at 7.30 in the evening and reach home next morning or early in the day, whereas, by the other train, he has to wait until next morning and only reaches northern New Brunswick next day, and St. John late in the afternoon. The minister will understand the great difference it makes to the travelling public. Then take the southern portion of New Brunswick, St. John and the neighbourhood; by taking away the Ocean Limited you ignore totally the traffic between Montreal and St. John. The Ocean Limited, when it is running, leaves Montreal in the evening about the same time that the Canadian Pacific leaves Montreal for St. John and the man who travels on the Ocean Limited reaches St. John next day about the same time as the man who travels on the Canadian Pacific. Therefore, there is an inducement for people to take advantage of the Government railway instead of the Canadian Pacific. If you take off the Ocean Limited for a considerable, or even for a short time, the travelling public from the southern part of New Brunswick have to take the Canadian Pacific and once they become used to that road they continue to patronize it even after the Ocean Limited is put on again. The Ocean Limited therefore loses the traffic for the whole year round. If the local services on the Intercolonial railway are not sufficient to meet the demands, it might be to the advantage of the Government railway to augment that service in one section or another, and then if only one of these through trains can be retained, I maintain that in the interest of the road and of the travelling public, it should be the Ocean Limited and not the Maritime Express. I hope my suggestion will commend itself to the favourable consideration of the minister. I know that I voice the general feeling of the public in the Maritime Provinces

Mr. REID: The Ocean Limited is taken off for a few months during the winter for the same reason as that which applies to trains taken off during winter by other railway companies.

Mr. TURGEON: I am only speaking of taking off one train.

Mr. REID: I understand that. The reason that the Maritime Express is left on is that you may have a train leaving Montreal in the morning if you are going through to Halifax. The Canadian Pacific has a night train leaving Montreal. If we were to leave on the Ocean Limited you would have two trains leaving Montreal at night and going through to the Maritime Provinces and you would have

none in the morning. Passengers from the West arriving in Montreal at 9 or 10 in the evening, or at 7 in the morning on the Grand Trunk, Canadian Northern, or Canadian Pacific, would have to wait until 7 or 7.30 o'clock at night before they could proceed on their journey through to St. John or Halifax. The object of having two trains, one in the morning, the Maritime Express, owned by the Government Railway system, and one in the evening, owned by the Canadian Pacific system, is that the travelling public may have an opportunity of leaving Montreal for the lower provinces twice a day instead of once as would be the result if you had a train running on the Ocean Limited time. The only way to satisfy the hon. member would be to keep the Ocean Limited on.

Mr. TURGEON: If the department could by any possibility keep on the double service the year round that is what we would like. Taking everything into consideration, I believe it would be more to the general advantage to keep the Ocean Limited on, if only one train is kept on. I perceive the advantage of being able to make connections with trains from the West, but on several occasions when I have come from the West it has been my luck to reach Montreal just in time to miss the Maritime Express, so that even if that train had not been on I would have been just as well off. On the other hand, other trains are supposed to arrive in Montreal in the evening, and these people have the advantage of making a connection with the Ocean Limited; so that, taking everything into consideration, as far as connection from the West is concerned, I do not think it makes much difference. It does make a great difference to the people of the Maritime Provinces, and more particularly to the people travelling between Montreal and St. John. If the people are without the through service on the Government railway for three or four months in the year they will do without it for the other seven or eight months, and thus a great deal of traffic is diverted from the Intercolonial to the Canadian Pacific that would not be diverted if the Ocean Limited were kept on.

Mr. REID: I cannot agree with the hon. member that the connection at Montreal with the Maritime Express from the West, New York, and other places is not a very important one. I have arrived at Montreal on the Grand Trunk many times, and I think that on the whole the Grand Trunk and Canadian Pacific trains arrive at Montreal pretty nearly always on time. There is some little difference between the arrival of the trains from the West, New York, and other places and the departure of the trains for the East, and as a rule, connections are pretty well made. I do not think the public would stand for the two trains leaving Montreal at practically the same hour at night, and having no train in the morning. We think that we should always have a morning train from Montreal for the lower provinces. With regard to keeping the Ocean Limited on throughout the year, it has always been the policy to run it for a certain number of months only, and take it off in the winter. As an experiment the present Minister of Railways allowed the Ocean Limited to run for the whole twelve months two or three years ago, but the traffic was so small that there was a very, very heavy loss. The hon. member knows that it costs $800 to run the train from Montreal right through, and $800 coming back again, or $1,600 a day. The loss was so great that the minister had to go back to the system that prevailed before he took office. I could not say whether the traffic now would justify the Ocean Limited being kept on for the whole twelve months. However, it will be on again in the next few days, and will of course continue, even under the old arrangement, until next fall. On the minister's return I shall draw his attention to my hon. friend's suggestion, and also take it up with the general manager with a view to seeing whether it would be advisable to give the experiment another trial. I agree that the more trains you have the more convenient it is for the public. But, of course, regard must be had to the public interests, when a train is being run at a heavy loss. I am very glad the hon. member has brought the matter up.

Mr. TURGEON: I was not criticising the taking off of the Ocean Limited during a certain period of the year. I admit that it might not be in the interest of the department to have the two trains running in the winter months, and of the two I would prefer to have the Ocean Limited kept on. Another suggestion I would make is that it might be better to have a local train from Montreal to points east in Quebec rather than run the entire train through from Montreal to Halifax or St. John.

Mr. WILLIAM CHISHOLM: I endorse what the hon. gentleman has said. The Ocean Limited would give very much better accommodation to the people in Nova Scotia than the Maritime Express. A man going by the Maritime Express to Sydney—and the bulk of the traffic is east of Truro—has to wait seven or eight hours at Truro before he can get a train to take him to his destination; whereas if he went by the Ocean Limited, he would have to wait only two or three hours, as he would be able to make connection with the train from Halifax. If, as has been suggested by the hon. member for Gloucester, the Ocean Limited were continued instead of the Maritime Express and a local train were put on between Montreal and points east in Quebec, the whole country would be very much better served, because much better time would be made. Is the minister in a position to give me the information I wrote him about a couple of days ago, with respect to the Antigonish flower garden.

Mr. REID: I wired for that, but I am sorry it has not yet come to hand. I will wire again to-day, saying I must have the information by to-morrow.

Mr. BOULAY: As the minister has explained it does not pay at a certain time of the year to run both the Maritime Express and the Ocean Limited. If from a business point of view only one train can be kept on, I would prefer to have the Ocean Limited. However, the explanation given by the minister seems reasonable, and it might be more in the interests of the railway and of the people in a certain section of the country to have the express kept on. Another thing I should like to point out to the minister, and about which I have spoken to the general manager several times, is that the Maritime Express leaves Montreal too early in the morning for people coming from the West, except those from Toronto. People travelling on the Canadian Pacific Railway train from Sault Ste. Marie, Sudbury or Winnipeg, arriving in Montreal about nine o'clock in the morning, miss the Maritime Express, which leaves at 8.15 and have then to spend a whole day in Montreal. I would suggest that when the Ocean Limited is taken off, the Maritime Express should leave Montreal about twelve o'clock, as it did some years ago. This would give passengers from the West a chance to get home to points between Lévis and Moncton without having to wait twenty-four hours in Montreal. Under the present schedule they have to stay in Montreal from 9 or 9.30 in the morning until 8.15 the next morning, which is very inconvenient. I would suggest that the express start about eleven or twelve o'clock, but twelve would be better, as it would give business men in Ottawa a chance to catch the train. I think this change would be to the advantage, not only of the Intercolonial, but of the whole travelling public between Lévis and Moncton. When the Ocean Limited is taken off I think a good many passengers will take the Canadian Pacific railway for points East unless the time of the departure of the Maritime Express is changed, as they would not want to stay in Montreal a whole day. This causes the Intercolonial to lose a great many passengers going to the Maritime Provinces. The making of the change in the way I propose would keep our passengers and would be to the interest of the Intercolonial.

4 p.m.

I would like to make another suggestion in regard to a change in the administration. I have already complained several times that the division between Montmagny and Campbellton is under the control of New Brunswick officials. I would suggest that instead of that, the whole line in Quebec, from Montreal to Campbellton, should be put under the direction of the Superintendent of Railways. That would divide more equally the work of the two inspectors, as the one who has charge from Montmagny to Campbellton has under his direction several small branches, such as the Fredericton branch, so that he has a good deal more mileage to administer than the Superintendent of Railways. My suggestion, if carried out, would be satisfactory to the people of the province of Quebec; it would settle all the difficulties that we have had for years with the officials at Campbellton and it would also be of great advantage to the administration of the road. The officials at Campbellton who administer the Montmagny-Campbellton division do not know anything about that road; they are all strangers to us; they do not know the grades except from what they see on the plans; and they are liable to make many mistakes. It often happens that trains are delayed on sidings just on that account. If the people appointed to look after that division were men from the province of Quebec who knew the ground, they could do their work more efficiently. I make this suggestion in the interest of the road and also of the people of the province of Quebec, and it would at once remove all the friction

arising between the employees on the two divisions. All the employees in the Campbellton office who run the trains on our division speak nothing but English and belong to New Brunswick, and our people in the province of Quebec do not like to be run by those strangers. We prefer to be under the control of our own men whom we know, and it would make conditions a great deal better than they are now.

Mr. REID: The hon. member mentioned this matter to me a few days ago, and I think the suggestion is worthy of consideration. I am taking it up with the management now, and I shall be glad to see that every consideration is given to his suggestion.

Mr. BEST: I would just like to add one word about what the hon. member for North Perth (Mr. Morphy) says about trains not waiting for passengers from other trains. I believe that no people are so badly used in that regard as are the people of Dufferin and North Grey. There is a daily train from Toronto to Owen Sound, a distance of about 120 miles, and from Owen Sound to Meaford on the east is 20 miles. To get across that 20 miles you have to go about 240 miles from Owen Sound to Toronto and back to Meaford. If the trains would wait at Inglewood, about 60 miles would be cut off, and you could reach your destination in about five hours, whereas if you leave Shelburne or Owen Sound in the morning, you arrive at Inglewood about eight in the morning and have to wait until six at night. One train is the Grand Trunk and the other is the Canadian Pacific, and there is only about four minutes difference in the time. Many people have been trying to get the matter arranged with the Board of Railway Commissioners, so that the trains might be compelled to wait for each other. I think it is up to the Government to see that something is done in a case like that. No matter whether you go from north to south, or from south to north, you have a ten hours' wait.

I would like to make a suggestion to the Government in regard to the taking away of agents at night on the line between Owen Sound and Toronto. Up to a few months ago the agents used to wait at their offices until the last train, which arrives at Owen Sound between ten and eleven, was in. For the last few months at many of the stations the agents have been taken away at night, and baggage for one of these stations is thrown off on the platform without any one to look after it, or it goes on to Owen Sound and it is sent back the next day. That is very unfair, because the line is a paying one; in fact, I have heard it said that there is no better paying line in Canada than the one between Owen Sound and Toronto.

Mr. REID: Such matters should be and can be settled by the Board of Railway Commissioners. There was a similar case at the town of Brockville, where one train left a minute or two before another one arrived. We had the matter arranged by applying to the Board of Railway Commissioners. Their officials look into the matter, and if they find any injustice, they issue an order which the railway company must carry out. If the hon. member will give me a written statement of any complaints he has to make, I shall be very glad to bring them before the Board of Railway Commissioners, or the parties interested can do so themselves. All they have to do is to lay their complaint before the Board and ask for a hearing, which the Board are compelled to give, and, as a rule, the decisions of the Board have been satisfactory. The hon. member can either adopt that method of procedure or, if he wishes me to deal with the matter, I shall be glad to take it up with the Board.

Mr. MORPHY: I spoke of this matter a few minutes ago, and I rise for the purpose of putting another point of view before the Acting Minister of Railways. People do not like to complain; they do not organize to go to the Board of Railway Commissioners, because a solicitor has frequently to be employed, and that costs money; and, while no doubt they get every consideration when they do go before the Board, I think this is a case where the Government should take action by communicating to the Railway Commission the fact, that this abuse exists throughout the whole railway system. The trouble is caused by each railway acting on the principle of carrying on its work without any consideration to any other railway, to the absolute disadvantage of the public. It is a shame that such should be the case, and the abuse should be corrected. If the hon. minister would state, so that his statement will appear on Hansard, that it is the desire of the Government that the Board of Railway Commissioners should take up this question and see what is the true state of affairs, with a view to correcting the abuse themselves, without the people making com-

plaint, a great benefit would accrue to the people of this country.

Mr. REID: I will bring this matter to the attention of the Railway Commission as suggested by the hon. member. Complaints are sometimes made against the railways for which little grounds are found to exist when they are looked into; but there are undoubtedly grievances. In a specific case such as that mentioned by the hon. member for Dufferin (Mr. Best) there is no reason why the matter should not be investigated at once. We had a great deal of trouble with the connection at Brockville, but we got that straightened out.

Mr. BEST: I would not have spoken on the subject at the present time but that the judges took it up, and the very time-table itself showed that there was only three or four minutes' difference in the time of the arrival of the trains at the crossing, and the losing of the train at that point might mean a hundred miles of travel for a passenger, or the loss of a day. Not only did the time-table show that one train would have only a few minutes to wait for the other, but it was also shown that at the other end of the line the Grand Trunk train had ample time to wait. We could get no redress.

Mr. GRAHAM: The Act provides that complaints of grievance can be made to the board not only by interested parties but by the Minister of Railways, or the board of its own volition can issue an order on a matter in which no complaint has been made. There is plenty of room to have the board act in this matter.

Mr. MORPHY: I desire the minister to get my point of view, especially in view of one part of his remarks. He said that if any member wishes to make a complaint to the Railway Commission the matter will be dealt with. I think members of Parliament have their time pretty well taken up with the miscellaneous duties they have to perform, and I am under the impression that the Railway Commission is there for the public benefit and to correct these difficulties the moment they hear of them. The reason I spoke was—and I have no doubt the same is true of other hon. members—that I assume the commissioners will read this in Hansard and learn that there is a great public complaint which has not reached them. Having sovereign powers, as you might say, and an equally sovereign duty to the people of this country, if they feel there is an abuse they should correct it without waiting for a member of Parliament to call it to their attention.

Mr. MARCIL: I desire to add a word with regard to the situation in Montreal, in the hope that it will reach the Railway Commission or this new commission, to which reference has been made. I said a few words about the desirability of concentrating the passenger terminals at Dominion square, by inducing the Grand Trunk to link up with the Canadian Pacific and use the Windsor station. With the Canadian Northern on the other side of the square we would have the three railways close together. Another great grievance in Montreal is that of street crossings. On one line they have adopted one system and on another a different system. The Grand Trunk uses the old gate system, and one may approach the railway track when he is in a hurry only to find that the gate is shut and there is no means of knowing whether he is to be kept for a minute or for half an hour before he is allowed to cross. He can take the risk of trying to cross, and he may be crushed, as a great many people have been crushed, under the train. The Canadian Pacific Railway system has been to close up the streets entirely. Under the Canadian Pacific track running from Windsor station, Decarie avenue is the only crossing that is open for many blocks. This is in Notre Dame de Grace, an extension of Montreal, which has progressed more rapidly than any other part of the city and is now quite densely populated. It is crossed by the line of the Canadian Pacific, and one finds that between Decarie avenue and Montreal West for a distance of fifteen or twenty blocks, every street is closed. The children going to school, the people going to church, the people on their way between Sherbrooke street and the Lower Lachine road may have to walk a mile or a mile and a half out of their way to find a subway which allows them to pass under the Canadian Pacific track. I suppose the company have the power to do this, because the road was built before this part of the city was developed and the crossings that were closed were only farm crossings. But the fact that the company had the right, does not make the situation any less a burden on the people, and I think that means of relief should be found. I hardly know which is worse, the level crossing system of the Grand Trunk with its gates which

you can get through at some time in the day, or the system of the Canadian Pacific railway which prevents you from getting through at all except by going a roundabout way. The railway companies protect themselves; and of course nobody would wish to see the railways of Canada go behind in any way, but it seems to me there should be some supervising authority to look after the interests of the people. Some years ago I had the advantage of travelling in France, and there I found such a thing as a level crossing to be very rare; the same is true of England. The railways run either over or under the roads. But the rights of the public seem to have been protected; there is something left for the common citizen; he can cross the street without danger of being run over and without being compelled to go half a dozen blocks out of his way. To solve the very complicated problem in Montreal, these several matters should be called to the attention of the Railway Board or of the new commission.

Mr. REID: I shall be glad to act on the suggestion of the hon. member and call attention of the Railway Commission to the matter. It is a big question and one that will bear examination by the new commission, and I hope that great results will follow that examination.

Mr. McKENZIE: I had not the opportunity of saying anything with respect to Intercolonial affairs when the Estimates were going through, but I understand that the privilege is still open for members to call attention to matters which they deem of importance with regard to that system. I wish to refer to what has been stated by the hon. member for Dufferin (Mr. Best). I did not hear the whole of his remarks, but I understand the gist of them to be that there is no proper connection made between the different systems of railways, no regulation or understanding by which one train waits for another. He spoke especially of one case in Ontario, but so far as we are concerned in Eastern Canada that is not the case. The feelings of two sets of passengers in trains of this kind are very different. The train load that is held up is swearing at the delay, while the passenger who wishes to take that train is hoping that the train will wait. There is a very strong conflict of opinion about a situation of that kind, and differences are not always easily reconcilable. I have frequently had to wait at Truro from 8 o'clock in the evening until 11.30 o'clock for the arrival of the Canadian Pacific Railway train. I would have arrived at Truro about the middle of the day and would have waited there until the Halifax train came in at 8 o'clock, when, in the ordinary course of events, I could have proceeded towards my home in Cape Breton; but we have been frequently held up until nearly midnight waiting for the arrival of the Canadian Pacific Railway train. If courtesy as between railways is scarce in Ontario, it is carried to the extreme at our end of the Dominion, and we should like to have matters adjusted so that the long stoppages at our end would be curtailed and part of them applied to Ontario. That would be an evening up that would be satisfactory all round. Only two or three days ago I waited for an hour and a half at Truro for a train. Coming from Cape Breton we were delayed for four hours by a little obstacle, a little worse than a cow crossing the track, at Tracadie. We lost our connection at Truro and had to wait for a whole day. This may be nobody's fault and accidents of that kind will happen; but it is very annoying. For the last six weeks or two months the arrival of trains at Sydney and adjacent points has been far from satisfactory. Sometimes the train from Halifax, only two or three hundred miles away, is 10 hours late. That is most extraordinary, and we cannot find out exactly what causes the trouble. I used to say, speaking facetiously, that when we had a manager with a salary of $5,000 or $6,000 a year, we had regular trains; but as the salary increased the time became worse, and if this manager received $30,000 we would have no trains at all. I would bring the size of the salary and the lateness of the trains to the serious consideration of the minister.

I wish to bring seriously to the attention of the minister the lack of proper facilities for the handling of traffic at North Sydney, which is really the eastern Atlantic terminus of the Intercolonial. Of course there is a terminus at Sydney, but there is very little business done there. The main business is done at the terminus at North Sydney, where connection is made for the island of Newfoundland. It may interest the minister to know that until 19 years ago we had not water terminus at North Sydney, and no business was done at that point in connection with the Intercolonial. But in 1897 a wharf was built and the road was run down to the water. At that time there was practically no business between

the island of Newfoundland and the Intercolonial railway, but that business has since grown by leaps and bounds so that now, during open navigation, which is about 10 months of the year, we ship outwards on the Intercolonial about 10 cars a day, sometimes 15 cars a day of freight going over the Intercolonial and on the boats to Newfoundland. When I was in North Sydney the other day, there were about 100 cars standing on the sidings, both down at the wharf and up at the station, waiting for boats to carry the freight to Newfoundland. With the in-coming business I am not so familiar. I am sure that the passenger business from Newfoundland must be a very material source of income for the Intercolonial, while the handling of freight, such as fish from Newfoundland, must be profitable. The business handled at this point is enormous, but the facilities are absolutely inadequate. The wharf is too small. It is not long enough and is not wide enough, and is in no sense commensurate with the business to be handled there. I would ask the acting minister to bring this to the notice of the real Minister of Railways—although if reports be true I am talking to the right man now. There are two, and sometimes three, boats on the Newfoundland route. There is only proper room for one boat at the wharf. The boats trading along the coast that want to land fish and other freight at North Sydney are compelled to tie up at some other wharf and cart their freight back to the railway. This is far from being just to our people, because they ought to have room to bring their vessels alongside the railway and be enabled to put their freight aboard the cars with the least possible expense and trouble. But there is always a Newfoundland boat there, as the service is a daily one. There is land near the wharf that the minister could buy at a reasonable price for the purpose of extending the wharf.

Then, the station at North Sydney is far from being sufficient. About half a mile from the station there is a little Indian village. I am far from casting any slurs upon Indians or upon poor Indian women, but it is a fact that white people do not care to be obliged to congregate with them at railway stations and in small railway rooms. We have only the one room there, a small room for a large passenger traffic. Passengers are compelled to wait in that room all huddled together, all kinds of people. It is quite proper that the Indian women and the Indians should have some shelter, but I think it would be well that the accommodation for passengers should be large enough to obviate the crowding of other people in with them as is the case with the present small station at North Sydney. Even apart from any objection of that kind, the station is far from what it should be. It was built 25 years ago when traffic was small and the town of North Sydney and surrounding places were not as large as they are now. There was no provision for Newfoundland traffic at that time, and so the station to-day is far from what it ought to be. I submit to the minister that when he undertakes to enlarge the wharf, which must be done in order to handle the business, he should also give some attention to the enlargement of the railway station.

I wish to bring up also another matter in connection with the handling of trains in that vicinity. The minister may tell me that I should go to the general manager with the case, but the manager is not available to us; we cannot see him, and, as was well said by the hon. member for Westmoreland (Mr. Copp), while this road remains a Government road, this Parliament, and this Government, and the Minister of Railways cannot divest themselves of responsibility. Members of Parliament will properly go to the minister with their complaints and requests and will expect them to be transmitted to the manager and his staff to have them attended to. The minister is aware that the town, from which I come, and the immediate vicinity are pretty well populated. We have a series of villages or towns along the first ten miles of the road from North Sydney. There is in the vicinity a large quarry operated by the Dominion Steel Company, and next to that are the Colonial Coal Company's works, the town of Florence, and the town of Sydney; so that for the first ten miles, there is practically a continuous community. The people there take advantage in the evenings to travel into North Sydney by the train from Halifax, which passes about 7 o'clock, returning by a train which goes out at 9 o'clock. Thus the people can go into Sydney and get back to their homes that night. That is all right, but on Saturday night, which is the night of all nights that the people want to go to town, there is no outgoing train; that is, no train leaves Sydney on Saturday night. If the people in the district go into town by the 7 o'clock train, they cannot get home

unless they drive, which means that they are really prohibited from getting into town.

Mr. REID: Is the train which leaves Sydney at 9 o'clock the through train going west?

Mr. McKENZIE: Yes, that is the night train going west to Halifax. The people come into town on the through train from Halifax, and it is very convenient for them to get home on this through train that goes out at 9 o'clock. There is usually standing at the town of North Sydney, an engine, and I think, a few cars, and it would not be very much trouble to make up a small train every Saturday night to run from North Sydney, about five or six miles, passing through these towns, so as to enable the people who go into North Sydney by the 7 o'clock train to return home. I think such a train would be a paying proposition; it would certainly be a great convenience to the people. Saturday night is pay night, the night on which people want to do their shopping, and it would be regarded as a fine stroke of business if the minister put on that local train. I trust he will give these suggestions his best attention.

Mr. KYTE: I desire to add a word or two to the criticisms made by the hon. member for North Cape Breton regarding the imperfect railway connections in the province of Nova Scotia. For instance, the Maritime Express leaves Montreal at 8.15 o'clock and arrives at Truro about noon the next day, just two and a half hours after the express train from Halifax has gone on its way to Sydney. The consequence is that persons living in certain sections of the province of Nova Scotia, off the main line of the Intercolonial, are obliged to remain in Truro for 24 hours before they are able to get a connection for their destination. It seems to me that some better arrangement and some better connection than that might be devised. As I have said, the Maritime Express leaving Montreal at 8.15 reaches Truro at noon the next day. It seems to me that some arrangement could be made by which that train could leave Montreal earlier, or by which it could make better time to reach Truro at 9.15 or 10 o'clock on the following day, and thus enable passengers from Montreal to connect with the day train for points to the eastern terminus of the Intercolonial railway. When the Ocean Limited is not running between Montreal and Halifax, it takes passengers who live in certain portions of eastern Nova Scotia four days to travel from points between Ottawa and Montreal to their destination. It takes me four days to travel from Ottawa to the constituency in which I live, and that is true of other hon. gentlemen occupying seats in this House, as well as of a large proportion of the travelling public who belong to eastern Nova Scotia. That seems to me to be a rather intolerable condition of affairs in this day and generation. I fancy there is no portion of settled Canada where the people have a worse railway connection than in the province of Nova Scotia. Taking into account the fact that that province, and particularly the island of Cape Breton, has contributed so heavily towards the revenues of the Intercolonial road, it seems to me that the Department of Railways should give to that section of the Maritime Provinces the best possible railway accommodation.

I desire to say a word or two with regard to the accommodation that is given to the public on the trains. At the present time, a passenger taking the train at Sydney at twenty minutes to seven o'clock in the morning is unable to get anything to eat until that train reaches Truro at five o'clock in the evening. As often happens, if that train is late, as was the case when I was down in Nova Scotia a few days ago, passengers who have had their breakfast at 6 o'clock in the morning are unable to get a bite to eat until 7 o'clock in the evening. Up till a year ago or so, a dining car was attached to the express from Sydney going West at Port Mulgrave, and it afforded accommodation to the passengers who desired a midday meal. When that dining car was taken off, one was attached to the day express at Antigonish, which gave passengers an opportunity of getting their meal at a reasonable time. But the dining car has been taken off altogether. I think it must be eight or nine months since there was a dining car on the day express from Sydney going to Truro. That is a great inconvenience to the travelling public. A buffet service existed on the chair and parlour cars, but I understand that even that has been cut out. It certainly was cut out on the two occasions that I travelled on the Intercolonial during the last couple of months. This is a complaint which is very general among the passengers on the Intercolonial railway. I am not making the complaint personally. In recent

months, I have not travelled very often on the Intercolonial, and I was not particularly inconvenienced by reason of there not being a dining car attached to the train; but it is a complaint which has come to me from commercial travellers and others who frequently patronize the Intercolonial railway.

There is one other matter of criticism, and that is with regard to the manner in which parlour cars on the Intercolonial railway are kept. It is a matter of very common complaint that the parlour cars and the Pullman cars on the Nova Scotia end of the Intercolonial railway are not kept as clean as they used to be. I am not directing this criticism towards any particular official of the Intercolonial railway; I am merely stating it as a fact. I have heard ladies make very loud complaints within the last couple of months that the parlour and chair car service of the Intercolonial railway between Sydney and Halifax is not looked after as it was in the past. The complaints appear to me to have considerable foundation. As I have said, I do not pretend to make any charges against any person in particular, but it seems to me that a little better supervision ought to be exercised by the official who is in charge of that particular department and thus remove what I regard as a very considerable ground of complaint.

Mr. REID: Answering the hon. member for North Cape Breton (Mr. McKenzie) first in reference to the port of North Sydney, I realise that it is a very important point on the Intercolonial railway. The matter was brought to my attention during the last two or three months on account of the congestion of the trade with Newfoundland. There was a very large number of cars that could not be unloaded. Cars were detained because the boats plying between North Sydney and Newfoundland could not carry the freight on account of the large quantity to be moved. We put on one or two Government steamers in order to relieve the congestion at that point. I was also informed that this trade has grown very rapidly within the last few years. I know that my hon. friend the Minister of Trade and Commerce (Sir George Foster) has been looking up the question of trade between Newfoundland and Canada, and I suppose the Reid Company, who own the Newfoundland railway, have been trying to increase the trade between the two countries. That port has grown to be a very important one. Of course, they must have facilities necessary to perform the work that may be required of the railway. I have not had it drawn to my attention before that the facilities were so inadequate as the hon. member has stated. The Estimates that were made out for the Intercolonial Railway system and this, of course, is part of it, were taken up by my hon. friend the Minister of Railways and Canals (Mr. Cochrane) at the beginning of the session. I had nothing to do with them, and I know that he cut out many important items that he would like to have had in the Estimates for the Intercolonial railway on account of war conditions and the desire to keep the vote down as low as possible, and this may have been one of them. Unless there is an item in the Estimates, the hon. gentleman knows it will be impossible for us to go ahead with the work that may be necessary during the coming season. However, I will be very glad to look into it and see if anything can be done during the coming year to improve the facilities there. With reference to the station at North Sydney, the same thing applies. It should not be much trouble to provide a little more accommodation, such as is suggested by my hon. friend, if that is all that is required, so long as it does not involve the building of a new station.

Mr. McKENZIE : It might be enlarged.

Mr. REID: I will also take that matter up. With reference to the train service between Sydney and North Sydney, as I understand from the hon. gentleman, the train for Montreal leaves every night except Saturday night. As I have understood the situation in Nova Scotia, the train does not leave on Saturday night because it does not run through on Sunday.

Mr. McKENZIE: There is a train on Sunday night, but not on Saturday.

Mr. REID: I know. There was a time when they did not run right through on Sunday. I do not know whether that system prevails now, although I am aware that it has been changed in part. But, I will look into that complaint and see if it cannot be remedied. I realise that in all these large centres such, for instance, as Sydney, people like to get in from the country and near-by places on Saturday night. It is a very important night for people who desire to come in and do their trading, and I can see that it is quite an inconvenience if there is no train out on Saturday night. There are, of course, difficulties in operating a suburban service such as that which

has been mentioned for one night only. There is a rule among railway employees, in fact, it is an agreement, an understanding with the railway unions, that if you start a crew out, even for a ten mile run, they receive a day's pay. It may be an expense that the traffic would hardly justify. But, it is well worth looking into and if I can overcome the difficulty I shall be very glad to do it. I stated a moment ago that I would like to see the people in the neighbourhood of a large centre have the advantage of coming into town on Saturday night. The large railways try to arrange a Saturday night service to enable people to get into the cities.

With reference to what the hon. member for Richmond (Mr. Kyte) stated about the train leaving Montreal for the East, the connection at Truro, and missing the connection by an hour and a half or two hours, if you start the train an hour and a half earlier you miss the connections from the west. There is one hour between the arrival of the Canadian Pacific and Grand Trunk trains and the departure of the Maritime Express. There is an hour allowed the people from the west to get the Maritime Express, and there is a great deal of difficulty in making change because if you start the train earlier you miss the connection from the west. The hon. gentleman made another complaint which I cannot understand, but I will get the information at once. He has stated that in going west there is no service by which a passenger getting on the train about seven in the morning can get anything to eat until five in the afternoon. There was a time, as he states, when a dining car was on, but that has been taken off, and I conclude from the remarks he has made that there is not even a restaurant provided along the road at which passengers may get something to eat from the time of starting at seven o'clock in the morning until arriving at five in the afternoon.

Mr. A. W. CHISHOLM: There is no restaurant east of Truro.

Mr. REID: That is what I understand, and therefore a passenger starting at seven in the morning and arriving at Truro at five in the afternoon can get nothing to eat, because there is no restaurant and there is no dining car service. I think that is what the hon. gentleman said.

Mr. McKENZIE: Quite so.

Mr. REID: That being the case, I will take the matter up and see if we cannot remedy this condition at once. The hon. gentleman also said that the Pullmans and the chair cars were not kept clean. Of course, any complaints of that kind, whether in this House or out of it, should be brought to the attention of the manager or of the minister, and should be remedied at once. That is one thing that must be looked after properly. It may be that those in charge of the work are not giving it the care they should.

Mr. A. W. CHISHOLM: Would it not be possible to have the train from Halifax to Sydney delayed about an hour and a half so that connection might be made at Truro? I realize that it would delay the arrival of the train at Sydney an hour and a half, and that might not be so convenient for my hon. friends who are on the main line, but those who, like myself, go over the Inverness road, have to remain over at Truro until the next day. It occurred to me that it might be possible to arrange some method by which the train from Halifax might be delayed an hour and a half, and some other changes might be made with respect to the train from Montreal. I quite realize that the traffic from the West is important, and that there is only an hour between the arrival of the Western train at Montreal and the departure of the train for the Maritime Provinces. If that time were shortened a little, and the train starting from Halifax were delayed an hour or an hour and a half, the connection might be made. This is very important to the constituency I represent, because the Inverness road is a branch of the Intercolonial. As it is at present all passengers on the Inverness road have to remain over at Truro for the night.

Mr. REID: It is well to have all these complaints on record. I will take this matter up and see if any better facilities can be given. It might however necessitate the changing of the whole time-table. It is the wish of the Minister of Railways and myself to give the best possible service, but it is difficult to get a time-table that will suit everybody. I have known us to change the time-table an hour only, and that would upset the connections with the branch line trains. We wish to have as few complaints as possible. When the manager is drawing up a new time-table I will have him look into all these com-

plaints thoroughly, to see whether any better service can be given.

Mr. McKENZIE: If it would be of any assistance to the minister I might say something further with regard to the dining car service. It is very inconvenient as it is now. For some years the diner used to be attached to the train leaving Halifax in the morning and going east to Sydney and passengers could get their mid-day meal in the diner before the train got to the town of Antigonish. There the Sydney train going west was met, and the diner was transferred to it, about two o'clock. That was rather late, but the passengers had ample time to get their meal between there and Truro. If that arrangement was restored I think it would satisfy the public. I also think this way of running the diner would be cheaper than having it go through all the way to Sydney.

Railways and Canals—Grand Trunk Pacific railway—Remuneration to Government Director of $2,000.

Mr. GRAHAM: Would the minister read the director's report?

Mr. REID: I haven't it here.

Mr. GRAHAM: Who is the director anyway?

Mr. REID: Jules Hone.

Mr. GRAHAM: He ought to be sharp. It seems to me that if he had been a real good director he would have sent in a report to the Government covering some of the points raised in the correspondence with the Grand Trunk Pacific.

Mr. REID: We have a certificate from the secretary of the board that the director attends all the meetings.

Mr. GRAHAM: All those he is notified of, but I suppose the really important meetings, at which dangerous matters are discussed, he gets no notice of, I suppose he makes an annual report?

Mr. REID: I do not think he does.

Mr. GRAHAM: Has the minister in his waking or other hours ever read or seen a report from the director?

Mr. REID: I have never met the man, I do not know him, nor have I ever seen a report from him.

Mr. MARCIL: Has the Minister received any report on the advisability of taking over the Quebec and Saguenay railway?

Mr. REID: Perhaps the hon. member could give me some information about that.

Mr. MARCIL: I see that L'Evenement, the Government organ in Quebec, reproduces a despatch published the night before last by La Patrie of Montreal. The proprietor of La Patrie is one of the directors of the Quebec and Saguenay railway. He announces that the arrangement is completed for taking over this road and making it part of the Transcontinental, and that the resolution will be introduced in the House in a day or two. I thought the minister might be able to give me some information about that.

5 p.m.

Mr. REID: I cannot, for the reason that I have none. I did not even know until the hon. member mentioned it that the proprietor of La Patrie was a director of that railway.

Mr. MARCIL: He was appointed within the last three or four months.

Mr. REID: I have no information on that. The hon. member knows the condition of the Quebec and Saguenay railway. It was started, I understand, for the purpose of serving the people living along the north shore of the St. Lawrence between Quebec and Murray bay, and is very nearly completed.

Mr. MARCIL: Does the minister know how many miles have been completed?

Mr. REID: I understand that it will not take very long to complete the road and put it into proper shape.

Mr. GRAHAM: The minister must have been getting a lot of information about the road.

Mr. REID: Every one knows about it. If the hon. member does not want to hear any more about it, I certainly am not anxious to continue.

Mr. MARCIL: I am anxious to know something about it. I will read this despatch which may clear the way for further information. It is dated Ottawa, May 2:

The fate of the Quebec-Saguenay is practically settled. The Government will present, this afternoon or to-morrow, the first resolutions to the effect of taking over the road to complete it and put it into operation as soon as possible. We do not know yet the details of the intentions of the minister beyond the fact that the Quebec-Saguenay will be added to the Transcontinental railway. This project is not included in the Bill relating to the Canadian Northern railway and the Grand Trunk Pacific.

It is a separate affair, but it is understood that it will pass. It is not expected that there will be any strong opposition.

The people of the district are naturally interested in knowing what kind of a railway it is, how many miles have been built, where it leads to, and what remains to be done. If it is to be a Government railway, I would like to know something about it.

Mr. REID: I do not know and I do not say that it is going to become part of the Government railway system. I have no information that that has been decided upon. The hon. member has asked what condition the road is in. Our railway officials know what condition it is in.

Mr. GRAHAM: The minister went over it.

Mr. REID: Yes, he went over it and he knows its condition. In addition to that, Parliament has subsidized the road and has paid a large amount of money in subsidies and of course, before doing so, the Department of Railways and Canals must have had a report of the condition of the road. So far as I understand, it was the intention of the promoters of that road to run a railway between Quebec and Murray Bay and eventually it was intended to extend the road to St. Catherines bay, as a winter harbour, opposite Tadoussac. The train service between Quebec and Ste. Anne de Beaupré, a distance of about thirty miles, is owned by the Quebec Light, Heat, and Power Company, and I understand is a good paying railway.

Mr. MARCIL: That is an electric service.

Mr. REID: Yes. From Ste. Anne de Beaupré to Murray Bay is a distance of sixty miles. In that locality there are many people who have been settled there for years and who have no railway service, and this railroad was intended to serve those people. Those who were building the road spent a very large sum of money on it and they got the road almost completed when financial difficulties arose and the road was not finished, although it would have taken very little money at that time to complete it. After the Minister of Railways returned from his trip over that road, I heard his statement in regard to it and I was greatly surprised as to its condition and as to the service it would give to the people on the north shore of the St. Lawrence. The road is so nearly completed that it is a pity to leave it in its present condition. For the benefit of the people between Murray Bay and Quebec, the road should be completed; and for our traffic between Quebec and the lower St. Lawrence during the season a road on that side of the river is just as justifiable as one on the south side. That is only my private opinion. There are, I suppose, members on both sides of the House who know the condition of that road much better than I do. I would like to know from my hon. friend (Mr. Marcil) now that he has heard what I have stated, if he, knowing that locality, thinks a railroad is justified on that side of the river where there are so many people, or if he thinks the service they have had for so many years, with steamers crossing to the other side, is all that is necessary for that part of the country.

Mr. MARCIL: I have never been over the road, but I understod that a railway, like any other facility, would be a good thing for that locality. It all depends upon the conditions under which the road is built. I understand that the only part of the road now being operated is in the neighbourhood of Murray bay; that from Ste. Anne de Beaupré to Quebec there is an electric service, and that a great deal of work remains to be done on the steam road. I do not know whether the Government is seriously considering the extension of the road from Murray bay to St. Catherines bay and establishing a winter port there. Winter navigation has been declared possible in the St. Lawrence by special boats, but it remains to be seen whether the Government will undertake the work or whether any company will be found willing to do it. We have heard of this railway being more or less of a stock-jobbing enterprise; it has been on the Montreal Exchange for a long time, the stock jumping up and down, so that the people have become more familiar with it in that way than with its real work as a railway. I do not know what amount of money has been invested in the road or whether it has been invested by Canadians or not, but I believe a large number of Parisians were glad to get their money out of it. What I wanted to know was, as the Government papers have been announcing that the road was to be taken over, what position the road was in, so that we would be in a position to criticise or to approve.

Mr. GRAHAM: Perhaps this discussion in regard to the Quebec-Saguenay is a little premature. The minister has given us his argument why the Government should aid that road. Perhaps that is also premature—I do not know—but for a man who did not know anything about the road, the minister told us quite a few things, which would indicate, of course, that the Government had been studying the situation.

Mr. REID: I said that those were the facts in the department.

Mr. GRAHAM: I have been in the department and I know how much study a minister would make of a special line unless something came up specially in regard to it.

Mr. REID: When I was acting for the Minister of Railways, not now, but some time ago, the subsidies came due as the road was being built, and, of course, when they came up before me, I would not consent to those subsidies being paid without having a report from the chief engineer or inspector as to the condition of the road. Therefore the whole matter came before me in that way months and months ago, and I knew the condition of the road from those reports. Besides, the money spent on the road must be proved to the satisfaction of the chief engineer before amounts are paid.

Mr. GRAHAM: That is information about the road, but it is not a reason for the minister arguing strongly for the Government acquiring the road. It has been suggested that this road can be purchased under the Branch Lines Act without the matter being brought to the attention of the House until after the purchase is made. But I would call the attention of the minister and of the Government to the fact that that could not be done without treating this House unfairly, and—I say it courteously—without proper respect.

Mr. ROGERS: Without proper respect?

Mr. GRAHAM: Yes, it cannot be bought under the Branch Lines Act without treating this House without proper respect. When the Branch Lines Act was before the House the question of the railways to which it could be applied was discussed at some length. I will not read the whole discussion, but I would refer the hon. minister to page 1544 of Hansard of 1915, where he will find a few words in relation to the matter which I shall quote. The hon. leader of the Opposition (Sir Wilfrid Laurier) had been discussing at some length this question of purchase—

Mr. REID: Of this road?

Mr. GRAHAM: No, but the purchase of railways under the Act. And he asked this question:

> Sir Wilfrid Laurier: We understand, then, that this legislation applies to the Intercolonial only?
>
> Sir Robert Borden: And to the Prince Edward Island railway. That is thoroughly understood.

So, that neither this railway nor any other that is not a branch line of the Intercolonial or the Prince Edward Island railway could be brought under this legislation, and the Prime Minister gave us assurance that it would not be done. I just bring this to the attention of the minister on account of the rumours in the corridors that this transaction has been completed under the Branch Lines Act, and that the particulars need not be brought before the House until next session if the arrangements are not completed until after the close of this session. So, it cannot be done in this way without treating the House unfairly and in violation of the assurance given by the Prime Minister.

Mr. LEMIEUX: When this question was transferred from this House to the Senate the same question was put to the leader of the Senate, and he declared in the most emphatic terms that the Branch Lines Bill did not contemplate adding to the system of the Transcontinental, the Quebec and Saguenay, mentioning that road by name. Also, he stated most positively that the Branch Lines Bill applied only to the Intercolonial. Now, we are to sit on Saturday at two o'clock. We are all anxious to prorogue and go home. I would advise the Government not to introduce any more contentious legislation; we already have our hands full. Not that I am against the completion of that road, but there are so many things in, and around, and behind that road that really the Government would have to extend the sittings of this House to have considered properly.

Mr. ROGERS: Replying to the remarks of the hon. member for South Renfrew (Mr. Graham), and also those of the hon. member for Rouville (Mr. Lemieux), I am afraid these hon. gentlemen are giving themselves unnecessary worry about this Government undertaking to do anything behind the back of Parliament, or in con-

travention of any statute in existence. We, as my hon. friend has stated, are a Government of study. We have studied the conditions of the Quebec and Saguenay, and the situation in the West, and in other parts of Canada as well, in connection with proposed railway legislation, and when the proper time comes to make known our conclusions from that study my hon. friend need not be alarmed but that those conclusions will be made known to the House and to the country in a very open manner. I have promised the House already to-day that any further legislation, or any further matters to be presented to this House, will be announced to-morrow.

Mr. GRAHAM: That does not touch the point I raised.

Mr. ROGERS: What is that?

Mr. GRAHAM: That if it were brought under the Branch Lines Act it would not have to be announced to-morrow.

Mr. ROGERS: If the hon. gentleman had paid attention to what I said, he would have known that I said he was giving himself unnecessary worry about that.

Mr. GRAHAM: The minister's speech does not lessen it any.

Mr. McKENZIE: The presence of the Minister of Public Works (Mr. Rogers) as leader of the House reminds me of something that happened two or three years ago. On an occasion when he was leading the House, I moved a resolution which was to the effect that in the opinion of the House the time had arrived when the Intercolonial railway with its branches should be extended into the non-railway sections of eastern Canada. The question was very fully discussed and a number of members, particularly those from eastern Canada, spoke in the debate. When we were all through, the minister, who had already spoken on the subject, accepted the resolution. The non-railway sections of eastern Canada referred to in the resolution included certain sections of Quebec, of New Brunswick, and of Nova Scotia. Since then, of course, war conditions have arisen and that is an excuse, and a good excuse I suppose, for the cutting down of large public expenditures. But when we are discussing railway matters, as mover of that resolution, and always bearing in mind that the resolution was accepted by the Government, I think it my duty to remind the hon. ministers that that acceptance on their part stands on record and that it has prevented me from introducing again a resolution of that kind. When a government solemnly accepts a resolution it assents to the acts set forth in the resolution and should at the earliest moment carry out the scheme for which the resolution was declared. I am pleased to learn from the Acting Minister of Railways (Mr. Reid) that he realizes the very great necessity of giving railway accommodation to the remote sections of this country. I hope that the day is not far distant when every part of this country will have the full benefit of railway connection. I have been a member of this House for a great many years, representing the county of Victoria and the northern part of Cape Breton. In North Cape Breton we are not complaining about railway facilities; we have a railway. But in the good old county of Victoria we have no railway at all. The county of Victoria extends along the shores of the Atlantic, with its splendid fisheries, for a distance of 110 or 120 miles, but in that whole distance we have not one foot of railway. The Government of the day, in 1911, shortly before the general election, had undertaken, by legislation and by vote, to build a railway into the county of Victoria, and a resolution which I brought forward some two or three years was accepted by the present Government. That resolution involved the extension of the railroad into the county of Victoria, and I now impress upon the Minister of Railways that whenever any move is made in the direction of further railway development in eastern Canada, he will not forget that that resolution has been accepted by this House, and that the carrying out of the terms of that resolution will involve the building of a road into the old county of Victoria.

Mr. REID: I shall be very glad, when the matter of further extension is considered, to take up that matter.

Mr. NESBITT: I should like to add my voice to that of the hon. member for Rouville (Mr. Lemieux). If the Government intends to bring in any fresh legislation we may as well make up our minds to stay here all summer, and I am anxious to get home.

Mr. REID: I do not think there is anything more than has been indicated by the Minister of Public Works. If there is any further legislation to be introduced it will be announced to-morrow.

Consolidation of Railway Act, $2,000.

Mr. GRAHAM: How is that work progressing?

Mr. REID: It is completed, I think, and ready for presentation to the House.

Mr. PUGSLEY: How much has that cost?

Mr. REID: About $7,500.

Mr. PUGSLEY: With a Department of Justice, with a Minister of Justice, with a Solicitor General, with a Deputy Minister of Justice, and quite a large number of highly paid officials on the part of that department, with a solicitor to the Railway Department, with a general counsel to the Intercolonial, why should it be necessary to go outside for the drafting of a Bill to consolidate the Railway Act? Why employ outside counsel to the extend of over $7,000, the salary of a judge of the Superior Court for a whole year, and the salary of a Cabinet Minister?

Mr. REID: The solicitor who did this work was a long time at it.

Mr. GRAHAM: They usually are.

Mr. REID: As to going outside of the department, no man in the House knows better than the hon. member for St. John the work of the officials in the Department of Justice. They have a staff barely large enough to do the work in connection with the several departments of Government. They are all very busy, and it has always been the rule, in many important cases, to employ some outside counsel. In this case I suppose the Department of Justice had no official whom they could ask to devote his whole time to the consolidating of this Act. No Act is more important or requires more careful study than the Railway Act, and it was necessary to employ an experienced solicitor to deal with it. I think the work has been well done, and the consolidation is now ready for the House.

Mr. GRAHAM: I am told it will be necessary for the members to watch that consolidation very closely, as in many important points a sufficient number of words have been changed to alter the meaning of the Act. Not being a lawyer I should not know the significance of the changes, but I take this opportunity of telling legal members of the House that when the Bill comes up for consideration it will be necessary to investigate the changes very closely.

Mr. REID: There is no doubt that there have been a great many changes, but I understand that the solicitor who has this work in hand consulted with the Chairman of the Railway Commission.

Mr. GRAHAM: What is his name?

Mr. REID: Mr. Samuel Price.

Mr. PUGSLEY: Where does he live?

Mr. REID: He is now the Chairman of the Ontario Railway Commission. He originally came from St. Thomas. He is, from what I have learned, a very able man. At all events the work was carried on in consultation with the Chairman of the Railway Commission. When the Bill comes before the House it may be materially improved by the many able legal gentlemen who are members of this House. The consolidation as prepared will be at least a working basis, and I think it is one that will not require many changes.

Mr. McKENZIE: Is this simply embodying into the new Act the amendments which have been adopted since 1903?

Mr. REID: And any changes that may be deemed necessary in the old Act.

Mr. McKENZIE: Reverting to the St. Peter's canal, what progress is being made with the work and when is there a chance of the canal being opened? Who is really the contractor? Is it a corporation or an individual?

Mr. REID: The contractor is a person named W. H. Weller. He took the contract when it was tendered for, and has been working on it ever since and will complete it. I have this memorandum on the work:

> The main portion of the excavation has been completed. The concrete work in the lock walls is nearly completed. Work is proceeding on the remodelling of the old lock gates which will be hung as soon as ready. By this time it is expected that the lock concrete will be fully completed and a small barrier of rock at the canal end of the lock will have been removed.
>
> A few weeks' work in dredging out the west wall of the old lock, after the lock gates are hung will enable us to open the canal for traffic. Some minor works in the Atlantic entrance and in the prism of the existing canal will be carried out while the canal is in service.

I understand that it is expected the canal will be open for service in the month of July.

Mr. McKENZIE: What will be the depth of water on the mitre sill of the canal after the new works are completed?

Mr. REID: We are not increasing the depth materially; it will be about 19 feet on the mitre sill at low water.

Mr. PUGSLEY: I should like to say a word with reference to the acquisition of branch lines. The minister will remember that in 1915 authority was given to the Government to acquire branch lines of the Intercolonial. I feel particularly charged with this duty owing to the absence of the hon. member for Kings and Albert (Mr. Fowler), because I remember that he took a great interest in this question, which, as the minister knows, was first urgently advocated by the late Mr. Emmerson. In the elections of 1911, the hon. member for Kings and Albert, which two counties are equally interested in the acquisition of a certain branch line, deemed the matter of such great importance that he wired the Prime Minister, who was then in Charlottetown, P.E.I., asking as to the policy of the Government in regard to the acquisition of branch lines of the Intercolonial. The Prime Minister wired back to the hon. member for Kings and Albert that it was the policy of the Conservative party to acquire branch lines of the Intercolonial, and that telegram was used with great effect by the hon. member for Kings and Albert in his candidature. I do not find any fault with that hon. gentleman for asking the question, or with the Prime Minister for replying in the way he did. But I have had a good many communications sent to me in reference to the taking over of these branch lines. The people feel that the delay has been very great. I think that only two branches have been taken over by this Government. For the information of the people of the Maritime Provinces, who are more especially interested in the carrying out of this policy which was unanimously approved by both parties in the House some years ago, I would ask the acting minister whether any steps have been taken towards the acquisition of other branch lines. I would think that before considering the acquisition of branch lines of the Transcontinental Railway, such as the Quebec and Saguenay railway, the Government ought to carry out the policy which it announced would be carried out in reference to branch lines of the Intercolonial.

Mr. REID: The hon. member knows that we passed a Branch Lines Act.

Mr. PUGSLEY: Yes, in 1915.

Mr. REID: Exactly; we made that step forward in order to be able to take over any branch lines which we desired. We have taken over two branch lines, but the hon. member knows that under the present war conditions we could hardly go ahead and take over more branch lines. The fact that we have taken over two shows that we are carrying out the policy which was announced by the Prime Minister, and we will continue to carry out that policy as soon as conditions permit.

Mr. PUGSLEY: I quite agree with the acting minister that this is not a good time to take on new obligations, but those who have communicated with me have heard rumours in regard to the taking over of a line which is not connected with the Intercolonial, and which was not included in the Branch Lines Act. As the minister can realize, they would naturally feel very much aggrieved if, before carrying out the policy which was approved by the House unanimously, the Government should make a new departure and take over a road which was not contemplated at the time, and which the Prime Minister, in 1915, expressly excluded from the contemplation of the Act then passed. I do not think that the people of the Maritime Provinces are anxious to have new obligations entered upon at present, but they feel that, before the Government take on heavy obligations in other directions, their claim ought to be considered. For instance, I had a letter the other day from a gentleman who takes a very great interest in the acquisition of branch lines in New Brunswick, which is included in the Act which was passed in 1915. He had heard rumours about large advances to the Canadian Northern Railway Company and Grand Trunk Pacific Railway Company, more especially to the Canadian Northern, and he thought it would be a very great hardship upon the people of the Maritime Provinces if the Government should commit the country to further obligations with the Canadian Northern and be forgetful of the claims of the districts which are served by these branch lines in the Maritime Provinces. They feel that all parts of the country should be treated with equal consideration, and that the different railway companies should have equal justice.

Railways and Canals—chargeable to capital —Quebec bridge—construction, $3,450,000

Mr. REID: I was to give a statement as to the Quebec bridge. With reference to that I may read a memorandum from Mr. Monsarrat, the chief engineer, dated Mont-

real, December 2, 1915. The memorandum is as follows:

I beg to report progress in connection with the construction of the Quebec bridge for period ending November 30, 1915, as follows:

Superstructure. Since my last report the work on the north shore has progressed rapidly, and at the present time the entire cantilever arm has been completed, thus completing practically all the steelwork for the north shore, which is in accordance with the programme mapped out by the St. Lawrence Bridge Company. There still remains a certain amount of riveting and erection of sidewalk, which will be done next year.

Work has already been started on the dismantling of the erection traveller, which will be taken down and re-erected at Sillery cove, to be used in connection with the erection of the suspended span at that point.

On the south side the programme of the contractor was also carried out, and practically all steelwork completed up to and including the main post over the main pier. There still remains a certain amount of riveting to be done on this work, but this will not be done until next season. Portions of the steel falsework supporting this anchor arm are now being removed and will be used in connection with the erection of the suspended span.

Next year the south cantilever arm will be erected, after which the suspended span will be floated into place and suspended from the two ends of the cantilever arms. The work of the erection of the suspended span will be commenced early in the spring and will be completed by the time the cantilever arm is ready to receive it.

The status of the work in the shop and field is as follows:

	Tons.
Raw material ordered from the mills	69,038
Raw material received at the shop...	66,908
Fabricated at the shop..	56,145
Members delivered at the site.. ..	55,434
Steel erected and partially riveted.	36,087
Net weight of erected bridge, estimated at..	65,000

Removal of unused steel. The contractor for this work entirely completed his contract to our satisfaction.

All of which is respectfully submitted,

(Sgd.) C. N. Monsarrat,
Chairman and Chief Engineer.

I want it to be noted that this report is dated December 2, 1915, so that when the chief engineer says that the south arm will be erected next year, it means during the present year, 1916. Mr. Monsarratt told me that they are now well on with the work. The statement of expenditure is:

Total expenditure to March 31, 1914, including cost of collapsed bridge	$12,732,062 71
Expenditure to March 31, 1915	2,816,305 10
Expenditure to Oct. 31, 1915 ..	2,709,253 24
	$18,257,621 05

Of the above amount $10,473,346.38 has been expended on the new bridge.

Mr. GRAHAM: I do not quite see why the minister puts into the cost of this bridge the cost of the bridge that collapsed. We made a certain contract for this bridge, the contract was on estimated quantities and it will cost not a great deal more than the estimate, but it will cost some more. The real cost under this contract has no connection with the collapsed bridge so far as the value we are getting under this contract is concerned. When does my hon. friend expect the bridge will be completed and this span floated into position?

Mr. REID: Mr. Monsarratt told me that he expects to have the last span in this fall, but of course, it will not be ready for operation by that time. It is going to take some time to do the riveting and finally to complete the structure. Speaking roughly, the bridge will be completed so that you can go across it this fall if there are no mishaps. With reference to the statement of my hon. friend as to why I included the expenditure on the collapsed bridge, I merely read what is in the memorandum before me, as supplied by the officials. However, $10,473,346.38 is all that has been expended on the new bridge, and, of course, the collapsed bridge has nothing to do with it. I suppose that has been carried on in the books and they have just copied it.

Mr. GRAHAM: I understand from the minister that they continued the construction of the bridge along the lines laid down originally by the commission. Mr. Monsarratt is the engineer, and with Mr. Monsarratt there is Mr. Snider—

Mr. REID: A commission was appointed; I think by my hon. friend (Mr. Graham). That commission remains exactly the same except that Mr. Snider died.

Mr. GRAHAM: Who took Mr. Snider's place?

Mr. REID: Mr. Monsarrat said the work was so nearly completed that they did not require another commissioner, but in order to carry out the commission as slated it was necessary to appoint some one else, and, speaking from memory an Order in Council was passed appointing Mr. H. P. Borden one of his assistant engineers.

Mr. GRAHAM: He is the secretary of the commission.

Mr. REID: Yes.

Mr. GRAHAM: Is Mr. Modjeska still on?

Mr. REID: Yes.

Mr. GRAHAM: I have no fault to find with that. The difficulty in the first place

was to get a board of engineers that would agree on a plan. After the plan was agreed upon and the method of operation arranged for, I imagine they got over that part of the work for which they wanted Mr. Snider's advice particularly. Mr. Snider was one of the oldest bridge engineers on the continent, older, I think, than even Charlie Macdonald. I am glad to know that the work is going along successfully. There was a change made by the new commission in the style of the piers. Has the chief engineer reported if that has been found satisfactory?

Mr. REID: He told me that it was found perfectly satisfactory. They were enlarged, I think.

Mr. GRAHAM: I took perhaps a greater interest in that particular work than in anything that came before the department when I was there, because it was so difficult to get it started. I think the minister might intimate to the company that they might let members of Parliament know the day they intend to float this span into position. It is a matter of great interest. The House ought to know that this is the largest bridge of its kind ever constructed in the world. Its completion is of great interest to the people who have paid any attention to it, and more particularly is it of interest to the engineering world. Each end of this bridge is being constructed separately, one on the north side, and one on the south side, and the floating span will be floated into position. It means that this span will be floated into position at a point 160 feet above high water and the work of placing it in position must not occupy much more than a few seconds, or at all events a very small fraction of a minute because the tide must be taken advantage of to bring down this floating span and when it is put into position it must be put in there properly and fastened almost immediately or the current will take it beyond its position unless that is done. If other people are as interested in it as I am it would be a kindness to a great many if the minister would let the members know the particular day when the company intends to float that span into position, because it is something they may never have a chance to see again. That is the only point at which I tremble about the Quebec bridge, and I will sleep more peacefully at night when this span is successfully floated into position. It will require the greatest delicacy and skill. If there was still water at that point there would be lots of time to float the span in place; but as it is tidal water the work will have to be done very rapidly. Some people who have criticised this great undertaking have said that it will be impossible to accomplish it in tidal water. I want the minister to promise that he will let me know the day the span will be floated in.

Mr. REID: I quite agree that the putting in of the last span will be a great feat, and I for one should like to see that great event.

Mr. PUGSLEY: You might take us all.

Mr. REID: I shall be very glad indeed to see that every member of the House gets notice of the day so that if possible we may all be there to see the last span put in. It will be very difficult to do, but Mr. Monsarrat and those who have been constructing the bridge have been so successful with the work so far, that I am confident that if anybody can do it they can.

At six o'clock the committee took recess.

The committee resumed at eight o'clock.

Ocean and river service—P.E.I. winter mail service, $11,000.

Mr. HAZEN: This is for the winter mail service to Prince Edward Island. It connects with the ice-boat service between Cape Tormentine and Cape Traverse. The vote is the same amount as was voted last year. The expenditure for 1914-15 was $10,996 and about the same amount was expended up to the 31st of December, 1916.

Lighthouse and coast service—construction of lighthouses and aids to navigation, including apparatus, submarine signals, and providing suitable boats for carrying on construction work, $750,000.

Mr. OLIVER: Is any of that expenditure to be made in relation to Hudson bay navigation?

Mr. HAZEN: No. The expenditure for 1914-15 was $996,638.16. We are reducing the expenditure this year to $750,000. Up to the 31st of December, 1916, we expended $506,681.70. Out of this vote we provide all the new aids to navigation such as lighthouses, buoys, beacons, fog alarms and submarine signals, including apparatus and machinery, as well as all large repairs to existing aids and the replacing of obsolete buildings and apparatus by equipment suitable for the protection of modern heavy

draught vessels. It also includes the purchase of the plant necessary for the carrying on of the works, as well as the purchase of lands, wharves, etc., the erection of such supplementary works as may be required, the chartering of any boats that may be found temporarily necessary to properly carry out these works; the regulation of traffic in the Detroit river and such other places as may be found necessary, and the administration and operation of the lighthouse department at Prescott.

Mr. GRAHAM: That last item looks bad.

Mr. HAZEN: Yes, anything at Prescott is naturally bad. That includes also all the minor works which have been decided on and which will be found necessary and urgent, between the present date and the end of March, 1917. There will also be the usual work to be done in connection with the various depots, workshops, etc., together with provision for extending the accommodation at such places as will be found absolutely necessary. The expenditures for last year will be found in detail in the marine report at pages 3, and 33 to 58.

Mr. GRAHAM: Who supplies the submarine signals?

Mr. HAZEN: A company that has been doing it for years, the International Submarine Signal Company.

Public works chargeable to capital—Marine Department—ship channel, river St. Lawrence —amount required for the completion of specially designed steamer to be used exclusively for testing and sweeping the river St. Lawrence channel.

Mr. HAZEN: There was less expended during the past year than we expected and so we have to revote a portion of the amount.

Ocean and river service—to provide for the construction of two steamers to replace the C.G.S. Quadra, $150,000.

Mr. HAZEN: A few months ago the steamer Quadra came into collision with a steamer of the Canadian Pacific Railway Company off the harbour of Nanaimo and was sunk. After getting the best opinion we could, we had the vessel sold as it lay. The estimated value of the vessel as reported by the officials of the department was $10,000. Tenders were asked for and four or five tenders were received, the highest being $9,500, or $500 less than the amount estimated by the officials of the department. We accordingly sold the vessel as it lay for $9,500. Our officials were of the opinion that it would not pay to raise the boat and repair it as it was a very old boat and the cost of repairing it would be great. Such a boat would cost usually about $150,000. We propose to replace it with two boats, the total cost of which will be about $150,000. We find that we can discharge the service better with two smaller boats costing in the gross the same amount as the larger vessel.

Mr. MACDONALD: Where are they to be built?

Mr. HAZEN: In British Columbia.

Mr. GRAHAM: Will each of those boats be a little swifter than the Quadra was?

Mr. HAZEN: They will be swifter and better adapted for the purpose for which they are intended, that is, the lighthouse service. They are not meant for the fishery service. Speed is not an essential, but they must be properly equipped with cranes, lifebuoys, etc.

Mr. MACDONALD: Are they to be wooden or steel vessels?

Mr. HAZEN: We have not definitely decided. The plans have not been prepared.

Lighthouse and coast service—amount required to pay a pension at the rate of $300 per annum from the date of retirement to the following pilots: Elzéar Godbout, Théophile Corriveau, Alphonse Pouliot, Emile Couillard, Treffié Délisle, Pierre Pepin Dumas, and Alfred Gaudreau, $2,400.

Mr. MACDONALD: Are pensions granted under any regulation?

Mr. HAZEN: Yes, a regulation under Order in Council passed in the year 1906 or 1907 which has been acted upon ever since.

Marine hospitals—Seamen's Hospital Fund, $5,000.

Mr. HAZEN: This vote of $5,000 is being given in compliance with a request made by a large delegation including some members of Parliament on both sides of the House. My hon. friend from Guysborough (Mr. Sinclair) and some hon. members on that side, and my hon. friend from Digby (Mr. Jameson) and some gentlemen on this side, some prominent citizens of Ottawa, and some Toronto gentlemen interested in this hospital, called upon us and asked us to give a subscription of a small amount. This hospital is situated on the Thames and is available to sailors from all parts of the world, including Canadian sailors. After these gentlemen had called upon me they furnished me with further data showing

that this hospital was rendering valuable services to our sailors who from time to time need hospital attention in that part of the world. It is a voluntary institution and among the subscribers is His Majesty the King. Over $30,000 had been raised by private subscription in Canada including a grant of $2,500 made by the Legislature of Ontario. At first, I was somewhat averse to this, but in view of the circumstances and the desire expressed I decided to ask for this vote. Hon. gentlemen will remember that the hon. member for Guysborough brought this matter up in the House and spoke of the admirable character of the hospital and the splendid service it rendered. His views as a shipping man of experience would naturally have weight with me. After considering the matter, I thought it fair to give the hospital a grant of $5,000 to supplement the subscriptions from private sources.

Mr. NESBITT: Is the hospital free to all sailors?

Mr. HAZEN: Yes; it is not for sailors of the navy, but for sailors of the merchant service.

Mr. MACDONALD: The claims of the hospital were not put forward as being in any way the result of the war?

Mr. HAZEN: No.

Mr. MACDONALD: Nor is it intended that this should form the basis for a yearly grant?

Mr. HAZEN: Not at all. I understand that in consequence of the very generous subscriptions that people have been giving for purposes connected with the war they have had to curtail their subscriptions to this hospital. It is not intended that this should be an annual grant, and as I understand it there will be no occasion to ask Parliament for it again.

Fisheries—to provide for the inspection of pickled fish and the fish canneries, $25,000.

Mr. HAZEN: The Fish Inspection Act came into operation on the 1st of May, 1915. Before that time copies of the Act, with the full code of regulations attached, were distributed amongst those interested on the various parts of the coast, and the general inspector of pickled fish has visited the different sections of the coast and at meetings of the fishermen and packers fully explained the requirements for putting up fish. Over one hundred of these meetings were held. A staff of local inspectors was appointed. As the Act is not compulsory, no definite idea could be formed as to the extent to which it would be availed of at the start, and consequently as few inspectors as it was considered possible to get along with were appointed. The Atlantic coast was divided into six districts, as follows:

1. Cape Breton Island: inspector, H. H. Mann, North Sydney,
2. The south side of Nova Scotia from Antigonish to Yarmouth county inclusive, inspector, A. H. Hiltz, Mahone Bay.
3. The Bay of Fundy counties of Nova Scotia and New Brunswick, including Westmorland county, N.B., inspector, A. O. H. Wilson, St. John.
4. The Magdalen Islands, Prince Edward Island, and Cumberland, Colchester and Pictou counties, Nova Scotia, inspector, Thomas Doyle, Rustico, P.E.I.
5. East coast of New Brunswick, inspector, Colson Hubbard, Carafuet.
6. Gaspé Peninsula and north shore of the gulf. No inspector has yet been appointed.

As the packing of barrels for the brand increases it will be imperative to appoint additional inspectors. As the past season was the initial one under the Act, it was not anticipated that many barrels would be put up for the brand. Few of the packers had provided themselves with barrels made in accordance with the regulations. There were, however, some put up on different parts of the coast, as follows:

1,160 barrels of alewives were put up for inspection and of these, 1,158 were found to be in accordance with requirements and were branded, namely, 899 in St. John county, all of which were branded, and 261 in North Sydney, 259 of which were branded.

58 barrels of herring were submitted for inspection in Gloucester county, New Brunswick, of which 43 were branded.

110 barrels of mackerel were submitted for inspection, of which 10 barrels were branded, namely, 100 barrels in Kings county, P.E.I., none of which were branded, and 10 barrels in Halifax, all of which were branded.

During the last fall the educational work among the packers and fishermen was again taken up in a personal way by the general inspector. Several of the larger packers in the United States have become interested in the brand and some of them have intimated their intention of requiring all the fish they buy next season to be put up for inspection. Owing to the war the herring fishery on the European side has been reduced to a minimum, leaving the markets on this continent practically bare. The Canadian dealers are realizing this and several of them are arranging to go into the putting up of herring according to regulation next season. One or two fish merchants went into the business last year and re-

ceived from 100 to 150 per cent more per barrel for their fish than they ever did previously. The Inspection Act, it would seem, has come into operation at a most opportune time; but the greatest care must be taken to have its provisions fully carried out, in order that the brand may become recognized on the markets as standing for the excellence of quality it indicates. If this is not done, any trade that may be built up will be lost again when normal conditions return.

Mr. MACDONALD: I desire to call attention again to matters of which I spoke on a previous occasion—the extension of the lobster fishing season in Northumberland straits. I was in Nova Scotia last week and saw the conditions at that time; the ice lay along the coast and fishing was not going on. The same conditions that arose last year obtain this year, and no doubt the need for an extension of the season will be urged upon the minister. I am satisfied that that extension should not be given except under special circumstances; but the conditions of this year ought to justify its favourable consideration.

Mr. HAZEN: The season does not close until the 25th of June, and it is too early to say yet what can be done; but we will watch conditions closely, and if they prove such that the fishermen have not had a fair opportunity to make what would be the catch of a normal year we will certainly consider the question of an extension.

Mr. MACDONALD: I have merely taken this opportunity to accentuate what I had already said. Along the Northumberland straits for the last two or three weeks the packers have had men under pay and have had their supplies ready, but they have not been able to fish. It is now the 4th of May. There is still ice all along that coast. If they do not begin fishing until next week, the minister will see that the season will be much shorter than it was agreed it should under the recommendations of the commission. Under these circumstances, where people will not have an opportunity of fishing for the period the commission recommended, it does seem to me that a case is made for an extension. I mention the matter now because I understand the minister is going away.

Mr. WILLIAM CHISHOLM: What steps did the minister take last year to inform himself of the conditions when representations were made to him along the lines of those just made by the hon. member for Pictou; and what steps does he propose to take this year to acquaint himself with the conditions with a view to meeting the wishes of fishermen?

Mr. HAZEN: When representations are made we ask the inspector to investigate and make a special report for the information of the department, and we will take the same course this year.

Fisheries Marine Biological Board of Canada, $26,000.

Mr. HAZEN: A new boat is required for the oyster culture business to replace the Ostrea which was built in 1902 and is absolutely worn out and unfit for service. The new boat is now being built at the Government shipyard at Sorel. She will be equipped with oyster dredging apparatus and will be able to do more work, and more effective work, than the Ostrea.

Mr. J. J. HUGHES: Some experiments were carried on in connection with the herring business last year, with headquarters at Souris. Will similar work be carried on this year?

Mr. HAZEN: The Marine Biological Board of Canada is composed of a number of gentlemen, one of them an official of the department, Professor Prince, who is a specialist and a biologist, and the other gentlemen from different Canadian universities, who serve practically without remuneration, simply for their expenses. Professor MacCallum, of Toronto University, takes a great interest in this work. There are also gentlemen from the university of Acadia, and from one or two others thoughout Canada. There is a biological station at St. Andrews and another at Prince Rupert. During this year the board has been doing very good work on the Atlantic in the continuation of experiments in the hatching and rearing of lobsters, and a continuation of the study of the natural history of the herring. On the Pacific, it has been investigating the question of kelp groves. Kelp is quite abundant along the shores of British Columbia, and it is claimed that it has very economic value and can be used for many different purposes. The board has also been making, on the Pacific, a study of the natural history of the halibut.

In connection with the study of the natural history of the herring, the services of Dr. Hjort were secured. Doctor Hjort is the director of the Nor-

wegian Fisheries, and is one of the most eminent experts on the herring. Keeping in view the vast possibilities of the herring fishery on this side of the Atlantic, it was considered well to arrange for Doctor Hjort's services when it was found out that such could be had last year. In order that he might be able to cover as much of the field as possible, packages of herring caught at different times of the year were procured on different parts of the coast for his examination on his arrival. After close consultation, it was considered that the end in view could best be achieved by placing at his disposal the department's steam drifter "33" for experimental fishing, dredging and tow-netting operations, and to arrange for two of the department's steamers to take him over desirable portions of the Gulf and Atlantic, so as to make hydrographic and other investigations. The final arrangement for these trips of investigation was as follows: Three trips were to be made in the cruiser Princess, over the Gulf, to start from Prince Edward Island and go northward to the Natashquan bank on the north shore, thence eastward to the Bay of Islands, Newfoundland, thence to St. George's bay, Newfoundland, and back to the place of starting. Three trips in the steamer Acadia on the Atlantic coast, going over Sable Island, thence to Banquero, to Miquelon Island, thence over the Green Bank to the Grand Bank of Newfoundland, thence up to Cape Race, thence back to the point of starting. The first trips were to be made in the early part of May, when the herring and other fish were spawning and when winter conditions would obtain in the sea; the second in June when the larvae of these fish would be in the water, and the third, at the end of July or in August, when the distribution of young fish, herring, cod, etc., could be studied, and when the summer conditions of the sea are fully advanced in the different water layers (currents). Owing to the unusually late spring, it was not found possible to start as early as expected, so that only two trips of investigation could be made, but these were carried out to the eminent satisfaction of Doctor Hjort, and in his opinion, much valuable and interesting information was obtained. The aims of the investigations were:

1. To obtain an understanding of the hydrographic conditions,—temperatures, salinities and currents.

2. To obtain material for a general description of the floating animal and plant life in the different layers of water on which the important food fish feed.

3. To ascertain where the eggs and larvae of the different food fish are found, so as to know where they may be caught during the spawning season.

This information should throw light upon the general distribution of fishes in Canadian waters, and especially on the races and growth of the fishes. Also, important information for the same purpose was to be collected by the 33. Owing to the late date that the ice remained in the Gulf, the first trip was made in the Atlantic on the Acadia, which started on the 29th May. The cruise was a highly successful one, the weather being favourable, enabling continuous work to be done day and night. Temperatures at different depths, and samples of water to enable the salinities thereof to be ascertained, were taken at stations twenty miles apart. The first cruise in the Gulf was taken in the Princess, starting on the 9th June. A second cruise was made in the Acadia, over the same area as the first one, in July, and in the Princess in August. The 33 was engaged throughout the summer in carrying on fishing and other operations in the Gulf, around Cape Breton, and as far out as Newfoundland.

Associated with Doctor Hjort in these investigations were Professor Willey, of McGill University, Doctor Huntsman, of Toronto University, Doctor J. A. Mavor, of Toronto University, and Doctor Bjerkan, a Norwegian. All the material collected could not be immediately worked up, and it was not expected that it could be completed before the end of last year or the first part of this one, so that Doctor Hjort's final report will not likely be available for a few weeks yet, but as soon as it is available copies will be printed for distribution.

I understand that the fishing people of Nova Scotia, the Halifax Board of Trade and others who had the pleasure of hearing Dr. Hjort's addresses, were very much pleased with the information he was able to give them, and are hopeful of very good results from the investigation which he is carrying on. He believes that the herring which visit our shores, and which are now caught near the shore, are not by any means the best herring, and that to get the best it is necessary to go farther out into the sea. It is to ascertain, among other things, where the schools will be found farther out in the sea that this investigation is being carried on.

Mr. HUGHES: Will any work of this kind be carried on during the coming year or will this work be completed when Dr. Hjort's report is completed?

Mr. HAZEN: I think that the work will be completed when we get his report, in a few weeks. It may be that the report will be such that it may be considered desirable to carry on further experiments, but I do not think so, and that is the opinion of the technical officers of the department.

Mr. HUGHES: If the work is finished and the services of Dr. Hjort and his assistants will not be needed this year, I shall refrain from making a few remarks I intended to make. Otherwise I should feel it my duty to make them. Perhaps there is nothing in them, but I know that as a matter of fact Dr. Hjort, when discussing the war, was, to say the least, not anti-German. I think it would be well, if the matter is not pressing, to suspend the work for a year.

Mr. HAZEN: I do not think there will be any further need for going on with it another year.

Mr. LOGGIE: I would like to take this opportunity of drawing the minister's attention once again to the necessity for protecting the lobster fishing industry and preventing, if possible, illegal fall fishing. When this matter was before the House on a previous occasion, the minister remarked that practically no illegal fall fishing went on during last year. I know of one case where 150 cases of lobsters without labels were offered to a buyer. The buyer did not purchase the goods, but I have no doubt that they found a market somewhere. While the labels afford a certain protection, they are not a protection against illegal fishing. What the minister requires to do is to stop the work while it is being done; that is to say, to stop the men who go from the shores, bring their lobsters in at night, and can them in the woods or in their houses. These lobsters will find a market. If they cannot sell them in the fall, they will sell them in the following season. The minister can never hope to stop illegal fishing by simply employing cutters along the coast, distributing traps, and insisting upon labels on the boxes. He requires to have men who will be fearless in the discharge of their duties, and who, when they find men guilty of illegal fishing, will punish them severely. If this were followed up, the practice might be stopped, but I do not think you can stop it with the procedure which has been followed for a number of years past. I know of this one case; I do not know if the parties were illegally fishing, but I know that the lobsters were offered for sale without labels. I do not know whether they found a purchaser or not.

Mr. HAZEN: My hon. friend has a thorough understanding of the lobster business, and his views are entitled to every respect, and will have every consideration. It is not an easy matter to prevent illegal fishing. My hon. friend knows that, during the past few years, the officers of the department have been more successful in dealing with illegal fishing than in previous years. The statement made by my hon. friend that 150 cases had been offered for sale without labels, is a serious one, and I would like the hon. gentleman to tell me, not in the House, but in confidence, who were the parties, as that might help us to guard against similar violations in future. The hon. gentleman's suggestion is, I understand, that illegal fall fishing cannot be successfully prevented by the system of patrolling the coasts, but that it is necessary to have officers, at higher salaries than are paid now, who would live outside the district altogether perhaps, appear on the scene at unforeseen times, and perhaps catch the guilty parties red-handed. I understand that that is what he suggests.

Mr. LOGGIE: They would have to be there all the time.

Mr. HAZEN: If they were there all the time, the fishermen would naturally guard against them. If, as in the case of bank inspectors, they did not know when the officers might appear there would be a better chance of catching them. We will give consideration to my hon. friend's views.

Mr. HUGHES: The minister states that his officers have been more successful than in previous years. The reverse is the case in the province of Prince Edward Island. Some officers, I think they are called overseers, are certainly not as active there as their predecessors were. These overseers are remiss in the discharge of their duties in Prince Edward Island.

Mr. A. K. MACLEAN: Has the minister been in receipt of any protests from persons engaged in the lobster industry in the Maritime Provinces, soliciting his intervention with the British Government with the view of having canned lobsters omitted

from the list of imports prohibited. In former years the British market was the most important market for those engaged in the canned lobster business.

Mr. HAZEN: We have had representations of that sort. Of course, it is a matter that more directly comes within the purview of the Minister of Trade and Commerce. I took the matter up with the Minister of Trade and Commerce who, I understand has made representations. Up to the present, no embargo has been placed upon canned lobsters, I understand, and I am hopeful that none will be.

Civil Government—Department of the Naval Service—to provide for one clerkship in First Division, sub-division "B," $2,100; to provide for one clerkship in Second Division, sub-division "B," $800; to provide for four clerkships in Third Division, sub-division "B," $2,000.

Mr. HAZEN: The first item is to provide for the appointment of an officer to act as assistant to the Superintendent of Fisheries. This officer is being brought in from one of the outside divisions to assist the superintendent in the important work of this branch. It is proposed to appoint this officer at the minimum of $2,100.

Mr. GRAHAM: Who is he?

Mr. HAZEN: Mr. Ward Fisher. The second item is to provide a vacancy for the appointment, at the minimum salary of $800 of an officer in the hatcheries branch of the fisheries. It has been necessary lately to employ a temporary officer for this purpose. The third item is to provide for the appointment of four stenographers at the minimum salary of $500 yearly. A large number of temporary stenographers are at present employed, and owing to the great inconvenience of changing these clerks repeatedly it is considered that four permanent appointments should be provided for.

Mr. MACDONALD: I assume that Mr. Fisher will be employed in the Fisheries Branch.

Mr. HAZEN: Entirely.

Mr. MACDONALD: Has he any qualifications for the position?

Mr. HAZEN: He was a fishery inspector in Nova Scotia, and his services as such were so extremely satisfactory that the officials of the department recommended his appointment.

Mr. MACDONALD: His qualifications must have been gained very speedily because it is only within the last few years that he changed from being a fisher of men to a fisher of fish; he was a clergyman in western Nova Scotia. He seems to have been anxious to serve his country for a consideration and he is made a fishery inspector largely on account of his political activity, so I understand. What particular duties is he performing in the department?

Mr. HAZEN: His duties are to assist the Superintendent of Fisheries. The work of the department has increased very largely. The superintendent needs his assistance in order to carry out successfully the work of his department. Mr. Fisher, in addition to being a preacher, was a newsman, and therefore is an all round man. At any rates his services are thoroughly satisfactory to the fishery officers of the department; they regard him as a very intelligent and competent man.

Mr. MACDONALD: I would have thought that Mr. Hockin, who was fishery officer in Northumberland straits, would have been—

Mr. HAZEN: He is a gentleman of over seventy.

Mr. MACDONALD: I did not know that he was that old.

Mr. HAZEN: He is a pretty old man.

Mr. MACDONALD: How old is this gentleman of varied occupations?

Mr. HAZEN: I am told that he is 43 or 44.

Mr. MACDONALD: He has managed to combine, within a very brief span, varied and interesting occupations. I fail to see, however, how he could have developed in the space of two or three years the special qualifications that would entitle him to precedence over other fishery officers in the Dominion. Some of my hon. friends from Nova Scotia who are interested in this matter would like to refer to it; or if my hon. friend has any other items perhaps he would just wait a minute.

Mr. HAZEN: These are all the items.

Mr. MACDONALD: Who is succeeding him in his former position?

Mr. HAZEN: The appointment of the local inspector has not been made yet. It will be made in a very short time.

Mr. MACDONALD: What are the counties in his district?

Mr. HAZEN: From Halifax west.

Mr. MACDONALD: On the south shore, or does he take in the Bay of Fundy?

Mr. HAZEN: On the south shore and up into the Bay of Fundy. His district would take in Kings and Digby.

Mr. MACDONALD: Has he passed the Civil Service examination?

Mr. HAZEN: No, he does not have to.

Mr. HAZEN: He has to get a certificate from the Civil Service Commission as to his qualifications.

Mr. LOGGIE: I regret that I was not in when the item to provide for the inspection of pickled fish and fish canneries was under consideration. May I ask the minister what is included in the provision made for the inspection of fish canneries? Has there been any appointment made in connection with this inspection, and what is the nature of the work?

Mr. HAZEN: Wherever necessary we ask our local inspectors in the different localities to inspect canneries.

Mr. LOGGIE: That is to inspect the quality of the products of the canneries?

Mr. HAZEN: No; the Act does not provide that. The inspection is made under the provisions of the Canned Food Act.

Mr. LOGGIE: The Canned Food Act does not take in canned fish.

Mr. HAZEN: Yes. The duty of administering that part of the Act which applies to fish canning establishments was handed over by the Department of Agriculture, which previously administered it, to the Department of Marine and Fisheries. We are using our own staff for that purpose now. We have not appointed any new officials or added to the expense in consequence of it.

Mr. LOGGIE: Your regular officials are to pass upon how to pack the goods and give directions as to how they are to be packed?

Mr. HAZEN: No, the Act does not make any provision of that sort at all. Under the Act, their duty is to see that the operations in the canneries are carried on in a sanitary manner.

Mr. LEMIEUX: Who has been appointed to the steamer Princess which was formerly commanded by Commander Wakeham?

Mr. HAZEN: Dr. Joseph Bernier.

Mr. LEMIEUX: Who is he?

Mr. HAZEN: He comes from Chandler, Gaspé county, Que. Like his predecessor, Commander Wakeham, he is a physician. Dr. Wakeham was a physician when he was appointed. Dr. Bernier is a gentleman who has taken a very great interest in the fisheries, he was recommended by a gentleman in whom we have the greatest confidence and the officials of the department thought he possessed the qualifications to enable him to carry out this work in a proper manner. I do not expect that for a little while he will be the equal to Dr. Wakeham, who had a very long experience and to whom the work was a labour of love. He did a great deal of good along the coast entirely apart from the fact that he was the fishery inspector. He did much work of a benevolent and philanthropic character, and being a physician, and a very good physician, in many cases he gave free of charge his services to people in out of the way places. I only hope that Dr. Bernier will discharge the duties of his office in a way that will measurably compare with the satisfactory manner in which Commander Wakeham discharged his duties.

Mr. LEMIEUX: I concur in what has been said by my hon. friend about Dr. Wakeham. His loss is Canada's loss. He was possibly one of the best officials any Government has ever had and in the distant regions of the Gulf his name is a household word. He was not only an able and experienced physician, but he was a peacemaker. On many occasions Dr. Wakeham was called in by the fishermen to settle any possible conflict arising between them, or between them and the Crown or the department. He was also exceedingly well versed in knowledge of the fisheries. He had been on several occasions requested by the Washington, as well as the Ottawa, authorities to report on the condition of the fisheries in the Gulf. No man was more interesting to listen to than Dr. Wakeham on that special subject. He was also an authority on winter navigation and on the harbour facilities of the indented coast of Labrador. In fact, I do not know how Commander Wakeham can be replaced. I have been for several years connected, politically as its representative, with the county of Gaspé. I do not know Dr. Bernier personally. I wish him all success in his new career. I hope that he will never forget that he succeeds—he does not replace—Dr. Wakeham, and that he will have

to measure up to a pretty high standard if he wishes to become the able public servant that Dr. Wakeham was.

Mr. MARCIL: I am very glad to corroborate in every respect what the hon. member for Rouville has said about the late Commander Wakeham. I have had the pleasure of coming in touch with him, and I know that he was a very painstaking official, probably one of the best in the department. He followed another distinguished man, the Hon. Pierre Fortin, who was the first commander of La Canadienne. and who established the fishery service shortly after Confederation, his work extending away up to the coast of Labrador. Both these gentlemen were of very high standing and rendered valuable service to the people along the gulf of the St. Lawrence. I hope that Dr. Bernier, who is a very young man, will be able to measure up to the position that has devolved upon him. It will be time enough to judge of his worth when we have heard of his actions. I should like to know how Quebec stands regarding the tidal fisheries. Does the department intend giving licenses this year.

Mr. HAZEN: We are awaiting the decision of the courts, and shall issue no licenses until the court decides we have a right to. By agreement between the Department of Justice and the Attorney General's Department of the province of Quebec a stated case is to go to the Court of Appeal, I think it is, in the province of Quebec this year, with the understanding that an appeal shall lie from that Court to the Supreme Court of Canada.

Mr. LOGGIE: I understood the minister to say that the inspection of fish was turned over to the Department of Marine and Fisheries by the Department of Agriculture, and I think the minister implied that the inspection was of the building only.

Mr. HAZEN: That is so.

Mr. LOGGIE: Under the Agriculture Department they inspect the product as well —canned fruits, for instance. The inspector goes around the factory and sends samples to headquarters, and they are then passed upon. I understand the situation now. It is simply an inspection of the building that the department carries out, to see whether it is in a sanitary condition. Am I right?

[Mr. Lemieux.]

Mr. HAZEN: Yes.

Mr. HUGHES: Are the licenses of traps for bait fish confined to any area, and what responsibilities devolve upon them?

Mr. HAZEN: The area within which a man must fish is stated in his license.

Mr. HUGHES: Do any restrictions accompany the license, as to whom the bait shall be sold? If not, the man can sell fish to his friends and refuse to sell to other people. He would have great power in his hands.

Mr. HAZEN: He is a free agent and can sell to whom he pleases. The licenses for lobster fishing are not restricted as regards the selling of the fish.

9 p.m.

Mr. HUGHES: I was speaking of bait fish.

Mr. HAZEN: They are not restricted either.

Mr. HUGHES: The minister can see what power that gives the licensee. He could refuse to sell to some fishermen and practically put them out of business.

Mr. HAZEN: The number of traps are not limited; any one can get a license.

Mr. HUGHES: What about the area within which a man can fish? In the ordinary harbour there would not be room for more than one trap.

Mr. HAZEN: A man is given a license to fish in the area for which he applies, provided there are not too many people fishing there already. Speaking off-hand, I think these traps must not be within 2,000 feet of one another; that is the only limitation.

Mr. HUGHES: Has the licensee to pay a fee?

Mr. HAZEN: Only a nominal fee.

Mr. MARCIL: Is this a new regulation?

Mr. HAZEN: No.

Mr. MARCIL: It does not apply to the Baie des Chaleurs.

Mr. HAZEN: There is no trap fishing there, but if there was, this regulation would apply to the Baie des Chaleurs.

Mr. HUGHES: The licenses are granted yearly?

Mr. HAZEN: Yes.

Mr. LOGGIE: What is the rate?

Mr. HAZEN: Five dollars for the first ten fathoms, and 10 cents a fathom after that.

Mr. HUGHES: Is that for the leader?

Mr. HAZEN: Yes.

Mr. MARCIL: The last time these Estimates were up I made the suggestion that on the permanent Shell Fish Commission there should be at least one representative from the mainland of the province of Quebec. The only representative we have now is Mr. Azade Arsenault, of the Magdalen Islands, and he is not at all familiar with conditions prevailing on the north shore of the Baie des Chaleurs, in the counties of Gaspé and Bonaventure. In the last sixteeen years I have repeatedly made the request to the Minister of Marine and Fisheries for a change in the dates of the lobster fishing season. This industry in the counties of Gaspé and Bonaventure is in a very precarious position, and has been for years past. It is claimed, whether rightly or wrongly, that the dates are not what they should be. It is well into May before the fishermen can start and they are stopped too early in the season. It is claimed that they would do better with an open season in the fall. The officials of the department have had very decided views on this and I do not think they have changed their views in these many years. I think if a competent man from the mainland of Quebec, who was familiar with the conditions, were appointed to this commission, he might be able to bring before the department the views of the residents of that locality. This Mr. Azade Arsenault is a very good man, as far as the Magdalen Islands are concerned, but they are hundreds of miles out at sea, and conditions there are altogether different from what they are in Quebec.

Railways and canals, chargeable to capital—to the Edmonton, Dunvegan and British Columbia railway, for a subsidy for a branch line from a point on its line as located, situated near the Spirit river settlement, to and through the Grande Prairie Land District, Alberta, for a distance not exceeding sixty miles; on the same terms and conditions as subsidies were granted in aid of the construction of certain railways as embodied in the Act 3-4 Geo. V, Cap. 96, 1913, $384,000.

Mr. GRAHAM: I want to protest against this system of providing for subsidies. I am not arguing against the payment of this subsidy; I am rather in favour of it; I am arguing against the system that has been adopted of putting the aid to railways in the Estimates instead, as has always been the custom so far as I can remember, of bringing them in by way of resolution upon which a Bill will be founded and finally passed. Whether designedly or not, the placing of aid to railways in the Estimates restricts the rights of the members of this House. Estimates are introduced by the minister as a message from His Royal Highness the Governor General, signed by his own hand, and every one knows that the power of a member to deal with an item in the Estimates is very limited; he can move to reduce or to strike out, but from a practical standpoint he can make no amendment. While that objection might possibly not be serious in this case, the aid of $15,000,000 to the Canadian Northern is put in the Estimates in this hitherto unheard of way which restricts the members of this House from expressing their views as they would like to, and of making amendments that might be made if the aid were brought down by way of resolution. The same is true with regard to the Grand Trunk Pacific. Therefore the members of the House will have to take these Estimates and move for their reduction, or that they be struck out, or else let them go through. In the ordinary way questions of aid are introduced by way of resolutions which have to go through a certain routine, which routine gives many opportunities to members to discuss them, to vary them, to reduce them, to change them, to make amendments in any way they like. The resolutions, after they are introduced, go before a committee and are taken up clause by clause and amendments can be made, and not one case out of a dozen goes through without amendments being moved and many of them adopted. When the Canadian Northern railway resolution was going through the Government accepted amendments from this side, but here the opportunity of making amendments is very much restricted, and members will find, when they come to move, if they do, amendments to the aid proposed to be given to the Canadian Northern and the Grand Trunk Pacific that they are very much curtailed in their privileges, and unless they are prepared to reduce the aid, or to strike it out, they might as well not say anything.

Further, this method of procedure is not fair to the upper chamber, because it practically precludes that chamber from dealing with the matter at all. Whether that was the design or not, that is the result.

Estimates for money expenditures originate in this House, and, after they are passed, they are embodied in a Supply Bill, which is passed by this House and then goes to the Senate. The only power that the Senate has is to throw out the entire Supply Bill that has been passed by the House of Commons, and that would be a pretty serious matter. If a subsidy Bill were brought in by itself the Senate could discuss it, as they have a right to do; they could make amendments if necessary, and refer them back to the House of Commons for consideration.

Mr. REID: I cannot agree with all that the hon. member has said. It is true that when the Estimates are brought down they must be signed by His Royal Highness the Governor General, but the same thing applies in the case of resolutions; before we can introduce a money resolution the Governor General must sanction.

Mr. GRAHAM: That is a different matter.

Mr. REID: No, it is an expenditure of money.

Mr. GRAHAM: He does not sign it at all?

Mr. REID: As to the subsidy resolutions that have been brought down for many years, the roads proposed to be subsidized were still to be built. There are often amendments made as to the conditions under which a road should be built, or the route may be changed, and so on. But the proposed aids to the Canadian Northern and the Grand Trunk Pacific are not like the usual subsidies per mile; they are simply loans to pay interest that has been paid, or is payable, in connection with a railway that is completed and in operation.

Mr. GRAHAM: What about this one?

Mr. REID: I was referring to the Canadian Northern and the Grand Trunk Pacific first. I cannot see any objection to bringing the aid down in that way. No amendments could be made to the aid even if it were introduced by resolution. It is simply an amount loaned to the railways to pay interest and the deficit on operating expenses.

Mr. GRAHAM: Does not my hon. friend see that if this aid were brought in by way of resolution, a member could move an amendment to the resolution that the money be given on the condition that the Canadian Northern should do such and such things? By putting this aid in the Estimates, a member is precluded from doing that.

Mr. REID: A member might move an amendment such as is suggested by the hon. member, but the aid is intended only to pay interest, etc. No matter what the Canadian Northern or the Grand Trunk Pacific may do—

Mr. GRAHAM: It does not make any odds what the aid is for.

Mr. REID: You might move an amendment that, if carried, would embarrass the roads.

Mr. GRAHAM: That is the right of Parliament.

Mr. REID: A member has the right to move to reduce the amount.

Mr. MARCIL: Why did the minister not bring the matter down in the ordinary way as a money resolution?

Mr. REID: That might have been done, but I do not see any objection to this method of procedure. So far as the Canadian Northern and the Grand Trunk Pacific are concerned, these aids are not subsidies at all, they are loans at a simple rate of interest, charged up to the road.

Mr. GRAHAM: What does the minister say in regard to my other point? By putting the amounts in the Estimates, the Government has deprived the Senate of dealing with the matter except by throwing out the Supply Bill, which covers all the money required for all the purposes of Canada for the coming year.

Mr. REID: They cannot throw those items out without throwing out all the other Estimates.

Mr. A. K. MACLEAN: Is not that a perfect answer to the remarks made by the minister a few minutes ago, and does not it support the contention of the hon. member for South Renfrew (Mr. Graham), that when any moneys are being voted for a special purpose that should be a matter of a special Bill, because it may be subject to a variety of amendments to which hon. gentlemen on both sides of the House may agree? No one cares very much whether the aid is brought in by way of resolution or by placing an amount in the Estimates, so far as the early stages of the matter are concerned, but it should pass through Parliament in the form of a Bill because it is special legislation. I submit that the

remarks made by the hon. gentleman from South Renfrew are perfectly correct, and they have not so far been answered.

Mr. REID: I do not agree with the hon. member that the Upper House would throw this out.

Mr. GRAHAM: We did not insinuate that it would.

Mr. REID: The conclusion I draw from the remarks of these hon. gentlemen is that perhaps that would be the result.

Mr. MACLEAN: Even though they concur in these votes for $8,000,000 and $15,000,000 I would still say that this is not the proper course to pursue.

Mr. REID: We will have to agree to disagree on the subject of procedure, so far as these items are concerned. But as to the item now before the committee——

Mr. GRAHAM: That is a subsidy.

Mr. REID: Yes, that is entirely different from the other two. This is a subsidy for the Edmonton, Dunvegan and British Columbia Railway for a branch line, from a point on its line as located, situated near Spirit river. I may explain that the matter of railway facilities for the handling of grain produce and supplies required by the settlers of the Spirit river settlement and through the Grande Prairie district of Alberta was brought to the attention of the Government, and it was decided that, as the Edmonton, Dunvegan and British Columbia Railway Company had a charter to build a line to these districts, a vote should be given to cover a line sixty miles in length, the same to be given under the conditions of a subsidy granted under the Subsidy Act. A few words in answer to the hon. member for South Renfrew. If I remember well, last spring the question was brought before the Minister of Railways of having this sixty miles of railway completed at once, for otherwise the large quantity of wheat in that section could not be brought out. After the facts had been laid before the minister, and an assurance given by the railway company that they could not complete the railway without a subsidy, he agreed to give them a subsidy for this line. The reason why it is put in this form is that the Minister of Railways had decided that this year, owing to war conditions, he would not bring in a subsidy Bill.

Mr. GRAHAM: But he grants this subsidy.

Mr. REID: This is really for last year. Many subsidies have expired the renewal of which is asked for, and some want new ones. But this vote is made to assist in getting the grain out of that country during the past season, and, as we are not having any regular subsidy Bill, the amount was put in the Estimates to carry it on the terms here mentioned. It was simply because of the promise the minister had made that we would not have a subsidy Bill that this is proposed in this form. Of course, if there had been other subsidies, a regular subsidy Bill would have been introduced.

Mr. GRAHAM: I want it clearly understood that I am not dealing with these items because they are these items, but I am objecting to the principle on which they are submitted to Parliament, and I am taking the earliest possibility opportunity of doing so. The principle is wrong. As explained by the Acting Minister of Railways this subsidy is put in this form merely to protect the Minister of Railways against the direct violation of a promise, but it protects him only by violating that promise in an indirect way. He told applicants that he was not going to have any subsidy Bill, and they, of course, thought he was not going to give any subsidies—for that must have been the idea they took away with them. He now proposes this way of giving a subsidy which ought to be given through a Bill.

Mr. REID: This was earned.

Mr. GRAHAM: The minister is not to be excused for violating his pledge by bringing this subsidy in, as it were, by the back door. I want to go on record as objecting to this as a violation of a principle. If this is to be made a precedent hon. members on either side are going to be deprived of opportunities which they now enjoy to deal in a practical way with matters of this kind, and the Senate will have practically nothing to say about aids to railways or anything else. These things ought to follow the safe parliamentary practice and ought to go through the regular appointed stages. A money measure has to go through stages which other Bills have not to follow. The measure is first brought down in the form of a resolution, and then a Bill must be introduced founded on the resolution, and the Bill cannot be altered materially from the resolu-

tion on which it is founded. The Bill must go through first, second and third readings and be passed by the House, and then must be sent to the Senate. Ample opportunities are afforded for hon. members to discuss the measure and to deal with it, and of those opportunities they will be deprived if these subsidies are allowed to go through in the Estimates.

Mr. REID: The hon. member is quite right as to the procedure, and there is no desire to vary that procedure. But this item, as I have said, was agreed upon long ago, and the minister informed the officials of what had been done. Many other lines, in the West particularly, are asking for subsidies, and many of them ought to be granted subsidies as soon as we are in a position to do so. But, as we are not able to take them up this year, and as this is the only item, we thought that under the circumstances not much fault could be found with it. When more subsidies are to be granted, I have no doubt the minister will bring them in in the regular way as outlined by the hon. member for South Renfrew.

Mr. OLIVER: This particular item relates to a railroad development in the constituency I have the honour to represent. From the discussion that has taken place it will be apparent to the committee that there probably appeared to the Government to be some special reason why this aid should be given. I desire, if I may, to take a little of the time of the committee to explain the railroad situation in that part of the country. In that explanation will appear, to some degree, from one point of view at any rate, the reason for this special aid. The minister has already stated that there was a settled and productive area having a surplus of product which had to find markets, or the people had to go broke. It was a matter of extreme urgency to give that settlement railroad facilities during this season. Circumstances were such that it was possible to give facilities, but it was necessary that substantial assistance should be received, and the minister has said that a promise was made that this assistance would be given. At any rate, I wish to inform the House that whatever the minister has said here to-night in regard to the desirability and the urgency of the construction of this piece of road is absolutely supported by the facts. I have pleasure in informing the House that the rails have actually been laid, and that although the line has not been ballasted, traffic is now being carried over this piece of road, to the great advantage of the large and important and productive settlement that it is intended to relieve and to connect with the outside world. But I think it would not be fair to the House or to the country, and it would certainly not be fair to my constituency, if I did not take this opportunity of placing before the House the general reasons which led up to this proposed subsidy. It will be within the knowledge of those who have followed the question, that during the great rush of immigration and expansion that took place in the prairie regions of the West in those better years before our friends took office, the prairie area of the Saskatchewan country was practically occupied; it had been practically alienated; it is now in private hands, not in the hands of the Government. There are still vast areas of timbered land or partially timbered land available for settlement, but there are practically no prairie lands available in the Saskatchewan country, speaking of the southern part of the provinces of Saskatchewan and Alberta. But there is in the Peace River country, in northern Alberta, a number of prairie areas of a very desirable character which have attracted settlers to such an extent that they have gone in to a distance of 300, 400 and 500 miles, over roads through wooded country, and have opened up the country, established farms, created production, and carried that production to such an extent in the case of this Grand Prairie, and in other areas that I desire to mention. that they cannot go any farther unless they can get an outlet for what they have produced. The Provincial Government, recognizing the needs of the people who had already gone into the country, entered upon a policy of railroad guarantees with a view of ensuring the productive development of this Peace river country. A federal charter was held and was acquired by one J. D. McArthur, a charter under the name of the Edmonton, Dunvegan and British Columbia Railway Company. This charter was to carry a line from Edmonton to the British Columbia boundary, passing a few miles south of the main stream of the Peace river, at the point Dunvegan. The company were fortunately able to realize on the guarantee of the Provincial Government to an extent that enabled them to carry their construction as far as Spirit river, 357 miles from Edmonton, 15 miles

south of Dunvegan on the Peace river, into the centre of a very desirable prairie area known as the Spirit river prairie. But at that point the railroad was 50 or 60 miles from the central point of the Grand Prairie, a large prairie area and was really of no very serious value to the settlers on the Grand Prairie. Certainly it was an advantage to have a railroad within 60 miles instead of 300 miles, but as a matter of actually producing grain and selling it at a profit, the railroad might just as well have been almost anywhere else. The Provincial Government gave a guarantee for this 60 mile branch to Grand Prairie, but in the present condition of the world's finances I presume the company would have had difficulty in financing for the construction of that road, had it not been for the assistance promised by this Government.

The Peace river itself is one thing; the Peace River country is another thing. The Peace river itself is a large and navigable stream, navigable for a stretch of 500 miles, from the foothills of the Rocky mountains to the chutes below Vermilion, and on each side of that river there are large prairie areas which we speak of as the Peace river country, areas which are desirable for settlement and which attract settlers by reason of the fact that they are prairies. A settler going into occupation of these areas does not have to clear his land and does not have to wait so long for production as if he went into the wooded country. Because of this advantage of getting prairie land, the settler is willing to travel far from railroad communication. He is willing to undergo certain hardships, finding his compensation in the advantage that he does not have to clear his land of timber or wait many years for the clearance to take effect so that he can get crops. That is the reason why the Grand Prairie was settled so far in advance of railroad construction.

But there are other areas in the Peace river country also which have been settled in advance of railroad construction, and it is to the condition of these areas that I desire to call the attention of the House and the Government for present or future consideration. On the north side of the Peace river, extending from Peace river crossing for a distance of sixty miles to Dunvegan, is another area of beautiful prairie country, occupied by settlers, producing largely, and still, so far as the main line of the Edmonton, Dunvegan and British Columbia railway is concerned, just as far from reach of the actual advantages of railroad communication as the Grand Prairie was, because these people are on the opposite side of the Peace river, and the valley of the Peace river is a tremendous impediment to travel, being a valley 800 feet in depth. In order to reach the navigation of the Peace river—because it will be observed that the route of the Edmonton, Dunvegan and British Columbia railway did not contemplate reaching the actual valley of the Peace river—and at the same time approximately reach this large settlement on the north side of the Peace river, the Provincial Government, or possibly this Dominion Government, chartered a branch line of railroad leaving the main line of the Dunvegan railroad at McLennan Junction and reaching the Peace river in a distance of fifty miles. The charter, I believe, carries the railroad across the river, and the Provincial Government gave this branch a guarantee of $20,000 a mile, the same as in the case of the main line and the Grand Prairie branch. But the railway company was unable, under present conditions, to market the bonds, even with the Provincial Government guarantee. The Provincial Government believed it was so urgently necessary that that railroad should reach the navigation of the Peace river, and give approximate advantages of railway connection to those settlers on the north side of the river, that a year ago the Provincial Government raised a loan on their own credit, and then gave a loan to the railway company of 80 per cent of the actual cost of construction of that 50 miles, in order to link up the 500 mile stretch of navigation on the Peace river with the railroad system of Canada at Edmonton. As the result of the action of the Provincial Government in making that loan, the company has been able to construct that 50 miles of road, and the rails to-day are either actually at the bank of the Peace river or within a mile or two of it. At any rate, by reason of the action of the Provincial Government in guaranteeing the bonds of the railroad from Edmonton to McLennan, and by making an actual loan of 80 per cent of the cost of construction from McLennan to Peace River Crossing, the country has the advantage of the linking up of the navigation of the Peace river with the railroad system of Canada, and the settlers on the north side of the Peace river have the railroad brought at any rate to one end of the

settlement, the river intervening between them and the railroad.

Up to the present, then, the situation is that by guarantees amounting to $8,000,000, and by a loan, which I will estimate at $1,000,000, with aid from this Government to the amount, approximately of $300,000 in cash, there has been opened up to settlement that great Peace river country. By the use of the credit of the Provincial Government, we have 400 miles of actually constructed railway, which is absolutely necessary to bring that country within range of profitable and actual settlement. With the assistance of this Government we have 50 miles more, bringing another large important productive area within the range of railroad communication. What I want to bring to the attention of the House is this: The Provincial Government has put up, as I have said, $9,000,000 in credit and cash for the development of the Peace River country, as far as it has yet gone. This Government has put up between one quarter of million dollars and half a million dollars, or will do so when this vote is passed. Now let me point out that the responsibility for the development of the western country does not rest properly upon the provincial governments. It does rest properly on this Federal Government. It is the Federal Government that owns the land, the timber, and the minerals. It has absolute control and ownership of all the natural resources of that country, and it is recognized to be responsible for its settlement and development by the control and direction of immigration. It may be asked, why did the Provincial Government go so far in order to secure that development for which it was not responsible. The Provincial Government is responsible to the people who are there. The people had gone into that country, in spite of all the difficulties, and they turned to the Provincial Government and said, you must give us assistance in order to enable us to live in this country into which we have gone. The Provincial Government is responsible to that extent, but I desire to lay before the House my opinion, and I do so without consultation with the Provincial Government. I am responsible for the representation of the constituency in this case. In my judgment, the Provincial Government has gone approximately as far as it can go in that work. Whatever their intention or desires may be, I do not conceive that the Government of the province of Alberta can continue indefinitely to guarantee railroad bonds and expect that guarantee to remain of serious value. A time must come when, if the guarantee is continually extended, it will be reduced in actual value, and therefore be of no effect.

I desire to take this opportunity of saying to this House that in my judgment the responsibility for securing the development of the Peace River country, as well as of all the new countries of the West, rests primarily upon this Government; and while giving this Government credit for the aid it has given in this case, I propose, so far as I can, to place upon it the full responsibility for the further development of that country, and to come right down to details and make certain suggestions, if I have the privilege of doing so.

The suggestion I make is this: The railroad having reached the eastern bank of the Peace river, in order that the country on the west side of the river may be developed—a country, remember, 500 miles in length; 200 miles up stream to Hudson's Hope at the Rocky Mountain portage, and 300 miles down stream to the chutes below Vermilion—it must have railroad communication. You cannot have profitable production and development without railroads. Therefore, a railroad must get across that river before we can see the development of that country. On the west side of the Peace river, as I have said, there are 60 miles of solid settlement, and there is no better settlement in the Dominion than that which lies north of the Peace river. Those people just as urgently need railroad facilities as did the people of Grand Prairie last year, but there lies between them and the present railroad terminus on the right bank of the river the width of the river, with the difficulties of climbing the hill on the west side over and above the ordinary cost of constructing a line of railway through level country. I have not consulted engineers on the subject, but my information is that the Peace river is a stream 1,800 feet wide at high water, that it has depth approximately of 16 feet in the channel at low water, that it has a rise of 20 or 30 feet and that ice forms in the winter of not less than 4 feet in thickness. It is evident that to construct a permanent bridge across such a stream is a great and costly work and a work of such a tremendous character that no provincial government could reasonably be expected to finance it, nor could any colonization railway company. If the railroad being built in the Peace river country were of a transcontinental character, then we might

say that the company would be able to finance such a bridge, but a branch road to Peace River crossing is not a transcontinental project, it is purely a colonization project and, stating my own opinion only and not having consulted the company, I cannot imagine that a colonization railroad being backed only by a province, which already has guaranteed railways very largely, is likely to be in a position to finance the cost of a bridge to be built at that point. It would be a calamity if money were spent in putting a bridge across that river at that point that would not be of a substantial character. If a company with limited resources, or with limited backing, undertakes to put a bridge across there, it may be tempted to take a chance and make the same error as was made in the case of the Quebec bridge, by having light construction instead of heavy construction with the result that the whole expenditure may be lost. This Peace River Crossing is a geographical strategic point. It is the natural gateway to the Peace river country and any bridge that is built there might very well be built for all time, to use a common expression, and consequently should not be built to be held in the hands of any single railway company to the exclusion of any other company that might wish to enter the Peace river country by that route. Therefore, my suggestion to the Government is that in due course they recognize their responsibilities in the development of the Peace river country, the necessity of railway connection and, particularly the necessity of railway extension across the Peace river, and that they either assume the responsibility of putting a railway bridge across the Peace river at that point or give such a substantial subsidy to a railway company as will enable the company to put a bridge across the river there that will be a thoroughly substantial and reliable bridge, such bridge to be for any other railway company that may desire to cross the river there, subject to reasonable charges for upkeep or use.

Following the construction of the bridge comes the question of rising out of the river valley. A rise of 800 feet of clay bank necessarily means very expensive construction. I would think that, in addition to the construction of the bridge, there might very well be considered the question of assisting the railway financially to rise out of the valley by a reasonable grade. At that point, in getting down to the river valley on the east side, the railroad company has at present a grade of about 3 per cent or perhaps a little over. That is an abnormal grade. It is not a good working grade for hauling heavy traffic but it is such a grade as was possible with the money that was available. It enabled the company to get their road down to the river practically last fall when, if they had tried to get a lighter grade, they would probably not have been there for a year or two yet. But in any case the problem of rising out of the river valley is a serious one and I would suggest that the Government might very well take that into consideration, in recognizing their responsibility for the development of the country west of the river.

The main thing, the immediate thing, is the construction of the bridge and I would certainly say that aid at the hands of this Government towards the construction of such a bridge as that might very well go to the amount of $1,000,000. If it were settled that this Government would make itself responsible for the construction of the bridge across the Peace river then settlement would go in west of the river and occupy the prairie all the way from the crossing to Hudson's Hope, a distance of 200 miles, because people would feel that there was a probability of getting railroad communication within a reasonable time. But, with that tremendous river unbridged, there does not appear a reasonable possibility of railroad construction on the west side of the river and therefore it is a great drawback to settlement because settlers under these circumstances will not go in and occupy the country.

There is another settlement that I wish to draw attention to in this connection. I have been speaking of a point entirely within my own constituency. I desire to speak now of a settlement that is not within my own constituency, but which immediately adjoins it. Under the arrangements by which British Columbia entered Confederation, in some way in consideration of the building of the Canadian Pacific, the Canadian Government acquired 3,500,000 acres of land in the Peace river country in British Columbia. It is called the Peace River Block. The area has been set apart, it is administered insofar as the land ownership is concerned by this Government but it is under the jurisdiction of British Columbia. The Edmonton and Dunvegan railway charter reaches the

British Columbia boundary at this Peace River Block. The Government of Alberta has guaranteed its bonds to that point. Immediately west of the British Columbia boundary, in the Peace River Block, is a settlement called Pouce Coupè, a beautiful prairie area that is entirely occupied by settlement. There are about four townships of solid settlement on this Pouce Coupè prairie. It is 60 miles distant from Spirit river. A preliminary survey of the railway has been made, the charter has been granted, the bonds have been guaranteed, but I presume that the construction of the railway for that distance will be in very much the same position as the construction of the line to Grand Prairie; that is to say, the guarantee will hardly be found sufficient to enable the company to finance the construction of that piece of road. Now the settlers are there; many of them have been there for four or five years; they are producing on a very considerable scale; and it is necessary that they should have railway communication, or they cannot continue to produce. If we want to increase production in this country—and I understand that that is what we do want—surely it is our business to see that where the people are on the land, and production has been undertaken, the railroad facilities should be provided that are absolutely necessary to success in the matter of production.

Let me go a step further and discuss this question of railroad extensions and of aid to railways. At the present time there is a considerable feeling that Canada has gone too far in railroad building, has spent too much money, and that we should restrict our efforts in that regard in the future. I do not want to argue the question from the point of view of those who hold that idea, but from the point of view of the man upon whose exertions and upon whose success the future of this country absolutely depends; and that is the man who has gone out beyond the frontier of present settlement, in order to bring into cultivation and production land that without his enterprise and without his labour would be of no value either to this country or to anybody else. That man cannot succeed unless he gets railroad facilities; he cannot provide those facilities for himself; some one must provide them for him, or he cannot succeed. And naturally and necessarily it is to the great mass of the people at large, who are looking for their prosperity to the development of that area the settler is occupying—it is to the nation at large that we must look for the financial risk that must necessarily be taken by somebody in order that that man may have the possibility of success brought within his reach. We may have over-built in some particulars, we may have over-spent in some particulars, we may have shown lack of good judgment in some particulars; but when a man has severed himself from the associations of his lifetime, and taken his wife and children out into the wilds, fifty or a hundred, a hundred and fifty, or two or three hundred miles away from those facilities which necessarily go with railroad communication, and is fighting the battle with nature—for his own benefit, it is true, but still for the nation at large—it is no use telling that man what you have done in other places. What you must do is to provide that man with railroad facilities, or he cannot succeed, and then you cannot succeed because he did not succeed.

10 p.m.

Mr. ROGERS: I do not know that I have much fault to find with what my hon. friend from Edmonton has said in regard to conditions in the northwestern portion of the province of Alberta. As a western representative, I am one of those who believe that this Parliament has never yet fully recognized the importance of the development of the great prairie provinces of western Canada. It is true that in the early stages of construction assistance, by way of land grants, and so on, was given to the Calgary and Edmonton, and the Regina and Long Lake railways, and, perhaps, one or two other branches in the Prairie Provinces. But for many years no assistance had been given towards the construction of railways in any one of the three Prairie Provinces, except that this Parliament seemed to recognize the great importance of the construction of transcontinental railways, and, contributing in that direction, had probably brought about the construction of one transcontinental railway too many. The fact remains that the local development of railways in the Prairie Province of the West has not in the past received proper consideration from the Parliament of Canada. For example, it was very necessary about the year 1900 that the people living in what was then know as the Northwest Territories, west of the province of Manitoba, should have an outlet to lake Superior for the transportation of their grain. There

was a pressing need for this; railroad rates were so high that it was almost impossible to hope for the development of that western country without providing cheaper means of transportation for its products. When the Government of the province of Manitoba undertook to remedy this condition, they found that it would be necessary for them not only to guarantee bonds for the construction of lines in several directions within the borders of the province, but also to guarantee the construction of a line in Ontario for a distance of something like 290 miles. They gave the guarantees; the road was constructed, and freight rates were brought down by something like 4 cents a bushel or 4 cents a hundred pounds —I forget which just at the moment— which was of great benefit to the people of western Canada. This policy of guaranteeing bonds of railways was followed by the new provinces when they were created; it was followed by this Parliament shortly afterwards, in the construction of the Transcontinental. The item now before us is, I think, the first direct grant by this Parliament in the last twenty years, to any branch line in any one of the three Prairie Provinces. I endorse what my hon. friend from Edmonton has said as to the necessity not only of this grant, but of additional grants for the purpose of bringing about the construction of branch lines in the different provinces of the West; and in no section of the country, I think, is there greater need for such assistance than in the Peace River district west of Edmonton. We have there what is recognized by every one who has studied the possibilities of that country practically an empire in itself. We have millions upon millions of acres of the finest land that can be found in probably any part of the civilized world; and having to-day three transcontinental railways, none of which has a sufficient amount of traffic to maintain it as it should be maintained, we must see to it that feeders are constructed in the various provinces to supply those railways with additional traffic, thus relieving this Parliament of being called upon year after year to grant aid to those railways. Were it not for the war conditions and the circumstances which exist at present, I am free to acknowledge that, if the matter were in my power, this Parliament would be asked to continue to subsidize in a large measure the construction of railways in the Peace river district, as well as in other districts in Western Canada. The present conditions are the only reason why this Parliament is not asked even at this session to give assistance towards the construction of those lines of railway. There is this justification why those lines should be built, that the people of Canada own and control all the lands in all the provinces in the West; that they own and control all the timber and all the minerals, and in that respect those provinces are therefore differently situated from the other provinces of Canada. Consequently it is our duty and responsibility to assist in the construction of those lines for the development of those great prairie provinces, and, above all, for the development of the Peace river country, where we have such magnificent possibilities. I trust that in the near future this Parliament will recognise its duty towards Western Canada in this respect.

As regards the criticism offered by my hon. friend from South Renfrew (Mr. Graham) as to the manner in which the Estimates for the assistance and loans proposed to be given to the Grand Trunk Pacific and the Canadian Northern have been presented to Parliament, it is quite true that perhaps the common practice in this Parliament in the past has not been followed. I would, however, like my hon. friend and other hon. members to understand that conditions are entirely different from those which have existed in former years. We find it necessary, on account of war conditions, in view of the heavy responsibilities involved, to keep those railways from defaulting; and in view of the heavy assistance which has been granted in the past, we have been obliged to place in the Estimates a further item of $150,000 to provide for an inquiry into the general railway system of Canada to consider the advisability of the nationalization of those two railways in particular, and probably of other railways in the Dominion as well. This is an important undertaking, and the items in the Estimates represent simply temporary assistance that this Parliament would be obliged to give were we to take over those two railways to-day, and until we have made a thorough investigation into the general railway system, we do not know whether that might or might not be the best course to pursue. With a national system of railways in Canada, we in the prairie provinces of the West would have reason to hope that this Government would recognize the importance of that great territory, and that it would secure the construction of the additional branch lines so necessary for its develop-

ment and to make profitable the great transcontinental railways that are already in operation. That is the position we take. We have introduced the items in this form and when they are reached they will be discussed in the House by the Prime Minister and the Minister of Finance in detail, and the House and the country will be given every particular that they should or could expect to receive.

I want to assure my hon. friend from South Renfrew and this House and the Upper Chamber that there never was a thought, and I never heard it mentioned by any of my colleagues, either in council or elsewhere, that by the introduction of these items in the Estimates, the powers of this Parliament or of the Upper Chamber might be curbed in any way, and I would not wish to have any misunderstanding about the matter. We acted in the manner in which we did, giving a direct and temporary loan, in order to maintain the conditions that exist to-day, believing that it would not be desirable at the present time to allow any default to take place, especially when we have in view the wider idea of bringing about the nationalization of the railways of Canada, with a view of ending, once and for all, this procedure of the coming to Parliament, from year to year, by the various railways of Canada, asking for assistance. I am sure when the matter is explained in detail, it will meet with the approval, not only of this Parliament, but of the Canadian people as a whole.

Mr. MARCIL: Has the minister given any thought in regard to the personnel of the commission to be appointed to inquire into this matter?

Mr. ROGERS: The idea has not yet been considered.

Mr. MARCIL: Would the proposition mean the acquisition of the railways by the Dominion of Canada?

Mr. ROGERS: That would be for the commission to consider.

Mr. MARCIL: That would be a pretty heavy undertaking just now.

Mr. ROGERS: Well, we will have to have very heavy men on the commission.

Mr. McKENZIE: I see that this resolution refers to chapter 96 of the Acts of 1913. I have looked up the Act and I do not see anything in that legislation which refers to the Canadian Pacific railway, that will help out in this connection. I thought it was the charter of the company and I cannot find anything in it that has any bearing on the subject at all.

Mr. REID: The Subsidy Act of 1913, 3-4 George V, Chapter 96.

Mr. McKENZIE: That is what I have here. I have not read it carefully, but glancing over it I do not see that it relates to this matter. I will pass it over to the minister.

Mr. REID: I find that it was a misprint of " 96 " for " 46," which is what is shown in our memorandum. I move that the item be amended by striking out " 96 " and inserting " 46 " in lieu thereof.

Amendment agreed to.

Mr. GRAHAM: To have an opposition is worth while sometimes; criticism is good.

Railways and Canals, chargeable to capital —Welland ship canal—construction, $4,500,000.

Mr. GRAHAM: Is this all for the Welland?

Mr. REID: Yes. For the construction of the Welland Ship Canal five contracts were awarded. The first was awarded to the Dominion Dredging Company. The estimate of the work to be done under that contract was $3,487,725. They were paid, up to 31st December, for work done by them, $1,523,910, so that their work is nearly half completed. The second contract was awarded to Baldry, Yerburg & Hutchinson. The estimate of their contract was $5,377,-185.75, and they have been paid $2,300,680; not quite half of that contract is completed. Section 3 was awarded to O'Brien & Doheny & Quinlan & Roberston. The estimated amount of their contract was $9,540,050, and they have been paid $2,207,970, so that less than twenty-five per cent of their contract is completed. Section 4 (a) was awarded to McGuire & Cameron. The estimate was $88,030.

Mr. GRAHAM: Where was that?

Mr. REID: Section 4 has not yet been let, but this portion was urgently required and therefore the contract was made.

Mr. GRAHAM: Is it dredging work?

Mr. REID: Making an entrance into the old Welland canal, the entrance being blocked by the work on section 5. Section 5 was the last contract awarded, and it was given to the Canadian Dredging Company.

The estimate was $1,945,788, and they have been paid $842,850.

Mr. GRAHAM: Who compose the Canadian Dredging Company?

Mr. REID: I know the names of several who have been mentioned as members of that company; Mr. Finn, Mr. Pratt, Mr. Playfair, Mr. Shepherd.

Mr. GRAHAM: What has been spent up to date on these contracts?

Mr. REID: The amount paid to the contractors is $6,948,141. But the total expenditure up to 31st October, 1915, was $7,796,260.47. That includes engineering, operation, maintenance, right of way, and cement.

Mr. GRAHAM: How much do you pay for cement?

Mr. REID: We have a blanket contract for the whole work at $1.85, made some time ago.

Mr. GRAHAM: Has the minister any reason to change the estimate of the cost of the work? What was that estimate?

Mr. REID: The estimate as stated by the minister at the time was about $50,000,000 for the whole work when completed. The officials tell me they have no reason to change that estimate.

Mr. GRAHAM: Too soon it will be changed all right. If I remember rightly, the location of the canal and the depth of the sill are so arranged that when it is desired to deepen the canal further, all that will be necessary will be to dredge the canal between the locks.

Mr. REID: Yes.

Mr. GRAHAM: The depth over the sills will be what?

Mr. REID: It will be 30 feet on the sill and 25 feet in the canal.

Mr. GRAHAM: What is the depth on the sill at the American Sault canal?

Mr. REID: 25 feet.

Mr. GRAHAM: I understand that they are making their harbours 26 feet, perhaps in some cases 30 feet.

Mr. REID: The water on the sill in the American canal at extreme low water is 24½ feet. That occurred last year, when the water was very low, and may not occur again for many years. In the harbours they are making a little greater depth, as is necessary, because they can drag the boats over the sill.

Mr. GRAHAM: Can the minister give an idea when the Welland canal will be completed?

Mr. REID: I cannot very well do that, because we have not yet let the contract for the other parts, and are not pressing it perhaps as quickly as we would have done had it not been for the war. We do not intend to let any additional contracts for the present year.

Mr. GRAHAM: I have read in the press of the plot now being exposed in New York to blow up the Welland canal, and I see an item in the newspapers to-night connecting some other names with that plot. It may be that we were nearer to trouble than we anticipated. How efficient are the steps that are being taken to prevent anything of that kind? An Order in Council has been passed by the British Government, and has been promulgated in the Canada Gazette, which I suppose means that it is adopted in Canada, forbidding, unless by the consent of the authorities, the further employment of foreigners of enemy nationality in the manufacture of munitions. A great many of the munition manufacturers in Canada have quite a number of foreigners in their employ, and that Order in Council, if carried out strictly, will interfere seriously with the manufacture of munitions, although the risk from having them employed may be considered serious. In the construction of the new Welland canal it strikes me that the same danger may exist to some extent. There must of necessity be quite a number of foreigners engaged in the canal work. Has it struck the minister that there may be some risk in allowing contractors to employ men who come from enemy countries? That would be a very natural channel for the enemy to work through. If they had men employed in the construction of the canal who would be willing to plot with them something might happen which no person would understand except those who had designed the plot. This scheme, hatched in New York, having failed in its object of injuring the present Welland canal, the enemy might begin to work through other channels, and, when many millions had been expended on the new canal, it might all be destroyed in a night.

Mr. REID: We have given a great deal of consideration to the protection of the

Welland canal now in use for the passage of vessels. It is well guarded by a great number of the militia. I have been there myself and I have seen that the militia are all along the canal that is now being operated. In addition to that, no person is allowed along the canal without a pass, so that it is almost an impossibility for any person, especially a stranger, to get to any part of the canal without some militia man seeing him and preventing him from doing any damage. With reference to the work that is going on, of course that is under construction and the contractors may have foreigners in their employ. We have militia stationed, so far as possible, even around the new works, but some damage might be done to the work. That, however, could only be done to the contractors' plants or to work that they have under construction, and would in no way interfere with the operation of the canal system between lake Erie and lake Ontario. That, of course, is what we must be most careful of. There would be no danger of any damage to the new canal interfering with the preseent transportation between lake Erie and lake Ontario. I am satisfied that everything is being done to ensure the safety of that transportation route. All of the items which have appeared in the paper have been brought to the attention of the Government, and we have made inquiries in each case and have found that every precaution is being taken. I do not think it is possible for anything to happen. Of course, even with the best protection, something might happen, but I do not think any fault can be found with what has been done up to the present.

Mr. GRAHAM: I am not finding fault, but I am calling attention to something which did not impress me until I read the Order in Council with reference to the employment of foreigners on munitions work. Then it struck me that, in connection with the Welland canal or the Quebec bridge, we might be a little lax in our precautions. It might not be a bad idea for the minister to call attention to the necessity of exercising the utmost rigour in looking after the parts of these works under contract, because while, technically, any damage to them would be a loss to the contractor, still if the new Welland canal is necessary, the delaying of its construction for a couple of years would be a great loss to the country, and the contractors would, of course, have some claim arising out of the damage. So it would be very much better to have every precaution taken in advance. I was going to ask the same question in reference to the Quebec bridge, which in its present condition would be easily destroyed if not safeguarded. If it were destroyed transportation facilities would be put back eight or ten years. Is every precaution taken for the protection of the Quebec bridge?

Mr. REID: The Chief Engineer of the Quebec bridge has informed me that every precaution has been taken. However, the remarks of the hon. member are very important, and I am glad he has made them. I believe that, as a further measure of precaution, it will be well to again remind those in charge of the different works of the importance of taking every possible precaution and I will make it a point to send Hansard to Mr. Monsarrat and to those in charge of other works, and to draw their attention to the remarks of the hon. gentleman. I think that this little discussion, when brought to the attention of the officers in charge, will impress on them the importance of taking every possible precaution for the protection of the different works. If these officials think that further protection is required, it will be their duty to advise the minister of the department in order that the necessary steps may be taken. Therefore, I think the discussion will be of great benefit in helping to carry out the protection that we are now carrying on.

Mr. OLIVER: Reverting to the Transcontinental item. The other night when we were discussing the transport of grain, the minister was not able to give detailed information as to what had become of the grain that had been carried over the Transcontinental railway last winter, and he promised to have the information later. Is he able to give us that information to-night?

Mr. REID: I made inquiry of the general freight agent of the Government railway system, and I received a memorandum. I understand that about 1,600,000 bushels were taken to Quebec. The balance was taken to Montreal and put in the elevators there. The whole object of that six cent rate last year was to fill the elevators in Montreal and Quebec, and, to that extent, to relieve the West. How the grain that was carried to Montreal and Quebec will eventually be disposed of we

cannot tell until we get the returns from the elevators at the opening of navigation. We have no information that any of it has gone other than from these two ports. That was the object of the six cent rate, and it has certainly been of some advantage, if the statement is true that the lake and rail rate at the opening of navigation has been 9 cents per bushel from Port Arthur to Montreal.

Mr. OLIVER: That would be 15 cents per bushel from Winnipeg?

Mr. REID: Yes. I have not that from the steamship owners, but I was told by a railway official that the lake and rail rate from Port Arthur and Fort William at the opening of navigation was 9 cents. If the grain were carried from Winnipeg on the Transcontinental, the rate would be 12 cents to Montreal or Quebec.

Mr. OLIVER: There is a Government elevator at Halifax.

Mr. REID: Yes, a small one.

Mr. OLIVER: I understood from the debate the other night that that elevator had not been filled.

Mr. REID: The elevator at Halifax is only a small elevator used more for transferring grain.

Mr. GRAHAM: It has a capacity of 500,000 or 750,000 bushels.

Mr. REID: 750,000 bushels, I think, but that elevator is only supposed to keep one or two cargoes on hand. The chief storage is at Montreal and Quebec and in the West.

Mr. OLIVER: I wish to draw attention to what appears to me to be a very serious situation, to relieve which, some measures should have been taken by the Government during the past winter. I have a statement here which was given to me by the Minister of Trade and Commerce the other day in reply to a question which I asked when his Estimates were under consideration. He gives a statement of the stocks of wheat in Canada on March 31, 1916. It is as follows: Terminal elevators, 25,528,440 bushels.

Mr. REID: That is at Port Arthur or Fort William?

Mr. OLIVER: Yes. Hospital elevators, 534,876 bushels. Winter storage in vessels, 2,447,386 bushels; that would be at Fort William. Inter-terminal elevators of the Dominion Government—Calgary, 629,956 bushels; Moosejaw, 2,820,523 bushels. Saskatoon, 1,632,692 bushels; interior terminal elevators of the Canadian Pacific Railway at Transcona, 633,327 bushels. Public elevators, that would be elevators east of the lakes, 3,326,417 bushels. Country elevators, that is, elevators west of Winnipeg, 43,996,131 bushels. Flour mills, 5,277,196 bushels. Transit by rail, 23,349,356 bushels. Farmers' hands, 86,854,000 bushels. Total wheat of last year's crop still in Canada, 197,030,300 bushels. Out of a total crop of 309,000,300 bushels. It appears to me that a situation which finds us at the opening of navigation with two-thirds of our total crop still in our own country, when we must look to market at least two-thirds of it across the water, is a very serious one; and, while I do not wish to harshly criticise the Government, it seems to me that it is a situation which should have been recognized earlier in the season. To repeat what has been said already, instead of the Government being satisfied with utilizing the storage capacity at Quebec and Montreal, which was, of course, in itself, very desirable, there should have been the most strenuous efforts to rail haul as much of that wheat as possible to tide water and to get it across the ocean during the past winter. Unless the wheat is carried across the ocean very much more rapidly during the coming summer than it was during the past winter, the next crop will find us with a large part of this wheat still within the country, and therefore not actually realized upon as it must be if the financial condition is to be properly maintained. I certainly cannot help thinking that the Government has not recognized to the full their responsibility when they had available the Transcontinental railway from Winnipeg to handle an enormous quantity of that grain to the ocean ports during the past winter. The Minister of Trade and Commerce has said and repeated that it was not possible to get that grain shipped across the ocean during the past winter. If it was not possible during the winter, there is no reason to suppose that it will be more possible during the coming summer. The urgency of getting the grain forward over the railroads should certainly have been supplemented with an equal effort to get it across the ocean. The situation is so very serious that I do not apologize for bringing it to the attention of the House and of the country, or for placing a very serious measure of blame upon the Government which has the fullest responsibility in the matter and, in some degree, the control of the situation in its hands.

Mr. REID: The hon. member is absolutely right so far as the seriousness of the matter is concerned, but as I stated before, and as his own argument shows, the Government were powerless to do more than they did. If you could not get it across the ocean, you could not do any more than fill the elevators at this end. The next difficulty that the Government was up against was this: It was intended when the Transcontinental railway was started that the Grand Trunk would have engines and cars ready to operate it, but they only had equipment for the western part of the road. We took it over but we have not been able to get sufficient cars and engines to transport all the grain. I was in the same difficulty here the other evening. I explained why we could not do more work with the Transcontinental and the reason I gave them is the reason I give to-night, that we did not have sufficient equipment. Then I was met by hon. gentlemen from the lower provinces who criticised us because we took 75 engines and a number of cars from the Intercolonial. They claimed this was an injury to the Maritime Provinces. Seventy-five engines are nothing on such a long road as the Transcontinental. But we hope to be in a better position next winter because we are ordering a large number of cars and engines to handle the western crop in a much more satisfactory way than we have done during the past winter. It takes time to get the equipment and organization necessary to handle the western crop. I am quite sure that everything was done that could have been done although there is no doubt that much more was required to meet the demand for the transportation of grain from the West.

Mr. OLIVER: One reason why I am so insistent in bringing this matter to the attention of the Government is that we have two lame-duck transcontinental railways on our hands. The assertion is made very frequently, and is generally accepted, that the reason these are lame ducks is that we have not sufficient business for them to carry. I desire to say that we have the business that should have been carried by these roads during the past winter, in which case they would have served the purpose for which they were created, and I presume that, had they done this businss, they would have helped to carry themselves to a certain degree. Therfore, the argument that we have not the business does not stand on a sound foundation. But the other alternative is that those who are responsible for handling the business have not discharged their duties with success or credit. I do not wish to press that point, but it has to be one way or the other. There is no doubt that we had the business this year. Perchance we will not have it next year because the fact that we were not able to handle the business this year satisfactorily necessarily restricts production for the coming year; so that we have made a double loss by not being able to handle the business we had in hand during this past year.

Mr. GAUVREAU: I call the attention of the Acting Minister of Railways and Canals (Mr. Reid) to a matter that I think deserves consideration. I refer to the propriety of giving some recognition to persons living alongside the line of the Intercolonial railway who have been instrumental in saving life and property. I have two special cases in mind. I have tried for four years to secure a reward for the men to whom I refer, but I have never been able to succeed. Just a few days before the declaration of war it happened that a poor farmer living beside the Intercolonial railway noticed two tramps engaged in the act of tying something around the rail. He investigated the matter, walked upon the track and found a tube tied around the rail. He succeeded in unfastening that tube, after which he was chased into the bush by these men. He threw away the tube. Subsequently the inspector of the trackmen was told about the matter, he called upon the man and they went to the bush and found the tube. They took the tube to the station, submerged it in water and upon examination found that it contained a powerful charge of dynamite. Two or three hours after that I am told that a train loaded with pilgrims en route to Ste. Anne de Beaupré passed over that road. I have reported the matter to the department, but I have never succeeded in getting a reward for this man. I have the certificate of the trackman who found the tube and who, upon investigation, ascertained that it contained a charge of dynamite. Four years ago two flat cars loaded with rails escaped from the siding upon which they had been standing at River Ouelle and managed to get upon the main line. A farmer who saw these two cars running wild remembered that it was nearly time for the Maratime Express to come along. He ran after the cars, jumped upon them, set the brake and stopped them. More than that, he went ahead, waved his handker-

chief and stopped the Maritime Express. It happened that I was on board the train that morning, and everybody admitted that if it had not been for this man's timely action there would in all probability have been a great loss of property if not of life. I have tried to get some reward for these two men, but I have failed. I hope the minister will realize that these men deserve some recognition at the hands of the Government. We give medals and money to those who save one or two lives. These men, I am sure, saved a large amount of property and perhaps many lives. I want to profit by the occasion and to ask the acting minister to take note of these cases and see if he cannot reward these men as an encouragement for others to follow their example.

Mr. REID: I am very glad that my hon. friend (Mr. Gauvreau) has brought this matter to my attention. I had not heard of these cases before. If such a thing has happened—and I am not disputing it at all—I believe these men have saved life, and I am surprised that these incidents have not been brought to my attention, because I think matters of that kind should be reported to the minister himself. If a charge of dynamite was found upon the railway track, or if attempts have been made to destroy property or endanger life as the hon. gentleman has stated, the matter should be brought to the minister's attention. I am glad that the hon. gentleman has mentioned these cases, and I shall call them to the attention of the management, because certainly if these men did these things they are entitled to some consideration.

Mr. GAUVREAU: I hope the minister will allow me to write to him and state the facts of these two special cases.

Mr. REID: I will be obliged to my hon. friend if he will send me all the information he has.

Mr. GAUVREAU: I have the certificate of the trackmaster who found the charge of dynamite in the tube.

Mr. MACDONALD: Some time ago the minister said that he proposed to use the surplus of the Intercolonial in the purchase of equipment. What equipment has been purchased?

Mr. REID: The final contracts for equipment have not been made. I asked the general manager the last time he was here to prepare the specifications and plans for a certain amount of equipment. He asked for tenders. The tenders were to be received up to May 1 for a certain number of freight cars—I think it was 1,000—25 engines, and some snow ploughs and passenger cars, I have not the figures before me, but the tenders would amount to between $1,000,000 and $2,000,000. I asked the general manager to come to Ottawa as early as possible in order that we might award the contracts and get the equipment at the earliest possible date. Unfortunately he could not get here the middle of this week. The last message I had said that he would be here on Monday next, when we expect to award the contracts for cars and equipment, to the extent I have stated.

Mr. GRAHAM: I am told that the general manager has purchased 27 second-hand passenger coaches in the United States, instead of buying them from our own Car Company. My information from the manufacturers is that they could have taken on this contract easily enough.

Mr. REID: I can hardly believe that 27 passenger coaches have been purchased in the United States. The general manager would have no authority to purchase these without first seeing me. The only purchase the general manager asked me to consent to was for some 8 or 10 Pullman cars that he could get at once.

Mr. GRAHAM: What date was that?

Mr. REID: Within the last three weeks. On some roads in the United States they are doing away with the regular Pullman cars, and as we had this opportunity of getting 8 or 10 we purchased them, because we want to get the service on the Transcontinental started at the earliest possible moment. It would take a very long time to build these Pullmans with the buffet. We were only able to get 8 or 10 of them, and they are in first-class shape. That is the only lot of cars that have been purchased in the United States, so far as I know.

Mr. GRAHAM: I have two faults to find: First, the cars were bought in the United States, and secondly, I think it is a mistake for the Government not to seriously consider the advisability of buying no more wooden cars.

Mr. REID: I agree that it is not advisable to buy wooden cars, but we must get the service started between Winnipeg and

11 p.m.

the east, and those are the only cars we can get at the present time. This is the kind of car that is being used throughout Canada; the regular Pullmans are all wooden cars. Our intention is, of course, to get steel passenger cars as soon as possible, and steel freight cars too. But if we ordered steel freight cars now we could not get them in time to haul next season's crop; so we came to the conclusion that it would be better to order 50 wooden freight cars for the present. We shall have to use wooden passenger cars until we can get the steel ones.

Mr. GRAHAM: Now that the Ocean Limited is not running, could you not use some of those coaches?

Mr. REID: She will be running on the 14th of May.

Mr. GRAHAM: That makes a difference. Would the minister kindly let me have a statement as to the cars that were bought, from whom purchased, and what they cost?

Mr. REID: I shall be very glad to do that.

Mr. GRAHAM: The information I have is that there were more than 10 cars purchased in the United States; I understand 27 were purchased, and the manufacturers are feeling quite uncomfortable because the Government are buying cars over there at a time like this, when we are preaching "production," "patriotism," and "buy made-in-Canada goods." I suppose the Government paid duty to themselves on these cars?

Mr. REID: They will, as the cars come in. I will get my hon. friend the statement he asks for. We are not asking for any tenders for cars built outside of Canada.

Mr. GRAHAM: You buy them without tender outside of Canada.

Mr. REID: The hon. gentleman knows what a long time it would take to build these cars. There were only 8 or 10 purchased in the United States.

Mr. E. M. MACDONALD: The minister's excuse for going to the United States is that the cars were needed at once on the Transcontinental. The general manager must have known a year ago that these cars would be required. Surely he didn't wake up just about a month ago to the fact that Pullman cars would be needed on the Transcontinental. The order for these cars should have been given a year ago, immediately the Government took over the road. The equipment would have been ready by this time, if any prudence or foresight had been shown by the department in this matter, for the car plants of this country have not been busy. The congestion of railway traffic on the Intercolonial during the last few months has been the worst in the history of the road, and it is very largely due to the fact that no foresight is displayed by the management. The acting minister tells us very plausibly that the congestion was due to the moving of large bodies of troops and supplies. That may be true; but the department knew a year ago that these troops and supplies would have to pass over the Intercolonial. Apparently, however, they did not wake up to the fact until the middle of winter, and they were entirely unprepared for the rush of freight. The only excuse the minister can give for the congestion is the hauling of troops and supplies, and he thinks that is a sufficient explanation. It seems to me it is about time the general manager of the Intercolonial looked ahead six months to see what is going to happen in regard to railway matters. If this gentleman who is earning—I will not say earning, but drawing—this big salary cannot devote some time to considering what is going to happen a few months ahead, I do not see what he is getting his salary for. Any railway man at all can deal with the situation from day to day, but what distinguishes a man in any business is prudence, and the capacity to foresee conditions that might arise. The purchase of cars in any shape or form in the United States by this Government is wholly indefensible and absolutely unjustifiable. The same remark applies to the failure to spend the money which six months ago the minister knew he was going to have available in the way of a surplus from the Intercolonial. This surplus was not a thing that accumulated within the last three months; it was accumulating every month since March 31, 1915, and as it accumulated the general manager and the minister, realizing the absolute certainty of the tremendous demands in the way of traffic that would be made upon the Intercolonial, should have seen that those things were provided. Does the minister think that the statement which he made a few weeks ago that they needed

Pullman cars on the Transcontinental, a sufficient justification for providing them?

Mr. REID: We gave orders for twelve sleeping cars to be made in Canada.

Mr. MACDONALD: When?

Mr. REID: Last spring. Nearly a year ago.

Mr. MACDONALD: What did your contracts provide for?

Mr. REID: The contractors have not been able to build them in the time specified.

Mr. MACDONALD: To whom did you give the contracts?

Mr. REID: The Preston Car and Coach Company and the National Car and Coach Company. One order was for eight sleeping cars and the other for four. We had to extend the time.

Mr. MACDONALD: They knew in advance they would be able to get you to do that.

Mr. REID: That is not a fair statement. We gave them the orders, and they expected to be able to do the work, but they have had more than they can do. We order all our equipment, locomotives, cars and everything else in Canada. So far as the general manager is concerned, he has known that we wanted more equipment, but until the money is voted by Parliament, or until we know exactly what we have to spend on equipment, we cannot order it. I am satisfied that any minister of railways would bear me out in this, that it has never been the custom to award contracts on any surplus there might be on the Intercolonial until the end of the session in each year. When there has been no surplus, and an amount has been placed in the Estimates for equipment, that has never been done until the end of the session. If the same custom had been followed this year, we would not even yet have been considering the letting of contracts until the close of this session. At the end of last year all those contracts for all those care were let to people in Canada, and the same thing will be done now; not a single car nor any equipment of any kind will be ordered outside of Canada if it is at all possible to get it in Canada, and I am satisfied that everything that we shall require in the way of such equipment can be made in Canada. The ordering of a few cars in the meantime at a reasonable price can easily be justified.

Mr. MACDONALD: Why did you not anticipate the conditions on the Intercolonial?

Mr. REID: We would have had plenty of equipment on the Intercolonial if we had not had to take it for the Transcontinental.

Mr. MACDONALD: You knew that a year ago?

Mr. REID: We took over the Transcontinental on the 1st of July, and it was about the first of May when the correspondence ended, but the hon. member knows that we had no vote by Parliament for any equipment for the Transcontinental and we could order only on the amount that was placed on the Estimates or on the surplus, and therefore we were not in a position to order in advance any equipment for the Transcontinental.

Mr. MACDONALD: Why did you not ask for it? You passed legislation last winter by which you took the right to take over that railway.

Mr. REID: We took the right, but the matter was not decided until after the session. According to the Grand Trunk Pacific Act, that company were to have equipment for operating the Transcontinental when it was completed, and we believed that they would have a certain amount of equipment that we could get from them; but when we took over the Transcontinental, we could not get any equipment of any kind, and, therefore, we were compelled, in order to operate it as we have been doing, to take the equipment from the Intercolonial in the meantime until we could furnish more equipment. With the orders which we have given and which will be given, we are going to have a very large amount of equipment which will be used on the whole Government railway system.

Mr. MACDONALD: Then the real reason for the congestion of traffic and the interference with transportation on the Intercolonial this winter has been that the equipment of the Intercolonial was taken for the Transcontinental.

Mr. REID: It is hardly fair to put it that way. That, of course, was one reason why we could not have a better service on the Intercolonial. In addition to that, the amount of freight traffic was very large on the Intercolonial this year; in fact, there has never been anything like it in the history of that railway. I had the figures here

a few minutes ago and the increase in freight traffic was enormous. The passenger traffic was also much greater because of the large number of troops carried over the Intercolonial this year, and on each troop train we had to use two engines. In that way both the passenger traffic, on account of the troops, and the freight traffic made the traffic on the Intercolonial so enormous that even that alone might have prevented the local traffic from receiving the same service as it had in the past.

Mr. MACDONALD: The minister then admits that his general manager did not foresee this additional traffic; that he took the equipment in order to operate the Transcontinental and that caused the congestion. Would the minister be good enough to tell me whether he has directed that the lower rates be given to the soldiers who have volunteered for overseas service? I asked him about the matter before the Easter vacation, and I understod that it was carried out, but I found out that it had not been done until a few days ago.

Mr. REID: I took the matter up with the general manager and I understand the notice has been sent out. I telephoned to the secretary of the department to-night, and he advises me that soldier on furlough and on public holidays can get return tickets at single fare, that the management was so instructed, and that the rate went into force on Good Friday. The soldiers must present certificates from the commanding officers.

Mr. MACDONALD: The rate was not in effect on the Saturday after Good Friday, because I saw some soldiers travelling and they told me that they had paid the single rate and a third. Would the minister be good enough to give me a statement of the allotments of coal contracts on the Intercolonial for this year?

Mr. REID: I have here a memorandum made by the secretary of the department which, if the hon. gentleman desires, I will read, in order that it may appear in Hansard. Orders for coal for the Intercolonial and Transcontinental have been closed as follows:

Name of Co.	Where to be delivered.	How to be delivered.	Quantity Gross tons.	Kind of Coal.	Price.
					$ cts
Dom. Coal Co.....	Sydney.....	F.o.b. cars and f.o.b. vessels...	120,000	Run-of-mine.....	3.40

That is the list I have, but I understand that there were a few small amounts not included in this list.

Mr. MACDONALD: Purchases from smaller companies?

Mr. REID: Yes. The idea was to get all the coal we could in the lower provinces, so there is no trouble about any of them supplying all the coal they can give us during the present year.

Mr. MACDONALD: Is the Valley Camp Coal Company of Fort William supplying American coal?

Mr. REID: Yes.

Mr. MACDONALD: And is there any other supplying American coal to the Intercolonial?

Mr. REID: Baille and the Nova Scotia Steel Company, I think, supply Montreal too. It is possible they will have to bring some American coal as well. They have the right according to my recollection if they cannot get the coal in Canada to supply American coal.

Mr. MACDONALD: And what about Baille at Quebec supplying the Transcontinental?

Mr. REID: Is that the Canada Import Company? I do not know who manages that.

Mr. MACDONALD: Can they give American coal?

Mr. REID: If they cannot get Canadian. We are taking all the Canadian coal we can get, and if we take American it is only because we cannot get the Canadian coal delivered. The hon. gentleman knows the coal situation in the lower provinces. They are giving us all they can spare for Montreal. There is the difficulty of getting it through because of lack of vessels, a difficulty we have never experienced before.

On motion of Mr. Reid, the House adjourned at 11.30 p.m.

Friday, May 5, 1916.

The House met at Two o'clock, the Speaker in the Chair.

PRIVATE BILL INTRODUCED.

Bill No. 100, to incorporate the Manitoba-Ontario Railway Company.—Mr. Carrick.

REPORTS AND PAPERS.

Sir THOMAS WHITE: Probably I may be permitted at this stage to lay on the Table two copies of a deed of trust securing an issue of $16,000,000 of Grand Trunk Pacific bonds, guaranteed by the Dominion Government; also two copies of a deed of trust securing $45,000,000 of Canadian Northern securities issued under the legislation of 1914.

COLLECTIONS ON HOMESTEAD PURCHASES.

On the Orders of the Day:

Mr. REID: An hon. member asked me to have placed on Hansard a statement with regard to the amount collected on the purchase of homesteads to the 31st March, 1916, including interest. The amount is $1,615,666.13.

Mr. PUGSLEY: Is that the amount of cash received or is it the total amount of sales? Sales would be on the instalment plan, I suppose?

Mr. REID: If the hon. member will allow this to go as it is, I will take the additional

question he asks and be prepared to answer it to-morrow.

REBUILDING OF PARLIAMENT BUILDINGS.

FAIR WAGES CLAUSE.

On the Orders of the Day:

Mr. VERVILLE: I desire to ask the Minister of Public Works (Mr. Rogers) or the Minister of Labour (Mr. Crothers) if there is to be a fair-wages clause respecting hours of labour and wages, incorporated in the contracts for erecting the Parliament buildings, and, if so, whether the minister will be kind enough to lay it on the Table early next week?

Mr. ROGERS: The committee having charge of the proposed reconstruction of the Parliament buildings is expected to meet this afternoon. We have not given consideration to any of the details up to the present time.

SHELL CONTRACTS.

ROYAL COMMISSION OF INVESTIGATION.

Mr. F. B. CARVELL (Carleton, N.B.) asked for leave to move the adjournment of the House for the purpose of discussing a definite matter of urgent public importance, namely, the desirability, in the public interest, of immediately enlarging the power of the Royal Commission of Inquiry into the contracts regarding fuses, etc., called the Meredith-Duff Commission, by providing for widening the scope of the inquiry into the matters referred to the commission.

And leave having been granted,

He said: I wish to present to the House certain facts as the result of the investigation of the Meredith-Duff Commission, so called. In doing so it is not my intention to in any way refer to any evidence given before the commission as indicating what has been proven or has not been proven, or anything of that kind. I realize that this is a matter which is really sub judice at the present time, and a matter to be desired by the commission, and that it would be highly improper on my part, especially as I am a counsel before the commissioners, to make any comment or reflection of any kind. Therefore, in the remarks I make, I will endeavour to confine my statements and my arguments entirely to the question of whether or not it is in the public interest to enlarge the scope of the inquiry. And in order to make the discussion as short as possible, I wish to refer to many things generally, without quoting page and date. It is within the knowledge of every member of this House that some weeks ago the right hon. leader of the Opposition moved that a Committee of this House be appointed for the purpose of investigating matters relating to the Shell Committee, which ceased to exist some time in the latter part of November, 1915. That motion was voted down by the House, and two days afterwards the right hon. Prime Minister informed the House that the Governor General in Council had appointed a commission for the purpose of investigating three contracts specially mentioned and one other in case it should come within the purview of the commission, or words to that effect. I am not going to read that Order in Council, because it is on Hansard and is a matter of record. Since Wednesday of last week that commission has been proceeding under the terms of the Order in Council, witnesses have been sworn and examined and cross-examined. Perhaps it would not be amiss if I should take this opportunity of stating publicly that I feel that counsel representing the Government is presenting the case in as fair and as able a manner as is possible—and that is saying a great deal when I am discussing Mr. I. F. Hellmuth. But, Sir, the investigation is developing a condition of affairs regarding the doings and status of the old Shell Committee which was certainly a revelation to every person who had anything to do with the commission, and which, I think, must be a revelation to a large majority of the members of this House. I refer to the fact, brought out before the commission, that at least from and after the first day of October, 1914, down to the day when the Shell Committee ceased to exist, on November 30, 1915, four members of that committee, namely Messrs. Bertram, Cantley, Watts and E. Carnegie, legally occupied the position of contractors with the British Government, as represented by the Minister of Militia and Defence. All of these gentlemen have not in any way claimed that they were entitled to any part of the profits which may have come out of the transaction. I want that to be particularly stated, because three of them have already been examined and have repudiated the idea of taking profits to themselves. But they all contend that legally they would be entitled to the profits if profits were made, and I think the converse would be true—at least, I know that this was admitted by one of them—that if

losses were made they would be responsible for them. I think they all say that they approached the Prime Minister and brought up the question as to what their position would be in case of losses taking place. The Prime Minister was very careful, they say, not to make any promise; he told them that they would cross that bridge when they came to it. They went on; that bridge was not reached; therefore they were not called upon to discuss it. The substance of it all, however, was this: the Prime Minister said: "We want the shells; go on, and if there are losses we will have to discuss that later." That, I think, would be a fair way of putting it; at least, that is the way the witnesses have placed it before the commission.

I shall not go over the correspondence leading up to the first contract, because it was placed on Hansard by the Minister of Militia in an address delivered in this House on the 25th or 26th of January last. However, the sum and substance of it was that a number of cablegrams having passed between the British War Office and the Minister of Militia, we had authority—I say "we;" I mean the Dominion of Canada; I would call that the Government of Canada—had authority to supply the British Government with 100,000 empty shrapnel shells, 18-pounders, at $8.55 each, and 100,000 empty 15-pounder shrapnel shells at $8.30 each. On the first day of October a contract was entered into between the Minister of Militia and Defence, representing the British War Office, and four gentlemen of a committee of seven or eight. I want to read this agreement, as found on page 30 of the evidence taken by the commission: EIGHT

Witnesseth that the parties of the first part agree to manufacture and deliver to the party of the second part one hundred thousand shrapnel eight-pounder—

That should be eighteen.

—Mark III shells (empty) and one hundred thousand 15-pounder Mark VII (empty) subject to the following terms and conditions, and at the following rates:

I do not want to weary the House by reading all the details of this document. I am reading, as I say, from the official document, and if I could have the whole placed on Hansard it would expedite matters.

Sir ROBERT BORDEN: What does it refer to?

Mr. CARVELL: It proceeds to deal with the drawing of specifications, contract to be fulfilled according to the specification, and things of that kind. (Reading):

The said shells shall be made of such materials and components and in accordance with the drawings and specifications hereto annexed, and signed by the parties hereto.

The parties of the first part agree to deliver the said shell as follows, viz. 18-pounder mark III shells, delivery to be made to the party of the second part or to his authorized officers f.o.b. Montreal to the order of the party of the second part.

The shells shall be subject to inspection and such tests as may be required by the party of the second part during the process of manufacture, and shall moreover, be subject after manufacture completed to inspection and acceptance at the factory by the party of the second part; the approval and acceptance of any one lot of shells shall not be evidence of approval of acceptance of any other lot.

The prices to be paid for the said shells shall be for 18-pounder shells, $8.55 per shell.

For 15-pounder shells, $8.30 per shell, to be paid within ten days after the date of delivery, subject to certification of the invoices by the authorized officers appointed by the party of the second part.

In witness whereof the parties have hereunto set their hand the day and year first herein written.

The signatories to this document are Alexander Bertram, Thomas Cantley, G. W. Watts, E. Carnegie, Sam Hughes, Minister of Militia and Defence for Canada; and the document is executed in the presence of D. Carnegie.

A second contract dated October 20, was entered into between the same parties for the supply of a certain number of boxes in which to transport these shells, also some cartridge cases. That will be found on page 33 of the proceedings of the commission. I do not think it is necessary to read it, because the wording is almost exactly the same as the one which I have just read, except, of course, as to the quantities, prices and specifications. Then they immediately entered into negotiations for the third lot, and in order to make myself thoroughly understood I feel that I shall have to read the negotiations with regard to this particular lot. This was for 200,000 18-pounder shrapnel, fixed ammunition, and 400,000 empty shrapnel shells. In this correspondence by cable the War Office was always addressed and signed as "Troopers" and the Militia Department of Canada was addressed as "Militia." This is a cable to "Troopers in London, the War Office," dated November 24, 1914:

Referring to your cable 2025 A-2 and our cable No. 1811-cipher, can undertake supply 200,000 18-pounder shrapnel shells fixed ammunition including propellants but without

fuses and packed in ammunition cases delivered f.o.b. Montreal or Halifax by June first. Prices seventeen dollars and sixty-five cents each including boxes.

Can also supply further four hundred thousand 15 or 18-pounder shrapnel shells empty packed in ammunition boxes same delivery, price nine and a quarter dollars each, including boxes, not including cost of inspection. Can also supply fuses and will name price on receipt of specification and drawings. Early decision necessary as price raw materials advancing rapidly.

Please hasten despatch of specifications, gauges, etc., of 18-pounder cartridge cases and fuses and any other ammunition you may require manufactured in Canada will save time.

The answer to that came back on the 26th day of November, from the War Office to the Militia Department, as follows:

Regret that unless price of 18-pounder ammunition without fuse can be reduced to $15 and that of 18-pounder shells to $6, we cannot place orders.

That was answered on the 2nd of December, 1914, from the Militia Department to the War Office, as follows:

Number 196 cipher. Referring to your cable 2287 A-2, November 30th and our cipher 191 27th November. My committee are proceeding with order, prices being fifteen and six dollars respectively not including wood boxes. Please cable confirmation.

I do not know that we have any evidence of the confirmation, but it was confirmed in some way, and they started out to make the ammunition. Those documents will be found on pages 32 and 33 of the printed report. A number of orders were given from that down to the first day of July. I shall not weary the House by going into the details; in fact, we did not have many details. But we do know that large numbers of orders were given, and that these orders were given out by the Shell Committee, sub-let as they would call it, to different people in different parts of Canada, and I believe that in some cases, when they could not get the parts in Canada, they went to the United States for them, and with that I am finding no fault. Further, they procured material to make shell boxes and things of that kind.

Finally we come to the third contract, which will be found on page 138 of the printed report. As this is a very important contract, I shall take the liberty of reading it:

This agreement made this 1st day of July, 1915.

Between

Alexander Bertram of Ottawa, in the province of Ontario, Thomas Cantley of New Glasgow, in the province of Nova Scotia, George W. Watts of Toronto, in the province of Ontario, and E. Carnegie of Welland, in the province of Ontario, Manufacturers,

Of the first part.

And

Major General, the Honourable Sam Hughes, His Majesty's Minister of Militia and Defence of Canada, acting for and on behalf of His Majesty's Secretary of State for war,

Of the second part.

Witnesseth that the parties of the first part agree to manufacture and deliver to the party of the second part the ammunition, and deliver to the party of the second part the ammunition specified in attached schedule, which forms parts of this contract, subject to the following terms and conditions, and at the stipulated rates;

1. The said ammunition shall be made of such material and components and in accordance with the drawings and specifications hereto annexed and signed by the parties hereto.

2. The parties of the first part agree to deliver, as far as possible the said ammunition in accordance with the said schedule. Delivery to be made to the party of the second part or to his authorized officers f.o.b. Montreal or other Atlantic ports, to the order of the party of the second part.

3. The ammunition shall be subject to inspection and such tests as may be required by the party of the second part during the process of manufacture, and shall moreover be subject after manufacture is completed to inspection and acceptance at the factory by the party of the second part; the approval and acceptance of any one lot of ammunition shall not be evidence of approval of acceptance of any other lot.

4. The prices paid for the said ammunition shall be in accordance with the said schedule, same to be paid not later than ten days after the date of delivery, subject to certification of the invoices by the authorized officers appointed by the party of the second part.

In witness whereof the parties hereto have hereunto set their hands the day and year first herein written.

Alex. Bertram,
Thos. Cantley,
Geo. W. Watts,
E. Carnegie,
Sam. Hughes.

Signed, sealed and delivered in the presence of

D. Carnegie.

Attached to this is an exhibit containing a copy of every order given by the War Office to the Militia Department of Canada, after the first 200 rounds mentioned in the first contract I have read, and also excluding the contract for the shell boxes and the few shell cases referred to in the second contract, which I have read. This schedule figured out really amounts to around $148,000,000, and according to the evidence, which I know I am stating accurately, it was a resume of all the orders given to the Militia Department or the Shell Committee, either by cable or by letter, between, we will say, the 1st of October, 1914, and the 1st day of July, 1915. Mr. Speaker, I should like to have this placed on Hansard

if I could be allowed to do so without reading it. It is a long, technical schedule, but of course if it is thought necessary I shall read it.

Sir ROBERT BORDEN: I do not see that there is any necessity of reading it.

Mr. CARVELL: That document is as follows:

Ammunition Orders from War Office to Shell Committee.

Nature of Order.	Number Ordered.	Promised Delivery.
18 Pr. Cartridge Cases— Mk. II Dwg. No. 20711 Spec. L Cable 1718 Cipher —— 19/10/14 3307	100,000 at $2.55	10,000 per month commencing March, 1915.
18 Pr. Shrap. Empty— Mk. III Dwg. No. 17072-A (1) Spec. L Cable 2287 A-2 —— Our cipher 196 3181 4/12/14.	400,000 at $6.00	To complete by end June, 1915.
18 Pr. Shrap. Fixed— Ammunition complete without Fuses. Cable 2287 A-2. Our cipher 196 4/12/14 Dwg. 17072 A (1) Spec. L 3181	200,000 at $15	To complete by end June, 1915.
18 Pr. Shrap. Fixed— Mk. II Dwg. 17072-A (1) Spec. L Ammunition complete without fuses. Cable —— 26 Dec. 14. 3181	150,000 monthly at $15. Six months certain. Three months notice.	Commencing May, 1915. Can increase from August.
18 Pr. High Explosive— Fixed Ammunition Complete without Fuses and Explosive charge. Dwg. No. 22326 Spec. L 2760 Cipher 16/1/15 3511	100,000 monthly at $15. Six months certain. Three months notice.	Commencing April.
18 Pr. High Explosive— Fixed Ammunition, without Fuses and explosive charge. Dwg. No. 22326 Spec. L Cable 3511 2371 Feb. 18th. Hanson to Carnegie.	100,000 monthly at $15. Six months contract. Three months notice.	Commencing June.
18 Pr. Shrapnel— Fixed ammunition without fuses Dwg. No. 17697 Spec. L 3192-C Cable 2371 Feb. 13th.	100,000 monthly at $15. Six months contract. Three months notice.	Commencing June.
4·5 How. Empty— With cases and Primers empty Cable 2044 8/2/15 from Army contracts 1-a.	100,000 monthly at $15. Six months contract. Three months notice.	Commencing deliveries 50,000 May 100,000 June.
4·5 How. Empty— With cases and Primers empty also Fuses, 4250 Cy. A-7 and 4091 Cy. A-7 and Cipher 352 23/4/15 No. 100. Fuse without gaine.	1,666,666 at $16.50 ⅓ of five million contract.	Commencing deliveries 50,000 July and complete March, 1916.
4·5 Cartridge Cases Empty— Mk. L. Dwg. No. 1794-F Spec. L 3085-A Cable 4586 Cipher A-7 11/5/15 our 373 Cipher.	3,000 per week at $2.10. Six months contract. Three months notice.	Commencing deliveries September.

Ammunition Orders from War Office to Shell Committee—*Con.*

Nature of Order.	Number Ordered.	Promised Delivery.
18 Pr. Cartridge cases Empty— Mk. II Dwg. No. 20711 Spec. L 3307 Cable 4856 Cipher A–7 11/5/15 our 373 cipher.	5,000 per week at $2.10. Six months contract.	Commencing deliveries September.
18 Pr. High Explosive— Fixed ammunition with Fuses but without gaine or bursting charge. Dwg. No. 22326 Spec. L 3511 Fuse 80 44 American tolerance proof at rest. See 4091 Cipher A–7 18/4/15 and our cipher 352 23/4/15.	1,666,666 at $16.50 ⅓ of five million.	Commencing deliveries 50,000 in July and complete in March, 1916. Fuses will not be ready until November but we propose shipping rounds without fuses.
Fixed ammunition complete with Fuses. Dwg. No. 17697 Spec. L 3192–C Fuse No. 80 to American tolerance proof at rest. See 4091 cipher A-7 18/4/15 and our cipher 352 23/4/15.	1,666,666 at $18.00 ⅓ of five million.	Commencing deliveries 50,000 July, completing by, March, 1916, Fuses will not be ready until November but we propose shipping rounds without fuses.
60 Pr. H.E. Mk. V.— Dwg. "22156 (1) Spec. L 3466 and L 3477-C Cable 3839. Cipher A-7 2/4/15 Our cipher 307 28/3/15.	50,000 per month at $16.50. Six months contract. Three months notice.	Commencing August.
Friction Tubes— T. Push Mk. 1. Dwg No. 14531-B (1)..... Spec. L 3088-A and L 3378 Cables 4832 and 8928 14th May. Our 106 code April 15th.	20,000 weekly at 45 cents until three months notice. Six months contract.	Sixty days after receipt of drawings and specifications.
Friction Tubes— T. Mk. IV. Dwg. No. 10283 C (1)..... Spec. L 2682 nd L 3377 Cables 4832 and 8928 our 106 code.	20,000 weekly at 45 cents until three months notice. Six months contracts.	Sixty days after receipt of drawings and specifications.
Primers— Mk. II. Dwg. No. 15031–C..... Spec. L 2986 Cable 4315 Cipher A–7. Our 379. 12/5/15.	2,000,000 at 45 cents have asked for 50 cents due to increase in price.	Deliveries by March 31st, 1916.
4·5 How. H.E.— Empty complete with cartridge case without propellant and clips, but with primers loaded. Cable 5110. Cipher A–7.	5,000 per week at $16. Six months contract.	Commencing delivery October, 1915.
18 Pr. High Explosive— Empty shells Mk. II Dwg. No. 22004–D..... Spec. L Cable 5141 3438 Cipher A–7.	10,000 weekly at $5. Six months contract.	Commencing delivery October, 1915.

Exhibit 122.

You will see by looking this over that it includes the 5,000,000 rounds of ammunition to which would be applied and of which would form a part, the 5,000,000 fuses under investigation by the Commission, under contract with the International Arms and Fuse Company and the American Ammunition Company.

I wish to refer to the examination of Mr. D. Carnegie, who from about the 24th of September, 1914, up to about April, 1915, was an employee of the Shell Committee in an advisory capacity, I think as ordnance adviser, and who some time around the first part of April, was made a member of the Shell Committee, still remaining ordnance adviser. Mr. Carnegie has stated on two or three occasions, although I have not the reference with me, that as they were contractors, it was practically their business what price they paid for any component parts of this fixed ammunition, so long as they did not exceed the prices authorized by the War Office, as in this schedule you will find prices for every different article.

Referring to the particular contracts which are being investigated by the Commission, on page 140, the first would be 4·5 Howitzers, empty, 1,666,666, at $16.50 each. Then you will find the same thing with reference to the 18-pounder high explosive, 1,666,666 at $16.50, and the 18-pounder fixed ammunition, that would be shrapnel, 1,666,666 at $18 each. Now, their contention was that, so long as the component parts all put together did not exceed the prices mentioned in this schedule or authorized by the War Office, it was their business from whom they were purchased, where they purchased, and at what prices, although I do not mean to say that the three gentlemen examined had intimated for a moment that they had any right to retain any of this money for themselves. There again I do not want to discuss the evidence, as I said in opening. But that is the attitude which they have assumed. That attitude was assumed to-day very distinctly by Mr. Cantley and Mr. Watts, I think perhaps more positively by Mr. Watts than the others; but all made the claim that they did not intend to take profits. But they claimed that they had legal right to take profits as long as the total cost of these articles did not exceed the cost authorized by the War Office; that they were within their right, and could act as to that as they had a mind to.

That is the substance of the foundation for the request which I wish to make of the Government. I have tried to give to the House as accurately as I could, and I only read from the official documents, the position of affairs as it stood up to yesterday morning. Yesterday morning the cross-examination of Sir Alexander Bertram was commenced by Mr. Johnston, and I am sorry to say it did not get very far along when a very serious question arose as to the powers of the Commission under the reference. But, Mr. Speaker, before I go into that, I have omitted one important thing in the direct examination of Sir Alexander Bertram. It will be found on pages 342 and 343 of the evidence, and as it is very important I wish to read the whole page. This was on the direct examination by Mr. Hellmuth, the Government counsel, and the examination proceeds as follows:

> Well, then, General, after that when did you first learn or appreciate the fact that there was going to be some difference, considerable or otherwise, between the War Office prices and the prices at which you had let these contracts to the sub-contractors. When was the earliest that you appreciated that?—A. Oh, it would be probably a week or ten days after. On the first order you mean?
>
> Q. Yes?—A. Yes.
>
> Q. A week or ten days after you appreciated the fact that there was going to be a profit?—A. Yes, sir. I began to collect prices of the component parts and estimated a surplus in the first place to carry on the business of inspection and the clerical work in connection with the Committee.
>
> Q. Well now was that probably discussed with other members of the committee at first?—A. No, sir.
>
> Q. Did you discuss it with any one at that time?—A. No, sir, I did not.
>
> Q. When did you first, if at all, discuss that with anyone and with whom?—A. With General Hughes.
>
> Q. And about when was that?—A. Oh, probably November or December.
>
> Q. That is in November or December of 1914?—A. Yes, sir.
>
> Q. And perhaps you will tell me what the discussion was?—A. I came up to Ottawa on some business in connection with the work and showed General Hughes a statement of the profits on the component parts of the shell, which amounted to a considerable sum.
>
> Q. Could you give me any idea of the sum?—A. I have the original. I think on the first 200,000 shells we estimated a surplus of $52,000.
>
> Q. It was quite a sum at all events. Will you continue then? When you told him that, what next?—A. Well, I found that our expenses in running the Shell Committee were a great deal less than I expected, and wondered what we were going to do with the surplus. I think I suggested that if we had a surplus we would turn it over to the Patriotic Fund. General Hughes said: "No, give it back to the War Office."

Some hon. MEMBERS: Hear, hear.

Mr. CARVELL: I am certainly trying to give the House the whole story.

Mr. BEST: It is much milder than before.

Mr. CARVELL: I think I appreciate the position that I occupy to-day, and remarks like that coming from a farmer member of this House are very much out of place.

Mr. BEST: It is quite true.

Mr. CARVELL: I am going to argue this matter as a lawyer, and I am not going to be drawn away by any farmer back-benchers on the other side of the House. (Reading.)

Q. So that at that time, let me understand it, you were prepared to turn the surplus over to the Patriotic Fund. That is you were not suggesting keeping it?—A. Oh, no.

Q. That had not entered your mind then?—A. No, we were doing it as a patriotic job.

Q. And General Hughes said, "Turn it over to the War Office"?—A. Yes, sir.

Q. Now that is in December or November?—A. I couldn't tell. It was some time about November or December. You know at that time we had no idea of getting any future order.

Q. Then to follow this out for the moment, you did get a number of future orders as you know?—A. Yes.

Q. And was it borne in on your mind when you got these future orders that there were going to be future surpluses?—A. Yes.

Q. What did you do in regard to that, did you communicate that to anybody?—A. No.

Q. Until when? When did you next if at all speak of a possible surplus, and to whom? Carry along from the time you spoke to General Hughes in November or December, whom next did you discuss that with, that there might be a surplus?—A. I would rather not give that for publication, unless the Commission desire it.

Q. You did discuss it did you?—A. Yes, I was asked to report to a high authority on the progress of our work, which I did.

Q. And about what date was that?—A. Some time in May or June. It was after we arrived in Ottawa.

Sir William Meredith: When he speaks of high authority perhaps he would not object to say, does he mean Canadian or Imperial?

Mr. Hellmuth: My learned friend Mr. Johnston tells me that he is quite satisfied.

Q. And in May or June you say it was?—A. I think some time about the first week in June.

Q. May I ask whether then the amount was still about $52,000 or whether it had grown into millions?—A. No, it had gone up to $14,800,000.

That was in the first week of the inquiry. Then, Sir, I think it was on Monday of this week, a statement was submitted and admitted in evidence, as of date the 30th day of November, 1915, which is the date when the old Shell Committee ceased to exist and the Imperial Munitions Board was created. This will be found on pages 345-6-7 of this report. I do not know that it will be necessary to incorporate it in Hansard. It takes up every different item or every different contract given by the War Office. It starts in with 100,000 18-pounder shrapnel and 100,000 15-pounder shrapnel, which were included in a contract of the first day of October. It goes on and gives a statement of the value of the material ordered and the balance of the material, or labour—I think they are both called material—in each distinct contract, the total, the War Office prices, and the surpluses or deficits whichever they may be. The sum total of it is that the surplus—that is, the difference between the prices authorized by the War Office and the cost of the articles to the Shell Committee—would be $41,350,000, or, in other words, legally speaking, the four contractors would have the right to take $41,350,000; but, as they say, morally, they never intended to do it.

Mr. MIDDLEBRO: Is not that $30,000,000?

Mr. CARVELL: I am coming to that in a moment. The statement was $41,360,000, but very shortly after the document was produced there was an error discovered in it, and that was in reference to the cost of 1,666,666 45-pounder howitzer shells, an error of somewhere around $11,500,000 That would bring the estimated profit down to the vicinity of $30,000,000 instead of $41,000,000. These matters have not been checked up, and of course, I do not know whether they are right or wrong; I simply take the document as it was placed before the Commission.

When Mr. Johnston attempted to cross-examine Sir Alexander Bertram yesterday morning, he was proceeding along a line that both he and I—I having consulted with him in regard to the matter—believed to be quite proper under the reference. In order that there may be no question as to what took place, I shall read from the record. I do not suppose, Mr. Speaker, that you or the members of the House generally have had an opportunity of seeing this. I went to the gentleman who has charge of the reporting and asked him to get me a number of typewritten copies. He told me that the printed copies would not be ready until late in the afternoon, but I urged him to get me two printed copies if he could do so, and to my surprise, just as the committee adjourned at one o'clock, he brought me two printed copies, but containing only the first hour

or hour and a half's evidence. One of these I have given to the Premier, and the other I shall read from myself. I am sorry I was unable to get any more. I am reading from page 371, during Mr. Johnston's cross-examination:

Mr. Ewart: I wish to point out to the Commission that the contracts Mr. Johnston is referring to now are not within the scope of the Commission at all, the boxes, empty shells, and the prices for them.

Witness: I never heard of any $9.25. The four hundred thousand were taken at $6.

Mr. Ewart: I wish to press my objection, that this has nothing to do with the matters in question. If it is followed up it will lead to endless questioning and cross-questioning. If Mr. Johnston goes into these questions we will have to go into other things.

Mr. Johnston: I will read a portion of the letter so that it will call it back to your mind.

On page 32 of the printed record, in Exhibit No. 28 this appears: "Can also supply further four hundred thousand 15- or 18-pr. shrapnel shells, empty, packed in ammunition boxes same delivery, price nine and a quarter dollars each, including boxes, not including cost of inspection."

Now, will you tell me (and I am not asking for anything further than the mere fact) were you asked $9.25, which should be $9.25 with 20 cents off for the box, when you told us that you had made up your mind that there would be a profit of $8.55?—A. I will tell you why. $8.55 includes the box.

Q. Was that the only reason?—A. I don't know, I don't remember that price of $8.55.

Q. It is in Exhibit No. 16?—A. I don't remember that.

Q. On the 18th of September General Hughes sent to "Troopers" the following: "Reference your cipher September 17th, committee reports price of 100,000 shrapnel 18-pr. as per your cablegram specifications will be $8.55 each delivered at Montreal, 20,000 by November 1st, and at least 30,000 monthly thereafter." Do you remember that?—A. Was that the first one?

Q. That is the first offer I can find as to price?—A. Yes.

Q. And that was on the 18th of September?—A. Yes, sir.

Q. Then "Committee report 100,000 shrapnel price $8.30 each."—A. 15-pr.

Mr. Ewart: Better read it, Mr. Johnston.

Mr. Johnston: Very well. "Committee report 100,000 shrapnel 15-pr. shells." Then there was an acceptance of that price under Exhibit 18 on the 18th of September, but no fuses discussed at all.

Q. That you told us was, as I took it down, you were satisfied there was a profit on that contract?—A. Just go back now. At the time we realized we were going to get a profit was long after the 18th of September, I said several weeks.

Q. You said that in the end of November you would make up your mind that there would be a profit at $8.55, and you said to-day that long before that you had made up your mind that there would be a profit. You have sworn to it this morning?—A. Well, what about it?

Q. What do you say about it yourself—I am not giving evidence.—A. What is the question?

Q. The question is, that you said yesterday that about the end of November you made up your mind that there would be a profit at $8.55?—A. Yes, sir.

Q. This morning you said that long before that you had made up your mind that there would be a profit at $8.55?—A. I said that tentatively.

Q. Now, I am asking you how it was that you demanded for the same article $9.05, 70 cents difference on the shell, on the 24th November according to this cable; I want the reason for it?—A. I cannot remember.

Q. You cannot give me any reason for it?—A. No.

Mr. Ewart: He gave one reason, the boxes?—A. You must recollect that the first order was without boxes, which cost us $1 each.

Q. I am allowing you 20 cents, which is more than you say it cost, and allowing that I am asking you for an explanation why this took place?—A. I cannot go back.

Q. Your counsel seems to intervene and say you have answered it?—A. I cannot remember, I have never seen the letter or cable since; we do not sit pouring over these things every day.

Hon. Mr. Duff: Perhaps, Mr. Johnston, you might draw General Bertram's attention to a sentence lower down, to be quite fair.

Mr. Johnston: "Early decision necessary as prices raw material advancing rapidly;" what do you say as to that, do you remember that?—A. That governed the situation a good deal, and probably we had in mind that at the time, because we had information that they were giving higher prices in the United States—nothing like being on the safe side.

