The idea of having only one language spoken in Ontario is a sham and a utopia. It may as well be realized immediately that never will the revindication of our rights be silenced, because the French language was spoken in Ontario long before it was settled by a British majority. In Europe, with the French soldier always pushing forward on the battlefield and the English host never falling back, victory will finally settle with the Allies; likewise in Ontario, where the French Canadian will never give up the rights he has acquired and the fair-minded and honest British who does not recede, we finally will get the majority in this province to understand the respect due to the minority. The different factions who are attacking the French language will give in at last, justice will triumph, because no language has played a nobler part in the world's destinies, in the triumph of civilization in Europe and Canada. It is spoken in all the courts, sovereigns learn it, speak it, and are not ashamed of it. Mr. Speaker, I could speak longer on the beauties of the French language, and the rights of the minority to continue its use in this province; but on account of the late hour, I conclude in stating that my remarks are founded on justice, that they are made on behalf of my province, and of the minority in Ontario. In giving expression to my opinion, I believe I voice the sentiments of all those who wish for peace, justice, harmony, not only in the province of Quebec, but also in the province of Ontario and all the other provinces of the Dominion. I shall then vote for the amendment of the hon. member for Kamouraska.

The House divided on the proposed amendment of Mr. E. Lapointe (Kamouraska).

YEAS:

Messieurs.

Achim,	Lapointe (Montreal, St.James),
Barrette,	Laurier (Sir Wilfrid),
Bellemare,	Lemieux,
Boivin,	Loggie,

Amendment negatived.

Motion agreed to, and the House went into Committe of Supply.

Progress reported.

PRIVATE BILL.

FIRST READING OF SENATE BILL.

Bill No. 103, for the relief of William Thomas Craig.—Mr. Pardee.

On motion of Sir Robert Borden the House adjourned at 4.10 a.m. Friday.

[Mr. E. Lapointe.]

Friday, May 12, 1916.

The House met at Two o'clock, the Speaker in the Chair.

SUPPLY.

The House in Committee of Supply, Mr. Rhodes in the Chair.

Railways and Canals—chargeable to income —Grand Trunk Pacific Company—loan not exceeding $8,000,000, repayable on demand with interest payable half-yearly at the rate of six per centum (6 per cent) per annum; to be used for expenditure made or to meet indebtedness incurred in paying interest upon securities of the Grand Trunk Pacific Railway Company, to meet deficit in operation and for the purchase of rolling stock; said loan to be secured by mortgage upon the undertaking of the Grand Trunk Pacific Railway Company containing such terms and conditions as the Governor in Council may approve. The disposition of the loan to be subject to the direction of the Governor in Council, $8,000,000.

Mr. W. F. MACLEAN (South York): I followed somewhat closely the speech delivered the other day by the former Minister of Railways (Mr. Graham) in regard to the proposed aid to the Canadian Northern Railway Company and the Grand Trunk Pacific Railway Company. What he said was that the present railway situation in this country was not permanent, and that if it had not been for the war and the consequent general dislocation of business all would still be well. His conclusion was that the sun would shine again; that things would come back to their normal; that the railway situation in this country would come all right once more. In other words, he endeavoured to justify the proposition that no fundamental error had occurred in regard to the railway situation. My contention is that the war which is now waging has disclosed the dislocation of the railway situation in this country. Not only may the war have helped to bring on this dislocation, but it has disclosed a railway situation that is unspeakably bad and against the general interest of the country. The situation must be remedied. I disagree with my hon. friend when he says that everything will come back to normal. I say that the people of Canada will have to come to the conclusion that the railway situation in this country is fundamentally bad and must be cured. I am going to prove my contention by pointing out these things to him. The Globe newspaper says: The railway situation is unutterably bad; the people of this country think the same thing, and I will read

the confession of Mr. Smithers, Chairman of the Grand Trunk Railway Company. On the first page of his letter addressed to the Prime Minister are these words:

Sir,—I have brought before the board the result of my conversations with you and some of your colleagues during my recent visit to Canada, as to the financial position of the Grand Trunk and Grand Trunk Pacific Companies from the 1st of January next.

I told my colleagues that at the interview I had with you on November 25 I disclosed to you very frankly the situation with which the Grand Trunk and Grand Trunk Pacific Companies would be confronted in the immediate future. I also told them that after full consideration, and with the deepest regret I had proposed to you, as the only safe solution of our difficulties that the Government should take over the Grand Trunk Pacific railway as from the first January next, with all its branch lines, together with its development company, and other subsidiary companies, with all the assets, the Grand Trunk Railway Company to surrender to the Government the whole of the common stock of the Grand Trunk Pacific Railway Company on condition of the Government relieving the Grand Trunk Railway Company of all liabilities in respect of the Grand Trunk Pacific Railway Company, its branch lines, its development company, and other subsidiary companies, and repaying to the Grand Trunk Railway Company any money advanced by the Grand Trunk Railway Company to the Grand Trunk Pacific Railway Company, or its branch lines, and Development Company and other subsidiary companies.

Mr. GRAHAM: Will the hon. member allow me? I want to read to the House from the same letter a paragraph which, I submit, proves my contention. This paragraph appears on page 6 of the statement respecting the Grand Trunk Pacific Railway Company:

If the Government accept the proposition of the Board, I feel confident that whatever the liability the Government may assume will be amply repaid in a few years by the increased traffic arising from the development of the Northwest, and the bringing of new land under cultivation. What that development may mean is foreshadowed in the amount of the record crop just gathered in the Northwest, the production of wheat alone being 320,000,000 bushels, as against only 140,000,000 bushels in 1914; with other crops showing considerable increase in yields. The board feel that they may be severely criticised in a few years for parting with the property, and nothing but the necessity of saving the money which the present investors have put into the property would have induced them to do so. The deficit of the next few years, at a time of unprecedented strain owing to the terrible war in Europe, is the danger to be avoided, but an amount of deficit which is impossible for a company to finance is quite possible for a nation.

Mr. Smithers assures the Government that it will get all the money back and that the investment will be a paying one.

Mr. MACLEAN: My contention is that Mr. Smithers shows by his letter that he has a lame duck upon his hands—

Mr. GRAHAM: For the present.

Mr. MACLEAN: —and he proposes to hand it back to the Canadian people if they will repay him all the money his company have invested in it, and if they will relieve that company from the agreement by which they are bound. I claim that the argument is a double-edged one. Mr. Smithers drunk or Mr. Smithers sober is anxious to put this burden on the shoulders of the people of the country. My main object to-day is not so much to argue that the bargain was bad, as to bring this Parliament to a recognition of this fact disclosed by this company, notwithstanding the conditions attendant upon the war, that the system we have been following in the past, of using the public treasury, and the legislatures and the Parliament of this country, to carry out the ambitions of ambitious men in connection with railways, is bad, is irretrievably bad, and must end here and now. This contention is proven by the words which I have just read from the letter of Mr. Smithers. I ask the ex-Minister of Railways (Mr. Graham) to read the Globe these days on the mistakes which have been made in connection with railways, and to note the attitude it assumes towards the railway situation. As I have said, I do not intend to hand out criticisms, especially in the way of blame; perhaps nearly all of us are more or less to blame in this matter. But the facts have disclosed a situation that cannot be justified, and the facts have done more; they have brought about—and I wish to say this in the way of advice to the Minister of Finance—they have brought about the psychological moment to administer a cure for this condition. There never will be such an opportunity as this to administer the cure, whatever it may be, to this railway situation.

Sir WILFRID LAURIER: What is the cure?

Mr. MACLEAN: I was just about to deal with that. I hardly need to tell the House what my cure is, my cure is public ownership, and now is the time to apply it. I give the Government credit for saying that public ownership may have to come, and that they intend to look into it by means of a commission appointed to investigate and advise. I do not need any

advice from a commission of this kind on this subject, and the people of Canada have made up their minds what they intend to do. They are ready to assume the responsibility of applying this cure of public ownership to the transportation situation which has arisen at this time, and which has been aggravated by war conditions. Public ownership of railways, when it was first suggested in this House, was described as being almost lunacy; the best that could be said of those who favoured it was that they were enthusiasts. But the whole history of progress in relation to railways is a history of advancing public ownership. Britain to-day is a public ownership country practically, so far as her railways are concerned, and she never intends to part with the control of those railways that she now has. I shall be asked: If we are to have public ownership, what practical suggestion have you to make as to these railways —granted that the time is opportune? A friend behind me says, "That is the point." I say that the worst thing that can befall us in this matter is a continuance of the present system; and the best thing is that, having faith in public ownership, we should try it out. I am told that this would involve an immense sum of money. Perhaps it would. It involves taking over commitments that already exist. But, as a matter of fact, we are committed to these commitments and must assume them whether we will or not. The very reason why this difficulty has arisen is that the railways are in such a state of misfortune that they must be rescued. There is no other way than by the assumption of these liabilities by the country. We are called upon to perform a work of salvage, nothing else and the question is whether we are to make it a temporary salvage or a permanent salvation.

How are we to proceed? I would assume the duty, whatever it involves; but there are various ways of procedure. For my part, I am willing that we should first deal with these two lame ducks, the Grand Trunk and the Canadian Northern. But the really easy way to proceed, the one that should be followed if I had my way, would be to nationalize the Canadian Pacific. I am willing, however, to proceed in the other way for the present. I would treat the Grand Trunk, perhaps, a little differently from the Canadian Northern, for the Grand Trunk has confessed bankruptcy in connection with this proposition. It says it is not able to continue the business and wants to hand the railway back. It wants to get its money back and be forever absolved from the engagements and commitments it has made in connection with the situation. The first thing I would say to the Grand Trunk—that is the Grand Trunk proper—is: "Mr. Grand Trunk, we will not release you from your engagements unless you propose to turn over not only the Grand Trunk Pacific but the old Grand Trunk." This is the Grand Trunk that we know in the provinces of Quebec and Ontario as the greatest railway of its kind in Canada. There is no such fine railway in Canada as this Grand Trunk. It runs through the settled portions of the country and it reaches the factories. It touches the city of Quebec, it runs opposite Three Rivers; it has great facilities in Montreal; it reaches Ottawa, and it runs to Toronto, Hamilton, London and nearly all the cities and towns of southwestern Ontario; it reaches the two international rivers, the Niagara and the Detroit; and it has important terminals on Georgian Bay giving access to the West. This Grand Trunk is so good a railway proposition that, even though it has made some mistakes, it will pay. It was getting out of the woods at the very time it made these commitments in connection with the Grand Trunk Pacific. It is the greatest railway in Canada, the one that can earn the most money, if it were administered from Canada, as Mr. Hays had begun to administer it; and it would have achieved success and been a paying proposition to-day, notwithstanding the enormous mistakes made in its early construction, had it not been for these unforeseen difficulties. I would leave the early shareholders to look after themselves. The road is admitted to be bankrupt. If the Grand Trunk Pacific is absolutely hopeless so is the old Grand Trunk proper, facing default, and ready for liquidation.

Mr. GRAHAM: You say that is the old Grand Trunk?

Mr. MACLEAN: It faces default according to this letter and is ready for the knacker if the knacker comes for it.

Mr. GRAHAM: Do you mean the Grand Trunk proper?

Mr. MACLEAN: That is the confession. They say: "If you force us to carry out our agreement, we are bankrupt. The lawyers will tell you that when you go to court, and when the bonds come due

the bondholders will go to the Grand Trunk treasury and demand payment. Here is an opportunity which presents itself for the first time, by reason of the war and as the outcome of our policy in the past. For the results of that policy I am putting no more responsibility on one side than on the other. The Grand Trunk Pacific is at our door in the position of a suppliant—and that word " suppliant " to me is the key to every important question of this kind which has arisen in Canada. It always happens that the persons or the companies that are the cause of grievances in this country are here this day and the next day as suppliants, and we miss the whole teaching of our English language and of the progress of liberty if we do not seize the opportunity which is afforded us by the presence of these suppliants seeking a cure of the grievances which they themselves have brought about. The old Grand Trunk is here as a suppliant asking for relief. I do not believe in taking over the Grand Trunk Pacific and relieving the old Grand Trunk of their engagement, letting them go scot free. I say: summon Mr. Smithers to Canada; tell him to bring over his board of directors and to go into session in the city of Montreal, where the head office is. We should say: we will talk with you here and now as to how we are to acquire and take over the Grand Trunk with the Grand Trunk Pacific. They will be glad enough to give it to us in order to be saved from liquidation. I would give them some little compensation in connection even with the old original stock; it would not be much, but it would be a little. But they will lose everything if this Government demands what it has a right to demand of them: that they pay their commitments; that they run the Grand Trunk Pacific; that they take over the Transcontinental, as they are bound to do. It may be argued that the time has not yet arrived for taking over the road, but I say that this is the opportunity to remedy the situation by taking over the old Grand Trunk and the Grand Trunk Pacific. It is all very fine for these opponents of public ownership when they are in trouble to say to the people of Canada, as they have said in the past: " Take over the dead horses and the lame ducks, and leave us the profitable ends." They have public ownership of telegraphs in almost every country in the world except our own, but whenever there is a weak line in this country for which there is no business and no profit—let the Government build it.

Mr. GRAHAM: Or to be bought.

Mr. MACLEAN: Or if there is a line to be bought, let the Government take it. And the Government takes it. They put the Transcontinental on us; it is not productive just now, although I think it has a great future. I am not going to profess lack of faith in my country so far as the future of the Grand Trunk Pacific is concerned; I hope that even the right hon. gentleman will give me credit for that. But this is the psychological moment to administer a cure to prevent the recurrence of the railway evils that have arisen in the past. In a word, that is my proposal as to dealing with the Grand Trunk. Let us say here and now, when they are suppliants at our door: " All right, gentlemen, we will take this road over and relieve you if you give us the old Grand Trunk upon certain conditions that we will name to you."

Mr. MORPHY: What does the hon. gentleman say as to this being the proper time to finance a proposition of that kind?

Mr. MACLEAN: You do not have to finance it; you have to assume commitments. I made that argument in this House some years ago in connection with the Grand Trunk and the Canadian Pacific. On one or two occasions in this House I have said: "How will you finance it?" The late Minister of Finance thought he was taking a shine out of me when he said: "We should have to raise millions and millions of money." I said: "No, you will have to assume commitments." We will have to assume the commitments of the old Grand Trunk if we take it over. But the last thing that I am in favour of suggesting to the Canadian people—I do not think this Government will suggest it—is that they should relieve the old Grand Trunk and take over the lame duck, the Grand Trunk Pacific. The stars of fortune of these two railways will never again come so close together; rather, there is a conjunction of circumstances affecting the fortunes of these two railways which will never occur again. It is this circumstance which gives us an opportunity to take them over and to use them for the benefit of the people.

Mr. STEVENS: What would the hon. gentleman do with the stockholders of the Grand Trunk?

Mr. MACLEAN: I said a moment ago: notify Mr. Smithers, get his board of directors to come over here by the next boat and hold a meeting in Montreal. Have

them bring some authority from their shareholders in England to negotiate with this Government; otherwise, let them go into court and defend an action for the liquidation of both roads. We do not have to go to them; they are here now as suppliants.

Mr. STEVENS: Supposing they did give you such authority, what would my hon. friend do with these stockholders?

Mr. MACLEAN: Give me the responsibility and I will deal with them. That is my answer to my hon. friend. I am ready to assume that responsibility, or rather to associate myself with gentlemen in this House to appeal to the people of Canada on a programme of that kind. The Minister of Finance and the Government are preparing to assume that responsibility, but the minister wants to take time to consider it. When he has considered it, the opportunity may be lost, and that is what I want to point out to him. That good old Tory organ, that great exponent of private railways, the Montreal Gazette, yesterday, undertook to tell an awful story of the obligations and entanglements and—still more dreadful thing—the great financial difficulty that must be encountered in raising money to take over the railways. The Montreal Gazette says there will be an enormous undertaking in making a flotation. But you do not have to do anything of the kind. You simply have to assume certain of the liabilities and refuse to assume others. The Canadian Government is on record as having come to the relief of this road many years ago. You will find a very large item in the funded debt of Canada for money advanced for the benefit of the shareholders of the old Grand Trunk Railway. We have helped them in times past; some of that old stock is held to-day by families of the original investors, and, largely, by men who are engaged in stock broking in London, and by speculators who use it for their own advantage. Yet these people come here to-day and ask the people of Canada to make a deal with them, to let them out in regard to the dead horse, but to let them have the profitable end of it. I say, no. Make them come here and deal with us; make them give this railway to us, or let them go into liquidation.

What would you do with the Canadian Northern? They also are here as suppliants. The Canadian Northern is a great railway in many ways; of the Transcontinental lines it is probably the best located, traversing the richest and best country. I believe it has potentialities. It is fine to hear capitalists arguing about potentialities. It is fine to hear an ex-minister talk on potentialities. It is a very fine argument.

Mr. GRAHAM: I was filling in the gap which my hon. friend left.

Mr. MACLEAN: But if it comes down to potentialities, they are in the Canadian Northern, and in that condition we are particeps criminis; we are partners in the crime, so to speak. We own 40 per cent of the road, and we are asking ourselves to give enough money to relieve the railroad. We have to relieve both railroads.

An hon. MEMBER: We are responsible for four-tenths of the crime.

Mr. MACLEAN: Yes, four-tenths of the crime is at our door. But what should we do with the Canadian Northern? It is so easy a proposition compared with the complexity of the Grand Trunk case. I would say to the Canadian Northern: we own 40 per cent of your proposition; it is a good proposition; its potentialities are great; what will you take for your $60,000,000 of stock? If the responsibility were on my shoulders I would make a settlement with them. I would say: What is the lowest you will take? I believe that they would take, perhaps, $6,000,000 or $8,000,000. That is only my own guess, but I have studied the question, and I think they would surrender that $60,000,000 worth of stock for that amount. If I were a financier as is my hon. friend the Minister of Finance, which I am not, I would say: what annuity will you take for twenty years?

Sir THOMAS WHITE: I understood my hon. friend to suggest that the Grand Trunk railroad could be forced to do a certain thing because of its legal position?

Mr. MACLEAN: Yes.

Sir THOMAS WHITE: Now my hon. friend says that $6,000,000 should be paid. What about the legal position of the Canadian Northern?

Mr. MACLEAN: I would say that probably they are committed just as much. It is a long story. However, I admit that, perhaps, I am inconsistent.

Mr. GRAHAM: That is nothing new.

Mr. MACLEAN: I never charged anybody with inconsistency. I remember quoting in this House before what Sir Henry Maine said in connection with politics; he referred to the doubtful virtue of consistency. It is a very doubtful virtue, and I may be inconsistent. But I would like to deal with the Canadian Northern in a short and sharp way, and if they could be brought to abandon their position we would have to give them help to tide them over as we propose to give to the Grand Trunk. But it would be on condition of turning the proposition over to this country, and I think you could get the Canadian Northern with all its potentialities, which are very great, though its commitments are also, for a comparatively small sum. I would say 10 per cent of the stock, or say $6,000,000.

Mr. MACDONALD: Does my hon. friend seriously mean to say that he thinks the controlling interest of the Canadian Northern would sell out to the Government for 10 per cent of their stock?

Mr. MACLEAN: I would offer them that; I would say; what will you do? I would say come into the captain's office when you are a suppliant. The trouble in this country is that nobody ever calls those people who come as suppliants. They come asking money and we say: what can we do for you; what can we do to help you to put it over the Canadian people.

Mr. MACDONALD: What would you do if they would not sell?

Mr. TURRIFF: Foreclose.

Mr. MACLEAN: I take the hon. gentleman's confession that he would foreclose, only, they say it is on record that, when the settlement of 1914 was made, there was an understanding that Mackenzie and Mann as railway builders had something coming to them for their services. I cannot place my finger on that statement, but I think it was made. With all their faults, I do believe that Mackenzie and Mann and the original promoters of the Grand Trunk Pacific were trying to give this country service and to help to build it up. But they are both here now as suppliants, and one of them has great potentialities. The old Grand Trunk is, to my mind, the greatest asset in this country. And now, when they are here in this position, is the time to secure them. This is the psychological moment. It needs courage and faith, but, by taking these roads under Government control now, these potentialities can be developed.

Now, I want to come to the other railroad, the Canadian Pacific, the best transcontinental, or any other railway system, in the world. It is to the credit of the Canadian people and of the members of this House as it was then constituted, both Liberals and Conservatives, that the construction of the Canadian Pacific railway was brought about. For this I give credit all round. This great railway to-day pays its shareholders 10 per cent, partly out of traffic earnings, partly out of revenue from land and from investments in other railways. The Canadian Pacific is not here as a suppliant, but it fears what will happen to the suppliants who are here and that if these roads are taken over by the Government the Canadian Pacific will be greatly damaged and its potentialities jeopardized. What would you do with the Canadian Pacific in connection with this public ownership proposition? I want the members of this House to realize that I am not pressing this matter for the first time. I have been here now for twenty-four years.

Mr. MORPHY: And looking younger every day.

Mr. MACLEAN: Not looking younger, but feeling younger and having greater faith in public ownership than ever I had; and I am still talking, I suppose, as a dreamer; yet I have the example of all Europe ahead of me and I have the example of the things that we have found out in this country.

Mr. SCHAFFNER: How do the conditions in Europe differ from those found in Canada?

Mr. MACLEAN: There are many differences; but I want to tell the hon. member from the plains that the system we have is the worst possible system for the farmers of the West, and that the way to relieve them is to give them the cheapest possible transportation, as the Australians have done, and as we also can do. But what would I do with the Canadian Pacific? I would say to the shareholders of that road: "You are earning 7 per cent on your capital out of traffic and you are earning 3 per cent in profits on lands and other enterprises." They have additional assets—those they desired to have segregated—and they are very profitable. I would summon them here and say: "We will guarantee to you 7 per cent for twenty

or twenty-five years, and then we will refund the securities if you turn the railway over to us." I believe the shareholders would accept that. I have no authority from Lord Shaughnessy or the shareholders to say this; but they fear the situation which is developing in connection with the two other roads.

Mr. MORPHY: You have said that they are already getting 10 per cent in perpetuity.

Mr. MACLEAN: I did not say in perpetuity.

Mr. MORPHY: Well, as long as conditions hold; is that it?

Mr. MACLEAN: Yes.

Mr. MORPHY: And you are going to give them 7 per cent?

Mr. MACLEAN: Yes.

Mr. MORPHY: And at the end of the 25 years—what?

Mr. MACLEAN: Refund the securities if we see fit to do it. If the market were advantageous at that time, I would refund the obligations, relieve the shareholders, and give them something, if we had the opportunity of doing it, dependent upon the condition of the market.

Mr. MORPHY: Or buy them out?

Mr. MACLEAN: Or buy them out. But I would have a terminable period in connection with the matter. Would the Canadian Pacific shareholders take 7 per cent? I do not know, but I would start negotiations with them and find out what they really wanted. I would say to them: "If we get the Grand Trunk Pacific, the Grand Trunk, and the Canadian Northern on reasonable terms, and if you do not want to have the opposition of the new consolidated Government lines, now is your opportunity to come in, and what will you take if we take you in?" If they should say, "You are sacrificing our assets, you are confiscating our properties," I would say: "No, we will guarantee you dividends at the rate of 7 per cent for twenty-five years, and we will take you over." I do not come here proposing confiscation of any kind. I would even offer to pay something to the old Grand Trunk shareholders, I would give a reasonable amount to the owners of the Canadian Northern, and I would give guarantees to the Canadian Pacific Railway Company for their railway.

What would happen if we took over one, two, three, or all of these propositions? In any case we have public ownership and we have opened the way into territory where public ownership will justify itself if it can. It never will justify itself by having ragged ends—lines away on the outskirts not coupled up or connected with the great lines of traffic. What is the fundamental error in the railway situation in Canada? The fundamental error is unnecessary duplication in the construction of lines. We have lines running in duplicate all over this country, which never should have been allowed. I live in Toronto; I come down here, often, as you do; we go to Montreal, the Montreal people come to us; and what do we see? Every night now there are five passenger trains running between Toronto and Montreal when two or three would do the business, give a better service, and save a lot of money? The unnecessary cost of duplication in construction is aggravated by the unnecessary, criminal, duplication of service. We have lost an immense amount of money by unnecessary duplication in construction. But, realizing that fundamental error, why should we aggravate it by insisting on this unnecessary duplication of service? That is something that public ownership will correct. It will not cure the unnecessary duplication of construction, but it will cure the unnecessary duplication of service. There are three lines from Winnipeg to Edmonton and perhaps five to the West. There are three or five trains for the Pacific going out of Toronto every night. There will be the Transcontinental, the Government-owned system, there will be the Canadian Northern,—its trains will soon start to go out every night—and the Canadian Pacific has two trains going out of Toronto for Winnipeg every day. Two trains would do that service better than it has ever been done.

Mr. STEVENS: In winter, but not in summer.

Mr. MACLEAN: So much the better for the system if we can have three or five trains every night. I want to see five trains going out from Toronto to Winnipeg and from Montreal to Toronto if the business calls for them; but I do not want to see an unnecessary duplication, something that I can see every morning when I look out of the window. I live near the railway track, and I can see three, fine express trains all coming over the Canadian Pacific to Toronto, and they run what trainmen call a ghost train.

Mr. SCHAFFNER: Do you say there are five transcontinental trains going out of Toronto every night?

Mr. MACLEAN: The Canadian Pacific have two going out of Toronto.

Mr. SCHAFFNER: They have one going out of Montreal.

Mr. MACLEAN: One out of Montreal. Every other night there is one on the Grand Trunk Pacific and every other night one on the Canadian Northern; so that there are four trains and there will soon be more. There is not enough business for all of them to do. I say that this is unnecessary duplication, and that the train service can be reduced.

Mr. LEMIEUX: Has it not been reduced?

Mr. MACLEAN: Not very much. They are putting on more trains because of the competition.

Mr. LEMIEUX: I know that on the Ottawa line of the Canadian Pacific the service is reduced on account of the war.

Mr. MACLEAN: Not between here and Toronto.

Mr. STEVENS: Between here and Montreal.

Mr. LEMIEUX: And also between Montreal and Quebec.

Mr. MACLEAN: So much the better; they see that they have had to reduce the number of their trains.

Mr. PUGSLEY: In New Brunswick we complain of the reduced accommodation.

Mr. R. B. BENNETT: Because the people generally have to pay for it.

Mr. PUGSLEY: No, because they want the accommodation.

Mr. MACLEAN: You can cut out a lot of unnecessary train services, and you can improve the construction. Take, for instance, the traffic out of Toronto. The Grand Trunk has the worst grade of its system at Scarborough going out of Toronto. Four miles north there is what is called the Wexford grade on the Canadian Pacific. It is one per cent grade at the steepest part and it takes the line over the same elevation. But, strange to say, the Canadian Northern, following in the steps of some of the Canadian Pacific engineers, four or five years ago found between these two lines four miles apart, a one-half of one per cent grade over Scarborough Heights; they have located it, and ultimately it will be built. If there were a consolidation we could wipe out these two expensive grades; we might even transfer the rails and build on this new grade, which would save the situation there forever. All over the country you could make improvements in this way.

Now, I will tell you how a public railway would work with respect to both freight and passenger service. You would get the Intercolonial railway, which is a Government-owned railway to-day, at Halifax, and come to Montreal; you would come to Ottawa and go on to Toronto by the old Grand Trunk; from Toronto you would want to use the best transcontinental railway, and you would take the Canadian Pacific to Sudbury; from Sudbury you would go to lake Nipigon by way of the Canadian Northern; you would build 25 miles from lake Nipigon to the Transcontinental railway; on the fine grade of the Transcontinental you would go on into Winnipeg. Then you would go from Winnipeg to Edmonton over either the Grand Trunk or the Canadian Northern, and you would certainly go to Vancouver by the Canadian Northern. In addition, if you had public ownership, you could link the systems up so as to get the advantages that linking up or grouping would give you, and you would have a real solution of the transportation problem in this country.

Mr. STEVENS: How would the hon. gentleman operate?

Mr. MACLEAN: How do France and Germany operate their systems and how do we operate the system we have? I would put them all together in charge of a board of three or five of the ablest railway men in this country, and we could pick them up in Canada to-day. I know where the men are; we could get them; and these men would run that system as it should be run. There might be a proposition to take the men employed on the road out of politics and deprive them of their votes.

Mr. MORPHY: Would the hon. gentleman double-track one right of way?

Mr. MACLEAN: I would have the railways administered in the public interest. I would take off any unnecessary trains and link up the systems with a view to giving the best service. In that way great savings would be effected and an improved service would be given at lower rates. It may be said that it is impossible to

carry out such a scheme, but I do not think so. Now is the time to take advantage of the situation, and the Government say they are going to take advantage of it. They may come to public ownership. At all events they are going to appoint a commission of three to consider the matter, and, if we can read how others interpret that, we are almost sure to have public ownership if the commission report in favour of it. But I do not propose to surrender my judgment to any three men on this subject; nor will the people of Canada. They have come to the conclusion to have public ownership, and they are going to have it; it is in the air. The success of the Hydro in Ontario is something we can look to with pride, and the success of public ownership in a great many ways leads me to believe that it can be successfully applied to the railway situation, if only we will alter our political system in this country.

In the presence of this war the day has come when we must stop patronage in connection with our public institutions. We must reform our public service, and banish the member of Parliament and the politician from the door of the Minister of Railways, or whoever it may be has to administer the railways of this country. And we can do these things. If there is anything I resent it is a man in public life in Canada saying to me and to this House: "You cannot trust the Canadian people with a railway franchise of their own." The Canadian people are just as big, just as good, and just as clean as the people of any other country. It is we public men who are in the wrong in this country. The people are all right, and I will trust them with the railways. I am not going to put a stigma upon my fellow-countrymen in connection with railways in this country. That is the one thing I have always noticed in these political discussions; it is the answer that is always given to me. Imagine the answer yesterday of the Montreal Gazette, that paragon of political virtue, that we are such a corrupt lot of people that we could not run our railways! I believe we can.

Mr. OLIVER: The Gazette is the spokesman of the Government party.

Mr. MACLEAN: I do not know so much about that. It is certainly the spokesman of the Grand Trunk Railway and of the Canadian Pacific Railway; I am sure of that, but I think I have seen the Gazette turn the Government down on occasions. I have every confidence in my fellow-countrymen. I have confidence that the Canadian people could effect greater economies in the roads, give an improved service, and in that way help to settle the West. By taking over these railways we should remove the greatest danger from our political life, because we should be putting the owners of private-owned railways out of politics in this country. The present system is wrong. I am not going to pass much criticism of what has happened in the past. The charge that has been made is that the owners of railways and railway promoters have broken into our politics and more or less demoralized us. I am not going to repeat that charge now. But I believe our public life would be better and purer, and certainly we should have a better railway service, if we applied public ownership to our railways, and applied it in a proper way. But we do not want any more public ownership of this kind: of the Intercolonial taking up all the lame ducks of the East; helping to build roads and then taking them over because they run through a new country where there is not much local traffic. I do not believe in the policy of taking over the weak spots in the Canadian Northern or any other railway. Let us go the whole hog or none; let us get the productive ends as well as the weak ends, and link the various systems up. The salvation of the Grand Trunk Pacific, and something that will add to the glory of hon. gentlemen opposite, for this road is their child, is to incorporate it into a great public system.

3 p.m.

Mr. LEMIEUX: Into whose hands would my hon. friend put the three transcontinental systems if they were nationalized today?

Mr. MACLEAN: As a democrat, I would say into the hands of the people, represented by a commission.

Mr. LEMIEUX: I understand that. I am not opposed to nationalization; I advocated it myself the other evening. But what men would my hon. friend choose?

Mr. MACLEAN: The very best I could get; and you can get good men. I still have faith in the railway men.

Mr. LEMIEUX: Would you take a man like Baron Shaughnessy to administer the roads?

Mr. MACLEAN: I would take him for one, if I could get him.

Mr. LEMIEUX: That is what will happen.

Mr. MACLEAN: In the past on this American continent, the most able lawyers and capitalists, the able administrators of public services of one kind or another, have gone into the employ of the great corporations, and made money for them and fortunes for themselves. But a strange thing has been happening in the last twenty years in the United States, and I begin to see it coming in this country. They are developing men over there, and we are beginning to do the same here, who see that the greatest opportunity that can come to any man is public service. I know young men in our universities who have had experience as railway men, experience in the financial institutions of this country and with business corporations. I could find you twenty men about thirty-five years of age who have this passion—and it is a grand passion—for devoting their lives to public service. And life is not worth living these days if we have not the vision and the disposition to give ourselves to public service in a great cause. I would have a commission in this country. Yes, I would have Baron Shaughnessy. I do not think, Sir William Mackenzie is a railroad operator, although he is a Napoleon in building; but he has two men in that system both of whom are great railroad men. Mr. Bury is a great operator who would serve the state. Has any one objection to Mr. Gutelius as a great railroad man? Take the roads out of politics and put them in charge of three or five men of this calibre. Take the roads out of politics——

Mr. R. B. BENNETT: Saying so will not do it.

Mr. MACLEAN: It is worth while trying to do, and I would sooner try that than go on under the present system. I will trust Canadians every day. I would like to see the hon. member, who challenges the integrity of his fellow countrymen——

Mr. R. B. BENNETT: I repudiate the observation. I did not challenge the integrity of my fellow countrymen. What I said was that, unfortunately, you cannot take the roads out of politics simply by saying so.

Mr. MACLEAN: I adjust myself to the orientation of my hon. friend from Calgary. I have no hesitation in saying that I would nationalize these roads, and I would get Canadians to administer them and to remedy these evils for the benefit of the Canadian people.

Mr. MACDONALD: Does not my hon. friend think that those men whom he would name would be the kings of Canada?

Mr. MACLEAN: Three wise men came from the East, and Heaven be thanked that they recognized something on a certain day in the history of the world, and brought frankincense and myrrh.

Mr. GRAHAM: Who were the other two?

Mr. MACLEAN: Would the hon. gentleman like to be one? He is looking for a job, it is said.

Mr. GRAHAM: I was asking who the other two wise men were to whom my hon. friend referred.

Mr. MACLEAN: There are plenty of wise men in this country, some of whom are supposed to come from the East, and some of whom are in the West. The finest type of man and woman that the world has ever seen is in this day and generation growing up in this country of ours. In my personal acquaintance of the last year or two I have never seen a finer type of youth than the genuine Canadian boys whom I know in my own city and in my own township who are going to the front. The spirit of sacrifice and fidelity and patriotism shown by those boys is what gives me confidence that the Canadian people can run these railroads to the advantage of the nation. I could speak for a week on this subject—

Some hon. MEMBERS: Go on.

Mr. MACLEAN: No. I do not intend to say much more. I am so convinced that this is the psychological moment for the nationalization of the railways of Canada that I think Parliament ought at once to instruct the Government to carry out that project, because the Government can do anything. I wish to warn the Government of the great danger they are in of not seizing the psychological moment to deal with this question. An election is not far away, and there is a temptation to these railway magnates that we know to butt into that election, and if the psychological moment has arrived to absorb the railways, to head it off. I hope the right hon. leader of the Opposition, who is the father of the Grand Trunk Pacific, sees the error of the father, and that he is prepared to assist the Govern-

ment in carrying out this project. There would, of course, be a great temptation to him, as he may have a political triumph ahead of him in the coming election—no one knows what is going to happen in an election—to come back with a programme to restore and carry out the original intention of the Grand Trunk Pacific and the old Grand Trunk and to put them in competition with all the other lines. I do not want to see that, I would like to see both sides of the House do their best to prevent that and deal with this question now. The key of the situation is to take over one railroad—I do not care which one you take if you get a transcontinental system. The Canadian Northern joined up with the Intercolonial and the Transcontinental would be a splendid transcontinental system; it would touch every point but that part of the province of Ontario west of Toronto, and that part is full of railroads.

Mr. R. B. BENNETT: Terminals.

Mr. MACLEAN: Yes, I am going to speak about terminals.

Mr. NESBITT: I am very interested in this discussion, and before you go into that, I would like to know what form of commission you would suggest in order to take it out of politics and party patronage.

Mr. MACLEAN: I would take it out of politics, and the people of Canada would see that the men whom they sent to Parliament and the men whom they entrusted with this work would be kept out of politics. Public men can be disciplined. The people of this country from this time on are going to discipline their public men. In England they are to-day making their public men walk the plank if they do not do as the people wish. Every hon. member here to-day knows that he is under the eye of his constituents and subject to their discipline more than he ever was before. The public conscience is aroused; public duty is demanded; consecration of service is demanded and the people will insist on getting that and they will get it. If the leaders of the people advise the people aright, all well and good; if they do not advise the people aright, the people will take the matter into their own hands. In regard to duplication of service, Sir Adam Beck has petitioned this Parliament to aid certain lines that he has in hand in Ontario.

Mr. MORPHY: He says that he does not want any aid.

Mr. MACLEAN: He has petitioned this Parliament and he proposes to build certain lines. In order to work out salvation as he views it, Sir Adam Beck wants to duplicate a line in the province of Ontario. My contention is that we have there all the railroads that are required. When I said that the Canadian Northern had no lines west of Toronto, I knew, of course, that we could take running rights over existing roads in that part of Ontario, and in that way make out of the Intercolonial, the Transcontinental and the Canadian Northern a splendid transcontinental system, by which we would get into every part of this country. That system with the Grand Trunk linked up to it would make a magnificent railroad. The best transcontinental system of all, of course, would be the Canadian Pacific joined up to the Transcontinental and the Intercolonial, and I would be willing to make very liberal terms with the Canadian Pacific Railway Company in order to carry out a project of that kind.

Mr. R. B. BENNETT: The branch lines of the Canadian Pacific are better, but its main line is not as good.

Mr. MACLEAN: The Canadian Pacific is better in Quebec, where railroading started in Canada. The most extravagant of all proposals is this proposal of unnecessary duplication of terminals in Canada. I first want to deal with terminal seaports, and we have room in Canada for seaports at Halifax and St. John and also at Quebec and Montreal. We cannot afford at the present time to have great seaports and all the terminal facilities that go with great seaports in connection with four or more cities, but we could have one, two, or three. We could start with one at the best seaport on the continent of North America, and that seaport should be under the British flag. We are making Halifax a seaport; St. John is here as a suppliant in connection with her port, and she is getting something; we are making Montreal a great port, and, in fact, almost all those seaports could be justified.

Mr. R. B. BENNETT: Halifax will be the best harbour in the world when present contemplated improvements are completed.

Mr. MACLEAN: The best port in Canada for general business. In regard to city terminals, I believe that the Grand Trunk station at Bonaventure street was burned recently. Mackenzie & Mann are boring a tunnel through Mount Royal for the great terminal station in Montreal. The Canadian

Pacific have built an enormous terminal, recently enlarged, at their Windsor station. There is no room for three terminals in Montreal, but there is room for a great terminal of the largest kind.

Mr. R. B. BENNETT: Is it not too late now, in view of the expenditure already made?

Mr. MACLEAN: No, I am told they are rebuilding Bonaventure station now.

Mr. GRAHAM: Only temporarily fixing it up.

Mr. MACLEAN: Yes, but I understand they want to build a great terminal. I have seen plans for a Canadian Northern terminal at Montreal which would involve an expenditure of thirty or forty millions of dollars.

Mr. GRAHAM: They have spent a lot of money.

Mr. MACLEAN: Probably the best entrance to Montreal is by the tunnel of the Canadian Northern, and probably there is room at the city end of that tunnel for a great terminal station. But there ought to be only one terminal in Montreal as there ought to be only one in Toronto, and in every other large city except where there are special advantages to be gained by having sub-terminals, and there are such cities. Why should we be committed to these unnecessary terminals, especially when this is the day of terminals? The termial costs are the great costs in connection with railways to-day. There are two big termials in Winnipeg, and I understand that in Vancouver there is a proposition to have another terminal.

Mr. R. B. BENNETT: The bonds are sold to the extent of ten millions.

Mr. MACLEAN: Devote these bonds to the purposes of the war.

Mr. STEVENS: In Vancouver we are bringing four roads into one terminal.

Mr. MACLEAN: So much the better. Surely hon. gentlemen are not saying anything against the concentration of traffic in these days. One of the great causes of expense is the terminal sidings owned by rival lines in our cities. The Railway Commission has succeeded in consolidating these terminal sidings in some places, but surely it is plain what an improvement it would be if all the terminal sidings in a big city like Montreal were under the control of one administration and were used for the service of the people instead of as at present as a means of extortion. One railway cannot use another railway's sidings except on condition of giving them all their freight. One great advantage of public ownership would be in the means it would afford for improved terminal facilities in the leading cities where the economies effected in the collection and distribution of trade are something enormous. The railways have spent immense sums, unnecessarily at times, to acquire terminal and siding facilities in the cities. All these things could be improved. It is a hard thing to do; the problem is great; but there is nothing for you or me as legislators in this country but to take up the burden of these enormous problems that present themselves to-day. They must be dealt with; we cannot sidestep them; the future of the country and its development, and the happiness and harmony of our people, can largely be promoted by improving our system of transportation. We must correct the errors of the past; one thing that stands to the credit of the really penitent man is that not only is he penitent but willing to lead a better life——

Mr. R. B. BENNETT: To bring forth fruits meet for repentance.

Mr. MACLEAN: I accept that—though I do not set myself up as an example. I have stated the case in a broad way, and especially I have tried to tell the Government the danger there is in throwing this proposition over into the election that is coming, and it must come. My appeal to the Government and to the right hon. leader of the Government is that at this stage it should take over one road at least. I do not care which one, but if it is the Grand Trunk then it should be the whole Grand Trunk, or if it is the Canadian Northern it must be the whole of the road, or let it be the Canadian Pacific. You can get the Canadian Pacific to-morrow, and you can get it without one dollar of expenditure. You have only to take it over and guarantee certain dividends on the stock. I know how you can get it. I present myself in this House ready to associate myself with others to go to the people who will authorize such a thing to be done, and it can be carried out; I will undertake to find the men who will do it. That is a rather broad statement. I am not blocking any proposition here to-

day. It is incumbent upon the Government to come to the relief of these railways. It would be bad policy to force them into liquidation if peaceful possession can be obtained. I believe you can obtain it; the danger is in not going at it now, but in putting it over until after an election and the report of the proposed commission. I have no objection to a commission, but I am not going to let the commission make up my mind for me. I would urge upon the leader of the Government and upon the Government as well, that the right hon. gentleman should tell the people that the substitute he was prepared to offer for the policy of hon. gentlemen opposite in relation to the Transcontinental railway was public ownership. There is the offer, in the letter of Mr. Smithers, to carry out this policy. I put it right up to the right hon. leader of the Government that now is the time to act. He can succeed if he will act now, and a more favourable opportunity will never come than that which exists to-day.

Sir WILFRID LAURIER: The hon. gentleman thinks that consistency is a doubtful virtue.

Mr. MACLEAN: That has been proved many a time.

Mr. PUGSLEY: With the hon. gentleman's consent, I desire to ask a question.

Mr. MACLEAN: Certainly.

Mr. PUGSLEY: The hon. gentleman is understood to be in the confidence of the Government. There is a vote of $18,000,000 in the Estimates for the purpose of making a loan to the Grand Trunk Pacific. The proposal and absolute statement of Mr. Smithers must have been withdrawn, or at least sufficiently withdrawn to enable this proposition to be made, which seems to be entirely different. I suppose that the hon. gentleman, in caucus, has been informed upon that and can enlighten the House.

Mr. MACLEAN: I am sorry I cannot enlighten the hon. member for St. John (Mr. Pugsley). There may have been a release, but I know nothing about it. The commitment is there acknowledged by Mr. Smithers, and it is on the statute books of Canada.

Mr. PUGSLEY: Why offer a loan of $18,000,000 if he will not accept it?

Mr. MACLEAN: I suppose he has said he would accept it. I do not recall having seen any man around this Parliament buildings who would not accept anything he could get. No, I should not say that for I have seen people to whom propositions have been made and they did not take them, and those who made them went away; that has happened not often, but it has happened. I do not think Mr. Smithers is going to be released, but I would not release him from any of his commitments. Now is the opportunity; it will never come again. I say again to the leader of the Government that he told the people of Canada that public ownership was the thing to apply to the Transcontinental proposition of the right hon. gentleman (Sir Wilfrid Laurier). Now is the day and now the hour to carry out that plan. To-day the Grand Trunk is suppliant at our door; never will such an opportunity come again. We can take over the Grand Trunk and the Grand Trunk Pacific, link them up with the Intercolonial, and make of these roads a great system, giving the people a better service, building up the Canadian West and giving better railway rates. Then you will be able to use railroads as Bismarck said they should be used; for the national purposes, for national defence, most of all for national upbuilding. What is the secret of German advancement in the world, notwithstanding their attack on the world's liberties? The case of Germany is the most marvellous instance in the history of the world of the development of a nation having many men but no great resources—no iron, no coal, and practically no trade. Bismarck said: "Nationalize the railways; use them to build up industries at home by giving them improved railway facilities; use them to give cheap rates to assist our ships in carrying raw products back to us and in carrying our exports to the markets of the world.

Mr. GRAHAM: But the federal authority of Germany does not own the railways.

Mr. MACLEAN: I did not say that it did, but the federal authority in Germany, working with the minor authorities have used the railway for national purposes, first, for the defence of the Empire, second, for the promotion of trade. The secret of the great growth of German trade was that the nation could use its railroads for the encouragement of trade.

Mr. R. B. BENNETT: And to absorb part of the freight rate in bringing to the

seaboard towns that were far away from the seaboard.

Mr. MACLEAN: I had forgotten something; the hon. gentleman reminds me of an awful heresy which I propose unfolding to this committee. Do you know what you can do when you have a Transcontinental line? You can valorize the cost of transporting a bushel of wheat. In other words, a man who grew a bushel of wheat in Manitoba or Saskatchewan or Alberta would get the same price for it no matter on what siding of the railway it might be delivered. That may be another heretical doctrine to propound; I do not propose it just now. But the only way you can valorize the price of wheat is by owning the railways so that the freight charge on a carload of wheat going to the seaboard would be the same from Manitoba as it would be from Saskatchewan or Alberta. Probably that is the way you are going to get settlement all through the western country: by giving equal railway charges to all people. They have actually recognized that doctrine in Germany, Austria and Hungary in regard to the transportation of workingmen. Whether the distance be five, ten or twenty miles, the workingman can go to work in the morning upon practically the same ticket in each case. This is done under national ownership. You can do a great many things by public ownership of railways; certainly you can improve the West.

Mr. R. B. BENNETT: You can, by equalising freight rates, obviate the demand for free wheat.

Mr. MACLEAN: I met a man the other day, known to many members of this House, who warned me as to some of my views. He said: "If we have not competition in freights in Canada, we have competition in service, and that means a great deal." There is something in that; the shipper gets better treatment where he is in a position to ask another competitive road to give him service. Some things can be said for private ownership, and there are evils inherent, perhaps, in public ownership, as there are evils inherent in private ownership. I am prepared to discount everything I have said in favour of public ownership, and to allow it to be discounted and ridiculed, but, standing here in my position as representing a portion of the people of this country, I say that the people I know and represent are in favour of public ownership of railways. I think the view of my own province, of many of the newspapers—indeed of all Canada—is in favour of public ownership. The feeling seems to prevail that the old system is coming to an end. If the war has taught us anything, it has taught us what I told a well-known Englishman when he was over here the other day—and I rather annoyed him because he asked me for the chapter and verse, and I could not quite give it to him. I said: "If there is anything the war has taught us, it is to realize the application to these times of the words of St. John in the Book of Revelation: 'I saw a new Heaven and a new earth.'" This war has put us in a new earth. The problems are new, the outlook is new, and the man in politics who is to succeed or to lead is the man who has the vision to see the new world and the solution of these new problems. You never can settle these problems—I care not whether in connection with trade or railways—by the old methods. There is a new approach to everything now, and there has to be a new approach to the railway question. While the people of the United States have not as a whole come to believe in public ownership, they are coming to it so fast that you will wake up some morning and see a man like Roosevelt at the head of affairs in the United States. Under the guise of a law protecting the public mails, or something like that, he will give a start to the system; it will be worked out and the people of the United States will welcome it. I make that prediction and I say that if we do not get busy in the matter of public ownership of railways the United States will be there before us. Seventy-five per cent of their roads have gone through liquidation at some time or other; they would all have been there but for the business that came to the United States as a result of the war. But the old conditions will come back again; the effects of unnecessary duplication will have to be dealt with. I say—and I want it to be engraven in the memories of you all—that now is the time to take over at least one railroad, and, by the leverage that the taking over of that railroad gives you, to deal with the others on your own terms and to the great advantage of Canada.

Mr. H. H. STEVENS (Vancouver): I do not intend to detain the committee at any great length at this date in the session.

Mr. BURNHAM: Hear, hear.

Mr. STEVENS: My hon. friend from Peterborough says "Hear, hear" with his usual frankness. However, there are a few things that I think I ought to say to this committee. First, I must congratulate the hon. member for South York upon the splendid presentation of his case that he made this afternoon. I have listened to it, and I have enjoyed every moment of it. A great deal that he has said will be very profitable to me. Ever since I was a young lad I have dreamed of the coming of public ownership of great utilities in Canada. It was always in my mind; it is in my mind to-day as an ideal to be sought after, and, if possible, attained. But I find, as I grow older, that there are two things facing you; one is the ideal, and the other is the attaining of that ideal. There is the theory, and there is the practice, and when I consider the great problem facing the people of Canada to-day in regard to the nationalization of the railway systems, after many decades of private ownership, I am almost overwhelmed by the stupendous problem which faces those who are called upon to work out the details. To put it in an illustrative way, my hon. friend (Mr. W. F. Maclean) would take a gun, put it to the head of the Grand Trunk and say: Come to Ottawa, talk this over, and liquidate or deal; one or the other. It is a spectacular way of putting it, and I appreciate it from my hon. friend's standpoint, but there are other considerations that must be kept in mind. In the first place, we must consider the indirect effects upon the country generally of a revolutionary movement of this kind, and, having in view the carrying out of the nationalization of the railroads, we must, as far as possible, minimize the disruption of trade, or the dislocation of the various interests that would be affected.

It is not my intention to go into a long argument, or to follow my hon. friend, because in my own mind I agree with him entirely. We simply differ on this point, that he is exceedingly hopeful of the simplicity of the process, while I am overwhelmed with the conviction that the process is a most intricate and difficult one. For instance, my hon. friend says he would summon the Canadian Pacific Railway, offer them 7 per cent for twenty years, and, he says, we could get the Canadian Pacific system to-morrow. It sounds good, and I think my hon. friend is sincere, but when I think of Baron Shaughnessy, of Mr. Bury and the army of experts and legal advisers, of the large amount of stocks and bonds, of the financial institutions affected, the hotels, steamships, terminals, elevators, and the other ramifications of that great system, the very thought of it is confusing to the mind. It would take a commission of the ablest experts at least a year, in my judgment, to investigate the matter, and that is exactly what the Government proposes to do. They say: give us $150,000 and we will secure the best experts we can get, put them on the job for a year or nine months, and then, at the next session of Parliament, we will present their report with ours giving the Government view. That is what they are proposing to do at the present time. So far as I am concerned, I think the Government's course is wise, safe, and business-like.

I wish to refer to some of the arguments presented by hon. gentlemen opposite in connection with the railway problem that is facing Canada to-day. My hon. friend from South Renfrew (Mr. Graham), my hon. friend from Edmonton (Mr. Oliver), the right hon. leader of the Opposition (Sir Wilfrid Laurier), my hon. friend from St. John (Mr. Pugsley), and others, have continually dinned into our ears in this House that the whole railway trouble in Canada lies west of the Rocky mountains. They say that if we could get rid of this incubus known as British Columbia, everything would be lovely and we would not have any problem on our hands to-day.

Mr. OLIVER: Would the hon. gentleman stop talking nonsense.

Mr. STEVENS: I thank my hon. friend for his interpellation, but I am not talking nonsense. My hon. friend stated on the floor of this House not more than a week ago, and has stated time after time, that the fault lay in the extension of those lines to the Pacific coast.

Mr. OLIVER: I beg the hon. gentleman's pardon—

Mr. STEVENS: I have no time to look up Hansard.

Mr. OLIVER: I just wish to say that the hon. gentleman's statement is incorrect.

Mr. GRAHAM: The hon. member puts it as if we had said that we should get rid of British Columbia. I never said a word about British Columbia. I stated distinctly that I thought the time was inopportune to build through to the Coast, but that eventually the road should be built. I took

exception to building being proceeded with at that time, but I said nothing about British Columbia, and I was speaking of the Canadian Northern.

Mr. STEVENS: My hon. friends cannot get away from the fact that this session, and in other sessions, when the railway situation has been under discussion in this House, they have continually referred to the British Columbia end as the chief difficulty in the situation. Of course, being entirely responsible for the Grand Trunk Pacific, they have not cast any reflections on that road. So far as the Canadian Northern in British Columbia is concerned, it passes through a very rich territory, and I purpose giving the House some idea of the possibilities of the Pacific coast province. So far as the territory from Edmonton to the coast is concerned, my hon. friend from Edmonton knows very well that one of the richest parts of the province of Alberta lies between the summit and Edmonton. He also knows that immediately west of the pass on the British Columbia side, we have some of the most magnificent farming lands to be found in Canada. The British Columbia Government at this very moment own in the Peace river district of British Columbia 6,000,000 acres of excellent farming land, 4,500,000 acres of which have been reserved exclusively for pre-emption purposes.

Mr. OLIVER: Will the hon. gentleman tell us what on earth that has to do with the Canadian Northern?

Mr. STEVENS: If my hon. friend will only contain himself for a moment I will tell him. I am not saying that the Canadian Northern runs through that part. I am saying that there are west of the Rocky mountains tracts of land capable of development which will create traffic and trade not only for the railroads there now, but for other railroads not yet constructed, but which ought to be constructed. For instance, the extension of the Dunvegan line from Edmonton to Fort George would pass through that district.

Mr. OLIVER: My hon. friend conveyed to the House the idea, if I gathered his remarks correctly, that he was going to tell us what area was being developed by the Canadian Northern in British Columbia.

Mr. STEVENS: I did not say anything of the kind. I said I would give some idea of the resources of British Columbia, which, in my estimation, justify the expenditures on railways which have been made in that province. Perhaps some of the money has been spent a little ahead of time, but the resources of the province will justify, not only what has been spent, but more expenditures.

Mr. OLIVER: Will the hon. gentleman say that any part of the money expended upon the Canadian Northern has any bearing upon the area of land he spoke of?

Mr. STEVENS: No, it passes through an area of land between the point where it leaves the Canadian Pacific railway north of Kamloops, or opposite the Canadian Pacific railway, and a point straight north at the North Thompson river. It passes through a district which is one of the most fertile in the province of British Columbia, or even in the Dominion of Canada, a district which was not touched by any railway, and which was inaccessible, so far as railway traffic was concerned, up to the time when the Canadian Northern was constructed. The district is also exceedingly rich in minerals. It may be that the construction of the Canadian Northern, paralleling the Canadian Pacific railway through the Fraser valley could be criticised, but, on the other hand, it must be remembered that the Fraser river and the Thompson river run from Kamloops to the coast. This river is a wide and turbulent stream, and the railway runs down one side. It is impossible to serve the other side of the river from the railway line, but the Canadian Northern takes the opposite side of the river, and where the Canadian Pacific railway crosses the Canadian Northern crosses to the other side. In this way both sides of the river have been served. It is a costly thing to double track the Canadian Pacific railway through what is known as the Fraser canyon. You virtually have in the construction of the Canadian Northern down the Fraser valley a double-track railway created out of the Canadian Pacific system. I say that merely to show that the construction of the Canadian Northern on the Pacific coast is not the incubus that many hon. gentlemen would lead us to believe. It is rather a striking statement but it is an actual fact that the grade from Edmonton to the coast on the Canadian Northern railway is a better grade than from Edmonton to Fort William on the same system, and it is an infinitely better grade than that which the Canadian Pacific have

through the Rockies. I remember 22 years ago when I went to British Columbia first, we had the Canadian Pacific line passing through the Rocky mountains, and we had the Field hill and other large hills which have been tunnelled and reduced to a very large extent. These grades were from 5 to 5½ per cent, almost impossible grades, and they had to use two, three, and sometimes four engines to haul a train over those grades. Every man who knows anything about railway operation knows that that is an impossible grade for carrying freight economically. These grades have been reduced by the expenditure of large sums of money by the Canadian Pacific but still they have grades of 2 to 2½ per cent. The Canadian Pacific is spending $100,000,000 in the improvement and extension of their line in British Columbia. A large portion of this has already been spent in tunnelling, reducing grades, double tracking and extensions, and the Canadian Pacific would not undertake extensions of that kind if they were not justified in doing so. These improvements will ultimately cost $100,000,000 and they have been undertaken because the construction of the Canadian Northern brought competition, and the Canadian Northern, having better grades, threatened to be a superior road to the Canadian Pacific. The statement has been made that as this is a sparsely settled country there is no call for these extensions. When the Canadian Pacific was built, and when the Hon. Edward Blake made the statement that the Canadian Pacific would not pay for the axle grease used upon the road, there were 170,000 people in all west of the great lakes. In 1903 or 1904, there were 175,000 people in the province of British Columbia. In 1914 this number had increased to 500,000. In the face of the construction of the Canadian Pacific when there were only 170,000 people in that vast territory, is it not reasonable to say that the construction of the Canadian Northern was not inadvisable, was not bad business and that it had every reasonable opportunity to make good.

I would like to place on Hansard and before the house some figures in connection with the resources and production of British Columbia in reply to the impression that has gone abroad in the East that British Columbia to-day is in a languishing condition. With reference to mineral production, I quote largely from the figures for 1913-14 because these are the last figures that I could obtain at the library, later ones not seemingly being available as yet. According to the figures for 1913-14, the mineral production for the whole of Canada from 1886 to 1913 was $1,500,000,000, and the mineral production for British Columbia alone was $395,000,000; so that during the 28 years from 1886 to 1913 British Columbia produced 26 per cent of all the minerals produced in Canada. Of this $395,000,000 worth produced in British Columbia, 54 per cent was produced between 1906 and 1913 or within the last seven years of the period quoted. In 1913 the mineral production was $30,150,000, and in 1912 it was $32,440,000. The dividends paid by the mining institutions of British Columbia in 1913 aggregated $2,400,000. It is necessary to quote these figures to show the actual conditions obtaining in my province.

Take the fisheries—and we hear a great deal about their fisheries from our hon. friends from the Maritime Provinces. All Canada is proud of the fishery business of the Maritime Provinces. The total production of the fisheries of Canada in the year 1913, was $33,390,000, and of that amount British Columbia produced $14,455,000, or about one half of the total production, and double the value that Nova Scotia produced.

In regard to agriculture, we have heard from a great many persons who have not visited British Columbia and know nothing about its beautiful valleys and their fertility, that it is an impossible country from an agricultural standpoint. In 1910 the agricultural production was $14,000,000, but in 1913 this had increased by $10,000,000, the total being $24,000,000. The increase has gone on steadily from year to year amounting to from $2,000,000 to $4,000,000 per year. In 1913 British Columbia spent $322,000 in the promotion of the agricultural industries. It added to that amount the splendid grant from this Government of $46,000, so that a total of about $370,000 was spent in aid to agriculture in 1913.

I wish to quote a few figures in regard to the lumbering industry, the basic industry of British Columbia. I would like the House to bear in mind that we have the following great industries in British Columbia. Lumbering is our greatest, mining probably next, and I have no doubt that in time it will take precedence over lumbering; agriculture and fruit-growing,

and fishing, in addition to which there is a great deal of manufacturing, transportation, shipping, etc. In the lumbering industry, in 1913, which was supposed to be a poor year, although it proved an excellent year as far as the cut was concerned, the cut reached the enormous amount of 1,467,000,000 feet B.M., and the people of British Columbia took from that industry a revenue of over $3,000,000.

You hear in eastern Canada from the traducers of my province that the Government and the people are steeped in corruption, to the lips, as one hon. gentleman said in this House, and that there is no such thing as a proper administration of the affairs of the province. I am going to show the House that we administer our affairs in British Columbia in accordance with what I consider to be up-to-date methods. The revenues which are produced or collected in British Columbia are from natural resources. If the House will bear with me I will give some figures in regard to the revenues which I think will be a revelation to some hon. gentlemen who have so vehemently and bitterly criticised the administration of the province. I hold no brief for the Administration, but I do hold a brief for the people of British Columbia. If there is anything that makes my blood boil it is to sit silently by while my province is being traduced and maligned by a few agitators, who, by the way, are seeking public office rather than the welfare of the country.

Mr. MACDONALD: Does my hon. friend call Sir Hibbert Tupper an agitator?

Mr. STEVENS: I am not referring to him. I say to my hon. friend what I said to the hon. member for Cape Breton the other day: that Sir Hibbert Tupper made the attack he did on the provincial Government because he felt the administration was not suitable to his ideas. He never offered a single criticism of the administration of the affairs of British Columbia by the Dominion Government.

Mr. PUGSLEY: Nobody is speaking of that at the moment.

Mr. MACDONALD: My hon. friend was undertaking to defend British Columbia.

Mr. STEVENS: I told my right hon. friend that I had no brief for the Government of British Columbia, but that I had a brief for the people of British Columbia. I do not intend to sit in silence in this House while my hon. friend from Pictou or anybody else casts aspersions on the province without offering facts by which the House could judge of the merits of the case.

Mr. PUGSLEY: I have been here during the entire session, and have been almost continuously in attendance, and I have not heard a single member of this House malign or cast any reflections on the people of the province of British Columbia, not one. To cast reflections on the administration of provincial affairs, are two entirely different things.

Mr. STEVENS: My hon. friend can take whatever consolation he likes out of his own ideas; but I have sat here a little more continuously, I think, than he has, and I have heard these statements made.

Mr. PUGSLEY: By whom?

Mr. STEVENS: I quoted one a moment ago. I am not going to quibble about this. My hon. friend can have his own way if he wishes. I ask the House to judge of this administration—

Mr. PUGSLEY: That is better.

Mr. STEVENS: The revenue of British Columbia in 1913-14 was made up as follows: Land sales, $1,172,950; land revenue, $218,000; water leases, $62,000; real property tax (the tax on real estate, which some hon. gentlemen in this House are very strong on) $501,000; wild land tax, $660,000; or a total of $2,613,950. In mining we have a revenue of $556,000; timber royalty and leases, $3,000,000. This amount is from royalties, timber licenses and leases, but the greater part of it is from royalties which run from fifty cents to a dollar a thousand. Then sundry items of revenue are as follows: Personal property, $212,000; motor licenses, $90,000; income tax, $350,000; succession duties, $250,000; law stamps, $100,000; registry fees, $750,000; game licenses, $108,000; fire insurance, $46,000; fishing, $40,000. For 1913-14 there was a total revenue of $12,500,000 in the province of British Columbia, derived almost entirely from the natural resources of the country. I have here also a few items of expenditure.

Mr. MACDONALD: What is the exact amount of guarantees that the province of British Columbia has assumed in connection with railways?

Mr. STEVENS: I have not the figures here, but they are given in the pamphlet my hon. friend has before him. I think it is in the neighbourhood of $47,000,000.

Mr. MACDONALD: That is only for the Canadian Northern; what for the other railways as well? If my hon. friend is going to give us the financial statement of the province, he should tell us what the debt is.

Mr. STEVENS: I will give an estimate of it in a moment or two. The revenue was expended on the following items: On education $1,141,000—a large amount for the province to spend on education, in addition to what had been spent by the cities and incorporated municipalities and towns. That sum of $1,141,000 was spent on a system of education which has absolutely nothing in the way of a sectarian school. Every school from the highest to the lowest is a public school. We spent 4 p.m. on roads and bridges $5,322,000 in 1914-15, and $9,600,000 in 1913-14, (in ten years the province has spent $20,000,000 on roads and trails) on hospitals and charities, $704,000; on the insane hospital, $496,000. I am giving these few items to show the manner in which the Government of British Columbia is looking after the interests of the people of that province.

My hon. friend asked me a moment ago about railway guarantees. I understand that the guarantee of the Canadian Northern railroad is in the neighbourhood of $40,000,000. While on this point let me say that the National Transcontinental cost this country $129,000 per mile. Am I right or not? Surely if the people of Canada can afford to pay $129,000 a mile for the construction of a transcontinental railway it is not bad business to guarantee a railway to the extent of $35,000 or $40,000 a mile, or to the extent of $40,000,000 for the whole province.

Mr. MACDONALD. What is the population of British Columbia?

Mr. STEVENS: A little over half a million. In 1901 the population was 175,000. With the population increasing at that ratio, there is an exceedingly bright future for British Columbia. Let me remind my hon. friend, who wishes to compare population with railroad construction, that the Canadian Pacific railway was constructed when there were only 170,000 people in the whole territory between the Great Lakes and the Pacific coast; and it is well that he bear that in mind when considering this question.

There is the question of the standard of construction, about which we hear a great deal. The ex-Minister of Railways (Mr. Graham), frequently impresses upon this House that the construction of the Grand Trunk Pacific is of a very much higher standard than the construction of the Canadian Northern, and in that he finds some comfort for the late Government. We have heard a lot about its permanent and final construction. Does the hon. member for South Renfrew know that only last December the wooden bridge at the crossing of the Minnewashta creek, west of Winnipeg, was blown over? That high trestle was a quarter of a mile long, and of the type of permanent construction that we hear so much about. Hon. gentlemen who took advantage of the Canadian Northern trip to the Pacific coast last year will agree with me, I am sure, that the roadbed of that railway is of a very high standard. One locomotive successfully hauled a train of 16 Pullmans, a dining car and, I think, a recreation car over the Summit, a feat that has never been accomplished before, and which it is impossible for any other railway to accomplish. I am not saying this because I have any particular liking for the Canadian Northern railway, but to show that the money spent on the Canadian Northern railway in British Columbia has been spent to good advantage. What is the use of trying to give the impression that the province of British Columbia has guaranteed the bonds of some useless institution, and that, in consequence, a debt of $40,000,000 is hanging over them? As a matter of fact, for every dollar guaranteed the Canadian Northern railway by the provincial Government, there is real value, and a great deal more, in the road itself.

It may be an eye-opener to hon. members to know that in the last month of operation—and operation was begun only in the month of November or December—the earnings exceeded the operating expenses. I think that is a pretty good record; it is better than the five or six years of dead loss on the Transcontinental. It is a pretty good business investment when you can get a railroad to earn sufficient revenue to cover its operating expenses within four months after the commencement of operation, and that in face of the fact that the Panama canal has been blocked ever since last August, so that grain could not be shipped by that route.

I hesitate to weary the House with more illustrations, but I wish to say a word or two as to the city of Vancouver as a great seaport. My hon. friend (Mr. W. F. Maclean) mentioned some of the great seaports

of Canada. I hold that Providence has given us in Vancouver one of the greatest national seaports in the world.