Q. To whom did you consult with reference to prices in that case?—A. With my secretary.

Q. Is that all?—A. Yes.

Q. Did Col. Carnegie know about these prices from you?—A. Nothing definite.

Q. What would he know if he did not know anything definite, because there was only the one thing, the quality of the shell and the price that you fixed?—A. At what date was that?

Q. I am speaking now about November?—A. Yes, yes, he discussed prices.

Q. Have you any recollection of discussing this particular matter with him?—A. Oh, yes.

Q. What is your recollection about that?—A. We discussed prices and the advance in the prices of material and a great many other things to arrive at a price on the shell.

Q. That would be before the 24th November, which was the day you fixed the price, I think?—A. Yes.

Q. You did fix a price on the 18th September at a lower rate, $8.55?—A. Yes.

Q. Do you remember any discussion with him, not generally you did have this or that, but did you remember any particular discussion as to price—this was the initiation you know, of the business?—A. On the 18th September.

Q. Or in September?—. I do not think he had arrived here in Canada at that time.

Q. What time did he join the Board?—A. Some time about the 20th.

Sir William Meredith: He was appointed inspector on the 24th September.

Mr. Hellmuth: Ordnance adviser?—A. Yes.

Q. When did he become a member of the

Board?—A. In 1915, about May or June, I do not know.

Q. It was after the occurrence anyway?—A. Yes.

Q. You see the reason I am troubling you?—A. You are not troubling me one bit.

Q. I am troubling you to get an answer which I am not getting; I am asking you if you recollect any particular conversation with Carnegie or anybody else when you came to fix the price at $8.55 or $9.25?—A. I cannot remember any conversation at all excepting what you see on record in black and white; I know we discussed it.

Q. You cannot tell me then as to what information you got from Carnegie or anybody else that brought you to these prices?—A. Yes, he had lots of information he brought with him from England.

Q. I dare say, but about these particular prices, if you will confine yourself to that, about these particular prices that I have referred to, can you give me any conversation or any interview?—A. No, I cannot; we were in constant communication; he was on one side the table and I was on the other.

Q. He was not on one side of the table until he came out in September?—A. No.

Q. The first one I am talking about is the 18th September?—A. Oh, well.

Sir William Meredith: Well what is the use of asking whether he talked with a man who was not here?

Mr. Johnston: Where the witness gives general evidence——

Sir William Meredith: This witness is to be treated at present as a respectable man.

Mr. Johnston: I hope I am treating him as that. If you take that view I shall not examine him.

Sir William Meredith: Certainly, the most searching, but treat him as a respectable man.

Mr. Johnston: In what way am I treating him as not a respectable man?

Sir William Meredith: It seems to me you are treating him just as you would treat the commonest kind of a witness that you thought was dishonest.

Mr. Johnston: Surely not; I certainly resent that accusation against my treatment of the witness.

Sir William Meredith: I cannot help you resenting it; it is my view of the way in which you are conducting the examination.

Mr. Johnston: If I am simply to go over in a polite manner with any witness I might as well not be here at all.

Sir William Meredith: As I say, the most searching examination, but do not make offensive observations.

Mr. Johnston: I do not know of any offensive observations I have made.

Sir William Meredith: I think that discussion as far as I am concerned will cease now.

Mr. Johnston: Did you consult any other colleagues at that time about prices?—A. No, sir.

Mr. Johnston: I did not intend to ask this witness—of course I felt somewhat hampered after the remarks made—

Witness: Do not feel that you are offending me, Mr. Johnston; I want to give you everything, and I will take it in the most pleasant way.

Mr. Johnston: I want to mention a matter to the Commissioners, General, just for a moment; I wanted to ask this witness, if I go on with him at all, as to certain matters in connection with that contract of the 1st October in which these four gentlemen for the first time became parties to the dealing in shells that I abstained from with the other witness because the question was reserved as to whether or not—

Mr. Ewart: We cannot hear you, and we really would like to hear.

Mr. Johnston: —as to whether or not I should go into that matter and that point I understand was reserved; if the Commission is of opinion that I ought not to ask questions in regard to that I shall not put any further question.

Mr. Hellmuth: May I intervene for a moment; anything that bears upon the question of contractual relationship or trustee relationship I would not desire to prevent, as far as I am concerned, any inquiry into that; going into the particular contracts were made outside of the scope of this is another matter, but the questions that would lead up to that I should think in view of the dealings with these particular contracts might be asked; that is the way it occurs to me.

Mr. Johnston: I may say that the question of what took place as gathered from various witnesses may be important from our standpoint, from my standpoint at any rate,and I so submitted at the time; in addition to that the contracts have been proved and they are before the Commission, and surely it is open to me to examine as to the contracts proved by my learned friend Mr. Hellmuth, and made part of the record. If they can be proved and nothing more said about it then of course my duty is very simple, as I should not ask if the Commissioners so rule, and I would not event attempt to lead up to that.

Mr. Hellmuth: I am not objecting to your asking any questions in regard to those contracts that were entered into between the Shell Committee or the four members of the Shell Committee and the Secretary of State for War through General Hughes; all I am objecting to is your going into the contracts that these parties made with others in regard to the matter, but I should think it is quite proper to find out from those contracts and from other circumstances what the relationship was; in regard to that I do not certainly interpose; I shall be glad if it were done.

Mr. Johnston: I answer that by saying that the question of the relationship having been asked yesterday and emphasized with General Bertram as to whether or not they were contractors or mere trustees or agents, or whatever one may choose to call them, that that question depends entirely upon what was done under these contracts after they were entered into, and the facts connected with the contracts themselves, and with the action of this witness or any other witness, ought to be available to me for the purpose of showing what the real relationship was notwithstanding the evidence my learned friend offered yesterday in regard to the fact that they were not in reality contractors but agents.

Sir William Meredith: You have not made it at all clear to me the scope of the inquiry you desire to enter into. Do you propose to enter upon an inquiry as to contracts, the details of contracts that were entered into with regard to other matters than the four that are referred to this Commission to examine into the prices at which those contracts were let or taken from the War Office, and the prices at which they were let to those who contracted with the Shell Committee—is that what you propose to do?

Mr. Johnston: And the relations between the parties as to their dealing and how the account was kept and the payments made; that is what I stated at the time, at least I intended to state that at the time, when the Commissioners thought until further consideration I ought not to deal with the matter, and I have ceased dealing with the matter.

(The Commissioners confer.)

Sir William Meredith: Mr. Johnston, the Commissioners are of opinion that you can make inquiries of this or any other witness as to the relationship between the Shell Committee and the War Office, or the Minister of Militia, but you cannot enter into the particulars of any of the transactions that are not the subject of this inquiry.

Mr. Johnston: It occurs to me with all deference, if I cannot go into the particulars—take, to make it quite clear I will give the dates of the contracts: October 1, 1914, Exhibit 23; October 20, 1914, Exhibit 31; July 1, 1915, Exhibit 122—now, the superficial facts or the facts that bear generally upon the contracts have been given; that, as I understand it is—

Hon. Mr. Duff: Let us take the first one and let us understand; this is the contract between the War Office and these gentlemen.

Mr. Johnston: Yes.

Hon. Mr. Duff: The observations of Sir William Meredith were not directed to this contract.

Mr. Johnston: Then 20th October, 1914, Exhibit No. 31.

Hon. Mr. Duff: That is the same thing, that is the contract between the War Office and these gentlemen.

Mr. Johnston: Yes. The 1915 one, July 1, page 139.

Hon. Mr. Duff: That is the same thing.

Mr. Johnston: They are all upon the same basis, and what I asked permission to go into was this, I wanted to show what these four gentlemen did, and in order to show that I want to ask the witness as to prices that they got from the War Office, and the prices that they paid to the sub-contractors.

Sir William Meredith: That involves going into each one of the transactions mentioned in that agreement; only four of them are the subject of this inquiry.

Mr. Johnston: I do not want to have any misunderstanding about what I desire to do, and I am putting it plainly now to the Commissioners as to what I propose to do subject to the ruling of the Bench, and I understand the ruling is I am not entitled to go into the particulars of these matters to ascertain the facts as I have outlined them.

Hon. Mr. Duff: The particulars of the prices of particular contracts other than these four contracts.

Mr. Johnston: Yes.

Hon. Mr. Duff: That is to say there is no question of contracts for fuses—

Mr. Johnston: No, I understand that, as far as the fuses are concerned, but the fuses are included with other matters in a contract of the 1st of July, 1915, because there was a lump sum of $16.50 as to these four contracting parties, nominally or really contracting parties, and as I pointed out, and as I again point out, that in order to ascertain the exact status of these gentlemen I ask to be allowed to go into the transaction, and let me make it as general as possible, into the whole transaction which will bear not upon the question of fuses but upon the position which these gentlemen actually occupied towards the War Office or towards anybody else with regard to these contracts for similar purposes.

Sir William Meredith: I think our ruling is plain, Mr. Johnston; you will proceed having regard to it, please.

Mr. Johnston: I do not know that I can make it clear to myself.

Sir William Meredith: If you will ask your questions and they are contrary to the ruling we will deal with them.

Mr. Johnston: Perhaps I can put in the form of questions that will explain what the ruling is and what my position is, that I should inquire and do inquire from this witness as to the persons to whom sub-contracts were let, and the prices under the contract of the 1st October, 1914—

Sir William Meredith: That is excluded except to these four contracts that were—

Mr. Johnston: I am speaking now about 1st October, 1914—

Sir William Meredith: As I understand what you have said, if there is a full price $16.50, part of it only the fuse, the ruling would not prevent you going into an inquiry as to the rest of the $16.50, whatever it is.

Hon. Mr. Duff: That is with regard to the five millions.

Mr. Johnston: Yes, I understand that.

Mr. Ewart: That is not the contract of the 1st October.

Mr. Johnston: But the 1st October contract, 1914, is not that kind of contract, as you will see; so that if that is the ruling I cannot go into these very matters I am speaking about, and there is no use putting questions which would be ruled out.

Sir William Meredith: No, no use taking up unnecessary time.

Mr. Johnston: Because each question would be ruled out, and I do not want to take that position at all.

Mr. Hellmuth: In regard to the ruling the questions that are directed towards elucidating the position of the four gentlemen with the War Office, whether they were, although legally contractors, treating themselves as trustees or agents, I do not understand any questions of that kind are ruled out.

Sir William Meredith: Certainly not.

Mr. Hellmuth: But if my learned friend Mr. Johnston wants to ask in regard to another contract or sub-contract made by these four gentlemen with somebody else in relation to a matter which is not covered by the terms of the Order in Council he cannot go into that.

Sir William Meredith: That is the ruling.

Hon. Mr. Duff: Or which has nothing to do with the contract of the five million.

Mr. Johnston: I have raised the question because I have taken one contract as a sample of the 1st October which has nothing to do with fuses, and is only brought forward by myself for the purpose of showing the actual contractual or other relationship of these parties, and in order to do that it would necessitate by going into the question of their sub-contracts, or payment, and the method of payment, and method of book-keeping and so on, which of course would be necessary to show whether they were contractors or agents.

Sir William Meredith: You are aware, of course, the Order in Council provides for the reference of other questions to this commission

if it is thought expedient to do so. If anybody thinks that these matters ought to be inquired into, and we are to stay here all summer doing it, I suppose representations can be made—Mr. Carvell is a member of the House, he can bring the matter up and ask that the power of the inquiry be extended, but we must keep within the terms of our map.

Sir ROBERT BORDEN: Perhaps it would be better to read the next dozen lines.

Mr. CARVELL (reading):

Sir William Meredith: You understand, Mr. Johnston, that with regard to this five million contract, the question of profits made by anybody is open to inquiry.

Mr. Johnston: I understand that.

Hon. Mr. Duff: Not merely as to the fuses, you know.

Mr. Johnston: Yes. And as to the five million fuses, not merely as to the price of fuses but the prices under the sub-contract, and so forth.

Hon. Mr. Duff: As to profits, as to fuse contracts, made by anybody. The fuse contracts were—speaking very roughly—an element in the transaction with regard to the five millions and what has been said with regard to other contracts does not apply to the five millions.

Mr. Johnston: I understand that the five millions is open to all investigation and all inspection of papers and all examination that may be deemed necessary.

Sir ROBERT BORDEN: I think that is enough.

Mr. CARVELL: I was not going to read that part, because it is only a repetition of what had been stated earlier. To summarize the matter, you will see, Mr. Speaker, the position in which Mr. Johnston finds himself in this investigation. The Government counsel, without asking the consent or advice of any one—and, I must say, I think quite properly—placed in evidence all the correspondence leading up to the contract of the first day of October, a part of the correspondence leading up to the contract of the 20th day of October, and a very small part of the correspondence leading up to the contract of the first day of July. And the statement is made, without any substantiation, without any book, any document, any paper, or proof of any kind, that the net profits of the first contract would be about $52,000. I wish to state at once that, later on, that was reduced to $42,000, and, so that there may be no question about the actual facts, in future I will discuss this as being about $42,000. He says there is no evidence given as to the profits of the second contract, because that was for shell boxes and cartridge cases; but the amount of profit is given as about $14,800,000. And these three documents are in evidence and they are simply bald statements made up, I presume, by bookkeepers; for when General Bertram was asked, he did not know about it, but said that that was what he was told. The moment Mr. Johnston attempts to cross-examine into the manner by which they arrived at the estimated profit of $42,000 in one case and $14,800,000 in the other, he is prevented from going into that. It seems to me that is a violation of the most elementary rules for the conduct of legal examinations in courts; and I am assuming—in fact I know—that the commissioners are attempting in this matter to apply the same rules as would be applied in court.

3 p.m.

Mr. BURNHAM: Does not it depend on the status of the committee?

Mr. CARVELL: The rules by which evidence would be received or rejected would be the ordinary rules governing the reception or rejection of evidence in a court of law. I do not know that that is so stated, but it is so elementary that I am satisfied that if the commissioners were here they would agree with me.

Mr. MORPHY: Was the statement to which the hon. gentleman referred, relating to $42,000, sworn to by any official of the Shell Committee to be correct?

Mr. CARVELL: General Bertram stated that he admitted the profits to be $52,000 in one case, and later a document was put in, not sworn to by anybody, showing that the net profits by that contract were $42,000.

Mr. MORPHY: Did you have General Bertram's oath?

Mr. CARVELL: I read his statement, and for the information of my hon. friend I will refer to it again.

Mr. MORPHY: I do not wish it.

Mr. CARVELL: I read every word he said.

Mr. BURNHAM: If he had a right to it, what difference would it make what the amount was?

Mr. CARVELL: I am afraid my hon. friend is not following the argument. I stated half a dozen times that General Bertram and his associates were not claiming that they had the right to take the money. Probably it would be better to let me go on, and when I have finished I shall be glad to answer any questions hon.

gentlemen may ask me. Now, the legal position in which we find ourselves is that a number of very important statements have been made—that profits amounting in one case to $42,000, in the second case to $14,800,000, and in the third case to about, we will say, $30,000,000, have been made in the operations of the Shell Committee. I am not saying now that they intended taking them, but that they had made them over and above the prices authorized by the War Office. But we do not know how these prices were arrived at except as I have explained in the two or three different instances referred to. We thought we should have the right to show exactly how these figures were arrived at; we should have the right to know how much it cost to maintain and operate the Shell Committee; we should have the right to know whether the profits or the savings—I do not want to use the word "profit"—on the second contract, instead of being $14,800,000, should not have been $25,000,000 or possibly even $30,000,000. But we are simply met with a bald statement. We are told that the amount is $14,800,000, and are not vouchsafed any of the particulars upon which that is arrived at, nor are we allowed to ask any questions in order to satisfy ourselves how they were arrived at.

Mr. BURNHAM: Will the hon. gentleman allow me to ask him a question?

Mr. CARVELL: Yes.

Mr. BURNHAM: I was there and heard the argument. The point, it seems to me —and as a member of the House I must try to understand this matter—is that, if these gentlemen were contractors, you have no right to inquire into these matters. Therefore it is the status of the committee you must inquire into first.

Mr. CARVELL: If this House and the Government, or if the Shell Committee themselves, want to take the ground that they were contractors, if they wish to say, "That is our business and none of yours, we can make what profits we want to, we can pay one friend $5 for a given article and another $2 for the same article—"

Mr. BEST: Did they do that?

Mr. CARVELL: Now, if that farmer over there will just keep quiet—

Mr. WILCOX: I resent this casting of aspersions upon the farmer members of this House.

Hon. MEMBERS: Order.

Mr. SPEAKER: Order.

Mr. WILCOX: I want to say that if there were a few more farmers in this House and a few less like the member for Carleton it would be a good deal better.

Some hon. MEMBERS: Order.

Some hon. MEMBERS: Oh, oh.

Mr. BEST: I may be a plain farmer, but I would not associate myself with him.

Some hon. MEMBERS: Order.

Mr. BEST: I firmly believe—

Some hon. MEMBERS: Order.

Some hon. MEMBERS: Oh, oh.

Mr. BEST: I firmly believe that if he was in Ireland he would be hot.

Some hon. MEMBERS: Oh, oh.

Mr. BEST: He is a rebel to the Empire.

Some hon. MEMBERS: Order.

Mr. BEST: A rebel to the Empire.

An hon. MEMBER: That is a fine specimen.

Mr. SPEAKER: I wish to say that for myself, I know many members of this House on both sides who are farmers—

Mr. CARVELL: I am one myself.

Mr. SPEAKER: —and they have my greatest respect; I consider them as gentlemen.

Mr. CARVELL: I think, perhaps, I should not have made the remark I did to the hon. member for Dufferin (Mr. Best). I am a farmer myself.

Mr. DAVIDSON: "This was the most unkindest cut of all."

Mr. WILCOX: We know what you are.

Mr. CARVELL: I have been trying to discuss this matter as a pure matter of legal argument, and have refrained from making any comment upon the evidence. I was trying to answer the question put by the hon. member for West Peterborough (Mr. Burnham) as to whether or not it was anybody's business, assuming that these gentlemen were contractors. I say that if the four working members of the Shell Committee take that ground, if the House takes that ground, if the Government takes that ground, that these gentlemen have made a contract with the War Office to supply shells at a certain price, and that is

nobody's business whether they paid to their friends higher prices than they should have paid, nobody's business what they did, nobody's business whether they made a loss or not, so long as they delivered the goods—then I do not think I should have the right to come here. But I have stated to the House that the members of the Shell Committee do not take that attitude. They say that while it is true that they took the legal attitude of being contractors, they always intended to hand this money over, and that they did hand it over, and it went to their successors, the Imperial Munitions Board. I hope I have sufficiently answered the hon. member for West Peterborough; I have tried to make it as plain as I possibly can. In order to arrive at any just conclusion as to the conduct of the members of the old Shell Committee; in order to come to any conclusion as to whether or not they conducted themselves in a proper manner, speaking from the commercial standpoint; in order to satisfy ourselves and the country as to whether these munitions which were bought on account of the British Government, and, according to the statement of the Minister of Finance some months ago, to some extent for the Government of Canada, were purchased as cheaply as they should have been purchased and whether the transaction was as sound a business transaction as it should have been, I submit, Sir, that the scope of this inquiry should be so enlarged that we should have the right to go into the method by which they made up the estimate that they saved $42,000 in the one case, $14,800,000 in the second case, and $30,000,000 in the third case. That is what I want to bring before the House and especially before the Prime Minister, because, being a good lawyer, he can appreciate exactly what I am talking about. I do not go so far as to question the ruling of the commissioners; I want to keep entirely away from that phase of the case. I have tried to place these facts before the House in order that they might be treated by the House entirely as a legal matter, coupled, of course, with the public interest; in order that the matter might be discussed from that standpoint and not in any way from the standpoint of what may have taken place or what will take place before the Royal Commission. I do not have to remind the House that in my judgment it would be entirely improper to discuss that, and I do not propose doing so, because the Royal Commission is not more than half or one-third through with its business. It will be time enough to discuss the doings of the commission when the witnesses have been heard and the facts are before the public.

Before I take my seat I wish publicly to draw to the attention of the Prime Minister —and I hope that I shall be allowed to do so, even though the matter is not contained in the notice which I gave to you, Mr. Speaker,—the fact that under the terms of the Inquiries Act there is no provision for taking the evidence of a witness outside the Dominion of Canada; that is, there is no provision for compelling the attendance of such witness. You are well aware, Mr. Speaker, that most of the states of the Union have provisions for compelling the attendance of witnesses before commissions issued out of our courts under certain conditions. In the state of New York the statute reads practically in this way—I think I can give it almost verbatim, although I have not the citation before me—I think it is section 915 of the Code of New York: "Any party to a suit, cause or action pending in any court may apply to have commissioners appointed, subject to the procedure afterwards given, which commissioners shall have the right to examine witnesses under oath, ask for and compel the production of documents," and generally to go on and work it out. There are decisions in the state of New York providing that a judge under the procedure granted may subpoena and force the attendance of witnesses before the commission appointed just the same as would be done in our own courts. There is no provision of our Inquiries Act which brings us within the purview of that sort of condition. That is to say, our Inquiries Act does not recognize the existence of parties; it does not recognize a Commission under our Act to be a court. As I view it, therefore, our Commissioners would have no power to appoint a Commission to go to any state in the Union and compel the attendance of witnesses the same as they could if these were applied for out of a court or by a party to a cause in that court. I make this suggestion to the Prime Minister, with the intention at the earliest possible moment—

Mr. DOHERTY: If the hon. gentleman will pardon me, is it not quite true that the statute that he is referring to of the State of New York, and statutes generally dealing with the subject, are limited entirely in their application to civil or criminal proceedings, and that, therefore, unless we have

a civil or criminal proceeding, it would not help the matter to call this commission a court? I may point out that when we get ready for any civil or criminal proceedings, of course we have plenty of courts before which we can proceed and on the proceedings before these courts we might invoke that statute.

Mr. CARVELL: I am bringing this matter to the attention of the House, and I hope that the Minister of Justice will be able to devise a scheme by which a commission of inquiry such as I refer to will come under the provisions of the New York statute.

Mr. DOHERTY: We should have to be able to amend the New York Act.

Mr. CARVELL: I have stated my object in bringing this matter to the attention of the House. I had intended asking the Prime Minister if arrangements could be made by which an Act could be passed bringing our commission under the Inquiries Act within the purview of the statute of New York or other statute, in order to obtain the evidence of witnesses who cannot be brought from the United States to Canada as the law now stands.

I have tried to place this matter before the House as plainly as I can. I only hope that the House will agree that I have presented a case, and that the scope of this inquiry will be so extended that we may be enabled to give to the people of Canada not merely a certain disjointed portion referring to three or four matters out of questions involving hundreds of millions of dollars, but the whole facts in connection with the case.

Right Hon. Sir ROBERT BORDEN (Prime Minister): My hon. friend has placed his position very clearly before the House. I should like to make an observation with regard to the concluding portion of his remarks. Some hon. gentlemen on the other side of the House spoke of the possibility of some amendment being made to the Inquiries Act which would facilitate the summoning of witnesses and the enforcing of their attendance in another country. When that suggestion was made, early in April, I think, I wrote to the Minister of Justice, directing his attention to the suggestion and said that any legislation for that purpose might very properly be brought in if it were feasible. The difficulty that he has found—one which, I think, is very obvious to all who consider the question—is this: The statute, as he has observed, which really requires amendment for this purpose, is that in force in New York. If that statute were so amended that commissioners acting under the authority of the Government of any other country should have in New York power, through the medium of the courts there, of enforcing attendance in the cases mentioned by the hon. member for Carleton, there would be no difficulty. It has not been made plain to the Minister of Justice or to myself, although I have not given it the same consideration that he has, that any amendment of the Inquiries Act would affect the purpose which the hon. member for Carleton has in mind.

The hon. member for Carleton observed that the Government or the Shell Committee might take the ground, if they saw fit to do so, that this was not really a committee, but that these gentlemen occupied the position of contractors. We have not taken any such ground in this House, so far as the Government is concerned. The first information of an important and definite character that came to me with regard to the operations of the Shell Committee was that which I quoted in a speech delivered in this House on the 15th day of April, 1915. The members of the Shell Committee had called upon me with the Minister of Militia shortly before and described the extent of the operations of the Shell Committee and their possible development in the production of munitions in Canada. I asked them at that time to make a written statement which they afterwards prepared and which I read in the House on the 15th April, 1915. And certainly, whatever the legal forms may have been which were observed between the Shell Committee on the one hand and the War Office on the other hand, the memorandum which I then read to the House conveyed to me the most distinct impression, as I am sure it did to all members of the House, that they were acting as a committee and were not acting in a contractual relation. I will quote just a few paragraphs of that memorandum, which very probably has escaped the recollection of most of the hon. members. It was headed in this way: "Report on the Formation and Work of the Shell Committee by David Carnegie, M.I.C.E., Ordnance Adviser." One of the paragraphs in the introduction was as follows:

Details of the committee's formation, constitution and operation are given in the follow-

ing pages. Tabulated facts of the materials used in the contracts and their value are also recorded together with notes on the progress and nature of the work involved in the various contracts handled by the committee.

Under the heading of "Formation of the Committee," this paragraph appears:

Before actually forming the committee the Minister of Militia asked Colonel Greville Harston and Lt.-Colonel F. D. Lafferty, to get in touch with all manufacturers in Canada who they thought could make the component parts for shrapnel shells. He particularly emphasized his desire to have the steel manufactured in Canada.

On the 8th of September, 1914, at a meeting held by the minister at the Dominion Arsenal the following committee was appointed to organize the work throughout the Dominion:

Colonel A. Bertram, Chairman; Thos. Cantley, Esq., Geo. W. Watts, Esq., E. Carnegie, Esq., representing the manufacturers; Colonel T. Benson, Master General of Ordnance; Colonel Greville Harston, C. I. Arms and Ammunition; Lt.-Colonel F. D. Lafferty, R.C.A., superintendent of the Dominion Arsenal, representing the Department of Militia and Defence.

Lt.-Colonel Lafferty undertook the technical instruction of the manufacturers in shell construction, and it was decided that the examination and inspection would be carried out by the chief inspector of arms and ammunition.

About two weeks after the organization of the committee, Mr. David Carnegie, of London, Eng., was appointed by the minister as ordnance adviser to the Shell Committee.

Then, further, under the heading, "Work of the Committee:"

The work of the committee in the early stages was that of formulating definite plans of procedure. They determined that, as far as possible, all the materials employed in the shells would be made in Canada; up to that time, for instance, no Canadian steel had been used for the production of ammunition.

To Colonel Cantley the committee is under obligation for having rapidly installed and equipped plant for producing the first steel made in Canada for shell manufacture.

With the exception of the copper bands all ports of the shells now produced are made in Canada, and it is hoped that, before long, these also will be included amongst the Canadian industries.

Another important decision made by the committee was to supply to the shell assembling manufacturers, all the component parts of shells, free of charge. By this means many of the smaller manufacturers have been relieved of the financial strain of carrying a heavy stock of raw materials.

Under the heading "Executive Work," we find:

The executive work of the committee has been very wisely entrusted to the chairman, Colonel Bertram, who reports weekly to the Minister of Militia and also to the committee when it meets (which is usually monthly) or more often, at the call of the minister.

The work consists of controlling what might be regarded as a huge combination of factories in which various contracts are being executed to British War Office specifications, which entails constant attention and queries regarding the selection of suitable factories, the placing of contracts, instructing manufacturers in the art, inspecting the parts made, and the payment and auditing of accounts, etc.

And further on under "Executive Work:"

A chartered accountant recommended by the general manager of the Bank of Montreal checks the accounts of the committee every month. These are then forwarded to Mr. J. W. Borden, chief accountant for the Militia Department. It might be said in passing that the committee's accountant has expressed himself in gratifying terms of the highly efficient way in which the accounts of the committee are kept.

Then under "Shell Contracts:"

The result of his visit has been fully reported to the Minister of Militia, but it might be briefly stated here that the War Office officials did not fully understand the nature and importance of the committee's work, and had no idea that the factories in Canada were capable of undertaking such contracts, until these facts were placed before them.

Under the head of "Miscellaneous:"

In addition to the foregoing, the Minister of Militia, through his committee, has made several investigations for the War Office in connection with the supply of propellants and high explosives. An investigation was undertaken regarding the supply of nitro-cellulose powder by a large firm in the United States. Other matters have been investigated, such as the supply of rifles and ammunition for the Russian Government.

So that, whatever forms may have been devised between the committee and the Minister of Militia and the War Office, the impression conveyed to my mind by that report was that the committee were really acting as a committee in organizing the industries of Canada for the production of munitions of war, and were acting in that regard for the War Office and under its direction, with the co-operation, wherever necessary, of the Minister of Militia and Defence.

The hon. member for Carleton has gone over a considerable portion of the proceedings of the commission. I shall quote, before I conclude, some portions of what he has already quoted, in order to arrive at the exact status of the matter as it presented itself to the commission and to the counsel who are engaged. Let me call the attention of the House for a moment to the circumstances under which and to the reasons on account of which the commission was issued to the Hon. Sir William Meredith and the Hon. Mr. Justice Duff. I said in this House on the 30th day of March last:

If a member of this House desires to make a charge against any member of the Government, or any member of the House, the proper course is for him to rise in his place, make a personal statement on his responsibility as a member of

the House, and conclude the statement with a charge.

This has not been done, and thus the course which I am about to announce is, strictly speaking, not demanded by any action which hon. gentlemen opposite have taken. No one of them has risen in his place and taken the responsibility of making a charge in the sense above set forth.

The hon. member for Richmond, N.S. (Mr. Kyte) however, made statements late on Tuesday evening the 28th of March, as to the connection of the Minister of Miltia with certain contracts entered into by the Shell Committee, and as to enormous profits or commisions arising out of these contracts to certain companies which he mentioned. It is alleged that Mr. J. Wesley Allison had a very large interest in those profits or commissions, and it is suggested that through his influence with the Minister of Militia the Shell Committee were induced to make the contracts in question. The Minister of Militia and Defence had previously stated to the House his close relationship to Mr. J. Wesley Allison, and his great confidence in that gentleman.

Then I went on to say:

Having regard to these considerations, the Government propose to issue a Royal Commission.

And on the following Monday, the 3rd day of April, I announced that that commission had been issued on that day. There is one portion of it which I desire to read, in order to make the position of the Government absolutely clear with regard to what was then proposed. The relevant portion of the Order in Council is as follows:

The Prime Minister, therefore, recommends that a commission for the purpose aforesaid to issue under the said Part One of the Inquiries Act directed to the Honourable Sir William Ralph Meredith, Kt., Chief Justice of Ontario, and the Honourable Lyman Poole Duff, one of the Justices of the Supreme Court of Canada, authorizing and requiring them with all reasonable diligence to make full and complete inquiry into the contracts aforesaid and each of them and into the acts and proceedings of the Shell Committee, whether by themselves or by any other person or persons directly or indirectly, and of the Minister of Militia and Defence whether by himself or by any other person or persons directly or indirectly in relation thereto or in connection therewith and into the negotiations therefor, the profits or prospective profits arising thereunder, the disposition, division or allotment of such profits or prespective profits, or of any commission or reward for procuring the said contracts or any of them and as to the persons interested in any such profits, prospective profits reward or commissions, and generally speaking into all other acts, transactions and matters of every kind relating to the said contracts and each of them and to report the result of such inquiry with the evidence taken therein. Also to inquire into such other matters relating to the acts or proceedings of the Shell Committee as may be referred to the said commissioners by Order in Council from time to time, and to report the result of any such further inquiries with the evidence taken therein.

I did not explain to the House at the time the purpose or object of the concluding portion of what I have just read. It had been freely stated along the corridors of this House that the alleged charge of the hon. member for Richmond was only an instalment of the charges, or rather insinuations, which hon. gentlemen on the other side of the House proposed to make. If any such further charges were to be made with reference to this matter, we did not propose to sit silent, but we did propose to have them investigated. Therefore that clause was inserted in the Order in Council. We had also in mind this: We proposed to send over to the Government of the United Kingdom the whole debate on the motion proposed by my hon. friend the leader of the Opposition, with the assurance that if an inquiry into the matter were desired at this stage, we would be prepared to give every possible assistance and co-operation in such inquiry, and that as far as we were concerned the Government of Canada had absolutely no objection to such inquiry. So, the clause in the Order in Council fulfilled a double purpose in that regard.

Thereafter, on the 17th day of April, I read to the House an Order in Council which was passed on the 15th of April, setting forth in terms the motion proposed by my right hon. friend the leader of the Opposition with regard to this matter, and my observations in regard to it. That Order in Council concluded as follows:

Having regard to these considerations and to the statement above quoted, the Prime Minister recommends that the Hansard report of the debate upon the motion of Sir Wilfrid Laurier be transmitted to the Right Honourable the Secretary of State for the Colonies, with the assurance that the Government of Canada is prepared to assist and co-operate, as stated by the Prime Minister in the House of Commons, in any inquiry or investigation into the transactions to which reference is made in the motion of Sir Wilfrid Laurier and that so far as the Government of Canada is concerned there is no objection whatever to the fullest investigation that may be thought desirable at any time.

It is not necessary for me to do more than allude to the reasons which were set forth as to why we declined to enter upon such an inquiry without consultation with the British Government. There were two main reasons: One was that the expenditure was not by the Government of Canada, but by the Government of the United Kingdom, and another consideration was

this, that during the progress of a great war such as that in which we are now engaged, the Government of the United Kingdom might not think it desirable that an inquiry should take place at the present time. So, we sent the debate, we sent all that was alleged, to them for their consideration with the assurance that if they thought any inquiry desirable we would be prepared to co-operate in it to the fullest extent.

Now, the matter has reached a certain stage before the commissioners, and I would like to quote just a few portions of what has been already quoted to the House by my hon. friend from Carleton. At page 373 Mr. Johnston is reported as saying:

As to whether or not I should go into that matter and that point I understand was reserved; if the Commission is of opinion that I ought not to ask questions in regard to that I shall not put any further question.

Mr. Hellmuth: May I intervene for a moment; anything that bears upon the question of contractual relationship or trustee relationship I would not desire to prevent, as far as I am concerned, any inquiry into that; going into the particular contracts that were made outside of the scope of this is another matter, but the questions that would lead up to that I should think in view of the dealings with these particular contracts might be asked; that is the way it occurs to me.

Mr. Johnston: I may say that the question of what took place as gathered from various witnesses may be importance from our standpoint, from my standpoint at any rate, and I so submitted at the time; in addition to that the contracts have been proved and they are before the Commission, and surely it is open to me to examine as to the contracts proved by my learned friend Mr. Hellmuth, and made part of the record. If they can be proved and nothing more said about it then of course my duty is very simple, as I should not ask if the Commissioners so rule, and I would not even attempt to lead up to that.

Mr. Hellmuth: I am not objecting to your asking any questions in regard to those contracts that were entered into between the Shell Committee or the four members of the Shell Committee and the Secretary of State for War through General Hughes; all I am objecting to is your going into the contracts that these parties made with others in regard to the matter, but I should think it is quite proper to find out from those contracts and from other circumstances what the relationship was; in regard to that I do not certainly interpose; I shall be glad if it were done.

It will be noted that Mr. Hellmuth distinctly stated there that he had no objection whatever to going into these contracts in so far as that might be necessary to ascertain precisely the relationship of the committee to the War Office and its exact status. Further on, after the commissioners had conferred, Sir William Meredith said this:

Mr. Johnston, the Commissioners are of opinion that you can make inquiries of this or any other witness as to the relationship between the Shell Committee and the War Office, or the Minister of Militia, but you cannot enter into the particulars of any of the transactions that are not the subject of this inquiry.

The position, as far as I understand it, which Mr. Johnston took, and I am not presuming to criticise him in any way, was that the inquiry should be just as open to him as if all the contracts of the Shell Committee had been referred to the commissioners, and not merely the four contracts with respect to which the charges of the hon. member for Richmond (Mr. Kyte) were made. Of course, the commissioners could not acquiesce in any proposal of that kind. I would think that entirely obvious.

Mr. CARVELL: I do not think my right hon. friend is stating the position exactly as it is, because, while if these contracts had not been put in in evidence and one side of the case had not been put forward, possibly my hon. friend's contention would be logically right; but Mr. Johnston's main contention was that, as these contracts had been put in evidence, and as the statement had been made about savings, he should have the right to cross-examine in order to test out the credibility of the witnesses and see exactly what the results ought to be.

Sir ROBERT BORDEN: I do not quite see the relation, because the charge made in this House was not in regard to the savings of the committee, that is, the difference between the amount which the British Government had authorized and the amount at which the committee had placed their contracts. The question was as to alleged exorbitant and inordinate profits made with respect to certain fuse contracts and other contracts, coupled with the suggestion, or the insinuation, that these contracts had been brought about through the instigation of the Minister of Militia and through some supposed influence that Mr. J. Wesley Allison had exercised upon him. That was precisely the issue which the hon. member for Richmond and other hon. members on the other side of the House proposed for investigation, and that is precisely the matter which the commissioners are proceeding to investigate, and as to which, so far as I understand, they are giving the fullest opportunities for in-

quiry. Sir William Meredith, further on, in reply to Mr. Johnston, said:

Sir William Meredith: That involves going into each one of the transactions mentioned in that agreement; only four of them are the subject of this inquiry.

And for the very good reason that in respect of only four of them was there any charge or even insinuation made in this House which affected in any way the status or honour of any member of this Government; and as to these, we promptly challenged inquiry, and have granted it. There now seems to be a disposition to raise some other question and ask for some other inquiry which is not covered by what hon. gentlemen on the other side of the House themselves suggested and asked for when this matter was brought up. Then, the Hon. Mr. Justice Duff goes on:

Hon. Mr. Duff: The particulars of the prices of particular contracts other than these four contracts—

Mr. Johnston: Yes.

Hon. Mr. Duff: That is to say, there is no question of contracts for fuses—

Mr. Johnston: No, I understand that, as far as the fuses are concerned, but the fuses are included with other matters in a contract of the 1st July, 1915, because there was a lump sum of $16.50 as to these four contracting parties, nominally or really contracting parties, and as I pointed out, and as I again point out, that in order to ascertain the exact status of these gentlemen, I ask to be allowed to go into the transaction, and let me make it as general as possible, into the whole transaction which will bear not upon the question of fuses but upon the position which these gentlemen actually occupied towards the War Office or towards anybody else with regard to these contracts or contracts for similar purposes.

Sir William Meredith: I think our ruling is plain, Mr. Johnston; you will proceed having regard to it, please.

Mr. Johnston: I do not know that I can make it clear to myself.

Sir William Meredith said further on:

Sir William Meredith: As I understand what you have said, if there is a full price, $16.50, part of it only the fuse, the ruling would not prevent you going into an inquiry as to the rest of the $16.50, whatever it is.

Hon. Mr. Duff: That is with regard to the five million.

Mr. Johnston: Yes, I understand that.

Further on Mr. Hellmuth makes these observations:

Mr. Hellmuth: In regard to the ruling the questions that are directed towards elucidating the position of the four gentlemen with the War Office, whether they were, although legally contractors, treating themselves as trustees or agents, I do not understand any questions of that kind are ruled out.

Sir William Meredith: Certainly not.

Mr. Hellmuth: Nor any inquiry in regard to any prices or any contracts that were made in regard to the fuses with the American Ammunition Company.

Sir William Meredith: Certainly not.

Mr. Hellmuth: But if my learned friend Mr. Johnston wants to ask in regard to another contract or sub-contract made by these four gentlemen with somebody else in relation to a matter which is not covered by the terms of the Order in Council he cannot go into that.

Sir William Meredith: That is the ruling.

Hon. Mr. Duff: Or which has nothing to do with the contract of the five million.

Further on Sir William Meredith observed:

Sir William Meredith: You understand, Mr. Johnston, that with regard to this five million contract, the question of profits made by anybody is open to inquiry.

Mr. Johnston. I understand that.

Hon. Mr. Duff: Not merely as to the fuses, you know.

Mr. Johnston: Yes. And as to the five million fuses, not merely as the price of fuses but the prices under the sub-contract and so forth.

Hon. Mr. Duff: As to profits, as to fuse contracts, made by anybody. The fuse contracts were—speaking very roughly—an element in the transaction with regard to the five millions and what has been said with regard to other contracts does not apply to the five millions.

Mr. Johnston: I understand that the five millions is open to all investigation and all inspection of papers and all examination that may be deemed necessary.

Under the circumstances, I hardly am able to appreciate the point or cogency of my hon. friend's suggestion that, by reason of anything that has transpired before the commissioners, there should be an amendment or extension of the terms of the Order in Council. The Government determined in the first instance that it could not undertake to authorize or proceed with a general inquiry into shell contracts, except after consultation with the British Government, and after submitting the whole matter to them. Later on, when a charge, or rather, a suggestion or insinuation was made on the other side of the House purporting to connect a member of the Government with contracts in respect of which it was said that inordinate and exorbitant profits had been made, although there was no direct charge in the ordinary sense, the Government determined that an inquiry ought to be made, and we brought down and laid upon the table of the House the Order in Council authorizing the present inquiry. That is the matter now being investigated and determined before the commissioners; that is the issue which hon. gentlemen on the other side of the House themselves raised; that is the question, in so far as the status of any member of the Government is concerned, which they themselves asked to have determined; and

so far as I can understand from a perusal of the proceedings before the commissioners, a copy of which I have under my hand, the commissioners have not only granted but are disposed to grant in the future the widest latitude to those who are pressing this inquiry and endeavouring to support the allegations of the hon. member for Richmond. Under the circumstances it does not seem to me that either the Government or the members of this House are called upon to reverse a decision that was made after careful debate in this House, merely for the reason that an honourable member of the Bar, however eminent, may think it suits his purpose for the time being to pursue a particular line of cross-examination. So far as these contracts are concerned, everything is absolutely open to him.

So far as the status of the Shell Committee and its relationship to the War Office is concerned, the commissioners, if I understand their ruling correctly, will permit him to inquire, not only into the four contracts mentioned in the Order in Council, but, in a general way, into all the con tracts; he is not restricted or limited in any way whatsoever. But when he asks the commissioners to allow him the same scope of inquiry that he would have had if the whole proceedings of the Shell Committee had been referred to the commissioners for inquiry, why, naturally, no one would expect that the commissioners could acquiesce in such a course.

Under these circumstances, I can only say to my hon. friend that I do not feel there is any occasion whatever for an extension of the terms of the Order in Council authorizing the inquiry. If the British Government, after consideration of the documents which have been sent forward, should come to the conclusion that a general inquiry is desirable, we shall be most happy to refer that general inquiry to these same commissioners if they are prepared to undertake it; but, until some such desire or wish on their part is suggested to us, it does not seem to me there is any occasion for further action by the Government of Canada. The commissioners, as far as I understand—I have not had time to follow the evidence carefully—are giving, and properly giving, not only a fair but a wide interpretation to the terms of the Order in Council; they are giving a wide latitude to the inquiry. But when my hon. friend the member for Carleton suggests that there should be an inquiry into the estimated profits under other contracts, or as to how they were made, or how much the operations of the Shell Committee generally cost the British Government, I, for one, am unable to see how such considerations are relevant.

I for one am unable to agree that such considerations enter into this inquiry, or that they affect the particular question which was raised in this House by the hon. member for Richmond, with the approval of hon. gentlemen opposite. Therefore I must say to my hon. friend that, so far as I am concerned, there appears no reason at present for extending the scope of the Order in Council which authorised this inquiry.

Hon. WILLIAM PUGSLEY (St. John): Mr. Speaker, if my right hon. friend the Prime Minister had confined his observations to a statement that he would not consent to enlarge the scope of the commission, I do not know that I should have felt called upon to make any remarks; but the Prime Minister has said further that the Government had decided to issue a commission to investigate all the charges which in any way connected the Government or any member of the Government with mismanagement so far as the affairs of the Shell Committee were concerned, and then he has said that a perusal of the proceedings before the Royal Commission shows that they are giving the widest possible latitude and that no objection can be made against their proceedings. As to these two positions I desire to take distinct issue with my right hon. friend. I say that there was a distinct charge made against the Shell Committee with which a member of this Government was directly connected; that that charge pertained to the general conduct of the Shell Committee and was not limited to the purchase of fuses. That charge was made by my right hon. friend the leader of the Opposition in the motion which he made for a committee of this House to investigate the conduct of the Shell Committee; that charge was reiterated by my hon. friend the member for Carleton (Mr. Carvell); and then we had the statement of the Prime Minister that if any member of this House would stand in his place and make a formal charge and take the responsibility of his charge, the Government would grant an investigation. Then I, as a humble member of this Houses, and having a deep sense of the responsibility that rested upon me, did stand in my place and make a charge in

words as plain and clear and explicit as possible, and I took the responsibility of proving that charge, well knowing, if I failed to do so, the punishment that would be meted out to me as a member of this House. It is idle for the Prime Minister to say that no charge was made. Let me call your attention, Sir, to Hansard, page 1789, and see what was the charge and whether it was made in plain and explicit terms or not:

I, William Pugsley, a member of this House, in support of the motion now under consideration, standing in my place in this House and on my responsibility as a member of this House, declare and charge that the Shell Committee, appointed by the Minister of Militia and referred to in said motion, fixed excessive and unreasonable prices for shells and for other munitions and goods to be furnished to the British Government (which by arrangement between the British Government and the Canadian Government were to be paid for in part by Canada.)

That such prices were fixed with competition and were far in excess of what would necessarily have been paid if ordinary business methods had been pursued, thereby involving an unnecessary excessive expenditure of many millions of dollars, conservatively estimated at at least eighty millions, which will be improperly taken from the people of the United Kingdom and Canada.

That said committee gave large orders at such excessive prices and without competition to companies in which members of the committee were largely interested, and of some of which companies members of the said committee were the directing heads.

There is a charge, not confined to the purchase of fuses, but connected with the purchase by the committee of all goods for the purposes of the British Government. Later on in the charge which I made it is expressly declared that the actions of the Shell Committee were known to and were connived at by the Minister of Militia; and yet the Prime Minister says there was no charge connecting any member of this Government with improper conduct. Are we to understand that it will not be deemed a charge against this Government that they are guilty of negligence, that they are guilty by careless business methods, of allowing money to be taken out of the treasury of Great Britain and the treasury of Canada, and that, in order to make a charge against the Administration, you must charge personal dishonesty against some member of the Government? I have never understood that to be the rule applied to men in public life. I directed a charge against this Shell Committee, created by a member of this Government and acting for a member of this Government, that they, neglecting ordinary business methods and disregarding those ordinary rules of prudence which should guide the gentlemen who are carrying on the affairs of the country, paid excessive prices involving an unnecessary expenditure amounting to the enormous sum of $80,000,000; that that was done with the knowledge and connivance of the Minister of Militia to whom the Shell Committee reported from week to week. It astonishes me that the Prime Minister, in the face of that charge, rises to-day in his place and repeats the statement which he made some time ago in this House, that there was no charge in any way connecting any member of this Government with improper conduct so far as the Shell Committee was concerned. I charged further:

That there has been great and wholly unnecessary delay in furnishing the completed shells for use of the Canadian and British forces at the front.

That the said Shell Committee neglected and delayed for an undue period of time to provide the fuses necessary to render the shells effective, and, failing to endeavour to provide for their construction in Canada, as they might have done, proceeded to give and awarded, through J. Wesley Allison in the United States, contracts for fuses amounting to $22,000,000, on which they made an advance of $3,750,000. That the making of the said contracts through said Allison was unwise and improvident and was entered into with the knowledge and connivance of the Minister of Militia, and the said Shell Committee failed to obtain delivery of said fuses for an unreasonable time.

And I do also charge that the Government of Canada had, through the Minister of Militia, to whom the said Shell Committee reported weekly, knowledge of such irregular and improper methods and acts of the said Shell Committee, and while having the power at any time to put an end thereto the said minister improperly consented to such irregular and improper methods and acts and permitted the same to continue.

There was a charge directed against the Shell Committee, not limited to the purchase of fuses, but having reference to the various actions of that committee in the purchase of shells, shell boxes, and other materials, and charging them with improper and irregular conduct, and that such conduct upon their part was with the knowledge and connivance of the Minister of Militia. Yet my right hon. friend says there was no charge against the Shell Committee so far as any member of the Government being connected with it was concerned, except in reference to fuses, and that the latter charge was made by my hon. friend the member for Richmond. I feel constrained to make that statement in view of what my right hon. friend the Prime Minister has said in reference to there being no charge connecting any mem-

4 p.m.

ber of this Government with improper conduct.

The Prime Minister says that they have not dealt with this matter as if this committee had any contractual relations with the Imperial Government, but as if they were a committee. Does he forget that he and the members of this Government informed this House and informed the people that this Shell Committee was in no way responsible to this Government or to any member of this Government, but that all this Government did was to name seven reputable gentlemen for selection by the British Government as their committee for the purchase of munitions of war, and that it was to the British Government, and to the British Government alone, that that committee was responsible, that it was with that Government alone that they had relations? Does the Prime Minister forget that? Does the Minister of Finance (Sir Thomas White) forget that? Does the Solicitor General (Mr. Meighen) forget that? If the Minister of Militia (Sir Sam Hughes) were here, he might perhaps say something in a different way; but these gentlemen to whom I have referred, one after another, stood in their places in the House and said that this Government had nothing in the world to do with this committee. Did my right hon. friend the Prime Minister, when he made that statement in the House, know of these contracts which had been signed by Sir Sam Hughes, Minister of Militia, on the one side, and these four gentlemen, members of the committee, on the other? I cannot believe he knew of them. I cannot believe that had he known of them he would have concealed them from the knowledge of the members of this House and of the people of Canada. Some may think it strange that he did not know of these contracts, for they had seen it reported in the newspapers that at times he was acting Minister of Militia. It may seem strange to hon. members of this House that other gentlemen did not know of them, for we have seen the statement made at one time that the President of the Council, Mr. Lougheed, was acting Minister of Militia. Other gentlemen from time to time have acted as Minister of Militia. Some may think it strange that, taking charge of the department as they did, none should know of the existence of these contracts which, it has been said, had been so much a surprise when evidence of them was disclosed before the Royal Commission. These contracts were, as I have said, directly between these four gentlemen and this Government, through its Minister of Militia. Will it be said, in view of these contracts being now before the country, that this committee had nothing to do with this Government? Will it be said that they had nothing to do with the Minister of Militia? Will it be said that the Minister of Militia was not the man who took these orders from the British Government and then gave orders to these gentlemen who did so make the contracts? To-day we have the facts, we have the absolute confirmation of the statement of my right hon. friend the leader of the Opposition (Sir Wilfrid Laurier) made in this House when he quoted the remarks of Lord Curzon that these orders came directly from the War Office to the Minister of Militia of Canada. When that statement was made, hon. gentlemen on the other side were disposed to question it, but to-day we have the fullest confirmation of the position which the leader of the Opposition took in proposing his motion to the House.

The Prime Minister says that it is evident that there is no necessity for enlarging the scope of the commission, that it is evident the commission has been given the freest hand that any counsel can in reason ask to be given them. I am not disposed to agree with my right hon. friend in that. In a court of law, if the counsel for the plaintiff were to put in a document and examine the witness upon that document, whether the document was relevant or irrelevant, the counsel upon the other side would have the right to cross-examine with regard to that document. I ask any lawyer in this House if that would not be the case. That is one of the clearest and most elementary principles of law. Yet we find that the gentleman representing this Government and taking his instruction from this Government puts in these various documents, puts in the calculations of profits, and, with the consent of the commissioners, went fully and with very great detail into the actions of the Shell Committee so far as it pleased him to do so, but that, when Mr. Johnston proposed to cross-examine on these very documents the statement which Mr. Hellmuth, representing the Government, had placed before the Committee, he was denied the right to cross-examine, a right which would have been accorded to counsel in any court in this country. Does my right hon. friend the Prime Minister, as a lawyer of great

ability and large experience, say that that is fair play? Does he say that one side should be permitted to put in such documents as it pleases and that counsel representing a different interest shall not be permitted to cross-examine upon those documents? I deny that that is in accordance with the principles that govern ordinary legal proceedings; I deny that that is in accordance with the principles which should govern the Commission if they are desirous of having the fullest investigation and of the facts going to the public. If the Prime Minister does not feel like granting the request of my hon. friend from Carleton that the scope of the Commission should be enlarged, he should instruct Mr. Hellmuth, acting for the Government, to permit the fullest cross-examination upon all matters which he went into in his direct examination That would be only fair play, that would be only in accordance with justice and with the rules of procedure, which, as every lawyer knows, govern the taking of evidence in the courts of this country.

Just a word with reference to the suggestion of my hon. friend from Carleton that the Government should introduce legislation so as to give these judges, who are appointed under Royal Commission, the status of a court, in order that they may have power to issue a commission to the United States, and so be enabled to obtain evidence in that country. My hon. friend recognizes the desirability of doing that if it can be done. It is known that this very large contract was given in the United States; it is known that some of the most important witnesses reside in the United States; it is known that these witnesses cannot be compelled by any process to come to this country and that the only way in which their evidence can be secured would be by some procedure which would enable them to be brought before a representative of the commission in the United States. If the Government does not lend its aid—if that aid can be made effective towards this result—it would be putting a premium upon those acting for this Government going to the United States and there making their contracts, carrying on their business, and spending the money of this Government—or the money entrusted to the Shell Committee which is in reality the money of this Government and the money of Great Britain—because they would expect that no commission could follow them into a foreign country and obtain evidence which would be available if the transaction had been carried on in Canada. I hope my right hon. friend the Prime Minister and the Minister of Justice will bend their energies toward giving such a constitution to this commission as will prevent it from being deprived of the opportunity of taking the testimony of witnesses in the United States. It is admitted that if these commissioners were a court they could issue a commission to the United States and witnesses would be obliged to attend. My hon. friend the Minister of Justice has said that that can only be done in a proceeding either civil or criminal. Well, no one pretends that it is a criminal proceeding that these commissioners are carrying on; but is it not a civil proceeding?

Mr. DOHERTY: Some very uncivil things have been said about it.

Mr. PUGSLEY: I do not think so. We on this side of the House, while we regret that a committee of the House was not appointed to investigate this matter, and while the inquiry has not been broad so as to take in all the matters with respect to which we made these most serious charges, recognize that half a loaf is better than no bread, and that if opportunity is given for full inquiry it will be, to some extent at all events, satisfactory to the public. Why could not an Act be passed declaring that these commissioners shall be deemed to be a court of inquiry? Why should a clerk to this court not be appointed, and why should it not be provided that that court, so constituted—

Mr. DOHERTY: Will the hon. gentleman permit me a question? Can this Parliament legislate that a body shall be deemed a court, and make that effective in the state of New York if the body is not a court?

Mr. PUGSLEY: Yes. The moment this Parliament, having jurisdiction to create a court for inquiry into public affairs, constitutes that body a court with power to take evidence under oath, to punish witnesses for contempt and to issue commissions to a foreign country, at that moment it becomes a court which will be recognized by the laws of a foreign country, the courts of which will then lend their aid to the bringing of witnesses before a commissioner appointed by our court to hear evidence. Does my hon. friend doubt the power of this Parliament to constitute a court? Only two days ago my hon. friend introduced a Bill to amend the Exchequer Court Act, in which he pro-

poses that the court shall carry on investigations and make inquiries even though they are not to pronounce judgment taking away property from the individual and giving it to the Crown. They are to carry on investigation and report to the Government as to the value of the property in regard to which they make the investigation. Suppose that was the whole power of the Exchequer Court; suppose it had not the power to give judgment, but were appointed simply for the purpose of making inquiry with regard to property which the Crown had expropriated and to report to the Government upon the value of the property. It would be equally a court; it could be equally given power to compel witnesses to come before it, to administer oaths, to punish for contempt. Equally could it be given the power to issue commissions to a foreign country in case it should be desirable to take evidence in such foreign country. I do not think my hon. friend will question the validity of the legislation that he himself is proposing with regard to the Exchequer Court. If that is so, then what is the difficulty in constituting these two judges a court of inquiry under the Inquiries Act? What is to prevent this Parliament from giving to the court so constituted the power to compel witnesses to attend before them, to punish for contempt, to employ all the powers of a court? What is to hinder this Parliament from giving that court power to issue a commission to a foreign country? If this Government will do that, I venture to say that we shall not require any amendment to the law of New York. I venture to say that upon application to a judge of the Supreme Court of New York an order will be made for the attendance of witnesses before the commissioner which the court so constituted may appoint. That is all the hon. member for Carleton asks for; that is what this Parliament has the power to grant if the Government choose to take that course, and if they desire that witnesses in the United States shall tell what they know about these facts. I am told that witnesses in the United States will be able to give the most valuable evidence with regard to the charges which have been made. That, I say, is the course which this Government ought to take if they are desirous of having a full and complete and thorough investigation and of having all the facts disclosed by this Royal Commission.

[Mr. Pugsley.]

Hon. C. J. DOHERTY (Minister of Justice): Mr. Speaker, when my right hon. friend the leader of the House closed his observations, I confess that I felt at that moment that there required nothing to be added to what he said in order to justify the conclusion at which he arrived and to demonstrate that there was no basis for the demand for the enlargement of this commission. I feel that I should apologize to this House for rising now to speak, because I have had such a strong confirmation of that view in the speech of the hon. member for St. John city (Mr. Pugsley). Assuredly, if there had been something to be said that would tend to support the claim that at this stage and for the purpose suggested by the hon. member for Carleton the scope of this commission should be extended, I think we might have counted upon the hon. member for St. John to find it out. But apparently he has deemed it necessary to confine his observations almost entirely to matters which, so far as I can see, do not bear upon the question of the extension of the scope of this commission.

He made complaint that the right hon. Prime Minister had stated that no charges other than those under investigation affecting any member of this Government had been made in this House. He proceeded to read to us some extracts from a speech which he had made in the course of the debate upon the motion of the right hon. leader of the Opposition for an inquiry before a committee, and he told us that these were charges. If the use of the word "charges" made them charges in any proper sense of the word, I think it could not be disputed that they were charges, because he repeated the word "charges" in almost every paragraph. The hon. gentleman seemed to have almost extraordinary conception of the effect of the use of the word. We have an instance of that in another portion of his argument, where he gravely represents to us that if we just call a body a court, that makes it a court and there is nothing more to be said about it—all outside states will recognize it as being a court. I do not attach the same value to words that the hon. gentleman does; in that connection I will have something to say further on.

I do not purpose going into the question of these so-called charges. At the time that they were made, even with greater solemnity than they have been read to-day, my hon. friend the Solicitor General (Mr. Meighen) very fully and very adequately

disposed of them. I want to refer only to one paragraph of them, the one that comes nearest to accusing someone of something. It is the paragraph in which these contracts of $22,000,000 are dealt with, and I want to refer to that only to point out that these are the contracts that are now under investigation

The hon. gentleman gets up to contradict the right hon. leader of the House in his statement that no charges other than those under investigation were made, and he cites the charge that is under investigation.

Mr. PUGSLEY: Will my hon. friend pardon me? My information is, and I have not the shadow of a doubt about it, that the contracts put in by Mr. Hellmuth are not limited to fuses at all, but contain the contracts in regard to the shells as well as the fuses.

Mr. DOHERTY: How does that bear on what I am stating, namely, that the charges with regard to contracts for $22,000,000 are under investigation? The hon. gentleman rises to say that not only are they under investigation, but that other matters are under investigation; and yet the gist of his complaint was that he made charges and that they were not under investigation.

Mr. PUGSLEY: My hon. friend persists in misrepresenting me. What I said was that the counsel for the Government put in all those contracts, not limiting them to the fuse contracts, and then Mr. Johnson was deprived of the privilege of cross-examining upon the matters into which the Government counsel had examined in the direct examination.

Mr. DOHERTY: We will come to that in a moment; we have not come near it yet. The hon. gentleman accuses me of misrepresenting him; but if he will keep his mind on what I am dealing with at the moment, I do not think he will venture to deny that what he describes as a charge and what approximates most nearly to a charge in his very—I may be pardoned if I say verbose and numerous statements intended to look like charges—what comes nearest to a charge and looks most like one, is actually under investigation now.

Mr. PUGSLEY: My statement is only verbose as compared with the brief speeches of the minister.

Mr. DOHERTY: That may be; I do not know whether I am subject to the reproach of too great brevity. However, that is all I have to say about his charges. The nearest approach to a charge is actually under investigation, and the hon. gentleman takes up our time complaining that the right hon. gentleman has said that no charges other than those under investigation have been made. I entirely fail to see the bearing of the fact that the hon. gentleman made what he called charges upon the question whether this commission, having been issued to inquire into an issue tendered by the hon. gentleman upon the other side of the House, should now be extended to cover all of the contracts of the Shell Committee. The hon. gentlemen who made these charges which have been subjected to investigation were exceedingly brave when they made them. Their words were many and their words were brave, and they clamoured for a body before which they could make the proof of those specific things that are now under investigation; they have a body before which they are given the widest possible latitude concerning those charges which they so made, and are furthermore told that they may refer to any other contract in so far as it bears upon the status of the Shell Committee, and what do they do? I have not read the evidence and I do not want to draw any conclusion from it, but it does not seem very unfair to suggest that it looks at all events like running away from the issue that they tendered. They are given the widest possible latitude on the issue they tendered, and they are here before this House complaining that they are not allowed to go into something else, and all of that because they say, if I followed the hon. member for Carleton, N.B., aright, that there is a question of the status of the committee, and, in the second place, because there is in the evidence a statement showing that large savings were effected as between the prices agreed upon by the War Office and the prices at which contracts were actually made——

Mr. MACDONALD: Does the minister lay it down as a principle that in this tribunal or in any other court where counsel acting for a party having responsibility introduces evidence to show that there were profits or savings or whatever you choose to call them, the counsel on the other side cannot cross-examine in regard to that fact? That is the ruling here in the minutes.

Mr. DOHERTY: I venture to say so, and I say it is fortified by the ruling of the Chief Justice of Ontario and of Mr. Justice Duff,

one of the most distinguished judges on the Supreme Court Bench, which ruling is absolutely at variance with the suggestion the hon. member for Pictou has just made, and the suggestion which the hon. member for St. John made. The hon. member for St. John said he ventured to say that there was not a lawyer of any standing in this country who would question his proposition, and yet his proposition was in the teeth of the ruling of the Chief Justice of Ontario and of Mr. Justice Duff.

Mr. MACDONALD: I am putting that to you as a general principle. What do you say about it?

Mr. PUGSLEY: What does the minister himself say?

Mr. DOHERTY: What the minister says is that if, as has been held, these contracts are irrelevant to the matter to be inquired into, the fact that there had been introduced a statement showing the profits made by them, a statement introduced, so far as we know, without the slightest objection on anybody's part, does not make that statement a relevant statement pertinent to the inquiry, and consequently gives no right to cross-examine upon it. The suggestion of these two hon. gentlemen amounts to this, that if I should sue a man on a contract for $500, and I should go into the witness box and, in the course of my testimony, voluntarily observe that I made another contract and realized $10,000 profit at some other time, because that evidence had slipped in, because nobody has said anything about it going in, then the court would be called upon to investigate my statement, which has no bearing on my case at all, that I made $10,000 in some other contract at some other time.

Mr. PUGSLEY: Would the minister say that in that very case there would be no right of cross-examination?

Mr. DOHERTY: Certainly and most absolutely I would say so.

Mr. PUGSLEY: There must be something different in the Quebec code from what is in the common law.

Mr. DOHERTY: Hon. gentlemen laugh. If they were in a court I think the laughing would be at their expense.

Mr. CARVELL: I think you had better look for some other illustration.

Mr. DOHERTY: For what my capacity may be, I have not the slightest hesitation in saying and I feel somewhat fortified by the fact that this is the ruling of Chief Justice Meredith and of Mr. Justice Duff—

Mr. MACDONALD: Does not the minister's logic go to this extent, that if the decision of the Chief Justice of Ontario on this question is right, he should not have permitted the evidence in regard to shell savings or profits to go into the record before the commission?

Mr. DOHERTY: So far as contracts are concerned, the contracts between the Shell Committee and the Imperial Government were put in at the beginning, for the purpose, as I understand it,—and I am depending largely on the statements of the hon. member for Carleton which I have no doubt reproduces what happened, although there may be room for differences of impression—

Mr. CARVELL: I do not think so, I think you are pretty safe in accepting it.

Mr. DOHERTY: I take it that those contracts were put in to show the status as towards the War Office of the Shell Committee, and I understand a statement was put in, and, so far as I am informed, without anybody suggesting objection to it, that showed, in a general way, that a saving had been effected upon the prices at which the sub-contracts were let.

It dropped there. I do not know what would have been the ruling if it had been objected to; but this much is quite clear, that the two learned judges have ruled that cross-examination, going into the details of what profits were made on each one of these contracts, is not justified by the introduction of the statement, and that it is irrelevant to the matters being inquired into. I think it would not be unwise of this House to leave that matter to be determined by these two learned judges. There will not be much gained by my quarrelling with my hon. friends on the other side of the House as to whether this is a sound judgment or not. I am quite prepared, and I think that other hon. members of this House will also be, to abide by the decision of the commissioners on that question, and that is their judgment.

If one follows the argument of Mr. Johnston, it is apparent that he claims to go into these contracts as bearing upon the status of the Shell Committee towards the War Office. The declaration of the commissioners on the subject has been read here more than once, that in so far as they may be pertinent to establish that

status they may be gone into. The other assertion is the one I have just dealt with, namely, that because there happened to be a statement that these profits were made, although these profits have absolutely nothing to do with the issue that the commission was appointed to try, we ought to extend the scope of the commission in order to enable them to go into all the contracts made by the Shell Committee. I am not going into the question whether that should be done or not. That question was threshed out in this House on the motion of the right hon. leader of the Opposition (Sir Wilfrid Laurier).

Mr. CARVELL: On another supposed state of affairs.

Mr. DOHERTY: In what respect?

Mr. CARVELL: On the supposition that the Shell Committee were trustees instead of contractors.

Mr. DOHERTY: I am not going into the question of whether they are in effect trustees or contractors. If I followed the hon. gentleman rightly, his contention was that legally, on the letter of the instrument, they were contractors.

Mr. CARVELL: There is no doubt about that at all.

Mr. DOHERTY: Very well; I am not questioning that; but they themselves say that morally they were representatives or trustees.

Mr. CARVELL: But with the right to pay any amount which they had a mind to for these articles so long as it did not exceed the estimated cost.

Mr. DOHERTY: That matter might very well be left to the commissioners to determine.

Mr. CARVELL: Yes. I do not wish to discuss it here.

Mr. DOHERTY: What their rights are may be left to the commissioners to determine; but how does that affect the question of the scope of the commission? The commissioners have told Mr. Johnston that, as far as anything bears on the question of the status of the Shell Committee, he may go into it. There can be no dispute about that question. All that has been ruled out is the details, the particulars, of the different sub-contracts which these parties made, other than the sub-contracts referred to in the commission, because they are all sub-contracts in this sense, in regard to fuses. That is all that has been ruled out. All I have seen, as a vestige of ground for suggesting that all these other contracts should go in, is the mere fact of the existence of that statement. I have dealt with that argument, and it seems to me that it requires no further observation.

The hon. member for St. John, taking up a suggestion of the hon. member for Carleton and harking back on something that was said by the hon. member for Pictou (Mr. Macdonald)—if I might be permitted to refer to something that was mentioned in a previous debate—calls upon the Government, and upon myself in a very particular manner, to legislate to make this commission of inquiry a court which will be recognized in the United States as being a court. He says that all I have to do in order to bring about that result is to give that body the powers of a court in regard to the summoning of witnesses, the examining of witnesses and compelling attendance, and to give them power to issue commissions themselves to other persons. May I point out to him that under the statute at present these are precisely the powers that this body has, and that the only modification he has suggested is that we should call this body a court. I would like to refer to the statute of the state of New York and to our own statute upon that subject. I do so simply for the purpose of making it perfectly clear that statutes of that sort are passed in order to enable courts of different countries to act in aid of each other, if I may so express it. I have here only the statute of the state of New York, but I feel fairly safe in saying that you will find the statutes of other countries on the subject are similar. They all have in contemplation a court, that is to say, a tribunal sitting for the administration of justice and holding trials between parties and carrying on proceedings either civil or criminal. The provision of the New York statute is:

> A party to an action, suit, or special proceeding, civil or criminal, pending in a court without the State, either in the United States, or in a foreign country, may obtain, by the special proceeding prescribed in this article, the testimony of a witness—

And so forth. The details of the procedure are immaterial. The right is given to a party in action, suit, or special proceeding, civil or criminal, pending in a court; so that you must have a court, you must have a proceeding to which there are

parties, and it must be a proceeding civil or criminal. With all respect to the hon. member for St. John, when he suggests that in a legal sense, and within the well-known meaning which the words have, as distinguishing between a civil and a criminal proceeding, this is a civil proceeding, I find it impossible to follow him. This is an inquiry directed to the ascertaining of facts. Upon the results of that inquiry a civil or criminal proceeding may be based; but we are at present at the stage when we have not got the material upon which to base a proceeding, civil or criminal. Our own statute, making a similar provision in favour of outside courts, is very much in the same terms:

> Whenever, upon an application for that purpose, it is made to appear to any court or judge, that any court or tribunal of competent jurisdiction, in any other of His Majesty's dominions—

This one deals with His Majesty's other dominions, but there is a provision in regard to foreign countries—

> —before which any civil, commercial or criminal matter is pending, is desirous of obtaining.—

Etc. We might call this a court if we chose, but it would not alter in any sense its functions; and as long as there is instituted before it no action or proceeding, and it is not competent to entertain any action or proceeding, none of these statutes will apply. If we were in a position to proceed before any court and institute any action or proceeding, we would not need to go before this commission at all. There are ample courts in this country if anybody has charges to make. Hon. gentlemen on the other side of the House said there were charges to bring, said they were in possession of evidence that would convict men under the Criminal Convictions Act—

Mr. CARVELL: Who made that statement?

Mr. DOHERTY: I cannot at the moment lay my hands on it.

Mr. PUGSLEY: The hon. member for Calgary (Mr. R. B. Bennett) came the nearest to it.

Mr. CARVELL: I think the minister should be a little more specific. If he will exclude me I shall not find so much fault.

Mr. DOHERTY: If the statement is questioned I will drop it, but I have sat here and heard appeals made to the Minister of Justice, "Why don't you prosecute the man for perjury?" When I used the words "criminal convictions," I realized I was not using the right words; I should have said, under the "Secret Commissions Act."

Mr. CARVELL: That is a different proposition.

Mr. DOHERTY: I would suggest that if hon. gentlemen had that evidence and wanted a tribunal to compel the attendance of witnesses, they should have gone to the courts of this country to lay their charges, and then they would have had the assistance of courts of other countries to compel the attendance of the witnesses wanted. When they refused that remedy, what was it they asked for in the same breath? They asked for a committee of this House, which manifestly and unquestionably would have had no greater power than this commission; would not have had the powers that a constituted court would have of compelling the attendance of witnesses. I was surprised when it was first suggested by the hon. member for Pictou; but, as the suggestion had been made by a gentleman for whose professional status I have the greatest respect, I made it my business to look into the matter as carefully as I could, and I am free to confess that for the reasons I have pointed out I think it is beyond our power. But if any method can be devised to compel the attendance of witnesses before this commission—whether it is called a court of inquiry or anything else—hon. gentlemen may rest assured that that method will be resorted to. They need have no doubt about our desire to do everything that can be done to bring before the commission witnesses that it is desired to examine, on all matters that are pertinent to the investigation being carried on.

Mr. PUGSLEY: If it is to be in the form of a statute, it should be passed before Parliament rises.

Mr. DOHERTY: I am free to admit that the hon. gentleman is a distinguished lawyer, and he knows or he does not know whether we can pass a statute of that kind. Personally, I know of no legislation that could be enacted. We cannot alter the real nature of the body, we cannot alter the real nature of the proceedings, by any legislation of ours that will be effective in the United States. We may legislate that a something that is not a court shall

be a court in Canada; but that would not carry in the United States, because we should only be giving the body a name. We have a body whose functions are essentially not those of a court, because the commissioners can impose no consequences upon people by reason of the findings of facts that they may make; they have no judicial function in that sense to exercise: they, therefore, are not a court or tribunal within the meaning of any of those statutes, and our calling them so will not create against people who are governed by the law of the United States rights that do not exist under the law of the United States or of the particular states in which the people may be found. We can neither make this a court that would be recognized in the United States, by merely calling it a court; nor can we make this a proceeding, civil or criminal, by merely calling it so, in such a manner as to have that recognized in the United States. If hon. gentlemen can suggest any method by which that can be done, I shall be more than happy to accept it. There is certainly an element of inconsistency in hon. gentlemen who would have nothing but a committee of Parliament to inquire into these charges complaining of the lack of power of this commission to enforce the attendance of witnesses. This commission has already, so far as the law of Canada can give it, all the powers of a court to enforce the attendance of witnesses.

Mr. CARVELL: Would not a committee of Parliament have the same power?

Mr. DOHERTY: What is suggested to me is that a court would have more power. What I say is that this commission has all the powers of a court with regard to the enforcement of the attendance of witnesses.

Mr. CARVELL: In Canada.

Mr. DOHERTY: Yes; and so has a court in Canada. What power they may have outside of Canada depends upon the statutes of the country in which the power is sought to be exercised, and not upon our legislation. If the reasoning of the hon. member for St. John is correct, I would say that the State of New York ought to recognize this body as being a court, because it has been given, in regard to the inquiry, all the powers of a court. But I do not think that foreign States would recognize it as being a court, and I do not think they would be any more likely to do so if we called it a court. I am sorry to have detained the House so long, but I wanted to explain this matter with regard to the existence of the powers attached to this commission, and the possibility of our widening those powers. If that possibility exists I shall be more than happy to avail myself of it.

But to come back to the real question that is at issue, I must confess that I can see no ground suggested for an extension of the commission other than the mere fact that this statement has been placed on the record; and the conclusion drawn from that, that we are therefore to go into the minutiae of all those contracts, because, perhaps irrelevantly, the sum total of savings has gone on the record, seems to me a proposition absolutely untenable, and its consequences, I think, demonstrate that. If the conclusion were correct, then the accident of the going on the record of any irrelevant statement would open up in this inquiry—and would open up in any case—any number of cases that might happen to be referred to in that irrelevant statement. I think the conclusion condemns the proposition. Upon the whole I entirely fail to see what case has been made for the extension of this commission. And might I add that, if there were room to suggest that we ought to take up further cases, would it not be reasonable to dispose, first of all, of the case we have? Why do hon. gentlemen think it so necessary to get away from the case that is really before the commission, and with regard to which the doors are absolutely wide open, and at this stage, before that case is disposed of, want to run into an investigation of every other contract that was made by the Shell Committee? Surely, if the time ever comes when there will be occasion to do that, we shall be none the worse off for having at least dealt with and determined the one case which was put forward as the typical and the gravest case—the case upon which hon. gentlemen seemed disposed to stake their all in connection with their endeavour to cast reflection upon this Government by means of their accusations against the Shell Committee.

Mr. E. M. MACDONALD (Pictou): The question involved in the matter brought before the House by my hon. friend from Carleton (Mr. Carvell) is one which it seems to me ought to have met with a more favourable reception from the Government.

In the course of the proceedings had before the tribunal called under the Inquiries Act by this Government for the purpose of investigating certain matters relating to

fuse contracts, referred to them by the Government, the counsel appointed by this Government proceeded to put in evidence certain documents and facts relative to the constitution of the Shell Committee and to the contracts entered into by them in connection with the manufacture of shells, which were not, strictly speaking, the subject matter of the charge. In the course of tendering that evidence and bringing that matter before the commission, Mr. Hellmuth, counsel for the Government, produced certain contracts and elucidated certain facts relative to the manufacture of shells, as we see in the report of the proceedings of the tribunal as, for instance, whether basic steel should be used, and so on. My hon. friend the Minister of Justice, who speaks about hon. gentlemen on this side wanting to go into the examination of the question of shells, forgets entirely that that tribunal, which is created by the Government of which my hon. friend is a member, permitted the Government counsel to raise that question. When, however, Mr. Johnston, who was also appointed by the Government, for the purpose, I presume, of cross-examining witnesses and placing before the public all the matters connected with the inquiry, following out what he deemed to be his duty, asked certain questions relative to shell contracts and to the way in which those contracts were carried out, the tribunal said: "That is not within our reference, and therefore we will not permit you to go on." I think that is a fair statement of the matter, as I gather it from the report of the proceedings. Apprehending that the situation created might be considered a singular one, Sir William Meredith, the presiding judge of the tribunal, suggested that this House should be approached in regard to the matter. He said:

> You are aware, of course, the Order in Council provides for the reference of other questions to this commission if it is thought expedient to do so. If anybody thinks that these matters ought to be inquired into, and we are to stay here all summer doing it, I suppose representations can be made. Mr. Carvell is a member of the House, he can bring the matter up and ask that the power of the inquiry be extended.

In consequence of the suggestion of Sir William Meredith, the hon. member for Carleton, N.B., came here, and I think the House will agree with me that he stated fairly the matters connected with the suggestion and the reasons why that suggestion should be accepted by the Government. When hon. members on this side point out that an anomaly is created by virtue of documents and other evidence being admitted in relation to shells in regard to which no cross-examination is permitted, my hon. friend the Minister of Justice affects to believe that it is an astounding principle to assert that the right of cross-examination ought not to be limited in such a case. With all deference to my hon. friend's legal standing, I am bound to say that I have never heard it stated in any court that, when documents are permitted to be gone into by the examining counsel, the cross-examiner must not deal with them. You may say that those facts were not relevant. If so, why was the examining counsel permitted to examine in regard to them? If the position is taken that cross-examination in regard to certain facts was not permitted because those facts were irrelevant, the proper course would have been not to have admitted those facts in the first instance. Mr. Johnston says, at page 373:

5 p.m.

> I may say that the question of what took place as gathered from various witnesses may be important from our standpoint, from my standpoint at any rate, and I so submitted at the time; in addition to that the contracts have been proved and they are before the commission, and surely it is open to me to examine as to the contracts proved by my learned friend Mr. Hellmuth, and made part of the record. If they can be proved and nothing more said about it then of course my duty is very simple, as I should not ask if the commissioners so rule, and I would not even attempt to lead up to that.

In answer to a further objection he says:

> I answer that by saying that the question of relationship having been asked yesterday and emphasized with General Bertram as to whether or not they were contractors or mere trustees or agents—

The question asked by Mr. Hellmuth, counsel for the Government.

> —or whatever one may choose to call them that that question depends entirely upon what was done under these contracts after they were entered into, and facts connected with the contracts themselves and with the action of this witness or any other witness, ought to be available to me for the purpose of showing what the real relationship was notwithstanding the evidence my learned friend offered yesterday in regard to the fact that they were not in reality contractors, but agents.

It was because Mr. Johnston desired to do that which he has indicated in the statement I have read, and because it was ruled by the commission that he could not ask those questions, that the hon. member for Carleton, N.B., came to this House, in

accordance with the suggestion of Sir William Meredith whose suggestion seems to be a very reasonable one, and one which ought to be accepted by this Government.

Mr. BURNHAM: Does the hon. gentleman insist that that is a fair statement of the case?

Mr. MACDONALD: If my hon. friend does not think it a fair statement, he can answer it when I get through. My hon. friend's interjections in regard to matters about which he knows nothing have become very tiring in this House. If he wants to answer me, let him do so later. I have stated what is in the record; I have stated the facts, and the point is, is anything to be done in regard to the matter?

The position taken by the Government was this, that the Shell Committee were the trusted confidants of the British Government, their creation, their agents, and that to the British Government alone were they responsible. On that basis the matter was discussed in this House and the House voted. After the reference was had, counsel for the Government, by the production of contracts which are the very basis of this discussion, elucidated the fact that the members of the Shell Committee were not the agents of the British Government, were not their appointees, but were simply and solely contractors with them, and that the question as to what was to be done with the surplus left after paying for certain shells was a matter of doubt. It was doubtful whether the money belonged to the members of the Shell Committee or not; and a discussion was had as to whether the money should be given to the Patriotic Fund or returned to the War Office. In other words, the whole position of the Government with regard to the Shell Committee has been absolutely and totally reversed as a result of the facts elucidated by Mr. Hellmuth, as admitted by the right hon. Premier in his speech to-day. The whole point is whether the Government will, in view of those changed conditions, permit Mr. Johnston, as counsel appointed by themselves for the purpose of elucidating the truth, to cross-examine upon the points which are set out in the proceedings here, and enable him to ask all proper questions with regard to the evidence which has been adduced by Mr. Hellmuth, counsel for the Government. Either the Government will do that or they will not do it. They can refuse, and to that extent the inquiry will be ineffectual and incomplete, and the portion of the evidence that has been adduced by Mr. Hellmuth, the whole evidence not being elucidated, the whole ground not being covered, will, to that extent, be unsatisfactory. About that there can be no doubt whatever. Apparently the Government have taken the position that they do not propose to allow that matter to be gone into, nor to allow Mr. Johnston to undertake that cross-examination which he has indicated.

In this connection, another question has arisen: whether or not the powers of this tribunal created under the Inquiries Act are sufficiently wide to enable them to deal with the taking of evidence outside of the Dominion of Canada. To the suggestion made on that subject the Minister of Justice replied that this is neither a civil proceeding nor a criminal proceeding, and that being neither it does not come within the provision of the New York statute, that being the state within whose bounds witnesses are to be sought. But it may be that the witnesses will not always be in the state of New York. It may be that some of them will cross the river into New Jersey, and there they might be reached by the long arm of a Canadian court. And we have not heard the Minister of Justice discuss what may be the law of New Jersey in regard to taking evidence before a foreign tribunal. This much the Government can do—they can create a court for this particular purpose, endowed with all the powers of a court, and there being before that court a proceeding within the meaning of the statute cited by the Minister of Justice, you have a tribunal under which, I submit, some way would be found to secure recognition in the United States and in the several states under the Acts there in force. Power to do this, it is conceded, will be found in section 101 of the British North America Act, which is as follows:

> The Parliament of Canada may, notwithstanding anything in this Act, from time to time, provide for the constitution, maintenance and organization of a general court of appeal for Canada—

—that is, the Supreme Court.

> —and for the establishment of any additional courts for the better administration of the laws of Canada.

"For the better administration of the laws of Canada." The Minister of Justice would be doing only that which he ought to do, if, instead of acting under this totally

inadequate Inquiries Act, he should introduce into this Parliament a statute providing for the constitution of a court with all the powers of a court, to deal with this particular matter. It could then proceed in the way indicated by my hon. friend from St. John, and could take advantage of the statutes of foreign countries, to the extent of which those statutes exist, for the procuring of evidence there.

The Minister of Justice says: "We will not appoint a court, because I find that the New York statute, which I construe in a certain way, limits the right of taking evidence." The hon. gentleman takes the responsibility for that, of course. A peculiar situation arises under the Inquiries Act, as amended by chapter 8 of the statutes of 1912. It is provided that the commission may allow any person whose conduct is under investigation to be represented by counsel. But I can find no power here given to permit the party making the charge before that tribunal to be represented by counsel. If at any moment this tribunal, appointed under this Act, should choose to say to Mr. Kyte, for instance, "We do not propose to permit you to go on with this matter, because, while we can appoint counsel to assist us and can appoint counsel for the defence, no particular statutory power is given for the appointment of any one to represent the party making the charge," they would have the power to do so. That is an illustration of the wholly inadequate nature of this court—no, it is not a court, this tribunal—which has been erected for this inquiry. The tribunal is without power to go beyond the borders of Canada to take evidence or to appoint a commission for that purpose. And the position of the Government in regard to this matter is that it has refused to give the tribunal this power.

Mr. MEIGHEN: The hon. gentleman states that we have refused to give this tribunal the status we ought to give them of a court within the powers of the statute of New York. Will he state what additional powers we could give them to afford them that status?

Mr. MACDONALD: I have not the statute before me and am not able to argue with the closeness I should desire to do. I only heard the statute read by the Minister of Justice. But this tribunal is not a court established under section 101 of the British North America Act and has not the full powers with regard to the taking of evidence of the country which a court established under that section would have. All the hon. gentleman needs to do is to create by statute a court under section 101 of the British North America Act. Ample power is given. Let the court be endowed with the same power that is given to the Supreme Court of Judicature of every province of the Dominion. Then you will have a body which will have the right to send commissioners to a foreign country to take evidence there. You will then have a court, and you will have a proceeding before that court, which are the essentials of the statute of the state of New York to which reference has been made. But now you have neither a court nor a proceeding before a court, and consequently you have not a tribunal which can issue a commission to a foreign country and there command respect.

It has been disclosed before this commission that the Government's position in regard to the Shell Committee as taken in this House is absolutely incorrect. It has been shown that this Shell Committee were not the agents of the British Government but were contractors appointed by the Minister of Militia of the Dominion of Canada to enter into a contract under which action could be brought against them individually. Their position in that matter was such that they seriously consulted the Prime Minister as to their personal liability for debts they might contract. These facts have been disclosed before this tribunal for the first time. Yet Mr. Johnston, who is conducting cross-examination, is not allowed to go into the matters which are pertinent and necessary in order to get the full facts before the country. It is for this House and the country to understand that the Government refuse to permit an enlargement of the powers of the commission for this purpose.

Hon. ARTHUR MEIGHEN (Solicitor General): That this matter, or some similar matter, should come before the attention of Parliament at this time can be to none of us a matter of surprise. Those who have had the privilege of watching the proceedings before the Royal Commission whose name has often been mentioned in this discussion, and have also studied the strategy of certain hon. gentlemen opposite, could quite readily come to the conclusion that the time had about come when some

explanations of the course of events at that commission might well be sent out through the country on the part of hon. gentlemen opposite by way of excuse for what was transpiring, such explanations masquerading, of course, as grievances and complaints.

What actually is before the House, however, I find it very difficult to see. What the House is asked to do is a matter which, though the debate has proceeded for some length of time, and though we have heard from three hon. gentlemen opposite, we may well say we do not know as yet. The hon. member for Carleton (Mr. Carvell), came to the House yesterday, and again to-day, with a motion that this House adjourn in order that he might discuss "a definite matter of urgent public importance," that definite matter of urgent public importance being as follows:

> The desirability in the public interest of immediately enlarging the powers of the Royal Commission of Inquiry into the contracts regarding fuses, etc., called the Meredith-Duff Commission, by providing for widening the scope of the inquiry into the matters referred to the Commission.

We are asked to discuss, to put it briefly, the desirability of widening the scope of the inquiry into the matters referred to the commission. We are not asked to refer any other matters to the commission. So far as the motion before the House goes, there is no suggestion that the scope of the commission as regards the matters before it is not wide enough. We are asked to consider the desirability of widening the scope of the inquiry into the matters referred to the commission. If the hon. member for Carleton really knew what he wanted—

Mr. CARVELL: I will save my hon. friend some difficulty when I tell him that I did not prepare that at all. The note which I handed to the Speaker yesterday asked for an enlargement of the scope of the inquiry. When I came to my place to-day the motion in its present form was sent to me from the Speaker's Chair; I accepted it and read it. I am not going to split hairs about what is in it or what is not in it; that is the way it happened. Please forget that and we will get along.

Mr. MEIGHEN: I am not one of those, Mr. Speaker, who can forget what we are discussing when I am doing the discussing. I need to have something before me to be discussed. I must commend the discretion of the hon. member for Carleton in renouncing the authorship of this resolution, although I think that the renunciation would have been more becoming had it come earlier in the discussion. But how can a man renounce what he moves the House ot adopt? Notwithstanding the fact that he absolves himself from the responsibility, there is nothing before us for discussion except this. I do not know what there is to talk about unless it is what is before us: the desirability of widening the scope of the inquiry into the matters referred to the commission. If hon. gentlemen knew how the scope of the inquiry into the matters referred to the commission could be widened, they would have said so; the hon. member for Carleton would have come to this House with a definite statement of how the scope of that inquiry into those matters could be widened, and he would have asked the House to grant such added powers. I say to him now that if he can still come with any definite, understandable statement or resolution widening the scope of the inquiry into the matters before that commission, it will get sympathetic consideration on the part of this Government. We thought we had given the scope the utmost wideness that the English language could give it in the Order in Council under which the commission now exists and is acting.

The course of the discussion has rambled from one thing to another. From their language, some hon. gentlemen would appear to desire that the commission be empowered to inquire into other subjects altogether. I think that actually is the desire of hon. gentlemen opposite, though it takes the guise of this rather meaningless resolution. Others argue that what they are bringing before the House is a complaint as to the soundness of a view of law entertained by the members of the commission. The hon. member for Pictou (Mr. E. M. Macdonald) and the hon. member for St. John city (Mr. Pugsley) assert that a decision on a point of law has been given that would be known to be wrong by any ordinary lawyer, and they ask the House of Commons of Canada to sit as a court of appeal from the judgments in law of the Chief Justice of Ontario and of Mr. Justice Duff of the Supreme Court. That is the second proposal made by hon. gentlemen opposite. Let us consider the first. They want us to widen the scope of the inquiry into these matters. The language of the commission says that everything relating to the four contracts may

be inquired into: everything relating to the relation, if any, of the Minister of Militia to them; everything relating to the relations with them, if any, of any one else directly or indirectly associated with the Government or the Shell Committee; anything relating to the subcontracting under those contracts; all things relating to the profits arising or accruing directly or indirectly under the contracts, and to whom they accrue. The powers of the commission in that regard have been acknowledged as ample by the members of the commission themselves. They have been stated in the widest possible language by the counsel for the commission, Mr. Hellmuth. More than that, they have been stated as complete by Mr. Johnston, named by the leader of the Opposition. This gentleman admits—and admits more than once in the course of the very quotation read by the hon. member for Carleton, N.B.—that in relation to the four contracts, the matters referred to the commission, he has every possible liberty, and asks for no more. Why, then, should this House inquire into the advisability of extending what already they admit is ample and complete?

A word more as to the second interpretation. It is said by two hon. members opposite: "We have not been treated fairly; Sir William Ralph Meredith has given a decision that is entirely unfair to us, and we want this House to review it." In the first place, even if there were any doubt as to its soundness, I must question the capacity of the House of Commons of Canada to sit in review over a commission of judges on a decision of law. In the next place, the very hon. gentleman who brings this resolution before the House admits that the decision is correct and that he has no fault to find with it. He admitted that yesterday, and he repeats his admission in still more emphatic language to-day. Here are his words:

> I wish here in the most emphatic manner to state that I do not wish to be considered as casting any reflections whatever upon the decision of the commissioners.

These are the words of the hon. member for Carleton, N.B., who moves this resolution; so that it is not his desire to call in question the fairness of the treatment accorded hon. gentlemen opposite before that commission. Where then does the hon. member for Pictou stand, and the hon. member for St. John, when we compare their language and their accusations with the words of the hon. member for Carleton, N.B., who brings the matter before the House? So that so far as these two suggestions of what it is we are asked to consider are concerned, hon. gentlemen have answered themselves so clearly and so manifestly that further discussion is superfluous.

May I at this point of the discussion, say that I feel no surprise that hon. gentlemen opposite find it impossible to explain what they want in language, which, while coherent, does not at once expose its own absurdity? The counsel who is acting for them—at all events acting for the commission but named by them—himself found it impossible to state to the commission in understandable terms what he wanted and what he complained of. As soon as he finished, the Chief Justice said, "Why, that amounts to inquiring generally into all that the Shell Committee did." So that the decision of the justices is this: "You ask us to inquire into the details of certain contracts that have no relation at all to these four contracts under inquiry, and you say you want it because you want to get at the status of the committee." They say: "There is plenty before the court to get at that status already; what you want to do is, under cover of inquiring into the status of the committee, to divert the inquiry from what we are here to inquire into and turn it away and scatter it off until it is lost in a wilderness where there are no charges to be found at all." That is substantially the answer which this disingenuous proposition received at the hands of the commission.

It was very plainly intimated yesterday by the hon. member for Carleton that this request had the endorsation of the justices. Here is what he said:

> Mr. Johnston rather persisted in the matter, and finally the commission made the statement that it might be advisable to apply to Parliament in order that further powers might be given to them.

The impression any one would get from that was that the commission were of opinion that their powers should be extended, and suggested that application be made to Parliament to that end. I did not think that was the case, and took occasion to inquire more definitely; and the second answer of the hon. member for Carleton was, I think, fairly in accord with what the commission did say.

But the hon. member for Pictou (Mr. Macdonald) comes in and says this very

thing is the suggestion of the commissioners themselves; they make, he says, the suggestion to Parliament that this be done. Have they done so? Have the commissioners made the suggestion to Parliament that their powers be extended in that way? Does any hon. member say that they have done so? The commissioners said: "If you want our powers extended, Parliament is the forum; this is not the forum; if you want it, go there and ask for it." It might be said that the commission suggested to them: "Go and ask for it." That suggestion has been fulfilled. But, so far from suggesting that it be granted, the commissioners very clearly discouraged any such idea. Here is what Sir William Meredith said, at page 374:

> You have not made at all clear to me the scope of the inquiry you desire to enter into.

I quite agree with him.

> Do you propose to enter upon an inquiry as to contracts, the details of contracts that were entered into with regard to other matters than the four that are referred to this commission to examine into the prices at which those contracts were let or taken from the War Office, and the prices at which they were let to those who contracted with the Shell Committee—is that what you propose to do?

I am afraid I have not the right quotation; but, as that one is somewhat pertinent, I do not regret having read it. I quote from page 376:

> You are aware, of course, the Order in Council provides for the reference of other questions to this commission if it is thought expedient to do so. If anybody thinks that these matters ought to be inquired into, and we are to stay here all summer doing it, I suppose representation can be made—Mr. Carvell is a member of the House, he can bring the matter up and ask that the power of the inquiry be extended, but we must keep within the terms of our map.

Any suggestion that Parliament should grant the request, or should seriously consider such a suggestion as this? Clearly a discouragement of the idea in so far as the commission felt justified in going. I have disposed of all I can find in the way of a suggestion by the commission to the hon. gentlemen opposite.

Apparently under cover of this application the hon. gentlemen propose to escape, if they can, from the position in which they find themselves at this moment. Instead of having their exact position, humiliating as it may be becoming, go to the country in its true form, they make this rather ungraceful attempt to hide themselves behind the dust of a purely artificial grievance.

They say to us also: "Why do you not make this a court? Why do you not erect this to the status of a court under section 191 of the British North America Act? If you do that, then it will have the power to issue a commission down in the United States, and that commission can summon witnesses there." What is the purpose of a suggestion like that? The purpose of that is one thing and one only: it is to have it go out to the country, if they can manage it, that there is somebody whom they want but cannot get. Who is he? Has his name appeared? We did hear names mentioned not long ago of men who, it was asserted, would not appear; but they are here. Who is this man in New York whom they have endeavoured, without success, to get, under their present powers. There is nobody, so far as I have been able to hear. We are told to erect this commission to the status of a court: a Commission of Inquiry under the Inquiries Act is not high enough. What did hon. gentlemen opposite want three weeks ago? They wanted a committee of Parliament. Would it have had the status of a court under section 191 of the British North America Act? It would have had no such status but would have had a history that would have done no credit to Parliament, if we may judge from these proceedings this afternoon. What would have been the character and volume of the complaints that would have been hurled at the doors of Parliament day after day if the decisions of a member of this House as chairman had to be taken, on a matter of law, instead of the decisions of the Chief Justice of Ontario?

They now want us to give this commission the status of a court, and they say: "If you will do that, there is a law down in New York which says that whenever there is a court in another country that has powers in relation to civil and criminal proceedings, that court may issue a commission, and if that commission sits in the State of New York witnesses may be compelled to attend." Now, they say, call this a court to-day, and put a clause in to say that this Commission of Inquiry under the Inquiries Act shall have all the status and powers of a court under section 191 of the British North America Act. We have plenary powers to put that in the statute. The question comes, what will be its effect after it is put in? If its effect is anything, it will be just the same as if we were to insert: "This commission shall be considered a court by the state of New York." That is another way of legis-

lating for the state of New York. Let me give an illustration. A town council, within the limits of its powers, has a certain power of inquiry delegated to it by the provincial authorities, whose powers are as plenary as ours. The town council appoints a committee of inquiry into some question in a certain ward. How would it be for that town council to solemnly enact that this committee shall have all the powers of a court under section 191 of the British North America Act, and must be so recognized by the law of the state of New York? Would it not follow that the committee would immediately be entitled to that recognition if the argument of the hon. member for St. John is correct?

A court is a court by virtue of its functions, not by virtue of its name; and you cannot make a committee a court or a commission a court acting under a statute that authorizes inquiry simply by calling it a court. However, it will be time enough to consider this when a case arises, and I say here and now that when hon. gentlemen come to this House and state that they have witnesses down in New York or in New Jersey—the hon. member for Pictou wants to discuss the laws of the state of New Jersey too—if they have a witness hiding in New York or New Jersey, and come before Parliament and say so and that they desire to get him and cannot, and bring to Parliament some means that will enable Parliament to procure his evidence, this Government will do everything in its power to meet their request to the full. All that hon. gentlemen have to do is to bring before us some means that will be effective, and if there is any means by which it can be effected we will effect it.

I have covered the only four possible meanings there can be to this remarkable motion. In such form the request of the hon. gentlemen is manifestly absurd. It was so denominated by the Chief Commissioner, so denominated by the counsel for the commission, Mr. Hellmuth, and so denominated by counsel acting for themselves. If they are asking us to sit in review upon a judgment in law of Chief Justice Meredith, I do not think Parliament will do itself any honour by acceding to that request. There are certain functions that others can exercise even better than we can. Besides if they are attacking that decision on the ground that it is wrong, we have the authority of the mover of the motion himself for saying that the decision is right. If they are asking for an extension of the scope of inquiry for a reference of other matters, or if they have intended to do so—for they have not done it—then I agree with the commissioners that all they want is to divert the course of the inquiry now proceeding in a defined field where charges of a certain attenuated character have been made and turn it into a field where there are no charges at all in order that its whole force may be dissipated and lost. If, on the other hand, they want the powers extended to get witnesses, if we have any means that will extend them, and if there are any witnesses who are not here already and will not come, we will adopt effective powers that may be suggested to us that will assist to bring such witnesses before this tribunal.

Mr. CARVELL: Mr. Speaker, I am satisfied that my right hon. friend the Prime Minister appreciates the position which I take, and I must say that he handled it fairly and frankly and in a perfectly intelligent and logical manner, as he always does when discussing questions before this House. The position is simply this: We realize that the scope of the commission, in its ordinary acceptance, refers to the investigation of four contracts. During the investigation, as I have tried to make perfectly plain, from the evidence matters have developed that in our judgment have placed us at a great disadvantage. Statements have been made as to the alleged savings of the Shell Committee which we were not allowed to investigate, and a new position of affairs has been created, in view of the fact that the members of the Shell Committee are legally acting in a contractual relationship with this Government, or with the Minister of Militia as the representative of this Government. Therefore we consider that conditions have so changed that, acting on the suggestion of Chief Justice Meredith, we have come here, and I have presented the facts to this House as fairly, as truthfully, and as logically as I know how to present them.

I do not think I am called on to say much in reply to what has been advanced by hon. gentlemen on the other side of the House. I do not find much fault with the hon. Solicitor General (Mr. Meighen), nor would I expect much else from him. I have tried to treat the House with absolute fairness and to state the facts as they are. I was somewhat pained that the hon. Minister of Justice (Mr. Doherty) should have so far frogotten himself to talk of the politi-

cal side of this question rather than the legal side of it.

Some hon. MEMBERS: Oh, oh.

Mr. CARVELL: My hon. friends may say, "oh, oh," but I can assure them that I am not going to be drawn into that side of it no matter what the Minister of Justice may have said. I say that I was sorry that he should have suggested that we were running away from the position. I tried to discuss this question purely as a legal matter, and perhaps, if I retorted to my hon. friend from Dufferin (Mr. Best) a little severely it was because I did not want to be drawn away from that phase of the question——

Mr. BEST: People know now that you are trying to get away from it.

Mr. CARVELL:—and I thought nobody else would treat the matter in a different way from that. I was discussing the matter purely with reference to the legal end of it. I would, however, digress to the extent of reminding my hon. friend that this matter is not being tried in an ordinary court, or in the way in which matters are tried in an ordinary court. In this case the defendant is putting in his defence first, and he has got about half way through with it. Therefore I would ask my hon. friend, before he passes final adjustment on this matter, to wait until the plaintiff, if there be such a person, or a person occupying that position, has had his turn. Then it will be time enough for the Minister of Justice to talk about running away from the position. I have nothing further to say upon that.

I hope the Solicitor General will pardon me if I do not travel over his somewhat technical discussion, because unfortunately I was compelled to take away from him the main ground of his argument by stating that the wording of the resolution was not mine. I adopted that which had been sent to me by Mr. Speaker. Of course, the Speaker's mind is broad enough to realize that we are discussing an important principle. I am not surprised that the Solicitor General attempted to get some comfort out of the actual wording of the resolution. As far as I recollect, and I have not been able to attend all the sittings of the House during the last ten days, I think the Solicitor General has had the first opportunity of exercising that fine talent for distinguishing the difference between tweedledee and tweedledum that his mind is so admirably fitted for since he was placed in a rather unfortunate position by my hon. friend from Richmond (Mr. Kyte) about a month ago. Therefore it is not to be wondered at that he should seize the opportunity to rehabilitate himself amongst his friends. As to how he has succeeded I have no comment to offer. I hope he will pardon me if I do not make any further reference to his argument, because it was of such a hair-splitting character that I could not understand him and I am sure that nobody else could. I am satisfied that I have presented this matter in good faith, I am sincere about it, and I believe that the scope of the inquiry can be broadened so as to go into the matters to which I have referred. I do believe, notwithstanding the arguments of the Minister of Justice—and I always like to listen to him, because he tries to elucidate matters—that the Inquiries Act should be so amended as to give us the right to get evidence in the United States if it turns out that such a thing may be necessary. For these reasons I hope that the suggestion which I made will be adopted by the House.

The House divided on the motion of Mr. Carvell:

YEAS:

Messieurs

Buchanan,	Loggie,
Charlton,	Macdonald,
Chisholm (Antigonish),	Maclean (Halifax),
Copp,	McKenzie,
Fortier,	Michaud,
Gauvreau,	Oliver,
Hughes (King's, P.E.I.),	Proulx,
Lanctot,	Turgeon,
Lapointe (Kamouraska),	Turriff,
	Warnock—19.

Mr. PUGSLEY: I was paired with the Minister of Marine and Fisheries (Mr. Hazen). Had I voted, I should have voted for the motion.

Mr. CARVELL: I was paired with the hon. member for York, N.B. (Mr. McLeod). Had I voted, I should have voted for the motion.

Mr. LEMIEUX: I was paired with the Postmaster General (Mr. Casgrain). Had I voted, I should have voted for the motion.

Mr. DEVLIN: I was paired with the hon. member for North Renfrew (Mr. G. White). Had I voted, I should have voted for the motion.

Mr. SEGUIN: I was paired with the hon. member for Chambly and Vercheres (Mr. Rainville). Had I voted, I should have voted for the motion.

Mr. KEMP: I was paired with the hon. member for Huntingdon (Mr. Robb). Had I voted, I should have voted against the motion.

Mr. DOHERTY: I was paired with the hon. member for Bonaventure (Mr. Marcil). Had I voted, I should have voted against the motion.

Mr. MIDDLEBRO: I was paired with the hon. member for South Wellington (Mr. Guthrie). Had I voted, I should have voted against the motion.

Mr. JAMESON: I was paired with the hon. member for West Quebec (Mr. Power). Had I voted, I should have voted against the motion.

Mr. REID: I was paired with the hon. member for South Renfrew (Mr. Graham). Had I voted, I should have voted against the motion.

Mr. KYTE: As this motion arises out of a matter before the Royal Commission with which my name is associated, I preferred not to vote.

Mr. CROTHERS: I am paired with the hon. member for West Kent (Mr. McCoig). Had I voted, I should have voted against the motion.

Motion negatived.

At six o'clock the House took recess.

The House resumed at eight o'clock.

THE ST. JOHN AND QUEBEC RAILWAY COMPANY.

On motion of Hon. J. D. Reid (Acting Minister of Railways), Bill No. 98, to aid in the construction of certain lines of railway of the St. John and Quebec Railway Company, and to confirm an agreement between the company and the Governments of Canada and New Brunswick, was read the second time, and the House went into committee thereon, Mr. Rhodes in the Chair.

On section 1—short title:

Mr. PUGSLEY: I have already expressed my views with regard to what seems to be the unsatisfactory nature of the agreement which has finally been arrived at and which makes this Valley railway have one of its termini at Andover, a station of the Canadian Pacific railway, and the other at Westfield, another station of the Canadian Pacific railway. Having expressed my

views, I will not weary the House by repeating what I said upon a former occasion. I would like, however, to point out to my hon. friend the Acting Minister of Railways that the agreement provides that the running rights which may be obtained by the company shall be subject to the approval of the Governor in Council. I would suggest that it would be desirable to make those running rights also subject to the approval of the Lieutenant Governor in Council of the province of New Brunswick. It would be very unfortunate if the company or this Government were not able to make a satisfactory arrangement with the Canadian Pacific Railway Company and the St. John Bridge and Railway Extension Company for running rights between Westfield and St. John. If they were not able to make such satisfactory arrangement passengers would have to change cars at Westfield and other inconveniences would arise. There should be provision for trains of the Government having running rights into the city of St. John to the station upon the eastern side and also for the Government freight trains to have running rights to their destination upon either side of the harbour. There has been passed at the present session a Railway Act, a very excellent Act in some respects and the provision which gives the Board of Railway Commissioners power, in order to prevent the paralleling of lines of railway, to order the owners of an existing railway to give running rights to another company whose railway is under construction, is an exceedingly good one; but, as the St. John and Quebec Railway Company is a company incorporated by the Legislature of New Brunswick, I would not think that the Board of Railway Commissioners would have power to order either the Canadian Pacific Railway Company or the St. John Bridge and Railway Extension Company to grant running rights to that company, and therefore it would have to be a matter of arrangement. The difficulty could be gotten over if the minister would consent to place in the Bill a section declaring the undertaking of the St. John and Quebec Railway Company to be a work for the general advantage of Canada. That would bring the road under the operation of the Railway Act and would give the Board of Railway Commissioners power to make the necessary arrangements for running rights. I am sure that the minister will see that that would be desirable, and I think he will also agree with me that a railway which is to be leased to the Government of Canada and operated as a part of the Intercolonial Railway system should be subject to the jurisdiction of that body, and that even upon that ground, if the other very important reason which I suggested did not exist, it would be desirable to declare the undertaking to be a work for the general advantage of Canada.

Mr. REID: The hon. member mentioned those matters in the discussion the other evening. In regard to the running rights between Westfield and St. John, the Bill provides that the company shall acquire the running rights from the Canadian Pacific Railway Company; but in the event of their failure to make a satisfactory arrangement that may be necessary, the Dominion Government will make the arrangement that may be necessary to operate the trains between Westfield and St. John. It is quite true that if the company were not able to make an arrangement themselves, the position would be a difficult one; but as the Dominion Government are to operate this road, they would have power, by making application to the Board of Railway Commissioners, to have that Board act in so far as the operation on behalf of the Dominion Government is concerned. I would have no objection at all to having this work declared to be a work for the general advantage of Canada. The only difficulty that I am in this evening is that I feel that any changes that we might make in connection with this agreement might not be in accordance with the wishes of the Provincial Government, who of course are the owners of the road. If the Bill as it stands covers all the points raised by the hon. member for St. John I should prefer to have it go through in that way. As I stated the other evening, the arrangements were satisfactory to the Provincial Government, and I have no doubt whatever that a satisfactory arrangement can be made with the Canadian Pacific for running rights over that portion of their road into St. John. But, as I stated, if the Dominion Government do not consider the running arrangements satisfactory they can provide a line of their own into St. John. The hon. member raised the point that arrangements should be satisfactory to the Provincial Government. The Bill provides that the company has to make the arrangement. But the company is really the Provincial Government; they name the directors by Order in Council, and can put them

in or put them out. In addition, they have really taken over the road, as I understand it. Everything in that way is working harmoniously. We discussed the several matters in connection with the running rights, and neither party anticipated any great trouble in getting in from Westfield to St. John. But, as I have stated, I should have no objection to putting in the clause suggested by the hon. gentleman if I were quite sure it did not affect the Bill as a whole. Of course, he is aware that this agreement has been passed and is now law, so far as the New Brunswick Government is concerned. What I fear is that any changes made here might affect the law as passed in New Brunswick. Perhaps we could let the Bill go on and discuss that a little later.

Mr. PUGSLEY: The remarks the hon. minister has just made would apply to an alteration in the agreement, but I do not think they would apply to the clause in the Act declaring the work to be one for the general advantage of Canada. However, I do not wish to press it if the minister thinks he would like to put that clause off in order to consult the Provincial Government. The road will probably not be finished before another session of Parliament, and if any question arises about getting running rights additional legislation can be passed.

Sir ROBERT BORDEN: The principle adopted, though under somewhat different condition, two or three years ago, was that Parliament delayed any declaration until after the work was completed. There is disadvantage in declaring a work to be one for the general advantage of Canada while it is still in course of construction. The reasons are so obvious that I do not need to point them out.

Mr. OLIVER: What is the length of line from Levis to St. John by this route, and what is the length of line between the same points by the Transcontinental?

M. REID: I have not that information just now but I can get it in a few minutes.

Mr. PUGSLEY: The distance from St. John to Quebec by the Intercolonial is 576·4 miles. By the Transcontinental, the distance from Levis to Edmundston is 236 miles, from Edmundston to McGivney Junction, 134 miles; McGivney Junction to Fredericton, 34 miles; and Fredericton to St. John, I suppose about 84 miles, a total of 488 miles. So, it is nearly 100 miles shorter.

[Mr. J. D. Reid.]

Section agreed to.

On section 8—lands acquired near Fredericton:

Mr. MICHAUD: How much land?

Mr. REID: Just through the yard at Fredericton. It is necessary to put this in because it runs over the Canadian Pacific.

Mr. MICHAUD: Has any land been expropriated lately in connection with this Valley railway?

Mr. REID: Not that I know of.

Bill reported, read the third time, and passed.

EXCHEQUER COURT ACT AMENDMENT.

Bill No. 99, amend the Exchequer Court Act—Mr. Doherty—was read the second time, considered in committee, reported, read the third time, and passed.

SUPPLY.

The House in Committee of Supply, Mr. Rhodes in the Chair.

Militia and Defence—cadet services, $100,000.

Mr. TURRIFF: May we have an explanation of this?

Sir ROBERT BORDEN: This is the same amount as was voted last year. The Estimate is as follows:

Pay and allowance of Director of Cadet Services at headquarters	$ 3,500
Pay and allowance of 14 organizers and inspectors at $2,190 each	30,660
Special living allowance to 6 organizers in the West	1,200
Transport, travelling expenses of 14 organizers and inspectors, say 200 days at $5 per day	14,000
Transport and travelling expenses of 15 physical training instructors R.C. R., say $100 each,	1,500
Subsistence allowance to same	8,500
Allowance to Instructors of Cadet Corps, $1 for each cadet instructed	40,000
Contingent expenses	640
Total	$100,000

Mr. TURRIFF: Is it the opinon of the Militia Department, now that we have had almost two years of war, that this service is of any real value? In times of peace it seems to me to be a waste of money to make this expenditure on the training of young boys, many of whom when they grow up will not join the volunteer force. It may, perhaps, be of some advantage during the war. I should like to have the view of the Prime Minister on this point.

Sir ROBERT BORDEN: I understand that it is the view of the department that the service which is rendered by this vote is a very important one. The boys throughout the country do take a keen interest in it, and the training is of advantage not only to the country but to the boys themselves. They are taught habits of discipline and they receive certain military training at a time when what they do learn will remain with them always. The hon. gentleman doubts whether they are likely to continue their training in the militia force as they grow older. I am informed that the experience of the department, so far as they have had any experiece, is precisely the reverse; that the boys who receive training of this kind naturally take an interest in continuing their training as they grow older.

Mr. LEMIEUX: Some years ago when this question came before the House I was rather critical: if I did not oppose the item, I criticised it. Since that time, however, I have learned to know better. I am not a militarist, and I do not approve the movement because of any belief that it would promote militarism in Canada; but I believe that the principles upon which this movement is based in Canada, in England, and in France, which has copied it from England, are most excellent. I have seen these young men in Montreal and in Ottawa doing excellent service, and from what I have read I understand that in France, at the front, and at the rear of the armies, the cadets have been most useful as helpers in hospital work and in other work connected with the management of these large armies. I vote for this item with pleasure, for I believe that the movement is a healthy one in time of war or in time of peace. It teaches the young men to be manly.

Mr. OLIVER: Although these Estimates do not bear directly upon the war expenditure and administration, would the Prime Minister consider it to be in order to deal with such matters under these items if in the course of the discussion it should become desirable to secure information with regard to the administration of war affairs?

Sir ROBERT BORDEN: I have not any objection, if my hon. friend thinks that would be more convenient than to take it on the Bill when it comes up in committee.

Mr. OLIVER: The work is all carried on by the Militia Department, and necessarily it interlocks to a certain extent. If satisfactory to the Prime Minister, it might be just as convenient for the committee to deal with these matters now as at some future time. In regard to this vote for cadet services, I would like to offer this for the consideration of the committee and the Government. When there was no war, it was desirable that we should prepare for war, but now that we have war, it is desirable that we should meet that condition as promptly and efficiently as possible. I have nothing but praise for the idea of the training of young men for military service. But at the present time we have need, not so much of boys who will be of service some years from now, as of men who will be of service in case of emergency to-day. There are many men throughout the country who are willing and anxious to be enrolled for local service, as a military protection either as enrolled active militia or in corps similar to the cadets. There seems to be no disposition to encourage such a movement as this. These organizations get no pay, no arms, no uniforms, no consideration whatever, except the privilege of enrollment and of drilling without arms. This condition may be due to the stress of circumstances; but while the country is in this condition of war, while we hope that there may be no danger of complications of any kind arising in this country, at the same time it would be well to encourage such organizations for home defence or for military service in Canada. If we are not doing that because we have not the money, I would suggest that we would better spend this money on adults who are ready for service than on the boys, who no doubt are good boys, but who will not be ready for service until a number of years have passed.

Mr. MORPHY: I am surprised to find that the conditions in the Northwest are different from what they are in the part of the country from which I come. The hon. gentleman has just made a plea in which he characterizes the Government's inactivity, in terms that are not very complimentary, with regard to those men who would like to join units that are not intended for overseas service. He says they do not receive good treatment when they make application to the department, that no consideration is given to them, that they have no uniforms and no rifles. Why, that is true in the case of the forces that

are going overseas. This country is pressed to the utmost limit to provide uniforms and rifles and equipment for those who are going to fight, and how the hon. gentleman can attack the Militia Department and the Government for not having this equipment for men who are not going to fight, passes all comprehension. In the neighbourhood in which I live, and I think this is generally true in western Ontario, the men who may desire to enlist for home defence are spending not only their business time but every spare moment of time in recruiting for overseas forces, going from town to town all over the district, holding meetings, urging the younger men fit for fighting service to come in and join the colours. Thus where I live the usefulness of the peace battalions has practically ceased. Officers fit for service who were in command have practically left their commands and gone into the fighting forces. So that the regimental units have been practically wiped out of existence, and practically all the men who are fit for service have gone or are going overseas to fight. The condition of which my hon. friend speaks is therefore a natural condition, and I am surprised to learn that the conditions are not the same in the West as they are with us.

As to abandoning the support of the cadet movement in favour of a movement such as the hon. gentleman has foreshadowed, or advocated, that it seems to me would be a great mistake, because the only home force to-day in western Ontario that is organized, that is available, is the cadet force, which is officered by regular officers attached to the schools of which the corps form a component part. They are composed of youths from 14 to 16 or 17 years of age. If there is any force that should be equipped for home defence, a force of energy, activity and intelligence, it is the cadet force. The hon. gentleman suggests that we substitute for them a non-existent section of the community.

Hundreds and thousands of these cadets have enrolled in the overseas forces and gone to the front not only with training but with intelligence and efficiency. Anything that would detract from, or cause deterioration in, the cadet forces would be the next thing to a national crime. I hope the committee will take the remarks I have made in the spirit in which they are offered. Whatever may be the conditions in other places, I would oppose any suggestion that would detract from the efficiency which is now being developed through the cadet movement, and which is reflected in the fighting forces of this country. I think it is the best movement that has taken place in the history of Canada.

Mr. TURRIFF: I agree very largely with the remarks of my hon. friend from Edmonton (Mr. Oliver) in regard to the Home Guard. In one of the towns in my constituency, when the war first started, a Home Guard was formed and a lot of our young men joined it. In the early part of last summer I was in that town attending a meeting for the purpose of helping recruiting, and they reorganized their Home Guard. Out of the first hundred members who joined the Home Guard when the war broke out 80 had joined the regular forces and were either across the water serving at the front with the First Contingent or had been drafted into various battalions that were being organized. They reorganized the Home Guard and some 150 more men joined it. Their complaint was that they could not get any help as to officers for drilling or rifles from the Militia Department. They particularly asked for rifles. There were some old Ross rifles that were not supposed to be first-class that had been sent out for the Border Horse. The Home Guard applied for these rifles. I had some correspondence over it with the Militia Department, and I asked them to communicate directly with the parties out there; therefore I am not prepared to say whether they eventually got any help or not from the Militia Department. I know there has been a shortage of rifles. Possibly the acting minister could say how many Canada can produce in the arsenal at Quebec. Are we producing a large number?

Sir ROBERT BORDEN: I do not know that it would be very prudent for me to give statistics in regard to that. I may, however, say that according to my information the Ross rifle factory has produced more rifles since the commencement of this war than any other establishment on this continent up to the present time. I am pretty sure, although not absolutely positive, that it is producing more to-day than any other establishment on this continent. I do not believe that will always continue, because very great preparations have been made in some of the establishments on the other side of the line; but I think I am quite within the limit when I make the statement to which I have just given ut-

terance. Might I say that while that is true, we really have not had any such supply of rifles as would enable us to meet the suggestion which the hon. member for Edmonton has thrown out. There is a certain amount of difficulty in providing uniforms and other articles of equipment for the men as fast as they are enlisted. The greatest difficulty of all is with the rifles. It is not a question of money, as my hon. friend from Edmonton seems to suggest, but it is a question of rifles. If he will tell us where we can get rifles, there is money enough on hand to purchase them; but we do not know where they can be secured except in the factory that we have at Quebec, and that has done fairly well. I appreciate very thoroughly the spirit of the men who enlisted in the home guards in the early months of the war. I had the privilege of reviewing a great many regiments of home guards in different parts of the country. There were men of all ages, old and young—young men, men in the prime of life, men getting on in years, fifty or sixty years of age and perhaps more. They were all drilling away, endeavouring so to train themselves as to do good service in case there were any call for it. As has been observed by my hon. friend from Assiniboia (Mr. Turriff), a great many of the younger of these men have since enlisted for overseas service in all parts of the country. The movement became so pronounced in various parts of the country that my hon. friend the Minister of Militia and Defence (Sir Sam Hughes) concluded that the better course for him would be to organize the reserve militia, which the Governor General had power to do, if I remember the provisions of the Militia Act correctly. An Order in Council was passed for that purpose. A good many units of the reserve militia have been organized in different parts of Canada. It is suggested that the Government give these no consideration. The Government give them all the consideration that is possible consistently with providing for the needs of the men who have enlisted for overseas service, and I feel sure that all will agree that that is the need which must first be provided for; so we have provided for that first. In some cases a few rifles have been procured for training of the battalions of the reserve militia, not very many, I am sorry to say, because they were urgently needed for other purposes which were regarded as of prior importance. Subject to those considerations, I am informed by the deputy minister that the department has been disposed to give, and does give, to these units of reserve militia all the consideration that is possible.

Mr. TURRIFF: I quite agree with the Prime Minister that if rifles are short the men who are overseas naturally have to be attended to before the home guards, cadets or anybody else; but I understand that the Department of Militia, or the Government, sold a large number of old Lee-Enfield rifles prior to the breaking out of the war.

Sir ROBERT BORDEN: I am informed by the officers of the department that no rifles have been sold since the outbreak of the war. Some time before the war a small number of old rifles were sold through the British Government to the New Zealand Government.

Mr. TURRIFF: Of course, I am aware that those rifles were sold before August, 1914; but even before the war broke out rifle associations had a good deal of trouble in getting rifles. With regard to the Lee-Enfields, my information is that 15,000 of them were sold to the New Zealand Government at $1 apiece, and that the New Zealand troops in Flanders and France and other war zones are now using those very rifles.

Sir ROBERT BORDEN: Where did my hon. friend get that information?

Mr. TURRIFF: I could give my right hon. friend my authority for it. If my information is not correct, the officers of the department who are here to-night can set me right. I know these rifles were sold to the New Zealand Government, because they are mentioned in the Auditor General's Report, and the New Zealand Government put a certain amount to the credit of the Canadian Government in London in payment for them. I had a letter from one of our soldiers in the trenches not long ago, and he said that the Ross rifle, with which they were armed, was not considered as good a rifle as the Lee-Enfield, and that whenever our soldiers had the opportunity of picking up a Lee-Enfield, they threw the Ross rifle away. If that is true we have the anomaly of the Canadian soldier throwing away a rifle which costs $17 or $18, or $27 or $28—I am not sure which, but it is a considerable sum anyway—and picking up a rifle which our own Government sold to the New Zealand

9 p.m.

Government for $1. I know exactly where this letter came from, and can depend on the writer when he says our soldiers are throwing away the Ross and picking up the Lee-Enfield.

Mr. MORPHY: Are the New Zealand forces armed with the Lee-Enfields that my hon. friend has just referred to?

Mr. TURRIFF: That is my information.

Mr. MORPHY: On what date were those rifles sold by the Canadian Government?

Mr. TURRIFF: I do not know whether it was in 1912 or 1913, but they were sold by this Government some time before the war began. I could not prove that these rifles the Government sold are now being used by the New Zealand soldiers at the front, but the Auditor General's report shows that they were sold to the New Zealand Government at all events.

Sir ROBERT BORDEN: I have heard stories of our men picking up the Lee-Enfield rifle, and I have also heard stories of British soldiers picking up the Ross rifle in preference to their own. I have been told it is not an uncommon thing for a soldier, when a rifle of a different type is available, to think for the time being it is better than his own, and to favour the idea of making the change. As far as the sale of rifles is concerned, I should like my hon. friend to bear in mind that the Ross rifle was adopted by the late Administration, instead of the Lee-Enfield, as the rifle our soldiers were to be armed with. It was a model weapon that was adopted. It is perfectly true that the contract made by the late Administration with the Ross Rifle Company provided that the Government might from time to time require the production of rifles of a different model, if it saw fit, provided it would pay the cost of the neo ssary machinery, gauges and other alterations of a complex character that the change would necessitate. The Lee-Enfield rifles, and some of the Lee-Metfords, I think, were disposed of, as they were not required while that policy was being carried on. The policy with regard to the Ross rifle was not changed when the present Administration came into power. I deprecate the idea of endeavouring to convey the impression, either to the House or to the country, but especially to our own troops, that the rifle with which they are armed is not a suitable weapon. Any idea of that kind, I think, would be most unfortunate, and do a great deal of harm. If we had any choice as to the rifle to be used there might be some object in it, but inasmuch as, under present conditions, we have to use the Ross rifle or nothing, I for one can see no good reason why any hon. gentleman in this House should seek to cast discredit on the rifle with which our troops are armed. There was a good deal of discussion about the Ross rifle some years ago, and there has been some discussion since the war broke out. To avoid a particular difficulty that occurred at the front a change has been made in the Ross rifle. A difficulty occurred at the front, not only with the Ross rifle, but with the Lee-Enfield as well, and a change corresponding to that made in the Ross rifle has also been made, I am informed, in the Lee-Enfield, and with good results in both cases.

Mr. HUGHES: The ammunition caused the guns to jam, I think.

Sir ROBERT BORDEN: The change that was made was an enlargement of the chamber. The chamber of the Ross rifle, I understand, was slightly smaller than that of the Lee-Enfield. The Lee-Enfield chamber was slightly enlarged, and the chamber of the Ross rifle enlarged to a still greater extent, and I believe that the enlarged chamber of the Ross rifle is now somewhat larger than the enlarged chamber of the Lee-Enfield. It is said, however, by those who are in a better position to judge of these matters than I am, that the jamming to which allusion has been made was occasioned by the character of a certain quality of amunition which at one time was being served out, but which I think has since been withdrawn. I am informed that neither with the Ross nor the Lee-Enfield has any great difficulty been experienced when other ammunition was used. As a matter of fact, when our own ammunition, manufactured in this country, was used in the Ross rifle no considerable difficulty in jamming occured.

Mr. J. J. HUGHES: I saw it stated in the newspapers quite recently in regard to the heavy fighting that took place within the last two weeks at St. Eloi and other places that some jamming occurred. Whether it was the fault of the ammunition or whether those things occur under the best conditions or not I do not know, but I saw criticisms of that kind in the Montreal Gazette and other leading Canadian newspapers.

Mr. EDWARDS: I am a little inclined to doubt the accuracy of the information of the hon. member for Assiniboia (Mr. Turriff) in regard to the old Lee-Enfield rifles sold to New Zealand being used by the soldiers at the front. I have a very distinct recollection, when the Liberal Government was in power, of that Government handing around hundreds of those rifles throughout the country wherever any number of young men formed a rifle association. The Government would provide them with the rifles free of cost, and also with all the old ammunition which the Government were discarding and which those young men saw fit to use. I belong to one of those associations, and my recollection of that rifle is that when you fire it off it will pretty nearly kick you into the next county. While I think the Government did a proper thing in discarding those old rifles and giving out the old ammunition, thereby encouraging rifle associations, I cannot think that those rifles would be used in actual warfare, although for a person who had his shoulder well padded they might do all right to use in firing at a target.

Mr. TURRIFF: Why would the New Zealand Government buy such a large quantity as 15,000?

Mr. EDWARDS: They might use those rifles for drilling purposes or for target practice. If a person had a bag filled with sawdust up against his shoulder, and if he placed his feet very firmly on the ground, he might remain in the county in which he was when he fired off his rifle. I do not think, however, from all I can hear, that troops like those supplied by New Zealand would use a rifle that was not up to date, and I do not think the New Zealand Government would place in the hands of their men a rifle that was purchased at a dollar apiece. I think the hon. member is drawing largely on a very excellent and active imagination when he supposes anything of that kind.

Hon. FRANK OLIVER: The discussion has rather switched from what we had in mind when this item was first called, and, if I might be permitted, I would like to take this opportunity of threshing out this question of policy in regard to arming and equipping and recognizing local forces throughout the Dominion. That question is an important one and one that is entirely pertinent to the subject under discussion. When we find it desirable to train and measurably equip boys for the sake of the service that they may render in years to come, and that is all very proper, we should not ignore the present need of men who can render service now, who are willing to render that service, but whom we are not willing to equip so as to enable them to render that service. There is, in parts of the Northwest, at any rate in Alberta, an organization called the Legion of Frontiersmen, formed for the purpose of military drill. That legion was organized long before the war and had exactly the same purposes, if I understand the matter correctly, as the cadet corps, only it was composed of mature men, and possibly to some degree of elderly men, and not of boys. That legion has organizations at various points throughout the province of Alberta for the purpose of securing military efficiency in order to be able to render to the country a service which, while it was only in prospect when the war broke out, may at any moment become an imperative necessity now that war conditions exist. There is no question about the good faith of those men, nor about their loyalty of purpose, nor about the efforts that they have made in the sacrifice of time and energy in fitting themselves for military service by military drill; but military drill is only an empty thing unless it has the support of actual weapons. I know that this organization has applied repeatedly to the Department of Militia for arms and for such recognition as is granted to the cadets, but I am informed that such recognition has been not only constantly refused, but refused with some abruptness that was perhaps not necessary under the circumstances. My contention is this, that when the country is at war, and when no man can forecast what contingency may arise, so long as we are dependent upon voluntaryism for our military service, it is the part of wisdom for the Government to encourage military organization under every possible circumstance that will measurably tend to efficiency and to good results, and that when the Government absolutely ignores the offer of service on the part of those men who form this Legion of Frontiersmen, they discriminate against men who are able to render service to-day in favour of boys who can be expected to render service only some years hence. I do not think that is good policy; I do not think it is what the necessities of the country require at the present time. I have already spoken of the active militia being organized, but not provided with weapons or with uni-

forms, being without pay or recognition, and only permitted to enroll themselves under the orders of the Government, and yet they may be called to any part of the Dominion at any time that the occasion may arise. The idea that is in the minds of those who are not prepared at the moment to enlist for overseas service, but who desire to render themselves efficient in a military sense by means of drill and organization, is that the men who enlist for overseas service will be sent overseas and leave the country depleted of an active military force. It may not be the intention of the Government to send overseas the men who have enlisted for that service; their intention may be to keep in Canada a large proportion of those men.

If that is their intention I can only say that I do not think they keep faith with the men who enlist. The man who gives up his business, gives up his prospects, believing that the country demands that sacrifice from him, will certainly not think that the country is doing fairly by him if, instead of giving him the opportunity to render the service that he has sacrificed in order to render, it keeps him doing drill and sentry-go in Canada around his own home. That is not his intention or desire, and if that is the intention of the Government in securing his enlistment, it is certainly not in conformity with the views and wishes of the men who enlist. The idea is that men who enlist for overseas service shall be sent overseas, and that there shall be a local military organization sufficiently large and efficient, and well enough equipped, to protect the interests of the country at home. While that is the idea of the people, I take the liberty of criticising what appears to be the policy of the Militia Department, which, judging by their action, is to ignore everything except the enlistment for overseas service. The men who enlisted for overseas service being held in Canada for a longer time than they believe they ought to be held, are dissatisfied and do not recognize that they are being dealt with fairly by the Government. I say that in time of war, under a voluntary system such as we have and must depend upon, the policy should be to encourage military drill and military efficiency in every section of the population that is willing to take up that drill and secure that efficiency.

Sir ROBERT BORDEN: I do not know that it will be of any use for me to repeat again what I have already said in terms as distinct as I can make them. We have not enough rifles to train the men who are going overseas. We regard the necessity in that respect as above the necessity for the reserve militia referred to. The hon. gentleman says we ignore them because we do not give them rifles. I tell him again we have not the rifles to give them; all the rifles we have are required for the forces training for overseas. I cannot make the matter any plainer. If the hon. gentleman would like a statement of the exact number of rifles available and the exact number of men under training, I should be very glad to give it to him for his own information, and perhaps he would then understand the situation better then than he seems to do now. So far as the defence of Canada is concerned, I think it was stated a year ago last autumn, or last December, that under the policy which the Government proposed there would probably be at all times in Canada not less than 50,000 men under training, who would be available for the defence of the country in case of attack. There are certainly more than twice that number in training in Canada at present, and as regiments go forward new regiments are formed. The total enlistments up to the present time run to about 320,000. The enlistments from the first of January to the first of May—I have not the exact figures before me—were between 112,000 and 115,000, or at the rate of nearly a thousand a day. The troops have been going overseas just as fast as the conditions permitted: first, the adequacy of there training here, so that they can complete that training in Great Britain; second, the arrangements made by the British Government for their reception in the British Islands while that further training is being carried on; and, third, the provision of transports to take them across the Atlantic. By all these conditions we have been limited. Perhaps there might be mentioned a fourth, which is the provision of equipment and rifles—though we have not always waited for rifles, but have sometimes sent them across without rifles which followed them safely afterwards.

Mr. H. H. STEVENS (Vancouver): I desire first to express my appreciation of the splendid manner in which the Government is handling this stupendous problem of equipping men, training them, and sending them overseas. It seems to me, Mr. Speaker, that the complete answer to the criticism of hon. gentlemen opposite, this

evening and at other times, is to be found in the fact that the records made by our troops who have gone overseas prove conclusively that the method used by the Government, the system under which these men are enrolled and trained, is a sound and good one. I do not think we could have a stronger testimony to the efficiency of the Government and of the Department of Militia than the record of our troops at the front.

There are one or two things I wish to draw to the attention of the Prime Minister. It has been brought to my attention that in the Motherland it is often very difficult to distinguish a Canadian soldier, because so many of them wear no distinct badge. On the contrary, New Zealanders and Australians wore badges that were quite distinct. I understand that the badge we use is a composition and that not all our soldiers wear a brass badge. The suggestion is made that we should have a common badge for all battalions which every Canadian soldier should wear, so that our men can be distinguished. That suggestion comes to me from a very prominent commander of a battalion at the front. Another point is this: of the men offering themselves for enlistment, probably from twenty to thirty per cent are rejected for some minor physical defect. A man may be an inch or two short in chest measurement, or he may have some defect in his teeth—though I understand that teeth defects are being remedied at the expense of the Government. Many of these minor defects for which men are rejected could be remedied by a brief course of physical training. It has been suggested to me, and I think the suggestion is worthy of consideration, that special instructors should be used to take men who are capable of being developed into suitable subjects for enlistment and give them a few weeks of special training. It is easy to see that if you can save five per cent of the men offering for enlistment it would add very materially to the forces going to the front. I know that there are men in different parts of Canada, well trained for this work and who could give special physical instruction to these recruits, and probably a few weeks would bring many of them up to efficiency.

Then, in giving commissions to officers taking troops overseas, I believe the policy should be followed at all times of bringing back from the front men who have seen service. We sent overseas in the first contingent a large number of bright, educated, clever men, highly capable of commanding men or directing their activities in civil life, and who have proven themselves to be very efficient at the front. I think that from now on the policy should be adopted as a definite and final one that all commissions shall be given to those men who have served at the front. I understand that the Government have already adopted the policy to a very large extent, and that many men are being brought back from the front who have seen active service. The whole question of commissions has become a very serious one in this country. Many men feel that they ought to have commissions, but while this is a proper and laudable ambition, it would be infinitely better if a man were compelled to have from three to six months' active service at the front before being allowed to take command of a body of men. Exception, of course, might be made in the case of those who have been in military life for many years and have undergone extensive training. I feel very strongly on the question of commissions and the type of men who should receive them. I wish to cast no reflection on men who hold commissions in Canada to-day, or in the training camps of England, but it appears to me that no one could criticise the policy of bringing non-commissioned officers and others recommended by their senior officers back from the front for that purpose. This applies particularly to commanding officers. I think it would be very desirable to bring back, say, majors or captains from the front and give them command of battalions in Canada. Knowing the entirely new and strange conditions under which the men now have to operate, they could impart very much better training than men who had not seen service at the front. I throw out these few suggestions for the consideration of the Government without wishing to add unnecessarily to their burdens, at the same time expressing my appreciation of the splendid manner in which this department has handled the gigantic task resting upon it. I can scarcely understand how the Prime Minister can carry the burden which is resting upon him, not only the responsibility of the Prime Minister's office, but also that of the Department of Militia. I think the committee should give to the Prime Minister every possible consideration in the matter of carrying out these very onerous duties.

Sir ROBERT BORDEN: Every Canadian who goes overseas has a badge

on his shoulder, the word "Canada," and he has, as I understand, a regimental badge on his collar. The type of cap used is practically uniform with that used in the British Army. It is not so distinctive as that used by the Australians and New Zealanders, who are more readily distinguished in that way. With regard to bringing back men from the front for the training of those in Canada, that has been done to a considerable extent. A great many of the units which have been organized during the past six months have been so organized by men who were brought back from the front. So far as commissions are concerned, I am informed by the deputy minister that the practice at the front is this: if, for example, a lieutenant is invalided, the next senior non-commissioned officer is promoted, and if the lieutenant does not return within thirty days to duty the position taken by the non-commissioned officer is made permanent. Promotions are made from the ranks to make good his place and that of the corporal and other non-commissioned officers; so that the department has been endeavouring to carry out that principal, giving preferment to men who have served at the front for a certain time.

Mr. STEVENS: The badge is a composition badge, I understand. The information I have from a very reliable source is that it does not wear well, and the suggestion is that it should be a brass badge.

Sir ROBERT BORDEN: A brass badge can be seen at a considerable distance and is very conspicuous. It is all very well in the streets of London, but not so appropriate at the front; and for that reason the composition badge is used instead.

Mr. MACDONALD: The idea which the hon. member for Edmonton (Mr. Oliver) puts forth is a very laudable one. I agree with the Prime Minister as to the difficulty of obtaining the necessary rifles for the equipping of the home forces along the lines suggested. The problem of obtaining sufficient arms to equip the troops is one that I am sure is very serious. I understand that the difficulty of obtaining arms on this side of the water is taxing the capacity of every factory; especially do we realize this when we consider that the Allied nations have come to the United States for the purpose of obtaining arms. As we have a factory in Canada making our own rifles, I think it is time that this captious criticism with regard to the Ross rifle should come to an end. It has come from hon. gentlemen on both sides of the House and from newspapers throughout the country. Formerly hon. gentlemen on the other side had the exclusive right to the criticism of the Ross rifle, but the criticism has probably come from all quarters regardless of politics. One thing I think we all agree about is that we have in Canada a rifle factory where we manufacture an arm which is all right, which enables our people to go out and take part in this conflict and which in time of war it is important we should have in Canada. So far as the equipping of troops is concerned, I do not know where we should have been if it had not been for the fact that we had the Ross rifle factory. I am quite sure that we should not have been able to equip 50,000 men, much less 300,0000, if we had been dependent on outside rifle supply. The demand has been so great, not only in the Mother Country, but in every one of the Allied nations, that if we had not had this factory we should have been absolutely unable to equip any considerable number of men in Canada since the outbreak of war. Reasonable criticism was necessary and desirable, but I think that we should agree now to give up all further discussion of the matter. The problem of maintaining forces at home is a very serious one, and I apprehend the difficulties suggested by the Prime Minister as existing in this regard while we are engaged in preparing and sending over as fast as possible these men for overseas service.

Mr. A. K. MACLEAN: In the course of a few months there will be in the province of Nova Scotia a provincial election. The term of the present legislature will expire shortly. There are, I am sure, over 5,000 soldiers under enlistment scattered throughout the province of Nova Scotia at the present moment. It is rumoured that all the regiments now recruited and recruiting will be sent to Aldershot for training during the summer months and until they go to the front. The question therefore naturally arises as to whether any provision can be made in a fair manner for the voting of these citizen soldiers at the forthcoming election in the province. It does not interest one party more than another, so I should think that both parties would desire to devise some means whereby such of the enlisted men as have votes might have the opportunity of voting. It is possible to arrange this in a small prov-

ince like Nova Scotia. Has the Prime Minister, who is now Acting Minister of Militia, considered this matter, and can he work out some plan whereby these soldiers may have the privilege of casting their votes at the impending election? I do not know that this burden should be cast upon him, but probably the gentlemen representing both political parties from Nova Scotia might get together and appear before him and jointly work out some plan. There are two methods by which the soldiers might be enabled to vote, one by giving leave for one or more days to the men in the training camps, so that they might go to their homes and vote. That could only be done with the permission of the Department of Militia, and, of course, if this permission were granted it would have to be granted without discrimination. The other plan would be for the Provincial Legislature to provide for a system of registration and voting prior to the polling day of the election, after the manner of the Act passed by this Parliament the session before last. Of course, such action by the Legislature of Nova Scotia would not be effective without the hearty co-operation of the Department of Militia.

Mr. EDWARDS: What about those who have gone overseas?

Mr. MACLEAN: I would eliminate them altogether. My suggestion is that we should make provision only for those who are within the province.

Sir ROBERT BORDEN: Of course, I would not undertake to propose any method of voting. But it is perfectly obvious that the fact that a man has enlisted for the purpose of defending and fighting for the interests of the Dominion, of the whole Empire, and indeed of the world, ought not to be allowed to debar him from exercising his franchise. The fact that he has enlisted is an additional reason why he should have the opportunity of polling his vote, if it is possible to do so by any reasonable means. I understand that the subject is under consideration in the Legislature of Nova Scotia, and that a committee of that Legislature to-day considered two proposals.

Mr. A. K. MACLEAN: I do not think that is correct.

Sir ROBERT BORDEN: I may be misinformed. All I can say at the moment is that, so far as we can co-operate in any reasonable way to assist in arriving at some arrangement to enable the soldiers to poll their votes, we shall be prepared to do so. If the Legislature of Nova Scotia is formulating any method it would be inadvisable for us to take any action until that method has been placed before us in the regular way.

Mr. A. K. MACLEAN: What does the Prime Minister think of the idea of giving a sufficient leave to the enrolled men to permit them to vote?

Sir ROBERT BORDEN: It would be inadvisable for me to express any opinion with regard to that without first consulting the Chief of the General Staff, the Adjutant General, and the other officers of the department, who would know much better than I would whether or not that would be feasible. I shall be very glad to place the observations of my hon. friend before them and ask them for a report on the subject. I do not know whether the proposals which I understood were under consideration would involve any question as to the men from the province who are already overseas. Some of them are in Great Britain and some, doubtless, in France. In some of the provinces where provincial elections are impending arrangements have been proposed by which men who have already gone overseas might be enabled to vote. However, my hon. friend has not raised that.

Mr. A. K. MACLEAN: I think it would be inadvisable to do that.

Mr. TURRIFF: It seems to me that the only feasible plan in connection with provincial elections would be the granting of sufficient leave for those who wished to vote to get away and cast their votes, providing everybody gets leave. All the soldiers would not want to go home to cast their votes. We all know that in any election 25 per cent of those on the voters' list do not come out and take advantage of their franchise. Among the soldiers many, if they were at home, would not vote, and while we should all like to see all the soldiers vote who wished to vote, it seems to me that for a province to adopt the very unreasonable legislation that we adopted for soldiers to vote abroad, would be a mistake. I think they ought to be given leave so that they may go and vote if they so desire.

Mr. A. K. MACLEAN: Might I ask the Prime Minister if to-morrow afternoon he will put himself in a position to say whether or not it would be possible, in the judgment of the officers of the department,

to grant leave to enable soldiers to vote, so that it would be known? The Legislature of Nova Scotia will not be in session very long, and if anything is to be done in the way of legislation it will have to be done very promptly.

Sir ROBERT BORDEN: Legislation here?

Mr. MACLEAN: Yes, or there. There will not likely be any necessity for legislation here.

Sir ROBERT BORDEN: I should not think that legislation will be necessary here. It would seem to be a question for the Legislature of Nova Scotia to take into consideration in the first instance. I am afraid that I shall have a pretty busy morning before me.

Mr. MACLEAN: Monday?

Sir ROBERT BORDEN: I shall make an effort to get the information at the earliest possible moment.

Mr. MACDONALD: There are two ways in which the votes of soldiers in Nova Scotia, a comparatively small province, and accessible for voting purposes at all points, might be polled, and that would be either by allowing the men to go home, or by enabling the men to cast their votes while in camp. One can see a great many difficulties that would attach to three or four battalions, representative of the whole province and many different counties, casting their ballots in camp. The difficulty of working that out on election day would tax the patience and ingenuity of the officers in charge. I assume that in regard to this question any attitude that would be adopted by the federal authorities who have control over these men, would not be in any way partisan or inconsistent with the idea that it would be important if possible for these men to exercise the franchise. I understand that in the western provinces a large number of men have been permitted to go and work at the crops. There is no reason why leave should not be given to those who desire to go and cast their votes. Of course, a large number of young men whose names are not on the list, and men whose names are not on the list for some other reason would not need to go home. But those who have votes and who desire to go should be given that opportunity. It would only mean three days' leave, and being in camp it is not as if they were located in a desultory way throughout the country. All the ordinary details of the camp would be carried on in their absence. I do not profess to be a military expert, but I have been in camps several times, and for a matter of three days the disjointing of things would not be serious because there would be enough men left for ordinary purposes. It seems to me that in our province that would be the most feasible method of working it out.

Sir ROBERT BORDEN: Give them leave?

Mr. MACDONALD: Give them leave.

Sir ROBERT BORDEN: And provide transportation?

Mr. MACDONALD: Yes, if that is thought desirable.

Sir ROBERT BORDEN: Would not we be subject to the penalties of the Election Act?

Mr. MACDONALD: I do not think that my hon. friend need have any fear on that score. I am sure that the Prime Minister approves of the desire of the men to have the opportunity of casting their votes, and I also feel confident that a scheme can be worked out with the least inconvenience to the men and the least difficulty to all concerned. It is impossible to tell anything of the political complexion of the men who are there, but it would be an anomaly if the 3,000 or 4,000 men who are in camp should not be permitted to go home for the purpose of casting their votes. I hope the Prime Minister will be able to work it out.

Sir ROBERT BORDEN: Of course, any question as to the political opinions of the men would not be taken into account at all. The only object to be arrived at would be to give the utmost possible freedom to exercise their franchise without any undue influence of any kind, and to provide every facility for that purpose so far as reasonably consistent with military considerations.

Mr. TURRIFF The hon. member for Vancouver (Mr. Stevens) rather gave the idea that we on this side of the House were unduly criticising, and not giving credit to, the Government for the manner in which the raising of the army had been carried out. I do not think anybody on this side of the House has any such idea in his mind. But I do not see that there is any such fulsome praise due to the Government, or the department, in connection with the sending across of an army to the Old Country. You only have to look to Australia with half of our popula-

tion and half our resources to see what she has done; Australia has sent more men to the front than we have. I would like to ask if there is any rule or system under which men are sent forward. I know of regiments that have been kept 18 months in Canada while other regiments that have not been in training half as long have been sent to the front.

Sir ROBERT BORDEN: What regiment has been here for 18 months?

Hon. Mr. TURRIFF: There was a regiment in Regina. It may have been one of the regiments that passed through here the other day, but they started organizing 17 or 18 months ago.

Mr. EDWARDS: Have there been no drafts from any of these regiments? In some cases there have been drafts of 150 or 200 men.

Mr. TURRIFF: In some cases perhaps drafts have gone over but in other cases there have been regiments ready for over a year and they do not seem to be chosen to go while other regiments which have not been organized nearly as long have been sent to the front. Is there any rule or system under which the different regiments are sent over.

Sir ROBERT BORDEN: I am informed by the deputy minister that there was greater delay than usual in the case of some mounted regiments organized in the West. There was no occasion for the use of mounted men on account of the kind of warfare that has been carried on during the past year or fifteen months. After a good deal of correspondence an arrangement was reached by which they could be sent forward as infantry; but for that purpose, I understand, it was necessary that they should go through a different kind of training. Further than that, the deputy minister informs me that a regiment at Regina, which is possibly the one that the hon. gentleman has in mind, has sent forward drafts of about 500 men. When these drafts were sent forward, it was necessary to enlist new men and train them, and a good deal of time was occupied in that way. However, the regiment is about to go forward, as I understand.

Mr. TURRIFF: One went forward last week from here.

Sir ROBERT BORDEN: It has either gone forward or is about to go forward. In the end it will go forward as one of the finest regiments in all the Canadian Expeditionary Forces.

Mr. OLIVER: Following the remarks of my hon. friend from Vancouver (Mr. Stevens), I appreciate quite as much as he does the very great burden that is carried by the Prime Minister, especially since he has assumed the duties of Acting Minister of Militia, and I certainly would not wish to add to his burden in any way. But we are here in a very responsible position, dealing with a matter that is of greater and graver import than any that has yet come before any Parliament of the Dominion of Canada, and I consider that we should be doing very much less than our duty if we did not bring into this council of Parliament the best we have, both as to constructive and, if you like, destructive criticism. We wish to secure the highest degree of efficiency in the military administration and service of this Dominion, both for our credit and for the welfare of the Empire, and I hope that neither the Prime Minister nor any other member of the Government will think that in anything said by myself or any other member on this side of the House we have any other desire than to secure the best that can be had in the interests of the country and of the Empire. We must necessarily criticise from time to time; and in opposition to the very broad statement of commendation that my hon. friend has made, I would be compelled to make an equally broad statement of condemnation, based upon the information that has been given to the House by the Prime Minister to-night, as to the condition of the country in the matter of rifle armament.

We have been in a condition of war ever since August, 1914. When war was declared we were supposed to have armament for a force, I think, of some 75,000 or 100,000 men. We had a contract, I believe, with a rifle factory in Canada for the purpose of providing a sufficient output to equip our forces. Now, if it is a fact that at the end of eighteen months or more of war we are not in a position to equip efficiently even the forces we have sent overseas—and we have not sent our forces overseas nearly as rapidly as the understanding on which the men were enlisted would require—I cannot find in that condition of affairs anything for commendation of the Government, either of its activity or of its success. I am not prepared to urge culpabil-

ity against the Government for not having met the exigency more fully.

Mr. STEVENS: Would the hon. gentleman suggest where and from whom the Government can secure rifles?

Mr. OLIVER: That is not a fair question addressed to a private member. The Government of the country is responsible for the direction of its affairs; it is upon the shoulders of the Government that that responsibility rests, and it is not for any private member of Parliament to be held responsible for the direction of the country's affairs. When we faced the condition of war that we did face in the summer of 1914 we must have contemplated at that time an enormous increase in our military forces and equipment, and we surely should have taken stock then with a view to meeting the requirements as they arose.

Sir ROBERT BORDEN: At what date?

Mr. OLIVER: At the beginning of the war.

Mr. STEVENS: No one dreamed of the developments that have arisen.

Mr. OLIVER: I am at a loss to conceive how any person could think this war was going to be any other than it has been. With all Europe under arms, with millions of men on both sides ready to take the field, with the training and preparation of two generations, I am at a loss to conceive how anybody could expect that this war would end in a very short time, or would not become the most tremendous conflagration the world had ever seen. My hon. friend has asked what my suggestion is. My suggestion is that the Government was remiss in not making preparation for equipping our forces on a larger scale than they did. We have a rifle factory in Quebec. I know of no reason why we should not have had a rifle factory in Toronto and another in Montreal. We have established shell factories all over Canada; we have established fuse factories in different parts of Canada; and I know of no reason why we should not have increased our output of rifles to any amount that was desired, in the interval that has taken place since the beginning of the war. There may be reasons that I am not aware of that limit the action of the Government, but that is my answer to my hon. friend's question.

10 p.m.

Mr. STEVENS: It is a very poor one.

[Mr. Oliver.]

Mr. OLIVER: I think it is an absolute answer. The weapon that wins the war is the rifle; efficiency in the use of that weapon is the chief factor in winning the war. Any country that presumes to accept a condition of warfare, and does not make adequate preparation for equipping its troops with rifles, and give them an opportunity for acquiring efficiency in the use of that weapon, is not considering the matter seriously.

Mr. EDWARDS: Does the hon. gentleman claim that the Government was remiss in not supplying these rifles previous to 1914? Or is he referring to the interval since that date?

Mr. OLIVER: Since that date. Remiss in not recognizing that a state of war had occurred in which it might be expected that Canada would have to put forth her military strength to a degree that was never contemplated in time of peace; remiss in not recognizing that the exercise of that strength would necessarily involve the equipping of an enormous number of men with efficient rifles, above everything else. Yet under those conditions of world war, we depended upon exactly the same institution as supplied us with rifles, possibly a sufficient number, in times of peace. That was not a reasonable proposition on the face of it, and it has not worked out well.

Sir ROBERT BORDEN: What does the hon. gentleman say we should have done?

Mr. OLIVER: I have already said that the Government when it saw the condition of war that had occurred, and it was quite evident that Canada would require to put forth military strength far beyond what she had ever dreamed of in times of peace, was remiss in continuing to depend upon the same mechanical organization—the factory at Quebec—to supply the needs of the country in time of war that had been adequate to supply its needs in time of peace.

Sir ROBERT BORDEN: Who told the hon. gentleman that we had to depend upon the same organization?

Mr. OLIVER: I understand that we had only one factory when the war began and that we have only one factory yet. We could have multiplied our means for the manufacture of rifles just as we have multiplied our means for the manufacture of shells, fuses, or any other article that was required for military purposes.

Sir ROBERT BORDEN: I would like to tell my hon. friend something that will convince him perhaps that a little knowledge is a dangerous thing. We could have done one or two things. We could have gone, as some other governments did, to the United States and placed orders for rifles there. I am not going to give information here that might be of value to the enemy, although in some quarters there is less consideration of that aspect than one might have anticipated. I would ask my hon. friend to get in touch with Mr. Moir, the representative of the British Government in New York, and ascertain how many rifles out of the millions ordered have been produced in the United States although they were ordered more than a year ago. The other course that we might pursue and that we did pursue was to endeavour to increase the output of our own rifles in this country; and I may tell my hon. friend that we are producing to-day in Canada an output fifteen times greater than the normal output in time of peace. The fact that we have been able up to the present time to equip all our troops sent overseas with the latest type of Ross rifle, with the exception of two or three regiments—and in the case of those regiments the rifles followed them very shortly afterwards—is of itself a sufficient confutation of the statement of my hon. friend that this Government has been remiss in that respect. It is very easy to criticise and to look back now and say that everyone must have known in August, 1914, precisely how this war was going to develop. All I have to say to my hon. friend is that if he knew that, he knew a great deal more than men who have devoted nearly all their lives to the study of military conditions. I have known men whose life study has been of military affairs and who did not entertain the opinion that my hon. friend says he entertained in August, 1914. I do not believe that any great percentage of the men who have given this subject their attention and study had any such conception in August, 1914. It is very simple at this date to look back nearly two years and say: "Why, any one might have known in August, 1914, that this war would eventuate precisely as it has eventuated." Will my hon. friend cast his prophetic gaze forward and tell us what the events of the next eighteen months will be? If he will do that with the same confidence and assurance with which he is able to point to the events of the past eighteen or twenty months, he will be rendering a great service to the Empire and to the world.

Mr. BURNHAM: I am to a certain extent cognizant of public opinion in Canada, at any rate in the district from which I come, and I am well aware of this fact, that the discouragement by the Liberal party in this House of the military spirit in Canada prior to the declaration of war is the cause of our lack of preparedness. Hon. gentlemen opposite suddenly find, subsequent to the 4th of August, 1914, that the war is not only not going to be a short one but going to be a very long one. In July, 1914, they thought it was not going to take place at all; they kept telling us, as they had been doing for months: "War! why, it is a preposterous thing; it could not take place." Now they tell us that it could not have been avoided. Before the war broke out they told us that it was madness for us to indulge in all that preparation. It was that sort of talk that placed Canada in the position she was in, and it is a wonder we did not encounter a danger which we were unable to meet.

Mr. OLIVER: It does not matter what occurred before July, 1914; what we are interested in is what is occurring now and what will occur in the immediate future. What the Prime Minister has said as to the increase in the output of rifles is very good so far as it goes; the only trouble is that it does not go far enough. If it was possible to increase the output of rifles fifteen-fold, it was just as possible to increase that output twenty-fold, that is to say, to have secured sufficient rifles to arm and equip our soldiers as they should be armed and equipped under the conditions as we find them to-day. Let me remind the House that exactly the same sort of talk was put up in the United Kingdom in the winter of 1914-15 as to the supply of munitions there for use in the war. The people of Great Britain and the Empire were told that everything was being done that could be done; but it turned out that everything that could be done was not being done, and under the stress of criticism, exertions were put forward that had not been put forward before, and the supply of munitions was increased and still increased until we believe that to-day they have an adequate supply. If, however, the Government and the people of the United Kingdom had rested, in the winter of 1914-15 as easily as this Government are resting now in regard

to the supply of rifles for the soldiers of Canada, the war would never have been won by the Allies; it would have been lost. This is no time for recrimination; it is no time for blaming this one or that one or the other one; this is the time to recognize the conditions that we have to face and to meet those conditions adequately, and the first thing we need in order to take our proper part in this war is a sufficient supply of efficient rifles in the hands of proficient men. Unless and until we have that, we are not taking that part that we all desire to take in the task of winning this war. I did not know the condition was as the Prime Minister has said it is; I regret that it has had to be stated that we are short of rifles; but I would be doing far less than my duty as a member of this House if I did not use this opportunity of impressing, so far as I can impress, upon the Government, the House and the country, the fact that we must have an adequate supply of efficient rifles, or else we are not doing our part in the winning of the war.

Sir ROBERT BORDEN: I would not like my hon. friend to imagine that anything he says impresses that consideration upon the mind of the Government any more than it has been impressed ever since the outbreak of the war. I cannot make that too plain to him. There is nothing that he has said here to-night that we do not know. There is no admonition that he has addressed to us that we did not have in mind fifteen months ago, and, if it had been otherwise, we would not have been able to produce in Canada to-day an output of rifles fifteen times as great as the output immediately before the war. If we had not taken that precaution the conditions would not have been as satisfactory as they are to-day. For I consider it a remarkable thing that, in the stress of this war and under the difficulties experienced in getting the complicated machines, too numerous for me to name, which are necessary for the purpose of establishing now units in a rifle factory, and with the growing demand all over the United States for that machinery on account of the orders for rifles that were coming from all the Allies to the United States—I say, I consider the results obtained in Canada are wonderful results. Not only had the machines to be provided, but it was necessary to procure all the material, material of a very precise type and difficult to procure—the seasoned wood, the special description of steel, and all the articles which go into these rifles. These articles had to be procured in quantities fifteen or twenty times as great as any provision had been made for before the war. And, as I have said, all this had to be done in competition with the great industrial concerns in the United States that had orders for millions of rifles from all the governments in Europe. The matter for astonishment is not that more was not done, but that so much was done, and that Canada, up to the present time, has been substantially able to arm every soldier with an efficient rifle before he crossed the Atlantic, the exceptions being, as I am informed by the deputy minister, two or three regiments whose rifles were not taken with them, but followed them very shortly afterwards. I repudiate any suggestion of remissness on the part of the Government, and I say that the results that have been obtained are a credit to Canada.

Mr. OLIVER: This is the most important question connected with the war and with Canada's participation in that war, and the Prime Minister will pardon me if I pursue the argument a little further. I have discussed the question of the supply of rifles for the active militia and for what may be called the auxiliary militia, the home guard. We are now aware that the reason these people are not equipped with weapons is that it was not possible to supply them. But we are assured that our troops as they go overseas are supplied with efficient rifles, and the Prime Minister tells us in detail of the difficulties of supplying rifles more rapidly than they have been supplied. I quite appreciate that there are difficulties. But let me turn the other side of the question. We are sending men overseas—our men—to meet on the field of battle the most highly-trained and best equipped troops the world ever saw. We are not doing justice to our troops unless, when we send them into the field, they have the best equipment that we can furnish them and unless they are as efficient and as proficient in the handling of that equipment as it is possible for them to be. Now I am to be corrected here and now if what I state is not right. According to the best information I have, our troops, enlisted in Canada and kept in training in Canada for periods of from six months to fifteen months, have gone over to England or the Continent, as the case may be, without

ever having had efficient target practice. Not to speak too generally, my information is that at the Sarcee camp near Calgary last summer there were 8,000 men in brigade camp, and that these 8,000 men had something over sixty-odd service rifles with which to carry on target practice. The only target practice they received was with these sixty-odd rifles for a period of four or five months in the summer camp. I saw some of these regiments going through here the other day. And I say that if the facts are as I have stated them—and I am here to be corrected if they are not—this country did not do its duty—

Mr. EDWARDS: Are you sure of the facts?

Mr. OLIVER: I am, but if I am wrong let me be corrected now. These men have gone to face the enemy on the battlefields of Europe, and, according to my information, they have not had fair opportunity to become proficient in the use of that weapon which is the decisive factor in modern battle, either in attack or defence. The Deputy Minister of Militia is at the elbow of the Prime Minister, and he can say whether that is right or not.

Sir ROBERT BORDEN: And he says absolutely it is not right. I will tell the hon. gentleman why it is not right. In the first place, so far as regiments in Canada are concerned, the best provision of rifle available has been given to them for target practice, not usually Mark III Ross rifle, but Mark II Ross rifle when the other was not available. I do not say they have always had the full equipment for a battalion, but I am assured by the deputy minister that they have had a sufficient number of rifles to enable target practice to be carried on efficiently at every camp. But my hon. friend goes further and says that they have not only gone overseas to Great Britain without instruction but they have gone from Great Britain to France without instruction.

Mr. OLIVER: So far as we know.

Sir ROBERT BORDEN: But the hon. gentleman should not without warrant make statements which disquiet public opinion in this country and which are without foundation. I say that when these men go overseas they go through a course of musketry instruction at one of the English schools. I myself, when in England last summer, saw regiment after regiment going out for instruction at the great musketry school at Hythe. I say from my knowledge,—and I think I know as much of this matter as does the hon. gentleman—that not one regiment from Canada has gone to the war without adequate instruction in musketry. If they have not got it on this side they have got it on the other side. And I deprecate strongly statements of that kind which will appear in the public press of Canada and which tend to disquiet the parents, relatives and friends of those who have gone overseas to fight for their country.

Mr. CURRIE: Perhaps a person who has been there and seen can speak with knowledge. The question has been raised as to the training of these men in the use of the rifle. A number of years ago the British Army changed its method of training. The men are now trained with dummy ammunition; they are not allowed to go on the rifle range and fire live ammunition until they have obtained a considerable degree of efficiency with dummy ammunition. The idea is that instead of going in for this long range target practice the men must be able to put twenty-five or thirty shots a minute in an 18-inch ring at 400 yards. The men are practised constantly in this aiming and rapid firing with dummy ammunition. Even at the front every man is on his honour bound to devote a certain amount of time to this practice, and each day he goes through these motions for at least ten minutes in order to acquire proficiency in rapid aiming and firing. I was at Sarcee Camp, and I know that the training there was of that kind. When the training is of that kind it is not necessary to have a great number of rifles; a few rifles will suffice. A man who fires five rounds on the rifle range after he has completed his practice in this way, is far more efficient than if he had been working for two or three weeks under the old system and costing the Government a large sum of money for cartridges. Soldiers of the old school appreciate the fact that the men are not firing away hundreds of dollars worth of ammunition at the targets every day. I know that the units that have gone to England get thorough training in this modern school of musketry, which, after all, is the school that stood the British Army in such good stead in the retreat from Mons, and that has made the Canadians such an efficient fighting force at the front. When I left England last summer, the number of men without rifles in the new army regiments,

when I saw them on the march, was far greater than the number without them in Sarcee camp. They had not made any provision for the war, but they were making rifles as fast as they could. The units that went to the Dardanelles got their rifles at Malta; these rifles were sent over from India for them.

The great dearth of rifles has been one of the drawbacks of this war. I suppose that possibly one-third of Kitchener's army is not yet supplied with rifles in England. Fully one-half of the men were drilling in civilian clothes and had been doing so all winter—or in old uniforms of the blue and red type which is now obsolete. I think, therefore, that we have made fairly good progress in this respect. When I came over and found the regiments all equipped with uniforms I was very much surprised, because in England fully three-quarters of the men did not have uniforms. As to the rifle practice, if the men are given rifle practice according to the new school, they do not need any rifle at all except a rifle in form that has two sights on it. It is like the old deer shooting idea, that men must be able to raise a rifle rapidly and drop the enemy. Some of the English soldiers who are very proficient fire as many as thirty-five rounds a minute. In that kind of training it is not necessary to spend thousands of dollars on the ranges. They were indulging in the new practice at Sarcee when I inspected them last fall, and they had made fair progress in it, and were doing very well. They did not have rifles for every one there, but I do not think that is necessary; if the men get new rifles after they are trained and go to the field, it is possibly the best way. I think we are doing very well so far as that is concerned. Of course, not 5 per cent of the people of Great Britain or the colonies and dependencies believed what Lord Kitchener said when the war broke out, that it would last two and possibly three years. The men who could get articles in the magazines and those who could hold public meetings and be listened to were the ones who would tell the whole world that the war was going to end in two months; that Germany would be starved by that time. In some places the same idea still prevails, but I do not think many members of this House, if I asked them when the war was going to end, would say that it will be over in two or three months. I stated in the House once before this session that the war would last more than another year, and in that I was very seriously brought to task by some of my associates, in the House and outside, who said that I was dreaming; that the war would be over in two or three months. I fail to see that. I think we are on the crest of the war at the present time; the situation at Verdun to-day shows the first sign that the Allies are going to win. If they make the best of progress it will take them another year or year and a half—but there is no doubt as to what the end will be.

Mr. OLIVER: There was a question of fact as between the Premier and myself in regard to the armament of the men at the Sarcee camp at Calgary. What the hon. member for North Simcoe has said substantiates my statement that the men at the Sarcee camp were not armed with the Mark III rifle; that they did not have adequate target practice with the Mark III rifle.

Sir ROBERT BORDEN I did not say that they were armed with the Mark III rifle.

Mr. OLIVER: I made an assertion as to the equipment of the troops there, and I understood the Prime Minister to say that I did not know what I was talking about.

Sir ROBERT BORDEN: My hon. friend said that members of the Canadian Expeditionary Forces who went to the front to fight in the trenches had not adequate musketry training. I said that this, according to the information given to me by the deputy minister, was absolutely incorrect, and according to the information it is absolutely incorrect.

Mr. OLIVER: Is that as to musketry training in England, or as to musketry training in Canada?

Sir ROBERT BORDEN: In Canada and in Great Britain. It does not make any difference where they get it as long as they get it before they reach the front.

Mr. OLIVER: I was stating a condition as I believe it exists in Canada, and I want to know whether I stated what is correct or not.

Mr. CURRIE: The hon. gentleman has perhaps misconstrued what I said. For instance one company in each battalion would be armed with rifles, either Mark II or Mark III. That is the condition that obtained all over the country. The time table of training is divided up into various things —squad drill, company drill, physical train-

ing, marching; one company would be constantly exercised in the use of arms and arm drill and musketry, whilst others would be employed in something else. I think it would be impossible for the United States, for instance, with all its power, to arm the soldiers of Canada in as short a time as would be required to arm them all as they are enlisted.

Mr. OLIVER: The question is not as to what could or could not be done; the question is what was done. I repeat that what I said has been established, that the Canadian troops did not get adequate target practice with the service rifle in Canada, that they were not supplied with service rifles with which they could engage in target practice, and that they went from Canada without having had sufficient or efficient target practice. The hon. member for North Simcoe says that they have some system for practice with dummy ammunition that is better than the practice with the efficient rifle. That may be; I do not know whether that is true or not, but my information is that in order that a man may be efficient in the use of the rifle, he must know the rifle. He must have had the opportunity of practicing with his own rifle, so that he understands whatever peculiarity there may be in the rifle, or else he will not be efficient. It is said that the only use of rifle shooting in the field is at short range and quick-firing; but I will draw the attention of the House to this fact, that our casualty lists show a larger proportion of injuries from snipers than they do from any other cause except when an occasional great battle occurs.

Mr. CURRIE: There are more German casualties from the sniping of our fellows.

Mr. OLIVER: I certainly hope so, but the point is that the man that can hit the mark at long range is on the showing of the facts the most useful member of the military force, both for offence and defence, and he cannot get that expert ability except by actual practice.

Sir ROBERT BORDEN: I would like to tell my hon. friend that I had the authority of the General Officer Commanding the Canadian Expeditionary Force at the front for the statement that the Canadian divisions at the front have been more successful in keeping down snipers, and more efficient in the use of rifles in the respect that my hon. friend alluded to, than any other part of the British forces that he was aware of.

Mr. OLIVER: I am very glad to hear that, but again I must insist that they are not given all the opportunities that should be given them under the circumstances surrounding their training at the hands of the Militia Department.

Sir ROBERT BORDEN: I may say furthere that I have had a letter from General Williams within the past two weeks, since our troops have been moved from one portion of the line that they formerly held to take up another portion of the line, and I have his statement that they were moved there because of their efficiency in that way, and that since they have arrived there they have been most successful in accomplishing the purpose for which they were sent.

Mr. OLIVER: We are very glad to know that they have acquired efficiency; but our business was to send them over efficient, and we did not do it because we did not supply them with the rifles that would enable them to become efficient on their home training grounds.

Sir ROBERT BORDEN: All I have to say is that General Alderson's and General Williams' statements are absolutely inconsistent with that which my hon. friend has just made.

Mr. LOGGIE: After this little tussle between my hon. friend from Edmonton (Mr. Oliver) and the right hon. Acting Minister of Militia and Defence (Sir Robert Borden) I think perhaps we ought to go on in a little different strain. I endorse the suggestion made by the hon. member for Vancouver (Mr. Stevens), that under certain circumstances it is very advisable to recall efficient non-commissioned officers, give them commissions and employ them in this country in the training of men who have joined the ranks in the battalions which are now being recruited. I think that is a wise proposition. Young men have been advanced within their own ranks. I know some that have been advanced, but they have not been given commissions. Perhaps it would not be out of place for me to say here that I congratulate the Government on the good work they have done in this dreadful struggle. Not only do I congratulate the Government, but I congratulate the whole citizenship of Canada on coming to the rescue as well as they have done. I was very much pleased when the Prime Minister intimated that

his goal was that we should have 500,000 men from Canada on the fighting line. I was glad to hear him announce that there had been recruited from the first of January until the 15th April about 101,000 men—

Sir ROBERT BORDEN: No, nearly 103,000.

Mr. LOGGIE: I was glad to hear that. You may consider me rather pessimistic, but I regret that recruiting has not been so active since that time.

An hon. MEMBER: Why?

Mr. LOGGIE: If there is anything the Government can do to make it more active it behooves them to do it, and I am sure that in that they will have the hearty support of the people of Canada as a whole. I think I should also congratulate the Government upon the splendid help of my right hon. friend the leader of the Opposition, who has come so boldly to the front and given his heartfelt support to the Government on this occasion.

Mr. MORPHY: And his followers?

Mr. LOGGIE: His followers too. It was my privilege to state in this House, during a session before this, that the Government must expect criticism in connection with their administration and the expenditure of the moneys entrusted to them; but that does not mean that hon. gentlemen on this side of the House do not support them in their undertaking in defence of home and country, and of this great Empire. The Acting Minister of Militia said to my hon. friend from Edmonton that he would like him to make a prophecy as to the extent of the war. Let me just read one line from a letter I received this morning from the front, almost from the trenches, from a soldier who was wounded last October, but who is now back fighting as a private in the First Brigade Machine Gun Company, First Canadian Division.

Mr. MICHAUD: Would my hon. friend give us the name of that soldier?

Mr. LOGGIE: This is a matter that is private. I could give it to my hon. friend if he wants to know, but it would be considered rather personal if I were to name him. But what is in the letter is this: "I do not see how anything but the wastage of men will end the war." That does not indicate that the end of the war is near at hand. It means that it will not end in the near future, and it devolves upon us to find a way of reaching the goal that the Prime Minister mentioned, and that is that before the New Year we should have the full total of half a million men enrolled from Canada. I do not know how this is to be overtaken, but as one member of the House I should be very glad to give every support to the Government who have this great undertaking in hand. It is, I am sure, an undertaking whose extent we did not realize even when the war was declared. There is much to be said in support of the contention of my hon. friend from Edmonton, that there was every indication that the struggle would be a long one, and certainly the indications at the present time are that the struggle will not end in the near future, and it behooves us as a people to do everything in our power to reach the goal that the Prime Minister intimated, at the opening of this new year, it was his desire to reach. I congratulate the Government and the people of Canada, and I congratulate the right hon. leader of the Opposition (Sir Wilfrid Laurier), who has given such splendid aid and support to the Government in their war measures.

Mr. E. M. MACDONALD: Would the Prime Minister be good enough to tell us what position General Alderson occupies in regard to Canadian troops? It was stated in the press lately that he had ceased to occupy the position of command and that a Canadian had been appointed in his place.

Sir ROBERT BORDEN: We have no official information on the subject.

Mr. OLIVER: Now that we have decided that we do not need rifles for target practice, I think we might take up the question of the efficiency of the rifle that we use, that is the Mark III Ross rifle. I have heard some reports with regard to this rifle that have been cited by hon. gentlemen on this side of the House, and I would submit that, as the efficiency of this rifle is under suspicion at any rate, there might very well be a careful inquiry as to what its efficiency really is. The matter is too important to be passed over. My right hon. friend the Prime Minister resents the idea of these questions being discussed in this House of Parliament. We in this House of Parliament are charged with the responsibility, on behalf of the people of this country, of seeing that the best is done that can be done. and we are not relieved from that responsibility because of the gravity of the question that has to be considered. We have at the front a reporter, or a person who sends

reports of what occurs there. His reports, I understand, are supposed to be official. They are given in the newspapers under the heading: "The eyewitness reports" thus and so. I have here two reports of the eyewitness as to the recent fighting in the trenches in France or Flanders, and there are certain statements in these reports which I will take the responsibility of reading to the House, which I cannot read without grave disquiet. This is one of the eyewitnesses's reports. He speaks of certain events and he says:

> An insistent bombardment was continued by the enemy, and finally, about noon, all his remaining rifles being out of commission and his men exhausted, Captain Gwynne decided to retreat.

The eyewitness, reporting on another occasion, says:

> Waist-deep in mud, the few survivors of our garrison could offer little resistance. Hardly one of their rifles could be got to fire.

He says again:

> The lieutenant emptied his revolver at the Germans and seized a rifle, only to find that it jammed at the first shot. The rifles of his men, again and again reclaimed from the mud, only fired a shot or two before they also jammed.

These are reports of the fighting that has occurred within the last few days. I say that these words are very disquieting to me. I do not want to emphasize the point too strongly, but I say that, in view of statements such as these appearing in the reports of the eyewitness, coupled with information which I have received from soldiers who have served in the trenches, information that is corroborated by other members of the House, I desire to urge upon the attention of the Government the desirability of making such inquiry as to the efficiency of this rifle with which we have armed our soldiers as shall absolutely settle the question as to whether it is a suitable rifle for active service, or the most suitable rifle we can get for active service. There is no doubt about its qualities as a shooting rifle, but my information is that its mechanism is in some parts so delicate that it is more apt to get out of order than the Lee-Enfield. That is to say, owing to the difficult conditions of active warfare, where it cannot have that care and attention that it would have in an arsenal or under peace conditions, it is more apt to get out of order than is the Lee-Enfield rifle. If that is a fact, it is an unfortunate fact, and we should take steps to alter that condition. I appreciate the responsibility of the statement I make, but it is because it is of such tremendous importance that I dare to make it.

Sir ROBERT BORDEN: An inquiry was made into the Ross rifle last year, and I believe into the Lee-Enfield as well, after the jamming to which I have alluded first occurred. As a consequence of that inquiry, the chamber of the Lee-Enfield, as I am informed, and the chamber of the Ross rifle, were enlarged. I have already given the particulars of those changes. The Ross rifle is not used at the front now except with the enlarged chamber. I suppose it might be taken into consideration in connection with the Ross rifle, if my hon. friend desires to criticise it, that 100,000 of these rifles were ordered by the British Government in the early months of the war, and complaints have been made that they have not been delivered as fast as was expected and desired. I am not aware that there is any rifle in the world that might not jam or refuse to fire after it had been imbedded in mud or had fallen into deep mud in a trench. I should imagine, although I do not profess to be an expert in rifles, that there is nothing very extraordinary in that, nor do I imagine that the Lee-Enfield or any other rifle would be immune from difficulties of that kind. The Ross rifle may be superior in some respects—I believe it is—to the Lee-Enfield. It is quite possible that in some other respects it may not be as serviceable as that rifle. I am prepared neither to affirm not to deny as to these matters, because I do not know about them. Very likely if you got a number of experts to give you opinions about both rifles they would not entirely agree among themselves. It is probably true that of any two types of rifle that you select, one would have certain advantages, and the other rifle in comparison with it, certain other advantages. As my hon. friend says, the Ross rifle, for accurate long-distance shooting, is perhaps the best rifle in the world.

Mr. OLIVER: Hear, hear.

Sir ROBERT BORDEN: It may be equally true that the very qualities which gave it that pronounced advantage may be attended with a certain disadvantage under other conditions; I do not know, but one can readily see that that is possible. I believe it is true that the British soldiers who are very good shots and are employed for the purpose of long-distance shooting —sniping, as it is called—are very apt to

throw away their own rifle when they have a chance to pick up a Ross. On the other hand, I have heard, as no doubt my hon. friend has, that some of our own men sometimes throw away the Ross rifle when they can pick up a Lee-Enfield. An inquiry was made into the Ross rifle last year. The difficulty about the chamber was discovered. The jamming, as I understand it, was not entirely due to the chamber, but, to a certain extent, to the character of some ammunition that had been issued, and which I think is no longer being issued. With ammunition of a different character, and especially with that produced in Canada, I am informed that even before the chamber was enlarged there was not very much difficulty with jamming so far as the Ross rifle is concerned.

Mr. OLIVER: I would suggest that means be taken, not to hold a formal court, but to have the privates who come back to Canada from the front interviewed, not by an officer, but by some person to whom they would be willing to state the facts as they believed them to be. In that way the Government could satisfy itself as to the rifle. I do not think a Military Board is a good way of getting at what the soldier actually thinks of the rifle. He would not talk as freely when he was in the position of a witness or of a criminal in the dock as he would to some reliable person to whom he could give his opinion casually as to the rifle. In the multitude of expressions of opinion the Government would have a pretty fair basis to go upon as to the worth of the rifle. This is a terribly serious matter.

Mr. EDWARDS: How could the hon. gentleman depend upon the opinion of the soldier when, as he told us only a moment ago, the soldier does not know anything about the rifle? He was not trained to handle it, and did not even know one end from the other; that was his argument.

Mr. OLIVER: Oh, no.

Mr. EDWARDS: The hon. gentleman said that the soldier had not been properly trained in musketry, and did not understand anything about the rifle.

Mr. OLIVER: I did not say anything of the kind.

Mr. EDWARDS: A man who does not know anything about the rifle is not the one whose opinion you should take, especially a man who does not know one end from the other. The hon. gentleman is absolutely inconsistent.

Mr. OLIVER: The hon. gentleman has put words into my mouth that I never used, and ideas that I never expressed and have never held. I argued that the soldier had not a fair opportunity of becoming efficient in rifle shooting. I did not argue that he did not have every opportunity of becoming acquainted with the mechanism of the rifle. Surely the man who has been to the front knows what the rifle can do, and I am suggesting that his opinion be taken rather than that of some alleged expert. The man whose life has depended on the rifle is the man whose opinion I am willing to ask and depend upon.

Mr. TURRIFF: Perhaps the Acting Minister could give me some information, if not now the next time these Estimates are up, as to rentals of recruiting offices in the city of Ottawa. There are two recruiting offices, one on the corner of Sparks street and Elgin, and the other a little way down on Elgin street, within a stone's throw of each other. As only a few men join daily at each of these places I think one building would be enough. There is a third building used for the same purpose a little further down Sparks street. I should like to know what rental has been paid since the war started for all recruiting offices. Also how much it has cost the department to guard the canal at Cardinal, Iroquois and Morrisburg since the war started. In my opinion the cost has been unnecessarily heavy.

Mr. OLIVER: Would there be any objection to giving information as to the number of machine guns provided for each battalion in the field?

Sir ROBERT BORDEN: The establishment of machine guns has been greatly increased both in the British service and our own. To each brigade there is attached a certain number of lighter and a certain number of heavier machine guns. I could give my hon. friend the number privately. These guns are used for different purposes. I am rather more familiar with this question, for the reason that we had
11 p.m. to take into consideration recently a communication from the War Office with regard to the relative number of heavier and lighter guns in connection with our regiments and brigades?

Mr. OLIVER: Do the heavier guns use heavier ammunition than rifle ammunition?

Sir ROBERT BORDEN: It is all the same ammunition, but the question depends upon the particular purpose for which the gun is used. One type of gun can be taken up and moved very quickly; the other is used in a different way and is usually placed where it will be in a permanent position for a certain period of time.

Mr. OLIVER: The Prime Minister, I see, does not desire to say how many guns are supplied to each battalion. I am going to ask the question: Have the battalions actually in the field been supplied with the full quota of machine guns, whatever that may be?

Sir ROBERT BORDEN: The deputy minister informs me, yes, absolutely so.

Mr. OLIVER: Have the battalions in training in Great Britain been supplied with their full quota of machine guns?

Sir ROBERT BORDEN: They are supplied in Great Britain with a sufficient number for practice. Even if there should be the greatest abundance of machine guns, I am informed that they would not receive more than enough for practice while they are in training. They receive their full quota only when they go to the front.

Mr. OLIVER: What is the position of the battalions organized and in training in Canada in regard to the supply of machine guns?

Sir ROBERT BORDEN: The arrangement in Canada has been the same, that they are supplied with a sufficient number to enable training to be carried on.

Mr. OLIVER: Would the minister be good enough to say what number of machine guns for training were supplied to the 51st, the 63rd, and the 66th Battalions during the past winter?

Mr. CURRIE: I really think the hon. member should not ask that question, because the number of guns supplied to each army corps could be figured out.

Mr. OLIVER: I do not think so. If the hon. gentleman will wait until I get the answer, I think he will find it has no bearing on that matter at all.

Sir ROBERT BORDEN: With regard to the battalions which the hon. gentleman has mentioned, they were all located where machine gun practice could not be carried on during the winter months.

Mr. OLIVER: The fact is that the three battalions were in Edmonton last winter, and when I saw them one of them had one machine gun and the other two had none. Therefore the machine gun sections of those battalions did not have a fair opportunity to become proficient in the use of the machine gun. Again I take the liberty of saying that I do not think that is a fair position to put our soldiers in.

Sir ROBERT BORDEN: Where were the battalions stationed?

Mr. OLIVER: The 51st Battalion was located in the drill hall, and the 63rd and the 66th were in the exhibition building at Edmonton.

Sir ROBERT BORDEN: I am informed that machine-gun training would not be carried on under those conditions, but that the men, when they go into camp, will receive machine-gun training.

Mr. OLIVER: They were at the Sarcee camp last summer, and they did not have machine guns there to train with. The fact that one battalion at Edmonton should have a machine gun and the other two none rather breaks down the idea of machine-gun practice not being carried on in the winter.

Sir ROBERT BORDEN: Machine guns, like rifles, cannot be procured in a moment. Orders were given immediately after the war broke out, but you do not get delivery of machine guns within a few months after they are ordered, sometimes not for a year. The companies which have been manufacturing machine guns have been making pretty good deliveries. It might possibly be that during the period which my hon. friend mentioned there were not machine guns available.

Mr. OLIVER: There are at the present time five battalions being recruited. Some of them are up to strength and all of them are training. How many of those battaliens have machine guns to train with?

Sir ROBERT BORDEN: I really could not say at the moment; I will get the information for my hon. friend.

Mr. OLIVER: The battalions are the 138th, the 151st, the 202nd—the deputy minister will know the numbers. I just want to emphasize the point that I have urged to-night, that the men are not receiving the opportunity to become proficient that is an absolute necessity for their welfare and for ours.

Sir ROBERT BORDEN: I do not agree with that, if my hon. friend speaks of the period at which they go to the front. So far as I am informed, they do receive adequate training in machine gun practice before they go to the front. If they do not receive the whole of it in this country, they receive further training and instruction on the other side before they are sent to the front. I am quite confident that the system of inspection on the other side is sufficiently thorough to ensure efficiency before the men are sent to the trenches.

Mr. OLIVER: The 51st Battalion was recruited at Edmonton beginning in the fall of 1914. It was recruited to full strength some time in January or February of 1915. It went overseas in March of 1915. It was there for over a year, yet all the target practice that the battalion had is what I have stated at the Sarcee camp, and that battalion in the barracks at Edmonton was the fortunate possessor of the one machine gun that was at Edmonton for training purposes. I just wish to ask in regard to machine guns, if the Prime Minister does not object, as to the pattern of the machine gun that is used.

Sir ROBERT BORDEN: The two classes that are used are the Colt machine gun and the Lewis.

Mr. OLIVER: The Lewis machine gun, as I understand it, is the later and most approved pattern for military use. It is the one that is used, for instance, in aircraft. I would like to ask why the Colt is used instead of the Lewis.

Sir ROBERT BORDEN: They are used for different purposes. The one is a heavier gun that the other. I mentioned to my hon. friend a moment ago that we had a communication on the subject requiring a certain proportion of the heavier gun and a certain proportion of the lighter gun. I am not enough of a military expert to set forth an exposition of the particular reasons which have influenced this decision; it is enough for me that the military authorities, who are supposed to be competent, have fixed a certain proportion of each, and, unless we supply our men with that proportion, they will not be allowed to go to the front.

Mr. OLIVER: I am not very much of a military man myself, but this question of machine guns is very important, as is also the question of the efficiency of machine guns. My information is that the advantage of the Lewis machine gun is that it is air-cooled; the Maxim is water-cooled, and the Colt is not cooled at all. The advantage of the Lewis is that it can be fired continuously without becoming too hot. In the case of the Maxim, rapid firing heats the water and causes steam which exposes the position of the gun. The Lewis can be fired continuously without exposing the position. As the Prime Minister has said, it uses the same ammunition as the Colt, that is, the ordinary rifle ammunition. It is inconceivable to me, when there are two guns using the same ammunition, and one offering a tremendous advantage over the other, why the one having the least advantage is used at all. In the Colt gun, in order to overcome the heating, the gun is provided with one or two extra barrels and when one becomes heated it is unscrewed and taken off and the cool one put in its place, when the gun is ready again to fire. It appears to me that a gun that requires that exchange of barrels is tremendously handicapped in actual use as compared with one like the Lewis that will fire as long as the ammunition lasts. There does not appear to me any good reason for the use of the Colt gun in preference to the Lewis, unless it should be that a sufficient supply of the Lewis gun cannot be secured.

Sir ROBERT BORDEN: Has the hon. gentleman any idea of how long it takes to change the barrel in the Colt gun?

Mr. OLIVER: It does not take very long, of course, but under battle conditions, the loss even of seconds may make a great difference in the result.

Sir ROBERT BORDEN: I can console my hon. friend as to the Colt gun in one respect, that is very creditable to the ingenuity of two of our Canadian officers at the front. The Colt gun has three barrels. When one becomes hot it is removed and another put in its place, which, in its turn, is replaced by the third, and by the time that is heated the first barrel is supposed to have cooled sufficiently to be used again. It used to take a minute and ten seconds under the old system, to make the change of barrels, and the change was made without protection to the man who made it. But two of our officers at Shorncliffe invented an improvement, which is very easily made, and with which, by means of what is called an interrupted screw, a principle applied in the big guns, the barrel can be changed in eight or ten seconds, and the man is pro-

tected while making it. After a review at Shorncliffe last year, these two officers asked Sir Archibald Murray, General Hughes and myself to look at the improvement they had made. Sir Archibald Murray, who understands these matters very well, said that the device was perfectly feasible and a great improvement. The Minister of Militia directed that all the guns should have this improvement made without delay. It was regarded as rather a quick piece of administration to arrange it in that way. One British officer who was present said it would take weeks, if not months, to accomplish that under the regular system in vogue in military affairs in most countries. The Colt gun is regarded as a suitable gun by the authorities of the War Office. It is used for brigade formation, while the Lewis gun is for company formation. I do not know whether the hon. gentleman has observed the regiments that have passed through Ottawa. Recently I had the privilege of seeing one every day for six days. Each of these regiments has a machine gun section, made up, as I recollect it, of some sixteen to twenty-four men, who are thoroughly trained in the use of the gun. Besides, there is the brigade formation which is supplied, in respect of each brigade, with the Colt gun, a heavier gun than the other and used for more permanent positions. Whether that is right or wrong from a military standpoint I am not in a position to judge, but I do feel that I at least am not in a position to overrule the authorities of the War Office on that subject.

Mr. MACDONALD: I desire to ask the Prime Minister with regard to a case I mentioned the other night, of Private Chapman of the 106th Battalion, at Trenton, Nova Scotia. I received a letter from a sergeant, wounded and invalided home, who said that the treatment accorded this man was very bad. Perhaps the right hon. gentleman, if he has the papers, will show them to me.

Sir ROBERT BORDEN: The hon. member for Moosejaw (Mr. Knowles) made some inquiry into a similar case. He asked me to postpone the discussion of it until he was here. There is no reason, however, why I should not give certain information in the meantime. The memorandum handed to me is as follows:

As I have already informed you, the Adjutant General has given direct instructions to stop this kind of punishment. Although there is nothing in our Canadian regulations dealing with the subject matter, the British regulations entitled "Manual of Military Law" page 721, deals with field punishment. Sub paragraph (d) of paragraph (a) reads: "When in irons a soldier may be attached for a period or periods not exceeding two hours of any one day to a fixed object, but he must not be so attached during more than three of any four consecutive days, nor during more than twenty-one days in all." Our officers commanding have applied this regulation notwithstanding the fact that it is no more applied in the British army. They have done it through ignorance and over zeal. The Adjutant General has given instructions that all kinds of field punishment, excepting detention, are not to be applied for the future. Therefore, I hope there will be no further recurrence of such cases.

There is in the memorandum some information with regard to particular cases, showing that there was very great insubordination. There are also reports of the medical officers which show that there was no physical injury.

Mr. MACDONALD: Would the Prime Minister place the papers on the Table so that I may look at them?

Sir ROBERT BORDEN: I will do so. I agree entirely with the view expressed that punishment of that kind, which is not only unusual but might be regarded as cruel, should not be applied in our expeditionary force. I am sure the Ajutant General will see to it, as he has promised, that nothing of that kind shall occur in the future.

Mr. MACDONALD: I think that some attention should be paid to the officers who undertake to apply that kind of punishment.

Mr. CURRIE: As an officer I deprecate very much the discussion of matters of this kind in the House. It is subversive to discipline. In England, according to the King's regulations, there are two kinds of field punishment: Field punishment No. 1 and field punishment No. 2. Field punishment No. 1 is the form of punishment that has been administered to this man. When a soldier is insubordinate at the front he can be tied up; that is the practice in all wars; it was the practice in South Africa. In England they have withdrawn field punishment No. 1, because they have there what they call detention prisons, like that at Gosport. When a man is insubordinate they send him to Gosport for a period where he is put through a course of sprouts. When he goes back to his regiment he is very much subdued and a very good soldier. We have no detention prisons in Canada. Although 99 per cent of the men that come

into our regiments are the very best in the world, sometimes magistrates or friends of criminals get them released from prison and they enter our army.

Mr. HUGHES: Not in Canada?

Mr. CURRIE: Yes. Very often after a man has been before a commanding officer a number of times, having been in the habit of fiercely attacking his comrades, disobeying regulations and acting like a wild beast, it is discovered, perhaps, that he has parole papers in his possession, that he has been a very vicious criminal and that his record here or in the United States is such that they do not want him in the country. The fact that only two cases of the kind referred to have been mentioned as occurring in Canada, speaks very well of the Canadian officers and the discipline that they are enforcing, especially when you consider the number of soldiers who are in training. Evidently there is the feeling that any one of them can write to a member and claim that he was vilely used, and that sort of thing. I feel satisfied that if the facts in this case were gone into it would be found that the men got a great deal less than they would have got in a civil court, and for that reason I think that possibly the less said about those things the better. It is not so very many years since they used to have flogging in the Army. If it is at all possible to get along with a man without punishing him, I do not think that a single officer in the Canadian Militia would tie him up, but if he gets abusive and threatens to kill his comrades, being in a state of madness, perhaps, from drink, you must do something with him. You must tie him up in some way, and you are only allowed to tie him up to a fixed object. I have seen men break through irons four or five times in succession. I have seen men so powerfully built that they could break handcuffs as if they were made of paper. You must do something with these men. The General in command has power to deal with all these questions, and if complaint is made to the divisional officer I feel quite satisfied that if the officers have gone beyond their duty they will be cashiered or court-martialled, and there would not be necessity for bringing the matter before the House.

Mr. MACDONALD: The reason why I brought this matter to the attention of the committee was a desire to prevent injury to recruiting in the locality. The incident to which I refer occurred in a company which was guarding one of the munition works, where, rightly or wrongly, the men engaged in the work interfered with what they thought was excessive punishment. The reason why I mention the matter again is because I have received a letter to-day from a sergeant who had been at the front and who, after distinguishing himself there, had returned home and was engaged in work in a munition factory. This man considered the punishment as improper. While there is a good deal in what my hon. friend not captiously take up complaints of privates against their commanding officers, yet says, that members of the House should there is a phase of the question that he forgets, and it is this: nothing will stop recruiting among the men whom you want to get into the forces like a feeling in the community that the treatment of the men has been improper or unduly severe.

Mr. CURRIE: Was this man a soldier or a worker in the munition shops?

Mr. MACDONALD: He was a soldier.

Mr. CURRIE: He may have been smoking or something like that.

Mr. MACDONALD: All I want to do is to get the official report of the matter. I am not condemning the Government or the department in connection with the matter; the memorandum which the Prime Minister has read shows what the practices are in this regard. The incident, however, has created a good deal of excitement in the locality, and if the officer in charge committed any breach of authority, I think it would be wise to see that it is recognized by the department. I am instructed—this is an evidence of the local feeling that has arisen—that the soldiers are not permitted to go into the grocery store of a former mayor of the town, a man named J. B. Strickland, who was interested in the matter. I would like the department to inquire into that, because this is a rather summary course to take in respect to a citizen who, rightly or wrongly, was interested in what some people thought the improper punishment to which these men were subjected.

Sir ROBERT BORDEN: Has my hon. friend seen the statement which the soldier made?

Mr. MACDONALD: Yes, I saw that. I received that to-day from another source. As I have said, I received also a letter from Sergeant Grant, who has returned

from the front and who is working in the munition works, who complains about the severity of the punishment. I am aware that the claim is that the soldier had a bad record.

Sir ROBERT BORDEN: It was not with regard to the character of the punishment. According to the Eastern Chronicle, an investigation was held at which the mayor of Trenton was present, as well as the mayor of New Glasgow, and representatives of local newspapers. The report says:

The soldier was questioned regarding the nature of the punishment given him and stood up against the wall showing the way in which he was fastened. He gave the following statement which he signed:

Statement No. 715631, Private W. P. Chapman, Composite Company, 106th Battalion.

I left the barracks at Trenton without leave at 6 a.m. on the 6th April, 1916. I did not return until 10 p.m., 17th April, 1916. At the time I went absent I was under open arrest (not allowed to leave quarters). On the morning of 18th April I came before Captain Williams on these charges: 1. Absent without leave from 6 a.m., 6th April until 10 p.m. 17th April; 2, breaking barracks while under open arrest. I was awarded twelve days' detention with No. 1 field punishment. At 11 a.m. I started my first hour's field punishment which consisted of having my wrists handcuffed to a plank five feet ten inches from the ground allowing some leeway in which to ease myself. My feet were firm on the ground. I was released in one hour. I received no bodily injury whatever, and, with the exception of the tired feeling in my arms felt none the worse for the punishment. I further state this to be my sixth offence against military discipline since coming to Trenton on the 14, 15th March, 1916. The punishment was remitted that afternoon, one hour's punishment being all that I did.

Mr. J. J. HUGHES: The other day I referred to the fact that there were in Canada officers who were over military age, and who, under no circumstances, would be accepted for service at the front, who did not themselves expect to go, and whom nobody expected to go, and I said that some of such men were members of Parliament. Needless to say, my remarks did not refer in any way to members of Parliament or others who have gone to the front, who were of military age or otherwise qualified to go, or who expected to go. I referred only to the class of men to which I have already alluded, namely, those who did not expect to go and could not, by reason of age or any other cause. The acting minister, in referring to my remarks, said that such men might do useful work in Canada by recruiting or getting battalions together, and using their influence as members or as prominent citizens for military purposes. I think the hon. member for Renfrew (Mr. Graham) made some remarks of a somewhat similar character. My judgment is that the public man or prominent citizen who declines to do anything he can do in the way of recruiting or anything else to help the cause unless he is appointed an officer and put on the pay-roll, is not worthy of citizenship in Canada, and I do not think that the taxpayers of this country should be called upon to provide such men with military pay. I believe that the man who is not willing to make that sacrifice and to do anything he can along that line is the least qualified man for such purposes, not referring in any way to some men who happen to be members of Parliament and who have the qualifications to be officers. Such men should not be debarred from being officers, and they are entitled to their pay as officers and their indemnity as members. I think that 99 per cent of the people of this country will agree with the view I have expressed.

Militia and Defence—clothing, $800,000.

Mr. OLIVER: There are other matters in connection with the military service that should be discussed possibly at some length. Would the minister object to having some items stand?

Sir ROBERT BORDEN: If we allowed one item to stand there would be no objection to discussing any matter relating to the Militia on that one item, as we have been doing all evening. Then, of course, there are supplementaries. The explanation of this item is as follows: It is to provide the Militia, both permanent and non-permanent, with clothing and necessaries. No vote was taken for 1915-16, the current year, and consequently provision for 1916-17 is all the more necessary. The Estimate of the Quartermaster General, which I have under my hand, shows a possible total of over $1,000,000 required, but we are asking for only $800,000. Possibly some of this vote will be used for the reserve militia, to which my hon. friend from Edmonton has called attention this evening, and whom we would be very glad to furnish with uniforms if it should prove practicable to do so.

Mr. HUGHES: When the volunteers are provided with military clothing, what is done with their civilian clothing and their personal effects?

Sir ROBERT BORDEN: They remain in the ownership and at the disposition of the soldier

Royal Military College, $160,000.

Mr. J. J. HUGHES: A few days ago I referred to the fact that the advertisement calling for students for the military college at Kingston was not given to some papers that happened to be Liberal.

Sir ROBERT BORDEN: And some that happened to be Conservative too.

Mr. HUGHES: The acting minister gave as the reason, that there were some Conservative papers that were not allowed to publish it either. The inference I drew was that because all the Conservative papers did not get this advertisement, no Liberal paper would get it. The only paper in the province of Prince Edward Island that desired to have publication of this notice did not receive it, while several other papers on the Conservative side did publish it. It would appear to be an application of the party patronage system which the acting minister deprecates.

Sir ROBERT BORDEN: I gave the information as it was given to me, that the number of papers was limited and that several Conservative papers which desired to publish it were refused, and doubtless several Liberal newspapers.

Mr. HUGHES: Is the inference I draw correct, that because the Conservative papers are not publishing it the Liberal papers will not be allowed to publish it?

Sir ROBERT BORDEN: I suppose we can all draw any inference we see fit. My hon. friends' inference is so complex in its character that I hardly grasp it.

Mr. HUGHES: I do not think it will be difficult to grasp.

Progress reported.

On motion of Sir ROBERT BORDEN, the House adjourned at 11.50 p.m. Friday.

Saturday, May 6, 1916.

The House met at Two o'clock, the Speaker in the Chair.

QUESTIONS.

[Questions answered orally are indicated by an asterisk.]

ADVANCES BY SHELL COMMITTEE.

Mr. PARDEE:

Were any advances made by the Shell Committee to any persons or firms in Canada, to enable them to start manufacturing either shells or fuses? If so, what persons or firms?

[Sir Robert Borden.]

Sir ROBERT BORDEN: The Government have no information with regard to the matter mentioned in this question.

DR. A. MACKENZIE FORBES.

Mr. PROULX:

1. What rank in the militia of Canada does Dr. A. Mackenzie Forbes, of Montreal, hold?
2. What are his duties and his remuneration?
3. What services did he perform overseas, if any?
4. What were the circumstances under which he returned to Canada, what representations were made to the Militia Department to that end, and by whom?
5. Is it the intention of the Department of Militia to again utilize his services overseas?
6. What allowance, if any, is being made to his family, wife and children, respectively?

Sir ROBERT BORDEN:

1. Lieut.-Colonel in the Canadian Army Medical Corps.

2. The officer is employed as medical officer in charge of troops, Montreal General Hospital, while he is in Canada, and is to be employed on special surgical duties, particularly in regard to orthopedic cases which may be inmates of convalescent homes. Regimental pay, $4; field pay, $1; subsistence allowance, $1.50.

3. The services of his office.

4. Returned for service in Canada.

5. The Militia Department will be only too glad, at any time, to utilize the services of this officer in the field.

6. Separation allowance, $50 per month to his wife.

WAR SUPPLIES—HORSES, HAY AND OATS.

Mr. BUCHANAN:

1. Who were the men engaged under Lt.-Col. A. D. McRae to purchase horses, hay and oats for the Militia Department in the province of Alberta?
2. What remuneration did they receive?

Sir ROBERT BORDEN:

1. For horses:

Purchasers: Capt. J. J. Fry, Mr. L. S. Manzer, Mr. Bernard Michell, Mr. P. G. Pilkie, Mr. E. J. Legg, Mr. W. R. Lowes, Mr. R. F. Bevan.

Veterinary inspectors: Dr. J. C. Smith, Dr. Robt. Blyth, Dr. F. A. McEwan, Dr. E. G. Cunningham, Dr. P. K. Walters.

No appointment was made for the purchase of hay and oats in Alberta.

2. Each of the above gentlemen received $10 per diem and actual expenses.

FREIGHT EXPORTED THROUGH ST. JOHN.

Mr. SINCLAIR:

1. How many tons of freight were exported through the port of St. John during the calendar year 1915, to the British islands, the British possessions, and to foreign countries respectively?

2. What are the corresponding figures concerning the imports through said port?

Mr. REID:

No information is obtainable for the calendar year 1915. According to shipping returns to Customs, the figures for the fiscal year ended 31st March, 1916, are as follows:

	Tons Weight.	Tons Measurement.
Vessels arrived—		
Great Britain..	46,814	49,555
British possessions. ..	60,130	19,457
Other countries	98,622	10,725
Vessels departed—		
Great Britain..	368,391	185,451
British possessions. ..	25,161	35,677
Other countries	345,155	165,954

PROPOSED FOREST RESERVE IN SPIRIT RIVER DISTRICT.

On the Orders of the Day:

Mr. OLIVER: The Minister of the Interior is not here, but I desire to ask for information, and no doubt the minister will be good enough to give it later. I have received a somewhat lengthy night lettergram from the secretary of the Spirit River Board of Trade protesting against the prospective setting apart of a forest reserve in that vicinity, and asserting on what is claimed to be good authority that at least 50 per cent of the land is clear, the soil good, good water available, and the balance of the land very light scrub. It is said that several whole sections can be ploughed without any previous preparation and that there is no muskeg. The land is in township 79-81, ranges 7-11 inclusive. I shall be glad if the hon. minister will say whether or not it is the intention to establish a forest reserve in that section of the country.

HOMESTEAD ENTRIES BY VOLUNTEERS.

On the Orders of the Day:

Mr. OLIVER: During the consideration of the Orders in Council of the Department of the Interior that took place in the House some days ago, in discussing a certain order regarding homestead entry by volunteers, the Minister of the Interior spoke as follows:

With regard to the protection of the homesteading rights of those who have enlisted, I think the hon. gentleman has probably misinterpreted the Order in Council. He states that we are giving practically the same protection to the soldier who has made his homestead entry after enlistment as we are giving to the man who was the owner of a homestead prior to enlistment. But there is a difference in our treatment of these two men. The man who had a homestead prior to enlistment has not only protection in so far as not allowing cancellation proceedings to be instituted, but he is also allowed to count as time of residence on his homestead the time that he is serving his country at the front. In the case of the volunteer who makes a homestead entry after enlistment, he is not allowed to count his time but he is protected from cancellation.

I find in the Manitoba Free Press of May 3, under the heading "Homestead for Every Soldier," an article which copies an announcement said to have been made by the Department of Militia with regard to this particular matter. The Militia Department apparently holds an entirely different view from that held by the Minister of the Interior, and it is this difference of view that I desire to bring to the attention of the House with a view to having the two divergent views harmonized; otherwise there will be misunderstanding and unfortunate consequences. I shall not read the whole article, but the important part is as follows:

The scope of the Act in the foregoing particulars has been enlarged to embrace volunteers who may, subsequent to the date of enlistment, enter for a homestead of Dominion lands. By the operation of the new regulation the Minister of the Interior is empowered to consider the latter class of soldier settlers in the same way as the Act provides for the bona fide settler, who, on the outbreak of hostilities, enlisted for active service.

Sir GEORGE FOSTER: Who makes the statement?

Mr. OLIVER: The newspaper credits it to new regulations of the Militia Department. I will read what it says:

The new regulations affecting this matter are contained in Militia orders issued at Ottawa.

I think it is very desirable that the House should be informed as to the divergent views expressed, and, whatever is the intention, certainly it should be understood distinctly from the beginning.

Sir ROBERT BORDEN: I am not able to give my hon. friend any information at the moment, in the absence of the Minister of the Interior. It is my recollection that more than one Order in Council has been passed on the subject. Possibly the misunderstanding has arisen from an oversight

on the part of one or the other of these departments with regard to amendments which may have been made.

WAR LOAN—$250,000,000.

Right Hon. Sir ROBERT BORDEN (Acting Minister of Militia and Defence) moved the second reading of Bill No. 97, for granting to His Majesty aid for Military and Naval Defence.

Mr. ROCH LANCTOT: (Laprairie-Napierville) (Translation.) Mr. Speaker, before the motion carries, I wish once more to record a protest against this mad policy, which is bound to bring ruin to the country. True it is that I stand alone in this House in the position I am taking, but I count more sympathizers outside this House than within its precincts, and I shall name one of them especially: he is Baron Shaughnessy. At a meeting of the manufacturers of the Montreal district, held only a few months ago at the Montreal Board of Trade, speaking in the presence of General Sir Sam Hughes, the Baron stated that the Government ought, without delay, to put a stop to recruiting, because, he said, we already have 135,000 men under arms, and it will take twelve to fifteen months before those soldiers are sent overseas. He said, furthermore, that in discontinuing now such recruiting campaigns a monthly expenditure of five to six millions would be saved to Canada. He predicted that the economical situation would become more and more tense; that this country will soon have no more hands to till the land. In proof of his argument, he stated, in the presence of the Minister of Militia that the western farmers had called upon him to bring them, if possible, 10,000 men for sowing time.

During the last twenty-one months, Mr. Speaker, the Government has sent overseas —I mean to France and Belgium—65,000 soldiers. More than 70,000 are in training camps in England, while the rest are being trained in Canadian camps. If the Government continues the methods they have followed to this day for sending soldiers overseas, and if they insist on carrying through a levy of 500,000 troops, I find, by an easy computation, that it will take them over ten years to carry 500,000 men to the front.

I fail to see, taking the situation such as it is, why the Government should drag the people of this country into bankruptcy against its wish by persevering in a policy of unnecessary enlistment. So far as I am concerned, any discussion on this subject would be wasted time; to me the question is as clear as crystal. If it has been possible for France to hold more than 400 miles of trenches with her 39 millions of inhabitants, I wish to know how it is that England, with a greater interest than ours in this war, cannot take care of more than 40 miles of trenches, when her population is 49 millions.

Mr. CASGRAIN: (Translation.) With my hon. friend's leave, I wish to state that the British army is now taking care, not of 35 to 40 miles of trenches, but of a good deal over 100 miles. My hon. friend is mistaken, because the British line now extends over 100 miles.

Mr. LANCTOT: (Translation.) The minister who has just interrupted me has his own source of information, which I feel not like questioning; but I have my own information, and I hope he will not question it either.

But I must say that only lately the British army extended over only 35 miles, and they have now taken care of five more miles. I do not care to name the gentleman who has given me this information, because he had no authority to do so. But granted that the British line had 100 miles of trenches to defend, if only one-tenth of the truth has been given out by newspapers since the beginning of this war, when they stated that Britain had from three to four millions of soldiers under arms, I fail to see where they have been sent. If little France, with its population of 39 millions, as I have stated, could take charge of 400 miles of trenches, Britain, with the help of its dominions, such as Australia, Canada and New Zealand, should at least be able to take care of her 100 miles of trenches, which is stated by the Postmaster General as the extent of her line, although I beg to differ with him on that score, as I claim it is at the utmost 40 miles. But in any case that is not the point I wish to make.

The other day, in this House, the hon. member for Red Deer (Mr. Clark) stated that we should not let our thoughts wander from the war. It seems as if his mind was filled with the idea and he will not speak of anything else. The hon. member might take a trip overseas and get a line on what is being done in England. He then could give good advice to our British friends, who have more dissensions to contend with than

we have, and he might show them how to carry on their business better than it is carried on to-day.

I wish to quote, as agreeing with what I have to say, the words of the hon. member for North Simcoe (Mr. Currie) who spoke in this House in the afternoon of the 22nd of February last, while I spoke that same evening. He was congratulating the right hon. the leader of the Opposition and the Liberal party for refraining from any party politics in Canada, while he stated the practice was current in Britain. If the hon. member for Red Deer is horrified at what is taking place in this House, I should advise him, as he has been in Canada only a few years from the Old Country, to take a trip to Britain to find out what is going on and endeavour to suggest to the British Government some means of recruiting soldiers to fight in the trenches of France and Belgium.

Since the outbreak of the war we have been following in the footsteps of the old countries of Europe, of countries which have accumulated wealth for ages, while the truth is that we are mere beggars compared with European nations. Every dollar required to foot our war bill we have to borrow, while Britain has money loaned in all parts of the world. But we, the scions of Britain, in our need, we are going to borrow this year $300,000,000 to 400,000,000 to carry on the war and cover the deficit in our ordinary and special expenditures.

What is our daily war expenditure in Canada? Only a few weeks ago the hon. member for Pictou (Mr. Macdonald) enquired from the Minister of Finance what we were spending monthly for war purposes. The reply was that the expenses reached from ten to eleven millions, or $300,000 to $400,000 per day.

Now, referring to the Canada Gazette of the 15th of April last, I find that the expenditure for March totals more than twice the amount stated in this House by the Minister of Finance. For that one month it reached over $25,000,000. So that if we keep on spending as lavishly and recruiting day after day, as has been done since the opening of hostilities, of course we must expect the expenses to keep on the increase.

At that rate, according to my computation, the war expenses for the year will total $300,000,000.

But, Mr. Speaker, our obligations after the war are not confined to those figures. The Minister of Finance has stated that after the war we shall have to make adjustments for ammunition, supplies and clothing; well, what about our share of the cost? Will it be $100,000,000 or $200,000,000? I cannot tell. But, Mr. Speaker, if we are to judge from the prices paid for shells and fuses, articles that come high both in Canada and in the United States, when this Government is the purchaser, it must be admitted that our share of the expenses will be large. Furthermore, the time will come when we shall have to provide for many other things in Canada, such as our railways for instance, for which even at this session we have been asked to provide.

I forgot to state that the expenditure for the country's management, only the ordinary and special accounts, will reach $217,000,000; the war account will total up to $300,000,000, or an aggregate expenditure of 517 millions for a population of 7½ millions of people and a revenue of $170,000,000. There will at that rate be a deficit in the expense account of $330,000,000 over revenue, or $65 to $70 per unit of population.

Yet the press will go on clamouring that our duty is to run to the rescue of the Empire. I am fully disposed, indeed, to save the Empire, I have no objection whatever to run to her rescue, but the Solicitor General (Mr. Meighen) ought not to be taken at his word when he advised last year the people of Manitoba to drive the country into bankruptcy against the wish of its citizens; yet I think this Government has followed very closely the Solicitor General's advice. However, Mr. Speaker, when you see that the people are thus badly misinformed, when public opinion is perverted by the public press here as well as in England and all over, the day is coming when a reaction will set in, and the same people who have been shamefully deceived by the politicians of 1915, 1916 and 1917, will wreak a terrible vengeance on its deceivers.

As a member of this House, I want to keep my electors posted on what is going on here and in that connection I must say that over in England there is a man I admire more than all other public men of Britain or of any country in the world. I mean Lloyd-George who again and again in the British Commons, has disclosed what Great Britain has done and what she has failed to do. I admit in passing that the British navy has done a great deal; but, as stated by Lloyd-George, it must be conceded that Great Britain has scarcely done anything on land. In a notable speech in the

House of Commons, the British minister inquired of his colleagues what part the British had taken in the struggle? France, said he, has been fighting for the past 18 months against one half of the German host. Russia with practically no arms and no munitions has held her own against the other half of the German enemy, against the whole Austrian army, the Bulgarians and the Turks. And what have we done? Nothing. Such are his very words.

Those are the words of a statesman. A statesman should always tell his people the truth. Why, in this country should we not tell the people that the policy which has been adopted by this Parliament will be disastrous, and can be carried out only by increased taxation on revenue and property. What good purpose is served by the newspapers spreading the hope of better times after the war? Who can claim that now, when we know that after the war our purchasing power will be cut down by a million and a half per day so as to keep our soldiers in the cities, what doing? I would rather not speak of it in this House. I am really shocked when I see what is going on here and in Montreal. A large number of these young men go from one saloon to another and get drunk. It is perfectly well known that the training the soldiers get here is of no value whatever to them, that when they get to England, they have to go through their training all over again. If such be the case, why keep on recruiting? Why should these young men from the country be kept in the cities and get the habit of drink and immorality. I say it is high time to put a stop to that. If in six or twelve months, the soldiers that have already enlisted must be sent overseas; if it is hoped that by shipping to the front the few thousand soldiers which are being trained, the Empire will be saved, so much the better; it ought to be done and I shall not object. But there is as yet no evidence that your idea is the Empire's safety. Why do you not acknowledge, as men should do who speak their minds, that your purpose in recruiting is to promote jingoism pure and simple.

In my constituency, I tell you that not five per cent of the people approve of your present policy. Then go into the rural districts throughout the country and you will realize that your system of enlistment is not in the least favoured by the nation at large. I must state to the House that I am now speaking for myself only, and that when anybody rises to speak on this question on behalf of the Liberal party, he does not express my opinion. My position in this matter is my own.

I do not wish to delay the House. As I have stated, the Government will have to take over the railways. The Canadian Northern has an indebtedness of $420,000,000, besides loans in practically all the banks of the country. We must also operate the National Transcontinental, which will increase our burden by $700,000,000. The public debt, in round numbers, is to-day $920,000,000, and with the expected deficit of $300,000,000 by the 31st of March, 1917, it will reach $2,000,000,000. And to what purpose? What have we to show for that inordinate expenditure, over which the people have no control? Absolutely nothing. We have sent our soldiers into the trenches to have them butchered, while at the beginning of the war we could not provide them with rifles and ammunition. Why keep to that policy? Within the current year we shall have to pay $100,000,000 in interest. Furthermore, we shall have to provide pensions for the invalids, the widows and the orphans, likely amounting to $30,000,000 or $40,000,000. We shall also have to provide for the different commissions which this Government is creating every day out of a revenue which will decrease after the war by several millions on account of the lowering of the country's purchasing power, as I explained a while ago.

I say, then, that conditions after the war will not be as rosy in this country as editors would have us believe.

I stated already that, in so far as I was concerned, I want to put these facts and the true situation, as I understand it, before the people of this country, and more especially of my county. My purpose is not to court popularity; I do it from a sense of duty, prompted by my conscience, because the people have been misinformed, and because the politicians who owe their election to their stand against all military expenditure, against the naval proposals, and against all contributions to Imperial defence, ought to have joined me in my protest in this House when I say to the Government: If you want to go into such follies first get the people's assent to them.

Mr. Speaker, as I have alluded to the navy and to dreadnoughts, I will say that I have often listened to the right hon. Prime Minister as he spoke to us of dreadnoughts and of the Senate's refusal—the naughty Senate—to vote for the famous

Bill to contribute three dreadnoughts to the Imperial defence. Much was said of the German menace. But the Prime Minister went to Great Britain; why, then, did he not warn the British Government of how imminent was the German menace and not urge them to increased preparedness?

If Great Britain was not ready when the war broke out, why should Canada have been in greater readiness? One must use his common sense.

I congratulate the Senate for having saved to the country the cost at least of the three dreadnoughts. Since the English fleet is keeping the German fleet bottled up, of what advantage would it be for Great Britain to have three more dreadnoughts in the North sea, or elsewhere?

Mr. Speaker, I shall not take up the time of the House any further. I have already discussed the question, and I shall do so every time it comes before the House in the same spirit as I speak of it at home. I intend objecting as strongly as I know how against that disastrous policy, and if anyone saw fit to bring in an amendment to reduce that amount by 100 millions I should vote for it.

Motion agreed to and Bill read the second time, and the House went into committee thereon.

On section 6—charged to Consolidated Revenue Fund:

Mr. TURRIFF: Is it open to discuss war matters at this stage?

Sir ROBERT BORDEN: Certainly, my hon. friend can discuss anything he thinks desirable.

Mr. TURRIFF: There is one point I would like to bring up. The country is spending a lot of money on training young officers, and I saw it stated the other day by a colonel in charge of a regiment in the West, I think, that there were enough young officers now training, to whom the Government had not been able to give positions, to man at least two battalions. That would mean 2,000 men who had qualified for commissions, but to whom there were no commissions to give. The acting minister stated last night, I think, that, as far as possible, it was the intention, and I think rightly, in granting commissions in future to give them to men who had served at the front and in the ranks. It would seem to me that something ought to be done either to stop the expenditure in training young officers, when we have so many that we cannot use, or to see that the services of those young officers are utilized. The Government have expended a considerable amount of money on training officers, and if it be true that there are at least 2,000 of them who cannot be used, something should be done. If they cannot be used as officers, why can they not go to the front as privates or as non-commissioned officers? I know numbers of them have been qualified for over a year, and have been waiting to go to the front, but they have not gone, and apparently are not going. It looks to me as if many of those officers did not want to go as privates, and so the country is going to lose their services altogether. I do not suppose that it is altogether their fault. It is quite natural that a young man should want to go as an officer if he can secure a position, but if there are no positions to give, something ought to be done, either to shut off the expense of training more officers, or to see that those who have qualified give their services to the country in some capacity.

Sir ROBERT BORDEN: I do not think that the spirit which my hon. friend seems to have found is one that prevails to any extent. On the contrary, it has been the experience of the Department of Militia and Defence that men have been willing to waive their rank and go to the front in a lower rank.

Mr. TURRIFF: In some cases, yes.

Sir ROBERT BORDEN: More than that, there have been many cases where men holding commissions and rank in the Militia have put them to one side and gone to the front as privates; so that any such aspersion as my hon. friend seems to be inclined to pass upon the young men of the country is altogether unfounded and unwarranted. The experience of the department is that any young man who desires to take a course as an officer will certainly not be the worse for that if he does go to the front. Further than that, the regulations of the department are that in all the training schools throughout Canada the men who shall have precedence are the men who have first volunteered for service overseas. The Canadian force of 300,000 requires, I think, about 10,000 officers. These young men are being trained in schools which are kept up for that purpose, and up to the present we have not found any detrimental results from keeping these schools open. The deputy minister informs me that while the young men are training in these schools,

they receive only the remuneration of ordinary privates.

Mr. TURRIFF: I do not think that the Prime Minister is justified in the tone of criticism which he has adopted towards me for bringing up this matter. I got the information from one of his own officers, and it was published broadcast throughout the country that there were over 2,000 of those men who could not be used as officers. I do not see any harm in pointing out a matter like that to the department. If this officer has not given proper information to the country, that is not my fault.

Mr. MARCIL: I have already had an opportunity during the present session of putting a question to the Prime Minister regarding recruiting. Canadians generally are very anxious to give to the Emipre all the assistance possible in this great war, but when the announcement was made by the Prime Minister that 500,000 men would be recruited, compulsory service had not been adopted in England. Now that the conditions in England have changed, I would ask whether he thinks it will be necessary to go to the full extent of recruiting 500,000 Canadians. We have been told by some very reliable authorities that this could only be done by seriously affecting the economic services of the country, and we can all realize, with our limited population, what 500,000 men leaving the country would mean. With the conditions now changed in England, and, in view of the new legislation adopted there, does the right hon. gentleman think it would be still necessary to recruit 500,000 Canadians?

Sir ROBERT BORDEN: What my hon. friend suggests, I understand, is that because Great Britain is proposing to do more, we ought to take into consideration the desirability of doing less than we at first proposed. We have not taken that into consideration, and we do not intend to depart from the announcement that was made on the first day of January.

Bill reported, read the third time, and passed.

SUPPLY.

The House in Committee of Supply, Mr. Rhodes in the Chair.

Post Office—to pay railway mail clerks for extra services at the ports of Quebec and Halifax in checking incoming British mails, notwithstanding anything to the contrary in the Civil Service Act, $372.64.

[Sir Robert Borden.]

Mr. LEMIEUX: What does this comprise?

Mr. CASGRAIN: This item has been in the Estimates for some years past, and is to provide for the payment of amounts varying from $1.38 to $10, to about thirty post office employees for extra services in connection with the handling of the mails at Rimouski and Halifax. These men are out in all kinds of weather, and it is thought only fair to give them this extra small remuneration.

Mr. LEMIEUX: In the summer, when the steamers arrive at Rimouski, does the department still send the mails out by train concurrently both east and west?

Mr. CASGRAIN: I believe that is so, but I am not quite sure. I will let my hon. friend know on Monday.

Mr. MARCIL: My attention has been called to the possibility of a change being made by the department in the design of the three-cent stamp. It is very difficult for any one, especially a short-sighted person, to distinguish between the two and the three-cent stamp. The three-cent stamp looks just the same as the two except for a mark on it increasing the value of the stamp by one cent. The bank teller where I do my little business, tells me that the majority of his customers put a three-cent stamp on a cheque when, of course, only a two-cent stamp is required; which shows that it is not easy to distinguish between the two. Has the minister considered the advisability of having the three-cent stamp of a different colour?

Mr. CASGRAIN: This matter has received the attention of the department, and we have instructed the contractor to make the stamp of another colour.

Post Office—to provide for the payment of one year's salary to the widow of John Linahen, railway mail clerk, Montreal district, who died on the 22nd March, 1914, from pneumonia, which he contracted while on duty, $800.

Sir WILFRID LAURIER: What is the explanation of this?

Mr. CASGRAIN: On the 23rd of February, 1914, John Linahen was asked to go out on a special postal car with a large quantity of mail matter that had been left over at Bonaventure station, Montreal, on account of a storm. The door of this car would not close on account of the ice, and Linahen protested against the state of the car, but finally consented to go. He caught

a chill while on the car and contracted pneumonia, of which he died a short time afterwards. As he had contracted this while on duty the department thought it only right to grant a compassionate allowance to his widow.

Mr. LEMIEUX: I do not object to his widow receiving a compassionate allowance, but I think my hon. friend, who is a good lawyer, will agree with me that an action could be brought against the company. The railway company provides the mail cars, and has to keep them heated and in a proper condition. As a lawyer, who was in practice some years ago, I would venture the opinion very modestly that the widow has a claim against the company, but not against the department.

Mr. CASGRAIN: Strictly speaking, that may be so. A case similar to this occurred last year. This is what the officers of the department say on Linahen's case:

> There was no heat in this car. The doors could not be closed on account of ice on the floor. The steam coils were inoperative on account of the cold, and it was three or four hours after the train started before it was possible to get the door closed.

It may be true that technically the widow has a claim against the railway company, but I doubt very much whether she would be able to recover, or whether it would pay the Government to take action against the company. There was no fault on the man's part, and I think we are only doing what is right in granting his widow this allowance.

Sir WILFRID LAURIER: There is no objection at all to the allowance being granted, for the case seems to be a deserving one. But I see in these Estimates half a dozen, if not a full dozen, cases of a similar nature. All these may be meritorious, but I never saw the Estimates so loaded up as they are this year with items of this character. Is there any rule followed by the Government as to granting gratuities? The country is, of course, disposed to deal generously with public servants who lose their health or their life in the service, but there ought to be some rule in cases of this kind, and I would particularly call the attention of the Minister of Trade and Commerce to this matter, because he was very severe on this point in times gone by.

Sir ROBERT BORDEN: My right hon. friend will remember that many of these items are items which we thought it only proper to include in the Estimates by reason of some of our public servants having lost their lives in the fire at the Parliament buildings. The Government gave very careful consideration to these cases, and on the whole we thought that the slight measure of assistance to their families which we proposed would commend itself not only to the members of the House, but to the country.

Sir WILFRID LAURIER: The circumstances to which my right hon. friend has alluded, of the death of certain officers of the House in the unfortunate fire which took place at the Parliament buildings, only emphasizes the need of a universal rule in cases of this kind. These men lost their lives under very dramatic circumstances, and, so far as it goes, nobody objects to the provision which has been made for granting their families some compensation. But other gratuities are provided in the Estimates, and these cases, though not so dramatic, may be just as deserving. In the new Supplementary Estimates, which we have not yet considered, and which were laid on the Table only a few days ago, I see the following:

3 p.m.

> Gratuity to the widow of the late J. J. Brennan accidentally killed by the elevator at Postal Station "H" Montreal, $1,000; Gratuity to the widow of the late H. Bélanger who was killed while at work at Lake Timiskaming dam, $1,000: Gratuity to John Sloan who was seriously injured while at work at Lake Timiskaming dam, $1,000; Gratuity to Onésime Chayer who was seriously injured while at work at Lake Timiskaming dam, $500; Gratuity to the widow of the late William Dunmore, engineer, Vancouver examining warehouse, accidentally killed by the passenger elevator, September 3, 1915, $1,000; Gratuity to the widow of the late J. E. Bussières, accidentally killed by the elevator at the Custom House, Quebec, $4,000.

I do not criticise this item. The gratuities may be well deserved as the servants may have lost their lives or been injured under circumstances which entitled them to the bounty of the Crown. I would like to know, however, if there is a system, or if each case is dealt with arbitrarily.

Sir ROBERT BORDEN. The very considerations which my right hon. friend has urged—and the force of which I do not deny—were considered by the Government, and the Minister of Justice was asked some weeks ago to investigate the Compensation Acts in the different provinces of Canada, to ascertain whether or not by the application of those Acts in the various pro-

vinces, some principle might be arrived at upon which the Government could work. I quite agree that we should act, not arbitrarily, but upon some principle, and I understand the Minister of Justice will make a report as to what may be gathered from the various provincial Compensation Acts, which would be of assistance to us in that way. The difficulty I think has been that those Compensation Acts differ rather widely from each other in their provisions, and it has not been the easiest task to arrive at a working principle which could be made applicable in all cases. For example, if we adopt the scale fixed in one province, we might find that somewhat in excess of or very much less than the scale adopted in another province. The question has been whether we should apply in each province the provisions of the Compensation Act of that province, should there be such an Act, or whether we should work out from all the Acts some fair scale which could be applied in all cases.

Sir WILFRID LAURIER: Perhaps the Minister of Justice has something to say upon the subject.

Mr. DOHERTY: I do not know that I can say much more than has been said by the Prime Minister. I first approached the question rather with the idea of applying in each province to our employees the Compensation Act of that province; but as the Prime Minister has pointed out, we found that that would produce the result that, as our employees are scattered throughout the Dominion and as the accidents that might happen to them resulting in death or in injury, would happen under very similar circumstances, if a man happened to be in one province, we would be paying him less than if he happened to be in another province. What calls for some consideration is whether we should select the system used in some one province and make it for our purposes generally applicable, or whether we should make something of a compromise of the different rules laid down in the various provinces and make that apply generally to our employees who may suffer injury or death in the performance of their duties, so that they will find themselves in the same position towards the Government as that in which an ordinary employee finds himself towards his employer under a General Compensation Act. I think the proper course would be for us to adopt a system of our own, selecting the most commendable features of the different Acts, and then we would be in a position to treat all our employees in all parts of the Dominion upon the same basis.

Sir WILFRID LAURIER: I repeat that the matter should be dealt with systematically, and the system ought to be that any servant of the Government who meets injury or death in the performance of his duty is entitled to compensation. The rate of compensation should be according to his salary. That is the rule adopted generally, and, I think, if adopted by the Government, it would meet the requirements of the case. We must have a system of our own, and the Minister of Justice, by comparing the different systems, can come to some decision. Instead of these different payments being placed in the Supplementary Estimates, if they are to be made at all, they ought to be made under a well understood system.

Mr. LEMIEUX: I have something to say about other gratuities, but I shall wait until we reach the Supplementary Estimates.

Mr. KNOWLES: It is true that the different provinces have Compensation Acts by which they allot to those who are injured varying amounts according to degree of injury. Inasmuch as this is a matter within the control of the provinces, I think the proper course would be to deal with each case under the Compensation Act of the province in which the accident occurred. It is true that you have the anomaly that a man who suffered injury or death would secure more for himself in case of injury and for his wife and children in case of death if he happened to be in one province than in another, but such things are bound to occur. The railways operate in the different provinces and they settle the claims that arise in each province according to the rules laid down by the legislature of that province, and I do not think any one considers that to be an anomaly or that that system should be done away with. Inasmuch as the matter is one of provincial concern, and a matter in which the province settles the quantum in respect of all the circumstances in the province in which the injured party lives, it may be right that the system should be a varying one. Perhaps in British Columbia a larger sum might be an equitable and just settlement that in one of the eastern provinces where living is much cheaper. I do not

think he blanket rate would be the best one. The Minister of Trade and Commerce can bear me out that some months ago I presented this view to him in a friendly way, in the same way as I am making these remarks now, and he has been good enough to give the matter consideration, although no decision has yet been arrived at. The matter concerned the employees in our government grain elevators, in which men in my own town have been injured; and one at least killed. If they are working for the Canadian Pacific Railway Company, or the Ogilvie Elevator Company, or any of the other elevator companies, they get compensation under the Workmen's Compensation Act. Surely, none of us who are voting the public money would wish our employees to be treated less generously than the employees of those companies, and it seems that the most simple and just way would be to extend the Exchequer Court Act to give the judge of that court power to deal with the matter, and if he thinks fit, to take cognizance of the Workmen's Compensation Act of the province in which the matter arises. Whether or not the Exchequer Court Act would have to be amended would be for the Minister of Justice to decide. If a province has not a Compensation Act, that is its own business, because it has its provincial rights and is supreme in that sphere. Just as the Canadian Pacific Railway Company is a business concern and conducts its business throughout the various provinces, complying with the legislation in the respective provinces as such legislation affects its business, so this Dominion Government should act, and I would be pleased if some such arrangement could be arrived at in the near future.

Militia and Defence—Dominion arsenal, $100,000.

Sir ROBERT BORDEN: The hon. member for Moosejaw (Mr. Knowles) made inquiry as to punishment administered to certain privates of the 128th overseas battalion. As the hon. member was not here yesterday, I might repeat what I said with regard to the administration of field punishment No. 1:

Although there is nothing in our Canadian regulations dealing with the subject matter, the British regulations entitled "Manual of Military Law" page 721, deals with field punishment. Sub-paragraph (d) of paragraph (a) reads: "When in irons a soldier may be attached for a period or periods not exceeding two hours of any one day to a fixed object, but he must not be so attached during more than three of any four consecutive days, nor during more than twenty-one days in all."

The memorandum which I have before me continues:

Our officers commanding have applied this regulation notwithstanding the fact that it is no more applied in the British army. They have done it through ignorance and over zeal. The Adjutant General has given instructions that all kinds of field punishment, excepting detention, are not to be applied for the future.

It is therefore hoped that there will be no further recurrence of incidents of this kind. So far as the particular case is concerned, the report that we have, after investigation by the Provost-Marshal, is as follows. It comes from the District Officer commanding military district No. 1:

Reference Adjutant-General's wire 27th instant and further reference my reply same date are field punishment being administered by O.C. 128th Overseas Battalion. Case has been investigated by Provost-Marshall who reports that Privates Anderson and Graham whilst undergoing detention were given field punishment No. 1 for a period of approximate]y fifty minutes at the expiration of which time medical officer reported no bad effects. The Provost-Marshall's investigation also brought out the fact that Lieut.-Colonel Hawlett has administered on different occasions field punishment in a mild form. Full explanation was however made to him with reference to this form of punishment and instructions given him that it was to be discontinued at once and that in future he was to award detention instead. From the Provost-Marshall's investigation it would seem that aggravated cases only were dealt with in this manner. Please advise me if you wish any further action in this connection.

Mr. KNOWLES: I am very thankful to the Prime Minister for having had this matter looked into. I am quite sure he would be even more opposed to cruelty to any soldier than I would. We have had the matter cleared up so that there will be no shadow over the regiment on this account, and this form of punishment will be stopped. Therefore the purpose of the inquiry has been attained. The Prime Minister spoke of only two soldiers, but the names of three were given. I suppose that is not worth bothering very much about.

Sir ROBERT BORDEN: Only two are mentioned, but as other cases are alluded to I imagine that all have been considered.

Mr. KNOWLES: I assume so. I should like to know where these boys are now. I am told that pending this investigation two of them were taken out of Moosejaw and put into the Regina 68th, then on the eve of departure, and that they are now across the ocean. If that is correct, of course their evidence could not have been taken.

Sir ROBERT BORDEN: I really have no information on that point, but I will make inquiry.

Mr. KNOWLES: I do not ask for that. I trust the regiment in Moosejaw will be even more successful than it has been and that the bringing of this matter before Parliament in this way will have a good effect. I understand that these are the only cases in Canada in which an officer has administered this punishment.

Sir ROBERT BORDEN: No. I explained that there was a case in Trenton, N.S., where the same punishment was administered. An investigation was held, and the same direction was given to the commanding officer. Indeed, the directions have been made general to all commanding officers in Canada, that this form of punishment shall not be administered in the future. I entirely agree with the Adjutant General that these instructions should be issued. It will be the duty of the proper officer of the Militia Department to see that these instructions are carried out.

Mr. KNOWLES: In this field punishment No. 1, are the arms suspended above the head?

Sir ROBERT BORDEN: It is expressed in general terms in what I read a moment ago:

> When in irons a soldier may be attached for a period or periods not exceeding two hours of any one day to a fixed object, but he must not be so attached during more than three of any four consecutive days, nor during more than twenty-one days in all.

My hon. friend will find in Hansard of yesterday an account of the punishment administered to a soldier in Trenton. His feet rested on the ground but his hands were attached to an object above his head. He remained in that position for an hour. There were no ill physical effects except that, as he stated himself, his arms felt quite tired. There is no particular description in the report of the officer commanding military district No. 10, but only the general reference to field punishment which I have read.

Mr. KNOWLES: The rumour which I reported to the Prime Minister to the effect that the man had fainted is neither confirmed nor denied?

Sir ROBERT BORDEN: That rumour would hardly be consistent with the report of the officer, to the effect that these soldiers were given this punishment for a period of approximately fifty minutes, at the end of which time the medical officer reported no bad effects.

Mr. MARCIL: Are any other punishments provided for offences on the part of Canadian soldiers?

Sir ROBERT BORDEN: The order given out is that they shall be punished by detention, but not in any other way.

I desire to make answer to a question asked of me by the hon. member for Regina (Mr. W. M. Martin) with reference to the case of Private Darrach of the 68th overseas battalion, who was in the hospital and who died, and the members of whose family were not present in time to see him before his death. The report which I have from the Adjutant-General, which is addressed to the deputy minister, is as follows:

> With reference to your minute of the 2nd instant, attached herewith, it is pointed out that a report was called for some time ago regarding this matter.
>
> On April 4, the Officer Commanding Military District No. 10 forwarded a copy of a letter from the Grey Nuns' Hospital, Regina, which states in part:
>
> "I must admit that there was a complaint from the parents of Private Darrach. But when the patient arrived at the hospital his condition was that of an ordinary influenza case, his temperature being 101 degrees raising to 104 degrees, and again coming down to the same point, with no other complications. The next morning his condition changed for the worse, shortly before his death, hardly giving us time to notify the doctor and the family, these taking a whole hour before reaching the hospital. In this case we understand that the parents must have felt very much grieved, and this excited them to lay the said complaint; but any one who saw the patient and ourselves were just as astonished at the sudden turn, which could not have been prevented."
>
> The description of this man's illness and death as taken from the official medical board, held on January 29 last, at Regina, substantiates the report from the hospital as to the fact that this man's death was very sudden, and that up to the hour before his death he was not considered to be seriously ill. The report is as follows:
>
> "That he was taken sick on January 24, 1916, and was given usual treatment for La Grippe.
>
> That condition did not improve and he was admitted to barracks hospital at 4 p.m. Tuesday, January 25, 1916, and was seen by Captain Morrison about 6.30 p.m., when he was detained in hospital and treatment continued.
>
> That on January 26, 1916, at the hour of 9.30 he was examined by Captain Coles and treatment continued; temperature, a.m., 101-5.
>
> Temperature p.m., 102-6. As his condition remained unimproved on this evening he was removed to Grey Nuns' Hospital at 7 p.m. After being placed in bed it was found that his temperature was 101-4.

That he was examined by Doctor Wallace at 11 a.m., January 27, 1916, when it was found that influenza was present, but gradually becoming worse. Temperature, 7 a.m., 104-2; pulse, 100; respiration, 24.

The disease pursued the usual course until 11 a.m., January 28, 1916, when heart failed. He became cyanosed. Pulse became imperceptible and he died at 12 a.m. same date in spite of temperature 100-4, pulse 90, respiration 30."

(Sgd.) W. E. Hodgins,
Major-General,
Adjutant-General.

Mr. TURRIFF: It seems to me that when his temperature was ranging up to 104 there was great carelessness on the part of the Militia authorities or of the doctors in charge that this man's people were not notified. I wonder what degree of temperature would be necessary before they would notify the relatives? The report that the temperature went up to 104 degrees carries condemnation on its face. Any one who knows anything about fevers or about temperatures knows that his relatives should have been notified when he was in that condition.

Sir ROBERT BORDEN: The temperature does seem to have been very high.

Mr. TURRIFF: There is absolutely no excuse for a thing like that.

Mr. OLIVER: In reference to the punishments inflicted, no doubt the committee highly approves the decision of the Government not to permit such punishment in future. May I ask whether any consideration has been given to the officers who inflicted these punishments?

Sir ROBERT BORDEN: I have not consulted the Adjutant General with regard to that; there has not been an opportunity of doing so. The punishments were authorized under the British War Office regulations, which are applicable to our force. It is not usual to administer such punishments in Great Britain, and they will not be administered here in the future. The punishments do not seem to have been attended with any ill effects to the physique of the young men, and I do not know under the circumstances whether the Adjutant General would recommend any disciplining of the officers or not. I shall, however, consult him as to that.

Mr. OLIVER: I take the opportunity of expressing the opinion that while the officers had the authority of the regulations enabling them to inflict this punishment, the fact that the regulation had become obsolete in Great Britain was evidence of a change in conditions and opinions that an officer properly appreciating his position and responsibilities would surely have taken notice of. In Canada, where conditions are so far removed from those that prevail in military circles in England, an officer who would exercise the authority given by the regulations to that extent would seem to have shown that he was not the man for the position; that there was error in judgment in placing him in that position, or that, at any rate, after his having committed that error in judgment it would be a mistake to continue him in the position. It is not possible to lay down rules and regulations for the conduct of officers, especially commanding officers under all circumstances. If an officer does not show that he has judgment over and above what is laid down in the regulations, it seems to me that he demonstrates that he is not the man for the position. The Government would be well advised to take that into consideration.

Sir ROBERT BORDEN: It is stated in the report which has been made, and which I read to-day as well as yesterday, that these incidents doubtless occurred through ignorance of the officer that the particular form of punishment administered was no longer used in Great Britain. It appeared in the regulations, and on the strength of the regulations they felt entitled to administer that punishment. Further than that, so far as the present case is concerned, and also, apparently, so far as the cases in the West are concerned, there had been very grave breaches of discipline. I do not know as to the particulars of the western cases.

Mr. KNOWLES: It is not very clear that there were any grave breaches of discipline in the western cases.

Sir ROBERT BORDEN: I am merely referring to the report, which says that the breach of discipline was flagrant, or something of that kind. From the Provost Marshall's investigation it seemed that aggravated cases only were dealt with in this way. In the Nova Scotia case, a man while under detention escaped, remained away from his regiment for about two weeks and then returned. He had been guilty of six distinct offences within a period of four weeks previous to that. It was, therefore, regarded as a very aggravated case, and the commanding officer administered this punishment.

Mr. TURRIFF: In the case of an investigation of this kind, is it the officer complained of who investigates and makes the report?

Sir ROBERT BORDEN: The Provost Marshal made the investigation, not the officer in command. The investigation is made under the direction of the officer commanding the military district.

Mr. OLIVER: The Prime Minister has not so far been good enough to say whether the Government has any intention of going into this question of the fitness of these officers for their positions or the propriety of administering some form of punishment.

Sir ROBERT BORDEN: Perhaps my hon. friend did not understand what I said with regard to that. I stated that I would consult the proper officer of the department, who in this case is the Adjutant General. I would ask the opinion also of the Chief of the General Staff, General Gwatkin, who is an officer of long experience and sound judgment, as is, indeed, the Adjutant General himself.

Mr. OLIVER: The matter is very far reaching. In our present condition, when we are attempting to enlist the active service and therefore the sympathy of most of our people in military affairs, such circumstances as these, which are very foreign to our ideas of right and justice, and so very foreign to custom, have a very prejudicial effect. Their tendency would be to prejudice the public mind very greatly against military service. Cases having occurred, it would seem to me that something should be done to demonstrate to the public that such conduct is absolutely contrary to the policy of the country, in military as well as in civil affairs.

Sir ROBERT BORDEN: We have not yet the full report of this investigation, but only a summary by wire. It is possible that some recommendations may be made by the officer who is charged with the duty of investigation. My hon. friends will remember what was said by the hon. member for North Simcoe (Mr. Currie) last night, that while 99 per cent, or 999 out of 1,000, may be the very best men you can find, you do occasionally find in a regiment a man who habitually offends against discipline and whose example to the other men in the regiment is very detrimental indeed. Notwithstanding that, instructions have been given that this particular form of punishment, which at one time prevailed, but which has now become obsolete in Great Britain, shall not be administered in the future in Canada. I really cannot say anything more about the officers than what I have stated. A consultation will be had with the proper officers of the department, and their view of the conduct of those who are responsible for the administration of punishment on these occasions will be ascertained. Considering that we have enlisted 320,000 men, who have been trained in Canada during the past eighteen or twenty months, there have been very few instances of anything like this. At the moment I cannot recall anything other than the few cases in the West and a case in Nova Scotia. So in that respect I think, perhaps, we are entitled to congratulate ourselves that so few incidents of a regrettable character have occurred.

Mr. KNOWLES: While it is true that there may be 99 per cent of the men good and 1 per cent bad, it is also possible that there may be a certain percentage of our officers who are not the highest type of officers. As to this punishment being set out in the field regulations, I do not think there are many officers who would hide behind that. I have no doubt that the same field regulations say that if a man deserts he should be shot. If you are going to say that you should go by the letter of the bond, it would be as much a justification for shooting boys who desert—and some of them, nice boys, do desert—and it would be preposterous to say that the field regulations were in force to that extent, I should think that the very word "field" regulations would be enough to convince any man that, in a city like Moosejaw, it is not necessary to adopt such regulations as you would at the salient at Ypres. I should think that the field regulations were made for the firing line. No mention is made in the report, of the young man named O'Brien. I know that the Prime Minister has only a telegraphic report at present and it may be that this case may have been overlooked in the telegram. I see by the press that a meeting of the battalion, or something of that kind, was held, and a vote was taken to the effect that they would stay by the Colonel, which to my mind is not a good sign. You will always get men who will vote for their colonel, especially that kind of a colonel. There are not many who would desire to have a taste of the cast-iron wheel to which the men were

tied, and naturally they would think that, all things considered, they had better vote for the colonel as long as he was colonel. The commanding officer, whose name I have never mentioned, may be an honourable officer. He said in a public address in the city of Moosejaw that he has been stabbed from behind. I am not going to enter into any controversy with him, but I will say that I am more convinced now than I was when I first mentioned it that I was discharging my duty when I brought this matter to the attention of the House, and I have no reason to doubt that the address he is reported to have made in Moosejaw last Sunday night referred to my remarks. It was not an utterance an officer should have made. I have my duty to perform, and he has his. So far as I have had any personal relations with him, they have been of unalloyed friendship. I know him very slightly, because he is a stranger in our city. When will the full report likely be received in Ottawa?

Sir ROBERT BORDEN: We expect it some time in the early part of next week.

Mr. OLIVER: Last night the Prime Minister referred to an investigation in regard to the Ross rifle. Is that report available?

Sir ROBERT BORDEN: I think the report could not be brought down; it is of a confidential character.

Mr. OLIVER: Was it a British or a Canadian investigation?

Sir ROBERT BORDEN: It was under the direction of General Alderson himself, and was made by officers appointed by him for the purpose.

Mr. WILLIAM CHISHOLM: On April 26 some questions were answered with reference to the employment of Mr. J. A. Spidal as recruiting officer in the county of Kings. The answer was that he had been in the employ of the department from November 9, 1915, until January 4, 1916. My information is that he is at present at Berwick in command of a detachment of the 219th Battalion, and it is said that he is still in the employ of the Government and is receiving military pay. I am also informed that he has been wearing his uniform and, having been nominated as the Conservative candidate for the legislature, he has recently been attending Conservative meetings in his uniform. It would appear that perhaps there is a misapprehension somewhere. I desire to know if the statement is correct that he has not been in the employ of this Government since January 4, 1916, and if he has been disporting himself in a military uniform while not in discharge of any duties as an officer?

Sir ROBERT BORDEN: I have no personal knowledge of the matter. The answer given was communicated in the usual way by the officers of the department. The deputy minister will take a note of the question and give the information later. So far as concerns the question of engaging in political activities, I do not understand the rule of the department or of the War Office to debar a man from becoming a can- a candidate.

Mr. WILLIAM CHISHOLM: I did not say that.

Sir ROBERT BORDEN: The other day I had an application from the Premier of Quebec asking for leave of absence for an officer who is on active service. The request was that he should receive leave of absence for 30 days in order that he might attend to his duties as a candidate in the general elections pending in the province of Quebec. We at once gave him leave of absence for that purpose, and he was relieved of his military duties in order that he might attend to matters requiring his attention as a candidate. The same rule will be observed in regard to all persons on active service, whatever their political affiliations may be.

Mr. WILLIAM CHISHOLM: No objection is taken to his being a candidate, or to his taking a part in politics. He has a perfect right to do so if he so desires. The reason I mentioned the matter was because of an answer to a question on 26th April, to be found on page 3219 of Hansard. The question was: "Is it the intention of the Government to continue to employ Mr. Spiddel in such service?" The answer was, "No." A previous question was: "When was he appointed?" The answer was: "November 9, 1915." Another question was: "What rank does he hold, and what pay does he receive?" The answer was: "No militia rank. $3 per diem from November 9, 1915, to January 4, 1916." The inference is that on January 4, 1916, he ceased to hold his position as recruiting officer. In respect to his rank, I am told that he has taken a lieutenant's course at the Royal School of Infantry at Halifax, and that that answer is not correct. It may well be that the other answers were incorrectly given, not intentionally, of course, but through

some misapprehension. It is alleged that this man is now in Berwick in command of a detachment of the 209th Battalion. It is also stated that he still continues in the capacity of recruiting officer, and is drawing pay as such. In support of that statement, the evidence is that he has been going through the country in his uniform, and that he attended a meeting at Kentville and was chairman on that occasion. That, however, is only mentioned in passing. I shall be very glad if the minister would get this information, and furnish it as soon as convenient.

Sir ROBERT BORDEN: I will have inquiry made, and give the information to my hon. friend when the Bill is in committee.

Mr. TURRIFF: I noticed that the acting minister stated that it was not his intention, and that it had not been the intention of the Minister of Militia, to allow political influence to be used in connection with the department. We all know perfectly well that there has been politics in the Militia Department, and in connection with the army, from the beginning of the war until the present moment; we see it manifested all over the country. I do not say that it would be possible for the Government to do away with it altogether, but there is no use in shutting our eyes to the fact that politics cut a very large figure in connection with the running of the Militia Department.

Sir ROBERT BORDEN: In what respect?

Mr. TURRIFF: Let me give my right hon. friend an instance. A battalion is being organized in Prince Albert, and an hon. member of this House is the lieutenant-colonel, while his son-in-law is second in command, having been put over the head of a man who had had military experience. If that is not politics, I do not know what it is. But what I got up to bring to the attention of the acting minister was this: A man named Frank Carew, whose father is a member of the local Legislature, is the paymaster for some soldiers located in Lindsay, Ont. He has clerks to do his work, and, while dressed in military uniform, runs his father's office. He is paid by the Militia Department. That seems to me to look as if political influence was at work. I have information of another case. A man named Roenik, a German, draws pay as bandmaster, though he is not the bandmaster; he is too old to attend to his duties or to go overseas, and another man named Heffernan is in reality the leader of the band and bandmaster. In other words, the man who does not do the work draws the pay for it. It strikes me that that savours a little of political influence, and I do not think that that sort of think should be allowed. In my own constituency one man applied for a position as an officer; he is an officer now. He has had a long experience, having been in the Mounted Police force during the greater part of his life, but he told me that another man had been placed over his head—a very good man, a lawyer, and a good supporter of the Government, but with no military experience whatever, while the other man had put in 20 years in the Mounted Police, and was an officer in a local corps long before the war started; yet he was passed over. Cases like these are numerous throughout the country, and I think it would be well if my right hon. friend, the acting minister, would, as far as possible, do away with that sort of thing and not have experienced military men turned down. I am not speaking now so much of political influence, but of men with some military experience being turned down for men who have had no experience. I do not think that that is in the interest of the Militia Department, or in the interest of our army when it goes across the water. Certainly it requires some experience to enable a man to be a good officer when he goes to the firing line. These are just a few cases that have been brought to my attention. I have heard of many more, but I cannot mention them because I do not know more about them. You hear every day of this man or that man being passed over for some one else with political pull but without any military qualifications.

Mr. BURNHAM: I think that in justice to the people of the country the statement of the hon. member for Assiniboia (Mr. Turriff) should not go unchallenged. Take for example the battalion which I know very well: discipline prevents me from mentioning the number. The colonel is a Liberal; the majority of the officers were Conservatives, and there were three applicants for the position. Two of them were Conservatives, but everybody pulled for the Liberal. When I say "pulled" I do not mean that there was any improper pulling done. They wanted to see the Liberal get the position for the sake of the service. There is no use in sending broadcast

through this country the idea that the Conservative party is honeycombed with vice of that description, because it is not so.

Mr. STEVENS: I quite agree with the hon. member for West Peterborough (Mr. Burnham), that this statement should not be allowed to go unchallenged. From Vancouver we have sent three battalions to the front. The commanding officers of these battalions are all prominent Liberals, prominent citizens, and excellent officers. One of them, who is now at the front—the Prime Minister knows him very well; I will not mention his name—has earned the D.S.O. and other distinctions. With regard to the case my hon. friend has spoken of, it is quite correct that the commanding officer had for his second-in-command his brother-in-law; but this was not a case of political influence. He appointed his brother-in-law, not because he was a Liberal, but because he had a liking for him; it was just a little bit of human nature; and the man is discharging his duties in an excellent manner. No one can complain of that; I would not think of suggesting political influence, or that the officer was appointed because he was a Liberal. The brigade commander is also a prominent Liberal and an excellent officer. I have no objection to him whatever. As long as a man can do his duty to the country I do not care a scrap what his politics are, and as far as the district I represent is concerned, I resent the suggestion that politics count one scrap in appointments to the army. I challenge any member to cite one single instance in which I have ever suggested politics in the appointment of officers or in the purchase of supplies in any shape or form. From the day the war broke out I have taken most emphatically the stand that politics should not enter into this war as regards military appointments. It is unwise and unfair to be continually throwing out to the country that our magnificent army is a matter of political patronage; it is not fair, it is not right, and I resent it.

Mr. McKENZIE: The hon. gentleman may resent it; I suppose he has a right to. But let me tell him on my responsibility as a member of this House that military affairs in the province I come from are, if I may use his expression, honeycombed with politics from start to finish, it being purely a matter of political patronage, and I challenge the hon. member or any one else to prove to the contrary. In the county from which I come we have Mr. Douglas, who is president of the Conservative Association for the province of Nova Scotia. He is also one of the local members for the county, and has just as firm a grip on every move in every battalion in Cape Breton as he has in what may be regarded as matters of legitimate patronage.

Mr. DAVIDSON: Did my hon. friend say that Mr. Douglas was president of the Conservative Association in Nova Scotia?

Mr. McKENZIE: I understood that he was.

Mr. DAVIDSON: He is not.

Mr. McKENZIE: If not, a change must have been made in the last few months. He was president last year.

Mr. DAVIDSON: Mr. A. B. Crosby has been president since last fall.

Mr. McKENZIE: Mr. Douglas was the president, at all events, and he is now either vice-president or honorary president. The hon. member for Annapolis knows well the standing that Mr. Douglas has in the Conservative party. I am making no misstatement at all about his position, and if the Prime Minister, either as Prime Minister or as Acting Minister of Militia, will take the trouble of getting some independent information as to how matters are managed in the county of Cape Breton, he will find that they are absolutely honeycombed, to again use my hon. friend's expression, with political influence. We are not looking for anything else; we do not expect anything else; we never get anything else. I say to the hon. member for Vancouver and to the Prime Minister that not one man east of Halifax has received any military prominence since the war broke out, unless he was a supporter of the Conservative party and identified with the cause. We have one gentleman in Halifax of whom I am very proud. He bears the name of the Prime Minister, and is a well-recognized Liberal. His ability prominence and personality have brought him forward; they could not keep him back; but he is the only Liberal in Nova Scotia who has received any prominence whatever since the war broke out. I challenge any one to name any other man who has come to the front in any way whatsoever in the province of Nova Scotia, unless he was well recognized to be in harmony with the Government of the day.

We are told that there is no political influence in the matter of supplies for the troops. I asked some questions a few days

ago as to supplies for the 94th at Sydney Mines and North Sydney, and I got the answer that the officers went around and got bids from different parties for the supplies. I have the names of those who furnished the supplies, and I should be glad to show them to the Prime Minister; he knows some of them. There is not a man on the list but got his name down through political influence, either directly or indirectly; there is not a prominent Liberal on the list at all, and the men who supplied the goods got their money direct from the department without there being any competition. We are not complaining of that; we are not looking for anything else. The acting minister—perhaps not he, for he has not said very much about it, but the Minister of Militia—used to say boastfully that there was no such thing. If he had kept quiet about it we would say nothing, but we cannot listen to such boastful declarations when the truth is absolutely to the contrary. We do not expect any patronage to come to us in Nova Scotia in public works or railway matters, or anything of that kind, so long as we are in opposition; and that is precisely the policy that has been followed in Nova Scotia in regard to military matters as well. It is the absolute truth that only by some unavoidable accident has anything fallen to the lot of a Liberal. On the other hand, the Liberals have joined the ranks and are doing their part just as well as the others; men and women, Liberal and Conservative, are connected with every patriotic society, doing what they can; but when it comes to preferment or an appointment to a military position the line is strictly drawn; there is no communication between the Jews and Samaritans in things of that kind. We do not complain, but we want hon. gentlemen to keep quiet, and not make vain and improper and unsupported boasts about these things.

Mr. STEVENS: Does my hon. friend say my remarks were improper?

Mr. McKENZIE: I am referring to no province but my own. Whatever my sins may be, I keep to facts within my own knowledge. But if I were to judge by general politics, I should say that Vancouver is about as corrupt as they make them.

Mr. STEVENS: I challenge my hon. friend to prove that.

[Mr. McKenzie.]

Mr. McKENZIE: On general grounds, I prefer to take the declaration of so distinguished a Conservative as Sir Charles Hibbert Tupper, who says that
4 p.m. the Conservative party in that province is steeped to the lips in corruption. I leave the issue between that distinguished member of the Conservative party and my hon. friend. I do not wish to find fault, especially as the Prime Minister is head of the department for the present, and is perhaps not so familiar with the details as the real head might be. I was in the province of Nova Scotia a few days ago when some complaints were brought to my notice and I wish, in the kindliest way, to bring them to the notice of the Prime Minister. I have reference to the 185th Battalion, which is now in camp at Broughton, a small place in a remote part of the county of Cape Breton. I do not quite understand why they were sent there. It is not a convenient place for a railway; there is no proper sewerage; there is no water system at the place, and it is practically in the woods where the land is not even cleared and the tents, I am told, are in amongst stumps and stones and uncultivated land. The men are complaining that they are not properly looked after and that they are not well fed. I was also told by my Roman Catholic friends that although the soldiers are there for several weeks, over several Sundays, no provision at all has been made for any Roman Catholic services. As they are complaining about these things, I bring them to the notice of the minister in the best manner that I can and with as little publicity as possible, and I trust that these men shall be properly taken care of and housed and well fed, and that their spiritual wants will be looked after as they ought to be.

Sir ROBERT BORDEN: Just a word or two with regard to what some of my hon. friends have said. There seems to have been an impression that the Minister of Militia spends his time making appointments amongst the force of almost 140,000 now under training in Canada. The appointments as I understand, are recommended by the Officer Commanding, and the Minister of Militia very often does not even know the names of the officers who are recommended. He takes the view of the officer on the spot as to those whom he should recommend, and he does not concern himself more about the matter, because it would be impossible for him to make personal inquiry into the officers who are selected by the commanding officers

of the different battalions to fill the various positions.

Mr. MARCIL: Who authorizes each battalion and selects the commanding officer?

Sir ROBERT BORDEN: That is done from headquarters.

Mr. MARCIL: By the Minister of Militia?

Sir ROBERT BORDEN: I presume the minister acts upon his own judgment and takes the report of the proper officers of his department as to the competency of the selection which is presented for his approval. My hon. friend (Mr. McKenzie) has referred to some matters in the province of Nova Scotia. I do not know very much about the details, but I am informed that the son of the hon. member for Pictou has been appointed as the adjutant of one of the battalions there. I am also informed that Mr. Rolston, who was the opponent, I think, of the hon. member for Cumberland (Mr. Rhodes) at the last election, has been very rapidly promoted, and that Col. Parsons, who was appointed to be second in command of the 185th Battalion, is a very strong Liberal. The remarks of the hon. member for North Cape Breton and Victoria are rather surprising in view of the fact that not long since a resolution was passed, I think, at a Liberal convention in Nova Scotia, giving the credit for the organization of the Highland Brigade in Nova Scotia to the Hon. Mr. Murray, premier of that province. If Mr. Murray has imbued himself with the political aspect of the situation to the extent which my hon. friend suggests, I admit that my hon. friend's remarks which must be taken as an animadversion upon him, are well founded, but I do not believe that Mr. Murray's connection with such matters has had anything more to do with politics than the connection of the Minister of Militia. It is a fact as reported to me that great credit is taken by the Liberal party in Nova Scotia for the organization of the Highland Brigade. Yet my hon. friend stands on the floor of this Parliament and says that the whole thing is honeycombed with politics. If you put those two observations together, you have a result which is not flattering to the patriotic attitude of hon. gentlemen on the other side.

The battalion at Broughton is under the command of an officer whom I do not personally know except that I saw him in Nova Scotia last autumn, but I have the best possible report as to Col. Day. He is, I am told, a very able man, a very patriotic man and a man who, I believe, would be inspired by no other consideration or feeling than the desire to do his duty. I have not the slightest idea as to what his politics are, nor have I ever inquired. I would like to say that if the province of Nova Scotia has been honeycombed, as my hon. friend suggests, by partisan considerations, in connection with military affairs, it is different, I believe, from every other province in Canada, because I know that in other provinces gentlemen who are associated with the Liberal party have been promoted to the very highest commands. That is true in the province of Ontario, and many illustrations could be given. As a matter of fact, I venture to think that for every complaint made with regard to some gentleman having been passed over because he happened to be a Liberal, I could give two complaints from Conservatives who thought they were passed over in order that Liberals might be appointed in their stead. In the province of New Brunswick we appointed a member of this House, Col. McLean, to a very important command. He was at Valcartier last autumn, and he has been rendering very good service. In the province of Ontario the highest commands are in many instances given to gentlemen who have a very high standing in the ranks of the Liberal party, and I desire to affirm to this committee my most sincere belief that from the first of this war up to the present time, the Minister of Militia and Defence has never in a single instance been actuated by any political consideration in any appointment that he has made. That is my sincere belief, from what I have seen and known of his conduct during this war. With regard to the appointment of a Catholic chaplain to the 185th Battalion, I understand that Father Gillis has been appointed.

Mr. McKENZIE: The Prime Minister says that there are no politics in the department, and that the minister is guided in his appointments by the recommendations of the officer in charge. I would like to call to the attention of the Prime Minister that Toryism gets in its work in making the recommendations to the officer in charge. The Tory politician in my county is supreme so far as military matters are concerned, and he says to the officers: If you do not do my bidding, off goes your head. I will point out to the Prime Minister—and he can look up the record—three

men who were rather independent. Col. McRae, of the 94th Battalion, would not play second fiddle to John C. Douglas. Off went his head; he was discharged. Major Gillis, an independent officer and a good Scotchman, would see John C. Douglas in Jericho before he would be pulled around by the nose by him, and off went his head. Major McLean, who was in charge of the 94th Battalion at North Sydney, was known to be a Liberal. He would not be dictated to by John C. Douglas and his minions, and off went his head.

Mr. MARCIL: Who is John C. Douglas?

Mr. McKENZIE: He is the Tory manager in the county of Cape Breton. The men who are in charge and who are human enough to think that it is nice to stay in office, do precisely what John C. Douglas tells them to do, and through the medium of those men the Tory appointments come to the minister, and he can flap his holy wings and say: I know nothing about the matter; it is done absolutely without any bias at all. But he knows that nothing can come to him but what is absolutely lined with Toryism.

Mr. STEVENS: I cannot allow the remarks of my hon. friend (Mr. McKenzie) to go unchallenged. It has been whispered and insinuated many times regarding British Columbia. The leader of the Opposition (Sir Wilfrid Laurier) laughed with considerable glee when the hon. member for North Cape Breton (Mr. McKenzie) made the remark. But I challenge the right hon. gentleman and the hon. member for North Cape Breton to cite a single sentence falling from the lips of Sir Charles Hibbert Tupper in which he cast any reflection whatever upon a single act of the Administration at Ottawa or upon a single act of mine as the representative of Vancouver in this House.

Mr. McKENZIE: I shall be glad to do so if he will give me the time.

Mr. STEVENS: Do so. I will take my seat to give the hon. gentleman his opportunity.

Mr McKENZIE: I have not the papers before me, but on Monday—

Mr. STEVENS: Sir Charles Hibbert Tupper did consider it his duty to take the platform against the Provincial Government. With that I have nothing to do, and this House has nothing to do; the people of British Columbia will judge of that. But by not one single word has Sir Charles Hibbert Tupper cast any aspersion, direct or indirect, upon this Government or upon any administrative act of this Government. And I want to say something further for the consolation of my hon. friend the leader of the Opposition and the hon. member for North Cape Breton, and that is that the only corruption that has come to light in the last election is the wholesale plugging on behalf of Mr. M. A. Macdonald, the Liberal hero in Vancouver. They brought men by the score from Seattle, self-confessed pluggers, and voted them for Mr. Macdonald, the Grit candidate. That is the only corruption that has been shown in the city of Vancouver in connection with the recent election.

Mr. OLIVER: Will the hon. gentleman inform the House what this House has to do with that?

Mr. STEVENS: An aspersion has been cast upon the province of British Columbia by the hon. member for North Cape Breton, and even at the risk of being out of order I would resent it on the floor of this House; and I think I have a right to do so when these statements are made here. For months and months the papers of eastern Canada have been circulating false and slanderous stories regarding British Columbia, and it is about time some one said a word to the people of the East in regard to my province. If time permitted, I could convince any reasonable member of this House that conditions in British Columbia, politically and otherwise, are a credit to the province and to Canada as a whole. Unless an hon. member is prepared to bring some specific charge or statement before the House, he should respect the representatives of the people from that province.

Mr. LOGGIE: I had the pleasure of visiting Halifax last fall, and while there I called upon several of the prominent mercantile establishments. I was told by a reputable firm that when ships of the imperial navy came into port at Halifax, tenders were publicly asked for supplies for the ships, but when supplies were needed for a Canadian ship, a few people were selected to tender. In my opinion, this way of buying supplies should cease; in this matter, we ought to attain as high a standard as the Imperial authorities. The firm that gave me this information is a reputable firm, and I think its testimony is conclusive evidence that, to some extent at any rate, there is a disposition to carry

on the abominable practice of petty politics and party patronage in the purchase of war supplies.

Sir ROBERT BORDEN: That relates to the Department of the Naval Service, and so I cannot pretend to be familiar with the matter; but I should be surprised to learn that the statement of my hon. friend has any foundation whatever. If the supplies for British ships are purchased through the Department of the Naval Service it is inconceivable that they should have one system for British ships and another system for Canadian ships. To what Canadian ships does the hon. member refer?

Mr. LOGGIE: I refer to ships under the authority of the Canadian Naval Department, but the ships to which I refer as publicly asking for tenders are under the authority of the Imperial Government. They are, as I understand it, patrolling out of New York and defending the route to the British Islands. Their supplies are purchased in a different way from those required by ships under control of the Canadian Government.

Sir ROBERT BORDEN: So far as transports are concerned—and I do not know whether the hon. gentleman has reference to transports or not—everything is managed by a gentleman who was formerly associated with the Canadian Pacific Railway, Mr. A. H. Harris, who has been acting as overseas director of transport. And, if I am not very much mistaken, the firm employed as ships' agent for the transports, is a strong Liberal firm. As to the small patrol ships, I do not know how they are supplied, but the Minister of the Naval Service will know and I will direct his attention to the observations of my hon. friend.

Mr. OLIVER: I have never troubled the House very much with mention of politics in the administration of public affairs, and shall not do so now; but, as the question has been raised concerning influence in military appointments, I may take the opportunity to read from the Edmonton Journal, a Conservative newspaper, something which may throw some light on the matter. This is from the Journal of the 6th of March, 1916:

Major Allan Elliott Declines Offer to Command Guard—Will Remain with the 51st Battallion Which is Soon to be Moved to the Front.

As predicted by the Journal on Saturday, the appointment as officer commanding the 218th Irish Guards was tendered Major Allan Elliott of the 51st Battalion, by a deputation consisting of A. F. Ewing, M.L.A., Alderman R. N. Frith, and Percy Abbott. The Advisory Committee of representative Irish citizens which is working in unison with Lt.-Colonel McKenery in furthering the interests of the Irish Guards had unanimously decided upon Major Elliott as a fitting soldier to take over this command.

You will observe, Mr. Chairman, that the Irish citizens had decided that Major Elliott was a suitable person to be colonel of a regiment, but that it was a committee consisting of Mr. Ewing, the Conservative M.L.A., Alderman R. N. Frith, ex-president of the Conservative Association, and Mr. Percy Abbott, who is very prominent in Conservative circles—I do not know what particular office he holds at the present time—these three gentlemen who, as stated by this newspaper supporter of hon. gentlemen opposite, went to Major Elliott and absolutely tendered to him the command, and it was to them he refused to accept it. I think it is only fair, in view of the discussions that have taken place, to lay the facts before the House.

Sir ROBERT BORDEN: Where a regiment is proposed to be raised from a particular nationality, I think it is very often desired to obtain the views of those who are very likely to be members of the battalion, and to learn whether or not they have confidence in the particular officer who is proposed to be selected. Something of that kind was done in this case; some representative gentlemen were asked to consult Mr. Elliott on the subject, as he was connected with another battalion, and to ascertain whether or not, if the appointment were offered to him, he would accept it.

Mr. McKENZIE: The member for Vancouver (Mr. Stevens) challenged me to produce proof of certain statements which I made. To take up the challenge of my hon. friend would not, perhaps, be exactly in line with the resolution before us; but I do not want to be charged with making observations that are not backed up by the facts. What I am about to read has reference particularly to Mr. Bowser, and brings in Sir Richard McBride. If I know anything about the politics of British Columbia, that has been the whole push for the last eighteen years—Bowser and McBride, McBride and Bowser. I venture to say the hon. member for Vancouver could never have got the nomination for Vancouver if it had not been for the sup-

port of Bowser and McBride and McBride and Bowser.

Mr. STEVENS: My hon. friend is making a very grave mistake.

Mr. McKENZIE: My hon. friend may say so, now that Mr. McBride is out of the country, but I venture to say that when he was in his palmy days no one from British Columbia could say or do anything except by his authority.

The CHAIRMAN: The hon. gentleman has, I think, sufficiently verified his assertion of a moment ago, and I do not know that any useful purpose can be served by this discussion. I submit to the committee that the Chairman is placed in a somewhat helpless position from day to day inasmuch as ministers announce that the widest possible discussion may be had upon a given resolution, notwithstanding the fact that the rules state explicitly that the discussion must be strictly relevant to the item under consideration. Of course, there is nothing for the Chairman to do but submit to the wishes of the committee in that respect, but the committee could assist the Chairman by keeping within such wide bounds as are laid down for discussion in committee. I sincerely hope that the hon. member will not pursue the subject any further.

Mr. McKENZIE: If I may be allowed to finish what I want to say, I will not add anything to my remarks. The hon. member for Vancouver put me in the position that I was making statements for which I had no authority; I am simply going to read my authority.

The CHAIRMAN: The hon. member will see that this will involve a reply from the hon. member for Vancouver and so on, ad infinitum.

Mr. McKENZIE: Permit me to say this: I have the telegram of Sir Charles Tupper in my hand which denounces in the worst terms the Tory party—and you will not permit me to read it.

The CHAIRMAN: The hon. member will have ample opportunity before the session is over. I think he himself will agree with me that it will be far wiser not to pursue the subject any further.

Mr. OLIVER: Something has been said to-day about a surplus of officers in Canada and something was said on a previous occasion about a surplus of officers in England. What is the position in England with regard to what may be called supernumerary officers? The statement was made here that as battalions have gone overseas, for one reason or another officers have ceased to be attached to them and are maintained on pay in England without rendering service. If that occurs to any large degree it is an evil that should not be permitted. It burdens the country and is a discrimination in favour of men who do not merit it. I certainly think the committee is entitled to understand from the head of the department what that situation is.

Sir ROBERT BORDEN: There is a supply of officers in Great Britain, above what is called the establishment. A communication was sent within the past two weeks to General Carson for information on the subject and the reply was to the effect that every one of the officers was attached to some unit and that every one of them was being employed. A fuller statement will come by letter. Pending the receipt of this reply a further inquiry was addressed to General Carson, to which a reply has not yet been received, so far as I am aware.

Mr. OLIVER: I wish to bring to the attention of the minister a certain instance that I have already discussed in part with the Minister of the Interior, who advised me that I should take the matter up with the Department of Militia. It relates to a battalion which was raised at Edmonton, and which was listed at Valcartier as the 9th Battalion. When war broke out there was in Edmonton a volunteer battalion known as the 101st. It was at full strength and was under the command of one Colonel Osborne. When war was declared this battalion offered its services as a body to the Government for service overseas; at least that is my information. It was not accepted, but authority was given for the raising of an overseas battalion, with the result that a battalion was raised immediately for overseas service under Colonel Osborne, and that battalion was amongst the first, if not the first, to reach Valcartier, although it came from Edmonton, further away than almost any other battalion that came to Valcartier. It came to Valcartier over strength; I think there were some 1,300 men in the battalion. Some little time after it had been at Valcartier I am informed that as Colonel Osborne sat in his tent one morning another gentleman, Colonel Maynard Rogers, entered the tent and said to Colonel Osborne:

"I am in command of the 9th Battalion." Colonel Maynard Rogers is a former resident of Ottawa. He removed to Edmonton and was finally appointed the superintendent of Jasper Park. Having had military experience, when war broke out he volunteered his services, and they were accepted. He left his employment at Jasper Park, came to Valcartier, and was given command of the 9th Battalion, over the head of the man who had raised it and had brought it down there, and with just the amount of ceremony, so I am informed, that I have related to the committee. Colonel Osborne accepted the situation and continued with the battalion as second in command. The battalion went overseas in due course, reached England, and while it was in England—I do not know all of what occurred, but in the end Colonel Osborne was retired altogether from the battalion, and, though retaining his rank, I suppose, was returned to Canada without military employment. My information is that it was found that Colonel Rogers was not competent for the position of colonel in the field; the fact was, at any rate, that the battalion was broken up and there was not any 9th Battalion from that time forward. The members of that battalion were distributed around among other battalions, and when I read the casualty lists issued in pamphlet or book form some time ago, I noticed that in the lists of casualties in the various battalions were men "formerly 9th Battalion." My information was that Colonel Rogers never went on active service in Europe, that he was one of the unattached officers in England until General Lessard was sent over to England; and then this Colonel Rogers was given a position as staff officer to him, and I suppose has been engaged in that service since. But from the time that the battalion went to England until he went to the front with General Lessard, so far as I am aware, he did no military service, and my opinion is that not only did he do no military service but, by reason of his lack of military ability, he did a serious dis-service in having been the cause of breaking up the 9th Battalion. At the same time, as the Minister of the Interior informs us, Colonel Rogers is drawing his salary as superintendent of Jasper park, $2,400 a year. He has been, of course, drawing his salary as Lieut.-Colonel during all this time. But not only is he not rendering the country or the Empire any service, but he rendered a serious dis-service by reason of his having been put in a position which he was not competent to fill. I do not know how many other cases there may be like that, but it appears to me that when there is such a startling case it should be made public, and I hope there are no other such cases. But the information that has come to me is that there are a very large number of them. The Minister of the Interior told us that Colonel Rogers drew his salary as superintendent of Jasper park, and was still drawing it. I say that is wrong. When it was found that this gentleman was not adapted for the command of a military battalion for active service, he should, in all common sense, have been returned to civil employment, for which I believe he was entirely fitted. Remember that I have no fault to find with Colonel Rogers personally or in his civil employment, but, having left his civil employment and undertaken military employment, and being found unfit for it, the results being as they were—and they were certainly very displeasing to men who are interested and to many of their friends —I cannot give the administration under which such a condition exists, that commendation that I should be very glad to give, and certainly such a state of affairs does not tend to efficiency or satisfaction.

Sir ROBERT BORDEN: I am rather surprised at my hon. friend's animadversions on Colonel Rogers; unless he has good grounds for them. Colonel Rogers has had a long military experience in the militia of Canada, to my certain knowledge; and unless I am mistaken he also saw active service in the South African war.

Mr. OLIVER: He did.

Sir ROBERT BORDEN: I understand he is engaged in Great Britain in connection with the training of the troops there. I do not know all the particulars. So far as Colonel Osborne is concerned, I do not remember ever hearing of him or of the incident to which my hon. friend refers. That occurred a long time ago. If the Minister of Militia were here doubtless he could give some information. I shall have inquiry made. If my hon. friend has anything else as to which he would like information, I wish he would state it now so that we can take it up at the proper time.

Mr. TURRIFF: Who was the contractor for supplying clothing to the department last year, and who is the contractor at the present time?

Sir ROBERT BORDEN: I really could not say. We will get the information and give it to my hon. friend.

Mr. OLIVER: There is another matter to which I wish to draw attention and it is in regard to recruiting. The Prime Minister said the other day that in the scheme of recruiting an effort was made to direct the exertions of those who were concerned to different localities where they would result in the least disturbance to the economic situation. I am compelled to take the view that that has not been the guiding policy of the department. My opinion is that they have been guided simply and solely by the possibility of securing recruits, and that wherever recruiting was good they took all the recruits they could without regard to the result to the community at large. I have no fault to find with the action of the department, but I do find fault with the assertion that discrimination has been used when there has been no such discrimination. If I may be permitted to give a statement of the recruiting that has taken place in Northern Alberta, of course with Edmonton as its headquarters, it will be seen just how much and how far consideration was paid to the circumstances which my right hon. friend has dealt with. On August 12, 1914, 120 men were recruited for the Princess Pats; on August 13, 116; and on Aug. 14, 65 men. On Aug. 22, the 101st sent 908 men. On August 26, the 19th Alberta Dragoons sent 206 men. On August 27, the 101st, that is the 9th Battalion, sent 350 men. That made 1,250 men in that 9th Battalion. On the 3rd of November a contingent of 100 men was sent to Quebec City, and in order to let the committee know the exact circumstances of that draft, I may say that a telegram was sent to Edmonton saying that 100 men were wanted. Those men threw down what they were engaged in and left the city, they did not take time to settle their affairs in any way. They simply took the next train for Quebec under the impression that the city had been attacked, or that there was some catastrophe that made such a call for men urgent. When they got to Quebec they found that all they were wanted for was to fill up a regiment that was somewhat short of its full number. On Nov. 16, 101 men went to Calgary to join the 31st Battalion there. On Nov. 17, another detachment went to Calgary to joint the 31st Battalion; on Nov. 25, 110 men went to Calgary to join the 31st Battalion; on Nov. 28, 40 men enlisted for the Lethbridge Artillery; on Dec. 12, 40 more men went to the 31st at Calgary. On Jan. 4, the Mounted Rifles, recruited under Colonel Kemmis, secured 164 men; on May 7, the first Universities Company sent a draft of 9 men; on May 8, a draft of 250 men was taken for the 51st Battalion, under Captain Higginson; on May 24, the second Universities Company sent 16 men; on May 29, the 49th Battalion, with base company, sailed for overseas, 1,300 strong. On June 1st, "C" Squad, 3rd C.M.R., Major Fane, recruited 164; on June 24, the 3rd Universities Company recruited 35 men; on August 13, another draft of the 51st Battalion, 270 men, went forward; on September 6, a draft of the 63rd Battalion, 252 men, went forward; on September 11, a draft of the 65th Battalion, 250 men, went forward; on October 4, the 4th Universities Company, 20 men, went forward; on November 17, a Pioneer Battalion, 75 men, went forward; on December 3, Serbian and Montenegrin reservists, to the number of 80, went forward; on December 5, the 5th Universities Company, 50 men, went forward; on December 19, the American Legion, 100 men, went forward; on December 20, 99 French-Canadians went east to join a regiment in St. Boniface.

Besides those who have gone forward, there was the 63rd Battalion, with a base company in the city numbering 1,132 men. It transferred to the Pioneers 35 men, and to the 50th Battalion 23 men. There was also the 66th Battalion with a base company, numbering 1,136, and it transferred to the Pioneers 50, and to the Artillery 10 men. In addition there was the 51st Battalion, with a base company, 1,263 men, and it transferred to the Pioneers 35 men and to the Artillery 10. There were also the 138th Battalion, 1,050 men; the 151st Battalion, 1,050 men; the 194th Highlanders (authorized) 1,050 men—this battalion is not up to strength yet—and a battalion to be raised by Lt. Col. Bowen, 1,050 men. There have been two other battalions authorized there since. I think this list will show that the only consideration in recruiting seems to have been to get men if they can be got. There has been no effort to distribute the quota throughout the country according to population; no rule at all other than to get the men if they can be got.

Mr. MORPHY: Did some of these men not come from long distances?

Mr. OLIVER: Yes, from the northern part of the province.

Mr. MORPHY: So that the recruiting covered a very large territorial area?

Mr. OLIVER: Yes, the men came from all parts of northern Alberta, Edmonton, of course, being the recruiting centre. But even so, according to the Ottawa Journal, the province of Alberta has already recruited some 2,000 more men, according to population, than would be its fair proportion of the 500,000 called for by the Prime Minister last January, and still the recruiting is going on. I am not objecting to that; we are perfectly satisfied that that should be so. But when it is asserted that there has been discrimination used, I want to say that the facts do not bear that contention out.

A further remark which I desire to make is that at the present time there are six battalions recruiting from Northern Alberta with headquarters at Edmonton. I do not consider that it is in the interest of recruiting that there should be so many battalions recruiting at the same time. When two battalions are recruiting at the same time, there may possibly be an element of competition that is good, but when there is a larger number of battalions, all looking for men, it does not tend to secure the best results. I do not think that the department is well advised in having so many battalions recruiting at once. When an authorization is made, and two battalions are recruited up to full strength, let two more be authorized, if that is thought desirable, but to authorize four or five different battalions to recruit at the same time, in a small place and in a thinly populated country, makes the work of the officers who are attending to the recruiting very difficult, much more difficult than if they were permitted to recruit, say, only two battalions at a time. I see the acting minister is not in the House at the present moment, but I would like to hear from him.

The CHAIRMAN: We have sent for him.

Sir GEORGE FOSTER: The item can stand.

Civil Government—Department of Trade and Commerce—to provide for 16 clerkships in the third division, subdivision "B," Census and Statistics Branch, at $600 each, $9,600.

Sir GEORGE FOSTER: This item looks as if it involved a large addition to the service, but in reality there is no addition. It simply means that we are putting on the permanent list clerks who, since 1911, have been on the temporary list. These temporary clerks constitute quite a large proportion of the help in the Census and Statistics Department because of the change in character of the work. When compilation ceases these clerks are laid off, and when compilation is at its height the number of clerks is at its maximum. After compilation in connection with the last census ceased the term of service of these temporary clerks came to an end. Amongst them were sixteen of the very best clerks who had become adepts in the working of the different machines and in the peculiar kinds of compilation that are made and what we wish to do now is to put them on the permanent list, so that these experienced and really good hands may be kept in the Census Department for the regular work. Their services will become necessary soon, if not immediately, in connection with the compilation of the Northwest Census, which is to be taken in June. After that there will be sufficient work of a steady and permanent kind to employ them. We do not want to have them dispersed after they have been trained for three or four years, and, when we come to need assistance, be compelled to get fresh hands and train them.

Sir WILFRID LAURIER: I understand that these clerks are to be paid at $600 a year?

Sir GEORGE FOSTER: They are put on at the salary which they are getting at the present time, which is $600, and they will go up to $900.

Sir WILFRID LAURIER: By regular progression?

Sir GEORGE FOSTER: By the regular gradation.

To provide for the development and extension of Canadian trade, $150,000.

Sir WILFRID LAURIER: What is the programme?

Sir GEORGE FOSTER: This is an item which the committee is asked to vote in relation to the programme which I outlined in the House some two weeks ago. A portion of this amount will be used for the extension of trade commissionerships, as they may be required. There is a vote in the main Estimates which is insufficient to accomplish the work which will be neces-

sary during the year 1917, and a portion of this vote will be used for that purpose, but just what portion I do not know; it will depend upon what circumstances demand, and somewhat upon how the war progresses. I think I explained before that we are opening new trade commissionerships in Russia—one at Petrograd, and one at Omsk, in Siberia, with some sub-trade commissionerships in cities tributary to these two centres. These are not very important, however, as the salaries paid to the men are not large, they being correspondents and not regular trade commissioners. Then, we are preparing a trade commissioner for Italy, and in the course of the year he will be ready to take his place and engage in the work there. Then, two other sub-commissioners are being trained for work in other parts, as necessities may develop.

Sir WILFRID LAURIER: Whereabouts in Italy will the trade commissioner be stationed ?

Sir GEORGE FOSTER: Of that I am not certain. The trade commission of which I spoke the other day in the House, in the course of its investigations, is to make a short stay in Italy, and we shall be better able to discuss the question of headquarters after we have made some further inquiry, and, possibly, after their return. The trade commissioners will also visit France, Belgium, and the United Kingdom. The commission will consist of six members. It is an honorary commission, but of course their expenses will be paid. There are also to be attached to the commission, for working purposes, a number of representatives of large special interests. These representatives or experts accompany the commissioners in an honorary and unpaid capacity, the interests themselves providing the men. A certain amount of expenses will of course be incurred in connection with this commission, and they will be paid out of the $150,000.

I stated also that it was the intention to form a bureau of commercial information. That will have to be organized, and will take a certain amount of money. It is not the intention of the department to rush into a full-blown bureau of commercial information, but rather to proceed by judicious steps from a small beginning to a greater enlargement afterwards. But a considerable amount of expense will be necessary even to make a small beginning. I am not able to tell the committee just how much will be expended, nor the exact plans on which the work will proceed, although I have the plans fairly well mapped out. A little more consideration, and the advice of experienced men, together with a study of the mode of operating that is followed in other countries, will no doubt have an influence upon the establishment and methods to be pursued. Those who have followed the course of matters incidental to trade and commerce in Great Britain will know that the British Government made a very elaborate selection of articles of German and Austrian production, and collected a very large and representative exhibit. They have been showing that exhibit in the large cities of the United Kingdom for the last eight or nine months. I got into early communication with the Board of Trade in England and have been successful in getting their consent to having the exhibit put into the hands of the Department of Trade and Commerce for Canada. It will be brought out and exhibited in a number of our large cities, and at the Canadian National Exhibition in Toronto, which is held in the latter part of August and the early part of September. In order to exhibit that properly some expenditure will be necessary, and all the expenses in connection with it, from the time it leaves London until it returns there, will of course be borne by Canada, and disbursed by my own department. The object of the exhibit is to show manufacturers and producers in Great Britain and in Canada, as it will be exhibited here, the kind of articles, the quality of the articles, and the cost of the articles which were so largely supplied by German and Austrian producers to Great Britain, and largely also to Canada and all the other overseas Dominions. That exhibit, will come under this vote. The necessity for research work along various lines of production and industry is, I think, perfectly understood and appreciated in Canada. Whilst a good deal has been done in that respect, Canada has suffered as most other countries have, from not having had an eye out in that direction long ago and not having adapted means for linking together more closely than has been done hitherto the laboratory and the research chamber with the practical working out of industrial and productive operations. So it was that the Germans, having given great attention to that, having laid great stress upon it and having understood its necessity in the industrial trade competition, had arrogated

5 p.m.

and gathered to themselves in the years before the war a monopoly of many of the most important processes connected with industrial production. When the war broke out and the connection was changed, Great Britain herself, as almost every other nation, woke up to the fact that invaluable sources and necessities for supplies were monopolized by the country which was now her enemy, and the British manufacturers were left, so to speak, high and dry. The best exemplification of that is what happened in reference to dyestuffs and chemical products connected with textile work. The entire world outside of Germany was thrown into utter and absolute confusion because of the fact that, in the course of the preceding years, a monopoly of that kind of product had gradually been gained by Germany, and when the war broke out, it was almost a complete monopoly. Then again, everyone knows, if they look into and think about the matter, that we probably waste enough in Canada every year to make a very large contribution to the wealth of the country; we waste in many way things which are useful, simply throwing them into the waste heap. What we want is to get concentrated upon all those points the research power of the country, to get it organized, to have it, as it were, mobilized, and to get our attention fixed upon the utilization of waste products which are of inestimable value when chemical and scientific research finds out their qualities and their adaptations, and is able to put them within the power of productive enterprise, so that they become utilized by our manufacturers and confer great wealth and advantage upon the country. In all parts of this country there are more or less of these research resources. Our universities are in part equipped for them—some of them very well equipped; chemical societies and associations are doing their part of the work; individual chemists are at work, and I have in view the idea of linking up to a certain extent with the Bureau of Information these sources of research, having them co-ordinated so that they shall not be overlapping, having some directive power given to them so that when these questions come up, they may undergo the analysis of a competent directive body or committee that shall apportion these different items of research to the university or the laboratory which is best fitted for them. The universities are strongly disposed to enter into a co-operative effort in that respect. We have been in consultation for the last year more or less, and I think it is possible to work out a not very expensive plan by which research work in connection with the different universities of this country, the Chemical Association of Canada, and other laboratory or individual research sources, may be undertaken in such a way that it will enure very much to the benefit of Canada from an industrial point of view. Manufacturers' associations in this country are very much in favour of that co-operative work, and I hope to be able with a part of this vote to assist in that object. Those are the points with reference to which the vote will chiefly be used.

Mr. LOGGIE: I would like to add a word or two to what the minister has said, and I appreciate the points that he has raised. With regard to the dye question, if the minister could in any way hurry up the matter, I am sure it would be in the interest of the commercial life of Canada. I know that if to-day you endeavour to place an order in the textile trade, the trade will ask you, say on an order for cheap flannel, for ten cents per yard extra if it is to be died navy blue; the Dominion Textile Company will tell you that they cannot give you navy blue prints at all, so that it is very important in the interest of the future of Canada that we should be able to provide those dyes within this Empire, and in Canada if that be possible. It may be that the consumption in Canada is not sufficiently large for us to engage in the manufacture of those special dyes, but we may be able to receive them from the United Kingdom or from the United States. We should, however, encourage the manufacture in Canada of those chemical dyes that are required by our textile manufacturers, and I heartily congratulate the minister on the undertaking that he has brought before us.

Sir WILFRID LAURIER: I think my hon. friend has opened up a very wide field and one which will prove of very great advantage, but there is something which is as important, if not more important, in regard to everything he has stated just now, and that is technical education. What my hon. friend undertakes to do will certainly produce very good results, but he will find himself balked at almost every step by the want of technical knowledge amongst the population. The Germans have undoubtedly been ahead of every other nation in the application of chemistry to industry; that seems to have been their specialty; in that they have excelled even the Americans, who are supposed to be

the most inventive of all nations. I think the chemical manufacture of dyes was invented by a Frenchman, but it is now exclusively the property of the Germans, and they have applied it to industry in a manner which has not been approached, much less excelled, by any other nation. It has been largely due to their system of technical education. It seems to me that if my hon. friend would supplement what he has done by some scheme of technical education, he would do a great deal toward what he has in mind. I am afraid my hon. friend will have a long time to wait before we have these things in Canada. They are the result of the spread of knowledge, and in that respect we can learn a useful lesson from Germany.

Mr. LEMIEUX: Has the hon. minister anything to tell us as to the personnel of this commission?

Sir GEORGE FOSTER: I am not able to give the names to-day. I have selected the men, and their names, I suppose, are now before the Governor General, but it is not possible to give those names until the Order in Council has been passed. On Monday, however, I shall be able to give the names.

Compassionate allowance to the widow of the late James Barr, deputy grain inspector, who was killed while in the performance of his duties at Canadian Pacific elevator "D," Fort William, Ontario, $1,000.

Sir GEORGE FOSTER: This was a particularly hard case. Mr. Barr was for a long time in the employ of the Government as Deputy Grain Inspector. He lost his life by falling and being sucked into the elevator. He leaves a widow and three small children. The usual—or what seems to be the usual—gratuity of $1,000 is recommended here.

Mr. LEMIEUX: The Minister of Trade and Commerce told us that on any item of his Estimates we might bring up any subject relating to his department. As this is the last item in these Supplementary Estimates, I desire to ask a question relating to the steamer service between the mainland and the Magdalen islands. A letter that I have received from an old friend in the Magdalen islands, the collector of customs, informs me that the Lady Sybil, a steamer built some years ago expressly for the route between Pictou, Prince Edward Island and Magdalen islands, had been sold. I do not know whether she has been sold to the Admiralty or to some private firm. She rendered excellent service on this route. The statement is made that she is to be replaced by the Amelia. This the people of the Magdalen Islands can hardly believe. Fifteen years ago the Amelia was on the route and was classed as a very inferior steamer. The steamer was partly wrecked, and a number of those on board perished, amongst them the owner himself, Mr. Leslie, formerly member of the local Legislature for the Magdalen Islands. The steamer was afterwards completely discarded; and now we are told that this old steamer is to replace the Lady Sybil which was certainly a credit to the department and to the service. I would urge upon the minister, before signing any contract—or, if the contract is signed before paying any subsidy—to have a proper inspection of the vessel. The route is a rough one, as the hon. minister, who comes from the Maritime Provinces, knows, and it will be dangerous for people to travel on that steamer unless repairs have been made which make her practically a new steamer.

Sir GEORGE FOSTER: The Lady Sybil was bought out from the service. I do not know who bought her or where she went. I imagine she commanded a good price and that her owner—and operator for a number of years—came to the conclusion that he could not have a better time than this to dispose of his property. Last year we only kept her by great persuasion as the owner wished to sell her then. But this year no persuasion could persuade, and she is gone. The difficulty was to get any vessel for the route, and for a time I thought we should have to borrow from the Marine and Fisheries the Princess—

Mr. LEMIEUX: She is a good steamer.

Sir GEORGE FOSTER: However, the Amelia, though out of sight, has not died. Or, at any rate, I believe she has made a complete and successful resurrection. She has been re-formed and re-fitted, and I am told that thus transformed she will be perfectly safe and a perfectly good vessel for the route. It was on these conditions that I entered into the contract for the service.

Mr. LEMIEUX: Under Captain McClure?

Sir GEORGE FOSTER: I do not remember the name of the captain.

Mr. LEMIEUX: Is it the same contractor as in the case of the Lady Sybil?

Sir GEORGE FOSTER: I think not. They are Halifax people, who had the vessel and who have rebuilt her and have put her into what they say is excellent shape. She will be inspected, of course, and if she does not pass the inspection she will not go on. But this seemed the best we could get, and from the information we received I think she will perform the service all right.

Mr. LEMIEUX: That being the case, I have nothing more to say, but I would urge upon my hon. friend to have his eye upon that inspection, because it would be a very serious thing if any accident should happen. Mr. Leslie lost the contract with the Department of Trade and Commerce because he maintained the service with the Amelia, and Captain McClure from Pictou secured the Lady Sybil, which was specially built for that route. The Amelia was discarded and a new contract was entered upon. I hope that my hon. friend will see that the inspection is a good one.

Labour — Industrial Disputes Investigation Act—further amount required, $5,000.

Mr. LEMIEUX: Will my hon. friend explain what became of his Bill amending the Industrial Disputes Investigation Act?

Mr. CROTHERS: I had a draft Bill prepared about a year ago. A large number of copies were struck off and sent to persons throughout the country who were thought to be specially interested in the proposed amendments. My hon. friend got a copy. I thought that we were suggesting some very practical amendments, which, in the interest of all concerned, should be enacted into law, but the Bill was not introduced this session owing to the fact that some of the suggested amendments were considered controversial and their consideration would take up a good deal of time. I think I asked my hon. friend and some others whether or not they would agree to let the Bill go through with certain amendments, striking out any that they had serious objection to. An arrangement of that kind, however, was not effected, and the Bill was allowed to stand in order not to take up time which it was thought should be devoted to other purposes.

Mr. LEMIEUX: How does the question stand with regard to the fair wage clause in munition contracts? I see there has been quite an agitation in the country to extend the fair wage clause to the munition works.

Mr. CROTHERS: The provisions of the Industrial Disputes Investigation Act have been extended to all industries in Canada manufacturing munitions of any kind. One reason why I am asking for an additional $5,000 is because I anticipate a larger number of boards of conciliation than there have been heretofore. The fair wage clause, I understand, is not being put in munition contracts. I took the matter up as soon as the war broke out, and I thought I had made an arrangement that such a clause should be inserted in every such contract. In fact, I was promised that that would be done. It was said, however, that a great many of these contracts were executed hurriedly in different parts of the country, sometimes by telegram, and it was not thought practicable to have such clauses put in the contracts. Wherever any dispute has arisen, however, as to wages, or hours, or any other labour conditions, we have inquired into them and effected an adjustment, I think, in every case. There is not that advantage that some seem to think there is in having this clause in the contracts. In the case of the construction of a public building a schedule is prepared by the department, and contractors tendering for the job are supplied with copies of this schedule, so that they know exactly the wages they will have to pay to the different craftsmen employed in erecting the building. But where it is not known where the contract is to be executed; where it is not known whether the tender accepted will be from Vancouver or from Halifax, a general clause is inserted simply requiring that the contractor, in executing the contract, shall pay the wages current in the district in which the contract is being executed. If any dispute arises in such cases we make investigation as to what the current rates are in the district. Although there is no such clause in the contracts for munitions, we take the same course; where any dispute arises we make an investigation as to the current rates of wages in the district where the contract is being carried out. So that we are taking the same course as if a clause of that kind were in the contract, and it works out just as advantageously to the workingman as if this clause had been inserted.

Mr. LEMIEUX: Can the minister tell me if Mr. Dubreuil, fair wage officer, has been replaced?

Mr. CROTHERS: A gentleman named Narcisse Arcand, of Montreal, was appointed a few weeks ago.

Mr. KNOWLES: Can the hon. minister give us any information as to the views of Mr. Lloyd George on the question of the insertion of the fair wage clause in munition contracts? Is it true that Mr. Lloyd George intimated his willingness that the fair wage clause should be inserted in these contracts?

Mr. CROTHERS: I had no correspondence with Mr. Lloyd George. I understood the Prime Minister to say in the House that Lloyd George was not in favour of having these clauses put in the contracts here in Canada.

Mr. KNOWLES: Does the minister give the committee to understand that Mr. Lloyd George is opposed to having this clause inserted in the munition contracts?

Mr. CROTHERS: That is my recollection of what the Prime Minister said in the House here. I am not quite sure that I am right in that, but that is my recollection.

Mr. KNOWLES: My recollection is not the same. The minister follows these things closely; surely he is not depending for his information on what the Prime Minister or any one else says in the House.

Mr. CROTHERS: I know that the Imperial Munitions Board, after inquiring into the matter, and after having, as I understand, some correspondence with Mr. Lloyd George, decided not to put in these clauses. I have that direct from the board.

Mr. KNOWLES: In connection with people in works carried on by the Dominion Government employees, I think the minister was in the House when that matter was discussed. Perhaps the Minister of Labour would give an expression of his opinion on the question which I raised this afternoon of compensation to workmen employed on Government railways and in the Government elevators, workshops, etc., for injuries received in their employment.

Mr. CROTHERS: I quite agree with my hon. friend that those in the employ of this Government should be treated as generously as workmen are treated by private employers. As to the suggestion that they should be paid according to the Compensation Act in force in each particular province, you might find that in one province a man could not recover under the Compensation Act of that province. The Ontario Act has been freed from any objection of that kind but there might be trouble in some other provinces. I think that the basis should be the salary or wages that a man is getting. My hon. friend spoke of the cost of living being higher in the extreme western provinces than in the East, and suggested that that might be taken into account. No rule has been adopted; each case has been considered on its own merits. I do not know of any case where a man has been injured or killed in the exercise of his duty where compensation has not been made if the facts were made known to us.

Mr. KNOWLES: That may be true in the case of death, that a compassionate allowance is always voted; but I refer to cases of injury, such as the loss of fingers.

Mr. CROTHERS: I do not remember anything of that kind.

Mr. KNOWLES: The Workmen's Compensation Act would cover that, and my argument is that the workman should receive as generous treatment from the Government for injury as if he were working for some other person.

Mr. CROTHERS: I quite agree with my hon. friend.

Quebec Harbour—River St. Charles—improvements to navigation, $700,000.

Sir WILFRID LAURIER: What is the nature of the work you are doing in the St. Charles river?

Mr. ROGERS: This amount of $700,000 is required to carry on improvements, under contract with Messrs. Quinlan and Robertson. They comprise the construction of a concrete dam 1,600 feet long of an average height of 20 feet, and two locks, respectively 450 feet and 350 feet long, by 60 feet wide at the entrance walls, each lock having 15 feet of water on the sill at low water. The dam will have a super-structure of two lines of interlocked sheet piles, the whole back filled with dredged material from the bed of the river. A sluiceway will be placed in the dam with gates to control the water in a pool to be created by the dam. An Order in Council was passed on the 12th of March, 1913, authorizing the acceptance of the tender of Messrs. Quinlan and Robertson, of Montreal, for the construction of two

locks and dam in Quebec harbour, involving at the unit prices quoted therein an approximating expenditure of $1,873.80.

Sir WILFRID LAURIER: How far has the work advanced?

Mr. ROGERS: Just about one-third of the work has been done.

Sir WILFRID LAURIER: Is the dam completed, or does everything go on together?

Mr. ROGERS: The dam goes rather ahead of the lock, and the dam is not quite completed yet.

Sir WILFRID LAURIER: Is it expected to have it completed during this season?

Mr. ROGERS: Yes. The dam will be completed, but I do not know that all of the work will be completed.

Sir WILFRID LAURIER: This season?

Mr. ROGERS: Yes.

Sir WILFRID LAURIER: And the whole work will be completed next season?

Mr. ROGERS: I am satisfied it will.

Mr. LEMIEUX: I was told by a Quebecker—I do not vouch for the statement myself—that the effect of the dam and the locks would be to flood parts of the riverside, and that the city of Quebec, as a result, would have to change its sewerage system. Is there any correspondence between the department and the city of Quebec on that subject, and if a change has to be made in the sewerage system, will the cost fall upon the Government or upon the city? Perhaps that is a matter of detail with which my hon. friend is not familiar, but it was told to me by a gentleman who is not opposed to the project. He stated that the river St. Charles works were of such a character that the city would ultimately have to pay a very large sum of money to divert the present sewerage system from its present location.

Mr. ROGERS: I have some knowledge of the points the hon. member has mentioned. As a result of this work the question of the sewage of Quebec has been taken up by the engineer of Quebec, and the engineer of the Department of Public Works, and, while I am not clear as to the exact details, I understand that they have arrived at a solution of the matter, the cost, I think, being divided.

Mr. LEMIEUX: Between the city and the department?

Mr. ROGERS: Between the city and the department. I have not heard of any differences or conflicting views on the part of the engineers. I have not before me the exact arrangement, but I would be very glad to furnish it to my right hon. friend if he so desires.

Sir WILFRID LAURIER: Has the department not had the same trouble at Winnipeg in consequence of the dam at St. Andrew's rapids?

Mr. ROGERS: We have had to a greater or less extent. We had to do a considerable amount of dredging by reason of the filling in at Red river, and in connection with the sewage, too, to some extent. We have had practically the same difficulty there; the Government did the dredging and relieved the conditions.

Sir WILFRID LAURIER: I would be interested to know what is the arrangement which has been arrived at by the engineer of the city of Quebec and the engineer of the department. To a layman like myself there seems to be no solution possible. The sewage cannot be diverted; it has to go into the St. Charles river because of the conformation of the land on which the city rests. The flow of the tide being obstructed, as it must be by the dam, as stated in the memorandum read by my hon. friend, a pool will be created which must collect all the sewage and all the mud that comes up from the river. I do not know how this can be overcome in any way.

Mr. ROGERS: I will be very glad to send the correspondence and everything we have in the department pertaining to the matter to my hon. friend.

Mr. TURRIFF: Where the Government undertakes such a work as this and interferes with the sewage of a large city like Quebec, on what grounds does it expect that city, or any other city in a similar position, to pay part of the extra cost caused by the action of the Government? It does not seem to me to be fair to the city.

Mr. ROGERS: Of course, the ultimate completion of the work will be a great improvement in the district. It is a work which is regarded as being of great advantage to the city of Quebec.

Mr. A. W. CHISHOLM: There is an item of $1,200 in the Main Estimates for repairs to the wharf at Broad Cove Marsh.

I would like to know the nature of this work.

Mr. ROGERS: The amount of $1,200 is asked for by District Engineer Bernasconi to repair the wharf which was seriously damaged by a severe northwesterly storm. Assistant District Engineer McKean reported on October 9, 1915, as follows:

On October 2nd last I made an examination of the breakwater at Broad Cove Marsh, Inverness county, and found that it had been seriously damaged by a severe north-westerly storm and extra high tide which occurred previous to my visit. On August 20th last, I reported on this work as requiring $500 to place it in good condition. Now it will require $1,200 made up as follows: 320 cubic yards stone ballast, $192; 6,000 feet B.M. 3-inch covering, $150; 1,000 feet B.M. curb timber, $30; 3,000 fenders, $90; 400 lineal feet logs, $80; 50 piles, $200; 400 stringers, $80; 200 braces, $40; 500 pounds iron, $25; labour, $200; omissions and contingencies, $113; total, $1,200.

Mr. A. W. CHISHOLM: Has any part of that amount been spent yet?

Mr. ROGERS: Nothing has been spent yet.

Mr. CHISHOLM: I would like the minister to see that this work is done in the proper season. It appears that all the repairs in the county of Inverness are attended to in the fall of the year. It is an eyesore to see men repairing public works of this kind in November, when the climatic conditions are so bad. They cannot do the work effectively, and the result is that the department does not get value for its money. Very often the men cannot work more than five or six hours a day, and sometimes they cannot even work one hour a day. This occurred last year and the year before; I speak from personal observation. I approve of these repairs. They are very necessary because the wharf is in very bad shape.

Mr. ROGERS: The deputy informs me that the work will go on as soon as possible.

Mr. CHISHOLM: There is an item for Inverness Harbour, $15,000. Is it the intention to spend this amount this year, and what is the nature of the work?

Mr. ROGERS: I do not expect that we shall find it necessary to go on with that this year.

Mr. TURRIFF: What does the minister propose to do in connection with Victoria harbour? There has been an investigation before the Public Accounts Committee, and from the evidence adduced it would appear that over-payments have been made to a considerable extent, and that claims are in from the contractors for still larger amounts. According to the evidence given by the officers of the department, the amount of rock taken out was many times greater than the amount of rock there was to be taken out. I would like to know what the minister proposes to do in connection with that work.

Mr. ROGERS: If my hon. friend has followed the evidence of the Public Accounts Committee he will have a knowledge of the facts. The engineer gave estimates for a greater quantity of rock to be taken out than had actually been taken out; at least that is the charge. So far as that is concerned, we are entirely protected. In the department we have ample funds in the shape of drawbacks and deposits to cover the loss. We have withheld a considerable sum of money and there will not be the loss of a dollar to the country in connection with the matter which has been before the Public Accounts Committee. When we first heard of the possibility of there being an over-estimate, Mr. Valiquette was sent out to British Columbia to investigate, and he did so. He reported that he did not think there had been any over-payment. There was still some doubt, and Mr. St. Laurent was sent out to make a further investigation. He went very carefully into all the circumstances, and his report went to show that there was a certain over-payment in connection with rock. But, whatever the over-payment, the department is amply protected, and will continue to be protected against over-payment on every classification.

Mr. TURRIFF: What amount of rock will be paid for?

Mr. ROGERS: We have turned the matter over to the Exchequer Court, to adjust the differences between the engineers.

Public Works—French River—extension of breakwater pier, $2,000.

Mr. McKENZIE: There are so many French rivers in Nova Scotia that I am wondering whether this is the one in my county.

Mr. ROGERS: Yes, it is. This vote of $2,000 is required for the construction of a breakwater 100 feet long, and from 16 to 20 feet wide. The district engineer estimates the cost as follows: 16,200 feet of cribwork at 10 cents, $1,620.

Mr. McKENZIE: Is that to stand for this year?

Mr. ROGERS: Yes.

Mr. McKENZIE: Will the same remark apply to the wharf at Plaster Mines?

Mr. ROGERS: Yes.

Mr. McKENZIE: Is it proposed to go on with the boat harbour at Cape Dauphin this year?

Mr. ROGERS: We do not expect to go on with that this year.

Victoria harbour improvements, $1,000,000.

Mr. OLIVER: What is the proposed total expenditure at Victoria Harbour?

Mr. ROGERS: The contract with Sir John Jackson for the breakwater amounts to $1,797,000. The work has not been completed yet.

Mr. TURRIFF: I think it was originally proposed to spend a larger amount than that for the harbour improvements there.

Mr. ROGERS: Besides the contract with Sir John Jackson there is the contract with Grant, Smith and Company, Limited, and Macdonnell for $2,444,000, for the construction of wharves.

Progress reported.

Sir ROBERT BORDEN: I believe it is the desire of members on both sides of the House that we should not sit this evening.

Several hon. MEMBERS: Hear, hear.

On motion of Sir Robert Borden, the House adjourned at 6 p.m.

Monday, May 8, 1916.

The House met at Two o'clock, the deputy speaker in the Chair.

PRIVATE ADOLPHE GRENIER.

On the Orders of the Day:

Mr. MARCIL: I wish to call the attention of the Prime Minister, who is also Acting Minister of Militia, to a case that has been placed before me by the Rev. J. O. Dubé, parish priest of St. Godefroy, in the county of Bonaventure, relating to Private Adolphe Grenier No. 416278, of the 24th, formerly 41st Overseas Battalion. This is rather an unusual case. This young man, 20 years of age, enlisted in Hull on February 18, 1915, and was reported on the 13th of March last as having been "killed in action March 3rd." On attestation the name and address of the next of kin were not stated. He was the adopted son of Pierre LeCourtois and his wife, Genevieve Roussy. These people took him when he was two months old, and brought him up until he was 20 years of age. Last year he happened to be in Hull working for a lumber firm, and he enlisted there and went to the front. He gave on enlistment the name of Adolphe Grenier, presuming that this was the name of his father, although he had been brought up by these two persons whom I have mentioned, who are very humble fishing folks. The question now arises who will succeed to whatever balance of pay has been left by him, and an insurance policy of $1,000 which he has referred to in two scraps of letters which I have in my hand. One of these is written in lead pencil and in it he says he is taking out an insurance policy on behalf of his adopted mother. There is a second letter, dated 12 August, 1915, in which he bids her a fond farewell on the eve of going into action, and hopes he will be able to get through all right, but if he does not he leaves everything to her. It is rather a pathetic letter, and looks as if he had a premonition of his fate. He refers to the sacrifice he is about to make for his Mother Country, England and Canada, and for all the citizens of this country. In addition to this, there is a letter, which I think worth reading, from the commanding officer of the corps to which this young man belonged:

Flanders, 19/3/16.

Dear Mr. Grenier:

Ere this letter reaches you, you will no doubt have heard from the department at Ottawa of the death of your son.

As his Commanding Officer I desire to place on record my appreciation of the faithful and efficient services which he has rendered and which has been an inspiration to all ranks.

I count it a great honour to have in my battalion quite a number of French Canadian soldiers, and they have all been looked upon by my officers and myself as the mainstay of the section to which they belong.

If at any time I can be of service to you, please write me, and if spared, I shall be only too glad to do anything I can to show my deep appreciation of the good work done by your son.

On behalf of my officers, N.C.O.'s and men, I extend our heartfelt sympathy.

Believe me,
Yours sincerely,

J. H. Gunn, Lt.-Col.

From this correspondence, which the reverend gentleman has sent to me, I see that the officer in charge of the estates of deceased soldiers says that it may take about four or five months before the department will be in a position to deal with the case. The reverend gentleman calls attention to the unusual circumstances that no kin are referred to in the attestation. He was the adopted son of these people; and by these letters, which evidently are a testament, whatever legal value they may have, he has left all that belonged to him to his adopted mother, Mrs. Pierre Le-Courtois.

Sir ROBERT BORDEN: This is a matter that will, of course, come under the consideration of the branch of the Department of Militia and Defence which is charged with the duty of making any necessary arrangements with regard to the estates of deceased soldiers. I hope my hon. friend will get into communication with the Deputy Minister of Militia and Defence, whose attention I shall direct to his request. I am sure that we all join in the sympathy which is expressed by the commanding officer on behalf of himself and the non-commissioned officers and men of the regiment, and in the appreciation which they also express with regard to the gallantry of this young man.

PRICE OF CODFISH IN PORTUGAL.

On the Orders of the Day:

Mr. LOGGIE: I wish to bring to the attention of the Minister of Trade and Commerce a matter which I deem important. I have here a letter dated Oporto, 19th April, 1916. I need not read the whole letter. The concluding paragraph is as follows:

> Owing to the high prices to which food has risen in this country, due in great measure to the low exchange, the Government recently appointed Food Commissioners to study the question. Yesterday a law came into force fixing arbitrary maximum prices for codfish considerably below the prices at which we have been selling, these being already below what shippers require for their fish. The law mentions codfish but does not specify the origin. We are therefore in doubt as to whether it applies to imported fish or only to the Portuguese cure. In the meantime we have closed all our stores and have applied to the Civil Governor for a definition of the codfish coming within the decree. We have also made representations of our case to the British minister at Lisbon.

I shall hand this letter to the Minister of Trade and Commerce and ask him to take such action as he thinks in the interest of Canada.

PAYMENTS TO SOLDIERS' RELATIVES.

On the Orders of the day:

Mr. PUGSLEY: May I ask the Acting Minister of Militia, who has special charge of the payment over of the portion of the pay of soldiers which may be assigned by them to their relatives? The reason I ask is that I have a very strong letter relating to the case of a young man—and the gentleman who wrote me thinks there are quite a number of similar instances—who arranged that a portion of his pay should go to his mother. The young man is now in England having been wounded; but the information which I have is that for five months no pay has been received by the mother. I cannot help thinking there is some explanation. I hesitate to read the letter to the House, and perhaps I had better send a copy to the Prime Minister.

Sir ROBERT BORDEN: The Accountant Paymaster General in Ottawa would give to my hon. friend all information which would make it possible for him to communicate with those who have charge of the matter. There is an overseas paymaster, whose relation to the paymaster at headquarters here is that of district paymaster, I think. I shall endeavour to direct their attention to the matter, and if my hon. friend will send the information in his possession to the Accountant Paymaster General of the Department of Militia and Defence, it will receive attention here, or will be put in train to receive attention on the other side.

Mr. PUGSLEY: I will send a copy of the letter to my right hon. friend.

ST. BERNARD—ST. MAXIME MAIL CONTRACT.

On the Orders of the Day:

Mr. LEMIEUX: I call the attention of the Postmaster General to a telegram I have received and regarding which I have been asked to place a question on the Order Paper; but, as I presume time is limited now, the Postmaster General might give me the information to-morrow. I wish to know the names of the tenderers and the terms of the contract for the carriage of the mails between St. Bernard and St. Maxime de Scotts in Dorchester county.

PRIVATE BILLS.

THIRD READING.

Bill No. 96, for the relief of David Whimster Rhodes.—Mr. Boys.

SENATE AMENDMENTS.

Amendments made by the Senate to Bill No. 31, to incorporate the Eastern Canadian Union Conference Corporation of the Seventh-Day Adventists—Mr. Smith—further considered.

Mr. SMITH: This Bill passed the House of Commons some days ago and was sent to the Senate, and then to their Private Bills Committee. A few amendments were suggested and adopted, and now the Bill has come back to this House. All the amendments were agreed to by those interested in the Bill.

Amendments concurred in.

SECOND READING.

Bill No. 100, to incorporate the Manitoba-Ontario Railway Company.—Mr. J. E. Armstrong.

QUESTIONS.

[Questions answered orally are indicated by an asterisk.]

BRITISH COLUMBIA COMPANIES ACT.

Mr. BOIVIN:

1. Has the Provincial Act, passed by the Legislature of British Columbia obliging Joint Stock Companies operating under letters patent granted by the Federal Government to register in British Columbia and pay a license fee to the Government of that province in order to do business there, been declared ultra vires by a judgment of the Privy Council?

2. If so, have the fees illegally collected by the Government of British Columbia been refunded to the companies who obeyed the provisions of the said Act?

3. If not, is it the intention of the Government to use its good offices to induce the Provincial Government of British Columbia to refund the moneys so collected, and thus save to the Joint Stock Companies interested the trouble and costs of litigation in connection with the matter?

1. This depends upon the interpretation of the judgment of the Judicial Committee of the Privy Council in the case of the John Deere Plow Company vs. Wharton, 1915 Appeal Cases, 230. Their lordships held in terms that those provisions of the Companies Act of British Columbia which were relied on in that case as compelling the appellant company to obtain a provincial license of the kind about which the controversy had arisen, or to be registered in the province, as a condition of exercising its powers or of suing in the courts, are inoperative for these purposes.

2. The Government has no information.

3. If it be determined that the provincial Government is liable to refund these moneys it would presumably discharge its liability. There does not appear to be any case at present for the exercise of good offices.

AMHERST, SYDNEY, AND NEW GLASGOW POSTAL REVENUE.

Mr. SINCLAIR:

What was the postal revenue in the towns of Amherst, Sydney and New Glasgow for the year ending December 31, 1915?

Mr. CASGRAIN: Gross postal revenue—Amherst, $36,088.43; New Glasgow, $27,294.87; Sydney, $39,773.81.

JOLIETTE POST OFFICE.

Mr. SEGUIN:

1. What has been the total cost of the improvements made in the Joliette post office?

2. Was the work done by contract?

3. Who were the tenderers, and what was the figure of each tender?

4. To whom was the contract awarded, and for what sum?

5. Were any changes made in the original contract, and were any extras paid for such changes? If so, what were the amounts of such extras and to whom were they paid?

6. Were the wages paid to the workmen by the contractor according to the scale of salaries established by law?

Mr. ROGERS:

1. $36,959.75 paid to date.

2. Yes.

3. Jos. Archambault & Co., $29,945. Jos. Lalonde and C. B. Lafleur Fils, Ltd., $32,150. A. Durand, $38,777. D. A. Dostaler, $49,167.

4. Jos. Archambault & Co., $29,945.

5. Several changes were made in the contract and executed by the contractors, Messrs. Jos. Archambault & Co., as follows:

Changes to tower	$2,625
Steel beams and columns on first floor.	296
Repairs to top part of front wall, filling in around windows, alterations in janitor's quarters and basement	537
Removal of stone fence	12
New doorway in cellar	15
Alterations to heating apparatus	180
Ladders to clock tower	4
Door and frame, stairs to caretaker's quarters	18
Alterations to radiation on first floor and the graining of woodwork around main door and stairs	40
Additional electric lights, etc	16
Total	$3,743

Contract for fittings awarded to the lowest tenderers, Scnell & Co., 4,289 and $185 for additional work.

6. Yes, so far as the department is aware, as no complaints have been received to the contrary.

GOVERNMENT OFFICES IN JOLIETTE.

Mr. SEGUIN:

1. How much does the Government pay in rent in the town of Joliette for the excise offices, the customs, the Inspector of Weights and Measures, and of the Post Office Inspector?
2. To whom are such amounts paid, and what is the amount for each particular lease?
3. For what reason were the excise, customs and inspection of weights and measures offices, which had been in the old post office building at Joliette, transferred to outside buildings, which the Government leased after the post office had been enlarged at great cost?

Mr. ROGERS:

1 and 2. The Government did pay, up to 1st May, the following for temporary quarters while improvements and additions to building were being made:

For excise offices to J. C. Rivest, $24 per month. For customs offices to J. M. and J. A. Chaput, $50 per month. For post office inspectors offices to Amanda Dauphin, $22 per month; this lease will be extended temporarily as to the space alloted to the post office inspector is required by the Department of Customs. The Weights and Measures occupy premises rented from J. A. Preville estate on a lease from 22nd January, 1913, to 22nd January, 1914, at a rental of $264 per annum.

3. The building is not yet completed, but was sufficiently far advanced before the 1st of May to move from temporary quarters into the public building.

CARLSLAKE HOTEL PROPERTY.

Mr. BUCHANAN:

1. What was the total award by the Exchequer Court for the Carslake Hotel property in Montreal?
2. What amount has been paid?
3. What were the dates of payment and the amounts on each date?
4. (a) Has any amount been paid since the case was appealed to the Supreme Court, and (b) is that appeal still pending?

Mr. ROGERS:

1. $288,250 with interest on $68,750 from 15th October, 1914, and interest on $45,000 from 15th October to 3rd December, 1914.

2. $22,000.

3. 15th August, 1914, $175,000; 21st November, 1914, $45,000; total, $220,000.

4. (a) No; (b) yes.

[Mr. Rogers.]

SALE OF LEE-ENFIELD RIFLES.

Mr. TURRIFF:

1. How many Lee-Enfield rifles have been sold by the Government since October 1, 1911?
2. To whom were they sold?
3. What price was received for the rifles sold?

Sir ROBERT BORDEN:

1. A number of rifles was sold to the Government of New Zealand between the 20th August and the 22nd of December, 1913, and a few to the Dominion Police.

2. They were sold, as I have said, to the Government of New Zealand the Commissioner of Dominion Police.

3. The total amount realized was $15,150.

D'ISRAELI GOVERNMENT WHARF.

Mr. TOBIN:

1. Were any repairs made to the Government wharf at D'Israeli, Quebec, in the year 1915?
2. If so, was the work done by contract or day labour?
3. If by contract, who was the contractor, and how much money did he receive for the work?
4. If by day labour, who was the overseer, how many days was he employed, and what wage per day did he receive?
5. How much lumber was used, from whom was it purchased and at what price per thousand feet?
6. What was the total amount expended on said wharf during the year 1915?
7. Were any tenders invited for said repairs?
8. What are the names of the different tenderers and the amount of each tender?

Mr. ROGERS:

1. Yes.

2. Day labour.

3. Answered by No. 2.

4. Joseph Lemieux, 38½ days at $3 per day, 17th June-31st July, 1915.

5. J. H. Parent, D'Israeli. 13,435 feet plank, 10 x 12, at $18, $241.82; 28,721 feet, 12 x 12, at $19, $545.69; 5,031 feet, 12 x 12, at $23, $115.70; total, $903.21.

6. $2,174.41.

7 and 8. Answered by No. 2.

BROMPTONVILLE MAIL SERVICE.

Mr. TOBIN:

1. Who is the mail carrier on the rural mail route known as Bromptonville No. 2?
2. What salary does he receive?
3. When was the contract awarded?
4. Were tenders called for?? If so, who were the different tenderers and the amount of their respective tenders?
5. Was the present carrier's first tender the lowest one received, or was it subsequently reduced?
6. Has any change been made in the said route since the contract was awarded?
7. If so, has the contract price been increased owing to said change?
8. Why was not the contract given to the lowest original tenderer?

9. Who recommended that the present carrier be allowed to present a second and lower tender?

Mr. CASGRAIN:

1. Gedeon Hains.
2. $695.
3. April 7, 1915.
4. Yes. Honoré Liberge Bromptonville, $700; Oscar Bachand, Bromptonville, $750; Gédéon Hains, Bromptonville, $790; Gédéon Boisvert, Cote St. Joseph, $1,000; David Richards, Sherbrooke No. 3 $1,100.
5. Gédéon Hains' offer was the lowest received.

6 and 7. On the 25th November a rearrangement, involving an additional travel of three miles per trip was effected, the contractor being paid on a pro rata basis for the extra work, as provided in the contract.

8 and 9. After Gédéon Hains had sent in his tender, he offered, through Dr. John Hayes, to perform the contract for $695 per annum, which offer was accepted.

UNOPPOSED MOTION FOR PAPERS.

Mr. Turgeon.—For a copy of all correspondence, letters and telegrams relating to the dismissal of Augustin D. Lanteigne as postmaster of Island River, Gloucester county, N.B.

CANADIAN NORTHERN AND GRAND TRUNK PACIFIC RAILWAYS.

PROPOSED LOANS.

Sir THOMAS WHITE (Minister of Finance) moved that the House go into Committee of Supply.

He said: Mr. Speaker, I avail myself of the opportunity afforded by this motion to make a statement respecting the proposed loans of $8,000,000 to the Grand Trunk Pacific Railway Company, and $15,000,000 to the Canadian Northern Railway, which are contained in the Supplementary Estimates recently presented to the House, and also respecting the policy of the Government regarding the general railway situation of Canada. The loans in question are, in the view of the Government, necessitated from considerations of public interest by reason of the critical position of the financial affairs of these two companies. The House will recall that two years ago legislation was passed by Parliament under which, by a guarantee of securities, aid was afforded to the two companies for the purpose of the completion of their enterprises. It was the view at that time that the proceeds of the securities so guaranteed, amounting to $45,000,000 in the case of the Canadian Northern and $16,000,000 in the case of the Grand Trunk Pacific would be sufficient for the purposes which were had in view. Within a few weeks after the legislation had been passed, and almost immediately after the completion and execution of the two trust deeds securing the issues of securities to which I have referred, war broke out. The immediate effect of the war, and its indirect result upon business and finance, was to close the London market, and indeed the markets of the world, to the issue of further securities except those of governments for the purpose of the prosecution of the war. In order that the intention of Parliament, as evidenced by the legislation to which I have referred, might be carried out, and the work upon these two Transcontinental railway systems continued, the Dominion Government made loans in Dominion notes upon a portion of the guaranteed securities. The amount advanced to the Canadian Northern Railway Company was $10,000,000, and the amount advanced to the Grand Trunk Pacific Railway Company was $6,000,000. In the case of the Canadian Northern loan of $10,000,000 security was taken to the amount of $12,500,000 of its guaranteed securities. and in the case of the Grand Trunk Pacific, railway security was taken to the amount of $7,500,000 of its guaranteed securities. These loans were made and the transactions in question were subsequently ratified by Parliament. It was felt at the time that it was in the national interest that these two undertakings upon which so much public money had been expended, should be pushed to completion.

I may say that when war broke out it was the expectation of many that a few months would witness its termination, and it was hoped that the dislocation of business, and the derangement of world finance which ensued upon its outbreak, would consequently be of only temporary duration. These hopes and expectations have been disappointed, the war having increased in magnitude and intensity since its outbreak with no prospect, so far as one can see at the present time, of its early conclusion; indeed, all the indications seem to point rather to an indefinite prolongation of the great struggle in which we are engaged.

The war has affected the two great railway companies in question in two ways; in the first place they were both obliged to dispose of their securities, including the guaranteed securities which I have mentioned, at a lower price than they would have been able to realize had the war not broken out. There has been a material shrinkage in the case of guaranteed securities. It will

be recalled by the House that, in addition to the $45,000,000 of guaranteed securities, the Canadian Northern Railway Company had some $55,000,000 of further securities, which were to be marketed and the proceeds devoted to the completion of its enterprise. As market conditions have been, the Canadian Northern Railway Company has not been able to realize within $10,500,000 of the amount which it expected to realize under the prices which prevailed prior to the outbreak of the war. The first year of the war, by reason of the interruption to general business, saw a great falling off in the earnings of all the railway systems of Canada. In the case of the Canadian Pacific Railway Company, the premier railway system of the Dominion, there was a drop in gross earnings from $130,000,000 to $99,000,000, a reduction of about 25 per cent. In the case of the net earnings of the Canadian Pacific Railway Company, there was a drop of about the same percentage, from $42,000,000 to $33,000,000. On account of the abundant crop, particularly in the West, railway earnings during the past year have been considerably improved, but in this connection it is to be borne in mind that we had, particularly in the Western part of Canada, a winter of unusual severity, and the operating expenses of all railways have in consequence been greatly increased over the ordinary. As a result of these conditions the Canadian Northern Railway Company and the Grand Trunk Pacific Railway Company have been unable to market their securities at the prices which they expected to realize at the time the legislation guaranteeing the issue of $45,000,000 and $16,000,000 respectively was passed. There was also, as I stated, a reduction in earnings for the first year after the outbreak of the war over what they might have hoped to obtain had peace conditions prevailed. In addition, by reason of the difficulties of finance brought about by the war, there was delay in completion of the work which the two railway companies had in view. In the case of the Canadian Northern Railway Company, the through service was linked up only last December, a delay of nearly a year over the period which that company had in view previous to the outbreak of the war.

In these conditions the affairs of these two railway companies, which have been so largely aided by the public credit, have given the Government considerable anxiety for many months past. With improving financial conditions and with better earnings in prospect, it was hoped that no material assistance would be required in addition to the aid which was given in 1914; but it is now clear, from the statements presented by the railway companies in question, which statements I have laid upon the table of the House, from the financial conditions which still prevail, and from the fact that the war is still raging, that relief is absolutely necessary if these two railway companies are to continue as solvent going concerns. It has been the policy of the Government since the outbreak of the war to maintain stability and to promote confidence in the financial and economic situation of Canada. We have, therefore, as I have stated, looked with growing concern upon the financial position of these two great transcontinental enterprises whose affairs have become so intimately connected with the public credit both of the Dominion and of the provinces of Canada. Securities to the amount of several hundred millions of dollars have been issued by both these companies and have found their way into the hands of investors in Great Britain, the United States, and Europe. Any financial crisis in their affairs could not but react seriously upon the general credit of the Dominion in the eyes of the outside world.

Without further elaborating these points, which are, I think, sufficiently within the knowledge of the House, I desire to refer briefly to the present financial position of these two railway companies. The Grand Trunk Pacific Railway Company is now completed from Winnipeg to Prince Rupert. That company has issued securities guaranteed by the Dominion of Canada to the amount, in round figures, of $78,000,000. In addition, loans have been made by the Dominion Government, under this and the preceding Administration, to an amount of $25,000,000, making a total of Dominion guarantees and Dominion loans of an amount exceeding $100,000,000. In addition, the provinces of Saskatchewan and Alberta have given their guarantees in connection with the Grand Trunk Pacific Branch Lines Company, which is a subsidiary of the Grand Trunk Pacific Railway Company, to the amount of $13,000,000; so that, in round figures, the position, so far as the Grand Trunk Pacific Railway Company is concerned, is that it has outstanding securities guaranteed by the Dominion Government to the extent of $78,000,000; it has obtained loans from the Dominion Government to the amount of $25,000,000, and the Grand Trunk

Pacific Branch Lines Company has issued securities to the amount of $13,000,000, guaranteed by the provinces of Alberta and Saskatchewan. Therefore in connection with the Grand Trunk Pacific Railway Company, the public credit of the Dominion and of the two provinces in question is involved to the extent of no less a sum than $115,000,000. In addition to the guarantees which have been given by the Dominion Government and by the Provincial Governments of Saskatchewan and Alberta upon the securities of the Grand Trunk Pacific Railway Company and its subsidiary companies, the Grand Trunk Railway Company of Canada has guaranteed additional securities of the Grand Trunk Pacific Railway Company to a total amount of $97,000,000.

The House is, no doubt, aware that it has been by the conjunction of the credit of the Dominion Government and the Grand Trunk Railway Company of Canada that the Grand Trunk Pacific Railway Company has been enabled to pursue its enterprise to completion. In addition to the $97,000,000 to which I have already referred as guaranteed by the Grand Trunk Railway Company of Canada, that company has made advances to the Grand Trunk Pacific Railway Company, to the Grand Trunk Pacific Branch Lines Company and to the Grand Trunk Pacific Development Company, the latter being also a subsidiary company of the Grand Trunk Pacific, an amount exceeding $25,000,000, for which it holds the notes of the companies in question, and a comparatively small amount, I think $3,000,000 or $4,000,000 of the securities of the Grand Trunk Branch Lines Company which, as I stated, are guaranteed by the provinces of Alberta and Saskatchewan. The Grand Trunk Railway Company of Canada is, of course, a powerful corporation. But in common with all other companies, it has experienced and is still experiencing the adverse financial conditions produced by the war. It finds itself now, from considerations affecting its credit, unable to extend further aid to the Grand Trunk Pacific Railway Company whose securities it has guaranteed to the amount I have stated and to which and its subsidiary companies it has made these advances exceeding $25,000,000. This is all the more the case because of the virtual closing of the London market to all new issues. In addition, the Grand Trunk Railway Company of Canada finds itself confronted with the necessity of providing for betterments, improvements and terminal facilities involving the expenditure of large sums of money, upon its own system throughout Canada. I have stated that from considerations affecting its credit the Grand Trunk Railway Company of Canada finds itself unable to extend further aid to the Grand Trunk Pacific Railway Company or its subsidiaries; and in that connection I desire to read extracts from the letters of Mr. Alfred W. Smithers, chairman of the Grand Trunk Railway Company of Canada, which are published in the financial statements relating to the Grand Trunk Pacific Railway Company which I laid upon the Table, and copies of which have been distributed to members of the House. Mr. Smithers says:

> Under present circumstances it is quite impossible for the Grand Trunk Railway Company to meet the extra liabilities arising from the Grand Trunk Pacific railway.

And further:

> We have done our utmost to meet the heavy financing which has been necessary, and the difficulty of which has been immensely increased by the disastrous war conditions. We are now "at the end of our tether" with regard to Grand Trunk Pacific financing.
>
> The first Grand Trunk Pacific payments for interest after the 1st January next will become due on the 1st March, and amount to just under $1,000,000, and there is no prospect of our being able to meet that payment.

And he goes on to say:

> The railway situation in Canada is a serious one, and any default on the part of the Grand Trunk Pacific Railway Company might lead to grave consequences as to the general financial position in Canada. The Board believe this danger will pass away if the Government accept their proposal, thus saving the general situation, and enabling the Grand Trunk Railway Company, as I have already explained, to fulfil its duty to the public.

From the figures I have given and the statements I have made it will be seen that the credit and standing of the Grand Trunk Railway Company of Canada are vitally bound up with the condition confronting the Grand Trunk Pacific Railway Company. The Grand Trunk Pacific railway is now out of the construction stage. I desire to say a word concerning its financial position. Its fixed charges for the present year amount to $7,200,000, representing, of course, the interest upon its securities. To this must be added a deficit on operating account and for maintenance and exceptional repairs of $2,000,000, making a total exceeding $9,000,000 of a deficit expected upon the operations of the Grand Trunk Pacific Railway Company for

the coming year. In addition, I should state to the House that the Grand Trunk Pacific Railway Company and the Grand Trunk Railway Company of Canada are in arrears of interest payments to the Dominion Government upon the loan of $25,000,000 made to the Grand Trunk Pacific Railway Company by the Government. The amount of such arrears on the 1st of April last was $1,350,000. I have laid upon the table of the House a statement, signed by the Vice-President and Treasurer of the Grand Trunk Pacific Railway Company, showing the details of the totals which I have mentioned. In a word, the position is this: Expected deficit upon operation and fixed charges for the coming year, $9,000,000; arrears of interest to the Dominion Government, $1,350,000.

Sir GEORGE FOSTER: Do these arrears take you to the end of the current year?

Sir THOMAS WHITE: There are actual arrears of $1,350,000. I should point out here that, under the agreement of 1903 between the Dominion Government and the Grand Trunk Pacific Railway Company, the Dominion Government will be called upon this year to pay, without recourse, interest upon the bonds of the Mountain Division. The House will recollect that, under that agreement, for a period of seven years the Dominion Government is obligated without recourse to pay interest on the bonds issued in respect of the mountain section of the Grand Trunk Pacific Railway. For the interest charges of the Grand Trunk Pacific Railway Company the Dominion Government is responsible under its guarantees to the amount of $2,400,000 per annum. The interest charges for which the Grand Trunk Railway Company of Canada are responsible amount to about $4,000,000.

From the statement which I have made, it will be apparent that the Grand Trunk Pacific Railway Company is not only earning no portion of its fixed charges but that there is a large deficit on operating account.

Mr. GRAHAM: If in keeping with his argument, would my hon. friend divide the mountain and prairie sections in regard to operating expenses. In other words, does the prairie section pay its way, and is the deficit altogether on the mountain section?

Sir THOMAS WHITE: I think neither section pays its way. I have not the exact figures before me, but I can give them to my hon. friend when we are in the committee.

Mr. PUGSLEY: The statement shows the net earnings of the prairie division to be $600,000.

Sir THOMAS WHITE: I have not before me the operating expenses, and I am unable to say whether the earnings are sufficient to take care of the operating expenses and any portion of the fixed charges.

Mr. PUGSLEY: These are the net earnings after providing for operating expenses.

Sir THOMAS WHITE: Then the position would be that the prairie section would earn $600,000 in excess of its operating expenses and would not be able to pay, except to the extent of $600,000, its fixed charges. But, as I have stated, taking the Grand Trunk Pacific Railway Company in respect of that portion of the line from Winnipeg to Prince Rupert, not only is it earning no portion of its fixed charges, but there is a large deficit on operating account. The amount which would have to be provided in respect of such deficit, fixed charges and repairs, will aggregate, as I have stated, $9,000,000 per annum. In considering the future of the Grand Trunk Pacific Railway Company it must be borne in mind that in addition to the deficit upon operating account and the amount which must be provided for fixed charges, there must be taken into consideration improvements, betterments and rolling stock which will be required for the carrying on of the enterprise. Those, I am advised by the Railway Department, would amount to three, four, possibly five million dollars, after a year or two.

3 p.m.

I come now to the position of the Canadian Northern Railway Company. For the fiscal year ending June 30, 1915, the net earnings amounted to $6,000,000. For the present fiscal year, which ends June 30, 1916, the estimate is about $9,000,000. That estimate is based upon actual earnings and expenditure to the end of March, which is the latest date at which the figures are available. I pointed out to the House that the Canadian Northern Railway Company have failed to realise within $10,500,000 of the amount which they expected to realise upon the guaranteed and other securities which they had in 1914, when legislation was passed by Parliament granting the guarantee of $45,000,000. The fixed

charges upon the Canadian Northern Railway system aggregate about $15,000,000, in round figures. When I say the Canadian Northern Railway system, I am including the constituent and subsidiary companies. For the past two years, since the passing of the legislation in question, the net earnings of the Canadian Northern system have been applied to two purposes, namely, the payment of interest upon securities—that is to say, fixed charges—and payments on construction account. That is to say, they have been applied to the extent that they were available, because the fixed charges and the shortage upon construction account have exceeded the amount of net earnings which they had available to apply. I would call the attention of the House to the fact that under the legislation by which a guarantee of $35,000,000 was given in 1911 upon the securities of the Canadian Northern Ontario, and by the legislation under which a guarantee was given in 1914 upon $45,000,000 of securities of the Canadian Northern Railway Company, provision was made that the railway company might call upon the Dominion Government for a period of three years to pay the interest upon the securities and to add the amount so paid to the mortgage indebtedness. That legislation will be called into effect this year. So that from the end of the present fiscal year, that is to say, from July 1, forward, the Canadian Northern Railway Company will call upon the Dominion Government, and also upon the Government of the province of British Columbia—because there is similar legislation affecting the guarantee given by the province of British Columbia—to provide the sum of about $4,500,000 towards the payment of interest upon guaranteed securities, that is to say, the $35,000,000 of guaranteed securities, the $45,000,000 of guaranteed securities, and the securities guaranteed by the province of British Columbia under legislation of that province. Therefore, for the next fiscal year the fixed charges of the Canadian Northern Railway Company, in so far as they have a bearing upon the financing of the Canadian Northern Railway Company, will be reduced to about $11,000,000. The Canadian Northern Railway Company has a total outstanding funded debt of $383,000,000. Of this amount the Dominion Government has guaranteed $104,000,000 of securities.

Mr. GRAHAM: That is on the entire system?

Sir THOMAS WHITE: The total Dominion guarantees in respect of the Canadian Northern Railway system aggregate $104,000,000.

Mr. GRAHAM: I mean the outstanding indebtedness; that is for the whole system?

Sir THOMAS WHITE: For the whole system. There has in addition been guaranteed by the provinces of Canada no less an amount than $107,000,000 of securities of the Canadian Northern Railway Company. Of this amount Ontario has guaranteed $8,000,000, Manitoba has guaranteed $25,500,000, Saskatchewan has guaranteed $15,000,000, Alberta has guaranteed $19,000,000, and British Columbia has guaranteed $40,000,000, making a total, as I have said, in round figures, of $107,000,000 of the securities of the Canadian Northern Railway system guaranteed by the provinces of Canada. Taking the two together, the Dominion and the provinces, the total guarantees aggregate $211,000,000. So that, Mr. Speaker, the position is that the public credit of the Dominion and of the provinces is now involved to the extent of $211,000,000 with the enterprise of the Canadian Northern Railway Company. In addition to the guaranteed securities which I have mentioned and which aggregate $211,000,000, unguaranteed securities are outstanding amounting to $147,000,000. In addition, there is income convertible debenture stock amounting to $25,000,000, making the total which I mentioned first, $383,000,000, as the total outstanding funded debt of the Canadian Northern Railway system. To this must be added the principal of equipment securities which have been issued, instalments of which mature from time to time. The total principal so outstanding amounts to $17,000,000. Although the securities which are pledged against them are contained in the total of outstanding securities which I have mentioned, there are temporary loans and obligations current amounting to $92,000,000. I have laid on the Table of the House a statement certified by the auditors of the company, Messrs. Webb, Read, Hegan, Callingham and Company, showing the details of the temporary loans and current obligations aggregating $92,000,000 as I have stated.

I may say to the House that the reason why there are so many temporary loans and current obligations is that since the outbreak of the war it has not been possible, at least until very recently, to sell long date securities, and the financing

which has had to be pursued by railway and other companies has consisted in pledging securities and issuing against them short date notes of one or two years' maturity. The Canadian Northern Railway Company officials assume that they will be able to renew the short date loans appearing in the statement, or to procure new loans to take their places; but if they do not receive assistance in respect of their current obligations they will not be able to carry through the year.

Mr. E. M. MACDONALD: Would the minister explain item 2, on page 8, Dominion Government loan Canadian Northern railway 4 per cent debenture stock (Dominion guarantee).

Sir THOMAS WHITE: In the fall of 1914, when the markets of the world were closed, the Dominion Government made two loans in Dominion notes, one of $10,000,000 to the Canadian Northern Railway Company, and one of $6,000,000 to the Grand Trunk Pacific Company, upon the security respectively of $12,500,000 Canadian Northern securities, guaranteed by the Dominion Government, and $7,500,000 securities of the Grand Trunk Pacific Railway Company, guaranteed by the Dominion Government.

Mr. MACDONALD: What legislation?

Sir THOMAS WHITE: There was no existing legislation, but at the next session of Parliament the transactions were ratified. The estimate is that the minimum assistance upon which the Canadian Northern Railway Company will be able to make arrangements to finance during the coming year is $15,000,000.

Mr. A. K. MACLEAN: Would the minister please state just what that $15,000,000 will be used for?

Sir THOMAS WHITE: If my hon. friend does not mind, I shall take that matter up when we are in committee. The general statement as to the purposes for which the $15,000,000 is to be used is this: For expenditures made or indebtedness incurred to meet interest payments maturing due upon securities in priority to the securities of $45,000,000 guaranteed by the Dominion Government under the legislation of 1914; to meet instalments of equipment bonds and on construction account. The minimum assistance with which they estimate they can continue to finance during the year is $15,000,000.

[Sir Thomas White.]

Mr. R. B. BENNETT: The minister said it would take $15,000,000 to pay the interest charges, that is $4,500,000 on the $45,000,000 and the $35,000,000. That would leave about $11,000,000. What does he estimate the net earnings of the system at June 30, 1916?

Sir THOMAS WHITE: In the neighbourhood of $11,000,000.

Mr. BENNETT: Then there would be no deficit.

Sir THOMAS WHITE: That is the estimate.

Mr. BENNETT: Then why do you want $15,000,000 with these facts?

Sir THOMAS WHITE: My hon. friend will observe from the statements of temporary loans and obligations that the Canadian Northern Railway is indebted for advances and upon loans which it has negotiated, to the extent of $92,000,000, of which I think some $16,000,000 or $18,000,000 is in respect of interest which has been met upon securities which have priority over the $45,000,000 of securities guaranteed by the Dominion Government, of instalments of principal of equipment securities and on construction account. The $15,000,000 is required if the Canadian Northern Railway is to continue as a solvent concern. It is the minimum amount with which it can continue to finance.

Mr. BENNETT: How is it made up?

Sir THOMAS WHITE: In committee I shall be glad to give the details. I have not them before me at the moment.

Mr. E. M. MACDONALD: It would be better to give it now, so that we will understand it.

Mr. BENNETT: It is very vital.

Mr. A. K. MACLEAN: It is on page 9 of the statement.

Mr. BENNETT: Yes, but that does not cover what he is speaking about now.

Sir THOMAS WHITE: In committee I shall be glad to give the details. Page 9 gives the statement showing the advances which have been made for payment of underlying interest on principal on construction account and for the meeting of principal and instalment obligations.

Mr. BENNETT: Do you propose to take care of the income securities, $25,000,000?

Sir THOMAS WHITE: No, they do not enter at all.

Mr. BENNETT: You would not call that part of the funded debt, by any stretch of the imagination.

Sir THOMAS WHITE: No. I would not say "by any stretch of the imagination"; but to show that I am in agreement with my hon. friend, I showed the different securities and then mentioned income convertible debenture stock, but the interest on which is not payable except under certain conditions. The interest which it is proposed to pay from this $15,000,000 relates only to that portion of the interest indebtedness of the company which is payable upon securities ranking in priority to the $45,000,000 Canadian Northern mortgage guaranteed by the Dominion Government. In other words, the Dominion Government has a $45,000,000 mortgage upon the enterprise. If the interest upon the underlying securities was not paid, of course the Dominion Government would lose the security it has in the $45,000,000 mortgage. If the Dominion Government entered into possession under the $45,000,000 mortgage, it would have to do what any mortgagee would be obliged to do in order to protect his security, if he so desired, that is to pay the interest on the underlying securities which come in priority to it. There is provision in the trust mortgage which was executed under the legislation of 1914, which contemplates the payment of interest on underlying securities in order to protect the interest of the Dominion in the guaranteed securities.

I have stated that the minimum amount with which the Canadian Northern Railway Company will be able to carry through, to continue financially for the year, is $15,000,000; and the minimum amount with which we estimate the Grand Trunk Pacific Company will be able to continue a solvent going concern is $8,000,000. Those are the two amounts which appear in the Estimates which will be discussed by the House in Committee.

Mr. E. M. MACDONALD: Would the minister explain why $15,000,000 is the minimum at this juncture? This question is very involved, and when the minister comes to that point in his argument which is vital to an understanding of the question, he proposes to defer consideration of that very vital point until later.

Sir THOMAS WHITE: If my hon. friend will look at the financial statement of the temporary loans which have been presented to the House, he will realize at once that the condition cannot continue; and the question arises as to what measure of relief must be afforded in order that the Canadian Northern Railway Company can continue. The advances which have been made temporarily will have to be, in large measure, cleared up before the company can get credit to enable it to continue. These borrowings have been upon securities, which are shown in the statement I have laid on the table of the House, for the purposes which I have mentioned, and the Canadian Northern Railway Company has come to the point where it has no more securities to issue, and, if it does not get this measure of aid, it will not be able to continue. I think that any financial man looking at the statement placed on the Table with reference to the Canadian Northern Railway will see that at least a sum of $15,000,000 will be needed to finance the company and to enable it to carry on its business as a going concern during the coming year.

Mr. PUGSLEY: In looking over the statement I find what strikes me as a singular omission. There is no statement of the earnings or operating expenses of the Canadian Northern Railway Company. Does the minister not think that that is an important matter to be presented to the House?

Sir THOMAS WHITE: I have stated to my hon. friend that the earnings and operating expenses for the fiscal year cannot be presented at the present time except by way of estimate.

Mr. PUGSLEY. There is no estimate even.

Sir THOMAS WHITE: I could get an estimate under the signature of the general manager of the company, but I should not think it advisable to lay estimates before the House, unless the House specially desires it.

Mr. PUGSLEY: Take the last six months.

Sir THOMAS WHITE: What I wish to lay before the House is facts. I have laid the facts, and, I think, all the facts, with regard to the financial condition of the company upon the Table, and if my hon. friend, or any other hon. member of the House, desires an estimate made by the general manager of the Canadian Northern

Railway Company, as to its earnings for the present fiscal year ending June 15, 1916, which I have stated to be $9,000,000, I can obtain it; I can obtain an estimate, according to their best judgment, as to what would be the net earnings for the year 1917, but I need not say that it would be only an estimate.

Mr. PUGSLEY: I would have thought it of importance and desirable to enable the House to form a judgment as to the advisability of giving aid to have a statement of the earnings and operating expenses for the past year, and also an estimate of the probable earnings and operating expenses for the coming year.

Sir THOMAS WHITE: The last financial statement of the company which was published, and which I can obtain, shows the net earnings for the year ended June 15, 1915. I stated to the House in an earlier part of my speech that the estimated earnings, based upon the actual earnings up to the 31st March of the current year, would be $9,000,000, but I would submit to the House that this is not so much a question of earnings as of finance.

Mr. PUGSLEY: The minister gave the earnings of the Grand Trunk Pacific, but not those of the Canadian Northern.

Sir THOMAS WHITE: I beg my hon. friend's pardon; I have given the earnings of the Canadian Northern for the year 1915, and the estimated earnings for 1916, and in addition to that I have stated the fixed charges. I made a most complete statement with regard to that a few moments ago.

Mr. PUGSLEY: In the statement submitted with respect to the Grand Trunk Pacific there is an estimate of the loss in operation. An estimate is given of the net earnings of the prairie division and an estimate of the loss of the mountain division; but there is no such statement in the pamphlet presented in regard to the Canadian Northern railway.

Sir THOMAS WHITE: If there is not, and my hon. friend desires an estimate, I will endeavour to get it.

Mr. R. B. BENNETT: The earnings are now complete up to the last week of April, and this is the first week in May, so that there would be only seven weeks' earnings to estimate.

Sir THOMAS WHITE: I am told, in order to give accurate information, that the actual earnings and expenditures are available up to the end of March. My hon. friend will no doubt realize that it takes some time to get the returns especially from the West.

Mr. R. B. BENNETT: I have them up to the end of April.

Sir THOMAS WHITE: My hon. friend is speaking of published earnings; I am speaking of bookkeeping and the financial situation. At all events, my hon. friend is aware of the net earnings, which, he states, have been published up to the end of April, and that would no doubt be founded upon actual earnings and expenditures so far as they could ascertain them up to the date of publication.

In giving consideration to the question as to whether at this critical juncture in their affairs we should afford further aid to these two railway enterprises, embracing as they do some 12,000 miles of completed lines, and vitally involved as they are with the public credit of the Dominion and of the provinces, there are to be considered three alternatives, and three alternatives only, at least in my view. One course would be to withhold aid, and to permit the two railway companies in question to go into the hands of the receiver. I need not say to the House how grave a situation that would be to the Grand Trunk Railway Company of Canada which, in case of a default, would be liable under its guarantees upon the securities of the Grand Trunk Pacific Railway Company. There are two aspects in which the matter may be considered. The first is the aspect of our public credit. We are in the midst of a war in which we are belligerents. Our expenditures are increasing from day to day, and must increase in large measure as our forces increase. Our expenditure is on a vast scale, and is likely to increase. For the present year, our expenditures for war will aggregate at least $250,000,000, possibly $300,000,000; the amount will depend upon the increase in our forces which have now reached the total of some 320,000 men. In this posture of our affairs, confronted as we are with borrowings on account of the war, to the extent of $250,000,000 to $300,000,000—and in estimating what that means to the Dominion of Canada, we must bear in mind that before the outbreak of the war the net national debt of Canada was only some $360,000,000—we are increasing annually the national debt of the country to an amount almost equal to the total

national debt which had accumulated since Confederation. The question of our credit is therefore vital, because upon that credit will depend the part which we shall be able to play in this war. Not only is the amount, which I have mentioned, exceedingly large, but we are confined in our borrowings to this side of the Atlantic. The British market is closed to our borrowings, except such borrowings as we may obtain from the Imperial Exchequer for the purpose of carrying on the war. We have already made on loan of $75,000,000 in the United States, and under the terms of that loan we agreed not to go upon the American market again during the remainder of the present calendar year. In view of the financial situation with which we are confronted as to our borrowings, it behooves us in a very special sense to preserve the credit and the standing of the Dominion. I believe that the collapse of the two railway systems in question, with the involvment of the Grand Trunk, would have a most disastrous effect upon our entire credit, federal, provincial, municipal and industrial. It appears to me that at this of all times we should jealously guard the fabric of our credit. Under the circumstances the Government find themselves unable to favourably regard the contingency of allowing the two roads, with the probable involvement of a third, to go into liquidation.

There is another aspect of the matter to which I desire to draw the attention of the House. It relates particularly to the case of the Canadian Northern, but in the case of both systems, receivership would undoubtedly mean great public inconvenience and confusion. In the event of a receivership of the Grand Trunk Pacific, the position would be that the Dominion Government would have a first charge in respect to its guaranteed securities, the Grand Trunk would come next, the last security being the $16,000,000 of bonds guaranteed by the Dominion of Canada issued under the legislation of 1914. In the event of a receivership of the Grand Trunk Pacific, the Dominion Government, would of course have to continue to pay the interest upon the $16,000,000 of guaranteed securities for which it is responsible under its guarantee and the Grand Trunk Railway Company would have to continue to provide money for the payment of the interest upon the securities of the Grand Trunk Pacific which it has guaranteed. By the issue of receiver's certificates it is possible that the road would be carried on for some time.

In the case of the Canadian Northern a much more serious situation would arise because the Canadian Northern system consists of a congeries of railway and subsidiary companies, some thirty or forty in number and the consequence of a receivership of the Canadian Northern would undoubtedly be liquidation. It is not possible, having regard to the securities which have been issued, to reach any other conclusion than that a receivership of the Canadian Northern railway would mean that the several sets of bondholders, in the assertion of their legal rights, would be obliged to dismember the system. In such a case we would have the province of British Columbia taking the Canadian Northern Pacific, we should have Alberta taking the Canadian Northern Alberta, we should have Saskatchewan taking the portion of the line in Saskatchewan and we should have the Government of Manitoba, or the perpetual debenture holders, if they should associate together, taking over the Canadian Northern itself with the rolling stock which belongs to it and with the securities of the subsidiary companies which it owns, subject to the charge which has been created in the interest of the perpetual consolidated debenture holders. We should have the province of Ontario under its guarantee, taking the lines within that province. The result would be dismembering of the Canadian Northern system. The Government, in such a contingency, would be obliged to pay the interest upon its $45,000,000 loan because the mortgage which secured that loan is junior to the mortgages securing the issues which had been made prior to the legislation authorizing the Dominion guarantee. As I have said, in the case of the Grand Trunk Pacific, the Grand Trunk Railway Company would have to make good its guarantee. The consequences attendant upon the allowing these two, and possibly three, railway companies to go into the hands of a receiver would be so serious from the standpoint of the national credit and national interest that in our view it should not be permitted to take place especially at this critical period when we are engaged in financing a war waged upon an unparalleled scale and involving colossal expenditures on our part.

The second alternative is to permit default and take physical possession of the two railway systems in question; that is to say, foreclose the mortgages which we hold.

In that event the Dominion Government would take over the mortgaged premises and hold them as it does the Intercolonial railway. If it continued to hold them and operate them without a receivership or liquidation it would mean that it would have to pay all the interest on all the securities of these companies at present outstanding. It would have to provide the amount of temporary aid which we are now proposing and in addition it would have to provide for the future financing of these roads.

Mr. MACDONALD: Would it have to pay interest on the subsequent securities?

Sir THOMAS WHITE: The Dominion Government would have to pay interest upon its $45,000,000 and its $16,000,000 of securities because it is bound to do so under its guarantee. If the Dominion Government foreclosed under these two mortgages, and took over the two roads, it would have to pay interest upon the guaranteed securities.

Mr. MACDONALD: Only on those that were prior to the mortgage.

Sir THOMAS WHITE: Prior to the mortgage, but the issues of $45,000,000 and $16,000,000 are junior securities and we would have to pay on those.

Mr. MACDONALD: Are they subsequent to all the guaranteed securities?

Sir THOMAS WHITE: The $45,000,000 and the $16,000,000 mortgages are junior to the mortgages securing the issues outstanding on the two systems constituting the greater part of the indebtedness.

Mr. R. B. BENNETT: Except the income securities.

Sir THOMAS WHITE: Except the income securities. Under the legislation of 1914 the Dominion Government was given power to appoint the Board of Directors of the Canadian Northern Railway and administer such company through such board, but in such event the Government would not only have to provide the temporary assistance which we propose now, but it would have to undertake the burden of financing the balance of $92,000,000 of temporary loans and current obligations. For the future, it would either have to allow the system to go into liquidation or it would have to provide for its future financing. If we were not in the midst of a war, and confined in our financing to this side of the Atlantic, if we had not before us the formidable burden of this war, with no prospect of its early termination, it would not appear to me to be so serious an obligation to take over the financing of these two railway systems. But it must not be forgotten that war or no war the taking over of two transcontinental railway systems, assuming their indebtedness, greater in the aggregate than the debt of the Dominion, and undertaking to provide in the future for their requirements as to fixed charges, as to deficits, betterments, improvements and rolling stock, would involve a burden which would not be regarded lightly by this House or the country. But, Sir, we are in the midst of a war and in considering the second alternative as to whether we should allow default and take possession, under the provisoins of our mortgages, or whether we should appoint the board of the Canadian Northern Railway and administer its affairs through that board, we must bear in mind that we have the burdens of the war actual and prospective upon us.

With the obligations of the war increasing and likely to increase, the Government finds itself unable, for the present at least, to consider favourably taking on such a heavy additional burden and becoming responsible for financing not only the war, but two transcontinental railway systems as well. It may well be, Sir, that with our expenditure upon the war this year and next year, if the war should last so long, and with further expenditure connected with the war succeeding the conclusion of the war—because we shall not immediately be able to disband our troops and stop our war expenditure—the national debt of Canada, when this war is concluded, will reach $1,000,000,000, That is no reason, however, for slackening our efforts. The interest upon that amount and a sinking fund to meet it are quite within the powers of this Dominion; but I should not be fair to myself, nor fair to the House, if I minimized or belittled the burden which the war is casting upon us, and which this House and this country are so ready and willing to assume.

Mr. LEMIEUX: Is it my hon. friend's opinion that, war or no war, he will have to take over at least one of the two railways?

Sir THOMAS WHITE: I am afraid I am taking up too long a time, but I regard the subject as one of considerable importance. I will come to that point in a moment or

two. The first business of Canada at the present time is the war; all other businesses, no matter how important they may be, are subsidiary and subordinate. What I am trying to show the House is this, that in the midst of the war, to undertake its burdens and at the same time to undertake the financing of two transcontinental railway systems would be a formidable proposition even for the Dominion Government.