Mr. MICHAEL CLARK: What does a protectionist country want with seaports?

Mr. STEVENS: I reply to my hon. friend exactly what I said to my hon. friend from South York. I have been a dreamer of the theoretical possibilities of free trade; but the theory of free trade and the practice of it are two entirely different things when you come into competition with other nations, as Canada is doing to-day. I do not want to enter into a discussion on free trade with my hon. friend, because I like him too well.

Mr. MICHAEL CLARK: The practice in England has been changed since the war.

Mr. STEVENS: My hon. friend is getting on delicate ground. I do not want to remind him of the recent conference at Manchester, nor of the conference at Paris. I do not want to remind him of the fact that the space in the daily newspapers not devoted to war news, is full of what is to be the fiscal policy after the war.

Mr. MICHAEL CLARK: The ports are full as well as the newspapers.

Mr. STEVENS: My hon. friend had better leave the matter alone. In regard to Vancouver, I find that in 1909-10 the exports from the ports of British Columbia, largely from Vancouver, were $25,000,000, the imports for consumption, $27,000,000, and the duty collected $5,750,000. In 1913-14, the exports increased to $33,000,000, the imports for consumption increased to $56,000,000, and the duty collected increased to $11,000,000. That is an indication of the growth of trade. I will also quote the Post Office and Inland Revenue figures, indicating the increase in trade in British Columbia—and I am making this argument for the purpose of justifying the investment in railways in British Columbia, and to inspire, if I can, in this House a little faith in the future of that province. In 1901 the post office at Vancouver had a revenue of $56,000; in 1911, when my hon. friends opposite went out of office the revenue was $350,000; in 1913, it was $500,000. The money orders in 1901 amounted to $240,000; in 1911, to $1,500,000; and in 1913, to $2,600,000.

Mr. TURRIFF: What is the figure for 1915?

Mr. STEVENS: I have not that. There was a decrease last year, but now the monthly reports show that things are rapidly coming back to their normal condition.

In regard to inland revenue, the figures are: for 1908, $438,000; for 1913, $728,000. For Customs the figures are: for 1906, $1,785,000; and for 1913-14, $11,366,000. I quote these figures simply for the purpose of demonstrating to the House the fact that, in your investment in British Columbia, as the representatives of the people of Canada you have good security. I could go on for hours illustrating the increase in the industrial facilities of British Columbia. Last year forty new industries located in and around Vancouver, with 4,000 employees and a pay-roll of $3,000,000 a year. I deprecate the suggestion thrown out from time to time that British Columbia has its windows boarded up. There is to-day no part of Canada where the outlook is more optimistic than in British Columbia; there is no place in Canada where the people are more willing to bear their part of the burdens, not only of the war, but of the building up of this country.

Mr. PUGSLEY: Will my hon. friend tell me what the surplus or deficit, as the case might be, was of British Columbia during the past year?

Mr. STEVENS: I have not the figures before me; but from the year 1908 to the year 1911 there was a surplus every year. In the year 1912-13 there was a surplus of $2,000,000: in the year 1913-14, if I am not mistaken, there was a deficit.

Mr. PUGSLEY: How much?

Mr. STEVENS: Quite a considerable deficit; it might have been two or three million dollars.

Mr. PUGSLEY: My hon. friend remembers the surpluses, not the deficits.

Mr. STEVENS: Not at all. I am telling my hon. friend as frankly as I can the exact situation. My hon. friend is surely not going to quarrel over the fact that there was a deficit the year after the outbreak of the war.

Mr. PUGSLEY: The hon. member said the year 1913-14.

Mr. STEVENS: I meant the year 1914-15.

Mr. PUGSLEY: The deficit is said to be about $5,000,000. What I said was: With the magnificent revenue of $12,000,000, how

does it come about that there was a deficit of $5,000,000? That does not look like a good illustration of prosperity.

Mr. STEVENS: During the ten years prior to 1913-14, we spent in British Columbit $20,000,000 on roads and bridges and trade. Although that is really capital expenditure, every dollar was taken out of revenue, and the deficit of which my hon. friend speaks was due to a capital expenditure of over $13,000,000 on public works, roads, bridges and trails. Eight or nine hundred thousand dollars was spent on school buildings. We put up in the city of Prince Rupert the court house and other public buildings at a cost of nearly half a million dollars. Those expenditures are really capital expenditures, but they were all included in the so-called deficits. It is not really a deficit, so far as revenue is concerned.

Mr. KNOWLES: Does the hon. member say that all the roads in British Columbia were built out of revenue?

Mr. STEVENS: I do.

Mr. KNOWLES: And not built out of money derived from the sale of lands and other resources.

Mr. STEVENS: I admit there would—

Mr. KNOWLES: That is all—

Mr. STEVENS: Wait a moment; my hon. friend is not going to confuse the issue. Out of $12,000,000 revenue for 1913-14, the returns from land sales was $1,170,000. The rest was practically revenue derived from the natural resources of the country. And, mark you, in that same year what I call the capital expenditure—and, I am justified in so calling it,—was about $13,000,000.

Mr. PUGSLEY: Does the hon. gentleman call expenditure on roads and trails capital expenditure?

Mr. STEVENS: To a certain extent it is. The expenditure on schools and court-houses is certainly capital expenditure. Take the court-house at Vancouver, one of the finest buildings in Canada and that was built out of revenue. Take the court-houses in all the British Columbia cities—splendid buildings that are good for a hundred years—the new one in Vernon cost a quarter of a million; and there are other new buildings in Victoria, Prince Rupert, New Westminster and many other places. I want hon. gentleman to be fair on this question, because these statements that are spread abroad are doing British Columbia harm, and they are doing Canada harm, for the credit both of British Columbia and of Canada, is injured by allowing these false ideas to go abroad regarding the expenditures of that province. I repeat, the capital expenditures of British Columbia have been made out of revenue up to about two years ago on the outbreak of the war. An addition has since been made to the debt of the province, but that is covered by $13,000,000 still owing on the sale of public lands. I want to say a word on that. I have heard it said, it has been stated in the Liberal newspapers, that the Government has squandered its public lands. One of my hon. friends in this House asked me to make a statement on that subject because this false impression was widespread in eastern Canada. Now, these critics can take either horn of the dilemma they like. Either they can say that the land on which that $13,000,000 is owing is excellent security for the amount, or, if it is never paid, then, the lands which they have valued at $5, $10, $15, or $20 an acre, come back to the ownership of the province and remain still an asset of the province. You cannot get away from that. And so I say that our province to-day is in excellent condition; not only has it survived this strain but it is going to come to the front again very rapidly.

Mr. KNOWLES: The hon. gentleman is familiar with the facts, and his opinion would be valuable. He does not need to answer if he does not wish, but I would ask him, with his permission, if he thinks that the administration of the affairs of British Columbia has been economical and wise.

Mr. STEVENS: I do not know that that has to do with the discussion other than in a general way. But I will answer it, and my answer is, yes. British Columbia has made mistakes, of course; it has done things that I did not agree with and which I would have criticised had I been a member of the legislature. On the whole, the figures that I have quoted show that the province has had a fair, decent administration; and, furthermore, there has never been one single statement brought before the people that has been demonstrated to reflect upon the personal honour and integrity of the present Prime Minister of British Columbia, Hon. W. J. Bowser. They have attacked, abused, and maligned him, but not one thing has

been laid at his door that has not been in the strictest sense honourable and honest.

Mr. PUGSLEY: How does the hon. gentleman account for the general condemnation of him in the two great cities of Victoria and Vancouver in the last election?

Mr. STEVENS: I am sure my hon. friend does not want me to discuss that; it is a long story and there is a great deal to be said about it. I can tell him that the people are to a large extent sorry; and let me tell him something further that will account for ninety per cent of it: To-day there is going on in the courts of Vancouver and before the Elections Committee an exposition of a most rascally and scandalous plot for plugging by bringing in over two hundred men from Seattle—and that was done by the political friends of my hon. friend from St. John (Mr. Pugsley).

Mr. TURRIFF: No.

Mr. A. K. MACLEAN: Brought in by the friends of the hon. member for Vancouver (Mr. Stevens).

Mr. STEVENS: No, these hon. gentlemen are mistaken. I am stating what is true; these men were brought in for the purpose of plugging in the interests—

Mr. TURRIFF: How does the hon. gentleman know?

Mr. STEVENS: It is proven in the courts. That is the only corruption that I know of there. Now, I had not intended to bring up this matter, but my hon. friend has forced me to it. Let me conclude—I have tried it half a dozen times and I hope he really will let me conclude this time—by saying that we have excellent security for all the money that is being expended in British Columbia; and no one in this House or out of it need have the slightest doubt that British Columbia will take care of all its obligations. And, further than that, I am convinced that the railway which is so much maligned will prove in time one of the best-paying systems of Canada.

Mr. J. G. TURRIFF (Assiniboia): I do not think any one who has ever visited British Columbia will question one of the statements made by my hon. friend from Vancouver (Mr. Stevens), and that is that the province of British Columbia is a great province, a rich province, a province of splendid resources. At the same time, I do not think he has given quite a fair statement of the position of that province. For instance, he gives the revenues of the province of British Clumbia up to 1913, and there he very conveniently stops—

Mr. STEVENS: For 1913-14.

Mr. TURRIFF: Well—and there he very conveniently stops and tries to make out that the depreciation of the revenue has been due to the war. Nothing can be further from the fact than that statement. I was in the province of British Columbia three years ago last fall, and half a dozen people in the city of Vancouver told me that during the year at least 20,000 people had left the city, and the same proportion held true of the city of Victoria. This could not have been on account of the war, because it was a year or two before the war broke out.

Mr. STEVENS: Last year they had the largest school population in Vancouver they ever had.

Mr. TURRIFF: It was not on account of the war, but on account of the depression which affected all Canada. It is no discredit to have a depression in British Columbia any more than in any other part of the country. But conditions have gone back very much, not only in British Columbia, but elsewhere, since then. Two or three months ago the local Government, to whom the hon. gentleman gives such a good character, estimated a revenue for the coming year of about five and a half million dollars and an expenditure of about ten and a half million dollars. Here was a government going into large expenditures which their revenue was only about half enough to meet. My hon. friend tried to make out that the Government were paying for public works out of revenue, though they were at the same time selling their public lands and timber in order to raise revenue. There is no doubt that a great deal of the land and timber sold will come back into the hands of the Government, for they were sold during boom times. Those sales were one great cause of the revenue in British Columbia, which turned out to be a bad thing in the end, because it led the Government—as I presume it would have led any government—into great extravagances, just as the bountiful revenue that we had in this Dominion some years ago led the people of Canada and the Government into extravagance, the results of which we have now to face. But conditions in British Columbia got very bad, and

I think this was largely owing to the way provincial affairs were administered.

However, that is not the subject we were discussing. My hon. friend tries to make this House believe that the money put into the Canadian Northern railway by the province of British Columbia during the last few years is money well invested. I do not think that one member of this House believes that the money put into the Canadian Northern railway by the provincial Government or by this Government in connection with the building of the line from the Rocky mountains to Vancouver is money well invested, because a great part of the line is simply a duplication of the Grand Trunk Pacific and of the Canadian Pacific railway. From the city of Edmonton the lines run parallel for a distance of almost 200 miles, if I remember rightly; in many cases you can throw a stone from one track to the other. When you get near Fort George the Grand Trunk Pacific verges to the northwest and the Canadian Northern proceeds in a southwestern direction, striking the Canadian Pacific at a point near Kamloops. My hon. friend has described how the two lines run down the Fraser river. No doubt my hon. friend is right in saying that the Canadian Northern, where it parallels the Canadian Pacific railway could be used in connection with the double-tracking of the Canadian Pacific railway; probably this method of double tracking would be as cheap as if the Canadian Pacific Railway Company had undertaken to double track their road. In that respect the Canadian Northern line may some time be useful, but any development of traffic along that part of the road is out of the question.

Mr. STEVENS: My hon. friend is mistaken. There is a lot of traffic down the Fraser river; some of the biggest ranches in Canada are tributary to that road.

Mr. TURRIFF: All I can say is that I have been over the road several times and I have never seen any evidence of increased traffic. My hon. friend, however, knows better about that than I do. As to that part of the country from Kamloops to the point where the Canadian Northern joins the Grand Trunk Pacific, I am not prepared to say anything, because I have not been over it. There may be some good country there, but there was no justification for the province of British Columbia or for this Government in putting that road through at the time it was built. The province of British Columbia, in respect of some 600 or 700 miles of that road, guaranteed bonds to the extent of $35,000 a mile. Two or three years later they made another guarantee of $10,000 a mile in order to enable the Canadian Northern to pay the interest on the bonds, otherwise the province would have been called upon to pay that interest. The province of British Columbia has guaranteed bonds in respect of that line to the extent of more than $82,000,000, of which some $78,000,000 have been issued. The bulk of these guarantees are in respect of roads that for the next twenty years will not earn one cent of interest on the cost of construction. If they earn operating expenses they will do well. My hon. friend spoke about the Canadian Northern line through the mountains earning more than operating expenses a few months after it was opened. Well, in railroading as in many other things a good deal can be done in the way of bookkeeping, but no one need tell me that a road the main line of which was tied up for months during the past winter, on which practically not a wheel was moving, can be earning money to pay the interest on the cost of construction. I do not want to cast any aspersions on the Government for their aid to railways; I do not want to put any particular blame on my hon. friends opposite. I think we are all entitled to take our share of the blame, on this side as well as on the other side; I do not believe that anything can be gained by trying to place the blame for this condition of affairs particularly on one side. The fact is that this condition of affairs exists, that we have incurred these liabilities, that we have bonused these roads. We have aided in the building of two transcontinental roads; the question now is, what are we going to do in the matter? I listened with a great deal of attention to the remarks of the hon. member for South York. I do not always agree with the hon. member for South York by any means, I have never been in favour of Government owned railways in Canada. But I will say this much: The hon. member for South York comes forward with a proposition; he offers something, but the Minister of Finance comes forward with nothing; he has nothing to offer the House. He makes no proposal except that we continue to shovel more money into this sink hole, the Canadian Northern railway. That is what I object to.

If the Minister of Finance in asking us to vote this money—$8,000,000 for the Grand

Trunk Pacific; $15,000,000, in reality, $18,000,000, for the Canadian Northern Railway Company—could point to some finality, to some object that he has in view, to some proposition by which this road could be handled, we should have something to work upon. But he does not give us anything of the kind; we are to continue voting millions of dollars for the continuation of these two roads in statu quo for another year, at the end of which time we shall be in a worse position to deal with them than we are now. I have heard it stated from both sides of the House during the last few days that the trouble in connection with these railways is due to the war. Mr. Chairman, I do not believe that. Had it not been for the war, no doubt the railroads could have continued to borrow money in the Old Country, could have marketed all their securities and could have got a better price for them. They could have got more money and could have kept on building. But all they would have accomplished in the end would have been the piling up of greater liabilities. The day of reckoning would have come, although not as quickly, and it would have come with greater force and effect because of the increased liabilities. Look at what the railways have earned in connection with the war. Had it not been for the war the railroads in that respect would have been in a much worse condition, although they might still have gone on. As long as a bankrupt concern can get banking accommodation, it will continue business, but a day of settlement has to come and the longer that day is put off the worse things are in the end. The Finance Minister makes no proposition; to that extent I like what the member for South York has said. At all events he comes forward with a proposition that he believes can be worked out and that he believes would be a good thing for Canada. Well, I do not know whether we could nationalize the railways of Canada and run them successfully.

It seems to me that in view of the lessons that the people of Canada, and of other countries, are learning in connection with the war, we should be able to put these railroads, if we nationalize them, under the control of a commission, and make that commission absolutely free from political patronage. It seems to me that we should be able to do that. Of course, we could do it a great deal better if we had the whole system of Canada under Government control and ownership. As to the policy of getting control of these roads, I do not agree with my hon. friend from South York (Mr. Maclean) in one or two of the propositions which he submitted. I cannot for the life of me see why my hon. friend from South York should suggest that we pay to the owners of Canadian Northern common stock, which is not worth the paper it is written on, a sum of $6,000,000 in order that they may hand over the control of the road. It is a bankrupt concern to a far greater extent than the Grand Trunk Pacific. The proprietors have taken out of the construction of that road, not $6,000,000, but many times $6,000,000. What they have done with that money, whether they have put it into private enterprise, or whether they have lost it, is no concern of this House. But if they have taken millions of dollars of profits out of the construction of the road, out of the moneys given by the provinces and by this Government, why should we give them any more? They come now as suppliants; they cannot go on. They do not own the road, and the liabilities piled up against it are greater than the value of the road, so that I do not agree with my hon. friend that, if the Government takes it over, we should pay $6,000,000, or any other sum.

I asked the Minister of Finance when the question was last discussed what his policy would be as to taking over the controlling interest if we gave this $15,000,000, and I trust that he will give us a definite statement on that point. To my mind it is rather an important point. We are now proposing to give them $15,000,000 to keep them as a going concern for another year, not to permanently help them, because that sum would only tide them over for one year. I say to my hon. friend the Minister of Finance that if we give this $15,000,000 it is the duty of the Government to take over at least the controlling interest in the common stock of the road, not that I consider it worth a five-dollar bill, but in order that the Government may have control of the road, so that, if conditions should change during the next three, four or five years, and we took the road over, the proprietors would not be able to say: "Hand over $35,000,000 or $50,000,000 or we will not give you the transfer." That is the position I take—if we do hand over this sum of $15,000,000, we should get the absolute control of the common stock of the road.

In reference to taking over the Grand

Trunk Pacific, I agree with my hon. friend from South York that we cannot take it over and release the Grand Trunk Railway from all liabilities as they suggest. That would be a most unfair proposition; it would be a case of heads I win, tails you lose. They came to this Government and secured assistance to build the Grand Trunk Pacific. They undertook certain obligations, guaranteeing roughly one-fourth of the cost of the road from Winnipeg to the Coast. Now they claim that the road is not a paying institution, and they ask to be relieved of the liabilities, and also to get back all the money they have put into the road. Whoever heard of such a proposition as that? I claim that it is the duty of the Minister of Finance or of the Government, when they come to deal with this question, to see that if the Grand Trunk refuses to take over the road, they are not allowed to get away from the liabilities which they have incurred. Why should they be relieved of one-fourth of the cost of the road any more than that the Government should be relieved of three-fourths of the cost? It was a Grand Trunk proposition. They wanted to build the road; they did build it, and now, because they do not think it is a profitable proposition for the old Grand Trunk, they propose to turn it over to the Government and ask to be relieved of their liabilities. That is an absolutely unfair proposition, so far as I can see. My hon. friend sitting beside me (Mr. Nesbitt) points out that while they would hand over the main line of the Grand Trunk Pacific they would still retain control of all the feeders of that line. The Grand Trunk Pacific was never expected to be a complete road without its connection with the Grand Trunk in the eastern provinces. My hon. friend from South York has pointed out the value of the Grand Trunk system in the eastern provinces, connected as it is with practically every town, village and city in Quebec and Ontario, and with big manufacturing centres along its lines. That system would be a great feeder and adjunct to the Grand Trunk Pacific. You cannot deal with one separately from the other, because one is not complete without the other. If they are going to deal at all, the Government ought to deal with both roads.

There is one other point I wish to touch upon. We have 300,000 men in uniform, and we are all hoping that if it is necessary to have 500,000 men we will be able to get them and equip them. But we cannot shut our eyes to the fact that we will have hundreds and thousands of men coming back from the war more or less maimed in body but still capable of doing good work. It seems to me that if we were to take over these roads there would be a field for those men. We could employ thousands of them in connection with the nationalized roads, and we would therefore be getting over one difficulty which we will have to face in the near future.

I would remind the Minister of Finance that I want to know what his proposition is in return for the aid which he proposes to give to the Canadian Northern, and as to taking over the control of the road. In addition to the 40 per cent of the common stock which we hold at present we ought to hold at least 15 per cent more. That would save a great deal of trouble in the future, and the company should have no objection to giving it. We should endeavour to have control of that road so that when the time comes to take it over we will be able to deal with it, and not be held up by its promoters as the country has been held up ever since they started to build railroads.

Mr. W. F. COCKSHUTT (Brantford): I would offer just a few words in expression of my view of the railway situation. It appears to me that the situation which confronts Canada to-day, so far as railways are concerned, is of a most serious nature, especially with regard to its financial aspect. I am sure that our Minister of Finance must have had an anxious time over the prospect before him of having to furnish now some $23,000,000 to tide over the temporary requirements of two of the great trunk lines of this country.

The situation, as the hon. gentleman has just said, belongs to both parties, and I think he is very liberal in allowing this side as much responsibility as he takes for his own side. The Grand Trunk Pacific is entirely the child of the Government of my right hon. friend (Sir Wilfrid Laurier) and the hon. gentleman is not fair in charging that even the old Grand Trunk took that responsibility. The Grand Trunk never wanted to build the eastern section of the road. That was a political proposition forced upon them. They proposed to build from North Bay and only to the mountains, so that the two lean ends of the road are political propositions that our friends on the other side of the House must take responsibility for. That was fought out

in the elections of 1904; it was the principal issue at the polls and the construction of that road was opposed by the Conservative party at that time as being unbusinesslike and for the reason that the road was not likely to be taken over or operated under the agreement that was made with the Grand Trunk. The pessimistic outlook that the Conservatives took with regard to the proposition has been more than justified by the results, and to-day we find that we have that immense railroad, representing some hundreds of millions of investment, that the Grand Trunk is not now ready to assume responsibility for.

The Canadian Northern was not a child of this Government. The first great plunge that was made in regard to the Canadian Northern was made by the Liberal Government in granting a subsidy of $35,000,000 to build from Port Arthur East. That was when the country took the first plunge in regard to that road. Having $35,000,000 in it we were obliged to put more in to save what we had. My right hon. friend opposite shakes his head, but that is absolutely true. It is like a customer who gets into a bank. The bank controls the customer so long as his business is sound but as soon as his business becomes unsound the customer controls the bank and simply says to the bank: You carry me, for if I go under you lose your money. This is a difficult proposition to finance but the Minister of Finance (Sir Thomas White) has met the situation with good judgment. So that my hon. friend (Mr. Turriff) is too generous when he says that the Conservatives are equally responsible with the Opposition in regard to these two great enterprises.

The financing of these roads has become very difficult by reason of the war. We all understand that, and it is not necessary for me to dwell upon it. The securities that were put up by this Government to tide them over a year ago could not be floated successfully on account of war conditions and to that extent the war is responsible for the position in which the Canadian Northern finds itself. The financial dealings of the Canadian Northern have been seriously interfered with on account of the war, and it was forced to sell the securities it did sell at a discount, while others could not be sold at all. This, coming on top of our war requirements, is certainly a very serious matter, and I think that the Minister of Finance has done well in proposing to finance them so that they may not go into a receiver's hands. In the meantime a commission of experts is to be appointed which will thoroughly examine the railway situation, come down with the facts and figures at an early date and lay before us a business proposition in regard to the taking over of these trunk lines or the making of some arrangement whereby they will not come to us year after year for assistance.

I have not had the opportunity to-day of hearing my hon. friend from South York (Mr. W. F. Maclean) speak on public ownership. I have heard him on many occasions on that question and I have a good deal of sympathy with his desire that the railways of Canada should be nationalized, taken over, and run by the Government or by a commission. But I want the members of this House and the country generally to look the matter in the face and not to take all the favourable anticipations in regard to public ownership without taking into consideration the financial responsibilities and obligations that the taking over of these roads will impose upon them. I desire to commend that remark particularly to the hon. member for South York. On many occasions I have heard him dwell upon the great advantages that would accrue to this country from the nationalizing of our railways. I do not say that he has exaggerated them. I daresay that he will feel satisfied that most of these points he has taken, and taken after a great deal of study, are correct. But, I see that he has lost sight lately of the financial responsibilities that will rest upon this Government, or upon any other government that takes hold of so large a proposition as the nationalizing of the railways of Canada. As nearly as I can estimate, it will cost between $2,000,000,000 and $2,500,000,000, or about four or five times as much as our share of the present war will cost, to take over the railways of Canada. That is rather a large sum but that is as near as I can figure it out. It will take more than half of that to take over the three great trunk lines which are already spanning this continent, the Canadian Pacific, the Canadian Northern and the Grand Trunk Pacific. These three propositions will probably cost $1,800,000,000 in round figures, or pretty close to that. I am speaking now of these lines with all their branches, all their terminals, all their rolling stock, all the other facilities that are required to equip and operate three immense transcontinental railways. That is a very large proposition for a country even with the resources of the Dominion.

Mr. W. F. MACLEAN: How much have we in them now?

Mr. COCKSHUTT: I have not entered into a close calculation as to that but I should think probably not more than 15 or 20 per cent of that amount. My hon. friend probably knows better than I do. It may be said that these railways should not be bought at their face value. That might be considered fair provided you could get the railways to see it that way, but it must be remembered that a great many people in the Old Country have put their money into these railway enterprises in good faith and they cannot reasonably be crowded out without giving them a comparatively fair and square deal. If we do anything else it will injure the credit of this country and we should not endeavour to drive a hard bargain with the bondholders and stockholders in foreign countries without giving them a reasonable chance to say whether or not they are prepared to accept it.

I did not hear what proposition my hon. friend from South York made in regard to the acquirement of these roads, and that is a very important matter. I want to commend my right hon. friend (Sir Robert Borden) for the statesmanlike action that he is taking on this railway problem. There are three courses confronting the Government and the Minister of Finance at the present time. The first is to continue the present position, go on advancing money from year to year to one or both of these great trunk lines in order to aid them in their financial operations, taking their securities and deriving from them what they will yield which may not be very much. This year we take $23,000,000 in round figures. That is the first proposition and that is the one that is made for the immediate relief of the railway situation. The next proposition that I have heard put forward is to allow the trunk lines to go into a receiver's hands if they cannot stand on their own financial basis. That would be very serious for the railways, it would be very serious for the people of the country and it would be very serious for those who advanced money in foreign lands to build and equip these great enterprises. I for one consider that an unthinkable proposition, and I trust this country will never allow its credit to be dragged in the mud, as it undoubtedly would be if these roads were allowed to default and were placed in the receiver's hands. A third proposition is that we face the matter fairly and squarely—take the bull by the horns, so to speak,—and nationalize these great trunk lines, and perhaps all railway lines. I do not know what the view of the hon. member for South York is with regard to taking over all the roads; I did not hear that part of his speech. But these two transcontinental lines have to be dealt with almost immediately, as I understand the statement of the Prime Minister, and it is necessary to advance this amount of from $20,000,000 to $23,000,000 to tide the railways over the current year. A commission is to be appointed with full powers to examine into the whole railway situation, and submit to this House at the earliest possible date a report in concrete form, showing what the nationalization of these railways will mean, what amount of capital will be required, and what are its prospects of financial success. I am not one of those who believe that, with an investment as great as I have spoken of you will be able to reduce either freight rates or passenger charges in the immediate future. I may be wrong about that, but I am very much in doubt whether it is fair to go upon the public platform and endeavour to enlist the approbation of the people of Canada in this immense proposition, in the expectation that a two-cents per mile rate is going to prevail all over Canada, and that freight rates are going to be much lower than the rates now charged by private companies. I question very much if either freight or passenger rates will be materially reduced in the near future, in view of the necessity of taking care of overhead charges and the interest accruing on this vast investment.

Mr. W. F. MACLEAN: Is there not a prospect of the rates being reduced, if unnecessary duplication and unnecessary competition is cut out under public ownership?

Mr. COCKSHUTT: That is a fair and proper question and I was coming to that. I think it quite probable that a considerable amount may be saved by cutting out this multiplication of boards and directorates, and this unnecessary duplication of lines, which entail unnecessary overhead charges. But that will altogether depend upon the ability of the commission that is to be appointed to solve this problem. I believe with the hon. member for South York that

very material savings could be effected. I do not want him to go away with the idea that I am at all opposed to public ownership, for I am very largely impressed with the idea that it is the only good solution in sight. It is a difficult solution, but it is the only sound one. Until the report is submitted I am not prepared to commit myself absolutely to saying that all the railways in Canada should be nationalized. But nearly all the enlightened countries in the world to-day do own their railways. At the present time 230,000 miles of the railways of the world are public-owned. Great Britain, recently, in war time, took possession of parts of the railways in the British isles, and has been operating them, I believe, satisfactorily. And what has been done in these other countries can be done in Canada; there is no doubt about that. But it will require men with excellent judgment, and an honour that is above reproach; men with a keen sense of responsibility to the people of Canada, a sense that is rarely met with in individuals. They will have to be selected with the utmost care from the very best ability in railway enterprise that Canada or the United States can produce. But I trust that it may not be necessary to have all these experts come from either Great Britain or the United States.

5 p.m.

Mr. MACDONALD: My hon. friend has observed that some of the railways in Great Britain have been nationalized. Does he infer from the fact that it has been done successfully in Great Britain, which is not as large as some of our smaller provinces, that nationalization could therefore be advantageously adopted in Canada, with its immense area?

Mr. COCKSHUTT: I think it would be very much more difficult in Canada than in Great Britain. Great Britain is a very small country; the railways are very short, and they have an immense freight haulage all along the line. They get freight rates that we know nothing of in this country. We often hear complaints about high rates in Canada, but I have known farmers in the midland counties in England pay higher rates to have their produce hauled from the midland counties to London, a distance of 200 miles, than would be paid to take the same produce from the city of Montreal, unload it at Liverpool, and transport it over the English railways from there to London. Such is the railway situation in Great Britain. Their capitalization per mile is probably twice as much as it is in Canada. In Great Britain nationalization was a comparatively small proposition, as the hon. member for Pictou has pointed out, and it will be a much larger proposition for us. But let us remember that Australia is about as large a country as Canada, and every bit of railway in the Commonwealth has been state-owned, not federally-owned, for many years past, and the roads, I understand, have been operated successfully. Does any one mean to say that we cannot do in Canada what has been done in Australia successfully? And they are not following the most enlightened policy there. I travelled in Australia some six years ago. Every state there has a different gauge railway, and, therefore, when freight gets to the boundary of one state, every car has to be unloaded and the freight reloaded on cars of the other state railway. That is the policy of the Federal Government, which is supposed to control the railway situation there. The labour situation in Australia has been such that the Government has been unable to unify the gauges. Labour says: You would destroy our labour; at the present time we get work loading and unloading these cars, and we refuse to have the gauges of the different railways unified. The result is that there are five or six different gauges in Australia, yet even with that disadvantage I believe the roads are run successfully; so I cannot see why we should not make a success of it in Canada.

Mr. NESBITT: Is my hon. friend sure that the Australian Government is making a financial success of it?

Mr. COCKSHUTT: I would not say that they are in all cases, but they have operated some of the roads with success, and the roads generally have been operated to the satisfaction of the people for a great many years. I cannot say that they are paying dividends; I do not think they are; but probably they do not intend to pay dividends. They try to make the road self-supporting, and I presume that all the railways in Australia have been self-supporting. Now this policy of transferring freight when it gets to the boundary of a state is a proposition that no enlightened country should put up with. I do not wish to cast any reflections on Australia, but I am making the point that the labour party in Australia will not allow the gauges to be unified because it would cut down labour.

Mr. KNOWLES: Does not that illustrate the contention that political influence enters into the operation of railways? It must be political influence that prevents them changing to one gauge—the influence of the labour vote, I presume. Is not that just an illustration of one of the great dangers of state ownership?

Mr. COCKSHUTT: I do not think it can be the fault of the labour vote, because a labour Government is in power.

Mr. KNOWLES: All the more reason.

Mr. COCKSHUTT: Australia is the land of the workingman, and the workingmen certainly manage to get into power there and to remain in power for a long time. If you please the labouring man, you please every one else so far as public ownership is concerned. For myself, I am willing to travel on a railroad, whether it is publicly owned or privately owned, so long as it is well run and safe, but I do not want to be ditched; I do not want to travel on a line that is not safe, nor in rolling stock that is not in proper condition. The people of Canada to-day have their eye on the railway situation, and it is going to be one of the great questions before the people when this or any other Government goes to the polls. The railway situation must be grappled with and settled with a strong hand. I congratulate the Prime Minister on being prepared to face the situation in such a splendid manner.

I was perhaps wrong in saying that the railways in Great Britain have been nationalized. I do not know that I am warranted in using that term in the sense that they have been bought outright by the British Government, but at present they are all being operated, and successfully operated, under the Government.

In regard to the appointment of a commission, as I have said, it will be necessary to select the biggest, brainest, and most capable men in the Dominion of Canada, or if they cannot be got here, in the neighbouring Republic or in Great Britain, to handle this immense railway proposition. The suggestion that has come from the Minister of Finance and from the right hon. leader of the Government, is, I think, one of the best auguries for the solution of this question. The first ray of light that I have been able to see in the railway situation in the last twenty or thirty years is the proposition that the question shall be thoroughly investigated by a commission which will look into the questions of how the financial and other responsibilities will be taken care of, what it will cost to continue the present system, or what it will cost to take over the railways and make of them a great national enterprise. In my opinion the last solution is the best, the soundest, and the safest, but I do not want the House to believe that the outlook will be rosy; that the freight charges or express charges or passenger charges will be very largely reduced in the near future.

Just one word more. I have spoken longer than I intended, but as I do not often speak in this House, I think that, as a business man who takes a deep interest in the transportation situation in this country, I have a right to say something on a proposition such as this.

I want to refer to the labour situation that will be created. The labour situation is one that must be reckoned with and taken into very serious consideration in nationalizing the railways of the Dominion, as that will mean the employment on all the railways of Canada of probably 200,000 men of the most skilled and intelligent mechanics and labourers that this country possesses. The last census, I think, shows that the number at present employed on the railroads is about 150,000, and I believe that in the very near future 200,000 will be employed. If those men are all under one commission and if anything should go wrong between the commission and them, you have the possibility of a general strike which would tie up every mile of railway in the Dominion of Canada. I do not know whether my hon. friend from South York (Mr. W. F. Maclean) who is full of solutions, has a solution for that difficulty, but that is a serious matter that must be reckoned with. Those men will be all under one management and if they become dissatisfied with their rates of pay, or their hours of labour, or the method of treatment, we might have a national railway strike on our hands.

Mr. W. F. MACLEAN: The United States of America are to-day confronted with the possibility of a general railway strike and negotiations with the men are going on. Every road is tied up with the others in that threatened strike; the men are organized; the railroads are organized, and the danger that threatens is a general tie-up. The Government, however, are dealing with the situation just as France has dealt with the strike that occurred there, and she got over it and she has national railways still.

Mr. COCKSHUTT: My hon. friend says it is quite possible that a strike might occur in the United States where the railways are under the management of a great many different companies. I quite agree that that is a possibility, but it is hardly as likely to occur as where men are under the management of one commission. I think that is a very serious question and one that will require very careful handling. There have been very few labour troubles on the Intercolonial Railway as I remember, but the Government have treated their employees liberally and the men are satisfied, as compared with the employees of other railroads. I do not know of any reason why things should not run smoothly, but I am asking the hon. member for South York to consider all the disadvantages as well as all the advantages, and to look at the proposition in a businesslike way and see whether it is likely to prove a financial and administrative success and whether it is likely to be of advantage to the people of this country. I for one am very hopeful that that will prove to be the case. The hon. member for South York has done a great deal towards advancing me, so to speak, on the road towards being in favour of the nationalization of railways.

The money proposed to be spent on this commission will be the best money voted in this House next to the money voted for the war, and next to the war, this is the biggest question on our hands from a financial point of view. I am sure the Minister of Finance will agree with me that the railway situation is as bad financially as the war situation, and that it looks as if some of the money proposed to be invested in the railways will be wasted just as some of the money spent on the war is being wasted. It must be admitted that we have built railways in advance of our time; that we have far more mileage than the business of the country warrants, and that the building of the eastern section of the Transcontinental was intended as a waste and is going to be a waste of money for years to come. It is a white elephant of the largest type; I think it is the largest of its kind and if Barnum were still living I would advise him to get it into his museum.

Mr. MACDONALD: Is my hon. friend not aware that the Acting Minister of Railways has announced that there has been a profit on the operation of that road by the Government?

Mr. COCKSHUTT: Do you mean the road from Winnipeg to Moncton, or only from Winnipeg to Cochrane?

Mr. MACDONALD: I mean from Winnipeg east.

Mr. COCKSHUTT: How far east? It is only operated as far as Cochrane, as I understand it. And my hon. friend is taking no account of interest charges, but is speaking only of the operating expenses. What about the interest charges on that vast investment? The $13,000,000 that was going to pay all the interest certainly will not pay it; it will take nearly $30,000,000 to pay the interest. Then you have the Quebec bridge and all that Eastern section.

Mr. MACDONALD: The hon. gentleman deals in millions very easily and hands them out—

Mr. COCKSHUTT: I am as careful with my figures as is the hon. gentleman. I certainly would not like to be guilty of as many wild statements as he.

Mr. MACDONALD: There was just one point—how does he work it out to $30,000,000 for annual interest charge?

Mr. COCKSHUTT: That is for six years.

Mr. MACDONALD: He said $30,000,000 a year.

Mr. COCKSHUTT: I do not think I said that; I certainly did not intend to. There was a construction period of several years, and I said that the $13,000,000 which hon. gentlemen opposite said would pay the interest was not enough, and that it would be $30,000,000. I was putting this $30,000,000 in contrast with the $13,000,000, and I think Hansard will show that that was the effect of my statement. My hon. friend (Mr. Macdonald) did not see that he was entering into a gigantic speculation which would end so disastrously. But we saw it, and it has come out exactly as we expected —only worse. The Quebec bridge alone is going to cost nearly as much as the whole Eastern section was to have cost. Now, I would like to ask the hon. gentleman, who knows so much about running the eastern end of this railway, how he expects the line from the Quebec bridge to Moncton to pay when it parallels the Intercolonial, which does not pay? How are you going to make two roads pay when there is not traffic enough for one?

Mr. MACDONALD: The hon. gentleman ought to get his facts right. The Grand

Trunk Pacific does not parallel the Intercolonial all the way.

Mr. COCKSHUTT: It parallels it nearly all the way.

Mr. MACDONALD: The hon. gentleman should visit the Maritime Provinces.

Mr. COCKSHUTT: How far does it parallel the Intercolonial; let the hon. gentleman state.

Mr. MACDONALD: I will send my hon. friend the figures.

Mr. COCKSHUTT: The hon. gentleman will not give the figures now, for he knows that what I say is about right.

Mr. MACDONALD: They run parallel for a short distance in the province of Quebec, but the Transcontinental runs the other side of the mountain and diverges, and from a point in the county of Dorchester it runs miles and miles away from the Intercolonial.

Mr. COCKSHUTT: Does not it end in about the same spot; and does it not start from about the same point? In order to have one railway parallel another, you do not have to have both run on the same right of way.

Mr. MACDONALD: I say it serves a different section of the country altogether, and the hon. gentleman does not know what he is talking about.

Mr. COCKSHUTT: If I did not know anything more about business than some of the lawyers know about law, I should not have much to say in this House. Let me tell my hon. friend that this House is about sick of legal arguments, mere hair-splitting, and we want a little business common-sense. We do not want to hear it said that one railway does not parallel another because it does not run on the same road-bed. It depends altogether on the traffic. Railways running fifty miles apart may be said to parallel each other. In the country to which the hon. gentleman refers there is no traffic to be developed. He knows that you parallel a railway if you put another within even two hundred miles of it if thereby you divide traffic which was not enough for the first railway. If there is not freight for one, you certainly cannot have freight for two. The hon. gentleman is simply trying to draw a red herring across the track. He knows that that road could not have been built as a freight or passenger road; it was a political road, and the effect of its construction has been to bring about the expenditure of $40,000,000 more than was necessary to build it, as was shown by the report of the Transcontinental Commission. Knowing that, it does not become my hon. friend to talk as he does. He might make an impression among a lot of lawyers, but he cannot go into any enlightened business community and show them that this road was the outcome of the application of business principles. The interest runs night and day, whether the freight is carried or not, and now where the railway was we have two streaks of rust. How much trade has been done over that road up to the present? How much was likely to be done in that country in the near future? Can the hon. gentleman tell that?

Mr. MACDONALD: The hon. gentleman spoke of a road "through a country like that." What does he mean?

Mr. COCKSHUTT: I mean a country that affords no freight for the railway.

Mr. MACDONALD: How does the hon. gentleman know.

Mr. COCKSHUTT: Does the hon. gentleman think I have never been in the Maritime Provinces?

Mr. MACDONALD: I do not think you have.

Mr. COCKSHUTT: Oh, yes, I have. The wise men came from the East, and sometimes they stayed West after coming. I had not intended to enter into a controversy with my hon. friend, but he is anxious for it. I simply rose to give the business view of a very difficult situation, not the legal view. My desire is that we should face squarely the financial obligations that are going to rest upon this country, no matter what is done, to waive aside all minor considerations and enter into a serious calculation as to what will be necessary to invest in these great enterprises and how it is going to pay when it is done. I say the Government are to be commended for the proposition they have brought in, to appropriate $150,000 to thoroughly investigate this situation in order to bring in a report upon which we can bank as absolutely correct. This is one of the best day's work that has been done in this House in a business way for years, and I shall hope for satisfactory results from it. I believe the Finance Minister will sleep better in his bed

when he sees the solution of this great railway question.

Mr. E. M. MACDONALD (Pictou): I desire to say just a word in regard to the eastern section of the Grand Trunk Pacific, or, as it is known, the National Transcontinental. The hon. gentleman (Mr. Cockshutt) belongs to that class of little Canadians who would shut out the Maritime Provinces altogether from——

Some hon. MEMBERS: Oh, oh.

Mr. MACDONALD: Yes—would shut out the Maritime Provinces from any participation in the transportation plans of Canada. It is quite common now to blame on the war the financial condition of this country. The Finance Minister takes the position with regard to the additional vote which he is asking for the railways, that had it not been for the war it would not have been necessary to ask for a vote. He justifies a second or third financial provision for the railways upon the ground of the war. Let us see how this applies in connection with the question as to the utility of the eastern section of the Transcontinental. My hon. friend talks about the policy of the Government of the day in contrast with that of the Government that was in power in 1904. My hon. friend knows that the verdict of the people of Canada in 1904, reiterated in 1908, and the well understood opinion of business men who were imbued with the hopefulness that existed throughout Canada during those years, was that the Transcontinental railway was a necessity and that it should be built. Were it not for the fact that the war has paralyzed immigration into Canada and has seriously interfered with the development of the country throughout that section in which the road has been built, we should have had an ample and complete vindication of the wisdom of constructing this railway—a vindication so complete that even my hon. friend would have been satisfied. My hon. friend is one of those, I am sure, who would desire a continuance of the policy of sending the trade of western and central Canada through our Atlantic ports. If the war were to cease within a year and a period of prosperity, involving extensive development and large increase of trade, should come to this country, does my hon. friend say that Canada should be satisfied for all time with the avenue of exit or entrance afforded by the Intercolonial railway?

Mr. COCKSHUTT: What about the Canadian Pacific railway? Have they not a line to St. John?

Mr. MACDONALD: The Canadian Pacific railway has a line with its terminus at St. John, but that line does not run entirely through Canadian territory. The necessity of having a road entirely within our own territory is shown by the fact that no matter how pressing the necessity may be, you cannot transport through the foreign country through which the Canadian Pacific railway runs anything relating to supplies for the war. Is that not so?

Mr. COCKSHUTT: No.

Mr. CURRIE: When did the United States place an embargo upon the shipment of munitions through the state of Maine?

Mr. MACDONALD: The Minister of Railways has been stating publicly in this House, and, I have no doubt, privately to his friends, that the reason the business of the Maritime Provinces has been congested and absolutely paralysed is because the Intercolonial railway is the only railway that has been hauling war supplies to the East.

Mr. CURRIE: That is because most of the munitions were being shipped from Grand Trunk territory.

Mr. MACDONALD: My hon. friend will say that to have a railway running through foreign territory, if it has a terminus in Canada, is just as good for this country as if the whole railway were on our own soil.

Mr. CURRIE: The Canadian Pacific railway was just as much congested last winter as was the Intercolonial.

Mr. MACDONALD: Not at all.

Mr. CURRIE: I know better.

Mr. MACDONALD: I admit that my hon. friend is very well informed on a great many subjects with regard to which I should not venture to question his assertions, but I say to him that when he seeks to instruct me with regard to business conditions in the Maritime Provinces, I will not defer my judgment to his.

Mr. CURRIE: I want to tell the hon. gentleman that I do a great deal more business over the railways in the Maritime Provinces than he does. I have had thousands of dollars worth of freight going

over these railways, and I suppose my hon. friend never shipped a ton.

Mr. MACDONALD: All I can say with regard to that is that I have the statement of the authorities of the Canadian Pacific Railway Company that there was no congestion or delay on their road, that they were prepared to take freight to St. John, but that they were unable to take freight to points east of St. John or to give freight to the Intercolonial for carriage to points east of St. John because of the congestion that existed on the Intercolonial railway.

Mr. CURRIE: The hon. gentleman's statement is perfectly correct. The congestion was common to both roads and to all roads in the East. If the money that was expended on the Transcontinental to Moncton had been expended on double-tracking the Intercolonial, they could have carried four times the tonnage that they are carrying now on either road.

Mr. MACDONALD: It is unfortunate for my hon. friend and for his party that he has not been Minister of Railways during the last two years. He would have had a chance to put into operation some of his theories in regard to this matter, and I am sure we would have been delighted to watch him work them out. If my hon. friend's argument amounts to anything it is this: it is just as good for Canada to have its transportation lines run through a foreign country as it is to have them all on her own territory. I am sure my hon. friend is not prepared to stand by that assertion. The hon. member for Brantford, who indulged in some wild talk with regard to the Eastern section of the Transcontinental and with regard to the inutility of the line which runs through the western part of Canada, does not know anything about the subject that he is dealing with. When that line in New Brunswick is properly operated and proper connection is afforded at its western end; when the line is complete as a through line from Winnipeg to Moncton, the wisdom of the policy of 1903-4 will be vindicated.

Mr. COCKSHUTT: If that is correct, why does not my hon. friend show the Grand Trunk Company, who agreed to take over the road, that that is the fate that will overtake them if they take over the enterprise? The Grand Trunk undertook to take it over; now they want to retire after spending $100,000,000 on it. Would they retire if it were as rosy a proposition as my hon. friend states it to be?

Mr. MACDONALD: If they retire it will be for the same reason that they retired from the western proposition: that the Grand Trunk is controlled by directors who live across the ocean; that they have lost the controlling influence of Mr. Hays, who directed the operations which culminated in the Grand Trunk Pacific proposition. The road is under the control of men who, on account of the war, want to run away from the whole thing. They asserted in their letter to the Premier in December last that although they believed they would be blamed by the directorate for doing so, they begged the Government—on account of the war, of the existing conditions, of their financial obligations being too great—to take the road over. That is the reason why they dealt with the western proposition in that way; that is the reason why they dealt with the eastern proposition in that way. The confidences which are expressed in this letter as to earning powers and successful operation apply as much to one section of the road as to the other. But my hon. friend speaks of a line which is not completed. He condemns the whole thing on a limited knowledge of the facts. Until connection is made between the Maritime Provinces and the western portion of the system no one will be in a position to tell what the result will be.

Mr. PUGSLEY: The trouble with the hon. member for Brantford and the hon. member for North Simcoe is that they have been reading the remarks of the Solicitor General in regard to the Transcontinental. They probably saw in the newspapers a short time ago the report of a speech which the Solicitor General made in Eastern Canada, in which he said that the Transcontinental simply consisted of two streaks of rust and a lot of decaying sleepers, or something of that kind.

Mr. MEIGHEN: I mentioned the debt, too.

Mr. PUGSLEY: It was the two streaks of rust that impressed him most, as apparently it has impressed the hon. member for Brantford (Mr. Cockshutt) and the hon. member for Simcoe (Mr. Currie). If these hon. gentlemen had the pleasure of being in the House when the Acting Minister of Railways presented his admirable statement with regard to the traffic upon the Trans-

continental they would have entertained a different opinion. The Acting Minister of Railways did not speak of it as two streaks of rust. He spoke of the splendid road-bed and of the very great and satisfactory traffic which was being carried over the Transcontinental. Unfinished at it is—being in the position of a house which has to be completed by the contractor, which is to have three stories and has only two stories completed, which is to have two bathrooms and has only one, and which this Government would call a completed house as they call this railway a completed railway, even although they themselves admit that it is not completed—even in its uncompleted condition the Transcontinental is to-day a great factor in connection with the transportation business of Canada. I was told just the other day that, if you go to any point on the Transcontinental in New Brunswick, every day, and almost every hour, you will see trains half a mile long, trains with 50 cars being hauled by one locomotive and transporting vast quantities of freight. The authorities of the Intercolonial Railway are using that road to far greater advantage than they would have been able to use the Intercolonial even if it had been double-tracked. Let these hon. gentlemen take comfort and hope from the statement of the Acting Minister of Railways, and realize, as they ought to realize, that the Transcontinental is one of the grandest and one of the most magnificent undertakings which have ever been carried out in any country. Let them take hope for its future, because they will have abundant reason for that hope. I trust that before making disparaging remarks again with regard to the Transcontinental the hon. members for Brantford and Simcoe will read the very interesting and instructive statement of the Acting Minister of Railways as to the business which it is doing, so far as eastern Canada is concerned.

Mr. CURRIE: I made no disparaging statement about the eastern section.

Mr. PUGSLEY: Did my hon. friend not say in effect that instead of wasting money upon the Transcontinental it would have been infinitely better to devote that money to double-tracking the Intercolonial.

Mr. CURRIE: Sure it would. That is right, but I was not disparaging the road.

Mr. PUGSLEY: Even if it had been double-tracked, the Intercolonial has not the splendid grades which the Transcontinental has. On the Intercolonial between Quebec and Halifax there are grades of 1½ per cent in a number of places, while on the Transcontinental you have a grade of only ⅒ per cent. Go down east and you will find a locomotive on the Canadian Pacific railway or upon one of the lines of railway which it is operating, hauling eight or ten cars while you will find the same locomotive power hauling 50 cars on the Transcontinental. Cannot the hon. member see what wonderful difference it makes in the cheapness of transportation.

Mr. CURRIE: The hon. gentleman is mistaking a local freight train for a through train.

Mr. PUGSLEY: I am speaking about the difference in grades. On the Intercolonial, taking the whole district from Quebec to Halifax or St. John, a locomotive could not haul half the number of cars it could on the Transcontinental. The Transcontinental is a road of which we ought all to be proud. We ought not to speak of it as two streaks of rust, but as one of the greatest and grandest accomplishments in this country, or in any other country.

Mr. MEIGHEN: It is a psychological study to sit on this side of the House and watch hon. gentlemen opposite when the Transcontinental railway or the Grand Trunk Pacific is under discussion. That any hon. member of this House, who had the remotest relationship with that undertaking of colossal folly, can stand before an intelligent people and pronounce it to be a grand and noble success really passes human comprehension. My hon. friend from St. John says that if we only listened to the statement of the Acting Minister of Railways we would take great comfort and encouragement, and would bestow our blessing on the late Government because they initiated the Transcontinental. The statement of the Minister of Railways shows this: That undertaking to operate the road as we would be forced to operate it—because those who fathered the road and forced it on the late Government would not operate it as a gift—the loss on operation alone is estimated $3,000,000 a year. That is what we are asked to take comfort out of in regard to this railway which has already cost the country $200,000,000, from Winnipeg eastward, and which will cost more than that. We find that with the probable necessity of loading our backs with

the Grand Trunk Pacific from Winnipeg westward, if we take it in the only way in which we now can, it would cost us $240,000,000 more. My hon. friend tells us that we have a fine road with fine grades and that a locomotive could haul more cars on the Transcontinental than on any other railway. Perhaps it could, if we had the freight to haul.

Mr. PUGSLEY: You will have the cars.

Mr. MEIGHEN: Would it not be better to have the road first. What is the good of having a road twenty years before the freight comes.

Mr. PUGSLEY: I have never seen a case yet where you had the cars before you had the railway.

Mr. MEIGHEN: Sometimes there is freight when there is no road. The hon. member for Edmonton gave us an instance, and there are other instances where freight is waiting to-day and there is no railroad. The finances of this country are crippled because hon. gentlemen opposite built railroads where there was no freight. Yes, about $240,000,000 from Winnipeg westward —that is what it would cost us now if we took over the road with the debt which is against it. The road over the prairie, they said would be an immediately paying part that would be strong enough to carry the eastern division through troublesome years and lean years.

Mr. PUGSLEY: Does the hon. gentleman mean to tell this House that the Transcontinental is not an essential factor in connection with the transportation business of Canada?

Mr. MEIGHEN: It is just about as essential a factor as an air line. I would rather have the $200,000,000 that was spent upon it than this "essential factor." Hon. members opposite denounce the utility of the Canadian Northern and what it has done in return for what it has got. Last year that railroad carried nearly 40 per cent of the western grain, and the "essential factor," of which the hon. gentleman speaks, carried about 8 per cent of the western grain. This road, the "essential factor," has cost about $42,000 a mile, and, before we are through, it will have cost about $44,000 a mile. The other road cost $21,000 a mile and the $21,000 a mile road is carrying from 33 per cent to 40 per cent of the grain while the "essential factor" is carrying about a quarter of that.

Mr. MACDONALD: Does the hon. gentleman think that the road from Winnipeg to Edmonton should not have been built?

Mr. MEIGHEN: It should not have been built in the way it was built, and neither should the road from Winnipeg eastwards. Four hundred and forty million dollars have been sunk in this road and the return in value to the Dominion is relatively infinitesimal. Yet, the hon. member for St. John stands up and says that this is a noble, a grand, a glorious work. What ties our hands in this war to-day financially?—the Transcontinental railway and the Grand Trunk Pacific. What loads the feet of this country and keeps us in our present——

Mr. MACDONALD: What about the Canadian Northern, which has been assisted to the extent of $75,000,000?

Mr. MEIGHEN: The hon. gentleman was chiding me for mentioning the Canadian Northern a moment ago; now, he wants to get away from the Grand Trunk Pacific by bringing in the Canadian Northern. This, gentlemen opposite tell us, was a grand and glorious project. When we get this $240,000,000 road from Winnipeg westward, where are we? What was the record of the road last year under private management, and what can we expect under public management?

Mr. MACDONALD: It earned $6,000,000.

Mr. MEIGHEN: Returned $6,000,000?

Mr. MACDONALD: I did not say "returned." I say earned $6,000,000.

Mr. MEIGHEN: If it earned $6,000,000 count next the operating cost and what did it lose? It lost $1,552,000 on the mountain section, lost on nearly all its branch lines. On the prairie section in six months it made about $600,000, leaving out fixed charges, and in stating the earnings it leaves out betterments, upkeep, even such items as throwing dust off the road that every railway charges against its cost of operation.

Mr. PUGSLEY: Will the hon. gentleman tell me what the Canadian Northern lost last year on the mountain section?

Mr. MEIGHEN: The Canadian Northern lost nothing on the mountain section because it did not open until November.

Mr. PUGSLEY: The hon. gentleman might very well answer the question because they have been operating since the first of November.

Mr. MEIGHEN: Yes.

Mr. PUGSLEY: The hon. gentleman has come to the House with a certain proposal, or his Government has, and he ought to be able to tell us how much the Canadian Northern lost during the time they have been operating the mountain section.

Mr. MEIGHEN: I will tell the hon. gentleman something that will surprise him.

Mr. PUGSLEY: You might answer that.

Mr. MEIGHEN: I am going to answer the hon. gentleman and I am going to do it in one second, but I would like him to tell me what he thinks of this. The "monument," the "essential factor," the "grand," the "noble work," lost $1,552,000 on its mountain section on operation alone, to say nothing of fixed charges and in the operation expenses did not include the upkeep of the road and the ordinary charges that every other railway company includes in operating expenses. On the contrary, here is a road that has been running in that section for only a few months, not years. The Canadian Northern opened in November and the Canadian Northern, for the present month, I am informed, did not lose a dollar in operation and is making money on the operation of the mountain section. That is the difference between that road and the "essential factor."

Mr. PUGSLEY: The hon. gentleman takes one month in the spring of the year when there is a good deal of traffic, but he will not answer my question as to the loss on operation since the first of November.

Mr. MEIGHEN: I have not the figures for the first two or three months, and I have not the figures for this month, but who would expect any road to earn the cost of operation for the first two or three months, or even the first five months? But compare the Canadian Northern with the "essential factor," which not only did not pay, but is losing at the rate of $1,552,000 a year on the mountain section and losing on the branch lines on the prairies where of all places it ought to pay. It did not pay even the cost of operation or fixed charges notwithstanding the fact that it was carrying between 8 and 12 per cent of the grain of that western country.

Mr. MACDONALD: Do you think there was good management?

Mr. MEIGHEN: There was certainly very poor management in the building of the road and in laying out the scheme. We are going to find out what the nature of the management has been. The hon. member for Pictou explained the situation by saying that Mr. Hays, the genius of the whole thing, died, and there was no man living to take his place.

Mr. MACDONALD: I did not say that at all.

Mr. MEIGHEN: I understood that, and it appealed to me as the best possible excuse.

Mr. MACDONALD: You did not understand anything of the kind.

Mr. MEIGHEN: Will the hon. gentleman tell me what he did say?

Mr. MACDONALD: The hon. gentleman quoted me partly correctly, as he usually does in discussing matters in this House, and then to suit his own purposes, he added that I said there was no man living who could take Mr. Hays' place. I said nothing of the kind.

Mr. MEIGHEN: The hon. gentleman was complaining to us about the death of Mr. Hays. He did not say that there was no one to take his place, but if there has been some one to take his place, then what is the difference? He died, as the hon. gentleman states, and I only added the essential factor to make his complaint commonsense. What did we hear the other day? We heard the other day from the hon. member for St. John that the folly of the Canadian Northern was really fathered by this Administration, that the mountain section was away out of the Liberal mind altogether, and that they had no thought of such a thing as a third transcontinental railway through the mountains.

Mr. PUGSLEY: That is not just what I said.

Mr. MEIGHEN: Will the hon. gentleman explain what he said, so that I will get it perfectly right?

Mr. PUGSLEY: I said the late Government did not give any financial assistance to the Canadian Northern through the mountains, that while we looked forward to its being carried through the mountains in later years, we had declined to give financial assistance, and it is this Government, in conjunction with the Government

of British Columbia, which is responsible for the building of the mountain section and placing upon the road enormous obligations which rest very heavily on the province of British Columbia, amounting to something over $40,000,000.

Mr. MEIGHEN: Will the hon. gentleman tell me how the late Government purposed that this new transcontinental railway from the Pacific coast to Montreal should get through British Columbia except by a separate line? What was their intention?

Mr. PUGSLEY: The time had not arrived when the Government could arrange that, but I will tell you what the late Government did. The late Government stipulated in the contract for the building of the Transcontinental that any other company should, with the approval of the Governor in Council, have running rights. I think that it would have been wise to have had an arrangement for running rights over the Grand Trunk Pacific more especially in view of the fact that even another road was built, and aided by the Government of British Columbia. I refer to the line from Vancouver to Prince George.

Mr. MEIGHEN: The time had not come for anything but a transcontinental railway from this side of the mountains to Montreal. The time had only come for the providing for a future transcontinental railway, and the route to the Pacific coast was to be by means of running rights over the Grand Trunk Pacific. That is the claim made on behalf of the late Government and that is the claim made by the hon. gentleman now. The route was to be by running rights. But legislation affirms that the time had come for a third transcontinental railway from the Pacific coast to Montreal, legislation passed in 1911. More than that, the Government of which the hon. member for St. John was a member, and during the time he was a member of it, not only by legislation pledged this country to the ratification of a third transcontinental railway right to the coast but they had the plans placed before them for the line and that line was approved under the hand of their Minister of Railways. How does the hon. gentleman square these facts, which I hold before me on the authority of the clerk of route maps of the Railway Department, with his now four years belated idea of giving the Canadian Northern railway running rights over the Grand Trunk Pacific or the Transcontinental.

Mr. PUGSLEY: Let me ask my hon. friend—

Mr. MEIGHEN: Well, just wait till he gets the facts. On the 22nd of October, 1906, a route map was submitted for approval covering a line from Edmonton to Dean Channel on the Pacific coast. This map was never approved. On the 10th of September, 1908, a route map was submitted, covering a line from Tête Jaune Caché to Vancouver. This map was approved on the 18th of January, 1909. Again on the 21st of May, 1910, a route map was submitted covering the line from Edmonton to a point near the Pembina river. This map was approved on the 22nd of June, 1910. I am ready to follow my hon. friend, with his route map approved by the department, and which, according to his own words in this House not a month ago, meant authority from the Government for the company to go ahead and build—

Mr. PUGSLEY: To go ahead and build without Government assistance.

Mr. MEIGHEN: Without Government assistance? How does that accord with his scheme of running rights over the Transcontinental? By route maps approved on the 18th of January, 1909, on the 22nd of June, 1910, and on the 8th of November, 1910, the late Government authorized the Canadian Northern Railway to build through their line to the Pacific coast, right through the mountains of British Columbia.

Mr. PUGSLEY: If they chose to do it at their own expense.

Mr. MEIGHEN: Why did he authorize that to be done if his real scheme was only to give them running rights over the Grand Trunk Pacific through the mountains?

Mr. OLIVER: Should the Government have prevented them from building at their own expense?

Mr. MEIGHEN: At their own expense? The plan of the late Government, then, was this: to assist the Canadian Northern Railway over the prairies and through Ontario, and when it came to the mountains, where the cost of construction was twice as much, let the company build at their own expense.

Mr. OLIVER: At the proper time.

Mr. MEIGHEN: And the Minister of Railways and Canals in the late Government stated in this House only about a year ago that the proper time had come,

that they could not build too soon; and he said the same thing in the debate on the Canadian Northern Railway in 1911.

At six o'clock, the House resumed and then took recess.

The House resumed at eight o'clock.

PRIVATE BILLS.

SECOND READINGS.

Bill No. 102, for the relief of Martha Isabella Kenny.—Mr. Nickle.

Bill No. 103, for the relief of William Thomas Craig.—Mr. Pardee.

SUPPLY.

The House in Committee of Supply, Mr. Rhodes in the Chair.

Railways and Canals—chargeable to income —Grand Trunk Pacific Company—loan not exceeding $8,000,000, repayable on demand with interest payable half-yearly at the rate of six per centum (6 per cent) per annum; to be used for expenditure made or to meet indebtedness incurred in paying interest upon securities of the Grand Trunk Pacific Railway Company, to meet deficit in operation and for the purchase of rolling stock; said loan to be secured by mortgage upon the undertaking of the Grand Trunk Pacific Railway Company containing such terms and conditions as the Governor in Council may approve. The disposition of the loan to be subject to the direction of the Governor in Council, $8,000,000.

Mr. OLIVER: When the committee rose at six o'clock the Solicitor General was speaking. Does he wish to continue his remarks?

Mr. MEIGHEN: There are some remarks I wish to make, but I do not think it would be of any great advantage to make them at the present time.

Mr. OLIVER: I wish to say a little in regard to the general proposition that is before the committee and then to speak in regard to the vote of $8,000,000 in aid of the Grand Trunk Pacific Railway Company, which, I understand, is the particular item under discussion. I find my principal ground for criticism in the fact that has drawn so much commendation to the Government from the hon. member for Brantford (Mr. Cockshutt), and, I think, from the hon. member for South York (Mr. W. F. Maclean), namely, that the Government is now about to appoint a commission for the purpose of arriving at a policy to deal, either with the railroad situation created by the Grand Trunk Pacific and Canadian Northern railways, or perhaps with the whole railroad problem of the Dominion. Whether it is the one or the other, I want to say that I cannot join my friends in their commendation of the Government policy because I consider it not a policy, but a lack of policy. I do not favour Government by commission; I am for responsible Government in this country, and I take strong exception to the fact that this Government, since it has attained power, has adopted the principle of Government by commission to a degree that was never before dreamed of in this country nor, do I think, in any other self-governed country. There are circumstances and occasions when the appointment of a commission to deal with a special, or peculiar, or little understood question is desirable, but I submit that the question of how this country is to carry the responsibilities now resting upon it because of these two great transcontinental railroad enterprises, the Canadian Northern and the Grand Trunk Pacific, is not a proper subject for the appointment of a commission. This subject is of such a gigantic character; it is of such immediate importance to this country, that it must be dealt with by the Government of this country as a matter of policy and administration. It would be, in my opinion, as reasonable for the Government to place in the hands of a commission the administration of its affairs in connection with the war as it is to place in the hands of a commission responsibility for the direction of the government of the country in regard to these two great railroad enterprises. If the Government is a Government for the purpose of directing in any measure the important affairs of this country, this is certainly the most important affair that at the present time can come under its consideration, aside from measures looking towards the prosecution of the war, and for the Government not to discharge those responsibilities but to side-step—I do not use the word offensively—its responsibilities by the appointment of a commission, is not a credit to the Government; it is not a credit to the country; it is not responsible Government. This Government have been in power since 1911, and the problems connected with the completion and maintenance of these two railroads met them when they entered office; those problems have been before them every day since they entered office, and they have been in office now for a matter of nearly five years. Who, in all the wide Dominion of Canada,

should know by this time what ought to be the policy in regard to these two railroads if not the members of the Government of Canada, assuming that they are discharging their duties and responsibilities?

When gentlemen who now form the Government sat in opposition, I was from time to time very much astonished to hear the present Prime Minister (Sir Robert Borden) and his Minister of Trade and Commerce (Sir George Foster), then respectively leader of the Opposition, and his first lieutenant, argue, in good set terms, that the condition of the country was not a matter of Government responsibility. I have heard them argue that if the country was prosperous that prosperity was not properly due in any important degree to the policy of the Government, but was due to the industry of the people, the bounty of Providence, and to the opportunities afforded by the country. I did not take the argument seriously then, I assumed that it was merely a form of words used to cover up the evident fact that the policy and administration of the Government of that day had resulted in vast benefit to the country and its people, and that this was the only argument that our friends of the Opposition at that time, discharging their functions as critics as was their proper duty, could put forward to minimize the facts that were in the plain sight of everybody and of which everybody was receiving the benefit. But, if we are to take the facts as they are to-day—this policy of government by commission, and particularly the proposal that this great railroad question shall be dealt with, and presumably settled, by a commission—I can only conclude that our friends opposite were absolutely honest and believed what they said when, in opposition, they declared that the policy of the Government was not an important factor in securing the wealth of the country. That would be in line with their attitude to-day. They have declined to assume responsibility for the condition of these two great railway enterprises with which is interlocked to such a tremendous degree the welfare and progress of the country. I take the position that the Government of this or any other country, its policy and its administration, cannot fail to have an important effect upon the well-being of the country. And, if I may be permitted to take the time, I wish to draw the attention of the committee to certain facts as they appear to me, concerning the policy and administration of the Government, which have led up infallibly to the present conditions in regard to one enterprise—the Grand Trunk Pacific—which we have to deal with to-day, and which the Government proposes to deal with by appointing a royal commission.