The third alternative, and the one which we now propose to Parliament, is to afford the minimum of temporary assistance which will enable these two systems to continue in operation pending an investigation, which we propose to carry out by the best experts available, into the fiscal, economic and financial conditions of the railway situation as it exists in Canada to-day. It is perfectly clear that it is not possible, nor in the national interest, that we should go on, as has been the case for many years past under this and the preceding Government, making loans or giving guarantees at short intervals for the purpose of assisting these two large enterprises. A continuing condition such as this would be intolerable, and the time has arrived when, in our judgment, it has become imperatively necessary that a permanent solution should be found for the existing railway situation. No doubt that situation has been aggravated by the war, but it is none the less necessary that some permanent policy should be adopted. We cannot adopt a permanent policy until we know all the facts and have been advised by those most capable of giving advice as to what is really involved in the problem which confronts us and what the future of the existing systems is likely to be. We cannot adopt such a policy until we know what, if any, rearrangement, redistribution or linking up of existing lines or systems, may be necessary in order to get the best economic result from the enormous expenditures which have been made upon Canada's railway systems. It is possible, and even probable, that the permanent solution of this great question may involve the Dominion taking over one or more of the existing systems, or there may be involved the larger issue of nationalization of all the railways of Canada. The whole question is so vast in its complexity and manifold in its bearings that nothing but a thorough mastery of the problems involved, upon the best information and advice obtainable, can lead to its proper solution. Nevertheless, for reasons which I have given, this problem must now be faced, and the present measure of aid is designed as a temporary expedient to meet the situation as it is until such time as the whole problem can be fully studied and solved.

The House will observe that the loans which we propose, of $15,000,000 and $8,000,000 respectively, are repayable upon demand, so that, in a sense, we have a control of the situation through those demand loans. We are charging a rate of interest of six per cent, the Dominion Government being able to borrow at slightly less than that figure. We realize that the security upon which we are making these loans to both of the railway systems in question is rather slender, and therefore we have a vital interest in the administration of the affairs of these two railways. It is our intention, in order that we may be kept fully informed, pending our investigation by experts, which I have announced, as to the condition and administration of these companies, to appoint three directors of the Canadian Northern Railway Company and three directors of the Grand Trunk Pacific Railway Company.

Mr. MACDONALD: Will they be railway men?

Sir THOMAS WHITE: They will be men of high standing. I am not in a position yet to give their names, but they will be men who can be depended upon to watch the interest of the Government in connection with the administration of these railways. The reason why we propose this is, as I have stated, that we are making these loans upon tenuous security. It is, therefore, in our view, important that we should be completely informed through our own representatives upon the two boards of directors as to the condition and administration of these railways from time to time until the report has been made by the experts whom we shall engage to make an investigation into the whole Canadian railway situation for the purpose which I have mentioned.

We propose also to provide for a continuous audit of the revenues and expenditures of these two railway systems. We have provided items in the Estimates for the purpose of defraying the expenses of the board of investigation which I have mentioned, and also of the continuous audit. As a result of the appointment of such auditors and our directors upon the boards of the two railway companies, we

expect to be kept thoroughly informed as to their administration and condition.

I have shown the present condition of the companies. I have pointed out that there are three alternatives, and three only namely, liquidation, taking over by the Government of the systems in question, or the affording of temporary assistance pending a solution of the larger question. The first alternative would, as I have stated, be at this juncture a most serious calamity and a great blow to the public credit and standing of the Dominion abroad. The second would add exceedingly heavy burdens to the increasing financial burden of the war, and would, I believe, seriously embarrass us in providing for its further financing on the increased scale to which we are looking forward. The third alternative, and the one which we propose, maintains the situation as it is at present and gives us time to investigate the whole problem with a view to such action at the next session of Parliament as may, it is to be hoped, solve in a permanent fashion Canada's railway difficulties. It seems to us that the latter course is unquestionably the course of wisdom, and I earnestly hope that the proposals of the Government looking to this end will meet the approval and endorsation of the House and of the country.

Hon. GEORGE P. GRAHAM (South Renfrew): Mr. Speaker, I do not propose to deal with this proposition in any detail, because I have not had time to look at the figures, having only received them to-day. I would suggest to the Minister of Finance that we might go into committee, and then take up some other business in order to give us an opportunity at least until to-morrow of looking into the matter. As I received a copy of the Canadian Northern report only about twenty minutes ago, I have not had time to read it over.

The difficulty that confronts the members and the House is this: How long, O Lord, how long? It does not need any arguments or figures to convince the members of this House that they want to do what is right for the Dominion of Canada, they want to do that which will have no bad effects on our financial position. But that is the argument that has been used for years and years. When we are discussing these things we are met with the suggestion that if this aid is not given something terrible is going to happen to the country. It is really embarrassing to know just what is the best thing to do,—we have done it so often. On several occasions we have been assured that this is the last time of asking; and the aid has gone through; and the very next morning after the Governor General has signed the measure, movements have begun for requests for another grant or some additional aid. Another difficulty that strikes me just now after hearing the Minister of Finance is this—that we are not absolutely sure on what ground this aid is needed. In the first place we have not all the figures about the Canadian Northern revenue and expenditure, and cost of operation. And, secondly, it looks as if one of the great incentives to the granting of aid to the Grand Trunk Pacific is that the Grand Trunk does not want to do it. These things just struck me casually. Is it possible that if this Parliament did not give aid the Grand Trunk would still decline to give it? I know that the shareholders of the Grand Trunk have been objecting for two or three years to giving further aid to the Grand Trunk Pacific. But so have the people of Canada been objecting to giving further aid to anybody. Is it outside the range of possibility that if we did not give it the Grand Trunk would have to give it?

I want a little time to look into these matters before I come to a decision. It is true that speaking generally seventy-five per cent of the railways of America have been in liquidation at one time or another —perhaps the percentage is greater than that. But what we have to do is to make sure that the interests of the people for whom these railways are constructed shall be protected. I am not sure that the interests of the people of the United States have not been as fully protected by having the railways go into liquidation, as they would have been otherwise. Of course, they have not aided railways, as a government, so much as we have. The statement appears in a British Columbia newspaper, and I would like to ask the Minister of Finance about it, that legislation here will have the effect of relieving the British Columbia Government of its obligation to the Canadian Government. I cannot think there is any foundation for that, but it is stated in the report of a deliverance of a public man in British Columbia. Of course, if we are to assume the liabilities of the provinces and other creditors, let us take over the railways at once. It is true, as the minister has stated,

that the war conditions have made it difficult to raise money. It is also true that the low rate of interest at which some of these securities were issued has made it impossible, no doubt, to realize nearly as much upon them as would have been realized had not the rate of interest risen, due to war conditions.

Let me go back to my original question: How long is it to continue, if Parliament grants this aid? The Minister of Finance tells us that there are three things that face us. As he states them they amount to this—liquidation, nationalization, and procrastination. Now, there may be things that have greater terrors than liquidation of a railway company under present conditions. Possibly it would not be a terrible calamity if nationalization took place—for what is proposed is only an expedient, a temporary arrangement, even at the best; the situation has to be faced, and faced before very long. Should we temporize, should we keep on putting off and putting off?—particularly, when it is such an expensive pastime? The minister says, and says with a good deal of force, that it would be a bad time to assume all the liabilities that these two railway companies have upon them. But would it? Are we not assuming them now? Are we not in the position, as a Parliament, of assuming the liabilities of these two companies to a very large extent?—and having nothing to show for our liability at that. If we were to go further, although we should, perhaps, assume a heavier liability, still, we should have some property to show for our liability, we should have the railway property at least to the extent of the liability, if it were worth the money. As we go on now, we are handing out money year after year, and have nothing to show for it except forty-five per cent of the Canadian Northern stock—

An hon. MEMBER: Forty per cent.

Mr. GRAHAM: Forty per cent of the Canadian Northern stock, which, I imagine, would not make anybody rich on the stock exchange at the present time.

Now, coming to the Grand Trunk Pacific. I think I told the Minister of Finance once in a quiet way that a certain report issued must have the effect of making it difficult for the Grand Trunk to obtain money; and, from the day the Staunton-Gutelius report was issued by this Government, the company began to have difficulty in securing money. I pointed out that that would be the only serious result of the report. For whether such statements be true or not, capital is very sensitive and shies at the least provocation, and sometimes without any provocation.

Now, perhaps I should not say what I am about to say, but I think I am justified in saying it from the position I have taken with the Grand Trunk people. They will understand that I am not saying anything new. That company will never make a success of its lines in Canada if it continues to operate them at long range. We in Canada are moving along so rapidly, as a new country, that the situation of yesterday is not the same as that of to-day and the situation of to-day may not be that of to-morrow. If any concern, a transportation company particularly, wishes to grapple with situations as they arise, it must have its directing forces on the ground. It is not so in the old land, where conditions are the result of centuries of work and development. We change in a day—in a few hours; what is a good policy now may not be a good policy to-morrow. The Canadian Pacific Railway has its board in Canada and can control its affairs. It can meet at 10 a.m., decide on a policy, and at 11 a.m. put it into force; in fact, it often puts the policy into force and meets afterwards. But as to the Grand Trunk and Grand Trunk Pacific, while in a measure it manages its affairs in Canada, the fact is that no departure of any importance can take place, no real advancement can be made, without first submitting it to the board in London.

By the time that is received by that board and is studied as it necessarily must be, and reply is made to the Canadian management, the reason for the application has disappeared and the next order of business is at hand. Under these circumstances the application might as well never have been made, because the time has passed for it to be acted upon. While the Grand Trunk people in London are wondering what they are going to do, the Canadian Pacific railway, because it has the power, steps in and takes action. One of the difficulties in connection with the management of the Grand Trunk Pacific railway is that while it is the best main line of road on the American continent, it has not sufficient branch lines to feed it and give it the business that it ought to have. That neglect will be more marked as the years go by, unless it be remedied. I know that the management in Canada did endeavour time after time to make as rapid progress as could be made, but these things all had to be submitted

to the board in London, and by the time that board had made reply the Canadian Pacific railway had its men working on a branch line, and the Grand Trunk Pacific branch lines were not needed; they would be superfluous. I think it is the duty of the Government to take the Grand Trunk Pacific and the Grand Trunk management to one side—I do not mean the Canadian end of the management, I mean the home end—have a quiet talk with them, and tell them that so long as the control is 4,000 miles away from the railway, so long will its management be inefficient and its financing almost impossible. I discussed this with Mr. Smithers on two or three occasions—and I am not saying anything now that I have not said to him most emphatically. The difficulty with the Grand Trunk Pacific system, as I pointed out to him, is not the matter of management; it is financial. The greatest financial mind obtainable should have been secured years ago by this company, and should have been on the ground in the Dominion of Canada, knowing the conditions, knowing what to recommend, and having power to act quickly on that recommendation. I submit that, no matter what happens, if the Grand Trunk Pacific is to remain as a company-managed road, the body having control must be removed to Canada, or the road never can be successful.

Mr. MORPHY: What was the answer to the hon. gentleman's representations for headquarters in Canada?

Mr. GRAHAM: I am expressing only my view; I shall not express the other gentleman's view.

Mr. MORPHY: I did not understand that it was private.

Mr. GRAHAM: It was not private so far as my views was concerned.

Mr. MORPHY: Is there no answer?

Mr. GRAHAM: There is no answer from me. My private view, expressed here in public, is that no answer has been or can be given that will satisfy the Canadian people other than the removal of the managing force to the Dominion of Canada. A move was made along the line of having the offices of president and general manager combined in one person, with residence in Canada. Mr. Hays did have very wide powers; but on his death those powers were again divided; the financial management was again removed from the Dominion of Canada. That is as far as I care to go in discussing that side of the question.

The Minister has stated to us that the Grand Trunk Pacific is completed from Winnipeg to Prince Rupert. Now, is it? Has Mr. Schreiber given his certificate that the work is all finished on the line from Winnipeg to Prince Rupert? I am simply asking for information, because I had thought that there was quite a bit of work to do there yet.

Sir THOMAS WHITE: I am informed that it is completed.

Mr. GRAHAM: Will the minister kindly put among the papers the certificate which would have to be filed by Mr. Schreiber before the road would be considered as completed? He is the chief engineer acting for the Government in the construction of the Grand Trunk Pacific from Winnipeg to Prince Rupert.

My hon. friend has said that he is going to put several directors on these two boards. Well, if they work with the same vigour that former Government directors of the Grand Trunk Pacific worked, I know that we shall not have a very voluminous or valuable report. The minister the other night could not even tell us the name of the man the Government has on that board. I at least knew who the man was that I had on the Board, although gentlemen opposite were never very much enlightened by the report that I always had to present.

4 p.m. It would be interesting to the people of Canada and to Parliament to know who these gentlemen are and what their duties are to be. It is very essential that the Government director should be notified every time the Board intend to hold a meeting, no matter what the business is. This is very essential, because Board meetings have been held without the knowledge of the Government director. Further, it should be the duty of the Government director or directors to report to the Government after every such meeting as to what occurred. If that be not done, the appointment of men as Government directors on this board will be merely a grand stand play, and no practical result will come in the way of information.

The Canadian Northern Railway Company has a debt of $492,000,000. If the Canadian Northern is as prosperous as I am told it is, then we ought to have all the figures as to net earnings and cost of operation. We ought to have also some general

statement as to the condition of the road in its various parts. The Canadian Northern is divided into several entities which make up the entire system. Even gentlemen from the West would have to be very astute to tell what part of the road they are riding on when they are travelling over the Canadian Northern railway. It may be the Canadian Northern Pacific, the Canadian Northern Ontario, the Canadian Northern Quebec—there are at least a dozen subdivisions. If we are to make a further investment in this line, of which we now hold 40 per cent, we ought to know what we are getting for our money. Outside of that, I think it is the duty of the Government this session, as part owners of that road, to put on the table of the House a report of the Government with regard to what is our property.

It would help us out materially. If we own 40 per cent of the property and all the liabilities, we ought to have a statement from the Government. They are our Board of Directors. It is true they have not been on the Canadian Northern Railway Board, but they are our representatives and should be able to tell us what condition our road is in, what it has done, what it proposes to do. There is only one point in that connection to which I wish to refer. I have received a lot of correspondence, and I know the Minister of Finance also has, concerning certain claims made by contractors against the Canadian Northern Railway. It was thought when one measure of aid was afforded that these liabiltities were to be settled; at least that is the impression I received. But several contractors have come to me in the last few weeks and have told me that that is not the case. I think this would be the time, when we are asked to grant further aid, that the legitimate claims of men who have performed work on the line ought to be considered and provided for, as I believe probably they are in the $92,000,000. The granting of this money without any such provision will be roundly condemned by a great many people, because not only are the contractors complaining, but the sub-contractors and the men who work for the sub-contractors complain that they have not been able yet to get their pay for work performed. I think the Government ought to inform us of its intentions on these points and ought to be able to tell us what provision, if any, is being made.

If the Canadian Northern railway had been content with its magnificent system of distribution and gathering in the West, connecting it with the East according to its first proposition, and had got that system well under way before attempting to go through to the coast, it would not now be in the condition it is.

Mr. R. B. BENNETT: Or come east from Fort William.

Mr. GRAHAM: Well, if it had come all the way East and had connected its western system with the seaboard on the east, or with tide water at Quebec, making arrangements with the Government railway to go to Halifax and St. John, it would have been somewhat behind; but I submit that its greatest difficulty has been in trying to finance the road through and west of the Rocky mountains. This was discussed between the Canadian Northern Railway proprietors and myself on several occasions, and the position I always took with them was this: Ultimately you will have a transcontinental line undoubtedly, because you will want a western outlet as well as an eastern outlet; but for the time being, until you get your system in the Prairie Provinces connected with the East, do not go farther west; by the time you have that done, if Canada is going to be what we think, the conditions will enable you to judge of the feasibility of going through to the West. Mark you, that was not with any antipathy of their going to the western coast; that was for the purpose of keeping the enterprise on a sound footing as it went along, and I believe that had that been done, to-day the Canadian Northern railway, with at most very small aid, would have been able to finance itself, and we would not have had this continual coming, year after year, and this constant repetition of votes to aid this enterprise. I shall not discuss these matters further now, as I desire to study the figures in detail; and I suggest that if the minister is agreeable we might have an opportunity to look into them. The minister might now go into committee on some other business, taking this up to-morrow or the next day, when we have had an opportunity to look at the figures.

Right Hon. Sir ROBERT BORDEN: As my hon. friend (Mr. Graham) desires some further information, and also a further opportunity to examine the documents which have been laid on the table of the House, I have only a few words to say now. This is an important subject, and it is manifestly only fair to postpone the discussion as he requests. There are, however, one or

two things I should like to say before the House goes into committee. One is that thirteen years ago, on the 18th day of next August, I asked the late Government, our predecessors, to make that very stipulation which the hon. gentleman now says should have been made; that is to say, that there should be from Edmonton west to the coast only one line of railway, common to the Grand Trunk Pacific and the Canadian Northern Railway. That would have avoided what might perhaps be regarded as an economic waste, and would have effected a saving of from $75,000,000 to $100,000,000. I made some further suggestions, which I shall be prepared to debate with my hon. friends when the time comes, to indicate to them that the situation which has arisen to-day is one for which they are very largely, if not wholly responsible. Every hon. gentleman in this House knows precisely the conditions that confronted us when we came into power in October, 1911 —two great transcontinental railway systems, both having received the imprimatur of the Government as such by statutes of this country, both uncompleted, and both of them impossible of completion unless assistance should be given. It would be proper to leave the consideration of that until my hon. friend has made himself familiar with the details of the present proposals. He asks about the condition of the Canadian Northern Railway line; he inquires who the directors will be and what part they will take. I may tell him that they will be men who will command the confidence of the country, and further than that, I have no doubt that they will take such part in the management of these roads as will be consistent with their duty as representatives of the interests of this country in connection with further construction, and with the operation of the two railways.

I pass by my hon. friend's suggestion that the difficulties which confront the Grand Trunk Pacific Railway to-day are due to the fact that an investigation was made by the present Administration, after it came into power, into the construction of the road. That remark could not have been made by my hon. friend in any very serious spirit. As a matter of fact, the Grand Trunk Railway has been carrying on the financing for the Grand Trunk Pacific Railway since its construction was first undertaken in 1904 or 1905. The conditions that confront the Grand Trunk Pacific Railway to-day have been described by my hon. friend the Minister of Finance. The conditions which confront that road are in no way due to any report that was made or any investigation that was held. As a matter of fact, the Government have sought to co-operate in every possible way with the Grand Trunk in maintaining the stability and the financial credit of the Grand Trunk Pacific enterprise from the day we came into power. It is true that the enterprise was launched under conditions of which the opposition of the day did not approve. It is perfectly true that we then made certain suggestions which were not adopted, and the value of which I shall be prepared to discuss before this debate is concluded. It is equally true that, as the proposals of the Government of that day were ratified by Parliament, as they were afterwards approved by the people of this country, we felt it our duty, when we came into power, to so guide our policies and our conduct as to support that enterprise in exactly the same way as we would have supported it had we been responsible for it in the first instance. In doing that we were doing no more than was proper and necessary, having regard to the principles of constitutional government which control such conditions. As an example of the extent to which we have gone in endeavouring to support the enterprise which was launched by my hon. friends opposite when they were in power, I may say that for the period of nearly four years that the Grand Trunk Pacific has been in operation in the Prairie Provinces, and for the year that it has been in operation through the mountains, it has been maintained, so far as the payment of interest is concerned, upon a construction basis which permitted interest to be paid out of capital. For that reason, the affairs of the Grand Trunk Pacific Railway have not been in the limelight to the same extent as the affairs of the Candian Northern Railway.

Mr. R. B. BENNETT: We lent them the capital to do it.

Sir ROBERT BORDEN: The actual fact is that in order to give fullest possible support to the enterprise which was launched by my hon. friends opposite, and to provoke as little public criticism of the results of its operation, as might be possible, nearly $12,000,000 has been paid out of capital during the period in which that road in the prairies and through the mountains has actually been in operation. If we had not

taken that course it would have been necessary, from public assistance or from some other source, to provide nearly $12,000,000 in order that interest might be met on the outstanding securities of the Grand Trunk Pacific Railway.

Mr. R. B. BENNETT: We lent them the money to do it.

Mr. PUGSLEY: Was that illegal or in accordance with the contract?

Sir ROBERT BORDEN: We did not take over the road as completed but it remained on a construction basis. Technically, it might not have been quite complete, as the hon. member for South Renfrew (Mr. Graham) has pointed out, but it was in practical operation, and during the period in which it was in practical operation the interest had to be paid out of capital in order to save a situation for which hon. gentlemen opposite are responsible.

Mr. LEMIEUX: I take it from my right hon. friend's remarks that he considers the eastern section of the Transcontinental as an incubus. Will he tell the House and the country whether it is his intention to add to that incubus two other lines, namely, the Quebec and Saguenay railway, and the Lotbinière and Megantic line?

Sir ROBERT BORDEN: We will come to the Quebec and Saguenay railway in good time and discuss it with my hon. friend.

Mr. LEMIEUX: Is it to be added to the Transcontinental?

Sir ROBERT BORDEN: We will discuss that road when we come to it. I think that when the proposal is submitted to the House in regard to that road it will be found to be somewhat different from that which my hon. friend seems to imagine; but it will be time enough to discuss it when we come to it.

Mr. PUGSLEY: Before the Prime Minister passes from the operation of the mountain section, may I ask if the operation was not in accordance with the terms of the contract, being carried on by the contracting or construction company in the West?

Sir ROBERT BORDEN: It has been carried on by the Grand Trunk Pacific Railway Company, as I understand, and carried on as if the road were still under construction. While, I think, it might not have been technically complete, according to the report of the Government engineer, nevertheless it was, for all practical purposes of operation, complete, and if we had not extended the time by the authority of Parliament, as we did from session to session, the situation to which I have alluded, would have had to be met. I am merely pointing this out to indicate that, by reason of a situation created before they came into power, and for which they were not responsible, this Government were obliged to give support in that way and every other way to these roads in order that the stability of railway conditions in this country might be maintained to the fullest possible extent.

As my hon. friend the member for South Renfrew (Mr. Graham) desires to postpone further discussion, we have no objection. We will take up the matter some other day, and resume the discussion when it will be entirely convenient to him. To-morrow, or the next day, or at any time he suggests, we shall be prepared to take it up again and go into committee and give all further information that may be desired.

Mr. TURRIFF: Before you leave the chair, Mr. Speaker, I would ask the Minister of Finance a question or two for information. What reason have we to believe that this statement of Canadian Northern railway affairs is an absolutely correct statement, covering all their liabilities? For my part, I do not believe that the Canadian Northern are in a position to state what their liabilities are. I do not believe that they know what their position is. I would suggest that when we take the matter up again my hon. friend should give us some information as to what amount of money, in addition to the present liabilities of the company will be required to put the company on a commercial basis; that is, to put it where it can carry freight cheaply and perform the duties for which it was organized. For instance, in my part of the country they have a branch line which was practically idle all last winter, and it will take a great deal of expenditure on many of their branch lines to put them in shape so that they can meet operating expenses and pay interest on their indebtedness. In dealing with the question we should have some such information which would certainly be a very great help to us when we come to consider what ought to be done in connection with the proposals made by the Government. I would also like some information on this point: If we are going to finance this company, what will be the policy of the Gov-

ernment in regard to this company extending their field still further by purchasing or building lines and extending in a manner that makes it impossible for them to concentrate their energies on the part of the country which they now occupy.

Mr. MACDONALD: To enable us to understand this question, I think the Minister of Finance ought to give the House some information as to how this amount of $15,000,000 was arrived at, and as to the purposes for which it is to be used. The minister has asked the House to accept the statement that he made an examination, and that he was satisfied that $15,000,000 was the smallest amount which could be given to enable the Canadian Northern Railway Company to go on. I think that information ought to be given now, so that the House and the country might understand. While I am on my feet, may I be permitted to point out the singular method which the Government has adopted in presenting this matter for the consideration of Parliament. I think that this is the first occasion on which any Government has come to Parliament asking for such a large sum as $23,000,000 for two railway companies, and submitting it in the Estimates, without making the matter one of special legislation as it should be. There should have been a concrete Bill so that the proposals now submitted to Parliament could be reviewed and dealt with, and the legislation considered and enacted, if it is to be enacted, by the Government in accordance with precedent. There are reasons, I have no doubt, why the Government has gone outside the usual method of presenting legislation, and put these proposals in the Estimates. When my hon. friend the Minister of Finance dilated upon the condition of the Canadian Northern Railway Company, and upon the position of this country at the present time, he simply stated what hon. gentlemen on this side of the House declared two years ago would be the result of the loan of $45,000,000. It was pointed out distinctly and clearly, not only by hon. gentlemen on this side, but by hon. gentlemen supporting the Prime Minister, that when the Government provided that loan of $45,000,000 it put this country in a position of being liable for every dollar of debt that had been incurred by the Canadian Northern Railway Company, both prior and subsequent to the granting of that security. It was urged by the Government then that that was not so, that the situation was such that, in order to enable the Canadian Northern to break through its financial difficulties, that loan of $45,000,000, even supposing it did leave $65,000,000 of liabilities still to be liquidated, would result in a condition of affairs in which the Government of this country would be relieved from further advances, and the company would be able to go on. To-day it is quite apparent—my hon. friend has told the House—that if the Government undertake to exercise the power contained in the mortgage, the result would be that we would be liable for every cent of this indebtedness, both prior and subsequent, including the floating liabilities. My hon. friend did not take advantage of the safeguard which they allege was of the most vital character at that time when they assured the House and the country that they proposed to appoint certain directors upon the Canadian Northern board. They gave us that assurance then, just as they are asserting to the country to-day, that they propose to provide safeguards for the future by putting a certain number of gentlemen on these railway boards. The statement was made to the House by the Government during the present session, that no director had ever been appointed by the Government to the Canadian Northern board to watch the interests of the country or guard the position of the Government after that loan was made two years ago. Why, therefore, are we to accept the statement of the hon. gentleman as being any vital guarantee that they are going to put three members on this board or that the interests of the country are going to be better protected in the future than they have in the past?

Mr. R. B. BENNETT: Does not my hon. friend think that there is a complete answer to that in the fact that the road was not a completed system, and not open for traffic, until the 30th November last, and, not being a completed system and not open for traffic, the Government could not appoint a director for a portion of the year as the first fiscal year only ended on June 31, 1916.

Mr. MACDONALD: I am speaking particularly of the Canadian Northern propoistion.

Mr. BENNETT: I am referring to the Canadian Northern.

Mr. MACDONALD: The Canadian Northern loan passed this House in the spring of 1914. I perhaps did not catch my hon.

friend's point, but I do not appreciate the suggestion he makes as being any answer to the claim that, immediately after the passage of that legislation the Government should have put its representative on the board in order that the interests of Canada might be protected. The situation in which the Canadian Northern stands to-day, as far as one can gather from hurriedly looking over the statement, is the situation that has existed every moment during the past two years. It does not seem possible for this Government to initiate any policy in regard to any matter without providing for the appointment of a commission to go out and report, or it may be, never report at all, because some of these commissions are allowed to die a natural death. Nobody has ever heard of their reporting if they have ever done so. My hon. friends now propose to appoint the 85th or 86th commission which they have appointed since they came into power to make inquiry as to what should be done in regard to this railway problem. It is like locking the stable door after the horse is stolen, my hon. friends two years ago should have had these commissioners appointed. The Minister of Finance, knowing the position of the Canadian Northern and the burden which the country assumed when it provided for a loan to them of $45,000,000, should have taken up the question as to whether or not this country would be bound to assume this railway and nationalize it. It was the bounden duty of the Government to have done that two years ago. They are simply two years too late in dealing with this question, even assuming that the proposition brought down to-day is tenable in the slightest degree. The result has been that for two years Messrs. Mackenzie and Mann have had control of the operation, the finances, and the securities of the Canadian Northern, and they have been able to do what they pleased in regard to them without the slightest interference, or restrictions, or caretaking of the situation by this Government in any way. After two years of non-interference, after after two years of absolute failure to secure the interests of this country, or to make inquiries as to whether or not, or as to how, this road should be nationalized or taken over, the Minister of Finance to-day admits absolutely that they have done nothing; that we are up against the situation which exists to-day and which has existed for two years, and that they have permitted control to remain in the hands which brought about conditions which rendered interference necessary, according to hon. gentlemen opposite, in 1914. After two years my hon. friend comes to-day and says: I am going to ask the House to give these gentlemen $15,000,000 more because this is the least they can get along with. He expects the House and the country to accept that. In these times of thrift, of economy and of care being enjoined upon the private individual by advertisements and by publications issued by the Government, the Government themselves are playing the part of spendthrifts. They have permitted this situation to arise, as the result of which $15,000,000 is to be taken out of the public treasury, and we are asked to await the report of a commission, which may never report, and which we say is simply intended to postpone further action in the hope that something or another may arise in the future. I submit, Mr. Speaker, that it is a situation which demands more information than we have before us. If my hon. friend can give us any better information than he has I think we ought to have it. I would ask him to give a further explanation of this proposed expenditure of $15,000,000 and a definition of the statement which he has submitted.

Sir THOMAS WHITE: The audited statement of temporary loans and current obligations shows the necessity of a loan of at least $15,000,000, but probably the matter can best be discussed in committee when I shall have all the information before me.

Mr. MACDONALD: That statement shows the necessity of a loan of $92,000,000.

Sir THOMAS WHITE: Not quite because the Canadian Northern assure us that they will be able to renew loans, or obtain new loans to replace existing loans, and that the one matter of concern to them is the item of current obligations and expenditures.

Hon. WILLIAM PUGSLEY (St. John): There is one matter in regard to which the Minister of Finance has not given any reasonable information to the House, and I think he might be very well expected to do it in answer to my hon. friend from Pictou (Mr. Macdonald). My hon. friend from Pictou has called attention to the most extraordinary fact that probably for the first time in the history of this country an appropriation of this character was made by placing it in the Estimates instead of coming before Parliament with a resolution

followed by a Bill so that the details might be discussed, and so that any amendment might be made which the committee would deem desirable. We have here, in the ordinary Estimates submitted to Parliament, a proposal to make a loan of $8,000,000 to the Grand Trunk Pacific, and the only condition which is attached to it is that the disposition of the loan is to be subject to the direction of the Governor in Council. We have also a similar provision with respect to a proposed loan of $15,000,000 to the Canadian Northern. I say, Sir, it is unheard of in the history of this Parliament that a proposition of that kind should be submitted simply as an ordinary Estimate. That there must be some peculiar reason for it is apparent, because with respect to what is known as the Quebec and Saguenay railway, a proposal which is only going to involve some $4,000,000, the Government does not put it in the Estimates in the ordinary way, but the Acting Minister of Railways and Canals has introduced a Bill, which appears to-day on the Order Paper, to acquire that railway. The proper course, it seems to me, would have been for the Minister of Finance to submit a resolution in the ordinary form authorizing the Government to make this loan, and then to follow that up with a Bill, giving the regular authority of the Governor General in Council. The reason for the course adopted ought to be stated to the House.

Some condition, I think, ought to be attached to this loan. In 1914, when the question of giving $45,000,000 aid by guarantees to the Canadian Northern Railway Company was under consideration, I ventured to call attention to the fact that the time might come when it would be deemed in the interest of the country to take over the whole Canadian Northern Railway system and to operate it as a Government railway. I called attention to the fact that the company was admittedly in a bad condition financially, and that unless the country came to its aid at that time to the enormous amount of $45,000,000, it would be compelled to go into the hands of a receiver. I urged that, as the company was proposing that the Government should come to its assistance to that enormous extent, some provision should be made whereby the country could for a reasonable sum, take over this system in the future. I pointed out that the Government ought not to give the requisite assistance to tide this company over its financial difficulties until the day of prosperity would arrive, without some provision whereby, if the country decided to acquire the system in the future, it would not be mulcted in an enormous amount for the equities which Mackenzie and Mann would have in the system. If I remember rightly, I moved a resolution at that time fixing the amount at which the country would be entitled to take over the road, at a maximum of $30,000,000, and that resolution was put to a vote of the House. My hon. friend the Solicitor General made the statement at that time, that Messrs Mackenzie and Mann, rather than accept the sum of $30,000,000 for their equity in this road, would allow the whole system to go into liquidation. Upon what authority my hon. friend made that statement I do not know, but it struck me as an extraordinary statement that those gentlemen, in a condition, as they alleged, practically of bankruptcy at that time should refuse to fix as a maximum a sum of $30,000,000, which at 5 per cent would give to each of those men and his heirs the magnificent sum of $750,000 per year, or upwards of $2,000 per day, and that they would prefer to throw the whole system into liquidation to accepting it. This company comes again and says to this Government: Again we are practically bankrupt; again we say to you we cannot continue the operation of this road unless you come to our assistance. Is the Government going to go to their relief again without fixing any maximum sum in case the country should wish to take the road over in the future? The Minister of Finance says that the question of nationalization will come up very soon. The Minister of Public Works, giving us the benefit of a very eloquent address the other evening upon the whole railway system of Canada, stated that the whole question of nationalization would soon come up. Are we going to advance this at present bankrupt concern $15,000,000 in addition to the $45,000,000 guaranteed in 1914 and to the other assistance which has been given, so as to tide it over until a day when prosperity again may come to it, and then be obliged, in order to acquire the system and to nationalize the railway, to give Mackenzie and Mann, not $30,000,000, but practically whatsoever they choose to ask? Does not the Minister of Finance think this is the time to fix the terms upon which this country may take over the Canadian Northern railway should we decide to do so? I submit this for the consideration of my hon. friend. While it

is true he does not give us a very great opportunity to present amendments, yet I think that is an amendment which he himself ought to propose, so that if the country should decide to take over this system, it may know that the system will be taken over on reasonable terms.

I was surprised at the bravery of my right hon. friend the Prime Minister, coming to this House with a proposition which I would think he would like to see treated in a non-partisan spirit, asking for this extra lgeislation, that he should seek to provoke party feeling in the speech which he has made. Instead of accepting, as I would have thought my right hon. friend would accept the responsibility for that part of the Canadian Northern railway system which is involving this country in the most tremendous part of its liability, namely, the construction of the road through the mountains of British Columbia, my right hon. friend seeks to throw upon the Liberal party the whole responsibility for the disastrous condition in which the country finds itself to-day in respect to the Canadian Northern. Upon what ground does he do so? Why, he says, I think it is thirteen years ago since I proposed to the then Government that they should provide that there should be only one line of railway through British Columbia to be used jointly by the Grand Trunk Pacific and the Canadian Northern. Let us see whether my right hon. friend is right in saying that the refusal of the then Government to provide for that is the cause of the present situation. Does he forget that in the Transcontinental Railway Act, it is expressly provided that the Grand Trunk Pacific Railway Company shall allow to any other company the use of its rails subject to an agreement to be made by approval of the Governor General in Council, and that under that the Canadian Northern Railway Company might and would necessarily have been allowed the use of the line of the Grand Trunk Pacific from Edmonton through to the Pacific coast. The very thing which my right hon. friend says he thought should be provided is provided for in the agreement for the construction of the Grand Trunk Pacific. The late Government refused to grant a subsidy to the Canadian Northern to build its railway west of Edmonton. The Government thought—and I think wisely—that they should not go ahead with the new transcontinental line through the Rocky mountains, but should allow the system to be developed, allowing the road to get into a position of financial strength before attempting this hazardous enterprise of building through the mountains to the coast. But when this Government came into power, it worked in harmony with Sir Richard McBride, then Premier of British Columbia, who seemed to think that there would be no limit to the wealth and the money which British Columbia could throw into this great enterprise, and he gave a very large subsidy for the road through the Rocky mountains, joining with the Government of British Columbia when that Government guaranteed bonds upon this road to the extent of nearly $40,000,000. Those members of this House who have been in British Columbia and who have gone over the line of the Canadian Pacific or of the Canadian Northern railway, know that for nearly two hundred miles those two railways run parallel to each other, one upon one side of the Fraser river and the other upon the other side, and that for at least one hundred and fifty miles through that portion of the mountains of British Columbia, there is no reasonable possibility of any traffic whatever to feed the Canadian Northern railway. And yet the hon. gentleman seeks to throw the responsibility for this useless and most expensive construction upon the Liberal party, which refused to countenance any proposition to extend the Canadian Northern through the mountains, but took authority for the use of the Grand Trunk Pacific line through the mountains should it be desired to afford that connection.

Sir THOMAS WHITE: Does the hon. gentleman suggest that in 1911 it was not understood by the late Government that the Canadian Northern Railway system was to be carried through the Rocky Mountains?

Mr. PUGSLEY: I do state that the late Government did not grant any aid whatever for such a project.

Sir THOMAS WHITE: The hon. gentleman has not answered my question. But, if he will pardon me, I would like to ask him this: In 1911, when the guarantee of $35,000,000 was given by the late Government to the Canadian Northern Railway in respect of the road between Montreal and Port Arthur, was it for the purpose of assisting the Canadian Northern Railway to become a transcontinental railway from Quebec to the waters of the Pacific ocean.

or was it not? Was that the understanding of the Government, or was it not?

Mr. PUGSLEY: So far as I am aware, the understanding was that it was to give the Canadian Northern Railway prairie section a connection with eastern Canada.

Sir THOMAS WHITE: This has been so frequently stated in the House, that I want to correct the hon. gentleman and to call his attention to the resolution preceding the Bill which guaranteed the $35,000,000 of the Canadian Northern Ontario Railway securities which was passed by this House in 1911, under the Administration of which my hon. friend (Mr. Pugsley) was a member. Let him consider the recital of that resolution which was:

> Whereas, having regard to the growth of population and the rapid development of the production and trade of that portion of Canada lying west of the Great Lakes, and to the rapidly expanding trade and commerce of the Dominion generally it is in the interest of Canada as a whole that another line of railway designed to assist in the direct and economic interchange of traffic between the eastern and western portions of the Dominion, to open up and develop portions of Canada as yet without railway facilities, to promote the internal and foreign trade of Canada, to develop commerce through Canadian ports, and to afford the Government system of railways in Quebec, New Brunswick, Nova Scotia and Prince Edward Island an interchange of through traffic, should be constructed from the Pacific ocean to the city of Montreal; and whereas the projected line of the Canadian Northern Ontario Railway Company extending from Port Arthur to the city of Montreal will provide the uncompleted portion of the said through line lying east of the Great Lakes.

In other words it contemplated an extension to the waters of the Pacific.

Mr. PUGSLEY: The other day the Acting Minister of Railways—to compare great things with small—told us that he was going to give us a connection between Andover and St. John; and a part of his plan was to apply for running rights over a portion of the Canadian Pacific railway covering fourteen or fifteen miles of that distance. If the Canadian Northern Railway Company had come to the Government and said: You have given us aid as far as Edmonton, and from Edmonton west to the Pacific ocean there is a railway already under construction over which we wish you to give us running rights in accordance with the reservation that was made in your Transcontinental Railway Act of 1903, the granting of that would have been carrying out to the fullest extent and in the most effective manner the spirit of the resolution which the hon. gentleman has just quoted. The point I make is that the Prime Minister is not willing to divide the responsibility with us on this side. He is not willing to say: The Liberal party is responsible for giving birth to the Canadian Northern railway; but we found that they had provided for construction only to the foot of the Rockies, and we gave money which enabled them to push through to the Pacific ocean. If he said that I should have nothing to complain of, for we on this side have no desire to shirk our responsibilities either for the Canadian Northern, so far as we are responsible for it, or for the Grand Trunk Pacific. We are proud of what we did in connection with these railways.

Some hon. MEMBERS: Oh, oh.

Mr. PUGSLEY: Hon. gentlemen on the other side laugh. It is extraordinary to think that hon. gentlemen who are usually courteous, usually polite, usually willing to hear an argument, yet, when anything touches them upon the raw, burst into laughter, thinking in that way to hide the chagrin they feel. We are proud—at least I am proud—of what the late Government did so far as the Canadian Northern railway is concerned. The Canadian Northern railway has a magnificent system extending in every direction throughout our western prairies, a system laid out with great judgment, and which has been, up to the present time, a most important factor in the development of that country. We are proud of what we did in encouraging the building of the lines of railway from Port Arthur west to the Rocky mountains. I need not speak of the different portions of this system. Suffice it to say that the whole system, from the day of the construction of the first hundred miles of line, has continued to pay not merely the operating expenses, but also interest upon all the bonds issued. It is a splendid system of railway, with good earning powers, and could be made—and will in the future be made—a great success. Was it not a reasonable thing to link up the prairie system of the Canadian Northern with eastern Canada? I think it was. Was it not a splendid thing to open up the portion of the clay belt of Ontario which is traversed by the Canadian Northern? We all know that the Canadian Pacific line runs close to the shore of lake Superior and does not traverse a fertile country. But the fertile country to the north of that line is being

opened up by the Canadian Northern, and millions upon millions of acres of splendid land are being made available for settlement by the building of that line. Therefore, as one member of the Liberal party, I have nothing to be ashamed of in the assistance given to the Canadian Northern. It was when this present Government, jointly with the Government of British Columbia, conceived the idea of making a separate and independent line of railway through the mountains of British Columbia that the difficulties of the Canadian Northern began. I have no doubt that the operating expenses of that portion of the line are enormously greater than its earnings, and it will be found for years and years a great source of difficulty to the system.

So far as the Grand Trunk Pacific is concerned, of course the Liberal party must take the entire responsibility for that system. As to that I am proud to belong to the party which has been the means of building that road and of opening up a vast section of country which would otherwise not have been made accessible. I do not believe that, if we have faith in our country, we should look forward with despair, so far as this Canadian railway system is concerned. Take the Canadian Northern and also the Grand Trunk, so far as they develop the prairie country, and I think that it is a low estimate to say that 200,000,000 acres of land is opened up by these great railways. And, Sir, what does that mean. I speak of 200,000,000 acres of land which are capable of cultivation, capable of being made the homes of millions of people in the future. Without these railways, that land would be practically of no value. Any man who is familiar with the western country knows that the land which has been opened up by those two railway systems, is worth today upon an average, and will be worth within the next fifteen years upon an average, at least $15 per acre. Multiplying that 200,000,000 by 15, you have the enormous sum of $3,000,000,000 which have been added to the potential wealth of this country by the building of these railway systems. Therefore, I feel that we have not anything to regret for having engaged upon these great enterprises. The mere consideration of increased money value is nothing as compared with the enormously increased value which will come to our western country and to the fertile portion of Northern Ontario by the hundreds of thousands—nay by the millions of people who in the next quarter of a century will inhabit those districts. As one member of this House, let me say that if it is reasonably necessary to grant assistance in order to tide these companies over this present period of depression, over the terrible times of stress which have been caused by the war, I for one would be very sorry to give my vote in refusal of the proposal which has been submitted by the Government. But I think, Sir, that the Government has not treated this House fairly in not coming before us with information as to the earnings of the Canadian Northern Railway Company; because that is the most important question which we have to consider. The Government ought to come frankly before us with a statement of the earnings of this company during the past year upon the different lines which go to make up the whole Canadian Northern system. It is desirable that we should be in a position to know whether we should make provision to hold on to that road which runs from Winnipeg down into the United States and which has its terminus on lake Superior. This road was acquired by the Canadian Northern not to bring traffic to the Canadian ports or through Canadian channels, but to take Canadian traffic out of Canadian channels down through the United States. I want to know what are the earnings of this road and what are its operating expenses. I want to know also the earnings and operating expenses of the prairie system, likewise those of the line between Port Arthur and Montreal. We have a right to know whether it is wise for us to make some provision to carry over the entire system or whether it would be better to let some of these branches be taken away. We want to know whether it would be better not to let some of these branches go which are not mortgaged by this Government or by the Government of any province, simply holding on to those in respect of which there are public obligations made either by the Dominion or by the provinces. If the Minister of Finance will pardon my saying so, in respect of two things he has not treated the House fairly. I do not charge him with deliberately treating the House unfairly, but he should have submitted to us a statement of the earnings and operating expenses of the different railroads that go to make up the entire Canadian Northern Railway System, and he should have acquired from these companies an agreement under which at any time

within the next three years or the next five years, if the country desires to take over the system, the Government shall have the right to do so at a stated maximum price. These are two very important matters which we have a right to consider, and which I trust the Finance Minister will give us an opportunity of considering when the question comes before the committee.

Hon. RODOLPHE LEMIEUX (Rouville): I have heard with amazement the words "bankrupt" and "bankruptcy" in connection with these railway systems. I do not believe that they are bankrupt, or that there will soon be any bankruptcy about them. I hope that the Canadian people will be sufficiently broad-minded and patriotic to do what is necessary to help these two roads if they really need this further aid, subject, of course, to the furnishing of all the particular information to which the House is entitled. If it is true that the Government contemplates appointing a commission to nationalize the two systems, I think the Government would be very unwise to incur further expenditure by acquiring the two other lines of railway mentioned in a notice of motion on the Order Paper to-day. All I want to say is this: when the Minister of Finance brings in the information which was asked for by the member for South Renfrew, I wish he would also submit the figures establishing the amount spent on the construction of the Quebec railway and the other road between Lyster and St. Jean des Chaillons. Will he state, also, whether these two roads are to be acquired with a view to their forming part of the National Transcontinental, and what amount will be required to complete them? I understand that one runs on the south shore of the St. Lawrence from Lyster on the Intercolonial railway to St. Jean des Chaillons, and the other on the north shore from Quebec to Murray Bay. From St. Joachim to Murray Bay, on the north shore, I understand that nothing has been done but the grading; what will it cost the country to complete that road? It is very important that we should get this information, in order that we may know if, with the railway situation as it stands to-day, we are going to extend one of the two systems, namely, the National Transcontinental.

Motion agreed to.

[Mr. Pugsley.]

SUPPLY.

The House in Committee of Supply, Mr. Blain in the Chair.

Militia and Defence—Dominion arsenal, $100,000.

Sir ROBERT BORDEN: When this item was under discussion on a previous occasion some information was asked for by the member for Pictou as to whether the house of a merchant named Strickland, of Trenton, had been put out of bounds for the troops stationed there. The following telegram has been received:

Strickland's store placed out bounds account strong suspicion selling intoxicants and statements of proprietor calculating great trouble amongst troops.

The hon. member for Edmonton (Mr. Oliver) asked for certain information, which has been thus summarized by the department:

(a) When were the 6 Battalions now stationed at Edmonton authorized?
(b) Why were they all authorized at the same time?
(c) What is the present strength.

The answer placed in my hands by the deputy minister is as follows:

(a and c) Dates and present strength of battalions as follows:

Battalion.	Date authorized.	Present strength. Officers.	Other ranks.	Total.
138th.. ..	19-11-15	33	1,023	1,056
151st.. ..	26-11-15	33	1,241	1,274
194th.. ..	28-1-16	31	994	1,025
196th.. ..	1-2-16	6	216	222
202nd.. ..	4-2-16	31	491	522
218th.. ..	23-2-16	5	542	547
233rd.. ..	14-3-16	8	41	49

The 196th Battalion will be raised by the western universities, one company being raised in each province independently to begin with, and later the battalion staff will be furnished by the four provinces. A committee has been appointed by the western universities to work in conjunction with the District Officers Commanding, Military Districts Nos. 10, 11 and 13.

The 233rd Battalion is French Canadian Battalion from the western provinces.

(b) The Units mentioned above are authorized on dates given, in order that recruiting and organization might be completed as much as possible, before the commencement of camp.

The hon. member for Assiniboia (Mr. Turriff) asked for some information about recruiting officers in Ottawa, and guards on some of the canals. The memorandum handed to me is as follows:

There is no recruiting office now stationed at the corner of Sparks and Elgin streets. The base recruiting office is located on Sparks street, between Bank and O'Connor streets. No expense was attached to this recruiting office for rent of

building, as the space occupied was given free by the owners until a month ago, when, an offer having been made by other parties, the Government agreed to pay rent at the rate of $200 per month. Other recruiting offices, including the one on Elgin street, which have from time to time been established, have been at no expense to the public, as they have been run regimentally, and the buildings have been donated free of rent. 4,758 men enlisted in Ottawa since beginning of war.

The Guards on the Iroquois, Morrisburg and Cardinal sections have cost since the beginning of the war $258,274.35. 350 men have been employed since the beginning of the war as guards on these canals.

Mr. OLIVER: I notice that the facts are as I stated them to be, that there are to-day four regiments besides the Universities Regiment, that is five altogether, being recruited at Edmonton at the moment, besides two others at full strength; and I am satisfied that there are others being recruited there. I know there was recruiting for a regiment to be known as the Bantams of Vancouver, at Edmonton. They may have ceased their operations at Edmonton now. This fact demonstrates that no discrimination whatever is used in the securing of recruits, in the way of having regard to the requirements of civil life; that the department simply goes after recruits whenever and wherever it can get them, without regard to any other circumstance. And more than that, the fact that so many units are being recruited in the same place at the same time tends against the success of the work. There is instituted a spirit of competition between the different officers who are engaged in recruiting that does not tend to success. I admit that probably to have two battalions recruiting at the same time and in the same place may give a healthy measure of competition; but when more than two are recruited it certainly is injurious rather than beneficial. I think it is only fair to draw the attention of the minister to my opinion in regard to that. I have done so in view of the number of men recruited in Edmonton and the number of branches of the service for which they have been recruited. I may claim to speak for a part of the country that has shown as good a military spirit as any other.

Sir ROBERT BORDEN: I think that is eminently true. My hon. friend no doubt has in mind that these regiments are recruited, I suppose, from a considerable district around Edmonton. I remember one which went through not long ago whose members had come to a considerable extent from the Peace river country. There has been an endeavour in some cases at least, to my certain knowledge, to adjust the recruiting to the requirements of local conditions. I cannot recall that any representations ever came to my attention concerning Edmonton, but I do recall other cases; and in those cases an endeavour was made by the department to meet local conditions through the guidance of recruiting officers.

Mr. OLIVER: I do not want it to be understod that I am making destructive criticism; I am making what I believe to be constructive criticism, and I speak from a desire to secure the best possible results. In the case of the men from Peace river, two battalions were authorized simultaneously and were in process of recruiting during the last harvest. Recruiting officers went up into the Peace river country and were able to get a number of homesteaders there to actually leave their harvest in the field, to come down to Edmonton and enlist in those regiments. Those are the men who went away the other day. While every credit has to be given to the men who volunteered under those circumstances, believing that their services were urgently required, I must say that there was not good judgment shown on the part of the department in securing their enlistment. At the same time that those men were being drawn away from their harvesting operations, the men in the brigade camps were authorized to leave their drill and go out and assist in the harvest field. I draw attention to this fact as showing that, so far as our experience is concerned, there has been an absolute lack of judgment, and that the department is not able to claim that they did show any judgment in the matter of recruiting in that part of the country, having regard to the requirements of civil life.

I mentioned the other day the fact of 100 men being called upon, as they believed, to protect the city of Quebec from immediate attack. Having dropped their occupations, they arrived at Quebec to find that they were merely required to fill the ranks of a battalion which, I am told, remained in garrison at Quebec for five or six months afterwards. I have no sympathy with those who desire in any way to hold back our men from going to the front as universally and as quickly as possible, but when claims are made that the work of recruiting has been conducted with judgment, I am bound to put before the House the facts, so far as they have come

under my notice, and they certainly do not bear out that contention.

If I may be permitted, I would like to refer to something that came up when this item was under discussion on Saturday. I discussed what had happened to the 9th Battalion recruited at Edmonton, and I informed the committee of the fact that the colonel who had recruited that battalion, and who had been colonel of the original volunteer battalion out of which the 9th Battalion was formed, had been displaced by Colonel Maynard Rogers, formerly of Ottawa, and that under Colonel Maynard Rogers' command the battalion had been broken up and had not been sent to the front as a unit. The men themselves, their relatives and friends, and the community from which they came, certainly felt a great sense of grievance, and they believe that Col. Maynard Rogers was in large measure responsible for that result. To-day I have been favoured with a letter from General Hughes, enclosing a letter from Colonel Rogers to myself, in which both General Hughes and Colonel Rogers take exception to the statements I made. I will not trouble the House by reading the letters; I will just draw attention to one paragraph in General Hughes' letter. He says:

> Permit me to say you are entirely in error, and that Colonel Osborne was relieved on account of his incapacity, and by my direction.

I am not going to discuss Colonel Osborne; I do not know whether he was capable or incapable; but I do know that he was the means of raising a regiment, one of the first regiments to reach Valcartier, and that, to that degree, he certainly rendered good service to his country, and, in all fairness, I think, was entitled to some consideration. I do not suggest that, because Colonel Osborne was successful in raising a regiment, he would therefore be a competent military commander in the field. I do not say that any injustice was done to Colonel Osborne by his being retired, but I do say that when the Department of Militia, or the Government, saw fit to replace Colonel Osborne by Colonel Rogers, and that then under the command of Colonel Rogers that battalion was not considered fit to take the field, I am compelled to reach the conclusion that Colonel Rogers was not competent. At any rate, without discussing the matter at any greater length, General Hughes and Colonel Rogers will have to divide between them the responsibility for the fact which resulted in such a tremendous disappointment to the men who had enlisted in that battalion, to their relatives and friends, and to the community from which they came, by reason of its being broken up, disbanded practically, or attached to other units, thus being deprived of the privilege of going forward as an Edmonton battalion which was of course their desire. The men did go forward as members of other units, and casualty lists show that they played their part as other men played their parts. We are not complaining, because they volunteered to render service in the Empire's cause; they were privileged to render that service, but there is a certain reasonable measure of consideration to which men and officers are entitled, and which they certainly did not receive in this case. In his letter General Hughes says that I am attacking Colonel Rogers. I have no desire to attack Colonel Rogers; it is a condition of facts of which I complain. Colonel Rogers in his letter also seems to suggest that I am attacking him. I repeat that I have no desire to attack Colonel Rogers. But I do desire to place before the House the fact that every man in the 9th Battalion, and his right to take his part in the cause for which he volunteered, is just as important to me as Colonel Rogers or General Hughes. I do not propose to allow such an occurrence to pass without due notice in this House, even though Colonel Rogers, and even General Hughes, may consider it in some degree a reflection on them. I have no desire to reflect on either of them, but I make a statement of fact, and that fact was certainly most unpleasant and most injurious to the men who were concerned, and to the locality from which they came.

It is a fact that that occurrence has not prevented further recruiting in Edmonton; it is a fact that the patriotism of the people, not of Edmonton alone, but of the country surrounding, is such that they are prepared to come forward and offer themselves even although they do not get that recognition which they have a right to expect. But I must point out to the minister that while that may be the case in Edmonton, it is not likely to be the case throughout the country. When an instance, such as I speak of, occurs in Edmonton—and I think it must be admitted that it was a most aggrevated instance—similar instances may have occurred in other places; and when we comment, as sometimes people do comment, upon the slackness of recruiting in different localities, perhaps such incidents may have some-

thing to do with it. I say it would be well for those who are responsible for the conduct of our affairs to see that such incidents do not occur, and to see that no reason is given to cause such a sense of disappointment and unfairness amongst the men as would tend to prevent others from offering themselves for service. When a man offers himself, with the sacrifice of his time, his position, and even his life, he is surely entitled to a square deal. If he does not get it he and his friends feel a sense of injustice.

There is another instance I desire to draw attention to. The 3rd C.M.R. was not from Edmonton city, but from the country east of Edmonton. Major Fane, the commander of the unit, came from Vegreville. The unit went into action some time in December of last year. They suffered very heavy casualties; I think one-third of them were killed and wounded in one day's operations. One of the officers was killed and the major was very badly wounded. They were very severely cut up. As far as I am aware, they conducted themselves with all credit; and our authorities showed their regard for the services rendered by this unit by wiping them out. There is no 3rd C.M.R. now. The unit has ceased to exist because it has been distributed among other forces just as the 9th battalion was. I do not think that such a system as that is good for the service, I do not think it is to the advantage of recruiting, nor do I think it is creditable to anybody who is concerned in it. Right from the start as far as our experience goes, no regard whatever has been paid to locality in the matter of recruiting, no regard has been paid to the establishment of fixed units attached to a certain locality where the presence of friends might tend to hold men together and give them a certain spirit in carrying on their operations. No regard has been paid to that and, due to that fact, we perhaps in a very large measure feel a certain slackness in recruiting that is complained of in a great many cases. In our own case we had three battalions training at Edmonton for the greater part of a year, one of them for over a year. From all of these battalions drafts were sent—two drafts from the 51st and one each from the 63rd and 66th. I do not know where they went or what units they were attached to. No doubt they are serving their country, no doubt they are fighting in the same cause as if they were called the Edmonton or the Alberta battalions, but this is not a good way to inspire our population with a desire for service. Every consideration should be given to the question of sentiment and it is well to encourage the idea of community of interest among the people of a certain locality. If a certain battalion is known as an Edmonton battalion, or an Alberta battalion, if it is recruited from Edmonton or Alberta, when the men who belong to it go forward, every one concerned, those who remain behind and those who have gone forward, have an interest in what that battalion is doing that he otherwise would not have had, and the ignoring of that fact has tended very greatly against rapid recruiting in many parts of the country. It is true that we have done magnificently in the way of recruiting. We have, as the right hon. the Prime Minister has said, raised over 300,000, but we have to raise 200,000 more. It must be remembered that raising the last 200,000 is a very different matter from raising the first 200,000, because the same conditions that produced the first 200,000 do not exist in connection with the last 200,000. Now that we are coming to the point when there is an abundance of employment, when every man who joins must certainly leave a lucrative position, we are facing a situation in connection with which we must recognize all those motives and sentiments that tend towards a willingness to sacrifice for the good of the cause. This has not been done in the past. We have done well without it, but we cannot expect to continue to do well and to carry on the business in that way. When we claim to have raised 300,000, that means that we have included in that number the rejections, which have been stated as over 20,000. That is not a fair count. These men may have been enlisted, but they have been rejected, they are not part of our forces, and we have no right to count them as simply enlisted. We must count only the men who either have rendered service, or are actually on the road to service.

Mr. MORPHY: I wish to bring before my hon. friend the Prime Minister, while he is acting as Minister of Militia and Defence, a subject that has been communicated to me by a gentleman living in my own constituency, a gentleman of some standing and repute, who has been warden of the county, and, for many years, reeve of the township in which he resides, Mr. James Donaldson. Mr. Donaldson writes me that the Militia Department has promulgated an order that soldiers may assist

the farmers for a certain time during the present spring. In the city of Stratford, in the county that I have the honour to represent, there is located the 110th Battalion, probably recruited up to 700 or 800. This order apparently is applied to that battalion and the men have gone into the country districts to work. This gentleman points out that the season has been very wet and backward, and that while the soldiers have been, and are now, engaged amongst the farmers, the spring work has hardly commenced owing to the wet nature of the ground, and he has asked me to bring the matter up and suggest that the time be extended. I may observe here that what is true in my district may be true elsewhere in Canada and I would therefore request the militia authorities to consider, having regard to the condition of the land throughout every portion of the country, whether the time should not be extended and that, if any action is to be taken, an early announcement of it, almost forthwith if possible, should be made in order that disturbance would not be the outcome of it.

Sir ROBERT BORDEN: Where the weather conditions are unusual I should think the time could be extended as my hon. friend suggests because without an extension, the arrangements under which these men were to assist in putting in the crops, seeding and ploughing would not be productive, of much benefit. The deputy minister tells me that he thinks it can be arranged. In regard to the matters spoken of by my hon. friend from Edmonton (Mr. Oliver) we have had calls for drafts from time to time from the War Office. These drafts have been sent forward from a great many battalions in different parts of the country. There has been an endeavour to keep men from a particular locality as much together as possible, but the drafts must be supplied when they are asked for.

Mr. MARCIL: On Friday afternoon I had the honour to put a question to the Prime Minister regarding recruiting. I do not know whether I expressed myself properly or whether I was misunderstood by the newspapers, but one newspaper to-night criticises my putting the question on the ground that I advocated that being done. I merely wanted information; I asked the Prime Minister, in view of conscription being about to be adopted in England and the recent claim that was made that taking away a large number of men would dislocate the agricultural industry in Canada, if the Government were contemplating recruiting to the full extent of 500,000 men. I would like to know if a census has been taken as to recruiting in Canada. I see that one of the senators has been giving out some statistics showing that on the 15th of March last the men enlisted consisted of 61 per cent of British born, 28½ per cent of English-Canadian born, 4½ per cent of French-Canadian born, and 6 per cent of foreign born. I know that several questions were put in this House last session in regard to that matter, especially as to the extent of recruiting in the province of Quebec, and I think that the Minister of Militia replied that he could not give any information on that score. I would like to know if the figures I have quoted are official?

Sir ROBERT BORDEN: The figures in question are not official.

Mr. MARCIL: I would like to take advantage of this opportunity to say that the Government is authorizing the recruiting of a number of French Canadian battalions. A French Canadian battalion is being recruited as far west as Edmonton. It would be a great mistake to imagine that French Canadians are recruited only in the province of Quebec. A large number of my constituents have been drafted into New Brunswick battalions, and a large number of French Canadians have been drafted into Nova Scotia and Prince Edward Island battalions. The same is true of Ontario; in fact, in some of the battalions recruited in Ottawa some of the companies consist of French Canadians, and the same is true throughout Canada. Recruiting in the province of Quebec has perhaps not been as large as it should be, due to various causes, but I think it would be unfair to cast aspersions upon those who have enlisted and who are doing their duty splendidly at the front, because recruiting has perhaps not been as large as it should have been. I think that if proper measures are taken, recruiting can be increased in the province of Quebec; I think the Government has undertaken the recruiting of men in certain rural parts of the province.

Sir ROBERT BORDEN: I am very glad to have the information that my hon. friend has given and I join with him in paying a tribute to that splendid service which has been rendered by the French-Canadians who are at the front.

Mr. A. K. MACLEAN: Has the Prime Minister taken into consideration since

Friday last the question of the voting of soldiers enlisted from the province of Nova Scotia?

Sir ROBERT BORDEN: I really have not had an opportunity of taking it up. I had hoped to have a militia council to-day, but it will have to be postponed until to-morrow and the subject will then be discussed.

Mr. A. K. MACLEAN: I would like to point out to the minister the urgency of the matter because, if any provincial legislation were necessary, as there is likely to be an early prorogation of the legislature, such legislation would have to be presented as soon as possible.

Mr. TURRIFF: If I understood my right hon. friend the Prime Minister aright, he stated that the cost of patrolling the canal on the Iroquois, Morrisburg and Cardinal sections amounted to $258,000.

Sir ROBERT BORDEN: I think it was something like that.

Mr. TURRIFF: I think the committee will agree with me that that is a very large sum for the amount of work that is being done. I want to point out to my right hon. friend, who is now Acting Minister of Militia, how to a certain extent the account has been run up to such a high figure. My information is—and I am satisfied that it is fairly correct—that in one company of Hussars, the horses are not owned by the Government, but are hired, and that the Government pays 50 cents a day for each horse, and, of course, the expenses and the keep of the horses; that a good many of the horses are horses that cost about $120 in that locality, and that the owner of each horse has the payment in full of his horse in eight months; or, if a horse costs $150 he would receive the total value of it in ten months, so that those who have had horses hired to the Government from the outbreeak of the war have collected already about double their value. My information is that some of the officers own a number of horses and are therefore making a very considerable revenue and running up the cost of the guarding of the canal over and above what it would be if the Government followed its usual course and owned the horses that those men are using.

There is another matter that I think accounts to a slight extent for the very high cost of protecting that canal, and that is that with 120 men stationed at Morrisburg, there are 16 officers, or one officer for fewer than eight men. If that is the case—and I am assured it is—it is a most unsatisfactory state of affairs, and I am drawing it to the attention of the acting minister in order that he may look into it and see if that is so, because I can hardly believe it.

I would like to ask a question as to who is the present contractor for clothing supplied to the department, and who was the contractor last year. I do not think the department bought much clothing last year.

Sir ROBERT BORDEN: Before the Chairman of the War Purchasing Commission answers by hon. friend with regard to that matter I would like to say that I understand there are not many horses employed on the canal. There are a few mounted men required. The arrangement, I believe, is that the owner provides the stabling and takes care of the horse; the department provides the fodder, and I think the rate is what my hon. friend has suggested. I will have the matter looked into and see whether the expense can be reduced.

With regard to the patrolling, I am informed by the deputy minister that every patrol on the canal must be in charge of an officer, and some times a patrol consists of only eight or ten men. The work has to be carried on day and night. I do not know about the particular district to which my hon. friend has alluded, but I do know something about the work which was carried on in the vicinity of the Niagara peninsula, because I inspected some of the posts there last summer. The work is important and has to be attended to with a great deal of diligence, and if my hon. friend were made acquainted with all the intimations that have come to us from time to time as to the danger at this, that, or the other point, he would feel with us, I am sure, that even if the expense be pretty large, the Government ought not to relax any reasonable precautions. A lack of vigilance at some particular place, even for a very short time, might result in great destruction of property. It has been held that these precautions ought to be of the most efficient character possible.

Mr. TURRIFF: I have no intention of suggesting that precaution should be relaxed in any way. My information is that men going out on patrol go two men at a time for two hours and patrol three miles and back. Possibly it may be that a larger proportion of officers are necessary. However, I am quite satisfied to have drawn the matter to the attention of the minister,

and I feel sure that if unnecessary expense is being incurred an effort will be made to curtail it.

Sir ROBERT BORDEN: A patrol of two or three men was sent on without officer last year with the result that one man was killed and another severely wounded in some shooting that took place. It created some international difficulty at that time. I understand that since then the military authorities have taken the ground that the men who are doing patrol duty must be in command of an officer.

Mr. KEMP: The hon. member for Assiniboia as I understood him wanted to know who was the contractor for clothing previous to the war and who is the contractor at the present time.

Mr. TURRIFF: I wanted to find out who was the present contractor and who was the previous contractor, if they were different.

Mr. KEMP: Before the war broke out?

Mr. TURRIFF: No.

Mr. KEMP: There are scores of contractors for clothing at the present time. Clothing is open to competition; tenders are asked for, and the lowest tenderer gets the contract.

Mr. TURRIFF: Not always.

Mr. KEMP: Always. In order to give competition, it was divided into units, so that the clothing manufacturers could become interested, and the saving has been very great.

Mr. MACDONALD: There is a vote of $800,000 for clothing this year. Is that clothing purchased through the War Purchasing Commission?

Mr. KEMP: I understand that that vote is for clothing for the militia force. Last year there was no vote of that character for clothing. I am inclined to think though I am not speaking by the book, and am not certain of the policy of the department. that the department will draw on the stores for that clothing. If not, they will need to buy it by tender, or have it made under the present contract with the department.

Mr. TURRIFF: If this clothing is used by our army, why is it charged to the Militia Department, instead of to the war vote like other munitions of war?

[Mr. Turriff.]

Mr. KEMP: As I explained, this item of $800,000 to which the hon. member for Pictou has referred, is for the militia force. Therefore, it is in the militia Estimates. But the war appropriation vote is $250,000,000 which went through last week.

Mr. MACDONALD: Is it the policy of the department to go on with the training and issuing of clothing to the militia when nearly all have gone overseas? There is only a skeleton organization.

Sir ROBERT BORDEN: That was explained when the item passed. No clothing has been bought for some time, and it is necessary to provide it now. Some of the militia are on active service. This may also provide some clothing for a force raised for home defence, as suggested, I think, by the hon. member for Edmonton, when we were discussing this matter a day or two ago.

Mr. MACDONALD: At $20 a suit this would provide for 40,000 men. There is not that number of our militia who have not gone overseas.

Sir ROBERT BORDEN: The information I have is that the money is needed to provide the militia, permanent and non-permanent, with clothing and necessaries. No vote for this purpose was taken in 1915-16 and consequently provision for 1916-17 is all the more necessary. The estimate of the Quartermaster General shows a total of over $1,000,000 but $800,000 will provide for present wants. I have details here of the number of caps and other articles in store. It does not follow that all this money will be used this year.

Mr. MACDONALD: Will this clothing be made by the contractors for the Militia Department?

Mr. KEMP: The contractors for the militia clothing are Mark Workman of Montreal and the Sanford Company. Their contract for militia clothing expires in 1917. They have been manufacturers, I believe, for a good many years past.

Mr. DOUGLAS: I desire to draw the attention of the Prime Minister to a condition regarding recruiting which prevails in Edmonton. As he is aware the city of Edmonton and surrounding country has done a large amount of recruiting, and at present we have six battalions, a portion of which have not their full complement of men. I find a news item in an Edmonton paper which states that the 210th Battalion

of Moosejaw has opened a recruiting office in Edmonton. The item is as follows:

Captain J. L. Thomas, the recruiting officer for the 210th Battalion, with headquarters in Moosejaw, Sask., announces that an office for recruiting has been opened in Room 5 in the Empire Block, corner of Jasper avenue and 101st street. He also desires to contradict a report that has been set in circulation to the effect that this battalion is not an overseas unit. The 210th has been authorized by Ottawa for mobilizaion in Moosejaw, Sask., and to recruit for overseas service in not only Saskatchewan, but Alberta also. Free transportation is given eligible recruits and owing to the fact that the men of this unit are either nearly all soldiers with previous active service or at any rate military training a much earlier departure for overseas is looked for than is usual. The 210th will put in their summer training at Sewell camp.

The point is that the province of Alberta has recruited more than her quota according to population in the overseas battalions. We have regiments not yet recruited to full strength. I understand that the policy of the department is not to authorize any new battalion until the battalions already authorized are up to strength. In view of that policy I think it is an injustice to Alberta, and to the city of Edmonton in particular, that an outside battalion with headquarters in Moosejaw should be permitted to have its officers come up and recruit soldiers from Alberta, pay transportation to Moosejaw, and take eligible men away who may be required to fill battalions at present being organized in Edmonton.

Sir ROBERT BORDEN: I think there is a good deal of force in the hon. gentleman's suggestion. I will bring the matter to the attention of the Adjutant General, who has control of such matters, and ask him to deal with it.

Mr. OLIVER: Would the Prime Minister be good enough to get from the department, for the information of the committee, a list of the various units, detachments and sections that have been recruited at Edmonton?

Mr. LOGGIE: When I was home at Easter my attention was drawn to the fact that the railway bridges crossing the two branches of the Miramichi river were inefficiently protected, and I was asked to draw the attention of the department to the fact. In the event of any disaster happening through the action of an enemy, certainly transportation would be very much interfered with. I simply draw the attention of the department to the fact that the interests of the country are more or less at stake through these bridges not being properly and efficiently patrolled.

Sir ROBERT BORDEN: I may say that my attention has been called to the matter. I communicated with the Department of Railways and Canals, and I understand that an intimation has come from the general manager that the subject is being dealt with.

Department of Militia and Defence—contingencies, $9,000.

Mr. OLIVER: There are some matters that I should like to discuss under this item, particularly that of the necessity of larger allowances to dependents, with a view to relieving the Patriotic Fund.

Sir ROBERT BORDEN: My hon. friend might discuss that when the Bill comes before the committee.

Mr. OLIVER: I would very much rather discuss it on the Estimate, and if possible this evening.

Sir ROBERT BORDEN: I am afraid I cannot very well be here this evening. We can let the item stand, if the hon. gentleman wishes; but there is precisely the same opportunity of discussion in committee upon the Bill as there is now.

Mr. OLIVER: I would rather have the discussion on this item than on the Bill.

Sir ROBERT BORDEN: Very good; we had better let the item stand.

At six o'clock the committee took recess.

The committee resumed at eight o'clock, Mr. Rhodes in the Chair.

Supplementary Estimates 1916-17. Railways and Canals—St. John terminal facilities—rebuilding grain elevator, $500,000.

Mr. REID: Before taking up this item, may I give some information which was asked for by the hon. member for Antigonish (Mr. Chisholm) about the garden plot at Antigonish station. I wired to Moncton for the information and received this telegram in reply:

The loam used in making Antigonish garden plot was taken from our right of way near Malagash station. After four cars had been unloaded it was found that two carloads were sufficient. As a result two cars were loaded back on the cars and shipped to Mulgrave, where it was used for similar purposes. The cost of loading done by regular sectionmen was about five dollars per car. The cost of reloading the two cars at Antigonish was approximately ten dollars.

F. P. Gautelius.

The hon. member for Pictou (Mr. Macdonald) asked me the date when the single fare for soldiers went into effect. I wired Moncton and have received this telegram from Mr. Hayes:

> Your message fifth. Arrangements for single fare for soldiers on leave is generally in effect on Government railways. Frst arranged for Easter holidays, April twentieth to twenty-fourth inclusive and became generally effective April twenty-eight, it taking few days to print and distribute instructions to agents. If Mr. Macdonald has any instance where agents failing to carry out instructions would be pleased to investigate.
>
> C. A. Hayes.

With reference to the item before us, the St. John elevator, the Intercolonial had an elevator at St. John which was destroyed by fire on August 13, 1914. It is the intention to build a transfer elevator at St. John, at Reid's point, with a capacity of about 500,000 bushels, which will serve a new slip. Conveyors would be extended to McLeod's and Pettinger's wharves. The object of locating at this point, instead of on the site of the old elevator, is to preserve the old site for yard accommodation. There is also an item for $55,000 for the steamer Northumberland. This steamer has been plying between Prince Edward Island and Northumberland for a number of years. The company have disposed of their two vessels. The Northumberland was purchased by the Government for $55,000, and will now be operated as part of the railway system.

Mr. OLIVER: What will be the capacity of the elevator to be erected?

Mr. REID: The machinery of the elevator will have a capacity of 1,000,000 bushels, but the storage at first will be only 500,000 bushels. It is more of a transfer elevator. We hope to get the 500,000 bushel elevator up before next winter, and it will then be easy to add as much additional capacity as we wish.

Mr. OLIVER: It seems to be a large price for an elevator of small capacity.

Mr. REID: The initial cost of erecting an elevator is estimated at about $1 a bushel. That is largely for the machinery. Then, of course, when additional storage capacity is erected that costs much less in proportion, as the machinery is already installed. This will be done by tender, of course, and if we could have an elevator of 750,000 bushel capacity erected for $500,000 we should be very glad.

[Mr. J. D. Reid.]

Mr. OLIVER: I quite agree that it is necessary to have this elevator, and I approve of the vote. My only criticism would be as to the limited capacity of the elevator. What is the capacity of the Canadian Pacific railway elevator at St. John?

Mr. REID: They have built a new elevator, with a capacity of one and a half millions, then there was an old elevator with a capacity of about one million. The difficulty with the Intercolonial has been that if we did take grain to St. John we had no elevator of our own, and the Canadian Pacific railway always claimed that they had all the grain they could handle from their own line, and then, of course, there were the shunting charges across St. John, so that we were really not in a position to handle grain. Even with 500,000 bushels we would be able to handle quite a little outward-bound grain. In addition to that, if we come in on the St. John Valley road, we go right into the Canadian Pacific railway yards, and we will not have the heavy shunting charges.

Mr. OLIVER: Is the new elevator to be on the same side of the harbour as the Canadian Pacific railway elevators, or is it at Courtenay bay?

Mr. REID: It is to be on the Courtenay bay or east side of the harbour. The Government own a lot of property, part of which they sold for a sugar refinery, and this is to be near the sugar refinery with carriers that will serve on the west side. It is on the east side of the harbour, but west of the elevator, and it will also serve Courtenay bay. It is intended to provide a storage capacity of more than 500,000 bushels, but we thought that if we could have 500,000 bushels capacity. and these vessels came next winter as they came last winter, we could put through a large quantity of grain by that transfer as well as by the transfer at Halifax.

Mr. OLIVER: Is it the intention of the Government to make the connections over the St. John Valley line with this elevator; is it part of the scheme?

Mr. REID: Yes, we will go right over that line.

Mr. OLIVER: This elevator is to be part of the new system of handling trade to St. John over the St. John Valley line?

Mr. REID: Yes. As the hon. member for St. John (Mr. Pugsley) stated the other

night, this route is 100 miles shorter than by the Canadian Pacific Railway. Of course, when we go over the eleven miles of the Canadian Pacific Railway we go through the Canadian Pacific Railway yards and right over to the Intercolonial terminals which are around Courtenay bay. We run right through to our own station. Our station will be on the east side, near where the other elevator was established.

Mr. OLIVER: Is this elevator accessible to the Intercolonial?

Mr. REID: It is right on the Intercolonial.

Mr. OLIVER: My only criticism would be, first, that there might be a danger of the elevator not being built soon enough, and next that there is a very great probability of it not being big enough. To carry on the discussion, which we had with the minister some time ago, I would like to go on record as holding the view that it is absolutely necessary for the proper handling of the grain in the West over the Transcontinental line by all the year-round transit that there should be ample accommodation at the city of St. John, not merely sufficient to make a transfer of one or two cargoes, but to carry a considerable amount of grain as it is carried, though not to such a large extent, at the head of the lakes in storage. In order to be of value in handling the grain, the railroad must bring it forward as its rolling stock will permit, so many thousand bushels a day, or so many thousands a week. That quantity cannot be speeded up very much. The railways must carry the grain forward as their rolling stock will permit it to be carried forward, and, if there is not ample storage accommodation at the winter port, in the event of the market being depressed, or of vessels not being available, that movement by rail would have to cease until the small capacity transfer elevator at St. John was relieved; whereas if there was ample capacity at the St. John elevator that movement could be kept up continuously. That is the principle which I see in the successful handling of the grain of the Northwest, the possibility of keeping up a continuous movement by rail all the year round, in winter, as well as in summer. I am emphasizing this point because the Minister of Trade and Commerce the other night, and the Acting Minister of Railways to-night, seemed rather to hold the view that there is no necessity for any considerable storage at the Atlantic winter port which is open and available to vessels all the year round, and that it might be supposed that the vessels would remove the grain as fast as it was brought in. In theory they would, but not in practice. The grain must go forward in a continuous stream, as the rolling stock of the railway will permit, and its transfer across the ocean then depends, partly on the condition of the market, and partly on the available ocean transport. There must be a large amount of storage accommodation, or that movement cannot take place in that way. My suggestion is that the minister get the biggest elevator he can for the money, and if he cares to double the amount, assuming that it is intended to transact business over the Transcontinental with the view of giving a continuous outlet of grain all the year round, he can go as far as he likes in elevator-building at St. John, and I will be glad to support him.

Mr. REID: The hon. member misunderstood me if he thinks that I was discussing this along the line that we did not require large storage capacity at the winter port. Years ago, in discussing this elevator question, I took the stand, and I think it was almost the unanimous opinion of the House, that we should have a large terminal storage capacity at our ocean ports. At that time it was Montreal that we had chiefly in mind, and at that time, I think, we had a capacity of only 1,000,000 bushels there. Now we have a capacity of 15,000,000 bushels, and a capacity of one and a half million bushels at Quebec. Last year, or probably two years ago, the capacity at St. John was increased by the establishment of a new elevator. We have now a capacity of one and a half million bushels in the new elevator, and, I think, a capacity of 1,000,000 bushels in the old elevator. I think we should have a great deal more accommodation, and no doubt it will have to be increased each year until we get a large capacity at St. John and Halifax. But I thought that we should have at once an elevator with a large capacity at Transcona, or at some other place in that section, and also that we should have one at once at St. John. In discussing the matter with the Minister of Finance, he asked me what I thought we would be able to get along with this year, that is, up till next spring, and I thought that if we could succeed in getting at each place a capacity of 500,000

bushels, then next year we could go on and extend it. I thought that that would be much better than building an elevator with a capacity of 1,000,000 bushels or 1,500,000 bushels at St. John without the small one at Winnipeg. The difficulty, I am informed by the management of the railway, is that they have to haul the grain to Fort William, which means a back haul on account of not having a transfer elevator at Winnipeg, where they could weigh the grain, inspect it, and give the certificates the same as is done at Saskatoon and Fort William. By having this elevator at a point where the Transcontinental and the Grand Trunk Pacific meet, so that the grain could pass through the elevator and be weighed, and certified, the Transcontinental will save that back haul down to Fort William, and, on that account, be able to handle very much more grain. It will go right straight through to Armstrong, Quebec, St. John and Halifax. We will be in this position as far as the Intercolonial is concerned: If we can get this 500,000 bushel elevator up, we will have 1,250,000 bushels capacity between Halifax and St. John. That will put us in not a bad position to start with next fall. I do not think we can spend more than $1,000,000 between the two this year. At the same time I have tried to carry out the wishes of the Finance Minister (Sir Thomas White) that I should just place in the Estimates what I thought I could spend. If it overruns the amount a little, we may have to have a Supplementary Estimate next year but we will try and get as large a capacity as we can for this amount.

Mr. COPP: Did I understand the minister as telling my hon. friend from Edmonton (Mr. Oliver) that the Intercolonial tracks now run to the point selected for the building of this elevator?

Mr. REID: The hon. gentleman knows where the sugar refinery has been built. The track runs around and out to this point they call Reid's Point. The elevator is to be built in that vicinity near the sugar refinery. Then carriers can be run along the shore on the west side to it, and when Courtenay bay is developed so that vessels can get in there, carriers can go the other way. This elevator has only 500,000 bushels capacity. Of course, it will be extended on down towards the Courtenay bay side as well. The management tell me that they think that would be better for the Intercolonial railway.

[Mr. J. D. Reid.]

Mr. COPP: What I want to find out from the minister is whether the spur line running from the Intercolonial track is already built to the point where the elevator will be?

Mr. REID: At the present time a little line runs over there but when the Courtenay bay scheme is carried out it will not be used as it now is. That is a new scheme altogether.

Mr. COPP: That is the Courtenay bay scheme?

Mr. REID: Yes, with the Courtenay bay scheme, there is a new way of coming in. The line we have now would never do for that.

Mr. COPP: Is there a way by which they can come in to that elevator until the Courtenay bay scheme is developed?

Mr. REID: As soon as we can get sufficient work done on the Courtenay bay route, so that we can change the route to come in by Courtenay bay, we will do so. We have an amount in the Estimates for that work.

Mr. COPP: I understand that what the minister is proposing is that grain for export coming over the Transcontinental railway, will come down over the Transcontinental to McGivney junction, then over the St. John Valley railway and the Canadian Pacific to St. John?

Mr. REID: Yes.

Mr. COPP: And on through to this proposed elevator?

Mr. REID: Yes.

Mr. COPP: Provided you want to take the grain over the Transcontinental railway to Moncton and down over the Intercolonial to St. John, what connection have you to enable you to get these car loads of grain to the boats?

Mr. REID: Just the same.

Mr. COPP: The link of the Valley railway from Gagetown to Westfield is not supposed to be completed until the first of February, 1917, and it is very doubtful if all the contracts will be completed by that date; therefore, during this coming fall, the export grain which cannot go down by way of the Valley railway ought to go by Moncton and St. John.

Mr. REID: We have that connection now and they are using it every day. We have a shunting engine that is kept busy shunt-

ing around there now. That is where they load the lumber and that is where the sugar refinery takes in its supplies.

Mr. GRAHAM: Why should this elevator be charged to the Intercolonial railway when it is for the business of the St. John Valley and Transcontinental? Is it proposed to bring grain over the Intercolonial railway and not over the Transcontinental? Why not build it as a Government elevator and allow either the Intercolonial or the other road to use it? There will be that capital charge, or burden, upon the Intercolonial railway when it is for the use of another road unless you propose to allow the Intercolonial to make a profit out of the charges for handling the grain.

Mr. REID: The Intercolonial always had an elevator. I never thought of that point. I thought it was simply replacing the old elevator that the Intercolonial had. I do not think it is a very serious matter. The hon. gentleman will see that in the next item we have an elevator charged against the Transcontinental railway.

Mr. GRAHAM: But that is on the Transcontinental railway, and for the use of the Transcontinental.

Mr. REID: This is really on the Intercolonial Railway system.

Mr. GRAHAM: But not for Intercolonial traffic.

Mr. REID: It is partly for Intercolonial traffic. We propose to put this elevator on property which is owned and controlled by the Intercolonial railway. The St. John Valley road will go into the Intercolonial station and will use our terminals and yet it could not be called a part of the Intercolonial railway. I do not think that is a very serious point.

Mr. GRAHAM: It is not very serious. I was to-day asked the question: What capital has been expended on the Intercolonial railway? The argument against the Intercolonial is based quite often on the amount of money that has been expended on capital account. Here is half a million being charged up to the Intercolonial railway although primarily it is not for Intercolonial traffic. This is only a unit, as I understand. Other units are to be added and in time we may have a further capital charge of a million and a half before we get through although it is to accommodate the traffic of another road.

Mr. REID: There is a difference of opinion in regard to that. It is to be on Intercolonial property and the Intercolonial should have an elevator anyway. It will have the use of the elevator.

Mr. GRAHAM: Will there be any revenue for the Intercolonial railway from the traffic that is created through this elevator?

Mr. REID: I do not suppose there will be. If it goes through the yard of the Intercolonial railway there might be some but I do not know what the nature of the traffic would be there.

Mr. GRAHAM: The Intercolonial gets all the expense and none of the benefit.

Mr. REID: I do not know what we could charge it too. We could only charge it to the Intercolonial or the Transcontinental railway.

Mr. GRAHAM: You build elevators elsewhere and you do not charge them to the roads that the elevators are placed on. At St. John there will be just a plain elevator built and you can call it a Government elevator.

Mr. REID: It adds to the value of the property.

Mr. GRAHAM: Certainly it does in a way. I just raised the point because it seemed to me that it might perhaps have been overlooked. The Transcontinental railway will have the benefit of the elevator but it will be an expense to the Intercolonial. The St. John Valley railway is to be extended to meet the Transcontinental traffic and bring it across by the short way into St. John and it is not to go around by the Intercolonial. If it were not to do that it would not be built. But we have an elevator to receive that traffic and we are charaging it up to the poor, overburdened Intercolonial railway which has everything charged to it when we cannot find some other account to charge to.

Mr. MARCIL: What does the minister intend doing with the section of the Transcontinental railway between Lévis and Moncton? I have heard that there is a great deal of congestion on the Intercolonial railway. Does he intend carrying the traffic that reaches Quebec, and that is to be sent down to Halifax and St. John, over the Intercolonial railway and not utilize that section of the Transcontinental railway?

Mr. REID: The hon. member knows the position in which we have been during the past winter. The equipment on the Intercolonial was all the equipment we had, and that equipment was run over the Intercolonial and part over the Levis-Moncton branch, and quite a lot of freight went over that branch at times during the winter. Until we can get more equipment for the Transcontinental it will be hard for us to do more than we have been doing. We have ordered a large amount of equipment and we will operate the two systems to the best advantage. The branch from Levis to Moncton is a good road, and after next fall we will use it almost entirely for the St. John traffic, because we go in by McGivney junction and on down to St. John. I hope that the elevator which we will have at St. John next year will help us out very materially.

Mr. MARCIL: You are not going to carry any grain beyond Quebec next summer?

Mr. REID: Not likely, because when it gets to Quebec it is at an ocean port, and it would only be adding so much to the freight to carry it on to St. John or Halifax. Of course, there are transports being sent to Canadian ports by the Admiralty, and some of them may be ordered to St. John or Halifax even during the summer months, and the Admiralty may order us to take grain, or hay, or ammunition to those ports. In that case, we will carry out their instructions, but it is not natural to carry freight past Quebec or Montreal during the summer months.

Mr. MARCIL: What kind of a passenger service is given between Levis and Moncton on the Transcontinental?

Mr. REID: The road is in operation and a tri-weekly passenger service is given.

Mr. MARCIL: Is there a regular freight service?

Mr. REID: Freight is also carried.

Mr. MARCIL: Will the service be improved during the coming summer?

Mr. REID: We are at present able to keep up the freight and passenger service fairly well and we will keep it up during the summer. Now that navigation has opened on the St. Lawrence, with the equipment we have we do not anticipate much trouble along the road.

Mr. GRAHAM: Has the minister been giving serious consideration to the question of the elevator capacity for storage purposes at the city of Quebec? If the Transcontinental is to be used to any extent, I suppose the Government will wish to get as much grain as possible to Quebec in the fall for shipment out in the spring.

Mr. REID: We have a storage capacity of 1,500,000 bushels.

Mr. GRAHAM: Has the Government that storage?

Mr. REID: That is under the Harbour Commission.

Mr. GRAHAM: It has no connection with the Government railway system?

Mr. REID: No.

Mr. GRAHAM: Has the Government thought of developing elevator facilities at the city of Quebec to handle the traffic coming over the Transcontinental from the West?

Mr. REID: We have been thinking over that matter as well as elevator capacity at other points along the line, but we have not decided to do anything during the present year. We intend to see how we can get along with the capacity that we have during the coming season, and having the other two ports besides Montreal and Quebec to take the grain to, with this elevator that we are getting at St. John, I anticipate we shall be able to handle a large quantity of grain. We did not provide for any more elevator capacity this year for the reason that we thought the grain would be going through pretty fast and that we would get along without much storage.

Mr. OLIVER: When the minister gets next year the elevator capacity that he speaks about at St. John, does he expect that the connection that has been under discussion by the St. John valley will be completed?

Mr. REID: The members of the New Brunswick Government told me that they expected to have that completed and ready for operation by the 1st of December, but in order to be sure, they asked that the date be filled in—I think it is February 1. That is the understanding that I have with them.

Mr. OLIVER: If you have the elevator ready, you can reach it over the Intercolonial.

Mr. REID: Just the same; it is only a question of so many miles further.

Mr. OLIVER: During the past winter the department put into force between Winnipeg and Montreal or Quebec a rate that was recognized as a very reasonable one, and one which competed with water traffic, but they did not put in a rate from Quebec or Montreal to St. John. They are going to build an elevator at St. John, but unless they put in a rate to St. John that will correspond with the rate that they put into force during the past winter from Winnipeg to Quebec or Montreal, they might as well not build that elevator. It will be of no use because last winter's rate was so adjusted that it simply made it possible to use the storage capacity at Montreal and Quebec without any advantage to the shipper and did not make it possible to use the accommodation at St. John, because there was no rate reduction that would enable that to be done. I am asking the minister if, in view of the proposed construction of this elevator at St. John, it is to be the policy of the department that a through rate to the port of St. John will be given at a corresponding charge per mile to that given last winter from Winnipeg to Quebec.

Mr. REID: That rate from Winnipeg to Quebec proved to be quite an advantage. There was an enormous quantity of grain in the West last year, and pressure was put on the Minister of Railways to see if he could do anything to relieve the congestion. He had only a small equipment—just what he could take from the Intercolonial. At Montreal and Quebec there was quite a large storage capacity that was not being filled. If the Canadian Pacific Railway took the grain through, they would take it right to St. John, because they had an elevator there, and if the Grand Trunk took it through, they would take it to their elevators at Portland. We had no elevators at St. John and there was not much chance of the Transcontinental taking grain to St. John.

Mr. OLIVER: I do not wish to revive that argument. All I am asking is, what is the policy for the future?

Mr. REID: I want to show the hon. member that the Minister of Railways and Canals (Mr. Cochrane) said: as an experiment we will take this grain to Montreal at the same rate as the summer rate of last year, that is 6 cents, and fill those elevators. That, of course, must have been a great advantage during the winter.

Mr. OLIVER: It was a certain amount of advantage.

Mr. REID: If there had been elevator capacity at Fort William, the grain would have gone there and the shippers would have had to pay the same storage rates as they would at Montreal, so the storage question was exactly the same.

Mr. OLIVER: That is right.

Mr. REID: As to the question of what is to be done next year; the hon. member knows that through rates are always made between Winnipeg, or the West, and ocean ports. That matter will be taken up by the minister and his general freight agent, and a conclusion will be reached as to a through rate between Winnipeg and St. John and Halifax. This grain that went through last fall all went to Montreal and Quebec, except a small quantity.

Mr. OLIVER: I said a little while ago that I should be glad to see elevator capacity provided at St. John, and wished the minister to go as far as he likes in establishing that capacity. But, of course, that is all contingent on the winter railway rate to St. John being on a basis that will enable the grain to be brought forward in winter. I made a little calculation some time ago on this subject, and I find that the winter rate from Winnipeg to Quebec was 12 cents for 1,352 miles. From Quebec to St. John, by the present route—that is by Transcontinental to Moncton and thence by Intercolonial to St. John—is 541 miles. At the same rate per mile as was charged from Winnipeg to Quebec, the rate would be 4½ cents, or a total rate from Winnipeg to St. John of 16½ cents. But the rate actually charged from Winnipeg to St. John this winter, whether by the Canadian Pacific railway through Montreal or by Transcontinental by Montreal or Quebec, was 20¼ cents. That just made the difference between a rate that would bring traffic and a rate that would stop traffic.

Mr. REID: Did I understand the hon. member to say that grain from Winnipeg to St. John either by the Canadian Pacific or the Transcontinental would be 20¼ cents?

Mr. OLIVER: Yes. The rate from Quebec or Montreal to St. John was so much higher per mile than the rate from Winnipeg to Montreal, that it balanced up and made the through rate just the same as that of the Canadian Pacific. If that policy is continued next year, there is very little object in building the elevator, or certainly a

very small elevator would answer the purpose. But my view is that the purpose of the building of the Transcontinental was to enable a winter movement of grain to the Atlantic ports to be carried on. What has been done this winter goes to prove that this is practicable; and it is in view of that that I am urging the construction of the elevator at St. John and that next winter a freight rate to St. John be charged that will be as good on a mileage basis as that given this winter from Winnipeg to Quebec. If that is not done, there is no great advantage in establishing any large elevator accommodation at St. John. The Quebec Board of Trade has gone into this matter very thoroughly, and amongst the figures they have given in their report is the statement that grain is now hauled from Goderich, a lake port, to Halifax, a distance of 1,231 miles, at 6 1-10 cents per bushel. That seems to be a low rate. If credence is given to their statement, then it is manifest that the through rate given on the Transcontinental is not phenomenally low, but one at which the railway ought to do business. If it was able to do business between Winnipeg and Quebec, it surely was able to do business between Winnipeg and St. John.

I wish to add a word to what the acting minister (Mr. Reid) said with regard to the storage at Quebec. While St. John is an open port all the year around, and while there is therefore some argument for there being only transfer accommodation there, Quebec is a sealed port for a part of the year. And it is beyond any question that Quebec has tremendous advantages in the summer time over any other possible port of Canada. And, as it is a substantially shorter distance from the prairies to Quebec by the Transcontinental than by any other present railroad route to Montreal, there is every reason why there should be ample storage accommodation at Quebec. So, while we desire the advantage of the open port at St. John during the whole of the winter, at the same time we shall always be very glad to save the cost of haul from Levis to St. John by taking advantage of the storage at Quebec, so that the grain may have to carry the least possible charge in getting to market. That is the whole purpose of this discussion, and of all this railroad building and elevator building—it is to cut down the cost of transport and handling between the producer and the consumer. With present world conditions, with the world crop increasing as it has been increasing, there is no doubt that from year to year it becomes more and more necessary, if our production is to increase by reason of the prosperity of our people, that the cost of transport and handling and the profits received between the producer and consumer, must be systematically cut down by every means possible. That is the main duty and responsibility of the department of the Government over which my hon. friend presides, and that will be arrived at by the use of the Transcontinental and by the subsidary accommodation of ample elevators at St. John and Quebec.

Mr. REID: The hon. member is absolutely right; we should have more storage. But we can only provide it as we have the money voted to build elevators and to carry on that work, and we will do it as fast as we can. Anything that can be saved in the way of transportation or storage charges is saved to the farmer—no doubt about that. I go further, and I say I am heartily in accord with some arrangement —by nationalization of the railways if that can be shown to be the most advantageous to get this railway system into such shape that we can operate the railways together and save a lot of money. Whatever you save, as I have said, is saved to the farmers of the West, and the people who have freight going over the railway system. Some people say that if the Government owned the railways so that there would be no looking for large dividends or profits, but operated them in the interests of the people, probably they could be operated at a great deal cheaper rate than at present. If that can be done it will certainly be a saving to the people who have products to transport. I look forward with a great deal of interest to the next session, when we shall be in a position to take up this great question —in fact, we must—and if a solution is arrived at, as I feel it will be, by taking over one or two of these systems, I believe that the cheaper transportation that probably will be got will have a great effect in the future so far as the development of the West is concerned. The question of increased accommodation at Quebec and at other ports will require consideration. The Montreal elevator has a capacity of 15,000,000 bushels, but that is a small quantity; Montreal will likely have to have increased accommodation. We should have large storage facilities at St. John and Halifax. At Portland and some of the other railway terminals the storage capacity is very large;

yet you could not get any grain through them this year; they were all filled to their utmost capacity. If the grain can be sent to Quebec and the elevators filled, there will be a saving of four or five cents a bushel, the cost of shipping from Quebec to Halifax or St. John; and that will go right into the farmer's pocket. If the farmer wishes to ship his grain to Quebec and hold it until the spring, he will get that advantage.

Mr. ROBB: The intention of the Government in reducing all rail rates over the National Transcontinental railway to 6 cents a bushel to Montreal and Quebec for export no doubt was good. But notwithstanding all that the minister has said since his Estimates have been up, he has not convinced me—and I do not believe that there is any man in the trade that has been convinced—that it worked out to be of any particular advantage either to the shipper or to the farmer. I will tell the minister why. The great trouble last year was to get grain on wheels. Grain on wheels right through the season was worth a premium running from 3½ cents to as high as 8 cents a bushel over the May price; consequently the exporters could see a good deal better profit in buying the May option and waiting for the opening of navigation. The minister has laid a good deal of stress on the advantage which this arrangement gave and the amount of grain that was carried to Quebec and Montreal for export. Last year when navigation closed in the fall there was a considerable amount of grain in the elevators at Montreal. I have not the figures before me, but we do know from a statement brought down here that some of the New Zealand wheat put there last summer was still in the elevators at Montreal in the month of March. As has been pointed out by the hon. member for Edmonton, this special rate of 6 cents a bushel was good only going to Montreal or Quebec for export. If the grain was re-consigned from Montreal or Quebec to St. John or Halifax for export, the shippers had to go back to the regular rate enforced by the Canadian Pacific, Canadian Northern and Grand Trunk Railway Companies—and that rate was 23.3 cents per hundred pounds. Notwithstanding the enormous amount of grain that the minister claims was carried by the National Transcontinental, my statement is correct that this rate was of practically no value. A good deal of grain was carried, but I think we got practically the full rate for it. It was probably more profitable to the country and to the railroad not to carry it at the cheap rate, but very little grain was carried on that cheap rate. A return brought down in the House told us, I think, that altogether there were 80 cars to one point and twenty to the other—something like that, more or less. I have here the statistics of the wheat in Canada, issued on April 3 by the Department of Trade and Commerce. It shows that the total quantity of wheat in the elevator at Quebec on that date was 99,000 bushels. No ships had come up to Quebec at that time, so that this was wheat which had been carried there during the winter; possibly some of the grain had been left over in the fall when navigation closed. There were 42,917 bushels of oats there and 5,000 bushels of barley. The total quantity of grain in the elevator in the city of Quebec on April 3 was 148,920 bushels. Remember that the elevator at the city of Quebec has a capacity of a million and a half bushels; so that you can put a good deal of grain there yet before you require other elevators. The elevators at Montreal have a capacity of 15,000,000 bushels. How much grain do you think there was in Montreal on the third of April? The total quantity of all grain 9 p.m. in Montreal on that date was just a little over a million and a half bushels. These are official statements published by the Department of Trade and Commerce, I imagine they must be correct. There is some justification for the minister's statement that we require more storage capacity at West St. John, because we find that on that date there were at West St. John a total of 950,093 bushels of grain, of which 730,516 bushels were wheat. At Halifax on that date there were 36,685 bushels of grain. So we could carry a good deal of grain down to those ports before we should need to start building elevators. Instead of listening to the demands of local people who are anxious to see construction going on in their cities; instead of running the risk of repeating the mistake that was made at Calgary, where we put up a big elevator that is practically of no use as a transfer elevator because it is located out of the running belt of grain, it would be well for the department to think out some plan of establishing elevators where they are most needed and where they will earn some money. Elevators with a capacity of 15,000,000 bushels in which only a million and a half

bushels are stored are not earning very much money for the shareholders, the Government. There is a great demand upon the Government for money for the different railroads. I imagine they need money, but I do not think they need it so much for the extension of their lines as they do for rolling stock. It seems to me that if the Government were to figure on a plan of owning, say, 10,000 freight cars and of leasing them at reasonable rates to the railroads during the grain carrying season, that would be of more advantage to the western farmer just now than elevator capacity. He does not want elevator capacity unless he can get the grain out of the elevator. We know from the experience of the past winter that there are sections in the West where very little grain has yet been moved. Take the Gilbert Plains district; I am told that many farmers there have not been able to ship a carload. What this country requires is more freight cars and more power. That is what the railroads need, not more miles of railway or more elevators. I submit this to the consideration of the minister, without condemning too strongly this policy of greater elevator capacity. I think that there is an indication at West St. John that we need it. But certainly we must get more grain down to Montreal and Quebec before we start talking of building greater elevator capacity.

Mr. REID: With all due respect to the hon. minister, we all have our own opinions as to the best way to improve this transportation system. The hon. member does not think it is good policy to have so many elevators where water navigation commences. My own opinion has always been that that is where we do require storage. Fort William and Port Arthur form the first water port, and surely we should there have as large storage capacity as possible. My own opinion is that if a farmer can load his grain in the winter on the car and get it right through to Quebec or Montreal at the same rate as it would cost for summer transportation through Port Arthur or Fort William, and have his grain stored at the seaboard instead of at Port Arthur, he would save the elevator charges on the grain at Fort Arthur. I think we should have large storage capacity at Port Arthur or at the head of the lakes, and also at Montreal, St. John and Halifax. As to the quantity of grain in Quebec and Montreal, the manager of the railways told me that they put one and a half million bushels of grain into the elevators at Quebec, and between Quebec and Montreal they had eight million bushels from the West over the National Transcontinental railway. I asked Mr. Hayes, the general freight agent, and those were the figures he gave me. What became of it after that I am not in a position to say, and we could not ascertain until after navigation opened. For instance, we may have put five million or six million bushels into the elevators at Montreal. That may have gone on by the Canadian Pacific railway; the parties who owned the grain may have had it re-shipped to Portland over the Grand Trunk railroad, or to St. John over the Canadian Pacific railroad. The hon. member states that there would be no advantage to the western farmer providing it had been re-shipped from Montreal. My understanding of it is that if you shipped last winter over the Canadian Pacific railroad or the Canadian Northern railroad, or the Grand Trunk under the old through rates, the winter rate was, say, 6 cents from Winnipeg to Fort William. Then I think it was 12 cents to Montreal, and then a certain amount, which I do not know, from Montreal to Portland over the Grand Trunk, the Canadian Pacific railroad rate from Montreal to St. John being the same. Taking the figures, 6 cents to Fort William and 12 cents to Montreal, and whatever the other rate was Montreal to Portland or St. John, the through rate from Winnipeg to Portland or St. John would be 18 cents plus the rate Montreal to the winter port. The advantage which the farmer in the West got was that he paid 6 cents from Winnipeg to Armstrong and 6 cents to Montreal. If it was then shipped on to Portland or St. John he paid the pro rata rate from Montreal to Portland or St. John that through grain pays, and he thus had the advantage of the 6-cent rate against the 12-cent rate between Armstrong and Montreal, or between Fort William and Montreal. The farmers in the West, if they got the advantage of the 6-cent rate, paid only 12 cents a bushel from Winnipeg to Montreal and Quebec, as against 18 cents if consigned to Montreal during the winter on the Canadian Pacific railroad. On our rate it was 6 cents to Armstrong and 6 cents to Montreal, or 12 cents against the rate I have stated. That is the advantage it was to the shipper.

Mr. ROBB: There is not much difference between the minister's view and mine on the storage capacity at the head of the

Great Lakes. He will admit that we have immense storage capacity there now. It has been fairly well filled this year, but there has always been room for a little more. But to come back to the rate, I have told the minister how much grain there was, according to the statistics furnished by the Department of Trade and Commerce, in Montreal and in Quebec, on the 3rd of April. The minister himself gave an answer from his own department on the 1st of March, according to Hansard, giving the number of cars shipped on that rate from Armstrong to Montreal, at 20 cars and from Armstrong to Montreal and 80 cars to Quebec. That clears up that matter from the statistics and as furnished in the minister's own answer. Probably the minister is right as to the rate from Winnipeg to Fort William, but that is not the way to figure on grain. The rate from Brandon to Fort William or Armstrong is 14 cents a hundred pounds. Tariff C G 18 gives the rate as 6 cents from Armstrong to Montreal or Quebec for export. Then there is a notation re consigning:

If grain is loaded out for export by Halifax, N.S., St. John, N.B., Portland, Maine, or Boston, Mass., through rates from Armstrong, Ont., will be applied in accordance with Transcontinental railway tariff, No. (C.G. 12 and C.G. 13) and supplements thereof.

Here is C G 13, giving the rates from Armstrong to St. John and Halifax. That rate is 23.3 per 100 pounds on grain and grain products. Then the rate to Portland, Maine, is the same, 23.3 (No. 3-G 12). The minister can settle that question with his traffic department.

Mr. WILLIAM CHISHOLM: I was not present when the minister answered an inquiry which I made a few days ago, but I have had an opportunity of seeing the telegram which he read to the House, and I find that it is neither full nor frank, and, besides, is misleading. The garden plot at Antigonish station was constructed I think last year, and although as rich alluvial soil can be got in and around Antigonish as is to be had in any part of the Maritime Provinces, they actually went to Malagash station, between 100 and 150 miles distant, to get loam to make that plot. According to the telegram, after they had unloaded four cars, it was found that two cars were sufficient, and they sent the balance of the stuff down to Mulgrave. Here is where the information is misleading: My information is that after the plot was completed the yard was so overcrowded that businessmen protested because of the obstruction to traffic, and that, consequently, they reduced it by about half. What I want to find out is what it cost to make the reduction. What became of the loam that was taken from Malagash when there was excellent soil right on the spot? Was it given to some friend to be taken away at his own expense, or was it given to him at a price? Did he cart it away free of charge or was the carting paid for? It is notorious that teams carried that stuff through the town. I want to find out from the minister where it went, and what the arrangement was, whether this man was paid for trucking that stuff from the station and through the town, and, if so, how much he was paid. Therefore I would like the minister to supplement the information given in that telegram. I received a copy of it from his secretary and sent a reply suggesting that this information should be given. Perhaps the minister can give it now.

Mr. REID: I told my secretary to see that the information was given to the hon. member. It does seem strange that they should go 100 miles away for loam, but I am a farmer myself, and I know that sometimes it is good policy to have a change of soil; if you took some soil from Ontario and mix it with Nova Scotia soil, you might have better crops.

Mr. CHISHOLM: We have the best of crops in Antigonish.

Mr. REID: I know that some farmers in Ontario get soil from Nova Scotia, and very good stuff it is. I get carload after carload of it, and I think that next time I will urge the manager to send to Ontario for soil and have it mixed with the Nova Scotia soil. I will be very glad to get the information which the hon. member wants. He can see that I did my best to get it, but if they have not furnished it in full, I will get it at the earliest possible moment.

Mr. CHISHOLM: I thank the minister for the efforts he has made to secure the information. But the case referred to is on a par with a good deal of the work that these highly trained specialists, who have been hired, borrowed, or imported from the Canadian Pacific railway and other railroads, have been doing on the Intercolonial railway. Just fancy going 100 or 150 miles to get loam for a place like Antigonish where there is alluvial soil of the richest kind. The minister has treated the matter

in a rather joking vein, and I do not wonder at it. The thing is ridiculous. It is a small matter, and I apologize for bringing it up, but it is a sample of the way in which those connected with the Intercolonial railway do things.

Mr. OLIVER: We have had a good deal of argument about the transportation of wheat last winter at the low rate. I understood very distinctly from the minister that that rate was for the purpose of filling the elevators, of utilizing the storage capacity of the elevators at Montreal and Quebec.

Mr. REID: That is right.

Mr. OLIVER: But by the report of the Department of Trade and Commerce, that statement is not borne out, so far as the Quebec elevator is concerned. We will assume that the grain delivered at the Montreal elevator was passed on to Portland or St. John by the other road, but, so far as the Quebec elevator is concerned, there was no such opportunity. Grain was certainly not forwarded from Quebec to St. John or from Halifax, because the Halifax elevator was not filled; therefore it could not have been put into the Quebec elevator. As long as there was vacant space in Quebec, and there was grain in the West to bring forward, the Transcontinental railway was not fulfilling its purpose, nor was the rate being utilized.

Mr. REID: All I can say is that I had the assurance of our general freight agent that that quantity of grain was put into the Quebec elevator and came over the Transcontinental railway during the past winter. The statement submitted by the hon. member for Huntingdon (Mr. Robb) is headed: "The total quantity in store on March 24, 1916." Whether or not the grain came after that date, or whether it went in and was shipped on again, is a question regarding which I have not information at present. I shall get the general freight agent to give me in writing a statement of the quantity of grain which went in, and I will give the hon. member for Edmonton the information. I will either show him that 1,500,000 bushels—it might have been a little more or less—went from Quebec, or I will stand up here and admit that I was wrong. But I got that information from him only ten days ago in this very building, and of course I must adhere to it. I will be able tto give my hon. friend fuller information, I hope, within the next 48 hours. I will have the exact figures for Montreal and Quebec and the dates on which the grain was put in. From the close of navigation up to a few days ago, eight million bushels went into the Montreal and Quebec elevators.

Mr. OLIVER: The hon. member for Huntingdon (Mr. Robb) suggested that if this railroad was to meet the purposes for which it was intended, there would have to be more rolling stock provided. I am not familiar with the workings of the Department of Railways, but, from what the minister has said during the discussions in the House, it would seem to me that it is a fact, that there is not sufficient rolling stock in the hands of the Government to handle a large amount of traffic over the Transcontinental. Is it proposed by the department to take measures to increase that rolling stock adequately so as to be able to bring forward a large quantity of grain during the winter months, and to what extent?

Mr. REID: I am going to award contracts for cars within the next three or four weeks; probably $3,000,000 or $4,000,000 worth will be ordered.

Mr. OLIVER: Is there anything for that in the Estimates?

Mr. REID: We have a part of the money in the Estimates and we have our Intercolonial surplus. The hon. member for Huntingdon (Mr. Robb) is right; if we had 10,000 cars and 200 engines it would be a great advantage but 10,000 cars would cost $10,000,000 or $12,000,000. These iron freight cars cost $1,200 or $1,400 each. They used to cost about $1,100 but they are now worth, I expect, $200 or $300 more. We cannot buy $10,000,000 or $12,000,000 worth of cars just now. You require power, vans and a lot of equipment. We will get these things as fast as we can. With reference to the rate question, as I stated during a previous discussion, we only started in last year as an experiment with this Transcontinental railway, we started in without equipment, without organization and just to get a little experience, we put on this 6-cent rate and handled 8,000,000 bushels of grain with such equipment as we had divided between the two roads. We expect to have sufficient equipment to enable us to handle a very large quantity of grain next winter. With good organization and extra equipment we will be of great service to the West next year.

Mr. MARCIL: With the acquisition of the Forget road, and the opening of a

winter port at St. Catharine's bay, will not the conditions be entirely changed at St. John and Halifax?

Mr. REID: There is work for all our winter ports.

Mr. A. K. MACLEAN: Where is Ste. Catherine's bay?

Mr. REID: Across the Saguenay river from Tadousac there is a large bay and a splendid harbour. This road was first intended to go to Ste. Catherine's bay. Murray bay is within 30 or 40 miles of Ste. Catherine's bay.

Mr. MARCIL: Will the port at Ste. Catherine's bay be open in the winter?

Mr. REID: Yes, they tell me that it is open nearly all winter.

Mr. MARCIL: Is that an official report?

Mr. REID: I understand that to be so, but I will see if there is any official report.

Mr. MARCIL: Our friends from the West and from the Maritime Provinces who take an interest in this grain question might very well be informed in regard to this because conditions may be entirely changed. If we can regard Ste. Catherine's bay as the open winter port of the St. Lawrence the other ports in the Maritime Provinces may look very small. There is no rolling stock at all on the Quebec and Saguenay railway at the present time?

Mr. REID: I do not know that there is, but there is on some other part of the road. The hon. gentleman talks about the Quebec and Saguenay railway! He knows to-day that from Quebec to Saguenay there were the electric and steamboat services which are really part of the system.

Mr. MARCIL: The electric road running between Quebec and Ste. Anne de Beaupré does a very large business in carrying pilgrims to the shrine at Ste Anne, but beyond that I do not think there is much business.

Mr. PUGSLEY: Then there will be pilgrimages to St. Catherine's bay. I would like to divert the Minister's attention from what must be an unpleasant situation to one which will give him more joy. I was told recently by a gentleman who lives in Chipman that every day there are long trains of cars full of freight passing over the Transcontinental railway that it is no uncommon thing to see one locomotive hauling a train half a mile long over this level road bed. I want to ask the minister if he has any report with regard to the traffic which is being carried on that line and where that traffic originates?

Mr. REID: I have not that information but the hon. gentleman knows that both of these roads belong now to the Government and they will be operated by the Government. It is only natural that we should operate them in the very best way possible for the Government. If we could haul 50 cars between Levis and St. John over the Transcontinental railway we would not start a train over the Intercolonial with 25 or 30 cars if that was all we could take.

Mr. PUGSLEY: That shows the advantage of the Transcontinental railway grades.

Mr. REID: I know, but at the same time it has cost us a great many millions to build that road. I do not want to go into a discussion of the Transcontinental railway system to-night. We have done it very often before, and I do not think there is anything to be gained by it. That road was built to run in opposition to the Intercolonial. Now that we own it, we intend to operate the two roads as a business proposition, and if we have a lot of cars at Lévis to take to St. John or Moncton, or, if you wish, to Halifax, we are going to take them with engines that will draw all the cars possible, and operate the roads in the best possible manner.

Mr. PUGSLEY: The minister says that we "own" it. That affords a text for some quite lengthy remarks. When did we secure the ownership of it? Some time ago I asked the right hon. Prime Minister if any permanent arrangement had been made for the Government operation of the Transcontinental railway, and he said: No permanent arrangement could be made except by legislation and the action of Parliament. No such legislation has yet been introduced. Therefore, I would like to know why the minister, in contradistinction to the statement of the Prime Minister, says that we own the Transcontinental.

Mr. REID: I will tell the hon. gentleman why I think we own it. I was under the impression that according to the Act passed the Government had built that portion of the road between Winnipeg and Moncton and owned it, and that we were to lease it to the Grand Trunk Pacific. So, I say we own it, and I think I am not mistaken in that. Am I not right in the statement that we were to build, own and lease

it for a certain number of years, and that the Grand Trunk were to pay interest upon it? That is the reason I say that we own it.

Mr. PUGSLEY: The minister said that it was built as a road which was to be run in competition with the Intercolonial railway?

Mr. REID: Certainly.

Mr. PUGSLEY: But the minister says now that we own it, as if something had taken place which had taken away the right of the Grand Trunk Pacific to operate it and placed the ownership in the Crown.

Mr. REID: The hon. gentleman is drawing a pretty fine distinction. I did say that it was built to be run in competition with the Intercolonial railway. The original proposition was that the Government should build, own and lease it to the Grand Trunk Pacific.

Mr. PUGSLEY: But did not the minister say now that we owned it, as if there had been some change in the ownership?

Mr. REID: There is no change in the ownership. We are operating it, if you wish to draw that fine distinction. However, we are operating it and we will no doubt do so to the advantage of the public. But this afternoon I noticed that the hon. gentleman was criticising the Government and asking why they should not take over the Grand Trunk Pacific at once and operate it. He found fault because we would not take over and operate the whole line between Winnipeg and the Pacific coast. Now he is finding fault because we did take over the Transcontinental.

Mr. PUGSLEY: Is the minister referring to me?

Mr. REID: Yes.

Mr. PUGSLEY: When did I so argue?

Mr. REID: I understood that to-day my hon. friend's argument was that we should take over these roads because they were bankrupt; that giving money to them was not in the public interest.

Mr. PUGSLEY: What I said was that, as these companies are now coming to the Government and are saying in effect: We are bankrupt; we cannot carry on the operation of these roads any longer, unless you assist us, and as the Government, according to the statements of the Minister of Finance and the Minister of Public Works are looking forward to the nationalization of the railways of Canada, they ought now, as a condition of giving this assistance, to stipulate for a maximum price at which the country would have in the future the right to take over the roads. In other words, this country should not help them over this period of adversity and then put them in a position, when the time of prosperity comes, to demand what they please for the roads, including prospective profits, which might amount to a very large sum.

Mr. REID: At all events, the discussion to-day would surely convince the hon. member that the Grand Trunk Pacific is not in a position to operate this road between Winnipeg and Montreal.

Mr. PUGSLEY: Not immediately.

Mr. REID: And that is the reason why the Government is operating it. We believe that next session, when we have a report as to the whole railway situation, there can be a reorganization of the railway system of Canada that will be a great advantage to every one concerned. As the Prime Minister and the Minister of Finance stated to-day, something must be done. It will be only six or eight months until we meet again, and then we shall be in a position to go thoroughly into the whole railway system and see what is best to be done under the circumstances in the interest of the public.

Mr. GRAHAM: Are you going to have a fall session?

Mr. REID: That may be necessary.

Mr. COPP: As the minister has been discussing the matter of providing more equipment during the coming summer for the operation of the Transcontinental and the Intercolonial railway, I want again to protest as strongly as I can to the minister against the Government robbing the Intercolonial of its rolling stock, and curtailing the freight and passenger service of the Maritime Provinces over the Intercolonial, and in this way destroying the Intercolonial for the benefit of the Transcontinental. That is what happened last winter. As I pointed out to the minister the other evening, the Intercolonial was made simply a local road in so far as through traffic was concerned. Traffic was held up; passenger trains running from Montreal to Halifax were delayed five, six or ten hours simply because the rolling stock of the Intercolonial was taken away and placed on the Transcontinental for the purpose of keeping that road in operation. That was inequitable and

unfair to the people of the Maritime Provinces for whose service the Intercolonial railway was really built. My hon. friend said that he proposed to buy three or four million dollars' worth of rolling stock apparently for the Transcontinental and the Intercolonial, and he stated that there was not enough in the Estimates, but that he was going to take the surplus from the Intercolonial and put it into rolling stock.

Mr. REID: I did not say that; I said that some was going to be taken from the surplus of the Intercolonial and that that would be put on the Government railway system. I do not think the hon. member will object to rolling stock being run through from Levis to Moncton. We will operate the stock on both roads. In addition to that surplus an amount has been placed in the Estimates for the Transcontinental. I said we were going to take the money from both the surplus and the Estimates, but it has always been the policy to use any surplus there may be on the Intercolonial for purchasing rolling stock for the Intercolonial. The hon. member has argued before that it was not right to take any part of the Intercolonial equipment last year. We could not get any equipment from any other railway; the Grand Trunk Pacific was to have some rolling stock for the Transcontinenal, but we did not get a car, and if we had not used a small portion of the Intercolonial rolling stock for the Transcontinental, we could not have operated it at all. I do not think the hon. member will say that we should have closed up the Transcontinental and not operated it at all between Winnipeg and Moncton during last winter. There were settlements along the line, and it was necessary to have some passenger traffic. There had to be cars and engines for that and supplies had also to be taken in and out. There was also this grain in the West that had to be carried out. Some people along the Intercolonial were inconvenienced, but there would have been much more hardship if we had had to close up the Transcontinental. We did our best to get what equipment we could, but we did not get it in time.

Mr. COPP: I do not intend to argue at length in regard to the conditions of last winter, because it is past and gone. Things are better now; the snow has disappeared, and the freight is going through much more rapidly. I rose, however, to enter my protest on behalf of the people of the Maritime Provinces in the future. My hon. friend says he would not think I would say that we should not operate the Transcontinental. I am not in a position to say that we should operate the Transcontinental or not. It is only a few years ago that those settlements spoken of by the acting minister, along the Transcontinental, have had railway accommodation. The people of the Maritime Provinces have had the Intercolonial ever since Confederation, and I contend that the minister had no right to rob the Intercolonial and sacrifice the rights of the people who are served by that railway for the benefit of the people who live along the Transcontinental. I want to put myself on record as protesting in the strongest manner possible that during the coming summer and the coming winter the Intercolonial should have proper rolling stock as it has had in the past and not have it depleted, as it was during the past winter, for the benefit of the Transcontinental. Whatever surplus has been laid aside from the Intercolonial should be expended on the betterment of that railway, both in roadbed and equipment, in order to give that railway its proper status as the railway which has served the people of the Maritime Provinces since Confederation, and I say that its interests should not be sacrified to those of any other great transcontinental railway.

Mr. OLIVER: What the minister has said in regard to the provision of rolling stock is rather of the character that he is going to strain a point in order to get some rolling stock for the Transcontinental. The Transcontinental has cost the country something like $200,000,000 to build, and that capital expenditure is of no value unless there is rolling stock to handle the business over the road. There was business this year to be handled if we had had the rolling stock. Unfortunately we may not have as much business next year because we have not been able to handle the business this year.

The question should be approached, not in any parsimonious spirit, but in the spirit of meeting the conditions of traffic as they exist and may be expected to exist some time in the near future. Of last season's crop, something like sixty or seventy million bushels found its outlet by way of Buffalo. Of this year's crop 125,000,000 bushels remain in the West, still to come forward; and if it comes forward at all, it will come by the lakes, and the larger part of that

crop will find its way out by Buffalo. We are producing the crop and it is the United Kingdom that needs it; and we have built railroads at enormous cost to do this very traffic; yet we allowed the traffic to pass away from us both last year and this year. We are continually talking of not having business for our railroads, but this year we not only have business but an enormous amount of business which has gone away from us simply because we were not prepared to handle it. What I urge is that means be taken to utilize the transportation facilities of the Transcontinental railway by ample elevator capacity at the winter port of St. John and at the summer port of Quebec, and by ample rolling stock to bring the crop forward all the year around so that we shall not be in the position in the future of carrying on the production and other people doing the business.

It has been generally assumed that because the grain has come forward by the lakes up to the present time, it must always come forward by the lakes. There is no ground for that supposition. When the Erie canal was built all grain from the West went by the Erie canal; but to-day the amount that goes by the Erie canal is little; the railways having displaced the water transportation to a tremendous degree. The Great Lakes, of course, are on a larger scale than lake Ontario or the St. Lawrence, or our canals; but the position of the Transcontinental from Winnipeg to Quebec is one of vast advantage. I do not see that there is any reason why the conditions which prevailed in regard to water traffic on lake Ontario and the St. Lawrence canals, in which the traffic has practically been driven off the lake, should not be repeated as between the Transcontinental and Canadian Northern on one hand and the navigation of the Great Lakes on the other. Of course, having built the railroads, we must equip them with rolling stock and other facilities. But let us not sit down and complain that we have not the business to do when the city of Buffalo and the American business of transportation on the Great Lakes is being built up out of the business that we create.

Mr. LOGGIE: I wish to refer to a matter not relevant to that which has been discussed, but which, I understand, comes within the minister's announcement of willingness to discuss any matter relating to his department. The question is that of deep water facilities at Newcastle, N.B. A survey was made and a proposition to extend the wharf. Nothing further has been done. When I was at home I found some of my constituents making inquiry about the matter, and I promised to have it brought to the attention of the minister.

Mr. REID: I will place on Hansard or give to the hon. gentleman, when we are discussing some other railway item, a full explanation of that matter.

Mr. ROBB: Now that the hon. member for Edmonton (Mr. Oliver) has shown that what we require is more rolling stock for the railway, which is the idea that I have urged, I wonder if we could not go a little further and let that Hudson bay scheme lie over for a year or two, and put the money into ships to carry grain from Atlantic ports to Liverpool. It is of little use to bring grain to deep water if you have not ships to carry it to the other side. Would not the minister think it well to take some of this money that some of us think is being wasted in the Hudson bay scheme and put it into ships?

Mr. REID: Personally, I have strong opinions on the question of ships. To buy new ships is impossible at the present time —there are none for sale. And if you start to build a new ship now you will not get it for a year.

Mr. A. K. MACLEAN: This is a good time to commence.

Mr. REID: Yes, but you have to consider that the cost of a ship in normal times is about $50 a ton, while now it is $120 per ton. A vessel of 10,000 tons would cost you in normal times $500,000, but to-day the cost would be $1,200,000, and you would not have the use of it for a year. If the war was going to last two or three years it would be a good idea to order ships and have them for the year's operations. Under present conditions, if you were to pay $1,200,000 to have delivered to you in a year's time a vessel which, under ordinary conditions, would cost $500,000, the investment might not be a very good one. I am strongly in favour of building vessels in our own country; but whether we build them in our own country or not you cannot get them at less, roughly speaking, than $120 a ton. These are the figures I have had given to me in discussing this subject with shipbuilders. I have in mind the case of a man who has in course of construction a 10,000-ton vessel which he expects to be finished in July; and he tells

me that he can get just double his contract price for the vessel, but he could not get another, probably, for more than twice as much as the contract. These are things to be taken into consideration. My idea is that if we had normal conditions we ought at once to start shipbuilding in our own country. We are a growing country and we require vessels to take our own products from our own ocean terminals to foreign countries; and by doing that and connecting with our own railway service we can greatly increase our trade.

We are facing these difficulties now, and in view of the conditions it is hard to tell what is really the best thing to be done. This consideration, together with the great expenditures for war, makes us hesitate to engage in such work as is suggested by the hon. member. The hon. member is absolutely right; we should have these vessels and run them in connection with our railways. But the hon. member is a business man, and he can see why we should hesitate to give an order for a vessel which in these times would cost $1,200,000 and in normal times $500,000.

Mr. A. K. MACLEAN: Will not the prices be equally high for a period of five years after the war?

Mr. REID: There is a difference of opinion on that. Some men say that they will be higher than they were in normal times, because so many vessels are being destroyed. Others say that there will be a very large drop in the price for the reason that a large number of vessels are interned at the present time, and a very large number of vessels are being used by different nations for their own purposes of transport. These will all again come into the mercantile trade, and that will tend to bring freights down and reduce the cost of building vessels. I have seen no one yet who will make the statement that as soon as the war is over the cost of building vessels will keep up to what it is at the present time. I think the drop will be very considerable.

Mr. ROBB: It is very satisfactory that the minister endorses that idea. If I understand him rightly, he claims that under normal conditions after the war we could build three ships for the price of one that we could build now. The extra expenses would be in the matter of labour and iron, I imagine?

Mr. REID: Yes.

Mr. ROBB: Would not the same principle apply to the Hudson Bay railway? Would it not be just as well to delay that work until after the war, when labour and iron will be cheaper?

Mr. REID: No, because the Hudson Bay railway is under contract. Of course, we are holding it down; we are not doing nearly the amount of work we should do in normal times. We are holding it down as much as we can without rendering ourselves liable to the contractors for damages for shutting down the work.

Mr. GRAHAM: That steamship that you are buying, is it by contract?

Mr. REID: It is the Northumberland, that ran on that route a great many years. A company owned the Northumberland and the Empress, the former running between Summerside and Point du Chene and the latter between Pictou and Charlottetown.

Mr. COPP: Is the Government going to run that boat now between Point du Chene and Summerside?

Mr. REID: The company have sold their boats. They sold the Empress to the Canadian Pacific Railway Company, and we bought the Northumberland. We are running the Northumberland between Point du Chene and Summerside, and we are running the car ferry between Pictou and Charlottetown.

Mr. COPP: All the communication, then, between the island and the mainland is being carried on by the Government?

Mr. REID: Yes.

Canals—bridge between Iberville and St. John—revote of lapsed amount, $52,000.

Mr. REID: An item was put in the Estimates in 1911-12 for $40,000, and an additional amount was put in the Supplementary Estimates for 1911-12 for $12,000, making $52,000. An arrangement was made between the Government and the municipalities at that time to build a bridge across the canal, and the municipalities entered into a contract under which four-tenths of the cost was to be paid by the Government, not to exceed $52,000. The amount was dropped from the Estimates by the Minister of Railways and Canals, for the reason that nothing was done by the municipalities. The Minister of Railways promised that if they carried out their part of the agreement and built the bridge he would again

. put the amount in the Estimates.

10 p.m. When the minister was absent I made the same promise. The bridge has been constructed, and we are asked to carry out our agreement. Therefore, I have put this amount, which I think we are entitled to pay, back in the Estimates.

Mr. GRAHAM: This arrangement is a good one, because I made it myself.

Mr. REID: Did I explain it correctly?

Mr. GRAHAM: Nearly. The arrangement was that the Provincial Government was to pay a certain amount, the municipalities a certain amount, and this Government, on account of the canal and approaches, a certain amount. There was a good deal of disappointment when this item was dropped out of the Estimates, and I am glad to see it in again.

Galops canals—in full settlement of all outstanding claims of contractors, Murray and Cleveland, in connection with the construction of the upper entrance, $20,028.25.

Mr. REID: There were two contracts in connection with this, one with Murray and Cleveland for building the locks and the upper entrance to the canal, and another after that with M. A. Cleveland for building what is known as the North Channel. Murray died a few years ago, and M. A. Cleveland died a couple of years ago. They are all dead but one man, Stephen.

Mr. A. K. MACLEAN: Has nobody living had anything to do with this?

Mr. REID: The estates have been trying to have this matter settled. Stephen Cleveland has had the matter up with the Minister of Railways, with a view to having it settled. This item is in connection with the Murray and Cleveland contract for the Galops canal. They put in a claim on thirteen different items, aggregating $117,961.29. The chief engineer allowed a little on each of four items. On item No. 1, for deepening the prism of the canal below the depth specified, for which they claimed $40,917, he allowed $10,760. He allowed item No. 10, for $85,343 for delay to dredging plant caused by navigation going down passing over work. Item No. 11, for additional painting of lock gates, $1,525 he allowed. He also allowed item 11, for fitting, erecting, constructing, and cutting checks for keys of lock gates, $3,480.

Mr. GRAHAM: Any interest?

[Mr. J. D. Reid.]

Mr. REID: No interest at all. Mr. Bowden recommended that this amount be allowed. That goes to the Murray estate. The other claim was for $284,894. On this the Minister of Railways made an offer of $48,955.31, on the recommendation of Chief Engineer Bowden.

Mr. A. K. MACLEAN: When was that offer made?

Mr. REID: Last fall, before the minister went away.

Mr. MACLEAN: Did any former Minister of Railways, during the last 15, or 20, or 30 years, decline to pay this, or were negotiations proceeding all the time and coming to nothing?

Mr. REID: I am quite satisfied that they have been up before different ministers, probably before the hon. member for Renfrew among others. The claims amounted to $284,894, and the Minister of Railways, after going over these different items, allowed portions of some of them. On item No. 2, which was for $72,813, additional price for re-excavating stuff for gut dam and elsewhere on account of excavation of prism having been finished before other works, he allowed $18,277. The ground they took was that they were supposed to excavate this lock, to take it up and convey it down and place it on the dam between Adam's island and the Big island.

Mr. GRAHAM: That is the north channel?

Mr. REID: Yes, taking it out of the north channel and putting it on the dam at the head of the Galops rapids. But they were not ready for it at the Galops rapids, and they had to put it on the island, and that was re-handling. He allowed one other item. They claimed $91,240 extra for excavation at 27 station plus 50, on account of material proving harder than anticipated in original location, and having to be drilled and blasted, and he allowed $30,678.

Mr. GRAHAM: That brings up the question of classification.

Mr. REID: Yes.

Mr. GRAHAM: Has the minister been in negotiation with Gilbert for settlement of his claim?

Mr. REID: I never heard of the Gilbert claim until the other day. The claim has been pressed for many years. I was always of the opinion, and I take the ground to-day, that those parties had not a fair claim, for the reason that according to the original

contract they were to be paid a certain amount for going down so many feet. Then there was a dispute and they were paid for having to do what, in my opinion, they had been paid for originally. They were paid for going down 100 or 200 feet below the grade required for going through that channel, and now they put in another claim for going down still farther. I always took the ground with every minister that they had no good claim, and I am on record in this House as saying that. I understand they have applied for a fiat and are going to take it to the Exchequer Court.

Mr. COPP: I wish to bring to the attention of the minister a matter which I placed before the Minister of Public Works, the other evening, that is the connecting of the Intercolonial by a spur line with a public wharf at Sackville. In 1910, or thereabouts, a new wharf was constructed at Sackville. After the engineers had made careful investigation and examination, and after conference with a number of sea captains who were operating vessels between St. John and Boston and elsewhere from that port, it was decided that it was in the interests of the town of Sackville to build the new wharf 300 or 400 yards lower down the river than the present old wharf which was absolutely dilapidated and fallen to pieces. The reason for that particularly is that at the site of the new wharf there was a very sharp bend in the river, and as the river is a tidal water, vessels leaving the wharf, and going out on a heavy tide found it difficult to go down the river and round the bend without running aground on the opposite side. By placing the new wharf at the point where it is constructed, that condition of affairs was overcome as vessels leaving the new wharf would get a straight run out of the river. I do not know what the custom is in regard to these matters, as between different departments of the Government, but it is natural to suppose that when the Public Works Department undertook to build that new wharf they expected the Railway Department to connect it with the main line of the Intercolonial railway, as the old wharf was connected with it. The new wharf was built at a cost of upwards of $40,000. It was begun in 1910, I think, and completed in 1912, and from that time till now it has not been of one cent's advantage to the people of that portion of the county of Westmorland. Not one vessel, so far as I know, has tied up to it and none will be tied up unless there is railway accommodation provided. I drew the attention of the Minister of Railways last year to this condition and he promised consideration. It is a small matter to be sure, but nevertheless Sackville is a town which we think is of some importance, and, in years gone by, before the old wharf went into decay, a large number of schooners, small-sized vessels, and barques even came up the river, received and discharged their cargoes at the port of Sackville. Now that the old wharf has gone, there is practically no shipping at that port and the larger schooners refuse to tie up at the old wharf. The people in the locality cannot get their freight coming to Sackville except by a wagon road.

The Deputy Minister of Public Works kindly drew the attention of the Deputy Minister of Railways and Canals to the matter, after the discussion we had in the House the other evening, and he has sent me a copy of a letter which is as follows:

Wednesday, May 3rd, 1916.

Dear Sir,—I beg to acknowledge receipt of your communication of the 29th ultimo, enclosing an excerpt from Hansard of the 27th ultimo, containing some remarks concerning an application for a railway siding to connect with the public works wharf at Sackville.

In reply, I beg to say that some years ago a wharf was built on the northeast side of the harbour of Sackville by the New Brunswick and Prince Edward Island railway, and that the Intercolonial railway has a connection with this wharf. It appears that four or five years ago your department built a wharf on the opposite side of the bay—

He is wrong about that; it is not on the opposite side, but further down.

—and made no provision for railway connection with it. In 1913, a petition from the citizens of Sackville was sent to this department by the Sackville Board of Trade asking that rail connections be made with the new wharf. The matter was submitted to the Intercolonial officials, and a report was submitted showing the propositions for such a connection, one at an estimated cost of $10,949, and a second one at an estimated cost of $12,611.20. General Superintendent Brady—

Mr. Brady was on the Board of Management of the Intercolonial railway.

—reporting on the matter stated: There is already a wharf track from our yard to the old wharf at Sackville and we cannot see where we are going to get one cent of additional earnings by spending the above-named amount of money.

This is the particular part to which I would call the minister's attention.

In fact, we can see where we are going to lose earnings, particularly from freight received from the Cape Tormentine line, which

we now haul to Dorchester wharf, which we will not haul at all as it will be delivered to the new wharf at Sackville and we will not get one cent of earnings out of it.

The whole subject was brought before the minister and he expressed the opinion that inasmuch as the railway had already provided rail connection with an existing wharf at Sackville, he did not think the Intercolonial railway should be called upon to make such a further expenditure of $10,000 or $12,000.

The minister will notice that Mr. Brady's idea was that in shipping lumber and other products coming over the Cape Tormentine line for export, the Intercolonial railway was going to make some money by hauling them past Sackville to Dorchester, and the people would pay the extra freight. The idea was to force the shippers to pay for hauling the freight 15 miles further. Without arguing the question at any length, because I think the minister understands the situation, it seems to me an absolutely absurd proposition that the Government of the country, after building a wharf at a cost of $40,000 to accommodate the people of Sackville, should refuse to make any connection between the main line of railway and that wharf. The only reason given is that on account of having no railway connection there the shippers will have to pay for carrying the freight 15 miles further, thus enabling the Intercolonial railway to make more money at the expense of the people who should have an opportunity of using the wharf at Sackville. The proposition seems so absurd that it should not require any argument. If the Railway Department does not take up this matter and build a spur line to the wharf, which is only a short distance away, the $40,000 expended on the wharf, might as well have been used in building a wharf in the woods between Sackville and Dorchester. Under present conditions, the wharf is not worth one cent to the people of Sackville. It is all very well to be economical, but I am afraid that Mr. Brady, in his dealings with the Intercolonial railway, was not so careful in the expenditure of public money in other directions. The expenditure called for is very small, and I can assure the acting minister that it would be of great advantage to the people of that locality. I would like to have from the minister an assurance that he will take the matter up, and see that a connection is made between the wharf and the main line.

Mr. REID: This is the first I have heard of this matter, but I will take it up with the management and see if there is any possibility of getting the connection.

Mr. DESCARRIES: I would draw the acting minister's attention to a demand on the part of the citizens of Lachine in my constituency, to get rid of the nuisance caused by the whistles of vessels going down lake St. Louis to Lachine lock. During the night the vessels pass along the front of the city of Lachine, and each vessel gives four blasts, and as the vessels now are very big, they have big whistles. During the silence of the night, when every citizen has a right to take his rest without being disturbed by anything of an annoying character, suddenly we hear that big noise, and if it so happens that there is a baby, a woman or any other person sick, it is very trying and all are bothered by it. I have very often been asked if it is possible to devise some means to give a signal to the men attending the locks instead of using the whistle. I call the minister's attention to it, and I hope he will be good enough to study the question and if possible grant the request of the citizens of Lachine. While passing through that part of the Lachine canal which is within the limits of Montreal, these vessels do not sound their whistles. Why should not the same consideration be shown for Lachine, which is a city of great importance now, in order that the citizens may be for ever rid of that annoyance?

Mr. REID: This was brought to my attention the other evening by an hon. member from Montreal, and the same thing applies to Lachine. I will take it up with the officials and ask them to communicate with the officers of the Lachine canal and see if something cannot be done. I will find out what has been done, and I will let my hon. friend know. I understand that this is quite a nuisance, and I will see if something cannot be done to improve the situation. If so it will be done.

Mr. DESCARRIES: There is a big dam at the head of the Lachine canal, and if necessary a man could be placed at the dam with a telephone to give the signal to those attending the locks.

Mr. REID: That is a good suggestion.

Public Works—chargeable to capital—public buildings—Ottawa Eastern Departmental Block—new fireproof roof, etc., $240,000.

Mr. GRAHAM: Has the contract been let for that?

Mr. ROGERS: No. This is for a new roof for the East Block. The roof is not

fireproof, and we felt the need of a fireproof roof when the fire in the main buildings took place. It is regarded by the officers as being essential.

Mr. GRAHAM: Will that put the roof on the building?

Mr. ROGERS: That will put the roof on.

Mr. A. A. McLEAN: Is the rest of the building fireproof?

Mr. ROGERS: Partly so, but it is not as good as it should be.

Mr. NESBITT: What is the matter with the present roof?

Mr. ROGERS: It is not fireproof at all.

Mr. NESBITT: There is not much use putting a fireproof top on a match. The building itself is not fireproof.

Mr. ROGERS: The main building is fairly fireproof. That part built recently is fireproof.

Mr. NESBITT: There is not much use spending money putting a fireproof roof on a building that is not fireproof.

Mr. A. A. McLEAN: It would be worth the miniser's while to consult with his officers, I think. It does not sound very logical to put a fireproof roof on a building that is not fireproof.

Mr. ROGERS: I brought the same point up when the matter was presented the other day with the deputy, but he convinced me that it was the proper thing to do.

Mr. NESBITT: If the roof is sound there is no possible object in putting a fireproof roof on it. The only object would be in case of fire close by, to guard against the danger from cinders, but I hope that we are not going to have another fire.

Mr. ROGERS: We will give it very careful consideration before we decide to spend the money. It has not been decided to spend it yet.

Ottawa Parliament building—restoration—the plans for the said building and the method to be adopted for securing the reconstruction thereof to be subject to the approval of the joint committee appointed by the Prime Minister and the leader of the Opposition, $1,500,000.

Mr. GRAHAM: That committee has been appointed?

Mr. ROGERS: Yes.

Mr. GRAHAM: Who compose it?

Mr. ROGERS: The Hon. Dr. Reid, the Hon. Mr. Hazen, the Hon. Mr. Blondin, the Hon. Senator Lougheed, the Hon. Mr. Pugsley, the Hon. Mr. Lemieux, the Hon. Mr. Murphy, and the Hon. Senator Watson. They have held one meeting already, and they are to hold another meeting tomorrow night.

Mr. GRAHAM: You are on it too?

Mr. ROGERS: I am on it.

Mr. NESBITT: You are the committee?

Mr. ROGERS: I am a member of it.

Mr. GRAHAM: This committee is associated with the minister and the work is to be carried on as it agrees?

Mr. ROGERS: That is right.

Mr. GRAHAM: As to whether it will be let by contract and to whom it will be let?

Mr. ROGERS: That is right.

Harbours and rivers—Vancouver harbour improvements—further amount required, $200,000.

Mr. GRAHAM: Is that under contract?

Mr. ROGERS: Yes, that is to finish the False creek work.

Public Works—chargeable to income—public buildings—New Brunswick—West St. John—medical inspection building, site, $2,000.

Mr. GRAHAM: Is that for immigration purposes?

Mr. ROGERS: This is to make provision for the purchase of a site at West St. John for the erection of a medical inspection building for the Immigration Department. This property is bounded by Clarence, Lancaster and Sutton streets, and comprises ten lots of land. It is reported as being especially cheap.

Ontario—Cayuga public building, heating and plumbing improvements, $3,500.

Mr. NESBITT: Is that a new building?

Mr. ROGERS: This is an old building which is being fitted up with plumbing.

Mr. NESBITT: What is it used for?

Mr. ROGERS: Public building, post office, and so on.

Kingston—Royal Military College—covered drill hall—further amount required, $55,000.

Mr. A. K. MACLEAN: Is this a new building?

Mr. ROGERS: This is a new building that the Militia Department are pressing for and that is very necessary at Kingston

in connection with the taking of the officers' course in cavalry.

Mr. A. K. MACLEAN: Is this the one in regard to which the hon. member for Frontenac (Mr. Edwards) was trying to get information for so long and about which he was so patient?

Mr. ROGERS: It may be.

Ottawa public buildings—fire escapes, $15,000.

Mr. NESBITT: I suppose that is for those belly bands we have up in our windows?

Mr. ROGERS: No, it is for iron ladders. There is a general idea that we should have fire escapes around our public buildings now. I would like my hon. friend to try one of those belly bands.

Ottawa Royal Mint—repairs and improvements, $10,000.

Mr. A. K. MACLEAN: Are these repairs necessary? The minister has about $2,000,000 in these further Supplementary Estimates for public works. It hardly seems like carrying out the pledge that he has been making to us every other day.

Mr. ROGERS: $1,500,000 is for the main Parliament building.

Mr. A. K. MACLEAN: It does not take long to get away with $1,000,000 on that.

Mr. ROGERS: We have to build the Parliament building. The other items are very small.

Winnipeg post office—sidewalk mail receiver, $6,200.

Mr. NESBITT: Is that for just one mail receiver?

Mr. ROGERS: That is at the back of the post office in a lane which is our property. The postmaster states that the time and labour which would be saved would be equivalent to at least one porter's salary per annum, for the reason that the mail delivered in the chute would land upon the sorting table in the basement instead of having to be received by the porters at the rear of the post office piece by piece or in sacks, placed upon a truck, taken down one floor and then hauled a hundred feet back and then lifted item by item or sack by sack on to the sorting table.

Mr. GRAHAM: You will have to hire a new porter to watch the mail receiver.

Winnipeg—to fit up old immigration building as postal station, $50,000.

Mr. A. K. MACLEAN: What is that?

Mr. ROGERS: We have an immigration hall adjoining the Winnipeg station and it is not a suitable place for an immigration hall. We have to have an additional postal station and we have decided to fit up the immigration hall for the postal station, thus saving the building of a new one.

Mr. NESBITT: What will you do with the immigrants?

Mr. ROGERS: We have an old building alongside to use for as many immigrants as are coming in now. We are practising economy.

Mr. LEMIEUX: Why does it take $50,000 to fix this place up?

Mr. ROGERS: It will take all of that. The Canadian Pacific Railway Company have made great improvements there and we have to make certain improvements to conform with the layout of the place.

Regina public buildings—Government's share of cost of local improvement rates, $4,600.

Mr. GRAHAM: Does the Government pay the frontage tax or the local improvement rates in every city?

Mr. ROGERS: Every place, yes.

Sutherland—building in connection with Forest nursery station, $5,000.

Mr. NESBITT: What is that item for?

Mr. ROGERS: For the erection of a building to be used as a boarding house for the men employed in connection with the nursery station at Sutherland. The building is 28 by 32, two and a half stories, with rear wing 20 by 12, a frame building on stone foundation. The lowest tenderer was $3,365; contingencies and superintendence, $1,335; total, $5,000. The deputy minister strongly recommended that provision be made for the boarding house as it was urgently needed. Eight tenders were received.

Mr. NESBITT: Is there $1,335 for superintendence on a $3,365 building?

Mr. ROGERS: That is for all the contingencies, fitting it up inside and that sort of thing.

Calgary drill hall—further amount required, $100,000.

Mr. NESBITT: Are you erecting that building?

Mr. ROGERS: Yes.

Mr. NESBITT: There is $100,000 already in the Estimates.

Mr. ROGERS: It will take $200,000. There was some delay in going ahead with the work on account of arrangements having to be made with the city for the site. It is absolutely necessary to put up this building because more soldiers are being recruited in Calgary than in probably any other city in Canada, and there is no accommodation there of any kind.

Victoria immigration building—to provide for Government's share of cost of laying a heavy asphalt pavement on Dallas road and Simcoe street, $1,345.02.

Mr. A. K. MACLEAN: I suppose we cannot criticise the present minister very much for these votes in aid of construction of sidewalks, because it has been the practice, I believe, for some years. I only rise to suggest the wisdom of a change in that policy hereafter. I think these towns may well construct the sidewalks around the buildings that the Canadian Government erects.

Mr. ROGERS: This has been the practice for so many years that it is now expected, and it will be unacceptable if a change is attempted.

Mr. MACLEAN: But it grows so rapidly.

Mr. ROGERS: The Dominion Government should keep pace with the enterprise of a growing town.

Mr. MACLEAN: But if the Government erects a building should not the town assume the responsibility for the sidewalk?

Mr. ROGERS: If in a town or city a person erects a store or dwelling, he contributes in taxation on that building for the maintenance of sidewalks and other public works and services. But we pay no taxes, and surely it is only in keeping with our proper relation to the development of a growing town to provide as a local improvement the necessary sidewalk.

Harbours and rivers, Nova Scotia, $119,400.

Mr. GRAHAM: There is an item here for East river, improvements, a further amount required of $60,000. That is a large item.

Mr. ROGERS: That is for the lock gates and the completion of the great work we are doing on the East river for the development of that growing and thriving portion of our Dominion.

Mr. GRAHAM: What county is that in?

Mr. ROGERS: Pictou county, I believe.

Mr. MACDONALD: Will the minister please state why he has not awarded the contract for the construction of the lock gates? I understood that tenders have been called for, and we should like to see the work go on. If the gates are not put in during the summer, long delay will be caused.

Mr. ROGERS: We have called for tenders, but I did not like to award the contract until the vote had passed Parliament. As soon as the vote is passed we will take the matter up and get ahead.

Mr. A. W. CHISHOLM: There is an item here of $1,500 to construct a pile wharf at Whycocomagh. What is to be done there?

Mr. ROGERS: This is to reconstruct the wharf. Assistant Engineer McKeen reports that on September 2 last he made an examination of the wharf and found it in a very bad condition, so bad that he considered it dangerous to load any great weight upon it, unless extensive repairs were made. Eighty-seven out of 154 piles supporting the wharf were badly worm-eaten, and practically gave no support to the wharf, some of them being completely cut off.

Mr. McKENZIE: In connection with the item in this vote of $1,000 to repair the breakwater at Jamesville. I understand that the work now proposed to be carried out is much smaller than was at first desired, and that it will not fulfil the purpose of the engineer. I do not know whether the minister has before him the information as to that. But in connection with the construction of that breakwater, I desire to call his attention now to a matter with regard to which I have had some correspondence with the department and on the subject of which I wrote him a letter today. Those carrying on the work engaged the scow of a man there and kept it for two months, but they decline to pay him except for the days during which they actually worked with the scow. It is no fault of the owner if they did not use the scow every day during which they kept it, and all he asks is that they should pay him what other people pay him for the use of the scow, namely $3.50 a day. I do not know whether the minister thinks that that is too high a price to pay for a large scow, but that is another question and one of which I am no judge. It is not fair that

they should take the man's scow and keep it for two months and then pay only for the days when they were at work. While I am on my feet, I desire to ask what is to be done under the item in this vote of $2,300 for repairs to ballast wharf at North Sydney.

Mr. ROGERS: As to the question of the scow to which the hon. gentleman has called attention, when I receive his letter I shall be glad to have the matter looked into. It is the usual practice of the department to pay for a scow only for the days it is used. If there is any special reason to justify what the hon. gentleman recommends, I shall be glad to give it consideration. As to the item with regard to North Sydney, this work is asked for by the district engineer. It is to build the outer face of a wharf where vessels lie for the discharge of ballast. The estimated cost is $2,270.

Mr. McKENZIE: That work is yet to be done?

Mr. ROGERS: To be done.

Progress reported.

QUEBEC AND SAGUENAY AND LOTBINIERE AND MEGANTIC RAILWAYS.

ACQUISITION OF BRANCH LINES.

Mr. ROGERS: This afternoon some hon. gentleman asked for certain information with regard to our railway legislation, in connection with lines of railway to be built below Quebec. I would ask the House to go back to the introduction of Bills, so that I can introduce a Bill intituled, "An Act to authorize the acquisition of lines of railway between the city of Quebec and Nairn Falls and between Lyster and St. Jean des Chaillons," in order that it may be printed and place given to it on the Order Paper.

Mr. GRAHAM: This Bill has to be preceded by resolution.

Mr. ROGERS: Not necessarily.

Mr. PUGSLEY: It involves the expenditure of public moneys.

Mr. GRAHAM: My view is that any Bill involving the expenditure of money should be introduced by resolution. Notice of the resolution is given, the resolution goes through its various stages, and a Bill is introduced founded on the resolution.

[Mr. McKenzie.]

Mr. ROGERS: In any case an Estimate will follow the Bill.

Mr. DEPUTY SPEAKER: May I suggest that the motion to revert to this order of business be put, and that any discussion take place on that motion?

Motion agreed to, and the House proceeded to the order "Introduction of Bills."

Mr. ROGERS moved for leave to introduce Bill No. 101, to authorize the acquisition of lines of railway between the city of Quebec and Nairn Falls and between Lyster and St. Jean des Chaillons.

Mr. GRAHAM: I still maintain that this Bill ought to be founded on a resolution. My hon. friend says that the Bill will be followed by an Estimate. That certainly is a roundabout proceeding; it is a new method of doing business in this House. Where we are providing by a Bill to do certain things surely that Bill, being a money Bill, ought to be founded on a resolution. The proposed aid to the Canadian Northern railway and Grand Trunk Pacific Railway Companies, not being brought in in the form of a Bill, need not necessarily have been proceeded by a resolution. This method, I may say, is very objectionable; a resolution would have been better. The procedure, however, suggested by my hon. friend is so contrary to all the practices of the House that I must protest against that way of doing it.

Mr. ROGERS: This Bill is founded on an Act passed in 1915 for the acquirement of branch line railways.

Mr. GRAHAM: This one line cannot apply to that.

Mr. ROGERS: No, it cannot apply to that, but this Bill applies to it, and is followed by an Estimate. That is why a resolution is unnecessary.

Mr. PUGSLEY: I think the hon. member for South Renfrew is right in the view that he takes, because the Bill certainly proposes a money obligation.

Mr. ROGERS: Not without an Estimate.

Mr. PUGSLEY: Oh, yes. It says this:

The Governor in Council may authorize and empower the Minister of Railways and Canals to acquire, under the provision of "An Act to amend the Government Railways Act and to authorize the purchase of certain railways", chapter 16 of the statutes of 1915, and upon such terms and conditions as the Governor in Council may approve, the railways described in the schedule hereto, together with such equipment, etc.

The consideration to be paid for each of the said railways and for any equipment, appurtenances and properties that may be acquired as aforesaid shall be the value thereof as determined by the Exchequer Court of Canada.

Mr. ROGERS: And to be followed by an Estimate.

Mr. PUGSLEY: It does not say that.

Mr. ROGERS: It has to be, in order to be of any value.

Mr. PUGSLEY: It is clear that if this Bill were passed it would authorize the Minister of Railways to purchase a road, the actual price paid to be fixed by the Exchequer Court of Canada. Rule 77 of the House says:

If any motion be made in the House for any public aid or charge upon the people, the consideration and debate thereof may not be presently entered upon, but shall be adjourned until such further day as the House thinks fit to appoint; and then it shall be referred to a Committee of the Whole House before any resolution or vote of the House do pass thereupon.

The meaning of that is that this Bill must be preceded by a resolution. Perhaps, however, it might be better to let the Bill be read the first time, and any objection could be taken on the second reading.

Mr. ROGERS: I simply made the motion for the benefit of hon. gentlemen opposite who wanted the information.

Mr. PUGSLEY: I withdraw the suggestion that I made, because I understand that the member for South Renfrew feels like urging his point of order.

Mr. DEPUTY SPEAKER: The hon. gentleman has referred to rule 77, which says that any motion for any public aid or charge upon the people shall be preceded by a resolution in committee. Further, it must be recommended by His Royal Highness the Governor General. I observe in looking over this Bill that, while it authorizes the purchase of a railway and provides the machinery, it makes no provision for the raising of funds. My mind goes back to a decision which was rendered by Mr. Speaker Sproule in the session of 1912, I think, on the question of the Highways Bill, which was an instance precisely in accord with this, if I mistake not. His decision at that time was that it was not a money Bill, inasmuch as any money to be expended would have to be provided either by Estimate or in some other manner authorised by Parliament.

Mr. GRAHAM: But he changed that decision.

Mr. DEPUTY SPEAKER: I think not. At all events, I think, having in view that decision, this cannot be regarded as a money Bill inasmuch as it does not provide for the expenditure of money, and the purchase cannot be completed until money is provided by Parliament by some constitutional means.

Mr. PUGSLEY: In the Highway Bill there was this difference, that the Bill provided that any moneys to be appropriated to the provinces should be voted by Parliament. But this Bill provides for the purchase of a railway, the price to be fixed by the Exchequer Court of Canada. That would authorize a positive agreement of purchase to be entered into, and if the Government should fail to carry out the agreement, I should think an action might be brought in the Exchequer Court and the price would be fixed by the Exchequer Court. The owner of the railway could recover the amount of the legal obligation. The Bill is clearly for the purpose of creating a charge. The Minister of Railways is authorized to make the agreement, the price to be fixed by the Exchequer Court. Then the Railway Company would commence suit in the Exchequer and would recover against the Crown the amount the Exchequer Court might fix as the value of their property.

Mr. DEPUTY SPEAKER: The Bill provides:

The Governor in Council may authorize and empower the Minister of Railways and Canals to acquire, under the provisions of an Act to amend the Government Railways Act, and to authorize the purchase of certain railways, chapter 16 of the Statutes, of 1915.

That is the so-called Branch Lines Act. This Bill, as I understand it, purports to bring the purchase or acquisition of this railway under the provisions of the Act of 1915, and if the objection of the hon. member for St. John (Mr. Pugsley) holds good in this case, it would hold good in the case of that Act, because that Act authorizes the purchase of certain branch lines of railways, but that purchase cannot be made complete until Parliament, by some constitutional means, afterwards provides the money. That, I submit places this Bill in exactly the same position as the Branch Lines Railway Bill, and for that reason as well as for the reason previously indicated, without professing to have gone into the

matter exhaustively, I am quite clear in my own mind that the minister is in order in bringing in this Bill as it has been brought in, by notice on the Order Paper, rather than by resolution, as if it were a money Bill, or a Bill in respect of trade.

Mr. ROGERS: I was only putting the Bill forward to suit the convenience of the House in view of the fact that we all know that this legislation is coming forward, and I understood that hon. gentlemen opposite were anxious to know exactly what it was. I put it forward with a view to getting it printed at once, and we shall, of course, be glad to discuss it on further readings when it suits the convenience of hon. gentlemen opposite. There is no special haste; it is only because we are getting close to the end of the session and I wanted to give the hon. gentlemen opposite all the information the Bill contains.

Mr. PUGSLEY: It is very important that we should proceed correctly, because if this is a money Bill it cannot be amended in another branch of Parliament; if it is not it can be amended as the other branch may determine. Therefore it is very important always to have the correct idea.

Mr. ROGERS: That is right. The Speaker has ruled.

Mr. A. K. MACLEAN: You had better be safe.

Motion agreed to and Bill read the first time.

On motion of Mr. Rogers, the House adjourned at 11.15 p.m.

Tuesday, May 9, 1916.

The House met at Two o'clock, the Speaker in the Chair.

On the Orders of the Day:

THE MEMBER FOR BELLECHASSE.

Hon. RODOLPHE LEMIEUX (Rouville): I would like to know if it is true that the hon. member for Bellechasse (Mr. Lavallee) has resigned his seat. I heard that he was to be a candidate in the provincial elections. I would ask his honour the Speaker whether he has received his resignation?

The SPEAKER: I was told that the hon. member for Bellechasse was to be a candidate in Berthier, but I have not received his resignation yet.

[The Deputy Speaker.]

THE BILINGUAL QUESTION.

On the motion of Sir Robert Borden for Committee of Supply:

Mr. E. LAPOINTE (Kamouraska) moved in amendment, seconded by Mr. E. B. Devlin:

That all the words after "that" in the main motion be struck out and the following substituted therefor:

"It has long been the settled policy of Great Britain whenever a country passed under the sovereignty of the Crown by treaty or otherwise, to respect the religion, usages and language of the inhabitants who thus become British subjects:

"That His Majesty's subjects of French origin in the province of Ontario complain that by recent legislation they have been to a large extent deprived of the privilege which they and their fathers have always enjoyed since Canada passed under the sovereignty of the British Crown, of having their children taught in French.

"That this House especially at this time of universal sacrifice and anxiety, when all energies should be concentrated on the winning of the war, would, while fully recognizing the principle of provincial rights and the necessity of every child being given a thorough English education, respectfully suggest to the Legislative Assembly the wisdom of making it clear that the privilege of the children of French parentage of being taught in their mother tongue be not interfered with."

Mr. W. E. KNOWLES (Moosejaw): I rise to a point of order. I take this point of order entirely on my own initiative and without consulting any one. It will be for you, Mr. Speaker, to decide whether it is well taken; I think it is. My point of order is that the suggested amendment of the hon. member for Kamouraska is not within the jurisdiction of this House. I might illustrate my meaning by comparing it with other matters. I submit that this House has no more jurisdiction to discuss this question than it would have to deal with the question of whether Prince Edward Island should take into consideration the matter of running automobiles on the country roads. I think it would be as much within our jurisdiction to discuss the question of whether the United States should take into consideration the matter of better preparedness, or to consider the matter of state ownership in Australia, or any other subject. There is a proper way in which this House could exercise the jurisdiction with which it is vested by the Constitution, namely, by disallowance, or by a motion criticising the Government for not having disallowed the Ontario legislation within the specified time. I think the question is as foreign to the duties of this House and

to the jurisdiction of this House as any of the other matters which I have cited for the purpose of illustration. True, we are supreme in this country, but supreme only within our own scope. We have no power beyond that scope over the legislatures or municipalities or any other kind of organization or corporation that may exist in the country. I respectfully submit to you, Mr. Speaker, that the question as to what should be done in the province of Ontario is beyond the jurisdiction of this House, and is therefore not a proper subject for this House to debate.

Sir ROBERT BORDEN (Prime Minister): Whatever may be said about the point of order, which will be within your disposition, Mr. Speaker, and as to which it might be well for you to take time to make your ruling, I would suggest to my hon. friend who proposes this motion that, whether the point of order be well taken or not, he is bringing into this House a subject over which this House has no jurisdiction, and that, therefore, he ought most carefully to consider whether he is well advised in introducing it here. There is no question that a certain feeling has been aroused in different parts of the country—it is not confined to one part of the country—with respect to matters that are the subject of provincial jurisdiction; and I desire to appeal most earnestly to the hon. gentleman who proposes to introduce this resolution that he should not proceed with it. Its terms, perhaps, I did not accurately gather. A proposed resolution was handed to me last evening by the right hon. gentleman who leads the Opposition, but after listening to the resolution which the hon. gentleman (Mr. Lapointe) proposes, I find that it differs somewhat from that which I received from my right hon. friend. In any event, it seems to me that, if my hon. friend is determined to precipitate a debate, which, so far as I see, can do no possible good, and which, in my judgment, may do an infinite amount of harm, the exact terms of the proposed resolution ought to be submitted for the information of the House before any debate takes place. Therefore it would be well, in order that His Honour the Speaker should have an opportunity of considering the point of order which has been raised, and also that my hon. friend who proposes to move this resolution may have the opportunity for more careful and weighty reflection and consideration, that this motion should stand until to-morrow. In the meantime His Honour the Speaker may take into consideration the point of order which has been raised by the hon. member for Moosejaw.

Sir WILFRID LAURIER: Mr. Speaker, I beg to submit, in all humility, but with great force, that the point of order of my hon. friend from Moosejaw is not at all well taken. There is an abundance of precedents in this very House against it. As to the legislation of the province of Ontario which it is proposed to discuss to-day, in no hostile spirit, I am sure, we have the precedents in this House, in the time of Sir John Macdonald, in the time of Liberal and Conservative Administrations, of resolutions in favour of Home Rule being presented and adopted, not once, not twice, but three times, and perhaps four, within my recollection. I have to say also that upon more than one occasion the British Parliament was moved, amongst others by Mr. Gladstone, to consider the treatment of Christian populations in the Orient. If I had supposed that any question would be raised as to the power of this House to consider or pass such a resolution, I could have armed myself with any number of precedents. As to the wisdom, or otherwise, of this motion, may I say to my right hon. friend the Prime Minister that for my part I have another and a totally different view from the one which he has expressed. Everybody knows that there is in this province at the present time a widespread agitation with regard to the rights of the French language in this Dominion. It is never a wise thing to run away from a question.

Some hon. MEMBERS: Hear, hear.

Sir WILFRID LAURIER: I do not want any applause. I address myself to the common sense and the spirit of fairness of my fellow countrymen in the province of Ontario, and I repeat that we have nothing to gain by running away from the question. Let us discuss it like men; let us discuss it like the British subjects that we are. I speak here as a member of the minority; but no one is prouder of his British rights than I am myself, and I can appeal to my forty years in this House to justify what I now say. There is nothing to be gained by running away from this question. Let us discuss it; let us hear both sides of it; and then, Sir, I believe that from this discussion we shall rise wiser and better men, knowing better what our position is, knowing better what the rights of the minority

are; and I venture to say that when the question has been settled, as it ought to be settled, the minority will accept the situation whatever it may be.

Hon. T. CHASE CASGRAIN (Postmaster General): Mr. Speaker, just a word upon the question of order raised by my hon. friend from Moosejaw. I do not think the precedents which have been advanced by my right hon. friend the leader of the Opposition have any application. The precedents that he has referred to are the precedents of Home Rule resolutions, which on several occasions were moved in this House, and also certain resolutions which were moved in the House of Commons in England with reference to the Christian populations of the Orient. I do not think that any benefit can be derived from the first precedent, that is, the passage of Home Rule resolutions by this House. I have not seen the terms of the present resolution, but, if I am correctly informed, we are asked to comment to a certain degree upon the action of a legislature in this Dominion. The powers conferred upon the legislature and upon the Dominion are defined very clearly by the British North America Act, and it seems to me that, by reason of that clear definition, any interference by this House in a question which concerns a legislature is an interference which cannot be justified by saying that upon another occasion the House expressed itself in favour of Home Rule. Let me call the attention of the House to the fact that the resolutions which were passed in favour of Home Rule were addressed to His Majesty's Government, and did not have the same significance as a resolution in this Federal House approving or blaming a legislature in the Dominion. Let me say one word to my hon. friend from Kamouraska (Mr. E. Lapointe) who has moved this resolution. I am as much concerned over this question as my hon. friend. I take as much interest, and have taken as much interest in it from the very first time that it was mentioned, as my hon. friend, and more than my hon. friend has done while he has been a member of this House. I have not had occasion to see the motion. I was unavoidably kept away from the House last evening. I saw a form of resolution this morning, but I am told that that is not the resolution which is before the House. I suppose that what my hon. friend has in mind is the good of the cause which he is advocating. If it is, and if he really does want an intelligent and clear discussion of the question, let him give notice of the resolution which he intends to move, so that we may see what attitude we upon this side of the House, or amongst ourselves, will take upon it; or, let him at least give us time to prepare any argument which he thinks we should bring forward either in favour of the resolution or against it.

Sir WILFRID LAURIER: May I ask that if hon. gentlemen want to have until to-morrow, or another day, to examine the resolution which is presented, I certainly would advise my hon. friend (Mr. Lapointe) to agree at once to the suggestion.

Sir GEORGE FOSTER (Minister of Trade and Commerce): Mr. Speaker, I was not present when the initial proceedings here to-day were had, and I do not quite understand all that has taken place up to the present moment. My understanding is, however, that an hon. member of this House wishes to move a resolution on the subject which has been mentioned, and that the point of order has been taken as to whether or not this is a subject which ought properly to come before this House. It is that question of order that is now being discussed. I do not wish to say anything at all in reference to the question of order. My right hon. friend who has just taken his seat (Sir Wilfrid Laurier) has asked his supporter, in reference to what has been said, to let this motion stand for another day. I wish to the bottom of my heart that he had put his plea that the question should stand forever and a day. For many days now there has been in the air the threatening of a coming menace. It has been stated that from one side or the other a question would be forced into this—

Mr. KNOWLES: Mr. Speaker, I rise to a point of order. I am sorry if my point of order has precipitated this discussion. I do not think it is fair to my hon. friend from Kamouraska (Mr. Lapointe). I now raise the point of order, in regard to the remarks made by my hon. friend the Minister of Trade and Commerce (Sir George Foster), that he is not addressing himself to the point of order, but that he is discussing the merits of the proposed resolution. I would ask your ruling, Mr. Speaker, as to whether it is now in order to discuss

the merits of the proposed resolution. I felt it my duty to bring this point of order to the attention of the House, but I do not want any unfair advantage to be taken of my hon. friend from Kamouraska.

Mr. SPEAKER: The last point of order of the hon. member for Moosejaw (Mr. Knowles) is certainly well taken.

Mr. KNOWLES: On the first point of order, I want to say a word in reply before you decide.

Mr. SPEAKER: If objection is taken, I think the Minister of Trade and Commerce will have to discontinue his remarks. The main point of order is certainly of very great importance and has, I must say, taken me quite by surprise—I only got back from Quebec to-day—and I would rather reserve my ruling on it until to-morrow.

Sir GEORGE FOSTER: Does that mean that I must reserve my remarks till to-morrow?

Mr. SPEAKER: The question before the House is certainly of the greatest importance. If the House is disposed to listen to the remarks of the Minister of Trade and Commerce there will be no objection from the Chair; but, if objection comes from the House, I have already ruled that the minister must discontinue his remarks.

Mr. KNOWLES: I wish to say a word on the point of order, in reply to what my right hon. leader has said. The belief that has been in my mind ever since this resolution—

Sir GEORGE FOSTER: I have the floor, I believe. So far as the Speaker is concerned, I am not denied the privilege of continuing my remarks.

Mr. SPEAKER: I understand the Minister of Trade and Commerce is coming to the point of order.

Mr. KNOWLES: He said he was not going to discuss the point of order.

Sir GEORGE FOSTER: I can easily frame an argument which will touch the point of order. However, it was not my intention at all to discuss the merits of a resolution which I have not yet seen, and about which it would therefore be quite impossible for me to offer an opinion or advance an argument.

Mr. GRAHAM: Can the minister say whether it ought to come here or not?

Sir GEORGE FOSTER: I wish to make an appeal to Parliament as to a member of the House.

Some hon. MEMBERS: Order.

Mr. SPEAKER: If the Minister of Trade and Commerce is permitted to make his suggestions to the House other members will claim the same privilege in which case a discussion would be had forthwith on the motion of the hon. member for Kamouraska. I think it is the desire of the House to postpone the discussion until to-morrow. With regard to the point of order raised by the hon. member for Moosejaw, at first glance I do not think it is well taken, but I should prefer to study the point and reserve my ruling until to-morrow.

Sir GEORGE FOSTER: In deference to your ruling, Mr. Speaker, I will not make any further remarks. The spirit and the intention of what I meant to say will, I think be well understood by the House and by the country.

Mr. KNOWLES: I wish to say a word on the point of order, in reply to what my right hon. leader has said.

Mr. SPEAKER: I do not think the hon. member is entitled to reply. I understand the point of order will be raised again to-morrow.

Mr. KNOWLES: Nobody was objecting to my saying a word.

Some hon. MEMBERS: Order.

Mr. KNOWLES: The Minister of Trade and Commerce was allowed to continue until somebody stopped him.

Mr. SPEAKER: I think the hon. gentleman had better wait until to-morrow, when I shall give my ruling on the point of order.

Motion agreed to, and the House went into Committee of Supply.

SUPPLY.

The House in Committee of Supply, Mr. Rhodes in the Chair.

Public Works—harbours and rivers, New Brunswick—Kouchibouguac, $10,500.

Mr. LOGGIE: What is to be done here?

Mr. ROGERS: This amount of $10,500 is asked for by District Engineer Stead for repairs and improvements to the harbour at Kouchibouguac, which was badly damaged by a storm on 20th November, 1914. The proposed works will consist of the con-

struction of a new dam, the repairing and extension of the old dam, and the rebuilding of pile breastworks. The estimated cost is as follows: dam to close new opening in beach, 800 feet long, at $9 per foot, $7,200; pile breastworks repaired and rebuilt, 1,000 feet, at $1.50, $1,500; extending old dam, 200 feet, at $4, $800; repairing dam, 125 feet; and contingencies, $1,000.

Mr. LOGGIE: I heartily agree with what the minister proposes to do at Kouchibouguac. The storm caused very serious damage, and I hope the minister will see that the new work is done very thoroughly, so that the breakwater will not be carried away by the next bad storm.

Mr. VERVILLE: If the minister would permit me on this item, I should like to remind him that on Friday last, I think, I asked him to lay on the Table a copy of the fair-wage clause in regard to the work to be done at the Parliament Buildings. The minister's answer was that the committee would meet the next day. Of course, I did not understand that that committee which was to meet next day had anything to do with the fair wage clause in connection with that work; I assumed that that belonged to the Labour Department, and, I suppose, to the Minister of Public Works. It seems to me that it should be laid on the table for a good many reasons. My information is that the wages of some of the workmen on the building have been lowered since last winter, notwithstanding that we hear it stated in Parliament every day that the cost of living is increasing. I do not know how this work is to be carried on, whether by contract, or on a percentage, or in any other way; but that makes no real difference, the Government of Canada ought to pay at least as much as any private contractor in the city of Ottawa is called upon to pay. And it seems to me it would be much better in the interests of labour in this country that we should know as soon as possible the wages that the workers may expect to receive in this work of rebuilding. I have just said that wages were lower. My information comes directly from the men working on the building. Last winter the carpenters received 40 cents an hour, but now they are paid 35 cents an hour. I believe that 35 cents an hour was the rate provided for in the fair wage clause applied to the custom house building. But the contract for that was made six years ago, and conditions have greatly changed since that time—the Minister of Public Works knows

that as well as I do. Therefore, it would not be fair to suppose that the same rate would apply to the present work as applied to the construction of the custom house. Furthermore, in the case of the custom house contract, provision was made for an eight-hour day. As the work of rebuilding the Parliament buildings is supposed to go on with rapidity, it may be found necessary to have three shifts a day. In that case it will be much better for the contractor, and for the Government as well, that an eight-hour day should be provided. If you have a nine-hour day, you cannot have more than two shifts, and you are liable, not infrequently, to be in such a position as to be compelled to use overtime; whereas, if you have three shifts, no overtime has to be paid. Of course, the wages should be in proportion to the cost of living. The Minister of Labour knows that according to the report of his department a family cannot live honestly on much less than $900 a year. The total of items contained in his report is about $800, but there are many items omitted which simply must be paid for by every family. I bring this matter up now because I suppose arrangements for the work are not yet completed, and it is well to provide in such a way as to give satisfaction to those interested in the work. I have spoken specially of the carpenters, but I might refer to those in other trades. I trust the Minister of Labour will consult the representatives of the different trades in Ottawa, and will get the report of his fair wage officers on this subject. I think he will find that the wages are, in some cases, far below what they ought to be. It would be in the interest of the contract itself that the Minister of Public Works should do as his predecessor did in the case of the customs house building, and provide for an eight-hour day. The work will go on more rapidly, which will be a benefit to Parliament and to the country at large.

Mr. ROGERS: I have very little objection to what my hon. friend has said with respect to the fair wage clause. I shall be glad to take this up with the Minister of Labour, as I intend to do, before we get started, and ask him to arrange a schedule of prices for the labour engaged in the reconstruction of the building. The eight hour day arrangement is something upon which I would not like to make a definite statement until I have had an opportunity to look into it with the officers of the department and study what the custom has been in the past in this particular locality.

We must have regard to conditions as they exist; and, having regard to these conditions, we will treat the matter in the best light and give it very favourable consideration.

Public Works—harbours and rivers, Quebec—Anse à Beaufils—to repair breakwater, $1,450.

Mr. LEMIEUX: I had not expected to speak on any of these votes, but on this item for Anse à Beaufils breakwater I have something to suggest to my hon. friend the Minister of Public Works. I regret that the Minister of Marine and Fisheries (Mr. Hazen) is not in his place, for what I have to say relates more to his department, but as the Minister of Public Works is the "master of the Administration" he can give his orders to the Minister of Marine and Fisheries. This Anse à Beaufils is a little cove on the Baie de Chaleur, in the county of Gaspé. I initiated the work there myself and happen to know exactly the conditions. This is an excellent little harbour for the fishermen. The fishermen on that coast go pretty far out in the gulf of St. Lawrence to fish, and as my hon. friend is aware there are more wrecks in that district, perhaps, than in any other part of the gulf of St. Lawrence. There is a bank there called the Orphans' bank, because of the many wrecks that have taken place. This little harbour was built in order to give protection in time of storm, a harbour of refuge for the fishermen. I have visited the harbour on several occasions, and the fishermen have expressed great gratification that this harbour had been provided. But consider what has happened during the last three or four years. I received a letter a few days ago, and I saw the fishermen myself when I passed there last Thanksgiving day. The harbour is so good and is so well equipped that the fishermen from all the neighbouring localities, from Bonaventure island, from the county of Bonaventure, and even from neighbouring places in New Brunswick, when there is a storm in the gulf, make direct for Anse à Beaufils, and thus the fishermen of Anse à Beaufiils themselves are deprived of their harbour for the benefit of outsiders. Of course, a true fisherman must always be liberal and generous to neighbouring fishermen. Therefore, one of two things should be done by the department in this case, either to enlarge the harbour or give instructions to the harbour master to limit the use of the place to the people of the locality. I suggest to the minister that he widen the approaches of the harbour rather than limit the number of fishermen who may take shelter there. I shall be very glad if my hon. friend will note my remarks and instruct his engineer during the coming season to visit the locality and see what can be done in order to meet the exigencies of the case. I can assure him that this is a grievance on the part of the fishermen of the locality, because, although it is their own home, they are dislodged from it by their neighbours—good neighbours, as they are—from Gloucester and Bonaventure.

Mr. TURGEON: May I be permitted to say that I concur in the suggestions made by the hon. member for Rouville? These natural harbours will have to be enlarged or given additional protection if they are to render the service that they should. Our fishermen are numerous in Gloucester. We have two hundred sailing vessels going to the banks, and when the wind strikes in one direction they have to get shelter wherever the elements take them. I remember that complaint was made a few years ago by members from Prince Edward Island with regard to the harbour of Tignish, which was sometimes filled by the Gloucester sailing vessels. The Minister of Public Works at that time did enlarge the breakwater there, and now all the fishermen of Gloucester and Gaspé can get what protection they need in that harbour without causing any detriment to the fishermen of the locality. I hope that the minister will take this matter into consideration during the coming summer and see what can be done.

Mr. ROGERS: I have listened with interest to what the hon. member for Gloucester has said, as well as the hon. member for Rouville, in respect to this important harbour. I find that it is a rather important harbour of its kind; it is a harbour of refuge, and the population immediately affected amounts to something like 4,000. A considerable amount of money has been spent there, nearly $30,000. The amount asked for in the Estimates is simply $1,450 for the repair of the breakwater. Some work was done on the breakwater last year; $3,000 was spent. We have improved the breakwater, therefore, sufficiently, but we have not yet given consideration to the idea of widening the harbour, as has been suggested by my hon. friend. I shall be

glad to have the engineer look into it and see if there is necessity for it.

Anse St. Jean—completion of wharf extension, $3,500.

Mr. MARCIL: Does that complete the work?

Mr. ROGERS: Yes.

Grands Machins—enlargement of wharf, $7,200.

Mr. MARCIL: Is this a new work?

Mr. ROGERS: This is practically a new work of widening the wharf. The matter of going on this year is under consideration.

Mr. MARCIL: That is in the county of Rimouski, I understand?

Mr. ROGERS: Yes.

Point Pizeau—repairs to wharf, $11,100.

Mr. MARCIL: Where is that situated?

Mr. ROGERS: About two miles from the city of Quebec.

Mr. MARCIL: Is that to be done this year?

Mr. ROGERS: Yes, that is the intention.

Port Lewis, repairs to wharf, $1,600.

Mr. ROBB: Will the minister explain what this work is?

Mr. ROGERS: This amount is asked for by the district engineer to remove the face timbers of the wharf, which are badly decayed for a height of 6 feet, and to replace the same with a concrete wall 18 feet thick at the base and 9 feet thick at the top. The approach of the wharf also requires concreting. The estimated cost is $1,600.

Mr. ROBB: I hope that the minister, now that the amount is in the Estimates, will not treat that as he has treated the works on La Guerre river. There has been in the Estimates since 1911 an amount of $15,000 for the works on La Guerre river. Last November, about the time that we heard considerable talk of a general election, La Presse newspaper had a write-up on the La Guerre river. They sent out this statement to the people of Huntingdon:

Happy Initiative.

The electors of Huntingdon have been very pleased to learn that the Government, thanks to the initiative of the Minister of Public Works (the Hon. Mr. Rogers) had practically decided to execute the old promises and use the sums of money which have been placed at his disposal for those works and which lie dormant in the coffers.

That money has been sleeping there since this Government came into power in 1911. I think a couple of weeks ago, in answer to the hon. member for Bonaventure, the Minister of Public Works stated that they did not intend to go on with the work this year. I gather, therefore, that La Presse newspaper in November was badly informed.

Mr. ROGERS: We are going on with this $1,600 work.

Quyon—in full and final settlement of claim of T. and J. Moran in connection with their contract for construction of wharf, $843.63.

Mr. GRAHAM: What is that?

Mr. ROGERS: This amount is required to pay the claim of T. and J. Moran in connection with their contract for the construction of a wharf at Quyon. The claim is made up as follows: Increased quantities of timber used in work, $478.38; extra cost to provide temporary landing for steamer G. B. Greene while the wharf was under construction, $365.25; total $843.62.

Rimouski wharf—water supply, $6,000.

Mr. MARCIL: Will the minister explain that item?

Mr. ROGERS: This amount is required to provide for the extension of the waterworks at Rimouski to the outer end of the wharf, for the purpose of supplying fresh water to the Government and other vessels. The town of Rimouski undertakes to instal this system in a first-class manner for this amount.

Mr. MARCIL: Has the resident engineer of Bonaventure county reported in favour of repairs being made to certain of the wharfs down there—I refer particularly to Bonaventure, Gascon, St. Godfroy, Caplan and Paspebiac? Is provision made for the completion of the beach protection work at Carleton and Maria? Is work to be carried on the wharf of Robin, Jones & Whitman at Paspebiac? Bonaventure county does does not appear in the Main or the Supplementary Estimates. I wanted to know whether the engineer had omitted to make any report, or whether the department had decided not to make any expenditures. I ask this, because a lot of these repairs are necessary.

Mr. ROGERS: In general terms, all repairs asked for by the engineers appear in

the Estimates; but the deputy will look the matter up, and if we have any recommendations from the engineer in the department, we shall be glad to send a copy to my hon. friend. The Paspebiac wharf has not yet been transferred to the department.

Mr. MARCIL: The minister's explanation last year was that it was intended to spend three or four thousand dollars on this wharf, the wharf to remain the property of the private owners, but to be available for the use of the public. Is no work to be done until the wharf is transferred to the Department?

Mr. ROGERS: That is my understanding.

Mr. MARCIL: The highways at Carleton and Maria have been washed away by the heavy tides and storms. Is that beach protection work to be continued this year?

Mr. ROGERS: There is a difference of opinion as to whether the work that has been carried on in the past at Carleton and Maria should be done by this department or by the municipal authorities. Of course, at present, when we can get any excuse to delay expenditure we are doing so, and that may be the explanation in this case.

3 p.m.

Harbours and rivers, Ontario—Bruce Mines—repairs to and reconstruction of wharf, $12,750.

Mr. ROGERS: This amount was asked for by the district engineer to repair and reconstruct this wharf. On October 4, 1915, he reported that this expenditure was necessary, the work to consist of cutting the piles off at water level and building a complete new superstructure.

Cobourg—repairs to east pier, $15,000.

Mr. ROGERS: This is asked for by the district engineer to make general repairs and improvements to the east pier, 200 feet in concrete. The work done during the present fiscal year consisted in the completion and the reconstruction of the centre pier, under contract with Randolph Macdonald. This pier has a length of 631 feet. The reconstruction of 320 feet of the east pier is concrete work.

Mr. GRAHAM: The car ferry goes across the lake there, does it not?

Mr. ROGERS: Yes.

Mr. NESBITT: Was there something wrong with the construction that you need repairs?

Mr. ROGERS: It is an old wharf, which is being repaired.

Mr. NESBITT: You are building it with cement now?

Mr. ROGERS: Yes.

Grand Bend—repairs to pier, $15,000.

Mr. GRAHAM: Is there any work being done at Kingston drydock in the way of repairing ships?

Mr. ROGERS: There is something being done. The Kingston Shipbuilding Company do a good deal of work there.

Mr. GRAHAM: What size of boat can they handle in that drydock?

Mr. ROGERS: I have not the size.

Mr. REID: It is larger than any of the Welland canal vessels. I know that a vessel of the full Welland canal size was in there, and there seemed to be quite a space at each end.

Mr. GRAHAM: They can handle any ship that goes through our canal.

Mr. ROGERS: Yes.

Parry Sound—in full and final settlement of Robinson, Walton and White's claim in connection with their wharf contract, $1,500.

Mr. GRAHAM: What was the trouble there?

Mr. ROGERS: This claim was as follows: For dredging 2,500 cubic yards for crib berth, at 30 cents per cubic yard, $750; for dredging 1,000 cubic yards rock filling, at 75 cents per cubic yard, $750; total, $1,500. Owing to the fact that an error of 26 feet was made in laying out the work, the contractors were obliged to remove by dredging a portion of the filling placed by them in the approach. In a letter of May 5, 1915, Chief Engineer Lafleur stated that in view of the error he was of the opinion that the contractors should not be penalized, and that their claim amounting to $1,500 should be allowed.

Port Burwell—repairs to piers, $32,000.

Mr. NESBITT: I thought you had got through with that work?

Mr. ROGERS: This is for repairs.

Mr. NESBITT: What was the matter—was the wharf washed away?

Mr. ROGERS: This amount of $32,000 is asked for by District Engineer Merrick to make the following repairs to the piers at Port Burwell: Reconstruction of portion

of east pier in mass concrete for height of 7 feet, width 24 feet, and length 560 feet; 3,482 cubic yards concrete at $7, $24,374. Completion of renewing defective faced timbers on east side of same, cross ties and decking, 300 feet, at $4, $1,200; completion of pile work on west side of turning basin, consisting of 10 x 10 x 35 feet, sheet piling, with double waling at top and outside waling at L.W.L. anchored to old mill, 315 lineal feet, at $20 per foot, $6,300; total, $31,874.

Port Stanley—reconstruction of pier, $100,000.

Mr. GRAHAM: This is a work which has given the Government a good deal of trouble, if I mistake not. In connection with the original construction of the work, was there not a large claim for extras which stood over for some years? Possibly it has not been settled yet. If I remember correctly, the work had been begun and partially completed, when it was washed away in a storm, or badly damaged, and had to be reconstructed. The contractor made a claim for damages some years ago.

Mr. ROGERS: I think you have Goodrich in mind.

Mr. GRAHAM: I remember the Goodrich case, but this is another one. I think it was Port Stanley.

Mr. ROGERS: This has nothing to do with that. We had an old wharf at Port Stanley, and it was proposed some years ago to widen the channel, and the outside breakwater was built up. The old breakwater is giving way, and it is necessary to build a new breakwater this year in order to save the work that has been done within the last few years. It is absolutely necessary to protect the work already done, as well as to protect and develop the harbour in such a manner as will enable ships to get in. The old breakwater and the old wharf have given way entirely on the one side, and this is to remedy this condition, and to save the new work.

Mr. GRAHAM: What railways run to Port Stanley?

Mr. ROGERS: There is the London municipal road and the Michigan Central. There is a great deal of traffic and Port Stanley is, I should think, the largest harbour in the western portion of Ontario.

Public Works—harbours and rivers—British Columbia—Fraser river improvements—further amount required, $200,000.

[Mr. Rogers.]

Mr. ROGERS: This is for the big improvements started some years ago.

Mr. GRAHAM: What strikes one as a little peculiar about such items as this is that the engineers, in making their estimates for next year, seem to have made an error of at least $200,000.

Mr. ROGERS: No, no.

Mr. GRAHAM: When the Main Estimates are being prepared the engineers are supposed to put in all the amounts required for next year. Evidently in connection with this one item a sum of $200,000 was omitted. Without wishing to censure anybody, it seems to me that it is too much the habit in the departments to make up their Main Estimates hurriedly and to take a chance, thinking there is plenty of time, in the Supplementaries, the result being that the members do not get a real grasp of what the expenditures are going to be. I have always maintained that, both in the Government and out of it. It came to pretty nearly that condition in the Railway Department. If urged, the engineers can give you pretty approximately what they require for the year in time to put the amount in the Main Estimates. That saves a lot of trouble. The Public Works Department appears to be slipping away from that, I think. There are some pretty big items in the Supplementaries this year. If the engineers could be made to understand that for a year or two they were not going to have any Supplmentary Estimates, they would get their Estimates ready for the Main Estimates.

Mr. ROGERS: That has been for many years the practice in the Public Works Department. It has been somewhat different from the practice of the Department of Railways. With reference to this particular work, this is the third unit of a very large work that was undertaken some years ago and is being completed. It is the building of a jetty on the Fraser river.

Mr. NESBITT: Is that not all the more reason why they should have had it in the Main Estimates? They must have known what was required six months ago.

Mr. ROGERS: That has not been the usual practice of the Public Works Department for many years past.

Mr. GRAHAM: Would it not be a good idea to have it that way?

Mr. ROGERS: I thought it would be when I came in, but I found it was not practicable.

Mr. GRAHAM: I could understand that it might be necessary in connection with some new work, but this work on the Fraser river has been going on for some years. The engineers knew six months ago what they intended to expend; but, knowing that the vote would be put in the Supplementaries, they did not give it to you for the Main Estimates. The difficulty is this: The members are asked to put through the Main Estimates before they see the Supplementaries. They vote amounts for certain works in the Main Estimates, but when the Supplementaries come up they find that they are really the Main Estimates so far as these works are concerned. I have no objection to the money being voted for the work; I think it is all right; but I think it would be better if we could arrive at a system by which the Main Estimates would be the Main Estimates and the Supplementary Estimates would be the Supplementaries.

Mr. ROGERS: This particular Estimate, together with the recommendation of the engineers, was in the department in time for the Main Estimates; but I had the idea that probably we could get on without spending the money this year. The engineers, however, convinced me that it was absolutely necessary to carry out that contract to save the work already done. A hundred thousand dollars has already been spent there, and this amount is necessary to enable the work to be carried to completion.

Mr. GRAHAM: That same condition arises every year, I am afraid.

Dredging — Ontario and Quebec — further amount required, $50,000.

Mr. MARCIL: I would like to present to the minister a long-standing grievance. We have no details in reference to the amounts estimated to be expended in Ontario or Quebec. I understand it is left entirely to the discretion of the minister to allot the vote as he decides. We do not know where this work is to be done. Where is it proposed to expend this amount this year?

Mr. ROGERS: If the hon. gentleman will follow the Estimates closely, he will see that we have reduced the amount for dredging in the various provinces.

Sir WILFRID LAURIER: Reduced it, actually?

Mr. ROGERS: Very largely, yes. We reduced it so much that we find that we have to ask for an additional $50,000 here. For example, for our own dredging plant, which we already have at work both in Quebec and Ontario, there is an estimated expenditure of $417,000, and the total amount that we asked for all the dredging work for the year was $550,000, including this $50,000; so that we have very little margin with which to do any dredging outside of the dredging to be carried out by the plant under the control of the department. The work of these dredges is divided as equally as possible between Ontario and Quebec.

Mr. MARCIL: I do not refer particularly to where the work is done, but I would like to know what is to be done. What work does the department intend to carry on during the present season in Ontario and Quebec?

Mr. ROGERS: It is being carried on at various points where there is necessity for it. There is a necessity for dredging this year at Three Rivers. It has been pressed for there and at similar points where navigation is affected by the filling in of silt. Dredging is necessary to provide for the accommodation of boats up and down the rivers at various points. There is no settled place.

Mr. MARCIL: The great objection is that there is nothing settled. I have referred to this especially, because some years ago some dredging was done in the channel of the Bonaventure river; the navigators appreciated very much the work that was commenced; but the unfortunate thing is that the work has remained unfinished. People ask me whether any dredging work is to be done there, and I am not in a position to say yes or no. If the minister would give the House the dredging programme for the season and a list of the places in which work is to be done, it would be a great advantage.

Mr. ROGERS: I shall be very glad to supply any details the committee may require. If my hon. friend requires any details with respect to the locality to which he has referred, we shall be very pleased to give them to him.

Mr. MARCIL: Will the minister tell me whether there will be any dredging in the Bonaventure river this year?

Mr. ROGERS: We have not laid out to do any work there. The work there will probably be more than our dredge could carry on. If we had a larger vote in the Estimates it might be possible to do some work there by contract, but, having so little, I doubt if it will be possible to do any work this year unless there is a very pressing necessity for it. If navigation were obstructed we would have to try to relieve the condition.

Mr. ROBB: Can the minister tell us if he is going to do any dredging in Valleyfield bay? His engineers have been staking out there all winter. There is considerable coal and lumber around there, and owing to the change in the water level the boats cannot get in. It was to be understood that the work was to be done this summer.

Mr. ROGERS: I cannot give my hon. friend a definite answer, as I have not the information before me. I know there has been some construction of a wharf at Valleyfield, but I do not know in what shape it stands to-day. Engineers of different power companies interested have their men down there surveying, and the men my hon. friend speaks of may not be engineers of the Public Works Department. I have no knowledge whether our engineers are down there just now.

Mr. TOBIN: Could the minister say on this item whether the public building at D'Israeli, for which there is a revote of $10,000 in the Main Estimates, will be gone on with this year, and whether the site has been purchased?

Mr. ROGERS: There will be no expenditure on that item this year.

International bridge between St. Leonard, N.B., and Van Buren, Maine—repairs, $2,000.

Mr. MARCIL: Has the minister taken any further steps with regard to the construction of an interprovincial bridge between Campbellton and the Quebec side, over the Restigouche river? The county councils of Bonaventure and Restigouche and adjoining municipalities, and several boards of trade have been after the department asking for this bridge. It was originally proposed to ask for a joint highway and railway bridge, but when this Administration came into office, the people of Campbellton, thinking the railway feature of the bridge was rather ahead of the time, consented to ask for a highway bridge only, on the understanding that the provinces of Quebec and New Brunswick would give a grant towards the undertaking, and that the whole work would be done by the Department of Public Works. I am sorry to say nothing has been done yet, except making surveys, soundings, and so on. Campbellton is rapidly becoming the most important town in northern New Brunswick. As the minister knows, it is the centre of the Intercolonial railway in that district, and has large lumbering operations. Its population is increasing year by year, and the town is perhaps the most enterprising one in the whole of northern New Brunswick. Communication with the Quebec side is very difficult, being by flat-bottomed scows which can travel only at certain hours, owing to the low tide on the Restigouche river. There is great necessity for this bridge. When the Government took over the International bridge, which runs into Campbellton, we had hopes that it would also take over the Gaspé and Baie des Chaleurs railway, and that the two would be linked up by a joint railway and highway bridge. Has any action in this respect been taken by the department, or is any such action in contemplation?

Mr. ROGERS: A couple of years ago or more the importance of this work was recognized. Undoubtedly it is a very necessary work, and one in which the provinces of New Brunswick and Quebec are very deeply interested. Following the recommendations, an expensive survey was made in connection with the proposed undertaking, but the estimated cost of the bridge was so heavy that we did not feel warranted in constructing it two years ago, and that is still our attitude to-day. The work, however, is very necessary, and should be carried out when conditions change; but at the present time I do not think there is any hope either of the Public Works Department or of the two provinces concerned going on with it.

Mr. MARCIL: Was the last survey for a highway bridge or joint highway and railway bridge?

Mr. ROGERS: A highway bridge.

Mr. MARCIL: What was the estimated cost?

Mr. ROGERS: I shall be glad to send a copy of the report to my hon. friend if he is interested.

Mr. MARCIL: I am greatly interested; it is a live question with us.

Mr. LEMIEUX: The minister will perhaps forgive me if I again draw his atten-

tion to what I would call the question of interprovincial bridges between Vaudreuil, Ile Perrot and Ste. Anne's. Yesterday, as I was coming up to Ottawa, I heard a remark which I hear practically every time I pass over those bridges: "What a pity," people say, " that we have no road for vehicles and pedestrians over these bridges." This difficulty may be hard to setttle, because it is in a way a provincial question, but it seems to me that the Government have now in their hands an opportunity for getting the work done. The Grand Trunk, one of the railways using the two bridges, is again asking Parliament for a loan; Parliament is not committed to it yet, but I believe that when we have the necessary information Parliament will be willing to aid the Grand Trunk—and why should the Government not arrange, when granting this loan, for the use of the piers for spans, so that vehicles and pedestrians could pass the bridge. I believe the piers could support additional spans, but at all events the engineers could easily ascertain that. I think the minister hardly realizes as much as I do, constantly travelling between Montreal and Ottawa, how inconvenient the absence of a bridge at that point is to the people, especially nowadays, when the automobile has come into its own. It takes a longer time to cross by the ferry boat than to run from Montreal, say to Coteau. It would be easy for the Government to settle the difficulty by arranging, as one of the conditions of the loan, that the Grand Trunk should allow the use of their piers, subject, of course, to the approval of the engineers. I do not think this would lessen in any way the stability of the bridge. My hon. friend is a diplomat, and it would be a great feather in his cap if he could bring this about for the people of the two provinces, for although the river Ottawa at that point is exclusively within the province of Quebec, at the same time it is the highway between the two provinces. I strongly urge my hon. friend to look into this matter and to get in touch with the Grand Trunk as soon as possible.

Mr. MARCIL: An additional reason for making a highway bridge there is that you are going to cross the canal at Ste. Anne de Bellevue, and that will mean that the Department of Railways and Canals will also be interested. I recall that the Department of Public Works some years ago utilized an old bridge on the Intercolonial to provide a bridge at Matapedia across the Restigouche river. The piers were there, and the old bridge was taken out and put alongside the railway bridge, thus making a highway bridge which has been a great benefit to the locality, enabling the people to reach a district that, up to that time, had been almost inaccessible. The minister must not forget that there are about seven hundred thousand people on the island of Montreal, and the number is rapidly increasing, so that it will be a million people before long, and these people cannot get off the island in this direction except by crossing this river. In addition to the point the hon. member for Rouville (Mr. Lemieux) has mentioned with regard to the Grand Trunk, a similar arrangement might be made with the Canadian Northern with regard to their bridge at Isle Bizard. I have no doubt that the hon. member for Two Mountains (Mr. Ethier) would take the same position.

Mr. W. F. MACLEAN: The same question has come up in connection with the Railway Bill that was brought down two years ago, and that ought to be made law now. The principle is broader than any raised by the two hon. members who have spoken. The Railway Commission should be given power to order any railway to allow a municipality or province to be joint builders with them of any new bridge; and I think it ought to go even further and provide that the public, whether acting through a province or a municipality, should be able to go to the Railway Commission and have an order made that an existing bridge owned by a railway company, if it will bear the added strain, should be usable for highway purposes. In my own constituency is a wide ravine which is crossed by the Canadian Pacific. The railway company propose to rebuild that bridge, and have expressed their willingness to co-operate with the city of Toronto in the construction of a joint highway and railway bridge. That is being worked out, but as a matter of grace or concession by the railway. It seems to me high time that we should have in the general law governing railways a provision giving a municipality or a province the right to associate itself with a railway in using any bridge for highways as well as for railway purposes.

Mr. DESCARRIES: (Translation.) Mr Chairman as the Grand Trunk Railway and Canadian Pacific Railway bridges between St. Anne and Vaudreuil, just mentioned, connect with the county of Jacques Cartier,

which I have the honour to represent in this House, I feel it is my duty to say a few words in favour of the building of a structure or bridge over which vehicles and pedestrians could cross from St. Anne to Perrott island and Vaudreuil.

As was said a while ago by the hon. member for Rouville (Mr. Lemieux) it seems to me that communication could easily be established at this spot. Between the Grand Trunk Railway and the Canadian Pacific Railway bridges, there is enough space to allow of a bridge to be built for the use of vehicles and pedestrians. The piers of the two bridges are placed opposite one another so that it would be a simple matter to put steel beams across on which to build the platform.

As the hon. gentlemen can see at page 11 of the Orders of the Day, I have moved a resolution which reads as follows:

That, in the opinion of this House, a committee consisting of five members should be appointed by this Government to ascertain if it is possible, and under what conditions, carriageways and foot-paths communicating between the mainland and the Island of Montreal, on the south, the west and the north sides of the latter, might be established, by using for that purpose the bridges of the Canadian Pacific Railway between Lachine and the Caughnawaga Reserve; those of the Canadian Pacific and Grand Trunk railways between Ste. Anne de Bellevue and Vaudreuil; and that of the Canadian Northern Railway to the north of Isle Bizard; such committee to have power to sit during and after the present session and to report during the next session, the services of such members to be gratuitous.

According to the rules of the House, I am precluded from introducing this resolution to-day, but I hope before the close of the session to have the opportunity of putting it through.

My hon. friend from Rouville asked the minister a while ago to find the means for having this work carried out at as early a date as possible. If a committee were appointed, such as I have suggested, its members could interview those two railway companies, get all the information required, find out on what terms those bridges could be erected and whether their engineers find that the bridges could be built where I have indicated in my motion. It seems to me we must get that information as to means and terms before coming before this House or before the Quebec Legislature with a request for help. I therefore heartily endorse the suggestion made to the minister that he do his best as far as he is concerned to carry out this important work, which has been asked for many years past and is absolutely necessary to the prosperity of the great city of Montreal, the heart of the province of Quebec.

Hon. Mr. LEMIEUX: Aye, and of Canada.

Mr. DESCARRIES: And, as the hon. member for Rouville is stating, of all Canada. I then join with those of my hon. colleagues who are interested in that work in an endeavour to have it carried out. Thousands of dollars are being voted here and there, in many places in the different provinces, for public works of no well defined public utility. I believe no amount would be better spent than that which would go to building this bridge. I, for one, realize that there is absolute need of such a structure between St. Anne and Vaudreuil to open up communication between Quebec and Ontario. There is none other than at this point, and to-day any one going across from Montreal to Upper Canada must cross there, that is at St. Anne in an old ferry pulled by oars, to Perrot island and then take another ferry to cross from the island to Vaudreuil. I say without hesitation that such a method of travelling or transportation at this stage of our development is unworthy of Canada's progress. Any one going to the United States from Lachine or Montreal has to cross the river by way of the Victoria bridge and cover a long distance to no purpose whatever; while if the crossing could be effected from Lachine to Caughnawaga we should have the shortest possible route to the American side.

Last Sunday, intending to go to Chateauguay—I must explain that between Lachine and the south shore the river is a little over a mile across—I was forced to go to Montreal, take the Victoria bridge, circle the lake in front of Laprairie, and come back opposite Lachine. By that circuitous way I had to drive thirty miles uselessly. I may be allowed to say that when I reached the Canadian Pacific railway bridge, on the road to the reserve at Caughnawaga, my car ran into a gully, and I had to get a team of horses to pull me out. Other cars met with the same fate and have had to be pulled out by horses.

If we built a bridge between Lachine and Caughnawaga, which could be easily done, a long distance would be saved, and, moreover, there would be opened one of the most beautiful and most frequented roads, because it is current, as we know, that Montreal will build its driveways along the aque-

duct. Starting from Montreal and taking by the driveways, one would get directly to Lachine, right opposite Caughnawaga. On that side of the river, at Caughnawaga, there is the right-of-way, or roadbed, of an old railroad, which is not now in operation. That road leads from Caughnawaga to Hemmingsford, and, if I mistake not, opens a straight connection between Caughnawaga and the United States.

Hon. Mr. MARCIL: Before the hon. member proceeds any further, I would ask him if he wants a separate bridge, or what kind of a structure he proposes?

Mr. DESCARRIES: I think the same thing could be done there as with the Victoria bridge, that is, a widening of the present structure. I fail to see why the same plan could not be followed in connection with the Canadian Pacific railway bridge at that point. That bridge is quite heavy, it has even been doubled; a second bridge has been built alongside the other, so that there is a large quantity of iron in it, and the proposed road could be built without in the least straining the bridge.

My hon. friend from Bonaventure spoke about another structure, which is also mentioned in my resolution, connecting Bizard island and St. Dorothée, at the north end of the island of Montreal. At that point the river narrows considerably; there are, I believe, only two piers in deep water under the Great Northern railway bridge, so that without great expense a road could be built for the use of vehicles and pedestrians. These bridges would give easy access to Montreal from all parts of the country.

Hon. Mr. MARCIL: I may point out to my hon. friend that the late Government had required the Great Northern Railway Company to build a highway bridge on the road at the other end of the island, at Charlemagne. His proposition is on the same principle?

Mr. DESCARRIES: I was just going to mention that circumstance. I was saying that Montreal would have roads leading to it from all sides, and, as my hon. friend has just stated, there is the Laurier bridge at Charlemagne, giving access to the island at that end.

Hon. Mr. LEMIEUX: And it is free.

Mr. DESCARRIES: Yes, the Laurier bridge is free. On the east we have the Victoria bridge, where we have to pay toll; on the south, we should then have the bridge at Lachine; on the west, the bridge at St. Anne, and on the northwest, the bridge to Bizard island.

I urge on the hon. minister and on all the members of this House who are interested in this question, to join together in common endeavour to realize those great public works which are necessary to the country's development, because obviously they would contribute to a large extent not only to the advancement of the counties which those bridges would tap, but also to the progress of Montreal, of the province of Quebec, and of the country as a whole.

Mr. MORRIS: I am very much pleased that the hon. member for Jacques Cartier has brought this matter to the attention of the committee, and it gives me pleasure to back up a few of the statements that he has made. While this matter may not be looked on very seriously by many members of this House, I can assure gentlemen that it is of the most vital importance not only to the people of my county, but to the whole district, as well as to the city of Montreal. We all admit to-day that Montreal is the metropolis of Canada, and when we stop to consider that there is but one means of access to the city of Montreal by teams it certainly makes us feel that we are a little behind the times. Then there is another phase of the matter, apart from the international view that my hon. friend has taken, that is worthy of the consideration of this Parliament. I speak of the local phase of the question. My county, the county of Chateauguay, is very much interested in this measure. We have to-day throughout the greater part of Chateauguay and Huntingdon macadamized roads. In my election in 1913 the question was put to me: "Will you assist us in getting direct communication with Montreal?" I said: "Friends, I will do my duty in that respect." I have attempted to do so, I have succeeded in obtaining certain works that were necessary along that line. But this question that my hon. friend has brought is one of great importance, and I am pleased to-day to endorse what he has said, and to attempt in a feeble way to lay before this House the requirements of the southern portion of the province of Quebec. Situated as we are, as my hon. friend has said, we have to go almost around the city of Montreal in order to reach that city. We have to-day macadamized roads. Some time ago the project was mooted of establishing

a line of communication by auto trucks from my county and the county of Huntingdon direct to Montreal, but we were held up for want of direct communication. We come before this Parliament to-day asking to have this matter taken into consideration, inasmuch as it will benefit not only the southern part of the province of Quebec, but the city of Montreal as well. My county is one of the best in the whole province of Quebec for market gardening, and in that respect it could supply one of the greatest needs of the city of Montreal to-day. Hon. members are aware that the bulk of the garden stuff used in Montreal is imported from the United States. Why is that? Simply because the people in the immediate vicinity of Montreal have not free access to that city. If we had proper means of access to Montreal, the bulk of the farmers of my county would be engaged in market gardening. They have the soil for it; they have people who understand the work, but they require direct communication. I confine my remarks to this bridge between Lachine and Caughnawaga, inasmuch as it interests me and the people I represent, as well as the people to the south of us. If we had that direct communication we would, before two months, establish a line of trucks that would carry the produce of our counties direct to the city of Montreal, the farmers in Huntingdon and Chateauguay could load their produce on trucks in the early morning and place it on the Montreal market in the forenoon. This is a matter worthy of the consideration of this House, and I hope that the minister and the Government will take into consideration the appointing of such a commission as my hon. friend has asked for. Let us endeavour to do something for the southern part of the province of Quebec. As you all know, probably no other part of the province or the whole Dominion has received so little attention as the county I represent. The county of Chateauguay, as I said on a former occasion, has never come begging to this Parliament. The people of that country are independent people, and probably the necessity for Dominion Government aid has not existed in the past. But to-day the question presents itself in a light that I hope hon. members will realize. I hope they will give due consideration to this question and that before the session ends steps will be taken to give to the people of southern Quebec the accommodation which they so need. This will be in the interest not only of the counties I have mentioned but of the city of Montreal. I sincerely trust that the Government will give serious consideration to the suggestion of my hon. friend.

4 p.m.

Mr. ROGERS: I do not know that I can add very much to what I said the other evening in respect to this important matter. I quite appreciate how thoroughly the hon. members of this House, especially those from the province of Quebec and the province of Ontario, realize the importance and the necessity for a bridge at Ile Perrot. I know how insistent my hon. friend from Chateauguay has been in pressing this matter, and I am sure that his remarks to-day will tend to impress on every member of the House the pressing need of this important public work. In view of the greatly increased mileage that it is necessary to travel in order to get on the island of Montreal, it is likely that the cost of a bridge at Ile Perrot would be easily saved in the reduced consumption of gasoline in the many motors that now have to travel around in order to reach the centre of the city. The hon. member has said that he has a resolution on the Order Paper in connection with the suggestion of appointing a commission to deal with this important subject, and also with the question of the construction of a bridge between the Grand Trunk and the Canadian Pacific Railway bridges. I have not in mind at the moment the exact distance between those two bridges, but I fancy it is not very great, although it is probably sufficient to permit the construction of a highway bridge between the two railway bridges. I do not know whether that plan would be feasible or not. I have no hesitation in saying that if there is a work in the nature of the construction of bridges in any part of Canada that it is desirable to carry out, this particular work takes first place. It is true, as the hon. member for Bonaventure has stated, that we also have to cross the canal. Of course, we can always impose on the Department of Railways and Canals the responsibility of building a bridge across a canal, whenever and wherever it is necessary to do so in the public interest. But we have the other and perhaps the larger difficulty of getting across the river before we reach the canal. This is a work which belongs to the provinces of Quebec and Ontario, if we are to regard it as an inter-

provincial undertaking. I have had the pleasure of receiving large deputations from both Quebec and Ontario, who apparently have a very deep interest in the construction of this bridge. I appreciate the importance of the work for the island of Montreal. It is remarkable that that island, with its very great population of 700,000 or 800,000 people, has been able to get along so long without this communication between it and the city of Toronto. Recognizing the force of the representations made in this connection, I take pleasure in saying that if the matter should be taken up by the two provinces of Quebec and Ontario, I shall be pleased to join with them, as representing the Department of Public Works; and if we can do nothing else under our present law, we can always find some way for making grants to the provinces to assist in such an undertaking. I shall endeavour to have the matter taken up before the next session and to have it so adjusted between the two provinces and the Department of Public Works, that I shall be able to come to Parliament and ask Parliament to vote one-third of the assistance necessary to carry on, in conjunction with these two provinces, the construction of this necessary work at Ile Perrot.

Mr. MICHAUD: I am glad to hear the Minister of Public Works express his views upon the importance of interprovincial bridges. I am sure he will not forget the interprovincial bridge which is proposed between Campbellton and a point in the county of Bonaventure. No doubt my hon. friend is aware of the importance of the town of Campbellton. It is the feeder of the northern part of New Brunswick and the eastern part of the Gaspè peninsula, and the people of that town labour under great difficulties through not having communication with the surrounding country. I know that the hon. minister will take into consideration the application which will soon be made in connection with the building of this important interprovincial bridge.

While we are on this important subject, I wish to urge upon the minister the importance of international bridges. An application was made to the Department of Public Works two months ago for a grant to enable an international bridge to be built between the town of Edmunston and the state of Maine. We all recognize the importance of interprovincial bridges, and in my opinion international bridges are also important. About three years ago there was a serious accident in connection with the ferry from Edmundston and almost every year a few lives are lost in the operation of the ferry boats. The state of Maine has voted $10,000 to show their good faith in connection with the proposal to construct an international bridge. The Minister of Public Works is probably aware of the facts which I am stating, but I would emphasize the importance of building this bridge. The construction of an international bridge between Edmundston and the state of Maine would contribute greatly to the advantage of the Canadian people. Edmundston has a population of over 2,000, and they look to the Government for assistance in this matter.

Mr. ROGERS: Perhaps my hon. friend was not in the House when a few moments ago I dealt with the question of the Campbellton bridge and stated that we had made a survey, but that nothing further had been done owing to the very heavy cost involved. With regard to international bridges, we have an item of $29,000 in the Estimates to provide our share of the cost of the international bridge over the St. John river between Clair in New Brunswick and Port Kent in the state of Maine. We have had several deputations upon the subject, and we are ready to fulfil our part as soon as the state of Maine is ready to carry out theirs.

Mr. MICHAUD: There is nothing in the Estimates to provide for the bridge between Edmundston and the state of Maine.

Mr. ROGERS: No, not for that.

Mr. MICHAUD: The state of Maine has already voted $10,000 for that purpose, and there is a risk of losing that subsidy if we are not prepared to meet them half way. I called upon the minister two months ago with reference to this proposed bridge and I was informed that he would be ready to meet the Americans half way. I am sorry that he has not seen his way to make some provision because there is great risk of losing what the state of Maine has voted.

Moosejaw-Wood Mountain telegraph line—renewal of poles, $5,000.

Mr. LEMIEUX: While we are on the subject of telegraph and telephone lines, has the minister inquired about the poles in the county of Charlevoix to which I referred the other day?

Mr. ROGERS: The deputy informs me that the telegraph branch of the department is making inquiry, and he expects a report

in a day or two. When I receive that report I will send my hon. friend a copy.

Mr. McKENZIE: A few evenings ago I brought up the question of the operation of the telegraph lines in the county of Victoria, and, on reading the minister's statement in Hansard, I found that he had stated that he deprecated what I had said. If I understand the meaning of the word "deprecated," it is that he did not believe what I said. I stated on that occasion that the telegraph line was improperly used during a provincial election, that it was taken charge of by the managers of the campaign, and that it was used for a whole month for election purposes without a charge of one cent being made for the use of the lines, 120 miles or 140 miles in extent, and of all the offices and branches. I stated that as a matter of fact, and I ask the minister to believe me unless he can find any evidence to the contrary. I stated on my reputation for veracity in this House that that was true. I further state that the manager of the line, and of the largest office, has since admitted upon his oath in a court of law every word I have said. That is a matter of record in the courts of the province of Nova Scotia, and if the minister deprecates what I say I want him to look up the records of the court of Mr. Justice Russell, who tried the election case and read the sworn evidence of Mr. David Dunlop, who was the superintendent of the line, and the operator, who admitted on his oath that he had taken charge of the line, that he had not collected fees, that he had not made any return to the department, and that he had never been asked to make a return. These are absolutely clear-cut facts sworn to, and upon that I say I state my reputation as a member of this House. I do not want any minister to stand up in this House and say that he deprecates the statements made by a member unless he has evidence to the contrary.

Mr. ROGERS: Before my hon. friend goes any further I would like to say that I have read the report of my remarks in Hansard, but I can assure him that what I said had not the meaning which he takes out of it. I do not know whether the word was used or not, or whether it was used in the sense in which he describes it; but whether it was used or not, I want to assure my hon. friend that I accepted his word without any question at all in my mind that he was stating exactly the facts as he found them. I wish to say to my hon. friend here that I regret very much to learn that such a state of affairs should have existed, and to assure him that I am looking into it, and I will see that it shall not occur again. It is an unfortunate position of affairs that our telegraph lines in various parts of Canada are not as secret to the users as they should be. To my knowledge that applies to the large lines in Canada as well as to the local Government lines. Every effort should be made by every member of this House, and certainly every effort will be made by myself, to correct such a condition as my hon. friend complains of, and, the facts being what they are, justly complains of. I will be glad to take every means to correct the condition and rectify it so that my hon. friend will have no cause for complaint in the future.

Mr. McKENZIE: I thought from the hon. gentleman's tone of voice that he had no belief in what I said. The acoustics of this place are wretched, and you cannot always be sure what is said across the floor, and I thought that the minister did not believe what I was saying, because the word "deprecate," as I understand it, means that you do not believe a statement that is made. If the hon. gentleman says that he deprecated the action of those who would use the telegraph lines as I have stated, that is a different proposition altogether.

Mr. ROGERS: That is right.

Vancouver Island telegraph and telephone lines—extensions, $9,000.

Mr. OLIVER: I wish to ask a question or two with regard to the preceding items if I may. I notice that there is a vote of $500 for repairs and improvements to the office building at House River in connection with the Fort McMurray telegraph line. What accommodation is there at McMurray, House River, Pelican portage, and Calling River for the telegraph offices? Are they in rented buildings, or does the Government own the buildings?

Mr. ROGERS: I am afraid I have not that information. I will give my hon. friend the information that I have with regard to this particular item. This is an item of $500 for repairs and improvements to the office building at House River. District Superintendent McDonald, under date of the 21st October, 1915, writes as follows:

It has been found expedient, instead of erecting a building, to purchase from Fred Taylor,

House River, the building in which our office has been located. This action meets with approval of all the people. The building is log, 16 x 28 feet one and a half stories high and the addition thereto is 10 x 16 covered with rubberoid roofing. The price paid for the building is $500 and the expenditure of another $500 will be necessary to put it in good repair.

Mr. OLIVER: This is not a matter of importance, but I would like to be certain if the offices at Calling River and Pelican Portage are merely offices in buildings belonging to private citizens or are offices supplied by the Government as at House River. Apparently the Government is going to own the office building at House River, and I wished to know what the situation was in regard to the other two places and also at McMurray.

Mr. ROGERS: The deputy will take a note of that and give my hon. friend the information. I could not give it to him correctly.

Mr. OLIVER: At McMurray, as well as the other two places. For the office at lake Saskatoon I see there is a revote of $400. Does the Government own that office?

Mr. ROGERS: Yes.

Mr. OLIVER: That is just for repairs and improvements?

Mr. ROGERS: To complete the office building at lake Saskatoon.

Mr. OLIVER: What are the rough details of the vote of $11,000 for renewals, repairs and improvements to the Peace River line, and is it intended to make the expenditure this year?

Mr. ROGERS: Yes. The $11,000 is required for renewing poles from Edmonton to Athabaska, 98 miles, at $100 per mile; for a well and repairs to the building at Grouard and for a well and repairs to the building at Peace River Crossing, $500 each.

Mr. OLIVER: Does the Government own the building at Peace River Crossing?

Mr. ROGERS: Yes.

Mr. OLIVER: Might I revert to the desirability of the extension of the line now running from Athabaska Landing via Plamondonville to Lac la Biche and also to Lac la Biche station, which I mentioned a few days ago? Has there been any further consideration given to the suggestion?

Mr. ROGERS: When the matter was brought up on the last occasion in the House it was referred to the telegraph department, and they are getting a report. We expect to have it in a day or two.

Mr. OLIVER: I hope the department will consider the matter favourably with a view to establishing a connection this summer, because it would be a very great convenience to the public and it would really be to the benefit of the revenues of the line. The Lac la Biche station is, and will be, a town and has railway communication. There is an important hotel there; it will be connected with the boating and fishing on the lake and in every way it will be very desirable to have telegraphic communication. The railway company do not intend to put in a telegraph service as they propose operating with the telephone. If the department can look upon this matter favourably, and can carry out this extension with a reasonable amount of celerity, it will be a great convenience to the public there.

Mr. ROGERS: We sent the department a copy of the remarks made the other evening by the hon. gentleman, and asked for a report. As soon as it comes I will let my hon. friend have a copy.

Mr. OLIVER: I am under the impression that I mentioned it last year and received a somewhat similar and equally favourable reply from the minister but so far there has not been any result.

Mr. ROGERS: We will see if we cannot arrange it this year.

Lévis graving dock—further amount required, $3,000.

Mr. LEMIEUX: Is this for the old dock?

Mr. ROGERS: Yes. This amount is required for purchasing the blocks that go under the ships.

Mr. LEMIEUX: How are you getting along with the new dock?

Mr. ROGERS: Pretty well. It is hoped the work will be completed this fall, but we are not quite sure.

Prince Edward Island—Bay Fortune—breakwater extension, $5,000.

Mr. PUGSLEY: My hon. friend from Kings, who was obliged to leave, asked me to get some information from the minister. First of all, is this amount of $5,000 for the breakwater extension at Bay Fortune to be expended during the coming year? The vote would indicate that it is not for repairs, but for new work. If it is for an extension, I am informed that $5,000 would not go very far. Is the amount required for repairs or for extending the length of the wharf?

Mr. ROGERS: This amount is required for the construction of an extension to the breakwater at Bay Fortune. The work is required for the improvement, by securing, of a shoal sandbar at the entrance of the harbour, so as to facilitate the import of coal, lime, lumber, etc., and export of surplus farm produce from a large and rich agricultural district. During 1914-15 about $2,000 was expended in repairing and raising, for an average of 3 feet, the outer 300 feet of the old work; also placing in fenders, ties, ballast, etc., and covering the outer block. Foreman, W. Aitkens; rate of pay, $2.50 per day. The engineer evidently thinks we shall be able to do the work satisfactorily for $5,000.

Mr. PUGSLEY: What is to be the total length of the wharf?

Mr. ROGERS: It does not appear to be given here.

Mr. PUGSLEY: What will be the total cost?

Mr. ROGERS: It is estimated that before completion it will cost $12,000.

Mr. PUGSLEY: Another question the hon. member desires me to ask is why it is not proposed to go on with the construction of a boat harbour at North Lake, an item for which has been in the Estimates for quite a number of years, and to expend $5,000 at Bay Fortune, when the work at North Lake is more urgently required and will be much more useful than the work at Bay Fortune?

Mr. ROGERS: With regard to North Lake, we have had a great deal of difficulty in getting the people to sign for the right of way and the land required for the work. The question of damages has been in dispute for some time, and has not been settled yet.

Mr. PUGSLEY: The minister must be wrong if my information is correct, because it appears by a return, I am informed, that the matter was adjusted to the satisfaction of the Government last June when tenders were called for.

Mr. ROGERS: The deputy informs me that my statement is correct. When we called for tenders we depended upon getting a bond from some parties indemnifying us against damages and so on, but we have not received it yet.

Mr. PUGSLEY: The hon. member for Kings is greatly impressed with the importance of repairing the breakwater at Souris. He says that a year ago $144,000 was spent on an extension to the Souris breakwater. This, he says, is the most important public work in Prince Edward Island. A few weeks or a few months after the work was completed a storm of no more than ordinary violence made a breach in the seaward side and carried away a portion of the new work, and every storm since has widened the breach. The hon. member is much surprised that nothing has been provided for repairs this year, and alleges that if the work is allowed to stand without being repaired, great damage will be done to the breakwater, and a great deal of money which has been expended will be lost. Has the minister any report with regard to the damage done to the breakwater, and is it proposed to ask for any amount this year to make the necessary repairs?

Mr. ROGERS: The engineer does not see the necessity for an expenditure this year, but later on something will have to be done. His report is as follows:

A contract for the 400 feet breakwater extension was awarded Beazley Brothers, Limited, on 18th October, 1912, at price of their tender, $143,917. The work was constructed according to plan and specification forwarded by the then District Engineer, J. B. Hegan. In November, 1914, when the work was nearing completion, 8 tiers of face timbers of the outer block became displaced from some cause which District Engineer Hyndman stated was difficult to explain, but was probably due to settlement. Mr. Hyndman certified that the work had been done faithfully and according to plan and specification, and that the damage was due to unusual and unforeseen circumstances. In July, 1915, the breakwater was again damaged by a heavy storm after the original breach had been repaired and reinforced according to specification. Consulting Engineer Hegan was then instructed to make an examination of the work. He reported that he did not consider that the injury sustained by the work resulted from either the use of poor materials or indifferent workmanship, but simply from unavoidable causes, as, so far as he could ascertain, the requirements and conditions called for by the contract, specification and plan, were fully and faithfully carried out.

Public Works—chargeable to income—public buildings, Nova Scotia—Halifax custom house, $2,470.

Mr. McKENZIE: Would the Minister of Public Works please state what progress is being made with the proposed extension to the custom house at North Sydney? Last year, I think, there was a vote to build an examining house in connection with the custom house there. I did not notice whether the work went on or not. I know that they have a place rented in connection

with the building, but if the money is available a new building would be better.

Mr. ROGERS: Nothing is being done at present in this matter, and we think that for the present we can get on as we are.

Public buildings—rents, repairs, furniture, heating, etc., $130,000.

Mr. NESBITT: Why this supplementary vote? Surely the minister knows what rents he has to pay. Why not include all in the main Estimates?

Mr. ROGERS: Since the outbreak of the war the staff has been very greatly increased, and the aggregate charge for rents is higher. But I may say, for the information of my hon. friend, in the first place, that we do not rent anything that is not absolutely necessary, and, in the second place, that when we rent we have a basis upon which the rental is fixed—we allow only enough to pay six per cent net return to the owner.

Mr. NESBITT: That would depend on who made up the estimate of cost.

Mr. ROGERS: The Deputy Minister of Public Works himself makes that up—gives special attention to it. This heavy expense for rents cannot be avoided at the present time.

Public Works—chargeable to collection of revenue—telegraph and telephone lines, Saskatchewan and Alberta—further amount required, $17,500.

Mr. OLIVER: What is this for?

Mr. ROGERS: This is to supplement an appropriation granted by Parliament last session to complete payments in connection with the working expenses of the telegraph lines in the provinces of Saskatchewan and Alberta.

Mr. PUGSLEY: This is for the last fiscal year. Is the minister allowed so long a time to make up the accounts for the year? As I recollect it, the Auditor General allowed a certain time, but it is nearly two months since the close of the fiscal year.

Mr. ROGERS: There is no fixed time, but the direction is given by the Auditor General. We are allowed until the close of the session, I understand.

Mr. PUGSLEY: And the time is not so long as I had figured—it is only a little over one month.

Miscellaneous—Royal Mint—further amount required, $43,000.

Sir WILFRID LAURIER: What is the purpose of this?

Sir THOMAS WHITE: The Mint has been doing a great deal of work during the past year for the British Government in treating gold that has been received from Africa and other parts of the world—I am not permitted to go into details for reasons that will be obvious. This $43,000 is the estimated additional expense. The charges made will, in a large measure, if not fully, reimburse the amount expended.

National Battlefields Commission—to supplement amount now available for purchase of lands, the acquisition of which has been authorized by Parliament, a sum not exceeding $10,000.

Sir WILFRID LAURIER: This is the matter to which reference has been made.

Sir THOMAS WHITE: This is the matter to which my right hon. friend the leader of the Opposition drew attention the other day. It was in the original plan of the commission. The purpose of the appropriation is to acquire certain properties there—Wolfsfield and certain other historic lands.

Sir WILFRID LAURIER: Hear, hear.

Mr. McKENZIE: Has anything ever been done in connection with the lands left at the old ruins at Louisburg? An English gentleman who died there some years ago, Captain Kennedy, formerly of the British army, left some lands to be used for the purpose of commemorating the wars of Louisburg days. In his will he made certain provision that the lands were to be utilized by the Dominion Government, subject to certain conditions. I do not remember just what the conditions were, but they had regard to some action on the part of the Government of Canada to put these lands in shape and to do some work around the forts that would put them in better condition. I have not the full details of the provisions of the will, but I thought that possibly the minister might bear it in mind in connection with the operations of the National Battlefields Commission.

Sir THOMAS WHITE: The matter has not been specially drawn to my attention, but the desirability of some commission being charged with the duty of preserving historic spots is a subject which has been frequently discussed in the House. I shall bear in mind what my hon. friend has said with regard to the Louisburg situation.

Mr. McKENZIE: I need not remind the minister that the Society of Colonial Wars, which is an American society, has built a monument on those grounds. It is some part of what is being done to commemorate the old days at Louisburg.

Canadian Associated Press, $8,000.

Mr. GRAHAM: Who is the European representative of the Canadian Association?

Mr. ROGERS: There has been no change; it is the same.

Mr. GRAHAM: Are you aware that this does not include a representative in the old land?

Mr. ROGERS: John Ross Robertson's brother used to be the representative years ago, but I do not know who has taken his place since his death.

Sir THOMAS WHITE: I have taken this matter up with Mr. John Ross Robertson, as President, I think, of the Canadian Associated Press. My hon. friend will recall that, under legislation which expired some two years ago, an annual grant was made to the Association from $12,000 downward; I think the last payment was in the neighbourhood of $6,000 or $7,000. Last year, instead of re-introducing the legislation—because I desired to discuss the matter with representatives of the press—I introduced an Estimate providing to continue the amount which had been paid in the preceding year. This year the matter was again drawn to my attention, and I have inserted an Estimate of $8,000, which is now before the Committee. I think that the object is one which appeals to us, especially at this time, because it is closely connected with the question of the news service from the old country. If ever there was a time when the newspapers ought to be helped by a justifiable subsidy, it is now.

Mr. GRAHAM: We agree pretty well on the necessity of this vote. There was a time when newspapers in Canada were not satisfied with the service. A great deal of our news for some length of time used to come via New York, and we discovered that that was not the most reliable kind of information to get, particularly for Canadian consumption. I am a little out of touch with it; the member for South York would know the conditions as they exist now better than I would. I know that they were unsatisfactory for a time, but from a casual observation I should think that the service is more satisfactory now than it was some years ago.

[Sir Thomas White.]

Mr. W. F. MACLEAN: It is very much improved.

To provide for the administration of the Business Profits War Tax Act, 1916: appointments for the purpose may be made without reference to the provisions of the Civil Service Act, $150,000.

Sir. WILFRID LAURIER: This is an important matter.

Sir THOMAS WHITE: This item is to provide for the expenditure in connection with the administration of the Business Profits War Tax Act which has been passed at this session of Parliament. When the matter was under discussion in the House, I explained in a general way the plan of administration which we had in view. The Act will be administered through the Finance Department. We shall have to add to the existing staff and we shall have to supplement that staff by officials in the several provinces. All business firms and corporations in Canada which have a capital of $50,000 and upwards will be liable to assessment, provided their earnings exceed 10 per cent in the case of private firms and individuals and 7 per cent in the case of corporations. The first thing to be done is to make a list from the publications of commercial agencies showing the firms which are likely to be liable to assessment. This has been done already by my department. The next step will be to notify all these firms thought to be liable to assessment requesting them to make the return called for by the Act. In order to get the administration to that stage it will be necessary that the staff of the Finance Department be considerably enlarged and that additional officials be taken on in the several provinces. After the returns come in, they will have to be scrutinised and further investigation made in many cases in order that the final assessment by the department may be made. After the final assessment is made, notices will be sent out to the various firms and companies liable to assessment informing them of the amount of their assessment. Then there will be a right of appeal in the case of any feeling themselves aggrieved to the court of revision or board of referees referred to in the Act. It is not possible at the present time to make an accurate estimate as to how much the expenditure will be in connection with the administration of the Act, but it would seem to us that $150,000 would likely more than cover it. I cannot vouch for that statement, because I do not know the facts.

Sir WILFRID LAURIER: It is easily to be understood that the matter is rather tentative, and that at the present time my hon. friend cannot be expected to have an absolutely exact plan to which he cares to give his authority. The minister must have a large clerical staff to perform the work arising from this new system of taxation. I think we should take some exception to the provision inserted, " appointments for the purpose may be made without reference to the provisions of the Civil Service Act." I do not think my hon. friend should take so much power as that. I am prepared to believe that some of these appointments must be technical, and that for them a technical business knowledge will be indispensable. As to these there may be special recommendations by my hon. friend under the Civil Service Act. But my hon. friend must have a large clerical staff attached to his office, and there is no reason why the provisions of the Act should not be applied. I am afraid that, under the administration of my hon. friends on the other side, the Civil Service Act is becoming largely obsolete, and that it is more honoured in the breach than in the observance. Still it is a very good law and one which I think ought to be welcomed by every Government. It saves every minister a lot of trouble, and it is a better way of insuring effective service than any other. Why my hon. friend should say that all appointments, even that of the merest clerk, should be made without conforming to the Civil Service Act, to me is incomprehensible. It is a very dangerous principle.

Sir THOMAS WHITE: There are some considerations in connection with this matter which have been overlooked by my right hon. friend. In the first place, the administration of this Act is for a limited period; the Act is operative only until December 31, 1917. Therefore, we shall not be making permanent appointments, but only appointments of officials for the purpose of carrying out the Act during the limited period in which it will be in operation. I gave this matter a good deal of consideration, particularly this clause to which my hon. friend has referred. The difficulty which I encountered is this. We have to appoint officials in the several provinces to assist in the administration of this Act. The type of official that we should like would be men with experience in finance, such as accountants who are familiar with joint stock companies, or have had banking experience. Under the Civil Service Act a man could not be appointed if he was over 35 years of age. It is going to be exceedingly difficult to get the right class of men to carry out this Act, especially at this
5 p.m. time, when the country is sending so many men to the front. I am faced with a very real difficulty at the present time. Therefore I do not think my right hon. friend would suggest, in view of what I have said, that we should be confined by the regulations of the Civil Service Act in appointing the officials we shall require in the several provinces to assist us in carrying out the terms of this Act. Now I come to our own office. We shall require some accountants in connection with our office, and from the difficulties I have already experienced I am not at all sure that we should be able to obtain them under the Civil Service Act. In fact, I am sure we should not be able to obtain them. So far as clerks and typewriters are concerned, the employment will be temporary. Only recently I said to my deputy that we should retain the staff which was temporarily employed in connection with the war loan, to assist us in connection with the administration of this Act. There may be further war loans later on. The situation in the Finance Department at present is that we have a considerable temporary staff, which has been engaged in connection with the war loan, the last instalment of which was only recently paid. We shall endeavour to use that staff to the extent possible in connection with the administration of this Act; but we must have accountants and those having business experience if we are to carry this out at all successfully. My right hon. friend and I do not disagree so far as principle is concerned. But in connection with this measure, it is not my view that it would be practicable to obtain the assistance that we shall require under the provisions of the Civil Service Act, and consequently this proviso has been inserted.

Sir WILFRID LAURIER: I realize that a good many of the appointments must be technical—people who have special technical knowledge of business; but I am quite positive that under the Act as it exists today, section 21, if I remember aright, my hon. friend has the right himself to appoint, without referring to the Civil Service Commission, men technically qualified. But he has the Act to guide him, and he should use it. The temporary appointments are also covered by the Act, and there is no reason why the ordinary clerks, whether

temporary or permanent, should not be appointed under the provisions of the Civil Service Act.

Mr. MARCIL: Will these assessments on the companies be made payable at a certain period in one lump sum?

Sir THOMAS WHITE: They will be payable on November 1st in respect of the first financial period of the company or firm which is being assessed. Only one payment in one year is the principle.

Mr. MARCIL: The minister has not considered the idea of splitting these payments so as not to make them fall too heavily on those paying them?

Sir THOMAS WHITE: My hon. friend is aware that the Act does not apply except in the case of individuals, firms, or companies having at least $50,000 capital, and I think no hardship is likely to arise under the mode of payment provided for in the Act.

Mr. NESBITT: If there is only one payment in one year it will last over until 1918?

Sir THOMAS WHITE: Yes.

Mr. GRAHAM: In case the Department suspect that a statement submitted by any company is not accurate, what do they do?

Sir THOMAS WHITE: That is why we have the official or officials in each province. We shall ask them to make an investigation and see the individual or firm or company in question and check up the statement to see if it is accurate.

Mr. NESBITT: After you get the statement from the corporation, you send out a statement of what you think the tax should be. Then if there is a dispute the Board of Reference comes in?

Sir THOMAS WHITE: We would not necessarily accept the statement. If we had reason to believe that the statement was not accurate, it would be the duty of our officials to interview the party in question and check up the statement so made.

Mr. NESBITT: Before referring it to the Board of Referees?

Sir THOMAS WHITE: Then, in the light of the statement and the checking up, an estimate would be made and notice sent to that firm: "You are assessed for so much in respect of the Business Profits War Taxation Act, 1916."

[Sir Wilfrid Laurier.]

Mr. GRAHAM: The department does all of this through its own machinery. In municipal assessments an appeal may be taken by one individual against the assessment of some other individual. William Smith thinks it is not equitable, and he appeals against the assessment of John Brown, say. Will that sort of thing come into play or will the department take all the responsibility?

Sir THOMAS WHITE: The department will take all the responsibility. I do not think it desirable that that element should be introduced. In municipalities one man can appeal against the assessment of another; but, so far as Dominion taxation is concerned, that principle has not been applied. In matters affecting customs taxation, only parties in interest are allowed to raise any question; otherwise you might have a situation which would lead to a great deal of petty controversy.

Mr. GRAHAM: I do not think it would be a good situation. There is nothing to hinder a man from giving information to to the department.

Sir THOMAS WHITE: The Government and the party assessed are the only parties in interest.

Mr. MARCIL: Will the amount paid by each party be published or become known?

Sir THOMAS WHITE: If Parliament desired returns as to the results of this measure, the returns would be brought down.

To defray the expenses of printing for distribution 4,000 copies of the report of the Federal Plan Commission of Ottawa and Hull, $2,000.

Sir WILFRID LAURIER: I would like to know, now that we have the plan of the commission, what are the plans of the Government in regard to carrying out what is suggested by the commission.

Sir THOMAS WHITE: My right hon. friend was not in the House the other day when the question was raised by the hon. member for Rouville (Mr. Lemieux). I stated that I intended, as soon as the session was over, to take up the report of the commission, go over the ground, and give the matter my personal attention. I know that my right hon. friend is very much interested in this question. I believe that a committee has been appointed by the City Council for the purpose of taking it up with the Government at a convenient time. I am greatly pleased that the plans

appear to have met with the approval of the citizens of Ottawa and of the members of this House, so far as I can learn. It is generally considered that the commission has done its work well. My right hon. friend naturally asks what is the next step. So far as I am concerned, the next step will be to make myself thoroughly conversant with the recommendations of the commission, and the Government will be prepared to take up the matter with the city of Ottawa and to consider what step ought to be taken next. My right hon. friend is aware that the object of preparing this plan was that there should be a model to which the Government and the city of Ottawa, the city of Hull, and the transportation companies could work over a long course of years. It was thought that it would be of use to all the different bodies I have mentioned, and that is its chief value. But there are certain explicit recommendations which we shall have to take up with the view of seeing whether and when they should be carried out, and that is a matter to which we shall give consideration as soon as we can find time after the session is over. I have not had time during the present session, since the report was presented, more than cursorily to glance over it, much less to go over it in detail.

Sir WILFRID LAURIER: I have looked over the report—I take some interest in this matter—and I must say that on the whole the commission has done very good work. There are some suggestions to which I will take exception—we cannot all agree—but I am satisfied to know that the minister will take up the report of the commission and study it as soon as possible. I know that he has been very busy during the session, and he cannot be expected to do more than take it up, after the session is over, with the committee of the city council. The work is very extensive; it is a work for years; and if something can be done now, it would be very advisable to do it.

To defray the expenses of the Economic and Development Commission, $25,000.

Mr. NESBITT: Will some one explain what this is?

Sir ROBERT BORDEN: It is a commission which has been at work during the past five or six months studying economic conditions in this country, more particularly in regard to what preparation may be necessary for us in respect of the period immediately following the conclusion of the war.

Mr. NESBITT: The Prime Minister says "us"; to whom does he refer?

Sir ROBERT BORDEN: I am speaking of the country, of course; it is very often referred to in that way. I hope my hon. friend does not take exception to it?

Mr. NESBITT: I wondered whether it meant the Government or the people.

Sir ROBERT BORDEN: Their interests are identical.

Mr. NESBITT: Not always.

Sir ROBERT BORDEN: According to the appreciation of my hon. friend, perhaps not; according to our appreciation, they are always.

Sir WILFRID LAURIER: Who are the members of that commission?

Sir ROBERT BORDEN: The commission is under the presidency of Senator Lougheed.

Sir WILFRID LAURIER: A good man.

Sir ROBERT BORDEN: The other members are Mr. Farrell, from British Columbia; Dr. Rutherford, from Alberta; Mr. Hopkins, from Saskatchewan; Mr. William Smith, from Ontario, a member of this House; Mr. W. B. Ross, a gentleman engaged in the fruit industry in Nova Scotia, and Mr. Rolland, of Montreal. They have a considerable number of people associated with them who are carrying on a great deal of research work and investigation. They are in touch with the staffs of certain universities who are doing a certain amount of research work. Mr. William Pearce, formerly associated with the Canadian Pacific railway, has made a careful study of railway development in connection with land settlement, and has prepared plans which, I understand, are of a very important character, and which have been spoken of very highly by those who have had an opportunity of examining them. I have been asked to do so on more than one occasion, but I have not found time to avail myself of the opportunity during the present session. I understand from Senator Lougheed, who asked me to examine the work which Mr. Pearce has done, that it is of an important character. It has been submitted to the Chairman of the Board of Railway Commissioners, who thinks it is so important that he hopes it will be extended to the other provinces.

Up to the present it has been confined, I think, to the three Prairie Provinces. It is believed that the work will be of great assistance to the Board of Railway Commissioners in connection with the discharge of their duties. There have been reports made to me, sometimes written and sometimes oral, as to the work which the commission has carried on. Unfortunately, it did not occur to me that this item would come up at this moment, otherwise I would have prepared myself with some notes which are in my possession as to the really important work which the commission has carried on. I appreciate, of course, the fact that the duties entrusted to it are of so complex a character that it would be impossible in five or six months to make a careful or comprehensive survey of all that must be taken into account by the commission in the discharge of its duties. I do, however, believe that a good deal of really important and interesting work has been done. They have associated with them in their work officers of various departments of the Government. Some of the officers have been assigned to special duties in connection with the work of the commission, and have been devoting their whole time, under the direction of the commission, to the study of various subjects which the commission is called upon to investigate and report upon. The work of the commission has not been very widely advertised, but it is not on that account of less importance. I might also say that Mr. Sandford Evans, who has been studying very carefully the question of transportation and marketing in connection with his duties as a member of the commission to report upon the Georgian Bay canal, has been asked to give the benefit of his work and his study to this commission, and I understand that he is doing so.

Mr. NESBITT: Are they taking up the question of immigration as well?

Sir ROBERT BORDEN: They have taken that up in connection with the Department of Immigration, and otherwise as well, and some recommendations of a tentative character have been made to me orally by the chairman of the commission. There has not been an opportunity to give them very careful consideration, but they will receive it as soon as possible.

Sir WILFRID LAURIER: The names of the commissioners, speaking for myself, are not all known to the House; but I have the pleasure of knowing Senator Lougheed and Mr. Smith, a member of the House, and they are certainly very good men in their way. I am quite sure that in their hands the interests of the country will be looked after, and that the interests of the Government will not be forgotten either. If there is a non's share I have no doubt the Government will get it. But what my right hon. friend has said as to the labours of this commission is rather vague. I do not know exactly yet what is to be done, but I suppose we shall have to judge of their work by the report which they will present to the House, perhaps next session.

Sir ROBERT BORDEN: I believe they will have a very full report before next session. I may observe that one of the most important members of the commission, and one whose work, I have no doubt, will be found very useful, is not a member of the Conservative party. He was formerly a member of this House and sat on the other side, I refer to Dr. Rutherford.

Sir WILFRID LAURIER: A very good man. If they were all like him they would do good work.

Sir ROBERT BORDEN: I do not know very much about the politics of the others. I am not sure whether Mr. Hopkins is a Tory or a Liberal.

Mr. GRAHAM: What about Mr. Smith?

Sir ROBERT BORDEN: There is no doubt about Mr. Smith, and there is no doubt about the chairman, Senator Lougheed. I do not suppose that, if they are otherwise qualified, they are any the worse, from our standpoint at least, because they happen to be affiliated with the party of which I am a member.

Mr. GRAHAM: They may be all right notwithstanding.

Pensions on account of the Fenian raid, 1866-1870, $2,000.

Sir ROBERT BORDEN: The increase in this item is due to an increase in the pension granted to Mrs. Caroline McEachren. Formerly she received 50 cents per day. This has been increased to $1.25 on the recommendation of the Pensions Board.

Pensions payable to militiamen on account of the rebellion of 1885, and active service generally, $20,000.

Sir ROBERT BORDEN: I am informed that the decrease in this vote is due to

the following reasons: The ordinary vote is $20,000. Last year, $100,000 was voted for pensions with the intention that it might be utilized for pensions to members of the overseas force. Later on it was found insufficient and a larger sum was provided. Consequently, $80,000 of the $100,000 was not used. This year the Estimate is $20,000, the usual sum granted in past years.

Mr. MARCIL: As this vote is for pensions, and as recruiting is an allied subject, I may be permitted to call the attention of my right hon. friend the leader of the Government to a paragraph in the Ottawa Evening Journal regarding the recruiting question that I brought up in the House yesterday. Perhaps the editor of the Ottawa Evening Journal did not take time to read the explanation given by me in the House before referring to the figures given by Senator Mason as to the parentages of enlistments. I will read the paragraph:

The figures which Senator Mason gave in the Upper Chamber last week of percentage of enlistment of the various classes in Canada give the following for the 320,000 men who have volunteered in this country for the war:

Enlistments.	Per cent.	Number.
English-speaking Canadian-born..	28½	91,200
French-speaking Canadian-born..	4½	14,400
British-born elsewhere than in Canada..	61	195,200
Foreign-born..	6	19,200
	100	320,000

I understand that these figures are not official, because they have been applied for at various times without result in the House. It would be unfair to judge as to the number of French Canadians who had been recruited by taking the figures merely for the province of Quebec, because French Canadians have enlisted in all the provinces of the Dominion, notably at Edmonton, in New Brunswick, and in Ontario. French Canadians are to be found in almost all the battalions from those parts of Canada. Therefore the right hon. gentleman told me yesterday that the figures were not official. I took that for granted. But there is another paragraph and this is what I take exception to. The Journal in commenting upon the figures said:

Considering the above figures, would it not be well for members of Parliament like Mr. Roch Lanctot and Mr. Marcil to prefer to preach volunteering in Quebec, rather than endeavour to cast cold water upon volunteering elsewhere? Clearly no industrial or agricultural interest in Quebec can have been hurt yet by a rush to volunteer, or seems likely to be.

As far as I am concerned, I have encouraged enlistment from the start. I have never declined a single appeal that has been made to me to attend a recruiting or any other meeting. Therefore I do not deserve to be made the subject of a criticism of that kind. I have never discouraged enlistment.

Sir ROBERT BORDEN: I inquired of the deputy minister whether the figures were official and he informed me that they were not.

Mr. GRAHAM: I would like to ask the right hon. gentleman if action will be taken this session on the report of the Pensions Committee. A special committee has been appointed by the House to deal with this matter of pensions, and I presume its report will be before us in a day or two. Does the Government intend to take action on its report?

Sir ROBERT BORDEN: The report has not been received. I discussed what might be done in regard to it, as I understand it has been drafted, with the chairman of the committee. It is probable it will contain a recommendation that some action shall be taken this session—perhaps not all the action which may be required, but action in connection with the formation of a Pensions Board. We propose to take whatever action may be possible at this session without unduly protracting it.

Mr. GRAHAM: It will need legislation?

Sir ROBERT BORDEN: I think it will need legislation, but probably of a character that will not delay the House very much.

Pensions—European war, $3,000,000.

Mr. GRAHAM: My question would come up more properly under this item.

Sir ROBERT BORDEN: This is the amount that has been estimated by the department. If the report of the committee should call for a considerable increase in the pensions, I am not absolutely sure that this amount would be sufficient, but it will probably be sufficient until another session of Parliament is called.

Mr. GRAHAM: When is the report of the committee likely to be presented?

Mr. HAZEN: I hope to be able to lay it on the Table to-morrow.

Civil Government—Office of Auditor General —to provide for five clerkships in third division, subdivision B, $2,500.

Mr. NESBITT: We got a circular letter some time ago saying that these men were starving on $500 a year. Would it not be better to put on less men and pay them more money?

Mr. ROGERS: They like to divide up the work.

Mr. NESBITT: They don't do anything except stand around and look at each other.

Mr. ROGERS: You will have to take that up with the Auditor General.

High Commissioner's office, London—to provide for the transfer of Edwin McLeod, Immigration agent, Carlisle, Eng., to the second division, subdivision A, in the High Commissioner's office, London, from the September 17, 1915, at $1,800 per annum, $970.

Mr. GRAHAM: Any suggestion as to the new High Commissioner?

Sir ROBERT BORDEN: Not at present. This is merely for the transfer of a clerk, to be untilized in one department instead of another.

Customs—salaries and contingent expenses of the several ports in the Dominion, including pay for overtime of officers, notwithstanding anything in the Civil Service Act, $3,590,000.

Mr. GRAHAM: How many men are included in this army, and what is the significance of the words "notwithstanding anything in the Civil Service Act"?

Mr. REID: There are 29,033 officers at the ports throughout the Dominion.

Mr. GRAHAM: What increase has there been in the number of employees?

Mr. REID: There has been no increase; I have been decreasing them. There is a large decrease this year as compared with last. When men have gone to the front or vacancies have occurred for other reasons we have not filled the positions unless it was absolutely necessary; 300 or 400 vacancies that have occurred since the war began have not been filled. The revenue has decreased since August, 1914, but now, at some of the ports like Montreal, business is increasing; in fact, business at that port is greater than it ever has been.

Mr. MARCIL: Are the appointments in Montreal made under the Civil Service Act?

[Mr. Graham.]

Mr. REID: A man has to pass a qualifying examination before he can be appointed. Under the Civil Service Act preventive officers are exempt from passing an examination.

Mr. NESBITT: What is the significance of the words, "notwithstanding anything in the Civil Service Act?"

Mr. REID: The men at the different ports work overtime, and under the law we should not be allowed to pay them anything extra, unless we inserted these words. Under the Civil Service Act we can pay them their salaries only, nothing for overtime.

Mr. NESBITT: What is the proper time of these employees?

Mr. REID: At Toronto, for instance, from nine in the morning until four o'clock in the afternoon. Then they could put in two or three hours' extra work a day as landing waiters, at thirty cents an hour. Nearly every port is working overtime. In the Auditor General's Report you will see several items like this: salaries, $900; overtime, $250.

Mr. MARCIL: Are the appointments at Montreal made on the recommendation of the Collector of Customs at Montreal?

Mr. REID: Every one who is appointed has to be approved by the collector and pass an examination qualifying for the position.

Mr. GRAHAM: There is one thing the minister might as well make a clean breast of now, as minister, and that is, the free importations to the port of Morrisburg which have been under discussion for some time. In the evidence it appeared that a certain letter had been written by the deputy Commissioner of Customs. But the Minister of Militia, speaking in the House the other day, said that the authority was given by the Minister of Customs himself. There are a great many conflicting statements as to what came across at Morrisburg free of duty. As a matter of fact, months before anything came up, I received several communications from citizens of Morrisburg informing me that bales upon bales of goods were coming through at Morrisburg and were being put into a building there that had been leased by a company, the name of which I forget—a new company organized, undoubtedly, for the purpose. I did not think it was my business to investigate what was being done, as I thought possibly it was for the purpose of war; but

recent events have led one to almost wonder why this was allowed to be done at all. And the information that came to me would seem to indicate now, in the light of recent events, that a very large quantity of goods had been brought in at Morrisburg free which should not have been brought in free. Some people go as far as to say that these goods were brought in and afterwards sent on as Canadian-made goods, the labels being changed at Morrisburg. For that and for other reasons our manufacturers of some of the goods identical with those imported free at Morrisburg have complained very loudly. There are conditions under which it possibly might be proper to allow such a thing, but up to date no evidence has been given to show that it was necessary nor that it was proper. The minister will see that it places the collector of Customs at Morrisburg in a very embarrassing position,—at least I know it would have put me in a very embarrassing position if I had been collector there. I know Drew, the collector there, very well, and I have not the least hesitation in saying that he would not allow anything to be done that he did not think he had the permission of the department to allow, anything that he did not think was exactly that which was desired by the department. But, here is how the matter stands. He was instructed by a letter which came from the department to do certain things, yet he was not allowed to retain that letter as his authority, and to-day he has no authority in writing for what was done. If he is accused of doing more than the department intended, even though he thought he was not exceeding his instructions, he is not able to show in his defence that he received any instructions. I think the minister owes it to the House to explain how that came to be done, and to tell us what was brought across free of duty. For the department will know these things. I do not want to interfere with any investigation that is going on—I have no reference to that. But the minister knows all about it; it was all done under his authority, according to what the Minister of Militia has told us. Will not he take us into his confidence and clean the thing up?—tell us what came over; what it was for; why the labels were changed; who brought in the goods; to whom they were sent, and all that kind of thing. It would be interesting to the country, and, perhaps, would put at rest the suspicions that have been aroused as to many of the incidents connected with that free importation.

Mr. REID: The hon. member, I take it, has read the evidence given before the Public Accounts Committee.

Mr. GRAHAM: They are not responsible to us.

Mr. REID: The Public Accounts Committee is not responsible to the House?

Mr. GRAHAM: The minister is responsible to us.

Mr. REID: Yes, I am responsible. There is nothing secret about this matter. The explanation was given in the Public Accounts Committee. Let me say at the outset that, as I stated in the Public Accounts Committee, we had to get many things for the use of the first contingent. The Minister of Militia secured many articles from the other side of the line. He had asked me to arrange to allow these goods to come in at the different ports throughout the Dominion. There was a question of them being allowed to leave the other side, and be exported through Canada to the front. I gave instructions—

Mr. WILLIAM CHISHOLM: Would that apply to clothing?

Mr. REID: It applied to anything that was required for the troops going to the front to fight for the British Empire, no matter whether it was clothing, munitions, guns or anything else. That was the instruction that I gave—that everything that was required to be transported through Canada for our troops that were to fight for the British Empire was to come in. And of course they would come through with the knowledge of the Militia Department, and by their instructions. I gave instructions to the Commissioner of Customs to allow this wherever the Militia Department wanted it done—at any port in Canada. The Commissioner of Customs did send one of his officials to Morrisburg to give instructions to the Collector of Customs. He wrote a letter and handed it to his official who went to Morrisburg, to read to Mr. Drew. But we were not at that time keeping records of letters and so on in order that they might come out at some future time. No one knew whether there might be some question raised as to these articles being allowed to pass through Canada.

Mr. TURRIFF: Was it not explained to the collector that there was only machine guns?

Mr. REID: If the hon. gentleman will have patience until after I get through I shall be glad to answer questions.

Mr. MACDONALD: Then let the minister not raise the question about the right of Canada to allow these imports.

Mr. REID: It was raised in the press everywhere at that time, whether munitions and other articles, including machine guns, might be allowed to be brought from the United States.

Mr. GRAHAM: Let us get that cleared up. That point was as to the right of the United States to let the goods go out, but there was no question as to the right of Canada to let them come in. Those goods were for us and for the Allies.

Mr. REID: There might be a question of allowing them to go out. We did not keep record of them—did not intend to keep a record of these goods passing through in bond——

Mr. TURRIFF: Why?

Mr. REID: Why? I do not think it is fair for the hon. member for Assiniboia (Mr. Turriff) to try to drag out of me a statement of the articles which did come over which were brought here for the soldiers going to the front. The Government had reasons at that time to try to get everything that we could, in the way of machine guns, ammunition,—anything that we could not get in this country—to help the militia that we were sending overseas at that time.

Mr. TURRIFF: And the minister just opened the custom house door wide to let in anything and everything, and allowed contractors like J. W. Allison to make all kinds of money that should have gone into the treasury of Canada.

Mr. REID: It is all right for the member for Assiniboia to make that statement; but, whoever gave the hon. gentleman that information, I want to say that that information is absolutely false and untrue, every word of it. And let me say this also —that when the hon. member is outside, I will tell him to his face, if he should make that statement, that it is absolutely false and untrue. Such stuff was not brought into Canada in that way.

Mr. TURRIFF: Does the hon. minister know what was brought in?

Mr. REID: The hon. member knows well what was brought in.

Mr. TURRIFF: Does the hon. minister know?

Mr. REID: I know what was brought in; nothing was brought in except what was shipped to the Minister of Militia's Department at Ottawa, or to Valcartier camp, all of which went out of this country in the usual way. Not one single dollar's worth of goods was brought into this country except what was brought in in the legal way and shipped to the Militia Department.

Mr. TURRIFF: My hon. friend the minister has no more idea of what was brought in than any one else has. The door was wide open. The customs officer at Morrisburg said before the Public Accounts Committee that he knew absolutely nothing about what came in; that he did not know how many dozens or how many hundreds of cases came in; that they came in there and were shipped away by the scow load, thirty or forty at a time. He did not know what it was, whether machine guns, ammunition, clothing or anything else. If the customs officer at the port of entry did not know what was coming in, how does my hon. friend the minister know? The customs officer said that no records were kept of what came in. In the face of those facts, sworn to by the customs officer, how can the minister say that he knows everything that came in?

Mr. REID: The customs officer said he did not know what the contents of the cases were, because he did not open and examine them. That is absolutely correct, but the goods were shipped here to Ottawa and to Valcartier and the Militia Department have a record of everything that came in at Morrisburg, and the Valcartier Camp has the same. The Government, therefore, is in full possession of the facts in connection with everything brought in at Morrisburg. The collector of custom at Morrisburg is an old man, seventy or seventy-two years of age—a fine old man; I am not saying one word against him. Instructions were given to him to allow machine guns or any similar article to go through so long as they were shipped to the Minister of Militia or his department or to Valcartier camp. The goods that did come over came over between the time of the breaking out of war and October the 14th or 24th, just when we were getting the first contingent ready, equipping the men with machine guns and sending

them over in anticipation of their going right to the front. Was it not right and fair that we should give them the very best possible equipment? Yet because I, as Minister of Customs, assisted in getting these goods in and in having them shipped through Canada, the member for Assiniboia tries to make a mountain out of a molehill. I want to tell him and the people of Canada that any one who says that any goods were brought in at Morrisburg other than in a legal way and without the full knowledge and consent of the Department of Customs or without their knowing the contents, makes a statement that is not in accordance with the facts. I hope that the hon. member for Assiniboia will not try to mislead the people by making another statement of that kind.

Mr. TURRIFF: The minister says that the instructions given to the customs officer at Morrisburg were that he should allow the goods to come in free without taking any record or notice of them provided they were addressed to the Minister of Militia or to the camp at Valcartier. The evidence given before the Public Accounts Committee did not state that. The evidence was that the instructions given Mr. Drew by letter written by the Commissioner of Customs and handed to him by an official and taken back again were that all goods addressed to a certain bunch around Morrisburg should be allowed to come in free. Nothing at all was said about shipping them to the Minister of Militia or to the camp at Valcartier. It was said that the object of these instructions was to let the Sifton machine gun battery come in. It was shown afterwards that that battery came in not by Morrisburg but at Cornwall. So I say that the door was opened wide for anything to come in. How does the Minister of Customs know what came in? How would he know?

Mr. REID: I understand the evidence was that part of the machine guns did come in at Morrisburg—all except the cars. It is true that these goods were not consigned to the Minister of Militia. They were shipped to other parties on the American side and brought to Morrisburg, not in the name of the Minister of Militia. From there they were shipped to the Minister of Militia at Ottawa or to his department or to Valcartier. The collector of customs at Morrisburg had these instructions. If he had been alert to his duty, watching the goods that came over—I think he said that he saw these goods coming across and never looked at them; if he had been attending to his duty he would have known the number of boxes and would have kept a record of them as they passed through; but he did not do it. I am not finding fault with him; I simply state that, in my opinion and in the opinion of the officials, nothing came across there in any way, shape or form except goods that came to the Militia Department. The Militia Department received every one of these articles that came across. That was not the only point of which this could be said; other places were the same. Surely the hon. member for Assiniboia will give us credit for trying to assist in every way in getting machine guns, ammunition and anything else that might be necessary to equip in the best possible way the men who were going to the front.

Mr. TURRIFF: My hon. friend says that if the customs officer there had done his duty he would have kept a record. Did my hon. friend instruct him to keep a record? His instructions, as he swore to them, were that he was to allow all these goods, shipped to certain people, to come in without taking any notice of them and without making any entries. The minister now says that he should have kept a record. Will my hon. friend bring down a copy of the instructions that were given to the customs officer? If he does not do so, the man who received the letter of instructions, read it and was asked to hand it back again, should be able to remember what those instructions were. I hope that my hon. friend will bring down a copy of the instructions that were sent to the customs officer at Morrisburg. The fact remains that the door was opened wide; anything and everything could have been brought in, and I believe no one knows just what was brought in.

Mr. GRAHAM: The customs officer was asked that very question, whether or not he suspected that any goods other than militia goods were passing through the customs at Morrisburg free, and he said he had no suspicion whatever.

Mr. TURRIFF: He said he knew nothing about them; he paid no attention.

Mr. GRAHAM: He said he had no suspicion. I put that question to him myself.

Mr. TURRIFF: He did not examine them; did not know how many.

At six o'clock the committee took recess.

The committee resumed at eight o'clock.

Railways and Canals—chargeable to income—Grand Trunk Pacific Company—loan not exceeding $8,000,000, repayable on demand with interest payable half-yearly at the rate of six per centum (6 per cent) per annum; to be used for expenditure made or to meet indebtedness incurred in paying interest upon securities of the Grand Trunk Pacific Railway Company, to meet deficit in operation and for the purchase of rolling stock; said loan to be secured by mortgage upon the undertaking of the Grand Trunk Pacific Railway Company containing such terms and conditions as the Governor in Council may approve. The disposition of the loan to be subject to the direction of the Governor in Council, $8,000,000.

Sir THOMAS WHITE: In connection with the consideration of this item, and the succeeding item, providing for a loan of $15,000,000 to the Canadian Northern Railway Company, I desire briefly to give the House certain information which was asked for by hon. members opposite when this matter was last under discussion. The hon. member for South Renfrew (Mr. Graham) asked me whether the certificate of the chief engineer of the Government had been given as to the completion of the Grand Trunk Pacific from Winnipeg to Prince Rupert. I find upon looking up the National Transcontinental Railway Act, and the agreement for the construction of this division of the National Transcontinental Railway, that no certificate is provided for as conclusive evidence that the road has been completed—whether or not the road has been completed is a question of fact:

> The standard of the road is not to be inferior to the main line of the Grand Trunk railway of Canada between Montreal and Toronto, so far as may be practicable in the case of a newly constructed line of railway, and the road is to be constructed according to plans and specifications to be approved by the Government.

In this connection I may refer to the report of Sir Collingwood Schreiber, the chief engineer of the western division of the National Transcontinental Railway, of April 1, 1915, that is to say, a little over a year ago, in which he made this statement:

> The western division—Winnipeg to Prince Rupert—has been in successful operation throughout since September 6, 1914. A very comfortable express train service has traversed the road twice a week each way, provided with the most modern design of sleeping and dining cars, in addition to which a passenger and freight service has been given daily on the road between Winnipeg and Prince George sufficient to handle the traffic offering.

Then he goes on to set out the balance of the work remaining to be done. In a word, I may say that the standard of the Grand Trunk Pacific while undoubtedly high is not sufficiently high to comply with the requirements, that is to say, the standard of the Grand Trunk railway between Montreal and Toronto. For example, there are many trestle bridges which should be replaced by steel bridges. There are a number of structures which should undoubtedly be erected, but which are not indispensably necessary for the operation of the line. Therefore, answering generally the question of my hon. friend, I might say that, while the line is open for traffic, it is not up to the standard, nor is it likely to be for many years to come. According to the report of Sir Collingwood Schreiber, to which I have alluded, and to the facts as they exist to-day, I should say that some $4,000,000 or $5,000,000 at least would be required to bring the road measurably up to the standard to which I have referred. But on account of the financial conditions, to which I alluded in my speech, with respect to the Grand Trunk Pacific and the Canadian Northern Railway, it has not been possible, and I think it will not be possible for some time to come, to bring the road up to the standard required by the Act.

In connection with the Canadian Northern Railway Company's loan, I have since yesterday obtained from the Canadian Northern Railway Company a statement showing the estimated gross earnings, operating expenses, and net earnings for the years ending the 30th June, 1915, 1916, 1917, 1918, 1919, and 1920. As to the year 1915 and the year 1916, they bear out the statement which I made to the House yesterday, namely, that the net earnings of the Canadian Northern Railway Company for the fiscal year 1915, which ended on June 30 last, amounted to $6,623,000, whereas the estimated net earnings for the year 1916 are placed at $9,770,000. For the year 1917, Mr. Hanna estimates that the net earnings will reach $11,500,000; for 1918, $13,700,000; for 1919, $15,120,000, and for 1920, $17,700,000. Of course, these are estimates; I do not give them as my estimates, but as the estimates of the general manager of the road, made, I have no doubt, in good faith, according to the best information which he has available. I shall therefore lay them upon the table, because it would not appear to me to be necessary to delay considera-

tion of the items by printing these estimates.

Then, my hon. friend from St. John referred to the Duluth, Winnipeg and Pacific railway, questioning, as I understood him, whether it was a benefit or a detriment to the Canadian Northern Railway system.

Mr. GRAHAM: The bonds of that railway were guaranteed by the Canadian Northern.

Sir THOMAS WHITE: They were guaranteed by the Canadian Northern, but I desire to say to the committee that that was one of the most profitable, if not the most profitable line of the Canadian Northern Railway system. Its earnings for the year ending June 30, 1915, were $311,000, and for the nine months ending March, 1916, they amounted to $390,000. A note attached to the statement by Mr. Hanna is to this effect:

> This company has a very heavy local traffic tributary to its own line quite apart from its great value to the Canadian Northern System as a connecting link for through business from and to the United States of America and Western Canada.
>
> This line has also proved of great advantage to the Canadian Northern in that when Port Arthur elevators were congested with grain an outlet was found at Duluth. In no case has the Canadian Northern railway ever shipped grain to Duluth when such shipments could be handled at Port Arthur.
>
> The increase in gross and net earnings for this year, compared with the previous year, is to a large extent made up from the movement of grain to Duluth during the congested periods at Port Arthur and this movement to Duluth was requested by the Board of Commissioners.

I lay this also on the Table.

My hon. friend from South Renfrew asked me with regard to the amounts due to contractors. I made inquiry of the Canadian Northern Railway Company, and I have received a letter from the assistant to the vice-president as follows:

> With respect to the amount due constractors for work done, materials delivered and drawback on construction, the total of this is provided for either by cash on hand in trust accounts or securities available. We expect to largely liquidate these accounts within the next sixty or ninety days.

I may explain further to the committee that there remains in the trust account, that is to say the account in which were deposited the proceeds of the $35,000,000 of securities which were guaranteed by the Dominion upon the Canadian Northern Ontario division between Montreal and Port Arthur, a credit balance of $1,300,000, and there is also a credit balance to the amount of $4,300,000 in the account, in which was deposited the proceeds of the $45,000,000 of securities guaranteed by the Dominion two years ago. So it would appear that so far as the amounts due to contractors appearing in the statement of temporary loans and current obligations is concerned, with the measure of aid which we propose to afford, there will be funds available for their payment. I think that is substantially all that I was requested to furnish in connection with the further consideration of these two items.

Mr. GRAHAM: I notice that a considerable quantity of grain went south. I am surprised at my hon. friend boasting about that in connection with the Duluth road.

Sir THOMAS WHITE: I was not boasting.

Mr. GRAHAM: I would have thought that he would consider it not a good thing for Canada that the grain should go south instead of coming east. As my hon. friend will understand, it is not an easy thing to go through these accounts and sift them. I was busy in the House last night and this afternoon, and I have not had the opportunity to digest them. I suppose it would not be out of place for me to say, regarding both of these roads, that I do not take the pessimistic view that some people take as to the outcome of the situation, so far as the railways of Canada are concerned. There is no doubt that the war has dislocated things, and the traffic of the railways fell off to such an extent at one time that the strongest transportation company in the world, to my mind, the Canadian Pacific railway, saw its stock tumble to a degree that was never anticipated. That did not mean that the stock of the Canadian Pacific railway had not an intrinsic value greater than was represented by the figures shown on the stock exchange; but it did mean that for the time being trade was so dislocated that the earnings, possibly temporary, were such that investment in the stock would not prove a paying one. But that condition has rapidly adjusted itself. True it is that the great crop in the West has helped materially, and the transportation of munitions and other things connected with the war has done a good deal to aid the companies in increasing their revenue during the past year or so. But the substantial foundation on which our transportation companies must build will be the immigration into Canada, with which must come an increase of agricultural production, the tillage of a much larger acreage, and with all that an

increased output by our industrial concerns. I am not discouraged a bit about the situation. If conditions had remained as they appeared a few years ago, if immigration had continued to pour in, to open up our western lands and increase the cultivated acreage, with all the coincident development to which I have referred, the railway companies would be pretty busy at the present time. I have no fear for the future concerning them at all. At the present time we are facing a peculiar financial situation. The companies appear to be in a worse position than some other forms of industry, because we know all about them, and because they are of more gigantic proportions than many other businesses. But, as a matter of fact, a great many of the industries of Canada were in a very precarious condition when the war broke out. Instead of it being an injury to them, the war has been a godsend to them financially; but it has not been so until recently to the transportation companies. Take the Grand Trunk Pacific. The arrangement with that company was peculiar and somewhat complex, the late Government constructing half of the main line approximately, from Moncton to Winnipeg, a distance of 1,800 miles, while the company undertook, under certain guarantees, to construct the line from Winnipeg to Prince Rupert, approximately the same distance, I think the line from Winnipeg to Prince Rupert is not quite as long as the line from Moncton to Winnipeg. In addition, the Grand Trunk Pacific had to construct the system of branch lines to which I referred the other day. They have done that to a considerable extent, but not to the extent which will be necessary in order to feed the main line and in order that goods may come in, to be shipped over these branch lines to the communities developed and yet to be developed.

The idea of building that road up to a very high standard elicited differences of opinion. I trust I shall not be breaking any rule of the committee if I deal with that for just a moment. There are two principles of railway construction. One is to build the cheapest possible road, practically placing the rails on the ties with little or no ballast, and with grades and curves of various dimensions, just so the road can begin to operate, and then, as it makes a profit, as the revenue begins to come in, it is used to improve the condition of the road and put in what we call betterments. In its former construction, the Canadian Northern adopted the latter principles, and its branch lines all over the West and in the East, I think, were built on the basis of comparatively easy construction. When the Grand Trunk Pacific and the Transcontinental came to be constructed, they decided to adopt the other principle, that is, to build a road of a very high standard at once, so that when it was completed it would be able to afford the people of the country cheaper transportation than possibly could be afforded them by a road built on the lines of cheap construction. I need not argue that, it is evident. We cannot tell at the present time, it can only be told as the days go by, how much benefit that superior construction is to the people using that road. It is conceded now by every person that the Grand Trunk Pacific and the Transcontinental form the most perfect transcontinental railway in America. I think that nowhere in the world is there a stretch of road of such length and of such superior construction as the Transcontinental line.

It is necessary, in order to utilize such a line, and to get the benefit of the dear construction, that it shall have a lot of business to do. It can haul a bigger tonnage with the same engine. It can haul more than double the tonnage that can be hauled for an equal distance over any other road on this continent at the present time with all the improvements. It will necessitate the filling up of the West as rapidly as possible, with all the coincident development. It will require that the industries and agriculture of the East shall be developed to the fullest extent. It will bring a return benefit to them in the way of cheaper freights. The Government have proven, during the past few months, that they can afford to haul grain at a cheaper rate than it has ever been hauled for before. The rate of six cents per bushel from Armstrong, which is a point that corresponds with Port Arthur, to Quebec is a cheaper rate than was ever given before by rail, and the Acting Minister of Railways and Canals (Mr. Reid) says that on that haul to Quebec a profit was made. This amply proves that the construction of a road of this character, if it has the work to do, is, for the present at least, of more benefit to the people than a line of cheaper construction.

It must be remembered too, Mr. Chairman, that ocean traffic has been greatly disturbed, and on ocean traffic, both Pacific and Atlantic, this through line depended

to a certain extent for its tonnage. But on the Pacific, as well as on the Atlantic, that traffic has been decreased to such a degree that the Grand Trunk Pacific and Transcontinental have received no benefit at all. Immigration that was flowing in by hundreds of thousands has come to a standstill. Increased acreage that, as everybody expected, would be yielding forth in abundance is not doing so, because the men are not coming in.

Then, many of our men from the West who were active in the tilling of the soil have gone to the war. In these respects conditions have altered to such a marked degree that you cannot judge at all what would have been the result if these conditions had not so changed. In the years to come—and not so many years either—I look for a vast increase in the number of people who will come to our western country; I look to a development of British Columbia, Saskatchewan, Alberta and Manitoba, after a space of time following the war, that will astonish us all, not excluding the people who live in those provinces. Some of our friends are at the war; some have been killed and others have been wounded; others are in the thick of the fight and we do not know when we shall hear from them; others of our families are preparing to go. On account of all these things, this is a time—and I say it advisedly—when we on whose shoulders the responsibilities of government is placed have to stiffen our backs to the burden and not grow pessimistic. Canada is all right; Canada is going to be able to carry all these burdens as the years go by; and we must not on account of present surroundings and any temporary discouragements we may have let the public think we have lost confidence in the ability of our country to do what we started out to do, and that was to develop one of the greatest countries in the world. We must not lose sight of the fact that we are a young and virile people; that under normal conditions we bring to our land the best; that our development, both as a people and of our natural resources, must go on; that we have inherent qualities in ourselves and in our natural resources that will make Canada what we expect to make her, and what to-day we believe she is capable of being made, if we will only stick to the helm and be true to our convictions.

This situation with regard to the railways comes to us at a time when we seem to be carrying the last pound that we can bear; and whether we agree to aid the railways in this or in some other way, my own conviction is that we all require some of the courage and stamina our fathers had when they first came to this country to hew out homes for themselves. Those qualities must be asserted in the sons who have followed; we must remain true to what we believe to be our duty, and, that course being followed, sooner than we expect it perhaps, we shall find that Canada needs all these railways, and will be able to use them for her own advantage and for the benefit of the people at large. In the years to come, for the Grand Trunk Pacific, with its magnificent construction, I look for a great traffic beginning in the east on the Atlantic and going right across to the Pacific, and vice versa. The Canadian Pacific Railway has done a large trade in that way and has made a name for itself the world over. No matter what we may have done by the Canadian Pacific Railway in years gone by, no matter how we may have criticised certain aspects of it, the fact remains that the Canadian Pacific railway is one of the greatest advertisements that Canada has to-day. Wherever it goes its business is done in a manner that brings no discredit either to the business concerns of Canada or to the financial transactions in which that company is engaged. We have often been criticised for passing certain legislation in connection with the Canadian Pacific railway; but this much has always been in the minds of members of Parliament, namely, that the Canadian Pacific railway was a road that was creditable to the Dominion of Canada; and, whatever latitude was given to the Canadian Pacific Railway in the way of financing, whether we agreed with it or not, the company did not bring discredit on any person connected with it.

I have said these few things about the Grand Trunk Pacific. I have my own view about the way the Government has managed this end of it. But I am not going into that; I think it foreign to this discussion. I have strong views about the management of the whole Grand Trunk Pacific system as concerns Canada itself. Without saying anything imprudent, I think there are men in Canada who understand the railway situation and our transportation necessities as they cannot possibly be understood by men who do not live in Canada. Conditions here are so different, our development is so much more rapid and our territory so vast, that the circle in which we move, from a transportation point of

view, is altogether different to anything that could exist in a smaller country, with a denser population, and perhaps a more intense production per acre. Our railway system has to cover many thousands of miles; we have a scattered population; we have a country only the fringe of which has been developed; and we must accommodate our transportation facilities to those conditions. To my mind we cannot rightly invite men from other lands to bring their families and go out into our vacant lands unless we are prepared to do something for them, so that they can get the production from those lands to a market that will bring them a good return. After all, what counts is the amount of money that a man has left over every year after paying his expenses. If we do not afford these newcomers the transportation facilities that will enable them to get the best value for their product, we reduce the value of their daily labour, and offer them no encouragement. When we understand, as we do, that the progress of our entire country depends primarily—primarily, I say—upon the man who is behind the plough, and upon the product of our soil, we can more thoroughly appreciate the necessity of allowing that man to get all he can out of the soil and out of his daily product, in order that he may be happy and contented. A man so contented is the best immigration agent we could engage in any place. It is true that during the past few years the condition of the man who tills the soil, and of his family, has been greatly improved by such conveniences as the telephone, and the daily mail.

But these conveniences only come to a comparatively few on the prairies; they do not have all these advantages in the remote districts. But, for the interest of the country at large, it is the duty of this Parliament, acting through its Government to devote itself with the utmost vigour as soon as the war ceases, to bring to our country a class of immigrants that will develop the country as rapidly as possible. That will be good for our transportation facilities, good for the Dominion of Canada, and good for the Empire at large. If that is done, I have no fear—no matter what the temporary difficulties may be—of the final result to the Dominion no fear of the country's destiny. I have full faith that the Dominion will make such progress in all lines that all our railway facilities will be needed within the next few years.

Now, let us consider the Canadian Northern along the same lines. I have been criticised, and the Government of which I was a member has been criticised, about this railway. Well, you know, so many people have good hindsight, but not everybody has perfect foresight. Nobody could foresee that this war was coming, and nobody could tell what the result would be. We were all caught in a financial maelstrom. I am not discouraged with the Canadian Northern as one of our transportation companies. I did take exception with Sir William Mackenzie to some of the things he was doing—for instance, to the extension of his lines through the Rockies for the time being. But it is a condition that confronts us. I said concerning the Grand Trunk Pacific, so I say concerning the Canadian Northern—hard struggling now, but in years to come, and not so many years either, we will need the Canadian Northern to carry our traffic to and fro in the Dominion of Canada. In my opinion, the Canadian Northern west of the Great Lakes occupies the best territory of any of the railway lines running through the West, and I have been over a good portion of them all. While the system has been constructed largely on the principle I first mentioned, that of cheap construction, to begin with and improvements made as traffic increased, it has a collecting system of close upon five thousand miles in some of the best territory in our Prairie Provinces. I may not agree with some of the projects of the Canadian Northern; and I do think it is time we came to a finality about handing them out money—I express that view frankly—but as to the final result, I believe that the Canadian Northern, running as it does through the best territory in the West, whether its operation is to be by the Government or by a company, will be needed in the time to come and needed to the fullest extent.

What is to be the outcome? The Government told us—and I suppose I am in order in discussing this now because it is practically the same subject—that it is the intention to appoint a commission to investigate the railway situation. I am not so confident at the present time that very much good will come out of that. And, by the way, I am afraid the Prime Minister will soon have to give up giving names to his commissions, which are now becoming quite an army; it might be more convenient to have them numbered or labelled. I am rather inclined to think that the Govern-

ment could, by calling in the heads of these different companies, come to a solution of this problem without a highly-paid commission, and so could devote to some other purpose the $150,000 proposed to be expended on the commission. But the Government says the commission is to be appointed. Now, the outcome will depend largely, first, on the instruction given to that commission, and, second, on its personnel. If the instructions are to examine the whole situation, without any restriction whatever, with a view to making suggestions to the Government as to the advisability of a certain policy and refraining from other policies, possibly that may be all right. But the commission must be composed of men of vision. We see it stated in the press that one commissioner is to come from Europe, another from the United States, these two to select the third. I do not know whether that is correct or not. I am not sure that men so selected will have the outlook that we in Canada have upon our own country. As I have said before, the men from the old land, to my mind, cannot possibly have the vision with which we are seized concerning the future of the Dominion of Canada, with our millions of acres still untilled, our mines unexplored, our vast timber territory, our fisheries, and many other things of which he is not cognizant—in fact, his vision might be narrower than that necessary to take in the whole situation; he might be inclined to bring the matter down to the present dollars and cents without having the outlook which, I think, is requisite if we are to maintain the progress of the Dominion. The representative from the United States would be more in line with our ideas of development, I imagine, because his country has gone through what we are now going through. But it will depend altogether on the man. I submit to the Government that it is not going to be an easy matter to make this selection and to get men who will completely fill the Bill. These two, I understand, are to select the third. I would not let them do that if I were in the Government.

Sir ROBERT BORDEN: That is a very new idea.

Mr. GRAHAM: That is in the press. The press is energetic these days; it is getting something new, notwithstanding the occasional dullness of Parliament. Anyway, I would not allow them to do that. I do not wish to be offensive, but railway men, like all other combinations of business men, are a kind of masonic society among themselves; and while the man whom they would select would probably work in harmony with them, he might not suit the requirements which, to my mind, ought to be found in any man occupying that position. The reason I speak of this is some experience that I have had. At one time in my career I tried to choose a board of engineers to help me in connection with the Quebec bridge. I selected one; we selected another, and before we had selected the third the other two were disagreeing. For two years I lived in an attitude that was not peaceful, the trouble being not in connection with the construction or the plans of the bridge, but in keeping my board on terms of peace with one another. The Government will have difficulty in the selection of that board, and the stronger the men the more difficulty there will be in getting them to work harmoniously, unless the Government handle the selection themselves.

I want to go on record as being a man with the optimistic view, wishing to sound a note of warning in my own weak way against our allowing ourselves to be stampeded by the pessimism that is in the air. Canada is all right. She is going on to the accomplishment of her purpose with a firm tread. True, she is hesitating at the present time, but when those who come after us write the history of our country I know that there will be no reason to feel ashamed of what the people of Canada did during this time of stress and trial. In addition to the courage we are showing concerning the war, we need just as much courage in handling our own domestic affairs. I urge upon Parliament the necessity of keeping our heads uplifted, not allowing ourselves to be diverted from the purpose of developing this country, feeling assured that in the years to come every dollar we have expended will be found to have been not unwisely expended, and will bring a return to the people of Canada, thus helping to build up our country as we expect it will be built up.

So far as the discussion of this question is concerned, I suppose if there were to be a possible division it would be on concurrence—I am not sure. However, I wish to ask just a few questions as to matters of detail. There is a statement on page 13 of the information concerning the Grand Trunk Pacific Railway Company, which I do not quite understand. It refers to sundry

assets and sundry liabilities of the Grand Trunk Pacific Railway Company on February 29, 1916. While it gives assets of the branch lines and various other items that would belong to the organization, no amount is given as an asset of the main line itself.

Sir ROBERT BORDEN: These statements are referred to on the previous page.

Mr. GRAHAM: I see that each statement refers to some other statement. Take the item under assets: "London Office, $243,000." Then I find these items, "unpaid wages, $559,698; accounts payable, $3,264,063." Would the minister explain that item "London Office"? Has he the details of these two items concerning unpaid wages and accounts payable?

Sir THOMAS WHITE: No, I have not. I did not consider that that had any direct bearing upon the matter of this proposed loan. If my hon. friend is interested, however, I shall try to get that from Montreal. The item of accounts payable would seem to be the accounts current in connection with the railway system.

Mr. GRAHAM: It is a large amount, $3,260,000.

Sir THOMAS WHITE: In connection with a railway system, especially in such times as these, there is usually a large amount of outstanding liabilities. As to the London office, that amount might be a balance over there to their credit, or it might represent charges on account of securities that have been sold. This is mere surmise on my part, because I have not the detailed information. It occurred to me that the question would not arise; I am sure my hon. friend will understand that.

Mr. GRAHAM: As to the item "unpaid wages," perhaps the Government does not meet with this like the ordinary member, but we get letters from different people about unpaid wages. When we propose to aid any company, immediately those to whom amounts are due, particularly for labour, write to various members and urge that the Government make some statement as to the probability of these unpaid wages being paid before the taxes of the men to whom the wages are due are handed over to the company.

Sir THOMAS WHITE: I should think that that would be the amount of wages unpaid at the time this statement was made, February 29, 1916. I do not think it is to be assumed that the road is in arrears as to wages. It has not been drawn to my attention that there are any unpaid wages.

Sir ROBERT BORDEN: That is, overdue.

Sir THOMAS WHITE: If my hon. friend has received any notification to that effect, before paying any of this money I shall be glad to make inquiries of the Grand Trunk Pacific Railway Company. I am quite sure that the loan would enable them to pay up any arrears of that kind, but personally I do not believe that they are in arrears in this respect. I believe that it is a matter of bookkeeping as of February 29, 1916, to show the amount of wages unpaid—accrued, I suppose, but not yet matured due.

Mr. GRAHAM: I suppose I need not ask any more questions about the details of that statement, because I shall not get any particulars. It would have been better, I think, if the Grand Trunk Pacific had given the accountant of the department some details of these matters; it is almost inevitable that questions of this kind will be asked. There is another item, "advances, National Transcontinental railway contracts, $873,000." I suppose that is an interchange of work, in a way, between the Grand Trunk Pacific and contractors on the National Transcontinental railway, but it is not clear here.

Sir THOMAS WHITE: That is right.

Mr. GRAHAM: Then there is the item, "section 'F' accounts, to be charged to National Transcontinental Railway Commissioners." The National Transcontinental Railway Commissioners—except it be the Minister of Railways—do not exist. That is on page 13. That is not a large item, but it is just a little confusing. This would make it appear that certain accounts ought to be charged to National Transcontinental Railway construction to the extent of $10,000. That is charged to the Government, or to the Minister of Railways as the commissioner who was to finish the construction of the National Transcontinental railway. But the National Transcontinental railway is finished, the Government says, and consequently there is no commission at all.

Mr. REID: Yes, there is; there is a commissioner still.

Mr. GRAHAM: The minister would be the commissioner.

Mr. REID: Yes; but the commission has not been dissolved.

Mr. GRAHAM: The commission as heretofore existing, except it be the Minister of Railways, is dissolved.

Mr. REID: The Act was changed reducing the number of commissioners from three to one, and the minister is now the commissioner.

Mr. GRAHAM: That means that the Government owe the Grand Trunk Pacific $10,000.

Sir THOMAS WHITE: They claim it.

Mr. GRAHAM: If we are to take this statement as one on which we should base the loan to the Grand Trunk Pacific, then the Government owes the Grand Trunk Pacific $10,000, which ought to be in the Finance Minister's annual statement as one of the liabilities.

Mr. REID: Is that not a case where the Grand Trunk Pacific were contractors along the railway? My hon. friend will remember that the Grand Trunk Pacific were contractors on part of the Transcontinental, and those accounts have not yet been finally adjusted or disposed of. The Grand Trunk Pacific had quite a large claim against the Transcontinental Commission for the construction they had done, and, on the other hand, the Government had some charges against them.

Mr. NESBITT: Referring to the Grand Trunk Pacific loan, is there anything in this report to show what amount is for the deficit and what amount for the purchase of rolling stock?

Sir THOMAS WHITE: That will be found on page 10, in a statement certified by the vice-president and treasurer of the Grand Trunk Pacific.

Mr. NESBITT: Why do the Grand Trunk company proper not guarantee this loan? What is the reason given for that? They guaranteed the other loans, so far as the Government is concerned.

Sir THOMAS WHITE: They did not guarantee the last one.

Mr. NESBITT: Do they give any reason why they do not guarantee this one? The Grand Trunk proper had a more successful year last year than they have had for some years past. Why do they not guarantee this loan?

Sir THOMAS WHITE: There are considerations affecting the credit of the Grand Trunk Company which are, of course, of great concern to its directorate.

9 p.m. My hon. friend knows that the guarantee of a company constitutes a contingent liability, and has a direct bearing upon its credit. I pointed out yesterday that the Grand Trunk had already given guarantees and made loans in respect of the Grand Trunk Pacific to an amount exceeding $120,000,000. The Grand Trunk has to do considerable financing in order to provide betterments, improvements and terminal facilities in connection with its own existing system; and the Grand Trunk feels, in a word, that it is not able, without seriously impairing its credit, to give additional guarantees upon the Grand Trunk Pacific. My hon. friend is quite logical in asking why the Grand Trunk should not carry the Grand Trunk Pacific. The reason they state is that they are not able to carry the Grand Trunk Pacific any further. Mr. Smithers made that statement in his letter to the Prime Minister, which has been laid on the Table of the House and appears in this statement. It is perfectly clear that the Grand Trunk cannot, under present market conditions, finance the Grand Trunk Pacific by raising additional money upon its guarantee; and it is their view that to do so would seriously impair the credit of the Grand Trunk Railway Company and prevent it from financing the betterments, improvements and facilities it requires in connection with its own system.

Mr. LEMIEUX: I wish to state, with the hon. member for Renfrew (Mr. Graham), that I also am an optimist. I have faith in my country, and I am far from being inimical to any of the railway systems. I think they have done a great deal towards the opening up and the development of this country. I cannot forget, when I was a boy attending Ottawa University, spending my evenings in the House of Commons listening to Sir Charles Tupper, Sir John Macdonald, Sir Richard Cartwright, and the other giants of those days. It was at the time of the inception of the Canadian Pacific railway. I remember Sir Charles Tupper predicting that some day the crop in the Northwest would yield 100,000,000 bushels. There was a roar in the House and in the party press over the prediction of Sir Charles. They derided him as too great an optimist; but he lived long enough to see his prediction fulfilled. My hon.

friend will remember that the Canadian Pacific was in pretty low water on a certain day. I remember that when the Hon. Frank Smith was a member of the Macdonald Government, and when the late Lord Strathcona, then plain Donald Smith, was connected with the company, together with Lord Mountstephen, they approached the Government on a very notable occasion when they were nearly bankrupt. The Government had refused to make a small advance, that is, small compared with the advances that have been made to railway companies since. They asked for $25,000,000. The history of the cabinet meeting of that day has been told by many writers, but perhaps the House will bear with me if I recall that the advance—I think it was something like $25,000,000, but perhaps my hon. friend from South York (Mr. W. F. Maclean) will be able to give the exact figure; he knows that part of Canadian history better than I do—had been refused by the Government at Ottawa. It is said that Donald Smith, afterwards Lord Strathcona, and Lord Mountstephen returned to the Russell Hotel in very low spirits. In fact, they were ruined, and their company was facing bankruptcy. But the Hon. Frank Smith—and all honour to his memory—and the late Hon. Mr. Pope, father of Senator Pope, asked Sir John Macdonald to hold another cabinet meeting to reconsider the application. It is said that at that cabinet meeting it was declared that if no advance was made the Canadian Pacific railway would go bankrupt, and that if the Canadian Pacific railway went bankrupt the credit of the country would be seriously damaged. We all know the sequel. The advance was made; the money was refunded before the day named in the contract; the line was built, the last spike was driven in near Vancouver by Sir Donald Smith himself long before the date fixed in the contract, and to-day the Canadian Pacific railway is certainly the best administered corporation on the American continent, and possibly in the world. I am bound to say that the heads of the Canadian Pacific railway have always been men of the highest merit, and the officials also have been of the very best. Having read the history of my country since Confederation and having lived since the inception of the Canadian Pacific railway and watched the course of events up to the present time, I am an optimist and believe that our National Transcontinental can certainly be saved. But it is not pessimistic to state that nationalization is ripe. I believe in nationalization, in state ownership, as regards railways. The note of pessimism comes from the Minister of Finance. It is not by listening to speeches on this side of the House that I become pessimistic; it is by listening to my hon. friend the Minister of Finance. He tells us in so many words, if I mistake not, that these proposed loans of $8,000,000 and $15,000,000 to the Grand Trunk Pacific and the Canadian Northern are a stop-gap; that they are only to enable them to pass through the crisis, and that we may well expect that in the near future they will come again hat in hand to obtain new loans from the Government of this country. So that I gather from the remarks of my hon. friend that he has in mind that, as surely as day follows night, the two systems are doomed, which I do not believe. But if they are doomed, why should we make the loans to-day? Why should we increase the burden? I will give some advice to my hon. friend the Minister of Finance and to my genial friend the Acting Minister of Railways, and I will charge nothing for it. The Government knows to-day that these two systems are in deep water. They have come again and again to this Parliament to obtain advances. The Government practically promised on each occasion that it would be the very last time and that their claims would not be entertained again. They come again this year, and, with this note of pessimism in the speech of the Minister of Finance, let me assure him that four out of five men on the street will tell him that the time has come for this country to get hold of these railway systems, to nationalize them. If my hon. friend will put his ear to the ground he will find out what he has to do. He will appoint this commission, he will delay the loan which he intends to make, and he will begin by putting that commission into operation. Let us prorogue this session of Parliament, let us have a session inside of four or five months, and then, if the report contains what seems to be already in the mind of the Minister of Finance, let us go in for nationalization. Otherwise, you are simply adding to the burdens of the people, you are not practically helping the two railway systems, as you will have in the end to nationalize them. I have it from the highest railway authority on the American continent—and if I were at liberty I would give the name, but I am not—that the Government must, within a very short time,

take over the transcontinental railways and have three state-owned railways.

Mr. OLIVER: When the Canadian Northern guarantee proposals were before Parliament in 1914, I took exception to the position in regard to the branch lines in the Prairie West. I would like to know what the position is, what is going to be done under this proposal now before the House in regard to these branch lines of the Canadian Northern in the Prairie West, branch lines not yet completed, although bonds guaranteed by provincial governments have been issued. In the Government's proposals of 1914 they simply ignored that condition. They counted the bonds which had been guaranteed by the provincial governments as an asset of the company upon which they took security, but they took no measures to secure the completion of the branch lines. What has the Government in mind in the proposal now before the House in regard to these branch lines?

Sir THOMAS WHITE: The present proposal has no bearing on that matter at all. The question of whether the Canadian Northern will be able to complete these branch lines will depend upon its ability to finance the securities guaranteed by the provincial Governments. It is quite possible, although I am speaking without full information, that if the financial conditions permit, the Canadian Northern will be able to proceed with the lines in question; but this loan is for the purpose of meeting the current obligations of the Canadian Northern and to enable them to finance until the next session of Parliament. The company is confronted with an immediate serious situation by reason of the large amount of its unfunded debt and current obligations, and this loan is for the purpose of meeting that situation and enabling them to finance during the year. Whether the Canadian Northern will proceed with the branch lines in the West under any understanding or agreement with the provincial Governments will depend entirely on its ability to finance the requirements altogether apart from this particular loan.

Mr. OLIVER: I do not think that the position taken in 1914, or the position taken just now by the Minister of Finance, is fair and reasonable or is even sound public policy.

Sir THOMAS WHITE: Does not my hon. friend observe that in order to provide for what he has in mind the Government would have to give an increased amount, assuming that we agree that this money is needed to keep the railway system as a growing concern? If the Government would provide an additional sum specifically for the purpose in question, that is one thing; but the Canadian Northern railway, as I stated, finds itself in such a position that it has to have this aid in connection with its current obligations and unfunded debt.

Mr. TURRIFF: What the minister says does not apply exactly, because I know that in some of the provinces the railway company has sold these bonds guaranteed by the province and that the money has been deposited in the bank and can only be drawn out on the certificate of the provincial Government's railway engineer. There are some millions of dollars, raised by the railway company from the bonds guaranteed by the province, lying in the bank, and the railway company does not complete the lines for which these bonds were issued. That was the case last year and it is the case to-day. If the Government is going to come forward like a good parent and practically finance this company, it ought to see that the company spends the money lying at its credit in the bank to complete these railways, or complete them as far as the money will go. There is no sense in the money lying there, and settlers on the prairies not being able to get the railway accommodation for which the provincial bonds were sold.

Sir THOMAS WHITE: My hon. friend will, I am sure, realize that it is a question, from the Canadian Northern standpoint, as to whether they can build the lines that were intended. I accept the statement of my hon. friend, although I have no accurate knowledge as to the facts, that guaranteed bonds have been sold and that the money lies in trust account to the credit of the Provincial Treasurer for the purpose of constructing these lines. Let us assume that the money is not sufficient for the purpose; the Canadian Northern have to have regard to the existing financial conditions and it will be for them to say whether the money is sufficient for them to complete the line. They might say: "If we go ahead and build the line we can only build it up to a certain point, and we will have to stop there owing to existing financial conditions. We are not able to raise the additional money to build this line, nor is it desirable that under existing conditions we should incur the loss which

might result from the early operation of the line." The difficulty of this war time is that the railway companies, as well as other companies, are confronted with extraordinary financial conditions under which they are not able to do what they would gladly do if the conditions were different. If they were able to finance as they were some years ago, and if their prospects were such that they could carry on the operation of these extra lines, the situation would be entirely different. But under present conditions I can well understand any railway company, either the Grand Trunk Pacific or the Canadian Northern railway, unable as they are to market their bonds except at rates away below the price they could have got two or three years ago, proceeding with construction without the certainty that they would be able to finish the lines, or without the certainty that after the lines were finished the company would be able to bear the additional burdens until such times as the lines were remunerative.

Mr. OLIVER: Again, I say, I cannot agree with the hon. minister that the two questions are entirely dissociate. I insist that they are absolutely interlocked; that the question of what the Canadian Northern railway is doing with the money of the provinces that it has in hand, and which this Government counts as an asset——

Sir THOMAS WHITE: No, it does not.

Mr. OLIVER: Under the guarantee of 1914 that money is listed as a security held by this Government on the Canadian Northern railway. Having assumed that position, this Government have a responsibility in regard to those enterprises that they cannot ignore, and which they should not ignore when there is before them a general proposition of aid to the Canadian Northern railway. This proposition of aid to the Canadian Northern railway is not confined to interest payments. It includes not only interest payments, but payments of actual expenditure. If the proposition were confined entirely to interest payments, there might be some merit in the contention of the minister. But it is not confined to interest payments; it includes payments for work done, for accounts outstanding, and other liabilities. It goes beyond the question of meeting interest payments now accruing and takes into account these other considerations, and I maintain that the question of the completion of these branch lines is not only of equal but of vastly greater importance to the well-being of the country and the success of the Canadian Northern enterprise, and the security of the money that is invested in that enterprise, than any of these other considerations. I hope I shall be excused if I speak very strongly on this point, but I do so because my constituency is very very deeply interested, as is also the adjoining constituency.

This railroad question has generally been discussed by those who see the question only from the centre outwards; I represent the people who are at the outside of the circle, and who are affected in an entirely different manner. Thousands of people have gone into the partially wooded country north of the Saskatchewan river, along surveyed routes of the Canadian Northern Railway, knowing that the bonds had been guaranteed by the provincial Government, knowing that the bonds had in many cases been sold and the money realized. They would not have gone in there and settled if they had not had the expectation that the road would be completed within a reasonable time. The company have in one case built and opened up some sixty miles of road, and graded some fifty miles more, but without the steel. In another case they have sold the bonds for a hundred miles of road, and have graded eighty-five miles, but have laid no rails at all; and people for a hundred miles beyond the extreme end of that grading have gone in and settled upon the expectation of the road being built. How the Government, holding 40 per cent of the stock of the Canadian Northern Railway—have assumed that much responsibility in regard to the company—can absolutely ignore that condition and say: We have no responsibility whatever in regard to it. We know nothing about it; it is a matter between the Canadian Northern Railway and the provincial Governments—is something I cannot understand. At the time they are saying that, they are taking the money of those very people to pay the Canadian Northern liabilities, and not liabilities merely in respect of interest accruing, but capital liabilities incurred in other localities. I have no hostility to the Canadian Northern Railway, and in this matter I do not wish to criticise the Government severely, I appreciate the difficulties that have to be faced, and am willing to assist the Government in facing those difficulties, but I certainly cannot agree without protest to a proposal that would carrry aid a certain distance and

chop it off just where it touches the people whom I represent, and who are more deeply interested in the extension of aid than any other people in the Dominion of Canada.

The idea that the Provincial Governments of the Prairie West are primarily responsible, or ought to be primarily responsible, for the railway development of that country is not a fair proposition. The land, the timber, and the minerals of the Prairie West belong to the Dominion, and are administered by this Government. The provinces do not own a foot of land, a stick of timber, a pound of coal, or a cubic foot of gas; they have no right of proprietorship in any of these things. The Dominion at large owns all these resources, and this Government administers them, derives revenue from them, and is responsible to the country for their development. In response to the demands of the people who were actually settled on the land, and who looked to the Provincial Government for means of transportation by wagon roads, it is true that the Provincial Government, considering the situation of these people and realizing that wagon roads could not possibly meet their requirements, guaranteed railway bonds for the purpose of having railroads constructed. The Provincial Governments have done everything they could; they have strained their credit to the limit for the purpose of aiding in the construction of those roads—a purpose which has had for its result the bringing into immense value of the property of the Dominion of Canada. This Government has guaranteed the bonds of the Canadian Northern Railway, and, the railway company having sold the bonds and having spent a large part of the proceeds, but not the whole of it, this Government takes a blanket mortgage on the very roads that the Provincial Government has guaranteed; and this Govern ment, now calling on the people of the Dominion to contribute $15,000,000 for the aid of that railway company, absolutely ignores the condition I have placed before the House, and the position in which these people are situated. I cannot agree with the Minister of Finance that this is not the concern of this Parliament or of this Government. I consider it an absolutely intimate concern of this Parliament and of this Government. Looked at only from the standpoint of the Canadian Northern Railway—if that was the only interest to be considered—the completion of these branch lines—I am not speaking, remember, of lines that have not been begun, but of lines that have actually been commenced, and which stand partially but not finally completed to-day, either for shortage of money or other reasons, I know not what—I maintain that the completion of these branch lines would be of greater material benefit to the railway company itself, in the way of building up the traffic that is necessary to its ultimate success, than any other assistance that could be given to it by this Government. I hope the Government will reconsider this view that has been expressed. When I saw this liberal amount of aid proposed for the Canadian Northern, I naturally concluded that it was intended to consider the position in Saskatchewan and Alberta, and that some adjustment would be included that would tend, at any rate, to the completion of these partially-completed enterprises.

Sir ROBERT BORDEN: Is the hon. member speaking of the two companies, the Canadian Northern Western and the Canadian Northern Saskatchewan?

Mr. OLIVER: I am speaking particularly of two lines in Alberta, in my own constituency and the adjoining constituency, which are under the Canadian Northern Western charter, I think; but I take it for granted that there is a similar situation in Saskatchewan, though I am not familiar with it; and I know there is a similar situation in other parts of Alberta, where the country is in occupation and is under production, and where that production is absolutely handicapped for lack of the completion of Canadian Northern lines which have been guaranteed by the provincial government,—the people have gone in and settled there in expectation of these lines being completed. I am not accusing the company of bad faith—but I am stating that there is the condition, and I say it rests upon the shoulders of this Government to see to it that that difficulty is rectified under present circumstances.

Mr. MEIGHEN: I will certainly not deny that there are districts in the West which are in need of branch line construction. Furthermore, it certainly would be our duty, were it in our power, to see to it that all branch line construction now necessary in the country is completed. The hon. gentleman thinks the Government is remiss in its duty in bringing down this measure without seeing to the completion of certain lines in the province of Alberta, and complains that the matter of their com-

pletion is entirely one for which this Government is responsible. He refers to a couple of lines which, he says, are under the charter of the Canadian Northern Western, in respect to which he says the bonds have been guaranteed to the extent of $15,000 a mile by the province of Alberta, but which lines have not been completed.

Mr. OLIVER: To be exact, one is guaranteed to the extent of $20,000 a mile and the other to the extent of $18,000 a mile.

Mr. MEIGHEN: I understood the hon. gentleman at first to say $13,000 a mile, but the extent of the guarantee of the province of Alberta, he tells us, is $20,000 a mile in one case and $18,000 in the other. These two are not the only lines in western Canada that should be completed, and that doubtless would be completed were financial conditions different from what they are. My first observation is this, that the Canadian Northern Western is a line still under provincial jurisdiction, a line in respect of which the Parliament of Canada has not declared that it is a work for the general advantage of Canada; this Parliament decided, two years ago, that during the period of construction the Canadian Northern Western should remain under the jurisdiction of the provincial Government and remain a purely provincial railway. And, I may say, it came to that conclusion at the urgent insistence of the hon. member for Edmonton (Mr. Oliver) himself.

Mr. OLIVER: I have to protest against the conclusion of my hon. friend right there.

Mr. MEIGHEN: That Parliament came to the conclusion—

Mr. OLIVER: That it came to that conclusion at my insistence.

Mr. MEIGHEN: Possibly we might have come to that conclusion anyway, but we were helped to it by the arguments of my hon. friend.

Mr. OLIVER: Not by my intention anyway.

Mr. MEIGHEN: Perhaps the hon. member's intention, though he argued in favour of that, was that we should decide against it. However, we agreed with him on that occasion, and, as a consequence, the Canadian Northern Western is still under the authority of the provincial Government of Alberta.

Mr. OLIVER: I hope the hon. member will permit me to interrupt him just a moment in order to get the record right. I think Hansard will prove that I insisted, in the remarks I made, that if the Government took the steps they did at that time they should assume full responsibility for the railway.

Mr. MEIGHEN: But he insisted that the control of the Canadian Northern Western should rest with the province of Alberta. Perhaps he would have liked that we should assume responsibility for supplying the money; but he insisted, whether we supplied the money or not, that the Government of Alberta should have the authority.

Mr. OLIVER: I cannot agree with that statement of the case.

Mr. MEIGHEN: The hon. gentleman is endeavouring to give the House the impression, if I caught his argument correctly, that the proceeds of securities guaranteed by the province of Alberta had not only not been utilized for the purpose for which they were guaranteed, namely, the completion of the construction of lines covered by that guarantee in the province, but were diverted to the payment of other debts.

Mr. OLIVER: No, I said they were listed as part of the securities over which this Government assumed control in consideration of the guarantee given.

Mr. MEIGHEN: The Government mortgage of 1914 applied to all the properties of the Canadian Northern, or, more strictly, it did not apply on the properties, but on the stocks of the company, subject to the mortgages, and the mortgage was in favour of the Government of the province of Alberta as security for its guarantee. It would be impossible that there should be any diversion of the funds; the funds are expended on the roads, or they lie there awaiting expenditure. If they lie there, it will be for one reason, and one reason only—that they were not sufficient to construct the road. The hon. gentleman has been instrumental in seeing to it that the province of Alberta kept within itself control of that road. The province of Alberta is not without power yet, if it insists upon the completion of these lines which the proceeds of the guaranteed securities are not sufficient to complete—it is not without power to increase that guarantee and so enable the proceeds to be made sufficient to secure completion. I understand that the policy of the road has been to build such lines as were laid out at the time of the going through of the $45,000,000 mortgage of two years ago, but

not to prosecute further unless the proceeds of the securities already guaranteed were sufficient to enable them to complete; for the simple reason that it has been the practice before to realize on provincially-guaranteed securities to the fullest extent possible and then to use the proceeds of the consolidated debenture stock to complete construction.

Mr. OLIVER: It is not a question of the Canadian Northern going forward with lines not already begun in 1914; it is a question of the company completing lines then begun and partially completed.

Mr. MEIGHEN: In one sense, I presume, a branch line is never completed. It may extend for ten miles, and later for another ten miles, and so on.

Mr. OLIVER: To the extent to which bonds have been issued.

Mr. MEIGHEN: To the extent to which there is money to complete. That is as far as they are able to go. The consolidated debenture stock mortgage provides that there may be a priority to it of securities to the extent of $10,000 per mile issued, or $15,000 per mile if those securities are guaranteed by a provincial or by the Dominion Government. The consolidated debenture stock securities become a second charge, subject, say, to provincially guaranteed securities to the extent of $15,000 per mile. Consequently they are able to issue that stock subject to these provincial securities. But the trouble has been that since the outbreak of war it has been impossible to sell that character of stock, so that there are no moneys that would enable them to go ahead with that construction. If the Dominion Government were to ask them to do so, the obvious answer would be: supply us with the funds, and we will. If the hon. member for Edmonton wants us to take the position that in addition to what is absolutely necessary to hold the situation we should provide the railway company with funds to prosecute new construction or to complete the prosecution of construction for which the provincially-guaranteed securities are not sufficient, then he should put that in the form of a definite resolution so that we shall know what we are asked to do. For the present it is not the intention to provide funds loaned by the Dominion of Canada to prosecute construction further. The provincial Government has it in its power to do so. We have power under the legislation of 1914 to give priority to provincial securities to a greater extent than they have already been issued, and I have no doubt that any application to give such priority to provincially-guaranteed securities would be sympathetically considered. The provincial Government has it in its power to enlarge that guarantee and to give priority to that enlarged guarantee if it so desires. So that it has the situation in its own power.

Mr. OLIVER: The minister has stated my position exactly. Under the circumstances as they exist, the Government being a part owner in the Canadian Northern and assuming to carry the Canadian Northern forward, I think that that would be an entirely proper additional expenditure on the part of this Government. I desire it to be understood exactly in the terms that my hon. friend has stated; that is exactly the position as I view it. When the Provincial Government guarantees the bonds of a branch railroad to the amount of $20,000 a mile and the company sells those bonds, no doubt at a considerable discount, and spends a part of the money—we do not know how much—the remainder of the money is to the credit of the company at the order of the provincial treasurer. My hon. friend says that if that money was sufficient to complete the road the company would complete it. It does not follow at all that the company would complete the road if that money was sufficient to complete it. It may be that the financial circumstances of the company are such that, the money being deposited in, we will say, the Bank of Commerce, the Bank of Commerce is willing to advance money to the company for other purposes while that money remains in the Bank of Commerce, a satisfactory collateral to the loan that is made for other purposes.

Mr. MEIGHEN: The hon. gentleman knows that it could not possibly be applied as collateral to any other loan. The trust deed would prevent it.

Mr. OLIVER: I do not follow my hon. friend's argument. I know that papers could not be drawn to that effect, but I know also that the management of the bank recognizes—$3,000,000 being there to the credit of the provincial treasurer of Alberta, which money cannot be drawn by the provincial treasurer until certain railroad construction has been done—that if they have an understanding with the railroad company that railroad construction will not be done, the money is just as safe in

the bank for other purposes as if they had all the agreements that could be put under seal.

Mr. MEIGHEN: That might be, but it could not be there as collateral to the new loan.

Mr. OLIVER: I am not a banker, and I may be using the word "collateral" improperly. I am sure, however, that it is perfectly good security to the bank to enable it to advance the company money for other purposes, and I verily believe that is what has been done, not so much because the bonds did not realize enough money to enable the company to build the road as because the necessities of the company caused that money to be used in the way that I say, for purposes other than those for which it was intended and for which the provincial guarantee was given. I have taken the responsibility of bringing this condition to the attention of the Government and I say that it is a condition that demands attention at this particular time. If the Government say: "We have no interest in this matter; we care nothing about how the Canadian Northern juggles with their money or with the money that they get from the provinces; if they are able to use provincial credit for the benefit of Dominion enterprise, well, that is good business; let the provincial Government find their own remedy;—if the Government say this, I do not think it is a fair proposition. I do not think it is right; I do not think it is good business. I certainly know that it is not good for the progress of the country, nor is it good for the Canadian Northern Railway Company itself.

Sir ROBERT BORDEN: One would think that if there was any such collusive agreement between the bank and the railway company within the knowledge of the provincial Government, they would simply remove the money so that it would stand to their credit in the same way in another bank.

Mr. OLIVER: That is quite an obvious conclusion, but there is this to be said: on a certain occasion not many years ago the provincial Government of Alberta undertook to do that very thing in regard to a railroad aid transaction that was not connected with the Canadian Northern in any way. The result was that the bank refused to give the money up. The case was carried to the Privy Council, and the Privy Council decided that the Government could not draw the money from the bank. Having had that experience, they are not anxious to undertake it again.

Sir ROBERT BORDEN: My hon. friend entirely misunderstands me. I did not suggest that they should divert it to any other purpose. The Privy Council did decide that they could not divert it to any other purpose under the particular circumstances, but the Privy Council did not decide, nor did any other court decide, that the money could not be placed to the credit of the provincial government for the same purpose in another bank which had no collusive arrangement with the railway company.

Mr. OLIVER: I am not able to answer the Prime Minister; he being of the legal profession, I will have to bow to his interpretation of the Privy Council's decision. But he will pardon me if I say that I do not appreciate the condition as he has stated it. I cannot see how the question as to how the ultimate purpose for which the money was to be used came in, when the only question was: shall the Royal Bank be compelled to honour the cheque of the Provincial Treasurer of the Government of Alberta, or not? I cannot understand how the purpose for which the money was to be used came into question. At any rate, that is what occurred, and because it occurred the provincial government is not anxious to enter into litigation with any of the banks on that account. This money got into the banks before the decision of the Privy Council in the Great Waterways case was rendered, and I imagine that probably it will not occur again.

Mr. NESBITT: I am neither an optimist nor a pessimist so far as railways or anything else are concerned. I only want to see the Government doing the best that is possible under the circumstances of this difficult railway situation, and for that reason I want to get whatever information I can.

I noticed a statement in the Bureau of Railway News Statistics, Chicago, that the Government-owned railways in Canada in the last year cost $102.13 for each $100 taken in; and the private-operated cost $73.94. That is not an encouragement to me for Government-owned railways, nor will it be until we have some system of operating them to better advantage than we have had in the past.

The Canadian Northern statement does

not show in what proportion this $15,000,000 is to be divided between payment of interest upon securities of the companies included in the Canadian Northern Railway system having priority over the guaranteed securities authorized by chapter 20 of the statutes of 1914, instalment of equipment securities, and upon construction. I think it is quite material for us to know how much of this is to be used for these items; we cannot otherwise discuss it intelligently.

Sir THOMAS WHITE: My hon. friend will find on page 13 of the Canadian Northern statement a memorandum, prepared from records of the Finance Department which I had prepared, showing the disposition of the proceeds of the $45,000,000 of guaranteed securities. I think my hon. friend may assume conclusively that the proceeds on the $45,000,000 of guaranteed securities have been paid out in accordance with the legislation of 1914 and the trust mortgage executed in accordance with its provisions. As to the proposed disposition of the $15,000,000, I draw his attention to page 8, on which appears the most important statement in this document, because it shows the immediate financial situation of the Canadian Northern Railway Company. So far as the funded debt is concerned, of course the securities have been placed, but the urgency of the situation of the Canadian Northern Company's system is shown by the statement on the lower part of page 8, that is the memorandum re liabilities, April 15, 1916. All the liabilities shown in this statement are either short date securities, one-year or two-year, or obligations current; and it is particularly to the latter that I now draw my hon. friend's attention. He will observe that apart from the London loans and the Canadian loans, and the two-year and one-year notes, representing respectively $29,400,000, $16,200,000 and $14,000,000, there are the following items:

10 p.m.

Bills payable—advances on construction of main line and branch lines..		$ 7,300,000
Temporary loans covering interest, construction, betterments and equipment..	$19,925,345	
Less receivable from proceeds of securities, etc., applicable in reduction of the above..	3,529,929	16,395,416

Then, on the top of the next page and embraced in the same statement, we have amounts owing to contractors, subcontractors, estimated, material accounts, etc., $5,912,407 and sundry accounts, capital account, coupon warrants, making an aggregate of $13,997,338. From this they deduct cash on hand, receivable, materials, supplies, etc., $10,780,389, leaving a balance of $3,216,940. Now, if my hon. friend will add together the $7,300,000 representing bills payable; the temporary loans less the amount receivable from proceeds of securities applicable in respect thereof, amounting to $16,395,416; the contractors estimates amounting to $5,912,407; and the balance of $3,216,940 in the last statement; he will find the immediate financial situation with which the Canadian Northern Railway system is confronted, aggregating $32,000,000. As I explained to the hon. member for South Renfrew—and I filed a letter in connection with this—the Canadian Northern Company have certified that, so far as the contractors' and subcontractors' estimates, monthly accounts, etc., were concerned, with the cash which remained on balance in the trust account and the financial resources which they had, apart from the $15,000,000, they would be able to meet that situation. Therefore what they are confronted with is a $7,300,000 situation and a $16,395,416 situation; in other words, $24,000,000. To put the Canadian Northern in a position in which its current obligations would be taken care of, would require, not $15,000,000, but $24,000,000.

Mr. NESBITT: Less the $10,000,000.

Sir THOMAS WHITE: No, the $10,000,000 does not entef. I am adding the $7,300,000 and the $16,395,416, making $24,000,000. That is the immediate financial situation with which, as I have stated, they are confronted. My hon. friend has asked me what are the details. So far as the $7,300,000 is concerned, that is perfectly clear, because that is represented by the balance payable by the company on account of the advances on construction of main line and branch lines. Then there are the temporary loans, aggregating $19,925,345—less receivable from the proceeds, $3,529,929; leaving $16,395,416—made up in this way: Construction—completion of main line and certain branches which were under construction, when war broke out, including interest on securities issued on same and ranking prior to the $45,000,000 guaranteed by the Dominion of Canada, $14,612,477.51; less receivable from the proceeds of securities, etc., applicable in reduction of the above, $3,529,929; leaving a balance on that account of $11,082,548.51.

The construction of terminals, grade separation, Port Kells branch, and other capital expenditure, represent $1,846,867.49; and principal of equipment notes, $3,466,000, making a total of $16,395,416, as exhibited in these statements. My hon. friend asked what securities were in priority to the Dominion $45,000,000 securities.

Mr. NESBITT: I asked what was the amount of interest due.

Sir THOMAS WHITE: In reality, all the securities of the Canadian Northern Railway system, with the exception of income convertible debenture stock, rank in priority to the securities of $45,000,000 which were issued under the Dominion guarantee by virtue of the legislation of 1914. I stated the other day that the entire fixed charges of the Canadian Northern system, which would include the interest upon the $45,000,000 were about $15,000,000 in round figures. I stated further that on July 1, by reason of the interest upon the $45,000,000 securities guaranteed, and upon the $35,000,000 securities, guaranteed under the legislation of 1911, which would be assumed by the Dominion Government for a period of three years, commencing this year, and by reason of a similar agreement in British Columbia, under which the Government of that Province will pay interest for a period of three years upon the securities which it has guaranteed upon the Canadian Northern Pacific, the fixed charges, or net earnings of the Canadian Northern system would be reduced from $15,000,000 by the amount of $4,500,000. That is to say, for the coming year the fixed charge will be about $11,000,000, instead of $15,000,000, because the Dominion Government and the Government of British Columbia will be obliged to pay $4,500,000 in interest.

Mr. NESBITT: Do you defer these interest payments?

Sir THOMAS WHITE: The interest payments as they come along will be taken care of by the company if they are able to take care of them; but I assume from the statement of estimated earnings, which I laid on the Table to-night, and which is certified by Mr. D. H. Hanna, the general manager of the system, that the railway company will be able to meet its fixed charges if there is taken into consideration the fact that the Dominion Government and the Government of British Columbia pay $4,500,000 a year for the next three years.

To come to the application of the $15,000,000 which we are loaning to the Canadian Northern Company, I stated that it was the minimum amount. I pointed out the fact that there were $32,000,000 of immediate obligations, not funded at all, confronting the Canadian Northern Railway Company. There are two bearings to that. In the first place, the amount is exceedingly large, and they are unable to obtain more money because they have not the securities to pledge. Further, in the renewal of their notes, one year notes and two year notes, the question will at once arise when they come to renew these notes—and they must renew part of them this year—what about your unfunded debt, what about your immediate liabilities? The first question that is asked a railway company, or indeed any company, when it comes to put out an issue of securities, whether for long or short terms, is what is your financial position? The financial position of the Canadian Northern is that it has some $32,000,000 of liabilities. It is true that it has money in trust accounts and resources which will enable it to take care of the contractors' and subcontractors' estimates; but the remaining situation, some $24,000,000 or $25,000,000, is immediate, and consequently the $15,000,000 is, in my view, and in their view, and I think it will be in the view of any man looking fairly at this statement, the minimum amount with which they can hope to finance the company. It would take at least $25,000,000 instead of $15,000,000 to clear up these current obligations which they are not able to fund, and to replace which they are not able to effect new loans because they have no securities. We are not making them as large a loan as would completely restore their financial position. We are making them the loan of $15,000,000, and we say to them: "you have got to finance with that for the coming year until we have this investigation and are able to look into the whole situation." They cannot get on with less than $15,000,000, and they have still this situation confronting them. I would like to say that the $15,000,000 which we propose to loan could be applied, under the terms of the estimate, in payment of any items to which I have referred, or partly so, namely, the temporary loans, covering interest, construction, betterments, and equipment, or to the liquidation of the balance payable in respect to advances or to the liquidation of the balance payable in respect of advances on construction on the main line and branch lines. We are not going to clear up the entire situation, but if we make them this

loan they will be able by renewing loans and replacing loans, having this situation in regard to current liabilities, to finance during the coming year. That is the position.

Mr. R. B. BENNETT: Does the minister propose to pay contractors who are indebted out of this money?

Sir THOMAS WHITE: The contractors who are unpaid will be paid by the Canadian Northern Railway out of moneys in trust against the $35,000,000 mortgage and the $45,000,000 mortgage to which I have referred. There is a credit balance at present to the account of the Canadian Northern Ontario Railway Company $35,000,000 mortgage trust account of $1,301,719.70.

Mr. R. B. BENNETT: Why is that not used to pay these unfortunate contractors?

Sir THOMAS WHITE: Just one moment, please. Then, in connection with the Canadian Northern $45,000,000 mortgage of 1914, there is a credit balance as of May 1, of $4,344,761. On the statement of the Canadian Northern Railway Company, corroborated by records in my own department, there is money lying to the credit of this trust account available for payment on construction account in accordance with the terms of these mortgages. My hon. friend from Calgary asks me why the Canadian Northern Railway does not pay the contractors. Personally I am not aware of the contractors being unpaid.

Mr. R. B. BENNETT: On the Canadian Northern Ontario?

Sir THOMAS WHITE: I am not aware of it. This afternoon it was brought to my attention by a couple of sub-contractors, who said that they had not been paid by the principal contractors; but they were unable to tell me whether the Canadian Northern had paid the main contractors or not. But, as I had heard that there are accounts owing to contractors by the Canadian Northern Railway Company, I took the matter up in connection with this transaction with the Canadian Northern, and I am only repeating to my hon. friend from Calgary the assurance which has been given me, that out of the proceeds of these trust accounts and the available cash resources they would make payment of the indebtedness to the contractors. But it must be borne in mind that, although this money would be expended in that way, if there was a disputed account between a contractor and the Canadian Northern Railway Company, they said that they would not necessarily pay the contractors the full amount that he claimed. It may well be that where they are in agreement they will say: "We owe you a certain amount, and we will pay you the amount that we admit we owe you;" but if there is a disputed account I do not think it is incumbent upon me to usurp the functions of the court and say: "You must pay the contractor the full amount that he claims." If the claim is right they ought to pay it; but if there is a bona fide dispute the only way to settle it is to refer it to the arbitrament of the courts. But, in connection with this transaction which we are now considering, the Canadian Northern claim that they will be able to pay the contractors out of money and the proceeds of resources which they have available.

Mr. NESBITT: I would much rather they did the financing than I. With respect to the $15,000,000, as against $25,000,000, has the minister gone into the matter far enough to be able to say that the $15,000,000 will enable them to finance for the year?

Sir THOMAS WHITE: I would be disposed to agree with my hon. friend, on the statement presented, that I would much rather they did the financing than myself; in fact, I indicated that in my speech of yesterday. At the same time they believe that if they get this loan of $15,000,000 to clear up their temporary obligations they will be able to renew their short date securities and finance during the year. It is upon that understanding that we are making the advance of $15,000,000. If it were not so we should either increase the amount or decline to make the loan. But they are satisfied that they can renew existing loans or make new loans, so that they can get the situation cleared up to the extent that we propose, but it does not by any means liquidate the temporary situation.

Mr. OLIVER: I notice on page 8, under the heading of "Canadian Northern Railway System," the audited statement of:

> Bills payable—advance on construction of main line and branch lines, $7,300,000.

How far does that amount of $7,300,000 come into this transaction under consideration now, or does it come in at all.

Sir THOMAS WHITE: It might, because it represents indebtedness incurred on con-

struction account. The Canadian Northern received advances with which it paid contractors who had done work upon the line or paid for material used in construction. They gave notes for that liability, but that money has all been paid to the contractors or for material, and the bills payable are outstanding and represent indebtedness.

Mr. OLIVER: What particular branch lines are those upon which this work was done?

Sir THOMAS WHITE: I cannot say offhand. I may be able to find out, but I would doubt it, because I should think these advances were made probably either last year, or a year and a half ago, probably since the 1914 legislation in respect to construction, some of the accounts would be paid off, accounts would be adjusted from time to time, notes given and renewed or paid off, as the case might be. I doubt if it would be possible to say precisely with respect to what line the notes had been given, but I may be able to do it.

Mr. OLIVER: The point is that the loan going through now represents payment in some degree for work done on branch lines. It is not confined to the main line, as was the contention when the guarantee was going through two years ago. Therefore there is no question of principle that excludes from consideration the branch lines which they brought to the attention of the Government.

Sir THOMAS WHITE: I assume that in the accounting the money might be applied to the indebtedness incurred by expenditures made upon branch lines, and in such case the mortgage is to cover not only the undertaking of the Canadian Northern but to further secure the amount expended upon the branch lines. But my hon. friend will not fail to gather this from the statement, or from what I have said, that in this particular case the money has been actually expended, and the Canadian Northern is confronted with the situation that it has these outstanding bills payable in respect to construction which has been done and which it has paid for by advances for which it has given promissory notes. I entirely followed what my hon. friend said a few moments ago, but I would point out to him that if the $15,000,000 is required by virtue of the present financial situation, then the Canadian Northern would not be able to build further branch lines, or to make expenditures upon such branch lines, unless the Dominion Government gave a loan in excess of $15,000,000.

Mr. OLIVER: Quite so.

Sir THOMAS WHITE: We are not proposing to do that at the present time.

Mr. OLIVER: That is what we should do.

Sir THOMAS WHITE: I do not know about that. There is nothing to hinder the Government or Legislature of Alberta tomorrow from giving further aid to secure the prompt building of these lines by way of subsidy or guarantee. The Dominion Government has this war on its hands, and the financing of this Dominion is about the heaviest burden in this country to-day. Our banks are doing well, our financial institutions are in a stronger position than they have been for some years, the credit of the provinces is good, the credit of the municipalities is good; but the Dominion Government has to-day the burden of this war and will have it in the future. I do not say that we should not have the burden of the war; the burden of the war falls squarely where it ought to fall, that is to say, on the federal treasury.

But the point I am making is that if the construction of these roads is as urgent as my hon. friend has pointed out—and I believe he is right with regard to some of them—then it might be a proper thing for the Government of Alberta to come forward and, by granting subsidies or by giving additional securities, provide for completion of the lines. I have not answered my hon. friend, because I do not think it advisable to do so, with regard to a matter of alleged collusion which prevented these lines from being built. To me there is a very simple explanation why the Canadian Northern railway has not built these lines up to the present time, although the money to proceed with their construction lies, as stated by my hon. friend from Assiniboia, in the bank. The simplest explanation is this financial statement that I have been expounding to the House. In view of that statement, how could the Canadian Northern railway raise additional money for the purpose of constructing lines? And even if the money left lying in the bank were sufficient to construct the lines, would the Canadian Northern railway, at this particular juncture in their affairs, confronted with the situation as disclosed by this balance sheet, be justified in starting these

lines knowing that, as soon as they were completed, the company would have the burden of carrying whatever deficit there was upon their operation, until such time as they became profitable.

Mr. OLIVER: Not starting lines, but completing lines already started.

Sir THOMAS WHITE: Even completing lines, and facing the deficit which they would have to meet upon them until they became profitable. I think with my hon. friend that it is very desirable that the sections he mentions should be reached. But railway companies, like individuals, have to do the best they can in the situation which confronts them, and the Canadian Northern railway, like the Grand Trunk Pacific, is to-day confronted with a situation in which they are not able to raise by the sale or pledge of securities the amount of money necessary to complete those lines. Nor are they able to face the financial situation which they would have to face by reason of the increase in their obligations due to deficits upon the operations of those lines. It seems to me that if the province of Alberta thinks it of great public interest that these lines should be completed, it might very well come to the assistance of the Canadian Northern railway. As far as the Dominion Government is concerned, I think that at this juncture, considering the obligations devolving upon us and the immense burdens of this war, increasing as they are from day to day, we are bearing all the burdens for the Grand Trunk Pacific and the Canadian Northern railway that we should be asked to bear. I believe these are the minimum amounts which will enable these two companies to continue solvent until we can deal in some permanent fashion with the railway situation.

Mr. OLIVER: I hope the minister will revise one phrase he used to-night. I understood him to say that although the Canadian Northern railway had money in its treasury, raised on the credit of the province, it would not be warranted in spending that money in completing the bargain it had made with the province.

Sir THOMAS WHITE: I did not say that. I proceeded upon the assumption that the money is not sufficient to build and equip the lines. What I was referring to was the additional amount the Canadian Northern will have to raise in order to complete the lines.

Mr. OLIVER: I am very glad that the minister did not mean to convey the idea as I understood it, because it struck me as being a very serious statement for a Finance Minister to make. At any rate the position is this: He does justify the company in withholding from expenditure the money raised upon the credit of the province, when that expenditure is needed from every point of view. I say that that is not a desirable position, and, sorry as I should be to criticise the Finance Minister, I certainly consider his attitude very seriously open to criticism. If I may be permitted to pursue this matter further, because it is a matter of life and death to a portion of the constituency I represent, it is admitted that the Canadian Northern Railway has prosecuted work on some branch lines, and this Government is now prepared to meet the cost of that work without having had direction as to which lines the money should be expended upon. My hon. friend undertakes to draw the distinction between cases in which the company have already spent money, and cases in which the company is absolutely obligated to spend money in order to fulfil their agreements. On page 6 of the printed documents, I find in the list of securities of the Canadian Northern Railway system, under the heading "Guaranteed by Alberta Government," certain mortgage bonds and debenture stock of the Canadian Northwestern Railway—I think that means the Canadian Northern Western—showing an asset in the one case of $6,424,000, and in the other case of $2,799,997.73. If I understand this statement correctly, it is intended that a part of the $15,000,000 loan shall be used to pay the interest on these debentures. Is that right?

Sir THOMAS WHITE: The purpose of this statement was to show the extent to which the Dominion and the provinces had given their guarantees. From the statement it would appear that the securities of the Canadian Northwestern Railway have been guaranteed by the province of Alberta and issued to the amount of $18,950,361.99—if the securities have been issued as stated, and I have no doubt they have. The interest would, of course, have to be paid, and to the extent that the Canadian Northern Railway was unable to pay that interest, it would be a charge ranking in priority, I think to the $45,000,000 mortgage, becauses my recollection is that under the legislation of 1914 the stock in this particular company is embraced in part of the mortgage premises.

Mr. OLIVER: As a matter of fact, we are going to vote money to pay the interest on the bonds of the Canadian Northern Western guaranteed by the provincial Government, the money realized from which is not being used to complete the roads. The roads are not completed and by reason of not being completed, are not in a position to earn the interest that would save its being paid by this Government. I think the case is clear beyond question. When this Government is paying the interest on money that was raised by that guarantee, surely, from the standpoint of the Minister of Finance himself, those roads should be completed and put in a position to earn interest, instead of this Parliament being compelled to pay that interest.

Mr. MEIGHEN: The position of the hon. member for Edmonton is most remarkable. He says that the Government of Alberta has guaranteed certain securities of the Canadian Northern Western railway, that the proceeds of those securities lie in the bank to the credit of the Provincial Treasurer of Alberta, that the company refuse to expend the money, and that the province of Alberta, unfortunately, is not in a position to compel the company to expend it. If that is the case, one of two things is the consequence: Either the province of Alberta made a very improvident bargain with the Canadian Northern, for which the Government of that province is responsible and should be castigated by the hon. member for Edmonton; or else it is impossible to do effective work with the proceeds of those securities; that is to say, it is impossible so to expend them as to make the road complete as to its expenditure. The hon. member for Edmonton must know that money can only be withdrawn from that account and expended provided the road advances to completion with each dollar of expenditure, at such a pace that it will be completed when all the money is gone. Consequently, unless the Canadian Northern Western has additional bonds sufficient to provide for the completion, mile by mile, there is no way by which the Canadian Northern Railway can get the money out.

Mr. OLIVER: Precisely.

Mr. MEIGHEN: Then I suppose the hon. gentleman is arguing that, wherever a province guarantees a certain amount, the Government of this country, if it protects the underlying security, that is guaranteed, must provide sufficient money to complete the road. That would place the Dominion treasury at the mercy of a province. The province could give a small guarantee and then say to the Dominion Government: Now go ahead; we have already, by what we have done, obligated you to complete that road.

Mr. OLIVER: Not at all.

Mr. MEIGHEN: By our providing money to pay this underlying interest the province of Alberta is not providing it. The province of Alberta had control of the sale of the bonds. They should not have allowed the sale of the bonds until they knew that the company was in a position to complete the road. If they find themselves responsible for interest in the meantime it is their folly, and it is to them the hon. gentleman should go with his castigation. Certain moneys were provided for certain definite purposes by the legislation of 1914. The purposes were all set out item by item —so much to such a road and so much to another; so much for improvements here, so much for improvements there. Included in that were certain appropriations for the Canadian Northern Western, notwithstanding the fact that the Canadian Northern Western, at the request of the hon. member, remained a purely provincial road and outside the jurisdiction of this Parliament. If the hon. gentleman will look at the blue-book brought in 1914 at page 19, he will see that the proceeds of these securities were to go first in payment of contractors' liabilities in the Canadian Northern, and he will find that $1,809,000 for the Canadian Northern Western was included in the $21,000,000 of contractors' liabilities. And, if he turns to the book issued this session, at page 19, he will find that $1,809,697 of that $45,000,000 was to be applied to the discharge of these contractors' liabilities. At page 19 of the blue book of 1914 you find that $310,088 was the amount that was to be expended in new construction on the Canadian Northern Western. On turning to the blue book of this year we find that the following amounts were expended on that construction: $140,042.47 and $174,444.53; total, $314,486.90, or about $4,000 more than was contemplated to be spent in new construction out of the $45,000,000, in addition to discharging the contractors' liabilities against the road. Therefore, so far as the moneys under control of this Parliament are concerned, the Canadian Northern Western get the full benefit of the legisla-

tion of 1914; and if they have not received all that we undertook to do for them, if they still find themselves straitened, their money tied up, and unable to complete their lines, the fault lies at the door of the Government of Alberta, and there is where the hon. gentleman should go with his complaint.

Mr. OLIVER: I cannot follow the hon. gentleman's argument at all. He suggests that, according to my argument, the Government of Alberta, by guaranteeing the bonds of a railway, could obligate this Government to pay interest on the bonds. I said nothing so absurd, nothing could have been further from my ideas than what the hon. gentleman has seen fit to attribute to me. The Government of Alberta has guaranteed the bonds of other companies besides the Canadian Northern. It has guaranteed the bonds of the Great Waterways railway. There is no way by which this Government can be held responsible, directly or indirectly, for that provincial guarantee of bonds. But that is a different matter altogether from the Alberta Government's guarantee of the bonds of the Canadian Northern Railway upon lines which this Government took as a security for the guarantee given by it to the Canadian Northern, assuming proprietorship to the extent of actually paying the interest on the bonds. If this Government undertakes to pay the interest on the bonds issued in respect of these partially-completed railroads, I say it is good business on the part of this Government to make such further arrangements, even if it involves the payment of money, as will secure the completion of these roads and put them on an earning basis, so that, instead of Parliament having to pay interest, the traffic of the road will pay interest. That is my argument, and I am very sorry that I am not able to get the Government to see what I regard as an eminently fair and commonsense, as well as necessary, proposition.

Mr. TURRIFF: A little while ago the Minister of Finance pointed out that the proceeds of the guarantee of 1914 had gone into the road. Has he any record or statement to show how much of the proceeds of that $45,000,000—some $36,000,000, I think—was paid to construction companies and sub-contractors that were owned and controlled by Mackenzie & Mann?

Sir THOMAS WHITE: I am not aware of any. The Comptroller of the Railway Department conducted an audit which, in my belief, was thorough, in which all vouchers were inspected and a complete examination made before these moneys were paid over. A more complete audit I could not imagine. His instructions were to see that the money was applied in strict accordance with the terms of the Act. Personally, I am perfectly satisfied that the proceeds of this $45,000,000 loan, paid over on the certificate of Major Bell, who is here to-night, and who did his work, in my judgment, most carefully and thoroughly, were properly paid out under the terms of the legislation of 1914 and the trust mortgage. It was pointed out in 1914 that Mackenzie & Mann were the contracting agents for the Canadian Northern, that they made contracts with sub-contractors and purchased materials, and they built the line; and it was the accounts of the sub-contractors and for the materials which went into the line that were audited by Major Bell. Major Bell tells me that in this matter he went below Mackenzie & Mann, acting as the construction department of the Canadian Northern Railway Company, and inspected and audited the vouchers representing payments made to sub-contractors and for materials. Personally, I have not the slightest doubt that the money was properly applied.

Mr. TURRIFF: That statement does not answer my question. All through the construction of the Canadian Northern from beginning to end this Government and the previous also, so far as I know, have handed over to Mackenzie and Mann, or the Canadian Northern Railway, millions, tens of millions, hundreds of millions of dollars by way of bonuses and guarantees, and no proper care has been taken to see that the money went into the railroads.

Sir THOMAS WHITE: Does my hon. friend say that this Government took no proper care in that respect?

Mr. TURRIFF: Yes, that is exactly what I say.

Sir THOMAS WHITE: What more proper care could have been taken than to provide by legislation that the money should be disposed of in a certain way and for certain specific purposes, and then to have a very competent official of the Railway Department audit and investigate all accounts and payments made before paying over the money? I have been familiar with the payment out of money on construction account for very many years in connection with business, and I do not

know any more strict system of supervision than is exercised by the Railway Department and the Finance Department in the payment of money under the provision of trust deeds securing mortgage issues of railway companies guaranteed by the Dominion Government. I have not the slightest hesitation in saying here to-night that I believe every cent of the money that was provided under the guarantee of 1911 under the late Government and of the $45,000,000 guaranteed under this Government has been properly applied for the purposes for which these moneys were designated by Parliament. The payment out of the money under the $45,000,000 mortgage has been precisely on the same principle as the money was paid out under the $35,000,000 mortgage for which my hon. friend the member for South Renfrew was responsible as Minister of Railways in the late Government.

Mr. TURRIFF: I do not doubt it.

Sir THOMAS WHITE: My hon. friend will not be able to say that any different principle has been applied, nor will the hon. member for South Renfrew, I am sure, admit that the provision which he made under the mortgage relating to the $35,000,000 guarantee upon the Canadian Northern Railway Company in 1911 was inadequate to protect the public which it was his duty to protect.

Mr. TURRIFF: All I can say is this: That practically from the beginning to the end of the construction of the Canadian Northern railway the contractors for construction were Mackenzie and Mann, who let the work out to sub-contractors. Is there any hon. member on either side of the House who does not believe that Mackenzie and Mann as contractors took many millions of dollars out of the moneys proceeding from the securities disposed of on account of the subsidies and guarantees by the provinces and by the Dominion? If the money received from the securities issued on these railroads to the Canadian Northern Railway Company had all gone into the railroads, the company would not be here to-day asking for more aid, because the money would have completed the roads and put them in proper shape. My hon. friend talks about the wonderful audit made by the Railway Department. Well, I am not much of a hand at auditing, but I notice that while the agreement was made in the middle of July, 1914, on September 12, less than a month afterwards, a certificate was given for $12,500,000. I do not think that any audit worth talking about could have been made in that time of an expenditure of $12,500,000 in the construction of a railway. The certificates follow in order one after another, so that I do not pay very much attention to an office audit of that kind. It may be all right, but it is more likely to be all wrong. I understand that the proceeds of the $45,000,000 were only some $36,000,000. Am I correct in that?

Sir THOMAS WHITE: $36,000,000 odd.

Mr. TURRIFF: Here we have bonds guaranteed by the Dominion of Canada that are worth only a trifle over 80 cents on the dollar. There must be something wrong in that. My hon. friend the Minister of Finance has been borrowing money at 5 per cent. Of course, these bonds were at 4 per cent; that would make some difference. At all events, they realized a very poor percentage, and I think if we knew exactly what became of that $36,000,000 we would find that Mackenzie and Mann got a big percentage of it for their purposes. That has been their history from the beginning; to get guarantees and subsidies to build railroads. I will acknowledge that their main line is a pretty fair line.

Mr. MEIGHEN: What beginning does the hon. gentleman refer to?

Mr. TURRIFF: Although my hon. friend is a very young man, he is old enough to know when Mackenzie and Mann began to build railroads.

Mr. MEIGHEN: In 1896.

Mr. TURRIFF: From the beginning to the end, that has been their practice; to get bonuses and guarantees and then issue, to any one who would purchase their bonds securities for a great deal more than ever went into the road. As I was about to say, the main line is not a bad road; I have been over it. But so far as the branch lines are concerned, I know that the proceeds of the bonds they sold, which were guaranteed by the provinces, let alone any other securities they issued on these roads, were far more than enough to build the class of road that they have built. Although they have milked the money out of these railroads and put it in outside private interests, when my hon. friend gave the guarantee of $45,000,000 in 1914 and took a mortgage the outside securities were not put in at all. On that occasion the railway company ap-

peared to satisfy this Government that the $45,000,000 would see them through. That was the argument two years ago; what is the statement of my hon. friend the Minister of Finance and of the Solicitor General to-night? They bring down a statement and they show that $15,000,000 is the lowest amount that they can get through with. I think the Minister of Finance is right, because here is $92,000,000 of short date indebtedness. In the name of common sense, if this company is $92,000,000 behind, over and above all the securities that they have issued, what is the use of this Government pouring more money into it, especially when we do not know that all this money is going into the railroad? Although we are responsible to-day for the $45,000,000 guarantee that was given two years ago, of which it is said that $36,000,000 has gone into the road, I doubt if more than $25,0000,000 has gone into the road.

My hon. friend comes forward to-day with a proposition to hand them out another $15,000,000. But if I understand anything about the figures put in our hands, that will not be all we will have to pay this year. Am I right in figuring from this point that in addition to this $15,000,000 we will have to pay interest on that $45,000,000?

Sir THOMAS WHITE: Yes, and upon the $35,000,000 guarantee which my hon. friend voted for in 1911.

Mr TURRIFF: $80,000,000.

Sir THOMAS WHITE: Yes.

Mr. TURRIFF: So that, in addition to the $15,000,000 loan, we will have to pay the interest on the $80,000,000 guaranteed in 1911 and 1914, which will be about $3,000,000. So that this year we will have to pay out $15,000,000 plus $3,000,000, that is, $18,000,000 to the Canadian Northern Railway. We know where the $3,000,000 for interest will go of the $15,000,000; but we do not know where all of it will go. My hon. friend the Minister of Finance may be a clever man at handling money, and I give him credit for his ability; but I want to tell him he is not clever enough for the job he has in hand, to see that all that money goes through the hands of Mackenzie and Mann and gets to the right spot, and that none of it is diverted to their own purposes, on any of their side issues.

Mr. BENNETT: They will not get their hands on it.

Mr. TURRIFF: If my hon. friend can do that and can show us that he has done so at the next session, I will give him more credit than I give him to-night, much as I respect his financial ability.

Where is this going to end? The company, according to their own showing, have $92,000,000 of present liabilities. And they are not satisfied with these present liabilities. These men are never satisfied unless they are branching out in all directions. During this session, as you know, Mr. Chairman (Mr. Blain), as chairman of the railway committee, we spent weeks and weeks up there fighting—why? Because 11 p.m. this same railway company, in spite of their bankrupt condition, were bound to get their grip over the western part of Ontario and insisted on building lines there that the Government of the province of Ontario wanted to attend to. And their representative, I think the general manager and third vice-president, insisted that they had the money to build these roads. If they had the money to build these roads in Ontario that would cost tens of millions of dollars, why should they come to this Government and get $15,000,000 and $3,000,000 from the Prime Minister? That is something that has not been answered yet. There is something wrong somewhere, when they have millions of dollars to invest in Ontario, against the wishes of the people of Ontario to build roads which the people of Ontario want to build, and they have not a dollar to pay their debts, and they come to this Government to get this money, and this Government proposes to hand it over to them and get nothing at all for it. They are taking a mortgage. Well, I do not know what good a second, or third, or fourth, or fifth mortgage may be. I would not consider that that $15,000,000 mortgage, when it is completed and registered, would be worth $5. I would not give $5 for it, because in my time or in my children's time it will not be worth a $5 bill, with the interest.

Mr. R. B. BENNETT: The autograph signature of William Mackenzie would be worth that.

Mr. TURRIFF: That would be the only thing I would value the mortgage for, the autograph signature of William Mackenzie. I would not mind this so much if I could see any end to it; but just as long as this Government or any other Government of Canada will hand out money to Mackenzie & Mann every time they ask for it, so long will they come here demanding that money,

and you may as well face the music to-day as at any other time. My hon. friend the Minister of Finance has told us what this war has cost us and what it is going to cost us, and we all know that this war will last for some time. Will we be in a better position to deal with this matter a year from now, or two years from now, than we are to-day, after handing over this money and thus adding to the road's liabilities and not adding much to its value? To my mind it is a case that calls for courage and skillful handling; and you are not going to better the condition by putting off the evil day. If I thought so I would offer no objection to this loan. But it seems to me that we are just going deeper and deeper into the mud, and we shall ultimately have to take the road over; there is no question about that. I venture the assertion that the statement presented to us does not begin to represent the condition of the road, and that if this road should go into the hands of a receiver, and the receiver's auditors went through the company's books and found out the exact position of the road, a very different state of affairs would be disclosed. That is the objection I make to pouring this money into the pockets of the road when we do not know anything, or at least very little, about its true condition. An hon. member asked where we would be in the course of a few years if things took a turn for the good. We might get our money back. In the meantime the Government has 40 per cent of the common stock of the road, and I ask my hon. friend the Minister of Finance and the Solicitor General that on this occasion, when we are coming to the rescue of the Government—

Mr. MEIGHEN: It is scarcely that.

Mr. TURRIFF: Almost that, for in my judgment the Government is in just about as precarious a position as the Canadian Northern Railway is in. I meant to say that now that the Government is coming to the rescue of the Canadian Northern Railway, I ask the ministers if they are taking the precaution to make the Canadian Northern hand over their common stock—not that it is worth anything in the meantime in the way of cash value. But I ask if they are taking the precaution to make the road hand over a least a controlling interest in that common stock, so that when they come to deal with the road in the future, they will not be dictated to in the way the Canadian Northern is able to dictate to this or any other Government that may be in power, under present conditions. Now is the opportunity to do it. Is my hon. friend going to do anything of that kind? The Government can get that common stock if they insist on it. It is not, as I said, worth anything in cash to-day, but it would give the Government of Canada, after putting up this extra $15,000,000, control of the road whenever they wanted to take it, and it might save a great deal of trouble in the very near future If $92,000,000 of debt is standing against the road, short date debts, and the company ran behind to the extent of $10,000,000 last year—

Mr. MEIGHEN: $6,000,000.

Mr. TURRIFF: — if the company ran behind to that extent last year, when we had a most phenomenal crop, and when the Canadian Northern handled a very large percentage of that crop, how can the Government expect better things next year or the following year? It is altogether unlikely that we shall have such a crop as that of last year during the next five years. This year the acreage is very much less, and even supposing you were to have a yield—

Mr. MEIGHEN: The hon. gentleman forgets that last year, so far as the railway company is concerned, ended in June, 1915, and there could not be very much of the crop shipped at that time.

Mr. TURRIFF: In that case they would not have the benefit of the large crop, and that benefit will come within the present financial year. But I think I heard the Minister of Finance give an estimate which did not show that the company were likely to be in a very fine position even with the handling of that crop. I asked the Minister of Finance yesterday if he could give any information as to what it would cost to complete the road, that is to put the branch lines in shape so that they could do business profitably. Many of the branch lines cannot do business in the winter time, and cannot earn profits in the condition in which they are. A railway company cannot make profits on a road that is tied up by snow and frost for weeks and months at a time. I agree with what my hon. friend from Edmonton has said. I will not speak for many of the provinces except Saskatchewan, but I venture the assertion that there is not a branch line of the Canadian Northern in Saskatchewan which, if completed, and put in anything like decent shape, will not earn operating expenses and

interest on the cost of the road—I will not say interest on the securities that have been issued against the road, but interest on every dollar that went into the building and equipment of the road.

Mr. MEIGHEN: Why do the Grand Trunk branch lines not pay interest?

Mr. TURRIFF: I think that their branch lines in Saskatchewan will pay interest.

Mr. MEIGHEN: Not one of them.

Mr. TURRIFF: They will earn operating expenses and interest.

Mr. MEIGHEN: Only two of them earn operating expenses the rest show a deficit in that respect, and not one of them pays interest.

Mr. TURRIFF: My hon. friend is probably taking only what the branch line itself earns, but he probably knows enough about railway matters, since he has been a pupil of the Canadian Northern for two or three years, to know that a branch line is entitled to a certain amount more than is earned on the line itself, because it supplies traffic to the main line.

Mr. MEIGHEN: Then how is it that the main line is losing and is not paying operating expenses?

Mr. PUGSLEY: The Grand Trunk Pacific statement shows earnings amounting to $600,000.

Mr. MEIGHEN: On one part. But there is a deficit on the other part, and there is a net deficit of $200,000, or a deficit of $500 a day for every day of operation, without a cent for interest. I am taking it altogether. Even on the prairie division the earnings are a small fraction.

Mr. PUGSLEY: $600,000 is not a small fraction.

Mr. MEIGHEN: It is a very small fraction of the debt. Will the hon. gentleman fit that into his argument?

Mr. TURRIFF: There is not branch of the Canadian Northern railway in the province of Saskatchewan that I have been over, and I have been over a great many, that will not earn operating expenses and interest, and that will not earn interest on every dollar that went into the building of the road. I do not say that they will earn interest on all the securities that are charged up against them, because when you charge up $20,000 of securities a mile on branch lines on the prairie and you only put in from $10,000 to $12,000, or perhaps $15,000 a mile—

Mr. MEIGHEN: In the case of the Grand Trunk it is $42,000 a mile.

Mr. TURRIFF: That may be, but the branch lines of the Grand Trunk are very different from the branch lines of the Canadian Northern. In most cases the Canadian Northern branch lines are very cheaply built, and they are charged up with securities to the extent of from $20,000 to $25,000 a mile.

Mr. MEIGHEN: Not quite.

Mr. TURRIFF: Yes, $20,000 a mile. There was a railroad built by the city of Winnipeg from Winnipeg east within the last couple of years, and the only difference between the construction of that road and the construction of the branch lines on the prairie by the Canadian Northern is that the rails are somewhat lighter. They have a 60-pound rail, and in some cases the branch lines may have rails over 60 pounds. That road was built and equipped, as far as was necessary, for $12,000 a mile, or about half of what is charged up on the Canadian Northern, proving what I say that the money that this Government and the local Governments have advanced, as well as the proceeds of securities not guaranteed by either, has been switched from the Canadian Northern altogether, and put into concerns in Mexico, Toronto and elsewhere, and has gone into the pockets of the promoters of these enterprises. Now they come forward, and they do not put up one cent of their money. They did not put up anything two years ago when they came and asked for a guarantee. The Government gave that guarantee, and took no precautions to see that the money all went into the road, and now the company comes forward again and says: You must give us more money or we will throw the road on your hands. They came and held the Government up, and now the Government says: Well, we will give you $15,000,000 more and pay $3,000,000 of interest. That is the position of affairs to-day, and next year it will be just as bad, and perhaps worse. What are you going to do about it? Why not face the music like men? The war is not going to be over next year; certainly our war expenditure will not be over, and what better position can we expect to be in? We will have $300,000,000 or perhaps $400,000,000 more of debt than we have to-day, and we will be

in a worse position to deal with this question. It is a most serious matter. Inside of five years Canada will have from one and a half billions to two billion dollars of debt to face. These two railroads will have to be looked after in some way, and if the Government takes them over, or keeps on fathering them, we will be liable for the whole business; and we will have from $75,000,000 to $100,000,000 of fixed charges and interest to pay every year. The situation will be worse if you let Mackenzie & Mann handle the Canadian Northern. If you are going to give them the money, why not give it in such a manner that you will have some control. I do not like the idea of Government ownership; I have no use for it if it can be avoided; but there may be a worse thing than Government ownership. According to my idea, it is a worse thing to pour money in and let somebody else handle it just as it suits him while you take the liability, and while you are not sure that all the money goes into the road. That is the position we are in to-day, and I think the Government ought to reconsider their attitude in regard to the matter. There might be some excuse for going to the rescue of these two roads because the Dominion and the provinces have so much in them, but what excuse is there for voting millions, either money or guaranteed bonds, to take over two roads in Quebec and to add to the Intercolonial that is losing money every year, simply to help out a political friend at a time when Canada cannot afford to put $1,000,000, or $4,000,000, in cash or securities into these roads? It is bad enough to help out the roads that the Government has some liability for, but to shoulder new liabilities where the Government has no responsibility whatever is one of the most criminal things that a government could do considering the financial position that Canada is in to-day.

Progress reported.

On motion of Sir Thomas White, the House adjourned at 11.20.

Wednesday, May 10, 1916.

The House met at Two o'clock, the Speaker in the Chair.

PRIVATE BILL.

FIRST READING OF SENATE BILL.

Bill No. 102, for the relief of Martha Isabella Kenny.—Mr. Nickle.

[Mr. Turriff.]

QUESTIONS.

[Questions answered orally are indicated by an asterisk.]

EMPLOYEES IN DEPARTMENTS OF GOVERNMENT.

Mr. PAQUET:

1. How many employees were there in the following departments, on the first of July, 1895: Public Works, Interior, Finance, Post Office, Justice, Agriculture, Marine and Fisheries, Mines, Customs, Railways and Canals, Public Printing and Inland Revenue?

2. How many employees were there in the said departments on the first of October, 1911?

Mr. BLONDIN:

Public Works: 1. 1,587—2. 4,690.

Interior: 1. 279—2. 1,893.

Finance: 1. Inside service, 33; outside service, 27; temporary employees, 11, total, 71—2. Inside service, 83; outside service, 29; temporary employees, 8, total, 120.

Post Office: 1. Inside service, 285; outside service, 1,726, total, 2,011—2. Inside service, 549; outside service, 4,342, total, 4,891.

Justice: 1. 345. 2. 519.

Agriculture: 1. 172. 2. 807.

Marine: 1. 2,609. 2. 7,269.

Mines: Geological Survey Department: 1. Permanent, 32; temporary, 16, total, 48—Mines Department: 2. Permanent, 118; temporary, 39, total, 157. The Department of Mines (Geological Survey and Mines Branch) was created April 27, chap. 29, 6-7 Edward VII.

Customs: 1. Outside service, 1,313; inside service, 33, total, 1,346—2. Outside service, 2,265; inside service, 206, total, 2,471.

Railways and Canals: 1. 6,726—2. 14,082.

Printing Bureau: 1. 431—2. 865.

Inland Revenue: 1. 479—2. 671.

SAGUENAY RIVER IMPROVEMENTS.

Mr. MARCIL:

1. What has been the total cost of improving the channels from Point Roches, River Saguenay, to Chicoutimi, and during what years were such operations carried on?

2. Is it a fact that the resident engineer at Chicoutimi reports the least depth of water in the channel at low water spring tide is now 14 feet?

3. Has any official chart been published or issued of the said channel?

4. Has any official notice been issued to mariners as to the depth of water in the said channels?

5. Is it a fact that in the case of a Quebec pilot, whose license also takes in the Saguenay, that his duties cease on arrival at the anchorage of Point Roches, eight miles from Chicoutimi, when inward bound to that port, and do not commence until the vessel has reached the same place, outward bound from Chicoutimi?

6. Is it a fact that the reason the pilots

give for such action is that the channel has not been declared officially opened?

7. Do the steamers of the Canada Steamship Company refuse to recognize the channels as other than Half Tide channels, on the ground that the depth in said channels has not been officially declared?

8. Will the channels be officially declared open this season? If not, why not?

Mr. BLONDIN:

Fiscal year.	Cu. yd.	Price.	amount.
1907-08..	8	$2 65	
	41,054	34	$14,070 78
1908-09..	64,615	32½	22,851 17

	165	2 50	60,292 41
1912-13..	17	2 50	
	249,425	32½	81,741 21
1913-14..	30,600	32½	*9,769 50
	34,300	32½	11,147 50
1914-15..	6,006	32½	1,951 95
Total..			$272,564 55

*Chicoutimi wharf.

Departmental Dredging Plant.

Fiscal year.	Dredge.	Cu. yd.	Cost.
1904-05.. ..	No. 110	1,500	$ 172 50
	Lady Minto, etc.	141,100	31,094 78
1905-06.. ..	No. 110	62,500	27,125 00
1906-07.. ..	No. 116	37,800	9,639 00
1907-08	No. 116	101,800	29,861 04
1914-15	No. 116	45,840	20,406 92
Total			$108,299 24
Grand total			$380,863 79

2. The district engineer at Chicoutimi reports that least depth below extreme low water is 10 feet.

3. The British Admiralty have published chart No. 1370 of the Saguenay river and approaches. This chart may be purchased from the Admiralty or Admiralty agents. A Canadian chart covering area from St. Fulgence to Chipshaw on the Saguenay river is under preparation by the Department of the Naval Service, and will be published in a few months. This chart may, upon publication, be purchased from the Department of Naval Service, or from the agents of the Marine Department.

4. No.

5. The Pilotage Regulations provide for pilotage on the Saguenay river from Tadoussac at the mouth of the Saguenay, to Chicoutimi, and from Chicoutimi to Tadoussac, and the fact that the department pays the pilots' board at Chicoutimi and did so off and on all last season would indicate that the pilots do go to Chicoutimi. The department has no information that the pilotage of vessels outward bound is undertaken by the pilots only at Point Roches, eight miles from Chicoutimi.

6, 7, and 8. No information.

CLAIM OF REV. D. R. MACDONALD.

Mr. TURRIFF:

1. Is the Rev. D. R. Macdonald still endeavouring to secure the sum of three thousand dollars, or any sum, for ballot used by the Dominion Government, claiming it is his design?

2. Has the Government paid this, or any sum, to Rev Mr. Macdonald for ballot?

3. If not, does the Government intend to pay this or any other sum to Rev. Mr. Macdonald on account of ballot?

4. Has Rev. Mr. Macdonald received any sum in the past, on account of ballot?

5. If so, how much, and when?

Mr. BLONDIN:

1. The Reverend D. R. Macdonald contends that certain devices covered by a patent issued to him, applicable to ballots used in elections, have been appropriated under the Dominion Elections Act, 1900, 63-64 Victoria, Chapter 12, and the Act to amend the Dominion Elections Act, 1900, 1 Edward VII, Chapter 16, and that under the provisions of the Patent Act, Chapter 69 of the Revised Statutes of Canada, Section 52, he is entitled to compensation therefor.