The Government was well aware, when taking office, of the character, purpose, and magnitude of the Grand Trunk Pacific enterprise, speaking of it as a transcontinental railway proposition. They knew its purpose; they knew approximately what its cost would be; and they must have realized how it was expected that the purpose would be achieved and how the difficulties that stood in the way of the achievement of that purpose were to be met. It would be absurd to suggest that such an enterprise as a transcontinental railroad could be completed without difficulty, or with absolute certainty as to what the result would be. These hon. gentlemen must have realized, if they realized anything, that, the enterprise having been entered upon and carried forward, as it had been carried forward with a certain definite purpose, that a responsibility in regard to it rested upon them, and that it was for them to make their decision either to carry that enterprise through to completion, with the intent of fulfilling the purpose for which it was instituted, or, in the alternative, deciding what other course they were going to pursue, and taking the responsibility of pursuing that course whatever it might be. But it appears to me that they did neither the one thing nor the other. In the discharge of the functions of government, even as they understood it, they were bound to fulfil the obligations entered into by their predecessors. And they were under equitable obligation to see carried out the contract for the construction of the Transcontinental. But, at any time, in the exercise of their sovereign authority, they could have altered the conditions to meet whatever line of policy they saw fit to pursue. They did not see fit to introduce any different line of policy in regard to this enterprise, they apparently decided to carry it forward, or to allow it to be carried forward, or to assist in carrying it forward, to completion. But the completion of a line of railway from Prince Rupert to Moncton was not a result, it was only a step in the fulfilment of a purpose, that purpose being to further the occupation and development of the country at large, without which, beyond any question, the vast investment of capital

in that tremendous enterprise must prove, measurably or entirely, unremunerative and the enterprise itself be discredited to that extent. When the Grand Trunk Pacific project was launched before the country, the country had not traffic to provide interest upon its proposed enormous capital cost. The project was launched with the expectation that by the time it was completed the country would have advanced in development, in occupation and in production, to the degree that the enterprise would find traffic and yield profitable results.

When hon. gentlemen opposite assumed the responsibilities of government, having this enterprise on their hands, they did not pursue a policy of looking to the further development of the country, to that increase of occupation and promotion of trade that would naturally provide the traffic that would make the road profitable, and to create which the road was built. It is true that they carried out the project so far as securing the laying of the rails was concerned. But that was not the project; it was only a step towards the achievement of the project, and while they took that step they refused to take any of the other steps that were necessary to secure the success of the enterprise.

From the day the Grand Trunk Pacific enterprise was launched in this House, the party in Opposition at that time, headed by the present Prime Minister, in season and out of season, by day and by night, in winter and in summer, on the floor of Parliament, in the press, and on the hustings, used whatever arguments they were capable of and every influence at their hand to discredit that enterprise in the eyes of the people of Canada and in the eyes of the world at large. No opportunity was ever lost by the then Opposition to discredit the Grand Trunk Pacific transcontinental railway enterprise in the minds of the people of Canada and of the people of the world at large. When they attained power and when they decided to continue the material completion of the project, it would have been reasonable that they should have reversed their policy in regard to the enterprise. They did reverse their policy in regard to other matters, and I do not know that they are to be seriously criticised for having done so. Consistency is the virtue of small minds, I believe it has been said, and I am sure that on that ground our friends on the other side could not be accused of being small minded. But in this particular they maintained the virtue of consistency, and the same policy of destructive criticism that was the policy of His Majesty's loyal Opposition up to 1911 has been the policy of His Majesty's Government from September 21, 1911, until the present day, May 12, 1916, when the Solicitor General, not three hours ago, stood up in his place in Parliament and spoke of the Grand Trunk Pacific Railway—I forget his exact words, but the idea was that it was a mad enterprise. How the people of Canada or this Government could expect that that stupendous enterprise, which depended upon the maintenance of its credit in the money markets of the world and in every other way, could thrive under such conditions, is certainly a mystery to me. The world knows that the enterprise depended upon the support of the Government of Canada. It was an enterprise in large measure of the Government and of the people of Canada, and when those who were more recently charged with the responsibilities of Government of the country decried the enterprise in every possible shape, form and manner from the day they took office as in the years before they attained office, surely they must have realized that even if they did stand by the actual contracts that had been made, which required that the rails should be laid for a certain mileage, they were destroying the enterprise just as surely as if they had refused to lay those rails. It may be that they did not know what they were doing. It is not for me to say whether they knew or did not know, but in either case the responsibility rested upon them, and to-day we are facing the results.

In the matter of the construction of the railway, I have said that they carried out the contracts that they found when they came into office. They did in some measure, but only in some measure. The rails are laid from Prince Rupert to Moncton, but the contract required that there should be terminal facilities at Quebec, which was the great Atlantic port of this great Transcontinental railway. When the time came that the rails had been laid and it would have been possible to transact business over those rails through that great Atlantic port of Quebec, were terminal facilities available there? No. How did this Government expect that the Grand Trunk Pacific Railway Company were to handle the business of half a continent through an ocean port that did not have any terminal

facilities for the accommodation of their traffic? This question arose two years ago and it was thrashed out in the House. The Minister of Railways and the Solicitor General argued that the Government had completed its contract with the company, that the company was now called upon to take over the road, that the road was completed. At the very same time that these gentlemen were standing in their places and asserting that the road was completed, the House was asked to vote the sum of $5,000,000 for expenditure on construction on the Transcontinental. The position is so absurd that it is only taking up time to dwell upon it. This Government was a party to laying 1,352 miles of rails from Winnipeg to Quebec. When the rails were laid and the $150,000,000 or $200,000,000 of expenditure made of which they complained so long and so loudly, they had not provided the means or facilities for handling traffic over these rails at the Atlantic port that the whole expenditure was made for the purpose of reaching and doing business at. A year has gone by since that time and we passed the other day an Estimate of $1,500,000 for construction on the Transcontinental. The Government made a bargain —wisely or unwisely, never mind—they made a bargain with the railroad company that when that road was completed the company would take it over and operate it on certain terms. The road has not been completed, and the company, in justice, as they set forth to their investors, are not able to accept an uncompleted road as a completed road. They are not able to take it over, and the condition is that more than two years after the last rail was laid, that road is not in a position to do business at the port of Quebec.

When the Grand Trunk proposal was placed before Parliament in 1903 by the then leader of the Government in the eloquent terms that he is so competent to use, he used the expression, in launching the enterprise, "Pray God that it be not too late." This expression has been the cause of vast merriment, and of a large measure of sarcasm from that day to this. But from year to year the railroad was pushed forward, and up to 1911 the production, upon which the success of the enterprise depended, was increased from year to year. Had that increase of production been continued up till the present time, there would have been, not only ample traffic for the railroad to enable the company operating it to earn interest on the cost, but such a pressure upon it that there would have been ample demand for the second Transcontinental railway. Unfortunately—and I will deal with that feature of the case a little later, if I may—production did not continue to increase under the benign policy and administration of our friends who occupy the treasury benches. It was not because the sun did not shine, or because the rain did not fall, or because the grass did not grow; it was because the policy and administration of the Government of the day prevented the producers of the West from securing that return for their labour to which they were entitled, and which they could have secured by the scratch of the pen of the Prime Minister of this country.

War broke out. That was a time when it was desirable that Canada should have ample communication from coast to coast, when it should have access to all ports, and means of transport for her produce under the most favourable terms, for her produce for export, as well as for her imports. It was a strange coincidence; in fact, it was a set of circumstances that synchronized with the needs of the Allies, then at their height, when Providence blessed our country with the most magnificent crop ever known in its history. We had in the Prairie West, without any very large increase of productive acreage, an enormous increase in natural production of export grain because Providence, was kind to us and gave us a return for our labours such as we had never expected and had never seen before. We had a crop of something like 350,000,000 bushels of wheat, oats to correspond, and barley to correspond, and the great need of the prairie farmer, of the prairie west, of all Canada, was that the grain should get to market and be turned into cash to be returned into the channels of trade throughout the Dominion in order that our people might receive the maximum benefit from it. We had the rails on the Transcontinental, built for the express purpose of coping with such a contingency, laid to Quebec, to the ocean port. Thank God, it was not too late, so far as getting the railroad constructed to tide water was concerned. Providence was not in fault in the matter. Providence had given a good crop. The people of Canada, to their credit, had supplied the money to build a railroad, but the Government of Canada, in control of the affairs of the people of Canada, did not see to the operation of that railroad.

so that the crop so produced could get to market and be returned in cash for the benefit of the people of Canada. Whose is the responsibility if to-day we have 125,000,000 bushels of wheat for the overseas market in this country at the present time. With a railroad built at a cost of $200,000,000, to give the shortest possible route under the best possible circumstances from the wheat fields to tide water. Over that road this year, when we had this tremendous crop, and two years after the last rail was laid, out of 350,000,000 bushels, we have hauled to the port of Quebec, it is claimed, but disputed, 3,000,000 bushels. I insist, Mr. Chairman, that this is not the fault of the Grand Trunk Pacific railway enterprise. It is not the fault of the Liberal Government that instituted it. It is not the fault of Providence, and it is not the fault of the country. It is not the fault of the war; it is the fault of the Government that did not realize its responsibilities and the possibilities of the enterprise, or at any rate, that did not use the proper means to realize on those possibilities. To-day our crop is still back in the country, we are without the money, the difficulties of getting across the ocean are increasing from day to day, and the responsibility is on the treasury benches.

We have heard to-day from the Solicitor General in terms that surely his colleague, the Minister of Finance must have regretted to hear him use, if he has considered how far his comments can reach in discrediting a great financial enterprise of this kind when we all appreciate that our enterprises need bolstering up instead of knocking down. We are asked to believe that this enterprise has not within it the elements of success, and we are told that its earnings during the past year have been limited to such a degree as to show that success is not possible. The Grand Trunk Pacific, as distinct from the Transcontinental railway, was intended to connect lake Superior with the prairies and then the Pacific coast. In order that the Grand Trunk Pacific in the prairies might be connected with lake Superior, a railway connection of 200 miles was built by the Grand Trunk Pacific connecting with the Transcontinental at a point about 250 miles out from Winnipeg. While the company would take advantage of direct connection between the wheat fields and the Atlantic port at Quebec, it would also have the advantage of direct connection between the wheat fields and the great lakes at Fort William.

For many years the Canadian Northern had that connection and did business over it with great success. Ever since the inception of the Canadian Pacific, that company has done business over that route with great success. It was an essential part of the project of the Grand Trunk Pacific that it should have an independent outlet on lake Superior and it spent the money of its shareholders, and raised money on the credit of the company, in order to build 200 miles to make that connection. A year ago the crop was light in the West and traffic was light. When the business was not there the most capable management could not earn money. Then this Government come in and they say to the railway company: If you do not take over this uncompleted line between Winnipeg and Quebec, do not take it over in its uncompleted condition, and do not take it over on the terms we dictate, we will cut you off at Winnipeg from access to lake Superior as well as from access to Quebec. And they did it. To-day the Grand Trunk Pacific, that should have had its outlet on lake Superior and should have had the benefit of that outlet, having spent an enormous amount of money in constructing terminals there, providing elevator accommodation and in other ways to enable it to carry on trade on that lake in the past year, when there was abundant traffic, when there was more than abundant traffic, has been denied the opportunity to share in that traffic to the extent of one dollar. The Government took over their traffic at Winnipeg and shut them out from the earnings of upwards of 450 miles of road. Then the Solicitor General asks why the Grand Trunk Pacific did not earn as much in proportion as the Canadian Northern. The Canadian Northern, or any other road, would not earn satisfactorily if it was broken off 450 miles before it reached the terminals to which it was endeavouring to carry its traffic. The Government broke the back of the Grand Trunk Pacific when it took away from it the connection that it had to lake Superior and where it had established its own terminals at its own cost. It did that at a time when the company was at a disadvantage owing to the light traffic and the small crop and did it under the plea that the company was not dealing honestly by the Government in not undertaking to operate the line to Quebec when the Government had not honestly completed the line and fitted it for operation.

The three great points in the eastern operation of the Grand Trunk Pacific en-

terprise were: access to the head of the lakes at Fort William, access to the ocean at Quebec and access to the great distributing and collecting system of the Grand Trunk Railway Company throughout the eastern provinces. Nobody would have been mad enough to undertake to push a great railway enterprise only from Winnipeg to the Pacific coast. Such a road would have been a local road, a colonization road, and certainly no such expenditure as was made on the Grand Trunk Pacific would have been warranted in such circumstances. Had it been the policy of the Government to organize, or encourage a company that would give colonization railway facilities throughout the Prairie West from Winnipeg to the Rocky mountains, then each mile of road would have been constructed for half or a quarter of what the Grand Trunk Pacific main line cost. But, that was not the enterprise. The proposition was that they should build the Transcontinental railway from Quebec to Prince Rupert with an even grade and of as high a standard of construction as could be secured and such as no other transcontinental railway had. It was only as a transcontinental enterprise that this vast expenditure was warranted, and when our hon. friends broke the back of the enterprise, took over the operation of the road from Winnipeg to Quebec and from Winnipeg to Thunder Bay, absolutely disconnected the Grand Trunk system in the eastern provinces from the Prairie Provinces in the West, there was nothing to it; they had destroyed the enterprise just as absolutely as if they had refused to lay the rails between Cochrane and Quebec.

Then they come to the House and say: "We need $8,000,000 as aid to this broken backed railway, this bankrupt concern. We do not know what to do with it, so we are going to appoint a commission to tell us what is the matter and see what we are to do with it." These are the facts of the case and no commission is necessary to tell what has happened to the Grand Trunk Pacific up to the present time. No commission is necessary to tell what must necessarily have happened to it under such direction and control. There was no possibility, it having been diverted from its original purpose and that purpose having been absolutely destroyed by the intervention of this Government, of its success as a commercial undertaking.

Sir THOMAS WHITE: Does my hon. friend suggest that the Government prevented the Grand Trunk Pacific from operating the National Transcontinental?

Mr. OLIVER: Surely.

Sir THOMAS WHITE: And took away the section from Fort William to Cochrane?

Mr. OLIVER: I am absolutely saying so.

Sir THOMAS WHITE: Does not my hon. friend know that the Grand Trunk agreed to that and was glad to?

Mr. OLIVER: I do.

Sir THOMAS WHITE: How, then, can he accuse the Government of breaking the back of the Grand Trunk Pacific by taking away that branch?

Mr. OLIVER: The company had to agree to it. They were at the mercy of the Government.

Sir THOMAS WHITE: Oh, no.

Mr. OLIVER: Certainly; they had to agree to whatever the Government insisted upon. And when the Government was hostile—deliberately, publicly, avowedly and aggressively hostile to the company—what was there to be done but to submit to any terms the Government saw fit to dictate? There was no other recourse. The Grand Trunk Pacific had to come to this Government to enable them to complete the line to the coast. My hon. friend has thrashed out that point time and again in the House, and explained how it was necessary. Well, the Grand Trunk Pacific cannot come to the Government and ask as a favour a certain concession, and then refuse the Government a concession it may see fit to insist upon. We do not need a commission to tell us that.

9 p.m.

I am sorry the Minister of Trade and Commerce is not in the House, because I am going to refer again to a subject to which he takes strong objection—the question of free wheat. I have said that the production of the prairie west made a continuous increase from year to year up to 1911, in which year it reached its maximum for the time being. In 1911 there was a big crop, but harvesting conditions were unfavourable, and it became necessary and desirable from every point of view that as much as possible of that crop should be marketed south of the line. The Government had been newly returned to power on a policy opposed to the marketing of grain south of the line, and therefore they were absolutely consistent in their policy when they re-

fused to permit of that marketing south of the line. But the fact that they had refused to permit it cost the producers of western Canada figures that ran into tens of millions; and that refusal absolutely broke the back of production in the West. It was not that Providence had not given a good crop; it is true that Providence had given bad weather for harvesting, but the Government could have saved the situation in a large measure if they had seen fit to do so. But they would not do it because it was against their policy of trade restriction and of opposition to the movement of our grain south of the line. The year 1912 showed no increase in either acreage or crop; the year 1913 showed no increase in either acreage or crop. The year 1914 showed a substantial decrease in both acreage and crop; that, however, I will admit was in a large measure the result of climatic conditions. But before that we had had two years of stagnation, so far as production was concerned, absolutely as the result of the policy and administration of our friends opposite—years when we should have been increasing our production so that when these great transportation enterprises were completed there would be business for them to do at a profit both to them and the people depending upon them and to the country. The Government was opposed to grain being transported south of the line. It ought to go east, they said, and not south, and so they would not let it go south. And when the railroad is completed to the east, when the rails are laid and the trains running, we find, four months before the next harvest, surplus grain to the amount of 125,000,000 bushels still not having gone east, still not having gone south, still in the elevators of the West or in the farmer's hands. As their policy was to keep the grain from going south, on the plea that it ought to go east, they ought at least to have sent it east when they had the railroad to send it over, and when theirs was the responsibility of seeing that it found a market in that direction. They are now going to appoint a commission to tell us how to finance or manage or administer the Grand Trunk Pacific and the Canadian Northern Railway If they do not know now what is the cause of the present situation, no commission that they appoint will ever tell them, because the men they appoint will be like-minded with themselves, will hold the same point of view, and bring in a verdict accordingly. It is suggested that the solution of the problem is Government ownership. Well, if that is the proper solution it is just as good to-day as it will be a year from now. What I complain of is that the Government is demanding over $8,000,000 to tide over the situation for one year, without any suggestion as to what is to be the situation after that $8,000,000 has been spent.

Coming now to another aspect, there is one condition under which Government ownership is desirable and necessary, and that is where any public utility is in the hands of a monopoly. If we had only one railroad operating in Canada we would surely need Government ownership to introduce competition. But I maintain that the difficulties of working out the problem of Government ownership satisfactorily are such that it is better not to undertake it unless it becomes a necessity. Our experience in Government ownership of railroads in Canada has not been fortunate. We have had Government ownership of the Intercolonial for many years. We complain that the Canadian Northern Railway and the Grand Trunk Pacific are not able to pay interest on their bonds; we call them lame ducks and broken-backed enterprises! They are injuring the credit of our country; they are a discredit to the men who conceived the enterprises and who carried them on, because at this time, they are not able to pay interest on their bonds! My information is that the Intercolonial railway has never yet paid a cent on its cost of construction; that it has never yet come anywhere near doing so; that from year to year and year after year the cost of operation has been met by appropriations out of the public treasury. While that may not be the condition to-day, there is no doubt that it was the condition for many years, and I say that until under Government ownership it has been demonstrated that we can earn some part of the interest upon the cost of construction of the Intercolonial, we are hardly the people to undertake lightly the project of managing such a vast network of railway systems as is involved in taking over the Grand Trunk Pacific and the Canadian Northern, which, if we are not able to manage them better than those who are now in charge are doing, and far better than we ever managed the Intercolonial, instead of lightening our burdens, are going to increase them vastly. Government ownership is an ideal condition. I have said—and I say it again for the bene-

fit of my hon. friend from South York (Mr. W. F. Maclean) who did not hear it before —that it is only in the case of a private monopoly of any public utility that Government ownership becomes a necessity; but so long as private enterprise can be maintained in effective competition, my opinion, as the result of our experience, is that we are better off without Government ownership than with it.

Mr. W. F. MACLEAN: What will you do with the roads on your hands now?

Mr. OLIVER: I have been trying to explain to the Government how they have fallen down in regard to that matter, and I would suggest better management in that case. The difficulty of Government ownership is briefly this. In order that any enterprise may succeed, it must have a directing head, and that head must have a direct interest in the success of the enterprise. When the whole people are the owners of an enterprise, that direct interest is lacking; there is a diffusion of interest that does not tend towards energetic and successful management. That is the weakness of Government ownership. I speak with knowledge, because we have in Edmonton municipal ownership, which is on the same principle, and we find that difficulty.

Mr. W. F. MACLEAN: The contrary is the case in Toronto.

Mr. OLIVER: That may be so, but we find a great difficulty in working out municipal ownership successfully, for the reason that I have stated. It may be that, under the direction of my hon. friend's campaign of education, and under changed circumstances, we may arrive at a point where the public mind will be so seized of its responsibilities as to enable us to manage these matters better in the future than in the past. I hope that time may come; it has not arrived yet. My faith is based rather in effective business competition, where that can be secured; and, before I close, I want to point out that the essential features of the Grand Trunk Pacific Railway project and of the Canadian Northern Railway project, so far as the former Liberal Government was responsible for either or both of them, was that they represented effective railroad competition throughout the Dominion of Canada. It was for the purpose of securing effective railroad competition that these enterprises were severally instituted or aided by that Government. Given that effective competition of these great utilities in the hands of men whose interests are in their absolute efficiency and success, and given a measure of Government control such as we have through the Railway Commission, and I think we have arrived at as near the ideal as we can expect to get in the present condition of the public mind. I know it is usual to say: Government ownership is the solution of all difficulties. I do not, however, hold that to be the case. The railway problem is not solved by the Government assuming ownership; it is only at the beginning. I would have been better pleased if the Government had come down with a definite policy with regard to these railroads that would look to their being financed successfully during the present period of difficult finance, so that we might expect them to emerge successfully when that condition passed away. I regret that the Government has not adopted that policy because I believe it to be sound policy and the best policy. I am sorry that the Government has come down with a policy, every line and every word of which is absolutely to further discredit these two railways as business enterprises and render what formerly was difficult, now a practical impossibility, that is, to finance them further on their own account. I know that these are hard times; I know that there are financial difficulties for the Government and everybody else; I know that we have sunk an enormous amount of money in these enterprises; I know that so far as earning their own interest to-day is concerned, they are failures; but we must take into consideration the fact that these are not the only enterprises that have failed to earn profits at the present time, and that this depression occurred—and remember that it was not due to the war condition, but to the condition before the war—at the time these roads were just completed, that is, at the most critical time in their career, because during construction all charges are carried out of capital,—but when they are completed they must be carried by the traffic, and the traffic must be sufficient to enable that to be done. Just at this particular time evil days have come and both enterprises are behind. My suggestion is that it would have been wisdom on the part of the Government to come down with a definite policy to carry forward these enterprises with a view to their becoming permanent and substantial competitive transcontinental railway enterprises for the benefit of the Dominion of Canada. That

is a somewhat radical, a somewhat serious suggestion; but we are facing a serious situation, and I have confidence enough in the country and in its future to believe that if these enterprises are properly handled, they will, in due time, work out successfully. I am, however, just as sure that, handled as they have been, hampered as they have been, by the policy of the Government of the day, they cannot possibly work out to a success under a policy of Government ownership unless we have a different kind of administration from anything we have had yet in regard to railroads or any other public utilities at the hands of this Government. Just a word in regard to the progress of affairs in Canada and the possibilities of the future. When the Canadian Pacific railway was first built across the continent the population was sparse; conditions were unfavourable; traffic was light, and I remember that during many years the passenger business of the Canadian Pacific was carried on by one train a day each way across the continent, and that the passengers on that train were remarkable rather for their absence than for their numbers.

I remember that, years after the Canadian Pacific railway was built, it entered the minds of the great men who were managing the enterprise to build a connection between St. Paul and the main line of the system at Moosejaw—what is called the Soo line. It looked like a splendid railroad proposition, and they expected that it would bring traffic. I have seen that train come into Moosejaw time and again—it came in every day—with engine, tender, baggage-car, second class car, tourist car, first class car, and Pullman, and with one solitary passenger on all that train. To-day everybody knows that the Canadian Pacific railway is probably the most successful railway enterprise in the world. The traffic of their main line is so great that they have double-tracked a large part of that line, not only on the prairie, but also in Northern Ontario as well. Their Soo line is a magnificently paying proposition. Every part of the enterprise, as they have undertaken it, has turned out splendidly. But it did not turn out that way for many years after the inception of the enterprise. Circumstances were such that it could be carried on very much more economically than a railroad enterprise can be carried on to-day. Now, throughout the Northwest, on those wide, lone prairies, where we might expect possibly to have a train once or twice a week—and I remember that during eight or ten years all we had at Edmonton were two trains a week, and accommodation trains at that; so-called because they did not accommodate very much—to-day, between Winnipeg, Brandon, Regina, Saskatoon, and Edmonton, and between Winnipeg, Brandon, Regina, Moosejaw, Medicine Hat, Lethbridge, and Spokane, Washington, you have railroad services that are not excelled on this continent. This is absolutely the result of competition, competition made effective by the introduction of the Grand Trunk Pacific and the Canadian Northern railway enterprises into that country. It may seem to my hon. friend from South York (Mr. W. F. Maclean), living where railroads come in from every direction, where they are almost climbing over one another, that we should not have railway competition, and that he can regulate railroads to run this way or that as he sees fit. But, looking at the circumstances as I see them in our country, and bearing in mind the conditions that we had under a monopoly as compared with those to-day, I say that present conditions are good enough for me. I do not want to revert to a condition of railroad monopoly, and I am not so sure that I want to see a condition of only government ownership, either.

Mr. W. F. MACLEAN: Having listened to the discussion of the merits and demerits of public ownership, I still think that the arguments in favour of that system are sound and that it is the proper railroad condition for this country. I tried to make it clear this afternoon that the opportunity to bring about public ownership in this country is here, in this crisis created by the war or by something else, when we find two railroads asking Government assistance. The small attendance during this debate may be accounted for to some extent by the length of yesterday's debate lasting into this morning. But the thing that strikes me in this debate is that the Grand Trunk Railway, the Canadian Pacific Railway, and the Canadian Northern Railway, are very much afraid that we are very near the open door of public ownership in this country, and they would like to see the country get past the present situation. That situation presents itself to Parliament, and it is upon Parliament I urge that that situation should be used for the purpose of trying out the system of public ownership. I would like to see public ownership

tried with at least one of these railroads in the East which has connecting lines in the West. We have the Grand Trunk Pacific on our hands, or we have to finance it; and we have the Transcontinental certainly on our hands, and are running it. We have also the Intercolonial, and are buying other lines in the East. So, I say take over one line that is profitable in the East and is linked with these lines in the West, and let us see what we can do in competition with the other roads. My suggestion was to give a sum of money—I mentioned a certain sum as a feeler—to get possession of the road. The only road that I see in immediate sight is the Canadian Northern, which, I believe, would sell its interest for a very small consideration. The suggestion I made is entirely my own. These negotiations afford us opportunity to take over a good system that affords connection with our cities in the East. And with that one road, whichever it may be that we take, we should link the great transcontinental system that will give competition with the other lines. The operation of such a road would be more effective in moderating rates in the West than anything else I know of. It would do more for the public of the West than the Railway Commission with all its powers of regulation can do. It may be that we shall be forced to take them all by our still further experience or on the recommendation of the commission that we are going to appoint. I am not going to object to that commission, and, of course, its report may be in favour of public ownership. But I am not going to be guided by that.

I tell this Parliament again that this is the opportunity of trying public ownership, where you have a transcontinental line connecting the cities of the West with those of the East. I think the people of Canada will be rather disappointed when they know that this opportunity of getting a transcontinental system has been allowed to slip by. I should have thought that the member for Edmonton would have been prepared to accept that course at least as one measure of relief. He may blame this Government for the fate that has come to the Grand Trunk Pacific, the Transcontinental and all its alliances. That may be, but it has proved a failure and the failure having taken place and the Grand Trunk being responsible in a legal sense for what has happened, the greatest opportunity that has ever presented itself to a nation has arisen, and to take advantage of this opportunity would give us a railroad and a chance to improve conditions in this country. The conditions could not be worse than they are to-day; they could be much better. I absolutely dispute the doctrine laid down by the hon. gentleman who has just taken his seat that to get good railroading you have to have the competition of privately owned lines. The whole experience of America is against that dogma being true or justified by the facts. Seventy-five per cent of the roads in the United States have gone into liquidation; road after road has been wrecked by railroad exploiters, and the system has proved to be the greatest failure in the way of railroading that has been known in the history of the world.

Mr. OLIVER: When the hon. member speaks of failure, does he mean financial failure, or failure as regards service rendered to the public?

Mr. MACLEAN: Both. Service has not been given the public in the United States for the money invested that that money properly invested under judicious state administration would have given the public.

Mr. OLIVER: For the two cents a mile that a man pays to ride in a train in the United States, does he not get better service than is given anywhere else in the world?

Mr. MACLEAN: I do not know that he does. In some ways they give a splendid freight service, but in view of the money invested and of the opportunities they have had in the United States, it has been an inferior service. I would remind my hon. friend that before many years he will see public ownership of railways coming in the United States. I have myself put on record and I intend to keep it before the people of this country that the opportunity came here to-day for public ownership of at least one transcontinental system. Again I say that this administration and the Conservative party are on record as saying that public ownership of the Grand Trunk Pacific would have been better for this country than the privately owned system which was imposed upon the country by the Liberal party. The two parties were in issue on that question; now the opportunity has come and it may never come again. Things that may happen in connection with the coming election may deprive them of the opportunity that they have here to-day. But as a party they are on record as saying that the Grand Trunk Pacific should

be publicly owned and administered and that this system is preferable to the system which is shown to have failed. That system has failed; the documents making the confession are on record and now, I say, is the time to adopt the new and better system. If the argument of the member for Edmonton is good—the same may be said of the remarks of other hon. gentlemen who have spoken here to-day—we ought to give away the Intercolonial railway; we ought to get rid of it, bag and baggage, as a thing that the state should not have. I have heard these arguments time after time.

Mr. OLIVER: Does the hon. member suggest that I said anything about giving away the Intercolonial?

Mr. MACLEAN: No, but the hon. gentleman would like to see it run in a different way. His hopes lie in private administration.

Mr. OLIVER: Yes; that is, judged by the results of the operation of the Intercolonial.

Mr. MACLEAN: Well, as to private administration of railroads in competition we have had that and we are sick of it. We have put millions of money into that system and what have we got for it? Nothing. We financed them right to the hilt, and they are here again asking us to continue financing them. Moreover, they want us to help them over this period when public ownership is likely to be accomplished. All we are asked to do is to help them over this time of trial and give them another opportunity to attempt to succeed in their enterprises. The matter rests with this Parliament, and I am convinced that when the people hear of these facts it will be the general opinion that the opportunity came to Parliament in this year to acquire at least one Transcontinental road and we did not take advantage of it.

Sir THOMAS WHITE: We have had a very interesting discussion, but we were here late last night and until rather early this morning. I would suggest that the Grand Trunk Pacific item be allowed to pass, and to-morrow we will take up the Canadian Northern railway item. Some other items have not yet been passed and we might make some progress with them.

Miscellaneous printing, $100,000.

Mr. LEMIEUX: Is this for the printing of public documents?

Sir THOMAS WHITE: Miscellaneous printing.

Mr. REID: This is an item that is put in every year.

Mr. LEMIEUX: I understand from the Assistant's King's Printer, whom I met the other day, that only a few members receive copies of the evidence taken before the Royal Commission. It seems to me that the evidence should be distributed to all members of the House. I do not complain myself, because I receive copies of the evidence.

Sir THOMAS WHITE: I would suggest that my hon. friend raise the question tomorrow, when the Prime Minister is here. I have no information as to the matter.

Legislation—House of Commons, $10,687.50.

Mr. LEMIEUX: I wish to refer to a matter which is not specifically mentioned in this item, but which relates to the House of Commons. I would first of all thank the Government for making provision for the payment of the indemnity of the hon. member for Beauce (Mr. Beland). Last year the gentleman who manages the affairs at home of that hon. gentleman, his brother-in-law, suggested to me that the indemnity be deposited at the bank where the hon. member for Beauce generally deposited his money. I wrote to the accountant of the House of Commons, and he was willing to do so, but he explained that he had to get the permission of the Government, through the Minister of Finance or the Auditor General, I think. The reason for the request was that the hon. member (Mr. Beland) might get the benefit of the accruing interest during his detention in Germany. I would ask the Minister of Finance to see that arrangements are made to transfer the indemnity from the treasury to the bank.

Sir THOMAS WHITE: Was it done last year?

Mr. LEMIEUX: It was done last year.

Sir THOMAS WHITE: My hon. friend might send me the name of the bank.

Mr. LEMIEUX: I will see that that is done.

Sir THOMAS WHITE: I need not say with what great pleasure we will do anything on behalf of the hon. member for Beauce, for whom we all have so much admiration, and whose absence we all so much regret.

Mr. MACDONALD: What provision is made with regard to the payment of the

indemnity to members who are on active service, at home or abroad?

Sir THOMAS WHITE: Provision has been made in the Supplementary Estimates for the cases of members on active service.

Mr. NESBITT: You will find it in the Estimate.

Customs, $4.215.000.

Mr. PUGSLEY: Was the Minister of Customs asked with regard to the matter of the admission free of duty of large quantities of goods at Morrisburg?

Mr. REID: We discussed that the other night at the instance of the hon. member for Assiniboia.

Mr. PUGSLEY: I do not think that it would unnecessarily delay the Estimates if this item were allowed to stand. The minister has been putting his Estimates through pretty rapidly. Is that upon the theory that prorogation is expected to take place shortly?

Sir THOMAS WHITE: It is due to an arrangement which we made before my hon. friend came in.

Mr. PUGSLEY: This is a large item and I think the minister might let it stand over.

Mr. REID: We are going to leave some items upon which you can discuss anything.

Mr. PUGSLEY: I understand that when the hon. member for West Lambton (Mr. Pardee) agreed to the arrangement he was not aware that there was an item amounting to over $4,000,000.

Mr. REID: It is exactly the same as last year.

Mr. PUGSLEY: How many items will still be left?

Mr. REID: Quite a number.

Mr. PUGSLEY: Then this might go through.

Civil Government—Department of Public Printing and Stationery—to appoint Frederick Cook Assistant King's Printer and Controller of Stationery, at $4,000 per annum, from July 1st, 1915, $3,000.

Mr. PUGSLEY: Is that our friend the ex-Mayor of Ottawa?

Sir THOMAS WHITE: That is the gentleman.

[Mr. Macdonald.]

Mr. PUGSLEY: Surely he is not willing to take $4,000 in these times.

Sir THOMAS WHITE: My hon. friend will remember the high cost of living.

Mr. PARDEE: Is that a new office?

Sir THOMAS WHITE: I think it is. It has been in existence since July last.

Mr. PUGSLEY: I think the minister had better let this stand. It is new and we had better have some information about it.

Item stands.

Mines and Geological Survey—Mines Branch—publication of reports, translation of reports into French, purchase books, stationery, chemical laboratories supplies, apparatus, instruments, office contingencies, additional assistance—further amount required, $50,000.

Mr. PUGSLEY: In view of it being ten o'clock, and as most of us were up until five o'clock this morning, probably the minister would leave the rest of the items. There are not very many.

Sir THOMAS WHITE: Before the hon. member came in, I put, not quite as nicely as he has, the same idea, that is that we were up late last night, or early this morning, and I thought it was desirable that we should pass these items and then rise. There are only four more items in the Supplementaries for 1915-16 and I suggest that we pass these and let the Supplementaries for 1916-17, containing about twelve items in all, remain until to-morrow.

Mr. PUGSLEY: This is a pretty big amount.

Sir THOMAS WHITE: Well, let it stand.

Item stands.

Miscellaneous—to recoup vote "unforeseen expenses" for advances made to defray the expenses for the Economic and Development Commission, $8,500.

Mr. OLIVER: Is that commission the eightieth or eighty-second?

Sir THOMAS WHITE: I have forgotten; it may possibly be the eighty-first.

Mr. LEMIEUX: Who is the chairman?

Sir THOMAS WHITE: Senator Lougheed.

Progress reported.

On the motion of Sir Thomas White for the adjournment of the House:

Mr. PUGSLEY: What business will there be for to-morrow?

Sir THOMAS WHITE: Supply, the Canadian Northern loan, and any other items.

The Grand Trunk Pacific item was passed but the Canadian Northern loan will be taken up.

Mr. PUGSLEY: I would like to give the minister notice of an amendment which I had intended to move, but which my hon. friend from Halifax (Mr. Maclean) will move for me, to the item providing for the $15,000,000 loan to the Canadian Northern. I propose that as a condition of the loan the Canadian Northern shall give to His Majesty an option which may be exercised at any time within five years for the transfer of all the property of the Canadian Northern railway and the connected systems at a price which may be fixed by the Governor General in Council. That is the effect of it.

Mr. LEMIEUX: May I ask the Acting Minister of Railways and Canals (Mr. Reid) to bring down some information as to the two roads to be absorbed by the Transcontinental, the Quebec and Saguenay and the Lotbinière and Megantic, the amount which the Government will have to pay for the roads, the cost of building them, their actual equipment, what remains to be built of both, the gross and net receipts of both and, generally speaking, such information as we should have to enable us to intelligently discuss this question? Would my hon. friend let me have that on Monday?

Mr. REID: Yes.

Mr. LEMIEUX: On to-morrow?

Mr. REID: I will get the information.

Mr. LEMIEUX: I understand the second reading of the Bill will take place on Monday.

Mr. REID: Yes.

Mr. LEMIEUX: Before we adjourn, Mr. Speaker, I would like to inform the House that, as Chairman of the Citizens' Committee for the collection of funds, I have received a telegram stating that the 163rd French Canadian Battalion, started three months ago, is now fully enlisted, the number being 1,100 or more. I was pleased to receive a telegram from Major Asselin stating that he had received orders to leave by the middle of next week.

Motion agreed to, and, House adjourned at 9.55 p.m.

Saturday, May 13, 1916.

The House met at Two o'clock, the Speaker in the Chair.

PUBLIC PRINTING.

PROPOSED REDUCTION IN COST.

Mr. JOHN A. CURRIE (North Simcoe) moved:

That the recommendation contained in the second report of the Joint Committee on Printing, presented to the House on May 11, be concurred in.

Mr. SCHAFFNER: If I am in order in speaking at this stage, I wish to enter, on behalf of the Debates Committee, a very strong protest against concurrence in this report.

Mr. CURRIE: There are two reports. The report against which the hon. gentleman wishes to speak is the third report, concurrence in which I shall move in a moment. The report to which this motion refers is only a formal one. When I speak on the other I will make an explanation.

Motion agreed to.

Mr. CURRIE moved:

That the recommendation contained in the third report of the Joint Committee on Printing, presented to the House on May 11, be concurred in.

Sir GEORGE FOSTER: Would my hon. friend have any objection to having that motion stand until Monday?

Mr. CURRIE: I shall not be here on Monday. Mr. Speaker, the Committee of both Houses on Printing has had under consideration means by which a reduction may be made in the cost of the printing of Parliament. It will be as well for me to read this third report of the committee dealing with this question, which is incorporated in the Votes and Proceedings, so that it may appear on Hansard. The report of the committee of which I am the mouthpiece is as follows:

The committee has had before it for consideration the question of the prevention of waste in public printing and distribution.

The committee has made careful investigation and inquiry, and after referring the matter to a sub-committee for further investigation, beg leave to report as follows:

The committee desire, in the first place, to call attention to the great increase in the cost of parliamentary and departmental printing in recent years. For instance, the expenditure in 1895 was $330,627. In 1915 this had increased to $1,807,390.

Within the past few days the committee has had before it the King's Printer and other offi-

cials of the Department of Public Printing and Stationery. After hearing the testimony of these gentlemen, the committee is of the opinion that great economies can be effected by the adoption of certain changes, both in the manner of printing and distributing. A complete review of the situation from the King's Printer's standpoint is contained in a memorandum which he prepared in March last year, copy of which is attached hereto, and which it is recommended be printed with this report.

Dealing first with the distribution lists, because upon these the extent of the printing to be done depends, the committee recommend:

That all distribution be made from the office of the King's Printer, as provided by the Act constituting the Department of Public Printing and Stationery (chapter 80, R.S.C.).

That all departmental mailing lists be sent to the Distribution Branch of the Government Printing Bureau, and that these lists be revised annually by the Distribution Office. This should be done by sending out reply cards to all individuals on the lists—for any class of Government publication. In the event of no response within a specified time, the name or names to be dropped.

The same practice to be pursued with regard to bound volumes of the sessional papers, over 640 sets of which are now sent out to different institutions. It is estimated that fully half of this quantity is thrown away, and that if the lists be reduced by fifty per cent there will be a saving of at least 9,600 bound volumes.

Distribution lists and the printing of the Debates of both Houses in every case to be referred to the Printing Committee.

Recommendations made to either House by any committee for the printing of evidence taken before it to be referred to the Printing Committee for action.

Reports of special commissions to be referred to the Printing Committee to determine whether they shall be printed, and if so, in what quantities.

The committee is of the opinion that the practice of charging the general public for departmental blue-books and special publications should be strictly adhered to. The indiscriminate distribution of maps, annual blue-books and special monthly reports has led to many abuses in the past. Instances have been cited by many departments where scores of applications have been received from schools in different parts of the country for publications which could not, in the slightest degree, interest the school children applying for them. These books have been asked for probably on the mere mention by some newspaper that they would be sent free. Some deputy ministers are of the opinion that the motive underlying the requests for these reports is the hope that the report will contain pictures.

In order to expedite the mailing of Governmental publications, it is earnestly recommended that a branch post office be established in connection with the Distribution Branch of the Department of Public Printing and Stationery, and mail be sent therefrom direct to the railway stations.

With regard to the parliamentary printing which is done under the supervision of the King's Printer, the committee is pleased to learn that during the past two or three years changes have been made in the typographical arrangements of several blue-books, whereby considerable economy has been effected. On these books it is estimated that an annual saving of $15,000 has been made. The King's Printer, however, has no editorial authority, and can only bring about these changes through the good-will of the officials of the several departments.

Attention is called by the committee to the enormous increase in the number of illustrations in annual and special reports. Many of those illustrations are of no value. It is suggested that only such plates be incorporated in parliamentary blue-books as are necessary to a proper understanding of the text.

There is great room for economy in the printing of annual departmental reports, by eliminating entirely technical treaties, complimentary references, lists of staffs of officials, formal introductions and formal signatures, duplication of statistical information, etc. In the latter connection one has only to examine the statistical reports of the Departments of Customs and Trade and Commerce to see the proof of this statement. The committee recommended that where at all possible duplications should be avoided.

The committee recommends that the scope of the monthly Agricultural Gazette be extended, by incorporating with it Seasonable Hints and small bulletins now issued by the Department of Agriculture in leaflet form in order to give them permanent value, and that the Gazette be distributed free to all Canadian farmers who apply for it. This could be accomplished without much additional cost by dropping the Bulletin of Foreign Agricultural Intelligence, much of the information contained in which is of little practical value to the Canadian farmer. The best features of the bulletin could be incorporated in the Agricultural Gazette, which should be published in cheaper form. The Bulletin of Agricultural Intelligence has been in existence for over five years and costs annually about $2,400.

The committee would call attention to the large quantities of maps, which are prepared by some sixteen branches of the public service, and which in a large measure are circulated free. The report of the Royal Commission appointed in 1914 to "inquire into the state of the records of the public departments" called attention to this great division of labour, and suggested "that the whole of the map-making for the Dominion Government might be carried on more effectively and economically under the direction of a central authority." We would recommend that this work be supervised by the Department of Public Printing, with absolute authority to prevent useless duplication or overlapping.

The committee would further recommend that all "copy" for the printer be typewritten. Instances innumerable have been noted of the great waste of public funds through bad caligraphy and consequent corrections of proof. Last year at the Government Bureau the cost of author's corrections was $48,376. This was a decrease of $5,666 over the previous year, but the committee is satisfied that this charge can be largely reduced by the exercise of greater care in the preparation of "copy."

As already pointed out, the King's Printer and the bureau staff have no authority to make any changes in the text of any parliamentary or departmental document. Recognizing that thousands of pages of reports of no value are printed annually, the committee is of the opinion that to revise copy to avoid redundancy

and over-lapping, a board of editors of parliamentary and departmental publications should be established by the Government to work in conjunction with the King's Printer. To this board all reports and publications should be referred, and authority should be vested in such a board to decide what should or what should not be printed. The committee is of opinion that such a board, properly constituted, with wide editorial powers, could save the country thousands of dollars annually.

Dealing first with the matter of distribution, which is the primary source of waste, the report says:

That all distribution be made from the office of the King's Printer, as provided by the Act constituting the Department of Public Printing and Stationery (Chapter 80, R.S.C.).

That all departmental mailing lists be sent to the Distribution Branch of the Government Printing Bureau, and that these lists be revised annually by the Distribution Office. This should be done by sending out reply cards to all individuals on the lists—for any class of Government publication. In the event of no response within a specified time, the name or names to be dropped.

The procedure as laid down by this Act is that each department shall have a mailing list which shall be sent to the King's Printer, and, as the various reports are printed, they shall be distributed according to that mailing list from the King's Printer's office. But the procedure, in fact, is that each department or committee has a large number of copies of documents printed for itself; in fact, nearly the whole issue is sent to it. Then at the department is established a mailing branch, which, half the time, is not employed, and these books and papers are distributed by this branch. The idea of your Committee on Printing is, that each department should send its list to the King's Printer, and that in the Printing Bureau there should be one general distribution office, as provided for by the Act. This method of distribution would avoid duplication of distribution staff to a very large extent. It often happens that the same name will be on the list of different departments, causing duplication in the issue of some of the documents. This duplication and waste is shown in the report in the following paragraph:

The committee desire, in the first place, to call attention to the great increase in the cost of parliamentary and departmental printing in recent years. For instance, the expenditure in 1895 was $330,627. In 1915 this had increased to $1,807,390.

Each department charges its printing against the vote over which this committee is supposed to exercise some supervision. The amount that each department therefore spends does not appear as an item in the estimates of each department. One source of waste is the lack of supervision of the various departmental lists. For instance, a man's name is put on the list for a certain publication—let us say for the Votes and Proceedings of this House, which make a large shelf of books. These books are sent to that man's address year after year. We find on inquiring that there are names on the list of men who have been dead for five or ten years, or who have moved away, and the books are still going to their address at great cost and waste to the public. It is proposed that a reply card should be sent out to each name on the list once a year. If the person still wishes to receive the public documents he sends back the card with intimation of his wish. In that way a check can be kept on the documents sent out. It may be that a certain document is required for only one year; but once a name is on the list we continue firing books at that mark, and the bulk of the books so wasted is so great that the printing bills of this country have been increased by about a million and a half dollars a year. It is necessary that this abuse should be stopped. If the person to whom the supply card is sent neglects to intimate his wish for a continuance of his name on the list, we are only wasting time in sending him these books. The department, in this way, will have some basis to calculate the number of books to be published. It is now mere guess-work, and thousands of tons of books are published every year merely to be destroyed—to be thrown aside as junk. It is not necessary for me to urge upon Parliament the duty of considering means of saving money. We are carrying on an advertising campaign in favour of Production and Thrift. If we take our own advice in regard to this matter of printing we can save from half a million to three-quarters of a million dollars a year.

The same practice to be pursued with regard to bound volumes of the sessional papers, over 640 sets of which are now sent out to different institutions. It is estimated that fully half of this quantity is thrown away, and that if the lists be reduced by fifty per cent there will be a saving of at least 9,600 bound volumes.

These bound volumes of sessional papers we are sending out still to mechanics' institutes in Ontario, organizations many of them that have ceased to exist, having been replaced by public libraries. The printing department should know whether the institutions and individuals to whom

they are sending these papers are alive or not, and whether they desire to receive these documents.

The next paragraph refers to the Debates of this House, and this is the point regarding which my hon. friend from Souris (Mr. Schaffner) says he wishes to protest.

Distribution lists and the printing of the Debates of both Houses in every case to be referred to the Printing Committee.

The Printing Committee has no desire to interfere with the form of the debates or anything in that connection. But the Debates Committee have been sending out copies of the debates to a great many people. The Debates can be purchased by any person who wants them for so much per annum, but the Debates Committee have been in the habit of putting a number of people on the free list from all over the country.

If a member asks it, Hansard is sent to half-a-dozen men in his riding. These Hansards that go out every day are published at great expense. Once they start going to a man they never stop, whether the persons to whom they are sent be alive or dead. If any one wants a public document of this House, and does not want to pay for it, the procedure is to go to the Printing Committee. Our suggestion is that the regulations in this respect be carried out by the Debates Committee, and that they should not be overridden by any committee of the House. It is not our desire to interfere in any way with the rights of the Debates Committee; but, if the Debates Committee want an increase in the number of official reports published to the extent of ten, twenty, or fifty per day, they should ask the Printing Committee for that privilege, because the Printing Committee has to pay for them out of the miscellaneous appropriation and is blamed for the great increase in the cost of printing. (Reading):

The committee is of the opinion that the practice of charging the general public for departmental blue-books and special publications should be strictly adhered to. The indiscriminate distribution of maps, annual blue-books and special monthly reports has led to many abuses in the past. Instances have been cited by many departments where scores of applications have been received from schools in different parts of the country for publications which could not, in the slightest degree, interest the school children applying for them. These books have been asked for probably on the mere mention by some newspaper that they would be sent free. Some deputy ministers are of the opinion that the motive underlying the requests for these reports is the hope that the report will contain pictures.

[Mr. Currie.]

Blue-books can be purchased by the ordinary voter at nominal prices. If a member wants blue-books or a series of parliamentary books sent annually to a friend, he can make the request through the clerk of the Printing Committee. In that respect the Printing Committee has been very generous; there is no desire on the part of the committee to disregard the wishes of members. If a member informs the clerk of the Printing Committee that he desires certain maps, books or things of that kind to be sent to certain persons, the committee is quite willing to comply with his wishes, because we are the servants of the members of this House. But we do not want the outside public to make demands that books and valuable publications of this kind be furnished to them free of charge, because a price is set upon them according to the law of the land.

The next recommendation is:

In order to expedite the mailing of Governmental publications, it is earnestly recommended that a branch post office be established in connection with the Distribution Branch of the Department of Public Printing and Stationery, and mail be sent therefrom direct to the railway station.

Under the procedure at present, these books are taken from the Printing Bureau to the various departments; they are prepared for forwarding, franked and sent to the post office. The establishing of a branch post office at the Printing Bureau would effect a reduction of the general postal work and of a great deal of the haulage which is necessary under the present procedure. It would involve much less cost to the department to send a letter to the Printing Bureau asking that certain publications be sent out than it does to have a wagon or truck go to the Bureau, bring the publications to the department and have them sent back again with a truck to the post office. The idea is to have the distribution and mailing work all done at the Printing Bureau, where the proper facilities could be afforded.

The next paragraph of the report says:

With regard to the parliamentary printing which is done under the supervision of the King's Printer, the committee is pleased to learn that during the past two or three years changes have been made in the typographical arrangements of several blue-books, whereby considerable economy has been effected. On these books it is estimated that an annual saving of $15,000 has been made. The King's Printer, however, has no editorial authority, and can only bring about these changes through the good-will of the officials of the several departments.

For the last year or so the King's Printer and the officials of his department and other departments have been earnestly attempting to effect a reduction in the size of the blue-books. The idea is to reduce the size of some of the tabulated statements by putting them in smaller type or condensation. By this method some publications have been reduced in size from three volumes to one volume. In cases where a tabulated statement is printed on two pages, with one heading in French and one in English, the heading is put on one statement in both languages, thus effecting a saving of space. The idea of this clause is to inform hon. gentlemen that work is now being carried on along the lines recommended by the committee, and that, with their approval, the committee desires your approval and intends to continue it. (Reading):

Attention is called by the committee to the enormous increase in the number of illustrations in annual and special reports. Many of these illustrations are of no value. It is suggested that only such plates be incorporated in parliamentary blue-books as are necessary to a proper understanding of the text.

I quite approve of illustrations in departmental books which relate to the text, but in many cases illustrations are inserted in connection with geological work and so on —Indians carrying canoes, and that sort of thing—which involve a good deal of expense. It is the view of the committee that economy could be effected by a change in that regard. (Reading):

There is great room for economy in the printing of annual departmental reports, by eliminating entirely technical treaties, complimentary references, lists of staffs of officials, formal introductions and formal signatures, duplication of statistical information, etc. In the latter connection one has only to examine the statistical reports of the Departments of Customs and Trade of Commerce to see the proof of this statement. The committee recommended that where at all possible duplications should be avoided.

In many of these publications there are technical references which can be understood by no one who is not a technical student or a professor at a university. In the second place, many complimentary references are made to officials of departments. Sometimes half a page or a page which costs the country $2,000 or $3,000, is taken up with a statement that so and so has joined a certain branch and is now in charge of certain work. There should be some editorial supervision of these trivial matters. It is to be noted that the statistics of the Department of Trade and Commerce and those of the Department of Customs are almost identical, figure for figure, and are published in large books. We think that better results would be obtained by issuing one book instead of two, which would contain far more information than is contained in the two at the present time. The United States has a publication of that kind, the Statistical Abstract, in which you can get everything you want. We do not deprecate the publication of these reports; they are very necessary, but the question is whether we can avoid duplication. The committee has cut out the Monthly Abstract, which was issued by the Department of Customs. For my part, I think that some simplified form of that abstract should be issued monthly; but by some collaboration or editorial supervision much more valuable information could be given and the interests of the service more adequately preserved.

We do not wish to interfere with the work of any department, but we are anxious to do everything possible to increase the usefulness of the publications and, with the co-operation of the departments, to reduce their cost. (Reading):

The committee recommends that the scope of the monthly Agricultural Gazette be extended, by incorporating with it Seasonable Hints and small bulletins now issued by the Department of Agriculture in leaflet form in order to give them permanent value, and that the Gazette be distributed free to all Canadian farmers who apply for it. This could be accomplished without much additional cost, by dropping the Bulletin of Foreign Agricultural Intelligence, much of the information contained in which is of little practical value to the Canadian farmer. The best features of the bulletin could be incorporated in the Agricultural Gazette, which should be published in cheaper form. The Bulletin of Agricultural Intelligence has been in existence for over five years and costs annually about $9,400.

The Bulletin is sent out to practically all farmers, and contains 50 or 60 pages. The Agricultural Gazette, a most excellent publication also, has a very large circulation; but not nearly as large as that of the Bulletin. The paper used in the Gazette is of the highest and most expensive quality; it is first-class book paper, costing possibly three times as much as the paper on which Hansard is printed. Paper of that class is increasing in cost, and probably next year it will cost twice as much as it does this year. The suggestion here made is that the Gazette and the Bulletin be incorporated in one monthly volume, on cheaper paper, and that it be sent to all the farmers on the free list, so that we will have a most valuable publication issued monthly free in such

a form that farmers will keep it for reference, and not destroy it as they do many of the Bulletins,, etc., now sent to them. Many valuable treatises are now thrown away by the farmers, which would be preserved if they were issued in some such form as is suggested. That is only a suggestion, but that one change would save possibly $15,000 to $25,000 a year.

Another paragraph of the report reads:

> The committee would call attention to the large quantities of maps, which are prepared by some sixteen branches of the public service, and which in a large measure are circulated free. The report of the Royal Commission appointed in 1914 to "inquire into the state of the records of the public departments" called attention to this great division of labour, and suggested "that the whole of the map-making for the Dominion Government might be carried on more effectively and economically under the direction of a central authority." We would recommend that this work be supervised by the Department of Public Printing, with absolute authority to prevent useless duplication or overlapping.

It will be observed that there are sixteen branches of the public service in Ottawa each having a staff of men preparing maps, and these maps are, in many cases, of such a nature that the information given on two or three of them could be given on one map, which would be a great saving. We suggest that that work should be mobilized under the control of the Department of Public Printing. We do not want to interfere with the issue of these maps, but we feel that it should not be left to some officials in one department to say that a map shall be published simply because he wants to give out certain information. That should be submitted to an editorial department having power to decide whether any map should be published. The report continues:

> The committee would further recommend that all "copy" for the printer be type-written. Instances innumerable have been noted of the great waste of public funds through bad caligraphy and consequent corrections of proof. Last year at the Government Bureau the cost of "author's" corrections was $48,376.

"Author's corrections" are changes made after the copy is set up in type. These corrections are attributable to carelessness in the preparation of the copy. The copy is thrown at the printers without being edited. It is set up in type and those who sent it to the Bureau then tear the proof to pieces, so that in many cases the proof has to be revised three or four times. The report says:

> This was a decrease of $5,666 over the previous year, but the committee is satisfied that this charge can be largely reduced by the exercise of greater care in the preparation of "copy."

The report goes on:

> As already pointed out, the King's Printer and the Bureau staff have no authority to make any changes in the text of any parliamentary or departmental document. Recognizing that thousands of pages of reports of no value are printed annually, the committee is of the opinion that to revise copy and to avoid redundancy and overlapping, a board of editors of Parliamentary and Departmental publications should be established by the Government to work in conjunction with the King's Printer. To this board all reports and publications should be referred, and authority should be vested in such a board to decide what should or what should not be printed. The committee is of opinion that such a board properly constituted, with wide editorial powers, could save the country thousands of dollars annually.

That board would not cost the country one cent additional. It would consist of an officer from each of the leading departments that print reports, and, working in the public interest, it would do everything possible to reduce the duplication of volumes and cost of public printing and would see that the copy sent to the Bureau was edited and put in proper shape for the printers. I think that every department having a large amount of printing to be done would be willing to delegate an able member of its staff to serve on such a board. This board would meet at the Printing Bureau once or twice a week for a few hours to pass editorially on all publications.

The committee have appended to their report the memorandum of the King's Printer, from which it will be observed that this question of reducing the great cost of Government printing has been the subject of inquiry in the United States as well as in Canada. The matter has been before our committee again and again during the time I have been a member of it, and it has been debated in the Senate. I feel satisfied that, if Parliament should see its way clear to accept these recommendations, the committee would be able to report at the next session a saving of fully half a million dollars. The adoption of this report would not interfere with the present functions of any department or person. The idea is simply to co-ordinate the work of the different departments and of the King's Printer, in order that the best results may accrue.

Sir ROBERT BORDEN: As we have not had an opportunity of perusing this report, I would ask that it be allowed to stand until Tuesday.

Motion withdrawn.

QUESTIONS.

[Questions answered orally are indicated by an asterisk.]

JOHN LYONS.

Mr. VERVILLE:

1. Is John Lyons an employee of the Exchequer Court, in the Department of Justice?
2. If not, was he dismissed?
3. If dismissed, what was the reason for the dismissal?

Mr. DOHERTY:

1. John Lyons is not an employee of the Exchequer Court. He was temporarily engaged at $2 per day by the Registrar of the Supreme Court to assist the messengers when additional assistance was required during the sessions, his engagement being from day to day as his services were desired by the Registrar.

2. His services have been dispensed with.

3. Because the Registrar considered it desirable in the administration of his office, and this man had already received employment beyond the period of six months allowed by the Civil Service Act for temporary employees.

MARTIN'S RIVER MAIL SERVICE.

Mr. A. K. MACLEAN:

Who is the postmaster at Martin's River, Lunenburg county, N.S., and when was the appointment made?

Mr. CASGRAIN: Mrs. Stella Langille is postmistress at Martin's River, N.S. She was appointed on 15th April, 1912.

Mr. A. K. MACLEAN:

1. Who is the contractor for the mail service between Martin's Point post office and Martin's River railway station, Lunenburg county, N.S.?
2. (a) Were tenders asked for the said service? If so, (b) what were the names of persons who tendered, and the amount of their respective tenders?

Mr. CASGRAIN:

1. James Shupe.

2. (a) Yes. (b) Burton Langille, $270 per annum; John B. Mosher, $290 per annum; Charles Sartee, $340 per annum; James Shupe, $350 per annum; G. F. Shupe, $350 per annum. The contract was awarded to Burton Langille, the lowest tenderer, but he was unable to provide the necessary security. James Shupe having offered to perform the service at the rate of Langille's tender, the contract was given to him.

Mr. A. K. MACLEAN:

1. Who is the postmaster at Martin's Point, Lunenburg county, N.S.?
2. Did James Baggatt, the late postmaster, resign or was he dismissed?

Mr. CASGRAIN:

1. William Dorey.
2. He resigned.

L'ASSOMPTION MAIL SERVICE.

Mr. SEGUIN:

1. Who is the contractor for carrying the mails in the parish of L'Assomption, for rural distribution?
2. What were the names of all the tenderers, the amount and date of each tender, and on what date was the contract awarded?
3. What is the amount of the present contract?
4. Were any negotiations carried on after the tenders were opened? If so, with whom?
5. Were any recommendations received by the Government? If so, from whom?

Mr. CASGRAIN: The rural mail route in the parish of l'Assomption has not yet been established. The department is now considering the tenders in connection therewith.

ROYAL MILITARY COLLEGE—CLOTHING CONTRACT.

Mr. GRAHAM:

1. Who has the contract for supplying the clothing to the gentlemen cadets of the Royal Military College at Kingston?
2. Is it the intention of the Militia Department to ask for new tenders on this work?

Sir ROBERT BORDEN:

1. At present no one; Messrs. Crawford and Walsh's contract expired on the 30th April last.

2. Under consideration.

PURCHASE OR HORSES BY DEPARTMENT OF AGRICULTURE.

Mr. MORRIS:

1. How many horses have been purchased by the Department of Agriculture within the last year?
2. Where were they purchased, from whom, and at what price per horse?

Mr. HAZEN:

1. Seventy-six since the 1st of April, 1915, up to the 30th of April, 1916.

2. The following horses were purchased by the Live Stock Branch:

	Stallions.
Bowden, Alta., Black Jas.	1
Hayfield, Man., Black, Wm...	1
St. Ferdinand, P.Q., Carey, Ed.	1
Magrath, Alta., Card, Geo. C.	1
Moosejaw, Sask., Cooper, I. W...	1
Spring Coulee, Alta., Elredge Bros. ..	1
Vegreville, Alta., Forbes, W.B.	1
Cochrane, Alta., Goddard, G. E.	4
Tregarva, Sask., Grant, Wm.	2
Swift Current, Sask., Guest, E.	3
Port Guichon, B.C., Guichon Estate..	1
Condie, Sask., Hogge, Thos.	1
High River, Alta., Hendrie, Mrs. Mary	1
Pekisko, Alta., Lane, Geo. & Co.	5
Hudson, Heights, P.Q., Macaulay, T. B.	1

	Stallions.
Melba, Alta., McElroy, Geo. M.	1
Drinkwater, Sask., McWilliams, S. H.	1
Raymond, Alta., Meeks, Wm. & Sons.	2
Truro, N.S., N. S. Agricultural College.	1
Coaticook, P.Q., Poulin, Robt.	2
Magrath, Alta., Ririe, J. B.	1
Alameda, Sask., Scott, R. H.	1
Cloverdale, B.C., Shannon Bros.	1
Edmonton, Alta., Sporle, Walter, Jr.	1
Allan's Corners, P.Q., Steel, A. G.	1
Wawanesa, Man., Stevenson, David	2
Saskatoon, Sask., Sutherland, W. C.	2
Kingsville, Ont., Wigle, L.P.	1
Tregarva, Sask., Wylie, Mrs. Mary	1
	43

Average price per stallion, approximately, $535.50.

The following horses were purchased by the Experimental Farms Branch:

Morden, Man.	Alleyn, R	3 teams.
Manitou, Man.	Falls, Richard	1 horse.
"	Carswell, Thomas	1 team.
Fredericton, N.B.	Jewett, H. C.	1 team.
"	Hutt, J. T. G.	1 bay mare.
Keremeos, B.C.	Gibson, F. B.	1 bay mare.
Hawkesbury, Ont.	Rutherford, S. H.	1 bay mare.
"	Hanna, Samuel	1 bay gelding.
Point Fortune, P.Q.	Kirby, D. B	1 gray mare.
Hawkesbury, Ont.	Higginson, W. A.	1 bay gelding.
Point Fortune, P.Q.	Kirby, J. M.	1 black gelding.
Hawkesbury, Ont	Fraser, David	1 bay gelding.
Dalkeith, Ont	McCallum, M. J	1 black gelding.
Ottawa, Ont.	Brennan, P. J.	2 teams.
Kingsville, Ont.	Scratch, E. C	1 horse.
Vankleek Hill, Ont	Lefaivre, R.	1 bay gelding.
Brysonville, P.Q	Greig, D. J.	1 pedigreed mare and foal, and 1 pedigreed mare in foal.
Montreal, P.Q.	Climie, Geo.	1 team.
Truro, N.S.	Archibald, F.	1 team.
		33 horses.

GRAIN CONGESTION IN THE WEST.

On the Orders of the Day:

Mr. CRUISE: I would like to draw the attention of the hon. Minister of Trade and Commerce (Sir George Foster) to a matter that I consider of great importance. I have just received the following letter from my constituency:

Just a word to let you know how we are fixed in regard to wheat markets. A poor settler came to my place this evening after driving 17 miles to market only to find no room in the elevators to take his wheat in. He came five miles back with his load to my place. He was unable to purchase a few necessaries of life to take home to his family.

I would respectfully ask the minister to look into the matter and see if anything can be done.

Mr. PUGSLEY: I would like to read a letter which bears upon the same subject as that which my hon. friend from Dauphin (Mr. Cruise) has referred to. The following letter, dated May 8, has been addressed to me from Craigmyle, Alberta:

Dear Sir,—I live at Craigmyle on the Goose Lake branch of the Canadian Northern railway. I note that in the debates in the House of April 25 in reply to your query the acting Minister of Railways is reported to have said: "The Railway Commission operating under this Bill were able to relieve the situation in the Goose Lake district by having the grain hauled out and carried through."

Without wishing to mix in a political controversy, I want to say that on November 2 last, when I got my grain threshed, I ordered a car and have not got it yet, although I have made every possible effort even to making a complaint to the Grain Commissioners through the Board of Directors of our Provincial U.F.A.

I suppose that is the United Farmers' Association.

My number on the car order book was 160. When the railway station and car order book were destroyed by fire some ten days ago, I was still 22 numbers off getting my turn then.

Now, I am told that no cars are being allotted, awaiting instructions from commissioners.

The three elevators and a flat warehouse are full and have been for a very long time. There are also bins of grain all over town, so that I think there is easily 200,000 bushels there awaiting movement with quite a lot out on the farms. So that, so far as Craigmyle is concerned, the situation is far from being "relieved," or "grain hauled out."

I wish something could be done and I wish you would put it up to the acting minister that he certainly must be misinformed. I would not want to infer he was trying to mislead.

It is a new district, we have been to big expense, and we need the proceeds of this tied-up grain to pay our bills.

Yours, etc.,

(Sgd.) S. Stevenson.

The matter seems to me so important that I hope the Minister of Railways and Canals and the Minister of Trade and Commerce will take it up. This man gave his order for a car last November. It certainly seems an extraordinary condition of affairs that for six months he has not been able to get a car to take his grain to market.