2. The Dominion Government paid to the Reverend D. R. Macdonald the sum of $333 in the year 1902, which was not accepted in satisfaction of the above claim.

3. The Government will pay any legal claim which may be established under the Patent Act above referred to.

4 and 5. Answered by No. 2.

MANITOBA SCHOOL LANDS.

Mr. CRUISE:

1. Is it the intention of the Government to sell any school lands in the province of Manitoba during the year 1916?

2. Are school lands ever sold by private sale?

Mr. ROCHE:

1. It is contemplated holding some auction sales of school lands in the province of Manitoba during the present year, but no definite arrangements have so far been made.

2. School lands are only sold by private sale to railway companies for right of way, station grounds, and other purposes of the railway under the provisions of the Railway Act, to Boards of School Trustees for school sites under the provisions of sub-section 2 of section 39 of the Dominion Lands Act, and for the right of way of pipe lines and reservoirs in connection with irrigation works under the provisions of the Irrigation Act.

WAR SUPPLIES—TRANSPORT TRUCKS.

Mr. McMILLAN:

1. On what date was the contract let for the 300 transport trucks for which the manufacturers were asked to quote prices on February 10?
2. Who were the manufacturers who received the orders and what was the price paid?

Sir ROBERT BORDEN:

1. February 12, 1916.
2. Petrolia Wagon Co., Petrolia, Ont., 150 wagons at $118 each; Adams Wagon Co., Brantford, Ont., 150 wagons at $118 each.

OKANAGAN INDIAN RESERVE.

Mr. OLIVER:

What are the names of the Indians of the Okanagan Indian reserve to whom money was paid out of the amount received for right of way from the Canadian Northern Railway Company, and the amount paid to each?

Mr. ROCHE: Herman Gregoire, $752.50; Joseph Jimmy, $703.19; Alexander Chelahitsa, $2,763.50.

STEAMSHIP BALEINE.

Mr. McKENZIE:

1. Who are the owners of the SS. Baleine, the name of which appears on page ZZ-119, Auditor General's Report?
2. How long has she been in the service of the Government and at what rate per month?
3. What is the size of the ship and what is her port of registry?
4. Of what horse-power are her engines?
5. What amount has been paid to the owners of the said ship from the date of hire to date.
6. Is the said ship still in the service of the Government?

Mr. HAZEN:

1. The Lockeport Cold Storage Company.
2. From the 1st Feb., 1915, to date; $3,500 per month, the owners to pay the wages and board of the captain and crew, also provide and pay for engine room and deck stores and oils; time lost from break-down of machinery or hull due to their defectiveness for periods over 24 hours, to be deducted from the amount of hire, the owners to secure and pay for ordinary marine insurance.
3. Length, 159.3 feet; breadth, 26.2 feet; depth, 13.7 feet; St. John's, Newfoundland.
4. 98 nominal.
5. $52,548.93.
6. Yes.

INQUIRIES FOR PAPERS.

On the Orders of the Day:

Mr. GRAHAM: A few days ago the House passed a motion for the production of a copy of the lease of certain property in North Bay. I think the return has not yet been brought down. It is a small matter, just a copy of the lease. It refers to the Militia Department.

Sir ROBERT BORDEN: I shall direct attention to it.

THE BILINGUAL QUESTION.

On the motion of Sir Robert Borden for Committee of Supply:

Mr. ERNEST LAPOINTE (Kamouraska): Mr. Speaker, I desire to move the amendment that is in your hands:

That all the words after "that" in the main motion be struck out and the following substituted therefor:

"It has long been the settled policy of Great Britain whenever a country passed under the sovereignty of the Crown by treaty or otherwise, to respect the religion, usages and language of the inhabitants who thus become British subjects;

"That His Majesty's subjects of French origin in the province of Ontario complain that by recent legislation they have been to a large extent deprived of the privilege which they and their fathers have always enjoyed since Canada passed under the sovereignty of the British Crown, of having their children taught in French;

"That this House, especially at this time of universal sacrifice and anxiety, when all energies should be concentrated on the winning of the war, would, while fully recognizing the principle of provincial rights and the necessity of every child being given a thorough English education, respectfully suggest to the Legislative Assembly the wisdom of making it clear that the privilege of the children of French parentage of being taught in their mother tongue be not interfered with."

Mr. SPEAKER: The motion of the hon. member for Kamouraska is an amendment to the motion that I do now leave the Chair for the House to go into Committee of Supply. This amendment contains certain declarations in the nature of a preamble, and asks the House, for certain reasons, to respectfully suggest to a Provincial Legislative Assembly the wisdom of a course of action recommended by the general tenor of the amendment. A point of order has been raised that this amendment is not in order because the subject matter of the amendment is not within the jurisdiction of this Parliament.

It is the duty of your Speaker to enforce, and, subject to your instructions, to administer and interpret the rules and practice enacted and prescribed by your House for the orderly conduct of its business and debates; but the privileges, powers and jurisdiction of the House are matters of the very greatest importance and must be determined by the House itself.

A motion to go into Committee of Supply is parliamentarily of a different nature from other motions in that debate upon it need not be relevant to the motion before the House. Almost any matter can be discussed on the main motion itself. There are, indeed, a few limitations of a strictly technical nature which need not be referred to here (See Bourinot, 3rd ed., p. 585). The present amendment is one asking for an expression of opinion on the part of the House upon a matter of general public interest and need not be relevant nor upon a subject within the legislative powers of this House. As to the nature of amendments which may be made at such a time, May (5th ed., p. 554) says:

> The ancient constitutional doctrine, that the redress of grievances is to be considered before the granting of Supply, is now represented by the practice of permitting every description of amendment to be moved on the question for the Speaker leaving the Chair before going into the Committee of Supply. Upon other orders of the day such amendments must be relevant, but here they are permitted to relate to every question upon which any member may desire to offer a motion.

Bourinot, 3rd ed., on page 583, quotes these observations with approval, and adds:

> The same practice is now followed very extensively in the Canadian Commons.

He cites in support of this statement many pages of the Journals of the House. Bourinot refers to certain limitations of this right, such as that only one amendment may be moved at a time, but he nowhere suggests that such an amendment would be inadmissible because the subject matter was beyond the legislative jurisdiction of the House.

The Journals are replete with instances of amendments of almost every description on going into Supply. These have been debated and voted upon without objection on the grounds either of relevancy or want of jurisdiction.

Members of this House, being here to act in the interest of all Canada, I think it is proper that any of them may bring before it, on the motion to go into Supply, any matter which in his opinion may be detrimental or advantageous to any section of the population.

In my opinion, the point of order is not well taken. By ruling that this amendment is in order, I mean that this House has the right to discuss it, not with the view of depriving a province of what may have been enacted by its legislature, but merely with the view of allowing the House to express its opinion.

Mr. W. B. NORTHRUP (East Hastings) appealed from the ruling of Mr. Speaker.

The House divided on the question: Shall the ruling of the Speaker be confirmed? And the same was confirmed on the following division:

YEAS:

Messieurs

Achim,	Macdonell,
Ames (Sir Herbert),	Maclean (Halifax),
Armstrong (Lambton),	McCoig,
Armstrong (York, O.),	McCraney,

NAYS:

Messieurs

Buchanan, Clark (Red Deer), Cruise, Douglas, Knowles, MacNutt, Northrup, Oliver, Thompson (Qu'Appelle)—9.

Mr. ERNEST LAPOINTE: Mr. Speaker, I feel it to be my imperative duty to move this resolution and to invite the discussion of this subject, which is of the utmost importance for the welfare of this country. I assure the right hon. the Prime Minister, for whom I have the greatest respect, that, previous to his appeal of yesterday, I had given to this matter the most earnest and serious consideration. I knew that the course which I had adopted would be disagreeable to many and that I would receive remonstrances and even castigations. For the last few weeks we have been cautioned and warned against approaching this subject in the Dominion Parliament on account of its extreme gravity, lest it should lead to further and more acute dissension between the two great races which compose the majority of the Canadian people. But ignoring difficulties, ignoring problems, is not solving them. On the contrary, I believe it is our duty, as the national representatives of the whole of Canada, to deal with the subject which is embodied in the resolution which I have the honour to move. This question, from its nature, has become a national question. We cannot ignore it. We have to treat it courageously and patriotically. There is no question which affects vitally one section of this country which does not affect the others; especially is that the case when it relates to the language which one-third of the population of this country claim as their birthright.

I earnestly hope that this discussion, instead of being a cause of discord, will promote a better understanding and a closer union between the two races. I do not want to create any ill-feeling, although unfortunately that exists at the present time. I do not want to accentuate any ill-feeling that exists; my purpose is to dispel it. During the last two years Mr. Lloyd George has pleaded in Great Britain for peace at home. That is what we need in Canada also.

It is a coincidence of good omen that this House should be the first assembly in the British Empire to be called upon to endorse and give effect in some way to the wish formulated in the resolution adopted unanimously on the 10th of April last by the British and French inter-parliamentary delegates at the meeting held in London on that date. The resolution, which I have taken from the London Times, reads:

> Believing that the alliance between the French and English peoples will be cemented by a more thorough knowledge on the part of each people of the mind and the literature of the other, the Franco-British Interparliamentary Committee expresses its conviction that the teaching and spelling of the French and the English languages respectively should be, as far as possible, encouraged and developed in both countries, and it commends this subject to the prompt and earnest consideration of the educational authorities and of the teachers in France and in the United Kingdom.

The mover of this resolution, Mr. Franklin Bouillon, gave an interview to the Daily Chronicle, and I take it from the edition of that newspaper of April 11, 1916:

> We think that no solid union can be built up except by the mutual interpretation of mind, said Mr. Franklin Bouillon, referring to the question of the teaching of the English and Franch languages which he had introduced at the conference. That was the only way to bind the two peoples together. The feeling of the whole conference was that such a consummation was absolutely to be desired, and our duty, after what we had learned, was that we the dominions and countries united, should be prepared to make an arrangement in future so that we should be perfectly independent economically just as we have been and would remain politically.

Lord Bryce was the president of the conference, and the resolution, which was carried unanimously, was moved by Mr. Franklin Bouillon and seconded by Sir Henry Craik, M.P.

I said that it was a rather fortunate circumstance that this Canadian Parliament should be the first to be called upon to endorse this resolution of the representatives of the Allied countries, and it is quite appropriate that such should be the case. This Parliament is the greatest bilingual institution in the British Empire, and it is but natural that we should view with favour and approval this new and most fortunate course adopted by the representative leaders of our two great mother countries.

The Canadian Confederation was a compromise. It is certainly to be regretted that periodically questions arise that endanger the work of unity and national harmony which is so essential to the building up and development of a great country. Such questions cannot be avoided;

but it is the duty of Canadian public men to approach and to deal with them in a spirit of tolerance, justice, and liberty. It is impossible to prevent those troublesome questions from being thrown into the political arena; but surely, after fifty years of Confederation, the two branches of the Canadian family must have come of age; they must be able to put aside the fanatics and the demagogues; they must be able to adjust their difficulties and to settle their controversies in that most commendable spirit described by Lincoln: "With malice toward none; with charity for all." Our social fabric is based entirely upon the mutual respect of the rights of the two great Canadian races. This principle is at the very root of our constitution. It is necessary for those who are not familiar with the history of this country that they should be made acquainted with that fact. There is no place in Canada for narrowness of mind or prejudice; indeed, there should be no place for them in any country in the world. Moderation, tolerance, and charity must be the governing principles of all creeds, races, and colours, and the Golden Rule should apply to all.

I do not purpose dealing with the legal and constitutional aspect of the question, although I may refer to it incidentally for the purpose of my argument. This resolution does not recommend the disallowance of any of the provincial laws of Ontario. It does not imply any blame or censure upon the course adopted by the Government in dealing with the petitions praying for the disallowance of that legislation. Indeed, I personally believe that disallowance would have been unwise; the remedy might, perhaps, have increased the disease. Coercion of any kind will not settle the difficulties. I am a true Liberal and a believer in provincial rights. I will go so far as to admit that to be effective and successful any final settlement of this question must be made in Ontario and by Ontario herself. But, Sir, is it not the right of this Parliament, while declining to interfere with the provincial legislation of Ontario by the exercise of the power of disallowance or otherwise, to appeal to the rulers of that province for a generous and peaceful settlement of this disturbing question and for a redress of the grievances of the minority? If the majority would not accept coercion on the part of this Parliament with regard to what they consider to be their provincial rights, how can they expect that the minority will tamely submit to coercion on the part of the provincial Legislature with regard to what the members of the minority also consider to be their most sacred and inalienable rights? Is it not our duty as representatives of the great Canadian family to plead with this member of that family, to ask him who is the big brother to be fair to his little and weaker brother, to be generous with him, to help him along in his struggles and not to quarrel with him? Surely, this is not coercion.

Sir, the French Canadians of Ontario love their language. We all love it. We love it because it is our own language. Let any hon. gentleman, let any man, consult his own personal feeling; let him consult his own heart and he will realize how great is his affection for the language that he learned to speak on the knees of his mother. But we love the French language also because we sincerely feel that it is the sweetest and purest and noblest language which has ever been spoken by human lips. We love it because of its great literature. We love it for its glorious history. We love it because of its clearness, which is so great that a German author is reported to have said: "I am anxious to have my book translated into French in order to understand it better." French, in the words of John Quincy Adams, is the acknowledged neutral language of all refined society; it is the language of diplomacy; its influence is world-wide. The reports of French literary statistics show that one-half of every edition of a French novel is sold outside of France, and that two-thirds of the more serious works are sold in foreign countries. Take the case of my hon. friend the member for Wright (Mr. E. B. Devlin), the seconder of this resolution. My hon. friend is an Irishman who has not a drop of French blood in his veins. Where did he acquire that knowledge and mastery of the French language which he possesses? He acquired it in a college in Great Britain. Let me give an illustration of the real status of the French language in the world. I will quote an article entitled, "French spoken in Berlin," from La Gazette de Lausanne:

3 p.m.

While Berlin is zealously striving to expunge from the German language all those grossly deformed and mutilated terms which they had originally borrowed from ours, French victoriously makes its entry into the capital of the Empire via Constantinople. A Bernese newspaperman who is a friend of ours, returning from a trip to Germany, states

that never was there so much French spoken in the streets and hotels of Berlin. The alliance with Turkey, followed by the Balkan campaign and the revival of intercourse between Berlin and Constantinople, has had the effect of bringing to the capital of Prussia a large number of Orientals entrusted with political and business missions of a more or less definite character. All those people have not as yet had time to learn German, and considering that, since the outbreak of the holy war, the Germans have been rather too hard pressed to study the Turkish language, it has been found indispensable on both sides to become proficient in the use of French and thus to pay homage to that western civilization which for centuries has been the only one to exert an influence in the Orient.

"The novelty consists in the emigration of the French language from the shores of the Bosphorous to Berlin. It is a known fact that, during the agitation which preceded the entry of Turkey into the conflict, it was in French that the crowd was addressed in front of the German embassy in Constantinople by a diplomatic agent of that country, and it was also in French that the Austrian ambassador, the marquess of Pallavicini, expressed his wishes of success to the Turkish delegates. As an anti-French manifestation it must have seemed rather odd.

The French Canadians of Ontario are proud of their language. They claim that they have the right to speak it in this country; they intend to speak it, and they want their children to enjoy the same privilege after them. I would like every member of this House to realize that these citizens are the descendants of the discoverers of the province. Their forefathers were the first settlers; they are not intruders or trespassers in any part of its territory. Seven or eight generations of men of their flesh and blood have contributed to the development of that country. They are a group of 250,000 people, and they constitute, with their brethren of the other provinces, one-third of the population of Canada. Talleyrand said once, very properly: "It is absurd to get angry about a fact." Those who do not like the condition of things that I have just described should remember the undeniable wisdom of that saying. I believe they will be wiser if they look at the matter in the same light as did that clever journalist who said the other day: "I think it quite likely that Providence was mistaken in creating so many Frenchmen, but what can you do against Providence? You must get along as best you can with it, and you had better decide that it is an easier job to get along with Jean Baptiste than to exterminate him."

I quite understand the feeling, and I respect the opinion of those who think that for the good of the country there ought to be only one race in Canada. I respect their opinion, although I entirely differ from it. I enjoy so much the right and the pleasure of expressing my own opinion—even after a point of order has been taken to prevent me from doing so, that I should not seek to deny to any man the privilege of doing his utmost to have his ideals prevail. But when that man strives to defend and to propagate his ideas there is a limit which he must not overstep, and that limit is my rights and my liberties and the rights and liberties of other people as well. It is against such interference that the French Canadians of Ontario are now protesting. As is stated in the resolution which I have the honour to move, it has always been the policy of Britain to recognize and protect the language of the subjects of all territories coming under the sovereignty of the Crown. In doing so the statesmen of Britain have only given effect to the principles of international law; and, by the carrying on of that policy, they have succeeded in creating the great Empire of which we are so proud to be a part. The last instance in which the principle was given effect to was when the South African Union was organized and was granted responsible government. Let me quote to you the words of one of the British statesmen who were responsible for the granting of the constitution of South Africa. In a speech delivered in the British House of Commons on that subject, the Right Hon. Winston Churchill spoke as follows:

In dealing with nationalities, nothing is more fatal than a dodge. Wrongs will be forgiven, sufferings and losses will be forgiven or forgotten, battles will be remembered only as they recall the martial virtues of the combatants; but anything like chicanery, anything like a trick, will always rankle. The Government are concerned in South Africa not only to do what is fair—

I draw the attention of the House to these words:

—not only to do what is fair, but to do what South Africa will accept as fair. They are concerned not merely to choose a balance which will deal evenly between the races, but one which will secure the acceptance of both races ... we do not seek to pit one race against the other in the hope of profiting from the quarrel. We hope to build upon the reconciliation and not upon the rivalry of races. We hope that it may be our fortune so to dispose of affairs that these two valiant, strong races may dwell together side by side in peace and amity under the shelter of an equal flag.

In another speech, on the Transvaal constitution, the same gentleman said in the House of Commons:

> Now let me come to the question of language.... The recognition of their language is precious to a small people. I have never been able to work myself into a passion because there are in parts of South Africa Dutch people who wish to have Dutch teachers to teach Dutch children Dutch. I have not so poor an opinion of the English language with its priceless literary treasures and its world-wide business connections, as not to believe that it can safely be exposed to the open competition of a dialect like the Taal. We believe that the only sure way to preserve in the years that are to come such a language as the Taal would be to make it a proscribed language, which would be spoken by the people with deliberation and malice, as a protest against what they regarded and would rightly regard as an act of intolerance.

Let me quote also the following words of Sir C. P. Lucas, in a lecture on the influence of science on Empire (King's College lectures on Colonial Problems, page 136):

> Self-government has distinctly not fused races, but what it has done is to enable different races, while remaining different to live in friendly co-operation side by side... I look to a future of the Empire in which there will be different groups of races, forming in the main large units, all on an equal level, not aiming at fusion but agreeing to differ, and yet not the less citizens under one sovereign, sitting side by side in an Empire Parliament, as French and English in Canada, Dutch and English in South Africa, etc.

Sir, the same underlying principle of generous treatment and British fair-play can be traced and discerned in all the legislation and the constitutional enactments concerning Canada from the Quebec Act of 1774 down to our own day. In 1841, however, the British Parliament, deceived by the clamours of the then bureaucracy, enacted a law proscribing the use of the French language in the Canadian Parliament of that day; but, through the efforts of Lord Elgin, that un-British law was repealed after a very short existence. Let me remind you that a great Canadian, one of the fathers of responsible government in this country, Louis Hypolite Lafontaine, made it his duty to violate the law of 1841; and it was in French that he delivered his first speech in the Canadian Assembly after the enactment of that law. Still, Lafontaine is rightly considered as one of our great nation-builders, and is in no way branded as an agitator. The British North America Act recognized the French language as an official language in this country; and, if you desire to know in an unmistakable way what were the intentions and the meanings of the fathers of Confederation, listen to these words of the great statesman under whose leadership Confederation was achieved. Sir John A. Macdonald, in the House of Commons of Canada, used the following language:

> I have no accord with the desire expressed in some quarters that by any mode whatever there should be an attempt made to oppress the one language or to render it inferior to the other; I believe that would be impossible if it were tried and it would be foolish and wicked if it were possible. The statement that has been made so often that this is a conquered country is "à propos de rien." Whether it was conquered or ceded, we have a constitution under which all British subjects are in a position of absolute equality, having rights of every kind, of language, of religion, of property and of person. There is no paramount race in this country, there is no conquered race in this country, we are all British subjects, and those who are not English are none the less British subjects on that account.

This Parliament has always respected the intentions of the framers of our constitution. A Bill cannot pass its second reading in this House without being printed in French. Why, as late as two years ago, at the instigation of the present Government, a Bill was adopted by this Parliament, the Naturalization Act of 1915, the statute, 5 George V, chapter 44, of which subsection b of section 2 requires of the applicant for naturalization that he shall be of good character, and shall have an adequate knowledge of either the English or French language. Is this not again a formal recognition of the official and national status of the French language in this country? Am I not entitled to say that its status is different from that of the various European or other foreign dialects —the editors of the Toronto News and the Ottawa Evening Journal to the contrary notwithstanding? To say that the French language is a national language in Canada, and to contend in the same breath that it is a foreign language in the Canadian provinces, is utter nonsense. Everything which in the Confederation has a national character must at least have a standing in the different parts of that Confederation. That which has a right in the whole must have some privileges in the different parts of that whole. In Ontario, the capital of Canada is situated; the Parliament of Canada sits in the province of Ontario; the various services of the national Administration are in the province of Ontario, and the French language is official in every one of them. Take the case of the hon. junior member for Ottawa (Mr. Chabot), or of the hon. member for Prescott (Mr. Proulx); both are French-Canadians; both live in Ontario and represent Ontario constituencies. Both are members of the Par-

liament of Canada and are entitled as a right to stand up in this Parliament and address you, Mr. Speaker, in the French language. It is not fair to contend that in order to exercise what is their right, they must have the privilege of receiving in the schools of the country, which they maintain with their own money, the education which will enable them to do so. But the advocates of By-law 17 claim that they do not want to prevent the teaching of the French language, that their only purpose is to improve the methods and quality of bilingual education, and that their regulations have been enacted for the advantage and benefit of the French-speaking children. Sir, the sense of fairness is so deeply rooted in the mind of the average English-speaking Canadian that to induce him to accept a wrong or an injustice, some moral excuse or justification must be given for that wrong. The wolf will always find some pretence to justify his eating of the lamb. I assure you that this sort of benevolent despotism does not appeal to me. I acknowledge the good faith of many of those who support and defend these regulations. I believe that the greater number of them would refuse to endorse the proscription of the language which is the pride of so many of their fellow citizens. But there is not the slightest doubt in my mind, and there is not the slightest doubt in the mind of any one who has received even a smattering of French education that these regulations, although they proceed more slowly, proceed obliquely, and more insidiously perhaps, but with no less certainty to the same end, namely, the strangling of the French tongue.

The time at my disposal does not permit me to analyse any of these regulations, nor do I think that this is the proper place to do so. Allow me to point out, however, that what is left of the study of French can only be made in the schools which were in operation and in which French was a subject of study previous to 1912. Does not that seem an unpatriotic reservation? It is inflicting a penalty upon the French-Canadians for being guilty of observing too well the law of multiplication prescribed by the Almighty. It is an inducement to race suicide. I believe, however, that the moral character and temperament of my countrymen will successfully resist any such unpatriotic design.

Another feature of the regulations which is also absolutely unacceptable is that no teaching of French shall be given in any manner except with the consent and on the approval of the inspector, from whose decision there is no appeal. I cannot understand why such a condition of things should receive the approval of any fair-minded man. My idea of what constitutes liberty precludes me from admitting that it can be sufficiently preserved when the citizen must depend upon the benevolence, the whim, or, in some cases, perhaps upon the prejudices of a minister, or any of his servants. Surely that is not liberty. For my part I cannot help thinking that these regulations were an unfortunate wounding of the French Canadians of Ontario in their deepest and most permanent susceptibilities. They have resented it, and their countrymen of the same race and language have resented it as well, and we have been passing through a serious crisis which threatens to become still more acute. But what to my mind is the most deplorable feature of the situation is not the agitation which has developed; there is something graver than the abuses and violences of language. What is peculiarly painful is that this unholy war is being waged at the expense of the most sacred and innocent victim; at the expense of the child. The Canadian children ought to ignore our conflicts and our rivalries. They ought to live in an atmosphere of peace and order. Is it not to be regretted that in the blood of these children should be instilled the poison of old hatreds and antipathies. We need greater things in this country. As to the proscription of the French language in Ontario, I have no fear whatever. A coercive policy will never assimilate a race, nor proscribe a language. That is a truism of sociology which all the governments of the world ought to remember. Will you permit me to read in that connection an article by Emile Faguet, a member of the French Academy, on the recent proscription of the French language in Bulgaria, after that country had joined Germany against the Allies:

> The Czar Ferdinand of Bulgaria has just forbidden in his kingdom the use of the French language. The fact strikes one as strange, even in a period of extraordinary happenings.
>
> What can be the matter with that czar? As far as blood goes, he is a half-Frenchman. He is a grandson of the first and last "king of the French." He has received a French education. What then ails him, and, as the poet said: Against all his past history turns him on a sudden?
>
> What harm has the French language done him? It is up to this day the instrument of diplomacy, and should we infer that the Czar Ferdinand has made up his mind that none of his subjects will take up the profession in which Talleyrand made a name for himself?

That would be taking a rather narrow view of the situation.

However, if such is not his purpose, such is the direct outcome of his action. A queer departure, indeed.

Would it be, perchance, that the French language is tainted and carries with it some deadly germ which it transmits to whoever uses it or tries to learn it? I wonder what it can be. It supplies a clear, systematic, direct means of expression, which enables one to speak to the point, without circumlocutions or roundabout verbosity; besides, a straightforward means of expression, which to those who make use of it can impart nothing but a liking for loyalty and honesty. Who is it fears such an infection? Who will acknowledge that he fears it? Who will allow such a suspicion to rest on himself? No living man. Well, then, why does the Czar of Bulgaria act as if he feared the natural play of the use of that tongue on those who make use of it? That is absolutely beyond comprehension.

There is no one—and that is a fact more especially as regards rulers of people—who is not desirous that his subordinates, his dependents, his subjects, should be above all true and honest. All then should see to it that those over whom they hold sway learn French with all their heart and speak it fluently. The following anecdote is familiar to a good many: Louis the Fourteenth advised one of his courtiers to learn Spanish, and the latter, surmising that the king destined him to be ambassador at the court of Spain, forthwith set himself to the task but was sorely disappointed when on returning to the king with the news that he could now speak the Spanish language, was simply told: Very well, then I think you would enjoy reading Don Quixote in the original. Similarly, instead of a ruler forbidding the use of French by his people, I would fancy one inquiring from some of his courtiers: Do you know French?—No.—Well, learn it, that will impart to you notions of righteousness in every form.

Ferdinand of Bulgaria is doing exactly the opposite. It cannot be gainsaid, he acts strangely. He has reasons with very little reason in them, and which, besides, are not prompted by any kindheartedness.

I can perceive only one motive which may have had some bearing on the resolve taken by the Czar of Bulgaria. He has been jeered and to a certain extent discussed in French. It must be admitted that he has been somewhat ill-used in French. But, your Majesty, is that a reason? Is there any sense in prohibiting the use of a whole literature from Villon to Rostand, just because some of those who speak the language have used it to banter you? That is trying to get even with a vengeance.

How touchy the victim, and how magnifying and long-armed his desire for revenge! What! shall a language be proscribed as a whole on account of a few words in that language which have displeased you, and which, I aver, had not been said for the purpose of conciliating you. A whole tongue put under ban on account of a few sounds which have grated on yours ears! That is exactly the stand taken by Aman in Racine's play, Esther:

"Un seul osa d'Aman attirer le courroux:
Aussitôt de la terre ils disparurent tous."

And that stand has always been held to smack of megalomania. A language as a whole cannot be proscribed, not any more than a people as a whole. Of course, that may be done theoretically, but by no means actually. Bulgarians will continue to learn French, with this added peculiarity that henceforth that tongue will have the further allurement of the forbidden fruit. Czar Ferdinand, in emitting that decree, has simply conferred on the French language a wider popularity, and that popularity will only increase in range and intensity as generations go by. Nothing is as effective as proscription towards furthering that end. Young Bulgarians will say to one another: "You know, that is the language which Czar Ferdinand intended to behead."

Sir, the present time is one when all sources of trouble and division ought to be removed. Canada is in urgent need of the union of her citizens. All moderate and well-meaning men of the country must regard it as a pity that the schools of the capital city of Ottawa should be closed, and that thousands of school children should parade the streets while the fathers and brothers of many of them are fighting and dying for liberty in the trenches of France and Belgium. Is it not to be deplored that such a fight about the French language should take place when France and Britain have formed a glorious and indissoluble union for the good of the world and the great cause of civilization? There is no longer a channel between the peoples of Great Britain and of France. Why should there be one in this country between their descendants? I have referred to the resolution adopted by the Franco-British parliamentary delegates on the 10th April last. Those delegates met first in France, at Paris and at Bordeaux. The first conference was presided over by Mr. George Clemenceau, a former Prime Minister of France, and he was entrusted with the agreeable duty of welcoming the British delegates. I happened one afternoon, in the reading room of this House, to read some beautiful and inspiring extracts from his speech. I fear that I have already detained the House too long, but if the House will bear with me I will give a few passages from this speech, which, as hon. gentlemen will perceive, are of a high literary order:

To the members of the British committee:

Gentlemen, we wish you a hearty welcome; and may the man who owes it to his advancing years to address you in the name of his colleagues of the French parliamentary committee, be allowed to tell you that, even in the darkest days, he never despaired of the concluding of an entente which appeared to him bound to materialize some day, though he had lost hope of seeing it effected during his lifetime.

Yes, gentlemen, I have been expecting you for endless centuries; and historians, who too often are out of touch with those undercurrents

of love and hatred which alternate in the lives of people, may express surprise at the length of time it took for us to join hands across such a narrow expanse of sea; an impassable barrier, if viewed in the light of so many adventurous war undertakings, but which is now in our eyes a great highway open to all who are worthy of comprehending and practising the future true brotherhood of nations, founded on a recognition of the equal rights of all and the proper consideration of the right of every one.

Yes, I repeat it, I have been expecting you since Hastings, since the days of the Black Prince. You may judge how persistent I am. I was awaiting you, and you have come, and here you are the representatives of the English people who, of your own impulse, have crossed the Channel, not to conclude a political agreement—our respective governments will see to that, neither is it to investigate military tactics, a subject which is necessarily outside our purview.

No, your visit is something like the forecasted crowning of all these labours. We are meeting simply for the purpose of seeing one another, of understanding one another, and of finding ourselves capable of loving one another. The present time requires action, and civilians as well as the military, on both sides of the Channel are engaged in action and will remain so, whatever the outcome, until the end. Until the end, do you catch my meaning?

With all the authority with which he is clothed, Lord Desart made that final statement. Our minds are made up, our purpose is set, our honour is pledged. We are giving our children, we will give our wealth, everything, everything, and such is the reward that may be expected from the triumph of the lofty cause of the independence of nations and the dignity of man, that despite the most heart-rending sacrifices, we shall never complain that we had to give too much.

Such is the great international secret which has led you across the seas to come to us. . .

True it is that to the war is due the miracle of a deep mutual understanding, which now could not be broken without calamity to civilization. We did not seek war, neither your nation nor our nation, and now we are both bent on having it, and so our good allies; and we are earnest about it, and we will have it as long as may be necessary to reach a complete victory-complete, do you hear?—that will repay us and repay our brave sons for those torrents of blood, such torrents as have never drenched any country in history. . . Heart to heart, as our soldiers are doing side by side, we shall live in a great bond of union, that no frenzy of hatred must ever tear asunder, and together we shall have accomplished something which short-sighted minds will perhaps deem insignificant because made without any display of pomp, but which nevertheless will mark an epoch in the forward march of humanity.

M. Paul Deschanel, President of the Chamber of Deputies in France, said:

Never was bond more necessary. The genius of Great Britain and that of France complete, impregnate and magnetize each other. Both bend themselves with a remarkable suppleness to the unforeseen exigencies of the most terrible of all wars. Together they come to the rescue of civilization now threatened with a frightful return to savagery; together, alongside our dear and brave allies, they will save the honour of mankind. Long live England and long live France, forever united in the triumph of justice.

But, Sir, immediately after having read these fine words, expressive of union and amity, my attention was called to an article published in an important newspaper of Ontario, the London Free Press, on March 4, 1916, and entitled "A Quebec Plot," I quote the following sentence from it:

The Liberal leader in Ontario must cease this practice of speaking to French audiences in Ontario in the French tongue.

This sentence would have made a most painful impression on me if I had not believed then, as I believe now, that this newspaper was not representing the true sentiments of my English-speaking fellow citizens.

In closing my remarks, I trust that in dealing with this delicate subject I have not offended the feelings of any hon. gentleman in this House. I have only done what I deemed to be my imperative duty. My most earnest desire is that this resolution and this debate, instead of driving our two great races further asunder, will contribute to weld them more indissolubly together in the defence of liberty under the law. I ask my fellow members to proclaim with Gladstone, the equality of the weak with the strong. It is our most difficult task to unite and reconcile the nation. We must inspire Canadian public life with a lofty and courageous spirit; we must protect the equal rights of all the citizens; and above all, erect in this Canadian land a strong and solid wall against the mad blows of violence and prejudice. To reach that end, we must ask our fellow-citizens to make concessions, to be compliant, to bear with each other and respect each other's opinions. I hope that in this way we shall succeed in creating that harmony which is as necessary to the welfare of the State as it is to the welfare of individuals.

Mr. E. B. DEVLIN (Wright): Mr. Speaker, listening to the prayer with which we open our daily proceedings in this House, the words "May peace and harmony always reign among us," appealed to me as they always have since I have had the honour of a seat in this House, and I trust that the temper and spirit of my words this afternoon will not in any way be in discord with that pious supplication. The resolution which is now

before the House is divided into three distinct parts. It has been said by hon. gentlemen opposite that it is a great pity that this resolution ever came up in this House. Might I say at once that I have that feeling myself. I think it is unfortunate that legislation should be passed by any province which would so affect the sensibilities of a great minority in this country as to force them to apply to this House for redress. Nevertheless, certain legislation, to which I shall refer, has been passed by the Legislature of Ontario. Petitions have come to this House, applications have been made to the representatives of the people to bring this question before the Canadian public through the Federal Parliament; speeches have been delivered from the public platform; I take it that all these are an appeal on behalf of the French minority in this country, not for the disallowance of any Act which has been passed by the Ontario or any other Legislature, but an appeal to the intelligence, to the judgment, and to the generosity of the Canadian people. I am a Canadian. I believe in the most absolute freedom and liberty for the people of all races and of all creeds in this country. Whenever I hear or read noble sentiments appealing to the generosity of the people of my country, I am forced to applaud. When I read a short time ago the speeches delivered by the right hon. the Prime Minister of this country in England, I felt that he was representing the true sentiments of the Canadian people. Will you, Sir, allow me to quote some words which the right hon. gentleman uttered in a speech at the town hall in Bristol, England, on August 10, 1915:

> Throughout this Empire we have many races and many creeds; but all united by a single purpose at this juncture. So we in Canada are not all of one race. Those who came first to the soil of Canada were of a great nation, now happily an Ally of ours, the great French nation. There are to-day within these islands, at Shorncliffe, several regiments whose mother-tongue is French, and not English, who have come from Canada to do their part in the great struggle. In the development of constitutional government in Canada—which has indeed proceeded very much on the same lines as with you—Canadians of French descent have laboured harmoniously and effectively with us whose forefathers came from these islands. And no better exponents of the cause of constitutional government and liberty in Canada have been found than these descended from the first pioneer race of Canda, the French race. We in Canada find the need, realized everywhere throughout the Empire, that we should know and understand each other a little better. In a vast country like ours, with scattered communities, diverse in race, diverse in creed, and sometimes in ideal and apparent interest, there is the greatest need of mutual understanding and comprehension. And as we have come to know ourselves better during the past twenty-five or fifty years, so the national spirit of Canada has been awakened, and has become strong and vigorous.

Those sentiments ought to be applauded throughout Canada as I feel they must have been applauded in Great Britain. Might I be allowed to make a further quotation from another speech of the right hon. the Prime Minister, delivered in the Guild Hall, London, England, on July 29, 1915:

> While it may not be fitting that one of our kindred should speak of the British people as a great race, nevertheless, I may at least say that it has wrought great things. And the greatest of all its achievements is the upbuilding of an Empire sustained by ties such as those which unite ours. In the beginning, the founding of a nation within these islands, and the consequent necessity of orderly government, compelled a system autocratic in its character and methods. Then came the great charters of freedom and the will of the people to make their own laws and govern themselves. Orderly government on the one hand; individual liberty on the other; justice, the equality of all men before the law—upon these secure foundations the fabric of the national life was built; and in these later years there has come the not less noble ideal of a democracy founded upon equality of opportunity for all the people. . .
>
> And why are the descendants in Canada of those who fought under Wolfe and of those who fought under Montcalm when contending for the possession of the northern half of the American continent, why are they now standing together in the Empire's battle line? To speak of later events, why do we find beyond the channel, in France or in Belgium, the grandson of a Durham and the grandson of a Papineau standing side by side in this struggle? When the historian of the future comes to analyse the events of this war, he will realize that some great overmastering impulse contributed mainly to this wonderful result. One such impulse is to be found in the love of liberty, the ideals of democracy, and the spirit of unity founded thereon, which make the whole Empire one in aim and purpose.

When I first read those words, my thoughts reverted at once to the celebration in 1908 of the Tercentenary of the foundation of Quebec and of the marvellous gathering of representatives of the component parts of the British Empire, and to the expressions, uttered in the presence of His Majesty the King, by eminent men of our Dominion, of their profound loyalty and attachment to the Throne, the flag and the free institutions governing this country and the Empire. Those sentiments were echoed by every one in every province in Canada. Canada was there represented as a Dominion; the narrow confines of provincialism

were forgotten, and men of the French race and men of the English race, grouped around the monument of Samuel de Champlain, seemed to form a new monument—a monument to the greatness of the unity of the people of Canada. There were expressions by eminent men of this Dominion as to the unity of the races in this country, as to the ideals which governed us in Canada. Some of those men have passed away; some are still living. Let me refer you, Sir, to the opening remarks of the mayor of the city of Quebec at that time, Sir George Garneau:

> The French-Canadians experience an inexpressible feeling of patriotic pride and gratitude towards the two great nations who have in turn presided over our destinies: France, always beloved, to whom they owe their life and noble traditions; England, who left them free to grow up keeping their faith, their language and their institutions, and who endowed them with a constitutional government based upon the largest amount of liberties, and which is undeniably the noblest and most perfect in the world.

Therein, in my humble judgment, is the real feeling of a French Canadian. He is attached to France because from France he got life; from France he got his great traditions. He is attached to England because England has allowed him to grow up in his faith, in his language, and in his institutions, and because England has given to this country a constitutional Government founded upon the greatest sum of liberty, which is, as Sir George Garneau puts it, "the best and most perfect in the world."

The only other expression which I would like to give to the House is of one who has passed away, Sir James Whitney, who, speaking upon the same occasion, said:

> We, Sir, of the other provinces, respect and love our fellow subjects of Quebec for their intrinsic worth and for their attitude and aid in times of stress and peril. We cannot forget the answer sent when they were urged to join hands with a foreign power against the British Empire.
>
> We cannot forget Chateauguay, where the gallant de Salaberry performed the most scientific military feat of the war of 1812.
>
> Sir, within a mile of my birthplace, on the historic field of Chrysler's farm, was done what Sir Nigel Loring would term a "comfortable feat of arms."
>
> And we cannot forget that there and then a company of French Canadian voltigeurs reddened the soil of Upper Canada with their blood in defence of British institutions and British connections.
>
> Nor can we forget the memorable words of Sir Etienne Taché, when he declared that "the last shot fired in Canada in defence of British connections will be fired by a French Canadian."

> Sir, we could not forget these things if we would, and on behalf of the provinces, I make bold to say also that we would not forget them if we could. We revere the memories of the great men of Quebec, of Taché and Lafontaine, of Morin and Cartier, Chapleau and Dorion, among the dead and offer our tribute of respect and honour to Laurier among the living.

Those are the words which have been uttered by some of the great men of this country; those are the sentiments which I understand actuate every true Canadian, and in harmony with those sentiments I shall briefly deal with the resolution which I have had the honour of seconding. The first part of the resolution reads:

> It has long been the settled policy of Great Britain whenever a country passed under the sovereignty of the Crown by treaty or otherwise, to respect the religion, the usages and the language of the inhabitants who thus become British subjects.

Referring solely to our own country, we find that that was exactly the policy which was carried out by Great Britain, because, if you refer to the third article of the Capitulation of this country, you will find:

> That the inhabitants shall be preserved in the possession of their houses, goods, effects and privileges.

That article was granted upon the condition of the inhabitants laying down their arms. Later on in 1774, Sir James Marriott, then Advocate General, was asked to report to the King upon certain conditions existing in this country, and, amongst other things, upon that very article, and his report is contained in the following words:

> The treaty made with the sovereign power of France, which, without taking notice of the capitulation transfers its subjects pleno jure, does not supersede the capitulation made with the inhabitants; because I consider capitulations, in the eye of the law of nations, to be not only as national, but personal compacts, and made with the inhabitants themselves, for the consideration of their ceasing their existence. It is consistent with the honour and interests of this Kingdom, that they should be religiously observed, and that the condition of the grantee should be rendered substantially better, rather than worse, so far as any person or persons are capable of taking benefit of the grant.

Since that time there have been several Acts passed by the Imperial Government concerning the constitution of our country. There was the Quebec Act of 1774, in which the principle was again laid down; there was the Constitutional Act of 1791; there was the Union Act of 1840, none of which Acts affected the use of the French language throughout the Dominion of Canada.

Again, there was the Confederation Act of 1867. The only section of that Act which deals with the use of the French language is section 133, which places both languages on the same footing in this Parliament, in the courts of this Dominion, and in the courts and legislature of the province of Quebec. Since the legislation of 1867 permits the French language to be an official language of this country—and you cannot in this Parliament or in any legislature take away that right—is it the part of wisdom to allow the children to use that language on the streets of any village, town or city in Ontario, or in any part of that or any other province, and yet not give them the right to learn how to speak that language correctly? I may be wrong, but in my humble judgment, Sir, it is elementary logic that if by your legislation you provide that a language shall be official in your country, it naturally follows that you must give to the users of that language the opportunity of learning it.

The principle of the recognition by Great Britain of the right to the use of other languages than the English language has been referred to by the hon. member for Kamouraska. I find also that under the British Nationality and Status of Aliens Act of 1914, persons naturalized prior to January 1, 1915, may after that date apply for a fresh certificate of naturalization under new conditions; and, in order to be eligible for such certificate in the United Kingdom an alien must amongst other things be of good character and have an adequate knowledge of the English language. It does not say that he must have a thorough possession of the English language, that he must know the English language and that only; it says that he must have an adequate knowledge of the English language. In our country, by our Naturalization Act, he may know either the French or the English language. That law, passed by this Parliament quite recently, gives every French Canadian in this country, no matter into what province he wants to go, the right to use only the French language if he will. If the law is good, if it is sound, if it is based upon logic, is it the part of wisdom to prevent the children of these people, coming into this country and having the right to the use of that language, from learning how to speak the French language correctly?

The second part of the resolution is:

> That His Majesty's subjects of French origin in the province of Ontario complain that by recent legislation they have been to a large extent deprived of the privileges which they and their fathers have always enjoyed since Canada passed under the sovereignty of the British Crown, of having their children taught in French.

The French Canadians of the province of Ontario claim that they have a grievance. They have, as I said in the beginning of my remarks, petitioned the Government; they have through their press and from the public platform told us that they have a grievance. They ask us as their representatives to bring that grievance before the Canadian Parliament, and to appeal to its judgment and its intelligence. For a moment I should like to put before the House what the status of the French Canadians was prior to and since Confederation, and I want to do it, not in my own language, but in the language of a gentleman who has written a work entitled: "Legislation and History of Separate Schools in Upper Canada, 1841 to 1876," who cannot be said to have any prejudice whatever in the matter. I refer to the work of Mr. George Hodgins, M.A., LL.D., F.R.G.S., barrister-at-law, Librarian of the Education Department for Ontario, and editor of the Documentary History of Education in Upper Canada. The chapter is 33; it is somewhat lengthy, but for the purpose of the argument which I intend making, I should like to read the whole chapter. Mr. Hodgins says:

4 p.m.

> There was one class of separate schools which gave the chief superintendent very little trouble. These were the French and German schools—chiefly Roman Catholic—which were scattered here and there throughout Upper Canada. All that had to be done in their case was to give them such teaching facilities as enabled them to go into operation under teachers who could speak the language of the ratepayers concerned, and that language only. Happily that faculty could be given under the general, not the separate school law, and that with the sanction of the chief superintendent.

There were two principles which Dr. Ryerson laid down at an early period in his administration of the Education Department. The first was that whenever he could meet special cases by a liberal, and often, with the sanction of the Government, a generous interpretation of his powers under the Schools Acts, and in terms of his commission as chief superintendent of education, it was his duty to give that interpretation in cases not specifically provided for—except by analogy—in the school law. The second principle which Dr. Ryerson laid down, and which he generally adhered to, was not to propose too frequent legislation with a view to meet special cases,

but only to seek such legislation at intervals of from five to ten years. Fortunately I was familiar with Dr. Ryerson's views as expressed in the first of the foregoing principles which he had laid down for his guidance, when the first application was made in 1851 to grant a certificate of qualification to a French teacher in the county of Essex, which had been largely settled by French Canadians. At the time that this application reached me from the Board of Public Instruction for the county of Essex, Dr. Ryerson was absent in England and I had charge of the department as acting chief superintendent. I therefore submitted the application, which had been received, to the Council of Public Instruction for Upper Canada, with the recommendation that it be granted. This was concurred in by the Council of Public Instruction, and I was therefore, enabled to inform the Essex County Board, that:

The Council of Public Instruction for Upper Canada has sanctioned a liberal construction of the programme to which you refer, making the term "English" convertible into the term "French" where it occurs, and when applied to French candidates for examination before the County Board of Public Instruction. The certificate should, of course, be expressly limited to teaching in the French language.

A copy of this intimation was also sent to the then local superintendent of education at Sandwich, with the following addition:

The School Act expressly authorizes trustees to employ any qualified teacher they please; should, therefore, the one to whom you refer obtain a certificate from the County Board, the trustees can engage his services, and no board or school officer can prevent them as has been assumed in a memorial transmitted to me by the secretary of the County Board of Public Instruction, from certain inhabitants of School Section No. 6, Sandwich.

In 1858, a partial extension of the principle here laid down was applied to German teachers, and to meet the case a knowledge of the German grammar was by the Council of Public Instruction substituted in the programme of examination for a knowledge of the English grammar. (Reading):

In 1871 a further difficulty arose owing to a delay of the Council of Public Instruction, to provide fully for the examination and licensing of German teachers in the German settlements of Upper Canada. To meet a special case, which occurred in the county of Waterloo, I told the local Superintendent, who had called upon me, in Dr. Ryerson's absence:

To grant six months' certificates to such German candidates as would present themselves for examination in July; and I said that, by giving the department early notice of the real requirements in the case, attention would be given to the matter by the Council of Public Instruction, and every provision made for the examination of such candidates, at all future examinations.

This was confirmed by Dr. Ryerson; and he informed the local Superintendent of the county, that examination papers in German reading, spelling, etymology and grammar might be prepared by members of the County Board, and that the other ordinary examination papers could be used in the case of teachers who could read English.

Similar applications, made in 1872 and 1875, were dealt with in the same spirit; and, in this way, every facility was given by the Education Department for the successful operation of French and German public and separate schools in the French and German settlements of Upper Canada.

That is further confirmed by a letter which Dr. Ryerson wrote on the 24th of April, 1857, which reads as follows:

Gentlemen:

I have the honour to state in reply to your letter of the 16th instant that, as the French is the recognized language of the country, as well as the English, it is quite proper and lawful for the trustees to allow both languages to be taught in their schools to children whose parents may desire them to learn both.

I have the honour to be, sir,
Your obedient servant,
E. Ryerson.

Therefore, according to Dr. Ryerson's opinion, it was not only proper but lawful for the French language to be taught in the schools of Ontario prior to Confederation. Since Confederation the same right existed down to what is known as Regulation 17. I should like to call attention to a letter which was written by Mr. Colquhoun, Deputy Minister of Education, on the 24th July, 1911, in which I find these words:

I am directed by the Prime Minister, Sir James Whitney, to acknowledge your letter of the 21st, and to state that no change has been made in the school law of the department regulations affecting the study of the French language in the schools. I am directed to point out that the question is one entirely under the control of the Board of Trustees.

(Sgd.) A. H. U. Colquhoun.

The only provision respecting education which I find in the British North America Act is the provision contained in section 93, which reads as follows:

In and for each province the Legislature may exclusively make laws in relation to education, subject and according to the following provisions:

Nothing in any such law shall prejudicially affect any right or privilege with respect to denominational schools which any class of persons have by law in the province at the Union.

Where in any province a system of separate or dissentient schools exists by law at the Union or is thereafter established by the Legislature of the province, an Appeal shall lie to the Governor-General in Council from any Act or decision of any provincial authority affect-

ing any right or privilege of the Protestant or Roman Catholic minority of the Queen's subjects in relation to education.

Thus, so far, we find that the French language has been tolerated, has been allowed, and has been sanctioned by the laws passed in the province of Ontario. The French Canadians apparently had no grievance whatever until the passing of Regulation 17. But prior to the passing of Regulation 17 another regulation was passed by the Ontario Board which reads as follows:

In school sections where the French or German language prevails, the trustees may, in addition to the course of study prescribed for public schools, require instruction to be given in reading, grammar and composition to such pupils as are directed by their parents or guardians to study either of these languages, and in all such cases the authorized text books in French or German shall be used.

So that by Regulation 15, in the province of Ontario, the French language was sanctioned by the law and the German language was also sanctioned by the law. There was a subsequent resolution passed, regulation 17, which has been greatly spoken of in this country, and under which the French-Canadians feel that that they were aggrieved. Regulation 17, in effect proscribes certain privileges which have been accorded to the French Canadians in the use of their language as the language of instruction in their schools. The French Canadians feel that if the Germans are not proscribed in the right to their language in the Ontario schools, the French Canadians should not have their privileges limited. Before Confederation, according to Dr. Ryerson and according to Mr. Hodgins, the Germans and the French Canadians had their full privileges in Ontario. As late as Regulation 15 those privileges were continued and confirmed. By Regulation 17 the language of instruction during the first two years of their instruction may be the French language; but the idea and the spirit and the letter of the law is that the moment they have a sufficient knowledge of the English language, then the French language must be set aside entirely, and their whole education must be conducted along the lines of the English language. The French Canadians claim that they have a grievance. I feel, in my humble judgment, that their grievance is well founded; and, as a Canadian, wishing to see equal justice given to all classes in this community, wishing to see the same justice meted out to the French Canadians as I would want to see meted out to the English-speaking people, I feel that the second part of this resolution is thoroughly applicable to the circumstances, and therefore I have absolutely no hesitation in agreeing to every letter of it.

The third part of the resolution reads:

That this House especially at this time of universal sacrifice and anxiety, when all energies should be concentrated on the winning of the war, would, while fully recognizing the principle of provincial rights and the necessity of every child being given a thorough English education, respectfully suggest to the Legislative Assembly the wisdom of making it clear that the privilege of the children of French parentage of being taught in their mother tongue be not interfered with.

I would not like to give my own appreciation only of that portion of the resolution which I have seconded, and I would not like the House to be guided solely by my opinion. I refer the House to other opinions to which they might attach, and I have no doubt will attach, a great deal more weight, the opinion of Sir Oliver Mowat, for instance, in a speech made at Woodstock on December 3, 1889, when he said:

French-Canadians cherish their own language lovingly.

Will you permit me, Mr. Speaker, to interject a remark and to affirm, as one who knows the French-Canadian people that their language is part of their soul. They are attached to their language just as they are attached to their faith, to the traditions of this country, and to the British Crown. There is something in their love of their language which may be incomprehensible to those who have not had to do with the French-Canadians, who have not lived among the French-Canadians, and who are not intimately acquainted with them. Sir Oliver Mowat apparently had a thorough appreciation of the French Canadian when he used that language. He goes on:

They wish their children to love it and be educated in it; but they know it will be for their interest to be familiar with English also, and to be educated in English, as well as French. Proscribe French, their mother tongue, and they will hate you and have nothing to do with your schools. Permit their own language to receive attention, and they are glad to have their children learn English also as soon and as fast as it can be imparted. Such was the view of the commissioners as to the proper policy; it is the view of this Government; and it is the view of all intelligent men, except our political opponents. It was the view of Dr. Ryerson and his Council of Public Instruction, even to the extent of putting no pressure whatever on French or German schools, and of awaiting their own spontaneous action as to English and other matters.

There you have the opinion of an English Canadian speaking in the province of On-

tario. Will you let me quote the opinion of an English Canadian speaking in the province of Quebec only a few days ago before the Canadian Club, the opinion of a man who for years had a seat in the Legislature of Quebec, who has always lived among the French Canadian people, who later became the representative of the English minority in the province of Quebec in the provincial Cabinet, and who later was appointed a judge. I refer to Mr. Justice McCorkill, and I think his words express in better language than I could use the real feeling that animates the province of Quebec in this matter. Speaking on March 28, 1916, he said:

> I need not tell you that I have been a student of Canadian history from the very earliest days. I have read with the greatest interest the history of the old regime, the opening up of the country, and then of the abandonment of the people by their country, so to speak, and of the tremendous efforts they made to keep the country for themselves. I have read the history of the country under the British regime, and how they have fallen in so well with the administration of justice, the administration in our Legislatures and municipalities under the British system. I believe that a certain French-Canadian at Ottawa is one of the greatest parliamentarians under the British Constitution that we have in any part of the Empire.
>
> They have adopted our system, but there are two things they have clung to, their religion and their language. I believe that their national sentiment is even stronger than their religious sentiment—I really believe so. The national feeling among them is intensely strong, but I would ask you English, Irish and Scotch descendants born in this country, and brought up here, supposing a regulation similar to No. 17 were passed in the province of Quebec, what do you think our duty towards it would be? Supposing Sir Lomer Gouin—I cannot imagine it—but supposing he did have the courage, or the nerve, so to speak, to pass a regulation of that kind. There would be a rebellion in this province, I think. And here we have our French-Canadian brethren in the sister province who by constitutional means are trying to obtain the repeal or the modification of the regulation, or some other settlement of the question which would be satisfactory to all concerned.

I do not wish, Sir, to delay the business of this House. I have put as concisely as I conveniently can my sentiments upon this question, and have explained why I feel it an honour to second the resolution which was proposed by the hon. member for Kamouraska. Will you let me say in conclusion that I would hope to see this vexed question settled. Our population is made up of several races true to the institutions of this land and of our great Empire. My trust is that in this moment of great crisis Ontario will send out the message that the word "liberty" is emblazoned upon its shield. My trust is that Ontario, living up to the principles of its statesmen of the past, will prove that the same unity of intent and purpose exists at home as that which has guided and is guiding the courage, the valour, and the heroism of Canadian sons upon the blood-stained battlefields of Flanders. The Empire's dominions are out to uphold nationalization and constitutional principles. Our sons have crossed the seas to fight for the oppressed, consecrating with their blood the principles so dear to us, the protection of the smaller nations, the rights and privileges of Belgium and of Servia, the solidarity of the Empire, the reign of justice and freedom. Such are also the underlying principles of this resolution submitted in the most respectful manner in favour of a race that has no superior in generosity, in liberality, in advancement and in education.

Right Hon. Sir ROBERT BORDEN (Prime Minister): Mr. Speaker, I desire in the first place to assure my hon. friend from Kamouraska (Mr. Ernest Lapointe) that there was not the slightest intention on my part to attempt to administer to him any castigation. His speech was couched in very moderate and courteous terms. His reference to the attachment of French Canadians to their language was touching, and his allusion to the union of our Empire with the French Republic in this war was eloquent. In all he said in both these references I heartily concur. It did not seem to me, however, that any considerable portion of his speech was especially relevant to the resolution he has introduced. But in so far as it was relevant, it would have been an appropriate speech to address to the proper forum—that is, the Legislature of Ontario.

This motion is addressed to Parliament rather than to the Government; it does not call for any governmental action. Nevertheless, I conceive it my duty, holding the position of leader of the Government, to make my attitude clear in regard to the motion. Notwithstanding what has been urged by my hon. friend from Kamouraska and by my hon. friend from Wright (Mr. Devlin), I still adhere to the opinion which I ventured to express yesterday that this motion cannot result in any good and that it may result in much harm. Therefore, as far as I am concerned, I cannot see my way for one moment to support it.

One would have supposed that there

would have been some effort on the part of the hon. gentleman who proposed the motion to examine the legislation and the regulations which he has called in question by the terms of this motion, and as to which he desires this House to admonish the Legislature of Ontario and that he would have endeavoured to show in what respect those regulations and the legislation upon which they are founded result in any unfairness or injustice to the French Canadian population of the province of Ontario. Indeed, the fact that my hon. friend has made so little attempt in that regard seems to me a very good reason why this motion should not be accepted by the House if there were no other, and more conclusive, reasons to that effect.

How many hon. members in the House would be prepared to pass an examination upon the effect of the legislation and the regulations of the province in regard to the subject under discussion? Yet, without any inquiry proposed—and the very idea of an inquiry suggests the unfortunate character of the proposed resolution—without any inquiry, with only the discussion that can take place in one debate, and without hon. members having before them for their consideration the legislation and the regulations in question, we are asked by this resolution to convey an admonition, to tender advice, to the Legislature of Ontario upon a subject that has been debated and considered most thoroughly and exhaustively in that legislature on many occasions. If we really propose to give advice to the Legislature of Ontario, if a resolution for that purpose could properly be introduced in this Parliament, would it not be reasonable in the first instance to refer the matter to a committee of this House for the purpose of inquiry and report? Every hon. gentleman realizes that if a proposal for any such inquiry were made, this House would be embarking on a most dangerous and unfortunate course in entertaining it. Yet, without that inquiry, without even an attempt at perusal of the legislation and the regulations in question, we are invited to inform the Legislature of Ontario that the policy they have announced and put into effect, under the legislation which they have passed and under the regulations which they have enacted, is not in accord with right and justice and that they should take our advice upon the question and amend their ways in that respect. It seems to me that the proposition needs only to be stated to this House in order to make us realize how impossible of acceptance is the proposal which my hon. friend from Kamouraska and my hon. friend from Wright (Mr. Devlin) have submitted for the approval of the House.

Reference was made by my hon. friend from Wright to an alleged interference with, and reference was made by my hon. friend from Kamouraska to an alleged attempt to proscribe, the French language in Ontario. I do not propose to examine that question. It is not the duty, as I understand it, of a member of this House to examine and pass upon legislation and regulations which are entirely within the control and jurisdiction of the Provincial Legislature and the Provincial Government; but I may remark in passing that I have given some consideration to this subject. I have tried to understand it, conceiving it to be my duty, that I should make myself acquainted with a matter which has aroused a certain feeling, a certain controversy, not only in the province of Quebec but in other parts of this country. I have been told by those who are in a position to be informed on the subject that the province of Ontario maintains a number of schools for the training of bilingual teachers; that it provides travelling expenses for teachers whose mother tongue is French in order that they may receive necessary training and acquire proficiency in both languages; that it provides their board and their expenses while receiving this training; that it provides tuition free; and that finally a special grant is made to bilingual schools in order that teachers so trained may be employed in such schools. It does not appear to me that a policy which produces such results can be fairly described as intended to proscribe the French language in Ontario.

As far as the general nature of the regulations is concerned, I do not feel called upon to discuss them, but I will invite the attention of the House to certain considerations which in my judgment make it undesirable that we should accept the motion of my hon. friend from Kamouraska. I thoroughly understand and entirely appreciate the natural attachment of the people of French origin in this country to their own language. I realize also that this attachment was taken into consideration by the Fathers of Confederation and as a result section 133 of the British North America

Act was incorporated in our Constitutional Act, and it is in these terms:

> Either the English or the French language may be used by any person in the debates of the Houses of Parliament of Canada and of the Houses of the Legislature of Quebec; and both those languages shall be used in the respective Records and Journals of those Houses; and either of those languages may be used by any person or in any pleading or process in or issuing from any court of Canada established under this Act, and in or from all or any of the courts of Quebec.
>
> The Acts of the Parliament of Canada and of the Legislature of Quebec shall be printed and published in both those languages.

That is the only provision of the Constitutional Act so far as language is concerned; and it is my understanding that it gives the French and English languages the status of official languages in federal affairs and in the public affairs of the province of Quebec, that is to say, in the federal parliament, in the federal courts, in the Quebec legislature and in the Quebec courts.

Subject to that provision, I would understand, so far as my knowledge extends, that the provinces of Canada have plenary power to deal with the question of language within their territorial limits. That is my comprehension of the provisions of the constitution of Canada as it is embodied in the Constitutional Act.

I realize that in Federal affairs both these languages occupy an official status, and when I entered public life in this country, and more especially when I became the leader of one of its great political parties, I conceived it my duty, so far as the demands upon my time and energy would permit, to improve my knowledge of the French language and my acquaintance with it. It seemed to me no more than my duty that I should do that, in order that I might converse with and write to persons of French origin in their own language, and might address public gatherings of my fellow-citizens of French origin, for a few moments at least, in their mother tongue. And I, for one, would resist with the utmost determination any attempt emanating from any quarter to interfere with the status of the French language as it is fixed in the Constitutional Act of our country. No one of my fellow-citizens of the province of Quebec could be animated with a more intense determination to uphold the rights of the French language in this country, as they are fixed by the Constitutional Act, than I would be if any attempt were made to assail those rights. But I have a great respect for the Constitution, and I think that until that Constitution is altered in the regular and approved manner, and by approved and constitutional methods, it is our duty to respect and observe it; and it is for this reason that I consider the motion which my hon. friend has proposed to the House to-day as not in the best interests of this country. I will go further, and say that in my judgment it is absolutely opposed to the best interests of the province of Quebec itself.

Section 91 of the British North America Act sets forth the powers and authorities which are possessed and shall be exercised by the Parliament of Canada. Section 92 of the same Act sets forth the powers and authorities which are possessed and may be exercised by the several provinces of Canada. Section 93 of the British North America Act contains certain provisions with regard to educational matters which confide the subject of education generally to the provinces, with certain limitations in respect of rights which were possessed at the time of the entrance of the several provinces into Confederation, and in respect also of rights subsequently acquired. My hon. friend the member for Kamouraska says that this motion does not call for the disallowance of any Ontario Act. He is absolutely correct in that. He would have been more within his constitutional rights if he had come forward with a motion in that regard, because that question was constitutionally before the Government of Canada and had to be dealt with; and for the reason that it was before the Government of Canada, the Parliament of Canada would have had a much better right to discuss that subject for the guidance and information of the Government, than to discuss and consider the question which is now proposed.

Let me point out for one moment the language of a great Liberal of bygone days with regard to that particular provision. I am alluding to the speech of the Hon. Edward Blake in the House of Commons on the 29th of April, 1890. He was not then leader of the Liberal party, but he had held that position, and he occupied a great place in the ranks of the party at the time he uttered these words (Hansard, p. 4086):

> I regard it as settled, for myself at any rate, first of all, that, as a question of policy, there shall be no disallowance of educational legislation, for the mere reason, that, in the opinion of this Parliament, some other or different policy than that which the province has thought

fit to adopt would be a better policy. I hold it to be settled, in the second place, that no address to the Crown shall be passed by this Parliament asking for a change of the constitutional Act as effecting any province at any rate against the will of that province, in this particular.

First, that Parliament, because it disapproved of provincial legislation in educational matters, should not seek to have that legislation disallowed merely for the reason that Parliament might think a better policy could be adopted; and, secondly, that without the consent of any province of Canada no change should be made in the Constitutional Act so far as such change might affect that province. No appeal is before Parliament at the present time, from the minority either in Ontario or in Manitoba; no question of disallowance is raised by the resolution; and therefore I venture to submit to the House with a great deal of confidence that there is no constitutional sanction under which we can be called upon to advise, or admonish or rebuke the Legislature of Ontario upon a subject entirely within the jurisdiction of that province.

What was the record in 1896, when the subject was constitutionally before Parliament? The result of the attempt then made to carry out the provisions of section 93 was not a very encouraging one, and I think with that opinion my right hon. friend the leader of the Opposition, who opposed interference at that time, will entirely agree. Let us remember that, subject to the provisions of section 93 and subject to the provisions for disallowance of provincial legislation, the provinces of Canada are as sovereign and supreme in their sphere as is the Parliament of Canada in its own sphere. That principle has been established and laid down by the courts. No man who has given the subject any consideration can gainsay what I have just now affirmed. If I desire to give an authority which I think will appeal to the right hon. gentleman who leads the Opposition, I might quote his own language. In 1896, when he moved the six months' hoist to the Remedial Bill, so-called, he said:

> The Imperial Parliament has the power of disallowance, of supervision over the Acts of these colonial legislative bodies. This may be easily understood because colonies are dependencies. But the relations between the Dominion and the provinces are not the same.
>
> Between these there is no superiority and no inferiority, all are equal, with this exception, that the Dominion Parliament is invested with larger powers, that is, powers of a more extended and more important character than the local legislature. Indeed, it must be accepted and accepted as a truism that under popular government the majority must rule.

A little further on he said:

> The remedy of the minority under a free government is to agitate and endeavour to bring over a majority to their way of thinking. This is the rule under free government.

He spoke of a supposed power of the Imperial Parliament to supervise the Acts of Colonial Legislative bodies, and then he went on to declare that, even if that power were possessed by the Imperial Parliament, no such power exists in the Parliament of Canada to supervise the legislation enacted by the Provincial Legislatures. If the principle embodied in this resolution is not an attempt to supervise the legislation of the province of Ontario, I do not know how to characterize it. We are called upon to consider legislation which is not before us, to take into account regulations with which we are not familiar, and then we are invited to give to the Legislature of the province of Ontario an admonition which cannot fail to be understood by that Legislature as a reflection upon the policy which it has approved and upon the legislation which it has enacted. That was not my right hon. friend's view in 1896, because when the question was then constitutionally before the Parliament of Canada, it was his view that there should be no interference. When the question is not constitutionally before the Parliament of Canada, why then should there be interference? He denounced the attempt of Sir Charles Tupper's Government to proceed with the Remedial Bill because, he said, there had not been sufficient inquiry. How does he reconcile that with his proposal to-day to consider and to cast reflection upon legislation of the province of Ontario without any inquiry at all?

He put forth views in even more distinct terms in the same debate, in a quotation which I shall now give:

> For, Sir, experience has taught us that this remedy of interference with local legislation has never been applied and probably never can be applied without friction, disturbance and discontent; that you cannot apply that remedy without causing as much dissatisfaction as satisfaction.

If we are to accept my right hon. friend's words in the spirit in which they were uttered, and to give them all the effect which he intended, that quotation alone ought to be regarded by the House as a just reason for rejecting the motion of my hon. friend from Kamouraska.

Let us for a moment examine this resolution and see what it really contains and what is proposed. It contains much matter to which no exception can be taken. It does not, however, necessarily follow that the House should adopt it. Some hon. member might bring in a resolution upholding the principles embodied in the Ten Commandments and commending them to the consideration of a provincial legislature with the suggestion that they should observe them better in the future than in the past. It would not follow that the House ought to adopt such a resolution. The hon. gentleman's motion is as follows:

> It has long been the settled policy of Great Britain whenever a country passed under the sovereignty of the Crown by treaty or otherwise, to respect the religion, usages and language of the inhabitants who thus become British subjects;
>
> That His Majesty's subjects of French origin in the province of Ontario complain that by recent legislation they have been to a large extent deprived of the privilege which they and their fathers have always enjoyed since Canada passed under the sovereignty of the British Crown, of having their children taught in French.
>
> That this House, especially at this time of universal sacrifice and anxiety, when all energies should be concentrated on the winning of the war, would, while fully recognizing the principle of provincial rights and the necessity of every child being given a thorough English education, respectfully suggest to the Legislative Assembly the wisdom of making it clear that the privilege of the children of French parentage of being taught in their mother tongue be not interfered with.

In the first place, it might be inquired why my hon. friend from Kamouraska, at a time when, as he describes it, all energies should be concentrated on the winning of the war, should see fit to introduce such a motion in a parliament which cannot possibly exercise any legislative control over the subject with which it deals.

Mr. MEDERIC MARTIN: Take your responsibilities.

Sir ROBERT BORDEN: I do not think my hon. friend's interruption is very relevant.

I would also suggest to my hon. friend from Kamouraska that if he desired to admonish the legislature of Ontario as to the policy which it should adopt, and if he expected that admonition to serve any good purpose, it seems particularly unfortunate that he should have waited until about a week after that legislature had prorogued. If his admonition was designed to have any good purpose, it would have been far preferable to address it to the legislature while it was in session and when it could take the admonition into consideration. As he let that opportunity pass, one might have expected that, at a time when all the energies of this country should be concentrated on the winning of the war, he would wait until another session when the legislature of Ontario would have been convoked and when this Parliament would also be in session. I do not know whether there are any incidents of a concurrent date which may have any bearing upon his course. I do not suggest anything with regard to that—but I do venture to remark on the extraordinary course adopted by my hon. friend in leaving this resolution to the particular date which he has selected.

Another remarkable feature about the resolution is that it omits any reference to the province of Manitoba. I would assume from this very significant omission that the situation in Manitoba, so far as this question is concerned, must be entirely satisfactory to my hon. friend from Kamouraska.

Mr. ERNEST LAPOINTE: I thought—and I think I have a fair ground for that opinion—that the question of the recent Manitoba legislation was not in the federal arena. No petition that I know of has been sent with regard to that legislation asking for its disallowance or otherwise, and I therefore did not think it was our duty to say anything about the Manitoba legislation. If my right hon. friend wants to know my opinion, I have no objection to telling him that I do not approve of injustice in Manitoba any more than I do of injustice in Ontario, and I shall have an opportunity of saying so on another occasion.

Sir ROBERT BORDEN: I accept entirely the explanation which my hon. friend has given, but I would point out that inasmuch as the question of disallowance has been dealt with by this Government without any motion from my hon. friend, and without any objection from him, the Ontario question is no more before this Parliament than is the Manitoba question. I challenge any contradiction of that assertion; neither one nor the other is before this Parliament for this purpose. The Manitoba legislation may be before us later for the purpose of having the question determined as to its disallowance. I infer from what my hon. friend has said that he intends, at the

proper time, to make a motion asking the Government to disallow it, for only in that way can I accept his statement as an adequate explanation. Even so, I do not regard it as giving a very satisfactory reason why Manitoba should be omitted and why Ontario should be included in this motion. The provisions of the Manitoba Act are well known; they have been known to my hon. friend for weeks, or even months. Yet he ventures to challenge in this Parliament the legislation of Ontario, and has not seen fit to challenge the legislation of Manitoba, which, if I am correctly informed, absolutely sets at defiance the principles which he advocates because it absolutely deprives children of French origin of the privilege of being taught in their own language.

The resolution then proceeds, as I have said, to advise and admonish the Legislature of Ontario. Is this Parliament to undertake the duty of tendering advice and admonition and rebuke to the legislature of every province of Canada that ventures to adopt a policy which may not be in accordance with the opinion of the majority in this House? Let me take an illustration. I understand that certain legislation was passed at the last session of the Legislature of Quebec, to which some portion of the people of Ontario take exception. Would my hon. friend say that if a resolution were introduced into this House commenting upon that legislation and recommending to the Legislature of Quebec that it should not continue or persevere in such a policy, we should adopt it? If he is right in the position which he takes, it would be perfectly proper for a majority of this House to give that admonition to the Legislature of Quebec. So far as I am concerned, if any such resolution were introduced into this Parliament for the purpose of conveying admonition or rebuke to the Legislature of Quebec, I would resist it as strenuously as I resist the motion of my hon. friend on this occasion. As long as these various legislative bodies are supreme within their own sphere, no good purpose can ever be attained by having any of them cast reflections upon the legislation or policy of the other. Let each keep within its own jurisdiction; let each deal with the matters that are confided to it by the constitution. Have we not in this Parliament, especially at the present time, a sufficiency of important subjects to engage our full energies and all our available wisdom without trenching upon matters of purely provincial concern? If we give advice on questions of language, why should we not undertake to give advice upon questions of education generally? If the province of Ontario, the province of Manitoba, or the province of Quebec sees fit to adopt an educational policy which does not commend itself to the majority in this House, we should logically proceed, if we accept the motion of the hon. member for Kamouraska, to convey advice and admonition to all these legislatures and invite them to give better consideration to the matters with which they alone are concerned and to change the policy which they in their wisdom may have fixed upon.

5 p.m.

The resolution of my hon. friend in its concluding words is of a significance which I do not fully comprehend. I had the privilege of looking at the original resolution which was presented to his honour the Speaker, and I observed that the word "is" in the last line was changed to the word "be." The change seems to give a somewhat different purport to the resolution. As it stood at first, before the change was made, it read in this way:

> That this House especially at this time of universal sacrifice and anxiety, when all energies should be concentrated on the winning of the war, would, while fully recognizing the principle of provincial rights and the necessity of every child being given a thorough English education, respectfully suggest to the Legislative Assembly the wisdom of making it clear that the privilege of the children of French parentage of being taught in their mother tongue is not interfered with.

The purport of the resolution as it stood at first was a suggestion that the Legislature of Ontario should make it clear that the privilege of being taught in French is not interefered with; that is to say, they should make the effect of their existing policy perfectly plain. But as altered, the suggestion is that the privilege of being taught in French shall not be interfered with. Although the words are perfectly courteous; although the language is respectful, that is a suggestion—more than that, a dictation—to the province of Ontario as to what its future policy in that regard should be. I repeat that no good purpose can be served, in respect of matters entirely within provincial jurisdiction, by any attempt of this Parliament to examine, to consider, to advise or to dictate to any province.

My right hon. friend, speaking on this subject yesterday, in the course of the brief discussion that we had in the House, said:

> Let us discuss it; let us hear both sides of it; and then, Sir, I believe that from this dis-

cussion we shall rise wiser and better men, knowing better what our position is, knowing better what the rights of the minority are; and I venture to say that when the question has been settled, as it ought to be settled, the minority will accept the situation whatever it may be.

I am not quite clear as to what my right hon. friend intended by that suggestion. If he means the legal rights as established by the constitution, then I would respectfully suggest to him that it is not the function of this Parliament to settle or determine them. That is the function of the constituted courts of this country which have been established for that purpose. They alone can deal with such questions, subject to a final appeal to His Majesty in the Judicial Committee of the Privy Council. But my right hon. friend may mean something more than that. He may mean that we are to settle in this Parliament the question as to whether there should be some amendment to the British North America Act by which the rights of the provinces in respect of language or otherwise should be cut down and the constitution amended in that respect.

I point to the opinion of the Hon. Edward Blake, which I read a moment ago, and which, in a few words, is this, that no change of the constitutional Act as affecting any province can be made against the will of that province. Surely it is not suggested by my right hon. friend that the Parliament of Canada, without any consultation with the provinces, against the consent of the provinces, can pass or ought to pass an address to His Majesty for the purpose of so amending the British North America Act that the rights of the provinces of Canada shall be cut down and limited. Is there any hon. gentleman in this House who will uphold a proposal of that kind? I venture to think that the view which the Hon. Edward Blake in 1890 announced is not only in the interests of this Dominion as a whole, not only in the interests of all the provinces, but eminently in the interests of the province of Quebec. It is, I repeat, eminently in the interests of the province of Quebec itself. If it were possible for this Parliament, without the consent of the provinces affected, to pass a resolution upon which should be founded an amendment to the British North America Act cutting down provincial rights, no province in Canada would be in a more unfortunate situation than Quebec. We know that for this very reason, because Quebec desired to maintain control of her own provincial affairs, Quebec was not willing to accept the legislative union which Sir John A. Macdonald desired. As a result we have a Federal constitution and not a legislative union. But if the proposal suggested by my right hon. friend who leads the Opposition (Sir Wilfrid Laurier) should be adopted, then any province of Canada, without its consent, without any consultation with it and against its will, might find its provincial powers cut down and limited by virtue of a resolution passed in this Parliament of Canada. If my right hon. friend does not suggest that by the language which he used yesterday, I should like to know what he does suggest, and perhaps he will inform us when he comes to address the House. If it is possible for this Parliament by a resolution to interfere with the autonomy of the English-speaking provinces in respect of their control of language, it is equally possible for the Parliament of Canada to interfere in the same way with the control of the language or education by the province of Quebec. I venture to think that the resolution which my hon. friend from Kamouraska has proposed, if it is to be read in the light of the observations of my right hon. friend the leader of the Opposition as I interpret them, is the very last step which any hon. member from the province of Quebec ought to advocate in this House.

Sir WILFRID LAURIER: My hon. friend has no warrant to interpret my words in that way.

Sir ROBERT BORDEN: Then my right hon. friend, when he comes to speak, will be good enough to explain to the House what he does intend. I will read his language again:

Let us discuss it; let us hear both sides of it; and then, Sir, I believe that from this discussion we shall rise wiser and better men, knowing better what our position is, knowing better what the rights of the minority are; and I venture to say that when the question has been settled, as it ought to be settled, the minority will accept the situation whatever it may be.

I understand my right hon. friend to say that this motion has been brought into this House for the purpose of settling that question. If his words do not mean that, they mean nothing. He is to have a discussion and he is to have the question settled.

Sir WILFRID LAURIER: Hear, hear.

Sir ROBERT BORDEN: I repeat what I said a moment ago, that so far as the legal question is concerned, he will not affirm that this Parliament can settle it. Does my right hon. friend affirm that this Parliament can settle the legal question to which I have alluded? He will not affirm that; he cannot maintain it before this House or elsewhere. Then what did he allude to? He alluded evidently to the question of policy, to the question of having some amendment to the British North America Act by which the undoubted rights of the provinces of Canada in this respect should be modified in some way. I say that this cannot be done, that it ought not to be done, without consultation with the provinces or without their consent; and I say that no province in Canada is more vitally interested in the principle which I have just enunciated than the province of Quebec itself. Therefore, when a suggestion such as that is made, pointing unmistakeably to action by this Parliament along that line, I say it is unfortunate, and particularly unfortunate from the standpoint of the province of Quebec. What is the purpose of this resolution? What object is to be attained by it? Suppose the province of Ontario and the province of Manitoba treat this resolution, if it should pass, with the scornful indifference which is indicated by the leading Liberal organ in the West of Canada. Parliament having given that admonition and that advice is to do what? To take the rebuke of that scornful indifference, or to proceed further? What is the purpose of the resolution? What do my hon. friend from Kamouraska (Mr. E. Lapointe) and the right hon. gentleman who leads the Opposition expect from it? If they intend any action afterwards in case that scornful indifference should be encountered, what is the action which they propose? And if we are right in believing, as the leading Liberal organ in the West has told us, that any such suggestion by this Parliament will meet with that reception, what purpose is there in passing this resolution? Why not leave this question to the forum to which the constitution of Canada has assigned it, and in which forum such questions have been dealt with ever since the Confederation Act was passed in 1867?

For these reasons I regard this motion as unfortunate. I regard it as especially unfortunate from the standpoint of the province of Quebec. I cannot conceive of any possible good that it can do. I can conceive that it may do a great deal of mischief; because it can hardly fail to intensify feelings already sufficiently aroused, and to strain the relations between the two great races in this country. No one is more anxious than I am that these good relations should be maintained and improved.

In the proper forum this subject is proper matter for discussion. In this forum I see no good reason why it should be discussed. So, for the reasons which I have assigned to the House, I for one, without the slightest hesitation, in the interests of this Dominion, in the interests of every province of Canada, and especially in the interests of the great province of Quebec, shall record my vote against this resolution.

Right Hon. Sir WILFRID LAURIER: Mr. Speaker, I rise in support of the motion of my hon. friend from Kamouraska (Mr. Ernest Lapointe). I approach the subject, however, in a very different spirit from the spirit which has been indicated by the observations of the right hon. gentleman who leads the Government. I rise for the purpose of speaking with as much moderation as I can, and to appeal, not to passion or prejudice, but to the sober reasoning and judgment of my fellow countrymen of all origins. I discard at once all reference to constitutional arguments. I do not here and now bring within the purview of this discussion the British North America Act. I do not here and now invoke the cold letter of any positive law. Still less do I question the paramount power of the Legislature of Ontario to finally pass judgment upon this question and record the final verdict of its people. I rise, sir, not for the purpose of giving advice or admonition to the province of Ontario. I rise to plead before the people of Ontario, in behalf of His Majesty's subjects of French origin in that province, who complain that, by reason of a statute passed by the province, they have been deprived of rights, in matters of education, which they have enjoyed, themselves and their forefathers before them, ever since Canada became a possession of the British Crown.

And if I take this course, I am impelled to do it by reasons which, in my judgment, are stronger than any that are contained within the four corners of the statute complained of. If there be those—and, if I am right, my right hon. friend is one of them—who tell me that I have no right to come

before this Parliament to plead the cause which I am now pleading, that I am debarred from pleading it, and that the only forum before which it can be pleaded is the Legislature of Ontario, I tell my right hon. friend, and his friends beside him, that it was only four or five weeks ago that I was appealed to by an important organ of an important section of the province of Ontario—I mean the Orange Sentinel—under the signature of its editor, Mr. Hocken, to interfere in this matter, to give my views to my fellow countrymen and endeavour to put an end to the unfortunate agitation that is now going on. Sir, there have been amongst my friends those who resented that interference of the Orange Sentinel, who called it an impertinent letter, I do not share that view. I have no fault to find with the Orange Sentinel for thus appealing to me, I stand here in Parliament, and hold myself accountable to every citizen of Canada who temperately addresses me, as I was then addressed, to give my views upon every question which concerns the peace, good order and good government of this country. The very fact that I was thus appealed to shows that in the language of its editor, at all events, if I understand the English language aright, the question is not confined to the province of Ontario, but has gradually extended beyond its boundaries. Therefore, if I have to accept the invitation which was extended to me, I want to know if there is any other place where I could answer it than here from my place in the Parliament of Canada.

In the letter which was addressed to me there are statements of fact and expressions of opinion to which it is my duty respectfully to take exception. In the first place, I take exception to the manner in which I am addressed. I am addressed by the Sentinel as the leader of the French race in Canada. Here are the words of the Sentinel:

> Do you not see that you have surrendered the leadership of the French race in Canada to the Editor of the Le Droit? Are you content to have him supplant you as the political hero of your people? Do you think it will add to their happiness and prosperity, or advance the cause of Canadian unity, for which you have expressed a strong desire?

Let me say at once that when I am addressed as the leader of the French race in Canada I have to disclaim that proud title. I never had that title; I surrendered nothing to Mr. Bourassa. Mr. Bourassa and I have been on many questions at the very antipodes; indeed, in recent events he has been far nearer to the friends of the Orange Sentinel than to my own. I have simply this to say, that, while I do not claim ever to have been the leader of the French race in Canada it has been my honour for the last twenty-eight years to be accepted as the leader of Liberal Canadians—Canadians of all origins, Canadians by birth and Canadians by adoption; of all those Canadians who find their ideals expressed in those principles of British liberalism advocated in their time by Fox, by O'Connell, and by Gladstone, and cardinal among which was the protection of minorities. For those twenty-eight years I have been at the head of the Liberals of Canada. I have been at their head in good report and ill report; in victory and in defeat, and in many an arduous agitation, but I think I can affirm here, where my record is open to discussion, that at no time in any of those discussions, in any of those agitations, have I appealed either to race or to creed. I have endeavoured on every occasion to find a solution by appealing to the consciences of all men who love freedom, justice, and tolerance. That is the position which I take to-day upon this question which is now before the Canadian Parliament. Let me say that, whilst I have been the leader of the Liberal party in Canada, I am of French origin, and perhaps my judgment may be biassed, though I do not think it is. But I ask no man on this question to follow me; I want no man to vote with me unless he thinks in his conscience that the cause which I am now advocating is a right cause.

Sir, now that I have laid down the ground upon which I propose to proceed, let me try, if possible, to lay before Parliament the genesis of the agitation which, unfortunately, is now raging in the country. I thank Providence that I have lived long enough to see the old enmity of France and England at last at an end and replaced by feelings of cordial and mutual respect and good will towards one another. I thank Providence that I have seen the present alliance of England and France, consecrated as it is by the blood of the two nations, shed as we know for this most sacred of all causes. I thank Providence that I have seen this alliance which gives evidence of being the dawn of eternal friendship between those two nations, an alliance so lofty in purpose that already it is looked upon as one that must last forever—a war between England and France to-day would be just as criminal as a civil war in either of those nations; an alliance

which has received its last consecration in the resolution adopted by the inter-parliamentary committee of France and England, suggesting to both nations that the study of their language should be made compulsory in all the schools of Great Britain and France.

Well, Sir, unfortunately it has not always been so. England and France, as we know only too well, have filled the modern era with the history of their wars. They have fought in Europe, and they not only fought in Europe, but carried their quarrels and their wars to the virgin wilderness of this vast continent. The virgin wilderness of this continent resounded with the clash of their arms, and the war between them only ended with the final defeat of France. That defeat, however, was not on the plains of Abraham, which witnessed the victory of Wolfe over Montcalm; for, immediately after the defeat, the French army was rallied by the Chevalier de Levis, who for one year maintained the unequal contest, until, in the month of September, 1760, when the French army found itself between the army of General Murray and the approaching army of General Amherst, he surrendered, and that was the finish forever of the dream of a French Empire on the banks of the St. Lawrence. But there were 60,000 colonists who were then to become British subjects, and whose fate was a cause of anxiety to General de Levis. In the articles of surrender, he asked the victorious general that these 60,000 colonists should be granted their civil rights and the freedom of their religion. The articles were at once conceded by the generous victor, and when he had doubts he wrote: "they became subjects of the King", implying that in that fact there was ample protection.

I am a descendant of those colonists, and I am bound to say, what I have repeated many times but never with more pleasure than on the present occasion, that my fellow countrymen under the British Crown have found ample justice and liberty. But, at the same time, no one can deny that there have been jarrings and quarrels between the different elements. We should not be surprised at that, because we have the testimony of history that race quarrels are very persistent and will continue sometimes long after the cause which brought them about has disappeared. However, with all the jarrings and all the quarrels that we have had, there is one thing upon which, for more than 150 years, there never was any friction whatever, and that is the subject of education. From the day that Canada became an English possession, and when the French settlements, extended all along the St. Lawrence from Gaspè up to the Detroit river, from that day in 1760 down to about 1885, there never was the slightest friction upon the matter of education.

The French colonists were allowed, in Ontario as everywhere else, to have their schools and to teach their language to their children. So it was so long as Canada remained a Crown colony; so it was after the two provinces of Upper and Lower Canada had been separated and given an embryo constitutional Government; so it was after Canada had been reunited and given responsible Government; and so it was after Confederation and down to the year 1885, when the rights of the French people with regard to education were first challenged. That was in the province of Ontario. That was under the Government of Sir Oliver Mowat, and the old veteran, to his credit be it ever said, rose up to the highest possible notch of magnanimity in standing for the rights of the French minority. He established, or rather he reorganized, the bilingual schools, and these schools gave satisfaction to the minority for many years and to the majority as well, until at last, six or seven years ago, it was complained that they had become inefficient. As to that I have no opinion to express. I grant that the schools may have become inefficient; but, if the schools had become inefficient it was not because the system was defective, but it was because the system was not properly enforced; and in my judgment the efficient remedy would have been to have had this system of schools carried out as it was conceived. But, instead of that, the Board of Education first, and the Legislature of Ontario afterwards, passed regulations which it is claimed by the French minority in Ontario interfered seriously with their efficiency and made them almost nugatory and barren of results. The French people have accepted the situation everywhere except in the city of Ottawa. They have accepted these regulations but under protest. They have appealed to the courts against them. and the appeal is still pending before the courts. They have been unsuccessful before the courts of the province, but they have carried their rights to the

foot of the Throne, to the Privy Council, and there the matter rests at the present time.

In addition, they have asked for disallowance of this legislation. The Government have refused the petition for disallowance, and as to that I have no fault to find. I have no quarrel with the Government. I do not know that they could have taken any other course. The remedy by disallowance is very illusory. It is not a positive remedy; it is a negative remedy; the Government can annul a law, but it cannot do any more than that. Our experience for many years has been that disallowance—and I have no word to change in what was quoted of some of my former utterances a moment ago by my right hon. friend—has not given satisfaction. Instead of giving satisfaction, it has been the cause of many of the agitations which we have had in this country. If the statute were disallowed what would be the result? The result would be that at the ensuing session the same law would be passed by the same legislature. I have no doubt whatever that many of the signers of the petition, and there were thousands of them, thought that by signing this petition and having the law disallowed, that would be the end of it, and that the Legislature of Ontario could thereby have its power curtailed and could not re-enact such a law. But that is a mistake; there is no such thing. If the law had been disallowed, there was nothing to prevent it from being re-enacted, and again re-enacted it would certainly have been.

But, while I do not blame the Government of Canada for having refused to disallow the law of Ontario, I am sorry that I have to express my regret that the Government did not think it advisable, as they had the power to do, to call the attention of the Legislature and Government of Ontario to the complaints of the minority and ask them to give them favourable consideration. My right hon. friend knows—everybody knows—that time and again, under Liberal Administrations and under Conservative Administrations as well, the Government, while refusing to disallow a law, would call the attention of the Government of the province to the fact that there were complaints against that legislation, and suggest to them that it would be wise to give heed to them and try to meet those complaints. Sometimes these remonstrances have been accepted, sometimes they have not been accepted; but I claim that it would have been a wise action on the part of the Government of the day to have made at least to the Government of Ontario some representation in that behalf.

Now, the matter rests. The only remedy is the remedy in the courts. For my part, I look upon the remedy in the courts under the present circumstances as a very illusory one. There has been, and there is at the present time, an agitation going on that has involved a great deal of bitterness and antagonism which no judicial decision can allay. We have had the experience of the last fifty years that when rights are vehemently asserted on the one hand and haughtily denied on the other, a judicial decision, while it may enforce, on one side or the other a grudging assent, will not promote harmony, will not create good-will—and harmony and good-will are the considerations which are to be sought first, last, and all the time.

And now, Sir, if my right hon. friend wants to know why I support this motion, as I do, it is not that we wish to force upon the people of Ontario our way of thinking, or compel them to a course they do not want; we have no right to do that. But it is to ask them to consider the situation in the light of the present agitation, and to investigate the claims which, in their opinion, may or may not be well founded but for which, at all events, I would ask respectful consideration. My right hon. friend asked me what I meant yesterday when I said I hoped the matter would be discussed here. I want to have the matter discussed here so that on all sides we may frankly approach the subject from the basis of our common Canadian nationality, and, if possible, find a meeting ground where we shall be able to say to the minority: "You shall not go further than that," and to the majority, "You should grant what is reasonable; you should, at all events, make some concession." I ask no more than that. I read a few days ago in a paper of this city the following statement, to which I ask the consideration of the House:

> The position of English-speaking Ontario is this—and let any Canadian who has any sense of national responsibility, be he French-speaking or English-speaking, try to understand it and use his influence accordingly before the racial fanatics of this city get their compatriots into fatal trouble. Ontario proposes to remain an English-speaking province in so far as the wishes of her present English-speaking people can prevail constitutionally.

I could quote hundreds of articles of the same nature, in which it is asserted, and again asserted, that Ontario is an English-speaking province, and will remain an English-speaking province. Who asks for anything else? There is an impression, I know, among some of my fellow countrymen whom I see on the other side of the House that the French Canadian has some sinister motive behind this agitation, that in some way he wants to get control of the province of Ontario. Sir, the idea would be ridiculous if it were not so serious as it is. But we know there are extremists everywhere; there are extremists who are to-day using language which I reprove as much as does any man of English origin. I am not asking anything at the present time for my French-speaking countrymen of the province of Ontario, except the privilege of having their children taught in the French language untrammelled—a privilege they have had for at least one hundred and fifty years. Will any one tell me that if the French Canadians of the province of Ontario are allowed to have their children taught in a language which is so dear to them—the French language at that, one of the noblest on earth—that Ontario will be less British than it is to-day? Will any one tell me that, if the people of Wales are deprived of the schools they have a right to, and of the use of their language in those schools in order that their children may acquire it, Wales will be less British than it is at the present moment or has been ever since it was joined to the British Crown? These are some considerations which I wish to place before my fellow-countrymen. Yesterday, when I stated upon the floor of the House that I wanted to have this question discussed, it was in the hope that discussion of it would make us wiser and better men, and that we should understand exactly where we were. There never is harm to be apprehended from a free discussion, and I hoped for a great deal of good. I meant nothing more than that.

Before I go further let me again refer to the open letter which the Orange Sentinel addresssed to me, urging me to interfere in this matter. Addressing itself to me it says:

> Settle the bilingual controversy by convincing your people that they have no rights in Ontario, and we may look for a better recruiting record in Quebec.

Sir, I am not prepared to say that my fellow-countrymen of French origin have no rights in Ontario; but I am prepared to say this, and I want my words to be heard throughout the length and breadth of this land: whether my fellow-countrymen have rights or no rights in Ontario, whether those rights are granted or denied, these considerations are no bar to the duty which the French-Canadians owe to themselves and to the honour of their race to come forward in their fullest numbers and take part in the great struggle that is going on to-day in the land of their ancestors for the cause of freedom, and of the civilization of mankind.

At six o'clock the House took recess.

The House resumed at eight o'clock.

Sir WILFRID LAURIER: Mr. Speaker, when the House rose at six o'clock, I was speaking of the rights of the French minority in the province of Ontario. I stated that I was not prepared to say that the minority had no rights; on the contrary, I would be prepared to argue that under section 93 of the British North America Act the minority has rights which can be enforced in the courts of law. But I repeat what I said previously in the debate, that I do not approach this question upon the cold letter of the positive law. My aim and purpose in approving of the resolution of my hon. friend from Kamouraska is rather to appeal to the sense of justice of the province of Ontario—justice between man and man, justice not according to the letter of the statute, but justice according to the conscience of every living man, no matter what his nationality may be.

I will now put forward the view which I intend to present to the House upon this aspect of the question. I referred this afternoon to the capitulation of Levis to the forces of General Amherst in the year 1760. In those Articles of Capitulation no mention is made of language; neither is any mention made of language in the Treaty of Paris which confirmed the terms of the capitulation of Montreal. The only things which are referred to in the Articles of Capitulation and in the Treaty of Paris, are religious freedom and civil rights. There are, however, jurists of eminence who hold it as a canon of the law of nations that civil rights carry with them as a corollary the rights of language. I will not say that the opinion is unanimous, but it is held by authorities of the most eminent reputation. But

canons of the law of nations have no sanction. They are binding on conscience; they are binding on honour; but they have no other sanction. Nations can ignore them or nations can respect them. Nations there are which ignore them; nations there are which respect them. Germany is one of the nations which ignores the canons of the law of nations. She has given in the present war example after example of that contemptuous unconcern, not only in this war, but even in times of peace, and in the events which followed war. The last instance that we have had of the policy followed by Germany is the case of Alsace-Lorraine after the Franco-Prussian war. By the treaty of Frankfort the provinces of Alsace and Lorraine were detached from France and annexed to Germany. She ignored all the canons of the law of nations and planted her brutal heel upon those two provinces, ignoring the rights and privileges which, under another regime, the population of those provinces would have had a right to expect. She subjected the French language to many cruel restrictions and indignities. But England, I am proud to say, has always respected the canons of the law of nations. Wherever England has planted her colours by conquest, by treaty, or in any other manner, she has always respected the laws, the language and the religion of her new subjects. The last instance of that is South Africa. She acted in that manner in Canada; she did it in India; she did it in Mauritius; she did it in Malta; she did it in the West Indies. Wherever she planted her flag the law of nations was observed, and the language of her new subjects was so well respected that no one would have suspected that there had been a change of allegiance. How many years have elapsed since we were at war with South Africa? Hardly fourteen years. But I am proud, as a British subject, to say that to-day the Dutchman of South Africa is just as free to speak his language and to have his children educated in his language as he was before the South African war. All that I have to ask my fellow-Canadians of the province of Ontario is; which example are we going to follow? Which is the best polity for Canada? Is it the German polity? No one will say that. Well, then, will it not be the British polity, which for two centuries or more has been invariably followed in every part of the globe? I could follow the whole circle of the earth and everywhere I would find the same story repeated by every British subject, no matter what his origin, whether he is in Malta, where he speaks the Italian language, or in St. Lucia, in the West Indies, where he speaks the French language, or in South Africa, where he speaks the Dutch language, nay, even whether in India, where he speaks languages almost without number. The same story is repeated everywhere, and what I have to propose to my fellow countrymen in the province of Ontario is that we should follow the example of England in the polity she has adopted in all parts of the world. All I ask is that in the province of Ontario, and also in the province of Manitoba, our children should be allowed to be taught in the language of our ancestors: in Ontario, because the language was preserved by the Crown itself; in Manitoba, because, when that province was created, the French language was introduced therein by the deliberate will and action of this Parliament.

Speaking of Manitoba, I was more sorry than surprised at the language of my right hon. friend the Prime Minister, as his statements in regard to that province added neither strength nor dignity to his argument. He endeavoured to compare my conduct of to-day with my conduct of 1896. Is there any parity or disparity between my conduct of to-day and my conduct of 1896? What was the situation in 1896? This Canadian Parliament undertook to pass a law of education for the province of Manitoba over the heads of the Legislature of Manitoba. Did I and my friends undertake to do anything of this kind? Did we attempt to force upon the people by the will of this Parliament a law which would be repugnant to the majority of Manitoba? The law which was introduced by the Government of 1896 was obnoxious to the great majority of the people of Manitoba. Sir, is it not a fact that the Legislature of Manitoba, having behind it almost the whole of the people of the province, had put an end to a system of education which they found obnoxious to them? Is it not also a fact that the Canadian Government of that day undertook to put a law upon the statute-book, by the power of the House of Commons and the Senate of Canada, which a large majority of the people of Manitoba resented? Well, Sir, I would not submit to that; I fought that proposed legislation. Is that all that I did? No, I did something else. I did then the very thing that I am doing to-day. I appealed to the

Government of Manitoba, to the legislature and to the people of that province, saying: "Here is a grievance. I do not care whether it is debated or not; I ask you to be generous to the majority and to correct the evil which you have created". I am glad to say that my appeal was heeded. The Legislature of Manitoba, in response to my appeal, undertook to amend the Act which was agreeable to the majority but obnoxious to the minority, so as to remedy to a considerable extent the grievance of the minority.

My right hon. friend alluded to-day to the fact that that law has just been repealed. Under the remedy which was enacted in the session of 1897 by the Legislature of Manitoba, the minority were allowed to have religious teaching in their schools and the privileges of a French education. As was stated this afternoon by the Prime Minister, the Legislature of Manitoba has repealed the concession which it made in 1897 so far as the French language is concerned. That is true—only too true.

The right hon. Prime Minister reproached us because the hon. member for Kamouraska did not include an appeal to Manitoba in the resolution of this day. I ask if he was very sincere in his regrets? I thought his regrets were more like crocodile's tears than anything else. I understood what was at the bottom of his speech, I had only to look at the face of my hon. friend the Postmaster General (Mr. Casgrain) when the Prime Minister uttered those words. I saw an expression of glee on the face of the Postmaster General; he thought it would be a good argument in the province of Quebec. Let me say to my hon. friend the Postmaster General that I do not speak especially for the province of Quebec; I speak for the people of Canada as a whole. This language I shall hold in every part of Canada, whether it be Quebec, Ontario or any other province. In this resolution we did not include the grievance of the minority of the people of Manitoba; the remedy for that will be sought in another way. I will give my hon. friend another reason. So far as I am concerned, if I have advice to give to my fellow-countrymen of French origin I will tell them not to be hasty, not to be premature, to take their time, to consider what course they should follow. We have not yet heard the voice of the people of Manitoba at the bar of the House of Commons or at the door of the legislature of that province. There is time enough for all this; the situation will be canvassed at the proper time. But, Sir, I resent that in a matter of so great moment an attempt should be made to mix up situations which ought not to be mixed up. I resent any attempt to look at this question from any standpoint except the broad basis of what is reasonable, right, just and fair.

I now come back to the province of Ontario. I have stated that I want to appeal to the sense of justice and fair play of the people of Ontario and to their appreciation of British institutions—no more. Even if I am in the wrong—and I hope I am not—I am sure that a frank understanding between the majority and the minority in the province of Ontario, between the two great elements which compose the Canadian people, may force a solution of this troublesome question. Every man in the province of Ontario, every man in this room who comes from the province of Ontario, whether he sits on that side or on this side, is determined that every child in the province of Ontario shall receive an English education. To that, Sir, I give my fullest assent. I want every child in the province of Ontario to receive the benefit of an English education. Wherever he may go on this continent I want him to be able to speak the language of the great majority of the people on this continent. I want it, I say, not only because it is the law of the province, but because of merely utilitarian considerations. No man on this continent is equipped for the battle of life unless he has an English education. I, if I may be permitted to make a personal allusion to myself, I am of French origin, but every day of my life I have occasion to bless my father for sending me when eleven years of age to an English school. The benefits which I received there I have carried with me up to the present time. I want every child, therefore, to have an English education. Now I come to the point where I want to speak of my fellow-countrymen in the province of Ontario. When I ask that every child of my own race should receive an English education, will you refuse us the privilege of education also in the language of our mothers and our fathers? That is all that I ask to-day; I ask nothing more than that. I simply ask you, my fellow-countrymen, British subjects like myself, if, when we say that we must have an English education, you will say: "You shall have an English education and nothing else." There are men who say that in the schools of Ontario and Manitoba there should be no

other language than the English language. But, Sir, when I ask that we should have also the benefit of a French education, will you refuse us that benefit? Is that an unnatural demand? Is that an obnoxious demand? Will the concession of it do any harm to anybody? And will it be said that in the great province of Ontario there is a disposition to put a bar on knowledge and to stretch every child in the schools of Ontario upon a Procrustean bed and say that they shall all be measured alike, that no one shall have the privilege of a second education in a second language? I do not believe it; and if we discuss this question with frankness, as between man and man, in my humble opinion, it can yet be settled by an appeal to the people of Ontario. I do not believe that any man will refuse us the benefit of a French education.

Then, in the newspapers, not all, but many of them, of both parties, I have seen the statement made that there is no disposition to curtail the teaching of the French language, and that it is already provided for. Well, sir, I welcome this generous indignation; and, if it be so, as I think I can show, that the teaching of French, which was organized by Sir Oliver Mowat between the years 1880 and 1890, has been very much restricted by Regulation 17, perhaps then we can come to a satisfactory conclusion that will be acceptable to both sides. Sir, I have seen it stated, and it is argued, that Regulation 17 has put no bar to the teaching of the French language. Before reading Regulation 17, may I read Regulation 15? Regulation 15 is as follows:

> In school sections where the French or German language prevails, the board may, in addition to the courses of study prescribed herein, require instruction to be given in French or German, reading, grammar and composition, to such pupils as are directed by their parents or guardians to study either of these languages.

It is stated that this regulation is still in force, and so it is. It is very plain in its wording. It means this, that in all sections where the German element or the French element prevails, this element can ask the privilege of having its education in either the German or the French language. I repeat that this section is still in force. But it has been modified by Regulation 17, which is in these words:

> Section 4. In schools where French has hitherto been a subject of study, the Public or Separate School Board, as the case may be, may provide, under the following conditions, for instruction in French reading, grammar and composition, in Forms I to IV, in addition to the subjects prescribed for the Public and Separate Schools.

Mark the words, "in schools where French has hitherto been a subject of study." What is the meaning of the word "hitherto" here, and why has it been introduced? Instead of one condition, which you had previously, you now have two conditions. One condition is that French henceforth is to be taught only in settlements where that language prevails and where it has hitherto been taught. In other words, Regulation 17 has created a restricted atmosphere in which French can be taught. It can continue to be taught, though in modified form, in all the schools where it was taught before June, 1912. But in other schools it cannot be taught. In other words, in no new schools can the French language be introduced. I know that this disposition has been dealt with in other papers. I have seen it denied. But I am told on good authority, and I have reason to believe it is true, that the regulation has been so interpreted as to mean that the French language shall not be taught anywhere except in the schools where it was taught before June, 1912. Will any man tell me that this is a liberal disposition? Will any of my friends sitting in this House tell me that they are satisfied with it? But if I am told—

Mr. ROGERS: Will my hon. friend pardon a question? Will he tell us where that interpretation applies?

Sir WILFRID LAURIER: I have told my hon. friend.

Mr. ROGERS: No.

Sir WILFRID LAURIER: It applies just what the word "hitherto" means, and I ask my hon. friend what the word "hitherto" means. Why is it there?

Mr. ROGERS: I will explain when my time comes.

Sir WILFRID LAURIER: I will explain now. If the word "hitherto" does not mean anything, strike it out. What will be the remedy I ask? Will my hon. friend agree to that? If it is meaningless why is it there? If it means nothing, why has it been inserted there? If it means what I say, why do you keep it there? Sir, we do not want any of this quibbling between us.

Some hon. MEMBERS: Oh, oh.

Sir WILFRID LAURIER: I do not want any of this quibbling between us. This word

"hitherto" must mean something or it means nothing. If it means nothing, if it does not mean that the tuition of French is to be restricted to schools where it was taught in 1912, then all I ask is that it be removed, and we shall have no further quarrel. This is my position. I know that it has been so interpreted elsewhere; at all events, I understand so. But if it has been so interpreted elsewhere, by mistake or otherwise, all I ask now is that there shall be no equivocation upon it, and that we shall know exactly where we are.

There is another disposition of Regulation 17 to which I take similarly serious exception. I must say that I have taken a long time to make up my mind as to what was the character of this regulation and what attitude I should take. Looking at those regulations, and giving them the best understanding I can, there is another disposition which I submit to the fairness and justice of my friends, the majority in the province of Ontario. The other thing of which I complain is that the language of tuition between teacher and pupil is made to be the English language for the French children, even in learning English. Between teacher and pupil the English language is made the exclusive language, except under very exceptional circumstances. Here is Regulation 17, paragraph 3:

> Subject, in the case of each school, to the direction and approval of the chief inspector, the following modifications shall also be made in the course of study of the public and separate schools.
>
> (1) Where necessary in the case of French-speaking pupils, French may be used as the language of instruction and communication; but such use of French shall not be continued beyond Form 1, excepting that, on the approval of the chief inspector, it may also be used as the language of instruction and communication in the case of pupils beyond Form 1 who are unable to speak and understand the English language.

What is the meaning of these words, "where necessary"? They did not exist before; they were introduced in June, 1912. Here are a few children between five and six years of age going to school. They have learnt at their mother's knee the French language and no other, and they are told that they must be taught in the English language unless it is found necessary to teach them in the French language. Who is to determine? The chief inspector. Here is a school in the back concessions, and you have to apply to the chief inspector to know whether or not it is necessary that the child should be given the privilege of having an education in the French language, in his own tongue, and not in English. Why this harsh provision, I ask? Why this unnecessary and harsh provision? Sir, I am free to say, and I say it without any hesitation, that men are not necessarily or wantonly cruel and offensive. This regulation has been introduced for a purpose, and with an idea. The idea is that the French pupil who comes into school, the young boy who receives his education from the teacher in the English vernacular will make more progress than if he were taught in the French language. I take absolute exception to that view, and I put this as a proposition of school-teaching under such circumstances that, if you want the child to make progress even in his own language, which is French, or in the English language, the medium of communication between the teacher and the child should be the French language. My proposition is plain. I put it to my hon. friends on the other side, and if I can make it good I hope they will give us the benefit of it. I will not give my own opinion as my authority; I will give authority much higher than my own. In the first place, I will quote upon this very subject the language of a man whose name I had occasion to mention before in this House, and who, though speaking from the grave, is still an authority in the province of Ontario as he was amongst the living; I mean Sir Oliver Mowat. In a speech delivered at Woodstock on December 3, 1889, he spoke upon this very point in these words:

> Our opponents pretend that the Government should insist on all instruction being given to the French children in the English language. No such regulation was suggested by the Commissioners—

These were commissioners appointed by Sir Oliver Mowat to investigate the question.

> —and none such has been made, because such a regulation would be absurd, and, instead of serving the cause of education, would often prevent education altogether.

This is high authority, I repeat. But I have other authority to submit to the House. The names are not as famous or as well known as the name of Sir Oliver Mowat, but they are the names of experts whose testimony ought to be acceptable, because they are regarded as experts in education in all parts of the British Empire.

In 1911 there was held in London an Imperial conference on education. Mark the words—Imperial conference on education; and a special sitting of the conference was

devoted to bilingualism. The conference on bilingualism took place on the 2nd of May, 1911, under the presidency of the Right Hon. Walter Runciman, then President of the Board of Education, and there were present experts from India, from Canada, from South Africa, from Malta, from Jersey, from the Scottish Education Department, and from the Board of Education of England and Wales, all countries in which, at that time, and from time immemorial, there has been bilingualism. This subject was canvassed upon every side. I could tell you of the suggestions offered and of the speeches delivered by the delegates from South Africa—Mr. Thomas Muir, Superintendent of Education, Cape of Good Hope, and Mr. Viljoen, a Dutchman, Director of Education in the Orange Free State. It would take too long to go over the whole pamphlet; but I will give the House some of the opinions which were then expressed upon this very topic that we have now under consideration.

In the first place, I will quote the opinion of Dr. MacKay, Superintendent of Education in the province of Nova Scotia:

> In Nova Scotia less than 10 per cent are Acadian French. In New Brunswick perhaps less than 20 per cent are Acadian French. For a number of years we endeavoured to give them at least in the common school grades bi-lingual readers with instruction from the beginning in English. It was held by the French that the children could make no progress because they could not understand English when first entering school. In order to settle the difficulty a commission was appointed; and the commission determined, and the Government accepted the determination, that the education of the French-speaking child should commence, and be continued during the first four years in the mother tongue, and French readers were provided for them. While these French readers were used during the first four years the teachers of these schools were expected to acquaint themselves with the method of teaching English colloquially, and during these four years the children were required to do as much as possible in English so that after the fourth year instruction could go on in English continuously. That is the way the matter stands at present in the provinces of Nova Scotia and New Brunswick. I believe the French are pretty well satisfied with it. The children in this way learn English more easily. They can learn written French more rapidly, and that enables them with very little difficulty, to commence their studies in English thereafter.

Mark the words: children commencing their education in their own tongue can take up English afterwards more easily. Now, I pause here and ask every man in this House, who has had a bilingual education, if this opinion of Dr. MacKay is not justified to the letter by his own experience. Where a French child knows his grammar, and has the elements of a French education, the complications of the French language are so much more difficult than the complications of the English language that the task of learning English afterwards is made quite easy. I am sure that every man in this House who has had a bilingual education will appreciate and endorse what I say.

But, Sir, the one opinion to which I am anxious to call the attention of the House is the opinion of Mr. Owen Edwards, Chief Inspector of schools in the Welsh Department of the Board of Education in England, who spoke in this way:

> With regard to the teaching of English to Welsh-speaking children, for a certain number of years we tried the method that seems to be condemned unanimously by the Conference to-day. We thought that the best way of teaching English to a Welsh child would be to make language and the atmosphere of the school entirely English, and to use Welsh, if at all, for the purpose of absolutely necessary explanation. I can but state the result by quoting from a report of a small committee of teachers of great ability and long experience, a report adopted and published by the Anglesey Education Committee. The infant, as he leaves the infant school, is thus described.
>
> "He reads words with which he associates no meaning, and is denied access to the written word which would at once call up ideas and stimulate his intelligence. Thus, when he has attained the age of six or seven, his book tells him nothing; the language he reads he cannot understand, and the language he understands he cannot read."
>
> That was the typical product of our infant schools until a few years ago. As regards the bi-lingual districts, we have to face, in our smaller schools, the difficulty of a double curriculum and a double staff. We avoid both. If about 66 per cent of the children speak English as their home language, we take English as the language of the infant school; if about 66 per cent speak Welsh, we take Welsh as the one language. So far, we have had no difficulty that has not been easily overcome. Bi-lingual teachers are easily obtainable.

And he concludes with these words:

> The results, so far as we in Wales are concerned, are certainly unmistakable. In the Welsh-speaking district, it is not too much to say that the newer method of teaching by means of the home language has practically doubled the efficiency of the schools. For one thing, it connects the elementary school with the home and with other educational institutions, especially with two characteristic Welsh institutions: the Sunday School (which is a school for the whole people, not for children only), and the literary meeting. It has also greatly facilitated the learning of English. A child in Standard III, in a school employing the modern method writes English more correctly and reads it more intelligently than a child in Standard V, in a school in which the old method is till used. That is, a Welsh-speaking child of nine, who has learnt his own language first, will write better English and read English more intelligently than a Welsh-speaking child of 11 who has been taught English exclusively from the

first day he entered school. This is my experience.

Now, I quote to you the opinion of another of these experts in the Welsh language, Mr. A. T. Davies, secretary of the Welsh Department:

So far back as 1893, the following instruction was issued by the Board of Education to Her Majesty's Inspectors acting in Wales :

"In the case of Wales it is clearly established that in many cases in Welsh-speaking districts the use of Welsh in the school, side by side with English, will greatly facilitate an intelligent understanding of English. It is desirable that the attention of teachers should be called to this question, and that Her Majesty's Inspectors should encourage the practice of bi-lingual teaching by themselves making use of Welsh in testing children's intelligence. The use of Welsh songs and Welsh poetry in the schools in question will be of considerable service."

Now, I pass to another expert, Mr. Warre Cornish, who represented the Scottish department of the Board of Education. Mr. Warre Cornish expressed his opinions in these words:

The department refrain from laying down the law as to the bi-lingual problem; only they are careful that in the Gaelic-speaking districts there shall be an inspector, generally a Highlander, who thoroughly understands the difficulties of the problem, and who is in very close touch with the teachers, and it is left very much between the two parties; and I can only say that, so far as I am aware, this method of leaving the problem to settle itself on the spot has worked with very general satisfaction to the parents.

Of course there are enthusiasts for the Gaelic language and extremists who may make their voice heard sometimes, but there has been very little complaint from the parents that that language is not receiving sufficient attention.

Dr. Viljoen: Is it used as a medium in any way?

Mr. Warre Cornish: There is no provision for or against the use of Gaelic as a medium.

The Chairman: It is occasionally used as a medium in some schools, is it not?

Mr. Warre Cornish: It certainly is used as a medium.

In the face of these authorities, in the face of these opinions of experts, in the face of the mature reflections of men whose lives have been devoted to teaching in bilingual schools, am I not justified in asking the Legislature of Ontario at all events to give us a rehearing upon this matter? I ask nothing more. I ask to have a rehearing in a matter of such importance to us as to whether or not the policy which has been adopted by Ontario is right and proper or whether it may be improved.

But when I express this request I know that men will rise up before me with uplifted hands and say, "Hands off,"—we have heard it to-day from the Prime Minister—. "Hands off; the province of Ontario is an autonomous province, and it will not brook any dictation; the province of Ontario has paramount powers in this matter." The province of Ontario has paramount powers in this matter, and it is for the province of Ontario to say whether or not it will give us that rehearing which I ask for my fellow countrymen of French origin or whether it will refuse it. The province of Ontario has paramount power, but may I not recall to the province of Ontario the words of the great poet:

O, it is excellent
To have a giant's strength, but it is tyrannous
To use it like a giant.

The province of Ontario has paramount power and I would be the last man to question it; I would be the last man to try to interfere with it. I am of the old school of Mowat and Blake, who were the prophets and the originators of the doctrine of provincial rights, and by that doctrine I stand to-day. I say that the province of Ontario will and shall determine that question; but I ask these new converts to the doctrine of provincial rights: Am I interfering with the doctrine of provincial rights when I ask humbly to be allowed to present my petition to the province of Ontario? Is it forbidden in the code of these new adepts in the doctrine of provincial rights that you shall not even be allowed to stand at the bar of the province of Ontario? and make your plea? I stated at the beginning of my remarks that I did not come here to admonish or advise the province of Ontario; I came here simply to present the petition of a humble subject of His Majesty who happens to have been born of French parents, and who wants to preserve the right which has been preserved to me by the British Crown, a right which has existed as long as the British Crown has had sway in this country.

I know that there is to-day in the province of Ontario a sense of irritation at the position which has been taken by some of my fellow countrymen of French blood in the province of Quebec, who have from the first deprecated the participation of Canada in the present war, and who have exerted their influence to attempt at least to prevent enlistment. Alas, it is true; it is only too true. It is deplorable, and it is to me as unintelligible as it

is deplorable. It is true there are in my province men of French origin who when France is fighting a fight the heroism of which stirs the blood of mankind, remain with their blood cold and tell us: "No, we will not lift a finger to assist England in defending the integrity of France; we want our wrongs to be righted in Ontario." Wrongs or no wrongs there is the field of honour, there is the call of duty. But, Sir, though our cause be just and fair, shall it be impeded because there are men who so far forget the duty which they owe not only to their British allegiance, but to the French blood which flows in their veins. If there are men who have taken that ignoble stand there are many men, also, who have gone to the front, and who are now standing by the side of their British comrades, fighting under the British flag with as much courage as any British soldier.

An hon. MEMBER: A pretty small number of them.

Some hon. MEMBERS: Shame.

Sir WILFRID LAURIER: If anything is to weigh in the balance, is it to be the voice of the shirker, the voice of the slacker, or is it to be the voice of the man who has responded to the call of duty and gone to the front, and who is doing his duty to the Empire, even to the shedding of his blood? Some hon. member says they are few in number. Yes, perhaps not as many as there might have been; I admit that. But, if it is so, where lies the responsibility if it is not with the men who, in 1911, said that under no circumstances should Canada fight for England. I have done my best, at all events. I have given the best of my life for the doctrine that I am now maintaining, not upon this question only, but in the fight for civilization which we are now waging on the soil of France. When Gladstone undertook to bind up and heal the wounds of Ireland and to give to that unfortunate country a last measure of liberty and justice, there were extremists among the Irishmen who did all they could to down the policy of the Grand Old Man. They did all they could to continue the old hatred against England, to sow discord, and to fan the passions of that unfortunate, but noble country. But Gladstone, great man that he was, was not deterred. He went on. Though, like Moses, he did not bring the people to the promised land, he sowed the seed. The seed he planted has germinated and brought forth fruit; the cause of Ireland has grown until it is fully matured, and to-day England is reaping her reward in the unanimity with which the Irish people stand behind her in this war. Indeed, in spite of all the gold and all the plotting of Germany, which did nothing more than to raise a riot which was at an end after three days at the most, the policy of conciliation inaugurated by Gladstone has been vindicated and the insane plot will not dash from Ireland the cup of fulfilment which was at her lips.

9 p.m.

I have lived too long not to know that the distrust that is caused by race quarrels is one of the banes of our life in Canada. If there is this exclusion of the French language which we complain of today in the manner which I have stated, is it because there is distrust of the French race? You do not look to the great body of the nation; you look only to certain extremists who have made use of the most detestable language. A journal published in the city of Toronto, edited by a man of great ability, an eminent writer who has given himself the mission of being the foremost advocate of a closer bond of union for the British Empire, has, within the last ten days, inaugurated a new programme, the first article of which is, "One language, and one language only." Under the present circumstances this means that only one language shall be taught in the schools of Ontario. The editor of that paper is not the only man to conceive that the Empire, to be united, must be united not only in aim and in purpose, but in every detail. Sir, I wonder if this new theory for bringing about unity of the Empire is to be applied in Wales, and the Gaelic language accordingly prohibited in the Welsh schools. Is this theory to be applied in the Highlands of Scotland, or in Malta, or in Egypt, or in South Africa? Sir, if there is one thing which to-day stands to the glory of England—a feat unparalleled in the history of the world—it is that to-day on the battlefield in Flanders there are men who do not speak a word of English, but who for England have come forward to fight and die. If the Britisher, when he went to India, to Malta, to South Africa, or anywhere else, had implanted that new doctrine of "one language and one language only," and had suppressed the language of the people who had just passed under his dominion, do you believe, Sir, you would have seen that great and noble spectacle which has astonished and is still astonishing the

world? No, Sir. It is because British institutions everywhere have carried freedom and respect for minorities that England is as strong as she is to-day.

My right hon. friend, commenting this afternoon upon the resolution which has been introduced by my hon. friend from Kamouraska, and especially upon the words, "That this House, especially at this time of universal sacrifice and anxiety, when all energies should be concentrated on the winning of the war," wondered why this resolution had been introduced in the midst of the war. Can he have any doubt? Does he not see why? I will tell him. It has been introduced in this House for the same reason that a similar motion was introduced at the meeting of the Inter-Parliamentary Committee of the Allies, held in old Westminster Hall. Assembled there to consider means for bringing about the end of the war, the committee declared that it would be in the best interests of unanimity to have the English and the French language taught wherever the banners of France and England floated. It is less than a month since eminent members of the French and English Parliaments met in that old hall to discuss the war and the best methods to be pursued in bringing it to an end, and one of the things which they did suggest was that the French and English languages should be taught wherever the French or the English ruled. Did they believe that in doing this noble work they were doing anything that would militate against the successful ending of the war? No, Sir, their thought rose higher than that; they believe that in so doing they were fostering the very object which we have in view—and what a lesson it is for us to-day, my fellow-citizens in this House of Commons! Sir, we are engaged in this stupendous war, which is to determine whether or not henceforth might or right is to rule the world. Alas, it is only too plainly evident that we are still very far from the end. More sacrifices will be needed; more mothers will have to mourn over their lost sons, and more horrors will be piled up on the soil of brave, desolate France and on the soil of unfortunate Belgium. But already to this black cloud there is visible a silver lining. After nearly three months of fearful battering, the citadel of Verdun, ever proud and defiant, still flies the tri-colour at its masthead. This failure of the German arms makes it very plain that in this contest Germany cannot win—that might cannot triumph over right. Already it is plain to any observer that in the trenches will be buried many of the old hatreds and old prejudices, and that from the soil of the battlefields will germinate a new spirit of affection and brotherhood, such as has never before been heard of or known since the angels themselves brought from Heaven the divine message of "Peace on earth, good-will to men." We have an earnest of this new spirit of brotherhood in the resolution adopted by the Interparliamentary Committee of France and England, which, as I said, came to us from Westminster Hall itself, that old and noble building which goes back to the time of the Norman Kings and which has seen the development and evolution of all that is contained in those great principles of freedom, justice, and tolerance. That call which was made in Westminster Hall to all British subjects, to all French citizens, I make bold to make here in Ottawa, not in any spirit of dictation, but in the same spirit which has inspired and is the true spirit of British institutions, in the hope that it will be heard in Ottawa, heard in Toronto, and heard in Winnipeg.

Hon. T. CHASE CASGRAIN (Postmaster General): Mr. Speaker, it shall be my duty to bring the attention of the House back to the real question before us, even if we have to descend from the high flights of eloquence attained by my right hon. friend the leader of the Opposition. I was rather surprised this afternoon when my right hon. friend said that he had received from the Orange Sentinel the inspiration to bring this resolution before the House. That, after having been forty years in public life, for twenty-nine years of which he has been the leader of the Liberal party he should look to the Orange Sentinal for his inspiration to become not the father, but at least the foster-father of this resolution, is, to say the least, somewhat surprising.

When I was practising at the bar I often watched the judges weighing the different arguments pro and con, and sometimes they were so long in coming to the point and rendering their decision that I was inclined to get impatient. I shall not on this occasion give the House time to get impatient awaiting my views on the questions before us. After the most mature deliberation, after having examined the situation, after having studied the resolution now before the House, and considered whether or not under the present circumstances it can be of any profit, advantage, or benefit to the minority in Ontario or

in Canada, I have come to the conclusion for the reasons which I am about to give that I cannot support the resolution.

But, Sir, there are certain circumstances which surround the introduction of this resolution in this House which to me are surprising and significant. As my right hon. leader said this afternoon, the agitation which we are witnessing at the present time has existed for at least six months. Since this House met in session on the 12th of January, the legislature of Ontario has met and has been prorogued. Why is it that, instead of waiting until the dying days of the session, my hon. friend from Kamouraska did not introduce this resolution at a time when it could be brought to the attention of the legislature of Ontario, and admonition given, if such a course were thought advisable?

There is another event which may have its bearing on the present situation and that is the pending general election in the province of Quebec. Although it is against the rules of this House to impute motives to hon. members, it seems to me that we can put two and two together and say that the introduction of this resolution at this time was considered necessary to supply a battle cry for the Liberals with which to defeat the Conservative party in the province of Quebec and thus make the way for my right hon. friend and his followers when the Federal elections come.

My right hon. leader spoke of the curious fact that reference to the situation existing in Manitoba is carefully omitted from this resolution. Of course we all know that the Government at Toronto is a Conservative Government, and that by reason of that fact, it is supposed at least to have some affinity to the Government which is in power in the Dominion, so that hon. gentlemen opposite deemed it good political tactics to attack the Tory party in Ontario in order to hit at the Tory party in this House. We all know also that the party in power in Manitoba is not the Conservative party, but the Liberal party, and notwithstanding the supposed reasons given a few minutes ago by the leader of the Opposition, I can see no other reason why the conduct of the legislature of Manitoba in abolishing bilingualism was not alluded to in this resolution, than the fact that in Ontario the Government is Conservative whilst in Manitoba the Government is Liberal.

We all remember quite well what took place in 1896, in the great struggle to which my hon. friend alluded. We remember that remedial legislation was introduced in this House, not through any whim or caprice of the Conservative party or of Sir Charles Tupper, its leader at that time, but because he had been told by the Privy Council in England that under the circumstances this House had the right to pass remedial legislation, which the province of Manitoba refused to adopt. That was why remedial legislation was introduced in this House. After the measure had been withdrawn because the term of Parliament had expired by the effluxion of time, my right hon. friend went to his electors in the city of Quebec and said to them: "I will bring Sir Oliver Mowat into my cabinet, and with him I will try to right this matter by conciliation; if I cannot do it by conciliation, I will take advantage of the means which the constitution affords so as to give back to the fullest extent to the minority the rights which have been taken away from them." That is what the right hon. gentleman said in Quebec, but in Ontario and in the other provinces he cried: "Hands off Manitoba." Then when the right hon. gentleman came to power he made a settlement with Mr. Greenway which is well known in history as the Laurier-Greenway settlement. One of the essential conditions of that settlement, which was afterwards incorporated in a statute, was that bilingual schools should be established in the province of Manitoba. Now that Manitoba has torn up this scrap of paper, has gone back upon its solemn obligations in this regard, has torn to pieces the agreement which the right hon. gentleman made with Mr. Greenway—an agreement made between the Federal and the provincial powers—my right hon. friend says, "We have nothing to do with this question; we will wait and see what happens and for the present we will take no action." As I have said, it is probably not in accord with the rules of the House to impute motives, but when I see that there is an election in Quebec at the present time; when I see that the Government in Ontario is a Tory Government, and that the Government in Manitoba is a Liberal Government, I put all these things together and I ask whether the inspiration which gave rise to the resolution that is now before the House is to be found in that high sense of duty and patriotism of which my right hon. friend spoke this evening.

There are some things in the speech of my right hon. friend with which I agree. I do not wish it to be understood in the least that I am at the present moment ap-

proving what took place in Manitoba or in Ontario but what I say is that this is not the place to discuss it. Certain rights or alleged rights in Ontario have been violated, as certain people say, and the question as to these has been submitted to the courts. I will not speak now of the legal rights of the minority of the province of Ontario. I wish to call the attention of the House, as my hon. friends on the other side have, to what I may call the historical and natural rights of the minority in the province of Ontario. My hon. friends have alluded to the history of this country, and, as the opportunity offers, it may be profitable that I should refer briefly to the historical aspect of the question.

At the conquest there was no geographical line dividing the province of Quebec from the province of Ontario; the district was all one province which extended from the Gulf of St. Lawrence to the Rockies. Sir John A. Macdonald said, in a speech made by him in this House, that Upper and Lower Canada were known under the name of the province of Quebec. At the western extremity of what is now the province of Ontario, on the shores of lake St. Clair and the Detroit river, there was a colony of Frenchmen who had come out when Lamothe Cadillac had founded the now prosperous city of Detroit. They were not numerous, but to-day they are a thriving and prosperous colony of French Canadians on the shores of the Detroit river. Although they were not numerous—this is interesting from several points of view—the legislature sitting at that time at Niagara and making laws for Upper Canada passed a resolution in the following terms:

> That such Acts as have already passed, or may hereafter pass, the Legislature of this province, be translated into the French language for the benefit of the inhabitants of the western district of this province, and other French settlers who may come to reside within this province.

That is the spirit in which the French inhabitants of the province of Ontario, or Upper Canada, were treated at that time, even though the only French member of the legislature of Upper Canada then was M. Jacques Duperron Baby. In 1840, as the member for Kamouraska said this afternoon, at the time of the union of Upper and Lower Canada, the use of the French language was abolished. A short time after, in 1844, a petition was sent to Queen Victoria by the legislature asking for the restoration of the French language. Here is one paragraph of the petition:

> That desirous that the hearts of all men in this province may be joined in unity, in their attachment to and support of Your Majesty's person, and Government, we humbly pray Your Majesty to endeavour to remove this cause of discontent, and to recommend to the Imperial Parliament the repeal of that portion of the law which has given rise to it; assuring Your Majesty that such a course will be hailed by Your Majesty's loyal Canadian people as an additional mark of Your Majesty's solicitude for their welfare.

In later years Ontario did not oppose the migration from the province of Quebec of those hardy settlers in the northern and eastern portion of Ontario. To-day the French Canadian population of Ontario is 250,000, and it is increasing all the time. Ontario welcomed these new settlers in the eastern and northern parts of the province. Was it not in the interests of Canada that instead of going to the United States, exiling themselves from their country, these inhabitants of Quebec should settle in these districts of Ontario?

As was pointed out by the member for Kamouraska and also by the right hon. leader of the Opposition, when Confederation came about, section 133 of the British North America Act was enacted, and it is the consecration of the principle of two official languages in Canada. Some say that this section 133 is restrictive; but it gives the French language a status which none other has in Canada except the English language. It suggests at least that the study of French should be encouraged and fostered so that the citizens of this country should be able to carry out more fully what seemed to be the inspiring idea of the fathers of Confederation. I congratulate my right hon. friend and leader upon what he said this afternoon, not only with regard to the French language, but with regard to the efforts which he has made to acquire a knowledge of it, and I am witness to the fact that on several occasions he has been able to address French audiences in the province of Quebec in their native tongue. Of all the English-speaking Prime Ministers of Canada since Confederation the present Prime Minister is the only one, not excepting Sir John Abbott, who was able to address audiences in the French language.

In 1890 there was a celebrated and protracted debate in this House, a debate which every one remembers who knows anything about the history of this country, on the abolition of the French language in the

Northwest Territories. I shall quote from some of the speeches made at that time by eminent men who have now passed away, to show in what spirit the French language was treated by them. The hon. member for Kamouraska quoted from the remarks made by the late lamented Sir John A. Macdonald. Let me cite what the Hon. Edward Blake said upon the occasion to which I have referred:

You may selfishly wish that he had agreed to be suppressed; you may have a profound conviction of the incomparable superiority of your tongue, your laws, your creed; you may earnestly desire for all men the inestimable boons of British birth, of English speech, of Protestant religion. But still, after all, cannot you put yourself in his place? And can you not, must you not, admire the courage, the fidelity, and the determination with which, at great odds, he fought in all fields—in the legislature, before the people, and in even sterner fields than these—for what to him was as dear as what you call your birthright is to you? Fought, aye, and conquered too! Cannot you recognise that his was after all a victory for humanity? And that if, as the case is, it has imposed greater difficulties and more arduous efforts and toils on those who are engaged in making a nation of Canada, it yet, by that very circumstance, gave the chance for more exalted triumphs, gave an opening for the exhibition of still higher and deeper and broader feelings of justice and liberality and tolerance than are permitted to a wholly homogeneous people? Can you not at least see—if that much you cannot see—that he has in fact conquered? Do you seriously hope to prevail to-day in a conflict in which, under infinitely greater disadvantages, he obtained the victory long ago? Surely if it were a conquest in which he was in the wrong, you had the right to struggle still; but his victory after all was for equal rights—rights equal with your own. That is all he asked; that is all he got. But you say: no; his language must be obliterated; it is inimical to the Constitution that it should continue; you must teach him your tongue; he must forget his own; he must not have what he regards—and, from his point of view, rightly regards—as equal rights with you, the Anglo-Saxon, of whom the hon. member for North Norfolk (Mr. Charlton) spoke so proudly this afternoon as destined by fate to swallow him up. Sir, I regard this larger question to which I have referred, and it is the real question we have to consider, as a settled question; and even were my views as to the settlement different from what they are, I would not consent, as a public man, to an attempt to reopen a controversy, long since closed, on grounds which do not give to my eye the least prospect of success, but which ensure ultimate defeat to the assailants, and meanwhile limitless disaster to the state. I say: No; a thousand times no! Whether you differ or agree as to what might have been best for the country, in the situation of the country as it stands, I say: No, a thousand times, no; to the least effort or proposal to reopen that settled controversy; and I maintain that it is the duty of those who truly regard the progress and the prosperity of Canada, who hope to see it advance in its path towards nationality, to defend the rights of the minorities in this regard, as by law and by convention and by national settlement established. I intend for my part to defend them just as warmly as if I were one of themselves; and I should regard myself as dishonoured and disgraced if I were now to yield to the forces which press me to any other course.

And Sir John A. Macdonald, on the same occasion on which he used the words quoted by the hon. member for Kamouraska, said this further:

Why, Mr. Speaker, if there is one act of oppression more than another which would come home to a man's breast, it is that he should be deprived of the consolation of hearing and speaking and reading the language that his mother taught him. It is cruel. It is seething the kid in its mother's milk. The greatest, perhaps, of all the objections to this measure, is that it is a futile measure. It will not succeed. It cannot succeed. As my hon. friend from Bothwell (Mr. Mills) said the other day, and as the hon. member from the West Riding of Durham (Mr. Blake) repeated, in order to carry out an oppressive measure we must have a Russian Government or we must have a Stafford here; we must put down the language with a strong hand; we must exclude it from the schools; we must exclude it from official life; no man in Canada who spoke French must be allowed to take office; the Frenchman must be made a Pariah, and his language must be made a mark of scorn; that is the only way to carry out the principle or the object of my hon. friend the minister for North Simcoe.

What was the outcome of this discussion during which these noble words were delivered? It was this that the question was to be left to the Legislatures of the Northwest Territories, when they had received provincial organization. And all these men who spoke in this way of the French language came to the conclusion that this was a question not for the Federal but for the provincial domain. Why has this regard been paid to the French language, by custom, by Acts, by the speeches of eminent men? The French were the first comers in this country; they were the pioneers; they introduced civilization from the Gulf to the Rockies. They were a valourous race, they fell fighting with their faces to the foe. The British respected them, and after a few years gave them more liberal terms, by the Quebec Act of 1874, than were contained in the Capitulation.

Again, I do not put the question upon the legal ground which is submitted to the courts; I put it upon the historical ground, and I join with my right hon. friend in appealing to the generous sentiments of the people of Ontario. If it is true that these regulations are restrictive or prohibitive of the right of teaching French in Ontario, I appeal to the generous sentiment of my fellow Canadians, I appeal

to their sympathy, and I ask them to right what may be a great wrong towards the minority in the province of Ontario.

Mr. PUGSLEY: That is all that anybody wants.

Some hon. MEMBERS: Carried.

Mr. CASGRAIN: My hon. friend from St. John says: that is all that anybody wants. But will the resolution now before the House attain that? Will this resolution allay the agitation which exists in the province of Quebec and in the province of Ontario? I fear not. I shall not follow my right hon. friend or my hon. friend from Kamouraska in the discussion of Regulations 17 and 15, for it is not my province to be informed upon these questions as I would be if I were a member of the Legislature of Ontario. But, if I do not discuss these questions, it is for another reason, and that reason is that I would not wish that any regulation or law emanating from the Legislature of Ontario should be subject to the censure of the House of Commons. If there is one province in the Dominion whose acts it would not be desirable to discuss in this House; if there is one province in the Dominion who should be careful of her autonomy; if there is one province in the Dominion who should be careful that the provincial sphere is not invaded by the federal, it is the province of Quebec. As my honoured leader said this afternoon, at one time it was rumoured—I do not know whether the rumour has ever been substantiated—that during the conferences on Confederation Sir John Macdonald wanted, not a federation as we have to-day, but a legislative union, and it was the province of Quebec which prevented the adoption of that constitutional system. Now, Sir, I put this question to the House: if we discuss to-day the educational affairs of Ontario; if we discuss to-day the educational laws of Ontario; if we discuss to-day the educational laws of Ontario or the educational regulations of the Ontario and Department of Education, is it not a fact that it would be competent for us to discuss in this House any law or any regulation emanating from the Legislature of Quebec?

Mr. MARCIL: Does the hon. gentleman imagine that the province of Quebec would pass such a regulation as has been passed in Ontario, or has he ever heard any complaint from the minority in Quebec?

Mr. CASGRAIN: That is not the point at all. There are certain laws which have been passed by the province of Quebec—and I am not blaming the province of Quebec—which have been distasteful to the province of Ontario, and if, because they were distasteful to the province of Ontario, they were brought before this House and condemned or criticised, certainly I would be the first, and I have no doubt my hon. friend would be among those who would oppose any interference by the Federal House in the provincial sphere.

Let me examine this resolution. It says:

> That this House especially at this time of universal sacrifice and anxiety, when all energies should be concentrated on the winning of the war, would, while fully recognizing the principle of provincial rights and the necessity of every child being given a thorough English education, respectfully suggest to the Legislative Assembly the wisdom of making it clear that the privilege of the children of French percentage of being taught in their mother tongue be not interfered with.

Sir, this resolution either is not sufficient or it goes too far. What does it suggest? It simply suggests that the laws of the province of Ontario be made clearer. Well, now, it seems to me that it is not for us, that we have no mandate in this House, and that we have not sufficient knowledge, to say to the province of Ontario that its laws are not clear enough, that its laws do not clearly say such and such a thing which we would like them to say. My humble opinion is that this resolution is not only absolutely useless, but harmful. It is fraught with great danger to the other provinces, and especially to the province of Quebec.

What would be the result if this resolution passed the House? Supposing, for instance, the majority of this House passed the resolution in question. What would we do? How would we make the suggestion to the Legislature of Ontario, and how would it be received by that legislature? That is what we have to ask ourselves. What reception would it get by the Legislature of Ontario and what good would it do? What good would it do? Supposing we passed this resolution and sent it to the Legislature of Ontario, what would happen? Sir, I have only to read some of the extracts from the press of the province of Ontario to show you what reception a suggestion of that kind would get from the province of Ontario, and from the Legislature of Ontario. The Toronto Star was one of the most sympathetic organs of public

opinion in Ontario to the cause of the minority, but it said on the 14th of April:

No row that can be raised at Ottawa, no play that can be made on the rivalry between the two political parties in Canada, will be of any avail whatever in modifying Ontario's position in this matter. In no school in the province will English be excluded. It will be taught by a teacher who knows how to teach English. The inspecting will be done by an inspector competent to see that the teaching is done.

That much being assured. the province of Ontario is disposed to be quite reasonable as to details.

Again, on the 27th of April it said:

Those who are seeking Federal interference in the present case may succeed in fomenting strife and increasing difficulty, but they will not help the French-Canadian in Ontario. To any conciliatory suggestion there can, of course, be no objection, but all notion of disallowance, or of any kind of coercive action, must be abandoned. For that reason, we see no advantage in starting any kind of debate in the House of Commons at Ottawa. Such a debate would be misunderstood.

Then, the Toronto Globe, not the Orange Sentinel, but the Globe of the 10th of May, said:

Canada is a Confederation. The Federal Parliament seems to forget that fact occasionally, when it gives advice to the provinces.

That is the reception which any suggestion from this Parliament to the province of Ontario would get. Who are taking part in this agitation and where does the agitation exist? It exists in the province of Quebec, and in the province of Ontario, and I say that by bringing this question up in the Federal House and asking us to pass this resolution, those responsible are sowing discord in this country, which will spread from one end of Canada to the other.

The resolution is insidious. It is skilfully drafted; it is drafted in such a way as to appear harmless to the uninitiated, who do not appreciate the distinction between the federal power and the provincial power, or between the executive power and the judicial power. After all, if the law is not clear, it is is being submitted to the courts for definition. There are two cases now which are on their way to the Privy Council, one in which the constitutionality, the validity and the meaning of Regulation 17 are submitted to the Privy Council, and the other in which the law which applies more particularly to the the city of Ottawa, and which substitutes a commission for trustees, is to be tested. Why should we, when these two cases are before the courts, seek to substitute the interpretation of this House for the interpretation which is being sought by the friends of the minority in the courts of this country? I say it is a dangerous principle to mix up in this manner the legislative power with the judicial power.

It is said that we have the expressive power. It may be so, but when the powers are defined by our constitution, as clearly as they are with respect to education, this Parliament, when it uses that expressive power in respect to subjects which are allotted to the provincial authorities invades a sphere from which it has been expressly excluded in regard to legislation or an expression of an opinion. There was one aspect of the question which could probably have been brought before this House, allusion to which has been made this afternoon, and that is, disallowance of the Act passed by the Legislature of Ontario in 1915, which was asked for by a great many people in the province of Quebec especially, and in the city of Ottawa. That was a proper matter to be brought before this House, as was correctly stated by my hon. friends who have preceded me, and I was glad to hear them say so. The right hon. leader of the Opposition and the hon. member for Kamouraska have said that they approved of the action of the Government in not disallowing that Act. If we were right in not disallowing the Act, how is it that hundreds and thousands of signatures were procured in the province of Quebec and in Ontario asking us to disallow it? Was it for the purpose of keeping up the agitation, and is it by such means that the agitation is being kept up not only in the province of Quebec but in other parts of the Dominion? The fact that we have not been blamed, that no member of this House has dared to rise and condemn the Government for not disallowing the Act of the Ontario Legislature is not only a vindication of the position we have taken, but a condemnation of those who have gone around in the province of Quebec and in the province of Ontario gathering those signatures to a petition, the prayer of which finds no supporters amongst the 221 members of this House.

Questions similar to this have occupied the attention of this House in times gone by. I remember well when the Jesuits' Estates Bill passed by the Legislature of Quebec in 1888 was brought before this House in 1889. That Act was distasteful to a large proportion of the citizens of Ontario; it was distasteful also to a large proportion of the Protestants in the province of Quebec. The matter was brought be-

fore this House, and I am proud to say that under the leadership of the late Sir John A. Macdonald and Sir John Thompson, the principle was laid down that there should be no interference with provincial legislation by the Federal Parliament. The principles upon which Sir John A. Macdonald, Sir John Thompson, and the Conservative party acted in those days in respect to an Act passed by the Legislature of Quebec are the principles upon which this Government stands to-day. In refusing to interfere, to admonish, or to suggest to the province of Ontario in relation to a measure which is within its competency, we are only following the precepts laid down in this House by Sir John A. Macdonald, Sir John Thompson, and the other former leaders of the Conservative party. I appeal to my hon. friends from the province of Quebec to-day to follow the example of the Conservative party, and especially of the English members of the Conservative party, in 1889, when, notwithstanding the fact that it was a Bill passed by the province of Quebec, a Bill which was distasteful to the great majority of Protestants in this country, the English-speaking Conservatives and the Protestant Conservatives of the House of Commons stood by Sir John A. Macdonald, by Sir John Thompson, and by the province of Quebec, in declaring that they would not interfere with provincial legislation.

I know perfectly well that I am running counter to the feeling of a large majority in my province, but in my sober judgment I think I am right. Let the storm gather, let the clouds burst and the thunder roll; the tempest will pass away, and to those who come after me I leave my defence.

Hon. RODOLPHE LEMIEUX (Rouville): Mr. Speaker, in rising to address the House in respect to the resolution now before you, I am well aware that the course I am about to take may be misunderstood. It is always easy to avoid a difficulty of a transient nature, but there are issues of a higher order which compel a man with a sense of duty to face them squarely, come what may. The present resolution, moderate in form, gives expression to a sentiment and embodies a principle which cannot but rally the unqualified support of all who have at heart the welfare of Canada. A grievance, as was well said yesterday by the right hon. gentleman who leads the Opposition, because it happens to be the grievance of a minority, should not be lightly discarded or ignored. On the contrary, the true basis of strength in a majority lies in the fact that it can dispassionately listen, as it has listened to-day, thank heaven, that it can scrutinize, weigh, solve. It has been stated, I know, that this Parliament should scrupulously avoid dictating its will to any province in matters essentially provincial. Far be it from my mind to dictate to anyone, or to dictate to any province. Belonging, as I do, to the minority in Canada, need I say that I stand for provincial rights? Historically, traditionally, the Liberal party has always resisted any encroachment on what properly appertains to the provincial domain. But this Parliament, as was admitted a moment ago by the hon. Postmaster General, has never lost its expressive power, nor has any British legislature in the world ever lost its expressive power. My hon. friend said a moment ago that this was not the proper tribunal. I take issue with him on that point. I say that this is the highest court in the land, and that if a subject of His Majesty the King has a legitimate grievance he has the right to ask redress for that grievance before the supplies are voted. That is what the French Canadian minority of the province of Ontario is respectfully doing to-day.

There are questions, I know, more acute in one section of the country than in the other, and because of that very acuteness they affect the well-being, peace and good government of our country. The language issue, unfortunately, is one of these acute questions. It is not a new one, because in a country made up of several nationalities it is liable at times to appear on the surface and bring confusion and misery where peace, harmony, and concord should prevail. It is, unfortunately, a vexed issue, because behind it nestle feelings of pride which tend to embitter and inflame, but I hope that in the few remarks I shall offer the House this evening nothing that I will say may accentuate that bitterness, or arouse acrimony. I fully realize that moderation is a virtue. I will speak this evening the language I would use in the historic city of Quebec, and that I would use to-morrow in the city of Toronto. After all, in this country there is but one constituency for a public man worthy of the name, and that constituency is Canada as a whole.

The bilingual issue has reached such a climax that to-day we are face to face with a condition and not a theory, and I do not

intend to set up a case on behalf of the minority based on any treaty or any statutory enactment. Whatever may be the legal or constitutional aspect of this question, I know full well that a minority must always depend on the good will and forbearance of the majority for the full enjoyment of its rights and privileges. It is, Mr. Speaker, an appeal to reason; nay, more, it is an appeal to fair play, to those generous instincts which have always characterized the British race in its treatment of minorities that I intend to make this evening. The question of whether or not the French were conquered or were ceded does not affect the issue one way or the other. Granted that they were conquered, but I claim that the French were not conquered on the Plains of Abraham. They were conquered in 1774; in 1791; in 1841; they were conquered in 1867, when British diplomacy, wise and strong as it has always been, gave the French Canadian minority all the rights which the British subject enjoys wherever the Union Jack floats. That is your conquest of the French Canadians. The Treaty of Paris, signed in 1763, speaks for itself. The outstanding point remains that there is in Canada to-day an English-speaking majority and a French-speaking minority. But will you not agree with me, Mr. Speaker, that it is the duty of statesmanship to see that both should learn to appreciate and respect each other? Right here it may not be amiss to recall a proposition laid down by that great British jurist, Lord Mansfield, on the effect of conquest by British arms. Says Lord Mansfield:

> The conquered inhabitants once received under the conqueror's protection, become subjects and are universally to be considered in that light, not as enemies or aliens.

The same principle was propounded by Wedderburn, by Marriott, by Thurlow, at the time of the Quebec Act in 1774. That has been the traditional policy of Great Britain in all parts of the world, and I need not say that it is due to that broad, tolerant and fair policy that the British flag to-day floats at the topmast of the British Navy over the Seven Seas, and that Great Britain owns one-sixth of the inhabited globe. A race may be ceded to another race, it may be conquered by force of arms, but every man who has a heart in his breast, every man who has some intelligence in his head—and I am addressing myself to men of the highest intelligence and to men who have hearts in their breasts

—will admit that, ceded or conquered, there are moral frontiers which cannot be overcome by mere force. The language of a race is one of these frontiers. This itself need not be safeguarded by the covenants of a treaty or by statutory enactment. Civilization would be a sham if that were necessary. Why? Because language is part of a man's soul, because there are traditions and ideas binding men to the same language by indissoluble ties, and because it would be cruel to deny a man the right to speak the language that he learns to lisp at his mother's knee. That language is sweet with the breath and aroma of memories that bring to his heart the joyance of happy tears, that language which exalts, inspires and fills his heart with reverence and faith and heroism that shine as stars in the temple of his race.

During the last half century Germany has vainly tried to eradicate the French language in Alsace-Lorraine. She has vainly tried to suppress Polish in Posen and Danish in Schleswig-Holstein. The Magyars have vainly sought to make their tongue the language of Hungary. But all these attempts have lamentably failed; failed in Alsace, failed in Denmark, failed in Poland, and failed in Hungary. Sir, need I say that the German policy is not of the British or of the French pattern. When the other day the French army reconquered a considerable portion of the lost province of Alsace, General Joffre issued a proclamation to the Alsatians containing the following ominous words:

> Our return is final. You are French forever more; France brings you, with the liberties that she has always represented, respect for your liberty, the liberty of Alsatians, the respect for the traditions of your convictions, of your customs.

Sir, the greatest colonial Empire of any time has been built up by Great Britain, and she has been able to hold that Empire together largely by following the policy of her statesmen, that the traditions, the religious convictions, the civil rights, the customs, and the language of her subjects shall be respected. It is radically false, I submit, to think that unity of Empire must be based on uniformity of language. Read the history of the world; read the history of the Roman Empire by Gibbon, and you will see that no empire has ever been united by oneness of language. To use the words of a modern writer "a nation, small as it may be, is a torch and it is important that there should be several luminous centres in the world." I submit

that the British example demonstrates that diversity of language and of laws, far from being a disintegrating factor, is on the contrary a most healthy and unifying influence. Not to mention India with her mosaic of languages freely taught and freely spoken, take that quaint little island of Malta where Italian is the official language of the courts, and parents have the right to say whether their children shall learn English or Italian at the schools. In South Africa, Dutch and English are on an equal footing. It was my privilege in 1910 to be present at the inaugural ceremonies of the new constitution of South Africa. His Royal Highness the Duke of Connaught, the present Governor General of Canada, was there, representing his nephew, His Majesty the King. I well remember the lasting impression made upon the minds of every one present when the speech from the Throne was read in English and in Dutch, and when the prayers were recited in both languages, just as they are in this House of Commons every day. In Wales a million people speak Welsh, and 250,000 of them speak Welsh alone. In Ireland the Irish Gaelic is taught in five thousand schools. In the highlands of Scotland Scotch-Gaelic is the language of a quarter of a million people. In Mauritius, French is the official language. I have in this House friends of Scotch origin, and only yesterday my hon. friend the junior member for Halifax (Mr. Maclean) told me that his grandmother spoke not a word of English, but Gaelic only. In the county of Inverness, as in the old Scotch settlements of the county of Gaspé, which I had the honour of representing for fifteen years in this House, I know old Scotchmen who speak the English language with the greatest difficulty, and who have ever been attached to their mother-tongue, the Gaelic language. In the Channel islands things are much like Quebec, except as regards religion. The people in the Channel islands are Huguenots, while in Quebec they are Catholics, but both cling to their national traditions, to their language, to their laws, their customs and their usages. But at the same time both are loyal to the British Crown, and both have given evidence of their loyalty. Both are, however, of a conservative frame of mind. A change in the constitution or an alteration in the laws is always looked upon with apprehension by the minority. A man who after long struggles has at last succeeded in obtaining what the Latin poet has so aptly defined "aurea mediocritas" will pause and reflect before he accepts any new proposition presented to him, and in this respect nations are not unlike individuals. Many people I know, honestly believe that there should be uniformity of laws and of language in the Dominion, because forsooth it would be far more practicable. Those who look at such questions from the mere practical point of view are apt to forget that sentiment, after all, is no mean factor in the map of life. I remember when I was a boy at college the first thing I learned in English was "Gray's Elegy in a Churchyard," and the first booklet I was asked to read bore the following suggestive title: "Put Yourself in his Place." I am simply asking the majority of my fellow men in this House to put themselves in our place. Our traditions, our laws, our language, constitute the inheritance which was left to us by our forefathers in 1759. It is a glorious heritage which any man of honour will always treasure. Would not my English speaking friends have less respect for me if I were unfaithful to that sacred trust? For an Englishman, after all, valour is still of value; he will always admire courage, thrift, perseverance displayed by his defeated foe.

10 p.m.

Let me remind you, Sir, at this juncture of what happens every day in London, at the very heart of the British Empire. In Downing street, next to the residence of the First Lord of the Treasury, sits the Judicial Committee of the Privy Council. This able body of men, some of whom may be classed amongst the greatest jurists in the world, holds periodical sessions to hear the appeals from the several colonies and dominions. From the Cause List, you will notice that one day an Indian case may be heard and the next day a Canadian case; one day the appeal is from Bengal, the next day it is from Mauritius or Ceylon. Each of these colonies—not to mention the many others—has kept its own laws, and one who is a daily attendant at the sessions of the Judicial Committee, may listen to very able arguments based on the common law, the Roman law, the Dutch law, the Indian law, the Coutume de Paris, or even the Coutume de Normandie, when it is a case from the Channel islands.

It is argued by some usually fair-minded people that once you grant the French language its status in the schools of Ontario, you immediately open the door to similar

privileges to the foreign-born who seek a home in Canada. Hence, they say, the imperative necessity of a uni-lingual policy. I hold no brief for the foreign-born, be he Slav, German, Hungarian, Italian, or Greek, he is fully entitled to all the rights of his newly acquired British citizenship. But when an immigrant comes to Canada and settles on the homestead which is freely alloted to him by the bounty of the Canadian Government, he knows that he becomes subject to the laws of the Dominion. He cannot claim special privileges; he knows that there are in Canada but two official languages, the English and French. Surely no one will contend that, as between the immigrant coming from a foreign land and the son of the soil—and we the French Canadians claim to be the sons of the soil for eight, nine and ten generations, the men whose ancestry was here long before the Cession, two hundred and sometimes three hundred years ago—there is no distinction to be drawn. Quebec and Ontario were part of the territory then known under the name of New France, and it is that territory with all its inhabitants which the Treaty of Paris placed under the domination of His Britannic Majesty.

As I have already stated, the traditional policy of Great Britain has even been to respect the religion, the civil rights, the usages, the customs, the language of a conquered people. The French Canadian is not an immigrant—I do not use the expression in any offensive sense—and he should not be treated as an immigrant. He does not come on this continent hat in hand, anxious to fit into the new ways of a strange country, ready to cut all bridges behind him, willing to surrender his race individuality by the process of the crucible or the melting pot. Canada is his fatherland; it is not for him an adopted country; it is his country and his only country. Occasionally, the habitant of the province of Quebec or from the French counties of Ontario will emigrate to the New England States to earn money in hard times to pay off a mortgage, but he never bids a final adieu to his farm; his heart remains behind with the long pastures, the bright-hued villages and the tall spires. He naturally clings to the traditions, the ideals, the language, which are so closely associated with the land where his forefathers long before him played such a prominent part.

Right here allow me to say, in order once and for all to answer the very insidious criticism which is made of the language as spoken by the French Canadian of this country: his language is not a dialect; it is not a patois; it is the language of old France, of France of the 18th century, the language which since the Congress of Vienna has replaced Latin in diplomacy, the language which for centuries was spoken in England, at the Court, in Parliament, the language which in all parts of the civilized world constitutes one of the highest manifestations of humanity. That language has always been respected and recognized by a wise and far-seeing British statesmanship. Evidence of this can be found in a series of Imperial enactments, the latest of which is the British North America Act, of which section 133 reads:

> Either the English or the French language may be used by any person in the debates of the Houses of the Parliament of Canada and of the Houses of the Legislature of Quebec and both those languages shall be used in the respective Records and Journals of those Houses.

Mark the words: either of the two languages may be used in this House and in the Senate and in both Houses of the Quebec Legislature, and both languages shall be used in the records and the journals. Is it not an elementary proposition that, the English and the French languages, having been thus declared official, in the spirit if not in the letter of the Constitution, it follows that the teaching of both languages was intended to be left free and untrammelled.

Do you look, Sir, for some more evidence of the bilingual complexion of this country? Some thirty-five years ago, when the Marquis of Lorne, later on the Duke of Argyll, was Governor General of Canada, he founded the Royal Society of Canada, which has been given an official status by this Parliament. I wish to remind you, Mr. Speaker, and my English-speaking fellow members of the House that there are two sections of that society, the English and the French sections. My hon. friend the member for Kamouraska this afternoon cited another enactment of this Parliament which is evidence that the bilingual complexion of this country is fully recognized. We passed two years ago a new naturalization law in order to meet Imperial requirements. It was sound policy to adopt that legislation. While it was peculiar to Canada a proviso was inserted in that law whereby the English and French languages were considered as test languages for the new-

comers applying for their naturalization papers.

I have read in the press, not without amazement, an assertion to the effect that bilingualism meant French domination. The English-speaking members of this House were solemnly warned not to surrender. Is it possible, Mr. Speaker, that in a country like ours, such warnings should find any echo? Is it possible that any such appeal could be successfully made to a proud and chivalrous race like the English-speaking people? Every French Canadian is anxious that his children should learn English, because English is the language of business. It is the language of the continent of America and no man is fully equipped for the battle of life if he is not conversant with that language. Besides, in a loftier sense the knowledge of English literature is in itself no mean privilege. The idea of French domination is altogether too silly an invention to be seriously entertained. On this continent of America, from the Rio Grande to the polar sea there are 100,000,000 people speaking the English language, and practically the English language only; and as against that immense number of people barely 5,000,000, perhaps less, Louisiana included, use the French language. Can this minority, will this minority ever attempt to dominate the vast majority? The idea is preposterous. No, Mr. Speaker; on this continent, in this country, in this great province of Ontario, the minority could not and would not dominate. It shall not be dominated, either, if we are all imbued with the spirit of democracy, if we all live up to true British ideals. The French Canadians want equal justice. They want fair treatment, nothing more and nothing less.

Two men have been mentioned in this debate whose name and fame shall ever be remembered in history. They were political opponents, but both were patriots and statesmen. I refer to Sir John A. Macdonald and Edward Blake. They lived at a period when the French population was larger in proportion than it is to-day; when the British isles and the Western States had not poured into the western prairies that steady and healthy stream of immigration which made it necessary in later years to carve two new provinces out of that great lone land. Yet Macdonald and Blake, when the bilingual issue came up before Parliament in 1890, gave utterance to their views in no huckstering spirit. Let me quote two short sentences from that historic debate in which both of them took such a prominent part. The first sentence uttered by Sir John A. Macdonald finds its application in the very Ontario case that we are discussing this evening. True it is that when he spoke he was opposing a Bill which had been introduced by the late Dalton McCarthy to do away with the French language in the legislative councils of the Northwest Territories. I draw the attention of my right hon. friend the Prime Minister and of the Postmaster General to these words of Sir John A. Macdonald. After quoting the resolution which was read a few moments ago by my hon. friend the Postmaster General, which was adopted by Upper Canada in 1793, providing for the translation into French of their Acts for the benefit of the few French settlers in the province, Sir John went on to say:

> Are we, one hundred years later, going to be less liberal to our French Canadian fellow-subjects than the few Englishmen, United Empire Loyalists, who settled Ontario? No, Sir. This resolution would cast shame on men who tried to deprive our French friends in the province of Ontario of the privilege given them a hundred years ago by a body of men altogether speaking the English language.

Further on he said, in still more eloquent language:

> Are we going to be less liberal? Forbid it, Mr. Speaker. In the name of humanity, in the name of civilization, in the name of the progress of this great country, I appeal to all our friends in this House, without reference to party, to forget what may be an inconvenience when they go back to their constituents on both sides, to forget that for a moment, and to merge everything in the great desire to make Canada, French and English, one people.

I am at a loss to understand the sentiments expressed this afternoon by the right hon. Prime Minister on whose shoulders has fallen the mantle of Sir John A. Macdonald as leader of the Conservative party. Does he believe for one moment that the resolution which is now before the House smacks of coercion? In 1890, the late Dalton McCarthy had introduced a Bill to do away with the rights of the minority in the councils of the Northwest Territories. Sir John A. Macdonald in his answer took the very attitude which is taken today by the leader of the Opposition and by the member for Kamouraska, he appealed to the better instincts of the Canadian majority to treat the French minority in a fair spirit. Not that Sir John A. Macdonald wanted to impose his views upon the people of the Northwest;

not that he wanted to coerce the Executive he simply made the appeal that any true Briton is entitled to make whenever he thinks a wrong is committed.

Sir, thus spoke the old chieftain of the Conservative party, the statesman who built up Confederation, with Cartier and Galt. Listen now to the Hon. Edward Blake, the leader of the Liberal party—not in 1890, because in 1887 he had himself moved that a man of French birth should succeed him in the leadership of the Liberal party—all honour to his memory for that. Edward Blake, a man whose profound knowledge of the law and constitution made him the peer if not the superior of any man holding a brief before any British court, said:

> Whether you differ or agree as to what might have been best for the country, in the situation of the country as it stands, I say: No; a thousand times, no to the least effort or proposal to reopen that settled controversy; and I maintain that it is the duty of those who truly regard the progress and the prosperity of Canada, who hope to see it advance in its path towards nationality, to defend the rights of the minorities in this regard, as by law and by convention and by national settlement established. I intend for my part to defend them just as warmly as if I were one of themselves; and I should regard myself as dishonoured and disgraced if I were now to yield to the forces which press me to any other course.

Such was the language of two of the noblest men who ever appeared in public life in this country. But I may be told that what I have just quoted is not relevant to the Ontario case—and remember that when I speak of Ontario I speak with the greatest respect of the Legislature and of the people of Ontario. I am myself a resident of the province of Ontario, and my children I have brought up in that province. Let me state briefly, as I understand it, the grievance of the minority in Ontario. As was stated by previous speakers, long before the Union of 1867 French schools existed in Ontario, and when Confederation took place in 1867 the English minority in Lower Canada was confided by Sir A. T. Galt, by Sir John A. Macdonald, by George Brown, to the care of the Legislature of Quebec in educational matters; and the French-speaking minority of Upper Canada was confided by Sir George Cartier, in educational matters, to the care of the Legislature in Toronto. A denominational system, I may be told, was provided for, not a bilingual system. Is there any one who will seriously contend that Sir John Macdonald, Sir George Cartier and Sir A. T. Galt did not contemplate, in their honesty of purpose, a reciprocity of treatment with regard to both minorities? I have already quoted the weighty words of Sir John Macdonald. Let me read a letter from Mr. Egerton Ryerson, formerly Superintendent of Education, upon that particular point. It is dated Toronto, 24th of April 1857, and was addressed to Messrs Donald McLean, John Cuttenach, Angus McDonnell:

> Gentlemen,
>
> I have the honour to state in reply to your letter of the 16th instant that as the French is the recognized language of the country, as well as the English, it is quite proper and lawful for the Trustees to allow both languages to be taught in their schools to children whose parents may desire them to learn both.
>
> I have the honour to be, Gentlemen,
>
> Your obedient servant,
>
> (Sigd) E. Ryerson.

Subsequently, and long before Confederation, grants were made, from time to time, to those bilingual schools. French inspectors were duly appointed to carry out the regulations of the Department of Education with regard to those schools. By regulation 15 the right of the parents to demand that the French or German language be the language of instruction and communication in the schools attended by their children was recognized. I will read, after others, regulation 15, because it cannot be read too often. It is the regulation which we ask the Government of Ontario to reinstate. Let the Department of Education restore that Regulation 15 on behalf of the French as it exists to-day on behalf of the German minority, and the agitation will cease—and what boon that will be for Canada. That Regulation 15 reads as follows:

> In school sections where the French or German language prevails, the trustees may, in addition to the course of study prescribed for public schools, require instruction to be given in reading, grammar and composition to such pupils as are directed by their parents or guardians to study either of these languages and in all such cases the authorized text books in French or German shall be used.

Such was the regulation governing the bilingual schools of Ontario when it was superseded by Regulation 17, a most drastic regulation indeed, which affects the French only and, mark well, not the Germans. I will not say that these bilingual schools were not at times threatened, but be it said to the honour of Sir Oliver Mowat, to the honour of Sir George Ross, they always treated the minority in a broad and generous spirit. The words from Sir Oliver Mowat on precisely the same issue have been quoted, but they may well be recalled.

Mr. EDWARDS: Can my hon. friend tell me when Regulation 15 was changed or repealed?

Mr. LEMIEUX: I did not say it was repealed. Regulation 15 exists, but for the German minority only. It has been superseded by Regulation 17 as regards the French schools.

Mr. EDWARDS: It is on the statutes just as the hon. gentleman read it.

Mr. LEMIEUX: As regards the French?

Mr. EDWARDS: Just as you read it. Do I understand it still remains on the statute book?

Mr. LEMIEUX: My contention is that it remains on the statute book as regards the German minority, but not as regards the French minority. However, my hon. friend will have occasion in a moment to explain his point. I am proceeding with my remarks.

Mr. EDWARDS: I want to make that clear. Does he claim that the wording of Regulation 15 has been changed?

Mr. LEMIEUX: I claim that Regulation 15 does not apply to the French minority as before. It still applies to the German minority, but it does not apply to the French. If I am wrong I wish to be corrected by my hon. friend.

I was saying that on precisely this issue of the English-French schools, as regards the language of communication—and this is the crux of the grievance—Sir Oliver Mowat used the following language:

> Our opponents pretend that the Government should insist on all instruction being given to the French children in the English language. No such regulation was suggested by the commissioners, and none such has been made, because such a regulation would be absurd, and, instead of serving the cause of education would often prevent education altogether. How can you teach in a language which the children do not understand?

Sir, Regulation 17, which superseded Regulation 15—and this is the point I wish to emphasize—does away with the system which Sir Oliver Mowat consistently maintained and defended. In other words, Regulation 17, reduced to its real size and significance, means the gradual elimination of the French language as a language of instruction and communication beyond the First Form, and the suppression of the study of that language, beyond one hour each day, in the other Forms, such study, and the time allowed for it, remember, always and completely subject to the approval and direction of the chief superintendent of education and supervising inspector. Read the Regulation, shorn of its proxility, and any one whose mind is unbiassed will come to the conclusion that it is unworkable and ineffective. This is, put in concrete form, the gist of the complaint of the French minority. Surely three or four men of good will can be found in this Dominion who would sit around a table with the Minister of Education in Toronto, and I venture to say that in half an hour's time the whole controversy would be settled.

The assertion that Regulation 17 is unworkable and ineffective—that is the complaint of the minority—I do not base on my own judgment, as my hon. friend from Frontenac (Mr. Edwards) would infer. It is the conclusion reached by the six inspectors specially appointed by the Ontario Government to report as to the nature and effect of that regulation. The report was unanimous, and here are the findings. I ask any fair-minded gentleman who belongs to the majority in the province of Ontario to listen to me at this moment because I have reached, I think, the point where the whole difficulty is laid bare. The inspectors appointed by the Government—three were French and three were English—agreed that

> The above Regulation 17 has not been effective for the following reasons: It was taken to mean that French could not be used as a language of instruction and communication, it was regarded as an attempt to gradually eliminate the French language from the English-French schools.

I now ask were the inspectors unduly pessimistic? Is the French-Canadian minority in Ontario unwarranted in resenting the radical change in the mode of instruction attempted by the Department of Education of Ontario? Let me answer very moderately but very frankly. When it is solemnly resolved by influential public bodies: "that the use of the French language in the public and separate schools of Ontario constitutes a grave menace to the integrity of the province, as an English-speaking community;" when it is alleged: "that it is not within the power of the provincial Government to compel the observance of the law as long as there is one loophole for the use of the French in the schools;" when the Government is asked: "to enact such laws and make such amendments to the regulations of the Education Department as will make it unlawful and

impossible for the French language to be used in any of the public or separate schools of the province of Ontario;" when, on the other hand, concurrently with these appeals and as a result of a regulation, most drastic in its terms and character, the number of bilingual schools is limited to those where French has hitherto been a subject of study; when the teaching of French must not exceed one hour, and it may be less; when the language of communication to learn the mother tongue is left at the discretion of the inspector; when the status quo ante is maintained as regards the German minority—and I do not begrudge the privilege to the German minority, but I claim at least equal rights for the French Canadian minority—and specifically, mercilessly altered as regards the French minority, can anyone, I pray, be surprised if my fellow-countrymen feel aggrieved and molested in what they justly consider is their most sacred privilege?

My right hon. friend (Sir Robert Borden) this afternoon referred to the fact that he had learned French after he became leader of the Conservative party in the House of Commons. He and I were elected on the same day to this House and I have often told French Canadian audiences in the province of Quebec that I looked upon him as an example of what a British statesman could do in a bilingual country like ours. I have often commended him as I saw him struggling with a language which was not his own, yes, I have often complimented him on the feat, which he had accomplished, of speaking well—yes, very well—the language of my forefathers. I put the question to him, not as representing the minority, but, as I believe he is in spite of his speech this afternoon, as the friend of the minority; I address myself to him as the leader of the Government of this country; as such, I put him above our party quarrels, and I say to him: Take your own experience; you came into this House in 1896 as I did; I could not then speak the English language; you could not speak the French language; if he had been forced to use the French language as the language of communication and of instruction, would he have attained the knowledge of the French language which he has attained?' And, Mr. Speaker, could I have learned what little English I know if I had been forced to learn it, by setting aside my mother tongue. Mr. Speaker, I say to my hon. friends this is the case; this is the whole question. This is no vain agitation; it is an appeal for generous treatment made to the majority of this country, and the right hon. gentleman might well rise above party politics and above party success in order to give to the French minority the privileges which it has always enjoyed since this country was ceded to Great Britain by France.

I ask again, Sir, is it to be wondered at that the French Canadians of Ontario feel themselves aggrieved and molested in what they justly consider as their most sacred privilege? No treaty, no statute, no law, can deprive a man of a natural right. If I were not as I am, and as I claim to be, a friend of peace, harmony and concord, I would say to the legislature of the province of Ontario: Maintain regulation 17 and the French will thrive under it; they will pay rates for schools that they cannot and will not send their children to, but they will pay double rates, too, in order to keep for their sons and for their daughters the teaching of the language which they have learned to lisp at their mother's knee. With regard to this question of natural right, the right of a child to learn and to speak the language of his mother, is just as sacred as the duty which devolves upon parents to look after their children, just as sacred as the duty which devolves upon children to support their parents if they are in need.

I may be told, and I believe it is right that I should be told, that the English language was not sufficiently taught in the old bilingual schools, and that this drastic departure was made necessary by that very evasion. I grant that this should not be permitted. But, Mr. Speaker, two wrongs do not make a right. You do not redress a grievance, you do not remedy an abuse, by destroying a privilege. Competent bilingual professors can, however, be found, they can be trained, and their training can be properly supervised and tested, just as their teaching of the pupils can be closely supervised and tested by the proper authority.

Once more, Mr. Speaker, I do not rest my case on any treaty, on any statute. From my seat in Parliament I rather appeal to the spirit of fair play of my fellowmen of English birth, who are the vast majority in Ontario and in the Dominion of Canada. Let us not forget that it has been decreed by Divine Providence that we, French and English, should live side by side on this half of the North American continent. We

have, therefore, become the trustees of those two proud races which, after centuries of conflict, have become joint partners in Europe in the upbuilding of a higher and nobler civilization. May we not, long after the plains of Abraham, "meet each otner, understand each other, love each other?"

There are, I know, obstacles embedded in the memories of the past, but can they not be overcome by goodwill and mutual forbearance? Is not the history of South Africa an object lesson to us? Less than twenty years ago, that beautiful country was the scene of a deadly struggle—succeeding a turmoil of nearly a century's duration—which threatened to make of the veldt the seat of an everlasting feud. Two proud races were set up the one against the other. Two conflicting ideals were at stake. War with all its bitterness, its vindictiveness, war with all its horrors, raged. It left a land devastated and desolate, a country divided into two camps of victors and vanquished.

To those who judged only by surface indications, to speak of peace might well have seemed a mockery. But there were those who saw deeper and knew that peace had come at last. The brave men who surrendered at Vereeniging kept their self-respect, but they in return, won the respect of their adversaries. The war issues were settled without humiliation. England did not fear for her own greatness; the terms made were generous. British statesmanship knows by long experience that a brave foe is usually a staunch friend. Events in South Africa have justified the British in their treatment of the Boers.

I, too, will say to the English-speaking majority of Canada and of the province of Ontario: "Rise up to your own greatness; be generous with the minority; be fair;" and, to repeat the last words of the English captain of the doomed Titanic: "Be British." That is all we ask.

Sir, when after Mons and Charleroi the driven and defeated line of the Allies stood almost under the walls of Paris, when the world expected that the Prussian hordes would soon ride in through its historic gates, thus striking a death blow to the cause of human liberty, there was a halt called by Joffre, and as the grim old soldier stood and watched, men in khaki and other men in dim blue coats suddenly swung out in long lines upon the plain, slowly folding upon Von Kluck's army. As it wheeled eastwards, the bugler blew the charge, and the English Tommies, for the second time in the history of British arms, found themselves victorious at Crecy. There in the olden times English knights and French knights had fought and died under the ensigns of St. Denys and St. George. And there again they met in September, 1914, this time side by side as after a long lovers' quarrel to break the Prussian thrust and to once more deliver Christendom and save civilization.

Sir, let us Canadians of French and of English origin take a lesson from that eventful day in the history of mankind. Let us bury the past with its passions, its quarrels, its contention, its miseries. And, exalted by the unique spectacle given to the whole world by both our Mother Countries, let us in common brotherhood and mutual solidarity make of this country what the Fathers of Confederation fervently hoped it would be: a country of equal rights, of toleration, of freedom under the aegis of the British Crown.

Mr. W. F. NICKLE (Kingston): Mr. Speaker, at this hour of the night I shall certainly not attempt an oratorical effort even if I were capable of such a thing. But, coming as I do from the province of Ontario, it does not seem unreasonable that I should at least attempt to outline, for the benefit of those who have criticised the legislation and regulations of my province, what I consider to be the law and regulations applicable to education in Ontario. I shall direct my remarks to three aspects of the question: first, the constitutional development of Ontario, and her attitude towards French as a constituted language of instruction in the province. I shall next direct the attention of the House to the development of this bilingual struggle, and then I shall endeavour to explain wherein I think a misapprehension exists in regard to the regulations. In the first place I might say that if anything were necessary to convince me that a resolution of this class should not be introduced into this House it is the great difference of opinion that exists among the speakers who have spoken as to the construction of the regulations, what their meaning is and what the position of the French in the province of Ontario has been and is to-day.

The first part of the resolution of the hon. member for Kamouraska says:

> It has long been the settled policy of Great Britain whenever a country passed under the sovereignty of the Crown by treaty or otherwise, to respect the religion, usages and language of the inhabitants who thus become British subjects.

There is always a danger in stating a fact in the preamble of a resolution. But the resolution is cleverly drawn in this respect, that the preamble is misleading, and to my mind conveys the impression that the religion, usages and language of the original inhabitants of this country were protected and have a right to exist as the religion, usages and language of the province of Ontario. The first speaker this afternoon took the position that it was the inalienable right of every man to have his language, and that it was impossible to take it away from him by legislation, reasoning from that he claimed that it was the inalienable right of the scholar in the province of Ontario to be taught in the French language, and that the province of Ontario had no authority to modify that right. The hon. member for Wright (Mr. Devlin), being a lawyer, and being more close to Ontario, perhaps appreciated the difficulty into which he was being led and his argument did not go quite so far. But he inferred that the French-Canadian in attendance at the schools in the province of Ontario had by implication certain rights under section 93 and section 133 of the British North America Act. My right hon. friend the leader of the Opposition, in a most wonderful speech of classic eloquence, admitted frankly that this problem must be settled by Ontario. He stated frankly and openly that the predominant right lay with Ontario. Now it is quite impossible to reconcile these three arguments one with another, and I propose briefly, and, I trust, not to such an extent as to tire the House, to show this House, and perhaps through this House, the country, what Ontario considers to be her position and what she claims is her right.

It has been alleged that by capitulations certain rights and privileges were guaranteed in reference to the language of the French-Canadian population of Ontario. I should like to direct attention first to the Capitulation of Quebec, 8th day of September, 1759. I am quoting from page 6 of the Constitutional Documents of Canada. And let me say, Sir, that if there is one thing I desire to do more than another it is to impress upon this House that Ontario has no desire to act the part of tyrant, and that in speaking as I speak to-night I am only trying to express to this House what I believe to be the true spirit of Ontario, and what I believe her desire and intentions are. Turning to page 6 of the Constitutional Documents of Canada, section 6 of the Articles of Capitulation at Quebec makes no reference whatever to language, but it does refer to the question of religion, and this is what was demanded:

> That the exercise of the Catholic, Apostolic and Roman religion shall be maintained; and that safeguards shall be granted to the houses of the clergy, and to the monasteries, particularly to his Lordship the Bishop of Quebec, who, animated with zeal for religion and charity for the people of his diocese, desires to reside in it constantly, to exercise, freely and with that decency which his character and the sacred offices of the Roman religion require, his episcopal authority in the town of Quebec, whenever he shall think proper, until the possession of Canada shall be decided by a treaty between their most Christian and Britannic Majesties.

And the answer was:

> The free exercise of the Roman religion is granted, likewise safeguards to all religious persons, as well as to the Bishop, who shall be at liberty to come and exercise, freely and with decency, the functions of his office, whenever he shall think proper, until the possession of Canada shall have been decided between their Britannic and most Christian Majesties.

That is the only provision I know of in that treaty in reference to language or religion. Turning to the Capitulation of Montreal, which took place on 8th day of September, 1760, approximately a year later, we find on page 27 of the same book, as follows (Article 41):

11 p.m.

> The French, Canadians, and Acadians of what state and condition so ever, who shall remain in the colony, shall not be forced to take arms against his most Christian Majesty, or his Allies, directly or indirectly, on any occasion whatsoever; the British Government shall only require of them an exact neutrality.

That is what was demanded, and the answer was:

> They become subjects of the King.

Article 42 demanded:

> The French and Canadians shall continue to be governed according to the custom of Paris, and the laws and usages established for this country, and they shall not be subject to any other impossibilities, than those which were established under the French dominions.

And the answer was:

> Answered by the preceding articles, and particularly by the last.

The reason I made reference to these two capitulations is this. The right hon. leader of the Opposition in addressing the House this afternoon said, in reference to that answer "They become subjects of the King" that the French Canadian subjects of that day had reason to suppose that they would have protection. I suppose he desired this House to infer that protection meant that their usages would be respected,

that their language would be respected, and that their customs would not be disturbed. But if that was the object of the right hon. leader of the Opposition, certainly history does not bear out that conclusion; because His Britannic Majesty, by the proclamation of October 7, 1763, which is quoted on page 118 of the book from which I have been reading, certainly went a long way from protecting what was thought to be the laws and usages of French Canadians of that day, for he ruthlessly cast them aside, and by proclamation introduced English Common Law into the province of Quebec. It seems to me that that conclusion cannot be otherwise than reached. And if you admit that the answer "They become subjects of the King" entitled His Britannic Majesty to introduce English Common Law into the province of Quebec, it certainly entitled His Britannic Majesty or any other competent legislative authority to pass legislation affecting the French language in the province or what then constituted Canada. Those who have studied the history of Canada are aware of the discontent that followed in Quebec the proclamation of 1763. They know how the French Canadian people, in the habit of being governed by the civil law, resented the imposition of the English common law. They know the petitions that went to His Britannic Majesty to restore again to them the law that they had known, and those who have paid attention to the fact are aware that in 1774 the law of France was again restored to Lower Canada. One might naturally ask: Why was this done? Was it all done out of kindly consideration for the French Canadian people, or was it done because England wanted to make Lower Canada unsuitable as a colony of Britain? Let me ask you to turn to page 389 of the Constitutional Documents of Canada, where, I think, some very enlightening information may be found. There is a quotation at the bottom of the page taken from one of Cavendish's debates, and this is quoted from one of Lord Wedderburn's speeches:

> I think there ought to be no temptation held out to the subjects of England to quit their native soil, to increase colonies at the expense of this country. If persons have gone thither—

That is, Lower Canada.

> —in the course of trade, they have gone without any intention of making it their permanent residence; and in that case, it is no more hardship to tell them, "this is the law of the land"—

That is, the civil law.

> —than it would be to say to a man whose affairs induced him to establish himself in Guernsey, or in any other part of North America. With regard to the English who have settled there, their number is very few. They are attached to the country either in point of commercial interest or they are attached to it from the situations they hold under Government. It is one object of this measure that these persons should not settle in Canada.

Now, the reason I direct the attention of the House to that fact is this, that I want to impress on this country that in 1774, when the Quebec Act was brought into effect, it was not brought into effect with the desire of making Lower Canada a British immigration colony; it was brought into effect to make it a French colony, but part of the British Empire. A change took place, one might almost say, in a night. The war between England and the United States came and went, and men left the United States, preferring their allegiance to the flag to a home in the United States, and they settled in what is now known as Ontario. They were men who spoke the English language. Practically the only French settlements of that day were at the forts of Kingston, Niagara and Sandwich. These men did not know the laws of Paris; they wanted the laws they had known on the other side of the border, and the result was that the Constitutional Act was passed by which Upper Canada was carved out from what constituted Canada at that time; one of the first Acts of that province was to bring the common law of England into effect, and that law has been from that time to this the outstanding principle of law governing the province of Ontario.

In all those days nothing was said as to language. Ontario was free to have such language as she wished. It was recognized as an English-speaking colony and Quebec was recognized as a French-speaking colony. We know what history tells us subsequently happened. Discord arose not only in the lower province, but in Upper Canada. Lord Durham, astute of mind, farseeing and tactful, was sent to Canada in the hope of reconciling the two races. His expressive sentence is well known; it is one of the outstanding remarks of history; he said he found "two nations warring in the bosom of a single state," and his solution was a legislative union between Upper and Lower Canada. In 1840 the Union Act came into force, and by that Act it was declared that English should be the

language of debate in that legislature. French was expressly excluded by the Act; but so chivalrous were the people of the joint legislature that in 1848 they passed a resolution asking that French be restored as the language of debate, and their request was acceded to. From 1840 to 1867 things were not just exactly as we might have desired them to be, and in 1867 the best minds in Canada brought about Confederation. Confederation was a compact by which the men in one province conceded certain rights to the men in the other province, and it is a well-known historical fact that Sir John Macdonald desired a legislative union, one central legislative body for the entire country, and I think it is equally well-known that that was found to be impossible because the province of Quebec did not desire such a legislative union.

The British North America Act is the Magna Charta of Canadian liberties; it is the document by which we must judge our rights, and if I read Canadian history aright, my opinion is this, that in these matters of racial and religious difficulties, when they are peculiarly relegated to one province as distinct from the Dominion, the Dominion is wise if she leaves them alone. This position was the position I took in my very early days in the consideration of public questions when the Jesuits Estates Act stirred this country from one end to the other. I said that was an Act that came within the jurisdiction of the province of Quebec, and that the Dominion had nothing whatever to say about it.

In 1896 this country was again shaken over another subject of similar character. The right hon. gentleman who leads the Opposition said: By "sunny ways" he could find a solution of the difficulty, and in 1896 I refrained from voting for the Conservative candidate in the city of Kingston because I believed that the principle that the right hon. leader of the Opposition then advocated was right, and that hands should be kept off Manitoba, because Manitoba had a right to work out her own educational system free from any interference on the part of the Dominion of Canada. To-night, when this question is again before the country, I take exactly the same position on general principles that it is wise for the Dominion to be cautious and not start what it may not be able to stop.

Coming to the British North America Act, let us see what the rights of the provinces are under that Act. The rights of language are defined by section 133, which reads:

> Either the English or the French language may be used by any person in the debates of the Houses of the Parliament of Canada and the Houses of the Legislature of Quebec; and both those languages shall be used in the respective Records and Journals of those Houses; and either of those languages may be used by any person or in any pleading or process in or issuing from any Court of Canada established under this Act, and in or from all or any of the Courts of Quebec.
>
> The Acts of the Parliament of Canada and of the Legislature of Quebec shall be printed and published in both those languages.

Now, we men from Ontario construe that to mean this, that French is an official language in the courts established under the statutory jurisdiction of the Dominion; that French is an official language in the Parliament of Canada; that English has rights in the province of Quebec; but we say, neither inferentially nor otherwise, does that fact affect, regulate, or control the province of Ontario? It was never contemplated that French should have equal rights in Ontario with the rights accorded to English in the province of Quebec. We take the ground that the fact that right being declared, covers the whole principle of the argument, and that Ontario is free in so far as language goes to make such regulations and to pass such laws as she may desire.

In regard to education, the rights are settled and determined by section 93, which reads as follows:

> In and for each province the legislature may exclusively make laws in relation to education, subject and according to the following provisions:
>
> 1. Nothing in any such law shall prejudicially affect any right or privilege with respect to denominational schools which any class of persons have by law in the province of the Union.

The question is, Sir, what right had any class in the province at the Union? The section reads as follows:

> Nothing in any such law shall prejudicially affecting any right or privilege with respect to denominational schools which any class of persons have by law in the province at the Union.

Legislation falling within the prohibition of this subsection is, of course, ultra vires. The rights and privileges protected are those which any class of persons had by law at the Union with respect to denominational schools. All legislation affecting those rights is not prohibited, but only such legislation as prejudicially affects them. Whether any given legislation is prejudicial or not is a question of fact to be determined in the particular case. At

the Union the only law of Upper Canada that conferred rights or privileges with regard to denominational schools in Ontario was contained in 26 Victoria, chapter 5. It authorized the voluntary establishment of separate schools by Protestants, by coloured people and by Roman Catholics. The distinguished feature of the Protestant and Roman Catholic separate schools was religious belief. No provision was contained in the Act for the use of any special language. The only schools which were in any sense differentiated by language or race were the schools of the coloured people. There were in Ontario at the Union certain French settlements and also certain German settlements, but neither the French nor the German inhabitants of Ontario were authorized to establish separate schools. Their children attended either the comman, now called public, schools, or the separate schools, as best suited them. But the statute 26 Victoria, chapter 5, did not, nor did any other law of the province, confer upon either the French or the German people any special right or privilege with respect either to the Protestant separate schools or to the Roman Catholic separate schools.

The point that I am endeavouring to make is this: by sections 133 and 93, Ontario has plenary jurisdiction in regard to what language of instruction shall be used in her schools, and she may pass any legislation she desires so long as she does not prejudicially affect the rights that were to be respected pursuant to that Act from which I have just read.

The question naturally arises, has Ontario been reasonable? In regard to the religious aspect of the case, I do not think there is a man in this House who will say that what is commonly known as Protestant Ontario has not been liberal to Roman Catholic Ontario. The rights enjoyed by the Roman Catholic people in Ontario to-day in reference to education are vastly wider than the rights they enjoyed at Confederation. Changed conditions have necessitated new laws: Ontario has met the condition and has been willing to widen the scope and influence and rights of the Roman Catholic population. But in regard to the racial question, in regard to language, a different problem confronts Ontario. We have, as you know, but one system of separate schools, and when you unite in that one school the Irish Roman Catholic and the French Roman Catholic, you must have, if both are to be adequately taught, two sets of teachers, or a teacher adequately conversant with two languages. Thus you throw a tremendous burden on the taxpayer, and that is the problem Ontario has had to face and is endeavouring to solve.

My right hon. friend the leader of the Opposition referred to-day to what Sir Oliver Mowat did in 1885. That was the first time the question pushed itself into Ontario politics. But Sir Oliver Mowat, a man of tact and shrewdness, pushed it to one side and got it out of the way. He got in the region of Torres Vedras, and was successful. But, as one speaker said this afternoon, you cannot conquer a difficulty by running away from it, and Sir Oliver Mowat, by his speech in 1885, did not conquer the difficulty; he only diverted it. What came to Sir Oliver Mowat in 1885 came much more strongly to the Liberal Government of 1899. I want to read to you, Sir, portions from a certain document published by the Minister of Education for Ontario:

During several years subsequent to 1885 the complaints continued, until in May, 1889, the Hon. G. W. Ross, Minister of Education appointed a Commission of Inquiry, consisting of Messrs. John J. Tilley, Rev. Alfred Reynar and Rev. D. D. McLeod. The reasons given for appointing this commission were that the regulations of the Department of Education required instructions in English to be given in all public schools, and that the department desired to learn with certainty whether and how far these regulations were complied with in the counties of Prescott, Russell, Essex, Kent and Simcoe or what steps should be taken for the more complete enforcement of the regulations of those counties. The commission, therefore, were specifically directed to consider and report in what way the study of English may be most successfully promoted among those accustomed to the use of the French language in their mother tongue.

The report of the commission declared that progress had been made in the teaching of English in the schools. In very few schools had sufficient attention been given to colloquial exercises, and in 28 schools less than the time prescribed was given in English. The school boards, however, recognized their obligation to obey the law of the province in several particulars, accordingly in 17 schools the results were very satisfactory indeed and in several schools quite equal to the work done in good English schools. In 21 schools fair progress was being made, and in 18 the pupils knew very little English.

That demonstrated, Sir, this fact: that if the regulations were adequately lived up to in the so-called French schools, an adequate education could be had in English and in French. (Reading):

To meet the deficiencies found to exist the recommendations of the commission included (1) the establishment of a special school for the

training of French teachers in the English language; (2) the holding of special institutes for the benefit of the teacher then in the schools; (3) the calling of the teachers' attention to the necessity of making greater use of the oral or conversational method in teaching English; (4) the introduction of a series of bilingual readers. By the use of such readers, the commission reported, the pupils should in time be sufficiently familiar with English to enable them to receive instructions in this language in the various subjects prescribed. In accordance with these recommendations the department established in 1890, in the village of Plantagenet, a model school for the instruction of teachers in English and French, and a series of bi-lingual readers was introduced. In 1892 the department issued a circular of instructions to teachers in regard to the teaching of English.

In 1893 the commission of 1889 was re-appointed, with instructions to report especially upon the condition of the schools in Prescott and Russell. They were "to consider and report what progress, if any, has been made in the study of English since the date of the last report." The commission reported in August, 1893, "a decided advance upon the state of things which we found on the occasion of our former visit." The commission also reported:

It only requires that the better methods now being used at the instance of the department be persevered in. In all educational measures time is an essential element. And from what has been accomplished in the past four years, the whole benefit of which has not yet been reaped, we may conclude that the continuance of these measures, and the use of such others as may yet be necessary, will give to the people of these counties schools which, as to efficiency, in English will be quite satisfactory.

The results of the inquiries, with the adoption by the department of the reforms recommended, failed to meet expectations and in August, 1900, the Minister of Education, Hon. R. Harcourt, issued a circular to the inspectors directing attention to the needs of the French bilingual schools. "The establishment some years ago", the minister declared, "of an English-French training school at Plantagenet did much towards improving the condition of the schools in the eastern part of Ontario. Advancement has not, however, been as rapid as would be desirable, owing to the difficulty of securing teachers who have the necessary knowledge of both the English and French languages." It was decided, therefore, to establish a course of professional training equivalent to the training given for provincial third class certificates. The minister concluded.

"The regulation requiring that so far as possible all communication between pupils and teacher shall be in English must be carefully observed. There should be a little teaching of English from books until the pupils have gained a fair knowledge of oral English. To this end the teachers should follow the instructions in the circular prepared by the Education Department on the teaching of English."

In 1910 a fresh Commission of Inquiry was appointed, and now I come to a portion of the subject of which I have peculiar knowledge, because I happened to be a member of the Legislature of Ontario at that time. The discussion was not launched in such a way that it could be stated that it was a matter of religious difference. It was not a matter between the Roman Catholics and the Protestants; it was a difference between Roman Catholics in attendance at the separate schools in the province of Ontario, in the districts into which the French people were coming, and in which, by natural increase, they were increasing. The French Canadians took a predominant control in certain of the schools to such an extent that certain of the Roman Catholic authorities asserted that the English language was suffering in comparison with the French language, and as a result Dr. Merchant was appointed to report. His instructions were:

The investigation should be so conducted as to ascertain whether there has been any departure from the provisions of the Public and Separate Schools Act or any of the Departmental Regulations or circulars affecting such schools, and if so to what extent. As the School Law intended to provide all pupils with a thorough training in English, it is desirable that you ascertain whether, and if so to what extent, the means to attain this end are inadequate or defective.

They laid down the principle that Ontario wanted every scholar to have an adequate education in English. The right hon. leader of the Opposition agrees with that, and I agree with him. It is absolutely essential, if the child in the province of Ontario who speaks French is to have an equal chance with the child who speaks English, that the French child should have every opportunity of mastering the English language, and Ontario has never been unwilling to do anything she could to bring about this result. But before Dr. Merchant reported something occurred. The matter got into the legislature in 1911. There was a good deal of discussion at the time, a good deal of newspaper controversy, a good deal of national heat; but after giving the matter full consideration, the Legislature of Ontario, on the 22nd day of March, 1911, passed a resolution unanimously and I may say in passing that no French member in the Legislature of Ontario objected to that resolution which reads:

Resolved that the English language shall be the language of instruction and of all communications with the pupils in the public and separate schools of the province except where in the opinion of the Department of Education it is impracticable by reason of pupils not understanding English.

In 1911 I voted for that resolution, and I believe it was sound. As an Englishman I voted for it because I believed that

the children whose mother tongue was French had a right, if they lived in the province of Ontario, to be in their early days educated in that tongue so that they would have a fair chance in the province of Ontario. We did not stand on our strict legal rights in the Legislature. We did not say: if the French come into that province they must learn in the schools we have; but we said to them that in their young days they might be taught in French. We wanted to give them every chance, and that resolution is incorporated in the Legislation of Ontario and stands on the statute book? Could anything be fairer? And yet they say that Ontario is tyrannical, that Ontario is over-bearing. Do they understand the resolutions that prevailed? Do they understand that to-day, in the province of Ontario, if a French child not understanding any English comes into an English settlement and goes to an English school he is entitled to be taught in his mother tongue? Do they understand that we have accorded that right? True it is inconvenient; true it is at times bothersome; but Ontario has not stopped to object to that sort of thing. We welcome them all, we want to give them education because the State, we believe, is better if every pupil has an adequate education. But, as I say, that resolution was passed, and then Dr. Merchant's report came in.

Mr. MARCIL: Did Mr. Racine, who represented Russell, inquire whether the adoption of this resolution would change in any way the standing of the schools of Ontario?

Mr. NICKLE: I could not speak positively as to that and therefore I shall say nothing. The resolution passed unanimously.

Mr. PROULX: It is true that before this resolution was moved in the House there had been one standing on the Order Paper for a long time in the name of the acting-Minister of Education to-day, which went further than this went. It aimed to make the English language the sole language of instruction in the schools, and I understand that this resolution was moved by the late Premier, Sir James Whitney. He amended the resolution which had been proposed by the acting-Minister of Education, and assured the Legislature that it left the law as it was. In fact there is in the Public Schools Act a section which says, in enumerating the duties of teachers, that they shall teach in the English language, except where a child does not understand that language.

Mr. NICKLE: Dr. Merchant's report came in. The right hon. leader of the Opposition this afternoon read at some length, certainly I think to the point, as to what great educationists thought was the proper system of teaching a child in a strange tongue; and the surprising thing is that the very trend of argument of the right hon. leader of the Opposition is the thing on which Dr. Merchant relies in the preparation of his report. I wish to read to the House a part of this report to show what the attitude of Ontario towards this whole question of French instruction in Ontario is. It is on page 72 of the report on the condition of English-French schools in Ontario, by Mr. F. W. Merchant, published in 1912. Here is what he says on conditions that promote efficiency:

> In some of the schools, the French-speaking children are acquiring a good working knowledge of English, both oral and written. At the same time, they are learning to read and write French, and are being given a satisfactory training in the other branches of a public school education. The success of these schools demonstrates the possibility of carrying out the provisions for education in French-speaking and German-speaking communities if the necessary conditions are observed in the organization and the conduct of the schools.
>
> In the course of the investigation I aimed to inquire into the conditions which appeared to promote efficiency. My conclusions are embodied in the remaining sections of the report:
>
> 1. Language of Instruction. The best results are obtained when the medium of instruction is in the beginning the mother-tongue. Life in the ordinary school is so different from the life of the home that the child on entrance to school finds himself in a strange and perplexing environment. He is bewildered if the language he hears in his lessons has no meaning for him, and for a long time he makes but little progress.
>
> When he appears to learn, he is usually but repeating meaningless words. My conclusions, I find, are in accord with those of others who have investigated the bilingual problem in other parts of the Empire. A discussion on bilinguialism was held at the recent Imperial Education Conference, and the question of the medium of instruction received a large share of the attention. While the delegates differed regarding the question of the time when English should be introduced into the course of study, and also regarding the stage at which it should be used continuously as the language of instruction, all were agreed that the child on entrance to school should receive his instruction through the vernacular.
>
> Dr. MacKay, of Nova Scotia, said: "In order to settle the difficulty a commission was appointed—

That was in Nova Scotia.

> —and the commission determined, and the Government accepted the determination, that the education of the French-speaking child should commence, and be continued during the first four years in the mother tongue, and French readers were provided for them. While

these French readers were used during the first four years the teachers of these schools were expected to acquaint themselves with the method of teaching English colloquially, and during these four years the children were required to do as much as possible in English so that after the fourth year instruction could go on in English continuously. That is the way the matter stands at present in the provinces of Nova Scotia and New Brunswick. I believe the French are pretty well satisfied with it. The children in this way learn English more easily. They can learn written French more rapidly, and that enables them with very little difficulty to commence their studies in English thereafter."

Mr. MARCIL: He said four years in New Brunswick and Nova Scotia.

Mr. NICKLE: Yes.

Mr. MARCIL: I would be satisfied with four years.

Mr. NICKLE: You have got three in Ontario now. The report proceeds:

Dr. Parmalee, of Quebec, said: "Our experience abundantly proves that we must first give instruction in the mother tongue. We consider that the instruction must be in the first instance in the mother tongue. The change to a second language comes at a later stage."

Mr. Owen Edwards, in describing the condition of affairs in Wales before the introduction of Welsh as the language of instruction, said: "We thought that the best way of teaching English to a Welsh child would be to make the language and the atmosphere of the school entirely English, and to use Welsh, if at all, for the purpose of absolutely necessary explanations. I can but state the result by quoting from a report of a small committee of teachers of great ability and long experience, a report adopted and published by the Anglesey Education Committee. The infant, as he leaves the infant school, is thus described: 'He reads words with which he associates no meaning, and is denied access to the written word which would at once call up ideas and stimulate his intelligence. Thus, when he has attained the age of 6 or 7, his book tells him nothing; the language he reads he cannot understand, and the language he understands he cannot read. That was the typical product of infant schools until a few years ago.'"

Then a change came about and Wales allowed the Welsh children to be taught in Welsh in the early days. The report goes on:

Mr. A. T. Davies, in describing the condition of affairs in Wales at the present time, says: "H.M. Inspectors, without exception, reported—I have a sheaf of reports here that I could refer to if necessary—most favourably upon the beneficent operation of the new provisions. Here is one report, dated 1909 (or two years after their first issue), and taken at random. It may be regarded as typical of numbers of others: 'The introduction of Welsh as the medium of instruction in the infant class has had a most beneficial effect on the whole school; the interest of the scholars is aroused from the beginning, and the older scholars bring to the study of other subjects an alert mind and not a mere memory.'"

[Mr. Nickle.]

When I read that, it seems to me that it must impress the members of this House that we in the Legislature of Ontario in 1911 were right when we said that the French child should be taught in French in its early days. Let me explain what Dr. Merchant's conclusions were as to organization. He says:

The organization which gives, on the whole, the most satisfactory results requires the pupil to remain three years in Form I and two years in Form II, during which time English is made gradually to replace French as the medium of instruction. At the end of this period the most backward pupil should have sufficient command of the language to follow with comparative ease lessons conducted in English.

This organization adds one year to the time commonly taken in English schools to complete the public school course. I am convinced that, considering the additional labour involved in learning a new language, the work cannot be done satisfactorily in a shorter time. In some good schools the extra year is taken in Form III, but, on the whole, pupils make more satisfactory progress when the additional time is spent in the earlier part of the course.

In schools attended by both English-speaking and French-speaking pupils the English-speaking pupils are best taught by themselves in Forms I and II. The French-speaking children naturally need, in the beginning, special attention in English not necessary to be given to the English-speaking children, and the separation of classes allows both the English-speaking and the French-speaking children to proceed with the least possible loss of time. In such schools the classes are combined with advantage in Form III.

Let me emphasize this fact that when teaching the two languages they had practically to break the classes into two, and have the English in one room and French in the other during the earlier days. He proceeds:

The mixed school offers the French-speaking children the best opportunity of learning English. Not only does this form of organization give them an opportunity of acquiring English through association with the English-speaking pupils on the playground, but it permits of the teaching of English throughout the grades by teachers whose mother-tongue is English and of French by teachers whose mother-tongue is French by a system of exchanges in teachers easy to arrange. Now and then we find a teacher whose mother tongue is English who speaks French perfectly, and one whose mother tongue is French who speaks English perfectly, but instances are rare.

I have read thus far with the purpose of showing that the Education Department of the province of Ontario realized that instruction must be given in French to the French child until he attained a knowledge of English during his early years in school.

Now I come to the regulations, and if the ex-Postmaster General (Mr. Lemieux), has the control over his party which he

says he has, the whole question is settled, and as the right hon. the leader of the Opposition said to-day, we will rise from this discussion better and wiser men, because clause 12 of section 2 which the ex-Postmaster General said would satisfy the French people has never been repealed and is in effect to-day. The fact is that the men who are criticising these regulations do not understand them. They say that Regulation 17 is a modification of Regulation 12. It is not a modification; it is supplementary thereto. Clause 12 has never been repealed. I read to-night from the School Report of 1915, and this is the regulation that is in effect to-day; it is the law of Ontario to-night. If as the ex-Postmaster General says it meets the requirements of the French people, then the whole subject is settled. We thought there was going to be turmoil, but peace may come out of it. This is the regulation:

12. (2) In school sections where the French or German language prevails, the board may, in addition to the courses of study prescribed herein, require instruction to be given in French or German reading, grammar and composition to such pupils as are directed by their parents or guardians to study either of these languages, and in all such cases the authorized textbooks in French and German shall be used. But nothing herein contained shall be construed to mean that any of the textbooks prescribed for public and separate schools shall be set aside because of the use of the authorized textbooks in French or German.

That regulation is the law in Ontario to-day, and any school section throughout the province of Ontario where the French or German language prevails, the French people or the German people have a perfect right to have their language taught in their schools. But they must not neglect the English language and the right hon. gentleman the leader of the Opposition says that they should not. That is what we ask in Ontario. We say: when your language prevails in a section, you have a right to teach your language; but having become a majority, you must respect our rights and you must see that our children, and your children as well—because it is as important to us as it is to you that your children should have an adequate education in English. That is the law in Ontario to-day. Let us come to the celebrated Regulation 17.

Mr. PROULX: What does the hon. member mean when he says, where the French language prevails? I will cite the case of Grand Valley, in the country of Glengarry, where 75 per cent of the rate-payers were of French origin and 75 per cent of the school children spoke the French language, and still the counsel for the Board of Education before the Court of Appeal maintained that the French language did not prevail, that it was the English language which prevailed, because the English language was the language used in the commercial transactions of the people.

Mr. NICKLE: The hon. member for Prescott (Mr. Proulx) understands the regulation in regard to schools question as well as I do. The counties appoint the inspectors and where the county inspector decides that in his county the French language prevails he is the arbiter as to the schools. The county council appoint the inspector and the inspector says whether or not the French language prevails. It is a question of fact to be decided by the inspector.

Mr. PROULX: We have—

Mr. NICKLE: I think I must be allowed to develop my argument and to carry it to its conclusion, after when I will be quite prepared to answer any questions, within the range of my knowledge, that any hon. gentleman may care ask me. There were two sets of Regulations 17. This was the regulation passed in 1912 and afterwards thrown out:

1. There are only two classes of primary schools in Ontario—public schools and separate schools; but, for convenience of reference, the term English-French is applied to those schools of each class in which French is the language of instruction and communication as limited in 3 (1) below.

Clause 3 (1) is as follows:

The use of French for Instruction and Communication.

(1) Where necessary in the case of French-speaking pupils, French may be used as the language of instruction and communication; but such use of French shall not be continued beyond Form 1 excepting during the school year of 1912-13, when it may also be used as the language of instruction and communication in the case of pupils beyond Form 1 who, owing to previous defective training are unable to speak and understand the English language.

The original Regulation 17 said that the French language could only be used in form 1 during the school year of 1912-13. But the slightest consideration ought to demonstrate to anybody the impracticability of that regulation. Regulation 17 passed in 1912 was purely temporary in character and in August, 1913, a new circular was prepared and it is called " Circu-

lar of Instructions." Here is what the circular said:

> There are only two classes of primary schools in Ontario—public schools and separate schools; but, for convenience of reference, the term English-French is applied to those schools of each class annually designated by the minister for inspection as provided in 5 below and in which French is a language of instruction and communication as limited in 3 (1) below.

Now, observe what was the intent of that instruction. As I have endeavoured to point out, the province of Ontario says that every child is entitled to an English education. The province of Ontario, for 15 or 20 years, had been wrestling with this problem of bilingual education. It could not be solved by leaving it to the school boards to regulate each local situation. First, the minister said: I am going to take control of these recalcitrant schools and I am going to put them in a class by themselves. If every school will handle the teaching of English as it should be handled in the primary grade; if every school board will see that English is adequately and emciently taught, it may pursue it own course, but if any school board will not do that, then I am going to take the administration of that school under my control. That is what Regulation 17 does and it is in that respect that it modifies what is sometimes called Regulation 15. Regulation 17 simply enables the Minister of Education to say: If the school board in a certain school section will not see that English is properly taught, then I am going to see that it is done by virtue of the inspection that the section provides for. The school may come under Regulation 17 today and not be under it next year. The School Board may observe the provisions of the law. The result will be that the minister will not have again to put the school under Regulation 17.

The sense of responsibility may make the School Board come to the conclusion that it will observe the law of Ontario and see that the children get an adequate education in English and, observing the law, and the minister being satisfied of their good faith, the school goes out of Regulation 17 and the general law applies. It is purely a supplementary system for controlling those who are not willing to accept what the province of Ontario considers the ideal educational system. That is all it is. It does not take from the French people anything; in fact, it gives them something that they have not legally had. Accentuation has been put on the word "hitherto." That word gives the French in Ontario more than they had before, because there are schools now under this Regulation 17 in which French was illegally taught before they were brought under the regulation. It was illegally taught because French was not the language that prevailed in the section in which the school was situated. But, the province of Ontario was so fair that they said: If you have taught French, we are not going to take the right from you and you can have French taught after you are put under Regulation 17.

Men from Ontario feel ruffled at times because we have sent our boys to avenge Catholic Belgium and maintain the status of France and we have been told by French Canadian newspapers, and it has been said by members of this House, that because there were differences on this educational problem, certain of the French Canadian people would not enlist. Certain of the leaders of French Canadian thought, to whom my right hon. friend the leader of the Opposition did not refer this afternoon in complimentary terms, have induced the people to hold back when the men of Ontario were going. I want to say in all sincerity in this House to-night, and I trust I speak as a moderate man, that when this war is over, when victory perches on our banners, do not let the men who induced the French Canadians not to enlist, resent it if certain elements in the province of Ontario take their race at the value set upon it by their leaders. We in Ontario have sent our men overseas to protect Catholic Belgium in her agony, and to maintain France in her integrity, and we do not want to be told that other men have not enlisted because they cannot have exactly what they want in Ontario. We in Ontario love our language, we demand our right to have our children educated in the English tongue. It may not be as soft, as gentle, as smooth a language as the French language, but any man who associates it with his civilization, who knows it in his literature, regards it just as dearly as the French Canadian regards his tongue. We in Ontario require that every child gets a good education in English and if our French Canadian citizens will co-operate with us in this, then the province of Ontario will have no grudge against the French. But I say here, with every conviction and in all sincerity, that Ontario is determined that English must be the language of her schools. In the early days we are quite willing that the

French child should be taught in the French language, but we are determined that every child shall have an adequate education in English while at the same time we do not begrudge the French child the privileges of our schools in order that he may be educated to take his place in this province and in this country.

On motion of Hon. Charles Marcil, the debate was adjourned.

SOLDIERS' PENSIONS.

REPORT OF SPECIAL COMMITTEE.

Hon. Mr. HAZEN laid on the Table the report of the Special Committee appointed to inquire into the matter of soldiers' pensions, together with the documents relating thereto, and moved that rule 74 be suspended, that the documents might be printed forthwith.

Motion agreed to.

On motion of Mr. Rogers, the House adjourned at 12.01 Thursday.

Thursday, May 11, 1916.

The House met at Two o'clock, the Speaker in the Chair.

QUESTIONS.

[Questions answered orally are indicated by an asterisk.]

WAR SUPPLIES—GROCERIES.

Mr. MACDONALD:

1. Who were the persons or firms who tendered for the supply of groceries called for by the Department of Militia in Vancouver?
2. What was the amount of each tender?
3. To whom was the contract awarded?

Sir ROBERT BORDEN:

1. P. Burns & Co., Ltd., Swift Canadian Co., Ltd., A. P. Slade & Co., Kelly-Douglas Co., Ltd., The W. H. Malkin Co., Ltd., White Bros., Oscar Brown & Co., Dominion Canners, Empress Mfg. Co., King Beach Mfg. Co., Ltd., Lindners, Ltd., Labrecque & Pellerin, E. D. Smith Co., Ltd., T. Upton Co., Ltd., Wm. Braid & Co., Wilson Bros., R. P. Rithet & Co., Ltd., Pioneer Coffee and Spice Mills, W. A. Jamieson Coffee Co., David Spencer, Ltd., Hudson's Bay Co.

The following were also asked to tender, but did not do so: Macdonald-Chapman, Ltd., Wm. Braid & Co., Duchesney Packing Co., London Grocery Co., Leeson Dickie Grocery Co., Ramsay Bros. & Co., Ltd., Skeena River Fisheries, Ltd., White Grocery, Vancouver Creameries, Mowat Produce Co., A. & C. Grocery, A. MacDonald Co., Knowler & McAulay, Canadian Produce Co., Naismith & Co., Canada Preserving Co., Glassco Co., Ltd., Imperial Extract Co., Kootenay Columbia Preserving Works, T. A. Lytle Co., Ltd., McCormick Mfg. Co., Nelson Jam Factory, Quebec Preserving Co., Alphonse Raymond & Co., Stuart, Ltd., St. Louis Preserving Co., Wagstaffe, Ltd., Wilson Bros., and Richmond Dairy & Produce Co., Victoria Tea and Coffee Co., Pacific Fruit and Produce Co., City Dairy and Produce Co.

2. Butter: 33c., 32c., 32c., 32½c., and 39c. Potatoes: 1¼c., 1½c., 1¼c. per lb. $24 ton April and May, $30 ton June and July, $25 ton August, $20 ton September. Cabbage and onions: 4c. lb. Carrots, parsnips, turnips and beets: 2c. lb. Assorted fresh vegetables: 2c. lb., 2½c. and 1½c. Jam: 11½c., 12c., 13⅛c., 11c., 15c., 10¾c. and 10¾c. Marmalade: 10c., 10c., 11c., 11c., 10½c. and 9¾c. Tea: 28c., 27c., 27c., 27c., 28c., 29c. and 27c. per lb. Coffee: 25c., 21c., 19⅒c., 23½c., 24c. and 27c. per lb.

Groceries proper: Beans, 6½c.; currants, 10½c., flour, soft pastry, 2⅞c., pepper, 15½c., prunes 7½c., rice 3½c., cheese 20c., rolled oats 3c., sago 6½c., salt 1c., sugar, white 8c., tapioca 6½c., split peas 6⅜c., baking powder 14c., macaroni 5c., raisins 8½c., yeast 30c. box., milk powder 17c., canned tomatoes $2.30 per case, canned corn $2.20 per case, canned peas $2.15 per case.

Beans 6½c., currants 13¾c., pepper 25c., prunes 9c., rice 5c., rolled oats 2¾c., sago, 6c., salt in 50-lb. pkgs. 45c., sugar, white, $8.50 per cwt., tapioca 6c., split peas 7c., baking powder $9.60 per doz., macaroni 40c. per box, raisins 9c. per pkge., yeast $1.30 per box, canned tomatoes $1.27½ per doz., canned corn $1.15 per doz., canned peas $1.20 per doz.

Beans 8c., currants 13c., flour, soft pastry 3¼c., pepper 27c., prunes 8⅞c., rice 4½c., rolled oats 3¾c., sago 7c., salt 2c., sugar, white, 8½c., tapioca 7c., split peas 7c., baking powder 15c., macaroni 9c., raisins 10c., yeast 18c., milk powder 36c., canned tomatoes $2.70 per case, canned corn $2.45 per case, canned peas $2.45 per case.

Beans 7½c., currants 12c., flour, soft pastry 2¾c., pepper 18c., prunes 7¾c., rice 3½c., cheese 19½c., rolled oats 3⅝c., sago 7c., salt ⅜c., sugar, white, 8¼c., tapioca 7c., split peas 6c., baking powder 15c., macaroni 5c., raisins 9c., yeast $1.30 per box, canned tomatoes $2.60 and $2.35 per case, canned

corn $2.10 per case, canned peas $2.10 per case, cheese 19c. and 19½c.

3. Lowest tenderers: Jam and marmalade were awarded to the lowest tenderer among the British Columbia manufacturers of same. Butter, A. P. Slade & Co., 30½c.; jam, Empress Mfg. Co., 12c.; marmalade, Empress Mfg. Co., 10c.; tea, Kelly-Douglas Co., Ltd., 27c.; coffee, W. H. Malkin Co., Ltd., 19⁹/₁₀c.; potatoes, W. H. Malkin Co., Ltd., 1¼c.; fresh vegetables, W. H. Malkin Co., Ltd., 1¼c.

Groceries proper: W. H. Malkin Co. Ltd., beans 6½c., currants 10½c., flour, soft pastry 2⅞c., pepper 15½c., prunes 7½c., rice 3½c., cheese 20c., rolled oats 3c., sago 6½c., salt 1c., sugar, white, 8c., tapioca 6½c., split peas 6⅜c., baking powder 14c., macaroni 5c., raisins 8½c., yeast 30c. per box, milk powder 17c., canned tomatoes $2.30 case, canned corn $2.20 case, and canned peas $2.15 case.

EXPORTS AND IMPORTS THROUGH HALIFAX.

Mr. SINCLAIR:

1. How many tons of freight were exported through the port of Halifax during the calendar year 1915, to the British Islands, the British Possessions and to foreign countries, respectively?

2. What are the corresponding figures concerning the imports through said port?

Mr. REID: No information is obtainable for the calendar year 1915. According to shipping returns to customs, the figures for the fiscal year ended March 31, 1916, are as follows:

	Tons weight.	Tons measurement.
Vessels departed—		
Great Britain... ..	264,049	291,902
British possessions..	171,155	2,387
Other countries..	105,129	26,988
Vessels arrived—		
Great Britain... ..	85,732	
British possessions..	73,193	
Other countries..	109,622	

THE BILINGUAL QUESTION.

Consideration of the proposed motion of Sir Thomas White: "That Mr. Speaker do now leave the Chair for the House to go into Committee of Supply;" and the proposed amendment thereto of Mr. Lapointe (Kamouraska) thereto; resumed from Wednesday, May 10.

Hon. CHARLES MARCIL (Bonaventure): Mr. Speaker, at this advanced stage of the session, with a general desire prevailing among the members to retire to their peaceful vocations, I do not intend in the present debate to enlarge upon the arguments which have already been submitted to the House; and, ar far as possible, I shall curtail within reasonable limits the arguments which I shall have the honour to submit to the House in support of the motion by the hon. member for Kamouraska (Mr. Ernest Lapointe).

I wish in the first place to congratulate the hon. member for Kingston (Mr. Nickle) on the very interesting statements he gave us last night in his retrospective view of the parliamentary history of Canada, with all of which, of course, I do not agree, and especially with that part in which he undertook to explain the present educational policy of Ontario and the action of the Education Department; but to both of those portions of his speech I shall have occasion to refer later on in the course of my remarks.

The House has reason to congratulate itself on the high plane of the debate so far. This House is a reflection, so to speak, of the Canadian people; this question concerns every home in Canada, and it is one of those questions which we can discuss dispassionately and to the advantage of Canada as a whole. Education is a sacred cause, not only in Canada, but in all countries of the world, and I am glad that in discussing education we have not drifted into a discussion of religion. Thank Heaven, the present discussion is in no way tinged with a religious aspect, and, however we may disagree on religious matters, we can discuss at least this great educational question without passion, and in the best interests of the country.

It is admitted, of course, that the English language is the great universal language being spoken throughout the English colonies, dominions, and possessions all over the world. It must also be admitted that French is one of the great languages. The man who can speak the English language has a great advantage, but so also has the English Canadian who can speak the French language. Our boys from the West and the Maritime Provinces who are now in France and Flanders would find it a great advantage to be able to speak French in the great work they are carrying on; but they have not that advantage. We in Quebec have had that advantage. We have been brought up in the older part of the country, along the banks of the St. Lawrence. The people of my race have

been there for eight or nine generations. I am myself somewhat of a bilingualist, and I think it a great advantage to be able to speak both French and English. Were it not for that fact I should not have the honour of addressing myself to the House of Commons to-day, in favour of what I believe to be a deserving minority in the largest province of the Dominion. It will be admitted that the French members from Quebec and other provinces set a splendid example of courtesy by their conduct in the proceedings of this House. Under the Constitution they could easily do all their speaking in French; they could move all their motions in French; put all their questions in French; in fact, transact all their business in the House in French. You can realize at once, Mr. Speaker, the position in which we should be if the French members exercised in that respect the rights and privileges which they have under the Constitution. But the people of Quebec, and the French people of the Dominion at large, are reasonable. They are a moderate and a conciliatory people. With the spirit that has always animated the French race, we want to be courteous to the majority. We speak the language of the majority, not so well probably as the English people themselves, but we try to master it as well as we can. We had an example in the member who moved this resolution of what a little study and a little work will do when a man really wants to acquire a better educational equipment. The hon. member for Kamouraska has set an example in learning the English language, which, I think, ought to be imitated, as far as possible, by every member of this House.

Coming now to discuss this question, let me read the terms of the motion, to show how moderate it is and how far removed from any aggressive spirit towards the English-speaking people of Ontario, or of the other English-speaking portions of the Dominion:

That all the words after "that" in the main motion be struck out and the following substituted therefor.

"It has long been the settled policy of Great Britain whenever a country passed under the sovereignty of the Crown by treaty or otherwise, to respect the religion, usages and language of the inhabitants who thus become British subjects :

"That His Majesty's subjects of French origin in the province of Ontario complain that by recent legislation they have been to a large extent deprived of the privilege which they and their fathers have always enjoyed since Canada passed under the sovereignty of the British Crown, of having their children taught in French.

"That this House especially at this time of universal sacrifice and anxiety, when all energies should be concentrated on the winning of the war, would, while fully recognizing the principle of provincial rights and the necessity of every child being given a thorough English education, respectfully suggest to the Legislative Assembly the wisdom of making it clear that the privilege of the children of French parentage of being taught in their mother tongue be not interfered with."

Following my leader, I concede at once that it rests entirely with the province of Ontario to deal with this question; that the province of Ontario is supreme in this matter, and that the policy which has been followed by the present Government in not disallowing the Act of the legislature is merely in keeping with the traditional policy of the Liberal party followed in this House since Confederation. Upon that point we are perfectly agreed. But this is the High Court of the land; we are here to promote the happiness, the prosperity, and the contentment of the Canadian people. I think that this Parliament is employing its time well in trying to remove any of the difficulties that mankind inherits, whether those difficulties be material or educational, or whatever their nature may be. It has been well said that Canada is one of the most difficult countries in the world to govern. My right hon. friend the Prime Minister will no doubt agree with that statement as have some of his illustrious predecessors. The governing of this country is a difficult task as it is inhabited by various races, nationalities, and creeds, but I believe that in the last few years great headway has been made towards a better understanding amongst the different classes of the people. We cannot hope that we shall always see eye to eye on all questions. When the great issue of the war confronted us, we might have expected that when France and England, our two great mother countries, were united for that most sacred of all causes, the cause of civilization and humanity, all Canadians would have been united, but even upon that issue we were disappointed to find disagreement. Similar instances have occurred in other parts of the world and I suppose human nature is so built that there never can be perfect agreement.

On this question of education, I think the consensus of opinion in this House and throughout the country is that it rests entirely with the province of Ontario, and it is to that province that we are making our appeal. As many of our fellow-members

from the other provinces may not be familiar with what the French Canadians desire to attain and what they are complaining of, I will read a brief summary prepared by the French Canadian Educational Association of Ontario, showing exactly what they ask for and what they do not ask for, so that the House can readily understand the precise nature of the question at issue.

What the French Canadians are Asking.

1. The respect of their rights for the education of their children in schools supported with their money.

2. The efficacious teaching of the two official languages of Canada during the whole primary course in the schools or classes attended by their children.

3. The teaching of their children through the natural vehicle: the mother tongue.

4. The grouping by schools or classes of the children to which their parents wish to have the two official languages taught.

5. Competent teachers capable of teaching the two official languages of Canada to take the management of schools or classes attended by the children whose parents require teaching of French and English.

6. Their part of school grants voted each year by the Legislative Assembly.

7. One inspection, Catholic and Franco-English, of separate schools attended by their children.

8. One inspection, Franco-English, of public schools attended by their children.

9. The granting of certificates to bilingual teachers who have sucessfully passed the examinations required by the Department of Education.

If there is anything in this plain statement of what the French Canadians of the province of Ontario are asking, that is not already enjoyed by every other class in that province, I would like to have it pointed out to me later on in the course of the debate. The Association also makes this statement:

What the French Canadians do not Want.

1. The French Canadians of Ontario do not want schools exclusively French.

2. They do not wish to force English speaking children or others to study the French language.

3. They do not ask for the introduction of a third school system in the province.

4. They do not wish on the one hand to expel anybody from the province; but on the other hand they will not allow themselves to be treated as intruders. They have paid for every inch of territory they possess.

5. They do not want to put up with the confiscation of their school grants which they have been subjected to for the past three years, because they have insisted on having their children taught efficiently in both the official languages of Canada.

There is one point upon which both parties to this controversy are agreed. The Government of Ontario wants every child in that province to have an English education, and I have not yet met a member of the minority who is not of the same opinion. No child in the province of Ontario can be said to have a proper education unless he has been given a thorough English education. To bring up a child in this province without giving him an English education is to handicap him for the rest of his life. The Government of Ontario wants an English education for the children; the French Canadian people of Ontario ask for the same thing. The only point of difference is as to how much tuition in French is to be given to the child. The Ontario Government proposes under Regulation 17 to give in certain schools a certain amount of teaching in French, and in other schools where the teaching of French did not exist previous to 1912, there is to be no French taught at all, so that the line of cleavage is as to the amount of French teaching that is to be given. The province of Ontario is not asked to institute a new system; it has allowed the teaching of French from time immemorial. The Postmaster General, who yesterday delivered a very interesting speech, has in his nature somewhat of the bilingual; a native of the province of Ontario, he has become a distinguished citizen of the province of Quebec. He has become familiar with both languages; he knows the mentality of the people of Ontario; he knows the mentality of the people of Quebec. My mind wandered back to the days when the United Empire Loyalists in the first Legislature of Ontario passed a resolution on behalf of one member of that Legislature, Mr. Baby, who represented the French settlement of Essex, providing that the Orders of the Day and the Votes and Proceedings of the House be printed in the French language for the benefit of the French settlers along the Detroit river. What an example of generosity shown by the United Empire Loyalists who were the first to settle in Ontario, who opened and paved the way for the great and glorious province that Ontario has now become.

The hon. member for Kingston (Mr. Nickle) referred in his usual dispassionate manner to the early constitutional history of this country, to the capitulation of Montreal, to the capitulation of Quebec, to the Quebec Act, and to all the other privileges which were granted to us by Great Britain. As I said in my opening remarks, I did not intend to delay the House upon this subject, because those points are more or less familiar to us all. England has never committed any injustice

on the French Canadians of the province of Quebec or of the rest of Canada, and I am proud to-day, Mr. Speaker, facing you in this British House, under the aegis and protection of the British flag, to declare that Great Britain has given to the French-Canadian people an overflowing measure of justice upon all occasions. Sometimes an error of policy may have been committed, but the British statesmen themselves have always been the first to correct it. In 1774, they may have somewhat restricted the Quebec Act. In 1841, the Union Act was looked upon as an error at that time, but I wish to read a few extracts from the statements of some of the Governors General, showing how valuable it was in the interest of Canada, in the interest of the Empire, in the interest of the retention of British power on the North American continent; it was, that the French language should be maintained here upon an equal footing with the English language. The hon. member for Kingston referred to those very speeches, and I shall quote one or two extracts showing what was the original British policy towards Canada and what was intended to be done with the two races inhabiting this country.

The Governors General of Canada, since Lord Elgin, have all, Lord Dufferin included, proclaimed the necessity of knowing both official languages in our bilingual country. Lord Dufferin, formerly Governor General of Canada, ex-Ambassador of England to Italy and France, one of the great statesmen who honoured the Empire in the last century, said in a speech that became famous:

> It is true that the racial differences existing in Canada complicate to a certain extent the problems statesmen have to solve from time to time; but the inconveniences resulting from this state of affairs are more than counterbalanced by the many advantages derived therefrom. I do not believe that ethnological homogeneity is a flawless boon to a country. It is unquestionable to say that the less attractive side of the social character of a great portion of the population on this continent is the uniformity offered by many of its divers aspects; and I believe Canada should be happy to rely on the co-operation of different races. The mutual action of the national idiosyncrasies introduce in our existence a variety, a colour, and an eclectic impulsion that would otherwise be impossible to attain. It would be an utterly impolitic policy to strive for their disappearance.

Lord Grey, Governor General of Canada, while visiting Victoria school, Quebec, in October, 1910, pointed out to the pupils:

> —that it was just as much in the interest of English-speaking Canadians to learn French as it was for the French to learn English.

Lord Elgin, writing to Lord Grey from Montreal, on May 4, 1848, said:

> I am very anxious to hear that you have taken steps for the repeal of so much of the Act of Union as imposes restrictions on the use of the French language... I must, moreover, confess that I, for one, am deeply convinced of the impolicy of all such attempts to denationalize the French. Generally speaking, they produce the opposite effect from that intended, cause the flame of national prejudice and animosity to burn more firmly... You may perhaps Americanize, but, depend upon it, by methods of this description you will never anglicize the French inhabitants of a province.

Lord Grey writes, in answer to Lord Elgin, on June 1, 1848:

> I quite agree with you as to the impolicy of the attempt.... Therefore, though I confess I am sorry to alter the Union Act as regards the languages, I shall almost immediately yield to their wishes by bringing up a Bill to effect the desired changes. You will receive an official announcement of this intention by this mail.

Lord Elgin to Earl Grey, Montreal, June 1, 1848:

> Let me also remind you of the importance which attaches to the passing of a measure to remove the restrictions imposed by the Act of Union on the use of the French language.

I shall say no more about that point. I think we all agree that it is an advantage, an asset, to Canada to possess two languages. Those members of this House who have travelled in Europe—and there are many—know that when they go to England, to France, to Italy, to Austria, to Germany, to Switzerland, or to any other part of Europe, they are rarely met by a man of some education who does not know two, three, or more languages. We are about to enter on a campaign for the extension of our foreign trade. I listened with interest to the instructive statements made to the House the other day by the hon. Minister of Trade and Commerce (Sir George Foster). We wish him success in the campaign he is undertaking to make known our goods abroad and to bring trade from other countries. He will be the first, I have no doubt, to tell the House of the great advantage it would be for the people of Ontario, or any part of Canada, to have among their employees men who can write the French language. For French is used universally in Russia, Switzerland, in Italy —practically by every non-English-speaking nation on the continent of Europe. The hon. member for Kamouraska gave us yes-

terday the astounding statement that when the Turkish plenipotentiaries reached Berlin those wishing to be understood by the gathering had to address them in the French language. So we are not asking the great province of Ontario to adopt that which is unworthy of her; we are not asking her to go back on the traditions of the British race, of which they are the main stock upon this continent. We are asking only a reasonable privilege for French Canadians. We are not asking them to impose the learning of France upon their children, but asking only that the 250,000 French Canadians who are good law-abiding citizens of that province, should be allowed, while learning the English language at their own expense, to have the privilege of imparting to their children the French language. Is there anything unbecoming in this? Is there anything un-British in this appeal? Is there anything unfair?

Look at the way the Maritime Provinces have dealt with this question. Look at Prince Edward Island; look at New Brunswick; look at Nova Scotia. And, in passing, let me pay this tribute to Nova Scotia —that it has at all times been in the vanguard in educational progress in the Dominion of Canada, and has furnished leaders of thought in educational affairs to the rest of the Dominion. I need only to refer to President Falconer of the University of Toronto; to the late Principal Grant of Queen's University; in Montreal to Sir William Dawson; and many others. The province of Nova Scotia is small in population and area, but, blessed with a splendid educational system and led by men with broad views who have played a large part in this matter, it has settled this question without difficulty. I was reading the other day the report of the Minister of Education of Nova Scotia, and was glad to see that the report on the bilingual system was published in French. In 1871, shortly after Confederation, this House was appealed to in connection with the New Brunswick school question. That question was removed from the Federal arena, and, under the guidance of wise men, they have solved it to the satisfaction of the Acadian minority in that province. What a satisfaction it must be to-day for a member from New Brunswick to have it said by a member of the minority that in that province they have been given justice and fairplay.

I have a higher opinion and a higher idea of the province of Ontario than is held by many others. I do not look upon Ontario as a province that would wilfully do anything wrong or would commit a wilful injustice at the expense of a minority. I have every faith in the province of Ontario. I have not visited that province so much during the last fifteen years, as I used to do in the old days; but in those old days I used frequently to visit Essex, Kent, Oxford, Toronto, and various other parts of Ontario. I went through the whole province sometimes with ministers of the Crown and with men who occupied leading positions in the affairs of the province. Upon all those occasions I was received as one of the family, and, as a citizen of Quebec, was always welcome to the hearts and homes of the people. I found in Ontario a degfee of advancement, progress, and material industry and prosperity which unfortunately, we do not enjoy in the province of Quebec. No one need tell me that a people so progressive in all such matters would be backward in this, which is not by any means a new principle.

The province of Ontario has allowed the teaching of French from time immemorial. The older members of the House remember the late Hon. R. W. Scott, who died at an advanced age, and who was the author of the Separate School Act of Ontario. On many occasions he explained to me the difficulties which he had in bringing about the passage of that measure; but when it was finally adopted in 1863 by a majority of the Canadian Parliament, in which majority were found 25 Protestant members, it was a recognition of the rights of the Catholic minority in the province of Ontario. Such a measure redounds to the honour of that province. What has been done upon the religious ground can also be done upon the racial ground.

Has it not sometimes struck you, Sir, as most extraordinary that at a time when, for the last three months, at Verdun, within a few miles of Paris, France has been pouring out the blood of her children to repulse the hordes of the German invaders, to save the civilization of Europe, as in other days Charles Martel saved it at Poitiers from the invasion of the Mussulman—does it not seem strange to you that in this, the premier colony of the Empire, we should be begging, craving, almost on our knees, to be allowed to give to our children the language which those heroes speak around the walls of Verdun?

I cannot believe that the Government of Ontario has finally closed this question. I

look to the province of Ontario for better treatment, and following up the requests that have been made, I hope that reconsideration will be given to this subject as it easily can be given. The minority are not unreasonable. In a statement that I have just read, they express their willingness that this grievance should be submitted to arbitration. They are willing that their school system in the city of Ottawa, which is the most important in this respect in the whole province, should be taken over at once by the Department of Education of Ontario. They are willing that the commission that they have themselves elected should withdraw altogether on condition that the appointed commission should also withdraw, and that then the Department of Education of Ontario should take over the handling of the schools. They are willing that that arrangement should continue until judgment is given by the Privy Council. But whatever that judgment may be, whether it be favourable to the minority or not, the final and the ultimate application of that judgment will rest with the people and the Government of Ontario. The citizens of Ontario are strong; they are numerous; they are rich. A bountiful Providence has given them all the elements for the constitution of a great people. They have shown a noble spirit in the recruiting which is being carried on in their chief city. The city of Toronto has sent almost 30,000 men, almost 10 per cent of all the soldiers that have been sent from Canada. I envy the magnificent example set by the city of Toronto in having sent 30,000 men to the front to defend the rights of oppressed nations in Europe. The Legislature of Ontario was opened two months ago by the Lieutenant-Governor of that province, and in the speech from the Throne he used this language:

> Hitherto the relations of the European powers to each other have been regulated and controlled largely by treaty engagements, by international laws and usage and by good faith. In consequence of the repudiation of such restraints and obligations in the pursuit of unlimited and unscrupulous ambition, the world has been plunged into a general war. The British people have therefore been compelled to take up arms to vindicate their honour, to enforce the guaranteed rights of the small nations and to protect the Empire from attack.

This is what the boys of Toronto, and this is what the boys of the old province of Ontario, with those of the other provinces, have gone to Europe to do. We ask the people of Ontario who have remained at home if they cannot do for a small minority in Ontario what the boys are striving to do for other minorities in Europe. We are fortunate in this country at the present time to be far from the scene of conflict. We have not been afflicted as unfortunate Belgium has been. Our soul has not been rent and torn as has been the glorious soul of France. We enjoy the blessings of peace. We are blessed by a bountiful Providence, and if it is necessary to the happiness and the greatness of a people, surely the premier province of this Dominion is able, on a question like this, to show an example. Even if there are men in the province of Quebec who have so far forgotten their duty as to be backward in the present movement, is that any reason why the province of Ontario should not give us an incentive in the work that we have undertaken of cementing and bringing together the various elements of the Canadian people? This question remains in the provincial arena; but the present Government and the members from Ontario in this House can exercise a great influence in its solution, and I hope that we will be able to do it before this debate is closed, or if not then, within a reasonable time, so that an end will be put to this unfortunate agitation.

The member for Kingston (Mr. Nickle) referred last night to the determination on the part of the Government of Ontario to see to it that every child in Ontario shall learn the English language. He said that Regulation 17 had been adopted to deal with recalcitrant schools, schools in localities where the English language had not been properly taught. For my part I am prepared to submit to the strongest measure that can be adopted by the Legislature of Ontario for the purpose of seeing to it that a fair and reasonable English education is given to every child within the province. But if I am prepared to do that in the interests of the child and in the interests of that province and of this Dominion, I ask from that province that they do not tear from the mouth of that child the mother tongue that has been given to him by nature and by God, because the man who is truly loyal to the instincts of his heart and his origin will never be unfaithful or disloyal to his Government, or to his Sovereign. We have found loyalty characterizing the French Canadian people in all the history of the race in this country; in Ontario, as in other parts of the old provinces, of Canada. What have the French Can-

adians done in Ontario? They came, the sons of the first pioneers of this country, mostly as shantymen; in some cases as navigators. They came through the wilderness, they followed up the Ottawa river, through the Great Lakes, and on beyond the head of lake Superior; La Verandrye to the Rockies; others to New Orleans. But those who settled in Ontario were the descendants of poor people, who found their way to Ontario through the wilderness. They did not go there in a Pullman car, with all the conveniences of a modern railway. They did not go into Ontario and take up land on which they could grow wheat on 100 acres in a year or two. They came into Ontario with the wives and their young children, with their strong arms, knowing that they were still upon British soil. They opened up the northern part of Ontario, they followed the water routes of travel. They established themselves along the Detroit river. They settled the eastern part of Ontario, and to-day they are loyal people and law-abiding citizens of Ontario. For many years a French Canadian was thought to be worthy of occupying a seat in the Cabinet of the province. Unfortunately at the present time they have no representative, but that is a mere accident. To-day these people are as good settlers, and in fact they are as good citizens of Ontario, as any to be found in that province. They are ratepayers in Ontario. The money which they pay goes to the maintenance of Ontario. They do not ask for their children the privileges which are given to the English-speaking children of Ontario. The English-speaking children of Ontario can go to the primary schools; they can go to the secondary schools; they can go to the high schools; they can go to the collegiate schools; they can go to the universities. The English child of Ontario can do that. He will find English taught wherever he goes; but the French child—what do we ask for him? We merely ask that introduction to the English language which he learns in the elementary school, and that he be allowed at the same time to improve the French that he inherits from his parents. He can go to the high school, but on the understanding that he loses his French. He can go to the collegiate institute on the same footing. There is no course of French study in the high schools.

Mr. CURRIE: There is a course of French in the high schools, and every collegiate institute has to teach it.

Mr. MARCIL: It is a subject for an hour or so a week.

Mr. CURRIE: No, more than that; the same as English.

Mr. MARCIL: Then I stand corrected, because it has been represented to me otherwise.

An hon. MEMBER: Do not believe all you hear.

Mr. MARCIL: But there is no difficulty on this point. We are not speaking of collegiate institutes; we are referring merely to the elementary course, and asking for what Ontario has always granted. The Ontario Government has, of its own free will, placed upon the statute book of the province an enactment in which it recognizes the teaching of French in the elementary courses under certain conditions for the benefit of French Canadian children in that province. The whole question rests upon the interpretation of that regulation. Surely Canadians ought to be big enough to settle a problem of this kind. Surely this question ought not to be beyond solution. For my part, I would be prepared, if I were a citizen of Ontario, to submit a question like that to three or four men. Give me Principal Falconer, of Toronto University, Principal Peterson, of McGill University, and the Principal of Queen's University, of Kingston, and give me one representative out of the four for the French minority, and I will abide by their decision. If they say that what is given to the French minority under Regulation 17, so far as the teaching of French is concerned, is in any way practicable; if these pedagogues, these men of high standing and experience, declare that Regulation 17 can be worked to advantage and for the benefit of the French minority, I will submit to their decision. But we are in this state of affairs, that the minority say that it is impracticable, and that it means the gradual extinction of the French language. Winston Churchill, in the words cited by the hon. member for Kamouraska, in dealing with the South African problem, said: "We must settle this question, and it must be settled to the satisfaction of the minority." How did British statesmen settle the South African question? Is there a brighter page in the annals of British diplomacy or of British statesmanship than the solution of the difficulties in South Africa? In less than five years former rebels, men formerly in

arms against Britain, were made the most devoted subjects of the Empire. It is a policy such as that which we would like to see adopted in the province of Ontario. We are pleading for fairplay. We are pleading, Sir, for the great privileges which have never been denied, but which we grant cheerfully, the minority in the province of Quebec. There are in this House 65 members from the province of Quebec, of whom 15 are English-speaking. These 15 members could rise in this House, one after the other, no matter to what race or to what political party they belong, and say that it is the glory of the province of Quebec that the minority in that province has never complained of ill-treatment on the score of education. We are proud of that; it is one of the satisfactions we have in connection with our educational system in Quebec. We do not ask for the same treatment in Ontario. We do not ask for an independent council of education in Ontario such as the English-speaking people have in the province of Quebec. We do not ask all the benefits and advantages which the English-speaking people of Quebec enjoy. We are satisfied to continue with the purely elementary system which you granted to us. You tell us that under Regulation 17 we can have it, but under certain conditions. We consider that those conditions are inadequate, unfair to us, and unworkable, and we ask you to give us another hearing, to give us another trial, in order to find some solution of this question. Are you going to refuse that? Is the province of Ontario going to refuse that? I do not think so. I think the province of Ontario is inhabited by men who have higher ideals on that score.

The hon. member for Kingston (Mr. Nickle) last night read long extracts from the report of Dr. Merchant. I have the answer to that here in a pamphlet; but I do not dare to inflict it upon the House, because I know that it is the intention to get through this debate as quickly as possible. Suffice it to say that the report which Dr. Merchant prepared gives a very able analysis of the bilingual system of Ontario. He has paid the French people of Ontario a tribute which they cannot forget. He has declared that the bilingual schools of Ontario are satisfactory, so far as they go, but that they might be improved in some respects. Let me read just a small paragraph, in which he says:

"English is a subject of study in all the schools visited," so Dr. Merchant himself assures us. It is an admission which should be made much of. It may be used, with effect, against those who accuse our schools of not cultivating the English language, or of not understanding the public and private interests of our people in this part of the Dominion. What must we now think of those who asserted that English formed no part of our teaching? "English is a subject of study in all the schools visited," we repeat, with Dr. Merchant. Let me proceed with further particulars. English conversation as distinguished from English reading finds a place in most of the schools in eastern Ontario and in the districts, but is seldom regarded as a separate subject of study in the schools of Essex and Kent. Where the subject is introduced, a fair beginning is being made in its development.

The result of Dr. Merchant's visit to bilingual schools in Ontario is summarized as follows:

These results are made clearer by the following table, made up of figures borrowed from Dr. Merchant:

In the 1st Form, out of 254 schools visited, 229 are marked passable (from excellent to bad exclusively) or 90.15 per cent.

In the 2nd Form, out of 252 schools visited, 192 are marked passable, or 76.20 per cent.

In the 3rd Form, out of 230 schools visited, 174 are marked passable, or 75.65 per cent.

In the 4th form out of 163 schools visited, 143 are marked passable, or 87.73 per cent.

These schools, it should be noted, are to be found in all the different French Canadian centres of the province, that is to say, in Russell, Prescott, Carleton, Nipissing, Algoma, Simcoe and Kent. The French Canadian population of these districts being chiefly agricultural, it is evident that their children have not all the facilities for attending school which could be wished for.

The French Canadian people have taken pride in the education of their children. In the city of Ottawa we have had some instances of the remarkable progress made by pupils of bilingual schools, and the same can be said of some of the rural parts of Ontario. The following figures show the number of pupils of bilingual schools who have passed the entrance examinations:

Year.	No. of Pupils.	Average Age.
Casselman, 1908 to 1912	12	13 to 15
Hawkesbury, 1908 to 1912	27	12 to 15
" 1914	18	
Bourget, 1912	6	13 to 15
Embrum, 1907 to 1912	32	13 to 16
" 1913	5	
" 1914	7	
Rockland, 1908 to 1913	23	12 to 16
Clarence Creek, 1913	5	13 to 14
Fournierville, 1914	4	14
Mattawa, 1914	4	12 to 14 and 16
St. Eugène de Prescott, 1914	6	13 and 14
Sudbury, 1915	10	13 and 14

This shows that generally throughout the province of Ontario the bilingual schools have brought forth students who were able

to pass the entrance examination. I do not like to bother the House with this issue, it seems to me such a clear one, and I will not attempt to make any more quotations. I will not attempt to go back and show what the relations have been between the two races, the difficulties that preceded the introduction of the Separate School system, and the difficulties that had to be solved at Confederation by the understanding between Sir George Etienne Cartier, Sir John Macdonald and the representatives of Nova Scotia and New Brunswick.

Whatever may have been the failings or mistakes of the past, let us hope that the dead past will bury its dead; and when we find that the world is about to be renewed and renovated in the older hemisphere, let us try to draw a lesson and an inspiration from the great sacrifices which many of our fellow countrymen are making daily; let us draw an inspiration from these great events, and let us do something to remove some of these grievances which have always been a cause of dissension between our people and a source of weakness to them. The greatest Conservative beyond doubt that this country ever produced was Sir John Macdonald. He was the man who, with George Brown, Sir George Etienne Cartier, and representatives of the Maritime Provinces, brought about Confederation. Why was Confederation brought about? It was brought about because government in this country had become impossible, because the requirements of government were beyond the resources of its greatest and most enlightened statesmen. The racial difficulties between Quebec and Ontario had been of long standing, and Confederation, it was thought, would put an end to a number of questions from the provincial arena and allowing the Dominion to deal with them. When Confederation was brought about Quebec was not consulted with regard to it, no election was held, the people were not asked whether they favoured Confederation or not; but the hierarchy of Quebec and leading public men of the Conservative party took

3 p.m.

the stand that this was the only means by which an end could be put to the difficulties that we might have to deal with, such, for instance, as this bilingual difficulty. This and other difficulties of a similar kind were proposed to be done away with by Confederation. The province of Quebec came into Confederation knowing that Quebec would be the only French province in the Dominion. The people of Quebec knew that there would in time be five or six or seven or nine other provinces, that they in the province of Quebec would be condemned to be the minority and that they would be limited to 65 members in this House no matter whether the population of Canada should be 2,000,000, or 5,000,000 or 10,000,000. They knew, I repeat, that they would be in the minority in Quebec but they knew British principles, they had faith in British ideals, they had faith in the promises that were made by the British Crown, they had faith in the Imperial Parliament in dealing with the British North America Act, and they had confidence that the rights of French-speaking citizens would be secured under the new order of things. Sir John Macdonald, who presided at the Confederation conferences, and who had long before entered the galaxy of the great men whom Canada has given to the world, uttered some memorable words, which are well worthy of note at the present time. The French people of Ontario do not ask to be placed on the same footing as their English-speaking friends; they ask only for a limited share in the education of the province, which is paid for by their own money, while learning English at the same time and while submitting to Government rules and inspection. They are very moderate in their requests. At that time Sir John Macdonald was speaking of the standing of the French race in this country, no matter what its past might have been, no matter what the future might have in store for it, and these are the words he used:

> I have no accord with the desire expressed in some quarters that by any mode whatever there should be an attempt made to oppress the one language or to render it inferior to the other; I believe that would be impossible if it were tried and it would be foolish and wicked if it were possible. The statement that has been made so often that this is a conquered country is "à propos de rien." Whether it was conquered or ceded, we have a constitution under which all British subjects are in a position of absolute equality, having rights of every kind, of language of religion of property and of person. There is no paramount race in this country, there is no conquered race in this country, we are all British subjects, and those who are not English are none the less British subjects on that account.

This is a fine illustration of what Sir John Macdonald intended this country should be. I have had the honour of being the representative in this House for the last 16 years of a constituency in which there are 5,000 English-speaking people sprung from old Loyalist stock, and inhabiting such

places as New Richmond, New Carlisle and Hamilton township. These people are Scottish Presbyterians, Anglicans, Baptists; some are Brethren; they belong to various creeds and nationalities. The most of them speak the French language. In this connection I wish to give an instance of the generosity of this county, and I hope it will serve as an example for which some day we may find a parallel in the province of Ontario as in the olden days, when Mr. Lafontaine, beaten in Rimouski, found a seat in the county of York. In 1896, when this country was almost torn to pieces over the Manitoba school question, my right hon. friend the present leader of the Opposition (Sir Wilfrid Laurier) stood up in his place in this House and moved the six months' hoist of a coercive measure, stating that he would appeal to the spirit of justice and fair play of the people of Manitoba as we now appeal to the spirit of justice and fair play of the people of Ontario. On that occasion the county of Bonaventure, which has 25,000 French Canadians and 5,000 English people, elected by an overwhelming majority a French Protestant Huguenot, Mr. Fauvel, to occupy a seat in this House. At a time when the racial and religious question was being discussed in the county of Bonaventure, the French-Canadian Catholics of that county, rising superior to the appeals that were made to them, elected a French Protestant to this House as their representative, and he remained their representative until the day of his death.

In the past, on more than one occasion, we have had such questions to deal with. Yesterday my right hon. friend the leader of the Opposition referred to that grand old man of Ontario, Sir Oliver Mowat, who was able to bring about a solution of these difficulties when he was the Premier of that province. We had in Quebec another grand old man, who was also a colleague of my right hon. friend the leader of the Opposition. I refer to Sir Henri Joly de Lotbinière. Sir Henri Joly de Lotbinière was the only Protestant who ever occupied the position of Premier of the province of Quebec, and occupied it, Sir, because the citizens of Quebec, regardless of his religion, regardless of what his fathers had taught him, regardless of the altar at which he knelt, and at which he had been brought up, had confidence in his honesty and fairness.

Among our fifteen colleagues sitting here from the province of Quebec, twelve at least represent constituencies where the French Canadians or the Catholics are in a majority. But that does not in any way affect the political action of those people. Whether the man who seeks their suffrages speaks the English or the French language, whether he is a Protestant or Catholic, if he has the confidence of the people, they vote for him. I know the people of Ontario appreciate these things. But we in Quebec may take a different view. I know the people of Ontario are a British people; I know the stock from which they sprang; I know that their forebears came from the Mohawk Valley, leaving that country rather than betray the flag their fathers had upheld and brought to the continent of America; I know that the people of Ontario want to maintain British institutions in this country. But allow me to say, Mr. Speaker, with the light of history guiding me that the best way to maintain British institutions and traditions, not only in Ontario but throughout the Dominion, is by carrying out in all respects the British policy which has been tried in this and in other countries. It is the boasted pride of Britain that there is no slave under its flag; that the chains of the man who in the old days was a slave fell to the ground when he set foot on British soil. Is it to the credit of Canada that any portion of our people should complain upon the score of language, or upon any other score? I do not want to dwell at any further length upon that. I think hon. gentlemen have all pretty well formed their opinions now. The House will probably agree that there is something to be done in this case in the province of Ontario. What I am asking for the French people is not unreasonable. They have had the French language ever since the days when Ontario was a wilderness. They have had French taught on the banks of the Detroit river when the city of Toronto did not even exist. They have had the French language in the old outskirts of Ontario. The hon. members for North and South Essex know the valour and the loyalty of the French population, and the member for Kent can testify to the worth of the French people inhabiting that county. Those of us who live in the city of Ottawa know how law-abiding and peaceful the French Canadians of this city are. They are ratepayers, they are Canadians, they are British subjects, just as we are, and why should they be given cause to complain? Why should there be a grievance in this country?

I do not think any advantage is to be

gained by speaking upon this point at any further length, and I will now summarize. The settlement which the minority ask for is not an unreasonable one. They ask the Government of the province of Ontario to give their children an English education, to pass regulations to that effect, and to see that those regulations are enforced. But at the same time they ask that with their own money their children shall be taught enough French to enable them to keep up the French language, which to them is as dear as life itself. It is useless to ask a man to give up his language, or the ideals that are dear to his heart. As Lord Dufferin has said, it is one of the assets of Canada and adds to the variety of life in this country to have these different languages spoken by people united by the common bond of the English language, which will always remain the language of an overwhelming majority of the Canadian people. The French language adds a charm to our varied life. Think of the stranger, the European, perhaps, who comes from other lands to visit Canada. Where will he direct his steps to find something historical, something romantic, something interesting, in the past history of Canada? We all know where he will go. He will go to the cradle of Canadian civilization, down to the banks of the St. Lawrence, down by the sea, where Canadian history began, where British history on this continent began, and where took place the cementing of the two great nations that has brought about the expansion of this broad Dominion —the creation of this great Empire on the North American continent. There are here in this House representatives from the West, representatives from the East, and representatives from the centre of Canada. They know what the French race has done for this country. They have learned in the histories they read at school what the pioneers have done for this country; what has been done by the missionaries and those who came here as the forerunners of civilization. They know also that the French race in their loyalty and devotion to the service of the King of England have never been wanting. Governors of Canada have testified, one after another, to the loyalty of the French population, not only in Quebec, but in Ontario as well. The King of England himself, when Prince of Wales, visited the Plains of Abraham at Quebec, and was gratified at the great spectacle that at a given moment Canadians could present. What was that spectacle? It was a gathering together of representatives of the whole of Canada on the Plains of Abraham. Ontario was represented on that occasion by the late Sir James Whitney, one of the great men who have represented that province; and other distinguished men from all parts of Canada met there upon common ground, to bury the differences that had in the past separated and disunited the Canadian people. They were there trying to establish a bond of friendship and amity.

I do not wish to close my remarks without alluding to a matter that is not referred to in the motion before the House. Allusion has been made here to the position of the French minority in Manitoba. The natural spokesman for the French people of Manitoba is the hon. member for Provencher (Mr. Molloy), in whose constituency live the great majority of French-speaking people of that province. But, being ill and unable to be present, he asked me two or three weeks ago if I would act in his place and bring before the House in this debate the position of the French minority in Manitoba. I do not ask for any different treatment for the French people in the province of Manitoba than for those in the province of Ontario. We have precisely the same appeal to make to Ontario that we have to Manitoba, and vice versa. But I am sorry for this: in Manitoba the old sore seems to have broken out again. We thought it had healed for all time to come. After all the trouble and anxiety that both political parties had had, not only in Manitoba but throughout the Dominion, we thought that this question had been settled forever; but, unfortunately, it has broken out again, and why? Because the Government of Manitoba has repealed one clause of the Laurier-Greenway agreement, an agreement which had been brought about by the joint action of the Dominion Government of that day and the province of Manitoba. The clause repealed is very brief, and reads as follows:

> When ten of the pupils in any school speak the French language, or any language other than English, as their native language, the teaching of such pupils shall be conducted in French or such other language, and English upon the bilingual system.

That was the clause of the Laurier-Greenway agreement, which was put into effect in the bilingual schools in Manitoba, and which has been in effect for the last fifteen years. It has been repealed now by the

Legislature of Manitoba, by a vote of thirty-six to eight. Included in the minority of eight is the sole English-speaking Protestant Don in the legislature, the six French Canadian members belonging to either political party, and the one Ruthenian representing the district of Gimli. Those eight representatives protested against the repeal of that clause, which they thought was in the interest of the French minority in the province of Manitoba, who occupy a unique position. In 1720 there were no white people out West when Pierre de la Verandrye wended his way from the lake of the Woods into the province of Manitoba, planted at Massacre island the first Christian cross erected on that part of the North American continent, and paved the way for the pioneers and settlers who came after him. In 1870, when the province of Manitoba was about to become united to the Dominion, delegates from Assiniboia and the Northwest Territories negotiated with the representatives of the Dominion and were granted their rights and privileges. The Manitoba Legislature met and those rights were confirmed. In 1890 the school law was passed and the separate schools were abolished. Then we had the long appeals to the Dominion Parliament, the Remedial Bill of 1896, and finally the appeal to the people of Canada, who decided against coercive measures, and I think the Canadian people would decide now, or at any other time, against coercive measures of any kind. In 1896 that question was settled and would probably have remained settled for all time. I do not refuse to any man, no matter from what land he may come, the advantages that he may have, the satisfaction that he may enjoy in retaining his language and the traditions of the race from which he has sprung; but, because of the arrangements entered into between the French and Scotch representatives of Assiniboia, because of the Manitoba Act, because of the judgment of the Privy Council, because especially of the Laurier-Greenway agreement, which was a scrap of paper, it is true, but which was a treaty, so to speak, between the Dominion and the province of Manitoba, which was placed upon the statute book of Manitoba, and which was an undertaking by that province to give the minorities certain rights, the French Canadians of Manitoba feel that they have peculiar rights different from the rights of those who have come into the province latterly. I understand that so long as the French Canadians were alone and claimed the privileges, no great objection was taken, but later on, when people of other nationalities came into Manitoba, the situation became more complex, as those other nationalities took advantage of the clause, and that, I understand, not having read the debate, was the reason given for the repeal of the clause. In the absence of the hon. member for Provencher (Mr. Molloy), and at his request I shall read to the House the resolution adopted at a general meeting of representatives of all the French Canadians in the province of Manitoba, held at St. Boniface on the day after the introduction of this Bill in the Manitoba Legislature, to indicate to the House the position taken by the French Canadians of that province. The resolution, which was moved by Mr. Talbot, member for La Verandrye, reads:

Whereas the French and Catholic population in Manitoba are, according to natural law, by right of their title as first occupants, under solemn treaties, under the British North America Act, pursuant to the solemn pact expressly entered into between delegates from the territory of Assiniboia and the Northwest Territories and delegates from the Dominion of Canada, by virtue of the Manitoba Act and subsequent legislation, entitled to rights and privileges that have been violated by the legislature of Manitoba;

And whereas the French and Catholic minority in the province of Manitoba has enjoyed its national and religious rights until there was enacted in Manitoba the law of 1890, by which the minority's constitutional rights were wiped out of the statute-books of the province;

And whereas the French and Catholic minority had its constitutional rights confirmed by the highest court of the British Empire;

And whereas in 1897 a general arrangement known as the Laurier-Greenway agreement was entered into between the Governor in Council and the Lieutenant Governor in Council in Manitoba, which agreement restored to the French and Catholic minority of this province a part only of its constitutional rights:

And whereas the said minority was never a party to the said agreement and never accepted it as a complete and final settlement, but only as a partial satisfaction of its claims;

And whereas the present Prime Minister of Manitoba, the Hon. Tobias Crawford Norris, was, at the time the said agreement was entered into, a member of the Legislature of Manitoba, and a supporter of the party then in power, and therefore made himself a party to the contract by voting in favour of it;

And whereas since that day the minority in Manitoba has never ceased to claim the full and complete acknowledgement of its constitutional rights;

And whereas the present Executive Council of this province, with the support of a majority of the members, has submitted to the Legislative Assembly a Bill abolishing once more the rights of the Catholic and French minority in this province, setting at defiance the solemn treaties confirmed by the highest court of the British Empire;

And whereas such an action is tyrannical, unconstitutional and contrary to all true notion and fair definition of British fair play;

And whereas Great Britain and the British Empire are now engaged in a war solely to uphold the honour of the signature Great Britain has appended to a treaty;

And whereas a treaty made and signed in Canada should not be considered as a mere scrap of paper in this country any more than in Europe, unless there be two different codes of honour;

Be it therefore resolved that:

The Catholic and French Vigilance Committee appointed at St. Boniface at a public meeting held on February 9, 1916, for themselves and for their co-religionists and compatriots of the province of Manitoba, solemnly proclaim their absolute attachment to the constitution of their country;

They vigorously protest against any legislation such as is now submitted and they express their unflinching determination to resist any law that may be enacted in violation of their rights and privileges as defined by the constitution of the country.

They further solemnly pledge themselves to use at their discretion and according to their judgment all constitutional and necessary means to prevent the said Act being put into force.

This question in the province of Manitoba, to which I understand the Prime Minister has referred, is not now before the House, but we are told that the Ontario question is not before the House, that this Government having refused disallowance, it has passed out of the Dominion arena, and the Manitoba question has not yet come into it. I was anxious to show that, in fighting the cause of the minority of Ontario, I did not overlook that of the province of Manitoba, and I think what is fair treatment on the banks of lake Ontario should be fair treatment on the banks of the Red river. We are asking merely for the same recognition of those rights enunciated in this resolution as have been recognized by the highest court of the Empire and by all Imperial and Canadian legislation. Nevertheless, those rights have been set aside. I am not going to discuss the merits or demerits of the case, because I did not listen to the argument. When the present amendment is disposed of I intend, at the request of this minority, to submit the following resolution, which has been drafted by them for presentation to this House. I am prepared to submit this resolution to-morrow, or at any time that the Government may decide. I will read the text of the resolution:

Whereas, on the advice contained in the judgment delivered on the 29th January, 1895, by the Lords of the Judicial Committee of the Privy Council on the appeal of Brophy and others v. the Attorney General of Manitoba,

Her Majesty was pleased to pass the Imperial Order in Council dated 2nd February, 1895;

And whereas the Government of Canada in 1895, 1896 and 1897, under the respective leadership of Sir Mackenzie Bowell, Sir Charles Tupper and Sir Wilfrid Laurier, in conformity with the terms of the said judgment and Imperial Order in Council, has taken action thereunder, which resulted in the enactment by the Manitoba Legislature of the statute being 60 Victoria, chapter 24, sometimes referred to as the Laurier-Greenway settlement;

And whereas the said Legislature, by an Act passed at its last session, has repealed section 258 of the Public Schools Act of the said province, which, prior to the consolidation of the statutes of the said province in 1902, was section 10 of the said statute 60 Victoria, chapter 24;

And whereas the repeal of said section 258 prejudicially affects a large portion of the Roman Catholic minority of the said province, by depriving them of a right which they deem essential to the proper education of their children and the suppression of which, moreover, grievously affects the working of the other clauses of the said settlement;

And whereas it is desirable, especially at this critical period in the history of the British Empire, to avoid any cause of inward strife and to promote a feeling of union between the various elements of the Dominion;

Be it resolved: That this House record its regret that the Legislature of Manitoba has at its last session repealed said section 258 of the Public Schools Act, thereby recalling legislation passed after a long and disquieting agitation with the object of relieving a grievance of a large section of His Majesty's loyal subjects in said province.

If the Government will afford me opportunity, I am prepared to move this amendment on the next occasion when the motion is made for Committee of Supply. In view of the statements that have been made; in view of the fact that this question is not yet in the Federal arena, no application having been made for disallowance of this measure; and seeing that hon. members are anxious to save time and to get through this session as soon as possible, I would prefer to take the earliest occasion to bring this matter forward. In doing so I shall fulfil a promise made to my hon. colleague from Provencher (Mr. Molloy), with whom, I am sure, we all sympathize in his illness. It will be my duty to make an appeal to this House for a small minority in the province of Manitoba. They may number only 30,000 in that province, but they are descendants of the first pioneers, those men who were trusted in that province by the Federal Government when the power of the Dominion was first extended to that territory. Those people had faith in the word of this Parliament when the Manitoba Act was passed; they had faith in the Privy Council of Great Britain when it declared that justice

should be done to them; they had faith in the Laurier-Greenway agreement, a treaty solemnly ratified by the province of Manitoba and placed upon its statute-books. They had a right to believe that the small concession accorded to them, of giving to their children, along with an English education, a knowledge of the French language, the first European language to be heard in the western part of Canada, would be respected. But it has been repealed. I do not know what the intentions of the National Government are with regard to it, whether they intend to recommend some legislation concerning it, or whether the matter lies there the subject of an appeal for disallowance.

I lay these facts and views before the House, and in doing so I feel in my heart and soul that I have fulfilled my duty as a Canadian, as a British subject, and as a representative of the people, anxious to promote harmony, good will, concord and a better understanding between the various elements comprising this Dominion. I hope that in the statement I have made, which is much longer than I expected, not one word has passed my lips which can wound the feelings of any member of this House. If such a word has escaped me, I apologize therefor. I submit these facts to my fellow members of this House, firm in my resolve to sustain the constitution under which I was born, and the flag under which I was reared, and with faith that British fair play will be accorded to all parties in Ontario and Manitoba in the settlement of these unfortunate differences.

Mr. J. W. EDWARDS (Frontenac): I desire to preface my remarks on this subject with a personal reference. When I was considerably younger than I am now, I spent several years in the very useful though not very remunerative occupation of teaching school. Most of these years I spent teaching in the public schools of Ontario, one in the county of Essex, where I happened to have as pupils a few French children who could not speak any English, while I was in the position of not being able to speak any French. And, strange as it may seem to some hon. gentlemen opposite, these children made satisfactory progress under these conditions. I also was principal for a matter of two years and a half of one of the largest schools in the province of Manitoba. I merely mention these facts for this reason —that perhaps, because of my close connection with the teaching profession, I have given to educational matters in the Dominion of Canada considerable thought and attention, and have specially given considerable thought and attention to educational affairs in the province of Ontario and in the province of Manitoba.

I trust that I shall be able to say what I have to say moderately and fairly and without giving offence to any one in this House. But I candidly confess, Sir, that in stating that I am undertaking a rather difficult task. For, as a resident of Ontario, it is by no means easy to sit in one's seat and hear the Government and the English-speaking people of my native province characterized as tyrannical, oppressive, and all that sort of thing. Under these conditions, it is not very easy, perhaps, for one to speak as moderately as he would wish to do. But I assure you I am going to do the very best I can to handle this matter fairly and in a moderate manner.

Outside this House, and in the House too for that matter, this subject has been discussed particularly upon two lines. Men who are in favour of the bilingual system have assumed that the rights of the French Canadian minority in Ontario have been interfered with, not only their constitutional and legal rights, but also their natural rights. May I be permitted to glance very briefly over history, as was done by others who have preceded me in this debate. I find that in the terms of capitulation after the Battle of the Plains of Abraham, and after the fall of Montreal a year later, and in the Peace of Paris of 1763, not one word appears with regard to the French language or the use of that language in Canada. In 1774, the Quebec Act was passed, in which I find no reference whatever to the question of language. There was provision made, and, I think, ample and generous provision, for safeguarding the interests of Roman Catholics in Canada at that time.

The next great event affecting the history of Canada, and affecting to a very large extent this question, was the American revolutionary war, immediately following which there was a large influx into the province of Quebec and the other provinces, of United Empire Loyalists. I believe that about 50,000 of these came into Quebec. Some 10,000 came in 1783 and 1784 into Ontario alone. Many settled in Nova Scotia, many in Cape Breton and along the St. John river in New Brunswick. The result of this settlement—and every encouragement was given to these people to

come in—was a good deal of jealousy and antagonism between the two races, the French and the English. Following this, and as a result of this I think, was the passing of the Constitutional Act of 1791, by which a separate Government was given to each province. The population of Ontario in 1791 was about 20,000 all English; and the population of Quebec at that time was about 125,000, of whom a little more than one-third were English. In passing on from the Constitutional Act of 1791, all I have to say is that in that Imperial Act there was no reference whatever to the question of language or language rights.

We come next to 1840, the passing of the Act of Union, which came into effect in 1841 and by which the two provinces were brought under one Government. It was provided in this Act that the English language only was to be used in the parliamentary records. While this was modified some years later, it is of importance to remember what the conditions were at the time of the adoption of the Act of 1840, if we are to properly understand the British North America Act of 1867. The population of Upper Canada in 1841 was 465,357, of whom 14,763 were French. The population of Lower Canada or Quebec was at that time 698,000, of whom 524,307 were French. In other words, the population of the two provinces which were brought together by the Act of Union for parliamentary purposes, to do their parliamentary business in one parliament, was 539,074 French and 624,283 English. That is, at that time the respective populations of the two principal races were practically the same in the two provinces. Just previous to the Act of Union of 1841, there had been troublous times in this country resulting in a rebellion in 1837. The people of the province of Quebec or Lower Canada and the people of Ontario or Upper Canada had many grievances to complain of, and it does seem to me that if at that time, when they were asking consideration of their grievances, this matter of language had been regarded by them as one on which they had a grievance, that would have been one of the things that would have been taken up and that would have been especially referred to in the Act of Union of 1840. But it was not so taken up. The Act of Union came into effect, and, as I have already said there was in it a distinct provision for the use of the English language in the records of the House, which was not changed for a number of years. To sum up in regard to this period from 1763 to 1840, I make the statement that in all the Acts that were passed, either in this country or by the Imperial Parliament, there was not one line, there was not one word, there was no controversy, no demand, in regard to the use of the French language in the Dominion of Canada.

While in all this legislation which had been passed from time to time the question of language was not made a basis of settlement in any Act in regard to teaching in schools, separate schools were recognized and were authorized in this country on denominational grounds. We find that in almost every Act from 1774 right down to 1867.

The Quebec Government, in this controversy, or since this controversy started, has undertaken to advise the Government of the province of Ontario, and has actually passed legislation permitting some of the people of Quebec to apply some of their money to assist certain of their compatriots in Ontario in fighting Regulation 17. I am going to place on Hansard some figures to show why, in my judgment, the province of Quebec should not presume to offer advice to the province of Ontario on educational matters. I do not do this with any intention or desire to wound the feelings of any person; I am simply going to give you facts which you can obtain, as I have obtained them from the census records of this country. According to the census of 1901, there were only 10.23 per cent of the children of school age in the province of Ontario who could neither read nor write. By the same census, there were in the province of Quebec 22.08 per cent of the children of school age who could neither read nor write. Then take the census figures of 1911. Of children, 5 years and over, who could neither read nor write at that time, there were only 6.51 per cent in Ontario, while in the province of Quebec there were 12.66 per cent.

The right hon. leader of the Opposition has said that he would be satisfied if in Ontario Regulation 17 was repealed and conditions restored as they were previous to 1912. What were the conditions previous to 1912? I have already stated, and I think it is fair to state, the relative positions of the provinces of Quebec and Ontario in regard to education of the children as indicated by the literacy or illiteracy of the children in each province. But I wish to go further, and to call to the attention of this House the fact that in the province of Ontario we find the greatest number of

children who can neither read nor write in those counties in the province of Ontario where the French Canadians are in the largest number. For instance, in the county of Nipissing, according to the census of 1911, there were 26,277 French out of 74,130 people. In that county 15.23 per cent of the children of school age could neither read nor write. In Prescott county, with a population of 20,124 French out of a total population of 26,968, 15.48 per cent of the children of school age could not read nor write. In Russell county, with a population of 22,475 French out of a total population of 39,434, 13.77 per cent of the children of school age could neither read nor write. In Glengarry, with a population of 8,710 French out of a total population of 21,259, 13.70 per cent of the children of school age could neither read nor write.

Now, I ask this question: Why should the county of Prescott show 15.48 per cent of children of school age who cannot read or write, and the county of Russell 13.77 per cent, while Dundas county, very close to Prescott and Russell, shows only 4.75 per cent of children of school age who cannot read or write, and Carleton county only 6.93 per cent? Why should North Waterloo, for instance, where there are 25,352 German-Canadians out of a total population of 33,619, show only 4.26 per cent of children of school age who cannot read or write, and Prescott, where there are 20,124 French Canadians out of a population of 26,968, show 15.48 per cent of children of school who cannot read or write?

Mr. PROULX: Has the hon. gentleman the figures for Frontenac?

Mr. EDWARDS: In Frontenac they are 6·57.

Mr. PROULX: Addington?

Mr. EDWARDS: I have not the figures for Addington here. Why should Ottawa, the capital of Canada, show a greater number of children who cannot read or write than any other city in the province of Ontario? That is a fact, and one surely worthy of consideration. I ask in all seriousness was it not time for the Government of the province of Ontario, in face of conditions such as those I have mentioned, and which no man can dispute, to look seriously into this matter, not merely on behalf of the English-speaking children, but more strongly on behalf of the French-speaking children in the province of Ontario, who were evidently not getting the education which they should receive.

I want to call attention to this further fact, that out of sixty-five constituencies in the province of Quebec only two are up to the Ontario general average, so far as literacy of the school children is concerned, and in one of these only twenty-nine per cent of the population is French Canadian. That is most significant, it seems to me, and I think I am perfectly right in saying, coming as I do from the province of Ontario, that under these conditions we have a right, not to accept the dictum of the Quebec Government, or of the people of the province of Quebec, on educational matters. I say that without any desire to give offence, and simply on the facts which I have given.

The figures which I am going to give now will show the reason why Ontario shows a high record in regard to the education of its people. In Ontario we have 12,016 teachers, and we spend $12,104,422 a year on education. In Manitoba they have 2,341 teachers, and they spend $5,023,891. In Quebec they have 14,937 teachers, and all it costs them there is $6,794,333. While they have that number of teachers in the province of Quebec, their salaries are not so large; there may be good and sufficient reason for that, and I do not care to go into that, the figures are there to speak for themselves.

I want to carry this matter a little further. Some may say: "You are dealing only with the children of school age from 5 years upwards." Let us take the figures of the Canadian-born males of 21 years and over, that is, men who have the right to vote in this country, and what do we find? Illiteracy of Canadian-born males of 21 years and over in Canada amounts to 9.55 per cent. That is a comparatively small percentage. The percentage for Ontario and Manitoba is only 4·91 who cannot read or write. The percentage for Quebec of males Canadian-born, 21 years and over, who can neither read nor write is 15·64, as against 4·91 for the province of Ontario, and against 9·55 for the Dominion of Canada as a whole. That is to say, that in that regard Quebec stands lowest of all the provinces of the Dominion, and the only parts of the province of Ontario that rank with Quebec's general average in this respect are the counties of Prescott, where 21·75 per cent of the voters can neither read nor write, Nipissing, where 14·78 of the voters can neither read nor write, Rus-

sell, where 18.66 can neither read nor write and Glengarry where 14.46 can neither read nor write. The only county in the province of Nova Scotia which ranks at all in this class, I need hardly tell this House, is the county of Richmond, which has an average of 23.45 who cannot read or write. These are figures to which hon. gentlemen must give consideration. They are significant. It cannot be said that it just happens so that the counties which show the high percentage of illiteracy are counties where French Canadians predominate in the population. It is something we should think about, and that the Government of Ontario should think about. In Ontario 95 per cent of the voters can read and write. That is a high percentage. Am I using too strong language when I say that as a representative from the province of Ontario, where 95 per cent of the voters can read and write, I do not feel very much like accepting advice from the hon. member for Bonaventure (Mr. Marcil), for instance, or from the hon. member for Kamouraska (Mr. Lapointe), especially when I find that over 20 per cent of the voters in their respective constituencies can neither read nor write the language which falls in such beautiful musical melody from their eloquent lips? Am I going too far when I say that I do not feel much like accepting the advice of the hon. member for Rouville (Mr. Lemieux), who for so many years represented the constituency of Gaspé, a constituency where over 33 per cent of the voters could neither read nor write? May I call attention to the fact also that over 25 per cent of the voters in Laval and Temiscouata can neither read nor write; that Three Rivers shows a percentage of 18½ per cent who can neither read nor write and that Wright, which is represented by the seconder of this resolution, has over 23.08 per cent who cannot read the beautiful speeches made by the hon. member for that county, nor write to him asking for a job.

It cannot be said, Mr. Speaker, that this degree of illiteracy is due to the British-born immigrants who come into that province or to any part of Canada, because the same census figures give us information to the contrary. So far as literacy is concerned, the British immigrants in this country rank higher than the native population in any province. There is only 3 per cent of British immigrants, 21 years of age and over, who cannot read or write. Nor can it be ascribed to the foreign-born immigrants who come to Quebec and other parts of Canada from all parts of the world, for it is the fact that they show a greater degree of literacy than the average in many constituencies in the province of Quebec. There are in the province of Ontario, or were at the last census, 202,000 French Canadians. We have been told that they number 250,000 at the present time. I am not in a position to dispute these figures; I state what there were in 1911. There was about the same German population in the province of Ontario as French Canadians at that time. In 60 out of the 86 constituencies there are more German Canadians than French Canadians; and let me also add this, that in all these years they have made no demands such as have been made by the 202,000 French Canadians in this province. I am not exactly right in saying that, because there are not 202,000 French Canadians making those demands. The demand has originated in the city of Ottawa, where they have not tried the regulation, where they have never tried to see whether it would work or not. As regards the French population of Ontario, what certain agitators in the city of Ottawa demand does not apply to the French Canadians in the province of Ontario generally. But I would like to ask this question of those who favour this legislation: Are those who demand bilingual schools for the French willing to accede to a similar demand from Germans, Austrians, Italian and other residents of this country? There has been considerable skating around that matter by hon. gentlemen opposite. The hon. member for Rouville (Mr. Lemieux), I think, intimated that they lost their rights to their mother tongue when they crossed the ocean. He would not be prepared to give them the right to their language. If I am correct, the hon. member for Bonaventure (Mr. Marcil) said that he would not deny the foreign population coming into this country the right to the use of their language.

Mr. MARCIL: I said it was natural for a man to adhere to his native tongue, but I said that the French settlers on the Red river in Manitoba were very different from those who came to Canada latterly, because they had a treaty and legislation in their favour and the others had not.

Mr. EDWARDS: I have no wish to misquote the hon. gentleman. I understood the hon. member to say that he was prepared to move a resolution in this House rather deprecating the abrogation of section 258, and if that meant anything it meant that he

would like to see section 258 restored. If section 258 is restored, you have the restoration, not of bilingualism, but of polylingualism in Manitoba. Would my hon. friend favour the Laurier-Greenway agreement of 1897 being applied to all the other provinces in Canada?

Mr. MARCIL: There is no reason to apply it in Quebec because the French people in this Dominion are in a very different position from that occupied by Germans, Austrians and others. They have rights according to the constitution and the others have not.

Mr. EDWARDS: Do I understand that my hon. friend would approve of applying that regulation to all the provinces?

Mr. MARCIL: I do not believe in making German, Austrian or Italian official languages.

Mr. EDWARDS: Then the hon. gentleman is directly at issue with his leader, who was responsible for establishing that system in Manitoba in 1897. If his leader was wrong, then it is quite possible that his leader and himself are wrong now. I think it is not only possible, but that it is extremely likely. What are the conditions as far as the West is concerned? You are either in the position, in so far as that section is concerned, of repudiating what your leader did in 1897, or of saying that it is a proper thing for the whole country. What position are you put in then with regard to these western provinces? The foreign-born residents of the four western provinces are as follows:

Manitoba.

Nationality.	Number.
French	30,444
Germans	34,530
Austrians	39,665
Poles	12,310
Jews	10,741
Russians	8,841
Scandinavians	6,419

Alberta.

French	19,852
Germans	36,862
Austrians	26,427
Scandinavians	28,047
Russians	9,421
Polish	2,243

Saskatchewan.

French	23,251
Germans	68,628
Austrians	41,651
Scandinavians	33,991
Russians	18,413
Polish	3,785

British Columbia.

French	8,907
Germans	11,880
Austrians	7,015
Scandinavians	15,968
Russians	6,896
Chinese	19,568

My right hon. friend who leads the Opposition says: Let us face this issue like men. This issue is one that applies to more than the province of Ontario. You are laying down a principle that you cannot confine to the limits of Ontario. I ask the right hon. gentleman who leads the Opposition if he is prepared, at the head of his party, to go into these western provinces, into Saskatchewan, Alberta and British Columbia, and ask the Governments to place on the statute-book the Act which he himself placed on the statute-book of Manitoba in 1897? They dare not go into these provinces and advocate anything of that kind. Neither the right hon. gentleman nor his supporters in this House will dare, for political reasons, to go into Saskatchewan or Alberta and demand of these provinces anything like the privileges which are granted to the French Canadians in the province of Ontario by the Ontario Government.

4 p.m.

Mr. LAMARCHE: Has my hon. friend any statistics as regards the Algonquin or any other tribe of Indians in Canada?

Mr. EDWARDS: I do not want to mix the Indians with the whites.

Mr. LAMARCHE: We are much obliged to you.

Mr. EDWARDS: You are quite welcome. In 1896 the slogan of the Liberal party in this country was, "Hands off Manitoba." I will again place on Hansard the section of the Laurier-Greenway agreement, although it was read by my hon. friend from Bonaventure.

When ten of the pupils in any schools speak the French language or any language other than English as their native language, the teaching of such pupils shall be conducted in French or such other language and English upon the bi-lingual system.

That is the law that is called the Laurier-Greenway agreement of 1897. The Hon. Dr. Thornton, Minister of Education in the Norris Government is responsible for these figures: On June 30, 1915, there were in Manitoba 2,727 school-rooms of which 1,042 were urban and 1,685 rural. There were 126 French bilingual schools with 234 teachers, 61 German schools with 72

teachers and 111 Ruthenian and Polish schools and 114 teachers. That is in 421 school-rooms or one quarter of the province we have this bilingual condition. The enrolments in these schools were 16,720 or one-sixth of the total school population of Manitoba. The population of Manitoba was 465,614 at the last census of whom 58 per cent was of British origin and 42 per cent was divided into twenty different nationalities. In that province, under this Laurier-Greenway agreement, 36 schools could demand three languages, 5 could demand four, and in 110 there was such a marked admixture of nationalities that the arrival or departure of a family any day might change the teaching from one language to another. In nearly one-quarter of the schools conducted on the bilingual plan, French, German, Polish, or Ruthenian children were receiving instruction in those languages or some other non-English tongue. In the Strathcona schools there were 1,237 pupils of whom 97 were English speaking, representing 12 different nationalities, each one of which had the right to demand the teaching of their own language in the school under the Laurier-Greenway agreement. I venture to say that never in the history of Canada was such an intolerable curse fastened upon any province in this Dominion. Manitoba had a system fastened on it by the right hon. gentleman who leads the Opposition which outlawed the English language in that province, which eliminated and proscribed the teaching of the English language and substituted therefor a conglomeration of tongues, a system which made national unity impossible and which encouraged national disintegration. That was the state of affairs brought about by the sunny smile of the right hon. gentleman who leads the Opposition. The advocates of bilingualism assert that the French in the province of Ontario are deprived of their legal constitutional and natural rights by the tyranny of the Government. They assert that Regulation 17 is ultra vires of the province. I assert that the passing of Regulation 17 is within the constitutional rights of the Provincial Government of Ontario, and in support of that statement I can cite as brilliant an array of legal talent as, I think, ever sat on the bench in Canada. For instance, Hon. Mr. Justice Lennox, at one time a member of this House; Judges of the first Appellate Division, the highest Court of Appeal in Ontario; Hon. Mr. Justice Garrow, Hon. Chief Justice of the Common Pleas, Hon. R. M. Meredith; Hon. Chief Justice of Ontario, Sir William R. Meredith; Hon. Justice McLaren, Hon. Justice Magee, Hon. Chief Justice of the King's Bench, Sir Glenholme Falconbridge; Hon. Justice Hodgins. A number of other judges also declare that the Ontario Government is within its rights in passing Regulation 17.

I also wish to place on record the opinion of Senator Belcourt, who, I believe, is acting as counsel for those who are fighting against Regulation 17. I wish to quote his opinion, expressed at the first congress of the French-speaking people, held at Quebec in June, 1912. His opinion was delivered at a time when I think that hon. gentleman—and many of his friends in Ontario—had not been swept from sound constitutional grounds by the rising tide of fanaticism. His words have all the greater force because they were evidently uttered with keen regret. He said:

> The true fact, regrettable as it may be, is that for the federal domain and the provincial domain of Quebec, there is but the constitution which defines equality of both languages at the Dominion Parliament, at the Quebec Parliament, before the Federal tribunal or courts; and also before the courts of the province of Quebec is the French language on an equal footing with the English language.
>
> Section 133 of the British North America Act, which proclaims equal rights of the French and English before the Federal House, the Federal courts and before the Provincial House of Quebec and the provincial courts, and in section 93 of the same Act, which gives to each province the exclusive power to legislate in matters of education, constitute the sum total of the rights officially recognized in favour of the French Canadian people of the Dominion of Canada; these are the only rights recognized in favour of our race; they are the only rights which cannot be stripped from us without the intervention of the Imperial Parliament; they are the only rights which the constitution and the law formally guaranteed to us; they are the only rights which the law will permit us to exact and about which it gives us the means whereby to exact the same.

In the face of such a statement I do not see how any one can successfully contend that Regulation 17 is ultra vires of the province of Ontario.

I wish to deal a little more closely with Regulation 17. I do not wish to say that hon. gentlemen on the other side of the House who have spoken have said anything which they did not believe or honestly mean, but I am surprised at the statements that have been made, as they would seem to indicate that some hon. gentlemen do not understand the matter at all. What has Ontario

done in connection with this matter? In the first place it took into consideration that there were over 200,000 French Canadians in Ontario, and about a like number of Germans. Then by legislative Acts it proceeded to deal with these people in a generous manner. It appointed a commission to inquire into conditions existing in those parts of the province where the French and German elements were in great numbers. It made provision for educating French and German children through the medium of their mother tongue, though, strictly speaking, they were not entitled to that privilege under the Constitution. I maintain that Regulation 17, as it exists to-day, is not a restriction, but a concession, and I cannot say that too emphatically. It is not a restriction, but a concession, to the French Canadians in the province of Ontario, and to the German Canadians also. The provincial Government of Ontario says: We recognize the fact that there are in this province a number of French and German Canadians; so far as you French Canadians are concerned, we think you should have teachers who understand English as well as French; we will put our hands into the public treasury of Ontario and take out money that belongs not only to French Canadians, but to German Canadians and to all the people, and with that money we will establish and maintain training schools, in order that French teachers may qualify and do better work in the schools where both French and English are used. The provincial Government established four of these training schools. This Government, which has been characterized as oppressive and tyrannical, went further. It said: In order to induce you to take advantage of those schools we will pay your travelling expenses and your board while you are training there. This tyrannical and oppressive Government did not stop there. It went further and said: We recognize the fact that the teacher who can speak both languages should command a higher salary; that salary may be higher than you French Canadians could pay; we will therefore again put our hands into the public treasury and bonus these schools to assist in paying these teachers their salaries.

It strikes me that this Government, which is characterized as oppressive and tyrannical and as trying to blot out the French language in the province of Ontario, is adopting very peculiar methods for that end. The Government has gone to all this trouble, not to blot out the French language, but to assist the French in having their children taught their own language, and the English language as well.

Mr. PROULX: My hon. friend should know that he is exaggerating. The Government does not bonus the schools. Regulation 17 provides that the Government may help in a few cases where the school sections are too poor. It is only in such cases that assistance is given. There has not been a case of bonusing since 1912.

Mr. EDWARDS: I am not a lawyer, and I am very often at a loss to follow the turnings of a legal mind. Perhaps that is my fault. The hon. gentleman can call it what he likes—bonus, grant, or anything else. I say that there are bilingual schools in the province of Ontario whose expenses the Government of the province helps to pay by taking money out of the public treasury.

Mr. PROULX: Regulation 17 provides for that, but I do not know of one case where it has been done.

Mr. EDWARDS: It does not make any difference about Regulation 17. The fact remains that the Government of Ontario has established training schools at the public expense, and pays out of the public treasury the travelling expenses and board of teachers qualifying at those schools. The Ontario Government has given to those schools a special grant that no other schools in Ontario have received. That is a fact, and it is a fact that does not indicate that the Government of Ontario is oppressive or tyrannical, nor does it indicate any desire on their part to blot out the French language in that province. The Ontario Government goes further, and says: "French shall be made the language of instruction and communication in those schools in Form 1." If a French child is in Form 1, in which he will remain for two and a half to three years of his school course, that child shall be taught in the French language. The regulation does not stop there, and here I want the attention of the hon. member for Wright (Mr. Devlin), who intimated to the House that that ended the matter so far as that child was concerned. The hon. member was not correct in that statement. After those two and a half or three years, during which instruction and communication are carried on entirely in the French language, one hour a day, or more if the inspector thinks it desirable, is set apart for teaching

grammar, reading, and composition in the French language. I have been surprised that hon. gentlemen should take exception to that one hour a day, and that they should consider it an insufficient provision for the teaching of French. I have been a school teacher for many years, and I have never been able—and I do not believe any other teacher in Quebec, or Ontario, or anywhere else has ever been able—to devote one hour a day to any one subject. A school day consists of five actual teaching hours, and if you devote one hour a day to French you should surely give one hour a day to English. In that case you would have three hours left to devote to seven or eight other subjects. Hon. gentlemen do not know what they are speaking of when they refer to this one hour a day as a restriction. It is a concession; more than that, it is a liberal and generous concession. It is idle, it is folly, it is worse than folly, it is criminal—for hon. members to try to make the people of this country believe that they are being restricted, and that their language is being blotted out under the regulations that we have in the province of Ontario at the present time. When a French child of seven or eight years of age first goes to school he knows nothing of the English language, and the Government of Ontario recognizes that fact by providing instruction and communication in French for two and a half or three years. At the same time, the child hears his mother tongue spoken at home. Practically for the rest of his school life up to form 4, he receives instruction in French for one hour a day, or more if the inspector thinks it advisable. That hour is used in perfecting his knowledge of the French language; and, as I said before, he hears that language spoken at home. The result is that when that child leaves that separate school, he will have a knowledge of English and also a knowledge of his mother tongue. Will any man here seriously tell me that a child under those conditions, when he leaves that separate school, will have his mother tongue blotted out? It is utter nonsense to say anything of the kind, and I cannot understand how hon. gentlemen opposite who, I presume, have given this matter consideration, can make such a statement.

We have in the province of Ontario 269 bilingual schools, almost half of the school rooms being in the city of Ottawa. Those schools which have adopted and tried out Regulation 17 have, according to the reports of the inspectors, made satisfactory progress. The hon. member for Bonaventure (Mr. Marcil) says that this regulation is impracticable. How does he know that? Is he merely taking the statement of Sam Genest, of the city of Ottawa, that it is impracticable? Is he going to take the statements of men in this city who have never tried out the regulation, who have set the Government of Ontario at defiance, who say that they have never given and will never give the regulation a trial? It is idle to say that the regulation is impracticable when in other parts of the province it is working out satisfactorily. Here in the city of Ottawa it is impracticable because the people will not put it into practice.

Mr. MARCIL: Why, in Regulation 17, insert the words "when necessary"? Clause 4 reads:

> In schools where French has hitherto been a subject of study—

That is previous to 1912. Why is the word "hitherto" inserted? Why these two restrictions?

Mr. EDWARDS: Suppose you had a school fifteen miles out in the country. Last year there were no French children there. This year two or three families moved in. That would be a case where it would be necessary, where it had not been previously necessary. Is that clear? In regard to the word "hitherto," hon. gentlemen have stated—and I suppose they are honest in making the statement—that if new schools were to be established in a settlement where a number of French were, the children of those people could not have the French language taught. The right hon. leader of the Opposition made that statement; the hon. member for Bonaventure also made it. I say that those hon. gentlemen are absolutely wrong. If, for instance, some French settlers were to go into New Ontario and build a school, and if the French children were to go to that school, that is a case where it is necessary to adopt these bilingual regulations, and Regulation 17 steps in there and makes provision for those very changes. There is no "hitherto" in Regulation 17; it says very clearly:

> In the case of French-speaking pupils French may be used as the language of instruction and communication.

That does not apply only to the schools which are now in existence or those which

have existed; there is nothing to restrict it to the present or to the past; it applies just as much to schools that may be formed ten or fifteen years from now in New Ontario or in any other portions of the province as it applies to schools that exist or that have existed. Why, then, harp and quibble on the word "hitherto" if that is the case? I say that is the case. My statement is perhaps no better than that of hon. gentlemen who have stated the contrary, but at least I am honest in stating that is my opinion, and I believe I am absolutely right in my statement.

Mr. MARCIL: Seeing that there is divergence of opinion between the minority and the Government, does not the hon. member think that some means should be found of bringing the matter to arbitration and having the case heard over again? Does he not think that it is in the interest of Canada, and in particular of Ontario, that this difficulty should be removed if possible? If the minority is under a wrong impression, does he not think that it should be brought to understand the regulation?

Mr. EDWARDS: It will behoove my hon. friend and other members of this House to occupy their time in getting people in the city of Ottawa to try out this regulation rather than encourage them by speeches in their defiance of the laws of the province of Ontario. Give the regulation a trial. What right have I, what right has any member of this House, to say that the members of the Ontario Legislature passed that regulation without giving it their serious consideration? There were members there of both parties, of the French race as well as of the English race, and when this regulation was introduced as a resolution it passed without one dissentinent voice and went on record as the unanimous voice of the people of Ontario through their representatives in Parliament. Yet you ask me, because two or three fanatics and hare-brained senators over there—

Some hon. MEMBERS: Order.

Mr. DEPUTY SPEAKER: Order.

Mr. EDWARDS: In what respect am I not in order?

Mr. DEPUTY SPEAKER: Order. I must remind the hon. gentleman that it is not in order to speak disrespectfully of gentlemen who occupy seats in the Upper Chamber.

Mr. MARCIL: The hon. member may be in the Senate some day.

Mr. EDWARDS: If I ever do get there, I hope they will have a more select crowd than at present. I withdraw the word "harebrained." I may explain that the senator I had in mind was Senator Choquette, and surely no man of sane mind could act and speak as he does. I, as one from the province of Ontario, resent his actions and words in the Senate—while I have, of course, the greatest love and respect for the Senate of the Dominion of Canada.

Now, I wish to draw to the attention of the members of this House something that has not been previously drawn to their attention. Why is it that the Government of Ontario found it necessary to pass this Regulation 17? I have already given figures that indicate that in certain parts of the province the literacy of the people is not as high as it should be. Take any county in eastern Ontario—Prescott, Russell, Stormont or Glengarry. Following each census, the number of French Canadians in these counties has steadily increased. And what has happened in these counties? Here, let us say, is a school section in the county of Prescott, or Glengarry. A number of French Canadians come there and settle. After a time they become sixty per cent, seventy per cent, eighty per cent, of the population of that school section. It is but natural that they, the majority, should ask to have a French teacher, one of their own race, for that school. I say one would expect that, and nobody can find fault with them for it. And it is perhaps only natural that they should tell that French teacher: We want you to devote more time to French and less to English. As a matter of fact this is the condition that the commissioners have found, that in many of the schools of eastern Ontario less and less time was given to the study of English and more and more to the study of French, until there were actually schools in eastern Ontario where not one word of English was taught from morning until night. And the natural outcome of that was this: suppose that there are two or three English-speaking settlers in that section. They find themselves in a position where their children cannot get an English education. Many people so placed have been obliged, because of these intolerable conditions, to sell their farms at half or two-thirds their value and move to the West. I say that

has happened not in one or two cases but in hundreds of cases. That is the sort of thing that caused the Ontario Government to take action. They say in effect: we do not want to deny to the French Canadian his right to the French language; we will make provision for your child getting an education in the French language; but we insist that you shall not be in a position to drive English-speaking settlers out of any part of this province by denying them the right to the English language. And this, I say as a representative of Ontario, is right and just, and I am ready to stand by it. There is no attempt, no desire, on the part of the English-speaking people of the province of Ontario to deprive the French Canadians in this province of their use of their language. Let hon. gentlemen well consider the facts in this matter. During the first two and a half or three years of the child's school life he is taught in French exclusively; and during the remainder of the four or five years of his school life a part of his time is devoted to French. Average that and you will find that more than half the child's time is devoted exclusively to the French language.

Mr. MARCIL: Will the hon. member allow me to ask him a question for information? I understand that Dr. McKay, Superintendent of Education for Nova Scotia, says that the best way to carry on bilingual instruction is to have that instruction extend through the whole course, and not have it stop with the first form. What is the hon. member's opinion on that point?

Mr. EDWARDS: In that respect I cannot understand the position of hon. gentlemen opposite. They keep repeating that at the end of two and a half years the instruction in French stops. But it does not stop. There is direct and specific provisions for continuing the instruction in the French language—in grammar, reading, and composition—for an hour a day, or more if the inspector thinks it desirable.

Mr. MARCIL: But suppose that in that hour you have four subjects—you can only give ten or fifteen minutes to each. I was talking with an eminent educationist the other day who pointed out to me the disadvantage of this division of the time.

Mr. EDWARDS: It is plainly set forth what that one hour a day is to be devoted to—to grammar, reading, and composition in French. You cannot take any part of that hour to teach geography, arithmetic, or anything else; that hour is to be given to French. Does it make any difference to you or to me whether we use French or English to learn multiplication or division? I suppose that if you were told in French that the city of Quebec was on the Ottawa river, it would be just as much on the Ottawa river as if you had been told it in English. There is not only ample provision for safeguarding the French in the province of Ontario, but I say most emphatically, speaking as an old teacher, that there is generous provision in this regulation, and that, instead of this being a restriction, it is a generous concession to our French Canadian fellow citizens.

Under section 93 of the British North America Act, power is given to the Provincial Legislature to make laws relating to education, subject to limitations imposed by the first subsection, which reads as follows:

Nothing in any such law shall prejudicially affect any right or privilege with respect to denominational schools which any class of persons have by law in the province at the Union.

Whether or not the legislation is prejudicial should be determined in the first place by the people's representatives in the legislature; and if there are any who do not believe in that it should be determined finally by an appeal to the courts—to the Privy Council if necessary. Why introduce it in this House? Why not abide by the decision as the English-speaking Protestants in Ontario have in times past abided by decisions which were such as they did not like? For instance, after 1842, and from that time on, when there were forty-two representatives from Ontario and forty-two from Quebec in the United Parliament, the first act of the first Parliament was to appoint a committee on education, with fifteen from Quebec and eight from Ontario. They introduced the principle of separate schools. In 1848, 1850, 1852 and 1853 particularly, there were sweeping demands made and concessions granted in regard to the rights of Roman Catholics in the separate schools of Ontario.

Notwithstanding the fact that the majority of the members from the province of Ontario were opposed to this legislation, it was adopted, because there were sufficient members from the province of Quebec, with a few from Ontario, to put that legislation through in spite of the opposition of the majority of the Ontario mem-

bers. It went through against the wishes of the people of Ontario; but the people of Ontario have stood loyally by these Acts and have submitted. Why then should we have 200,000 of a certain class of people in this province undertaking to dictate to two and a half million people of the province of Ontario? I say further, that the only law of Upper Canada at the Union which conferred rights or privileges re denominational schools was the Statute 26 Victoria, chapter 5, which authorized the establishing of separate schools by Protestants, Roman Catholic and coloured people. Religious belief was recognized as a distinguishing feature, but language was not so recognized. Race was not recognized as a distinguishing feature, except in regard to the coloured people. From time to time attempts were made to secure more adequate teaching of English in the schools in Ontario, and on March 22, 1911, the Ontario Legislature passed a resolution which has already been put upon Hansard. Following this resolution, in June 1912, Regulation 17 was published. That was amplified or changed, although not materially, in 1913. No objection was made, either in 1912 or in 1913, to Regulation 17. It lay on the table of the House through the whole session; it was there and no objection was taken to it; and no person thought of such a thing, apparently, as bringing it to Ottawa and throwing it into the Federal arena. How is it that the feeling against Regulation 17 seems to come up just about this particular time? Why was it that the people allowed Regulation 17 to lie undisturbed through our session here in 1912-13? Where were the hon. member for Kamouraska, and the hon. member for Wright, that they did not get up? What was holding the member for Bonaventure to his seat, that he did not then rise and move this resolution? Why is it that in 1913 and 1914 we had no trouble about it? Why was there no discussion in 1914 and 1915? Why is it that it comes on now, in the session of 1915-16? Is it because there is an election coming on in the province of Quebec within a few days? Is that the reason?

An hon. MEMBER: No politics.

Mr. EDWARDS: No politics in this? No politics in this? I think I am right in saying that when the Government move to go into Supply and a member moves a resolution such as this, if the resolution carries in this House to-day, or whenever it is voted upon, this Government goes out of power. I may be right in my interpretation of the rules or I may not, but if I am right what does it mean? It means that this House unanimously agreed to an extension of one year in the life of this Parliament in order to avoid an election in war times. It means that hon. members are asking this House to vote for a resolution which will put the Government out of power and force an election on the country. And for what? For something that this Government has done? No, for something that the province of Ontario has or has not done. It is absolutely ridiculous, it should never have been brought into this House at this time, when it means just what I have said.

It is idle for hon. gentlemen opposite, or for hon. gentlemen on this side of the House to rise day after day and say we should bend all our energies to the winning of this war and forget our party politics and differences. I maintain that this is not an evidence of forgetting party differences; it is not an evidence of unity. I charge it against the right hon. gentleman who led the Liberal party in this country for twenty-eight years that he has backed up a resolution here put before this House, which, if it carries, will make unity in this Dominion of Canada from the Atlantic to the Pacific an absolute impossibility for months to come; which will divide the people of this country along racial lines as they have never been divided since Confederation. I say, in the face of that—and the right hon. gentleman must know that this is the case—that he is taking upon himself a responsibility which I should not want to take upon myself, in asking the House to support this resolution, and to tear this country to pieces along racial lines.

In 1896 the slogan of the Liberal party was "Hands off Manitoba." That was the battle cry of the right hon. gentleman and his party at that time. Should not that apply equally to the province of Ontario as to the province of Manitoba? Apparently the old battle cry still obtains so far as Manitoba is concerned, because in this resolution it is still "Hands off Manitoba," but "Hands on the province of Ontario." What right has the right hon. gentleman to ask members of this House to support a resolution of this kind, which is placing hands on Ontario? You can cover it with all the words and all the eloquence that you are capable of—and I place no limit on the matchless eloquence of the right hon. leader of the Opposition; I only regret that he possesses that

eloquence in a case like this, because of the power that it gives him—he may use all the eloquence he is capable of in saying that this is not an interference with Ontario; but if it is not an interference with the rights of Ontario, if it is not an admonition to the province of Ontario, if it is not offering advice to the province of Ontario, if it is not telling Ontario what it ought to do and what it has not done, and is not blaming that province for its action, then what in the name of heaven is it? Why is it brought in here? You may affirm as often and as strongly as you like that you believe in the provinces handling their own affairs, but if you believe in the provinces handling their own affairs, give evidence of that belief. You would have given better evidence of that belief by not bringing before this House such a resolution as this. The hon. member for South Renfrew (Mr. Graham) about a month ago made a speech in the city of Quebec in which he advised interference. If his speech meant anything at all it means this, that he was encouraging those who were back of this movement in their agitation, encouraging them to believe that they had a grievance, encouraging them to believe that if the Laurier Government was in power it would deal with this matter in a manner satisfactory to those who profess to have a grievance. The right hon. gentleman who leads the Opposition (Sir Wilfrid Laurier) stated, about the beginning of the war—and the sentence he used impressed itself upon my mind as I am sure it did upon the minds of the people throughout this country—that he did not desire to and he would not open the doors of office with a bloody key. That sentence echoed through this country from end to end. It was a very commendable sentence. But I ask him what kind of a key he is trying to use at the present time in order to open the doors of office? Is it a key bright with honour, or is it a key which will bring discredit on the career of the right hon. gentleman in years to come? The hon. member who just took his seat spoke of what the city of Toronto and the province of Ontario had done in recruiting. He credited the city of Toronto with having enlisted some 25,000 men. Let me tell the hon. gentleman that he can pretty nearly double that for the city of Toronto alone. Let me call attention to the words so eloquently and so justly spoken by the hon. member for Bonaventure (Mr. Marcil) of the people of the province of Ontario. He has said that on the battle line in Flanders, standing side by side with the soldiers of France, who, I venture to say, are making a record in this war before which the records of even Napoleon's veterans will sink into the shade, are thousands and thousands of the sons of the province of Ontario. Let me ask you, Sir, and you men who represent French constituencies, if when the province of Ontario has shown this disposition, this spirit, if to-day the blood of her heroic sons is being poured out on the plains of Flanders in the defence of France and Belgium and England, in this great struggle for freedom and justice, if they are to-day fighting alongside of France in this great war of liberty, surely hon. gentlemen opposite can trust the men who represent the people of Ontario to deal justly and fairly with the French children in that province. Are they giving proper recognition to what has been done by Ontario's sons on the battlefield, to the sacrifices they have made, when they come to this House and charge the people of the province of Ontario with being tyrannical and oppressive, and with tearing the tongues out of the mouths of French Canadian children, speaking figuratively, as the hon. member for Bonaventure did. Is that the sort of language which should be used towards a province which is making the sacrifices that Ontario is making? I am a humble son of that province, and as a native I am proud to say that it has been fair and just and equitable in all its dealings with the minority in the province, whether French, or German, or anything else, and in time to come it will manifest that same generous spirit which it has manifested in the past towards the people who compose the minority.

I ask the pardon of this House if I have transgressed too much upon its time, but I think I can place some of the blame on those hon. members who asked questions, proper questions, which I have endeavoured to answer, and I trust they will not find fault with me for doing so.

Mr. P. E. LAMARCHE (Nicolet): Mr. Speaker, it is not my intention to take up much of the time of this House in dealing with the resolution which has been so well and ably discussed by its mover and by hon. members on both sides of the House who have taken part in the debate. I feel that it is my duty, however, to state here, as fully as I can, the reasons why I give to this resolution my unqualified support.

The speaker who has just taken his seat, my hon. friend from Frontenac (Mr. Ed-

wards), opened his speech by saying that under the circumstances it would be very hard for him to be moderate, and he has, I think, given a fair illustration of the truth of his prophecy. Not only will I try to be moderate, but I assure you, Mr. Speaker, that I will be moderate. Surely my hon. friend from Frontenac will be astonished at the fact that we French Canadians have spoken in this debate moderately, because it is well recognized that in this squabble we are the under dog. Mr. Speaker, I have not devoted any part of my time to studying the different censuses, or to trying to assort the ignorance of this country into races, counties, and denominations, and that is the reason why I am not able at present to follow the figures given by my hon. friend from Frontenac. I remember, however—and I am sorry that I have not the documents in my hand—that when the statements just made before the House were published, not very long ago, the figures were repudiated by the proper department of the Quebec Legislature. I believe that some of the newspapers of this country will again repudiate the figures, since they have assumed more importance by being brought before this House. If I am unable to follow him in the statements he has made as to the proportions of ignorance or illiteracy, I believe that every one who has listened to the debate which has taken place on this resolution will admit that there are in this House to-day representatives of the French Canadian race who surely know how to read and write and talk, either in French or in English. Although I have differed on many questions from the right hon. leader of the Opposition, I was proud yesterday that one of my race could master the English language so well as to excite the admiration of both French and English in this country. Taking for granted, for the purposes of discussion, that the figures brought before the House by the hon. member for Frontenac are correct, what do they show? They do not show that the French Canadian people are not able to learn any subject of study as well as the English-speaking people. They do not prove that the French Canadian student cannot follow the courses in any school as well as his English competitor. They perhaps show that the results were due to non-attendance in the schools; and, if that is the case, the proper remedy is not to blot out French altogether from the schools, but to make necessary laws for compulsory education, and force every child in the province of Ontario to attend school; and the same thing might be suggested to the legislation of the province of Quebec.

My hon. friend from Frontenac was scandalized because such a question as this has been brought before this House because, he says, it is so remote from federal politics. He said it had been brought here only to serve the purposes of the political followers of certain leaders. I remember that only a few years ago certain questions were brought into the federal arena for discussion not only in this House but also before public opinion in this country. Certain questions were brought up, and I am told that to those questions many members on this side of the House, at least, owe their seats. Were those questions foreign to federal politics, or were they solely within the province of the local legislature? We all remember the famous question of the Ne Temere decree. We all remember the turmoil which was raised in certain parts of the Dominion on account of the presence of the right hon. leader of the Opposition at the Eucharistic Congress. We all remember that, Mr. Speaker; and can it be said to-day that those questions were not more foreign to the federal arena than the question of education?

The question of education is a question which is dealt with separately in the British North America Act. There are three sections dealing with legislative powers: One section, 91, which enumerates the different subjects upon which this Parliament has power to legislate; the second, section 92, which enumerates the different subjects over which the provincial legislatures are supreme, so far as legislative powers are concerned; and there is a special section, section 93, devoted to education. In that section it is provided that provincial legislatures are supreme, so far as education is concerned—supreme in the sense that the Federal Parliament cannot legislate except in an exceptional case; the case of a remedial Bill. But they can legislate only within certain limits. The subject is limited by a special proviso dealing with certain guarantees given to denominational creeds in this country. It is true that this guarantee contemplates religion. But I maintain that the French-Canadian Catholics have in that section certain rights as well as their English-speaking co-citizens of the Catholic creed.

If we go beyond the limit of Confederation, if we go back beyond the year 1867,

we find that education in Upper Canada was governed by the law of 1863, and that law of 1863 enabled the Catholics of this province to have their school matters regulated absolutely by a board of commissioners and by their own inspectors. The board of commissioners and inspectors were empowered to determine the kind of schools to be established and how those schools might be governed. They had the power also to say whether the schools would be totally English or totally French, or whether they would be French and English, that is, bilingual. That right existed before Confederation, and by section 93 of the British North America Act all these rights have been preserved. Therefore, I say that the legislation passed by the province of Ontario is not only unjust, not only oppressive, but is also ultra vires.

But it is not my intention to deal with that matter. The general terms in which this resolution has been worded allows, in my opinion, no serious objection to be taken as to the advisability of bringing it before the House. Its conclusion, if adopted, cannot be considered as binding in any way on the Legislature of Ontario. The subject-matter of the resolution is treated as a question of general policy in the light of British principles, which we all know, and which we all try to apply in this country as well as everywhere else. Furthermore, this resolution does not deal in any way with the constitutional or judicial aspects of the question. This enables me to say that even if all the contentions of our English-speaking friends in Ontario were maintained by the Judicial Committee of the Privy Council in England, this motion would still be in order, because it is the duty of this Parliament to discuss all matters which are connected with the good government and welfare of this country at large and with the welfare of any portion of it, because this Paraliament is the national forum where, naturally, according to British principles, these questions must be aired.

I am a lawyer by profession, and I have learned the principles of law in the office of a gentleman who occupies a seat on the treasury benches; I mean the hon the Postmaster General (Mr. Casgrain). I have not been able to follow him always in politics, but I have always thought that he was a very good lawyer, and I still think so. In order to illustrate that I am sincere, I am going to invoke his high authority on the very question that is before the House to-day. I would have preferred that the Postmaster General himself should have done it. He has very cleverly outlined the course which parliamentary procedure should take by attempting to show that this question should not come before this House, but in this case, Mr. Speaker, I must abide by the decision given by yourself yesterday, when you explained at length the doctrine applicable to such a case as this. I am at liberty to do so, especially as the Postmaster General has upheld your decision by his own vote. It having been settled by yourself, Mr. Speaker, and your position having practically been endorsed by the Postmaster General, that this is the proper place to discuss this question, and the Postmaster General having thought to put aside the question and not to deal with it upon its merits, it is my duty to the country at large to show what his position with regard to it is, lest some people might unjustly represent that the Postmaster General does not think the same way as we do upon it. I do not want him to suffer any harm from that.

5 p.m

I will quote the opinion of the Postmaster General on the question of schools in Ontario given to the New York Times Magazine of February 13, 1915. I will give an extract from a legal opinion written by him, because I say that the Postmaster General passes not only in Montreal, but all over Canada as a high authority on these questions:

> In Ontario, where there are 250,000 French Canadians, the difficulty is with the act of the provincial Legislature in hindering the teaching of French in some of the schools and actually prohibiting it in others.

I commend these words to the hon. member for Frontenac and the hon. member for Kingston:

> Until 1912 the schools in the French sections of Ontario were bilingual, as much attention being paid to French as to English. But in that year it was enacted that thereafter in all schools then established French should be used exclusively only for French children during the first two years of their schooling and that beyond that age the language in all forms should be English except for one hour a day.
>
> Now, since 1912, many new French Canadian settlements have been established in the province of Ontario, and of course they have their schools, but the provincial authorities have ruled that by the wording of an Act of 1912 no French whatever can be taught in the schools opened after that law went into effect.
>
> When France ceded Canada to Great Britain it was stipulated in the treaty between the two mother countries that the French in Canada should retain all their civil, religious, and social

rights. And, furthermore, the British North America Act, which is, in part, the Constitution of Canada, recognizes French as one of the two official languages of the country. So Ontario is violating both constitution and treaty. Two cases growing out of this very serious school disturbance, with its incidental strikes of teachers and pupils and protests of parents, are now pending in the courts and will be taken to the Privy Council of England for settlement. I believe that the final ruling will be in favour of the French Canadians, for the Privy Council has never failed to uphold our rights.

I agree entirely with the Postmaster General in the opinion he gave as a lawyer outside of this House, but I cannot agree with him in the opinion he gives as a politician sitting on the treasury benches.

Mr. CASGRAIN: What my hon. friend read from was an alleged interview with me in the New York Times, and it was not at all a legal opinion that I gave at that time. I may tell my hon. friend and this House that what I said was not correctly reported in the New York Times, although a good deal of what appeared in that interview I did say.

Mr. PUGSLEY: Perhaps the minister would state in what respect the interview was incorrect?

Mr. CASGRAIN: I certainly will. I gave the reporter of the New York Times the contentions of the French Canadians in Ontario, on the constitutional rights in the matter of the French language, and not my own contentions on the question.

Mr. LAMARCHE: According to the Rules of the House I have to accept the explanation given by the minister, and I can only regret that he has waited so long to give it. He has allowed this country and his compatriots to be guided by what I still consider the good legal opinion circulated by the New York Times. My hon. friend says he was misquoted. This interview seems to have been well prepared; it is even accompanied by a very good picture of the hon. gentleman. Unless he thinks that the photograph is not as good as the original, I am sure he will not deny that part of the interview.

As a consequence of the enactment of Regulation 17 a great deal of discussion has taken place in this country, and recently a petition was sent to the Executive of Parliament asking the Governor General in Council to grant disallowance of a statute which elevated to the dignity of the law Regulation 17. I have not studied very carefully the report laid on the Table by the hon. Minister of Justice; but from what I can gather at a first perusal, some of his conclusions seem to me extraordinary. A great part of the report is taken up with allegations and arguments to the effect that this Government can not grant disallowance of a regulation, but only of a statute. We knew that; the people of Canada knew that; the 500,000 petitioners knew it; and the best evidence of what I say is that they never asked for it. What they asked was that the statute elevating Regulation 17 to the dignity of a law be disallowed. I agree with the right hon. leader of the Opposition that in every case disallowance is ineffective in practice, inasmuch as the Government which has passed the law complained of can the very next day pass a similar one; nevertheless, I wish to go on record that had I been a minister of the Crown I should have voted for disallowance. The reasons given by the Minister of Justice for not granting disallowance can be put under two heads: first, a law can hardly be disallowed that is within the legislative power of a province, and this law is alleged and seems to be within the rights of the province of Ontario, dealing as it does with education; secondly, if this law is ultra vires, the proper remedy is not to seek disallowance, but to apply to the courts. As a consequence, a law being either intra vires or ultra vires, the fathers of Confederation have put this provision in the Act for no purpose. I do not believe that that explanation will be accepted in toto by the population of Canada, or at least by the numerous petitioners who have petitioned the Government. However, I do not wish to deal with this point any longer. The question is between the Executive and the petitioners, and they will probably have an opportunity of settling it one day or the other.

I was very pleased yesterday at the clever and admirable speech of the hon. member for Kingston (Mr. Nickle). He and I do not always see eye to eye, particularly in this case. But I have the greatest respect for him, and for two reasons: first, because in this Parliament he always discusses any kind of question in a very moderate tone and on a very high plane; secondly, because I know—and I am sure in this case as well as in many others—that the bases of his opinions are his personal convictions, and not mere petty questions of politics. On several occasions,

and particularly on one occasion, he has shown that when he had to choose between following his leader and following his personal convictions, he has followed his personal convictions, and I have great admiration for a man who will do that. That is why, in dealing with Regulation 17, I will take into serious consideration the arguments set forth by my hon. friend from Kingston, and I will try as well as I can to prove that his contentions are not quite correct, but that the contention of the hon. member for Kamouraska, of the right hon. leader of the Opposition, and of those who supported them on this question, is the correct one. My hon. friend from Kingston has a different explanation from ours of the word "hitherto." I will not delve into dictionaries; I will not consult eminent authorities; I will not even quote the opinions of able lawyers in case such opinions may be contradicted later on; but I will give to this regulation the practical interpretation which is given to it by the Department of Education of Ontario. Although the interpretation of my hon. friend from Kingston is very generous, and although the interpretation sometimes given by Mr. Ferguson seems to be very generous, when we look only at the interpretation, yet, if any of my compatriots dare to follow those interpretations, they find that next day they are brought before a court of law, fined, and threatened with imprisonment. I believe this inclines them to take the other interpretation and to endeavour to live in peace at any cost.

In the city of Windsor, in the province of Ontario, a school was established long before the enactment of Regulation 17. Later on, after 1912, after the passing of that regulation, two new schools were established. According to our interpretation of the word "hitherto," the school established previous to the enactment of the regulation had a right to be classed as an English-French school and to have French taught to the pupils in it; but the new schools established after the passing of the regulation could not be granted the same privilege. I will read a copy of the resolution which was passed by the Roman Catholic School Board of the city of Windsor and which was sent to the principal of the St. Edmond and St. Francis schools:

Moved by A. Langlois, seconded by R. Langlois:

That a Sister be engaged to teach the French language exclusively in St. Edmond and St. Francis schools, the said teacher to be a French-Canadian and to hold a first class teaching certificate and capable of teaching the French language in all its branches. That she is to teach the said language one hour in each class except the entrance class each day at St. Edmond and half an hour each day in all classes at St. Francis school. Salary at $350 per annum to commence at date of service.

Carried unanimously.

Windsor, June 1, 1914.

The following is the answer received by the secretary-treasurer of the Separate School Board of Windsor from Mr. Colquhoun, Deputy Minister of Education of Ontario:

Toronto, August 5, 1914.

Sir:

I am directed by the Minister of Education to say that he understands that your Board proposes to introduce the teaching of French into the St. Edmond and St. Francis Separate Schools. The minister desires me to inquire whether this report is correct.

I have the honour to be, sir,
Your obedient servant,
(Sgd.) A. H. U. Colquhoun,
Deputy Minister of Education.

D. Gourd, Esq.,
Secretary-Treasurer, Separate School Board,
Windsor, Ontario.

Now the answer sent to the Deputy Minister of Education:

Windsor, Ont.,
August 8, 1914.

To the Deputy Minister of Education,
Toronto, Ont.

Dear Sir:

Your letter of August 5th received, and contents noted. In reply would beg to say that we intend to introduce French in the St. Edmond and St. Francis schools, and you will find a copy of a resolution passed at a meeting held on June 1, 1914.

In your letter you ask me a question which I am answering you and I am asking you a question which I would like answered. From what source did you get this information?

Awaiting your reply on same by return mail, I have the honour to be, sir,

Your obedient servant,
(Sgd.) D. Gourd,
Sec.-Treas. R.C. S.S. Board, of the city of Windsor.

Follows a letter dated October 31, 1914, sent by the Deputy Minister of Education:

Toronto, October 31, 1914.

Sir:

I am directed by the Minister of Education to acknowledge the receipt of your letter of August 8th, and to say in reply that the subject has been under his careful consideration, and that he finds that the Regulations of the Department of Education do not allow French to be taught as a subject of study in any of the Separate schools in the city of Windsor, with the exception of the school of the Sacred Heart.—

That was the school that was established before the regulation was passed.

—You will accordingly, within a reasonable time, make such changes in the organization of your school as may be found necessary under this instruction.

I have the honour to be, sir,
Your obedient servant,
(Sgd.) A. H. U. Colquhoun,
Deputy Minister of Education.

My hon. friend the member for Kingston will probably think that one school was within one section and that the two others were within another section, and that according to his interpretation of the regulation as given yesterday, one would have been regulated by Regulation 15 and the two others by Regulation 17; but that is not the case, because the city of Windsor, where the three schools have been established, forms only one section, and these schools are within the limits of the same section. Therefore this is a practical application of the word "hitherto." The first school continues to have French taught in it, because, according to our interpretation and the interpretation of the Minister of Education of Ontario, it was established before 1912, and the two others, although within the same section and supported by the same ratepayers, are refused the same privilege, only because, according to this interpretation which, I believe, is the right one, they have been established after the passing of the regulation. This example shows that the interpretation given before this House by my hon. friend—was given probably to calm the demands of the French Canadians, but is not in accord with the facts.

Now, a rapid review of that Regulation 17 will reveal the fact that it changes altogether the system of education and is detrimental to our interests; and, as I have already said, this is the proper place to discuss this matter. Some of my English-speaking friends on this side of the House have asked me: "What interest do you have to bring this question before the House? Do you think it will settle the question?" My answer is very simple. We are so convinced that this measure is unjust, oppressive and illegal on the face of it, that it is to our interest to show it to the country at large; and those who passed that regulation are apparently so convinced of the same thing that they are interested in not letting the public at large know it; and the reason why we bring this subject before this House is to inform the public of this country from the Atlantic to the Pacific—moreover, the world at large, if the world at large take an interest in this local matter—that of all the possessions of the British Empire the province of Ontario is the place where the language of the conquered is the least respected. When this thing is known in the country, when it is known that French, the language of the pioneers of Canada, the language of those who founded this country, who won it from the wilds, and who have preserved it not only for themselves, but for Canadians in the wide sense of the word—when it is known that this language has not the same rights and privileges in this country as Welsh has in Wales, as French has in Mauritius, as the Dutch language has in South Africa, notwithstanding the bloody war that took place there fourteen years ago, perhaps public opinion will have something to say about it, and perhaps men will be able to get together from the four corners of this country and ask that justice be rendered to whom justice is due.

Regulation 17 begins as follows:

English-French Public and Separate Schools.
Circular of Instruction.

There are only two classes of primary schools in Ontario—public schools and separate schools; but, for convenience of reference, the term English-French is applied to those schools of each class annually designated by the minister for inspection as provided in 5 below and in which French is a language of instruction and communication as limited in 3 (1) below.

Therefore, Mr. Speaker, the only English-French schools are those designated for us by the Minister of Education, and even these are limited by clauses to which I will now refer. The French language, by Regulation 17, is treated from two different points of view: First, as the language of instruction and communication; that is, the language to be used in teaching geography, arithmetic, catechism, or any other matter; and secondly, as a subject of study. The French language as the language of communication between the pupil and the teacher is absolutely abolished, except as regards the child who is beginning his schooling, and who is absolutely unable to understand anything but the language of his mother, the French language. As soon as this child has been able to gather the principle of the English language, he ceases to benefit from the privilege of having his tuition given in his mother tongue. This is the "generous" part of Regulation 17, as it affects my compatriots of Ontario. As a subject of study, this regulation deals with the French language differently. It puts French on the same footing as geography, arithmetic, or any other subject

of study in the class. But where this is so permitted, the time assigned to it is one hour. But the inspector can, without giving any reason, and whenever he chooses, reduce that hour to three minutes or to one minute.

This "privilege," as it is called, is limited in another respect. Article 4 of this regulation provides:

> In schools where French has hitherto been a subject of study, the public or the separate school board, as the case may be, may provide, under the following conditions, for instruction in French, reading, grammar, and composition in Form I to IV. (See also provision for form V, public school regulation 14 (5) addition to the subjects prescribed for the public or separate schools.

I have already given the interpretation, which I think is the right interpretation, to this clause, an interpretation sustained by the practical interpretation given by Mr. Colquhoun in the Windsor case. And in the face of these things I can only conclude, and I state without fear of contradiction, that the privilege of having French taught as the subject of study can exist only in the schools where French was taught before the regulation was passed. My hon. friend from Frontenac has cited Regulation 15. That regulation provides for the teaching of German and French. But my contention is that, since the passing of Regulation 17, although the other regulation remains on the statute-book, one part of it at least has become inoperative, that part dealing with the French language. The only part of Regulation 15 which is still in force is the part which deals with German. We are to-day confronted with this state of things. Around Verdun, in France, on the one side people talking the German language are directing shells and gas against another people whose language is French. And to-day in this country, or at least in Ontario, we find privileges given to the language of the Huns which are refused to the language of those who are defending the altars of civilization.

I believe that no matter how you twist this regulation, no matter how cleverly you put it, you can come to only one conclusion, that its object is the gradual proscription of the French language in the province of Ontario. The hon. member for Frontenac calls it a concession, and says that the French Canadians never had as many privileges as those contained in Regulation 17. On the other hand, it is pointed out that there are people in Ontario who think that too much is given to the French Canadians by this regulation. Then the matter can be easily settled. If, on the one hand, it is thought that the French Canadians get too much; if, on the other hand, the French Canadians do not like this regulation, do not care for this present from the Greeks, the matter can be easily settled by abolishing the regulation altogether, and then both sides—call them extremists if you like—will be satisfied. If you refuse to do that it is because you do not believe that you have given to the French a concession. The hon. member for Frontenac has a very peculiar way of dealing with a problem of this kind. On the one hand he says: "This state of things was arrived at after proper resolutions had been passed in the Legislature of Ontario, and nobody made any complaint. even the representatives of your race did not make any complaint; therefore, you have no right to come and say that this regulation is oppressive or abusive." On the other hand, after dealing with the matter from other aspects, he comes back to the same subject, and, notwithstanding his former statements, says: "Why are you condemning this? You do not know its effect; you have not tried it out." If we try it out we accept it. If the hon. member for Frontenac claims that we have accepted a state of things by reason of silence, if we try it out he surely will come and say: "Not only have you accepted it, silently, by not raising a voice against it, but you have accepted it practically, because you have used it."

I was very glad to hear the Prime Minister yesterday say that if ever there was a motion proposing interference by the Federal Government in the provincial politics of the province of Quebec, he would be the first to raise his voice in protest against it. I believe, however, that he will never be put to that test, because in the province of Quebec the minority, which is English-speaking, is our star witness in this case. That minority is in a position to teach the people of Canada at large that the French Canadian majority knows something about justice, about tolerance, and about equity.

It has been insinuated, even affirmed, that the French Canadian population contain a greater proportion of illiterates than any other race in Canada. I have always thought that, if we know how to apply justice, if we know how to deal with questions of that kind in such a way as to deserve the compliment of being the province which

has understood better than any other the spirit of the Canadian Confederation, possibly it was because many of our men had given some time to the study of the treaties and to the study of our constitution and of such books as would instruct them in the science of justice. But even if we have to admit that there are among us so great a number of illiterates, compliment my race all the more, because then it has not acquired that science of justice by tuition or by education, but has possessed it naturally from birth.

The best test to apply to this regulation is to transpose it. I would recommend every member from Ontario who does not share my views to take a copy of this regulation to-night and to make just a few amendments in it. First, instead of Ontario legislation, make it Quebec legislation, and instead of the word "French" insert the word "English," and read it. If you are satisfied after perusing only once the regulation so amended—, I will be very much surprised.

Mr. BRODER: Have you any bilingual schools in Quebec?

Mr. LAMARCHE: Yes, sir. We have bilingual schools; we have bilingual statesmen; we have bilingual homes; and we have bilingual justice. Is the abolition of the French language useful, necessary, or desirable in any way in the interest of the welfare of this Dominion? For there must be a reason for gradually abolishing the French language, as is proposed. This reason I will try to find. Is it the French language that is objectionable? I do not believe so. The time would not be well chosen to object to such a language as the French language. At present the whole world is taking its hat off to the French nation. The French language is adaptable, I believe, to the study of literature, of science, of art, of any other subject of study. The French language is spoken the world over. It is spoken in the highest courts of the world. It is recognized as an accomplishment for an educated man to be able to talk French. It is spoken by the King of England; it is spoken in the palace of the King of England; it is spoken at Rideau Hall. We do not need to be ashamed of the French language, Mr. Speaker. At present we are engaged in a great struggle, a war between Germany and her Allies on one side, all speaking different languages, and, on the other side, five or six other nations speaking other languages. I hope that the treaty of peace will be signed shortly. I hope it will be signed in the city of Berlin. But I can assure you that, no matter where it is signed, it is going to be drafted in the French language; and, no matter what adjustments appear in that treaty, those who will have to give something or those who will have to receive something, in either money, property or liberties, will find it, if they know French, in the French language of the treaty. If they do not know French, they will have to wait a few hours until somebody else translates it into some other language. If it is not the French language which is objectionable, is it because in this country French is a political obstacle?—and in using the word "political" I use it in the large sense of the word, that is, so far as the relations of this country to other countries are concerned. I do not believe so, and I do not need to delay very long in dealing with this aspect of the question. One has only to read the history of British rule in Canada. The French Canadians have always been loyal. They have always been ready to repel the invader. They have always been ready to refuse offers from wealthy neighbours, even when some others were ready to accept them. Mr. Speaker, the children who are asking the Government of Ontario to-day to let them speak their mother tongue, and to let them be educated in their mother tongue, are the sons of a great nation. Without their ancestors—and I state this without fear of contradiction—without their ancestors of French origin, instead of paying our taxes into the Canadian treasury, you and I would be paying taxes into the treasury at Washington.

Mr. HUGH CLARK: Would you have had bilingual schools then?

Mr. LAMARCHE: I can answer the question of my hon. friend. I do not know the laws of the United States, but I have been in certain parts of that country and I know that there they give privileges to the French schools which are denied to-day by the province of Ontario, and that notwithstanding the fact that the French were not the founders of the United States. The authority for the statement I make is not commonly known. The statement came from the lips, or rather from the pen of Sir Guy Carleton, Governor of Canada for many years. He stated that without the French Canadians

it would have been utterly impossible to keep this Dominion under the British Crown. Those who have read history know that. It has been written not only in French books, but in all Canadian histories worthy of the name. We pride ourselves upon it. We do not like to brag about it too often; but under circumstances like these I believe it is not only our right but our bounden duty to do so.

Is it to perfect the system of education that the regulation was passed? I always thought that the possession of two languages was an achievement compared with the possession of only one, and until it is proven that to learn French is an absolute obstacle to the acquisition of a knowledge of English I will maintain that the striking out of one of the two languages, instead of perfecting the system of education, is handicapping it. I will go further. It is a well known principle of pedagogy that in order to get the best results in a school it is not sufficient to pour instruction into the mind of a pupil. Some other things must be done. The teacher must first ascertain the adaptability of that child to receive instruction, and the adaptability of the child to receive instruction is always found in following the law of nature, in following racial inclinations. That principle has been laid down by men of experience and of world-wide fame. It is interesting to read a page from the works of perhaps one of the greatest philosophers of the world, and surely one of the greatest philosophers of the English nation—Herbert Spencer. I do not think that Herbert Spencer could be prejudiced by this school question. He was dead long before this by-law was passed. Here is what he says:

> The education of the child must accord both in mode and arrangement with the education of mankind as considered historically; or in other words, the genesis of knowledge in the individual must follow the same course as the genesis of knowledge in the race. In support of this doctrine two reasons may be assigned, either of them sufficient to establish it. One is deducible from the law of hereditary transmission as considered in its wider consequences. For if it be true that men exhibit likeness to ancestry both in aspect and character,—if, passing from individual cases in which the traits of many dead ancestors mixing with those of a few living ones greatly obscure the law, we turn to national types, and remark how the contrasts between them are persistent from age to age—if we remember that these respective types came from a common stock, and that hence the present marked differences between them must have arisen from the action of modifying circumstances upon successive generations who severally transmitted the accumulated effects to their descendants—if we find the differences to be now organic, so that the French child grows into a French man even when brought up among strangers—and if the general fact thus illustrated is true of the whole nature, intellect inclusive; then it follows that if there be an order in which the human race has mastered its various kinds of knowledge, there will arise in every child an aptitude to acquire these kinds of knowledge in the same order. So that even were the order intrinsically indifferent, it would facilitate education to lead the individual mind through the steps traversed by the general mind. But the order is not intrinsically indifferent; and hence the fundamental reason why education should be a repetition of civilisation in little. It is alike provable that the historical sequence was, in its main outlines, a necessary one; and that the causes which determined it apply to the child as to the race.

At six o'clock House took recess.

The House resumed at eight o'clock.

Mr. LAMARCHE: Mr. Speaker, when the House rose at six o'clock, I was trying to demonstrate that any attempt to abolish the French language, gradually or otherwise, could not be justified on the ground that the language itself is objectionable; furthermore, that its abolition could not be urged because it is a political obstacle in this country, and also that such a policy could not be invoked in the interest of making the system of education more perfect. Is assimilation in the interest of harmony in any country in the world and, in particular, in this country? International law has no fixed code but we find its principles in the different authors, in the reports of different conferences, and in the meetings of great men from different nations who from time to time gather around the same table and discuss dispassionately the causes of international trouble and also the means of preventing it. The last movement in that respect emanates from The Hague and it was inaugurated not before but since the war began. I have received, in my capacity of secretary of the Canadian branch of the Inter-Parliamentary Union, several documents of great importance. The last that I have received is a document entitled:

> Durable Peace—Official Commentaries on the Minimum Programme.

I believe some explanations are necessary to indicate to this House what the purpose of this association is. Since the beginning of the war, many peace articles have appeared in the press and in the Parliaments of belligerent nations, as well as in those of neutral nations, talks about peace have been heard. We have also read reports of discussions as to what should be the treaty

of peace at the end of this war. The members of this Association are representative of most of the civilized nations of the earth. I will tell you what nationalities are represented officially or otherwise, on the International Board of this Association. There are the United States of America, Germany, Russia, Austria, Belgium, Brazil, Canada, Denmark, Spain, France, Great Britain, Greece, Guatemala, Haiti, Hungary, Italy, Mexico, Norway, the Netherlands, Portugal, Roumania, Sweden, Switzerland, Turkey, Uruguay and Venezuela. I am translating because this document is written in French, that being the diplomatic language of the world. These people got together and worked out what is called the "Programme Minimum" containing five different propositions. These people maintain that if the treaty of peace which is to be signed at the end of this war is to provide for a durable peace and not a temporary one, no matter what the different clauses are, at least these five conditions have to be embodied in it. What is the first article? I will translate:

> The states shall guarantee the nationalities comprised within the limits of their territory civil equality, religious liberty and the free usage of their language.

And the free usage of their language. In the minds of these great men, of these unprejudiced patriots of different countries, the free usage of their language is to be a source of peace, harmony and happiness amongst the nations and amongst the different nationalities composing those nations. They also believe that the absence of these guarantees, or the non-respect of these guarantees, would be a source of trouble, discord and war. Are we in this country to be deaf to such appeals? I was glad this afternoon to hear one of the speakers who preceded me quote certain extracts showing that England and France had made proposals for the adoption of both the English and French languages in both countries as soon as possible. That idea is only in harmony with the wishes of this conference which is representative of all nationalities and all civilized countries. If that is true of any national minority in any country, I believe that here in this country we have more than one reason to adopt this principle of international law as developed in later years. We have other reasons because here not only would it be in the interest of peace and harmony, not only would it prevent discord and trouble and ill-feeling, but it would be the best way for the English majority to show that they not only ruled the country but that they appreciated what was in it. It would also enable the English majority to be in harmony with all English majorities throughout the whole Empire. After listening to this argument, moderately presented to this House and submitted to the public opinion of this country, I believe that the province of Ontario should hestitate before deciding to continue to be the exception in the British Empire and that it will readily abide by this principle of international law, of natural law, of British fair play, and will do its bit towards harmony in this country just as in the province of Quebec we have always done our bit to promote harmony amongst the people of our Dominion.

If I have touched upon all these subjects, if I have brought forward all these reasons, I do not wish to have anybody believe that we French Canadians in this country think that this Regulation 17 is the last stroke at our language in this country, that our language will perish and that our national identity will disappear. I am confident that the French language is in this country to stay forever. Why? No matter how many laws are passed by Provincial Legislatures, no matter how many regulations are passed, I maintain that you cannot turn a Frenchman into an Englishman by process of legislation. I maintain that you cannot muffle a whole race by statute and that you cannot gag a rising generation by enacting a regulation on education—why? Simply because nature is stronger than the will of man. This is a natural law. We follow the law of nature, even when we do not think it; the work is being done even without an effort. Having read the history of this country and learned that at the Conquest there were in this country only 60,000 French-speaking citizens, and remembering the many efforts that have been made to have the French language disappear from our laws and from our practice, who can say with any appearance of sense, now that we are a people of two million and a half, that a by-law will endanger our national identity! No, Mr. Speaker, no man believes that. But this by-law does render less happy the lives of a number of law-abiding citizens of this country, and when you take away happiness from a portion of the people you are taking it away from the country at large, and you are doing an unpatriotic act. I believe that the more obstacles you put in

the way of the the expansion of a nation, or in the way of its retaining its identity, the more you assure to it its perpetuation. This has been shown in the history of most nations where this problem has been dealt with. Do you want an example? Centuries ago descendants from the same stock, men of French origin, came into the new world. Part of them went towards what is now called Canada; the other part towards what is now called New Orleans. Both these parties were surrounded later on by an Anglo-Saxon population, and both encountered the same dangers of assimilation. And what was the result? In New Orleans the French language and the French identity of the early French settlers has practically disappeared. On the other hand, in this country the French language and the French identity of the first settlers is stronger and more robust than it was at the time of the foundation of this country. What is the reason for this? It is because the settlers in New Orleans had no obstacles in their way, and because our national life has found the food that has given it its robustness and its strength. From the time of the Conquest the French language has been preserved, only because those who possessed and loved it have fought tooth and nail to keep it intact for themselves and their children.

Some of our Ontario friends say that English ought to be known by every person in this Dominion, and I entirely agree with that. Let me in a few words state our position in regard to the English and French languages. We consider a French education as a duty, and the acquisition of the English language as a necessity. We will not budge from our duty; we will remain Frenchmen. But we realize the necessity of a knowledge of English in all walks of life. The lack of it would be a serious handicap in the race for material success in life, not only in this country, but on the whole continent of America. We want every one of our children to know as much as possible of the beautiful English language. But we also want the country at large to know that, no matter what it costs, we will learn and keep learning the language that we have inherited from our fathers and mothers. Some speaker said yesterday: In matters of education, hands off Ontario, hands off Manitoba. I agree with that. But the legislature should also preserve untrammelled the rights of the subjects of a British country, no matter of what origin they are. We who are in possession of the French language, who consider it a treasure from the Atlantic to the Pacific, say to every one that the possession of that language is not limited by physical or by legal boundaries. We who are French Canadians also say: Hands off the French language.

A great deal has been said about this matter having been brought up as a political question. I am not here to speak for any one except myself. As far as I am concerned I would consider it a crime for any one to mix with the petty questions of politics a cause which to every French Canadian is sacred. From the high plane of the speeches that have been delivered in this House yesterday and to-day, I do not believe it has been in the mind of any one in this House to make this a question of politics. Personally I have been taken to task by certain papers that I respect in our sister province, and whose main asset seems to be the great imagination of their editors. They have said that I had a resolution ready to put before the House, and that this was done because the leader of the Opposition was forced by a wing of his party to abstain from moving one, and that I was going to talk as the agent of the leader of the Opposition, and as the agent of the Liberal party. Let me tell you, Sir, that I am no more the agent of the Liberal party than I am a piece of the Tory machine. I am an Independent in this House, and I am an Independent because these are my convictions, and because this was my programme when I faced my electorate. I was elected here on condition that I would judge every question on its merits, and vote in favour of any motion, Bill or measure of any kind coming from the Liberal party, if it was good, and against any motion, Bill or measure coming from the Conservative party if I considered it bad. The small place I occupy in this House as representative of the county of Nicolet belongs to me. My vote also belongs to me, and I shall use both the way I please, without consulting any one. My judges will be the people whom I represent, the people of my race, and the public opinion of Canada. I am satisfied with them as judges, no matter how my words may be construed in this House to-night. But if I am an Independent, whether I support or combat any motion, measure or Bill coming from the Liberal or Conservative party, I have no hesitation in declaring that my hand is extended loyally to any public man in this House who has the

strength and the courage to get upon his feet and defend his race and his language, and that my hand shall be withdrawn the moment I discover that others are ready to betray their race and their language. That is my position so far as politics are concerned.

Before closing my speech, I wish frankly and sincerely to make a moderate but forceful appeal—first, to my compatriots both on your left and on your right, Mr. Speaker, and ask them by their votes, if not by their speeches, to show that they sympathize with those of their own race who are suffering. Only a few days ago I received a letter, which cannot be read without the greatest emotion, from one of the members of this House who unfortunately is too sick to come here. I refer to our friend the hon. member for Joliette (Mr. Guilbault). Our poor friend has no longer the use of his limbs, but his big heart is strong enough to drag his sick body into this House in order that he may vote in favour of the resolution of my hon. friend from Kamouraska. He begged me in his letter to make arrangements to have him carried here even if the consequences should be fatal. I went to see him in the hospital and endeavoured to dissuade him from that idea, but I promised him I would be his interpreter in this House in favour of the resolution when he wanted to support by his vote. I am telling you this, Sir, because I want to commend this example of one of my compatriots to my other compatriots in this House, especially to those who perhaps are inclined to be weak-kneed. This is an example that they ought to follow, and when they hear that a man who is not physically strong enough to stand up has the courage to ask to be carried here in order to give his vote in support of the resolution, those who are of more robust health will surely do no less.

Since yesterady it has been gossiped around the House that the great objection to voting for this resolution on the part of those who are sincere supporters of the Government, is that the resolution is not in the proper form, because, being moved as an amendment to the motion to go into Supply, it may be considered as a motion of non-confidence in the Government. So far as I am concerned, even if that were the case, I would sooner vote non-confidence in any government than vote non-confidence in the French language. But it is not the case, and those interested will find the proper authorities in Hansard of 1900, under date of the 13th of March, page 1824, and also in Hansard of 1893, in the debate of the 21st of March, page 2401.

I wish also to make an appeal to all generous English-speaking members of this House, whether on the Conservative side or on the Liberal side, representing any of the provinces of Canada, to show their broad-mindedness towards the French minority by supporting this resolution. I make a special appeal to those English-speaking members who owe their seats in this House to a generous French-Canadian majority.

In a few months from now we shall be called upon to celebrate the fiftieth anniversary of Confederation. The buildings erected for the purpose of enabling the nation to send its representatives there to debate on serious questions has been destroyed. Let us not permit the country or the world to understand that the same disaster has happened to the principles laid down by the Fathers of Confederation.

Mr. H. B. MORPHY (North Perth): Mr. Speaker, on the understanding that this debate is to be brought to a close to-night, I will not take up the time of the House for more than a few minutes.

The resolution under discussion is the result of an agitation outside of this House, an agitation which has caused a great deal of bitter feeling in the province of Quebec, and which, from its inception, as judged by the platform utterances and the newspaper comments, was in pursuance of a principle which it was contended was based upon a legal right which the French-Canadian people of Ontario claimed were being taken away from them. Although the agitation was promoted and fanned throughout the country upon that claim, I notice that the resolution itself makes no claim to a legal right; but that it is absolutely admitted by the speakers on both sides of the House that there can be no just claim by the French Canadian people of Ontario to any legal right to the use of their language in the school system of that province. That being so, we have made it clear that those agitators outside of the House who have been pretending that there has been a deprivation of right have not stated the fact; and up to this time in this debate no speaker has contended that such a right exists, but every one who has spoken of it has admitted that there is no such right. The next thing that we have made

clear is that the resolution is brought into this House, the Federal Parliament of this country, by hon. gentlemen opposite, and is fathered by the right hon. leader of the Opposition under circumstances in which the admission is made by that right hon. gentleman and all his followers that this Parliament cannot legislate upon the matter in question.

Next, the assertion is made that what the resolution means is that there is a natural right to a privilege of which the French people of Ontario have been deprived by the legislature of that province. But is seems somewhat strange to me that, where there was no right before—no legal right, no legal privilege—enjoyed by the French people of the province of Ontario, to be taught in their own language in the schools, that the Legislature of Ontario having officially recognized the French, having put it on the statute-book that it should be recognized where it was not recognized before, this country is to have the spectacle of a party being pushed in here by an outside agitation and coming to this House asking for a declaration that a natural right is violated. Assuming the natural right, that natural right can be claimed by every nationality that speaks a foreign tongue. But I wish to say to hon. gentlemen opposite—and I do not say it in any scolding way, but simply as a matter of opinion—it has been said before in this House, and I wish to repeat it—that, in my opinion, the forum for the discussion of this particular resolution is not here. On the admission made, it is not here. The forum for the discussion of this resolution is in the city of Toronto and before the Legislative Assembly there, that legislature which, with its English and its French members, both Tory and Grit, unanimously passed a resolution to put upon the statute-book the law that is here attacked. The door was open in Toronto until two weeks ago to the hon. gentleman and his friends. They could have taken their petitions there; they could have made their applications there. But they wait until that Parliament is prorogued—the Parliament that is seized of the matter, the Parliament that enacted the law—and then, when that Parliament is out of the way, they bring in a resolution here to deal with a subject about which they themselves declare this Parliament has no power to enact anything. I submit that a party that will, on a question of language, take such a course, that will be pushed in here by an agitation that is shaking the country to its foundations—in some parts, that is to say, for the province of Ontario is not much troubled about it yet—is taking a course which cannot be justified by any standard held in honour among our people. I will not debate that, but I will say that an agitation about language makes for dissension and disintegration rather than for harmony, union, and tolerance. It is a dangerous kind of resolution to bring into any parliament where the statutory rights have already been fixed by the Confederation Act of this country.

There is a great responsibility, to my mind, resting on the shoulders of these agitators. They have entered upon a propaganda in which they have organized and publicly paraded children of tender years through the city of Ottawa. They have instilled into the minds of these children false premises and statements not based on facts, or upon legal rights. They have paraded these children bearing banners indicating their French nationality. No one objects to that; we wish to see the tricolour waved in its proper place. But it is not right that this plea of nationality should be made in this way, to bolster up and foment an agitation brought about by the seniors of these children. On these banners were inscribed the legend, "Pay our teachers," those who were responsible for it knowing well that the children were too young to understand the situation. The older heads who were directing this agitation were willing, in this free Canada, to parade these youngsters through the city with these banners to instil in their minds the thought that it is virtuous to disobey the law. My further comment is the diligence with which these agitators promote this propaganda while this terrible war is still going on. Of all the disturbing factors of our life, this question is one of the most disturbing. Yet these agitators have no hesitation in stirring it up, bringing it before Parliament, so that it may spread all over the Dominion, so that the press may take it up and waft it abroad. I leave it there, so far as I am concerned. The forum, as I have said, is Toronto; it is not here. But we are asked as a Parliament to send forward some sort of a decree without legislation, impugning the conduct of the legislature before whom no complaint has ever yet been put, no appeal for consideration has ever been

made; no plea like the eloquent plea of my hon. friend from Nicolet (Mr. Lamarche) has ever been made. This Parliament is actually asked to commit an impertinence by two parties in this House who say they believe in provincial rights. I submit that an agitation of this kind can be well described by certain words that I wish to quote, which were uttered in a debate in this House in the year 1890:

> The honourable gentleman may mean nothing more than a mere party device, but he is opening the flood-gates to passions which, once aroused, perhaps no human power may be able to restrain. He is appealing to national and religious passions, the most inflexible of all passions, and—whatever his purpose—his movement cannot be characterized by any other language than that of a national crime.

These are the words of the right hon. gentleman who leads the Opposition, applied in this House to a gentleman who in his day and generation was trying to foment strife similar to that which the right hon. gentleman himself is attempting to foment in this country to-day.

Mr. J. A. ROBB (Huntingdon): This debate on education can do no harm if it helps to stir up a greater interest in education, not only in Ontario and Quebec but throughout the whole of Canada. I think the hon. member for Frontenac (Mr. Edwards) who spoke this afternoon was not quite fair to my province. In quoting statistics, I think he proved too much. He brought home forcibly to this Parliament what has been debated in the different Protestant church assemblies throughout the country for the last few years, and that is the fact that the Anglo-Saxon birth rate in this country is not as great as the French Canadian birth rate—or, as the figures show it, that the birth rate of the province of Quebec is greater than that of any other province. Consequently, there are more children between the age of one and five years in the province of Quebec, in proportion to population, than there are in any other province. Everybody knows that children between one and five years of age can neither read nor write. That is the explanation of the statistics which the hon. gentleman gave this afternoon.

Mr. GLASS: Did not the hon. member state that this percentage applied to those of school age, and not to all children including those from one to five years?

Mr. ROBB: I did not so understand him. Nor can that be right. I noticed that the hon. gentleman quoted the census of 1901. But the census of 1911 gives the percentage for the whole Dominion of children between the ages of seven and fourteen years who did not attend school at all as 20.17. The province of Prince Edward Island has the smallest number. The province of Ontario comes next, Nova Scotia next, and Quebec comes next. Quebec is only fourth in the list of all the nine provinces in the percentage of children between the ages of 7 and 14 who do not attend school. Or in other words, we stand fourth in general education in the Dominion of Canada. The province of British Columbia has 24 per cent; Alberta, 37·17 per cent; Saskatchewan, 33·29 per cent; Manitoba, 25 per cent; Ontario, 15 per cent; and Quebec, 19 per cent, between the ages of 7 and 14 not attending school. But the commissioners, after reviewing these statistics, make this reference to education throughout Canada, which is very interesting and very satisfactory to the people of the province of Quebec:

> In table 6 the percentage of the population 5 to 20 years of age attending school is given by age, periods and by sex for Canada and the provinces. For children under 6 years of age, Quebec, Nova Scotia and Ontario show the greatest proportion attending school, and the smallest percentage is shown by British Columbia and Alberta and New Brunswick in the order named.

In a country where over 20 per cent of the children between the ages of 7 and 14 never enter a school door, there is much to be done, and no apology need be offered for introducing a school debate in this House. During the few days prior to the introduction of this resolution, some very good friends wanted to know what attitude I would take, and they advised me that it would be well for me to keep out of it; but that is not my conception of the duty of a public man. I want to say that neither in this House nor out of it has any one of my French-Canadian fellow-citizens asked me what attitude I would take upon this proposed resolution that was to come before Parliament; and if I take an attitude here to-night it is not because of any idea of how it will affect me politically, but because I consider it is a duty to my fellow-citizens of French-Canadian origin, with whom I have lived for 40 years, and lived upon the best of terms, and whom I have found to be good neighbours and good friends. I would be an unworthy representative in this House if I were afraid to take a stand upon an issue of such importance. After having listened to the debate, the introductory speeches of those

who proposed and seconded the resolution, and the speeches made yesterday and to-day, I am encouraged to believe that the spirit of conciliation will prevail and that here in the capital city of Canada, where for some months children of school age who should have been attending school, have been walking and playing on the streets, the parents of these children will be satisfied and the children will be able to return to school and obtain such education as will qualify them for the duties of citizenship Every person admits that an uneducated people are a menace to the state, that children, to become useful citizens, must have such education as will qualify them to discharge their duties not only in their native province, but in all the provinces of Canada. I have had an experience of 20 years in school work in my home city, where I have been connected with the school board, and where the Protestants have a splendid system of elementary and advanced education; where our Roman Catholic fellow-citizens, our French-speaking fellow-citizens, have a college for boys, a normal school for girls and a system of primary and elementary education that would be creditable to any city or town in the Dominion of Canada. You, Mr. Speaker, are a product of the Valleyfield schools, and I want to say here to this House that the people of Valleyfield, irrespective of race or religion or political sympathies, are proud to know that you, one of our boys, educated in our schools, have been qualified to take a position which to-day places you as the first commoner of the land.

Sir WILFRID LAURIER: Hear, hear.

Mr. ROBB: Now, Sir, I am not going to discuss this from a legal or a constitutional point of view. I am not a lawyer. I want to discuss it from an experience of 40 years in a bilingual community, where the people live together and try to respect each other's principles and prejudices. We hear many people in Canada who say that we should have but one language and one school. But when you ask them what language or what school, invariably they say: "Our language." Now, I want to speak frankly, in the few observations I have to make, to my friends from the great province of Ontario; what would be the position of the English-speaking minority in the province of Quebec if the influence and example of the English-speaking majority in the sister provinces should appeal to the French-speaking majority of the province of Quebec, and they should start in to hamper and to hinder the education of the English-speaking minority of that province? This school trouble, so acute in Ontario, is largely between the Irish or English-speaking Catholics and the French-speaking Catholics. I, a Protestant, a Presbyterian, want to appeal to my English-speaking Roman Catholic friends of the province of Ontario, I want them to remember that in the province of Quebec there is an English-speaking minority, where in many places the English-speaking and the French Catholics are about evenly divided. I want to ask them if they expect that their compatriots, the English-speaking Catholics in the province of Quebec, can hope for any better treatment from the French-speaking majority of that province than is given to their compatriots, the French-speaking minority in the province of Ontario?

The census of 1911 gives Ontario a population of 212,442 French-speaking citizens. They are the descendants of the pioneers of civilization in this country. When the redman roamed at will, did as he liked, for the redman's law at that time was might is right, I want my friends to remember that many of the French Canadian missionaries sacrificed their lives because they were freely offering education to the redman, who had as little regard for education as he had for life. In the opinion of the red man, I repeat, might was right. Unfortunately, that theory is not yet altogether extinct as we have witnessed in Alsace-Lorraine, and in Poland, where the Germans, as well as the Russians, have deprived the people of those countries of their rights, their liberties, and their language. It is because we do not believe in that theory or principle because our British ideals are those of freedom and liberty that we are to-day at war, and that 300,000 Canadians, representing the best blood of our nation, are to-day in arms ready to sacrifice their lives that they may restore to Belgium, to France, and to Alsace their rights and their liberties. Can we who remain at home here in Canada not do as much? Can we who remain at home here not give and take? Is it not possible for sober-minded citizens to sit down together and settle this acute difficulty which, as one speaker has said, might break out into rebellion. I think our French Canadian citizens have presented their claims very moderately. As a liberal and a supporter of the Liberal party, I stand upon

this issue exactly where my distinguished leader stands; where the Liberal party stood in 1896. We stand for provincial rights. As a citizen of the province of Quebec I have no right, nor do I desire, to dictate to the province of Ontario, or to meddle at all in the domestic affairs of that province. But, as a representative of the English-speaking Protestant minority of Quebec, I wish to appeal to my English speaking fellow-citizens in the province of Ontario. I wish them to remember that we, who are the great majority in the province of Ontario, are but a minority in the province of Quebec. Can we hope to expect any better treatment for our children from the French speaking majority in the province of Quebec than we, who are the English speaking majority in the province of Ontario, are ready to give to our French speaking fellow-citizens who go to that province? I am encouraged by the debate here to-day to hope that the people will take a sober view of this trouble, and that before this Parliament meets again this subject will be settled to the satisfaction of all interests. Let us remember, we who are the majority in the Dominion of Canada, the golden rule, and do to others as you would that others should do to you. Those who say that there should be but one language will remember that the Book of Genesis tells us that at one time in the history of the world, after the flood, there was but one language and one speech throughout the earth. Was the world any better then? Is it a disadvantage for men to have two languages? Happily, here in Canada, we have the English language which is the language of commerce, and the French language, which is the language of diplomacy.

I appeal to this Parliament, to men upon both sides, to English-speaking people and French-speaking people, to cease our bickerings. Let us take an example from our brothers who have gone to fight the battles of freedom and liberty. Each day the casualty list that comes to this country registers the names of English-speaking Canadians and French-speaking Canadians who have given their lives for freedom and liberty. Let us take an example from those men who are standing shoulder to shoulder for these principles. Let us try to sit down together and see if we cannot settle once and for all this question, and do away with this language agitation which surely is not to the benefit of this country.

Mr. Oliver (Edmonton) and Mr. Macdonell (South Toronto) rising together,

Mr. SPEAKER: It is customary for the Speaker, when he sees an hon. member, to have some idea as to whether he is in favour of the resolution before the House or opposed to it. I do not know what the hon. member for Edmonton (Mr. Oliver) will do, nor do I know what the hon. member for South Toronto (Mr. Macdonell) will do. I promised the hon. member for Edmonton to see him after the hon. member for Huntingdon, and if the question can be settled this way, I can promise the hon. member for South Toronto that I will see him next.

Hon. FRANK OLIVER (Edmonton): I intended to say that I took part in this debate with very great regret, but, in view of what has just occurred, it would seem as if I were somewhat insistent in taking part, thanks to your kind decision. It is a fact, however, that I do regret most sincerely being compelled to take part in this debate, because I am compelled to oppose the resolution offered in such eloquent terms by my hon. friend from Kamouraska. I regret the fact from many points of view. I did what I could to prevent the question from coming before this House. I voted to keep it from coming before the House.

9 p.m. I noticed that my right hon. friend the Prime Minister and my hon. friend the Postmaster General (Mr. Casgrain) agreed with me that it was undesirable that it should come before the House, but, unfortunately while they spoke one way, they voted the other; and the question is here to be dealt with.

One of the reasons why I regret so much having to take part in the debate is that the question is one which might very well be accompanied by acrimonious discussion. That was the reason why I did not desire to have it come before the House. I am bound to say, however, that in view of the tone which was given to the debate by the mover of the resolution, by his seconder, by the right hon. leader of the Opposition, and indeed, I may say, by all those who have taken part in it, it does not appear to me that the result which I feared is likely. Instead of injury arising from the free discussion of this matter, by a frank consideration of the facts of the case from different points of view, as suggested by my honoured leader, we shall in all probability arrive at a better mutual understanding of what must be admitted to be a very difficult question.