Mr. REID: I will take this matter up with the Railway Commissioners on Monday.

Mr. PUGSLEY: I will send a copy of the letter to both ministers.

Mr. R. B. BENNETT: Mr. Speaker, while this matter may not be within the range of my responsibilities, I may say that I have been taking up the matter of the grain congestion on that line during the last ten days with the Chairman of the Railway Commission, and I was assured yesterday that 130 cars per day had moved out of that district until the congestion was relieved. The difficulty has been that the grain on that line goes out towards Saskatoon instead of in the other direction. I may also say that the United Farmers' Association of Alberta have presented the matter to me, and I have been taking it up with the Board of Railway Commissioners. I have their assurance that the matter has now been adjusted, and all the cars necessary have been put upon the line since that letter was written.

PUBLICATIONS OF THE DEPARTMENT OF MINES.

On the Orders of the Day:

Mr. NESBITT: I would like to draw the attention of the Government to a book that has been published by the Department of Mines. I will send it over to the right hon. the Prime Minister (Sir Robert Borden), and he will find that it well illustrates what the hon. member for North Simcoe (Mr. Currie) said a few moments ago in regard to the over-production of printing. When the Department of Mines Estimates were going through, we found a good deal of fault with some of the items, and the opinion was expressed that a good deal of the money was wasted. This book is not merely indecent but filthy, and it ought immediately to be burned.

RESIGNATION OF MR. LAVALLEE.

On the Orders of the Day:

Mr. LEMIEUX: May I ask you, Mr. Speaker, if you have received the resignation of the hon. member for Bellechasse (Mr. Lavallee)?

Mr. SPEAKER: The hon. member for Bellechasse has sent me his resignation. It was received to-day.

Mr. LEMIEUX: In due form?

Mr. SPEAKER: I think it is in due form.

Mr. LEMIEUX: Signed by himself?

Mr. SPEAKER: I know it is signed by the hon. member for Bellechasse, because I know his signature. I did not take notice as to whether it was in proper form, because it only came to me at half-past one. I will look the matter up and bring it before the House to-night.

SPIRIT RIVER FOREST RESERVE.

On the Orders of the Day:

Mr. OLIVER: I would like to ask the hon. Minister of the Interior if he is able to give a reply with regard to the two matters I brought to the attention of the House last Saturday during his absence. One relates to the proposed Spirit River Forest Reserve. The question was:

Is it intended to include land in townships 79-81 ranges 7-11 in the Forest Reserve?

This proposed forest reserve was the subject of a protest from the Spirit River Board of Trade. That is one question.

Mr. ROCHE: I looked up Hansard, saw the question, and got a departmental answer to the same, which I sent to the hon. member privately. I do not recollect its exact terms, but I understand it was to the effect that the proposed Forest Reserve would be satisfactory to the Spirit River Board of Trade, as it would not include the particular lands they had protested against being included.

Mr. OLIVER: I am afraid that their protest applied to very much more than the lands which the map the minister has been good enough to send over to me indicates as being withdrawn. However, I wished to have the minister's statement on record. The other matter I referred to was the homestead rights of soldiers who had entered for homesteads after enlisting. I drew attention to the fact that the announcement made public by the Militia Department gave a different interpretation from that given by the minister in the House, and I asked that this might be rectified in order that there might be one official decision upon

the matter. As this comes within the jurisdiction of the Department of the Interior, I would respectfully ask the minister to make a statement.

Mr. ROCHE: The orders sent out by the Interior Department were to the effect that, while absent on service all volunteers who had taken up homesteads prior to enlisting would have their entries protected and the time counted as residence. Those who have taken up homesteads since enlisting are having their entries protected from cancellation, but the period they are absent on service is not allowed to count as residence. A letter to this effect was sent from the Interior Department to the Militia Department, but the Militia Department misinterpreted it, with the result that erroneous information was published in their Militia orders. When our attention was called to this we immediately asked the Militia authorities to correct the mistake, and we also sent to our agents in the West information to the effect above mentioned.

Mr. OLIVER: I have seen in various newspapers the Militia Department announcement that is now stated to be in error, but I have not seen any announcement correcting that error. I think it would be advisable for the minister to suggest to the Militia Department that the correction be made as public as the original announcement.

Mr. ROCHE: That has already been done.

GOVERNMENT RAILWAYS SMALL CLAIMS ACT AMENDMENT.

On the Order for consideration of amendments made by the Senate to Bill No. 91, to amend the Government Railways Small Claims Act:

Mr. REID: I beg to move:

That this House doth disagree to the amendments made by the Senate to said Bill, and for the following reason: that parties having legal claims against the Crown in connection with the Prince Edward Island Railway now have their remedy in the courts, and it is not in the public interests that the said Bill be made retroactive.

Motion agreed to.

Mr. REID moved:

That a message be sent to the Senate to acquaint their Honours therewith.

Motion agreed to.

SALE OF SMALL ARMS AMMUNITION.

On the motion of Sir Thomas White for Committee of Supply:

[Mr. Oliver.]

Mr. D. D. McKENZIE (North Cape Breton): Last Monday I brought to the notice of the Prime Minister that I had a certain motion to make with regard to small arms ammunition, and he informed me that the Minister of Finance had an important motion to move on that day; so, of course, I had to defer mine. I have had no opportunity since of bringing it up until to-day, and as to-day is Saturday, not one of the prohibited days, I should like to go on with my motion now, if I am in order.

Mr. SPEAKER: The rule is that on Thursdays and Fridays the Speaker leaves the Chair without motion being put; so I think the hon. member is in order.

Mr. McKENZIE: This question has been receiving some attention from the House for quite a while. After several questions in regard to it had been put by the hon. member for Pictou and the hon. member for Carleton, a return was at last brought down to this House on the 6th of April, giving certain information as to small arms ammunition. The number of the return is 276. I think it is desirable that this matter should be brought to the attention of the House and that proper investigation be made. First of all I wish to quote what might be regarded as the principle laid down by the Prime Minister on the 15th of April, 1915, in respect to inquiries of this kind. Dealing with the question of irregularities in connection with public expenditures, he said (Hansard 1915, page 2612):

So far as these matters, or any other such matters, are concerned, what we propose to do in every instance is this—to investigate every suspicious case, and to exact restitution and punishment so far as the laws of this country will permit. And let me say now, for the benefit of Parliament, and particularly for the information of persons throughout this country who may be concerned in selling supplies or materials to the Government that if any man in Canada, be he Conservative or Liberal, proposes to commit any fraud or imposition upon the Government and people of this country, or to be concerned in any attempt for that purpose, especially in connection with the war vote, he should remember that there are courts of justice in this country, and that the doors of the penitentiary are yawning for every man who commits such an offence.

Keeping fully within that statement laid down by the Prime Minister, I propose to prove to you, Sir, and to this House, that there are at least good grounds for suspicion that this was an irregular transaction that should be properly investigated. This transaction is precisely set forth in

a letter from the Auditor General to Sir Thomas White, dated 3rd of April, 1916. I think the subject that I am discussing will be better understood if I read that letter to the House:

Ottawa, April 3, 1916.

Sir,—I beg to call your attention to a sale of ammunition made by the Department of Militia and Defence. Some time prior to the 31st of December last this department sold through Col. J. Wesley Allison, without the authority of the Governor in Council, over 3,000,000 rounds of ammunition at $20 per thousand. The department has been buying ammunition since the declaration of the war at $33 per thousand and has also been manufacturing ammunition at the Dominion Arsenal at a cost of $34.60 per thousand. Consequently there has been a loss to the Government on this transaction of over $45,000. It is alleged that this ammunition has been sold to Vickers Limited for testing purposes. I can hardly credit this statement owing to the magnitude of the sale; but if it were so, why was it sold at such a low rate and why was it necessary to obtain the services of Col. Allison? I have reason to believe that the ammunition was resold at an advance of about 25 per cent and that its destination was not Vickers Limited. I may be mistaken in this, but Col. Allison's connection with the transaction does not tend to allay suspicion.

I wrote to the Department of Militia and Defence asking to be furnished with an Order in Council and also the particulars of the sale, but have had no reply. I have therefore to request that you will obtain the approval of the Governor in Council for the sale and that you will also let me know why the rate was fixed at $20 per thousand.

I am, sir,
Your obedient servant,
(Sgd.) J. Fraser,
Auditor General.

To that letter the Minister of Finance replied on the following day:

Ottawa, April 4, 1916.

John Fraser, Esq., I.S.O.,
Auditor General,
Ottawa.

Sir,—I beg to acknowledge receipt of yours of the 3rd instant referring to a sale of ammunition made by the Department of Militia and Defence. I am not aware of the facts connected with the transaction, but shall at once bring your communication to the attention of the Prime Minister.

Yours truly,
(Sgd.) W. T. White.

On the same day the Minister of Finance wrote this letter to the Prime Minister:

Ottawa, April 4, 1916.

Dear Sir Robert:

For your information I enclose herewith copy of a communication which I have received from the Auditor General respecting a sale of ammunition by the Department of Militia and Defence, together with a copy of my reply thereto. No doubt you will ascertain the facts from the Militia Department and bring the matter to the attention of the Council later.

Yours faithfully,
(Sgd.) W. T. White.

The Rt. Hon. Sir Robert Borden, P.C.,
Ottawa.

That is a part of this history of the case so far as its discovery by the Auditor General is concerned, the steps that he took in regard to it and how the matter was brought to the notice of the Prime Minister. No doubt, according to the suggestion of the Minister of Finance, the matter has been before the Council, but there is no record in this return as to whether it was before the Council or not, and if it were before the Council, there is no report in this return as to what was done. I am not sure that there should be in this return anything that would transpire before the Council; I presume that it would have to be dealt with in some other way, because I understand that what is done in the Council does not ordinarily find its way back to the department concerned.

This large amount of ammunition was sold, as I take it, in an irregular way. On the first of May of this year the Prime Minister told us, as reported on page 3377 of Hansard, that as far as possible everything that was being done in connection with war matters was done by Order in Council.

Sir ROBERT BORDEN: I said that all purchases were made.

Mr. McKENZIE: Perhaps the word "purchases" was used: but I think the language of the Prime Minister was sufficiently broad to give us to understand that an Order in Council was passed whenever that would be necessary in connection with any war transaction. This is such an extraordinary matter that I presume the Prime Minister would not have it in mind when he was making that address, and the sale of ammunition, when we are buying ammunition everywhere, would not regularly be in his mind and he would make no statement that would cover this case exactly. I think, however, the broad meaning of the statement made by the Prime Minister on the first of May was that, when money or money's worth was passing out of the hands of the Government, or when any money or money's worth was coming into the hands of the Government in connection with the war, proper recommendation was made and proper sanction was given to the

3 p.m.

transaction by the formality of an Order in Council.

Sir ROBERT BORDEN: What was the page from which the hon. member quoted?

Mr. McKENZIE: Page 3377. The whole of the Prime Minister's speech is not, of course, on that page, but I think what I especially referred to will be found there. The point that I particularly make is that, at all events, ever since the war broke out—and this transaction took place since the war broke out—nothing should have been done in connection with the sale of any arms or ammunition or anything else that would be specially required in connection with the war except with the full knowledge of the Governor in Council and with the full knowledge of the Government, and even if in any department the practice did exist that war material could be disposed of or done away with in a less formal manner, such regulations, when the war broke out, should be suspended and the greatest possible care exercised in the disposing of any property of that nature.

When I go a little further into the documents that have been brought down, it will be seen that there is only one precedent previous to the last year or so for the sale of ammunition in the Dominion of Canada, and that sale was carried out and sanctioned by an Order in Council, and up to this date, so far as the history of the department is concerned, there is no precedent for the sale of ammunition or anything appertaining to the defence of this country without an Order in Council. I submit therefore that this sale, taking place as it did, without an Order in Council, is irregular, improper, and that even at this late date, an Order in Council should be made ratifying it, if it can be ratified, and if not, that the proper steps should be taken to chastise and properly deal with the parties responsible for disposing of our property in this way.

It will appear further from the papers which I purpose reading that nobody seemed to know where this ammunition went. It is a most extraordinary thing that ammunition would be sold by the Department of Militia and Defence in this country, without any knowledge of where it was going or to whom the department was selling. I submit that it would be a most extraordinary thing if this department should permit the selling of guns by other people outside the department, much more if they should do it themselves. And if they were permitting the sale of ammunition, it is just as bad. We have been hearing that we are in danger of invasion by overzealous Germans of the United States; that plots and intrigues are entered into between parties on the other side of the line and people in Germany to do damage to this country, and that they were going to invade Canada. There will be evidence given that this material went to the United States without any knowledge as to its destination and without any proper convoy to make sure where it was going. I submit, therefore, that it was quite possible, even probable, that the ammunition sold by ourselves was going into the hands of these rebels, if there be such, who planned to invade Canada, and who would shoot us down with our own ammunition. It was a very grave and serious matter that ammunition of this kind, or of any kind, should be passed out, possibly to our enemies, or even allowed to go beyond the control of our officials, without any definite knowledge of its destination or by whom it was to be handled. This will seem particularly reprehensible when I point out to you that in this return appears an official statement that no such ammunition should be sold at all. I refer to one document dated 13th November, 1914, a letter addressed to the Deputy Minister of Militia and Defence, as follows:

> Under existing circumstances, low stock of ammunition, do you not think it would be wiser to hold this ammunition until such time as the stock in depots is brought up to normal condition?
>
> See folio 122 hereof.
>
> (Sgd.) D. A. Macdonald,
> Major-General.

Then there is a communication to the Quartermaster General, signed by the deputy minister:

> We should not dispose of one single round.

That is the decision reached by the deputy minister upon this subject.

Mr. LEMIEUX: What was the date?

Mr. McKENZIE: It was the 13th October, 1914, when the war was well under way. I have looked through this file very carefully, a very bulky file, and with a great deal in it that does not bear upon this subject, but I can find no official reversal of that decision of the deputy minister. There is nothing to show that any proper authority was given for the sale of ammunition, and it was therefore, so far as I can find out, sold in contravention of this decision and report made by the deputy

minister, who, no doubt, is responsible in connection with this matter, and who thought, I suppose, that he was taking such steps as were necessary to hold in stock whatever ammunition we had.

I shall be obliged to give to the House, so that there may be no mistake, an exact report of what appears on the file, and I shall do so as briefly as possible. On page 16 of this file I find this letter. It is marked "confidential." Let me say, Sir, that there should be no confidential letters passing between private individuals and the Department of Militia during time of war, unless that private individual be sufficiently important to give him license to do business of this kind. Of course, this letter is signed by J. Wesley Allison, and he may come within that designation:

September 8, 1915.

General D. A. Macdonald,
Quartermaster-General,
Ottawa, Ont.

My dear General,—Referring to my arrangements with you some time ago for the purchase of 236,000 .303 Mark VI cartridges for Sir Trevor Dawson, I have just received a cable requesting me to have those shipped to C. A. Searles, Vickers House, Broadway, Westminster, London, at the earliest possible moment.

I have cabled asking authority to pay you from their account here for the above cartridges. Therefore kindly send me your bill and I will see that it is paid.

Faithfully yours,

J. Wesley Allison.

There is a note on this letter:

Spoke to Col. Helmer, who says Mark VI ringed.

J. F. M. (S.H.)

10-9-15.

Give I.O. 4821.

I take the "S. H." to be the initials of the Minister of Militia (Sir Sam Hughes). Then follows, on the 23rd of September, another memorandum:

With reference to Col. Wesley Allison's letter dated September 8, requesting that 236,000 cartridges, S.A. Mark VI, be shipped to Vickers House, London, Eng., will you please note that shipment left Montreal yesterday on ss. Corinthian.

The cash debit voucher to recover value of this ammunition will be passed to you as soon as received.

Should not Colonel Allison's letter go on H.Q. file.

(Sgd.) J. M. M.

Ottawa, 23-9-15.

On the 24th of September there is another letter sent by an official of the department to Colonel Allison:

Dear Colonel Allison:

General Macdonald, Q.M.G., has transferred your letter of the 8th instant to me, with the information that the shipmen of 236,000 cartridges S. A. Mark VI left Montreal yesterday on ss. Corinthian. This ammunition was consigned to C. A. Searles, Vickers House, Broadway, Westminster, London.

Your letter to General Macdonald was marked "Confidential" and as we do not like to have this letter on our file as showing the authority for shipping the ammunition, would you please drop me a line that the word "Confidential" may be overlooked and oblige.

Yours truly,

(Sgd.) Lt.-Col. Military Secretary.

On the 28th of September there is a letter addressed to Lieutenant Colonel Charles F. Winter, Military Secretary, as follows:

Dear Colonel Winter:

In answer to your esteemed favour of the 24th instant, would say that you may overlook the word "Confidential" in my letter of the 8th instant, to General Macdonald, Q.M.G., in reference to the 236,000 cartridges, S.A., Mark VI, shipped to Vickers House, London.

Faithfully yours,

J. Wesley Allison.

There is this further letter, marked "confidential":

Confidential.

Hotel Manhatten, Madison Ave.,
New York, Oct. 6, 1915.

General D. A. Macdonald,
Quartermaster-General,
Ottawa, Ont.

Dear General Macdonald:

I have just received instructions from London requesting me to order from you an additional 750,310 .303 Mark VI cartridges to be shipped to the same address as referred to in my letter of September 8. They have asked if you would permit them to deposit the amount of the purchase price to the credit of the Canadian Militia Department in London, at the Bank of Montreal there.

Thanking you for a reply, and with kind personal regards, I am,

Yours very truly,

J. Wesley Allison.

Minister says issue.

(Sgd.) D. A. Macdonald.

8th October, 1915.

This is marked on the letter: "Minister says issue. (Sgd) D. A. Macdonald, 8th October, 1915."

There is another letter dated Morrisburg, Ontario, October 8, 1915, as follows:

General D. A. Macdonald,
Quartermaster-General,
Ottawa, Ont.

Telegram fourteenth received. Ship seven hundred fifty thousand three hundred ten stop three hundred and three mark six to same adedrss as others, Vickers House. Mail account to me here.

J. Wesley Allison.

Then there is the following communication dated October 14, 1915, and addressed to Col. J. Wesley Allison, Manhattan Hotel, New York city:

Ammunition twenty dollars per thousand boxes extra average one dollar forty-seven cents each.

(Sgd.) General Macdonald.

I suppose that means that the boxes average $1.47 each. Then follows some way bills and other statements which are of no particular value to the House. On November 23, 1915, the following letter was addressed to Col. J. Wesley Allison, Morrisburg, Ont.:

With reference to my letter of the 1st instant, numbered as above, please find copies in duplicate of vouchers No. B. 105 and B. 176 for Mark VI ammunition shipped to Vickers, London.

Will you kindly instruct your principals to place the amount of $20,926.94 to the credit of the Receiver General of Canada in the Bank of Montreal in London.

(Sgd.) J. F. M.,
Lt.-Col., P.O.O.

Then, there is a letter from headquarters:

C. 1718, A.P.M.G. Copies of the attached C.D. V, Vs, Nos. B. 105 and B. 176, totalling $20,926.94, have been passed to Col. J. Wesley Allison, Morrisburg, the Canadian representative of Vickers, Ltd., of London, Eng., with request that he instruct his principals to place the amount to the credit of the Receiver General of Canada in the Bank of Montreal in London.

Copy letter attached.

(Sgd.) J. F. Macdonald,
Lt.-Col., P.O.O.

Ottawa, 23rd Nov., 1915.

A note at the foot says: "Noted, Lt. for A. and P.M.G.'

There is another letter dated November 11, 1915, as follows:

An application for an additional million rounds of Mark VI ammunition has been received from Col. Allison on behalf of the Vickers Co. Ammunition to this amount is available at Quebec. It is part of this which is under suspicion. Should this issue be made at same price as the last two issues, please?

J. F. Macdonald,
Lt.-Col., P.O.O.

This is marked "O.K., signed S.H." I take these initials to be those of the minister. This note appears underneath:

Spoke Q.M.G. that Col. Allison wanted two millions. Told to increase to that amount.

(Sgd.) J. F. M.

It will be stated, perhaps, that all this ammunition was defective. It will be noted, however, that nothing was said about defective ammunition until the writing of this letter of November 11, 1915. Previous to that at least two shipments of considerable quantities of ammunition were made, and if that ammunition was defective I think it is fair reasoning to say that some observation to that effect would have been made before that date.

The following communication, which I take to be a telegram, was sent on December 18, 1915, to General D. A. Macdonald, Quartermaster-General, Militia Department, Ottawa:

Can you ship our friends London two million more .303 Mark VI? General Hughes here and approves, but requested me to write you.

(Sgd.) J. Wesley Allison.

The Minister of Militia and Defence was evidently in New York at this time with his friend Allison, and had consented to this issue, but wanted to have it done through the officers of the department. There is another telegram sent from Morrisburg on December 20, 1915:

General D. A. Macdonald,
Q.M.G., Militia Department,
Ottawa.

Please wire answer Morrisburg my telegram regarding two million more.

Evidently Mr. Allison had come home to Morrisburg after sending the telegram and before receiving a reply, and he asks for a reply to his telegram of the day before. On the 20th of the same month, two days after the minister had evidently consented to the sale, we find a somewhat ordinary question asked by him. He asks: "to whom is this to be sold, and where is it going?" I think it will strike the ordinary business man as peculiar that two days after the minister had consented to the sale he should make inquiry is to who was buying and to whom the articles were to be sent. I will read the departmental report:

Col. Allison has applied for 2,000,000 rounds of S.A. ammunition, Mark VI, for his principals, the Vickers Maxim Co. of London. There is available in ordnance charge this amount of ammunition. It is part of that under suspicion. The amount of this ammunition already shipped to this company is 2,986,000. Shall issue be made and at the price formerly charged, $20 per thousand?

(Sgd.) J. M. Macdonald,
Colonel, P.O.O.

Minister says "O.K."

(Sgd.) D. A. Mac.,

Dec. 20, 1915.

Over the minister's "O.K." is this statement:

Ascertain where and by whom this is to be used if sold by O. C..

I assume that O. C. means Order in Council.

I wish to bring to the notice of the Prime Minister and of the House this extraordinary inquiry on the part of the minister two days after having consented to the sale of this two millions. He asks: "Ascertain where and by whom this is to be used if sold by Order in Council." Evidently the sale was made before there was any Order in Council. Still further down on the same page is this note:

Please note minister's instructions. If this ammunition is to be sold it must be done by Order in Council and the minister's inquiry should be fully answered.

Eugène Fiset,
Deputy Minister.

There is here a draft of an Order in Council dated January 5, 1916. It remains, of course, for those who are familiar with the inner circles and whose responsibility it is to know whether this Order in Council was passed or not, to tell the House and the country whether it ever received the proper sanction. This is not exactly a draft; it is perhaps a recommendation, or it appears to have passed the stage of a recommendation. I will read it:

January 5, 1916.

To His Royal Highness the Governor General in Council.

The undersigned has the honour to submit for the consideration and approval of Your Royal Highness in Council an application from Vickers, Limited, for the purchase of 4,985,900 rounds of S. A. ammunition, mark VI. This is part of the stock of mark VI ammunition which, "under suspicion," was not allowed to be used with rifles in Canada. The price of the ammunition to be $20 per thousand rounds. This ammunition, while rejected for rifle use, is, however, reported to be suitable for the testing of Vickers machine guns now being manufactured in very large numbers in England.

The matter is respectfully submitted.

Sam Hughes,
Major General,
Minister of Militia and Defence.

There is no record beyond that as to what became of this Order in Council, whether it was passed or not; but, so far as this House is concerned, from any information that any member can get, I have a right to believe that all the information is on this file, and there is nothing here to show that this Order was ever passed. There is also a letter from the Auditor General which I have read to the House wherein he asked the proper department to give him a copy of this Order in Council. That request of the Auditor General was never complied with. I think, Sir, it is a fair deduction that the Order in Council was never passed; otherwise the minister or his officials would have been only too pleased to hand it over to the Auditor General when required. A request was also made to the Minister of Finance, who, with the Auditor General and other officials, is the guardian of the treasury and is supposed to see that everything is done decently, regularly and in order, to make a demand for this Order in Council, and I do not think it would have been infra dig for him to pass it over to the Auditor General if he could get it. He did not get it, and he did not send it, and I have every reason to think that the hon. Minister of Finance would have gladly have filled up the gap and have rectified this irregularity if he had been in a position to do so. He did not get the Order in Council, and I am credibly informed that the Order in Council, if made, has never reached the proper officer in the Auditor General's Department. The Minister of Finance passed the whole thing over to the Prime Minister himself, and I have every reason to believe that his business instinct would lead him to make inquiry for the Order in Council and to see that it was furnished if it could be found. It has not been forthcoming so far. All that we know is that this ammunition was sold, and that there was evidently some irregularity, because the minister himself comes forward and says that he should have had an Order in Council for the selling of it, and that he did not get it. Why he did not get it is a matter of inquiry, and it is quite possible that it was determined by the proper authorities that such an Order in Council could not be made, and that the goods should never have been sold.

That, Sir, is, in a general way, the case. Besides, the file shows that the cost of production of these goods to this country was $34.60 per thousand rounds. They were then sold at $20 per thousand rounds, so that there was a loss to the country on every thousand rounds of the difference between $20 and $34.60. It has been reported, and I think if it is properly inquired into it can be shown, that these goods were not sold to Vickers-Maxim at all, but were sold to the Admiralty. Now, it strikes the ordinary individual, and I think the members of this House, as somewhat unique, that although we have a Department of Militia and Defence to which we are giving millions of dollars annually for the proper discharge of duties of this kind, we have not the machinery

by which we can sell these few rounds of ammunition direct to the British Admiralty without the intervention of Colonel Allison. We have often heard the prayer and offered it ourselves, confessing that the brittle thread of our existence is in the hands of the great power above. But it seems to me that the brittle thread of the existence of the Government—and the Lord knows it is brittle enough—is in the hands of Allison, and that they cannot do anything, they cannot move a finger, they are unable to do the smallest little thing, without the providence of this man being invoked. It has been hinted, and I see in the newspapers to-day that this matter has already been referred to the court established by the Government nearly a year ago, that is the court presided over by Sir Charles Davidson, who is assisted by eminent counsel, Mr. Thompson. I do not think it should be left to that commission, because I think there should be a vigorous inquiry into this matter. Whatever may be the nature of the inquiry in that court to which I have referred, it is moving very slowly indeed, and I do not think the Prime Minister will think it too much for me to say that, in my judgment at all events, this court should have been heard from in some shape or another before now. It is nearly a year since matters were submitted to them, and I think it would be only fair to expect that a report should have reached us in the earlier stages of this session, so that the people of this country, and Parliament, would know what this court was doing. So far we have not heard a word from them of their proceedings. The relief we may hope to receive from that court reminds me of the old story of the Indian whose wife had been very sick for many months. The priest came to see him and to console him, and said to him: Never mind, Noel, the Lord will relieve you. Oh, yes, says the Indian, the Lord is no doubt very good, but he is very slow some times. I must say that, so far as this court is concerned it may be very good, but, like the Indian's Lord, it is very slow sometimes, and I would expect, if this matter is to be sent to a court at all, that it would be sent to a court from which we might have some hope of a decision some time before the present generations pass away.

These, Sir, are the facts upon which I base this motion. I move:

That it appears from official papers laid on the table of this House, that the Minister of Militia, since the beginning of war, illegally and without any power or authority, sold a quantity of small ammunition exceeding 3,000,000 rounds to J. Wesley Allison, who represented himself as acting for Vickers, Maxim, Ltd., at a price of $20 per thousand rounds. That the quantity first intended to be sold was 5,000,000 rounds, and that over 3,000,000 rounds was actually delivered.

Be it and it is now resolved, that the depleting of the stock of ammunition held by the Government exclusively for the purposes of the war, and the disposal of the same to any one but the Imperial authorities, was a serious danger to the country and an offence which was further aggravated by the circumstance that there is strong reason for believing that the said ammunition was subsequently sold to the British authorities at an advanced price.

That the commission issued on the 3rd April to Sir William Meredith and Mr. Justice Duff to investigate certain contracts of the Shell Committee be also empowered to investigate the sale of small ammunition to the said J. Wesley Allison, as well as the disposition which he made of it and that for the purposes of the said investigation, the said powers and authority now vested in the said commission be continued and extended as far as may be necessary.

In the light of the facts which I have presented to you, Mr. Speaker, I make this motion.

Right Hon. Sir ROBERT BORDEN (Prime Minister): Mr. Speaker, my hon. friend (Mr. McKenzie) has brought on this matter to-day without extending to the Government a courtesy that in my experience has seldom been withheld. It is the practice when a motion of want of confidence is to be made, that the hon. gentleman who proposes to make it will send at some reasonable time in advance a copy of the motion which he proposes to move. I did not know that this matter was coming up to-day, nor have I had from my hon. friend the courtesy of receiving a copy of the resolution he has moved, the terms of which I did not know at all until he read the motion to the House.

Mr. McKENZIE: I do not want to be regarded as discourteous. I wrote the Prime Minister a letter in which I made reference specifically to this as being a matter that had been referred to in a letter from the hon. Finance Minister (Sir Thomas White) to himself, bearing date the 4th April. I saw the Prime Minister since and discussed this matter with him, and he did not complain that that was not sufficient notice. I did not think it was necessary to bother him with a copy of the motion when he already had the full substance of it. I did not know, even if I gave him another notice, that I could be sure of going on to-day, but if the min-

ister has not sufficient notice he need not go on with it now.

Sir ROBERT BORDEN: We will go on with it now, but it would have been better if my hon. friend had sent, some hours in advance, the usual notice containing an intimation of the terms of the motion, in order that the Government might have known what they had to meet in the proposal which was to be submitted to the House. The conversation which took place between my hon. friend and myself was simply this, that I explained to him that the hon. Minister of Finance (Sir Thomas White) desired to go forward with certain proposals as to which there had been an arrangement between himself and hon. gentlemen on the other side. I informed him at that time that an inquiry into this matter had already been authorized and that the inquiry would take place before Sir Charles Davidson. My hon. friend, in reply did not say that he was going on with the motion but he said that he desired to say something on the subject. The words impressed themselves upon my mind; I remember them precisely. I did not know until my hon. friend rose this afternoon that he really did propose to make this motion seeing that an inquiry had already been ordered.

However, I am glad to know that if he finds Sir Charles Davidson slow in reporting about matters into which he has made inquiry, he does not find him slow in proceeding with an inquiry once he has been authorized to do so. It was necessary to pass an additional Order in Council because when the Minister of Justice, with whom I had spoken on the subject about ten days ago, desired Sir Charles Davidson to proceed with this inquiry, he was told by Sir Charles Davidson that the terms of the Order in Council passed nearly a year ago, were not wide enough to embrace this matter. Therefore, the Minister of Justice brought a report to council on Monday last which was approved by His Royal Highness on Tuesday, and as soon as the Order in Council had been communicated to Sir Charles Davidson, he made arrangements to subpœna the witnesses and to proceed with the inquiry, with the result that the investigation commenced before my hon. friend made his motion. I understand that the matter was under investigation by Sir Charles Davidson this morning. Therefore, it would appear that the motion of my hon. friend is designed either to find fault with the commissioner who is making the investigation and to suggest another tribunal, or it is designed as a condemnation of the Government and of my hon. friend the Minister of Militia and Defence (Sir Sam Hughes).

Mr. MACDONALD: Where is the inquiry being carried on?

Sir ROBERT BORDEN: He is holding it in the city of Ottawa.

Mr. MACDONALD: That is a pretty large place.

Sir ROBERT BORDEN: I really do not know the precise place. My hon. friend the Minister of Militia and Defence informs me that it is in this very building.

Mr. MACDONALD: Is it a private or a public inquiry?

Sir ROBERT BORDEN: It is a public inquiry.

Sir WILFRID LAURIER: It is a public inquiry unknown to the public.

Sir ROBERT BORDEN: In what way is it unknown to the public?

Sir WILFRID LAURIER: Because the Prime Minister says he does not know where it is sitting and he is part of the public.

Sir ROBERT BORDEN: Does my right hon. friend expect me to take note of the particular place at which any commission holds its sittings?

Sir WILFRID LAURIER: No, but I would have supposed that my right hon. friend would have known.

Sir ROBERT BORDEN: Well, I found out very quickly from the Minister of Militia and Defence. It seems to me that my right hon. friend is hypercritical when he suggests that a minister of the Crown must know all these details about the proceedings of a commission that is carrying on its work. The commission is sitting for the purpose of holding a public investigation. I understand that the representatives of the press were present this morning; they knew about it, there is nothing secret about it and if it is desired, Sir Charles Davidson will no doubt send to my right hon. friend, or to any of his followers whom he may designate, notice of the time and the place at which the commission will sit for the purpose of this, or any other investigation. I am glad that my hon. friend the member for North Cape Breton (Mr.

McKenzie) has arrived at the conclusion that the Royal Commission composed of Sir William Meredith and Mr. Justice Duff is an efficient commission. Great objection was taken to the appointment of that commission for the purpose of investigating the matters they now have in hand, but my hon. friend from North Cape Breton is evidently satisfied with the commission so far, for he suggests that a further inquiry be referred to them.

As to the inquiry now before the Royal Commission, I might point out that it relates to an expenditure by the Government of the United Kingdom, whereas the inquiry with which Sir Charles Davidson is charged relates to matters with which the Government of Canada is concerned. For that reason, therefore, it was more proper to refer this matter to Sir Charles Davidson than to a commission which was appointed for the purpose of investigating expenditures made, not by this Government, but by the Government of the United Kingdom. There was this further reason for referring this matter to Sir Charles Davidson. Certain persons who are not usually in Ottawa, and who might be able to give necessary evidence in this inquiry, are in Ottawa at the present time. It could hardly be expected that Sir William Meredith and Mr. Justice Duff would interrupt the proceedings they are now carrying on, for the purpose of taking up this inquiry. On the other hand, Sir Charles Davidson was in a position to take it up at once, and secure the evidence of witnesses who are now available in the city of Ottawa. It was therefore more convenient, and more in the public interest, as we thought, to refer this matter to Sir Charles Davidson rather than to Sir William Meredith and Mr. Justice Duff. The Government have absolute confidence both in the one commission and in the other; we have absolutely no choice between them. The only thing the Government would desire from either commission would be an impartial and thorough inquiry, and it would secure that inquiry whether the matter was referred to Sir William Meredith and Mr. Justice Duff or to Sir Charles Davidson.

Coming to the points which my hon. friend has made, he has alluded to the Auditor General's letter, and to the fact that no Order in Council seems to have been passed. This subject first came to my attention in the first or second week of February last, when some further information which had been asked for was received from the Department of Militia and Defence. In consequence of the report then received still further information was asked for, and this did not come to hand until the first week of March, and did not come to my attention and was not read by me until after the Minister of Militia and Defence had left for England. I therefore did not read the information which has been brought down and laid on the table of the House, and which is contained in a memorandum from the Quartermaster General, until after the Minister of Militia and Defence had left for England. The question was discussed in the public press, and it was alluded to by my right hon. friend who leads the Opposition on the occasion when the Minister of Militia and Defence made a statement to the House with regard to the allegations of the hon. member for Richmond. It seemed to me then that as discussion had taken place and criticism had been made in the public press, and as my right hon. friend who leads the Opposition had made certain statements—I will not say insinuations—with regard to the matter, the subject was deserving of inquiry. We were aware then that witnesses whose testimony might be important and even necessary, would probably be very soon available in Ottawa, and for that reason no further proceedings were taken upon the report to Council, and the matter stood until the inquiry, as to which I spoke to the Minister of Justice about ten days ago, could be made. That inquiry is now proceeding. Therefore, so far as this matter calls for an inquiry, I have only to say that an inquiry is already in progress before a gentleman of the highest integrity, ability and experience, and in whose capacity to make an impartial and thorough inquiry I am sure the country will have absolute confidence, and in whom the Government has the like confidence.

My hon. friend not only makes a demand for an inquiry, but proceeds to censure the Minister of Militia and Defence, and incidentally the Government, for the course which has been adopted. Let us look for a moment at the circumstances to which the hon. gentleman has called attention. In the first place he says that no one seemed to know to whom the ammunition was sold, or where it was going. The hon. gentleman is not well advised in making that statement, because the documents upon their face show that the ammunition was

sold to Vickers, Limited, and the shipping documents which have been brought down and laid upon the Table show that the ammunition was shipped in care of Vickers, Limited, London, England; therefore, so far as the person to whom it was sold and the place to which it was shipped are concerned, there is no warrant for the statement which my hon. friend has made.

He then goes on to suggest that the price at which this ammunition was sold was altogether too low. He suggests, rather than states, that it was perfectly good ammunition suitable for use by the troops at the front, and that ammunition of that type is now costing $34 or thereabouts per 1,000 rounds. He says in effect that the Minister of Militia and Defence sold for $20 per 1,000 rounds ammunition which had to be purchased at the price of $34 per 1,000 rounds. Either my hon. friend has not examined the papers or he was not desirous of making a fair and reasonable statement to the House. I shall take occasion to quote from the documents to show precisely what the facts are. As a matter of fact, only four months before this war broke out this same ammunition was offered for $12 per 1,000 rounds to the Ross Rifle Company, for testing purposes, and was refused by them. Further, the price for the same ammunition fixed by the responsible officers of the Department of Militia and Defence before this war broke out was $10 per 1,000 rounds, which is one-half of the first cost, as I am informed. This is the very same ammunition for which this country is to-day receiving $20 per 1,000 rounds.

It is worth while perhaps for me to refer to the report of the Quartermaster-General with regard to this matter. The regulations for the Army Ordnance Service, part 2, paragraphs 552-3, define the steps to be taken in regard to ammunition which has been declared unserviceable, and reads as follows:

> Small arm ammunition, having been sentenced "Unserviceable" by the Inspecting Ordnance Officer or other proper authority, and the sentence having been approved, will be dealt with as follows: the bullets will be extracted, the cartridges will then be fired off and loose cordite will be burned. Where it is for any reason impossible to destroy ammunition in the above manner, it will be drowned in deep water.

A few years ago the Minister of Militia caused a very careful investigation to be made with regard to the ammunition in stock in this country. The report of the British experts who made that investigation has been brought down and laid upon the table of the House. It is proper that I should read a portion of that report:

> As to small arms ammunition, we do not recommend the continuance of ringing on new ammunition. We regard the ringing as a satisfactory method of checking the blow-backs to which Dominion Arsenal ·303 cartridges have in the past been peculiarly liable. Cases recently manufactured—with cap chamber better formed and freer from scores, etc.—do not require ringing, and we do not consider that in ·303 cases of future manufacture, any necessity should arise for this treatment, which should be regarded only as a means of overcoming defective manufacture.

The report is a very long one and indicates that ammunition manufactured during certain years, more particularly when my hon. friends opposite were responsible for the management of the Dominion Arsenal, was not of a quality which would justify its use in active service. The report continues:

> Some 40,000 to 50,000 cartridges have been rejected on examination after ringing.

I do not precisely understand the operation of ringing, and it will be explained by my hon. friend the Minister of Militia and Defence (Sir Sam Hughes). It was a device for making defective ammunition serviceable by overcoming certain defects which had occurred in its manufacture. The report continues:

> We would suggest that these be visually examined for elimination of scored cases, etc., and used for machine gun practice only.

Further on the report proceeds:

> Ammunition subsequent to February, 1908, to be ringed, visually examined for ringing and for external scores, and for elimination of the old e.g. (07) cases, and subject to firing proof before reissue. For each lot of 200,000 rounds, 1,000 rounds should be taken for proof; if a burst occurs, a second proof of 1,000 should be taken of the lot in question and also of the lot immediately preceding and the one immediately following. We do not think that ammunition manufactured in and prior to February, 1908, is likely to be rendered serviceable even after ringing on account of the uncertain annealing and its liability to bursts, and we are of opinion that the ammunition should be broken up and the cases might be used for blank and a certain saving thereby effected.

I want my hon. friend and the House generally to understand that of the 3,000,000 rounds which have been sold 2,000,000 are of the character which I have described. Those 2,000,000 rounds were ordered by the Barlow report—the report of British officers brought to this country for the purpose of making a thorough examination of our ammunition—not to be ringed, not

to be used for any purpose, but to be broken up, and it was recommended that the cases should be used for blanks and a certain saving thereby effected. Therefore, so far as these 2,000,000 rounds were concerned, they were absolutely condemned by the Barlow report, and the 4 p.m. Minister of Militia and Defence, when the matter came before him, wrote the word "destroy," because it was obvious that that ammunition was not fit to be used in active service, nor even for practice.

Now, a précis of what took place will be found in the report of the quartermaster general, which has been brought down to the House, and which, after setting forth the regulations of the Army Ordnance Service, goes on to say:

The Barlow report condemned as unserviceable all '303 ammunition manufactured prior to February, 1908, and recommended same to be destroyed.

I have just read a quotation from that report. Then the following memoranda are noted:

Memo. from Director of Artillery proposing selling all Mark VI ammunition of five years of age and older at half price, dated 24th October, 1911.

Submission along this line to Militia Council by Master General of Ordnance, approved by Militia Council, dated 15th November, 1911.

Notification by Director of Artillery to Principal Ordnance Officer of decision of Council to sell and asking for insertion in Militia Order, dated 18th November, 1911.

A militia order to that effect was made thereupon in the same month.

Telegram, 4th of May, 1914, from manager, Ross Rifle Company asking what quantity of ammunition department would sell.

That was followed by a recommendation of the Master General of Ordnance to sell it, and there was thereupon a reply from the deputy minister to the Ross Rifle Co., offering to sell 10,000,000 rounds at $12 per thousand rounds. That offer was dated the 18th of May, 1914.

The next document to which the Quartermaster General calls attention is a memorandum dated the 29th July, 1914, from the Quartermaster General to the Master General of Ordnance, suggesting that this ammunition be destroyed by drowning. The destruction of ammunition by drowning simply mean that it is thrown into deep water where no harm can result from it. The suggestion was that this ammunition should be disposed of in that way rather than by the method proposed in the Barlow report. It will be remembered that the commission made a recommendation as to taking out and utilizing the cordite, and thereby effecting some saving. My hon. friend the Minister of Militia and Defence says that the proposal to break up the ammunition and save the cordite was in virtue of a departmental regulation and not a suggestion of the Barlow Commission.

The next document, which is dated July 30, 1914, just before the war broke out, is a reply from the Ross Rifle Company refusing the offer of sale at price quoted.

There are some of these documents which I think it might be of interest for me to read to the House. I am afraid they are not arranged here in chronological order, but I will read them just as they are, and hon. gentlemen, I think, will sufficiently understand the situation.

The first document that I have here is dated January 8, 1914, and is a report from General Morrison, who is now at the front:

According to the findings of the Barlow report on the Dominion Arsenal and its output all '303 ammunition made prior to February, 1908, is condemned as unserviceable, and it is recommended that this ammunition should be destroyed.

During the past summer some of this ammunition was used by the Royal Canadian Regiment at Halifax with very bad results, though no serious accidents happened.

I would suggest that orders be issued that no more of the ammunition made prior to February, 1908, should be issued to or used by troops, pending the decision of the minister as to what disposition is to be made of it.

Regarding all Mark VI ammunition made subsequent to January 31st, 1908, the report recommends that it should all be tested before being passed as serviceable. No action has yet been taken by the Honourable the minister, in council regarding this recommendation, possibly because until the arrival of Captain Gordon Ogilvie from Woolwich to take over the appointment of inspector of small arm ammunition there was no officer available to carry out the tests. Further action on this will be reported on at an early date.

Hon. gentlemen should bear in mind that all this ammunition which has been sold is what is known as Mark VI, which is only intended for Mark II Ross rifle. The authorized Ross rifle at the present time is the Mark III Ross rifle. Therefore, not one single round of this ammunition, even if it had not been condemned, could have been used in active service at the front because our troops are armed, not with the Mark II Ross rifle, but with the Mark III Ross rifle. I consulted with the Master General of Ordnance himself, and he told me that not one single round of any ammunition of Mark VI should be issued for service at the front, as it would be unsuitable; and the ammunition which must be

issued for troops at the front is Mark VII ammunition. The only ammunition sold was Mark VI, and it included two million rounds which had been condemned as absolutely unserviceable. The next document I wish to read is dated 24th October, 1911. It is signed by Major General Elliott, a British Officer of long experience, who entered the Canadian service some years ago and whose work has been thoroughly satisfactory, indicating that his capacity and experience are all that could be desired:

With reference to your return of .303-inch ball ammunition; it is suggested as ammunition over 5 years old is liable to deteriorate that all S.A.A. of dates up to and including 1906 beginning with the oldest should be sold at half price. This will make more certain of a turnover which is absolutely necessary, and will it is thought be appreciated by all ranks interested in rifle shooting and also by Rifle Associations and Cadet Corps.

It is at any rate better to make use of old though serviceable ammunition rather than to keep it so long that it becomes useless and has to be destroyed. An instance of this as you know has lately occurred.

Hon. members will bear in mind that this was nearly four years ago, and his suggestion was that they should begin to dispose of the ammunition of 1905 manufacture which, at the present time, would correspond, roughly speaking, with that manufactured in 1909. A memorandum upon that was made by Major-General Hallick, prinicpal Ordnance Officer, in the following words:

It is necessary before giving instructions, to ascertain from S.O.O.'s the date of manufacture of all ammunition on charge which in the consolidated return is shown as "prior to 1903". This is in hand.

It is assumed you will obtain council's authority for the proposed reduction in price for sales?

Then I come to a report of the Master General of the Ordnance which was confirmed by the Militia Council. The date of the submission of this report was 10th November, 1911. The report is in the following words:

The Master-General of the Ordnance makes the following submission for approval of the Minister in Militia Council.

Small Arm ammunition over five years old should be sold at half price.

This will obviate the possibility of this ammunition having to be destroyed owing to age and consequent deterioration, will ensure a proper turn over which is not the case at present, and will probably be appreciated by Rifle Associations and Cadet Corps.

That was presented to the Militia Council, and on 15th November, 1911, it was approved by the Militia Council, as will appear from this minute:

The Master-General of the Ordnance:

Your submission in this case was considered at the meeting of the Militia Council held this day, and approved.

E. F. Jarvis, Secretary,
The Militia Council.

Other departmental minutes and memoranda with regard to the subject were made, and finally the following report was made by the Quartermaster-General and was embodied, as I understand it, in Militia Orders:

Price of ·303" ball cartridges of old manufacture.

In future, issues on payment by the Canadian Ordnance Corps of ·303" ball cartridges of over 5 years manufacture will be made at half price, viz., $10 (ten dollars) per thousand rounds.

H.Q. 62-2-31.)

(Sgd.) D. A. Macdonald.
(Sgd.) H. K. B.,
A. A. G. (1.)

15-12-11.

These are the initials of General Benson, then Master General of Ordnance. Then comes a letter from General Benson, (at that time Colonel) Master General of the Ordnance, in the following terms:

Q.M.G. :

Re telegram from Mr. Craig, Ross Company, recommended that ten million rounds be sold composed of 1908-1909 manufacture leaving sufficient at Quebec to be ringed for use during 1914.

2. The cost of delivery at point to be named by Mr. Craig to be borne by purchasers.

3. Could you give me the approximate date on which this order could be delivered at Quebec?

4. Ammunition of dates prior to 1908 has been condemned and must be destroyed or broken up.

The telegram from Mr. Craig to which General Benson alluded was dated 4th May, 1914, and was in the following terms:

Quebec, Que., May 4, 1913.

Colonel Sam Hughes,
Minister of Militia,
Ottawa, Ont.

Referring to General Macdonald's letter twenty-fifth February, what largest quantity can you sell me up to forty millions at price mentioned?

Thomas Craig.

The response to that telegram was a letter from the Deputy Minister of Militia and Defence, dated 18th May, 1914, which is as follows:

Ottawa, May 18, 1914.

The Manager,
Ross Rifle Company,
Quebec.

Sir,—With reference to your telegram to the hon. the minister, dated the 4th instant, I have

the honour to inform you that ten million rounds of ·303" ball ammunition of 1908 and 1909 manufacture are available for sale to your company at $12 (twelve dollars) per thousand rounds, plus 75 cents (seventy-five cents) per box for such packages as contain it, delivery to be taken by your representatives at Toronto, Montreal and Halifax in about equal proportions.

The price offered is conditional on your accepting the whole ten millions, as any smaller lot would be charged for at an increased price per thousand rounds.

Please inform me if you accept this offer in order that instructions may be sent to the Ordnance Officers concerned.

I have the honour to be, sir,
Your obedient servant,
(Sgd.) Eug. Fiset,
Colonel,
Deputy Minister.

On the margin is noted the following by the minister:

If this is proper price, O.K. Sam. Hughes.

The Ross Rifle Company, as appears by the correspondence, refused to purchase at the price of $12 and the proposed sale was not carried out. I may observe also that the ammunition which it was proposed to sell to the Ross Rifle Company was 1908 and 1909 ammunition, whereas the two million rounds to which I have alluded was three years older, having been manufactured in 1905 and 1906.

The result, therefore, is that the Department has sold at $20 per thousand rounds ammunition declared absolutely unserviceable by the Barlow report and ordered to be destroyed; ammunition which was three years older than the ammunition which was offered to the Ross Rifle Company in May 1914 at $12 per thousand rounds. I think that if these facts are borne in mind by the hon. gentlemen, they will dispose of any question as to adequacy of price.

The report which I was about to read is a report from Col. J. F. Macdonald for the Quartermaster-General. It is dated July 29, 1914, and is as follows:

Destruction of ammunition of date of manufacture prior to February 1908. With reference to folios 110 to 114, the S.O.O.—

S.O.O. means the Senior Ordnance Officer.

With reference to folios 110 to 114, the S.O.O. —5th division, was instructed to hand over to the superintendent of the Dominion Arsenal the stock of ammunition referred to on folio 41. He now reports that the superintendent has neither time, facilities nor accommodation for taking over this ammunition, but that he, the superintendent, stated that it may be possible to take it over about the 1st of October for salvage, provided, in the meantime, he sees that it will lead to economy.

It therefore seems doubtful whether the Dominion Arsenal will be able to take over the ammunition, and as the storage accommodation taken up by it is very urgently required for serviceable ammunition, and the boxes in which it is packed are required for packing ammunition now being manufactured, would it not be preferable to have all this condemned ammunition destroyed by drowning or otherwise?

Please see my minute, folio 114, in this connection, to which you do not seem to have replied.

J. F. Macdonald,
Lt.-Colonel,
for Major General,
Quartermaster-General.

There is a minute made upon that report by Gen. Hughes, personally, on the 6th day of October, 1914—I am not sure whether that is the correct date or not—which is just one word: "Destroy" of which the director of artillery made a note.

I might read, although it does not come in order of date, the letter of the Ross Rifle Company refusing the offer to sell at $12.00. It is under date of July 30, 1914, and is as follows:

Col. Eugene Fiset,
Deputy Minister,
Department of Militia and Defence,
Ottawa, Ont.

Sir,—Your letter of July 6th H.Q. "C" 1402 was duly received but acknowledgment was delayed owing to the writer's absence.

In view of the fact that we received a quotation from Ottawa, under date of February 26, of $10 per 1,000 for 500,000 rounds of .303 ammunition, it will be impossible for us to avail ourselves of your quotation of May 18th, viz. $12.75 per 1,000, which is $2.75 per 1,000 in excess of the former offer.

We beg to remain, Sir,
Your obedient servants,
Ross Rifle Company.
Thomas Craig,
Secretary.

It is perfectly true, as the hon. member for North Victoria and Cape Breton has said, that there was a note, concurred in, I think, by the chief of the General Staff and the Deputy Minister of Militia and Defence, that none of this defective ammunition should be sold. I have that under my hand, and I should like to refer to its exact terms. It was on the 13th of October, 1914; I might as well read it:

Under the existing circumstances, low stock of ammunition, do you not think it would be wiser to hold this ammunition until such time as the stock in depots is brought up to normal condition?

See folio 122 hereof.

D. A. Macdonald,
Major-General,
Quartermaster-General.

The following note appears under that: "We should not dispose of one single round. (Signed) E. F., D. M. 15th October, 1914." "E. F." means the Deputy

Minister of Militia and Defence. A further memorandum by Colonel Gwatkin, now General Gwatkin, was as follows:

With reference to folio 122, the situation has changed since the word "Destroy" was written; and the order, unless repeated, should not be carried out.

Then further on: "Noted. Necessary action taken." All these memoranda are based on the report of the Quartermaster General, which declared that it would be wiser to hold this ammunition until such time as the stock in depots had been brought up to normal condition. Let us see what the condition was at the time the war broke out—because a statement with regard to that is brought down and included in the return. My hon. friend the Minister of Militia and Defence desires to know whether this should be made public. I say no. I made this public in the face of the advice of the Chief of the General Staff, the Deputy Minister of Militia and Defence and the Master General of Ordnance. I felt that I was compelled to do so by reason of the insinuations and virtual charges made in this House, more particularly by my right hon. friend the leader of the Opposition. Notwithstanding the advice of these officials, I was determined that this information should be brought down and the facts made known, although the publication of those facts may be a detriment to the public interest. If hon. gentlemen on the other side of the House are determined to spend their time in seeking to pry into matters of this character with regard to which they are not fully informed, and to make charges and insinuations with regard to them, it is necessary, in order that public opinion in this country should be quieted, that we should make matters public that otherwise would not be made public. Therefore I felt it my duty to bring this information down and to place the actual conditions before the people.

On the first day of August there was in stock of Mark VI ammunition 36,418,160 rounds and of Mark VII ammunition 3,534,571 rounds, a total of 39,952,731 rounds. Hon. gentlemen will observe that we had on the first day of August, 1914, a very large supply of ammunition suitable for the Mark II Ross rifle, and a very small amount of ammunition suitable for the Mark III Ross rifle, which is the rifle used on active service, as it has superseded Mark II. We sent forward, to be used, as we understood, for practice purposes, a very considerable amount of Mark VI ammunition when the first Canadian contingent went forward. So that on the 31st December, 1914, the supply stood in this way:

	Rounds.
Mark VI..	14,936,304
Mark VII..	4,161,556
A total of..	19,097,860

As compared with 39,952,731 rounds on the 1st day of August. In other words, we had decreased by about twenty-one and a half million rounds the supply of Mark VI, and we had increased by about 600,000 rounds the supply of Mark VII. The decrease was due to shipment of large quantities to Great Britain. On the 31st day of March, 1916, the supply stands as follows:

	Rounds.
Mark VI..	9,449,772
Mark VII..	12,569,080
Or a total of..	22,018,852

We have decreased by about five million rounds the Mark VI ammunition, which is not suitable for use in active service at the front with the Mark III Ross rifle, the standard rifle of the Canadian forces; and we have increased by nearly eight and a half million rounds the supply of the Mark VII ammunition, which is the ammunition designed for use with the rifle with which our troops are armed for active service. So then I venture to think that, taking things as they were in the autumn of 1914 and as they are to-day, the condition alluded to by the quartermaster general has been brought about, as the supply of ammunition has been brought up to very much more than normal for the Mark III Ross rifle.

Under the circumstances, the course which was taken by the Minister of Militia and Defence was this: We have still in stock in Canada 10,000,000 rounds of Mark VI ammunition. I have conferred with authority as high as any recognized in this country respecting the supply of that type of ammunition which should be kept on hand; and the amount named to me was 5,000,000 rounds. This, as I have said, is suited for the old type of Ross rifle, and is not so suitable for the new type. Instead of 5,000,000 rounds of this kind of ammunition, we have to-day nearly 10,000,000 rounds; and in addition to that we have twelve and a half million rounds of Mark VII ammunition, which is suitable for use with the improved

Ross rifle for active service. Under the circumstances, hon. gentlemen on the other side, on the strength of newspaper rumours, have seen fit to make charges or insinuations in this matter, and we have thought it desirable that all the documents should be brought down, even though, in the ordinary course, they would not be brought down as they give certain information with which we would prefer that the enemy should not be made acquainted.

And we have done more than that; we have passed an Order in Council directing that there shall be a full inquiry into all the circumstances of this case, and that inquiry is now proceeding. Under the circumstances, considering that an inquiry has already been directed and is now proceeding, my hon. friend's motion is inopportune for two reasons: In the first place, the inquiry which he asks for is now being carried on and, in the second place, it is a most unusual course that any gentleman in this House while a matter is under inquiry by a responsible tribunal, should see fit, without waiting for the report of that commission, to propose a motion condemning the Government and especially condemning one of its members. It would have been in better taste, and the time of the House would not have been wasted, if my hon. friend had awaited the conclusion of that inquiry and reserved the motion he now proposes until we had before us the information which will be afforded by that inquiry when made. I need hardly add that, under the circumstances, we cannot accept the motion of my hon. friend, because an effective inquiry is now being proceeded with. When that inquiry has been made and the report upon it is in the possession of hon. gentlemen of this House, it will be quite time enough for any hon. gentleman on the other side of the House to come forward with a vote of censure.

Right Hon. Sir WILFRID LAURIER: Mr. Speaker, my right hon. friend (Sir Robert Borden) opened his remarks by complaining that he had not received the usual courtesy which is extended from one side to the other whenever a subject is to be taken up which is not already on the Orders of the Day. The little discussion which took place between him and the hon. member for Cape Breton (Mr. McKenzie) showed that there was no cause for complaint on his part. It has been shown that my right hon. friend did receive ample notification, because last Monday—this is Saturday—and last Monday the member for Cape Breton informed my right hon. friend by letter that on that very day, last Monday, he would ask for an inquiry into this matter, specifying that he would ask that this matter be referred to the commission composed of Sir William Meredith and Mr. Justice Duff. Surely, after the many occasions on which, during the present session, this matter has already been brought to the attention of the House, my right hon. friend should have known what was meant; and so it seems to me that his complaint was not well founded.

I call my right hon. friend's attention to this, that time and again during the present session he has stated that if any member had charges to make against anybody, against the Government or any of its members, the moment an hon. member would take the responsibility of making the charges, most ample investigation would be offered and given. If, Sir, there is a case which requires investigation, and the most ample investigation at that, it is the very matter which we now have in hand. Records which have already been brought down show that, some time during last year, the Minister of Militia took upon himself to dispose of a certain quantity of small ammunition. He had no warrant, he had no authority for doing so, the thing was absolutely illegal. What he sold was not the property of Gen. Sir Sam Hughes; it was the property of the Government, and the Government alone could dispose of it. What was his authority, what reason was given? My right hon. friend has given no reason at all for the conduct of his colleague in the matter. Whether the minister acted upon his own motion, without even consulting his colleagues verbally, does not appear. The first thing we know of this is that a communication was sent by the Auditor General to the Minister of Finance on the 3rd of April, 1916, calling the attention of the Minister of Finance to the fact, some time prior to the 31st of December last, this department sold through Colonel J. Wesley Allison, without the authority of the Governor in Council, over 3,000,000 rounds of ammunition at $20 per thousand rounds, and he concluded in this way:

> I have therefore to request that you will obtain the approval of the Governor in Council for the sale, and that you will also let me know why the rate was fixed at $20 per thousand rounds.

It is very strange that amongst the papers brought down, the authority of the Governor General in Council for the sale of

that ammunition is not given. The only thing I find in the record is a recommendation of the Minister of Militia, dated 5th of January, 1916, to His Royal Highness the Governor General in Council, which is in the following words:

January 5, 1916.

To His Royal Highness the
Governor General in Council,

The undersigned has the honour to submit for the consideration and approval of Your Royal Highness in Council an application from Vickers Limited for the purchase of 4,985,900 rounds of S. A. ammunition, mark VI. This is part of the stock of mark VI ammunition, which, under suspicion, was not allowed to be used with rifles in Canada. The price of the ammunition to be $20 per thousand rounds. This ammunition, while rejected for rifle use.

Mark the words—

—for rifle use is, however, reported to be suitable for testing of Vickers machine guns which are manufactured in very large numbers in England.

The matter is respectfully submitted.

Sam Hughes,
Major General,
Minister of Militia and Defence.

That is the recommendation to council dated 5th January last. The report in answer to the motion passed by the House was brought in about three weeks ago. No Order in Council is found in the papers and as far as we know to this day there is no Order in Council. A few days ago my hon. friend from Pictou (Mr. Macdonald) asked why this Order in Council had not been brought down. If I remember the answer of the right hon. the Prime Minister correctly, it was then stated that the Order in Council had not been passed because the matter had been brought to the attention of the Council in the absence of the Minister of Militia. Mystery piles upon mystery in this matter. The recommendation was made and sent to Council apparently on the 5th January. January passed away, February passed away, March passed away. For three months the Minister of Militia was here attending to his duties; he sailed for England in the last days of March or the first days of April, I do not know which; he was away for some three weeks, he has been back now for three weeks and to this day the Government has not legalized such an illegal matter as the sale of the property of the Government by the Minister of Militia. What age are we living in? Is this Parliamentary Government, or is it not Parliamentary Government? Do I understand that the members of the Government will allow one of their colleagues to dispose of the property of the country illegally and without a tittle of authority? That is the position in which we are at the present time.

My right hon. friend says that there are certain matters which ought not to be brought to the attention of the country because they affect the war. He gave us the information as to the amount of ammunition which was held by the country at one time, and the amount which is held to-day, and he says he did this in defiance of the advice of his officers to allay the suspicions of the Opposition. When and where have we asked for any information as to the amount of the stock of ammunition which is held by the Government? We have never inquired into that, we do not want to know. That is the business of the Government and in regard to that it ought to be trusted. But, we do want to know under what circumstances a part of the stock which should have been held for the country was disposed of to that philanthropist, Mr. J. W. Allison. The answer given by the Prime Minister to-day is not only insufficient but—and I do not want to characterize it too strongly—it is in absolute defiance of the law of Parliament. We should know where we stand to-day. Do the Government approve of their colleagues disposing of the property of the Government as he has done or do they not? What is the reason that to-day we have not the sanction of the Government for this matter? We should know whether or not the Government approve of the action of their colleague and if they do approve of it then they should legalize it because the thing is illegal. If they do not approve of it they should tell us why they do not approve of it and they should act accordingly. The whole defence which is set up by the Prime Minister to-day with regard to this sale is simply this, that there was a certain stock of ammunition which was deficient and which had been condemned by the authorities. But, I do not understand that the ammunition which was condemned by the authorities is the ammunition which was disposed of under this recommendation of the Minister of Militia to Council, is the ammunition which he has sold to that philanthropist and patriot, Mr. J. W. Allison, because he does not say in that recommendation to his colleagues that he wants to dispose of all the ammunition which was found defective. No, he says it is " suspicious." He speaks of such part of the stock of Mark VI ammunition as was under sus-

picion and he says that it was not allowed to be used with rifles in Canada; that it is suspicious and should not be used in the field. Yet, it has some virtue in it because he goes on to say that:

> The price of the ammunition to be $20 per thousand rounds. This ammunition, while rejected for rifle use—

Mark the words—

> —is however reported to be useful for the testing of Vickers machine guns now being manufactured in very large numbers in England.

If this ammunition was useful to Vickers for the testing of their machine guns, why was it sold to Vickers and not to the Imperial authorities? The Imperial authorities wanted this ammunition just as much as Vickers-Maxim wanted it and the charge which we make against the Government in this matter is that this stock was disposed of to a private individual, and that this Government had no right to authorize the disposal of this ammunition to anybody but the Imperial authorities. If they had power to do so, an Order in Council stating that the Government had that power ought to have been passed. There is on record in this return which has been brought down, the rule laid down by the Quartermaster General, General Macdonald, approved by the Deputy Minister of Militia and Defence, that no ammunition should be disposed of to anybody. In the face of this it was disposed of. Leaving aside altogether the fact that it was disposed of to such a person as Mr. John Wesley Allison, do hon. gentlemen on the other side of the House, in times of war, believe that we should dispose of the stock of ammunition that we have, deficient or not deficient, useful or not useful, to anybody but the Imperial authorities if we do not require to use it ourselves? I submit that in this time of war, it is nothing short of a crime against the country that we should deplete our stock of ammunition by selling it to anybody. But who is that body? It is Mr. J. W. Allison who represents himself to be acting as a philanthropist while acting for the Vickers-Maxim Company.

It is said that the ammunition was sold to the Vickers-Maxim Company for testing purposes. I call the minister's attention to the letter of the Auditor General in which he says that he had reason to believe that the ammunition was disposed of finally through somebody to the Imperial authorities; that is to say that the ammunition, instead of being sold directly by the Government here to the Imperial authorities, was sold to private individuals, or through the agency of Mr. J. Wesley Allison. The Auditor General in his letter, makes use of this language:

> The department has been buying ammunition since the declaration of war at $33 per thousand rounds and has also been manufacturing ammunition at the Dominion Arsenal at a cost of $34.60 per thousand rounds; consequently, there has been a loss to the Government in this transaction of over $45,000.

It is alleged that this ammunition has been sold to Vickers, Limited, for testing purposes. I can hardly credit that statement, owing to the magnitude of the sale; but if it were sold, why was it sold at such a low rate, and why was it necessary to obtain the services of Colonel Allison? Mark this: the Auditor General can hardly believe that this ammunition was sold to Vickers, Limited, for testing purposes. Well, for my part, I am rather disposed to agree, until better informed, with the suspicion of the Auditor General. Vickers, Ltd., were intending to buy 5,000,000 rounds of ammunition at $20 per 1,000 rounds. Some 3,000,000 rounds had been delivered, for which they would have to pay $60,000, and there is evidence on record that some $20,000 was paid. Now, $60,000 seems to be a very large sum to pay for ammunition simply for testing purposes. That struck the Auditor General, and it would strike anybody else in the same way. The Auditor General goes on:

> I have reason to believe that the ammunition was resold at an advance of about 25 per cent, and that its destination was not Vickers, Limited. I may be mistaken in this, but Colonel Allison's connection with the transaction does not tend to allay suspicion. I wrote the Department of Militia and Defence, asking to be furnished with an Order in Council, etc, etc.

I repeat what the Auditor General says here, that there is reason to believe that the ammunition was sold at an advance of about 25 per cent. He does not say to whom, but I think I am warranted in saying that there is strong reason for believing that the ammunition was sold to the Imperial authorities, and I say this upon the statement made by the Minister of Militia and Defence himself. On page 7 of this file is found the following statement by the Minister of Militia and Defence:

> Re the sale of defective ammunition. The Canadian Treasury has received $20 for every thousand rounds thereof. There are no records available to show what became of it, further than that it was regularly ordered and shipped to Vickers, one of the most reputable firms in the world. The assurance was given that not

one cent was paid in commission by the firm to any one, and no profit was made on it. It is understood—

These words are very vague.

—It is understood that to cover the cost of transport, handling, exchange, insurance, etc., a sum was added by one of Vickers' officers to the price, but on learning that these expenses were borne by the British Government they were immediately removed.

These expenses were borne by the British Government. What is the meaning of that? If the ammunition was consumed by Vickers themselves, there was no necessity for adding to the price. If they were selling it to somebody else, then of course it was necessary to add to the price the cost of transport, handling, exchange, insurance, etc. Mark the closing words of this paragraph, and I leave it to the sense of any man to say whether they do not furnish irrefutable evidence that the purchaser from Vickers, Limited, was the Imperial authorities. Why were the expenses to be borne by the British Government unless the ammunition was sold to the British Government? And this is from the report of the Minister of Militia and Defence himself. The Minister of Militia and Defence also states:

The Canadian Treasury has received $20 for every thousand rounds thereof. There are no records available to show what became of it.

And he ends the paragraph thus:

On learning that these expenses were borne by the British Government they were immediately removed.

It seems to me that he knows more than he pretends to know; that he knows this ammunition, after it was sold by him to Vickers, Limited, was sold by them—or at all events through the agency of Colonel Allison—to the Imperial authorities. That is something which I say is absolutely inexcusable. Will anybody in this country excuse the Minister of Militia or the Government for having depleted our stock of ammunition by selling this quantity to Vickers, Limited, and allowing them to sell it at a profit to the Imperial authorities. That is the charge which is made to-day; that is the charge which is borne out by the record, and it is that for which we ask an investigation. I repeat what I said a moment ago: the Prime Minister, not upon one occasion only, but on occasions almost without number during the present session has stated that if a charge were made against one of his colleagues or against the Government, nothing would be allowed to stand in the way of an investigation. The Minister of Militia himself has repeated more than once that he desires the most ample investigation. The defence made to-day by the Prime Minister is that the matter has been referred to the Davidson Commission. I have to complain of one thing, and it is this: We should have had this Order in Council brought before us to-day, and long before to-day; it should have been laid upon the Table as soon as it was passed. The House has a right to be informed whenever a matter of this kind is referred to a commission to be investigated, so that the men who had called the attention of the Government to the matter might have an opportunity of following the inquiry. The charge which I make to-day is that the Government is not giving to this charge the most ample investigation.

There are two investigating commissions sitting in Ottawa to-day. Will any one pretend that the Davidson Commission will give the same degree of satisfaction to the public as the Commission presided over by Sir William Meredith and Mr. Justice Duff? Will any one pretend that it is possible to expect that this matter will be probed to the bottom—investigated out and out— before the Davidson Commission as it would be before the Commission presided over by Sir William Meredith and Mr. Justice Duff? How are the two commissions composed? One is composed of a single judge, and the other is composed of two judges. The Davidson Commission, composed of a single judge, has no counsel to prosecute this charge before the commissioner. There is only one young man, eminent in his profession, I admit, to assist the commissioner. But I have this to say against Mr. Thompson's investigating this matter. If I am correctly informed, Mr. Thompson, who assists the commissioner, is an officer in the Militia, under the Minister of Militia and Defence. Will my right hon. friend or any other hon. gentleman tell me that it is proper that the Minister of Militia should be investigated by a commissioner who is assisted by one of the officers of the Minister of Militia? If we are to have an investigation the ordinary rules should be followed. On the other hand, there is before the Commission presided over by Sir William Meredith and Mr. Justice Duff, a counsel appointed to represent the Opposition. Have they not the same right to investigate one charge as to investigate another? If the Government thought they owed it to the country, under the

existing circumstances in which we are placed, that the fuse charges should be so probed that the country could have absolute faith and confidence in the result, and that the Opposition should be allowed to select a counsel so that both sides of the case would be represented and the fullest probing of the matter ensured, is there not as much reason why this matter should also be investigated in the same manner by the same commission? The only reason given by my right hon. friend why the matter was placed in the hands of the Davidson Commission was because certain witnesses were at present available in Ottawa. Those witnesses can always be procured whenever they are needed, and if the investigation cannot take place immediately because other matter are being investigated at present, it can be delayed for a few weeks, so that his reason is not a valid one why the course I have suggested should not be taken. My right hon. friend is not living up to-day to the pledge which he has boastingly given on more than one occasion that upon any charges there will be a full investigation. The investigation before the Davidson Commission is not a full investigation; it is not satisfactory, and we must press to have the matter referred to the Meredith-Duff Commission.

Sir SAM HUGHES (Minister of Militia and Defence): Mr. Speaker, Let me say at the outset that I am delighted to see the right hon. leader of the Opposition in such good form. From what I have heard recently, I expected that he would come here in an ambulance and be attended by two or three nurses. I understand he has recently been passing through a very trying time; that he has been passing through political tribulations.

Mr. PUGSLEY: He is feeling pretty good.

Sir SAM HUGHES: There is one thing, however, that I do miss. In his enthusiastic utterances, he did not label himself as one of the old Liberal school of politicians. His voice had little of the ring that I used to hear in it in 1896, when his hair was longer than it is to-day and hardly so gray, when he used to tell the people of Ontario: Hands off Manitoba, and when he would go down to Quebec and say to the people there: Trust me, a Frenchman and a Roman Catholic and shun Tupper, who is an Englishman and a Protestant. His voice had somewhat of the pathos of the olden times but hardly the ring in it. I understood that the House was not sitting on Saturdays, and I thought the right hon. gentleman was going to take the opportunity of doing some recruiting.

Mr. PUGSLEY: This is a sort of red herring.

Sir SAM HUGHES: I beg your pardon.

Mr. PUGSLEY: This a sort of red hering which the hon. gentleman is using just now.

Sir SAM HUGHES: Recruiting is going on excellently, but in the place where the right hon. leader of the Opposition might exercise some influence, I am sorry to say that it needs a little stimulant, and I trust he will direct his attention to that matter and make use of that pathos that he has exhibited here to-day.

5 p.m. He has complained that Captain Thompson, a lawyer, is engaged before Sir Charles Davidson. The fact that Captain Thompson wears the uniform of a British officer is a good reason why he should be regarded as entirely worthy to appear before Sir Charles Davidson, and it is one of the surest guarantees that he is an honest man. I have not, however, the slightest doubt that from the great array of legal talent behind the right hon. leader of the Opposition he can select suitable counsel, in case Captain Thompson cannot find time to attend to the duties of the court, to take his place. I do not find as many of my right hon. friends in uniform as I would like to find.

I will briefly analyse this matter. The charge was made before I arrived here that the price of this ammunition was too low. I may say that it is exactly the cost of the ammunition and it is just twice the price that was offered a year or so ago for the same ammunition. The statement was made that it was not known where the ammunition was going. The correspondence brought down clearly shows that it was ordered by the firm of Vickers-Maxim, one of the most reputable firms in the world, and was shipped to them, and that the money was paid by them to the Bank of Montreal in England. The statement was made that the ammunition was resold. That statement is absolutely untrue. The ammunition was sold to Vickers-Maxim and the address given of one of their officers. The statement was made that no Order in Council was passed.

There was no necessity for an Order in Council in regard to the matter. According to the law, the quartermaster general could have thrown the ammunition into the river St. Lawrence. That is with reference to that made before 1909, and subsequent to 1909 the officer commanding the district of Quebec had the absolute authority to destroy ammunition on an order from General Macdonald, that is, on an order from a "superior authority." General Macdonald, on receiving the intimation to sell the ammunition, did not consider that to be "superior authority," and he therefore came and got me to initial the document. The reason I asked for an Order in Council in regard to the 2,000,000 rounds was because the quantity was so large that I thought the responsibility, if anything transpired, should be divided. The cost price of the ammunition, when it was supposed to be in good condition, was $20 per thousand. I have not heard of any price of $34.60, and I do not know what that refers to. Mark VI ammunition is not being manufactured to-day in any part of the British Empire, and, therefore, there is no need to refer at all to that particular size. The statement was made that the ammunition was illegally sold. As it was sold under the regulations of the department, the sale was a perfectly legal one. The statement was made that there was a shortage of ammunition. After the war broke out there was a shortage of good ammunition because we sent it all to the front, but I sent an order to the quartermaster general to replenish the store of good ammunition according to the requirements of the country at that time, until we would have a sufficient store of Mark VI ammunition. I also directed that the best of the Mark VI ammunition should be returned, but in order to get it out of the way the Militia Council decided that we had better destroy the 12,000,000 rounds ordered to be destroyed by the Barlow Commission a year before, in order to prevent any portion of it getting mixed up with other ammunition, and that the Mark VI ammunition manufactured up to the time of the Barlow Commission, which ammunition was declared to be defective, should be retained in case of an emergency in this country before we could get Mark VII ammunition manufactured in sufficient quantities.

Long before I became Minister of Militia it was known that the ammunition being manufactured in the Dominion Arsenal was defective; every rifleman in Canada knew that, and report after report brought forth only the statement: Oh, you do not understand the matter, and so forth. I remember on one occasion, after I became minister, going through the factory and putting my hand on one of the machines. I caught five or six cases as they came out, and out of five cases three were defective, as could be seen with the naked eye. The machines needed trueing up. But to any suggestion made about possible improvements, we were told that we didn't understand it and that the best possible was being done. We could buy the English ammunition which would not give any blow-backs, but in the case of our own ammunition, about six rounds out of ten would show a blow-back—that is the powder would be blown back through the cap-hole, or at the point where the case was defective, permitting the discharge from the breech instead of from the muzzle. Therefore, soon after becoming minister, I consulted the Prime Minister and we obtained authority to issue a commission to inquire into the manufacture of ammunition in the Dominion arsenal. We communicated with the British War Office, and they sent to us two of the greatest experts on these subjects, Colonel Sir H. Barlow, and Major Ogilvie. These gentlemen came here and made a very minute inspection of the Dominion arsenal. A summary of that report has been presented to the House by the Prime Minister. Twelve million rounds of ammunition made prior to 1908 were rejected on account of cracked cases and other defects, and were ordered to be destroyed. The suggestion was made that the bullet should be taken out of them, and so on. The balance of the ammunition was declared to be "under suspicion." In other words, the whole of the ammunition was declared to be defective—twelve million rounds made prior to 1908 ordered to be destroyed, and the balance manufactured up to 1913 declared to be "under suspicion and defective." That "under suspicion and defective" ammunition, I venture to say, could not be used in the Mark II Ross or Lee-Enfield rifle, with safety. But I will not go into that aspect of the case unless it is deemed necessary. We did what we could to prevent these blow-backs and render the ammunition more or less efficient, by putting it to a process which we call "ringing." One of the officers in the arsenal thought that by putting each cartridge in a slot and pressing the metal at

the base of the cartridge still tighter around the cap, the difficulty would be overcome. It was found that in some cases it did improve the cartridge, while in other cases it not only did not improve it but made it worse.

Sir ROBERT BORDEN: It still permitted blow-backs?

Sir SAM HUGHES: Yes, the explosive blowing-back in the face of the soldier. We are paying pensions now to some such cases, while others were injured and laid up for a long time. So, it was found that this "ringing" did not remove the trouble. Accordingly, the ammunition declared by the Barlow report to be defective ammunition made subsequent to 1908, was set aside as fit for machine gun use only. But when it came to the big camp at Valcartier in 1914, the British Government, wishing to get every round of good ammunition that was possible, and desiring that all our ammunition made subsequent to 1913 should be shipped to the front, we did ship it. We gave our boys a chance to practice by using the Mark III Ross rifle, which is much more powerful than the Mark II, and we used for rifle practice this Mark VI ammunition, the ranges being short. We inspected it carefully and used the best we could find. Even then, as the camp drew to a close, the men found that the ammunition was not right, that it was defective owing to blow-backs, explosions, detonations, and so on, and they were getting nervous over the use of it. Therefore, we held it up.

Just before the troops sailed from Quebec, on my return from Gaspé Basin, we held a council and talked over the supply of ammunition. We were deficient in ammunition at that time—it is no harm to admit it now, when our supply is ample. We decided to get rid of that manufactured before 1908 and keep the balance of the Mark VI ammunition in hand in case of an emergency. If the worst came to the worst we would use it. The Quartermaster General, as explained in his report, has steadily built up a proper store of Mark VII ammunition. I gave this order before I sailed for England. The deputy minister, the Master General of the Ordnance, the Quartermaster General and the Chief of the General Staff, each disseminated it to his officers, the object being to hold the ammunition in case of an emergency, and that is the reason of these orders appearing on the papers. In England I heard stories that a number of the soldiers had suffered at Valcartier, having blow-backs in the use of the ammunition. Once a man has a blow-back it renders him nervous in firing any rifle. A good deal of that kind of thing had occurred at Valcartier, and a number of the fellows were more or less nervous over this ammunition. Accordingly, on my return, it was decided that none of this Mark VI ammunition should be used. And the store of Mark VII was gradually coming up to the full height, and I am happy to say that it has long since passed the high water-mark of what is necessary for the defence of the country. The Mark VI ammunition was lying in store, the order of the board being that it was to be used only for machine gun testing. We have no machine guns to test, ours being tested before we receive them. This order became known to the ammunition men throughout the country, and there were requests for the ammunition. One was received, but was not fulfilled, as we did not know where the ammunition was going—something was said of its going to Mexico. In another case, I was willing that it should be allowed to go. It was sold, not in large quantities, but in small quantities here and there.

There is a misunderstanding as to Mark VII ammunition, which I might as well clear up at this time. The Mark VII is much more elaborately made than the Mark VI. It has a more pointed tip, the point being filled with aluminum inside, backed up with lead to preserve the balance of the bullet in its course. It is one thirty-third inch longer than the Mark VI. When we use Mark VII ammunition in the Mark II rifle, which is the old Ross rifle, the sharper point of the bullet sometimes prevents the ready entrance of the cartridge into the barrel. Therefore, the word was passed without any undue ceremony that in using Mark VII ammunition in the Mark II rifle it was well not to use the rifle as a magazine rifle but as a single-loader; and with green troops this is much better.

As regards the sale of this ammunition, I was spoken to about it by a representative of the Vickers firm who was then in Canada—one of the firm. The question came up of the making of ammunition in Canada, and when I told him that I understood that the British Government had ample facilities for making ammunition, the question came up whether we could spare what was understood to be defective ammunition, for testing machine guns or something of that kind. The whole con-

versation did not occupy half a minute. My answer to him was to communicate with General Macdonald, Quartermaster-General, who had the matter in charge. There was another conversation some time later, not with this distinguished gentleman, but with one who, at one time, was a good friend of the right hon. leader of the Opposition, Colonel J. Wesley Allison.

Some hon. MEMBERS: Oh, oh.

Sir SAM HUGHES: Perhaps I am wrong. Perhaps I should say the reason that the gentleman does not bask in the smiles of the right hon. leader of the Opposition to-day is because he chances to be a friend of the late Hon. Mr. Blair, with whom the right hon. leader of the Opposition had some slight differences.

Sir WILFRID LAURIER: That may be, but I do not know that I have seen Mr. Allison more than two or three times in all my life.

Sir SAM HUGHES: Well, I myself saw the right hon. member talking to him at least twice in the olden days. If the right hon. member has the faculty of having no heart and of going back on his friends, I want him to understand that the Minister of Militia is not in that class.

Sir WILFRID LAURIER: If the hon. gentleman wishes to insinuate that Mr. J. Wesley Allison was amongst my friends at any time, I give it a most emphatic denial.

Sir SAM HUGHES: I do not insinuate it; I assert it, and can prove it to the right hon. member's satisfaction if he wants the proof.

Sir WILFRID LAURIER: What can you prove?

Sir SAM HUGHES: I can prove that the right hon. leader of the Opposition considered Colonel J. Wesley Allison as one of his friends.

Sir WILFRID LAURIER: Never did.

Sir SAM HUGHES: But if it suits the right hon. member's policy——

Some hon. MEMBERS: Order.

Sir SAM HUGHES: If it is the policy of the right hon. member to play executioner in respect to the gentlemen who sit around him—half of them sit here to-day dreading the block—let me assure him that that is not the policy that this individual pursues towards his friends. Until I find that they have proved traitor to me I do not go back on them, as was the case with regard to a number of gentlemen who sat behind the right hon. leader of the Opposition in the days gone by in the House of Commons of Canada. I am glad to see fire in the right hon. member's eye at this moment; I will light him up a little more if he wishes it.

This ammunition was first ordered, I say, by the members of the Vickers firm. Finally it was ordered by Col. J. Wesley Allison, who has the honour of being the Vickers representative, and who had, and still has, the honour of having been selected by the special representative of the British Government as agent in the United States of America in respect of very large matters of international concern. He is a gentleman who to-day stands high in the estimation of the people of the country, not from fear—

Some hon. MEMBERS: Oh, oh.

Sir SAM HUGHES: Not from fear, not from trembling, not from having a solid phalanx behind his back and, to keep it there, playing one role in one part of Canada and the old English school philosopher in the other. He holds the good opinion of this House and this country to-day, and he holds it by merit. This gentleman ordered the ammunition. He saw the Quartermaster General, and the Quartermaster General consulted me. The Quartermaster General knows his business—I never yet found him wrong on a legal point—so I put my initial on his memorandum and the ammunition was shipped to Vickers in London. The money was paid to the Bank of Montreal, and a straighter transaction never was conducted in this Dominion of Canada. I did not know how much of this ammunition they would want, for they were getting thousands of these machine guns. However, our first desire was that the soldiers going to the front should not be obliged to use one round of defective ammunition; that they should get the very best that could be obtained. By securing the release of a few million rounds of good ammunition from Britain that would otherwise have been used for the machine guns—and it was pointed out in a report read by the Prime Minister that this ammunition was capable of being used for that purpose—by securing this release, I say, through letting the Vickers people have this defective ammunition, I claim that we were doing the country a service. By the way,

the right hon. gentleman forgot to talk about the retreat from Mons to the Marne. Surely he could have shown that this sale of ammunition compelled the British to retreat to the Marne—that is another of his fads that he generally makes use of. By releasing this ammunition we did the British Empire a good service, and benefited the Canadian treasury by bringing back $20 for every thousand rounds of ammunition.

The right hon. member dilates upon the argument about keeping that ammunition in store. I want to tell him that so long as I am Minister of Militia—and I intend to be Minister of Militia until I go out—I assume my full responsibility and intend to exercise it. So long as I am Minister of Militia, not one round of that defective ammunition will be given to any of our soldiers by me or by my authority to fire at the enemy. When our men go into action we want them to go with the very best materials, the very best equipment, the very best ammunition that can be got. I purpose at a very early date ascertaining where this defective ammunition is and settling the matter once for all by getting rid of it, in a legitimate way. If we do that, then the defective ammunition will be entirely out of the way; it will no longer take up storage room, and good ammunition will be served to the boys so that they shall be able to perform their duties. Not one round of this ammunition is held by me for defensive purposes. For that we have no warrant or authority.

The hon. member quotes from the Auditor General. And the Auditor General occupies a peculiar position; it is hardly proper for any member of Parliament to stand up here and criticise him. But when the Auditor General undertakes to say what he has said in the document which has been read; when he makes reflection upon a gentleman who has more honour in his little finger than the Auditor General has in his whole carcass, I want to tell him that I will find some means of reaching the Auditor General. I will permit no man occupying the position of public servant in this country, so far as I am concerned, whether in office or out of office, so to misconduct himself as to pen the letter which he has penned—I never saw it until to-day—to the Minister of Finance. Had such a letter been sent to me—indeed, I did get one of a somewhat similar character, and it was dealt with in double quick time—had such a letter as that come from the Auditor General to the Minister of Militia, it would have been returned in mighty short metre with an intimation that the writer had better study his duties and learn to pen his letters in proper form.

The right hon. member asks why this ammunition was not sold direct to the British Government instead of to the Vickers' Company. I do not see what the British Government knew about it. We sold them all the good ammunition we could spare early in the war. This ammunition was asked for; we realised that the use of it would be a good way to test the machine guns, and it went. The story was that this ammunition was being resold by Vickers for the machine gun purposes of the British Admiralty and that Vickers were making $5 per thousand rounds on it. Well, if Vickers paid the freight, insurance and exchange charges on that ammunition, which were pretty heavy at that time, then they would not be any money in pocket by turning it over to the Admiralty at $25, when they paid $20 for it. I do not know anything about it, only this: When I was in England, having heard the yarn, I asked one of the Vickers' officers—I think it was Mr. Searles—about the matter. He said he did not know the details of it, but that he had heard these stories. He said they had added this sum to the cost, but as soon as they found that the Admiralty would themselves meet the cost, they wiped out the one pound sterling that had been added and the price stood at the $20 that the Government charged them for the ammunition and for sending it over.

Let me summarize. All ammunition made before 1913 and in store was condemned as defective by the commission. All of the defective ammunition made prior to 1909 was condemned to destruction in one form or another. The balance was recommended for machine gun practice only. However, in order to have as little of this destroyed as possible, we decided to use that recommended to be used in machine gun practice or in Mark III rifles. We tried it out quietly, after ringing it as I have described; and decided to use it, not in Mark II or Lee-Enfield, but in Mark III Ross rifles. Ringing it, however, was found not to benefit the defective ammunition to any great extent, and in some cases it injured it. There were several proposals for the sale of defective ammunition. One was made by the deputy minister at $10 or $12.50, supposedly for Mexico. Another was to sell to Vickers, through their New York agent, Allison, for machine gun testing. This was for 2,000,000 rounds at

$20—that is an error in my notes, apparently, as it should be 3,000,000 rounds at $20.

The Quartermaster-General, following the usual practice in Canada regarding condemned military material, authorized the sale, and obtained the endorsation of the minister in addition. I again point out that when cases of this kind arise in a district, the district officer commanding, if he feels that he wants any superior authority to dispose of condemned material, looks to the Quartermaster-General for that superior authority. As a rule it is considered, and has been so acted upon, that the Quartermaster-General's authority is sufficient. In destroying one and a half million rounds at Winnipeg the Quartermaster-general was regarded as the superior authority; but General Macdonald did not wish to regard himself as the superior authority in time of war, so he came to me and asked me to place my initials on the order, which I gladly did. The goods were then regularly shipped to an officer in the Vickers' works in England, Mr. Searles. There was no commission paid, offered or asked by anyone in the transaction. That was brought out this morning before the Davidson Commission. We got $20, and that was all that was paid for the ammunition, so that there could not be any commission. The quartermaster general had the money placed directly to the credit of the Receiver General of Canada. Thus it passed through no one's hands.

This defective ammunition released a similar quantity of good English ammunition for the front. It has been asserted that Vickers' officer in England added, for transport, freight, insurance, exchange, handling and risk, one pound sterling additional, and then sold the lot to the British Admiralty for $25 per thousand. The Militia Department has no record of this, the sale being direct to Vickers' officer, Mr. Searles, in England. All we know is the insinuation in the Auditor General's Report and remarks heard in various places throughout this country. The sale was made direct to Vickers' officer. Mr. Searles, in England. But I am informed, on good authority, that on finding all expenses were paid by the Admiralty, Mr. Searles withdrew the charge of $5. This, however, is a matter entirely between Mr. Searles and the Admiralty; it is a matter with which this department has nothing whatever to do. This ammunition, or any of the defective ammunition, was ordered to be held in store by the minister in 1914, and ordered further not to be used in Mark II rifle in any circumstances. The part that I ordered to be destroyed in 1914 was the part made prior to 1909, which was ordered not to be used on any consideration.

The net result is that, by the sale of the 2,000,000 rounds of defective ammunition referred to, Canada has received $40,000 which would never have been received; 2,000,000 of good English ammunition has been released for the front; an ample store of good new Mark VII ammunition is held in store for use in Canada. It is now universally recognized that Mark VII, new and good ammunition, can be used in Mark II rifles, while the condemned Mark VI should not be used, and has been forbidden. Under no circumstances would the ammunition sold be allowed to be used in Mark II rifles, the one retained for arming the troops in Canada. The balance of the defective ammunition could not be used in either Mark II Ross rifle or Lee-Enfield rifle. It cannot be safely used even in Mark III rifle, even for practice. The practice in England is to treat such matters as the Quartermaster-General has treated this sale of condemned material.

I may say that, while in England, I made inquiries about this and found that such a transaction would never reach the Quartermaster-General, much less the minister, and certainly never the Cabinet. The practice is that the officer commanding in the district calls his board and the board makes a report. The officer commanding then orders the ammunition disposed of as condemned, and places any money received to the credit of the Government in the official way. Thus in every sense we have been well within our rights in the Militia Department in dealing with this matter as we have done.

I have to say, in conclusion, that no Canadian soldier will, so long as I am Minister of Militia, be requested or permitted, if we know it, to carry one round of this condemned mark VI ammunition in his pouch for service in action. When our boys go into action we want them to feel as confident as it is possible for men to feel. Napoleon asserted that the sentimental as against the material is as three to one in fighting; and if you have men poorly armed, poorly equipped, using bad ammunition, that sentimental diminishes to nothing, and you lose three-fourths of your fighting power. I want my boys to go in

feeling they have the best rifle in the world, the best ammunition in the world, and that they can handle themselves in a manner to equal the best.

Mr. F. B. CARVELL (Carleton, N.B.): Mr. Speaker, the somewhat wonderful statement of the Minister of Militia reminds me of a quotation from the Bible which I think I can quote correctly: "The wicked flee when no man pursueth." I would like to know who ever asked the Minister of Militia to send our boys to the front with defective ammunition. I would like to know what a discussion about giving J. Wesley Allison a rake-off of $5,000 has to do with sending our boys to the front with poor ammunition. I want to answer the minister in a logical, fair manner, but it is pretty hard to do so, after listening to the arguments he has used. This is not a question of whether or not there was bad ammunition in Canada. If the Government had poor ammunition or defective ammunition on their hands, this country has money enough to take charge of that and to throw it into the river, if necessary, and get good ammunition in its place. The question which we are bringing up here to-day, which was first brought up by the Auditor General—and I think, notwithstanding the dire threats made by the Minister of Militia, that once in a while it is a good thing for Canada that there is an Auditor General. The question brought up by him is the fact that defective ammunition was owned by the Dominion of Canada; that the Minister of Militia, through his counsellor, friend and guide, J. Wesley Allison, sold this, not to Vickers, but through Vickers, to the British Admiralty, at a rake-off of $5 a thousand rounds.

Sir SAM HUGHES: That is a deliberate mis-statement, and he knows it.

Some hon. MEMBERS: Order.

Sir SAM HUGHES: The records do not show it.

Some hon. MEMBERS: Order.

Sir SAM HUGHES: The records are here and do not show anything of the kind, and the hon. member must make himself acquainted with these records.

Mr. SPEAKER: I am asked by some hon. members to decide whether or not the hon. member's statement is parliamentary or not.

Sir WILFRID LAURIER: "And he knows it."

[Sir Sam Hughes.]

Mr. SPEAKER: According to the authorities, I have to decide that it is certainly out of order and offensive.

Sir SAM HUGHES: I bow to your ruling, but it does not change the position.

Some hon. MEMBERS: Order.

Mr. CARVELL: I do not want to raise any more points of order with the Minister of Militia. He, as he says of my right hon. leader, has been passing through certain tribulations of late; and I certainly will not raise any point of order or do anything to add to his troubles. I sympathize with him in his difficulties. I realize that he is not a free agent this afternoon; he is not in a position to think clearly and logically, and therefore I am not going to take any advantage of his unfortunate mental condition at the present time. But in order to prove to him that I have some knowledge of what I am talking about, I want to refer him to his own report which I find on the file, and which is as follows:

> Re sale of this defective ammunition. The Canadian treasury has received $20 for every thousand pounds thereof. There are no records available to show what became of it, further than that it was regularly ordered and shipped to Vickers, one of the most reputable firms in the world. The assurance was given that not one cent was paid in commission by the firm to any one, and no profit was made on it. It is understood that, to cover the cost of transport, handling, exchange, insurance, etc., a sum was added, by one of Vickers' officers, to the price but on learning that these expenses were borne by the British Government, they were immediately removed; but that is their own concern.

How could a man who had the possession of his mental faculties state that this did not go to the British Government? That is the question with regard to which I want to address myself for a few moments. If this did not go to the British Government, if it went to Vickers for their own business, if Vickers bought this ammunition at whatever price they thought best, and it was purely a commercial transaction between this Government and Vickers, why, after the matter had received some publicity, why after questions had been asked by my hon. friend from Pictou (Mr. Macdonald) and myself, why after it had been advertised in the newspapers, was it necessary for these gentlemen—these hon. gentlemen—to make restitution of the graft which they had taken either out of this Government or out of the British Government? We have the confession of the Minister of Militia this afternoon that when he went over there and discussed this matter they

had made restitution, they had paid back £1 per thousand, or whatever it might be. Yet, in the face of that, this hon. gentleman wants us to believe that this thing was perfectly straight, that there was nothing crooked in his department, that there was nothing wrong between himself and J. Wesley Allison. It is an insult to the intelligence of any ordinary man, in view of what has taken place in this country during the last three months, to believe that anything could take place between this Government and that gentleman that would not require the closest investigation before he could come to the conclusion that there was not something tricky or disorderly about it. I do not want to rehash old sores but I want the Minister of Militia to remember that hon. members on this side of the House are ordinary, intelligent beings who know something of the subjects that they are discussing.

Before I go to another branch of the case —and I do not propose to discuss it lengthily—I want to refer to my hon. friend's attack upon the Auditor General. It will be a long time before the people of this country will pray to retain him in office as they are praying that the Auditor General may be retained where he is at the present time. It ill becomes an hon. gentleman who occupies the position in the public eye that the Minister of Militia does to make an attack upon a gentleman of the high honour and unblemished character of John Fraser, Auditor General of Canada, a man who has occupied that position for some years, a man who has tried to be the watch dog of the treasury and who, I am happy to say, in many instances, has been the medium through which some of the nefarious transactions that have been sought to be pulled off in late years have been brought to light. My hon. friend might have saved the hon. Minister of Finance (Sir Thomas White) the chagrin of receiving the castigation which he gave him this afternoon. I do not know that the Minister of Finance will suffer very much from it and I presume he will take care of himself. It seems that the Minister of Militia is in the mood this afternoon of hitting everybody with a club of some kind. One felt that he would almost have liked to have taken a club to the Premier but he possibly felt that it would be better policy to be a little moderate in that direction. He made an assault upon my honoured leader. I can only say to him that when he has been in politics as long as my honoured leader has been, perhaps he might like to exchange reputations with him. But, in all probability, he will never reach that time in political life and therefore he will not have the opportunity of making comparisons.

I want to discuss this matter from the Government standpoint for a moment. It is to my mind one of the most remarkable things that I remember in my short parliamentary experience that the Government should have adopted the course which they did over this very important matter. This matter is not important from the standpoint of money to such an extent as it is from the standpoint of principle. It is true that there is probably $20,000 or $25,000 involved in it, which is a fairly reasonable amount of money. At this particular time, when this country is retching with the name of J. Wesley Allison, when every dirty trail leads to Allison, this Government, instead of turning the fullest light of day upon the question of Allison's connection with the matter, are trying to cover it up, to prevent the people from getting the information. And, Sir, I do not know, but it seems to me, if we are to take the statements that we hear on the street corners, that the Minister of Militia is still the master of the Administration.

Who do you think, Mr. Speaker, asked to have this referred to Sir Charles Davidson? Do you think it was the Minister of Justice (Mr. Doherty)? Not by any means. Do you think it was the Minister of Finance? I do not believe that in his whole political experience anything has caused him so much chagrin as this has. All we have to do to find out who probably asked that this matter be referred to Sir Charles Davidson is to refer to the cablegram sent to this country by the Minister of Militia on the 30th March last. In reply to a long cablegram sent him by the Premier giving him a very complete summary of the statements made by the hon. member for Richmond (Mr. Kyte) in this House two days before, telling him that he was going to appoint a royal commission to investigate fuse and cartridge case contracts, and saying that it was necessary for him to return immediately for the purposes of the inquiry, a cablegram came across, or under the waters of, the Atlantic ocean, and this is what it said:

> Please state to House on my behalf that I have no improper connection with contracts referred to, or any other contracts. If any suggestion to the contrary is made I respectfully demand full investigation by the judicial tribunal presided over by Sir Charles Davidson.

All you have to do is to read a few things like that going back just two or three months in our political history—

Sir ROBERT BORDEN: I would like to say that, if the hon. gentleman suggests that it was referred to Sir Charles Davidson at the instance of the Minister of Militia, he states that which is not true.

Some hon. MEMBERS: Hear, hear.

Mr. CARVELL: I am glad to give some of my hon. friends on the other side a chance to clap and feel good. I realize that my hon. friends do not get very many opportunities these days to cheer, and I suppose we should not begrudge them this little pleasure once in a while. Perhaps my right hon. friend the Prime Minister would tell me whether the Minister of Militia objected to the appointment of Sir Charles Davidson?

Sir ROBERT BORDEN: The Minister of Militia was not consulted about it. It was determined at a meeting of my colleagues at which he did not happen to be present.

Mr. CARVELL: We must have a great deal less respect for the Prime Minister and his colleagues than we had before that, because I want to tell the Prime Minister that it does him and his colleagues very little credit that in a matter of this importance they should select the commissioner who has on previous occasions been chosen by the Minister of Militia in order to investigate things which have turned out so rotten that the name of Canada is a disgrace and a by-word among the civilized nations of the world.

Sir SAM HUGHES: Does the hon. gentleman mean to say that I have chosen Sir Charles Davidson?

Mr. CARVELL: I mean what I say.

Sir SAM HUGHES: If the hon. gentleman does not care to repeat what he said I am not particular; I pay no attention to what he says anyway.

Mr. CARVELL: I am not going to repeat; but what I said I stand by. I tell the Premier that if he thinks he can satisfy the people of Canada by referring matters of this importance to Sir Charles Davidson, in the light of what this commission had done during the last year, he is living in a fool's paradise. The people of this country will not stand for any more hiding and covering up of the dishonest and nefarious transactions of my right hon. friend's friends and supporters. There is no use trying to hide the thing or smooth it over. We have had enough illustrations in the last few months of the attitude of the Premier, and we might as well just come out and call a spade a spade, as Sir William Meredith said at the commission the other day. Day after day and week after week since this Parliament assembled in January last, we have sought for an opportunity to get the light of day on many transactions of the friends of this Government, and we have been balked at every turn except in one case where the Government were driven to it by a power whose name I am not at liberty to mention in this House. They have refused us investigations, and have made one flimsy excuse after another, and when driven from one citadel to another—

Sir ROBERT BORDEN: What does the hon. member mean when he says we were driven to a course of action by a power he is not at liberty to mention?

Mr. CARVELL: I mean exactly what I say.

Sir ROBERT BORDEN: If I understand the inference, I want to say that that statement is absolutely devoid of the slightest semblance of truth.

Mr. CARVELL: I am glad I am getting my right hon. friend interested; that was my object in speaking this afternoon.

Sir ROBERT BORDEN: I am glad you are pleased.

Mr. CARVELL: They have refused investigations of things which any reasonable intelligent man knows are so dishonest that they would stink in the nostrils of every man in Canada. They have refused to extend the scope of investigations because they dare not, on account of what would happen to their friends. They have handed this matter over to a commission appointed more than a year ago, when perhaps my right hon. friend was sincerely penitent for some things that had been revealed in the Public Accounts Committee, and at that time he said that the doors of the penitentiary were yawning for those who sold lame and decrepit horses to the British Government, and for those who boodled in bandages, boots and binoculars, and everything else they could get their hands on that was required for the army during the nation's stress. I want to tell my right hon. friend that these doors are still yawning, and unless there is greater

activity on the part of my right hon. friend and his Government than there has been in the past, the doors will still remain yawning for his friends who have been guilty of looting the public treasury. If my right hon. friend can take any comfort out of the course he has pursued during the last year and the results of the investigation of his special commissioner, Sir Charles Davidson, he is welcome to it. I am not here to attack Sir Charles Davidson personally, and what I have to say about him as a commissioner I want to say right here in the public light of Parliament. A gentleman who has occupied the high position that this man has, a gentleman who for nearly a year has been investigating such things as the Government would allow him to investigate, a gentleman who, so far as we can judge, concluded his labours three months ago, with the exception of one small transaction, a gentleman who has not the honesty—I think I may use the word—to bring down to Parliament after we had been in session for three or four months, a report on matters so important as he has been charged to investigate—such a man is not the one to whom the people of Canada want to have referred important matters with which the Minister of Militia is concerned. I say that to my right hon. friend with a full sense of the responsibility for what I am saying. A gentleman who has investigated the nefarious horse deals in Nova Scotia and driven one member of Parliament of that province out of public life, a gentleman who has investigated other nefarious horse deals in the province of Ontario and driven out of public life a member of the Ontario Legislature, a gentleman who has investigated the bandage and drug transactions here in the city of Ottawa, which, I was told early in the session, had driven another member of Parliament out of public life, a gentleman who has investigated all these things and will not make his report on them to Parliament either is not fit for the position he occupies or he is holding back the report at the instigation of the men who appointed him. I do not care which horn of the dilemma my hon. friends choose. I have tried to state my position in language as plain as I could use, and I think I have the ability of using fairly plain language when the occasion requires. I want to tell my hon. friends that if they think they can cover up their tracks and whitewash and cleanse the character of the Minister of Militia and Defence by handing these nefarious and dirty transactions over to the Davidson Commission, they are making the greatest mistake they ever made.

Sir SAM HUGHES: As the hon. gentleman has mentioned character, let me point out that I have never been caught impersonating people in New York or buying blackguards to steal papers from New York offices.

Mr. CARVELL: Mr. Speaker, the Minister of Militia is welcome to all the pleasure he gets out of this. He will get his answer, probably before many days are gone by.

Mr. McKENZIE: If there were no dirty papers, they could not be stolen.

Mr. CARVELL: I tell him right here that he cannot draw the attention of the people of Canada away from the doings of his friend Allison, and his portion of the divvy of half a million dollars, by throwing dust in the people's eyes about anybody trying to steal papers. Don't let the Minister of Militia deceive himself on that point. Don't let him feel that he can help his cause or protect a man who has practically pilfered a quarter of a million dollars from the people of Canada, by throwing out any nasty insinuations about what I or any other member of Parliament may have done in New York or elsewhere. Neither he nor his friend Allison, nor the Ottawa Free Press, the champion and organ of his friend Allison, can get the people of Canada to forget the real question by any such small-bore tactics as that.

At six o'clock the House took recess.

The House resumed at eight o'clock.

Mr. CARVELL: It will take me only a few moments to conclude the remarks that I want to address to the House. Before I refer to the subject matter under discussion I wish very shortly to refer to a most uncalled for and insulting remark made by the Minister of Militia just before the House rose at six o'clock with reference to my taking papers from some source unknown, and from which I had no right to take them. In making that remark he followed up a course of conduct which he, his counsel, and a friendly newspaper have been carrying on for the last three or four days. I want to assure my hon. friend that shortly after the Meredith-Duff Commission was created I took every reasonable means in my power of obtaining information as to the conduct of himself and of his friend,

counsellor, and guide, Colonel Allison. In doing so I found it necessary to go to the city of New York and other places in the United States. I had not been very long on the investigation when I became well satisfied that my hon. friend the minister was attempting to put up a very nice job on me for the purpose of drawing public attention away from his own conduct, and that of his friend and his friend's friends. I therefore employed, as my solicitor and counsel in the city of New York, William Travers Jerome. I consulted two other men of such prominence that when their names are made public, even my hon. friend the minister will have no doubt of the wisdom of my course, and I consulted no man, discussed no plan and made no move without first consulting one of the three gentlemen to whom I have referred, my solicitor having been named. I want to tell the minister that when the reports of the detectives which have been furnished to me by Mr. Jerome are made public, as they will be, if and when necessary, he will not make any nasty insinuations about my trying to obtain papers to which I have no right. I want to say further that during the last four months I have been in only two legal offices in the city of New York, one being that of William Travers Jerome, and the other that of Kiddle and Margison, of 115 Broadway, on the 14th floor. My friends are at liberty to investigate those two firms as much as they like. So far as any firms of German name are concerned, I know nothing about them; I have never seen them, and I have had no correspondence nor communication with them. Whenever my hon. friend the minister wants to pursue this case any further before the tribunal having jurisdiction over it, I am ready to meet him and give him all the information which he desires, and I hope that before I am through with him I shall give him a little more than he would like to have made public.

Sir SAM HUGHES: My hon. friend has stated that I put up a plant on him. The plant was put up by the hon. member himself and his friends, as I am prepared to show. The first news which I had when I reached New York city was the intimation of the plant which this gentleman has put up with a certain gentleman to whom I have referred.

Mr. CARVELL: I am not going to discuss this question with the minister further except to say to him that I had not been in the city of New York for more than a year until at least a week after the minister returned from England. I have nothing further to say as to this, but I do not want the Minister of Militia to attempt to cover his dirty tracks by attempting to throw dirt at me.

Sir SAM HUGHES: The Minister of Militia is prepared to face this hon. gentleman in this House or before any other tribunal in the world. Let me assure the hon. member that when the matter is all cleared up, the Minister of Militia will have no cause to blush for any of his actions and if the hon. gentleman does not blush, it will be because he has a rhinoceros hide on him.

Mr. CARVELL: I want briefly to refer to the question before the House. The right hon. leader of the House has attempted to show that this transaction was all right, because, he says, they got more than the ammunition was worth. If my right hon. friend can take any satisfaction or glorification out of selling through the agency of Col. John Wesley Allison condemned ammunition to the British Admiralty for twice as much as it is worth, he is quite at liberty to do so, and if his friends in this House can take any comfort out of that, so far as I am concerned, they are welcome to it. That is the question. The question is not whether the ammunition was worth $20 a thousand or $10 a thousand or $12.50 a thousand. There is no use in my friend's or my friend's friends trying to get away from the real question. While I do not make the statement, I do say that I am informed on the best possible authority—and if anything like a fair investigation is given, it can easily be proved—that the reason sent up to the Council when this matter was first brought before it, was that this was condemned ammunition and not to be used for testing purposes, and when it was pointed out that they would never be able to pass an Order in Council to sell condemned ammunition to the British Admiralty, the reason was changed and put in the form that the ammunition was being sold for testing purposes.

Sir ROBERT BORDEN. I do not quite understand the point my hon. friend is making. Does he say that there was a recommendation to Council to sell this ammunition to the British Admiralty?

Mr. CARVELL: I am informed that when this matter first came before the Council, it was put on the plea or argument that this

was condemned ammunition sold to the British Admiralty or the British Government and that accounted for the reduction in the price.

Sir ROBERT BORDEN: For the third time, I affirm that the statement made by my hon. friend to the House just now is without the shadow of any foundation whatever.

Mr. CARVELL: The next question is: How are you going to investigate? If this thing is bad enough to require an investition of any kind, then it requires and demands a genuine investigation. If it does not require and demand a genuine investigation, then my right hon. friend is not fair to the Minister of Militia and Defence. My right hon. friend is pillorying Sir Sam Hughes before the people of this country as being charged with doing that which he ought not to do. I repeat again—either this is of sufficient importance to be investigated, or else it should be left alone; it is too serious a matter to trifle with, too serious to play the petty game of politics with.

Some hon. MEMBERS: Oh, oh.

Mr. CARVELL: One hon. gentleman says: We are investigating it. You are investigating it by the Davidson Commission. I am not going to spend much more time on the Davidson Commission. It is the greatest farce my right hon. friend the Prime Minister has created in his four years of farcical government. At the head of it is a man who, as I said this afternoon—I do not know whether it is because he has not the ability, or because he has not the conscience, or because he is acting under dictation—has laboured for a year, has squandered about $20,000 of the public money of Canada, and has brought forth nothing in the way of a report, and nothing to justify his existence. My right hon. friend hands this important matter over for investigation to a commission presided over by such a man as I have described, and before whom business is conducted by a lawyer who is the subordinate of my hon. friend the Minister of Militia and Defence.

Sir SAM HUGHES: I desire that the hon. gentleman should not refer to me as his friend. There is a parliamentary term for use when one member of this House refers to another, and that is "the hon. member," not "hon. friend"—I object to that.

Mr. CARVELL: That is a pretty narrow escape. This thing must be getting pretty close home when the Minister of Militia has to seek that sort of defence. But the hon. minister has his friends, one of them being J. Wesley Allison. Refer to the hon. member as you will—and I do not think it will be very long until he will not be referred to in this House as the hon. member for Haliburton or any other place—but refer to him as you will, this farce must not go on any further.

Some hon. MEMBERS: Oh, oh.

Mr. CARVELL: If the Government are going to investigate——

Some hon. MEMBERS: Oh, oh.

Mr. CARVELL: I assure my hon. friends opposite that the greatest compliment I get from them is the evidence that I am hurting them, and I think that on this occasion I am accomplishing all that I started to accomplish. For I am trying to-night to show some members of the Government of this country up in their true light. That is my real object. I do not believe that every member of the Government, and I am sure that not half their followers, are in sympathy with what is going on. If I talk plainly, I do so intentionally, and I am showing them exactly the position in which they are placed. I tell them, they are handing over the investigation of what appears to be a very, very dishonourable transaction by the Minister of Militia and Defence to a man who, while perhaps he has not been chosen by the minister, certainly, from his past intercourse, and from our knowledge of what has taken place during the last four months, is not at all contrary to the wishes of the Minister of Militia; a man who has proved himself incompetent for the position up to the present time; a man who, we know, will not and cannot, under the conditions under which he is acting, give this matter the investigation that is demanded; a commission in which there is no person representing the public, in which there is no person trying to get to the bottom of the affairs; a commission in which the only lawyer is the lawyer for the defence, and the only jury is the man who would find the minister innocent, no matter what evidence he had against him. If my right hon. friend wants to hand the investigation of this important matter over to a tribunal

of that kind, that is his business, and he can take the consequences of it. But I want to tell him, it is not good enough for the honest people of Canada, Liberal and Conservative alike. It is not good enough for the ordinary men and women of Canada, who want to see this carried on fairly and disinterestedly, and there are hundreds of thousands of these people in both political parties. Shunting off investigation into these charges has been done time and again by the right hon. Prime Minister during the present session. That may please him and some of his followers, but I know that many of those followers are not pleased. He may think that he is in some way playing the game of Minister of Militia; but he is not playing the game of the people, and he will find it out when the proper time comes.

That is practically all I have to say about it. I place the matter before the country in as plain language as I know how. I can only once more express the hope that, before this goes on, at least they will do my hon. friend from Cape Breton North and Victoria (Mr. McKenzie) the courtesy to let him know when the commission will sit. Think of the farce of this Government starting out to investigate a serious charge against one of its members by means of a Royal Commission that sits in secret, and that has not even the courtesy to notify the man who starts the investigation where and when the commission is to sit. They held a star chamber investigation this morning, and the hon. member for Cape Breton (Mr. McKenzie) did not even know that the commission was to sit—did not know that the matter was going on. No wonder some of my friends on the other side look serious when this matter is brought up. Now, Sir, I do hope that this House will adopt the motion of the hon. member for Cape Breton North and Victoria. I hope my right hon. friend will see the position in which he is placing himself and his party and that this thing will be taken out of the hands of the farcical commission in whose hands it was placed, and will be handed over to some tribunal—and the best I know is a committee of this House—where the people of this country will have at least a chance to be represented and which will try to get somewhere near the bottom of what looks like a very shady transaction.

Hon. C. J. DOHERTY (Minister of Justice): Mr. Speaker, when the hon. member for North Cape Breton (Mr. McKenzie) made his motion this afternoon, with the full knowledge that the matter which he was moving to have investigated was being investigated, I think that one might very well be tempted to draw the conclusion—which, since the hon. gentleman who has just taken his seat has spoken, I am sure there can remain not one shadow of doubt about—that, realizing that, once there was an investigation there would be nothing left to talk about, he thought it wise to do his talking first.

The hon. member for North Cape Breton spoke, and he was supported by the right hon. leader of the Opposition. After replies had been made by the right hon. leader of the House, and by the Minister of Militia, they had it more manifestly borne in upon them than ever that there was no case; and so my hon. friend the member for Carleton rose with the brief duly endorsed: "No case; blackguard the plaintiff's attorney." But there did not happen to be any plaintiff's attorney; somebody had to be blackguarded, so the hon. gentleman blackguards the distingished gentleman to whom in his capacity of commissioner this matter has been referred. I say that I have difficulty in qualifying the action of an hon. gentleman who stands up in this House to pour out reckless vituperation upon a man who has lived a long career of usefulness to his country and of honour to himself. The hon. gentleman said that it was not the Prime Minister who had recommended the reference to Sir Charles Davidson; he said that it was not the Minister of Justice who had recommended that reference. He suggested that it was the Minister of Militia. He has already had his answer as to that matter of fact, but let me say to him that when he seeks to relieve me of responsibility for having in the first instance suggested the name of Sir Charles Davidson to act as commissioner and for having recommended and joined in the recommendation that this matter should be referred to him, he seeks to withdraw from me not a responsibility that I shrink from, but the credit of an action of which I am proud.

Mr. CARVELL: You are easily satisfied.

Mr. DOHERTY: Sir, when Sir Charles Davidson was originally named to hold this investigation—named, I repeat, at my own suggestion in the first place—upon the recommendation of Council—and I may say that there was no consultation by me with the hon. Minister of Militia on the subject—no man raised his voice on the

subject except to commend the choice. Down in my own city, which is also the city of Sir Charles Davidson, the newspapers of both parties declared that no better selection could have been made. Even the newspaper for whose sayings and doings the hon. member for South Renfrew is responsible, announced in the most unmistakable and inequivocal terms that a selection had been made that would command the confidence of the whole of the people of the country. It is true that at that time, finding it necessary to say something, I suppose, to offset the credit to which this Government was entitled for that appointment, that paper did suggest that perhaps that bold, bad man, the Minister of Justice, might try in some way to have this investigation held in secret. The record of the commission is there to show whether there was any secrecy about it; whether the suggestion that I would have had any desire to do so was well founded. If I had any desire to exercise any influence with Sir Charles Davidson, I venture to say that it would have been an utterly useless undertaking on my part. Sir Charles Davidson was given an open commission. He was given a commission to investigate every matter connected with the expenditure of money by this Government for the purchase of arms or ammunition, of materials of any kind or description whatsoever for the purposes of this war. He was sent out with that open commission to investigate every charge, every insinuation that any one would be found to have the courage to come before that commission and make. That is all the instruction that he had, and that instruction has been, in spite of what the hon. gentleman says, carried out to the letter in a manner which has commanded the approbation of the public without distinction of party.

The hon. gentleman talked about investigations being burked. Well, it is a matter of public notoriety that that commission, everywhere it went, made its sittings public, and that it called on any one who had any charges to bring forth, any imputations to make, or any doubt to express as to whether something had not been wrongly done, to come forward and lay the facts before that commission.

Something has been said about delay in the report. The report is not yet made; it is a considerable time since that commission was appointed. But is not an explanation, in large measure at least, to be found in the very thoroughness of that inquiry and in its very wide scope? When the commission was named, comparatively few matters had been brought forward in respect of which the commission was called upon to decide. But as time went on, before those few matters were disposed of, other charges and insinuations were made, other matters were brought to the attention of the commission, with the result that during this period, during which we are told we have had no results, that commission has travelled from one ocean to the other, and has held investigations at every point in Canada where any man had one word to say, or any imputation whatsoever to make against any of the innumerable transactions which have been carried on by the Department of Militia during the course of this war. Is it to be wondered at that, having regard to the immense field of different charges and investigations that had to be covered, resulting in thousands of pages of testimony, we should not as yet have had a complete report? The hon. gentleman himself, who talks about this resultless commission, tells us that down in the Maritime Provinces it has sent one man out of public life; that right in this neighbourhood it has sent another man out of public life; that it has sent a man out of public life in the province of Ontario. I may tell him that it has sent a man in Regina behind the bars of the penitentiary, and has placed another man under surveillance waiting the decision of the American authorities in respect of extradition proceedings. The commission is spoken of as having been very useless, as having not yet reported. Surely these results are a testimony to the severity and the thoroughness with which the facts have been probed and inquired into by the commission. That very thoroughness of inquiry has taken time, and I may tell my hon. friend that very same thoroughness will be given to the preparation of the report and to the pronouncement of views that may be expressed in that report.

Mr. CARVELL: Does the minister not know that two members of this House were driven out of this House and read out of the Conservative party by the Prime Minister as the result of the work of the Public Accounts Committee, before the House prorogued?

Mr. DOHERTY: If I am mistaken I am mistaken in taking the statement of the hon. member.

Mr. CARVELL: That commission was a post mortem, not an investigation.

Mr. DOHERTY: And now the hon. gentleman imputes the fact that this particular matter has been referred to Sir Charles Davidson to some influence on the part of the Minister of Militia; and he finds the evidence of it in the fact that when a cablegram was received by the Minister of Militia in which it was intimated that matters had been brought forward involving imputations upon himself, he cabled at once asking reference to the only existing commission at the time.

Sir ROBERT BORDEN: Hear, hear.

Mr. DOHERTY: It is the misfortune of Sir Charles Davidson that, having the confidence of everybody excepting the hon. member who has attacked him, he finds himself enjoying, among that everybody, the confidence of the Minister of Militia too.

Mr. PUGSLEY: Hear, hear.

Mr. DOHERTY: That is the one suggestion that has been made why there is impropriety in naming Sir Charles Davidson. But the hon. gentleman did not quite know upon whose testimony, confirmatory of the views we all of us entertained of Sir Charles Davidson, testimony given at what was supposed to be the termination of that investigation, although it has been prolonged since because other matters have arisen—the selection of Sir Charles Davidson was made. The hon. member has paid a high tribute of eulogy to the Auditor General, and the Auditor General is the person who, with regard to this matter, stands in the position, not of the accused, but of the accuser; and if the hon. member wants to know what the view of the accuser in this matter is, of Sir Charles Davidson as a competent, reliable, impartial, careful man to conduct an investigation of that kind, I shall just read to him the opinion of the Auditor General.

Mr. CARVELL: You are reading his official view now.

Mr. DOHERTY: I shall read his sworn testimony. What was the letter that the hon. gentleman read but the official view of the Auditor General? He read to us—and I do not want to minimize in any way the certificate which he gave to the Auditor General—his letter as something entitled to credit in every respect. I am going to read the sworn testimony of the Auditor General. This was at a sitting of the commission a month or two ago, and it appears by the context that it was when it was believed that the matters for investigation had been all investigated—although, as I have said, other matters have arisen since. Here are the questions and answers:

We are about nearing the completion of the taking of testimony.

Mr. McKENZIE: In whose court was this evidence given?

Mr. DOHERTY: It was before the commission.

Mr. McKENZIE: It would be very awkward to say anything of a man impairing his character in his own court.

Mr. DOHERTY: I appeal to the certificate given to the hon. member for Carleton, N.B., as the answer to what I may describe as the not very creditable insinuation of the hon. member for South Victoria. If the Auditor General——

Mr. McKENZIE: It is not an insinuation, Sir; it is a statement.

Mr. DOHERTY: Then it becomes more discreditable. I did not suppose that the hon. gentleman would take the responsibility of stating that the Auditor General of this country, to whom his colleagues has paid so high a tribute, would, merely because he was in the presence of a man, tell an untruth upon oath with regard to questions of fact that were put to him with regard to the manner of conducting the investigation.

Mr. McKENZIE: If the minister will permit me, there is no need of getting hot over this thing at all. I say to the minister that I do not expect any insinuations or slurs, even from a Minister of Justice. And I say I am almost as old a barrister as he is, and that I have been in a great many courts; but I never heard a counsel taking the responsibility of asking an opinion as to the competency of the court before the court itself.

Mr. DOHERTY: If the hon. gentleman thinks that there is no occasion for getting hot, why does he get hot?

Mr. McKENZIE: Because I do not think it is worth while.

Mr. DOHERTY: I want to say at once, that I admit the superiority in age of the distinguished gentleman; and, if he desires, I will not question the greater length of his experience as a barrister.

Mr. McKENZIE: My experience as a barrister is all right, sir.

Mr. DOHERTY: If it were a question of length of temper, perhaps——

Mr. McKENZIE: Or length of speeches, perhaps—

Mr. DOHERTY: I might suggest that the hon. member's is perhaps a little shorter than my own. Let us see what the Auditor General did say, before the hon. member condemns him. He was talking about facts, and it is from the facts that I deduce the establishment of the competency of the investigator and the nature of the investigation:

Sir Charles Davidson: We are about nearing the completion of the taking of testimony, Mr. Auditor General. as you are aware.... Is there anything else now that you can think of which it would be proper for this Commission to investigate?

Mr. Fraser: No, I cannot recollect anything now that I want examination made into further than what has been made.

Sir Charles Davidson: Either here or elsewhere?

Mr. Fraser: No.

Sir Charles Davidson: We have had the pleasure of your company, Mr. Auditor General, throughout the eastern provinces and in the West.

Mr. Fraser: Yes, Sir Charles, I enjoyed your company very much—

This is where the undue politeness that the hon. member attributes to the Auditor General comes out.

—and also the experience I have had.

Sir Charles Davidson: Save at Regina and Winnipeg and Calgary, where it was impossible for you to continue with us, in consequence of your public duties, you were present at all the sittings of the Commission.

M. Fraser: Yes.

Sir Charles Davidson: Was there anything affecting the cases which arose, in which the evidence was not sufficiently thorough, Mr. Auditor General?

Mr. Fraser: Not that I am aware of. I read the reports of your meetings in the West, at which I was not present, and everything seemed to have been gone into very thoroughly.

Sir Charles Davidson: And when you were a witness of our proceedings, what have you to say?

Mr. Fraser: I was perfectly satisfied with the examinations that were made.

Sir Charles Davidson: All suggestions which you made and which you desired carried out were carried out?

Mr. Fraser: You very frequently asked me during the course of the inquiry if I had any further questions to ask, or any further suggestions to make, and whenever I had any questions to ask or suggestions to make I gave them to Mr. Thompson—

This subordinate of the Minister of Militia.

—and they were always promptly attended to, and very satisfactorily attended to.

Sir Charles Davidson: In fact, I think you could fairly say, Mr. Auditor General, that you were treated as a coadjutor in the furtherance of the inquiry.

Mr. Fraser: I was never conscious of any other treatment from the commission than that which I would desire.

Further down:

Mr. Fraser: So far as the knowledge I have of the inquiry made by your commission, it has been a very full and thorough one. If I am any judge at all of these matters, I must say that the inquiry was very satisfactory. I cannot imagine or think of anything else that could have been done. I think the matters submitted to you were very fully covered. It is true that persons who were not present at the meetings of this commission may think now that certain things should have been done which were not done, but it is impossible for them to judge, unless they have been present, as I was.

Hon. gentlemen might, perhaps, take notice of that.

Sir Charles Davidson: And if there is anything of importance to inquire into, the commission is still open for their investigation at the slightest suggestion from you.

Mr. Fraser: Yes, I presume that any ground that has not been covered can yet be attended to.

Mr. CARVELL: Did they close the meeting with prayer and the doxology?

Mr. McKENZIE: Is the Auditor General a solicitor in court? Is he a barrister?

Mr. DOHERTY: I am really afraid he is not.

Mr. McKENZIE: I would not think he would be competent to give any judgment on the conduct of a court.

Mr. PUGSLEY: It has been quite a mystery to me why Sir Charles Davidson refused to permit parties to appear by counsel to cross-examine the various witnesses.

Mr. DOHERTY: On what occasion?

Mr. PUGSLEY: Sir Charles Davidson positively refused to allow parties to be represented by counsel.

Mr. CASGRAIN: Where?

Mr. PUGSLEY: At Victoria the matter came up specially. A gentleman appeared there and asked to be allowed to cross-examine witnesses. Sir Charles Davidson stated that he had no power to allow counsel to address anybody except Mr. Thompson.

Mr. DOHERTY: I cannot deal with a particular case without knowing the circumstances of the particular case.

Mr. PUGSLEY: Does not the minister think that that is an extraordinary position to take?

Mr. DOHERTY: It all depends entirely on the circumstances of the case and, prima facie, inasmuch as it is the decision of Sir Charles Davidson, I should say that the presumptions are that he is right. Under the Inquiries Act he has power to name counsel to assist him in obtaining the truth, and, as I understand it, unless somebody was charged with an offence—and I am speaking of the statute from memory now—there is no provision in the statute giving the right of representation by counsel. In so far as I know the circumstances of the incident, the application that was made—I speak under correction because I do not pretend to have official information, although the hon. gentleman seems to know the facts——

Mr. PUGSLEY: Yes, I do know.

Mr. DOHERTY——the application that was made was that the Liberal party should be represented by counsel. The Conservative party was not represented by counsel—

Mr. CARVELL: Yes, by two of them,—both the commissioner and the counsel.

Mr. DOHERTY: Well, I leave that for what it is worth. The hon. gentleman today has studiously worked and his last observation caps his work and assures him of success in making for himself such a reputation, that when he shall rise and make accusations against people, the public will assume that these people deserve praise instead of blame. When the hon. gentleman undertook to make the reckless attack that he did make this afternoon, he simply placed himself in the position that when the report of it goes to the public, that knows Sir Charles Davidson and that knows the hon. gentleman, it will draw its own conclusion, and that conclusion will be greatly to the advantage of the gentleman whom the hon. member next chooses as the object of his vituperation. The hon. gentleman says that the Conservative party were represented by counsel. He is in that respect no more unjust to Sir Charles Davidson than he is to Mr. John Thompson—Captain John Thompson—the subordinate of the Minister of Militia. There is the testimony of the Auditor General, the man who has gone into matters that were brought before that commission, and he tells you that there was no matter that he suggested to Mr. John Thompson, the so-called attorney of the Conservative party, that was not taken up and most thoroughly gone into. Application, I understand, was made for the appearance of counsel on behalf of the Liberal party, not for any individual taking any responsibility, or making any charge whatsoever. That would have opened the door to counsel for the Conservative party and to counsel for the labour party, which is a very important party in British Columbia, and which represents an element of very great importance in this country. This commission, which in its nature was a commission of inquiry, would have found itself faced by a large number of counsel, none of them representing anybody who made any accusations, and each one of them trying from different party points of view, to derive some advantage from a proceeding that had no object in the world but to ascertain the truth and which was being carried on by two gentlemen perfectly competent and, the hon. member for Carleton to the contrary notwithstanding, absolutely desirous of reaching that truth.

Mr. PUGSLEY: I hope the minister understood from me that Mr. Taylor, who sought to appear before the commissioner in Victoria to cross-examine witness, did not ask for any remuneration from the Government. The Minister understands that?

Mr. DOHERTY: I understand that.

Mr. PUGSLEY: Does not the minister think that having counsel to cross-examine witnesses is always a most important factor in arriving at the whole truth?

Sir ROBERT BORDEN: May I ask the hon. gentleman whether he is aware that the so-called Insurance Commission, part of whose direct task was to drive Sir George Foster out of public life, did not permit Sir George Foster to cross-examine witnesses by counsel, if my recollection is correct? That was a case in which he was directly attacked, and if some correspondence is ever made public as to the purpose of the late Administration in ordering that investigation, my hon. friend, I think, will not find it to the credit of those who had the particular motive of which I have some evidence.

Mr. PUGSLEY: Did my right hon. friend approve of that course upon the part of the commissioners to whom he refers?

Sir ROBERT BORDEN: I might have denounced that course and approved this, because there was a man placed in the position of a defendant and not allowed to ap-

pear in court and defend himself by counsel before the very commission in whose court the attack was being made. It would not be possible under the amendment we have made to the Inquiries Act for such a result to be brought about. But it was possible formerly, and full advantage was taken of that possibility.

Mr. PUGSLEY: I agree with my right hon. friend that if the commission acted in the case to which he refers in the manner described, it was a great impropriety on their part, and I would not justify or defend any commission that would refuse to allow counsel to represent a man who was under accusation. I think it was exceedingly improper if they did so. I desire to repeat the remark I made to the Minister of Justice. I have seen many investigations, and when you have a commissioner with only one counsel to aid him and no counsel to cross-examine, there is the greatest possible danger of having the facts misrepresented and the truth concealed, and of an erroneous conclusion being arrived at.

Mr. DOHERTY: There was only one counsel, and that counsel was counsel for the people of Canada.

Mr. PUGSLEY: Oh, no; he cannot act for both sides.

Mr. DOHERTY: That man was selected by the commissioner himself, and the purpose of that counsel throughout was to get at the truth. In effect he was prosecuting counsel, and if anybody has suffered it would be the people against whom evidence might have been brought out and who might have had an interest in cross-examining. But this is aside from the question. Surely, even if there was one erroneous decision made by the commissioner upon a question of that kind, my hon. friend will not suggest that that justifies the unbridled abuse from the hon. member for Carleton, and that is what we are concerned with now.

Mr. PUGSLEY: I could point out some other errors made by the commissioner.

Mr. DOHERTY: We shall be in a better position to discuss these things when we have the report.

Mr. PUGSLEY: Let us avoid the danger; let us have counsel there now.

Mr. DOHERTY: We will come to the question of counsel later on. For the moment, when I am dealing with men of unbridled tongues who, with wonderful courage and bravery attacking an adversary that is not here, allow themselves to make diatribes such as my hon. friend from Carleton has made this afternoon, it would at least—

Mr. PUGSLEY: He has a good defender in the minister.

Mr. DOHERTY: —it would at least be fair that when one undertakes to stand up and put the defence—so far as he needs it—he might be allowed to make it without interruptions from the hon. member.

Mr. PUGSLEY: May I—

Some hon. MEMBERS: Order, order.

Mr. SPEAKER: If the Minister of Justice has no objection to being interrupted the hon. gentleman can ask his question.

Mr. PUGSLEY: I desire always to be courteous. I thought the minister had given me permission to interrupt.

Mr. DOHERTY: I have no objection in reality.

Mr. PUGSLEY: I thought the minister hadn't.

Mr. DOHERTY: All I want to say further on this subject is that any one who appeared before that commission accused of anything was allowed counsel if he desired it, and the duty of Mr. John Thompson was to act as a Crown counsel would act in any case before a court; seeing to it, from that point of view, that no evidence that would indicate wrong-doing failed of being brought out. And now, in addition to the imputations made upon Sir Charles Davidson, we have it said that Mr. John Thompson was not worthy of confidence.

Mr. PUGSLEY: Will the minister allow me to say that no matter how competent a counsel may be, and no matter how honourable, you cannot rely on getting justice unless you have also a counsel to cross-examine. That is what I meant to say. I was not reflecting on Mr. Thompson.

Mr. DOHERTY: I do not mind being interrupted when my hon. friend has anything new to say, but he has already interrupted several times to tell us that.

Mr. PUGSLEY: I understood the minister to say that I reflected on Mr. Thompson.