I do not wish it to be understood that I take the ground that was taken by some of those who have spoken, that because

this is a provincial matter it should not be discussed in this House. I take it that this Parliament is the highest law in this Dominion, and that nothing can occur in any part of the Dominion but that this Parliament has the right to discuss it, and, if a substantial injustice is being done, then it is the duty of this Parliament to discuss it. So far as the question that is immediately before the House is concerned, I am not prepared to say that it is of such a character, or that it is not of such a character. I do not propose to deal with it from that point of view. I have been greatly impressed by the eloquence with which the cause of those who supported the resolution has been presented, and I can assure them of my most sincere sympathy in the views they have expressed and the reasons that are behind those views. They are influenced by tradition, by sentiment, by every feeling of the human heart that is entitled to respect. For that reason it is still more my regret that I cannot see as they do. This Canada is a big country, and being a big country, there are various conditions in its various and distant parts. So, while the principles of toleration, of conciliation, even the principles of liberalism which have been appealed to so eloquently by my friends, may be entirely applicable to the conditions existing in one part of the country, as they propose to apply them, they may be altogether inapplicable to the different conditions existing in another part of the country, supposing we wanted to apply them in the same way. I would like if, when they speak of conciliation, when they speak of toleration, they would be good enough to remember that the conditions here are not the conditions there, and that a certain set of principles which might be perfectly right and good, as they propose to apply them to conditions here, may be entirely wrong and to the disadvantage of the country, if they were to be applied in the same way under conditions that exist yonder.

I am here as a representative of the West, as those who have spoken up to the present time are representatives of the East. There could be nothing brought out more clearly than that which has been brought out by this debate and that is the difference between the east and the west. The claims that have been made on behalf of this resolution have been based upon conditions as they exist here, the result of occupation and settlement for hundreds of years. Certain conditions have grown up, with or without the sanction of law, which are entitled to be respected by every one, which secure the reverence of many and which are to be defended as earnestly and as honestly as these gentlemen have defended them to-day. This outlook that sees the past, and looks at the future only in the light of the past, fails to take note of the fact that in the West we have an entirely different condition. It seemed good to the men of light and leading, in what is now eastern Canada, many years ago that they should not be compelled to restrict their activities to the valley of the St. Lawrence or to the shores of the Gulf, but that they should extend their dominion to the western sea. That brought about their control of the prairies and the distant mountains in order that there might be built up a greater Canada, a Canada that would be worthy the ambitions, the energies and the activities of those men already settled on the banks of the St. Lawrence and on the Gulf. It is as one of the representatives of the conditions that have arisen in the West, as the result of the foresight and enterprise of the men who played their part here, that I desire to speak to-night and it is because of the difference in conditions that I am compelled to refuse to support the resolution of my hon. friend (Mr. Lapointe).

Speaking of population, stress has been laid on the number of French speaking people in Quebec and of the French speaking population of Ontario. There is a population west of the lakes to be considered, and if I have the support of other representatives from that part of the country, and I believe I have, then in what I desire to say, I, as well as they, speak for nearly 2,000,000 people. We speak for more than a quarter of the population of this Dominion at the present time. But that is not the heavy part of our responsibility. We speak for a part of the people of Canada, but we speak for a part of Canada which in time to come will be the heart of Canada and where the greatness of Canada will be built and demonstrated, if ever it is demonstrated. The heart of Canada for generations, for centuries, has been on the banks of the St. Lawrence and along the lakes. But, it is only a truism to say that in the years to come the heart of Canada will lie between the Red river and the Rocky Mountains. It is on the population that will occupy that country, it is on the conditions under which they will occupy that country, the

conditions under which they carry on their affairs in that country, that the greatness of Canada will depend. That fact is based upon the material possibilities which, by the bounty of the Creator, exist there to an extent and to a degree to which they do not exist in other parts of Canada; and because of that condition we must expect occupation and development to correspond. The development of the country is the result of the exertions of the people, and the success of the people depends in everything upon the education of the children. And so this question, which is so important to the minds of our friends here from eastern Canada—and they are certainly able to express that importance in the most eloquent language—is no less important to us who are charged with the responsibility of directing in some measure the development of that western country, the heart of Canada that is to be.

I do not wish to take exception to what my hon. friends have said, but if I took exception at all it would be to the attitude they have assumed, that theirs is the only point of view. There is another point of view, the point of view that I have feebly tried to express; and it is entitled to just as much consideration—I say it boldly and unshrinkingly—entitled to just as much consideration, and is just as sacred a point of view in the interests of this great country as is theirs, let them express it with all the eloquence they may, and though my expression be as feeble as it is.

The provinces west of the Great Lakes—I will take the liberty of speaking of the four provinces, and if I should trespass in any way there are plenty of representatives of those provinces here to-night to correct me—I speak of the four provinces with their possibilities of population, and the need of education amongst that population. Surely, if the task that is before the handful of people scattered over those prairies and through the mountain valleys is to be discharged to the credit of themselves and to the benefit of this great Dominion, we must have educational efficiency to the last degree. We cannot achieve the success we ought to achieve, or realize the expectations we hold regarding the success of our efforts, unless we have the highest mark of educational efficiency amongst the population that is born and bred and reared in that country. That is an idea that is absodutely grounded in and—may I say—dominates the mind of the people of that country. It is as sacred to them as are the language and the traditions of their race to our friends from the East who have spoken here yesterday and to-day. What is it that strikes the eye of any traveller through the Northwest as he passes by train or by road through the country? Wherever he finds a knot of people settled in village, town or city, the landmark that strikes his eye is the school, the biggest building in the place, and the best that the money of the people can afford. It is just as much the landmark in our western provinces as are those beautiful churches and spires in the province of Quebec, and represents, again I repeat, just as sacred an idea. The problem of securing efficient education to the population born and raised in that country is the greatest, the most important, the most pressing and the most thoroughly appreciated problem that is before those who are charged with the leading of public thought in that country. Unless the settler who goes into that country with ambition, with energy, with hope and expectation for his own material success—but still more, in the huge majority of cases, for the success, material and moral of his children—unless he gets reasonable facilities for their fair education he will not submit to the disabilities of pioneer life. He will find some easier way; he will drift into the towns for the sake of the education of his children. So I say that the problem of establishing facilities for the efficient education of the rural population of those Prairie Provinces is the great problem, not only for those provinces, but, in the long run, for this Dominion itself. I appeal to all men of fair mind in this House if the men who are charged with the responsibility of providing those facilities should be hampered or hindered in any way; if, on the contrary, they should not be encouraged and supported in every way possible. The man who leaves his original location and moves on to the western prairies in the expectation of establishing himself with prosperity for himself and his family there, has ambition, energy and hope, and he leaves the old condition, wherever it may be, with the intention of securing and establishing a new condition in the country to which he goes. Therefore may I say to our friends who have spoken so eloquently and so ably of traditions, of historic rights, that many of the people of the West—I do not say all, because there are exceptions to every rule—but I would not hesitate to say that the vast majority

of them have gone there in the hope of getting away from many of the traditions that hampered or hindered them, or that they found distasteful in the country from which they came. They did not go to the West to perpetuate disabilities under which they suffered elsewhere.

To speak of school problems as they exist there, may I take the liberty of saying that I have the right to speak with some degree of authority so far as the provinces of Alberta and Saskatchewan are concerned? I was a member of the Northwest Council that put into force the first school law in those two provinces. I may say that I personally drafted the first School Bill that was submitted to the Northwest Council; I was a subscriber to the first public school —not a legally-sanctioned school—erected in those two prairie provinces; I was a member of the Northwest Legislature when the school law that was passed in 1884 was changed in form and substance at a later date. So that I may claim to have some knowledge of conditions as they exist there in the matter of education, and particularly of rural education, because I have been most of my life in the West, and, although living actually in a village, town, or city as the place has grown, I have been in absolutely close touch with the pioneers, and to-day represent a constituency of pioneers.

The problem that has to be dealt with is rendered difficult on account of many reasons. You must have the children or you cannot have schools, and you must have money or you cannot have schools. The large majority of people go into that western country to settle, not because they have money, but because they have no money; and, owing to the system of apportionment of the land, they are settled very far apart as judged by the standards that prevail in this part of the country. Therefore you have a scattered population of poor people who are anxiously desirous of the education of their children, and the problem is how to provide them with that education in such a way that it shall be efficient. Besides that, let it be remembered that, owing to climatic conditions and this sparseness of settlement, many of the schools can be conducted only during the summer season, so that the children throughout a vast portion of that prairie area have only six months in each year in which they have an opportunity of attending school. That is the condition as I find it. I ask: how are you going to accommodate that condition to the demands that are made, not in the resolution but in the speeches that have been made in support of it, to secure to each race and tongue that settles in that country the teaching in its own language?

There is another condition in which the features differ. While in eastern Canada you will find the people settled very largely in communities of similar speech and race, a French settlement here and an English settlement there, when men go into the prairies to pick out their land they choose the land rather than their neighbours. The first man who takes a quarter-section in a township does not know who the next man is going to be who will take a quarter-section in that township. There is no possibility of segregating the different languages and races and nationalities. You are crying for people to develop the land, and as they come you give them the land. The consequence is that in no part of the country with which I am familiar do you find any considerable population of only one race or nationality except in the large part of the country that is occupied by English-speaking people. You will find people of different races and nationalities in almost every school district where the people are not English-speaking.

The regrettable feature of this debate, so far as it has gone, has been the suggestion that those who are not prepared to subscribe to this resolution are of that mind because they are not willing to accord to the French language or to the French nation that consideration to which they are entitled. I want to say for myself—and, I am sure, for those who think with me—that we take no second place to anybody in our admiration for the French language or in our appreciation of the French race, of what it is, of what it has been, of what it is doing to-day, or of what it will do.

And I want it to be distinctly and thoroughly understood that there is no question of race antagonism or race opposition because of the conditions we find in these prairie provinces, and which we must meet if we are to do justice to the people who are there, of whatever race they may be.

The conditions in the province of Manitoba resemble in large measure those in the provinces of Saskatchewan and Alberta; they are not identical, but in some degree similar. In the province of Manitoba, under the regulation that was made, —that which was called the Laurier-

Greenway agreement, an arrangement made in the very best of faith and with the very best intentions,—it was provided that there might be teaching of French or any other language where there were ten children of that language in the district able to attend school. That agreement was made at a time when there was no question of any other languages than French and English. The words " any other language " were put in, but, as I understand the matter, the object in view was simply to remove a grievance of our French-speaking fellow-citizens of the province of Manitoba, that we might have peace and co-operation in the building up of the country. But circumstances arose which were not contemplated when this agreement was made. There came a large immigration of people speaking other languages. There was an inflow of people of Austrian nationality, speaking the Russian language. There was already there a considerable German population which, no doubt, was augmented in the general inrush from Europe. There were Poles, and—I am not able to call the whole list. Many nationalities came into the province of Manitoba, and all these made their demands upon the Government of that province for recognition of their rights as conveyed in that Laurier-Greenway agreement which had been primarily intended as a recognition of the French language, but which they claimed covered their own demands as well—and I am bound to say that, as I understand the wording, it did. The Government of the province of Manitoba saw fit to accede to these demands. I do not wish to introduce anything controversial here; I do not wish to find fault at the moment with what the Government of Manitoba did, nor do I wish to justify it, but only to state the fact. The fact is that the Government of Manitoba of that day, if I may be excused the word, went the limit in meeting the conditions of bilingual and polylingual education. They provided for training schools, I believe, for French, Germans, Ruthenians, Poles—it is not necessary to go over the whole list. They did everything to fulfil the idea expressed so eloquently by my hon. friend from Bonaventure (Mr. Marcil) to-day, in giving everybody everything he wanted in the way of education. Now, that policy was tried out, and, for the sake of argument, I will assume that it was tried out in good faith. But the result was simply inefficiency and confusion. There resulted in Manitoba an educational condition that was certainly unfortunate and that was not beneficial to the people of the province at large, much less was it beneficial to the people who were supposed to be benefited by the so-called advantages of education in their own language.

It has been argued here to-day that it is possible to give a competent education in two languages at the same time. I am perfectly willing to admit that it is possible, under certain circumstances. Given competent teachers, given ample opportunities and facilities, given clever pupils, there is no manner of doubt that it can be done. But, under the conditions that prevail in the province of Manitoba, especially in the rural or village schools, where the population is small to begin with; where the people are not well off—poor, I may say—where the term of teaching is very short; where it is not possible to secure teachers of high class who can teach both languages, and where the people are so scattered that they cannot get together, the only result that can follow is the result that did follow—absolute inefficiency in education. It is not a question, to my mind, of racial preference or racial perpetuation that is at issue in that province. That may be the issue in Ontario, or Quebec, or any other province; but, as a representative of the West, I want to say it is not the issue in the western province. The issue is, to fit the children born in or coming to these provinces to fight the battle of life on equal terms with others. And to my mind and I believe this is the way it appeals to the people of the West, whether the child be of French or German parentage, or any other, whatever the conditions may be behind that child— and they may be as great and as noble as any of our friends can claim, and as I am willing to admit—if that child is not sufficiently and efficiently educated to stand on an equality with other children in other localities, it is unduly handicapped in the race of life and has not received justice or fair play at the hands of those who are in authority and who are responsible for its education. That is the principle that underlies the administration of school matters in the prairie provinces and British Columbia to-day.

The injustice of the Manitoba Government as it stands to-day has been alluded to. I regret that these expressions should have been used, because they might lead to a very contentious argument here. I will not make my statement contentious, although

I must say that I am inclined to resent the imputations that are passed against that government for its action. Nor do I wish the Minister of Public Works (Mr. Rogers) to think that I am desirous of making imputations against him or against the provincial government of which he was a member. I merely wish to state the fact that, whereas the Norris Government, when it came to power, found an absolutely impossible position in regard to the non-English-speaking public schools and population of the province of Manitoba, and the public needs demanded that they should make a change in that condition. The public interests demanded it; the interests of the children, the interests of the people, the interests of the province, and the interests of the whole Dominion of Canada, demanded that they should take such measures as would give to the children born or being reared in that province the best education that they could be given, and they could not do that by attempting to give two educations when they had not either the time or the money to enable them to give one effectively. I do not know how the action of the Norris Government will turn out, but I can only say that it was taken in absolute good faith, with the intention of doing the best that could be done for the interests that were placed in the hands of that government. And may I go so far as to say this, that if the action of the Norris Government does not turn out as successfully as we might hope, it will be because of a lack of that appreciation of the necessities of the situation and that co-operation which the Government should receive at the hands of the people who are most deeply interested in the efficient education of their children?

In the province of Alberta, the conditions have been somewhat different. The provinces of Alberta and Saskatchewan formed the old Northwest territories, and under the legislation of the Northwest Council and legislature a certain school system was adopted; and, whether by accident or design I am not going to say, in that part of the old Northwest territories which now forms the province of Alberta, the education of the children has been carried on in the English language from the beginning of the establishment of schools in that province. We have in that province large and important settlements of French-speaking people. A large majority of them, I think, have come from the United States, and the large majority of those people speak English quite as well as I do. There are large settlements of German speaking people, most of them coming from the Empire of Austria. These people came without any knowledge of the English language. There are also large settlements of Russian-speaking people, coming from Austria but of Russian race. When they came they had no knowledge of the English language. There are also very large settlements of Scandinavian folk. They mostly came from the United States and they, of course, mostly had a good knowledge of English before they came, and so I hardly speak of a language problem in their case. But we have, at any rate, those four non-English speaking nationalities in Alberta in very large numbers, so that we are in identically the same position as Manitoba is, having a multi-language problem on our hands in our Department of Education. What occurred was this: When the German settlers came in they were poor; they were desirous of education. When the Russian settlers came in they were poor; they were desirous of education. School teachers were difficult to get, and only English-speaking teachers could be secured. English speaking teachers went into the German settlements and the Russian settlements where the parents knew no English, and they began to teach the schools there in the English language. The result is that you can travel through those German and Russian settlements to-day, and you will find that while the old people cannot speak English, the young people, both German and Russian, speak English just as well as you and I do, without an accent. The child who learns any language correctly has a vast advantage in all its after-life over the child who learns that language incorrectly.

I have heard much as to the necessity of teaching children through the medium of their own language, and I am not going to dispute the desirability of doing that where it is practicable. I am not arguing against that at all where it is practicable; but I am saying that the experience of the province of Alberta is that where it is not practicable it is not necessary, and the ultimate result is to the advantage of the children in that they learn the language from teachers who speak it correctly, and so they learn to speak it correctly. If my hon. friend the member for North Waterloo (Mr. Weichel) is not present I will take the liberty of making an allusion. Reference has been made to

our German settlers in the province of Ontario and their special privileges in the matter of language. We have in Alberta, in my constituency—and I hope I will not lose any votes by what I am going to say, although I may—we have a large settlement of German-speaking people from Austria, and we have also in that great settlement some of the friends of my hon. friend from North Waterloo, who come from the county of Waterloo, Ont., who were born and raised in that good county, and certainly they are most desirable settlers and most desirable citizens from every point of view. But, when it comes to a question of language, they are associated with the German-speaking people from Austria, of whom I have spoken, whose children have learned English in that particular locality, and have learned it correctly. These people say of our friends from Waterloo: "Why, they have not any language; they do not speak German and they cannot speak English." Now, this is the condition that exists, and it is a result of the fact that the so-called English teaching in the Edmonton district was English teaching, and I presume that the so-called English teaching in the county of Waterloo in the early days was not purely English teaching; it was probably teaching by persons who had not a good knowledge of the English language. That is without racial prejudice, without reflection on anybody; it is a statement of fact; and, when our friends here complain about certain regulations in the province of Ontario—and I am not going to say that their complaints, so far as the province of Ontario is concerned, are not absolutely well founded, nor do I say that they are well founded, I am not arguing that point—I say that if they transfer their criticism of the conditions in Ontario to the conditions in the prairies of the West, and make the same objections to them as they do to the conditions here, in my humble judgment they are entirely wrong, and it is for that reason that I am compelled to disagree with the resolution which they have brought before the House and with the arguments which they have made in respect to it.

The province of Alberta has always held to the principle of English schools, of teaching English in the schools, of using the English language to teach English in the schools, and the result has been that we have made a success of it for those of our citizens who did not originally speak English, as well as for those who do. The child whose father came from Galicia, whether of German or of Russian race, starts out in the battle of life just as well equipped as the child whose father came from the province of Ontario. That is the purpose we have in view, and I submit that we are not trespassing on the rights of anybody when we achieve that purpose. I maintain that we are fulfilling the obligation that is laid upon us to do the best we can for the people that we have and for the country that we want to build up.

In the province of British Columbia the conditions are somewhat different; the members of that province will pardon me if I refer to them. There have never been any but English schools there; there has never been any question about any other language than English being used in the schools, so far as my information goes, and the reasons are very much the same as those which prevail in the prairie country, although in the one case the country is mountainous and in the other prairie. In the interior valleys of the province of British Columbia the population is necessarily small in many cases, and the people are in such a financial condition that it would be an imposition to impose a bilingual education upon them. As a consequence, it has never been done, and I do not imagine that even the most extreme up-

10 p.m. holder of bilingual schools would say it should be done, once he realized the situation as it exists in the interior of that province. Of course, in the cities in that province, as in the cities of any other western province, we can give any kind of education we like. We can adopt any of the languages in our schools if we so desire. But that is not the great question. The great question is the education of the people on the land, in the rural school, the satisfying of the legitimate ambition of the men who are making the country; and it would be a cruel thing to say to those men, whether they spoke French, Russian, German, or any other language, that they who have gone there to stake their labour, their money, their prospects, and indeed their lives and those of their families in making a success in that country, should be debarred from achieving that success on behalf of their children, by imposing upon them a double language, or a treble or quadruple language, instead of only one language, the only language they

can afford, under such circumstances, to have imparted successfully to their children.

Mr. Speaker, I have already stated, and I will repeat, that I do not wish, in anything I have said, to suggest interference in the discussion of school questions in the province of Ontario, in the province of Quebec, or in any other of the eastern provinces. I recognize that under the conditions which prevail in these provinces they have their difficulties, their limitations, and their frictions that must be allayed and adjusted. I do not propose to discuss them; I leave them to those who are better posted and more interested than I am, although, of course, I am interested in the wellbeing of eastern Canada just as the people of eastern Canada are interested in the wellbeing of western Canada. But while I am willing to accept the conditions, as discussed, in regard to the school systems of eastern Canada, I appeal to our friends who have brought this resolution forward to recognize the limitations, the conditions, the aspirations, and the ambitions of western Canada, and to give us the same consideration in dealing with the problems that are under our administration as we are willing to give them in regard to the problems that are under their administration. If they insist on applying the standards which they maintain, and which may be perfectly applicable to the conditions prevailing in the country with which they are familiar, to our country, where the conditions are entirely different; or, if they accuse us of intolerance, of sectionalism, or of a desire to wipe out or injure anybody, I say they are not fair, and they are not entitled to adopt that attitude towards us, as we do not wish to adopt that attitude towards them. Let the problems of eastern Canada be dealt with as they may be, but let the problems of western Canada be dealt with as they may be; that is all we ask. If we cannot agree, all I suggest is that we agree to disagree, because I do not wish that any man should have it in his heart or mind to suggest that I am guilty of any intolerance, or of any racial or sectional prejudice of any kind. Our friends on this side of the House have proclaimed themselves as Liberals. They are Liberals, very good Liberals. I claim to be a Liberal, too; just as good a Liberal as they are, and just as strong for conciliation as against coercion, and for the maintenance of the rights of minorities where those rights can be maintained without becoming wrongs, either of the majority or of a minority. I am just as ready to go as far as they will go in maintaining rights; but I am not prepared to maintain what I believe to be a wrong because it is called a right.

Mr. A. C. MACDONELL (South Toronto): Mr. Speaker, I apologise to the House for rising at this late moment in the debate to add a few words to what has been so well said on both sides. I may say at the outset that I very greatly regret the necessity for speaking on a resolution of this kind. To my mind it is to be doubly regretted that this resolution is now before the House. I think it is untimely and inappropriate, both because of the undesirability of raising the cry that this motion will raise and has raised in the country, and because a matter of still more importance, and one that I think we all have at heart, is engaging our attention and that is the purpose of prosecuting this war with a single aim and a single idea. It is no time for the people of Canada, much less those who are in the Parliament of Canada, to have their attention distracted from the one object of pursuing the prosecution of this war with every possible diligence until we meet with that final triumph which we believe is in store and which will no doubt come to pass provided our united energies are bent in that direction.

I have no desire to censure anybody. I am going to give you my opinion and I believe it is the opinion of a great majority of the people of this country whether they come from Quebec or Ontario or whether they come from the West. The ineptitude of this resolution has been pointed out in this debate by many speakers. I do not desire to go over the arguments which have been presented but they are very apparent. The legislature was sitting at Toronto for months this winter and almost immediately after that House adjourns we find the appearance of this mischief maker in the House. It seems to me that that was the proper place, and that the time to take the case up, discuss it, and fight it if need be, even if conditions existed which would have justified bringing into that House such a resolution as this. If anything were needed to confirm me in the belief that there is no justification for the introduction of this question into this House, it is the fact that, although the question has been discussed for two whole days, it is quite evident that

members of this House are still very much in the dark. We are at the present time trying a government behind the back of that government. We are making an investigation into matters that we know not of. The Government that we are asked to censure, because that is virtually the tenor of this resolution, are not here, they have no representative here, and no means of meeting this argument. I appeal to business men, to professional men, to fair-minded men. Is it right, is it fair, to proceed farther with this investigation behind the back of the Ontario Government without a knowledge on their part of what is being done, without an opportunity of meeting what is being said, because, as has been said in this debate, it may be a matter for conciliation, a matter for getting together? No one knows what the argument of the Ontario Government may be. They may have an argument which will convince my right hon. friend the leader of the Opposition, if they had a chance of presenting it—I do not know. But, it must be remembered that the leader of the Opposition said: Let us face this matter, let us investigate it, let us get to the bottom of it. What kind of an ex parte investigation are we engaged in here? It is purely and simply an ex parte investigation. This afternoon my hon. friend from Nicolet (Mr. Lamarche) was discussing something that took place at Windsor, where, apparently, the schools were disfranchised. They were, he represented, not allowed to proceed with the operations of the schools and they were either closed up or threatened with being closed up because of certain objections that were made by the Ontario Government. The hon. gentleman, prefaced his remarks in regard to the situation at Windsor, by the statement that these schools were closed up under Regulation 17. I happen to have a statement of the Minister of Education of Ontario, which appeared in the public press a few days ago, in regard to these very schools at Windsor: He says:

> It has been contended, that the position of the French language in the Windsor Separate Schools is a proof that the department is preventing French-speaking children in those schools from learning their own language. These schools are not under Regulation 17 and accordingly the right to introduce French teaching into them, whether they were schools in which French had never hitherto been taught, or schools where it had been taught for a time and then abandoned, would be determined by Regulation 12 (2) which does not apply unless where French is the prevailing language. French is not the prevailing language in Windsor, according to every test which can be applied in such matters.

So that after my hon. friend spent a great amount of time and much eloquence in relation to these Windsor schools, we find that they were not under Regulation 17 at all. I do not desire to go into the details of these various classes in which the French language may be taught. We have the one class in which small children who are not acquainted with the English language are taught in French until they can learn English. As they grow older they learn English and they continue under English tuition in the higher forms of the schools. It is the duty of the teacher to instruct them in that way. I will quote from the Revised Statutes of Ontario, 1914, chapter 266, the provision as to what the duties of the teacher are; they are all stated there. Section 84 says:

> It shall be the duty of every teacher—

And so on . Subsection b:

> —to use the English language in instruction and in all communications with the pupils in regard to the discipline and the management of the school, except where it is impracticable to do so by reason of the pupil not understanding English, but recitations requiring the use of a text-book may be conducted in the language of the text-book.

The Government seems to have done all they could to meet conditions where the pupils are not able to understand the English language. It does seem to me that, having regard to the fact that Ontario is an English-speaking province, and that the English language is in use there, they have gone as far as they could to meet the condition of French children who are not familiar with the English language.

The hon. member for Nicolet this afternoon spoke about other languages in other countries. He made out a great case of hardship for the French language in Ontario by citing Wales and I think Poland and other countries. He pointed out that those countries had their own languages. Of course they have, and so has Quebec her French language; but the Welsh people, or the Poles, do not ask that their language should follow them into any land to which they go in any part of the world. They have their own language at their own home, and so it is with our French people of Quebec; they have their own language there.

Mr. MARCIL: Is a Frenchman in Ontario away from his own country?

Mr. MACDONELL: No more than a Welshman when he goes to England?

Mr. MARCIL: Is the descendant of a Frenchman whose family has lived in the Detroit river settlement for a hundred and fifty years a newcomer to Ontario?

Mr. MACDONELL: He is entitled to only such rights and privileges as the constitution of the province of Ontario allows him. Beyond a mere scattering, however, there was no settlement of French Canadian people at Windsor or elsewhere in Ontario until recent years. I will come later on to what my hon. friend has in mind with regard to the so-called settlement of parts of the province of Ontario in the early days by French Canadians. The French of Ontario are amply protected in the use of their own language in the schools by regulation 15 of the present Ontario law. Paragraph 12 of the regulation reads:

12. (2) In school sections where the French or German language prevails, the board may, in addition to the courses of study prescribed herein, require instruction to be given in French or German reading, grammar and composition to such pupils as are directed by their parents or guardians to study either of these languages, and in all such cases the authorized textbooks in French and German shall be used.

Surely that is amply protecting their privileges. Where they do not speak English they can use their own text books. I do not desire to labour at length the Constitutional question. But as a matter of fact the motion of my hon. friend rests on nothing that gives it fundamental strength. The Constitutional rights on which it is alleged to be founded do not exist. I think the hon. gentleman who introduced the resolution went back as far as the Treaty of 1763, after the conquest of Canada, and the hon. member for Wright (Mr. Devlin) followed him on practically the same line, pointing out that the language was secured to the French people at the time Canada was ceded to Great Britain by the French King. Every matter that required consideration at that time was dealt with in that Treaty, and although it preserved to the French people their laws and customs, their property, and liberty, and so on, the Treaty made no mention whatever of anything in connection with the French language. I have not been able to find any authority for the statement that the French language was mentioned at that time. It does seem to me that the only thing giving the French language any status in Canada is to be found in the British North America Act. We are all familiar with section 133 of that Act, which simply gives the rights that are so well known. It in no way, shape or form relates to the French or any other language, or includes education, and when we come to the clauses in the British North America Act dealing with education, we find that the provinces have exclusive jurisdiction. Provision is made there for whatever action the Parliament of Canada thinks it necessary to take under the Constitution. Cases of this kind, no doubt, were in the minds of the Fathers of Confederation. It was conceded that the provinces should have exclusive jurisdiction over education. It was carefully provided, however, that denominational schools were not to be prejudicially affected, and that the Roman Catholic minority in the province of Ontario and the Protestant minority in Quebec were to be protected. Provision was also made for remedial legislation. So the whole question was dealt with and considered at length, and no doubt every provision was included that it was thought wise and proper to include. There was no thought of giving the Dominion jurisdiction over educational legislation, and no thought of permitting interference by the Dominion with the provinces with regard to education, with the exception of the matters I have already mentioned, which are dealt with in subsections 1, 2, 3 and 4 of section 93. The very fact that these exceptions are mentioned by the Act—that the denominational schools should not be affected, that the Roman Catholic minority in Ontario and the Protestant minority in Quebec should be protected, and the provision regarding remedial legislation shows conclusively that these things were all considered at that time, and the fact that the exceptions are mentioned is a good reason for saying that everything else in the nature of Dominion interference is excluded; what is mentioned remains, and what is not mentioned is excluded. The general language of the Act is perfectly clear as to that. The motion of my hon. friend is introduced simply on the ad misericordiam plea. It is simply a plea for better terms and consideration, that has been set forth by the mover and seconder of the motion, and by other hon. gentlemen who have backed them up.

With regard to the provincial legislation, we are asked to exercise a measure of control over the province of Ontario, whether it be by direction, by admonition, or by appeal. We are asked to issue some kind of

a mandate to the province of Ontario. Now, under our Constitution, what control, if any, has the Dominion over the provinces? It has a certain control: the power of disallowance, for instance, of legislation that is objectionable to the Dominion; and, in matters of administration, the Governor General has a certain control over the Lieutenant Governors of the provinces, and in concurrent legislation, on certain matters the Dominion has also a certain control. The power of the Dominion Government is specifically laid down in the British North America Act. Perhaps here I might make a quotation from that very admirable book of Dr. Todd's on Parliamentary Government. On page 623, dealing with Dominion interference in provincial matters, he says:

> The Houses of Parliament ought to refrain from any overt acts and even from the formal enunciation of any opinion in respect to matters which do not come within the sphere of their jurisdiction as a Federal Legislature.

We have here an authority on the Constitution giving a word of caution against any interference with the provinces by the Dominion. He makes it plain that there should be no interference except in matters that are authorized by the provisions of the British North America Act.

Reference has been made to the early introduction of the French language into Canada, and the earliest reference was to the treaty generally known as the Treaty of Paris in 1763.

Mr. MARCIL: The treaty of 1763 is the Treaty of Versailles.

Mr. MACDONELL: Some hon. gentleman, I think the hon. member for Nicolet, stated that in 1774, by the Quebec Act, the French language was introduced into and took a root in the province of Ontario. The answer to that is very plain. Whatever reference there is in the Quebec Act to the French language, that Act has no reference to what is now the province of Ontario, because there was no such thing then as Ontario, scarcely even a bare settlement in that part of the country. Even had there been we find that, as soon as Upper Canada and Lower Canada were separated and the province of Upper Canada was founded, the very first Act of the first session of the first legislature of that province in 1791 declared that it was a British province and that the laws of England were to be brought into force in Upper Canada in regard to property, civil rights, and so on. So that even if it could be said by implication that the French language was introduced into that territory by the Quebec Act of 1774, that Act was certainly made of no avail by the Act of 1791 which I have just mentioned.

The remark made a moment ago by my hon. friend from Bonaventure (Mr. Marcil) brings to mind the fact that some French people settled in the province of Ontario. Far be it from me to detract for one minute from the courage, the heroism, the adventurous spirit, the enterprise and the splendid character, generally of the French in the early days of this country. They were the great pioneers who opened up this country. To-day, however, we are dealing with living facts; we are dealing, as representatives of the people, with this resolution, and we cannot have our minds led away by our emotions; we must deal with the question according to the necessities and the facts and law of the case. It is very interesting to listen to the story of the settlement of Ontario by the voyageurs and other French settlers; but, as a matter of fact, the province of Ontario was settled by the United Empire Loyalists who came to Upper Canada after the outbreak of the American revolutionary war, and there were very few, if any French in Upper Canada at that time and very few came for a long time afterwards. As the right hon. leader of the Opposition said yesterday, they used the great waterways of the St. Lawrence and the Great Lakes to go to the far West, but they did not use the shores of the Great Lakes for the purpose of settlement. Although the French came there in certain numbers, the settlement was very scattered, a few going to Windsor. The French settlement in Ontario is of later date, and I suppose that is why the question of the French language in the schools has not become acute until the present time.

Let us consider the history of the school question in the province of Ontario, because that is the place where the claim in regard to the rights of the French is made, and it is according to the laws of that province and the laws of the Dominion governing the provinces that we have to decide all rights with regard to education and language. Prior to 1840 there were very few educational facilities in the province of Ontario; it was not until 1863 that the school laws took any definite shape. It is of some importance to understand the facts in connection with the passing of the school law of 1863, and I therefore state the facts concerning it:

> In this Bill, that is, the Act of 1863, as accepted and passed were two principal stipu-

lations: First, that Catholics in their schools should have the right of instruction in their own religious principles; second, that these Catholic schools should be as completely subject to governmental regulations as the public schools.—The Bill proved acceptable to its distinguished authors.

What was done in 1863 was the establishment of separate schools in the province of Ontario, with those two principles: that the minority should have the right to teach their religion, but subject always to governmental inspection. That Act was passed by the Government of the United Provinces, and that legislation, as hon. gentlemen no doubt know, was made the basis of the school clauses in the British North America Act: and it is worthy of note that that school law of 1863 was agreed to by all the Catholic bishops of the then United Provinces, including the bishops of Kingston, Toronto, and Ottawa, in Ontario, and Quebec, Montreal, and Three Rivers, in the province of Quebec.

The right hon. gentleman who leads the Opposition yesterday mentioned the fact that it was in 1885 that the trouble with regard to the use of the French language in the province of Ontario first arose. That was when Sir Oliver Mowat was in power in that province. Conditions were not satisfactory then, and a commission was appointed in 1889 to inquire into the question. Another commission was appointed in 1893, and another in 1910, and these difficulties were grappled with and largely overcome. In 1910, Dr. F. W. Merchant, Chief Inspector of Public and Separate Schools, was appointed a commissioner to investigate and report upon the English-French schools, public and separate, of the province, and this is a synopsis of his report from a statement given by the Minister of Education of Ontario:

The report of Dr. Merchant, which was completed in 1912, was based upon personal inspection of 269 schools in which the French language was either a subject of study or was used by the teacher as the medium of communication or instruction. The report dealt with the whole subject as an educational problem. The conditions found to exist have probably not changed materially in the four years that have elapsed since. A summary of this report will, therefore, be a fair index of the problem as it exists at present. The conditions were not satisfactory. Many uncertificated teachers without any professional training, were in the schools; and of those who held temporary certificates, about 50 per cent came from the province of Quebec. The attendance was irregular, the younger pupils being kept at home during the severe winter weather, the older pupils in spring and autumn.

That was the condition when the legislature dealt with the matter and passed the following resolution in the session of 1911. which is the basis of the portions of the school law of Ontario with regard to the French language. I will read that resolution, because it is important; it was carried unanimously, there not being one dissenting vote:

Resolved, that the English language shall be the language of instruction and of all communications with the pupils in the public and separate schools of the province, except where, in the opinion of the Department of Education, it is impracticable by reason of pupils not understanding English.

The French members of the legislature voted for that, and this is verbatim the language of the French school laws of Ontario.

Mr. MARCIL: With the hon. gentleman's permission, I desire, with a view to eliciting information, to put to him the same question as I put to the hon. member for Kingston (Mr. Nickle) last night. Did Mr. Racine, who represented Russell, inquire whether the adoption of this resolution would change in any way the regulations with regard to the French minority?

Mr. MACDONELL: I do not know anything about Mr. Racine. What the hon. gentleman has said affords me another argument. It proves the unfairness of bringing into this arena matters that belong to the province of Ontario. Sir James Whitney is dead, and the records of these proceedings are in Toronto. No doubt the hon. gentleman would be answered if the Government of Ontario were asked the question he asks me. I am not familiar with the details of these matters I was not a member of the legislature. Had this discussion come on in the proper way, had the resolution been put on the Order Paper and hon. members given an opportunity to consider it and prepare themselves, I believe that the discussion would have been more informing and useful than this which has been thrust thus suddenly upon the House. I desire to read a telegram which has been received from Hon. G. Howard Ferguson, Acting Minister of Education:

Toronto, Ont., May 9.

Under our regulations there are only two classes of schools, namely, public and separate. By special regulation, however, the minister is given authority to designate annually the schools to which Regulation 17 shall apply and these are called English-French schools. The reason for this, you will observe, is that a school formerly designated and operated under 17 may have acquired a sufficient English training and adopted such methods of teaching that it would not be necessary longer to desig-

nate it as an English-French school. On the other hand, a school that obeyed the requirements of our regulations last year may have changed its attitude this year, and the minister would feel it necessary to designate it so as to bring it under Regulation 17. In other words, Regulation 17 is only made to apply to schools where it is found French children are not given proper opportunity to acquire knowledge of English. You will therefore see why it is that the particular schools and the number of them may change from year to year. Section 12, subsection 2, applies generally to all bilingual schools, and provides that where French language prevails inspector may permit use of French under certain restrictions, as provided. Necessarily the designated class, which comes under Regulation 17, is excluded from those that come under section 12, subsection 2. Take the case of a new school section growing up. It begins as an English section. With the influx of French people the prevailing language in the locality may change from English to French. When that becomes the case the school has the right to operate under section 12, subsection 2. If it grows intensely French and the tendency is to deprive children of chance to learn English, then the minister would designate it under 17. It is all wrong to say it is impossible for the French people to secure instruction in their mother tongue in case they immigrate into districts where no bilingual schools had prevously prevailed. As a practical possibility such a thing is scarcely likely to happen because if the French people begin to move into an English community, they pick up so much of the English language by intermingling with the people that it would scarcely be necessary to use any other than the English language for instruction purposes. If you can imagine a whole French community settling down isolated from opportunities of learning English, that school would be designated by the minister as an English-French school and the department would see that ample facilities were provided for pupils to acquire English through the medium of their mother tongue and at same time be given in that tongue.

G. H. Ferguson.

That explains the matter very fully, and I will not attempt to add anything to it. I leave it to the House and to the country, merely saying that for myself, for the reasons that I have tried to give I will vote against this amendment. I believe it is not in the interest of Canada, nor in the interests of the province of Quebec, nor in the interests of the province of Ontario. I believe nothing more unfortunate could have happened to our friends in the province of Quebec than the introduction of this resolution. The nature of the resolution and the way it is put makes it plain to the people that its introduction at this time is entirely inadvisable.

Hon. GEORGE P. GRAHAM (South Renfrew): I can sympathize somewhat with the statement of the Postmaster General (Mr. Casgrain) yesterday that he possibly was not acting as many of the people in his own province would think it better for him to act. There are such times in the life of every public man; in fact that time is always present with him. But the older he grows the more he is impressed with the necessity of hewing straight to the line in his public conduct. It has been suggested to me many times during the past three weeks that were I to vote for any resolution touching on this delicate question I should be preparing material for a first-class political funeral. If so, blessed are the dead.

Sir GEORGE FOSTER: Only on one condition.

Mr. GRAHAM: I submit that a man's conscience is the guide to him whether the conditions are fulfilled or not. While I prize the opinion of my friends as highly as any man can possibly do, while I am heartily thankful for the confidence that has been reposed in me by the people of my native province for a great many years, yet, Sir, I consider that my conscientious duty is paramount to anything else, and in the performance of that duty I am both going to speak and vote on this question. Were I looking for the plaudits of friends, or possibly for political preferment, I might take some other course; but I have in my mind, after associations of the past year and a half in certain parts of this Dominion, something which to me is more paramount than either of these, great and desirable as they may be. If, Sir, by my action, by anything I can say, I can in the slightest degree assist in bringing together the warring factions in Ontario, and thus add to the warring forces of the Allies in the old land even but ten men, I am accomplishing something for the Empire and for the Dominion of Canada. Sir, I go further. If, by the sinking, if that be the case, of any ambition I may have, I can take away from any number of men in Canada the excuse for not enlisting, I feel that my duty has been performed and I am fully repaid. I know of what I speak, without going into any further details; and if, as the hon. gentleman who preceded me (Mr. Macdonell) has rightly said, the prosecution of this war is the paramount issue now before the Canadian people, I submit that by my action to-night I am taking the strongest step I possibly could to do my best towards the achievement of that end.

My hon. friend spoke as if this resolution were intended to coerce the people of On-

tario, or to advise them, or to interfere with them. No such thought is in the mind of any man in this House, and I think the high plane of the discussion on this most delicate question, in which the issues at stake appeal to the very sinews, to the very fibre of men's being, and the fact that there has been such a complete absence of words that might annoy, of sentences that might irritate, is a striking tribute to the ability and the calibre of the men who form the Canadian House of Commons. A firebrand on either side on a question of this kind, might have led men of ordinarily mild temperament to say things which they would not say in cool moments, but which they would always regret. That has not been the case; but we have discussed in this House up to the present moment a question of the most delicate nature without a harsh word being said, and without anything escaping the lips of members that would bring any blush to those who come after us when they come to read the debates on this question at the present time.

But, Sir, we have no intention of dictating to the province of Ontario. It is merely through this resolution, as the most direct means of exercising our right of expressing our opinions upon an alleged grievance, that the authority, and the only authority that has power to deal with this grievance, may learn what our viewpoint is, and, if it be in their minds, can remedy the grievance which is said to exist. You, Sir, made it very plain that this was the case, and I am not sorry now, Mr. Speaker, that your ruling was challenged, because some people might have said that in your ruling you leaned to virtue's side—or the contrary. But your ruling having been approved by the vast majority of this House, we are discussing this matter because the House of Commons, nearly to a man said that we had a perfect right to discuss it. But I want to refer to the words which you, Mr. Speaker, used which were approved of nearly unanimously, and which must convince the members of the attitude of those who are discussing it that it is not their intention, that they have no desire, to interfere with the rights of the province, but merely to express an opinion. The Speaker used these words:

> By ruling that this amendment is in order, I mean that this House has the right to discuss it, not with the view of depriving a province of what may have been enacted by its Legislature, but merely with the view of allowing the House to express its opinion.

That is merely what those who proposed this resolution, as I understand it, desired to do. Now that the question is here, I am free to admit that I should have preferred that it had not been brought here. Personally, being a citizen of Ontario, I had intended to address a few meetings in this province on this very point, to express to the people my own viewpoint—whether it would have been approved or not is another question. That being my intention, I should have preferred to have taken up the discussion outside of this House rather than to have it brought here. But it is here, we must face it, and I propose to do so for a few moments and tell the House why I am taking the attitude which I now take. I hope in doing so not to offend any person, though I may say a few plain things to people in both provinces on this question. Perhaps I should not say the people in both provinces; I mean the people speaking both languages; because this is an Ontario affair, and while you gentlemen from outside may discuss it, remember that we in this province are the ones to settle it, and the only ones who can settle it, or who have the right to settle it. My own view is that defiance of law is not the proper way to go about getting a remedy of a grievance.

But I will go further, and say that the cause of this irritation is not all one-sided. Let me be frank. I have been through discussions of this kind for a good many years. I have been in the Ontario Legislature, and, perhaps, I know as well as any man on the other side of the House the outlook from that angle on all these questions. Ontario is very jealous of her right to manage her own affairs, and rightly so. Certain laws were passed under the Mowat Administration after heated discussions on this question and on the question of separate schools in two or three elections. Had those laws been adhered to I believe that we would not now have the irritation which exists. One of the difficulties arose, and I say it advisedly, not from the enactments of the Mowat Government and of the Legislature of Ontario, but from the fact that the people interested did not obey the laws of the Ontario Legislature. I could cite several instances. Thus the irritation began. Speaking as a man from Ontario, who has been in the Ontario Legislature, who knows that viewpoint, I say without hesitation that in some schools in the province of Ontario the law was not only ignored, but defied. I do not refer to

the situation of recent date in Ottawa I am not referring to that at the present moment. Irritation consequently arose. It is possible that the authorities of that day were a little too lenient in not compelling compliance with the law, but this is such a delicate question to deal with that in a measure they may be excused. But it is the fact nevertheless that had not some schools that should have remained bilingual at least been made absolutely and totally French, there would not have been the cause for much of the irritation that has taken place in Ontario. I am not saying who is to blame I am simply saying that I know that to have been the case.

Coming to the city of Ottawa, I want to say plainly again that I do not believe that defiance of the law is the proper way to go about getting any grievances remedied. We have certain extremists in Ontario, I admit, but I do not want the people of the province of Quebec to judge the province of Ontario by a few ranters in this province. There are extremists in the province of Quebec, and I ask the Ontario people not to judge the good people of the province of Quebec by ranters in that province. The men who keep in the middle of the road represent the best men in both provinces, and by these the people in each province are to be judged, and by these alone. Ontario people are sensitive. Perhaps I am not as sensitive as some people about the things which are said about the province from which I come, in which I was born, and in which I live. We are not a lot of bigots in the province of Ontario. I resent any suggestion of that kind. We have some; they creep into the best of society. If you could take ours in Ontario with yours in Quebec, and send them to the front where we would be sure they would stay, it would be a good thing for both provinces. But, in dealing with these questions, while we are irritated in each province by the extreme words of ranters in the other, we must keep our heads, and remember that the best in each province is not represented by men of that stamp.

I want to reiterate that, so far as I am concerned, I would not vote for a resolution, much less speak for it, which had even the semblance of interfering with the rights of this province or of any other province. If I thought that my action was construed in that way by those who have moved this resolution—I know it is not—I would not—I would not vote for the resolution at all, because Ontario is the only power that can deal with this question. Some person may say to me—I have seen the insinuation in some newspapers in Quebec and in some in Ottawa that the Ontario Government is made up of bigots and fanatics, and that the legislature in general is of the same calibre. I have no brief for the Ontario Government, as you can well understand; but I know Premier Hearst, and nobody can make me believe that Hearst has the least semblance of a bigot in his make-up. I am acquainted with the man. I know the Hon. Thomas McGarry, and I know him to be broad-minded, a man who hews to the line and tries to do the right thing. I was associated for years with the Hon. W. J. Hanna in the Provincial Legislature, and there is not a man in Canada who can make me believe that Hanna is a fanatic, or has the semblance of a fanatic in his anatomy, or is a man who would do anything wrong as between men in the way of encroaching upon their rights. These men are not bigots. These men have a duty to perform. But, lest I may be misunderstood—I have mentioned only three because they are the three I know best—the others, I have every reason to believe, are in the same category. Coming to the Opposition, I know N. W. Rowell. Rowell is not a bigot; he is one of the broadest-minded men in the Dominion, and one of the ablest men as well. I know many of his followers who were in the Ontario Legislature when I was there. I know Charles Bowman, a man of German descent, who, like his father, is a credit to the province of Ontario. There is not an iota of bigotry in the make-up of Mr. Bowman. Another I think of is Mr. Sam. Clark, of Cobourg, a man of all men, open-hearted, broad-minded, and with a heart that would take in everybody in the Dominion of Canada and have some room left. This question must not be discussed on the supposition that the men in the Ontario Government or in the Ontario Legislature are narrow-minded. I do not admit that; I resent it, because, knowing these men, I know they do not view their public duty from that standpoint.

11 p.m.

Let me deal for a moment with the question of disallowance. I need not say that I am not in favour of the disallowance of this Act. There have been very few Acts passed the disallowance of which I would favour. Sir Allen Aylesworth, Minister of Justice in the former Government, once made the statement that in his opinion a

province had a right to do wrong if it wanted to. That was possibly putting it broadly, but to a large extent, the powers given to the provinces under the Act of Confederation enables them to do that, so long as some great public right is not interfered with. I know of legislation for the disallowance of which petitions came to the federal authority in the time of the Administration of my right hon. leader that bore upon their face evidences of injustice. The Minister of Justice then took the ground that the people of Ontario had the power to punish a Government that would pass that kind of a law and that the matter was their business and not ours. I think that is fairly sound logic and sound constitutional practice, although the law would allow them to take another view. But, there is another reason in this case why I would be absolutely against disallowance. If the grievance now claimed does really exist, disallowance would not help one iota. Those of us who are older remember the disallowance of provincial Acts many years ago, with what result, Sir? These Acts were immediately re-enacted by the Ontario Legislature, disallowed again, and re-enacted again, until they went to the Judicial Committee of the Privy Council. No real remedy could be afforded, particularly in a case of this kind, by disallowance. It would only add to the irritation, and the Government did exactly right in not thinking of disallowing this Act. Further than that, they would have been compelled to take the strong ground that this Act was so injurious that it should be disallowed, although it was absolutely within the purview of the Ontario Legislature, which nobody does dispute, or nobody can dispute, if he looks upon the matter dispassionately.

But you say: "Then, that being the case, this question should have been referred to the courts and finally decided." If this were a question of commerce, if this were a question of some minor importance, of something that dealt only with the heads and not the hearts of people, I would say that a decision by the courts would settle it. But this is a question far and beyond and above anything in the way of a commercial transaction or of a commercial dispute. It is something that touches the beings of men, something that touches their history and their traditions, and no decision of any court, no matter what it may be, can alleviate the irritation that exists. I say to those who are prosecuting that case and taking it to the courts that, no matter what the decision may be, the people of Ontario will have to deal with the question ultimately.

Mr. BURNHAM: May I ask the hon. gentleman if he means that it would be desirable to test the opinion of the country at large upon this matter?

Mr. GRAHAM: I am not objecting to it, but I do not suggest it. My hon. friend has a constituency where he thinks he could use this question fairly well, as he did the ne temere decree. I say that a decision of the court, no matter on which side it was, would not alleviate the condition or remove the irritation. Why do I say that? Supposing that those who make the complaint of this law were upheld and the decision were in their favour, think you that, if the Ontario Legislature did not believe in the justice or wisdom of the decision, they would not and could not find a hundred ways of getting around it without violating it? Everyone knows that. They need not pass any legislation to implement the decision. They could do several things, refuse to grant money and that kind of thing. That would not help. I say to the French people of Ontario: suppose the decision were against you, then where would you be? I am not a lawyer, but my judgment is that if the case goes to court it will be decided in favor of the Ontario government. This being so, an appeal to the courts would not lessen the irritation; it would but add to it, no matter what the decision might be.

What is the only remedy? You say to me: "Why should we have anything to do with this question in the federal Parliament"? That has been decided by almost the unanimous vote of the House, and I will not discuss it. But, if there be a grievance, I do not know. Is it claimed that there is a grievance? It is. If any man imagines that he has a grievance, he is as much troubled in his heart as if he had a real grievance, because to him it is a real grievance. One thing I do know is that for some reason hundreds of children to whom we owe an education are walking the streets, or have been, and are not getting it. I do not know what the situation is to-day. We owe a duty to these children, and those on either side who are preventing an arrangement being brought about by which these children can proceed on their course to manhood and womanhood are taking a grave responsibility. There is a grievance, or an alleged grievance, I am not sure which it is. It exists in the minds of a lot of people

at least, and we in Ontario ought to be big enough to find some way to do justice to the children of Ontario if not to the children in the other parts of the country. What is to be that way? It cannot be by law, it cannot be by coercion, it cannot be by disallowance, it cannot be by court decision; it must be through some friendly and conciliatory method on the part of both parties. It will not do to say: "You have no grievance; there is the law." That makes no difference to the man who thinks he has a grievance. Something ought to be done. Are we not big enough in Ontario to devise a method by which a remedy can be found?

I said that I did not know whether there was a just cause for a grievance or not. This much I do know, that, having sat in this House, I have heard men, learned in the law, on each side if the House say there is no cause for a grievance because the amendment to the Ontario law does not mean that those who claimed to have a grievance insist it does mean. The acting Minister of Education said that these amendments to the Act are not intended to deprive children of French-speaking parents of any privilège they had. Mr. Rowell has said the same thing. Their remarks appeared in the same newspapers. That is the Ontario side of it. Hon. gentlemen in this House have said the same thing. Eminent men on this side of the House, whose ability both as statesmen and lawyers no person will question, declare just as emphatically that these amendments can bear an interpretation which does deprive the children of French-speaking parents of the privileges that they have always enjoyed. Who is right? I do not know. There should be some person to say who is right as between these two opinions. I know a most eminent lawyer in Canada who has said that this Regulation 17 is weak, and if it is apparently capable of two constructions, surely there is some method by which that weakness can be removed and the law made clear so that there can be no dispute that it means what the Ontario Government and legislature say it means. If that be done the cause of grievance is removed, so far as I am concerned. If some enactment can be passed that will make it so clear that lawyers cannot differ, and everybody will know that this legislation means what the Ontario Government says it means, there will be no cause, I think, for the grievance among those who are now complaining. Lawyers may laugh at that, but lawyers make good fees out of these very differences. If these differences did not get into legislation we should have fewer lawyers. Not being of that profession myself, I cannot appreciate these technicalities but I do know that they exist. Prominent legal men have said to me that the interpretation put upon these amendments by the leader of the Opposition and by the hon. member for Kamouraska is not a strained one. Now, this resolution only suggests, nothing more. It does not ask; it does not advise; it merely expresses the opinion that, that being the case, it would be wise if all doubt were removed by having the legislation of Ontario made so clear that nobody could say that it did not mean what the Ontario Government says it means. That is not a very big demand. Knowing the members of the Ontario Government, I believe that if the Minister of Trade and Commerce, the Prime Minister, the Minister of Finance, the member for East Toronto, and the member for South Toronto—Ontario men, who have the right to sit down and discuss it directly with the Ontario Government—I believe that if they were to sit down and discuss this matter with Premier Hearst, this grievance would be removed in twenty-four hours. I know the men of whom I speak, and I say in all fairness to the members of the Ontario Government that I have never found any of them showing the least symptom of bigotry, or a desire to interfere with any man on account of his religion or origin. That being true, I urge upon the Government and the members from Ontario the wisdom of sitting down quietly with the members of the Ontario Government, and pointing out that if they will make clear what they say is their intention, much of the trouble will be removed. If that can be done—and it seems to me very simple—there will have been accomplished by this discussion, conducted as it has been without any irritation, harshness or abuse, something that will be worth all the money that has been expended in the holding of this session of Parliament, if it accomplished nothing else. Let us look at our hearts at the present moment. The greatest necessity in this hour, in the face of an enemy who has appeared almost unbeatable, is that all hearts in Canada should beat as one. If friendly conference by men from Ontario with the authorities in Ontario can bring about a state of affairs whereby the present friction, no matter from what cause, will

no longer exist, and hundreds of children now going uneducated will return to the schools, and we in Canada, no matter from what part we come or what our race or origin, can say that we have no grievance against each other, we shall be in a better position than we have been in for the last eighteen months to face and overcome the enemy, because the people of the Empire will be united.

Sir GEORGE FOSTER (Minister of Trade and Commerce): Mr. Speaker, I have a very few words to say in connection with the question that has been debated now for two days, and the discussion of which, I suppose, is now nearing its end.

I have listened attentively to every speech that has been made, including the speech which has been made by my hon. friend who has just taken his seat (Mr. Graham); and I acknowledge to this House and to myself that now, just at this moment, I am more mystified as to why this resolution was ever brought here than I have been at any other time during this debate. I have been trying to find out what it was brought here for, I have diligently scanned the arguments, and listened to most of them as they have proceeded from those who have spoken; and I cannot yet see, from anything that has been said by my right hon. friend who is the father of the resolution, or by my hon. friend who has just taken his seat—taking them as the two principal exponents—what in the wide world this resolution was ever brought here for, if it was not brought here for mischief. It seems to me like the foolish prank of a mischievous boy. My hon. friend who has just taken his seat spoke of firebrands. He has been on tenterhooks ever since this resolution came into this House lest some word should be spoken which would set a fire going that would blaze up all over this country. Was it necessary, in order to make a protest to the Ontario Government, that you should contemplate firebrands and conflagrations, and bring tinder into this House which would contribute to it?

My right hon. friend (Sir Wilfrid Laurier) says: "I do not want to dictate; I have not the least idea of giving Ontario advice; all I want to do is to make a plea and have a hearing." Good gracious, Mr. Speaker! Could he not have made the same plea without a resolution? Could not everybody in this House have said what everybody has said on a motion to go into Supply, without bringing in any resolution at all as an amendment to that motion? Then why was the resolution brought? That is what mystifies me. How is it with the rest of you on each side of this House?

An hon. MEMBER: It synchronizes.

Sir GEORGE FOSTER: There is another thing which shows the absurdity of trying to try out a question of this kind in a forum which is uninformed, and cannot possibly be informed on the very kernel of the question. My hon. friend from Nicolet (Mr. Lamarche), in that excellent speech of his as to form and clearness, although I do not agree with everything he has said here this afternoon, charged the Ontario Government with various wrongdoings. Who is there here to answer for the Ontario Government? Is the Ontario Government at the bar of this House when charges are made that deeply affect its honour, its spirit of fairness, and its objects? Is there any one at the bar of this House to speak on behalf of the Ontario Government, to give the reason for its acts, to explain what is not clear or defend what is wrongly attacked? I am satisfied that there is an answer to every charge that has been made; but no man in this House who has not grown up in the atmosphere of the Ontario Legislature, who has not gone from an Ontario constituency to enact the legislation which pertains to that House under our Constitution, no matter how able he is, can take up a question like this, which has a growth of thirty years in the province, and be at even advantage with reference to it, know its genesis, its development and the truth that is in it. A lawyer can take a brief and make a very good case out of it; but there is no man on either side of this House—and the debate we have had here has shown it—who is capable of taking this educational problem, that has been before the Legislature of Ontario and the various Governments of Ontario for these many years, and thoroughly understanding it, can do it justice or speak with authority with reference to it. So almost every man who has spoken has had a different idea of its purport, none know certainly.

My right hon. friend the leader of the Opposition is consumed with a spirit which impels him to make a plea. To what God is he praying? If he wants to make a plea which shall be an effective one, let

him put his plea upon the altar of the being who is able to grant it or refuse it. My right hon. friend the other night seemed to be under the impression that such a deity was my hon. friend who sits here by my right (Mr. Rogers). At the very end of one of his most impassioned pleas, he said, turning to my hon. friend: "Will you grant me that?" The man to whom he ought to have gone was that good, fair, impartial man, Mr Hearst, the Premier of Ontario, by long knowledge of whom my hon. friend (Mr. Graham) felt himself justified in saying with reference to him:

He is no bigot; he is an honest man who tries to do even justice to every one in his province."

Mr. GRAHAM: I am afraid my hon. friend is going further than I said.

Sir GEORGE FOSTER: That is the man to whom you should have gone with your plea, and not to my hard-hearted though large-hearted friend who comes from Manitoba. That is the one thing that seems to me to show the absurdity of bringing this question here, where there is nobody to answer for it or to say whether or not he can or will grant the plea.

Now, I want to pick a bone with my hon. friend (Mr. Graham). In the interest of the very people whom he has been championing here to-night, was it a fair estimate to make of that French-Canadian character which began to develop upon the shores of Canada 150 years ago, for him to say that because a French child somewhere in Ontario is alleged, for a little while, in learning grammar and geography, to be kept from using his own language or having his own language uttered to him, therefore that grand race shall refuse to fight for the country that they have adopted and the country that they love? I have formed no such opinion of my French Canadian friends in this House or in this country of Canada, and I think that my hon. friend was ill-advised when he supposed that before you could get recruits in Quebec you must fix up this small trouble on the streets of Ottawa, where the children are pacing the streets instead of being in the schools—on account of whose fault? Because somebody chose to be disobedient to the law—nothing less and nothing more than that. The greatest crime that a man can commit in a democratic country is to refuse to obey the laws that the democracy imposes upon him.

Mr. GRAHAM: That is what I said.

Sir GEORGE FOSTER: That is done in the streets of Ottawa; and yet I have not heard a single expression of regret as to that side of the question from my right hon. friend who had so much to say with reference to the faults of many people in Ontario.

My hon. friend from Nicolet (Mr. Lamarche) uttered, I think, a heresy this afternoon when he stated that the law should not be appealed to, that the courts should not be appealed to, in order to get rid of a law which was oppressive, because by doing so you proclaimed your adhesion to the law. There are only three ways of getting rid of a law. One is to go to the law-giver and convince him that the law is an improper one and get him to amend it or to get it out of the way.

Mr. GRAHAM: Hear, hear.

Sir GEORGE FOSTER: My hon. friend said: "hear, hear". A brave man and a man who honestly wants to get what he says he wants to get goes to the man who has the power of giving it, and does not stand three or four hundred miles off and make long shots through a foreign substance and wait until by similar long shots in the opposite direction, he gets a reply from somebody who has nothing to do with the matter. In my boyhood days, if I wanted something from my mother, I went straight to her and asked her for it and I got it; I did not run around to all the Aunt Sallys in the neighbourhood.

The other ways of getting rid of an obnoxious law is either to have it annulled in the courts if it is illegal or to reverse it through the electors.

There was another little heresy of my hon. friend, and I think a heresy uttered by one or two others, including the hon. member for Kamouraska (Mr. E. Lapointe). Just here let me state what I thought while this debate was going on. If I were a young man like some of those English-speaking men, around me, I would study from this very moment straightforward until I could speak French just as well as some of my French friends speak English in this House. The ability to speak two languages gives a man power. I am, however digressing a little; what I wanted to do was to compliment my hon. friend from Kamouraska on the excellent English in which he addressed himself to his subject. My hon. freind, however, as to that little heresy of his, has taken comfort to himself and solace for his conscience in try-

ing to find a reason for the bringing of this question into this House. "We have a right to bring it here", he says; and it is here properly, because the Speaker said they had the right to bring it here.

Mr. GRAHAM: I said more than that.

Sir GEORGE FOSTER: I remember a lesson of my Sunday-school days to the effect that there are some things that are right, but which may not be expedient. Some scripture character gave utterance to that many long years ago. Because the Speaker said that under the rules of Parliament, when a motion is made to go into Supply you can bring in an amendment with regard to almost anything under the sun, that does not excuse my hon. friend from bringing in a firebrand motion; and I think he felt a little of that fire burning in his own conscience when he turned to the Speaker's decision and the support given to the Speaker in this House as a solace to him for having this firebrand question brought into this House.

Mr. GRAHAM: My hon. friend, perhaps, does not mean to be unfair—

Sir GEORGE FOSTER: I will not be unfair.

Mr. GRAHAM: I was answering the argument of the hon. member for South Toronto (Mr. Macdonell) that we were trying to do something in the way of giving advice or instruction to the Ontario Legislature which we should not do, and I read the paragraph of the Speaker's ruling based on the fact that we were merely asked to express an opinion. I did not give the reasons that the hon. gentleman has given at all.

Sir GEORGE FOSTER: I accept the hon. gentleman's explanation and if I have done him an injustice I am sorry for it. But the hon. gentleman said he would rather the resolution were not here. Why did he say that?

Mr. GRAHAM: For the same reason that I said a good many other things—because it is true.

Sir GEORGE FOSTER: It is true my hon. friend would rather it was not here. Will he say that, in order to make the plea which he has made, a very effective and straightforward plea, it was necessary that this motion should have been introduced? Could not he have said every word he has said even if this resolution had not been introduced.

[Sir George Foster.]

Mr. GRAHAM: Does my hon. friend want an answer?

Sir GEORGE FOSTER: Yes.

Mr. GRAHAM: That answer was given in almost the next sentence I spoke, when I said that as a citizen of Ontario I would have preferred to go elsewhere to discuss this matter, and I intended to do it. But, as it is here, I propose to support it.

Sir GEORGE FOSTER: What kind of a soldier is my hon. friend, to load himself up with unnecessary impedimenta when he goes into the field? He could have done all the fighting he had to do without this resolution. He did not wish it, he did not need it; and yet he has lugged it in. My hon. friend paid a high compliment—and not too high—to the members of the Government and Legislature of Ontario. I know these men, and I believe what he said, that they are honest men; they are not bigots, but fair-minded men. These, then, it seems to me, are the men to whom he should go. He never has expressed such high confidence in the men who sit on the treasury benches in this House. And yet, desiring honestly to do a great thing for the cause which, he says, commands his sympathy, he deliberately turns away from the men in whom he has confidence and comes to press an impossible task upon men in whom, he has expressly declared over and over again, he has no confidence.

Disallowance is no good, he says; disallowance is no good, said my right hon. friend the leader of the Opposition (Sir Wilfrid Laurier) over and over again; disallowance will not do what is desired, said others in this debate, over and over again. How is it—and here is a question that troubles me—that for week after week, for month after month, an agitation has been carried on, paper and ink have been freely used, and thousands upon thousands of people were led to sign a petition to this Parliament, asking for disallowance as a remedy for a grievance which is alleged? My right hon. friend, whose hand is upon the strings of the whole country, and especially upon the strings of Quebec, should have advised his friends that this was only provocation and embarrassment. But all that time there was no word from him advising—

Sir WILFRID LAURIER: No, no.

Sir GEORGE FOSTER: —those in whom—

Sir WILFRID LAURIER: No, I never advised, because I never was consulted, and never knew. If I had been consulted a different course would have been taken.

Sir GEORGE FOSTER: My right hon. friend is about as innocent a youth for an old politician as I have met in a long time.

Sir WILFRID LAURIER: I will admit no such imputation. I say here on my honour that I never heard of these petitions, I never was consulted about them. The hon. gentleman can take my word or not as he chooses.

Sir GEORGE FOSTER: My right hon. friend is quite wrong: I had no intention of suggesting doubt of his statement that he did not know these things. But the mystery deepens. How a man like my right hon. friend, who has been forty years in politics, who knows the ropes, who keeps even with the current of public thought—how all these things could have gone on and he never have heard of it surprises me. There is another thing with regard to my right hon. friend. In all his speech I did not hear a single word of condemnation for the firebrands, for the violators of law on the other side of the question, and not only the violation, but the denial, and and the flouting of it under my right hon. friend's front windows. He must have known that. Where, in Ottawa or elsewhere, did my right hon. friend say a word on behalf of the majesty of the denied law, a word as to the short-sightedness of the men who fight the law on any such lines?

My hon. friend from South Renfrew (Mr. Graham)—I must get back to him because I like him so well—I think, has got on strange ground to-night. With long years of experience, with high standing in his party—some time, it is rumoured, to be the leader of his party—what strange heresy is this he has been preaching here to-night? He has invited both sides to this dispute to evade the judgments of the courts of the land and pay no heed to them.

Mr. GRAHAM: I have not invited them, but I have stated facts which everybody knows.

Sir GEORGE FOSTER: What solid ground can we go upon if we are to follow the hon. gentleman? Up to the present time I think we have had solid ground in this, that whenever legislation was enacted which was supposed to be wrong, gradually it went up from court to court until at last it got to the highest tribunal, and when that highest tribunal pronounced its judgment every citizen bowed to that judgment. Is that not the only safety that we have in a country like this? My hon. friend to-night scouts such doctrine as that, goes to the one side, the enacting power, and says: "If the Privy Council says you are wrong, you will evade their judgment, and you will find some way of perpetrating that wrong again." He goes to the aggrieved party, and says: "If the judgment goes against your wishes, you will not be satisfied, and you will not bow to the law." That is not good doctrine in a country like ours, but perhaps it is only a temporary aberration in my hon. friend.

Mr. GRAHAM: That is all.

Sir GEORGE FOSTER: I know he will come back to his right mind.

Mr. GRAHAM: Ask any lawyer, and he will tell you it is true, just the same.

Sir GEORGE FOSTER: I am sorry, myself, that this resolution ever came into this House. I say that for all purposes which have been avowed by my right hon. friend and my hon. friend who has just spoken, for all purposes of making a plea, of expressing their sentiments, there was no necessity for bringing this resolution. But the resolution was brought, and just the last few words of my hon. friend gave me a clue as to why it was brought. He has been pointing the moral and adorning the tale. Nothing in that resolution of advice, or anything of the kind he says; but when he comes to apply it, as he did a moment or two ago, he says: "Just let the Minister of Trade and Commerce and the Minister of Finance or one or two other members of the Government take this message from us and go down and use their influence with the Ontario Government, and they can settle it in a minute." And, if they do not happen to be able to settle it and the Ontario Government say, "We stand by what we have done," then my hon. friend would have got what he wanted—a chance to blame the Government and to trumpet it all over this country that they did not do what they might have done. That gives a pretty good indication of why this resolution was brought in.

Mr. GRAHAM: Does the hon. gentleman really mean to say that was my motive in making that suggestion? I absolutely deny

that I had anything of the kind in my mind; I treated this question from a higher standpoint.

Sir GEORGE FOSTER: Then my hon. friend is very unfortunate in making the application in the way he did, because his last argument included laying this burden of duty on certain members of the Government, and that if they would take it up and go down to Toronto the whole matter would be fixed and everybody would be satisfied.

Mr. GRAHAM: I will go with them if they will take me.

Sir GEORGE FOSTER: We would be glad of your company.

I listened to the speech that was delivered here by my hon. friend from Edmonton (Mr. Oliver) with a good deal of interest. The position of the west was strongly put by him. I am sorry this resolution was brought, because it makes a pathway for succeeding resolutions. Once you open the pathway to a resolution which involves an interference with a legislature which is acknowledged by hon. gentlemen themselves to have enacted within its powers a law which they would not ask to be disallowed, the very moment you open a path with reference to the province of Ontario, you open it for every province in this wide country. I repeat what my right hon. friend the leader of this Government (Sir Robert Borden) said, that if that is to become a habit and a practice in this House, no province is safe from the reproof, the admonition and the interference of a majority in this House which may choose to interfere with its just rights of legislation. If it is possible to do that with the province of Ontario, it is possible to do it with the province of Quebec, and the province of Quebec is the last province in this Dominion which, from its own standpoint and holding to its own ideals, should have helped to brush out a path for action such as that into this Dominion Parliament, into this House of Commons—the very last. Here, with reference to the other provinces, we may be divided; but something might occur with reference to the province of Quebec on which the vast majority of the Dominion would feel one way, whilst Quebec had felt and legislated another way, and then you would have, not a resolution which can be defeated as this will be defeated in this House, but a resolution which might pass this House and impose interference with the action of the province of Quebec.

Then, what in the wide world is the use of framing a resolution with a mandate in it unless you are determined to carry out the mandate? A mandate looks for a remedy. The remedy in this case is the amendment of the law. We pass the mandate—put it as mildly as you please, we pass it. We are no men, we have not been serious and in earnest, if, having commenced, having put our hand to the plough, we do not see the end of the furrow; and, if the Government of Ontario does not take our suggestion, then there will be a duty laid upon us to use something more than suggestion. Otherwise it is futile to bring a resolution of that kind, and futility is the chief characteristic of this action of my right hon. friend.

Mr. F. F. PARDEE (West Lambton): Mr. Speaker, the subject which is before this House is so important that, although there has been some considerable discussion of this resolution, I feel it due to myself as a member from the province of Ontario that I should not cast a silent vote upon this question. Let me say further, Sir, that I propose to give reasons, as shortly and clearly as I may, why, in my opinion this resolution is properly here, and why, in my opinion it should be supported.

The hon. Minister of Trade and Commerce (Sir George Foster) who has just sat down, has found fault with the fact that this resolution is here. Why is it, he says, that a resolution of this kind should be before this House? Let me say to him that, in the first place, this House can only speak by resolutions. Let me say to him, in the second place, that we are here as representatives of the whole of the Dominion of Canada, and as such we have a right to have put before us and to have aired any grievance which any portion of the people of the Dominion of Canada may suffer; and it is for us to say then whether or not, that grievance having been put before us as representatives, not of any province but of the whole Dominion, it is fit and meet that we should take some action in regard to it.

The resolution that is presented to the House to-night by the hon. member for Kamouraska (Mr. Ernest Lapointe) is not without precedent, and I would give to the House a precedent established in 1872, which I take from the Journals of this House. At that time Mr. Colby, a Con-

servative membber for Stanstead, there having been some trouble with regard to a school law in the province of New Brunswick, moved:

> That this House regrets that the School Act recently passed in New Brunswick is unsatisfactory to a portion of the inhabitants of that province, and hopes that it may be so modified during the next session of the Legislature of New Brunswick as to remove any just grounds of discontent that now exist.

The question went to a vote, and in those days they were no pigmies as they are not to-day, but big broad-minded men, who sat in the House of Commons representing this Dominion, men who had quite as much appreciation of provincial rights as any man in this House has to-day. Amongst the men who voted for that resolution, I find, were Blake, Cartwright, Hincks, Howe, Mackenzie, Tilley, Tupper, and Sir John A. Macdonald. Could we, I ask, in all sincerity, have a better precedent than was there laid down by the very men who were responsible for the foundation and confederation of the Dominion of Canada. There you had men, who recognized that a grievance existed in a certain portion of the Dominion, who were here as representatives collectively of the whole Dominion, bringing the matter before the Legislative Council of New Brunswick, and asking, as this resolution to-night asks, with all humility and with all respect that the Legislature look into the grievance, and give at least some aid towards its removal.

Sir, there are two things in the Dominion of Canada that are uppermost to-day. One is the winning of this war, and the other is the unity of the races in the Dominion of Canada. No country can be great, no country can prosper, where there is not unity among the inhabitants. Of provincial rights, let me say this: I was brought up in the cradle of provincial rights, and my father before me. No man ever held stronger views about provincial rights than he, and those views he translated into positive and concrete action in the province of Ontario. I inherited them, and I feel as strongly in regard to them as any man could feel. But I challenge any man on the other side of the House to show me wherein provincial rights are by one jot or tittle infringed in this resolution. Further, I say that to raise the question of provincial rights in this debate is to go far afield of the question at issue. The hon. member for Kamouraska, the mover of this resolution, stated his position in language so plain that nobody could misunderstand his meaning. He started his speech by stating that had disallowance been moved in this House he would have been one of the first to oppose it. He further said:

> Indeed, I personally believe that disallowance would have been unwise; the remedy might, perhaps, have increased the disease. Coercion of any kind will not settle the difficulties. I am a true Liberal and a believer in provincial rights. I will go so far as to admit that to be effective and successful any final settlement of this question must be made in Ontario and by Ontario herself. But, Sir, is it not the right of this Parliament, while declining to interfere with the provincial legislation of Ontario by the exercise of the power of disallowance or otherwise, to appeal to the rulers of that province for a generous and peaceful settlement of this disturbing question and for a redress of the grievances of the minority?

I ask, could anything be more simple, and at the same time more forcible, or could anything show a greater appreciation of what the mover of the resolution conceived his position to be? Granting all the provincial rights that Ontario possesses, he said, will you not consent to make some effort towards the peaceable settlement of the grievance which we think exists. That is all he asks. It is plain, simple, direct, and is the plea of a minority to a vast majority. It puts in words a plea to which the House surely cannot fail to pay heed, so far as the passing of this resolution is concerned, a plea for some effort towards settlement of this very great difficulty.

My hon. friend the Minister of Trade and Commerce has talked about a mandate, and the right hon. the Prime Minister has talked about admonition and direction. I defy any man who reads that resolution through to show me where the mandate is, where the admonition is, or where the direction, or even the hint of direction to the province of Ontario or to its Legislative Assembly is. The resolution reads:

> That this House especially at this time of universal sacrifice and anxiety, when all energies should be concentrated on the winning of the war, would, while fully recognizing the principle of provincial rights and the necessity of every child being given a thorough English education, respectfully suggest to the Legislative Assembly the wisdom of making it clear that the privilege of the children of French parentage of being taught in their mother tongue be not interfered with.'

A grievance there undoubtedly is. Everybody in the province of Ontario knows that that grievance exists. I am not saying that it is right or that it is wrong, but I do say that to pass this resolution would only do justice to those who suppose that they have a grievance. If it should be proved, after due inquiry, that

they had no grievance, the passing of this resolution would prejudice nobody. If that is so, then why cavil? Why not at least let us say as men, having the best interests of the country at heart, that it being a matter of common knowledge that the grievance is there, we will pass this resolution, and if we do, can we possibly, in any way whatever, or by any stretch of imagination, be said to be admonishing the Ontario Government or infringing upon provincial rights? Although no man will uphold provincial rights more strongly than I, where provincial rights are not being entrenched upon, and where a civil request is made, no demand, it would not in the least prejudice the best interests of our country, which we are supposed to be here to uphold, if we adopt this resolution. May I say to some hon. gentlemen who sit on the other side of the House, that were they to vote for the resolution as it stands, they would only be upholding the traditions of Sir John Macdonald, whose principles they profess to so greatly admire? The passing of that resolution will mean that there will be greater unity in Canada and a closer adhesion of races and peoples.

I have been told by my friends, some of them political, some of them otherwise, that, as a member for an Ontario constituency, for me to vote for the resolution means political oblivion. All I have to say is that if the time ever comes in this House why I cannot give good reasons for the faith that is in me, for the measures I support, I sincerely hope that I shall not continue to be here. I can do little less than satisfy my own conscience as a man, and if I do vote for the resolution, and if it does mean political oblivion, I only have to say that the passing of political parties, or the passing of any one member of a political party, makes little difference, as they are sure that they have done full and complete justice to the cause which they are supposed to have at heart, and if they pass out they do so feeling satisfied with the course which they have pursued. Ever since I have been in public life—and it is not a matter of yesterday—at periodical times, there have been raised racial and religious questions within the province of Ontario. Well do I know whereof I speak, but I want to say this, that if we here to-night, with this resolution before us, can, by the exercise of a little moderation, and by setting aside all party associations, pass this resolution and bring about a stifling of these racial cries which are rending Canada from time to time, we will have done full justice to ourselves, and we will have done a benefit to Canada as a whole and to the provinces collectively and individually.

Mr. HUGH CLARK (North Bruce): Mr. Speaker, it does not often happen, but when it does happen I doubt if there is anything more solemn than to hear a man delivering his own funeral oration. There has been more solemnity in the funeral oration just delivered than there was in that of the hon. member for South Renfrew (Mr. Graham). That hon. gentleman took a melancholy pleasure in the prospect that his attitude upon this question was going to mean his political funeral. I think he hopes to escape the funeral by getting away to some place where that funeral is not going to occur. Any person reading the resolution before the House must marvel at the character of the speeches that have been made in support of it. We heard a great deal yesterday, last night and to-day, about the right—the inalienable right —of the French Canadians to the use of their language in the public schools of Ontario. There is not one solitary word in the resolution about rights. The word is "privileges". I venture to say that if the minority have enjoyed these privileges, as quoted in the resolution, in a province such as Ontario, that province surely is not open to the censure of being intolerant and that this Parliament is not in a position to advise the legislature to exercise justice and tolerance. The fact that these privileges have been enjoyed so long shows that the Government of Ontario has always been tolerant or these privileges would not have existed so long as they did as privileges.

We are asked to convey an admonition to the Ontario Government. Why? Not because there is a grievance. The resolution does not say there is a grievance. The hon. member (Mr. Pardee), who sat down just now, said that there is a grievance but the resolution does not say there is a grievance. The resolution says that some people say there is a grievance and because some people say there is a grievance we are asked to give an admonition to the Ontario Government. I know some people say there is a grievance. My right hon. friend the leader of the Opposition (Sir Wilfrid Laurier) must have heard of this grievance but why should we be asked to adjudicate upon this matter upon hearsay evidence of that sort? The hon. member (Mr. Lapointe), who introduced the subject, should have been sure that there was a grievance, he should have made the reso-

lution state there was a grievance, but instead of that he simply states that some people in the province of Ontario say there is a grievance. I am not going to deal with the question at any length. This is a difficult question of long duration. As long ago as 1885 complaints were made of the bilingual schools in Ontario. In 1885 first, and in 1889 next, the Government of Sir Oliver Mowat, who was praised yesterday by the leader of the Opposition as a man of great breadth of view and toleration, had to take the matter in hand through his Minister of Education, Sir Geo. W. Ross. No man questioned the toleration of these men. The question had to come before them and it did come before them. It was brought up in the House and an attempt—a rather feeble attempt indeed—was made to remedy it. The condition of these schools became worse instead of better.

When the present Government of Ontario came into power these conditions had to be met. Representations were made. It was not that the Protestants were suffering to any great extent. As a matter of fact it was Bishop Fallon who complained that efficient education was not being given in these English-French schools in his diocese of Essex. A commissioner, Dr. Merchant, was appointed. No man will say that he was a man of intolerant views. He examined into these schools, and his report bore out the contention of His Lordship Bishop Fallon. And the conditions were met. I was glad to hear my hon. friend from South Renfrew pay so high a tribute to two or three members of the Ontatrio Government. He might have added that at that time there was at the head of the Ontario Government Sir James Whitney, a man whom French Canadians have certainly no right to regard as intolerant. No man had a finer regard for French Canadian character than Sir James Whitney. It was under him that French Canadians in Ontario received representation in the Ontario Cabinet, with full ministerial powers. That did not argue that Sir James Whitney was an intolerant man by any means. And it was while the French enjoyed this privilege of having a representative in the Government of Ontario that Regulation 17 was passed, in June, 1912. At that time Sir James was Premier, and Hon. Dr. Reaume was his Minister of Public Works, acting also in an advisory capacity with Sir James. I hope, therefore, that no one will allege that this Regulation was passed with any idea of being intolerant in any degree whatever.

My right hon. friend the leader of the Opposition expressed regret that this Government had not appealed to the province of Ontario to remedy this legislation. Similar legislation is in effect in Manitoba. My right hon. friend has considerable influence with the leader of the Government there. It is a Liberal Government and friendly to himself politically. I should like to know whether he has used his good offices with Premier Norris of Manitoba to prevent the French-Canadians of Manitoba being placed under worse disabilities, as they call them, than the French in Ontario. If he has not done this in Manitoba why does he regret that this Government have not used their good offices with the Government of Ontario? I do not believe there is one solitary government in the Dominion of Canada, outside of that of the province of Quebec, that would pass such legislation and regulations as the Government of Ontario have passed with respect to the teaching in bilingual schools. I should like my right hon. friend to use his influence in having similar legislation passed in Alberta or Saskatchewan. I know the answer he would get from Saskatchewan and other provinces in this country, where he has more influence perhaps than in Ontario. I say it does not lie in the mouth of any hon. gentleman opposite to charge the Ontario Government with being intolerant in any degree whatever. If we liked to make an appeal against certain legislation passed by the Government of Quebec this session I do not think the Speaker could rule us out of order. We should have a mighty good precedent anyway. Reference has already been made to that Act of the Government of Quebec, by which the School Boards in the province of Quebec were allowed to contribute up to five per cent of their taxes towards opposing educational legislation in the province of Ontario. The legislation could properly be disallowed by this Government. And yet I have no intention in the world of asking to have that done. I do not care what the province of Quebec does with their money. They collect it, and they can spend it amongst newspapers and lawyers, fighting this legislation, if they like. I am not going to object to that at all. At the very time that legislation was being passed in Quebec, a Quebec minister, the Minister of Justice, was passing through this House legislation the object of which was to make it a crime for any man in one province to assist in the violation of the law of any

other province. While we were passing that, the Government of Quebec were passing legislation allowing funds to be raised for the violation of the legislation of Ontario; for that legislation can have no other meaning.

My right hon. friend has great admiration for his people, and I do not blame him for it; it is very creditable to him. He wants to see this thing righted. He brought in this resolution, or the hon. member for Kamouraska did, as a motion of want of confidence in this Government, and then he asked the people behind him to vote as they pleased. Is he doing his full duty by the French Canadians of Ontario when he does that sort of thing? Why does he not command his whole force on the other side of the House to vote for the resolution? He could, if he would. I never saw the time yet when his will was not law with his followers on that side of the House. They always vote at his command. They "live in his mild, magnificent eye." There is nothing that he can ask that they would not do. If he demands their support for this resolution he will get it. And if he is sincere in trying to have this resolution passed and remedial legislation enacted, for the benefit of his compatriots in Ontario, he will command the full support of his followers on that side of the House.

My hon. friend the member from Nicolet (Mr. Lamarche) has declared that this law is ultra vires. I think it is too late to do that now. He should have told it to the courts before they declared that it was not ultra vires. It was up to him to do it. With his superior judgment one would have thought he had foresight enough to offer his opinion to the court before judgment was delivered.

It is too late to-night for me to speak at any great length, and I am not going to do it. I hope I shall not be accused of having any grudge against the French language, because I have not. I like the French language. Its music, its melody, its poetry and its rhythm appeal to me. But I like it as a language. I do not accept it as a fetish, or revere it as a religion, as my hon. friends from Kamouraska and Wright apparently do. French is a language that all of us on both sides of the House ought to know, no matter what our nationality. But I will say this, that hon. gentlemen who attempt to make capital against the Government of the province of Ontario by alleging that the French Canadian people have grievances in that province, are not doing themselves any good and are stirring up strife which they will find it very hard to subdue later on.

Mr. E. PROULX (Prescott): Mr. Speaker, I wish to say a few words on this question, and, as the hour is getting late, I will be very brief. I do not purpose discussing constitutional rights; I will take the broad ground taken yesterday by my right hon. leader, that by the law of nations the French race—call it a conquered race if you like; I prefer to say that this country was ceded by France to England—had the right to keep its language. When the question was discussed in 1890 on a motion to abolish the French language in the legislature of the Northwest Territories, an eminent lawyer, a man who later became Minister of Justice and afterwards a judge of the Supreme Court of Canada, Hon. David Mills, said that he thought it was not necessary for Chevalier de Levis to stipulate in the articles of capitulation anything with regard to the French language; that when their usages and civil and religious liberty were accorded to the French people, that meant also their language, because those usages and that civil and religious liberty were preserved in that language.

In regard to the question of the teaching of French in this province, the French language was taught many years before Confederation, and, although the Confederation Act does not expressly stipulate that the French language has a legal status in Ontario, still section 133 states that French is an official language in the country, and, that being the case, it should certainly have a right to be taught to the citizens of that province. That was the interpretation held by the Council of Public Instruction before 1867. As my hon. friend from Wright (Mr. Devlin) mentioned yesterday, the following letter was written on the 24th of April, 1857, by the Superintendent of Education, Dr. Ryerson, to the trustees of a school section in the township of Charlottenburg in the county of Glengarry:

Gentlemen:

I have the honour to state in reply to your letter of the 16th instant that, as the French is the recognized language of the country, as well as the English, it is quite proper and lawful for the trustees to allow both languages to be taught in their schools to children whose parents may desire them to learn both.

My hon. friend the Postmaster General (Mr. Casgrain) read last night a resolution adopted by the Legislature of Upper Can-

ada in 1792 ordering that the records of the legislature and the statutes of the province should be published in French as well as in English. The French language has always been taught in the schools of the province, public and separate.

My hon. friend from Frontenac (Mr. Edwards) this afternoon said that Regulation 17 gave a concession to the French people of Ontario, that it was not a restriction. I differ from him in regard to that. Before Regulation 17 was promulgated full scope was given to the teaching of French in the separate schools of the province. There is nothing in the Separate School Act limiting the teaching of French. In the Public Schools Act there is a section which says that the teaching must be in the English language unless the pupil cannot understand that language, in which case the teacher can impart instruction in the mother tongue of the pupil. Regulation 17, however, applies both to public and separate schools, and it applies more to separate schools in practice, because all the schools that were classified in 1912 as English-French schools were separate schools, which were inspected before 1912 by a French Canadian inspector. The list of schools which was made in 1912 for the inspectors was never enlarged, and there is no public school included in that list. Therefore Regulation 17 limits the teaching of French in the separate schools of Ontario, whereas, before the promulgation of that regulation, there was no limitation and the teacher could impart all the instruction necessary in the mother tongue of the pupil.

My hon. friend from Kingston (Mr. Nickle) last night put a wrong interpretation upon paragraph 4 of Regulation 17. He contended that the word "hitherto" did not imply that French could not be taught in a school established since 1912. To appreciate Regulation 17, we must see how it operates, and I can give two cases of schools established in my county since 1912 which are not attended by any English-speaking pupils, and still the Department of Education will not recognize them as schools where French can be taught, because they are not schools where French was a subject of study before 1912 when Regulation 17 was promulgated. The trustees of those schools appoint teachers who impart instruction in French, but as those schools are considered to be outside the law, they do not receive the legislative grants nor the grants from the county council.

My hon. friend from Frontenac (Mr. Edwards) this afternoon tried to create the impression that the Government was bonusing the English-French schools of Ontario. Instead of bonusing them, the Government is starving them, becauses, since 1912, some of the English-French schools of Ontario have not received any grants from the Government nor any grants from the county council, because the latter grants are paid on the reports of the inspectors; and, the inspectors not reporting, the county treasurer has no authority to pay the grants collected by the county council. It is true that the last paragraph of Regulation 17 permits the Government to make a special grant to a school on the report of all the inspectors approved by the chief inspector. (Reading):

> An English-French school, which is unable to provide the salary necessary to secure a teacher with the aforesaid qualifications, shall receive a special grant in order to assist in doing so.

I do not, however, know of a case since 1912 where such a grant has been made by the department. When this regulation was promulgated, the Government appointed two sets of inspectors, English-speaking inspectors and French-speaking inspectors. There was no necessity for this. Before 1912 the bilingual schools were inspected by bilingual inspectors, but when this regulation was made inspectors were appointed, as I have stated, and precedence was given to the English-speaking inspectors. I say that the French-speaking inspectors were better qualified to visit these schools because they knew English as well as French. When the Government made all inspectors equal in 1913 they gave control to the chief inspector of the province. For a teacher to teach French outside of the first course he must have the approval of the chief inspector. This puts the English-French schools under the control of the chief inspector, and he is the only person who can say, outside the first grade, whether there should be one hour or one minute devoted to French teaching in the schools. I will not go into the question whether it is preferable to teach the child in its mother tongue or not—that has been very well discussed by my right hon. leader and others. But perhaps I might give my own experience. My family moved to Ontario when I was six years of age. When I began to go to school the only school available was one entirely English. I learned to read English, but I did not know the value of the words. A

few years afterwards, there was a bilingual school established, and I commenced to receive instruction in French as well as in English. I did not know the meaning of words in English until I had got a sufficient training in my own language. I do not give my experience as an authority, but I think that the conclusion I have stated is supported by the best pedagogues of this country and Europe.

Some speakers have tried to make a case against bilingual schools by saying that they are not efficient; and the hon. member for Edmonton (Mr. Oliver) says that in the West the object has been to secure efficiency. I admit that some years ago some of the schools in this province may not have been as efficient as we wish them to be, but that was because of the lack of teachers trained in both languages, which must be the case in the western provinces. In Ontario, the number of bilingual teachers has been increased every year, and in a few years I believe there will be a sufficient number of well-trained bilingual teachers to care for every bilingual school in the province. There were teachers teaching in Ottawa who belonged to religious orders, and who were said to be unqualified. But why? They had written on their examinations in 1913, but had never got the results of those examinations. They were required to sign an undertaking that they would obey Regulation 17. But this they would not do, and the department would not grant them their certificates. My hon. friend from Bruce (Mr. H. Clark) has said that the resolution which was passed in 1911 was accepted unanimously, and that there were French-Canadian members sitting in the Legislature at that time. Well, there had been a resolution on the Order Paper for weeks before, standing in the name of the hon. member for Grenville, now the acting Minister of Education, that English was to be the language of instruction and communication in all the schools of the province, and it was afterwards amended so as to provide that English was to be the language of instruction in schools except where the pupils did not know that language. The member for Russell asked the Premier if this would make a change in the law, and was assured by the Premier that it did not make any change, but that it was only affirming what had been provided by the Public Schools Act. So, when it is said that the regulation was based under the resolution passed unanimously in 1911, it is a mistake in fact; it is not based on that resolution, but goes further than the resolution. It was applied to permit the teaching of the language of the pupil in the first course only. Take the case of the city of Ottawa. There were schools here where English language prevailed and others where French language prevailed. The French-speaking trustees attended especially to the schools where the French language prevailed, and French was taught in these schools. But an injunction was sought against the board which was successful and the Legislature passed a law providing for a commission to replace the school board regularly elected by the ratepayers. The law provides that the people shall elect their trustees and that the trustees have full power to decide what kind of schools shall be carried on; but the Government repealed this and the ratepayers of the city of Ottawa sought the privilege of electing their trustees. Last session they passed further legislation depriving the Separate School Board of the city of Ottawa of the taxes paid by the separate school ratepayers and permitting the School Commission appointed by the Government to take possession of the taxes paid by the separate ratepayers. I think we can call this a grievance, and there are many other grievances of which we can complain. I said that the trustees under the Public Schools and Separate Schools Acts have control of the schools and are the judges of the instruction that should be imparted, and we have a warrant for this. We have authority for this in the letter which was written by the Deputy Minister of Education of the 24th of July, 1911, to the Rev. Father Chaine, Parish Priest of Arnprior. This letter was written under the instruction of the Premier himself, the late Sir James Whitney. This letter reads:

Rev. and Dear Sir:

I am directed by the Prime Minister, Sir James Whitney, to acknowledge your letter of the 21st and to state that no change has been made in the school law of the department regulations affecting the study of the French language in the schools.

I am directed to point out that the question is one entirely under the control of the Board of Trustees.

My hon. freind from North Bruce (Mr. Hugh Clark) has said that Sir James Whitney was well disposed towards the French people. I believe he was, and I believe that if Sir James Whitney had

had a free hand, regulation 17 would not have been promulgated. But strong pressure was brought to bear upon him by certain sections of his party, and the Acting Minister of Education is mostly responsible for this regulation. But my hon. freind says that the Acting Minister of Education is also well disposed. I doubt it, because the Acting Minister of Education in 1911 wanted to do away entirely with the teaching of French. If the present acting Minister of Education had had his way then, there would not be a word of French taught in the schools so I submit that we have reason to pass this resolution, and that if it is accepted by this House it will exert a good influence on the Ontario Government, especially on the Acting Minister of Education. Some gentlemen may think that the French are unreasonable, and that they want to convert the bilingual schools into French schools. They have made representations at different times to the Government. Some proposals were made in July, 1913, by the Separate School Board of Ottawa, through their Chairman, and these proposals certainly are very reasonable. They proposed:

> In schools where all or nearly all the pupils are of French origin, the French language will be the language of communication and instruction, and besides the thorough teaching of French, English shall be efficiently taught.
>
> In schools of two or more rooms, attended by pupils of both English and French extraction, besides the thorough teaching of French, English shall be efficiently taught.
>
> In schools of two or more rooms, attended by pupils of both English and French extraction, the pupils shall be grouped in separate rooms, according to either of said nationalities subject always to clauses 3 and 4.
>
> In schools of one room only, where pupils of English and French origin are found, the pupils of French origin shall form a separate section and this section shall be taught in English and French in accordance with 3 and 4.

So you can see that in the proposals made by the French-Canadians to the department they always stipulated that English should be efficiently taught; and it is to the advantage of the French-Canadians that they should learn English. It is the language of the majority of the people of this country; it is the language of commerce, and, if the French-Canadians want to be equipped for the struggle for life, they must certainly be educated in English. But at the same time I think it would be a crime to prevent them from being educated in their mother tongue.

It is recognized in all civilized countries to-day that the French language is one of the leading and most important languages of the world. It is the language of diplomacy, the language most employed in negotiation between different nations. Only the other day, I read in the Manitoba Free Press that there had been a meeting of educationists in the city of Winnipeg at which proposals were made to do away with the teaching of Greek and Latin as requirements for entrance to the university, and to substitute instead the teaching of modern languages, one speaker saying that French is certainly the most useful and important of modern languages, and that it would be to the advantage of the English-speaking people of this country to know French. The only objections that he had to the introduction of French was that he was afraid that the French-Canadian people would insist on French having an equal status in the country with English. Well, that has not been the request of the French-Canadian people. They have asked that their language should be taught in the schools, and they would be satisfied if it were given a place there, so that their children would be sufficiently taught in their mother tongue. In parts of this province it is to the advantage of the English-speaking people to know French. I know that in my county many English-speaking people know the French language; they can speak it and understand it well, and if they did not they would be handicapped in their ordinary callings. An English-speaking friend of mine, an educated man, told me one day that it was not the French-Canadians but the English-speaking people who had a great grievance, because French was not taught in all the schools of the province; and he thought that French should be taught in all our schools. If it was not taught the children of the English-speaking people would be at a disadvantage.

I had hopes when this resolution was introduced that it would be accepted by the Government. There is nothing provoking in the resolution, it is only to express to the Ontario Government our view that in order to promote peace and harmony and goodwill among the different nationalities in this country, it would be well to make clear that the rights of the French-Canadians to have their language shall be not interfered with. That has not been made clear before, and it ought to be made clear. We have only to read the report in 1912 of the six inspectors, three of whom were English-speaking and three French, to see that

I will not go over the whole matter. I will only say that they reported to the department in 1913 that Regulation 17 was taken to mean that French could not be used as the language of communication and that it was regarded as an attempt to gradually eliminate the French language from the schools. So you see Mr. Speaker, it was not clear, and is not clear yet, and it is very important that it should be made clear. I was sorry to see that while some hon. gentlemen opposite, the Postmaster General for example, expresed the opinion that Regulation 17 was unfair, they declined to help us to remonstrate or to induce the Government of Ontario to afford a remedy to the grievances of the minority.

Hon. C. J. DOHERTY (Minister of Justict): I do not propose to detain the House at this late hour for more than a few moments, but there are one or two things I would like to say before registering my vote upon this resolution.

In the first place, in passing, I would make one observation with regard to some of the things that have been said by the hon. member for Nicolet (Mr. Lamarche) in connection with the report addressed to His Royal Highness upon the question of disallowance. I noted that the hon. gentleman premised his observations by saying that he had not carefully read the report. He might have dispensed with the explanation, for when he proceeded it became quite self-evident that he had not done so. He was pleased to criticise some of the reasons advanced in support of the conclusion which was reached. He admitted that he did not think that disallowance would have been of any use, and then in a somewhat extraordinary consequence he said that if he had the responsibility he would have advised disallowance. I think that in face of the numerous opinions which have been expressed upon that question I may safely leave the reasons in that report to the judgment of people who may consider the matter of sufficient importance to carefully read the report before proceeding to discuss it.

Upon the question of the resolution, as it is before the House, we have certainly had an interesting debate. I have listened to the greater part of it with great interest. I have learned a great deal; perhaps I may be among those whom the right hon. gentleman who leads the Opposition thought would be better and wiser men by reason of this discussion.

1 a.m. I want to point out the one question upon which it seems to me we are called upon to vote, and the one question upon which I desire to make it perfectly clear that I express an opinion by my vote. That is the question of the propriety of this House sitting in judgment upon the Legislative Assembly of the province of Ontario, or of any other province, and proceeding, as has been pointed out so forcibly by my hon. friend the Minister of Trade and Commerce, to try that Legislative Assembly and find it guilty without it being heard or had opportunity of being heard of action that has been described in terms of varying degrees of strength. The hon. gentleman who has just taken his seat described it as a crime. The hon. member for Nicolet said that this was the opportunity to make the injustice which the Legislative Assembly of Ontario had perpetrated ring from one ocean to the other. This House is asked to solemnly pronounce that that injustice has been proved, as has been pointed out, without the slightest opportunity of the Legislative Assembly of Ontario, the elected representatives of the people of Ontario, elected with an express mandate to deal with subjects of this kind, having had the slightest opportunity to be heard. The hon. member for Rouville (Mr. Lemieux) justified the bringing of this matter before this House on the ground that this House is the high court before which it was proper that all grievances should be tried out, and we are asked in our capacity as members of that high court of Parliament to pronounce that the Legislative Assembly of Ontario had been guilty of grave injustice, though they had not had an opportunity to be heard. I can conceive of nothing more fundamentally unjust than the condemnation of a man, or of a body of men, who have not been heard and who have had no opportunity of being heard, and the clearest demonstration that we are stepping beyond any attribute that belongs to us, when we undertake to pronounce that judgment, is to be found in the fact that there is no possible method by which we could have that alleged culprit before us to say one word on his own behalf.

We have had the Legislative Assembly of Ontario on trial before this House for two days, and the Legislative Assembly has not been represented here and has not been heard, and yet we are asked to pronounce the judgment I have mentioned. The right

hon. gentleman who leads the Opposition says: "' Oh, this is a very harmless thing; this is the mildest of suggestions," and, when honourable gentlemen come to support their motion that this House make this mildest of suggestions, they find it necessary to produce proof of this alleged injustice, of this alleged wrongdoing on the part of the Legis- alleged wrongdoing on the part of the Legislative Assembly of Ontario. Unless we are prepared to say that they have established it, there is absolutely no basis for us going to the Legislature of Ontario with the suggestion. I must do the justice to the hon. member for West Lambton (Mr. Pardee) of saying that he at least tried to avoid the grave responsibility of pronouncing that serious verdict against a party unheard, but in order to do so he found himself reduced to say: "I do not know whether they are right; I do not know whether they are wrong; but we will pass this resolution, and when we have passed it we will go to Toronto and see whether, upon the inquiry we will make, there was any occasion for us to pass it." That is putting this high court of Parliament in a dignified position indeed. I have been elected a member of this Parliament to represent those who send me here and to take my share in the legislation and the administration of those matters that are confided to this Parliament, and therefore I cannot help asking myself what mandate I have to determine, according to my views, what is the proper system of education for the province of Ontario or what the representatives of the people of Ontario, elected with an express mandate, should declare to be the proper system of education for that province.

Mr. LEMIEUX: Would my hon. friend be prepared to vote upon a resolution in this House in favour of Home Rule?

Mr. DOHERTY: The hon. gentleman thinks he has struck me on a tender spot; but I would point out to the hon. gentleman that relations between this Parliament and His Majesty the King are somewhat different from the relationship between this Parliament and any of the legislatures of this country. When a Home Rule resolution was passed and this House decided to make a humble address to His Majesty the King, it put before him that in the judgment of this House it was a matter of interest to the Empire as a whole and every one of the Dominions, including Canada, that that particular matter should be taken up and considered. We were really dealing with a question that in a manner affects this entire Empire, but to suggest that there is anything analogous between our then going to His Majesty the King and putting before him that every portion of the Empire was interested in seeing the British constitution given practical effect to throughout the entire Empire, and this Parliament, occupying the position it does, addressing the legislature of the provinces, this Parliament being the creature of the same statute that created those legislatures, and this Parliament having allotted to it an exclusive field of legislation, and they having allotted to them, in the most express terms, another exclusive field, is something that is absolutely without foundation. If the hon. member wants to put me on the horns of a dilemma he will have to ask me another question.

Mr. MARCIL: Before deciding not to disallow this Act, did the Minister not have before him the answer of the Ontario Government on this question?

Mr. DOHERTY: Most assuredly I did.

Mr. MARCIL: The Government therefore has been heard?

Mr. DOHERTY: His Royal Highness in Council heard the Government of Ontario, and hon. gentlemen do not complain of what His Royal Highness in Council did after having heard the Government of Ontario. But they come to this Parliament, that did not hear the Government of Ontario, and they ask Parliament to take action. I think this hon. gentleman also will have to find some other question before I get very much embarrassed.

Mr. MARCIL: I understood the minister to say that the Legislative Assembly of Ontario had been put upon trial without having been heard.

Mr. DOHERTY: In this House most assuredly the Legislative Assembly of Ontario has been put on trial for two days and there has been no opportunity of it being heard, and in the very nature of things it would not be possible to give it that opportunity. And I believe that is a conclusive demonstration of the fact that this high court of Parliament is proceeding to act in a manner that is fundamentally opposed to the most simple rules applicable to any British court of justice.

Now perhaps I shall be permitted to go back to the subject I was endeavouring to

abbreviate as much as I could when I was interrupted. I asked myself what mandate I had to express my views as regards the best system of education for any province, or in that connection my views in regard to the jealous care which should be given to the respect of every right, or every believed right—I am prepared to go so far as to say of every prejudice—that can be reasonably considered without injury to the common weal, of every minority. I am free to say that as a general principle I am not here to judge whether it is complied with in one place or in another place; but I am quite prepared to say that in my judgment there is nothing more sacred than the right of the minority within a democracy unless it be the sacred trust reposed in the majority to see that the right of the minority is preserved. I am not here to apply any principles of that kind although they are principles that I think would meet with general assent. I am not here to apply them in particular cases. There is no case before this Parliament that this Parliament has, properly speaking, any right to pass upon or adjudicate upon. Nor is there any room for us to determine to what extent these principles have been applied, or have failed to be applied in a particular province. But we are asked to take this step in the interest of a minority which is represented as having a grievance. There is no doubt that any possible grievance of any minority is a most important thing. I have always been, I suppose I always shall be, within this country one of the minority. In my own province I am one of the minority from the point of view of language. Throughout this Dominion I am one of the minority from the point of view of religion. Since I have mentioned the fact that I am one of the minority in my own province, I might, perhaps, be permitted to digress one moment just to say that as one of the minority I am proud of my own province, in that I am able to affirm that one does not feel in the province of Quebec that he is subjected to injustice or inconveniences by reason of being in the minority in regard to the recognition of every right to which he is entitled. I say that of course without suggesting that the same is not the case everywhere. I have no case and this House has no case before it to judge.

I have heard much said, and eloquently said, with which I would be in absolute agreement, with regard to systems of education and the consideration that should be given to the feelings of people, in regard to proper matters of education. When I shall find myself in a position where I am entitled to express opinions as to the system of education that should be established or maintained, I shall be glad to express those opinions. But standing here to-night, I, as one member of Parliament, feel that I have no mandate to express opinions with regard to the best system of education for the province of Ontario. I have that right in so far as I am, as a resident of Ottawa, a citizen of Ontario. But, standing here as a member of Parliament, representing the constituency I do, I cannot see that I have any mandate to pronounce any opinion on that question, and I ask what mandate have all the other hon. gentlemen sitting in this House? I do not except even the members who come from the province of Ontario. Certainly those who come from other provinces have no mandate from the people of Ontario, and those who come from Ontario have no mandate to deal with that question of education in this House. So here we are asked to pronounce judgment upon the conduct of a province with regard to its legislation concerning education. We, the members of this House, most of whom have no mandate from anybody competent to give it, and none of whom have any mandate to act upon this matter are asked to pronounce judgment upon that question.

The discussion we have had may have been useful, but as my hon. friend the Minister of Trade and Commerce has pointed out, all of that discussion might have been had without this resolution. But we are appealed to to pass this resolution because it is to bring harmony and unity in this country. I would go very far in the direction perhaps of risking over-stepping the proper bounds of my authority, or perhaps to join in the overstepping of the bounds of the proper authority of this House, if I could be convinced that the step that is proposed would be conducive in any way to the creation or maintenance, or the increasing of harmony or unity between the people of this country. But I ask you Mr. Speaker, who have listened to this debate, whether you anticipate that an adjudication by this House that the Legislative Assembly of the province of Ontario has been guilty of an injustice towards the minority in that province,

pronounced in the manner I have described, and conveyed to that Legislative Assembly in the form of a resolution of this House—I ask you whether that is the best method of bringing an appeal to the Legislative Assembly on behalf of the minority in that province? I have always supposed that when you made an appeal you tried to put it in the form that would ensure to yourself the most favourable reception. And what is it that it is proposed to do here on behalf of the minority? It is proposed that there should be presented to that Lgislative Assembly, whose action has been brought in question here, a certificate from the House of Commons of Canada that in the judgment of the House of Commons of Canada that Legislative Assembly had already rendered itself guilty of an absolute injustice to the minority, and that we, this House of Parliament of Canada, seized of the matter in no constitutional way, had been so impressed with that that we had felt called upon to pronounce judgment of condemnation against that Legislative Assembly, and to convey that judgment of condemnation as the best method we could think of of making a plea on behalf of that minority.

The right hon. gentleman (Sir Wilfrid Laurier) has made a most eloquent speech, and several others have made eloquent pleas on behalf of the French minority, and I have no doubt their voices will go beyond the limits of this House. Who can doubt that the plea which has been made by the right hon. gentleman, an outstanding citizen of the province of Ontario will receive consideration when it reaches the ears of that Government? Would it not come to them in much better guise in that form than in the form of a verdict of condemnation which this House is asked to transmit to the Legislative Assembly of Ontario as a means of inducing them to remedy such grievances as exist, and, above all, as a means of creating peace and harmony in this Dominion? I ask you, Mr. Speaker, what have we to anticipate if the different legislatures of the different provinces and this Parliament proceed to take up their time in discussing their respective conduct, for the purpose of determining whether the one or the other has been guilty of injustice? Do you think that would produce a condition of harmony and unity in Canada? And let me point out that it is just as much within the functions of the legislature of Ontario to introduce a resolution complaining of injustice of some action of this Parliament within its proper sphere, as it is for this Parliament to introduce a similar resolution with regard to the legislation of the province of Ontario. Let us remember that there is no question of superiority or inferiority between this Parliament and the different legislatures. We stand on a footing of perfect equality; but the subject matters with which we may deal are different. The extent of the sway of our laws is more extensive; but, acting within the scope of their proper legislative authority, the legislature stands our equal in every respect. As we all know, the Privy Council has declared that, acting within the scope of their legitimate authority, each one of those legislatures has all the power and authority that the Imperial Parliament itself possesses. What right, then, have we to sit in judgment on them, more than they have to sit in judgment on us? And if we are going to start the fashion, and if it be followed up, what an aid to harmony and unity!

I sometimes think that those whose cause has been championed here with so much eloquence might very well on more than one occasion have asked to be saved from their friends. This resolutionn that the House is asked to pass is the culmination of a series of actions initiated in another legislative body. Let me say this and I think I may say it as one who is as deeply sympathetic with my French Canadian countrymen as it is possible for any man not of their own blood to be; let me say that if I had been one who desired to put obstacles in the way of their having a favourable hearing from the one authority that can remedy the grievances that are claimed to exist, I would have brought about the very things that have been done by their so-called friends.

We are told that a resolution of this House need only to be passed and that at once peace, unity, harmony will prevail. The legislature of one of the provinces of this Dominion attempted to bring about peace, unity, harmony, and the remedy of the grievance alleged, by telling the legislature of the province of Ontario what ought to be done in regard to this question. Any one who knows human nature would have known in advance that that was the last way in the world to bring about the desired result. You projected into this question at once—and this resolution wants to project the same question into it—the question of who governs Ontario. I think that I will find no one in this House to disagree with me when I say that there is

nothing of which the different provinces are more jealous than their own right to be governed by the representatives of their own selection with regard to those matters which fall within the competency of the provincial legislatures, and there is nothing which is more likely to arouse resentment with regard to a request that might otherwise be favourably received than that it should come with the endorsement upon it of a legislative body which steps entirely beyond its sphere when it undertakes to give that endorsement. I say that the people on whose behalf we have heard such eloquent and moving appeals have been badly served by their ostensible friends and that those friends have been badly advised. Speaking in the interest of those on whose behalf these pleas are made and as one who, as I have already said, is thoroughly in sympathy with every legitimate aspiration of the French Canadian people of this country, I do not know of anything more prejudicial that can be done to the cause they have at heart than the methods that have been adopted on their behalf and in their name; and, I think perhaps, not the least prejudicial would be the adoption and production to the Legislative Assembly of Ontario of the assumed authoritative condemnation by this Parliament of their action in this regard, which we are asked to pronounce.

I feel that I have detained the House too long at this stage, but I have been moved to make these remarks because I cannot shut my eyes to the fact that if you open the door to this sort of action on the part of this House—you cannot call it a mere suggestion—it necessarily involves the condemnation that we are asked to pronounce I think the hon. member for West Lambton (Mr. Pardee) has a monopoly of his contention that we should condemn first and inquire afterwards. I cannot conceive how anybody can be so blind as to fail to see that if you initiate to-night the course that is proposed, it is a course that may lead this House very far, a course that will not be in the interest of the province of whom the gentlemen who have championed this course claim to be in a special manner the authorized voices. I too come from that province; I too am proud of my birth in that old province; I am proud of the province and of the people that make up its population; I have passed my life amongst them, and I hope to go back again to die amongst them. There is no man in this House that has at heart more earnestly and more sincerely than myself—however mistaken I may be in my view as to the best method to serve them—the service of the best interests of the people of the province of Quebec, and because that is true, I stand here to register my vote in a moment against this resolution.

The hon. member for West Lambton found a precedent. He had to go nearly as far back as Confederation to find it, and he read a resolution proposed by the late Mr. Colby, then member for Stanstead, and supported by men whose names naturally carry and will always continue to carry very great weight in this Dominion of Canada. After reading that resolution, he said: " Edward Blake, Sir John A. Macdonald, George Cartier voted for that resolution in 1870, and yet in this good year of 1916 there are hon. members who venture to suggest that it is not desirable that a resolution such as this before the House should be passed now." What was that resolution? I have not the exact words, but I do not question that it was a resolution to the effect that that House believed that the Legislature of New Brunswick passed an Act which was not satisfactory to a certain number of people in that province, and expressed the hope that it would be repealed. Let me say two things about that precedent. In the first place, if I am correctly informed—and I think I am—that resolution was adopted at a time when it still was within the power of the Government of this Dominion of Canada to take action with regard to the particular Act in question, and I can conceive under those circumstances that it might perhaps be a proper thing for Parliament to sound a note of warning, to call the attention of the legislature to the fact that possibly the legislation in question might call for some action on the part of the executive Government of this country, an action for which that executive Government would be responsible to that Parliament. I think, in the first place, that distinguishes the two cases, but let us suppose it does not. I yield to no man in my respect for those great men whose names were mentioned; but it is permitted to us in the course of forty or fifty years to learn some things, and there is no subject upon which greater progress has been made from what might be described as almost absolute darkness towards a perfectly clear light than the subject of provincial rights, the subject of the relations between this Parliament and the different legislatures.

Why, Sir, any man who has been called upon to look at the succession of cases in which constitutional questions have come before the highest tribunal of the land, can follow and watch them as they "broaden down from precedent to precedent," until from the starting point in which I, as a law student, heard some of the most distinguished lawyers of this country in their time describe the legislatures of the provinces as "glorified municipal councils," we have reached the point where His Majesty's Privy Council have made the declaration I have mentioned, that these so-called "glorified municipal councils" stood on an equality—so long as they acted within their proper sphere—with the Imperial Parliament itself. That is the progress that has taken place since 1870. I have heard men of the Liberal party—if I am not mistaken I have heard the right hon. gentleman himself—speak of the part the Liberal party has taken in furthering that progress. I am not going to quarrel as to who contributed to bring it about; all I say is, the fact is there—we have progressed; and the fact is that any man who has occasion to take the series of reports dealing with that question of disallowance, as I had occasion to do a short time ago, can watch that progress. The name of Edward Blake has been mentioned. I can watch that progress in Mr. Blake's own reports, from the early time when the people thought that if an act was unconstitutional you necessarily disallowed it, down until 1890, when, in a speech delivered before the House, he declared—and the House with Sir John Macdonald at its head acquiesced—that the fact that a law was ultra vires was, save under very exceptional circumstances, a reason why it should not be disallowed. Because, being ultra vires, it was void, and you did not need to disallow it, and another authority should pass upon that question. I regret that both the late Mr. Blake and myself should find ourselves, on that matter, in disagreement with that distinguished lawyer the hon. member for Nicolet (Mr. Lamarche); but, unfortunately for the memory of Edward Blake and for myself, we do. As I have said, we have made some progress on the subject of provincial rights, and, even if the cases were absolutely analagous, I would still stand firmly for the proposition stated by the leader of the House (Sir Robert Borden), and elaborated by the Minister of Trade and Commerce (Sir George Foster), and which I announced in the opening of my remarks. You may try to avoid it; you may try to whittle it away or minimize it; you may talk about "respectful suggestions," and about only wanting to make peace; but when you sit here solemnly to take action upon the action of a provincial legislature with regard to a matter which is within its scope, I venture to say that you are not very far from the day when you will go forward more boldly to invade the field of provincial rights. I do not want to reiterate that; I have perhaps said it too often. You may try to disguise this as you may, you may call it the exercise of the expressive power, as I believe it was called in the course of this debate, or you may call it, as the hon. member for Rouville (Mr. Lemieux) called it, a judicial action of the high court of Parliament; but, whatever you choose to call it, it is a pronouncement of judgment by this Parliament upon the action of a provincial legislature, a judgment condemning that action, determining that it was wrong; and that judgment, if we are to appreciate its meaning by the argument which was made in support of it, involving a conviction of crime, of gross injustice, of ignoring the clear rights of a minority. And all that, we are told, is a matter of no consequence; all that is merely "venturing to make a suggestion;" it is going to "bring about peace and harmony." That is the way that a Legislative Assembly which, I think we may fairly presume, after some consideration, has come to the conclusion that a particular line of action is right, is to be induced between to-day and to-morrow to change its entire policy, and, in fact, to plead guilty to these very grave accusations upon which this Parliament has pronounced its conclusions. If ever there was a travesty, if ever there was a means represented as being the proper means to an end, but which must necessarily defeat the end for which it is represented they are resorted to, it is the means that this House is asked to take to produce peace and harmony and to bring about the protection of the rights of a minority with regard to whom it is claimed that it is suffering under a serious grievance.

There are other methods. Our provinces, within their scope, are sovereign states; and we are pround to boast that we live under a democratic form of government. Under a democratic form of government the majority must govern. But there are many, many means open to the minority. There are the powerful appeals of my right hon

friend (Sir Wilfrid Laurier), probably the most distinguished citizen of the Catholic minority in the province of Ontario; there are the appeals of my hon. friend from South Renfrew (Mr. Graham); there are the appeals of other hon. gentlemen who have spoken so eloquently. Why do not they address these appeals to the legislative body that enacted these laws and is responsible for those regulations and can modify them if they are to be modified? Surely their persuasive eloquence would count for a great deal; surely, the case they have made before this House would be listened to there as well as here; and surely, if it were listened to there would be the power there to grant the remedy that is asked for; and if the remedy were obtained in that way it will be obtained in a way that would really conduce not only to the removal of such grievance as may exist, but to the re-establishing upon firm and solid basis of peace and concord where it is threatened, and to maintain peace and harmony in other portions of this Dominion where it might otherwise be disturbed by a belief in the existence of the grievances that are alleged.

As I said at the outset, I have expressed, and desire to express, no opinion of my own upon this legislation of Ontario, nor upon the general question of the best methods of education. I may say this, however. I am a grateful man that I have the good fortune to have been born and brought up in a bilingual province; I am a grateful man that my father saw the advantage it would be for me to be able to speak the two languages that prevail there; I am a grateful man for the possession of the French language and the many treasures that that language has opened to me in the literature of the world. I should like to see everybody else share in these benefits and advantages. But that gives me no right to take upon myself, no capacity as a member of this House particularly, to join with others in pronouncing the condemnation it is asked to pronounce,—and asked to pronounce in the name of a peace that it certainly would not conduce to, in the name of harmony that, it seems to me, to be the most effective means of disrupting, and in the name of the interest of a minority, very dear to me, for whom I feel sure that it would be one of the most serious obstacles to the bringing about of the remedy of such grievances as they suffer from. I do sincerely hope that my friends from the province of Quebec, those of them who may have been disposed to think otherwise, will give a second thought before they vote for this resolution, with all that it is bound to mean in the future to all of our provinces, and to our own dear province of Quebec in particular, before they vote for this resolution, which is but another obstacle placed in the way of the harmonious and just settlement of such questions of difference as may exist between the minority in the province of Ontario and the majority of the population of that province.

Mr. G. H. BOIVIN (Shefford): Mr. Speaker, as this is the first time that I have risen from my seat to say a few words in this House since the declaration of war between Great Britain and Germany, you will pardon me if, even at this late hour, I take at least ten minutes of its valuable time to give a reason for the vote which I intend to cast upon the resolution which is now before this House. I say that this is the first time I have spoken since the declaration of war, and if I now speak it is because I consider that this is the most important question that has been submitted to this House of Commons since the declaration of war, with the exception of the voting of the money and the aid required by the Mother Country. I say that this is the most important question because, as many other speakers have so ably said, it is a question which will do much for peace and harmony among the different peoples of this Dominion. As my right hon. leader (Sir Wilfrid Laurier) said yesterday, one must not run away from these questions. They are bound to come up, they must be faced fairly and squarely, and from their discussion something will be learned. I feel sure that there are very few hon. gentlemen in this House who have not learned something from this discussion. The Minister of Trade and Commerce, in his very eloquent and able speech a moment ago, gave us an excellent reason for the introduction of this resolution when he said that many learned lawyers who were members of this House had spoken upon it, and that not one of them had agreed with the other. His exact words, I think, were that a different idea came from every speaker, and that a different interpretation was given by each one of the speakers to the regulation which is being discussed by this House. I expected him to tell us, a better way than this resolution to bring to the

knowledge of the Government of Ontario or to the people of Ontario the wrongs which the French Canadians of that province claim to suffer, and to have the regulation amended. He said there were three ways to get around any law. The first way was a direct appeal to the Government, to the Parliament, or to the party who made the law; and when I made the mistake of saying "hear, hear," those two words of approbation carried him so far away from his subject that he forgot to give us the other two ways.

Sir GEORGE FOSTER: That is a fact.

Mr. BOIVIN: I am very anxious to know what the other two ways were. But I think the way adopted by the hon. member for Kamouraska is the best way, after all, because, in spite of the fact that the Government of Ontario and the members of that Government are 300 miles or more distant from the Capital, as the hon. Minister of Trade and Commerce pointed out, it did not take long for a reply to come back to some of the remarks made in the discussion yesterday. In the Ottawa Journal of to-night we find an interview given by Mr. Ferguson explaining the working of section 4 of Regulation 17; but for some unfortunate reason, the explanation given by Mr. Ferguson to-day, May 11, is not absolutely the same as the opinion which was read to this House a few hours ago by the hon. member for South Toronto (Mr. Macdonell), which also came from Mr. Ferguson. So that not only was the Minister of Trade and Commerce right when he said that different men and different lawyers interpret this law in different ways, but he could have gone further and said that the persons who administer this law find it so complicated that they are obliged to interpret it themselves in one way to-day and another to-morrow. Let us see what Mr. Ferguson says:

"The problem that the government of Ontario has to work out is not how the children shall be educated in French, but how the French children may secure an English education," declared Hon. G. Howard Ferguson, Minister of Lands, Forests and Mines, this morning.

Hon. Mr. Ferguson fully answered the query by Sir Wilfrid Laurier in the House of Commons yesterday as to why the word "hitherto" should appear in Section 4 of Regulation 17.

Hon. Mr. Ferguson said:

Those who raise objection to the use of the word "hitherto" forget that there is only one official language in this province. The application of the word "hitherto" can best be understood by illustration.

He does not explain the word "hitherto;" he does not say why it is there. He tells us that the application can best be understood by an illustration, and here is the illustration. He continues:

A bilingual school can only arise from one or two conditions—either by the gradual growth of French population in an English community, or if one can imagine such a condition, in a new settlement entirely French and segregated from English surroundings. In the first case, where the French people gradually drift into an English community they acquire a knowledge of the language by intermingling with the English speaking people in everyday life. As a consequence, the children grow up with the knowledge of both French and English. French they learn at home and the English they acquire outside the home. Having this knowledge of English they are capable of being taught in the English tongue in the school of the locality, and it is unnecessary in such a case to make use of any other language than English as a medium of instruction.

In the case of an entire French community isolated from the opportunity of acquiring English, the department extends the privilege of the use of the French tongue to the extent necessary to enable a child to get a knowledge of English. This in effect is what Regulation 17 does. It was framed with that object in view, after the most thorough investigation and consideration by the best experts in the province, and it has been demonstrated that it works admirably in every place where given a fair trial.

Sir Wilfrid Laurier is entirely in error when he says that Regulation 17 interferes with Regulation 12; subsection 2, which he calls Regulation 15. It was the old Regulation 15. Regulation 12 has been in force for a great many years and is the Regulation with which he apparently finds no fault. It provides that where the French language prevails, the board may, in addition to the course of study prescribed, require instruction to be given in French to such pupils as are directed by their parents or guardians to study French. The investigation and report of Dr. Merchant disclosed the fact that in many schools there was little or no attempt to give children a knowledge of English.

It was to meet this situation that Regulation 17 was passed. In schools where the opportunity of learning English was denied the pupils are now designated by the minister for special supervision. It is this class of school that is called the English-French school and by which Regulation 17 appear. In other words the English-French schools designated by the minister are selected from the whole class of bilingual schools and are brought directly under special officials to ensure to the French children an English training. It is apparent therefore that Regulation 17 does not in any way supersede or clash with Regulation 12, subsection 2, as Sir Wilfrid Laurier appears to think.

That is the statement given to the press by Mr. Ferguson; that is what Mr. Ferguson calls the explanation of the word

"hitherto" by illustration. In communities where the French Canadians come in gradually, the French-Canadian children who learn French in their homes can pick up English on the streets, and when they go to school they can get their education in the English language. If it were possible for a French-Canadian community to be suddenly created in any part of Ontario at the present time, our friend Mr. Ferguson, in his great magnanimity, would allow the children of that community to learn French just long enough to be able to read English, and then they could not learn French any more; all their instruction would be received in English. That is the interpretation which he gives of Regulation 17. Paragraph 3 of Regulation 17 says in all schools,

> Where necessary in the case of French-speaking pupils, French may be used as the language of instruction and communication; but such use of French shall not be continued beyond Form 1.

That is two years; it stops there. That covers all schools; that is all the French education that the child can ever get. There is nothing in Paragraph 3 which says that even an inspector can give any more. Paragraph 4 says in schools where French has been hitherto taught:

> Such instruction in French shall not interfere with the adequacy of the instruction in English, and the provision for such instruction in French in the time-table of the school shall be subject to the approval and direction of the Chief Inspector and shall not in any day exceed one hour in each class-room, except where the time is increased upon the order of the Chief Inspector.

I believe, Mr. Speaker, that it is not the intention of the right thinking people of Ontario, that it is not the intention of the vast majority of the people of that province. to deprive the French minority of its language. That is not what they want in their law. I may be wrong in the interpretation and I do not pretend to be a great constitutional lawyer by any means, but I differ with several of those who have risen on the other side to interpret this law. The law must be interpreted as it reads, you cannot go behind it and search for the intention of the legislators—and that law as it reads means that where French has not hitherto been taught, French will not be taught, and that where hitherto it has been taught it will be taught for an hour a day unless the inspector gives more.

2 a.m.

Mr. LAMARCHE: If my hon. friend will read the section in question he will probably find that the inspector has the right to give less than one hour a day, but not more. One hour is fixed as the maximum.

Mr. BOIVIN: I was referring to paragraph 4, section 2, which reads as follows:

> Such instruction in French shall not interfere with the adequacy of the instruction in English, and the provision for such instruction in French in the time-table of the school shall be subject to the approval and direction of the Chief Inspector and shall not in any day exceed one hour in each class-room, except where the time is increased upon the order of the Chief Inspector.

Mr. LAMARCHE: He could give one minute.

Mr. BOIVIN: I quite recognize that the inspector could give less, but I want to be absolutely fair, and I think that upon the order of the chief inspector more could be given. This is my interpretation; it is a difference of opinion with my hon. friend from Nicolet, which goes to show that the law should be carefully reconsidered by the legislature of Ontario who framed it, and couched in language that everyone will understand.

I say that this appeal should go not only to the Government of Ontario; it should go to the people of Ontario at large. I have had occasion several times to visit different sections of the province of Ontario. I have met many citizens of that province, and I have found the majority of them to be broad-minded men, proud to be living under the British flag, proud of the liberties which they enjoy, and willing to respect the privileges and liberties of the French Canadian minority in that province. I have found them loyal to their King, to their flag, and to their country. They have on many occasions given proof of their loyalty, but some of them are mistaken when they say that the French Canadian who lives in the province of Ontario has not the same right to teach his language to his children in his own schools, paid for by his own money, as he would have in the province of Quebec. When New France was ceded by France to Great Britain, or conquered, if you wish to use that expression, there was no division line at the Ottawa river. The whole territory was ceded to Great Britain. The inhabitants of that territory, which now comprises part of the province of Ontario, as well as the inhabitants of the province of Quebec became British subjects, and were then guaranteed for the future the perpetuation of their religion,

their laws, and their usages. What can the word "usage" mean when it is applied to a people, if it does not mean their language. It certainly does not mean their dress, for we all dress alike. It cannot mean their religion, because religion was specially mentioned. It cannot mean civil laws, because the civil laws were mentioned. What did the word "usage" mean if it did not mean the mode of expression and the language which the people used? They have enjoyed this liberty for years under the British flag, and now a regulation has been passed which they believe takes away from them the right to teach their own language to their own children.

I have been told to-night by some speakers on the other side of the House that the French Canadians of Ontario must not consider that they have the same rights in matters of education as the French Canadians in the province of Quebec. I was told by the hon. member for South Toronto (Mr. Macdonell) that they have come into this province and that they must accept the laws of the province.

I hope Mr. Speaker, that such a thing will never come to pass as a victory of Germany over Great Britain. I hope that Canada will never become a German colony; but if such a thing could possibly happen, if by any chance the Allied armies could be defeated upon the field of battle, and if Germany, signed a treaty granting to the English-speaking inhabitants of Canada their rights to their religion, their usages and their civil laws, and allowed them to enjoy those rights for fifty or sixty years, and then after that time in a section of Canada that is now very sparsely settled by English speaking Canadians, if German people imported from Germany passed a law wiping out the teaching of the English language in the schools, would not the English Canadians from other provinces assembled in this Canadian Parliament have the right to pass a resolution respectfully requesting the legislature of the province in question to amend their law and grant to the English, the right to teach their own language? That is what is happening to-day.

Speakers like my hon. friend from Edmonton (Mr. Oliver), have compared and placed on an equal footing the French Canadians, the Ruthenians, the Swedes, and other nationalities who have come into Canada. We must not forget that the French race were the founders of this country, that we were the discoverers of this country, that we were here first; that after the French had arrived and had hewn their homes out of the forest, that after they had won victories over the savages and had begun to evangelize them, then the English people began to come and take up their residence in this country. The rights of other nationalities and ours are not to be compared. Ours are the rights of a conquered people, the same as the rights of the Dutch in South Africa, and the same as are granted by Great Britain to all the colonies she has conquered.

I shall not speak any longer. I merely wish to say that it is a pleasure for me to support this resolution, because, while the vote given upon it to-night, may be an adverse vote, I feel it will have a moral effect. The people and the members of the Government of Ontario will read the debate in the newspapers, and if they are the men I think they are, imbued with the highest ideals and a desire to give right and justice to the minority that reside in their province, they will in due time amend this law, make it more favourable to the French minority, and thus enable the people of Ontario to enjoy that peace, that understanding and that good fellowship which exists in the eastern townships from which I come. In that part of Quebec some of the counties have English majorities, some have French majorities, and in some the population is about equally divided. We never have school troubles, we never have difficulties over race and religion. Our representatives to the different Houses are generally equally divided, one man representing one race going to Parliament and another man representing the other race going to the legislature. We live in the most perfect peace and harmony. I would like to see the people of Canada from one end of our great Dominion to the other following that example, and that is why I am going to vote in favour of the resolution introduced by my hon. friend from Kamouraska.

Mr. D. O. L'ESPERANCE (Montmagny): Mr. Speaker, I desire to say just a few words in explanation of the vote I intend to give on the question now before the House. Let me say at once that I have the fullest sympathy with every sentiment that is expressed in the motion moved by my hon. friend from Kamouraska (Mr. Lapointe), and which has received such warm support from the right hon. the leader of the Opposition (Sir Wilfrid Laurier). While listening yesterday to the very eloquent

speech of my right hon. friend the leader of the Opposition, my mind wandered back to the great drama, or rather to the great tragedy that took place in the House of Commons twenty years ago. At that time I happened to visit the capital for the first time and I was much impressed by everything I heard and saw. On that occasion it was my privilege to hear the famous speech, which is still ringing in my ears, which was delivered by the leader of the Opposition, and which proved to be the last nail in the coffin of the Manitoba School Remedial Bill, which was brought into the House by the Tory Administration of the time. Twenty years have passed over the head of the leader of the Opposition, and I am pleased to say that the speech he made yesterday was just as eloquent as the one he delivered twenty years ago. He received just as much support, he was cheered just as much by his supporters from the province of Quebec yesterday as he was at that time. But while my mind dwelt on the tragedy which took place in 1896, and the comedy now being enacted in this House, I could not help thinking that his eloquence at that time served to kill a practical and constitutional measure that would have brought relief to his compatriots in Manitoba, while to-day that eloquence is used for no other purpose than to create political strife in this country. But no doubt to-morrow he will be hailed as a hero in that section of the press that has covered him with obliquy and poured the grossest abuse upon him for the last few years, while I and my colleagues, who refuse to be trapped by this political trickery, will be branded as traitors to our race, as traitors to our creed, as traitors to our religion, perhaps as traitors to our own children. But history will record—and history, I submit, is the final judge, and my right hon. friend the leader of the Opposition will not and cannot escape that judgment—history will record that twenty years ago, when he could have helped his compatriots he refused to do so. And to-day he is not taking the course that is the best calculated to help the minority in Ontario. I do not wish to say more. I refuse to support the present motion, not because I am not in sympathy with the sentiments expressed therein. I regret that my compatriots in Ontario have a serious grievance, and I hope and trust that the great province of Ontario will adopt every means in its power to redress that grievance. I shall vote against this motion because it is unconstitutional, and is introduced in such a way and at such a time that it can effect no good purpose, and may perhaps do mortal harm to the cause I have at heart.

[Mr. L'Espérance.]

Mr. R. B. BENNETT (Calgary): As I heard the observations of the hon. gentleman who has just taken his seat I could not but wonder what the verdict of history would be on this Parliament, sitting here at half past two o'clock in the morning to consider a resolution that can result in no action by this Parliament, sitting upon a futile resolution at a time when thousands of our fellow-countrymen are at this very moment offering their lives upon the plains of France and Flanders in defence of this free Parliament. I wonder if it has dawned upon the minds of the men responsible for the introduction of this resolution that the very existence of our institutions is at stake, and that the question for which our fellow Canadians are dying to-night is whether this shall continue to be a British country, or, as the hon. member for Shefford (Mr. Boivin) has said, a German colony. That seems to me to be the question that we should consider, and I cannot but think that history will weigh very carefully, and determine very accurately, the position of the gentlemen responsible for the introduction into this Parliament at this time of a question that divides race against race, that makes for dissension and not for unity, and that would in the end destroy the Confederation, instead of carrying forward the work of the founders that made possible this Dominion. For the question involved is simply a constitutional one in the first instance. When I think of the labours of the Fathers of Confederation that made possible the uniting of the old provinces and the creation of this Confederation, I realize that that was done by a system of compromise in which each gave up a little of his rights in order that there should be a united Confederation. The rights of minorities and the privileges of majorities have been determined by a statute called the British North America Act, which is the constitution of this country, and that constitution allocated to the several provinces and the Dominion the powers they should possess and the legislative jurisdiction they should exercise. It was determined—and it seems to me very properly—that the power with relation to education should be exercised by the provinces, subject only to the exercise by this

Parliament of that jurisdiction which may become necessary for the purpose of giving remedial legislation to minorities, Protestant or Catholic, that may be affected. The observations that have just been made by the hon. member for Montmagny (Mr. l'Esperance) recall the fact that in days gone by this Parliament was prevented from taking the only legislative action that could be taken by it under one of the sections of the constitution to remedy wrongs that had been done to minorities in relation to education. The same forces that twenty years ago prevented these remedies from being granted, that in days gone by called out "Hands off Manitoba," are to-day the forces that are crying aloud to the people of this Canada of ours, east, west, north and south, "Hands on Ontario." If it was right that twenty years ago the province of Manitoba should be left to work out its own destiny, and make its own legislation in regard to education, how much more is it right to-day, in the light of twenty years' more experience, that each province should be permitted to work out its own salvation with relation to education of the children within its boundaries.

My hon. friend has referred to a precedent that would indicate that possibly this Parliament in days gone by had interfered with the free exercise of power by the provinces. I was surprised, I was astounded, when the hon. member for Lambton (Mr. Pardee) so dared in this free Parliament to inaccurately discuss what took place in it in 1872. If he were not a member of the legal profession and did not understand the language he read, I might not feel so much called upon to say that if he had turned back the page he read from he would have found that every observation and every statement he made to this House on that point was calculated to leave a false impression. I should like him to understand that when a man reads to this House a precedent dating back to 1872, indicating action taken by this Parliament with reference to a matter of this kind, then at least he should read the whole record, and not mangle it. And it ill became a member of the legal profession, with his long parliamentary experience, not to have communicated to the House that the motion before it at that time was a motion moved by Mr. Costigan for the disallowance of the New Brunswick School Act. That was the question that this Parliament was asked to consider. Had he turned back he would have found on page 134 of the Journals of the House for 1872, that Mr. Costigan, on the 20th of May, made a motion, seconded by Mr. Renaud, directing the attention of His Excellency the Governor General to certain allegations regarding the New Brunswick School Act, and calling upon him at the earliest possible period to disallow the said New Brunswick School law. That was a proper subject to bring before this Parliament and for this Parliament to consider. It was within the constitutional rights of any member of the House to ask that a motion should be submitted for the disallowance of the measure. After the debate had proceeded, it was moved in amendment by Mr. Graham, seconded by Mr. Bolton, that the Constitution itself should be amended (Journals of the House, 1872, page 155). Later on, another amendment was submitted, and finally (Journals, 1872, p. 177) the amendment to which reference has been made by my hon. friend from Lambton was submitted, not as a substantive motion, not as a motion asking the House to take direct action, but as an amendment to a motion asking for the disallowance of the statute as a way out, that matter having been properly before the House.

Mr. PUGSLEY: Will the hon. member read the amendment which was passed?

Mr. BENNETT: It was not passed except with another amendment, and it was seconded by Mr. Bolton:

That this House regrets that the School Act recently passed in New Brunswick is unsatisfactory to a portion of the inhabitants of that province and hopes that it may be so modified during the next session of the legislature of New Brunswick as to remove any ground of discontent that now exists.

Mr. PUGSLEY: Was that carried?

Mr. BENNETT: That, with another amendment, was carried, and the motion for disallowance, which was the subject matter under discussion in the House, was voted down because the House of Commons, even in that day, declared: "Hands off New Brunswick." The motion that carried declared that hands should be kept off New Brunswick, although hon. gentlemen opposite would vote to-night to strangle Ontario.

Mr. PUGSLEY: That motion was stronger than this one.

Mr. BENNETT: It was not only not stronger than this one, but it was not in

the same terms, because the motion submitted asked for an interference with the right to exercise its power on the part of the Legislature of New Brunswick, and the Parliament of Canada, guided alike by the genius of Cartier and Macdonald, and the logic of Dorion and the gentlemen surrounding him, and the great Blake and Tilley and Tupper, said: "Hands off New Brunswick; let New Brunswick work out her own salvation in fear and trembling as best she may, having regard alike to the rights of minorities and the privileges of majorities."

Mr. PUGSLEY: Does my hon. friend pretend that Parliament could not have voted down the motion for disallowance without being obliged to adopt the amendment to send a request to the Government and Legislature of New Brunswick to remedy the matter?

Mr. BENNETT: I am not pretending anything. If my hon. friend wants to look for pretence, he will find it with the gentlemen who are moving this resolution. If he wants to look for it, he need not look far either to the right or to the left. So far as that question is concerned, it was not competent, in view of the amendments that had been submitted, for that motion to be voted on at that time, because it was realized by Sir John Abbott, then Mr. Abbott, that the amendments that were submitted involved a change in the British North America Act which, as was pointed out, meant an amendment to the constitution which, as was further pointed out, could not be made by that Parliament, and so Mr. Colby, not in amendment to the proposed motion, but in amendment to the proposed amendment, moved:

That the matter be referred to the law officers of the British Crown and submitted to the Judicial Committee of the Privy Council for determining the rights and powers alike of the Parliament of Canada and of the legislature of New Brunswck.

The point to be decided was a novel point. If there be any doubt about that, let me read the words of that great statesman, the Hon. Edward Blake, who said, as reported at page 904 of the Hansard of that date:

Mr. Blake had considered from time to time since the early discussion of the subject the very difficult question of the proper interpretation of the Act with reference to the state of the law existing in New Brunswick on the subject of schools and he was quite free to confess that upon that subject his opinion had fluctuated, and any opinion he might then give would be given with much doubt and reservation. There was much to support in the argument put forth by the Minister of Justice in his minute of Council. It was a conclusion at which the hon. gentleman might well have arrived and might possibly be a correct one; but he would point out a few circumstances in connection with the Act which would lead to a different conclusion. He quoted from the British North America and School Acts of New Brunswick and endeavoured to show that, although the system of denominational schools was actually established by law, still denominational teaching in the public schools was practically acknowledged, and deeply regretted the course pursued by the legislature of New Brunswick in inserting in the new School Act a clause providing that every school under that Act shall be non-sectarian.

He then proceeded to point out that the question was properly before the Canadian Parliament to determine what might be the rights of that Parliament to deal with remedial legislation, which is an altogether different matter from that now before the House, on the one hand and the rights of the province of New Brunswick to amend its laws on the other. He proceeds further:

In his opinion it was in that spirit alone that the question could be successfully dealt with; but they had been asked to go a great deal further, and he felt—having been one who, upon former occasions, took an humble part in endeavouring to maintain the integrity of the constitution—bound to say a few words upon that subject. It was one thing for the provincial or the Canadian legislature to pass Act of Parliament beyond its constitutional powers, an action deserving of the highest reprobation, but it was quite another thing for a provincial or a general parliament to propose an amendment to the constitution.

And then he proceeds:

But the rights and interests of the provinces would not be worth the paper on which the constitution was written if it could be said that all rights could, as a matter of course, be altered or changed on addresses alone. The Imperial Government would never take away the rights of the provincial legislature at the instance of the Dominion Parliament alone, and no more dangerous error could be fallen into. The proper mode would be not to ask Her Majesty's Government to take action, but to ask the local Governments to take action.

Some hon. MEMBERS: Hear, hear.

Mr. BENNETT: Why do hon. gentlemen say "hear, hear" to this when the resolution now proposed violates every principle of constitutional law? The only method by which the constitution of this country could be amended in regard to the rights of provinces would be by a constitutional convention at which all the provinces would unite in asking either for the enlargement or for the curtailment of their powers, and a joint address of this Parliament based upon no such constitutional convention, as Mr. Blake pointed out, would not be heeded

nor obeyed by the Imperial Parliament because the rights that have accrued, the privileges that have been enjoyed and the customs that have grown up under the constitution cannot be taken away merely because this Parliament asks them to be taken away; they can be taken away only by a constitutional convention properly convened for the purpose of considering amendments, which convention would represent the common judgment alike of the representatives of all the provinces, and hon. gentlemen know that that must be so. Mr. Blake says further:

If any constitutional rights were infringed, Parliament had power, under the fourth clause of the Britiesh North America Act, to interfere, and he quoted the provision giving Parliament the right to make remedial laws when necessary.

The question was properly before Parliament. It was a question involving whether or not there should be an exercise by Parliament of its remedial rights under the constitution, the powers that were asserted in the Manitoba School Act in 1890, the powers that were given by which this Parliament, not clothed with original jurisdiction with regard to education, could exercise its powers under the British North America Act for the purpose of remedying wrongs that might have been done to minorities, whether they be Protestant or Catholic, and it was because of that provision in the constitution that Mr. Blake pointed out the necessity not of disallowance—he said no, do not disallow; do not refer back to the provincial legislatures alone, but get the opinion of the law officers of the Crown and of the Judicial Committee of the Privy Council to the end that it may be determined whether or not a wrong has been done to which the remedial sections of the Act extend. That is what he asked. I will not trouble the House to-night by reading further from the debate the language used by Mr. Dorion, by Mr. afterwards Sir Albert Smith, a very great lawyer from the province of New Brunswick, who said at that time: "The cry must be: Hands off New Brunswick." This is what Mr. Smith said:

This Parliament might have the power to whip that of New-Brunswick into submission, but New-Brunswick in that event would await her opportunity to avenge the wrong.

Those are the words of a great Liberal statesman. I turn to the words of Col. Gray, who afterwards was one of the Judges of the Supreme Court of British Columbia who pointed out what the issue would be. I turn to the words of Mr. Dorion, who pointed out exactly what the difficulties would be and the course that should be pursued. I point out Sir John Macdonald's words with relation to it. I have not time to read them all. But the consensus of opinion was that so far as this Parliament was concerned, it refused to disallow or to intervene, but sent back the Bill that was alleged to have taken away from Catholics their rights, leaving it to the legislature to determine the matter, but first determining by reference to the courts the respective and relative rights and powers, alike of the Parliament of Canada and of the Legislature of New Brunswick.

Now, let me point out what has been done in this case with reference to Ontario. I am not here to argue as to the rights and wrongs of a regulation with regard to education passed by a provincial legislature. The Privy Council has declared that the Legislature of Ontario dealing with a matter within its proper scope, has power as full and plenary as the Imperial Parliament itself may exercise with relation to the same subject matter. That legislature having exercised these powers by passing a statute defining the terms under which English and French shall be taught in their schools, this Parliament has no more power to curtail or enlarge those rights than it would have to declare whether there should be three or four minarets upon a mosque at Constantinople. Let it not be forgotten for a moment by my hon. friend from Shefford (Mr. Boivin) and my hon. friend from Nicolet (Mr. Lamarche) and those other gentlemen who have spoken here, that this very regulation and the powers under which it has been passed are now on their way to the Privy Council for judicial interpretation. The matter is sub judice. The very demand made by Mr. Blake which was acted upon by the Government of Sir John A. Macdonald, that the matter should be sent to the courts, is the very remedy which has been sought by hon. gentlemen opposite with relation to this legislation at this present time. Then, if that be the case, why is it here? Are we here to revise the unuttered judgments of the Privy Council? Are we here to decide what the Privy Council shall say? If we seek a legal remedy in this case, why not leave it to the courts?

Why pass resolutions of regret, if the matter is on its way to the foot of the

throne? Since when has it been the settled policy of Parliament to interfere with suits that are being heard? Who cares for the courts? asked the hon. member for South Renfrew (Mr. Graham). He declares in terms that the work of the courts is to be revised alike by the majority and by the minority. The courts that we have been taught to respect and honour from our youth, as has been pointed out by the Minister of Trade and Commerce, are not to be thought of so long as you can get a resolution into Parliament and bring about any action you will. Since when was that a doctrine of the Liberal party? Since when was disregard of constituted authority made the basis of legislative action? It is new doctrine to me that in this twentieth century and in this British country disregard of constituted authority, marchings upon the street, the flying of banners, the defiance of law, shall form the basis of action by the Parliament of Canada? I was appalled when I heard that doctrine asserted in this House. For me, trained in the law —a little—I can only say this; that if that doctrine is to prevail, then to wreck goes every opinion I have as to the security of property and the safety of the rights of individuals in this country. If you can resort to Parliament while a suit is still in progress to determine the constitutionality of a law; if you can pass a resolution in this House to determine whether a statute is ultra vires or intra vires; if you can go to the Privy Council with a resolution of this House to urge upon them in order to influence their judgment, if that is the opinion of gentlemen opposite I say that the sooner that opinion is got rid of the better. I would ask the hon. member for Pictou (Mr. Macdonald), who is taking voluminous notes, if, when he was engaged in the steel case, or in the Dominion Coal and Iron case, he would have thought it right for the Legislature of the province of Nova Scotia to meet in solemn session and declare what should be done. At least, such action would have been within the rights of that body—that is the difference between that case and this. Property and civil rights lie within the powers of the Legislature of Nova Scotia but property and civil rights are not within our powers, and neither is education. But, in the midst of a war, it is sought to wring from the House a resolution dealing with a case that is sub judice; a case in which a legal decision has been sought is to be prejudiced by this Parliament. Since when did all the members of this Parliament become trained jurists? Since when did they weigh finely the constitutional points involved? The hon. member for Shefford (Mr. Boivin) asserts the beautiful doctrine that when two lawyers from Quebec differ about the interpretation of an Ontario statute this Parliament should intervene. Somebody else urges another doctrine, and others still different doctrines. But constituted authority, the courts of this country, are the tribunals to which we must appeal alike for the preservation of our rights and the declaration of their limitations. No worse doctrine can be taught than that in a democracy you can appeal to the Parliament of Canada to contravene and destroy the value of judicial decisions, especially when an appeal to the highest court is under way. I resent it. And the people will resent it. They may not care so much, many of them, whether this or that fine point is at issue; but they will care if this Parliament is asked to declare for a principle that is destructive of security alike for property and of individuals, and one which this Parliament should not for a moment tolerate.

One gentleman asserted that there was an interference with the free right of the people to teach their children in French. But look at the contradiction involved in the very terms of the resolution:

> That this House, especially at this time of universal sacrifice and anxiety, when all energy should be concentrated on the winning of the war, would, by fully recognizing the principle of provincial rights and the necessity—

Mark the word.

> —of every child being given a thorough English education—

"Every child"—that includes the French population of Ontario. And "a thorough English education"—how can the child get that without being taught English? And, if it comes down to that, look at the remainder of the resolution:

> —respectfully suggest to the Legislative Assembly the wisdom of making it clear that the privilege of the children of French parentage of being taught in their mother tongue be not interfered with.

If you are not going to interfere with the children of French parentage being taught in the French language, how can they get a thorough knowledge of English?

Mr. MARCIL: There are many examples in this House.

Mr. BENNETT: I am struck with the fact that the hon. gentleman who moved this resolution spoke in English—that is, the language of communication and instruction.

Mr. MARCIL: And I hope the hon. gentleman will some time speak in French.

Mr. BENNETT: I trust I shall some day be able to speak French as eloquently as the hon. gentleman; I should regard it as a distinction indeed. But what I ask the House is, how is it possible for this child to have a thorough knowledge of English while there is no interference with his being taught in French? Some of his time must be taken from being taught French in order that he may be taught English. Therefore, it comes down to this—what would be a just distribution of the time to be given to French and to English? This is the issue and nothing else. Since when did this Parliament undertake to say how long French or English should be taught in the schools of any province? I challenge any constitutional lawyer on the other side to say that this Parliament has the right to say that three hours shall be given to French in Ontario and only two hours in Alberta, or has the right to say how long shall be given to English in Alberta, Saskatchewan, British Columbia, or Ontario. Then it gets down to this, that the Legislature of the province of Ontario, and that Legislature alone, has the right to decide and determine what time shall be allotted to the teaching of French, and what time shall be allotted to the teaching of English; and, if that be so which is admitted in the terms of this resolution itself, as explained by the hon. member for Bonaventure (Mr Marcil), with the applause of the right hon. leader of the Opposition (Sir Wilfrid Laurier) what right has this resolution in this Parliament? What right has it here at all? Has it any? If, then, you say it must be left to the province of Ontario to determine how many hours must be given to French and how many to English, in order that the child may have a thorough knowledge of English and at the same time his French education may not be interfered with, I ask this House why this resolution is here at all under those circumstances? There is only one reason, and that is a reason which, in the midst of war, one hesitates to mention, and will not mention.

Sir, I am not concerned, then, as to how Ontario exercises her legislative jurisdiction; I am not concerned how, under the constitution, New Brunswick exercises her powers. I come from the West, and I, like the hon. member for Edmonton (Mr. Oliver), am vitally interested in this great question that, while it affects the well-being of the East, affects even more the potential happiness and greatness of a nation yet unborn; for, from the lakes to the Rockies, there will grow up a race of men that will either be divided into the nationalities they represent, or will be taught that the language of communication, of commerce, of business, is English. They must be taught national efficiency, to adopt the words of a friend of mine who sits opposite. National efficiency in this case means that there must be taught, as the language of communication and instruction, in that great undeveloped land between the lakes and the Rockies, the language that we call English. That is all that we demand. The population of French nationality in the province of Saskatchewan is small to-day; but there are 100,000 Austrians and Germans there, meeting together to-day, yesterday, last week, and demanding the right to have their schools taught in German—why? Because of the agitation that is being carried on about bilingualism down here. That is the reason. I happened to visit Regina last year to attend court, and I saw, in a newspaper there, a letter written by the Catholic trustees of a separate school district, resigning their trust and their office, two English-speaking Roman Catholics, because they said they could not longer remain upon a board that had been dominated by the Germans of that community, in which the language of communication and instruction was sought to be made German. That was the outcome of this agitation. Let that responsibility rest where it belongs, with the men who are trying to interfere with the educational powers of the province of Ontario in this Parliament. If you say to the new settlers who come to us from Austria, Germany, Russia, Sweden, Norway, from every nation of the world, that they are to grow each group to a little nationality of their own, with their schools and their languages, their customs, where is your Canada? Where is your Canada? It would be like the Balkan states. Shall this be a state of little nationalities, or shall it be a great union of a great people, with one language, so far as communication and instruction is concerned, subject to the rights guaranteed to the people of Quebec under the con-

stitution, or shall there grow up here a nationality, there a nationality, here a settlement of Germans, there one of Austrians, there one of Slavs, there one of Swedes, there one of Norwegians? That is the problem. Every man in this House from western Canada knows that the largest problem that lies before us is the assimilation of our races and the development of national efficiency. They all know it. There is not a man who studies the question who does not know it, and I appeal to the common sense, I appeal to the patriotism of this House, in this time of stress and pain, not to permit it to be thought that we hold out hopes to these people settling on the plains that there shall be federal interference for the purpose of promoting the growth of little nationalities in this great Confederation.

I should like to tell you some of the perils that are now being experienced in Saskatchewan, some of the evils that are creeping in there by reason of this very thing, and of the splendid efforts that are being made to overcome them or grapple with them. The situation is being faced with the dauntless energy with which men are throwing themselves into the heroic task of assimilating this vast cosmopolitan population; but all this effort fails, all these labours will be in vain, if this Parliament, speaking for the people of the Dominion, not realizing the measure of its responsibilities, says to these new citizens: "If your legislature does thus and so, we will tell them that we want this thing changed and fixed so that you will have a continuation of your national existence."

Sir, at this time of the night I have no right to trespass upon the time of this House, but I should like to summarize my position, speaking, like the hon. member for Edmonton (Mr. Oliver), as one from the West, in these words:

I believe in the maintenance of our Constitution. I believe that the series of compromises that made possible the passing of the British North America Act embodying legislation protecting the rights and privileges of minorities, were wisely made by the Fathers of Confederation. I believe that under that constitutional system, by which plenary powers were given to the legislatures of the provinces to enact laws with relation to education without interference by this Parliament, is to be found the safest and the surest possible remedy for the differences and difficulties that we experience in the growth of national sentiment in this great democracy. I go further: I believe that it is wholly unconstitutional, wholly irrelevant, for this Parliament at this time to be endeavouring to interfere with this matter. I am not concerned with what may be done in these provinces, except in so far as there may be a violation by them of the constitutional powers which have been committed to them; and, if I may appeal to the common sense, to the patriotism, and to the reason of this House, to the men of the East, and especially to the men of Quebec, may I say to them, in the language of my hon. friend who has just taken his seat, that nothing could be more dangerous for Quebec than to have it thought that this issue is thrust upon this House at this time, looking towards the coercion of another province, for the advantage of a minority that comes from that province. In my province, where 30,000 men have rushed to the colours, the talk that has already been engendered by reason of this legislation is something to be reckoned with. It makes for bad feeling, it makes for discontent, it makes for lack of harmony, and in the end for the disturbance and destruction of the state. I should like to remind this House, and especially my friends from the province of Quebec who referred to the naturalization laws, that if they lived in the United States they would find that the influence which they exercised upon the body politic would be limited as it is in the New England states, as compared with what it is here under the splendid constitution, which guarantees them a fixed representation in this Parliament and the preservation of their rights, privileges, and liberties. The very debates which I hold in my hand contain a statement by Sir George Cartier in which he pointed out that if once there be an interference by this Parliament with the free rights of the provinces to pass educational legislation, then, as he said, " The rights of my French compatriots in Quebec may one day be interfered with by a Protestant Parliament." So that I do again appeal to them to reflect, to pause, to consider, before they place themselves upon record as being opposed to the doctrine which their fathers who laid the foundations of this Confederation thought right, proper and just. I have no doubt, as a friend of mine said to me tonight, that if the question were only dis-

cussed between some of us who come from the other provinces with some who come from Quebec, much might have been gained, in the way of remedying the grievance if there be a grievance. But when a province endeavours to speak as a whole, when the mass of the population headed and guided by one who for 40 years has sat in this Parliament, then indeed, I say it is evil they do and not good. I am as certain of that as that I stand here this night. Nothing but evil can come from anything that makes the united effort of the great mass of a province project itself against the rights of another province. As individuals we love, we admire, we reverence those who come from the province of Quebec. Our relations have always been most happy and harmonious, and always will be; but it is one thing to deal with the individual and with the pressure that a combination of individuals may exercise in the way I have indicated; an effort combined under the leadership of one who for 40 years has sat in this Parliament and who, as he told us, has been a leader of the Liberal party for 28 years, in good report and ill report is another thing. It is quite another thing for one who leads a great party to ask for the destruction of the rights of a province as they were laid down by the founders of Confederation. In the name of unity of purpose, of harmony, of the greatness of the Dominion that is to be, remember those great plains that are to be peopled by millions, and that one day will say to my friends from Quebec: "We have not forgotten your efforts." I would deprecate it, and so would others; but let this country realize, as my hon. friend from Edmonton said, that the shifting of population is already in progress. It will not be in my day possibly; it will not be in the day possibly of any one in this House, but as certain as the sun shines, those great lands between the lakes and the mountains will have a population as great as that which inhabits the central west of the United States. It will have reached 50,000,000 within a reasonable time and I am perfectly convinced that these 50,000,000 living under the protecting aegis of the Union Jack, as British subjects, securing to them liberty and justice and freedom; securing them from the tyranny of minorities which may be greater than the tyranny of majorities—that must not be forgotten, it is a fact in history—securing them from that, we will, if we are true to the trust that devolves upon us, leave to them a country whose institutions make possible the development of that unity of purpose, that harmony of feeling, that intelligent coordination of effort that brings about national efficiency under one language of communication and instruction which, in this case, must be, because we are part and parcel of the British Empire, the English language.

Mr. E. M. MACDONALD (Pictou): Mr. Speaker, at this very late hour of the night I owe an apology to the House for attempting to address it at all. But for the impassioned harangue of the hon. gentleman who has just sat down, and who has introduced a note into this debate somewhat out of touch with the high plane on which the discussion has been carried on by other hon. gentlemen, I would not have ventured to trespass upon your patience, and I shall do so only for a few moments. When my hon. friend from Calgary, with that assertiveness which he can command with very little justification, says that my hon. friend from Lambton (Mr. Pardee) misled this House in regard to what took place in this Parliament in 1872, it would not be proper to permit this debate to close without showing conclusively to the House that my hon. friend from Calgary is the one who has attempted to mislead the House. When was it ever said in this or any other Parliament that when a matter for the House had passed a resolution and determined that a certain thing should be done, it was a question as to how the matter had been brought to the attention of the House. My hon. friend laid down a very curious doctrine. I am sure that you, Mr. Speaker, never heard of it before. Because in 1872 a certain matter was brought to the attention of this House by virtue of a resolution moved by Mr. Costigan, in which after certain recitals, this House was asked to come to the conclusion that a certain Act of the Province of New Brunswick should be disallowed, and because that resolution was amended and the House came to a subsequent conclusive resolution as the result of debate, my hon. friend from Calgary says that my hon. friend from Lambton misled the House when he told the House what the result was which Parliament arrived at.

Mr. R. B. BENNETT: That was not the resolution.

Mr. MACDONALD: My hon. friend will find that in his hasty way of looking at this question he has not seen all the books upon the subject. My hon. friend will find on page 179 of the Journals of the House of 1872 the following statement:

Then the main question, as amended, being put, that this House regrets that the School Act recently passed in New Brunswick is unsatisfactory to a portion of the inhabitants of that Province, and hopes that it may be so modified during the next session of the Legislature of New Brunswick as to remove any just grounds of discontent that now exist.

That was the resolution quoted by my hon. friend from Lambton.

Mr. R. B. BENNETT: Pardon me: I must correct my hon. friend at once. The resolution quoted by the hon. member for Lambton is on page 177 and is the resolution that Mr. Colby moved. The resolution on page 179, which was passed, was not moved by Mr. Colby because it involved two amendments.

Mr. MACDONALD: My hon. friend is certainly indulging in very queer reasoning. On page 177 I find that Mr. Colby moved a resolution in the very words which were read by my hon. friend from Lambton, which I read a moment ago, and which afterwards formed part of the main resolution. Does my hon. friend from Calgary want this House to believe that it was misled when I read the same words on page 179, where, after the words, "Then, the main question, as amended, being put," are to be found the very words contained in the resolution of Mr. Colby, and then, after adding the substantive resolution, the record says: "it was resolved in the affirmative." The fact therefore is that in 1872, as recorded on page 179 of the Journals of that year, the House of Commons passed a resolution which contained the words exactly as read by my hon. friend from Lambton. In 1875 this question came before Parliament again. My hon. friend read what the Hon. Mr. Blake said in regard to the matter at that period. Let me tell my hon. friend that in 1875 the Hon. Edward Blake seconded a resolution, moved by Mr. Cauchon and dealing with this very question of New Brunswick schools. It had no relation to the legislation which my hon. friend conjured up, but was a legitimate and apparently natural sequence to the resolution moved in 1872. For the information of the House, in view of the statement made by my hon. friend from Calgary, I wish to read this resolution which was moved by Mr. Cauchon and seconded by Mr. Blake in 1875, and I want this House to judge whether my hon. friend from Lambton was right when he read the resolution of 1872, or whether my hon. friend from Calgary was right. This is the resolution of 1875:

Mr. Cauchon moved, in amendment to the said proposed amendment, seconded by Mr. Blake, That the words "That on the 29th day of May, 1872, the House of Commons adopted the following Resolution.

This House regrets that the School Act recently passed in New Brunswick, is unsatisfactory to a portion of the inhabitants of that province, and hopes that it may be so modified during the next session of the legislature of New Brunswick as to remove any just ground of discontent that now exists.

There are the words that my hon. friend from Lambton read. Messrs. Cauchon and Blake, in 1875, refer to this resolution of 1872 in the terms of the following motion:

This House regrets that the hope expressed in the said resolution has not been realized.

That an humble address be presented to Her Most Gracious Majesty the Queen, embodying this resolution, and praying that Her Majesty would be graciously pleased to use her influence with the legislature of New Brunswick to procure such a modification of the said Act, as shall remove such grounds of discontent.

We thus have the resolution of 1875 quoting the very words read by my hon. friend from Lambton to-night and when the hon. member for Calgary, at this hour in the morning, and in such a debate as this, has the assurance to charge one of his colleagues with having made a false statement I say that he has not the right to do it, and that he has no right to trespass upon a debate of this kind for such a purpose. My hon. friend talks about the great West with his usual eloquence, but he knows just as well as every lawyer in this House that this resolution has no bearing whatever, directly or indirectly, on Alberta, Saskatchewan, British Columbia, or any other province in this Dominion except Ontario. My hon. friend knows full well that by a resolution which was pressed in this House by a former Minister of Public Works, the Hon. Mr. Monk, in 1905, it was proposed to create certain rights in Alberta and Saskatchewan with respect to the use of the French language and that my right hon. leader at that time, dealing with that question frankly and fairly, called upon his followers to vote down that resolution. It was voted down, and my hon. friend knows that to-day, when he talks about the interference with the English language in Alberta and Saskatchewan, he is talking

beside the mark. No such question can arise there.

Just one word on the general question. Those of us who speak the English tongue, those of us who treasure the memories of the great British race during all the long years of the history of our Empire, must realize that the foundations of the race and of the Empire were laid by men of various races, Angles, Saxons, Jutes, and Normans, who came over to England. These men spoke a number of different languages. In the North, and across the channel in Ireland, were the Celts, while in Wales there were the men of the Cymric race. By a consideration of the varying and conflicting interests of the people, and not by acts of hostility, not by speeches such as my hon. friend from Calgary delivered here to-night, but through long years of harmonizing these difficulties and of working together, there grew up the great British race to which we are all so proud to belong, which laid the foundations of our Empire and which carried the British flag to every sea. Whenever a race came under that flag what did they do? Wherever the flag was planted the first essential right that was recognized of the people who came under their government was the right to the language of the people who lived in that land. So the story has come down all through the years. What has occurred in South Africa? After the war, lured by the assurances of the Germans, there trekked up into German territory a great number of Boers. They found an illustration there of the difference between British and German rule, because the Germans enforced the principle of uniformity of languages and the subordination of the rights of the Boers to the dominance of the Germans. These men found their way back to British territory, and under the British flag, where the right of their language was accorded to them, and to-day we have the spectacle of the whole of Africa being saved to the Empire as a result of the recognition of the rights of these Boers to their language in South Africa. When we come to Canada, I know that gentlemen like the hon. member for Calgary tell us that we must have one language in this land from the Atlantic to the Pacific.

Mr. BENNETT: I did not say that.

Mr. MACDONALD: I did not say that my hon. friend said it; I said gentlemen like my hon. friend. We have heard that, and it is a very pleasant thing to say in certain quarters. Men of the dominant race will say we should have one country, with one language, that we should have one flag, and there should be no exception to that proposition. But, we in Canada, are fettered in regard to that matter. We do not control this question of language. Those of the class to which I have referred, like to say there should be only one language in Canada. But that cannot be the case. Why?—because Imperial enactments and treaties have provided conditions in this country by which men of the French race who were here when our fathers came are given in the courts, and in the province of Quebec certain rights and privileges that can never be taken away. Not only in this Parliament can a man come from any part of this Dominion speaking the French language, representing people who speak that language and having the right to expect that a gentleman shall sit in the Speaker's chair who shall know what is being said when he addresses him on behalf of those who elected him to Parliament, but in the Supreme Court any man who speaks the French language has the right to demand that his plaint shall be heard by a court composed of men who understand the French language. You have the Exchequer Court, which travels from the Atlantic to the Pacific under Judge Cassells and under Judge Audette. Every litigant in this country can hire a counsel who does not understand one word of English, under the law created by the Imperial Parliament, he has a right to have his plaint heard.

When my hon. friend talks about conditions in this country, when he talks as if the men of the French race, whose rights are embalmed in the constitution under which we live, are to be told that there is only to be one race in Canada, he must remember that whatever we would like to do, whatever individuals might desire, the hands of the Canadian Parliament and of the Canadian people are indelibly fettered by reason of these conditions imposed by the British Parliament and by the conditions under which our constitution arose. That being so, what are we going to do in this land? Are we to be continually aggressors against each other? Is it by preaching such a doctrine that we are going to attain that peace and unity which are so essential to the upbuilding and the future of this country? Is it by preaching division amongst these races that this unity is to be had? No problem with regard to the French

language in the schools arises in any of the provinces of this Dominion except Quebec, Ontario and Manitoba? And why does it arise in Manitoba? Simply and solely because in 1897 this Parliament chose to create certain rights in that province, which created a condition from which you cannot get away. But in all the other provinces of the Dominion than these three there is no restriction, no danger, for those who worry in regard to this question. The legislatures of every one of our provinces except Ontario, Quebec and Manitoba have absolute, supreme and exclusive rights in regard to every question of education, and this Parliament cannot interfere in any way with those rights, and it does not propose to interfere. What is our situation here? This resolution is not an invasion of provincial rights. This Parliament does not in any way intend to interfere with provincial jurisdiction. On the contrary, it expressly recognizes it. Hon. gentlemen in this House who have spoken in this debate, no matter from which side of the House, have all admitted that there is an agitation and there are grievances. Some hon. gentlemen opposite have spoken most admirably on this question, notably the hon. member for Kingston (Mr. Nickle), who dealt with it in a way that was most interesting to those of us from other provinces who were anxious to know the facts. He declared that the people of Ontario were anxious to encourage the teaching of French as well as the teaching of English, and that they believed these regulations would effect that purpose. Hon. gentlemen on this side of the House, in utterances which were notably clear, and free from all passion and prejudice, placed before this Parliament statements which indicated that the rights and privileges of the men of the French race which existed before Confederation, and have since been recognized by statute and regulation in Ontario, have been interfered with and abridged. What is to be done? My hon. friend says, "Let this matter go to the Privy Council and be litigated upon." Is there not a better way in which we can arrive at a full and complete understanding on this question? This House is in a splendid temper, a temper I have rarely seen equalled during all my parliamentary experience. This question has been presented fairly and equitably from both sides, and is it not reasonable and natural to expect this Parliament, forgetting all questions of party, to say: If we have in Canada these conditions, everybody should recognize them, and so far as we can, we should model ourselves on the lines laid down by the Imperial Parliament; and both races should go along under this Constitution in amity and friendship. That is the proposition which is made to this House. That is all that is asked for by the mover of the resolution. Realizing to the full that Ontario is supreme on this question, and without any desire to restrict her rights by any legislative action, all we say is that if there are grievances there should be a rehearing of the case, and an investigation of all the facts, and we would then leave it to the good sense of the people of the province of Ontario to recognize the rights that exist, and deal fairly by all classes of the population. That is the intent and meaning of the resolution presented by the hon. member for Kamouraska. If it meant an invasion of provincial rights I should be the first to vote against it, but there is no desire to invade or attack the supremacy of Ontario. All that is asked is a rehearing, full and fair consideration of the exact conditions, free from prejudice. That and that alone is what is sought by this resolution, and I trust that when this question is taken up by the Legislature of Ontario which alone can deal with it, the men who control Ontario and its educational policy will realize these conditions and endeavour to deal with this question fairly and equitably; that the cause of difference between the races of this country may be removed, and the difficulty settled along lines which are just and equitable, and characteristic of the British fair play which we of the British race have boasted of through all the years of our history.

Mr. J. GIRARD: (Chicoutimi-Saguenay) (Translation.) Mr. Speaker, notwithstanding the lateness of the hour, I wish to give some explanation of the stand I intend to take on the question now before this House. I wish also to express in my mother tongue the opinion I have formed after perusing the whole of the debate in which the House has been engaged for the last two days. I think a little French, on this question of French, may not be out of place.

The resolution now before the House expresses the unanimous sentiment of every Canadian—be he French or English speaking—because it is a well-known fact that

under the folds of the British flag, of which we are so proud, every subject enjoys the greatest possible measure of freedom; what is going on in the province of Quebec is the best instance.

But in certain of the provinces of the Dominion, educational laws have been enacted, in good faith I presume, which are more or less unsatisfactory to the French Canadians. In the resolution which has now taken two days to discuss, Ontario only has been taken to task for enacting, on the subject of education, laws which are not as complete as they should be. We are all agreed that we must join in an endeavour to obtain the redress of grievances, whatever and wherever they be. I heard no word of dissent as to that. The time has come when the law makers are willing to take action under the law and the constitution.

In Ontario, as I have just stated, there exists a statute which is insufficient as regards French Canadians; but in Manitoba, there was a statute which was also insufficient, but which, such as it was, had been giving our compatriots for some years past a certain measure of satisfaction. Well, a few weeks ago, the Government of that province saw fit to call on the legislature to repeal that statute and, at one fell blow, to deprive the French population of all the privileges they had enjoyed hitherto.

We are appealed to on behalf of the wounded of Ontario, but what about our murdered brethren of Manitoba? Do we really believe that in the latter province so heavy has been the blow that all remedy is hopeless and we must be resigned to have the case buried for evermore? That is the conclusion that may be drawn from our two days' debate. If Parliament is entitled to discuss my hon. friend's resolution was it not open to us a few weeks ago, while the Ontario and Manitoba Legislatures were both in session, to submit at both capitals with some chance of success the humble prayer which this House to-day is asked to formulate? But now there is behind the present resolution no possible sanction, and at any rate any chance of better conditions is retarded a whole year by the delay in presenting such a resolution.

Would it not have yet been time, before the Manitoba guillotine severed whatever rights remained to us in that province, for the promoter of this resolution, by some such measure, to urge on the provincial Prime Minister before letting the knife drop, the desirability of giving a second thought, to ponder over what is legitimate and what is right, and perhaps instil into him some feeling of pity towards our compatriots? Far easier to forestall death than to resurrect. Would it not then have been the part of wisdom to suggest to the Manitoba Government some action along the lines of this resolution; then might have been avoided the massacre of the French race in Manitoba and might have been obtained in Ontario the balance of those rights to which I believe the French Canadians are entitled.

Mr. MARCIL: Will the hon. member allow me a question? Why did not the hon. member himself introduce a resolution to that effect?

Mr. GIRARD: Why not have inserted it in the present resolution?

Mr. MARCIL: If the Government allows me to introduce such a resolution, because as my hon. friend well knows, the rules of the House forbid a second amendment,—but if the Government will consent to suspend the rules, I shall immediately move a resolution, which I shall ask my hon. friend to second.

Mr. GIRARD: I am ready to do anything that is required of me, in order that what is not right may be made so. Like you, I am a French Canadian; like you I am a staunch believer; I have a wife and children; I am a Catholic, and I represent a constituency which is Catholic and French-speaking just like yours. But I wish to know why by taking a very skillful advantage of the rules of the House, we have been precluded from having a regular amendment put to us, when it could have been done in the regular course, if this resolution had not been moved in amendment to a motion that the House go into Supply.

I admit, without hesitation, that we have come to a difficult juncture in our national history, when all fair-minded men, all who feel their responsibilities, should unite in an effort to avert the danger with which we are threatened.

But what reason have we to deal to-day with the schools in Ontario only, where French is being commonly taught, and leaving out of consideration the people of Manitoba, from whom everything has been taken away? Is there a secret motive? Along with my colleagues, I am bound by my oath of office, by my allegiance to my language, my faith and my religion, to de-

vote all my energies to see that the rights of all are respected, especially the rights of minorities. I have laboured alongside men, much higher than I, to help the wounded of Ontario and on behalf of the murdered ones of Manitoba, whom I would bring back to life. Accordingly, I much regret that the resolution which is submitted to us falls so short of what it should contain, and is so unfair as regards those of our compatriots who are suffering the more painful agony, and that the amendment should have come before us through a procedure that precludes its being amended to put it in a more acceptable form, and gives it practically the character of a motion of censure on the Government.

I expected to see the Government censured for not having disallowed the Ontario statute, but I was surprised to hear the chieftains of the Opposition, especially the leader, speak against the principle of disallowance. What purpose did it serve them to trouble so many peaceful citizens all over the country to get them to petition for disallowance, when it must have been known that it was impossible under the circumstances? Why not have introduced the present resolution as a substantive motion that could have been discussed with the same good faith as we are doing now, and modified, if necessary, to make it more comprehensive instead of limited in scope, as is the amendment before us?

Mr. Speaker, I repeat what I have just said; we have arrived at a terrible chapter of our annals. Had we not enough on our hands with the abominable war that shakes the world to its very foundations? We are now threatened with a civil war, necessarily brought about by an injustice which, as I understand, depends on a mere word in a regulation. At the present juncture, knowing the danger of the agitation that is being promoted, I feel it is my duty to appeal to the wisdom of the fair-minded men of both parties in this House and out of this House, to join in an attempt to ward off this menace, and as soon as possible re-establish peace in our great Dominion.

With the present widespread perturbation, I should suggest that new men, independent of the present organization, get together and endeavour to bring about a redress of the grievances complained of by peaceful and diplomatic means, which alone will bring back to Canada the quiet it enjoyed heretofore.

In closing, I want it clearly understood that I am, from a sense of duty as well as by common sense, intent on working along with all broad-minded citizens against the perpetration of any wrong; I am as loyal to my race as any of my colleagues and countrymen; I desire to give all my endeavours to secure a remedy for the grievances in Ontario, and especially in Manitoba, but I do not think the resolution before the House expresses these sentiments with any greater force than the declarations I have just made.

I profoundly deplore that the murder of the rights of my compatriots in Manitoba should not have been covered by the resolution, but I hope that the discussion of the last two days will prompt fair-minded men of all classes to go to work and see that permanent justice be granted to those to whom their rights are now denied.

With these words I must state that while I support heart and soul the sentiments expressed in the resolution, I feel that I cannot vote for it on the grounds that it overlooks the rights of a section of our compatriots, because it is too limited in its scope, because it has no sanction behind it, and because, as put before the House, it amounts to a non-confidence motion against the Government, without assigning any reasons therefor.

Mr. A. BELLEMARE: (Maskinongé) (Translation.) Mr. Speaker, in the province of Ontario, as we are made to understand, strong condemnation is being expressed in certain quarters against our intervention and our protests in connection with the rights of the French Canadian minority in that province.

In this vast Dominion, if one province is guilty of a very great wrong, such as is apt to disturb the harmony between the races that make up the country's population, it seems to me that it is permissible for this Parliament or for a sister province to record some comments, or make suggestions, without being accused of any disloyalty, or of a desire to dominate. The part of a legislator is to maintain here below peace, justice, and truth.

The world war, which is now being waged, is without doubt the outcome of injustices similar to those which are to-day perpetrated in the province of Ontario.

In defiance of all right, our schools may be taken away from us, but never will anyone succeed in extirpating from our bosom our French hearts, no more than we should attempt to instil in the heart of an Irishman, an Orangeman, or a Scotchman, our

French ideals, and national aspirations. If the country is to have peace and prosperity, why not be respectful of our mutual rights?

The claim is heard that the Gospel can be preached and taught in the one language: what an error! What folly! Are we not aware that the Gospel is taught both in Catholic and Protestant churches, in this country and elsewhere, in the language of the people? Was not the gift of tongues bestowed on Peter, the Apostle of Christ, so that his teachings might be understood by all the nations of the world? Alas! that a priest, a Catholic bishop, should be so blind as to make common cause with the Orangemen in their attacks upon our race. Does he not realize that the interests of religion, the welfare of the country, the promotion of peace in Canada, forbid him to assail a minority that has acquired rights and shows respect for his high office?

See what is going on in the province of Quebec; there the Protestant minority enjoys the full control of its school grants, and the use of its language not only in its churches, but also in its educational institutions.

It is objected that we are only a handful. A handful, indeed, when the minority accounts for nearly 250,000 French Canadians! And what if it were true? Not the units and not their wealth give the measure of moral energy. After all, might does not make right, and has not the spectacle been given to the world of twelve apostles, whom we all revere, although despised by all the wealth, the pride and the science of their time, conquering the world.

I do not look forward to our conquering North America, but I claim that justice calls for respect, even when the number of its exponents is insignificant. The brutal element in a wrong is not capable of turning it into a right.