Mr. DOHERTY: The complaint of the hon. gentleman is analogous to the com-plaint that might be made because, in a prosecution the Crown alone was represented and the defence did not get a chance. It was the people of Canada who were endeavouring to ascertain the truth; they were represented by Mr. Thompson, and his function was to find out by every means he could conceive of, whether anybody had done anything wrong. That was the purpose of his examination. There might have been room for cross-examination to exculpate perhaps, but from the point of view of bringing out the truth as against the parties charged, certainly there was ample representation of the people of Canada before that Commission. And we have the certificate of the faithful and vigilant watch dog, as he was described this afternoon by the hon. member for Carleton, that that work was thoroughly done. The Auditor General was also there representing the people. He was not a barrister, but he was there as a representative of the people of Canada to instruct Mr. John Thompson, and he was perfectly satisfied that everything that could be done was done.

9 p.m.

But what amazed me most was the reason—and I was surprised to see it come from the leader of the Opposition himself; he expressed it in more courteous words than the hon. member for Carleton chose to repeat it in—why Mr. John Thompson is to forfeit the confidence of the people of Canada in his professional capacity, and that reason is because he is an officer in the Militia. The right hon. leader of the Opposition asked, "Will my right hon. friend tell me that it is proper that the Minister of Militia should be investigated by a Commissioner who is assisted by one of the officers of the Militia." And my hon. friend from Carleton, abbreviating that, spoke of Mr. Thompson as the subordinate of the Minister of Militia. When Mr. Thompson's name was last mentioned in this House in connection with this investigation, we had from the hon. member for Pictou an assurance of his entire confidence in Mr. John Thompson. And what has happened since? Mr. John Thompson gave months and months of his time, perfectly gratuitously, to the service of the people of Canada to help in unearthing whatever wrong-doing there might have been, and he has now added to that sacrifice by donning His Majesty's uniform, and is now in active preparation for almost immediate departure for the front. We are told that because he has done that, in the opinion of the right hon. gentleman who leads the Opposition he is not to be trusted in his professional capacity to carry on this investigation, and he is described as an officer of the Minister of Militia, and the hon. member for Carleton caps that by calling him the subordinate of the Minister of Militia. Since when are those, our sons and our brothers who have gone forth to risk, and, if need be, to sacrifice their lives in the defence of this country and of the Empire and of civilization, to be sneered at as the subordinates of the Minister of Militia? How will the people of Canada accept even from the right hon. gentleman the suggestion that when a man dons the uniform of an officer in His Majesty's service and goes forth, as I have said, to take his place with the men who are defending us and the liberties of this Empire, he forfeits his honour, his conscience, and his reliability, and that by that fact alone he becomes incompetent to act with regard to investigations respecting the Militia Department, because, forsooth, he is the subordinate of the Minister of Militia? Surely hon. gentlemen are hard put to find a ground for insinuation against the honour, the integrity, the readiness and the capacity to fearlessly and impartially perform his duty, of a man who, though he be young and in the eyes of the right hon. gentleman—that seems also to be a reproach to be made to him—has earned for himself an enviable reputation for integrity and for ability in his profession, and a man who bears an inherited name that was in the lifetime of his father honoured, and that shall be honoured in this country as long as this country remains and keeps in mind the memory of those men to whom she owes her greatest debt.

The hon. member for North Cape Breton may ask me now: "Why do you get hot?" I would be ashamed of myself if I failed to get hot in the face of such an absolutely and unqualifiedly unworthy imputation—most assuredly unworthy of the right hon. gentleman, whether or not it be worthy of the hon. member for Carleton.

I have heard a great deal about motives in referring this matter to the Davidson Commission. Gentlemen have suggested, and we have heard in addition to those imputations on the gentleman who is

acting as counsel for the people of Canada before that commission, other imputations. It has been suggested that there is some desire or intention to carry on the proceedings of that commission in secret. I have said that the proceedings of that commission from start to finish have been open to the public. They have been sitting in this building and have been sitting last week and have resumed their sittings this morning. The fact that they were so going to resume their sittings, and the subject they were going into were given out, as I am informed, to the press in the usual manner. My understanding was—I do not state that the thing was carried out because evidently the two hon. gentlemen who were sitting here did not have an intimation conveyed to them—that besides asking the Department of Militia to send everything that they had, besides suggesting that the Auditor General should be communicated with, I did say that the hon. member for Pictou (Mr. Macdonald) had asked a number of questions a day or two ago, and that I understood that the hon. member for South Cape Breton had contemplated making a motion, which at that time it was not intended to go on with. I suggested that they should be communicated with.

Mr. McKENZIE: Perhaps the hon. member for South Cape Breton (Mr. Carroll) might not care to be associated with this matter, as he is not here. My constituency is North Cape Breton and Victoria.

Mr. DOHERTY: Well, I suppose it is easier to keep cool in North Cape Breton than in South Cape Breton. My information is that endeavours were made to reach the hon. member for Pictou, and that they were not successful, and that with regard to the hon. member for North Cape Breton, what I had said apparently had not been understood, so that the accident did happen that the sitting opened this morning without these gentlemen having been communicated with. The Auditor General, however, was communicated with, and we must remember that upon this record, so far as it goes, the basis and source of any imputation that may be involved in the documents that are produced is the letter of the Auditor General. The Auditor General, as I have said, was communicated with, and interested himself in the gathering of information. Now, I am informed that the meeting this morning was really intended as a preliminary opening of the inquiry. It was held, as I understand it, in the usual place. Newspaper reporters, who had been informed of the fact yesterday or the day before, were present. The commission adjourned. It is to sit on Tuesday at ten o'clock in the morning in the same place. The witnesses that were heard this morning will all be there and all available for examination.

Mr. PUGSLEY: Will counsel be allowed?

Mr. DOHERTY: I am coming to that. Since hon. gentlemen opposite are so anxious with regard to counsel in this particular matter, I am not disposed to make objections to counsel being given. I am prepared to admit that this matter is on a different footing from matters of the nature of those that have been investigated in the past, and above all, in view of the imputations which hon. gentlemen have seen proper to make upon the gentleman who occupies the position of adviser to the commission—whether he continues in that position or not is for him to decide after the conduct which we have witnessed this afternoon—if any hon. gentleman is prepared to assume the responsibility of such imputation or charge as may be contained in these papers and desires to be represented by counsel, I myself am quite ready to represent to the commissioner—I cannot undertake to control his action in the matter—that so far as I am concerned and this Government is concerned—and I am satisfied I speak for the Minister of Militia as well as for every other member of the Government—there is not the slightest objection in the world to counsel appearing before the commission upon this particular matter.

In all the imputations which hon. gentlemen are so ready to make, I sometimes wonder whether we do not find verified in this House, on one side of it at least more perhaps than anywhere else, the truth of the saying that people are prone to judge others by themselves. In view, however, of the imputations that have been made, and to make it perfectly clear that, notwithstanding those imputations, there is in this Government absolutely no desire in the world other than that anything that can be given, by any possible construction, the face or appearance of a charge against this Government or any member of it, should have the most ample and thorough and competent investigation possible. I am free to say that, so far as this particular matter is concerned, and under the circumstances I have mentioned, if any hon. gentleman desires to assume the responsibility of those charges, there will be no objection to his having

counel to conduct such prosecution as he may be advised before the commission.

Mr. PUGSLEY: I do not wish to interrupt the hon. minister, but with his permission I desire to ask him a question. This commission of Sir Charles Davidson is appointed under the very same Act under which the Meredith-Duff Commission is appointed. In the Meredith-Duff Commission the Government agreed that the leader of the Opposition should name counsel, and counsel was appointed. Now these are very important charges made by the hon. member for North Cape Breton (Mr McKenzie). Will the Government adopt the same course in this matter before Sir Charles Davidson as has been adopted in the Meredith-Duff Commission —arrange for the appointment of counsel and give that counsel the same status as counsel before the Meredith-Duff commission? If so, that would be an approach to reasonable fair play.

Mr. DOHERTY: What I have said, perhaps, goes further than we said we would do with regard to the Duff-Meredith Commission. What was said with regard to the Duff-Meredith Commission was that the Government would appoint counsel to assist the Commissioners, and that the right hon. leader of the Opposition (Sir Wilfrid Laurier) should be at liberty to select one of these counsel. We have actually now counsel to assist the commission. I am going further; I am saying that if hon. gentlemen opposite take the responsibility of this charge and want counsel to prosecute, for whatever purpose may run in their minds, we will be willing that they should have counsel before the commission.

Mr. PUGSLEY: The minister seems to be not quite fair. All I ask him is this. We have here two cases. The hon. member for Richmond (Mr. Kyte) made certain charges with regard to the purchase of fuses, and for that the Government appointed a commission under the Inquiries Act to make investigation. Now, the hon. member for North Cape Breton (Mr. McKenzie has made certain charges with regard to the sale of ammunition. All I ask is that the Government should appoint counsel, having the same status exactly—neither more nor less—that Mr. Johnston has in the Meredith-Duff Commission. That is all we ask; will the minister do that?

Mr. DOHERTY: I have used the words of the English language, as I understand them, which convey the idea that we are willing that counsel should be appointed. I do not know that I have anything more to say. I do not follow what it is I am asked to define.

Mr. CARVELL: Take away the condition you imply.

Mr. DOHERTY: Do I understand that what is asked is, when we are giving counsel to act for the people of Canada generally, hon. gentlemen opposite say: That is no good, we want counsel to act for somebody who is not the public of Canada? Surely that somebody else must be the somebody taking the responsibility of the charges.

Mr. PUGSLEY: The hon. member for North Cape Breton is making the charges.

Mr. DOHERTY: I have said that there may be counsel before this commission to prove these charges the best he knows how. What further I can say I do not understand.

Now, Mr. Speaker, I am done. I did not rise to discuss the subject-matter of the so-called charge which the hon. member for North Cape Breton has made, and I have not gone into it. It is now before a competent tribunal of investigation, and I am absolutely satisfied to leave it there and to abide by the result which shall be reached. I rose only, I may say, because I felt that it was incumbent upon me, as a duty, not to let go unanswered such absolutely reckless vilification——

Mr. PUGSLEY: I think that is out of order, Mr. Speaker; the minister is forgetting himself.

Mr. SPEAKER: If the hon. minister was referring to the words used by the hon. member for North Cape Breton (Mr. McKenzie, or by the hon. member for Carleton (Mr Carvell), I think he is out of order; but I understand that not to be the case.

Mr. DOHERTY: I think that under your ruling, Mr. Speaker, I will have to admit that I was making that reference, and will have to withdraw the expression. The hon. member for St. John (Mr. Pugsley) suggested that I was forgetting myself. May I say that I was not forgetting myself that I was remembering the language of the hon. member for Carleton. However that language may be characterized, I felt that I should be doing very much less than my duty if I did not stand up to make—I do not know that I should call it a defence, because I am sure that the reputations of

the two gentlemen who have been attacked stand so high that they might be left to stand as the sole defence against the attack (I hope that is parliamentary) made upon them by the hon. member for Carleton. We had some discussion this afternoon on comparison of reputations. May I say to the hon. member for Carleton—and in this I am not depreciating in the slightest degree the height of his present reputation—that if he ever succeeds in attaining the reputation which Sir Charles Davidson has attained, after a long career lived out in the public eye, and under conditions in which his qualifications for such a position as he now occupies were put to the severest test, the hon. gentleman can flatter himself that his life has been that of one of the most honourable, the most distinguished of men whom Canada has produced.

Mr. E. M. MACDONALD (Pictou): Mr. Speaker, the matter now before the House may be said to be a sequel of what began as long ago as the 9th of March. The Minister of Justice charges my hon. friend from North Cape Breton with being in this position in bringing this matter before the House—that he desired to have something to talk about, having found that the Government had referred the matter to Sir Charles Davidson. The hon. minister should not have made that remark; it was totally unwarranted. It is just as well that we should be clear as to the facts. The hon. member for Cape Breton (Mr. McKenzie), on Monday last, informed the Prime Minister that he proposed to make a motion based on the papers that had been brought down. It was after my hon. friend from North Cape Breton had intimated that he would move in this matter that the Prime Minister moved.

Sir ROBERT BORDEN: I beg the hon. gentleman's pardon. There is no foundation whatever for that statement.

Mr. MACDONALD: Why not?

Sir ROBERT BORDEN: I have already explained, but the hon. member must have overlooked it, that on Thursday or Friday last I spoke to the Minister of Justice and told him that Sir Charles Davidson should be instructed to proceed with that inquiry. He saw Sir Charles Davidson on Saturday, I think. On Monday he reported to us that Sir Charles Davidson thought that an additional Order in Council would be necessary, and the recommendation was brought to Council on Monday by the Minister of Justice.

Mr. MACDONALD: It appears, then, that my right hon. friend discovered last Thursday that this was a matter that ought to be investigated. My right hon. friend was very slow in bringing down information to the House in regard to this question. It took him two months to give to this House information which he might have given within two weeks after the matter was first called to his attention.

Sir ROBERT BORDEN: I do not think it was as long as that.

Mr. MACDONALD: I will give the House the story of the way in which this matter came before Parliament. Last Thursday it developed in the mind of the Prime Minister that this was a matter that ought to be investigated, and he communicated the fact to the Minister of Justice. He knew, or ought to have known when the idea first developed in his mind, that there was no power in Sir Charles Davidson, under the Order in Council under which he had been appointed a commissioner, to deal with this matter. My right hon. friend knew that last Thursday.

Sir ROBERT BORDEN: The statement that my hon. friend has just made is not a correct statement. It was not presented to my mind at all that any further Order in Council would be necessary. That was first brought to my attention on Monday by the Minister of Justice.

Mr. MACDONALD: Then my right hon. friend did not know the extent of the powers that he had previously conferred on Sir Charles Davidson?

Sir ROBERT BORDEN: I did not have the Order in Council before me, and it did not occur to me that it related to purchase and did not include sale.

Mr. MACDONALD: Why did my hon. friend not have in mind that according to the statement which he made to the House, and under the Order in Council creating the Meredith-Duff Commission he could have sent this matter to that commission without specially dealing with it? My right hon. friend intimated here more than once that the Order in Council creating the Meredith-Duff Commission contained powers which were sufficiently wide to enable him to send to that commission any matters coming up in Parliament that might require investigation.

Sir ROBERT BORDEN: It would have required an Order in Council even in that case. My hon. friend ought to know that.

Mr. MACDONALD: My right hon. friend some weeks ago constituted a commission which for the purposes of this discussion we will call the Meredith-Duff Commission. He announced and re-announced to the House that the Commission was constituted for the purpose of dealing not merely with those charges in which the name of J. Wesley Allison was mixed up, but with any other charges of a kindred nature that might arise. Some days after having brought down to the House the papers which, produced only a week ago Monday, he could have brought down long before that day, he decided that the papers which he himself had produced indicated the existence of a state of affairs which demanded an investigation. Instead of referring the matter to the commission which he had led the country to believe was constituted for the purpose of investigating matters relating to J. Wesley Allison, my right hon. friend in some inscrutable way decided to utilize the services of Sir Charles Davidson. Last Monday the member for North Cape Breton went to my right hon. friend and intimated to him that he purposed moving a resolution in the House based on the facts disclosed in the return brought down by the Prime Minister, and then and not till then did my right hon. friend disclose to the member for North Cape Breton the fact that he intended to refer the matter to Judge Davidson. What did my right hon. friend do subsequent to that? On Tuesday the Order in Council was passed. He did not notify Parliament; he did not bring the Order in Council down to the House. No one in the country except my right hon. friend and his colleagues knew that such an Order in Council existed. It was his duty to give us the facts.

Sir ROBERT BORDEN: I beg my hon. friend's pardon. I have already stated that when the member for North Cape Breton spoke to me on Monday last I told him that the matter was referred to the Davidson Commission.

Mr. MACDONALD: As a matter of fact, it had not been at that date.

Sir ROBERT BORDEN: The recommendation had been signed and sent to the Governor General for approval at the time that I made that statement to the hon. member for North Cape Breton and Victoria.

[Mr. Macdonald.]

Mr. MACDONALD: We have here in this file the memorandum of another Order in Council which had apparently been prepared but had never been approved or passed. It is rather curious, therefore, that my right hon. friend's Order in Council was in that position. But my right hon. friend has not told us why he failed to place on the table of the House the Order in Council which was passed on Tuesday.

Sir ROBERT BORDEN: I told the hon. member for North Cape Breton that the matter had been referred to the Davidson Commission. If the Order in Council had been asked for, I should have been perfectly willing to lay it on the table of the House.

Mr. McKENZIE: The Prime Minister does not say that he mentioned anything about an Order in Council to me?

Sir ROBERT BORDEN: I told my hon. friend that the matter had been referred.

Mr. McKENZIE: There was no mention of an Order in Council.

Sir ROBERT BORDEN: It could only be referred by Order in Council of some kind.

Mr. MACDONALD: My right hon. friend admits that he did not tell the member for North Cape Breton that an Order in Council had been passed. He simply used the word "referred," not the words "Order in Council." How could we ask for the Order in Council when we never knew it had been passed? It is a peculiar fact that though my right hon. friend mentioned to the member for North Cape Breton and Victoria the fact that the matter had been referred, the member for North Cape Breton and Victoria had no notice of that, and never knew that such an Order in Council had been passed. The memorandum of Council, which is like the one in the Militia Department of January 5, which was never passed, might never have been passed at all. My right hon. friend can find no good excuse in the assertion which he makes that if the Order in Council had been asked for he would have brought it down. My right hon. friend should have brought down the Order in Council, because no one but himself and a few of his colleagues knew that such a document existed. I think my right hon. friend ought to tell us here and now what are the contents of the ref-

erence which has been made to Judge Davidson. I pause for a reply.

Sir ROBERT BORDEN: A copy of the Order in Council is here; it will be laid on the table of the House to-night. I handed it just now to the Minister of Justice; I will send it over to my hon. friend.

Mr. MACDONALD: At this juncture I might as well read this document. It is dated the 9th of May, and is as follows:

> The committee of the Privy Council have had before them a report dated 8th May, 1916, from the Minister of Justice submitting with reference to the commission of 2nd June, 1915, issued to the Honourable Sir Charles Peers Davidson to investigate the purchase of arms and munitions, etc., and the expenditures and payments therefor, that it is deemed desirable to extend the powers of the commissioner so as to enable him to inquire into and investigate the facts and circumstances of or connected with the sale or disposal by Your Royal Highness's Government of small arm munitions since 4th August, 1914, referred to in returns made to the House of Commons on the 1st and 2nd of May, 1916.
>
> The minister therefore recommends that Your Royal Highness cause inquiry to be made pursuant to part 1 of the Inquiries Act, Revised Statutes of Canada, 1906, chapter 104, concerning the aforesaid transactions and that a supplementary commission be issued in the case conferring and charging upon the commissioner all the powers and duties for the inquiry aforesaid which the commissioner has under and by virtue of the aforesaid commission of 2nd June, 1915.
>
> The committee concur in the foregoing recommendation and submit the same for approval.

The Minister of Justice had the temerity to denounce my hon. friend for North Cape Breton for bringing on this resolution this afternoon because the Government had referred this matter to a commission. Yet no one ever saw this Order in Council outside of himself and the Prime Minister until this moment. The Minister of Justice really had the temerity to charge my hon. friend with having brought this question on for the purpose of discussing this matter in advance. That suggestion is not worthy of my hon. friend, and he would not have made it had he not been in a temper, and were it not for the fact that he was indulging in a species of buncombe such as I never heard him attempt to perpetrate in this House before.

The minister appealed to the House and the country to regard with indignation the suggestion made by my right hon. leader that Captain John Thompson, wearing as he does the King's uniform, engaged as he ought to be and no doubt is, in preparing himself to go overseas, and being a subordinate for the time being of the Minister of Militia and, as the Minister of Justice knows, under his control and direction, would place himself in an anomalous position by continuing to act in that investigation.

Sir WILFRID LAURIER: Hear, hear.

Mr. MACDONALD: As a friend of Captain John Thompson, as a professional man, I want to say that both from a military and a legal standpoint, and in view of all the ethics that apply to the professions both of law and of arms, my friend Captain John Thompson knows that he would occupy a most anomalous position before the people of this country if he undertook to go on with an investigation into the conduct of the man who is, at this moment, his superior officer. Such a suggestion as was made by my right hon. friend was an eminently proper one. My hon. friend's criticism was pure buncombe and playing to the gallery, and my hon. friend knows it very well. Not only was it unworthy of him, but I venture to say that I never saw him before descend to such tactics in discussing a public question. He complains because this resolution was introduced. Why sir, what are the facts of the case? The story is a long one. On March 9, over two months ago, I ventured to ask this question in the House:

> Mr. Macdonald:
>
> 1. Was any small arms ammunition disposed of by the Militia Department since August 4, 1914? If so, to whom?
>
> 2. What was the price received?
>
> Mr. Kemp: All serviceable ammunition has been issued to Canadian contingents. It would not be advisable to give the details during the present emergency, in the public interest.

The moment I saw that answer in Hansard I knew, as every hon. gentleman who read it must have known, that there was something very peculiar in regard to the question of the sale of small arms ammunition. I had no detailed information in regard to the matter; I had no means of knowing whether there was anything incorrect in the transaction. But the very answer given by the Minister of Militia at that time was an indication that he was concealing something that was suspicious. I proceeded to put further questions, and, quite unconscious of the fact that the hon. member for Carleton (Mr. Carvell) was moving along the same lines, and without any communication with him, I asked, on March 14, a general question in regard to the whole matter, while my hon. friend

asked a similar question on March 13. These questions remained unanswered for quite a number of days. On March 23rd my question was put and this occurred:

Mr. Macdonald:

1. Did any one purchase from the Militia Department, since August 4, 1914, any small arms ammunition?

2. If so, what quantity, and what price was paid therefor?

3. Who was the purchaser?

Mr. Kemp: Stand.

Mr. Macdonald: How long does my hon. friend expect this question to stand. It has stood for two weeks now.

Mr. Kemp: We will give the information just as soon as possible. We are doing everything possible in that direction.

One would think it was necessary to make some very involved and deep exploration in order to answer the question; yet all the papers relating to the transactions were lying in the Militia Department, and the transactions had been closed on the 1st day of January, 1916, and every hon. gentleman comprising the Government knew that a memorandum had come to council and had never been passed. Yet the Acting Minister of Militia wanted the House to believe that he was straining every energy to get this information in order to give it to the House. Finally, on March 27, an answer was given to the question of my hon. friend from Carleton. That answer was to the effect that this ammunition, which we are told to-day is no good at all, had been sold for money to various rifle clubs throughout the Dominion for the use of men who were practising and learning to shoot. At the end of the answer there came this statement:

To Vickers, Limited, a certain number of rounds of Mark VI, at $20 per thousand rounds represented to be for the purpose of testing machine guns.

The sale of a quantity of ammunition to Vickers-Maxim to be used for testing machine guns, coupled with the suspicious circumstances in connection with the returns up to that time, at once suggested to one's mind that here was a field in which further information might be desired. So following that, on March 29, I moved for an Order of the House, and I was met by my right hon. friend (Sir Robert Borden), who told me that it was contrary to the public interest to disclose the quantity of ammunition that was sold. My right hon. friend indicated that I must amend my motion before I could have it passed. I was compelled to amend the motion, eliminating the matter of quantity, because, forsooth, there was liable to a national menace if the quantity were published. All this time the quantity that was sold, apart from the sale to Vickers-Maxim, was sold to people in this country for practising with the rifle, rifle clubs and organizations of that kind, so that the theory that the disclosure of the quantities would be liable to hurt somebody or be dangerous to the public interest was entirely illusory; it had no justification whatever.

What follows? On April 5 my question was answered. Varying slightly in terms from that of the hon. member for Carleton (Mr. Carvell), it had been dropped from the Order Paper in my absence from the House on the theory that the answer to the question of the hon. member for Carleton was a sufficient answer to my question. I was compelled to call the attention of the House to the fact that I had asked for certain information and that my question varied from that of the hon. member for Carleton. It was not until April 5 that my question was answered. On April 5, in a discussion with my hon. friend on the subject, he said:

I have no objection to this motion passing, subject, of course, to some consideration as to giving the quantities. I shall also endeavour to expedite it.

From April 5 to May 1 nothing was done with regard to bringing down the return, but on May 1, two months after we had started to get the most ordinary information in regard to this matter, the return was formally brought down. These facts indicate a condition of affairs which naturally would cause suspicion to be aroused in the public mind.

Sir ROBERT BORDEN: On what date was the order passed by the House?

Mr. MACDONALD: April 5.

Sir ROBERT BORDEN: When was the return brought down?

Mr. MACDONALD: On May 1.

Sir ROBERT BORDEN: That is not two months.

Mr. MACDONALD: Two months, I said, elapsed from the time at which the matter was first broached in the House until the Government were able to bring down the return. My right hon. friend was not then in charge of the department, but the acting minister who was in charge knew that the subject was not only a matter of interest but that it was to come up in the

House and he ought to have been able to have got the return in much less time than it took. Well, the return was brought down. It goes into a lot of ancient documents that have no relevancy whatever to the question. Notwithstanding this unnecessary and irrelevant matter, what does the return disclose, beyond the shadow of a doubt? It discloses this and I speak from the official statement:

On September 8, 1915, Col. J. W. Allison, representing the Vickers, Limited, applied to purchase 236,000 rounds of Mark VI ammunition required by Sir Trevor Dawson.
Application approved by the minister.

These hon. gentlemen talk about the Quartermaster General having the sale of bad ammunition. Any theory of that kind, such as we heard put before the House this afternoon, vanishes in the face of the official statement. I find on page 13 of the return:

Application approved by the minister. The shipment in question was made on September 22.
On December 18 Col. Allison applied for 2,000,000 rounds of Mark VI ammunition.
Application approved by the minister.

No Quartermaster General is selling that ammunition. The minister sells it as this document shows. Imagine the temerity of hon. gentlemen in talking about bad ammunition and the Quartermaster General having power to sell it. It seems absurd in the face of this positive statement that this application was approved by the minister. Then:

On November 11, Col. Allison applied for 1,000,000 rounds of Mark VI ammunition for his principals.
Application approved by minister.
Later Col. Allison asked that this amount be increased to 2,000,000. This was authorized to be issued—

By the minister.

On December 18, Col. Allison applied for 2,000,000 rounds of Mark VI ammunition.

He applied in a telegram from New York in which he said he was there with the minister and that the minister had authorized the sale of this ammunition, but he wanted to let the Quartermaster General know about it. Inquiry was made by the proper officials to know if this quantity should be issued and at what price and it was:

Approved by minister—

On the 20th December, 1915.

—later endorsed by minister to ascertain by whom to be used, and if sold, to be by Order in Council. The deputy minister endorsed the application that this sale would only be by Order in Council.

Then we have the

Application for Order in Council as finally settled.

There was a memorandum from the minister asking the Governor General in Council for approval not merely for the sale of the balance of the 5,000,000 rounds of ammunition but for approval of the sale that he had effected without any Order in Council permitting him to do so. There the matter stood. No Order in Council was ever passed, and as my right hon. friend the leader of the Opposition pointed out this afternoon, the result was that a Minister of the Crown undertook to sell the property of the Canadian people without the authority or consent of the Crown which, under the law, he must and should have got before undertaking to dispose of that property.

These are the facts in connection with the matter. When you remember that this gentleman, Mr. J. Wesley Allison, was the man who negotiated this unusual and peculiar sale, you have a further condition under which investigation becomes absolutely imperative. Mr. J. Wesley Allison went to the minister first in regard to the purchase of this ammunition and the minister sent him to the Quartermaster General. Mr. J. Wesley Allison writes the Quartermaster General telling him, and his letter is to be found at page 16 of the return:

Referring to my arrangements with you some time ago for the purchase of 236,000,—303 Mark VI cartridges for Sir Trevor Dawson, I have just received a cable requesting me to have these shipped.

J. Wesley Allison arranges with the Minister of Militia that he is to get this quantity and then he writes to the Quartermaster General for the purpose of getting it. He writes to the Quartermaster General that he has been instructed by the minister to apply to him for the purpose of getting the ammunition. Then we find a statement made to the House and made in the memorandum accompanying the application for the Order in Council to the effect that this ammunition was required for testing purposes. There is not a line or word in any of these documents on record to show that the Vickers Maxim Company ever asked to get this ammunition for testing purposes. That is purely the creation of the minister in preparing the memorandum for council. No one of his subordinates made a statement of that kind. It is not here stated from any source that it was to be used for

testing purposes. Yet, the Government undertake to ratify that assertion by stating to Parliament, in answer to my hon. friend from Carleton, that they had sold a large quantity of this ammunition to the Vickers Company to be used for testing purposes. I would like to know where the minister who answered that question got that information. Is it to be found in any document? If it is contained in any document it should have been brought down. This House was entitled to see that document and to know whether the Vickers Maxim Company wanted this ammunition for testing purposes. It turns out when the minister does bring down the return, that he has placed on file a memorandum, a sort of apology or excuse or justification for the sale in which he intimates that this ammunition was not used for testing purposes at all but that it was wanted by the British Government.

Right here I want to ask the right hon. gentleman who leads the House what possible explanation he has for a department of this Government selling ammunition or anything else to the British Admiralty through the intervention of Col. J. W. Allison. If the British Admiralty wanted to buy ammunition, how is it that my right hon. friend was not communicated with? How is it that the British Admiralty did not communicate their wishes to this Government in the proper and official way? But that is not the situation; J. W. Allison appears in this transaction. This House and country is being absolutely deceived by the official statement made to the House that this ammunition was sold to Vickers-Maxim for testing purposes. It was not sold to Vickers-Maxim for testing purposes; the Government knows that, and the Minister of Militia knows it. But in some way this ubiquitous individual, J. W. Allison, who turns up at every corner in this country where there is a dollar to be made, is thrust into the position of mid-

10 p.m. dleman between this Government and the British Admiralty. My right hon. friend took very great care this afternoon not to refer to J. W. Allison. He said nothing whatever to defend or excuse him, or even indicate that he had any existence at all. True, the Minister of Militia once more rushed to the defence of his friend in his usual vigorous style; but the right hon. gentleman left J. W. Allison alone; he was not going to father him. He has not assumed any responsibility for him up to date, although this afternoon he did endeavour to assume responsibility for the righteousness of the sale of this ammunition. But he was not going to assume responsibility for J. W. Allison. He told us that this ammunition was no good. Why was it no good? Because it was under suspicion. And he quoted Colonel Barlow's report that the ammunition was not to be used in Mark II rifles.

And yet the ammunition was sold. During the past year I find that Major J. S. Thom, of Sarnia, for instance, purchased 1,000 rounds of this very same ammunition; the Prince Edward Island Provincial Rifle Association also purchased a large quantity; the Amherst Canadian Rifle Association purchased 1,000 rounds of this ammunition on two occasions; the 63rd Regiment, in the constituency of my hon. friend, purchased 4,754 rounds of this very same ammunition, which the minister says he will never allow to get into the hands of our boys who are fighting at the front. But he is willing to let the 63rd Regiment take the chance of shooting themselves while practising rifle shooting with this ammunition; he did not care about them. Then the 183rd Rifle Association purchased 1,100 rounds; the Morven Canadian Rifle Association, 600 rounds, and the 20th "B" Horse.

Mr. OLIVER: What did they pay?

Mr. MACDONALD: The price varied according to the amount purchased. Some paid $20, and here it says that $25 was paid by the 20th "B" Horse, but it does not indicate whether that was the price per thousand rounds, or for the total quantity bought.

What did the Minister of Militia mean this afternoon when he talked about the Quartermaster General having power to dispose of this ammunition without an Order in Council? Did he want the House to believe that Quartermaster General Macdonald had sold this ammunition without his authority? If he did not mean that, what was he talking about the Quartermaster General for? In addition to the names given in the main return, there appears in the supplementary return a list of other parties to whom this ammunition was sold. Under the authority of the Minister of Militia we find that Vickers, Limited, of London, bought 236,000, 2,000,000 and 750,000 rounds at different times. The man who was responsible and whose authority was given for the sale of

these three lots is given in the official document as the hon. Minister of Militia. It is clearly proven beyond the shadow of a doubt in regard to these various items that the Minister of Militia himself directed the sale of the ammunition to Allison. There is nothing in these returns to indicate for one minute that the ammunition was to be used for testing purposes. The first time any suggestion was made about its being used for testing purposes was in the memorandum sent by the minister to Council on the 5th of January.

It appears further from this return, from the statement of the minister himself justifying this transaction, that the sale was not to Vickers-Maxim at all, but that the ammunition ultimately went to the British Admiralty. These are the facts, unquestioned and undoubted, that are given in the return. These are the facts that the Government was fooling with from March 5 to May 1, and were preventing from getting to the public. I should like to ask the Prime Minister why the answer was given on March 5 that serviceable ammunition had been issued to all Canadian contingents, but that in the public interest it would not be advisable to give details during the present emergency. Why was that answer given if it was not to prevent the information from being given to the public? The defence made this afternoon was that the Quartermaster General had disposed of this ammunition, but I have proved from the return that he did not sell it, and that it was sold directly under the authority of the minister. Other documents in the return indicate that in December the minister and Allison were conferring in New York, and wired up to Ottawa that a large quantity of ammunition be provided, but the deputy minister made a memorandum, which is on the return here, to the effect that the requisition would have to go to Council for sanction. So much for the Quartermaster General and his power.

My right hon. friend this afternoon went at great length into Colonel Barlow's report as to the quality of the ammunition. It is needless for the Minister of Militia to make assertions that he is not going to let any of his boys at the front fight with this ammunition, as if there was any chance of them getting bad ammunition unless he put it into their hands. He need not make doughty assertions of that kind, as if we were forcing bad ammunition upon them. Who is doing that? No one. If this ammunition was of no value why did the British Admiralty want it, and why did this Government sell it to them through its own minister? If the ammunition was no good, why did they put through a transaction, through their own middlemen, whereby the boys on the ships and in the naval brigades in England were provided with ammunition which the minister would not allow the boys in the Canadian regiments to use? Having regard to the fact that all the forces of the Empire are one, what difference does it make whether the ammunition explodes in the rifle in the hands of a boy in one of the naval brigades in England, or in the hands of a Canadian soldier? Why should an attempt be made to mislead the public in regard to this ammunition? Why is it asserted that the ammunition was of no value, when the British Admiralty got it and used it? And this Government knew that the British Admiralty got it and used it. If they knew this ammunition was no good, they were guilty of a crime against the state and against the Empire in permitting improper ammunition to go into the hands of any portion of the forces of the Empire. Yet they did that, and they kept on selling to the men in the rifle club throughout this country this ammunition for practice. It is no wonder that my right hon. friend the Prime Minister came to the conclusion that the matter deserved to be investigated. The question is as to whether he is going to give that full and complete investigation which he avowed to the country he was prepared to do in regard to all matters. He can choose two tribunals, both in existence at the present time, one presided over by two distinguished judges with ample counsel representing all possible parties, a tribunal in active operation which can proceed with the inquiry at once. My right hon. friend said that there were witnesses available in town which could be heard at once. Who were the witnesses? Col. J. Wesley Allison is in town. Does my right hon. friend mean to say that that gentleman may skip out before the Meredith-Duff Commission would get through with him in regard to this matter? What other witnesses are in town? This transaction is not one in which Americans are involved; it is a transaction in which men of the British race are involved, and I am quite sure that if it is necessary to get information from England, means could be adopted to get that information. We are not dealing with aliens in this matter, and it is within the purview of the

Meredith-Duff Commission if my right hon. friend would give it the power to deal with the matter. His only excuse for not giving them that power is that there were some witnesses in town.

Sir ROBERT BORDEN: That is not correct.

Mr. MACDONALD: What is the excuse?

Sir ROBERT BORDEN: It is not an excuse; it is a reason. The reason was that the Meredith-Duff Commission had been appointed to deal with expenditures made by the British Government. The Sir Charles Davidson Commission had been appointed to deal with matters that directly concerned this Government, as that matter does. Therefore, it was thought advisable that it should be referred to that commission.

Mr. MACDONALD: If my right hon. friend will pardon me, that is not a very good reason, and if he will stop to think for a moment, he will see that this is peculiarly a matter that ought to go before the Meredith-Duff Commission, because it is a matter affecting the sale of ammunition by this Government to the British Government. According to the facts that are admitted, the British Government purchased from this Government certain small arms ammunition.

Sir ROBERT BORDEN: I do not admit anything of the kind. I have already stated that no such proposal ever came to the attention of the Government, so far as I am aware. The proposal that came to the Government was that this ammunition should be sold or its sale ratified to Vickers, Limited, of England.

Mr. MACDONALD: This is the statement of the minister himself. My right hon. friend has seen this memorandum.

Sir ROBERT BORDEN: What does the hon. member say contrary to that?

Mr. MACDONALD: The memorandum says:

> It is understood that, to cover the cost of transport, handling, exchange, insurance, etc., a sum was added, by one of Vickers' officers, to the price, but, on learning that these expenditures were borne by the British Government, they were immediately removed.

My hon. friend the Minister of Militia this afternoon stated that this ammunition went to the British Admiralty.

[Mr. Macdonald.

Sir ROBERT BORDEN: Does not the statement that my hon. friend holds in his hand state definitely that the ammunition was sold to Vickers, Limited?

Mr. MACDONALD: Certainly.

Sir ROBERT BORDEN: That was what I was alluding to.

Mr. MACDONALD: But it was resold by Vickers, Limited, to the Admiralty, according to the statement of the Minister of Militia this afternoon.

Sir ROBERT BORDEN: I do not remember that.

Mr. MACDONALD: Not only that, but he says in this memorandum:

> The assurance was given that not one cent was paid in commission by the firm to any one, and no profit was made on it. It is understood that, to cover the cost of transport, handling, exchange, insurance, etc., a sum was added, by one of Vickers' officers, to the price, but, on learning that these expenses were borne by the British Government, they were immediately removed.

These munitions went to the British Government; they went to the Admiralty. I say this is essentially a case that ought to have gone to the Meredith-Duff Commission because it referred to relations between this Government and the Admiralty in regard to ammunition. The Meredith-Duff Commission was the proper tribunal; the counsel were there, everything was in readiness to proceed; J. Wesley Allison was before the commission or going to be before it. My right hon. friend must admit that it was an unnecessary and unusual act on his part when he proceeded to resurrect Sir Charles Davidson and hand the matter over to him. We have the question before the House and the country as to which would be the better tribunal, and after a long discussion this evening, the Minister of Justice indicated that he might be prepared to appoint counsel, but he was very careful in regard to that; he was making very large reservations in regard to what he was going to do, and he did not speak with frankness in regard to the subject. I say that the Davidson Commission is not the proper commission to try this matter. My right hon. friend the Prime Minister knows that; he knows that Sir Charles Davidson is a jurist who has retired from the bench; that he is a very old gentleman; that the task of dealing with this matter or any matter of an investigation is one that requires strenuous virility on the part of any judge. I remember, when my right hon. friend was leading the Opposition, that the present Mr. Justice Lennox,

who was one of his lieutenants, discussed year in and year out the lack of wisdom in appointing judges as commissioners to deal with matters of this kind. I say without hesitation that the Sir Charles Davidson Commission is not one which has the confidence of the country at the present time.

Just let us see what was said to-day in one of our papers in regard to the subject. I agree that in this country the maintenance of the fair name of the judiciary is one of the highest possible importance, because anything that would create a lack of confidence in the mind of the public in the men who have to sit as judges would be an unfortunate thing for the people and for the state. This is a letter which I think is worthy of the attention of the House:

> The following is some of the evidence given by Mr. Allison as it appeared in the press report of the 8th instant, before the Davidson commission
>
> Have you any letter to act as agent for General Hughes?—No, I had letters of introduction from him and I found the minister's influence was of great assistance to me.
>
> Was the introduction to the Colt Company one?—I am not sure. I think I knew the Colt officers before that, but not in a business way.
>
> "I am to understand," asked Sir Charles, "that while you had letters of introduction from General Hughes you never utilized them?" —Not for business, but for social purposes.
>
> Is there anything in that evidence which would possibly give Sir Charles Davidson to understand 'that while you had letters of introduction from General Hughes you never utilized them'? Is this not rather the evidence of Commissioner Davidson than of Allison? Then look at Allison's answer.

So says the wily Allison.

Sir ROBERT BORDEN: Who signs the letter?

Mr. MACDONALD: The letter is anonymous.

Some hon. MEMBERS: Oh, oh.

Mr. MACDONALD: The fact that it is an anonymous letter does not make any difference because it draws an inference which an eminent lawyer like my right hon. friend would draw himself. The letter goes on:

> —and yet Allison says at the commencement that he found "the minister's influence was of great assistance to him." Socially or commercially, which did he mean? We don't know who he met socially; we know what he did commercially. Is it any wonder the public grin when they read the report of a commission such as this?—Reader.

My hon. friend the Minister of Justice dilated upon the tremendous work of this commission and the fact that it had been sitting for a year.

Anyone who stops to think will realize that what Judge Davidson has been doing is trying a number of different cases during the past year, just as every judge who sits in the Supreme Court of any of our provinces. But, although he has been trying these cases, and began to deal with them last autumn—September or even earlier—he has never given judgment in a single one. What is the reason he does not decide in regard to the question of the purchase of horses in Kings County, Nova Scotia? He tried that case last fall. It has no relation to anything that he is trying to-day. Any judge would be almost driven off the Bench, or, at the very least, difficulty would be raised, if he should reserve judgment as long as Sir Charles Davidson has reserved judgment in this case. Everybody knows that Mr. Foster, the gentleman who was concerned in that matter, is telling his friends that he is going to be whitewashed, and that he will be the candidate of the party in Kings County again. My right hon. friend (Sir Robert Borden) has heard that.

Sir ROBERT BORDEN I have heard nothing of the kind.

Mr. MACDONALD: Then all I can say is that the right hon. gentleman is getting very badly out of touch with his own home constituency. Is there any warrant under heaven for Sir Charles Davidson, who tried that case in regard to the Kings County horses not giving judgment? That is what the people of the county are asking. It is a very singular thing that even though the evidence in these cases is all in, this gentleman cannot take time to consider the question of fact involved and sit down and write a judgment. Though Parliament has been sitting for four months, and though we have asked that some suggestion be made that this report should be brought down, we are going to close next week and there will be no report. And there may be no report when we come together for next session. Yet the Prime minister in giving another case to this judge who never decides anything, another case to be put away, never to be decided and never heard tell of. Had my hon. friend committed the task of inquiry in this matter to the Meredith-Duff Commission, he knows there would be a finding within a reasonable time. If it is given to Sir Charles Davidson, who has worked so hard that he cannot decide the cases he tried nearly a year ago, when can we hope for a declaration from the commissioner as to his opinion on the facts of the case?

Now, just a word in regard to Mr. Thompson. The heroics of the minister about Mr. Thompson were most amusing. Mr. Thompson is a very estimable gentleman, no better and no worse than hundreds of young men of his age and experience at the Bar. It has been pointed out that this gentleman is in active training to go overseas. He is asked to intermit his duties of preparing to go to the front, to go before the Davidson Commission and sit in condemnation of his superior officer, the Minister of Militia, the supreme commander of the forces of Canada. To say that this is not an anomaly is to say something absolutely ridiculous. According to the ethics either of the Bar or of the military profession, it is not open to Mr. John Thompson to conduct this inquiry into matters that affect the Minister of Militia. The Minister of Justice might well have spared us his heroics. He is dropping into an imitation of the Minister of Militia in the curious speech we had this afternoon, casting slurs upon hon. gentlemen on this side because they were not in uniform. I look about me here and see two men whose boys are at the front, one of them wounded —twice wounded. I see about me vacant chairs which were filled by men who are preparing to go to the front. This suggestion from the Minister of Militia or from any other man that we are not answering the call is a disgrace to the country. The Minister of Justice ought to have hesitated before indulging in the rhodomontade in which he did indulge following the Minister of Militia. The speech of the Minister of Militia, even his friends must realize, is a very singular one. When he undertook to compare this gentleman, Mr. J. Wesley Allison with our right hon. leader on this side of the House, he sunk to a very low level. I care not what politics men have when a man occupying the position of the Minister of Militia talks about our distinguished leader in the same breath as this nondescript individual, J. Wesley Allison, there is not a decent person from one end of the country to the other who will not wonder if the man has lost his senses. Such utterances are so ridiculous that one feels he should hardly mention them. But when, in Parliament documents are laid on the Table, and the statement made in those documents—not statements made outside—show such a situation to exist that the Government of their own volition determine that an investigation must be had, that the House and country must listen to the diatribes we heard this afternoon from the minister affected, seems a most anomalous and peculiar condition of affairs. The Government admit that the matter requires investigation. The natural and proper tribunal to deal with this matter was the Meredith-Duff tribunal. The right hon. gentleman has failed in his responsibility, and the House and the country knows that he is not doing his duty, in suggesting that Sir Charles Davidson should investigate this subject. Why, Sir, are we to have the farce going on of a matter in which the name of a minister of the Crown is involved being sent before a tribunal in which no person is interested in bringing out the facts? That is the position; that is what the Government proposes. I say, such an investigation would be a farce, and my right hon. friend knows it.

The issue, therefore, before the House, is whether we will or will not have a proper investigation. The act of the Government was forced by the persistence with which this matter was kept before the House, and if it had not been kept before the House continually by questions and motions, the Government would never have moved even to commit this investigation to hands that will not deal with it vigourously, to a tribunal from whom we probably shall not have a report for a year or more. And then it will be urged that because there has been no finding on the facts, no action should be taken. That is not the way to deal with it; it should be dealt with vigorously, sternly. Is it to be said that in one of the great dominions its ammunition in war time can be juggled with by fakirs and speculators and middlemen, eventually to find its way to the hands of the Mother Country and to the men who are fighting our battles? This story about the Quartermaster General is all moonshine; this story about ammunition not being good is all moonshine. If this ammunition was good enough for the boys of the Naval Brigade in Great Britain to shoot with, it was good enough for Canada to keep for herself, or, if she wanted to sell it, to sell it after direct negotiation, in a proper, legal way, with the Imperial Government.

There is no question about the facts. The only issue, Sir, is as to whether this matter will be investigated thoroughly and completely in the manner proposed by the hon. member for North Cape Breton and Victoria, or whether we shall have a farcical investigation which will give no satisfaction to the people of this country.

The House divided on the proposed amendment of Mr. McKenzie.

YEAS:

Messieurs.

Mr. DOHERTY: I was paired with the hon. member for Bonaventure (Mr. Marcil). Had I voted I should have voted against the amendment.

Mr. CROTHERS: But that I was paired with the hon. member for West Kent (Mr. McCoig), I should have voted against the amendment.

Mr. MORRISON: I was paired with the hon. member for Saltcoats (Mr. MacNutt), otherwise I should have voted against the amendment.

Mr. CARVELL: I was paired with the hon. member for York, N.B. (Mr. McLeod), otherwise I should have voted for the amendment.

Mr. STEVENS: I was paired with the hon. member for Lethbridge (Mr. Buchanan), otherwise I should have voted against the amendment.

Mr. GREEN: I was paired with the hon. member for Victoria, Alta. (Mr. W. H. White), otherwise I should have voted against the amendment.

Amendment negatived.

Motion agreed to, and the House went into Committee of Supply.

SUPPLY.

The House in Committee of Supply, Mr. Rhodes in the Chair.

Canadian Northern Railway Company—loan not exceeding $15,000,000.

Mr. W. E. KNOWLES (Moosejaw): Mr. Chairman, I desire to make a few observations in order to have them placed on Hansard and to direct them to the attention of the Government, particularly of the Minister of Finance, and the Minister of the Interior. I purpose making them upon this item. The problem of the best solution of our railway question is one that I cannot discuss in any very full way. Different speakers have had different solutions to offer, and different observations to make. The observation that I desire to make is that there is one way to render our railways successful, and that is to develop our country, especially the West, in such a way that there will be more business for the railways. The facts and figures which I propose to offer on that bear out

the contention I desire to make, namely that we have at our disposal in Western Canada an enormous quantity of arable land which, if put to use as it was meant to be, would give a sufficient production of wealth in this country to enable us to better bear our burdens, speaking in a general sense, and would afford increased business for the railways. The three railways we have on our hands, I suppose, like other business concerns, are for the purpose of doing business. No business man, and no association of business men, having established a great factory or plant, would say that they had arrived at the goal which was before them when they had merely constructed their plant. The building of our railways is in itself only a means towards an end. It is worse than useless to build railways unless you are going to use them. It is worse than useless to build a factory unless you are going to use your brains to get grist for your mill, goods to manufacture, and markets in which to sell them. We in Canada have these railways, and they have a certain thing to sell, namely transportation; and you cannot sell transportation unless there is something to transport and unless there are men who are able to pay for that transportation, or, in other words, are able to buy the thing that you are ready to offer on the market. While there may be many suggestions to be made as to other ways in which this principle might be applied, such as in the development of our manufacturing industries, I, coming from the West, wish to call the attention of the committee to something which I think worthy of the attention of this House and of this country, from the viewpoint of the great resources we have lying in the West.

Last year we had in the provinces of Alberta and Saskatchewan, and I speak of those two provinces alone, nearly 15,000,000 of acres of land under cultivation. I take the figures from the statistical departments of this Government. The total amount of arable land which is at our disposal in those two western provinces is 190,000,000. We had 15,000,000 acres, approximately, under cultivation, producing wealth for this nation, and 175,000,000 acres lying idle. There must be some reason for this. There must be something that is standing in the way of using that great national resource that we have there, and my point this evening is, without any reference to party issues whatever, that whatever is standing in the way of the development of these western acres, surely there must be in Canada brains enough to find out how to use and develop and make productive that great national asset that is lying there, not being developed in any way. Of course we cannot develop it all in a day, or in a year, or perhaps in a decade. During recent years, and I shall not weary the House with comparative figures, we have not been stretching out our arms to take into the national use these great national assets. We are not developing in the direction of even gradually exploiting that great national asset which lies before us. Last year according to the statistics of the Government, and I have no reason to doubt their accuracy, the value of the crops produced on those 15,000,000 acres in those two western prairie provinces of Alberta and Saskatchewan, was over three hundred million dollars. If we could apply the same proportion to these unused arable lands, we would have, not three hundred million dollars, but three billion, nine hundred million dollars. When we are through with this war we are going to have an enormous debt; it may be one billion dollars; it may be two billion dollars. The interest on it will be probably fifty million dollars per annum at the least. Here there lies in our hands and in our possession 175,000,000 acres of land which, if they were to produce at the rate the acres in use last year yielded, would produce in one year three billion, nine hundred million dollars worth of produce, a value four times as great as this terrible war debt that is staring us in the face. I desire to say to this Government, and especially to my hon. friend the Minister of the Interior, that the responsibility that rests upon him at this time is very great. We have other resources. We have the fisheries, the mines, the lumber; we have our industries, our manufacturing plants, and all of these can, no doubt co-operate, and can in a very great way help us to meet this tremendous obligation that is before us. But, all said and done, while I may be partial to the West, and, like many a western man, may think more of it in a comparative sense than I ought to think, yet. when you see lying there, unused, 175,000,000 acres of land, you must realize that we have in our hands an asset that it is our duty to develop to the greatest degree possible.

There may be some difficulties in bringing this about. Of course there is the difficulty of immigration, and of that I shall say nothing, because there are reasons why to-day, and for the last two or three years, we are not able to achieve all we should like. But I make this suggestion to the

Minister of the Interior and to the Minister of Finance, that, in the case of such of this land which is lying idle as is owned by private owners, they should penalize the holding of that land in such a way that men would have to use it. Men are holding enormous stretches of land, within 5, 10 or 20 miles of the railways, just waiting for the rise of the market. They went in at the low prices, they went in for the purpose of speculating and trafficking in the unearned increment of this country; and I declare that I would penalize the holding of this land. That may seem a strong word, and there are many upon whom it would bear very hardly; but the financial desperateness of our country is going to be such that I would feel quite justified, for my part, in penalizing men who hold land not for use, because we have no time in Canada to-day to waste pity on the men who want to lie still and wait for the unearned increment to make millionaires of them.

Sir THOMAS WHITE: Would that not be a matter for the Provincial Governments rather than for the Dominion?

Mr. KNOWLES: I think the observation of the Minister of Finance is well taken, and I had that in mind when I said that surely there are in Canada men who could devise some remedy.

Mr. PUGSLEY: Are not the provinces in the West doing that now by the super-tax?

Mr. KNOWLES: They are doing it now in a degree, about $10 per quarter-section. But that is not meeting the purpose that I have in view. It is true that this matter really comes under the provincial jurisdiction, but we are a democracy, and surely no man will say that because it happens, by the accident of our constitution, that the provinces have a more direct and more customary control of the taxation of land, we are going to lie down and say that we can do nothing. Immigration is under the Federal jurisdiction; the administration of the war is under this Government; and those things to a certain extent would justify this Government in saying that the interest of trade and commerce, the interest of the war, the interest of immigration, require that this Parliament should exert its powers and pass such legislation as is necessary to ensure the cultivation of that land.

If it were only a matter of amending our constitution that would be in itself a very simple thing. These provinces down here do not realize the necessity because the matter has not pressed itself upon them as it has upon us. This fetish of the British North America Act which you invoke when any change is proposed is only a fetish after all and it is a small thing to stand in the way of bringing under cultivation 175,000,000 acres of land. I think my hon. friend the Minister of Finance (Sir Thomas White) would agree with me that in a democratic country like ours, possessing great resources, a great part of which belonged to the Crown, when you find great areas in the hands of speculators, men who are not using the land for cultivation, the question of amending the British North America Act is a very small thing to stand in the way of the cultivation of this land. Make it gradual. Undoubtedly it would force down the price of land.

Mr. PUGSLEY: Would my hon. friend give us an idea of what portion of the 175,000,000 acres is owned by the Crown and what portion is granted?

Mr. KNOWLES: I am sorry I cannot do that. I might have anticipated that question and I recognize my oversight in not having informed myself on that point. But in regard to that which is owned by speculators, and there is an enormous quantity owned by private individuals, I would adopt means such as I have suggested. In regard to the other, surely we can get experts to advise us if the minister thinks the task is too large to be undertaken by himself. We have a countless number of commissioners trying to find out academic things, and you might as well try to find out what the moon is made out of for any good that that is going to do. If there ever was a commission that would be justified, I think it would be a commission that would tell us how to go about this question so as to enable men to get on these other lands which are still in the hands of the Crown. We are going to have 175,000 or 200,000 soldiers coming back from the war. Many of them will be able to work on the land while others will not. With all the modern agricultural machinery now in use, a man with an arm off, or otherwise incapacitated, can often do a great deal more work on the farm than he can in the city. I do not see any reason why a tax should not be put on companies, and on those men who are rich enough to hold land for speculation, and why you should not use that money for the purpose of developing the lands still in the hands of the Government. Surely something of that kind could be worked out in order that men could go on the land.

Mr. WRIGHT: Is there not a scheme before one of the legislatures to put a tax of 30 cents an acre on uncultivated land? I understood there was such a proposal.

Mr. KNOWLES: Yes, there is an extra charge of $10 on 160 acres of uncultivated land.

Mr. WRIGHT: But I understood there was a proposal to impose a tax of 30 cents an acre.

Mr. KNOWLES: I am not aware of it. I was speaking only of my own province, and there, I understand, it is $10 per quarter section. The expense incurred in getting this thing under way would not be very great. It might have to start in a small way, but we should not allow that land to lie idle for such a long time. We cannot speak of conditions as if they were normal conditions. We can only speak of the last conditions we know of as being normal. In Moosejaw we had men walking the streets by scores who were crying out for work, men who wanted simply to make a living, and they could not get work of any kind. Out on the prairies there was this immense number of acres crying for men to come and work. There was something wrong when these two could not be brought together—the men seeking work and the land belonging to this Government crying out for men to come and work it. Then we saw that there was no encouragement for these two to be brought together. The raw material was there, and the men were there ready to exercise their muscle on the raw material, but the conditions were not sufficiently encouraging to bring the two together. Surely we could make these conditions encouraging enough to bring these two elements together. You are bonusing every kind of industry. By protection you are bonusing them all. It may be hard to work out, but surely we can work out some system by which men will go on the land and use it for the purpose for which it was meant to be used. No doubt the minister can throw many difficulties in the way. Suppose a man owned one section of land instead of the millions of acres we own. He has been a man of comparative wealth before and has had no trouble in meeting his payments. But, suppose he met with reverses and had to live more economically, to use other resources for his income, the first thing he would do would be to go to his section of land and start work at farming. I have seen many a man in Moosejaw do the same thing. A man got "busted" in real estate, or in trading jack knives that had been making a fortune for him, he took his land and he is doing better than he ever did before. We, the Government, are in one sense a great big farmer with an immense farm of 175,000,000 acres, we are in a desperate position financially and we have the ability to produce $3,900,000,000 worth of grain in one year. Why not use that immense farm in such a manner as to increase our income and thus create a business that will make us able to meet our financial obligations?

Hon. W. J. ROCHE (Minister of the Interior): Just a few words in regard to western land settlement. I quite agree that we have a very large area of unsettled land but it must be remembered that a very large proportion has already been alienated from the Crown. It has passed into the hands of railway companies in the form of land grants. Whether we have had a judicious system in the past or not it would be altogether useless to discuss at the present time. In the early history of Canada it was absolutely essential to hold out extraordinary inducements to get the great West opened up by means of railways and as a consequence of this a very large acreage was alienated from the Crown. There is also a large area in the hands of private speculators, land companies and individuals, in addition to regular homesteaders and others holding Government land. The question of compelling these people to bring this land under cultivation is a very important one, a very complex one and one which more directly comes within provincial jurisdiction. The provincial legislatures have attempted to grapple with it during the last few years by means of taxing wild land and a surtax on uncultivated land. I do not know of anything that they have quoted in the United States to discredit immigration very much more, with the exception of conscription, than the question of provincial taxation.

Mr. PUGSLEY: Or the duty on grain.

Mr. ROCHE: No, I heard very little about the duty on grain when I was there. A great deal of fault has been found on the part of residents of the United States with the provincial taxation on land companies. Representatives of these companies have been down here giving their

evidence before the Economic Development Commission, complaining bitterly of the discouragement to the investment of capital in Canada by reason of the very large taxation that has been put on land by means of that surtax. I am not finding any fault with the local legislatures for having adopted that policy. I think it is the best policy to penalize people who are holding out uncultivated land in order that it may be brought under cultivation. But at the same time it has its side of criticism and the premier of Saskatchewan, when I invited him to attend the conference of immigration agents in February, devoted almost his entire remarks to a justification of his Government in imposing this surtax.

One thing the American papers have made a great deal of in trying to keep the American farmers at home has been the printing of facsimiles of the tax notices sent out through western Canada. In one column they will show general taxes, in another school taxes, and in another gopher taxes, and so on, giving the American people the impression that the Canadians are taxed to death. America is, of course, more thickly populated and their lands are higher priced than ours, and the American farmers would not look so much to the total of these taxes as to the number of different items, and those interested in discouraging immigration have made the utmost possible capital out of this. The hon. gentleman has said that this is a large question which should be referred to some commission. That has been done already. The Economic Commission has been working on it during the past year.

Mr. KNOWLES: Were the commissioners selected for their fitness to grapple with an economic question of this kind?

Mr. ROCHE: It is an honorary commission, but an honorary commi sion is, as a rule, composed of competent and representative men. This commission is comprised of farmers, business men, land men, transportation men—representative men from every province of the Dominion almost. I think it is a very good commission.

Mr. KNOWLES: It is too big.

Mr. ROCHE: They can collect information just the same as any other commission; I know that they have had this question under consideration, and that they have had a number of witnesses before them. Perhaps they are not getting on as expeditiously as we should like, but Senator Lougheed, of course, has been very busy during the session and probably has not had the time that he would otherwise have been able to devote to it. In this problem of land settlement the provincial Governments should act in co-operation with the Dominion. The provincial Governments themselves have a great deal to do with land settlement. I think one of the essential questions for Canada to determine is what we are going to do with the immigrants who come to this country after the war. I am afraid we are going to have a large immigration, probably of those who have never been brought up on the farm, and who know little about agriculture. To put these men on the farm without previous agricultural experience and without capital would be useless. They must have training of some kind, either at an agricultural college or by seeing the demonstrations or experimental Farms, and so on. That is a matter that should be taken up by the provincial Governments. Manitoba is grappling with it already. They set aside a sum of money last session to purchase stock to assist poor farmers. These men, of course, have to be hand-picked. Then there is the system of agricultural credits. A few years ago I understand that the various Governments in the West sent a commission to nearly every country in Europe and the United States, gathering evidence on this question. The commissioners made a report to their respective Governments as to the policy that should be pursued with regard to agricultural credits, but I do not think there has been any practical outcome as yet. In Saskatchewan some law was placed on the statute-book, but it has not been taken advantage of. I think we should do everything we can to encourage those who come out to this country to go upon the land. That would involve the expenditure of a very large sum of money; there is no question about that; and that is one reason why, at the present time, when all our energies should be devoted to the winning of the war, we should not launch out upon any expenditure in this direction. As a matter of fact I do not look for any large immigation to Canada until after the war is over. History teaches us that there is little immigration to any country at war. But after the war I think we shall have abundance of immigration although I will not pledge myself that it will be of the kind that we have been endeavouring to secure—that is, agriculturists. We have had a very large immigration in years gone by. In the year ending

March 31, 1914, 385,000 immigrants came to Canada, and in the year before, 402,000—the largest number in the history of Canada. It may be true that not so many are taking up homesteads, but that is not a good criterion by which to judge. Many of these immigrants did not go to our western provinces at all, but located in the East. Then many of those who went out to the West went out as agricultural labourers, and never put in homestead entries. For the years ending March 31, 1914, and March 31, 1915, there was a larger immigration into the province of Ontario than into the provinces of Manitoba, Saskatchewan and Alberta combined. So you cannot say that the immigration is not of the right sort, simply judging by the homestead entries. I quite realize the importance of the subject the hon. member for Moosejaw (Mr. Knowles) has brought before the House. We expect a report from the Economie Commission in the very near future. It does not necessarily follow that their recommendations will be adopted in toto, or even in part, but at any rate we shall have the benefit of what information they collect, and shall then be in a better position to judge what policy to adopt.

Mr. J. G. TURRIFF (Assiniboia): I think the question raised by the hon. member for Moosejaw (Mr. Knowles) is one of the most important this House could discuss. No one doubts that when this war is over Canada will have a tremendously large debt, with a large fixed sum to pay annually on account of interest and sinking fund. Unquestionably, also, if we can increase the population of Canada we shall lessen to just that extent the per capita payments on that debt. For instance, if within the next ten years the population of Canada doubles our per capita payment will be halved. It is quite true, as the minister says, that a great part of the 175,000,000 acres that the hon. member for Moosejaw spoke of has passed into the hands of private owners, and there is no object in going into that subject now. But there is in the northern part of the three Prairie Provinces many millions of acres that are not prairie lands in the sense that the plains of Manitoba, Saskatchewan and Alberta are. In that area north of the Saskatchewan river from lake Winnipeg westerly there is a large stretch of park lands north of Prince Albert. There are some stretches of prairie and great stretches of timber land; but the timber is mostly poplar, and poplar is nearly always found on dry land. It is first class land when it is cleared up, and grow splendid crops. Every one in the West knows that poplar bush is easy to clear up; the stumps come out very easily, or in the course of a few years they will rot out. When you get as far west as Edmonton, that class of country extends four or five hundred miles north of the Saskatchewan river, and in some places a great deal more, and as you go further west, the country is much more open. Probably only part of that country could be called first class land, as compared with the country in the southern portions of the province, but it is very well suited for mixed farming. I know that in the southern portion of the province of Saskatchewan there are districts that are not well suited for raising wheat; where, although a good deal of wheat is grown, at the same time the land is more suited for mixed farming. My hon. friend will know, because it is the country he lives in, that there are some parts a little north and west of that that are better for stock raising than wheat. The farmers who, during the last 25 years, have gone into those parts that I have mentioned and have gone in for mixed farming, are the farmers who are most prosperous to-day. In my own constituency, on the eastern and northern side of the Moose mountain, where the land is more broken up and rougher than the general run of the land, the farmers who have adopted the system of cattle-raising and mixed farming are to-day amongst the most prosperous settlers in the whole province of Saskatchewan. In that country to the north of the Saskatchewan river there are millions and tens of millions which some time in the future will be settled by a thrifty, contented and prosperous population that will pay its share of the revenues of the country. If you wish, however, to have that country bring forth its best resources, it will be advisable to give a certain amount of assistance to the settlers, and I have in mind a scheme somewhat along the following lines. Supposing a settler goes into that northern country and takes up one of those more or less rough quarter sections and builds a little house and stable, thus showing the Government that he is a bona fide settler, and that he knows how to handle his farm and to take care of cattle, I think, instead of doing as we have been doing for the last twenty years, spending a huge amount of money annually on public buildings and other public works throughout the country, many of them necessary and proper if times are prosperous, but unneces-

sary in times such as we are having now and such as we are going to have on account of the war and the railroad situation that is confronting us, the Government should commence a grant of, say, $1,000,000 a year, gradually increasing that amount to $5,000,000 or $10,000,000 a year, and appoint a body of men to buy cattle and give such settlers as I have described from two to ten cattle each according to his capacity for looking after them. Then they should charge that settler the full cost of the cattle laid down at his station, but charge him no interest on the cattle for, say, three years, then for a couple of years charge him interest on the cost, and then after he has had the cattle for five years, charge him a certain percentage of the cost so that at the end of ten years he will have paid back to the Government the cost of the cattle with five or six per cent interest according to the rate at which the Government could borrow the money. In that way you would have thousands and tens of thousands of settlers in that part of the country who would be making a living out of those cattle and who at the end of those ten years would be able to pay back the amount that was put into the cattle by selling off the increase as they grew up to be three or four years old. In that way, at the end of those ten years, those cattle would be paid back and the farmer would have a big herd of his own from the increase of the original stock. Even those who have watched what some farmers in our own neighbourhood, starting with a couple of cows, have done, can hardly appreciate how a herd increases and how a farmer can get a good herd around him. To make that scheme a success, care, of course, would have to be taken that stock would not be given to men who could not take care of them. That is one difficulty in the way, but difficulties are made to be overcome. Many of our settlers from the old country are men who come from the cities and do not understand the care of cattle, and it would be impossible for those men, in the course of one or two years, to know enough about the care of cattle to enable them to handle a proposition of that kind successfully. The average foreigner knows more about stock raising and can make money out of caring for cattle, so that the difficulty might arise that our English-speaking friend might say: You are not treating me as liberally as that foreigner. But the matter would have to be dealt with according to the merits and the ability of the man. If we would take the money that we spend annually in unnecessary and unproductive work and put it into cattle, and distribute them amongst the settlers in that new country to the north, we would accomplish with that money ten times as much good as we could accomplish by spending it in the way that we have been doing in the past. Nineteen out of twenty of those settlers would make a success, and the loss to the Government would be very little, if any. You would have to keep up that grant for, say, five years, and then, as the money came in from paying for stock, it could be put out again. I am merely outlining the scheme as I have it in mind, and when this Economic Commission reports, the matter can be taken up.

Mr. ROCHE: Would it be confined to the holders of unpatented lands?

Mr. TURRIFF: My idea would be that in that country the land would be all unpatented for a number of years after the settlers went in. The Government could not only take security on the stock itself, but could register a lien against the unpatented homestead. In case the land was patented, if there were any in that part of the country, to which the Government might apply under such an arrangement as this, security could be taken on the stock itself and also on the man's covenants, and, if the land was not encumbered, take security upon the land as well. I do not think there will be great difficulty in the matter of security. My hon. friend mentioned a few moments ago that something of that kind was being done in Manitoba. I discussed this matter with some of the members of the Government of Manitoba, and they told me they were going to make an experiment along that line applying to the country lying north of Winnipeg, which is very much the same class of country, as the minister is well aware, as that lying north of the Saskatchewan river in Manitoba, Saskatchewan and Alberta. In fact, it was more wooded, I imagine, around Winnipeg. The difficulty they have had there is that of getting the land under cultivation for grain, but it is a good stock country, and any men in that part of the country who have been able to make a start in raising stock have done remarkably well. It will only take two or three years for the Government of Manitoba to try this plan out and prove whether it is feasible or not. I remember that when I went into

that country first, about forty years ago—I settled in the vicinity of Manitou, Manitoba—certain people there who had a little money for investment would buy, say, ten head of cows and give them to a farmer on shares, the farmer to look after the stock and to give the capitalist or financial man one-half the increase when they arrived at three years of age. At the end of the term of agreement, five or ten years, the farmer had to return the ten head of cows. In the course of that time, the farmer would have a great big herd of cattle from half the increase, and the man who put up the money would have received a higher rate of interest than he could get by loaning the money on mortgage, on farms, or in any other way. If the same success should attend the Government in furnishing the money, it would be a profitable thing for the settler and the Government would not lose anything. Even if action should not be taken for a year or two, the experience in Manitoba, I imagine, will have gone far enough to enable the Government to judge whether this scheme would appeal by them. No one would want to see such a thing tried on a very great scale at first, because it is, to an extent, experimental. The matter would have to be placed in the hands of somebody who would be absolutely outside of political control. I say that regardless of what Government is in office, or whether the Liberals or the Conservatives are in power. If this matter were the subject of political patronage that would go a long way to kill it, and would certainly make it unsuccessful. I feel sure that we have a huge stretch of country there that would be occupied by settlers, settlers who would become wealthy and will do just as well as they could in the best grain-growing parts of Manitoba, Saskatchewan, or Alberta. For many, many years to come cattle and stock of all kinds will command high prices. There will always be a market, and it does not matter in a case of that kind whether a man is forty or fifty miles away from a railroad. I lived for many years in the West, and I was in one case sixty miles and in another case further from the railway. Settlers who had cattle had no trouble in marketing, because, in a couple of days, they would drive out a big herd when it was ready for the market. I believe the suggestion I make to the minister is worthy of consideration, for I have seen it carried out most successfully in individual cases. This plan will help to populate a country as large as the whole settled area of Manitoba, Saskatchewan and Alberta.

Mr. ROCHE: The Canadian Pacific are doing it now.

Mr. TURRIFF: They are doing something along the same line, advancing money to settlers. But I have never been much in favour of putting men on lands in the West who had no money of their own, starting them out with a debt of $500 or $600 and expecting them to pay interest right along and pay the money back. But where a man has shown his ability as a farmer, and has the stabling, or can put it up, and will grow the hay in the vicinity, he will be all the better settler for having a little help and will not only pay back the money but, while he has it, his use of it will add materially to the wealth of the country and the revenues of the Government.

Mr. PUGSLEY: It is getting near to Sunday morning, and I should think that the Government, whatever we may think on this side, will hardly feel like holding the House longer. I have an amendment of which I gave notice, and I would like to move it, as the chairman (Mr. Rhodes) has stated a point in regard to it. The resolution is as follows:

That after the word "approved" in the third line from the bottom of the particulars of the proposed vote, there should be added the following words: "Before making such loan the Governor in Council shall require the Company to give to His Majesty the King an option to acquire at any time within five years from the date thereof the railways and other property of the company and of all other railways and property included in the Canadian Northern system at such price as to the Governor in Council may seem reasonable under existing circumstances."

I do not propose to say anything in support of that amendment to-night.

Mr. ROGERS: We came here at two o'clock expecting to get some business through. And here it is half-past eleven, and the hon gentleman proposes to adjourn with nothing done. Surely hon. gentlemen opposite have discussed this matter at sufficient length to have said everything that they desire to say concerning it. I think my hon. friend (Mr. Pugsley) has reduced everything that the other side desire to say into the motion he has presented, so I think hon. gentlemen opposite ought to be satisfied to vote on the motion and let us get the item through. My hon. friend knows that we are getting close to the end of the session. We are

hoping to prorogue on Tuesday and we have a considerable amount of business yet to do on Monday. If our hope of getting through on Tuesday is to be fulfilled, I would like my hon. friend to consider the idea of letting this item go through tonight if possible.

Mr. PUGSLEY: The minister can readily see that the reason why nothing was done to-day was because the Government would not let the proposed amendment carry. If it had carried, it could have been said that a great deal of progress had been made. We on this side of the House, therefore, are not to blame. The minister says very truly that in the discussion of the Grand Trunk Pacific item the Canadian Northern also was pretty fully discussed, but there are some gentlemen who want to express some views on the subject. Although I could give no definite assurance in the matter, I do not think the discussion would take very long, and I think I can assure the minister that every reasonable effort will be made to conclude the discussion in a comparatively short time. I do not think that much could be accomplished, at any rate, by remaining here for twenty-five more minutes to-night. So far as I am concerned, I will do the best I can to bring the discussion to a close on Monday at an early hour.

Mr. KNOWLES: Just a word to the Minister of the Interior. He intimated that I myself suggested the appointment of a commission. I wish to say distinctly that I feel it my duty to put the responsibility for that on the minister himself. If we are here next session I purpose bringing this matter up and making reference to the observation I have made this evening, lest the minister might then say to me that I myself had suggested a commission. I say now that I suggested a commission only incidentally. It is the minister who has the responsibility. In these war days there is danger of ministers standing aside and watching the Minister of Militia and the Minister of Finance—particularly the Minister of Militia—look after their respective departments. I do not purpose discussing the salaries of ministers of the Crown, but they are not paid, even in war times, to sit around and let the country run itself. The minister has been a long time in office, and we have never had anything startling from him.

Mr. ROCHE: No scandals since I have been here.

Mr. KNOWLES: No, but if a man is asleep there can be no scandals—I do not say this offensively. The hon. gentleman is our minister, and we would like to be proud of him in the West. We would like him to have some really startling programme for next session that would show what a real live minister we have. Whatever might be the case in Ontario, we would like him to show that the Minister of Interior, who lives in the prairie provinces, is really on his job. Then, when the question of salaries comes to be considered, as I think it ought to be, we from the West would give the matter favourable consideration.

Mr. ROCHE: The hon. gentleman evidently overlooks the fact that this matter had been referred to a commission when he himself suggested that it ought to go to a commission; therefore he ought to qualify his remarks. Whether it is incidental or not, the policy is there all the same. It is something like the policy of protection that my hon. friend used to advocate; it was only incidental, but the protection was there all the same. So, in connection with suggesting a commission, and it has gone to a commission. Of course, I do not think that I ought to anticipate any action of the commission, now that the matter has been referred to them, by making any comments before the commission reports. As I said before, we cannot expect to do very much in these war times. We have to get through with the war first, at any rate. I admit that we should have a policy promulgated in relation to procedure after the war.

Mr. KNOWLES: I think serious consideration and discussion ought to be given to these matters in the House long before the war ceases. I think the minister would be justified in appointing a commission, but I do not wish to be understood as saying that that would exhaust his duty.

Mr. TURRIFF: I have asked the Minister of Finance twice in connection with these railway matters, whether, if this vote of $15,000,000 for the Canadian Northern carries, he intends to ask them to hand over to the Government, in addition to the 40 per cent of the common stock of the company that the Government now owns, additional stock to the amount of say $15,000,000 or $20,000,000. I suggest this

not because I consider that this stock would be of any particular value, but in order that the Government might be ready to handle the situation and be in a position to avoid being taken by the throat in connection with the matter in the future. My hon. friend is asking for $15,000,000 for this company and the company cannot get along without it. The company will hand over that additional stock, which is not now of any commercial value, if my hon. friend the minister insists upon it, and in the interests of the country I think he should insist upon it. What is his policy in the matter?

Sir THOMAS WHITE: The question that is raised is cognate to the amendment which is being moved by the hon. member for St. John city, and for convenience I had intended to take the two together on Monday.

Mr. ROGERS: Upon the assurance given by the hon. member for St. John city that he will facilitate this matter on Monday, we will not waste more time this evening.

Mr. KNOWLES: Does the hon. gentleman suggest that time was wasted to-night? I do not like that expression "wasting more time." I do not think that the minister would say that time devoted to the consideration of western problems is wasted. The people will be sorry to read that in the Winnipeg Telegram on Monday.

Progress reported.

On motion of Mr. Rogers, the House adjourned at 11.41 p.m.

Monday, May 15, 1915.

The House met at Two o'clock, the Speaker in the Chair.

VACANCIES.

Mr. SPEAKER: I have the honour to inform the House that I have received a communication notifying me that a vacancy has occurred in the representation in the House of Commons by the death of Bowman Brown Law, Esq., member for the electoral district of Yarmouth, Nova Scotia; and also that I have received the resignation of Joseph Octave Lavallee, Esq., member for the electoral district of Bellechasse, Quebec; and that I have issued my several warrants to the Clerk of the Crown in Chancery to make out new writs of election for the said electoral districts.

[Mr. Turriff.]

PRIVATE BILL WITHDRAWN.

Bill No. 100 (C-2 of the Senate) to incorporate the Manitoba-Ontario Railway Company.—Mr. Blain.

QUESTIONS.

[Questions answered orally are indicated by an asterisk.]

THE LAUNCH WALRONDO.

Mr. PARDEE:

1. Has the launch Walrondo, formerly used by the superintendent of dredging at Victoria, B.C., been sold? If so, to whom, and at what price?
2. What was the original cost?

Mr. ROGERS:

1. No.
2. $12,000.

LUNENBURG COUNTY MAIL SERVICE.

Mr. A. K. MACLEAN:

1. Who is the contractor for the mail service on the Church Lake, New Cornwall and Mahone Bay route, Lunenburg county, N.S.?
2. Were tenders asked for the said service? If so, what were the names of persons who tendered, and the amount of their respective tenders?

Mr. CASGRAIN: The contract for this service has been awarded to the lowest tenderer. The names of the tenderers and the amounts will be furnished when the contract has been executed.

QUEBEC REFEREE ON BUTTER AND CHEESE.

Mr. BOIVIN:

1. Did the Government receive a petition signed by about 300 factorymen of the province of Quebec asking for the appointment of Mr. John O'Dell, formerly of Montreal but now of Abercorn, Quebec, as referee on butter and cheese in that province?
2. If so, has this petition been considered by the Government?
3. Has the said appointment been given to Mr. ODell? If not, who has been appointed?

Mr. HAZEN:

1. Such a petition was received signed by 15 produce dealers and 46 factorymen.
2. Yes.
3. No. It is not proposed to appoint any one to the position of official referee. Before the receipt of the petition J. E. D. Gareau was appointed inspector of weighing of butter and cheese.

THE RAINBOW.

On the Orders of the Day:

Sir WILFRID LAURIER: By your leave, Mr. Speaker, I wish to direct the attention

of the hon. Minister of Naval Service to a despatch, published last Saturday, stating that the Rainbow had actually taken possession of a ship which, though Mexican in origin, as I understand, was chartered by a German company and was carrying a valuable cargo of sugar, copper and corn. May I ask if there is any truth in the information?

Hon. J. D. HAZEN (Minister of Marine): On a former occasion I gave answer to the House that the department had been advised that the Rainbow had captured a power schooner called the Oregon, but that in the opinion of the department it was not advisable to publish at this time any details with regard to the matter.

Sir WILFRID LAURIER: I do not want to ask for more information on that point, but are we to understand from this that the Rainbow is patrolling the waters of the Pacific with a view to protecting our commerce?

Mr. HAZEN: Yes.

Sir WILFRID LAURIER: May I ask if the two submarines which were purchased at the opening of the war are also so engaged?

Mr. HAZEN: Yes, they are both in commission all the time and actively engaged.

SALE OF SMALL ARMS AMMUNITION.

COUNSEL FOR OPPOSITION BEFORE DAVIDSON COMMISSION.

On the Orders of the Day:

Sir WILFRID LAURIER: May I ask the hon. gentleman who is leading the House to-day to tell me whether or not it is the intention of the Government to allow the Opposition to have counsel appear on its behalf before the commission of Mr. Justice Davidson in respect to the charges made the other day by the hon. member for North Cape Breton (Mr. McKenzie)?

Sir GEORGE FOSTER: Yes, I think I may say that counsel will be arranged for.

Sir WILFRID LAURIER: In what manner?

Sir GEORGE FOSTER: I do not know in what manner. The Prime Minister himself is away, but I think I may go so far as to say that counsel will be provided.

Sir WILFRID LAURIER: My hon. friend cannot tell me whether counsel will be arranged to represent each side of the House, as was done in connection with the Meredith-Duff Commission?

Sir GEORGE FOSTER: No, I cannot tell my hon. friend anything as to details.

Sir WILFRID LAURIER: That is not a detail; it is important.

Sir GEORGE FOSTER: It may be important, but I have not the details.

Sir WILFRID LAURIER: I suppose, then, the matter being under consideration, that the commission will not proceed to-morrow with the investigation?

Sir GEORGE FOSTER: I believe that the commission is called for to-morrow. I think my right hon. friend will have to wait for an answer to his question until the return of the right hon. the Prime Minister, who will be here to-night.

EXTENSION OF TERM OF PARLIAMENT.

On the Orders of the Day:

Sir WILFRID LAURIER: Can my right hon. friend give me to-day any information as to what has been done with reference to the petition of this Parliament for an extension of the term of Parliament? We were informed by the right hon. the Prime Minister a few days ago that the petition of this Parliament had been forwarded to the Imperial authorities; but he has not told us that any information has been received of the action taken upon it.

Sir GEORGE FOSTER: The last information that I know anything of was that this resolution had been forwarded, that the matter was in the hands of the British Government, and that legislation will be introduced in the Imperial Parliament. It is in their hands.

SUPPLY.

The House in Committee of Supply, Mr. Rhodes in the Chair.

Canadian Northern Railway Company—loan not exceeding $15,000,000, repayable on demand, with interest payable half yearly at the rate of six per centum (6%) per annum; to be used for expenditure made or to meet indebtedness incurred in paying interest upon securities of the companies included in the Canadian Northern Railway System having priority over the guaranteed securities authorized by Chapter 20, Statutes 1914, and instalments of principal of equipment securites and upon construction; the whole of said loan to be secured by mortgage upon the undertaking of the Canadian Northern Railway Company, and so much of said loan as may be applied for the benefit of any company included in the Canadian North-

ern Railway System, to be secured in addition by mortgage upon the undertaking of such company, such mortgages to contain such terms and conditions as the Governor in Council may approve. The disposition of the loan to be subject to the direction of the Governor in Council, $15,000,000.

The CHAIRMAN: Before the committee proceeds further with the consideration of this item, I wish to say that on Saturday evening, when this item was under consideration, the hon. member for St. John (Mr. Pugsley) proposed to this resolution the following amendment:

That after the word "approve" in the third line from the bottom of the particulars of the proposed vote, there should be added the following words. "Before making such loan the Governor in Council shall require the company to give to His Majesty the King an option to acquire at any time within five years from the date thereof the railways and other property of the company and of all other railways and property included in the Canadian Northern railway system at such price as to the Governor in Council may seem reasonable under existing circumstances."

On the subject of amendments in committee, May, 11th edition, at page 615, says:

Each resolution for a grant forms a distinct motion, which can only be dealt with by being agreed to, required, negatived, superseded, or, by leave, withdrawn; . . . here the power of the committee ceases. The committee may vote or reduce a grant, or may reduce the amount thereof, either by a reduction of the whole grant, or by the omission or reduction of the items of expenditure of which the grant is composed; but the committee have no other function.

Again, at page 616:

Nor can the committee attach a condition or an expression of opinion to a grant.

The powers of the committee in this connection are so circumscribed that it does not appear that the House itself could give instructions or authority to the Committee of Supply to propose such an amendment. On this point, I quote May, 11th edition, at page 607:

An instruction to the Committee of Supply cannot be moved, as, following the Speaker's ruling; "nothing can be brought on in that committee of which notice has not been given in detail, by the Estimates laid before the House."

It, therefore, in my judgment, appears to be clear that the amendment of the hon. member for St. John is not in order, and I so rule.

Mr. PUGSLEY: Mr. Chairman, I, of course, cheerfully bow to your decision. My object has, I think, been attained by bringing the motion before the committee and to the attention of the Government,

[Sir George Foster.]

because, of course, if the Government decided against the amendment, I recognize that I could not hope it would be carried by the committee, even if you, Sir, had ruled it to be in order. But I would like to call the attention of the Minister of Finance to the fact that the resolution itself provides that the loan shall be secured by a mortgage on the undertaking of the company, such mortgage to contain such terms and conditions as the Governor in Council may approve. I submit that, under the resolution as it is, it will be quite open to the Government to stipulate that the company shall give to His Majesty an option to purchase the Canadian Northern railway system at a price which may be agreed upon, and I do hope that the idea which I have endeavoured to put forward in the amendment will commend itself to the Government. I hope so for this reason, that there is to-day a rapidly-growing sentiment among the people of this country in favour of the Government acquiring this transcontinental system of railways. That feeling has, of course, been given a very great impetus by the fact that this company has been coming pretty often, I think quite too often, to the country for assistance. When this loan of $15,000,000 is made there will be in the vicinity of $70,000,000 or $80,000,000 which the company has obtained from the Government under conditions which make it apparent that, but for the Government assistance, the company could not have pulled through. The Minister of Finance, in proposing this vote, frankly stated that unless the Government gives this assistance to the company it will, in all probability, be obliged to place its railway system in the hands of a receiver. The same statement was made two years ago, when the Government guaranteed the bonds of the company to the extent of $45,000,000. Now, does it not seem that, the company having been obliged to come again to the Government for an additional $15,000,000, the Government ought to take an option from the company, on reasonable terms, for a reasonable amount, which option could be exercised or not as Parliament in the future might determine. I would not suggest that any injustice whatever should be done to the company. I should think that it ought to be recognized that these two gentlemen, Sir William Mackenzie and Sir Donald Mann, notwithstanding what may be said by their critics, are deserving of a large measure of praise, a large degree of credit, for the enterprise

and foresight they have shown. They have succeeded in building up a great railway system, consisting of some 8,000 or 9,000 miles, traversing many of the richest sections of Canada, a system which in the future must prove an enormous factor in the development of this Dominion. I think that these gentlemen are entitled to all reasonable consideration, and that the Government ought to deal with them on some equitable basis. But it does seem to me that it would not be fair to the people of this country that the Government should, by continuing to assist this company, take all the risk of the company pulling through and getting in a good financial position in the future. Then, when the day of prosperity comes again, as we all hope that day will soon come again, and if the country should deem it wise to take over this system, the company would be in a position before arbitrators, or before the Exchequer Court, to demand an enormous sum running into many millions of dollars, claiming prospective profits, and compelling the country to pay a very large sum of money indeed for this property which to-day is practically in the hands of the Government, and which, if the Government were to exercise its powers, it could now acquire for the amount of the securities which are outstanding against the road.

In 1914 I moved a resolution, the effect of which would have been that the Government would have the right to take over the equity of Mackenzie and Mann, Limited, which means Sir William Mackenzie and Sir Donald Mann, at a sum not exceeding $30,000,000. I was greatly astonished to hear the Solicitor General, speaking for the Government on that occasion, say that $30,000,000 would be no temptation to Sir William Mackenzie and Sir Donald Mann, and that rather than accept $30,000,000 for their equity, over and above all the securities and obligations, they would let the road go into the hands of receivers. I could not believe that statement. I could not believe that the Solicitor General was warranted in making that statement to the House; though when he made it I presume he must have consulted them. But the time has arrived when with the company coming back again for assistance, for the enormous sum of $15,000,000, the Government should come to an understanding with Sir William Mackenzie and Sir Donald Mann, and have it clearly understood that if, within a reasonable period, say within five years, the Government and Parliament should, in the interests of the people of Canada, take over this road they will affix to it as a condition a reasonable sum at which the equity of these gentlemen should be acquired for the country.

Mr. R. B. BENNETT (Calgary): I desire to make a few observations this afternoon on this item. I ventured two years ago to say that I believed that the largest problem in domestic politics was that related to transportation in this country. I still think so. Unfortunately, no recriminations that we may engage in will take from us the question, and no deception will delude us for a moment as to the conditions that confront us. I cannot conceive of any question of greater importance to the country as a whole, and to the individual, than the question which is now before us.

Before I make a few observations regarding the matter, I should like to place myself on record, not in a spirit of hostile criticism, but rather in the way of suggestion, that there should be, if possible, some rule adopted by this Parliament by which railway legislation shall be brought into this House in the first fifteen days of the session. For many years, since 1900, at least, and for many years before that, legislation involving the appropriation by Parliament of millions of dollars has usually been submitted for consideration in the closing days of the session. The result has been that only a few members are conversant with the question, and these few usually make it their business not to disclose what they know as to the real purpose of the legislation introduced. I think something should be done to prevent legislation of this character from being introduced during the last days of the session. I am perfectly certain that this House, at this critical stage, has not had ample opportunity to consider this matter in all its phases. Might I suggest that legislation of this character, involving an appropriation of public moneys for the support of public utilities of the character of railways, should be introduced in the early days of the session, and be left for the consideration of the members, even if it is not passed until the closing days of the session.

There is no problem perhaps that is engaging the attention of thoughtful men in England more than the making effective of that system of democracy which is embodied in our representative institutions, whether we call them legislatures or parliaments. At the present time, the com-

municating link between the private member in this House, and practically in every House of Parliament in the British Dominions, and the Government, which initiates legislation and under our constitution, which appropriates public moneys for public purposes, is the caucus. How inefficient that is, it is unnecessary for me to state. There is not a man in this House who does not know that the caucus is a wholly inefficient method of communication between the private member and the Government which initiates legislation. The theory of the constitution that a cabinet is a Committee of the House of Commons or of Parliament is an excellent theory, but the tendency of our history has been, for the last 50 years, to increase and strengthen and magnify the powers of the cabinet, while destroying and minimizing and lessening the authority of the private member. Any student of the political history of England during the past 50 years is conscious of that fact. In England they have been endeavouring by various methods to overcome that difficulty. They realize that not only has the power of cabinets become greater, but that the supreme authority of the Prime Minister in the cabinet has become greater. I think it was Mr. Paul who in his political history of England pointed out that fact with great authority and with great power.

There must be some method, short of that, which is used in the United States, by which the cabinet has no representation on the floor of Congress at all, and where every member has the power to initiate legislation of a far-reaching character—there must be some method by which the power and strength of democracy can be maintained, and, at the same time, the cabinet system of government, which we have as a Committee of Parliament responsible for initiating legislation, is maintained. I make these observations because I think there is no subject which better illustrates the point than that to which I am alluding. It is absolutely impossible for the members of this House to grasp in all its magnitude the issues that are involved in this railway legislation. It is perfectly absurd to expect that in a few days men can appreciate all the bearings which this legislation may have on the future of this country.

Fortunately, to-day, we can at least feel that what we are asked to do does not commit this country to any permanent policy as some of us regret we have been committed to permanent policies in the past. What we are doing to-day we are doing because it is necessary; because there is that necessity which knows no law, and to which we must at all times yield if we are to maintain the credit of the country, which is a matter of paramount importance. I make these observations because conditions and not thories confront us. Might I analyse in a few passing sentences what these conditions are. We have a vast area, one of the largest countries in the world, as large as the United States of America, and larger; half a continent, stretching from the Atlantic to the Pacific, from the 49th parallel to the Arctic regions, with a population of less than 8,000,000. and to-day, whether we like it or not, we have over 35,000 miles of railway. I suppose this House is aware that only four countries of the world have a greater railway mileage than Canada, namely, the United States of America, British India, and the Empires of Germany and of Russia. In railway mileage we rank fifth among the nations of the world. The mere statement of that fact, coupled with what I have already said as to our limited population and the immensity of our area, will at once bring home to every member of this House the magnitude of the problem that confronts us. And if we look further into that problem we find that we have in this country practically four great systems of railway: the Government-owned system, which we have had since 1867, and which had its origin in what might be called one of the terms of Confederation—the derivation of the word "Intercolonial" itself indicates the purpose and intent that was in the minds of those who created that system of transportation. To the Intercolonial railway has been added, during the intervening years, many miles of road. The railway has been extended to Montreal; that was certainly a necessity, and was one of the first acts of hon. gentlemen opposite when they came to power. Its branch lines have in some cases been built, and in others acquired, by taking over small feeders in the Maritime Provinces. There are still in the Maritime Provinces some small lines that have not yet been taken over, which cost but little, and which, in my opinion, should be taken over before any other lines are taken over. I make that observation because of personal knowledge of the conditions.

Next, we have the Grand Trunk system. That system, as has been pointed out by many, was never conceived with the idea

of occupying the place in the transportation business of this country that it does to-day. This road, originally extending only from Portland to Montreal and Toronto, was pushed through to Chicago, and has gradually absorbed, during all these years, a large number of smaller roads, and its unfortunate financial position has been brought about not through the operation of the system itself, but because in taking over other small lines it has frequently paid larger prices for them than should have been paid, and very often has guaranteed obligations that were wholly incommensurate with the value that was being received by the system. Speaking broadly and generally, that is how the Grand Trunk system has been built up. In connection with the Grand Trunk we have the Grand Trunk Pacific system, about which I shall make a few observations later on; dealing with them both under the term Grand Trunk system.

It may not be known to all the members of this House, but the fact is that practically every dollar in the Grand Trunk system is British money. Except for a small loan made upon the New York market within the last two years there is not a dollar in the Grand Trunk system that is not English money. I do not know whether hon. gentlemen are aware of the fact, but it was certainly a surprise to me to learn that over $100,000,000 in the Grand Trunk system has never seen a cent of dividends. I believe that the security holders of that company number now 90,000 persons, most of whom live either in the British Isles or in British possessions scattered throughout the world.

The next system, in point of time, is the Canadian Pacific railway. Of that system it is only necessary to say that it is one of the richest, most powerful, with the most diversified interests of any corporation in the world.

The last system in point of time is the Canadian Northern. It is true that the Grand Trunk Pacific was launched after the Canadian Northern, but I am dealing with it as part of the Grand Trunk system. The Canadian Northern system, as I pointed out two years ago, owed its origin to the ambition of a couple of gentlemen for whom apparently the hon. member for St. John (Mr. Pugsley) has a very warm feeling to-day, and as to whom I will not say anything other than to point out, and point out in stronger terms as I proceed, that any proposal to take an option on the Canadian Northern and pay these gentlemen a single dollar for their charters would meet with the just disapproval and condemnation of every Canadian; for to commit this country to paying them a single dollar would do violence to every principle of reason and every dictate of common business sense.

As I pointed out two years ago, the Canadian Northern system has grown up gradually, extending its ramifications from the province of Manitoba westward to the Pacific, and now eastward to Montreal and Quebec. As to the policy that actuated the gentlemen who built that road, I am not concerned to-day. I have had my say as to that, and I am reminded of the words of a very great exponent of principle who said, "Not Heaven itself can change the past. What has been, has been." And he closed with these words: "And I have had my day." That may be true also. These, then, are the systems of railway that we have in Canada to-day.

Then there are scattered throughout the country some small lines in the lower provinces, quite a few independent lines in Ontario and Quebec, and a few in the far West, but these latter are closely associated with the Great Northern system in the United States. In the East, the Michigan Central, the Wabash and the Pere Marquette connect with their termini at Chicago, Buffalo, or on the Atlantic seaboard.

That is the situation. I have heard a great deal said as to who is responsible for it. But all the talk in the world as to who is responsible for this situation will not relieve us from the condition that now confronts us. If there is one thing this war has taught us, it is that recriminations do no good; we have learned that at least. On this point I would only say that there is, I think, a certain definite principle that may be laid down that will fix the measure of responsibility as between the Liberal and Conservative parties. A party that initiates legislation must assume responsibility for it, and unless the other party in the House opposes, it must share with the initiating party the responsibility. So I have already pointed out that the government owned system of railways was part of the arrangement by which we reached Confederation. The extending of the Intercolonial to Montreal was part of the policy of the Liberal party, and to them must be given the credit, and they are glad, I doubt not, to accept this responsibility.

They should have extended the Intercolonial further to the Great Lakes, by taking advantage of the opportunity they had of acquiring the Canada Atlantic; there is no doubt about that. The price paid for the Canada Atlantic by the Grand Trunk was at least $1,000,000 too great.

The responsibility for the Grand Trunk rests with pre-Confederation men like Hincks, Macdonald, Cartier, and other men who lived, moved and had their being in this country prior to 1867, had much to do with shaping the course and guiding the destinies of that road.

I understood the hon. member for Edmonton the other day to make some observations that would lead me to believe that he thought the attitude of the Conservative party after they came into power had something to do with the ill-fortune that has overtaken the Grand Trunk Pacific and the National Transcontinental. I should like to say this: In my opinion the Liberal party must assume the whole responsibility for the Grand Trunk Pacific. The hon. member for St. John quite realized that when he rejoiced in this ill-fortune, because he said that it reflected great credit upon the Liberal party; he did not say so in those very words, but that is what he meant in the ultimate analysis. So far as the Grand Trunk enterprise is concerned I happen to remember the late Mr. Hays and his party coming west to look over that country before determining what the policy of the company should be. I remember that the Board of Trade and others of us met them at Calgary, and I went on to Banff with them, and spent Sunday there. I know something of the dreams they had, something of their hopes and expectations, and certainly what they now have on their hands does not in any sense represent the hopes and expectations they then held. It is only fair to say that at that time these gentlemen believed—at least they so expressed themselves—that the great cities and towns of eastern Canada where manufacturing was being carried on vigorously, and where traffic was being produced in large quantities, and which were served by the old Grand Trunk, should be linked up with the prairies of the West, in order that the Grand Trunk could share in the great development that must inevitably take place in that country.

I believe at that time that these gentlemen would have been quite satisfied to project their line to Winnipeg and Edmonton, and make adequate connections in the East by using existing facilities or by extending existing facilities, and ultimately carrying their road through to the Pacific. Unfortunately, however, the proposal submitted to Parliament bore no resemblance at all to the proposal which these gentlemen had in mind and which they desired Parliament to pass. I suppose it is a matter of public knowledge that the late Mr. Hays placed himself on record as to what he asked the late Government to do, and that, as a matter of fact, the late Government did not do it. It is sufficient for my purpose to say that, as that legislation was initiated by the Liberal party and as it was opposed by the Conservative party of that day, the Liberal party in this country must take the responsibility for it. That is a fundamental principle of our constitution. Had the Conservative party agreed to and accepted that legislation, it would have been equally blameable, because one party must initiate legislation and the other party may oppose or support.

The National Transcontinental, built at an expenditure by the Canadian people of $152,000,000 up to the present time, was built largely for political purposes. It is my belief that hon. gentlemen opposite, then in power, had hopes or expectations that that road would one day be useful; but in the light of the knowledge we now possess—and I do not altogether blame the Government of that day, and I am going to say something as to that in a moment—it must be apparent that to build that road from Winnipeg to Quebec, to span the St. Lawrence by a bridge and continue it to Moncton, New Brunswick, under the conditions that existed (commencing, as my hon. friend the Minister of Finance said last year, to build the chimney first and the house afterwards), was little short of a manifestation of absence of all business judgment. I believe hon. gentlemen opposite think that now; they must think it, they cannot get away from it; but I do not go so far as to blame them entirely for that. After carefully studying this railway matter during the past year, the best conclusion that I can arrive at is that all of us—and I mean the people of Canada as a whole—were somehow infected at that time with a disease which came from over-speculation and optimism run riot, or run mad. There was no real warrant for the building of the Grand Trunk Pacific and the National Transcontinental in the way in which it was built, having regard to the

Canadian Northern, than there would be for an endeavour to create, for instance, a House of Lords in this country, and I have never been quite able to understand how strong-headed business men permitted themselves to be led into building that road. I have never yet heard any explanation from anybody that would either justify it or excuse it. I had the hardihood, on a public platform in my community, to give my opinion in regard to the matter, and I remember that I was very severely criticised by my own friends, and was told that I was lacking in faith in my country and was filled with a spirit of pessimism. So, in the ultimate analysis, under our democratic institutions, the people themselves must accept the responsibility for the conditions that exists, and neither the Opposition nor the Government is vitally concerned, because no Government would have initiated the legislation in the terms in which it was initiated except upon the demand of the people manifested by resolutions passed by boards of trade, municipal councils, farmers' unions and associations, and merchants throughout the country, who were all asking for the building of railroads, wholly oblivious to the fact that those railroads must be paid for; who gave no reasons, simply demanding the building of railways and the spending of money, reckoning not the evil day when the cost would have to be borne, caring not except for what they called the development of the country and the maintenance of a fine spirit of optimism.

Let us pass to the Canadian Northern, which was partially commenced at that date. I have never yet heard an adequate explanation for the building of it, although I have heard, from two gentlemen who are now no more, a reasonable explanation. I have never yet been able to understand how the right hon. leader of the Opposition ever permitted those two roads, the Canadian Northern and the Grand Trunk Pacific, to be built. I remember, in 1905, the Canadian Northern system reached the city of Edmonton, and I remember something of the rejoicing that took place because it was built through to that point. Then I remember that, instead of amalgamating those two systems into one, or instead of by some method preventing the Grand Trunk Pacific from parallelling the Canadian Northern, they launched the Grand Trunk Pacific system and permitted the Canadian Northern to push forward its enterprise by branch lines, which were perfectly justified; but they also, in 1911, placed upon the statute books of this country, in fulfilment of a resolution which passed this House, an Act by which they declared in the preamble, and in the terms of the resolution, that the Canadian Northern was to be a transcontinental system reaching from the Pacific to the Atlantic, just as in similar terms they had made a similar declaration with relation to the Grand Trunk Pacific. Surely that will stagger any one who merely sits down and thinks of it. Less than 8,000,000 people, just when times were beginning to get bad in 1911, permitting the ex-Minister of Railways and Canals to introduce and have passed through this Parliament, legislation giving to the Canadian Northern railway $35,000,000 to bring its system from the head of the lakes east, when we all know that the expenditure of a much less sum than that would have brought efficiency to existing facilities and caused no such embarrassment as that which now confronts us.

I have been asked by a hundred business men—and I am sure every other hon. member has been asked the same thing—what explanation can you give for this? The reasonable explanation—and it is a very simple one— is that an election was coming on. We ought to face that proposition very frankly; and, what is more, that is a case in which both parties must accept responsibility, because the Conservative party of that day, sitting in Opposition, did not oppose that $35,000,000 grant to the Canadian Northern railway; they did not challenge it. The records show that, and the Conservative party must accept responsibility with the Liberal party, because if the one party initiated this legislation, it is a case in which the other party did not oppose, and, not opposing, must share the responsibility. Why did the Conservative party not oppose this legislation? I suppose the obvious answer is—because there was an election pending. Therefore you have an election forcing upon the people of this country a grant of $35,000,000 to bring the Canadian Northern railway east from Port Arthur.

The Conservative party on the defeat of the Liberals succeeded to these legacies. My hon. friend from Edmonton (Mr. Oliver) does not usually make unfair statements, but the other day he said that the Conservative party's attitude towards the Grand Trunk Pacific and the National Transcontinental had been in a sense respon-

sible for the evil days that had overtaken those enterprises. I wonder whether he has paused to think what the Conservative party did. In January, 1912, I was in the city of London, England, and the broker for the Dominion of Canada, speaking to me in one of the banks, said: "I suppose Canada will not disregard her obligations with relation to the Grand Trunk Pacific." I was happy to say to him, as any Canadian would have said: "Governments may change, but the obligations of the State continue." So, instead of the Conservative party doing anything to embarrass the Grand Trunk Pacific or the National Transcontinental, they did quite the opposite; they placed upon the statute books from year to year, provisions whereby the time for completion was extended in order that that railroad might not show its continuing deficit upon operation, but might possibly, with changed conditions and improved times, be able to meet its obligations.

So far as the National Transcontinental is concerned, I am sure that there is not a member of this House who does not know, not only that the Grand Trunk Pacific could not have taken over the National Transcontinental, but that to have suggested that they should do so, as we see now in the light of their then financial position, would have been to have added to their deficit three per cent upon the cost of that road, which would have been not less than $5,000,000 a year.

There is the situation: the National Transcontinental was still unfinished; the Canadian Northern nor the Grand Trunk Pacific were not built through to the Pacific coast; the Canadian Northern rights in relation to the $35,000,000 available for construction east had been established; the building of branch lines over the prairie had made much progress; and signs were showing of the financial depression that followed. What was to be done? For my own part, I have no hesitation in saying that had I been dictator I would have stopped the building of the Canadian Northern railway east of the lakes; I would not have assumed the responsibility of guaranteeing the 3½ per cent on the $35,000,000; I would have stopped the building of the road;—and more, I was going to say this to the House and will say it now, that, in my opinion, many miles of track on the National Transcontinental must be taken up and put in some other place where they will serve some useful purpose. It was under these conditions that Parliament granted cash subsidies to the Canadian Northern Railway, they voted them year after year. I had not hesitation in saying what I said two years ago. We should not have done it. As I now see it, I was derelict in my duty in not then pointing it out. But we voted those subsidies. It is impossible for any member of this House to say truly that this Parliament is primarily responsible for the carrying of the Canadian Northern to the Pacific. With an optimism which is not properly described by that name, the province of British Columbia guaranteed the securities of the Canadian Northern, and the road was built from the Yellowhead Pass to Kamloops and from Kamloops to the coast. It parallels the Canadian Pacific at some points and the Grand Trunk Pacific at others.

As to the prospects, there is no local traffic that can be developed for many years to come that will pay the interest on any mile of its track. It has good grades and curves; it has every quality to make a railway, except one, and that is traffic; and it will take some time, under existing conditions, before traffic is forthcoming. This Parliament voted cash subsidies to assist in its completion. I do believe that possibly there was a situation when, finding the road in the position it was in, with the province of British Columbia only responsible, when it would have been better to leave it as it was until we could take stock of the situation, until we could see if by some system of re-arrangement we could find a way to make something out of the road crossing the mountains. But recriminations and retrospective views in the light of present knowledge do not assist us. Two years ago we voted a guarantee of $45,000,000 to the Canadian Northern upon representations of fact which, I have no doubt, were believed, but which are now shown to have been absolutely erroneous. To-day we are confronted with the appalling situation of the Canadian Northern in default and the Grand Trunk Pacific practically insolvent. What are we going to do?

It has been pointed out that there are three courses any of which we may pursue: we may take them over to-day; we may assist them; or we may put them into the hands of a receiver. For my own part, I have never hesitated in my belief as to what should be done. I have listened to all the arguments that have been given and

they have not changed my mind. In my opinion, we ought to let both roads go into the hands of a receiver. That sounds very serious, and in the minds of many it is an absolute impossibility. I can only point out that eighty per cent of the railroads of the United States have been in the hands of receivers; and one-seventh of the railway mileage of the United States is now in the hands of receivers. There is only one way by which you will get rid of all the accumulated water and of all the difficulties that belong to taking over these systems, and that is by a receiver or by a reorganization which has the effect of a receivership.

Look at the Grand Trunk Pacific for a moment; I will not deal with it at length. The Grand Trunk Pacific has three kinds of securities; those guaranteed by the Government; those guaranteed by the Grand Trunk; and its own class of securities. Those guaranteed by the Government place upon us a responsibility which we must discharge in times of stress and strain, as well as in times of prosperity. And I trust that in any balance sheet of the public accounts which the Minister of Finance may put out hereafter, he will show at the foot of the page "contingent liabilities," because no statement of the finances of the Dominion is a correct and complete statement that does not show the contingent liabilities that belong to us by reason of our guarantees. So, we have to pay the interest upon the Grand Trunk Pacific guaranteed securities for its lines in the mountains and on the plains, for which we hold a mortgage. We must pay this, whether we wish to or not, we must pay this to maintain our place among the nations of the world and our credit in the markets of the world; we must do this, or, ourselves become insolvent. As to the securities guaranteed by the Grand Trunk Railway Company, my hon. friend from South York (Mr. W. F. Maclean) pointed out that we should take over this railway to-day; but I should like to point out to the House and to the country that we are confronted with the guarantee of the Grand Trunk Railway system its guarantee upon the bonds of the Grand Trunk Pacific. For my part I am not prepared at this moment to say that the tax-payers of the Dominion of Canada should be substituted for the shareholders of the Grand Trunk Railway. It may be that when we have before us all the information to enable us to deal with this matter as adequately as we should, the common sense and wisdom of the House will conclude that it is better that we should ourselves be put behind the securities of the Grand Trunk Pacific by accepting the obligations of the Grand Trunk system, by relieving them, and taking over the system as a whole. But to-day, for the Grand Trunk Pacific, there is the guarantee alike of the Dominion of Canada and the Grand Trunk Railway system behind it; and until such time as the obligations of the Grand Trunk have in some sense been settled with relation to the Grand Trunk Pacific, I do not think that this House would be discharging its duty to the people by now taking the system over. It is all very well to say: there is $15,000,000 due to the Grand Trunk by the Grand Trunk Pacific, and $15,000,000 due to the Grand Trunk Pacific Development Company, and that we have only to take over the stock. That is very true; it is a simple thing to acquire the Grand Trunk Pacific. But in the acquisition of that road, we substitute for the guarantee of the Grand Trunk Railway system—a guarantee given thoughtfully and after careful consideration by the shareholders duly assembled in London to deal with the matter—the guarantee of the tax-payers of the Dominion of Canada. I want to know that adequate safeguards have been provided, that we have proper agreements with regard to traffic that will secure us against the building up of towns and ports outside the Dominion of Canada, before that is done. It is for that reason that I gladly vote a sum of money to enable a proper investigation to be carried on in order that we may know, in the light of expert information and advice, just what can be done to save a situation which is very acute. So much for the Grand Trunk Pacific, in so far as taking it over at the present moment is concerned

With regard to the Canadian Northern, I am not going to deal at length with figures to-day, because they are only painful to read and my voice is bothering me very greatly. What are we going to do about the Canadian Northern? My hon. friend the member for St. John (Mr. Pugsley), says that we should take an option for its purchase. The crux of the Canadian Northern situation may be very simply stated. It has $107,000,000 of provincially guaranteed securities and $101,000,000 of Dominion guaranteed securities; that is, $208,000,000 of guaranteed securities of the provinces and the Dominion. That means that the people of this Dominion must protect the credit of the Dominion or of the provinces

to the extent of the interest on those sums of money. In addition to that, whether we will or not—it is now too late to look back except to take stock of it—we have promised to pay the interest on $45,000,000 Dominion guaranteed securities for two years and on $35,000,000 of similar securities for three years, and British Columbia has promised to pay the interest on an enormous sum involved in the construction of that road to the Pacific for a period of three years. So these sums must be met anyway.

According to the figures that we have before us, something like $147,000,000 of unguaranteed Canadian Northern securities are outstanding. How are they secured? They are secured primarily by lodging with a trust company the certificates of title to Canadian Northern properties called subsidiary companies. There are the Lake Superior terminals, there is the telegraph system, there is the express system, and in addition they are secured, of course, by a charge upon the Canadian Northern system. It is true that two years ago we put $45,000,000 behind that again. I think we could afford to lose the $45,000,000 now rather than put ourselves behind that; I think that must be apparent to every thoughtful Canadian. The problem is a simple one with the Canadian Northern. You say you will not have a receivership, because it would hurt our credit. Then I ask this question: how are you going to adjust that $147,000,000 of unguaranteed securities? You have your federally-guaranteed securities, your provincially-guaranteed securities; now you have your unguaranteed securities. I, for one, will protest as long as I have a seat in this House against the substitution of the Canadian taxpayer for the Canadian Northern with relation to these unguaranteed securities. I will not become a party to the people of this country being told that they must insure and guarantee unguaranteed securities. If men in England bought $25,000,000 of income certificates of the Canadian Northern and paid par and more for them; if they bought $147,000,000 of unguaranteed 4 per cent perpetual debenture stock and paid par for it, that is their business. But I do protest against the substitution of 8,000,000 Canadian people behind an unguaranteed security of any railroad company. I go further. Not only is it unsound business, unsound in principle and in detail; I say further that it puts a premium upon watering railroad securities and stocks. A point to which I shall presently direct attention is this: If we are to take over this Canadian Northern railroad, or if we are to prevent a receivership occurring; if we are to act the part of the receivers; if we are to reorganize the system, then we must proceed to reorganize even as the receivers of the Wabash reorganized that road two years ago; even as the receivers of the Frisco system are now endeavouring to reorganize that system; even as the receivers of the Rock Island system are now endeavouring to reorganize that system. We must proceed upon business principles, and if these 4 per cent unguaranteed securities are to be taken care of by this country they can never be taken care of on the basis of making them worth 100 cents on the dollar. I am not adverse to any system of reorganization by which these securities would have some value placed upon them; but I would deprecate greatly any endeavour to substitute for the Canadian Northern Railway system, which was the security upon which they were sold, the collective credit of the people of this Dominion. That is the reason why it seems to me that we must go further than we have gone; we must do that very shortly, in order that an opportunity may be afforded by the lodging of these securities with a trust company, or otherwise to bring about some scheme of reorganization, because I think the time is gone by when men of business and intelligence, sitting in this House, should be frightened by the word "receivership." It is a great bogey, this word "receivership." All it means is that you put somebody in who takes charge of the property to conserve it and save it for the people whose money built it.

I would just like to say this to the hon. member for St. John, who talks about the magnificent undertakings that have been carried forward by Mackenzie and Mann. The Canadian Northern Railway Company is a corporation owing its origin to this Parliament. It was created by nothing more or less than a statute that gave corporate powers and existence to two or three men. and clothed them with the responsibility on the one hand and the opportunity on the other of building a transportation system. They organized themselves as a corporation, and with one hand they borrowed hundreds of millions under that name, and with the other hand they paid it to themselves as contractors, to build what we now have—a railroad. That is the story, just as tersely put as I think it can be put. And, mark you, the money that was borrowed with the one hand was, with the ex-

ception of the $140,000,000 to which I have referred, borrowed upon the collective security of every man in the Dominion or in the provinces. In the one instance it was the collective credit of the people in the provinces, and in the other of the Dominion as a whole. And with that money they, under another name and with the corporate existence which is given to them in another place, are building this transportation system and handing it over to whom? To the people whose money built it? To the people whose credit built it? To the people who made it possible? Not so. Year after year they have come back to us and asked us to give them more money to continue the operation of something that they themselves did not create nor build, but which owes its very existence and continuance to the collective credit of the people of this country. We are unable, however, to get a receivership, because the attitude of the Minister of Finance, may, after all, be the correct one. Moreover, in a period of war we must accept the inevitable; the opinion of those who are charged with financial responsibilities and the obtaining of large sums of money with which to carry on the war should at least be respected to the full. So, conceiving that the hon. Minister of Finance is right and that I am wrong, what are we to do? We are confronted with this situation; we must either assist the road or let it default, and since we are not to let it default, for the reasons which the minister has given, then we must help it.

What are the conditions upon which I, speaking as a western man, am willing to help save the credit of this country? To me the conditions are very simple. First of all, any loans made to these roads must be demand loans. I would not permit myself to become a party to a single dollar more going to either of these systems unless it be upon demand. Because, as my hon. friend who has just taken his seat knows, that if loaned upon demand you may demand it to-day and go to action to-morrow; or you need not demand at all but commence action for payment.

Mr. PUGSLEY: Which you would not do.

Mr. BENNETT: I do not know whether or not my hon. friend's remark reflects his own mind; but, speaking for myself, if the systems were conducted as they have been, I would not hesitate to commence proceedings to-morrow morning. First of all, then, a demand loan. That insures for me absolute control of the situation; I know when it is a demand loan that I at least have control. I know when it is a demand loan that I can call, and by calling it I can get my money back, or take possession. If the days of prosperity come to-morrow or the day after, then so much the better for us; we shall get our money back, and in a period of years we shall have made good the $45,000,000 loaned two years ago to the Canadian Northern and the $25,000,000 loaned the Grand Trunk Pacific. First, then, a demand loan. I have no hesitation in saying that, so far as a loan, if it must be a loan at all, is concerned, we must do this.

Then, having made a demand loan, what is the next condition I insist upon, so far as I am concerned? The rate of interest, the terms, having been settled, I ask that this country shall have absolute control of the distribution of that money; in other words, I want the Minister of Finance to be responsible to this Parliament for every dollar of it. I do not want this money to pass through the exchequer of these people, for them to do with as they please; I ask the Minister of Finance to accept the responsibility for its expenditure, for and on behalf of the people, who make the loan. He will say to me, I suppose: "Why should I accept this responsibility? I am only lending money." It is more than lending money. We are saving bankrupt enterprises from destruction, and because we are endeavouring to save our credit we are not putting a receiver in charge. But the Minister of Finance, sitting here to-day, is to me the receiver of the system, and as such I ask and I expect, and if I am permitted to live will demand, that he shall see to the distribution of every dollar of that money—every cent of it. I want to know that every dollar of it is used for the purpose for which this Parliament is voting it. I want to know that every cent of it is used for the purpose of meeting the demands which have arisen, and which must be paid by reason of fixed charges accruing —for the purpose only of preserving the credit of this country.

Then so far as the Canadian Northern is concerned, there is a large question—this is the third demand that I make upon my friend the Minister of Finance. The operating revenues of the Canadian Northern Railway far exceed its operating expenses. According to its estimate, which has been laid upon the table of this House, the Cana-

dian Northern Railway, for the year ending 30th June, 1917, will have, apparently, a net revenue of nearly ten millions of dollars. I say to you, Sir, that I protest against Mackenzie and Mann being left in charge of that ten millions of dollars.

Mr. TURRIFF: Hear, hear.

Mr. BENNETT: I protest against the men who have been guilty of the misrepresentation they have, between their statement of two years ago and their statement of to-day, being left in charge of the operating revenues of that system. They are not worthy of being left in charge of the operating revenues of that system. I do not trust them. The people of this country do not trust them. The people of this country will not for a single moment submit to taxation being put upon them to save this system from going into the hands of a receiver if, Sir, it is proposed to leave these men in charge of the operating revenues of that road. I am satisfied that that must not be done. I want to point out to this House that this vote, which we are making here to-day, means a tax for both railways upon the people of Canada of $3 for every man, woman and child in it, for the purpose of meeting the interest charges and demands that may be made upon us by reason of the default of these railway systems. There are worse things than default in payment of money, and it seems to me that, when this record is written in the history of this country, the default in comman sense on the part of the Canadian people will be in evidence quite as much as the default in payment of interest. Now, having taken stock of the situation, realizing where we are at, I believe that I but voice the opinion of the community in which I live when I say that we demand that these men shall not be left in charge of the operating revenues of that road.

I am not casting any reflection upon the operation of railways; I am not a railway man. But I wish to give one illustration of the wasteful methods of these men in the operation of this road. The hon. gentleman from Assiniboia (Mr. Turriff) spoke the other day. Doubtless he and I frequently go down to the station to take the train for Toronto. Sometimes we take the Canadian Northern train; sometimes we take the Canadian Pacific railway train. That train on the Canadian Northern between Ottawa and Toronto has no more license to be there, no more license to be running there than there would be for running a train from here to Kamchatka. It has no license whatever. Any man in this House knows that.

Mr. PUGSLEY: Would the hon. gentleman explain why?

Mr. BENNETT: The reason is this: there is a sufficient number of trains without this one, to meet the demands of night traffic between Ottawa and Toronto. The Canadian Northern is operating a day train between these points. I have passed through the night train and counted the passengers, night after night, for the purpose of satisfying myself what the revenue may be. I know how many passengers are necessary for a train to pay operating expenses. The maintenance of that train means nothing more or less than a fixed charge upon the revenues of that road; and, as a matter of fact, that money should have been spent in building freight cars to supply the Goose Lake system, of which my hon. friend spoke the other evening, to haul out the farmers' grain. That is what I mean.

Mr. MORPHY: Why would the hon. gentleman not take off the Canadian Pacific Railway train?

Mr. BENNETT: The Canadian Pacific Railway train is operated by a system that shows a surplus of $20,000,000 and was there first.

Mr. MORPHY: Let the other road have a little of the money, then.

Mr. BENNETT: I hope my hon. friend is not so lacking in intelligence as to make a remark of that kind seriously.

Mr. MORPHY: I do not ask you to submit me to any impertinence. Of course, we will stand almost anything from you.

Mr. BENNETT: I am surprised——

Mr. MORPHY: The hon. gentleman is an advocate here for the Canadian Pacific Railway.

Mr. BENNETT: At least, my hon. friend, who occupies that proud position for the Canadian Northern Railway, has been able to show that animus which actuates him. I am not an advocate of the Canadian Pacific Railway.

Mr. MORPHY: You have that reputation.

Mr. BENNETT: I want to say once more that I am unfortunately in the position of sacrificing a large sum of money per annum because I was, and am not now, an em-

ployee of the Canadian Pacific Railway. I have sacrificed more money per annum than the hon. gentleman ever earned in his profession in a year for the purpose of being here rather than being an advocate of the Canadian Pacific Railway. I simply say that the duplication of unnecessary railway facilities is best indicated by the running of that train between these two points. There are four trains a day on the Canadian Northern railway between Toronto and Ottawa: one leaving each point at noon, arriving at the other point in the evening, and one leaving each point at 11 o'clock at night, arriving at the other terminus the next morning at 7.30 o'clock. The local service is not taken care of by the night trains; that is obvious. How did the Canadian Pacific Railway—and I thank my hon. friend for reminding me of it—reach its present position? Just in the manner indicated by my hon. friend from Edmonton (Mr. Oliver) the other day—by making its service consistent with the demands of the travelling public. That is how it was done. When I first went West the train between Calgary and Edmonton ran three times a week; it went up one day and came back the next. My hon. friend from Edmonton will say it was a poor train. It was a poor train. And yet it was by the maintenance of that service that the Canadian Pacific Railway was able to permit the system between these two points to exist. Had it run night trains, as it now does, there would, of course, have been a deficit as between the operating expenses and the revenue. But it did not run night trains until three years ago. But getting back to my illustration, you have on the Canadian Northern a beautiful Pullman train leaving here at 11 o'clock at night. May I remind my hon. friend from St. John that every one of those cars would put 20 freight cars upon the plains, where the profitable business of that road comes from. In other words, according to the best computation that I can make, each of these two night trains between Ottawa and Toronto would involve an initial expenditure at least equal to the cost of one hundred 1,000-bushel freight cars. I leave it to the hon. member for Assiniboia (Mr. Turriff), who is much more familiar with these facts than I, to say whether or not one hundred freight cars would not handle 100,000 bushels of grain; and whether the moving of 100,000 bushels of grain would not help to relieve the congestion in that country. In constant service between the grain-producing centres of Alberta and Saskatchewan and the head of the lakes, these cars would produce five times the revenue that will be produced in the next five years by the operation of the night trains between Ottawa and Toronto.

nd the money that my hon. friend from Perth (Mr. Morphy) wants the system to get, I want it to get by carrying the freight that is lying there to be carried by reason of the development of the country which the railway was built to serve. The people of the West realize that the expensive passenger equipment and service is being maintained at a loss. I do not care what the company says, or what their traffic returns show. I have the evidence of men who have gone over the system for the purpose, and the Board of Railway Commissioners will give you the actual statement. It is a losing service, and the 100 freight cars that could be built, with the expenditure necessary to maintain them, would move 100,000 bushels of wheat out of the congested areas, and be productive. What we demand is that this system be no longer managed by the men who created the existing conditions, but by men who will be responsible for meeting the traffic demands of western Canada, and who will see that the money is not diverted for other purposes. I think it is only fair to ask that.

You ask, how is it to be accomplished? It is to be accomplished in two ways: (1) by the appointment of a board of directors, and (2) by the appointment of adequate auditors. These are the two methods by which I propose to meet the difficulties to which I have directed attention. Left in charge of the $15,000,000, these men would do what they have done in the past. We want not local auditors, not men who have merely good reputations in the particular communities in which they live, but men of international reputation, men who will be responsible in the largest sense of the term for the audit of the railway system, men of large business training and experience who, by reason of their great position in the business world, will enjoy the esteem and confidence of the Canadian people.

So far as directors are concerned—I can only speak for some of us in the West—we ask that those appointed, and I think the Minister of Finance said he would give us three directors, be not dummy directors, not men who will not direct, but men who will be able by reason of their skill, experience and knowledge of railways, to see that the money of the road is used for

the purpose of supplying facilities to the public. After all, the obligation of this railway system is to do what? It is to supply the people with an efficient transportation service, and the demand for that will not be met unless there be appointed directors who have the requisite knowledge, and who will be responsible for the effective administration of the system.

The next safeguard which we ask, and it is not too much to ask, in view of the circumstances, is that no new work should be commenced that would commit the system to great expenditures. I agree entirely with the observations that have been made as to what has been going on in various parts of Canada with regard to the launching of new enterprises connected with this system. We ask, and we have a right to ask, that the money lying in the banks upon the guaranteed securities of the Dominion and the provinces should be used for the purpose of completing the roads for which they were loaned, because we are bound as a matter of law to that, and further, that no new undertakings be commenced. A few years ago, they launched a vast steamship enterprise; they launched a system of hotels, and they have also on hand great terminal enterprises. We must insist, and I ask the Minister of Finance to see to it, that no new expenditures are made until such time as we have had an opportunity to consider them

I go further. The last demand is that there should be an adequate commission for the purpose of ascertaining all the facts connected with these and other railway enterprises. It is not sufficient to say to this House that you are going to appoint a commission. If a commission is to be appointed, it should be appointed before the end of this month. It should be appointed before the month of June, because there will remain only the months of June, July, August and September in which it could carry on its work. It must be a commission, if possible, of men who do not reside in Canada. I do not believe that you can get in Canada men who would not be more or less influenced by local conditions and circumstances, or who would take a disinterested view of the matter, and present a report of a disinterested character upon which we could act. My hon. friend from Perth (Mr. Morphy) referred to the attacks that have been made upon me at various times, the suggestion being that I am partial to the Canadian Pacific railway because I once acted as their legal adviser. These attacks reflect a state of mind common in this country and one which might find expression in any report made. We do not want men who are likely to be influenced by the Canadian Pacific railway, by the Grand Trunk railway, or by the Canadian Northern. What we ask is that you get the biggest men that you can get for money on the American continent, for the purpose, not of studying the Canadian Northern and Grand Trunk enterprises, but of looking over the whole railway situation of this Dominion and of determining how the 35,000 miles that are now in Canada can be so co-related and so co-ordinated that they will be of the greatest use to everybody, and that we will get out of them the money to meet the charges against them.

I do not think it is unreasonable or unfair to ask that the commission get to work at the earliest possible moment. I have talked with a gentleman who has travelled over Canada and he informs me that 2,500 miles of railway in this country should be torn up, because they are of no good and never will be of any good to the people. By co-ordination and by co-relation, by linking up this piece of system or that branch line with a new main line, by using the branch lines of the Grand Trunk or Canadian Northern, by using the lowest grade of this road here and another there, we may be able by a system of co-operation to save many miles of railway from destruction. Should a man ask for more than that; can he ask for less? It is not too much to expect that a commission composed of such men would be able to do invaluable work for this Dominion, and would be able to bring in a report which would enable us to arrive at a conclusion in relation to the whole matter when Parliament met again. But it is not for any commission to determine the policy of the Canadian people. That must be determined by themselves. I do not believe that the railway question has ever been as seriously considered by the Canadian people as it should be, and I think that when a report, such as I have indicated, is ready, we should have if possible a special session of this Parliament to deal with this whole matter. I have advocated that privately, and I repeat it publicly. I believe that Parliament should be called together, if possible, without the Government assuming the responsibility for the carrying out of this or that policy. There should be placed on the table of the House a report such as I have indicated, and we should sit together in special session

and determine once and for all what we shall do with regard to a matter which is of great importance to the Canadian people. It would be a report made by men of outstanding position in the railway world whose knowledge and experience would command the respect and esteem of the Canadian people. There should be a financial report that could be read and understood by every hon. member of this House. I would supplement that report, if I had my way, with the annual reports of the Canadian Pacific Railway, Canadian Northern and Grand Trunk systems of the 30th June, 1916, and let the members of this House study the situation which demands the greatest possible care on the part of every person. Then there is left the question, what shall be done after that? I am not going to say whether or not I believe that government ownership would serve best the interests of this country. I am not here to say whether I believe in the nationalization of all Canadian railways. What I have been struggling for for years —and, so far as I am concerned I will not be content until I get it—is the necessary knowledge to enable me to arrive at an opinion on this question. A former president of the United States, President Taft, in a recent address pronounced himself as strongly opposed to government ownership of railways, as strongly opposed to the nationalization of railways in the United States. The hon. member for Edmonton (Mr. Oliver) the other evening said he was not sure that it would serve as a useful purpose in this country. The hon. member for South York (Mr. W. F. Maclean) was sure that it would be a panacea for all our ills. I am not sure; I have not definitely made up my mind. I have recently looked through the traffic returns of all the great railroads and am satisfied of one thing: the economies that could be effected in operation if the railroads of Canada were nationalized would amount to a stupendous sum. The surplus revenues of the Canadian Pacific railway are very great, for the fixed charges of that road last year were only $10,000,000; and when you remember that their fixed charges were only $10,000,000; while the fixed charges of the Canadian Northern were $15,000,000 per annum, you can get some idea of the burden that would be placed upon us if we dealt with this question in every phase and took into consideration every road that has been built and will be built in Canada. So I am not here to declare either for or against public ownership. But what I ask in the strongest possible terms is that we should not procrastinate in the creation of this commission. We should deal with these matters in the earliest possible moment, and should receive a report that will command respect, that will be the last word of authority on the subject. There are great men in the United States who have been employed by the great railroads for a similar purpose—by Mr. Hill and the late Mr. Harriman, for instance—men of transcendent ability in railroad work, and who have done much in the reconstruction work of railroads in the United States. In addition to that, there are great financial men who would be able to give their assistance in the preparation of a report that would enable us to understand, first of all, the physical value of the Canadian Northern and Grand Trunk Pacific system—the replacement value—and, secondly, their franchise value, if any. We should also have prepared by proper solicitors a statement of the legal position and of the securities that have been issued by these roads, together with recommendations as to how they can best be dealt with.

In connection with the question of physical value, I should like to turn for a moment to the last condensed balance sheet of the Canadian Northern railroad system. This values the railway and equipment of the Canadian Northern railroad, as on the 30th day of June, 1915, at $430,052,428.55. Let us compare that with the Canadian Pacific railroad. You will find in Poor's Manual a statement of the Canadian Pacific railway system, and it is one well worthy of consideration, because, with all its vast mileage of railway, aggregating 14,000 miles, with all its steamships and lands, it carries its railway and equipment at only $503,584,725.07 (Poor's Manual, 1916, page 1499). When you reflect that the Canadian Northern railroad system is carried in their balance sheet at over $430,000,000, and the Canadian Pacific railroad, with all its equipment, at $503,000,000, or only $73,000,000 difference, you can form some adequate conception of the real situation in regard to the railways of this country. Nothing could more clearly indicate the character of what has been going on during all these years than these two sets of figures. Take that in conjunction with the figures that were put on Hansard the other evening by the hon. member for Lambton (Mr. Armstrong), comparing the Canadian Nor-

thern Railway cars per mile with the Canadian Pacific Railway's, and showing that the Canadian Pacific, with some 14,000 miles for traffic purposes, owns something like 87,000 freight cars, 2,781 passenger cars, and nearly 8,000 service cars, as compared with a system which shows not one-third of that equipment, yet whose railway and equipment is declared on its books to be only worth $73,000,000 less than the Canadian Pacific Railway and with several thousand miles less track. That, it seems to me, is something to which the attention of the country cannot be too strongly directed, and I should like the figures placed in possession of every member of this House, together with a copy of the annual statements of the Grand Trunk Pacific, the Canadian Pacific Railway and the Canadian Northern Railway for the year ending June 30, 1916; so that hon. gentlemen might study these figures in the light of the report of the commission and determine how economies may be effected such as will, by co-relation and co-ordination, enable us to save, if possible, the Canadian taxpayer from further demands on his purse.

I should like hon. gentlemen also to bear in mind the obligations of this road which carries its railway and equipment at $430,000,000. On the 30th of June, 1915, the assets of the Canadian Northern were represented in round figures to be worth $562,000,000, while the Canadian Pacific Railway's assets were valued at $931,000,000 only, of which nearly $100,000,000 was in cash and active securities. Does not that suggest to the House the necessity for the most watchful care in relation to the expenditure of the revenues of the Canadian Northern Railway and of the moneys we are advancing?

But that is not all. Two years ago, you will find in the Sessional Papers for 1914, representations were made by Mr. Hanna, vice-president of the Canadian Northern Railway, over his signature, as to what would be the earnings of the Canadian Northern Railway system for the year 1916. He estimated that the gross earnings for 1916 would be in round figures $54,000,000, and the net earnings $15,000,000; for 1917, gross earnings $61,000,000, and net earnings $17,000,000; and for 1918, gross earnings $67,000,000, and net earnings $20,000,000. Now I find by the documents that were laid upon the Table of the House the other day that the estimated gross earnings for 1916, instead of being $54,000,000, as represented by Mr. Hanna two years ago, are now estimated by him at $34,900,000, and the net earnings at $9,770,000 instead of the $15,000,000 that he estimated two years ago. In view of that the country may well question whether the glorious prophecies of Sir Donald Mann as to the traffic of the future will be realized, and whether, let us say in 1917, the gross earnings of the company will be $61,000,000, as Mr. Hanna estimated them to be in 1914. This year he says they will be $41,000,000. In 1914, when he was after $45,000,000, he estimated that the gross earnings for 1917 would be $61,000,000, and this year, when he is after only $15,000,000, he estimates that the gross earnings will be only $41,000,000, or $20,000,000 less. Then as to 1918, he estimated in 1914 that the gross earnings would be $67,000,000 and to-day he estimates that they will be $47,000,000, a shrinkage of $20,000,000, and so on for 1919 and 1920, and as regards the net earnings in the same ratio.

There is one other matter I should like the House to consider. There are outstanding, according to the figures placed upon Hansard by my hon. friend the Minister of Finance and the documents we have before us Canadian Northern railway liabilities to the amount of $492,000,000—$107,000,000 and $101,000,000 and $149,000,000, then $92,000,000 of apparent debt then $17,000,000 for equipment, besides $25,000,000 which we have outstanding for income bonds, or nearly $500,000,000 of securities outstanding, outside of capital stock which is another $100,000,000. Think of that in the light of the fact that the total value given of the railway and equipment is only $430,000,000. It is no wonder that people are asking: Where are we going to get off if this thing continues? There is a limit to the resources even of the Canadian people; there is a limit to the power of the Canadian taxpayer, and I say, in all seriousness: This country cannot continue year after year putting up money to meet deficits that arise in the operation of railroads owing to the promoting tendencies of the contractors who build them. Hence, I rejoice that the Minister of Finance has seen fit to appoint three directors on the Board of Directors of this road. If they are dummy directors like our present director on the Grand Trunk Pacific, who is a station agent at Levis, they will not be very valuable, but if they are men like Sir Thomas Tait, who gave the best of his life to the Government railroads in Australia, then I know that not one dollar will be diverted from its proper source, and that

every dollar that comes from the system will go back into the system or in payment of its just debts.

There are other figures of tremendous interest. My hon. friend from Edmonton (Mr. Oliver) said the other day—and he seemed to think it was true, I think he believed it absolutely—that since we came into power in 1911, there had been a shrinkage in railway earnings, and he attributed that to the fact that the people of this country were not as prosperous as they were before. All I can say is that the railway statistics show quite the opposite. I wish every hon. member would study the volume issued by Mr. Payne every year, and if my hon. friend will turn to page 32, he will find that the railway earnings per year in Canada have increased since 1911; that on the 30th of June, 1911, they reached a higher point than they ever reached before; that they increased since then; that the number of passengers and tons of freight carried per mile until this past year also increased. A summary of the whole railway situation is given on page 39, and it indicates that for the year ending the 30th June, 1911, the gross earnings per mile were $7,430.45; the operating expenses per mile, $5,158.85, and the net earnings per mile, $2,271.64. In 1912 the net earnings increased; in 1913 they increased and in 1914 they increased, but in 1915, they showed a falling off, so that instead of there being a diminution in the traffic returns of the railways as to the number of passengers or as to the tons of freight carried per mile, or as to the revenue per mile, either gross or net, there has been a constant increase since the 30th June, 1911, until last year.

Mr. OLIVER: Is the hon. gentleman saying that I made some allusion, in the remarks I made the other night, to railway traffic since 1911?

Mr. BENNETT: The remark that I understood my hon. friend made was that unfortunately, shortly after the Conservative party come into power, there was a shrinkage in the prosperity of the country, and that that shrinkage affected the railroads.

Mr. OLIVER: I did not specify the railways. What I mentioned particularly was that there had been a yearly increase in productive area and in production in the West, and that that increase in production and in productive area did not continue after 1911. I did not allude to the railway traffic at all.

Mr. BENNETT: Well, it was referable to the railway traffic.

Mr. OLIVER: Certainly.

Mr. BENNETT: And I only read from page 39 of the statement to show that in 1911 we had reached a higher point in railway earnings per mile than at any time before or since 1907, and that there was a steady increase every year until 1915. I merely mention that in passing as it seems to bear upon the observations which the hon. gentleman made.

There can be but two ways by which we can effect improvements in our present system. One is by practicing economy. In relation to economy, I will not deal with that at any greater length than to say that I believe the railways in question can be managed much better than they have been in the past, because the Canadian Pacific Railway Company was last year able to show economy amounting to many million dollars that enabled it, with a shrinkage of 25 or 30 per cent in gross revenues, as the hon. Minister of Finance said, to show a very large net return, almost in keeping with the previous year. Everyone who lives in the West will bear me out when I say that the most drastic economy can be effected in relation to the Canadian Northern in the East, and that great benefit will accrue to the West by better facilities for the handling of freight, because freight facilities are demanded in western Canada, and most railway men are constantly engaged in the study of how to bring the handling of freight to the highest state of perfection.

I have had letters from almost every part of the western provinces during the past few months, complaining of the handling of traffic by the Canadian Northern. My hon. friend from Assiniboia (Mr. Turriff) has had the same sort of letters, and I doubt not that my hon. friend from Edmonton (Mr. Oliver) has had the same. Every one of us have received complaints of the slow movement of freight. While there has been congestion of freight, and no cars, these unnecessary duplications of services go on in eastern Canada. Where is the traffic to come from? Economy in service can effect some improvement, but the reorganization of the railway system of Canada, the saving of the taxpayer from the demands that are made upon him an-

nually, can be brought about only in one way, and that is by increasing traffic. Increased traffic in the East must largely mean passenger traffic, because there can be no great increase for some years to come in freight traffic, but in the West, colonization and settlement are the two things that must bring about increase in traffic. Linked up with the transportation problem is the problem of settlement and colonization. After this war there can be no material progress, no material move towards prosperity until such time as we settle our lands with suitable persons and increase the population of this country, and that increase of population will mean that we shall thereby be adding traffic to the railways, so that the solution of this problem of transportation ultimately must rest with the men of western Canada and with the development of that great country west of the lakes. I care not how much discussion may be indulged in as to what passenger facilities are required here or there. So far as the West is concerned, in the hands of the producers of the plains, and not with the residents of the cities and towns, rests the solution of this problem, for until such time as the great body of mileage that is now unproductive, that is now not being utilized to the extent to which it can be utilized, is supplied with traffic, although there may be congestion at this or that point, in the ultimate analysis you find there is not sufficient traffic for all those roads to take care of. There is a limit to the traffic production of 8,000,000 people, and that limit has been nearly reached. This year, with lessening crops, and with lessening traffic, there will be lessening returns.

Let me point out some figures that have been prepared by a gentleman who is now engaged with the Economic Commission, and that show what we have in the West at the present time. We have a population in the four western provinces of 2,212,576. In Manitoba 56 per cent of the population is urban and 44 per cent rural; in Saskatchewan, 27 per cent is urban and 73 per cent rural; in Alberta, 40 per cent is urban and 60 per cent rural; in British Columbia, 55·4 per cent is urban and 44·6 per cent rural. We have a total of 955,653 people in the towns and 1,256,923 people in the rural parts of the four western provinces. Let us look at the railway mileage:

[Mr. R. B. Bennett.]

Railway mileage.

	Miles.
Manitoba	4,576
Saskatchewan	6,011
Alberta	4,153
British Columbia	4,378.9
Total	19,117.9

That is, in these four provinces we have more than half the railway mileage of Canada—and with a population of less than two and a half millions of people. How does that work out with relation to the population?

Relation of Railway Mileage to Population.

	Total. 1 mile to.	Rural. 1 mile to
Manitoba	116	51
Saskatchewan	115	84
Alberta	120	72
British Columbia	114	45
Four Western provinces	116.3	66

This does not take account of certain miles of railway in British Columbia not yet completed. Now, if this House and this country will keep these facts in mind, it will assist in the realization of the vastness of the problem that confronts the Canadian people. It means this—that we must get into the West more people. For there is no chance of 66 people ever being able to produce or consume traffic sufficient to maintain a mile of railway the average cost of which in Canada is between $40,000 and $45,000, and the fixed charges upon which will amount in the aggregate to nearly $2,000;—sixty-six people cannot contribute $2,000 a mile net, which really means after all the production of $6,600 a mile. People cannot produce at the rate of $100 each for the purpose of maintaining the railways, for that is what it comes down to. So, this problem of transportation is indissolubly connected with the colonization and settlement of western Canada; and I say to the Minister of Finance, unless some policy is outlined by which these plains are settled year by year and day by day, you will have a demand made upon the tax-payers of this country to pay a deficit upon the operation of these railroad systems. There are the facts that stare us in the face; and it requires courage, determination, imagination, and a vision of the future that is to be to deal with them as they should be dealt with. We must settle this country, for until the country is settled the transportation problem will not and cannot be settled. In the eastern part of Canada, I believe, you have only one method by which you can possibly hope to succeed in solving

4 p.m.

the problem, and that is by increasing largely your passenger traffic, and you can only do that when you have roads sufficiently strong to take care of these passengers. I have long had a dream that the terminal facilities at Halifax might be used by bringing, let us say, the Mauretania to that port to ascertain what time she can make in carrying passengers from Liverpool destined for Chicago and other American cities; and then have well-equipped trains such as we have provided in some cases, to see how many days quicker we can land passengers in Chicago, Minneapolis, St. Paul and other western points, than can possibly be done by way of New York. In that way we may be able to develop passenger traffic for our railways. But we cannot look to that alone for a solution of the railway problems. It is borne in upon my mind—that, when, out of thirty-five thousand miles of railway in the whole Dominion you have nineteen thousand miles west of the Great Lakes, the problem must be dealt with in the West; and, that being the case, it is incumbent upon those who have the power and responsibility, to see to it that our population is increased by a vigorous immigration policy.

Mr. PUGSLEY: I am very glad to hear the hon. gentleman come to settlement of the West. Will he state briefly what are his views of a progressive policy for settling the West?

Mr. BENNETT: I have a well-defined idea on that subject, but the statement of it in this House might not serve any useful purpose. It would be only a statement of the ideas of one person.

Mr. PUGSLEY: But the hon. gentleman is very influential with the Government.

Mr. BENNETT: No, not very influential. I wish he were. I will go this far—any settlement policy to be effective in this country must have reference both to the East and to the West. I am not one of those who believe that when this war is over you will find people flocking into this country. I believe that the darkest days of this country's economic history in the near future will be, first the period of readjustment to follow the war, and after that the period of reconstruction. When the war is over, and our soldiers are paid off and return; when dislocated industry is being adjusted from the manufacture of munitions; I believe you will find a time of very great depression in this country, a time that will require the greatest courage and determination on the part of all of us to meet. After that will come the reconstruction period, and that, in my judgment, will be not of rapid development. There are two reasons why it should come slowly. The first is, that the settlers we shall get into the country will be of limited numbers, and the second is that the economic strain which we shall have undergone will be so great as to prevent us from readily finding large sums of money for the purpose of the undertakings necessary for a large inflow of people. I do not know that I should take up time to talk about this, and perhaps the hon. member for St. John (Mr. Pugsley) will excuse me if I do not enter upon the question at length, because I do not think that the presentation of the views of one individual upon an abstract question will serve any useful purpose. I have said that I have well-defined ideas of how this is to be accomplished, and I have also said that the carrying out of the policy necessary to accomplish the end will require great courage, great determination, some imagination, and a vision of the future that is greater than the present. I believe that the abandoned farms of the eastern provinces can be settled. Upon these farms I would settle men who have lived out of doors for the last two or three years, men who will be glad to come here with a little money, to seek educational advantages for their children, and who desire to escape high taxation and to continue to live under the British flag. These men will settle in the East. But the younger men, more vigorous, with a spirit of adventure, and who want to be in the open, must come to the West. And in coming they should be given the assistance of the state, with money to go upon the land and to find for them agricultural implements. We must provide modern facilities to make this the best country to live in in the world; because, unless it is better than other countries, other countries will get the settlement that we need. For we know that settlement does not always follow the flag. We know that after the Boer war thousands of men went to the United States who should have come to Canada. And they went there because we could not offer them the facilities that were offered them elsewhere. We must have rural telephones, good means of highway transportation, and some community life such as can only be brought about by putting the state behind it all. No policy of colonization can be made efficient or useful or worthy of the

name of a policy, that does not put behind it the power of the state. I am sure I shall be excused, if for no other reason than because of the difficulty with which I speak from making further observations on the subject.

I do desire to reiterate and to press upon the attention of this House the fact that the transportation question cannot be settled other than by the West, because, fortunately or unfortunately, 20,000 of that 35,000 miles of railway are there, with a population so sparse that we have one mile of road to every 66 of our rural population. That being so, I am giving my support to this measure at this time because I believe that it means the end. Two years ago I was frank in stating that I did not believe that it meant the end. It is no joy to any man to be right if being right means that his country suffers thereby. I have no joy in relation to that, but I am profoundly concerned about one thing, which I press upon this Government and upon my hon. friend the Minister of Finance: that no time be lost; that there be no procrastination and no delay; that this commission of the biggest men that money can buy at once get to work and report to the Canadian people as to the possibilities of co-ordination and co-relation of the various units that comprise the railway systems of this country, so that, if possible, the traffic that is now being developed and may be developed, may be made productive and so that there may be no further calls upon the Canadian taxpayer. I am certain, however, that the Canadian taxpayer will not continue to pay unless some return be made to him either in the way of lessened freight rates or by his ownership of the facilities by which his trade is being transported. I want to be able to arrive at a conclusion, with my mind at least seized of all the facts, therefore I do urge upon my hon. friend the selection of the best men that he can get—men of experience, of knowledge, of vision; men who, looking to the West, will see not merely a few scattered homesteads and a few miles of track, but a great vision of the mighty influx of the human race that will one day pass over in that direction and occupy this land, for whom facilities have been supplied far in advance of the needs, far in advance of what the requirements are to-day. The constant demand that has been made on Governments being met by constant acquiescence, not refusal, has created a condition in which we find more facilities than we have traffic to take care of, although now and then, by reason of the spreading out of those facilities, there are not sufficient cars to take care of the traffic which develops at particular points. That but accentuates the force of the argument that I have been endeavouring to make. If such a commission does that, having a proper audit made by men of international reputation who will ensure to me that the money which we are voting is used for the purpose of protecting the credit of the Canadian people and not otherwise, and that the revenues which are paid by the people of this country are used for the purpose of carrying their traffic to the seaboard; if and when that is done, I am satisfied that when we come back—if I had my way it would be a special session for the consideration of this subject only—free from the fetters of restraint imposed upon men who vote to support a cut-and-dried policy —what we will do as representatives of all the Canadian people to work out a great policy, having regard to the present and looking also into the future, will redound to the credit of this Parliament and of the people who are represented here.

I apologize for having trespassed so long upon the time and patience of the committee in compelling it to listen to my remarks, made under very difficult physical conditions. There is much that might and should be said with relation to figures, but they are lessons of the past. The future problem is what must be dealt with under the conditions that now exist. Recrimination or self-deception or regrets will not get us away from the fact that the condition that confronts us is one of the most difficult that ever confronted Canadian statesmen, and that it calls for the co-operation and the united effort of every man who sits within this Chamber, whether he sits on the side of the Opposition or supports the Government.

Hon. GEORGE P. GRAHAM (South Renfrew): I assure the hon. gentleman who has just taken his seat that he need not apologize for the length of his remarks. He has devoted a good deal of study to this question, as is evidenced by the manner in which he has presented it to the committee. It is one of the problems, and my hon. friend has dealt with it in a manner to which no person can take objection. I regret that I was called out and did not hear his remarks in their entirety, but I shall read them in Hansard with a great deal of interest, and

I will keep them among the few Government books that I do keep, because the hon. gentleman has given us a great deal of information that is worth while. The gist of it is this: whatever our views may be, Sir, the successful solution of our railway problems depends on the results of our endeavours to fill up the western country and make traffic for our transportation facilities. That, in short, is what confronts us. The problem before the country is to devise a scheme to bring immigration or its management up to date, so that the lands of the West will be occupied and developed and so that proper returns may come to the country from that development.

A few days ago, when these railway Estimates were placed before the House, I pointed out that the manner in which they were submitted to us robbed the members of their right to deal with them in a practical manner. I was laughed at by some hon. gentlemen on the other side. I pointed out that they should have been introduced by resolution, as is the ordinary method, so that any member on either side could move an amendment. No restriction, no qualification can be placed on these grants, and I claim that that is not fair to members of the House. The Government meet and decide what they will do, but the rest of us represent the people just as much as do the members of the Government. I repeat that the manner in which the granting of this aid has been introduced precludes any motion on the part of any one on either side of the House to vary, to qualify or to place restrictions or impose conditions in respect of this proposed aid. That is not fair. The Government say to us: you have to take the responsibility of putting this road into liquidation without any condition, or you have to grant this aid. After the ruling to-day, which, Sir, was absolutely according to the rules of the House, I am firmly convinced that these items were not brought in in this way accidentally; they were brought in to put it beyond the reach of members to impose any condition upon the granting of this money. I wished to move an amendment providing that if we granted this aid the Government should take over a sufficient amount of the common stock of the Canadian Northern to give the people control, so that we could say what must be done with this road when the time came. I think it is unfair that I am precluded from proposing that amendment. I am not going to argue the matter; what is the use? As a member of this House who has given some attention to railway matters, I realize that my hands are tied. I might just as well sit down. I am absolutely helpless unless I am prepared to vote to strike out the item, which I am not prepared to do.

Mr. BENNETT: Would it not be sufficient if 25 per cent of the stock were lodged with a trust company and we had a voting power? This would give us control of the corporation and would be sufficient for our purposes.

Mr. GRAHAM: I would not object to that; what I want is not the stock for its value, but for its voting power, so that when the time for decision arrives the people of Canada, through the Government, will have control. But, as I say, I cannot move the resolution because the manner in which the legislation is brought in precludes my proposing an amendment. The only thing I can add is to urge the Governor in Council to make that a part of the conditions which they have power to impose, when they come to grant this aid. I have not the power. I say that the decision of the chairman, which was absolutely correct as I pointed out to the House the other night, makes it impossible for any member on either side of the House to have anything to say about this grant in a practical way, unless he is prepared to move that the item be reduced or be struck out. Under those conditions I feel that my duty has been performed. Had I the right, I would move one resolution, perhaps two. One that I would move I have just outlined, and that is, that in some way the Government should take control of the stock, so that when the time for a final decision comes, it would be in a position to practically dictate what the terms would be, and the company would be compelled, yes, I think, would be willing to be compelled, to leave it to a reasonable Government to say on what terms this road would be taken over. I protest again at this unusual method, of presenting this matter to Parliament, one which has never before been followed in this Parliament, at least in my time. When in other sessions aid to railways has been proposed, the measures have always been brought in in the usual form, by resolution; and then any member in this House could move any amendment he liked as to conditions, and these amendments could be discussed. But under this new method under which both these items

have been presented to the House, we are absolutely precluded from moving any amendment, and no member, no matter what constituency he represents, has the right to do anything practical in reference to these votes of money.

One word more: The question of the nationalization of railways has been discussed in this House. Personally I am free to say that I am not afraid of the nationalization of railways; but if I were going to do it, I would nationalize all railways and not a portion of them, for reasons which I shall not stop to discuss now. One great reason is that the systems ought to be brought in under the same conditions, and should be placed under the same management, if we are to take over the control of any of them. Mark you, the taking over of one or two might be the initial step towards taking them all over. I repeat that I am not the least alarmed at the prospect of the nationalization of railways. I have lived for a good many years in a town where the lighting system and the waterworks have been taken over by the municipality; and while we have disagreed as to details in many things, I must say that the management has been just as good, if not a little better, than under private companies, and the people have always felt that, whatever money was expended, it was their money and it was their business; and the public have taken a greater interest in the management of these public utilities than they did when they belonged to private companies. Then we have the work of the Hydro-Electric Commission in Ontario, which has been Government of a great public utility. That commission has served, and is serving, a useful purpose. I say, without any hesitation, that I believe the establishment of that commission and its working out has brought about the betterment of conditions 20 years sooner than this betterment would have been brought about had there been no Government control of this great public undertaking. I have no fear of the nationalization of railways. It will have to be a complete proposition embracing them all, if it be done at all. Perhaps, as I have said, taking over one or two at a time might be the initial step towards further enlargement of the national system until it would embrace all existing systems. But I do want to make my position clear that I am precluded as a member of this House from moving a resolution that I desire to move,

[Mr. Graham.]

imposing conditions on both these companies when we are granting aid to them.

Sir THOMAS WHITE (Minister of Finance): It appeared to the Government that it was not necessary to proceed by resolution with this Bill as was done in 1914 when the mortgage of $45,000,000 was given to the Canadian Northern Railway Company. This legislation—because it is legislation notwithstanding that the loans are embodied in the Estimates—provides for the issue of no securities. It is a simple money loan, a loan of $15,000,000 upon conditions set out in the Estimate. No securities are to be issued, no complicated legislation is necessary; and it seems to me, arguing the matter from the standpoint of the right of the Government to introduce this legislation in this way, it is simply a question as to whether or not those proposals are properly in the Estimates. I do not think that the Chairman or the Speaker of the House would rule that these items in the Estimates are out of order. If they are in order, then the Government is clearly within its rights in bringing down these loans in the Estimates, as has been done.

Mr. GRAHAM: Does my hon. friend remember the Scripture quoted by the hon. Minister of Trade and Commerce (Sir George Foster) the other evening, "All things are right; but all things are not expedient"?

Sir THOMAS WHITE: If the Minister of Trade and Commerce quoted Scripture, I would pay more attention to him than to my hon. friend in doing so. There is no reason why the suggestion of the hon. member for Assiniboia (Mr. Turriff), the hon. member for St. John (Mr. Pugsley), and the hon. member for South Renfrew (Mr. Graham), should not be discussed, notwithstanding that no power of amendment exists in Committee of Supply. The hon. member for Assiniboia raised the matter the other night. He asked:

> Whether, if this vote of $15,000,000 for the Canadian Northern carries, he intends to ask them to hand over to the Government, in addition to the 40 per cent of the common stock of the company that the Government now owns, additional stock to the amount of say $15,000,000 or $20,000,000.

That is the idea the hon. member for South Renfrew (Mr. Graham) has in his mind.

Mr. GRAHAM: Either that or the proposition of the hon. member for Calgary (Mr. Bennett); I am not particular.

Sir THOMAS WHITE: At all events, the idea is to obtain control of the stock of the company. The hon. member for Assiniboia went on to say:

I suggest this not because I consider that this stock would be of any particular value, but in order that the Government might be ready to handle the situation and be in a position to avoid being taken by the throat in connection with the matter in the future.

I desire to draw attention in this connection to the legislation of 1914. Under that legislation, in event of default on the part of the Canadian Northern railway in the payment of interest upon its securities, or in the event of a receivership, which would be in event of default, then this Government has the power, as that legislation is existing to-day, to appoint a board of directors of the Canadian Northern Railway Company and of its subsidiary and constituent companies to enforce its security; to

—declare the equity of redemption of the Canadian Northern and of all other persons whomsoever in the mortgaged premises to be foreclosed, and thereupon the equity of redemption of the Canadian Northern (and of such other persons) in the mortgaged premises and every part thereof shall be and become absolutely barred and foreclosed, and the same shall thereupon be vested in His Majesty in right of the Dominion of Canada, any statutory enactment or any rule of law or equity to the contrary notwithstanding.

The effect of that enactment, which is in existence to-day, is that, in the event of default on the part of the Canadian Northern Railway Company, so far from the Canadian Northern Railway Company being able to take this Government by the throat, the Government can demand that the directors of the Canadian Northern Railway system resign their offices, and the Dominion Government may appoint directors in their places, may take complete control of the Canadian Northern Railway system; and may foreclose the equity of redemption of the Canadian Northern railway and deal with that equity of redemption as Parliament may see fit, in the interests of the people of Canada. That was the legislation brought down in 1914 in connection with the guarantee which we then gave upon the $45,000,000 securities of the Canadian Northern. In so far as my hon. friend from Assiniboia (Mr. Turriff) has declared that the Canadian Northern railway can take this Government by the throat and control the situation, I desire to draw his attention, and the attention of the hon. member for South Renfrew, to the legislation to which I have referred.

Mr. TURRIFF: Would that not mean that the Government would have to take foreclosure proceedings? That would take at least a year, if not more. It would mean, if the Canadian Northern people fought the case, a long, tedious legal struggle, whereas the whole trouble could be avoided and the Government could be put in a position to act quickly and thoroughly if they controlled this stock. When my hon. friend the Minister of Finance gave the grant of $45,000,000 and the guarantee in 1914, he took over $40,000,000 worth of stock. Now that the company comes for another $15,000,000 more, why not take over another portion of the stock?

Sir THOMAS WHITE: My hon. friend still misunderstands the legislation of 1914. So far from any delay being open to the railway company, under that legislation the Dominion Government can at once appoint boards, take possession, and administer the system by these boards. It has as full power as if it had all the stock of the Canadian Northern railway and its subsidiary and constituent companies.

I come to the amendment which my hon. friend from St. John (Mr. Pugsley) had in view. No point of order was taken by myself, or, so far as I know, by any other member of the Government. The point of order was raised by the Speaker himself. Personally, I had no objection to the amendment; in fact, I came to the House to-day prepared to discuss it, because it had not occurred to me that it was out of order. The Chairman is, however, clearly right, and no amendment is possible under the rules of the House, but that does not preclude us from discussing the merits of the amendment which my hon. friend from St. John had in view. In that amendment he suggested:

Before making such loan the Governor in Council shall require the company to give His Majesty the King an option to acquire at any time within five years from the date thereof the railways and other property of the company and of all other railways and property included in the Canadian Northern system at such price as to the Governor in Council may seem reasonable under existing circumstances.

That is to say, my hon. friend from St. John had this in view, that, before extending this aid, by way of loan, the Governor in Council should now fix a price at which it would be open to the Government to take over the Canadian Northern system, and that in reaching a conclusion as to that price they should refer to the existing circumstances. I would point out to my hon.

friend that he is dealing there with the equity of redemption of the Canadian Northern Railway Company. Of course, so far as the terms of his amendment go, it would be possible for the Government to fix a price, $380,000,000 or $400,000,000, or more, but included in that price, of course, would be the debt which the Government would have to assume in taking over the system. My hon. friend will agree that as there are liabilities amounting to some $380,000,000 upon the Canadian Northern system, what the Government would have to do would be to practically fix the value of the equity of redemption of the Canadian Northern railway system in its undertaking; in other words, to fix a fair price upon the value of the stock. That is what the amendment of my hon. friend comes to, and the question arises as to whether it would be wise for the Government, dealing with this matter as it is now dealing with it, to fix a price at which it would be within the power of the Government within the next five years to take over the Canadian Northern Railway system. It has to be pointed out that at present the Government holds 40 per cent of the stock of the Canadian Northern, that is to say, $40,000,000 out of a total issued capital stock of $100,000,000. My hon. friend from Assiniboia says that there is no value in the stock, but he and my hon. friend from St. John (Mr. Pugsley) are evidently at variance as to that, because it is perfectly clear that my hon. friend from St. John, by reason of the suggestion that the Government should fix an option, has in mind that there is value in the stock of the Canadian Northern to-day. He is at variance with the hon. member for Assiniboia, who says that the stock has absolutely no value, and whose suggestion was that the Government might be better able to control, through a majority interest in the stock, the administration of the Canadian Northern Railway system.

Mr. R. B. BENNETT: Purely voting.

Sir THOMAS WHITE: Yes, purely voting. I have pointed out that the holding of a majority interest in the stock is not necessary to enable us to control the Canadian Northern Railway system in the event of default, and if we took over to-day the administration of the Canadian Northern Railway Company, no default having taken place, we should not only have to provide this $15,000,000, which we are providing by way of a loan so as to meet the temporary obligations of the Canadian Northern system, but we would also have to take upon ourselves the burden of financing the Canadian Northern system during the present war and hereafter.

Hon. gentlemen will have observed from the statements laid before the House the position of the Canadian Northern—$92,000,000 of maturities this year and next year, and obligations current. The sum of $15,000,000 is the minimum amount, upon receiving which by way of loan the Canadian Northern will be able to finance the obligations which it has still to meet during the present and the coming year. The Government is not at this moment proposing to control the operation of the Canadian Northern, because if it did propose to control it, it would have to undertake the burden of financing the Canadian Northern system. The proposals of the Government are to assist the Canadian Northern Railway Company and the Grand Trunk Railway Company by way of loans of minimum amount, upon receiving which, the two railway companies will be able to continue their operation during the present war. It is a temporary measure designed to enable these two companies to go on as solvent concerns, until we can make the investigation to which I alluded in my speech upon the occasion of the House going into committee on this subject, until we can make an investigation into the whole of the Canadian railway situation, so that we can substitute for the temporary policies which have been adopted during recent years a permanent policy which will, we hope, solve the whole railway situation.

To come back to the question of taking an option, under the legislation of 1914, in the event of default, the Government may foreclose, and it will then be for Parliament to say whether they will pay anything for equity of redemption or not. It will be open to Parliament to say: We shall pay something or we shall pay nothing. There is another feature. Not only do we control the situation through the legislation of 1914, but, as pointed out by the hon. member for Calgary, we absolutely control it by reason of the fact that this $15,000,000 loan is a demand loan, and being a demand loan, we hold a stronger position than if we held a majority of the stock of the Canadian Northern Railway Company because the rights of a creditor are higher than the rights of a shareholder. The company not being able to meet his demand, the creditor absolutely controls the situation. So that from a strictly legal standpoint it is not necessary that we should have a majority of the stock of the

Canadian Northern railway in order to control the administration of that road in case of default.

Mr. PUGSLEY: Is it intended to exercise the right of calling in this $15,000,000 in case of default?

Sir THOMAS WHITE: I have told my hon. friend that the Government is investigating the whole Canadian railway situation. We are doing what I believe is the sensible thing under present conditions. The Canadian railway situation is exceedingly complicated and one of the most important that has ever confronted any Government in Canada. We are taking the opinion of experts, and when we have their advice we shall be in a position to act. In the meantime, by reason of this being a demand loan, our position is such that we can control the situation. There is another point. Hon. gentlemen have suggested that we should obtain control of the Canadian Northern railway stock. Now, it must be borne in mind that the possession of that stock is very valuable to them in financing the Canadian Northern railway system. As a matter of fact, I understand that to-day their stock is pledged in order to assist in the financing of the company. The company, of course, has to continue to finance itself, and it seems to me that as we are affording the minimum degree of assistance with which the company can get on, we should not take any step that would prevent the Canadian Northern railway from doing its share of the financing. As the hon. member for Assiniboia thinks the stock has no commercial value—and I am not pronouncing upon that at all—the only point my hon. friend can have in mind is the control of the Canadian Northern system, and I have already pointed out that we have that control by the legislation of 1914 and by reason of the fact that this is a demand loan. There is another aspect that I commend to the attention of the hon. member for St. John. Would it be wise for the Government at this time to place a value upon Canadian Northern stock? If we did that we should have to say that the stock was either worth nothing at all or worth a small amount, or perhaps a large amount. Now if the stock was not worth anything, as my hon. friend from Assiniboia thinks, what would be the use of taking an option on it?

Mr. NESBITT: No use except that it would give you control.

Sir THOMAS WHITE: We have dealt with control. Again, if the Government put a small value upon the stock, that would unquestionably embarrass the Canadian Northern in the financing which they must do to carry on this road, for I have already stated that the stock is of value to them in carrying on their financing. So if the Government, taking the advice of the hon. member for St. John, placed a small value on the stock and took an option on it for five years, we would be fettering the company, or at least the owners of the majority of the stock, in the financing which they and the company have to do if the company is to continue as a going concern. If the Government took the other alternative and put a large value on the stock, what would be the position if by reason of default the Government found it necessary to take over the Canadian Northern railway system? Under the legislation of 1914 it would then be for Parliament to determine what should be done with the road and how much should be paid to the stockholders, whether anything or nothing. Why should the Government take a step which might embarrass Parliament in dealing with the equity of redemption should the road ever default? Unquestionably the placing of a value on the stock would fetter the Government in deciding what should be done with the equity of redemption, if it had to deal with it under the legislation of 1914.

So far as control is concerned, I have shown that we are able to exercise all the control we need under the legislation of 1914 and by reason of the fact that this is a demand loan. I have shown further that the taking of this stock by the Government would seriously embarrass the Canadian Northern railway and its shareholders in the very necessary work of carrying on the financing of this road. The Canadian Northern railway financial arrangements are not going to be completed by obtaining this $15,000,000 from the Government. There are the maturing obligations of this and next year and current liabilities to be met to the amount of $92,000,000.

Mr. PUGSLEY: How will possession of the common stock which stands behind all this security assist the company in their financing?

Sir THOMAS WHITE: My hon. friend knows that in the eyes of financial men the majority of the stock of a company like the Canadian Northern railway might be

regarded as of considerable value as additional collateral. It might make just the difference between the company obtaining a loan and not obtaining a loan. As a matter of fact, I understand that the stock is now pledged for that very purpose.

Mr. PUGSLEY: Has it a market value to-day?

Sir THOMAS WHITE: I do not know whether it has or not. But my hon. friend evidently has it in mind that it has, or he would not suggest that the Government fix a price at which it could take over the road at any time during the next five years.

Mr. PUGSLEY: What I am afraid of is that after the Government has pulled the road through, the stock will have a vast prospective value.

Sir THOMAS WHITE: My hon. friend does not say that. He says "at such price as to the Governor in Council may seem reasonable under existing circumstances." I have dealt with the matter of common stock from the point of view of taking an option on the equity of redemption of the Canadian Pacific railway.

Referring to one or two other matters which have been mentioned in the course of this debate, the hon. member for Edmonton, I think, charged the Government with discriminating against the Grand Trunk Pacific. When this Government assumed office it found a certain railway situation existing in the Dominion of Canada. The Canadian Pacific railway had long before that attained a degree of prosperity under which it was not necessary for it to approach Parliament for assistance, although in the past of course it had been assisted by the Dominion. The hon. member for Digby the other day placed upon Hansard a statement showing that the Canadian Pacific railway had obtained subsidies and loans from the Dominion Government, from the provinces and municipalities to the amount of $71,000,000, showing that constructed lines and surveys were handed over by the Government amounting to $37,000,000, and that the Dominion Government had given the Canadian Pacific Railway Company land grants amounting to 21,000,000 acres, while the Government of British Columbia had given some 6,000,000 acres. Therefore, in the early days the Canadian Pacific Railway Company was subsidized both in land and cash grants by the Dominion and Provincial Governments. When this Government assumed power, we found that the Canadian Northern Railway Company had an uncompleted line between Montreal and Port Arthur. We found the line through the Rockies in course of construction and we found the Canadian Northern Railway system in Ontario other than the line to which I have referred between Montreal and Port Arthur, also under construction. We found a situation in which the Canadian Northern had, as I have stated, uncompleted lines both in the East and in the West, and we found them confronted with a situation in which either they would have to cease construction and possibly go into insolvency or we would have to assist them in carrying out the construction of their lines which they were constructing under aid granted by the previous Administration.

We had the National Transcontinental in an unfinished condition between Moncton and Winnipeg, especially from Quebec to Winnipeg. We found the prairie section of the Grand Trunk Pacific uncompleted; we found the mountain section of the Grand Trunk Pacific uncompleted. Now, I say that any charge against this Government of discriminating against the Grand Trunk Pacific is absolutely unfair. Since this Government have come into power, we have dealt fairly with all the railways of this country. As Minister of Finance I have had no favourites in this matter. I am not saying anything as to politics; I am not saying whether the National Transcontinental should have been built or not; I am not saying whether the Transcontinental Railway agreement of 1903 should have been entered into or not; but coming into power in 1911, and finding the unfinished railway systems of the Canadian Northern and the Grand Trunk Pacific, we acted with scrupulous fairness to both, and we are not properly open to the charge of having discriminated against the Grand Trunk Pacific Railway Company. I call to witness the facts. One of the first transactions that confronted me as Minister of Finance was a payment of $5,000,000 under the "implementing" judgment. It was proper that we should pay that, because judgment had been given by the Privy Council. We bought at par $33,000,000 of Grand Trunk Pacific 3 per cent bond guarantees by the Dominion Government and furnished the money to the Grand Trunk Pacific promptly in order that they might proceed without delay in their construction. Further than

that, we made a loan of $15,000,000 to the Grand Trunk in cash the second year we were in power, and in 1914 we gave a guarantee of $16,000,000 of the securities of the Grand Trunk Pacific in order that they might complete the Mountain section and the unfinished part of the Prairie section. As a result of the legislation that we have introduced concerning these railways, their lines have been completed; the Canadian Northern has been linked up; the National Transcontinental has been taken over by the Government, and the Grand Trunk Pacific has completed its line from Winnipeg to Prince Rupert. Therefore, what the Government has done since it came into power in 1911 has been to assist in completing the uncompleted railway systems of Canada. Those systems were made possible by the aid which was afforded by the Government in power prior to 1911, the aid which was given to the Canadian Northern, first by way of guarantee upon a portion of its line from Winnipeg to Edmonton, and, secondly, the guarantee which was given by the late Government of $35,000 per mile upon the Canadian Northern Ontario from Montreal to Port Arthur. Those systems, therefore, transcontinental railway systems, were made possible by the legislation of the preceding Administration, and the task which has confronted us since we have come into power has been to assist in completing their enterprises. If we had not assisted in completing those enterprices they could not have been carried to completion. The Grand Trunk Pacific would not have been completed to Prince Rupert to-day if we had not given the assistance; the National Transcontinental would not have been completed unless we had completed it by carrying on the work of construction, and the Canadian Northern railway system would not have been completed except for the aid which we gave in 1911, a subsidy upon the line in British Columbia and a guarantee upon a portion of the line up to Summit, the subsidies which we gave in 1912 and the grant of $45,000,000 which we gave in 1914.

Mr. PUGSLEY: Where would have been the difficulty, after this Government came into power, in arranging to give the Canadian Northern running rights through the mountains over the Grand Trunk Pacific, instead of giving them the subsidy and joining the British Columbia Government, which guaranteed bonds for over $40,000,000 to enable them to build an independent line down through the Rockies?

Sir THOMAS WHITE: The line was under construction. Not only that, as I pointed out the other evening—

Mr. PUGSLEY: They started construction on the British Columbia grant.

Sir THOMAS WHITE: Yes.

Mr. PUGSLEY: But is it not true they had no assistance from Canada to go through the Rocky mountains?

Sir THOMAS WHITE: The line was under construction when we gave the assistance. In the legislation of the late Government, under which a grant of $35,000,000 was given on the Canadian Northern Ontario line between Montreal and Port Arthur, it was recited that it was in the interest of Canada that there should be a third transcontinental line from Montreal to the waters of the Pacific. It was that $35,000,000 grant on the Canadian Northern Ontario line between Montreal and Port Arthur that determined the character of the Canadian Northern as a transcontinental system. There is not a doubt about that, and at the time that grant was given the late Government had in contemplation, and stated in the recital of the resolution, that it was in the public interest that the line should be carried through to British Columbia to reach the waters of the Pacific.

There is one thing about this debate that has pleased me, and that is that there has been very little recrimination. The past is a closed book. I address myself to this railway situation with no favourites. It is one of the most important situations that has ever confronted any Government in this country; it has been for the last four years. The difficulty in this country as we all know is the immense geographical area and the sparseness of our population. In the early days confederation was possible only because the Intercolonial, built at great expense, linked up the then East with the then West. The next great step taken was the construction of the Canadian Pacific railway which made a larger confederation possible, and linked up the West and British Columbia with the East. Then we had the building of the Canadian Northern railway in the Prairie Provinces. And there is one aspect of this that is apt to be overlooked, and that is the enormous importance to Canada of the railway situation which we have built up. Almost every day in this House we hear of the necessity of more transportation, of more cars, of new districts in the West that should be reached

by branch lines. What would be the condition in the West to-day if those lines had not been built.

Mr. PUGSLEY: Deplorable.

Sir THOMAS WHITE: Last year 40 per cent of the wheat was carried out by the Canadian Northern Railway system. This question is not a matter of individuals; it is not a matter of the Canadian Pacific or the Canadian Northern or the Grand Trunk Pacific as a corporation. The point is, the importance of the railway system to Canada and its development; and that is the way in which this question ought to be approached. What we have before us to-day is not a theory but a condition. We have these three railway systems completed—except that railway systems are never completed, because they must always extend, must always increase their mileage as conditions permit. No question in this country since Confederation has been so vital to it as that of the railways. My own opinion is that we have overbuilt for the time being. But it must be borne in mind that public opinion has been in favour of building railways, to connect the East and the West, to develop the West, and to afford access to the remoter parts of the country in order that immigration might flow in and settlement result. The whole country has benefited by the extension of the railway systems to the West. Therefore, though, as I say, we have overbuilt, it must not be forgotten that the most vital question in this country to-day is the transportation question. That being the case, I personally do not believe in getting into a pessimistic frame of mind with regard to Canada. If, when this war broke out, anyone had told me as Minister of Finance that we should have been in the condition in which we are to-day the war having lasted almost two years, I should not have believed it. Consider the position of Canada to-day. Notwithstanding this war, Canada enjoys a very high degree of prosperity. Our exports are greatly in excess of our imports, and our trade is the largest this country has ever had. Our bank deposits are two or three hundred millions greater than they were at the outbreak of the war. I do not allow myself to take too long views of things, because I do not believe that the human mind is capable of forecasting what will take place after this war is over. I have great confidence in the people of this country and in this country's resources, and so I do not allow myself to think things are going to the bad after this war is over.

Mr. NESBITT: They don't give any reasons.

Sir THOMAS WHITE: No, they do not. I rely with the greatest confidence upon Canada's ability to carry out her share in this war and to come through the war with a high degree of prosperity.

Mr. PUGSLEY: In connection with the hon. minister's financial operations, which have been very successful, does he not find himself hampered sometimes by the pessimistic remarks made by his colleagues?

Sir THOMAS WHITE: No. Most of the pessimistic remarks come from the other side of the House. But I recognize the fact that we are in the midst of a great war and that the burdens upon us are great; no one realizes more the burden of this war than I do; the immediate responsibility is upon me. Yet, while realizing to the full the responsibilities with which we are confronted, I believe that this country will come through this war, not only having creditably discharged her duty to herself and to the Empire, but with a high degree of prosperity. What I hope is that, with this prosperity which we now have and which I believe will continue, we shall be able to bridge over, if necessary, any short period of dislocation of business which may ensue. I am putting that forward as my own opinion. Opinions differ. I do not believe that anybody's view on a matter of this kind is of much value, but I am putting forward my view as being optimistic with regard to Canada.

Now, what is the present railway situation? We have poured out tens and hundreds of millions of dollars in building our transportation system, in linking up the Maritime Provinces with Ontario, in linking up the East with the West; to promote the settlement of the West. And now that we have come to the position of having these railways completed, personally I do not believe it is the part of national wisdom to let them collapse. Having gone so far, should you now stop? Especially in the midst of a war? I believe it is the opinion of the members of this House and of the people of Canada that these railway systems at this time should not be allowed to collapse—and I am speaking now of the Canadian Northern, the Grand Trunk Pacific, and the Grand Trunk as well, for the Grand Trunk is undoubtedly bound up with

the financing of the Grand Trunk Pacific. The position is, that having almost completed their lines, these companies find themselves in a position in which they require further aid in order to continue. The Government is affording that aid, a temporary measure of aid. But, as I said on a former occasion, it is not possible that we should continue to make these loans year after year to these railways; and we must find a permanent solution of this railway question. And what has pleased me about the debate on this subject is that the speeches indicate that hon. members realize that recrimination as to the past is useless; that we are face to face with a very serious situation; that we can meet it; that the railway problem is one of the most important problems in this country; and that the course the Government has taken, in extending temporary aid to prevent untoward happening in the case of these railways and to make investigation with a view to solving the railway problem, is the proper course to pursue.

The question of immigration has been touched upon. A proper immigration policy is the key to the solution of the economic problems of Canada. Get in immigration, get your immigrants settled upon the land, and your railway problem is settled, and your other economic problems are settled. That is the great question with which this Dominion of Canada is now confronted, and with which it will be confronted after the war—getting in desirable immigration, and getting the immigrants established as producers on the land. That will mean more traffic for the railways, more business for the commercial, manufacturing, and industrial interests. It is vital and fundamental that Canada should promote in every way possible immigration and settlement. I believe we shall get immigration and that we shall settle it upon the land, and that the railway problem will in time be solved. In the meantime, here is the railway problem and we must meet it.

Mr. PUGSLEY: Has the hon. minister any view as to a broad immigration policy?

Sir THOMAS WHITE: I have. At the present time the sources of immigration are largely stopped by reason of the war. But not only should the Government use every effort to promote immigration, it should encourage any auxiliary means there may be of bringing in immigration; it should seek to have its own efforts to bring immigration into this country supplemented by the efforts of others. In addition to that, once the immigration is here, the Government should assist, by some plan that I think could be devised, in getting the people settled on the land.

Mr. PUGSLEY: To my mind this is the most important question we have had to deal with. I am glad the minister has touched upon the subject of immigration. The minister has stated that the sources of immigration are stopped during the war. Is that true in regard to the vast multitude of people to the south of us, in the United States, from which in recent years we have obtained hundreds of thousands of our very best settlers? Why should we not, by a vigorous policy, continue to get people from the United States even in larger numbers than in the past?

Sir THOMAS WHITE: My hon. friend is right so far as the United States is concerned. When I spoke of the sources of immigration being stopped, I had reference rather to European sources. At the same time, we must not disguise the fact that the war has an influence upon immigration even from the south. It is not rational that it should be so, but it is a fact, nevertheless.

I have shown the railway situation which confronted this Government when it came into power. I have indicated my views as to the importance of the problem, and to the unwisdom of allowing these railway systems which have continued up to the present time to collapse. I have indicated my faith that the country with its resources and with its people will overcome any difficulties that may be presented in the future. On the whole, as I have stated, my attitude is one of optimism, not of pessimism, in regard to the future of this country, even of the railways of this country—although I say that in my view we have overbuilt. It must be borne in mind, however, having regard to the geographical areas of this country, that it is, in a sense, necessary to overbuild. That is to say, you do not get your settlement until you get your railway; the railway comes first in order of time. I do not desire, as I have said, to enter upon any controversy, but my view is that if the Canadian Northern Railway system and the Grand Trunk could have been put together in 1903-4, this overbuilding situation would have been avoided. The Canadian Northern was taking grain out of the West, but the Canadian Northern

must find return traffic, and the reason why the Canadian Northern embarked upon its railway policy in the East was in order to obtain feeders for its western system. If the Canadian Northern had had the Grand Trunk as a feeder in the East, then the Canadian Northern would not have needed the Canadian Northern Ontario; but by reason of the Grand Trunk promoting the Grand Trunk Pacific the Canadian Northern found itself in a position in which it would be shipping grain out of the West but not taking freights back. Consequently, it embarked on the policy of building the Canadian Northern Ontario. As I have said, there is no use in recriminating. There is not much use in criticising. There is not much use in making reflections upon the wisdom or unwisdom of past policies. The fact is that the railway situation, so important to the people of Canada, is here before us and we have to deal with it, and that is what the Government proposes to do.

Some points have been raised as to the disposition of this money. We are making a loan of $15,000,000 to the Canadian Northern Railway Company. Under the legislation of 1914 and of 1911 the Dominion Government gave guarantees of $45,000,000 and $35,000,000 to the Canadian Northern Railway Company and the Canadian Northern Ontario Railway Company. The proceeds of those securities went into the Receiver General's account under the legislation in both cases. I have been trustee for hundreds of millions of dollars in my time, and I can say that no more complete check could be devised than was devised by the Railway Department in authorizing the payment out of those moneys. I say here as Minister of Finance that the proceeds of the $45,000,000 guarantee were paid out absolutely for the purposes for which the guarantee was given, and for no other purpose whatsoever.

Mr. MORPHY: Was that money handled by Mackenzie and Mann?

Sir THOMAS WHITE: A guarantee was given for the purpose of paying indebtedness incurred and expenditures made on construction account and for certain other things mentioned in the legislation. The suggestion has been made in the House that in some mysterious way the money is being diverted, but I say there is not a word of truth in that.

Mr. PUGSLEY: Those suggestions came largely from the other side of the House.

[Sir Thomas White.]

Sir THOMAS WHITE: They did not come from me. I set out in the statement which I laid on the table of the House every single certificate, and at the end I set out a letter from Major Bell, who is an admirable official, one of the best officials in Ottawa—he is an expert accountant—in which he stated that in all cases before these certificates were issued—I am speaking now of the $45,000,000 guarantee—a careful audit was made either by himself or by members of my staff under my supervision. Every voucher was checked; he had representatives even in Winnipeg.

Mr. TURRIFF: My hon. friend is aware that the great bulk of the Canadian Northern railway was built by Mackenzie and Mann as contractors. The certificate might be perfectly right, but if Mackenzie and Mann charged $50,000 for doing $35,000 worth of work, what was the check worth?

Sir THOMAS WHITE: It was shown in 1914 that nothing of the kind occurred; that they were the agency of the Canadian Northern for making these contracts with sub-contractors. I will say this—after all, the truth is the truth—I do not believe there is a more economically conducted railway in Canada than the Canadian Northern. I have absolute confidence in the accounts that are presented.

Mr. MORPHY: Is there any railroad that has its investments at a cheaper rate?

Sir THOMAS WHITE: I do not know of any. The proceeds of this $15,000,000 loan are paid over on the order of the Governor in Council. It will be audited just as the proceeds of the $35,000,000 of guaranteed securities were audited, and as the proceeds of the $45,000,000 of securities were audited. I have had some experience in trust company work in paying out moneys, and I do not know of any system of any trust company in this country under which the disbursement of moneys are paid out with greater care than the proceeds of Dominion guaranteed securities are paid out at Ottawa. I think that would apply to the late Government as well as to this Government; I believe that the Finance Department has been absolutely honest in its administration of public funds. This loan will be paid over on the order of the Governor in Council after an audit is made to show that it is properly paid out. We are charging 6 per cent, and the loan is a demand loan. I believe that every possible safeguard has been thrown around this transaction from

the standpoint of the Dominion Government. A mortgage is being taken upon the undertaking of the Canadian Northern and its subsidiary and constituent companies which may derive benefit from this loan. Therefore, so far as the transaction itself is concerned, I have no hesitation whatever in supporting and recommending it.

One or two other matters were mentioned, among them the assets of the Canadian Northern Railway Company. The Canadian Northern Railway Company has been built in more recent years than the Canadian Pacific. I do not know what system the Canadian Pacific has in vogue, but if it carries on its business the way other companies carry on their business, I suppose the property values were entered up as of the time that they were acquired. That may also be so in connection with the Canadian Northern Railway Company, and, that being so, the Canadian Northern Railway Company's assets would naturally stand at a much higher figure because they had been acquired in later days. The sums that would be paid for the Canadian Northern Ontario right of way through the province of Ontario would be very large as compared with the cost twenty years previously. If the Canadian Pacific assets were entered up at their present value, I think they would be very much larger than that at which they now appear. I am the first to pay tribute to the Canadian Pacific and the efficiency of its management, but it must not be forgotten that years ago the Canadian Pacific Railway Company was not in as prosperous a condition as it is to-day. Its western lands have become immensely valuable. Its own enterprise, of course, had a great deal to do with making them valuable, but it must not be forgotten that the enterprise of other concerns also tended to make these lands valuable. So that the Canadian Pacific railway is through its land holdings a participant in the prosperity which was brought about, perhaps, in large measure by itself, but also by these other railway companies, that is to say, the Canadian Northern, and in less degree the Grand Trunk Pacific Railway Company.

Mr. PUGSLEY: And by the enterprise of the people.

Sir THOMAS WHITE: And by the enterprise of the people, and by the assistance which the Government of Canada has given to all these enterprises. The hon. member for South York (Mr. Maclean) the other day spoke, lightly I thought, of taking over all the railway systems of Canada.

Mr. NESBITT: Sure; it would only take a minute.

Sir THOMAS WHITE: He stated that it would be only a matter of assuming liabilities. Well, in principle he was correct, subject to this, that there is a large stock-holding in the case of the Grand Trunk Railway Company. The hon. member for Calgary (Mr. Bennett) showed to-day that $100,000,000 had been put into the Grand Trunk by shareholders who have never received a dollar in dividends. I think that the capitalization of the Grand Trunk Railway Company is about £50,000,000, that is $250,000,000. There is a stock-holding interest there that would have to be reckoned with in taking over the Grand Trunk Railway.

We are confronted with a railway situation which it is our duty to solve, and which we propose to solve by taking the best expert advice that we can get, looking to a permanent settlement of these difficulties which annually confront the Government. My own view is that the solution of that railway problem may involve, and probably will involve, the Government of Canada taking over one or more of the railway systems of Canada. As I stated in my speech when introducing these loans to the House, it is possible that it may lead to the nationalization of the railways of Canada. But I stated at the same time, and I state now, that whether a war is on or not, it is not a light undertaking to take over all the railways of the Dominion of Canada. We should have to consider many things; as, for example, the effect upon our credit of taking them all over at once. The hon. member for South York (Mr. Maclean) seemed to suggest that it was a very easy thing to take them all over. Well, it is not an easy thing to take over all the railways of Canada and assume all the activities now being carried on by them, activities connected with immigration; activities connected with transportation upon the Atlantic and upon the Pacific; the operation of all those roads; the financing of their needs. That would not be a light undertaking at any time, even if we had no war. But I desire, in conclusion, to say that we are in this war; we are confronted with heavier responsibilities by far than have ever fallen to the lot of the people of Canada before; that the end of this war is not in sight; that we are increasing our national debt

at the rate of twenty or twenty-five million dollars a month, some two hundred and fifty or three hundred million dollars a year; that we shall probably be confronted with a debt, at the end of this war, of one thousand million dollars. In time of peace it would not be a light undertaking to bring about the nationalization of all the railways of Canada; it would certainly not be a light undertaking to do so in time of war. But this situation must be faced; there must be an end of this annual coming to the Government of Canada by these two railway companies for relief. The policy which we have adopted has been stated to be no policy. I say it is the true policy in the situation in which we find ourselves. We are not in a position to say what should be the permanent solution of Canada's railway problem. We are in this position, that we do not want these railway companies to collapse. The policy which has been before this committee, and I know it has met with approval in this House, is the true policy at this time, and it is not the less the true policy because it provides temporarily for the situation. It bridges time; it enables these roads to continue—these roads which are so vital, so essential for the welfare of this country—until such time as, upon the best advice that we can get, we shall be able to suggest some permanent solution, which I believe will probably involve the taking over by this Government of one or more of the existing railway systems of Canada, and which, as I stated, may involve later on the nationalization of all the railway systems of Canada.

Mr. F. F. PARDEE (West Lambton): With the hon. member for South Renfrew (Mr. Graham), I distinctly voice my objection to the manner in which this legislation has been brought up. Even with the explanation of the Minister of Finance as to the whys and wherefores of bringing it before the House in this way, the fact remains that it should have been introduced by resolution. Further than that, I want to wholly endorse the remarks of the hon. member for Calgary (Mr. Bennett). There are many of us who took a somewhat strong position in 1914 in regard to the legislation granting $45,000,000 to the Canadian Northern railway. It appears to me to be a most vicious practice that practically the largest amount, outside of our civil government, that we grant in this country are to railways, and that invariably—and perhaps one side is not more to blame than the other—the Government waits and waits until the dying days of the session and then such important legislation, with all that attaches to it, is put before this House. I am not going to cavil to any great extent, but we have been here practically for a month waiting for the Government to bring down this railway legislation and it has only just now come down, when everybody is in a mood to finish the session and go home. I am glad to hear the Minister of Finance speak with the optimism he does. We have at the present time rather too many pessimists in this country——

Mr. PUGSLEY: Hear, hear.

Mr. PARDEE: —who are going along with their mouths drawn down and predicting all sorts of evil things for Canada at the end of the war. It is true they all say we are overbuilt in railways. Unquestionably we are; but I would remind this House and the country that for ten years after the Canadian Pacific railway was completed we were also overbuilt. The building of railways in districts where they are most needed, has invariably produced good results. The railways have brought the people, the people have brought prosperity; and to a large extent the great prosperity of the West is due to the building of the Canadian Pacific railway and the immigration which that railway brought into the West, to such an extent that it has enriched this country by millions and millions of dollars. Then if we had not had the existing railway transportation, even although we were overbuilt, with the abnormal crop of last year in the West, Canada would have been in a far worse position than she is in to-day. So, I am not finding fault to any great extent with the building of the railroad. The only thing that does strike me in regard to the Canadian Northern is that, year after year, we come to this House and, year after year, grants are made to the Canadian Northern Railway and, year after year, the same question is put from either one side of the House or the other: Is this the last aid that the Canadian Northern Railway is going to require? And the invariable answer is: Yes, this is all they want; this will see them through. I have been listening to that now for a good many years, and yet, as the sessions roll around, still there come other requests from the Canadian Northern railway: "We are again in deep water; we come to you and ask you to give us aid."

It has become, so far as my observation goes, a question in the country whether or

[Sir Thomas White.]

not the Canadian Northern Railway is being properly managed. We have been told by the Finance Minister that in his opinion—and without any disrespect to him I am sure he will allow me to take his opinion in this matter, for what it is worth, as mine is to be taken—that it is a most economically managed railway, that all the money that comes from this railway goes back into it and that, as a matter of fact, it is properly managed in all respects. That may or may not be true. Speaking for myself, I would like to be convinced by a most thorough independent audit of the Canadian Northern Railway Company's books that all the money that is earned by the Canadian Northern goes back into the Canadian Northern. The hon. member for Calgary (Mr. Bennett) told us this afternoon that $10,000,000 is the estimated profits of the Canadian Northern on its operating account. If that is so, I would like to know, merely as a citizen, if that $10,000,000 goes back into the Canadian Northern. We want to know that, and we can only know that by a better and more independent audit of Canadian Northern affairs than there has been up to the present time. Would it not strike the ordinary man that, having regard to the fact that these requests are coming session after session, and are granted, as this request will be granted, I have no doubt, the Government, not from the point of view of the value of the stock of the Canadian Northern—I care nothing about that for the purposes of my argument—but for the purposes of the management of the Canadian Northern, should take unto itself sufficient stock to give it control, irrespective of the control which it acquired in 1914; that it should appoint upon the Canadian Northern Board men, in whom the people would have confidence, to see that the money which comes from the Canadian Northern goes back into the Canadian Northern, so that the people would know exactly where the money is going, and, therefore, whether these grants are being made properly or not. That is the point I make. So far as the stock goes, I agree with the minister's argument, so far as it goes, but, to my mind, no argument can be successfully put up against the contention that as the people of this country have advanced, in this Parliament and in other Parliaments, enormous amounts of money, they should know that the moneys which come from the Canadian Northern go back into the Canadian Northern and that the road is properly managed. This, it would appear to me, is a proper enough request, and it is something that really ought to be done.

So far as I am concerned,—I am expressing only my own opinion—I am in favour of a receivership for the Canadian Northern. A receivership would not dislocate matters in connection with that system to the slightest degree. The borrowing powers would not be curtailed in any way, and the financing of the road would not be hampered in any way. A receiver could go on and do exactly the same thing to-day as if the road were left, as no doubt it will be left, in the hands of the present owners. But there would be this advantage, I submit, that if a receiver were appointed for the Canadian Northern railway, and he was a man in whom the country had confidence, the people would know that, dollar for dollar, the money that was coming in and going out was being applied and expended in the interests of the road, and therefore, in the interests of the people of Canada. The matter is becoming serious, so serious that when we consider the enormous amount of money that has been put into the Canadian Northern railroad, and that the money has to a very large extent been advanced by the people of Canada, it seems high time that the people of the Dominion had a voice in the running and operating of that road. I have not heard any argument advanced by the Minister of Finance against a receivership. I would like to hear, for my own information, whether, in any way the road would be prejudiced by such an appointment.

Sir THOMAS WHITE: I dealt with the matter in my speech before we went into committee. I pointed out that a receivership would mean by reason of the number of subsidiary companies involved, dismemberment of the system, a break-up.

Mr. PARDEE: I would not think that that would be an insuperable difficulty.

Sir THOMAS WHITE: There are thirty or forty of them.

Mr. PARDEE: I have yet to be convinced that the hon. minister is right.

Mr. MORPHY: Would the hon. gentleman apply the same principle to the Grand Trunk?

Mr. PARDEE: It might be very reasonable to do the same thing.

Mr. MORPHY: In regard to the Grand Trunk and Grand Trunk Pacific?

Mr. PARDEE: The Grand Trunk and the Grand Trunk Pacific are locked together. If, as the Grand Trunk railway tell us to-day, the Grand Trunk railway can no longer carry the Grand Trunk Pacific, and if it is a fact that the Grand Trunk Pacific will have to come for aid in subsequent years, in the same way as the Canadian Northern has come, the sooner we take hold of the Grand Trunk Pacific the better. So far as I am concerned, the hon. member for Perth (Mr. Morphy) can take no comfort from the view that because we had to do with the Grand Trunk Pacific we should argue another way. I say that so far as the Canadian Northern is concerned, the control of the stock ought to be taken, that the people ought to have upon that board representatives able to take care of the receipts and expenditures of the road. If this is not done, and I have no doubt it will not be done, I say a receiver should be appointed in whom the people of the Dominion would have confidence, so that they would know exactly whether or not the money which they had invested in that road would be properly expended.

We are told that a commission is to be appointed, "a commission for inquiry and report upon the railway situation," and for that purpose a sum of $150,000 has been placed in the Supplementary Estimates. Since 1911, when this Government came into power, there has been a superfluity of commissions in this country. Some 85 commissions have been appointed for one reason or another, according to a return recently brought down. Some of these commissions have done something; some of them have done very little, but I do think —and I am not speaking in a partisan way—that, before these sums are voted to the Canadian Northern and the Grand Trunk Pacific, it would be fair for the Government to give this House the names of the commissioners who will inquire into the railway systems of the Dominion. That at least would have the effect that, when these votes go through, the country will know that, even although another vast sum had been granted to the Canadian Northern, men in whom they had absolute confidence were being appointed to inquire into the operations and carryings of these two roads, and that, therefore, they might reasonably hope that before another grant is asked, as no doubt it will be, they would know all the facts connected with these roads.

In conclusion, I just wish to say that I think, and I believe the people of this country think, that before any further large grants are made to the railways of this country, and especially the Canadian Northern railway, the people should be fully informed of all the facts, and if any railway is to be assisted the Dominion Government should be fully protected so far as the outgoings and incomings of that road are concerned.

Mr. OLIVER: I have listened with very great interest to the remarks of my hon. friend from Calgary (Mr. Bennett), and if I appreciated them correctly their logical conclusion was, or might very well be interpreted to be that Canada had reached the limit of its railway development. When he argued that to-day we have far over-built in railroads, and are in consequence suffering serious financial difficulties, the logical conclusion of his argument must have been that we should not build in the near future. I maintain that so far as the western country is concerned we are not over-built, and not only are we not over-built, but it has been my duty to bring to the attention of the Government from time to time the needs of certain localities for additional railways. I am not alone in that, as other members have been impelled to bring the same aspect of the case to the Government's attention. Admitting, for the sake of argument, that there has been over-building in some directions, there is still a need of further building in other directions. Even if it should be demonstrated to the satisfaction of the country that we have over-built in some districts, that is no reason why we should not have further construction in other places where it is needed. I will not go over the details as to where it is needed, as I have already discussed in the House construction in which my constituency is particularly interested.

First of all, let me say on the general question whether we have over-built or not, that in developing a new country we build in advance of requirements; otherwise there would be no development through railway construction. It is admitted in the present day and generation that if we have a country to develop it is sound policy to invest the public money and credit in the construction of railways that will secure that develop-

ment; and it is not until after the road has been constructed that development takes place, or can take place. When, therefore, it is said that we have over-built and have not the traffic to make our railways profitable, we are simply stating what must necessarily be the case: the railways must be built before the traffic is created. We build the railway in order to create the traffic, and we must await the natural and ordinary development of the traffic before we can expect a railroad to have the earnings which it will ultimately have. Such a condition does not indicate any fall-down or failure of our policy in railway projects. It is true that war conditions at the moment are preventing, and will prevent, so long as they continue, that expected development upon which we rely for carrying the capital charges and expenses of our roads. But that is an abnormal condition that no foresight could have provided against; that is an abnormal condition that lays serious burdens upon us which we never expected. Those conditions have to be met, and it is now for us to say in what manner we shall deal with them. I do not wish to discuss at the moment how we should deal with this question, but I want to bring to the attention of the House the fact that the railway condition confronting us is not an abnormal or an unnatural one, but the normal and the natural one, except in so far as it has been made abnormal by abnormal war conditions. As my hon. friend from Lambton (Mr. Pardee) has said, we were overbuilt when the Canadian Pacific Railway was completed. It was many years before the traffic that was created by the building of that road was sufficient to make the Canadian Pacific Railway a profitable enterprise. There was less traffic per railway mile in Canada on the day the last rail of the Canadian Pacific railway was laid than there is to-day, counting every mile of railroad we have in the country. Just as the building of the Canadian Pacific railway produced valuable results to the country, which results, however, had to be waited for, so the building of the Transcontinental and the Canadian Northern railways have produced and are producing results, but we must wait a reasonable period for those results to accrue. In fact, it is still in dispute whether the Transcontinental is completed yet; the Canadian Northern railway is certainly not completed. After the Canadian Pacific railway had been completed across the continent and its branch lines completed to Prince Albert and Edmonton, it was still ten years, so far as the main line was concerned, and five years so far as the branch lines were concerned, before the road was doing the business that is being done to-day by the Canadian Northern Railway and the Transcontinental.

We are to find the solution of our railway difficulties in increased settlement and development? When we realize that of the crop of last year produced in the prairie West, practically half of that available for export still lies in the elevators and in the granaries of that prairie West because there were not transportation facilities to move it to the seaboard during the months that have passed, I ask you, Sir, to prove to me that the country is overbuilt with railroads. I do not think the evidence is that the country is overbuilt with railroads. It may be evidence that the railroads are not well managed; that the business is not well directed; but when such facts are brought before the House as were brought before it the other day by the hon. member for Dauphin (Mr. Cruise) and by the hon. member for St. John (Mr. Pugsley), that men in the prairie West in the month of May, having hauled their grain fifteen or twenty miles to the elevator at the railroad station to sell it, could not sell it because the elevator was full, and that the elevator was full because the railroad had not been able to take away the grain. I say that the evidence has yet to be produced to show that this country is overbuilt with railroads.

While I do not wish to introduce contentious matters, there must be some question as to responsibility in this case, and I maintain that the Government of Canada, being responsible for the railway situation, having assumed absolute responsibility for the operation of the Transcontinental, certainly are the people who either should not have allowed that condition to exist or should be able to say to the House why it exists and how they propose to remedy it. Certainly, for the Government to come to the House and ask for loans amounting to $23,000,000 to pay interest and cost on railroads now existing, on the plea that they are not able to earn interest on their bonds owing to lack of traffic, while the prairie West is choked with its own wealth produced last year, is a situation that I maintain demands explanation.

I agree with my hon. friend from Calgary (Mr. Bennett) when he says that every dollar of this loan should be traced by the Government in order to see that it goes

where it is intended to go, and that there should be no question as to the fact of the money being used to meet the purpose for which it is voted. I supplement that with the criticism that the Government, having had to take this responsibility ever since they have held office having two years ago come before the House and the country with their proposal for a guarantee of $45,000,000 for the Canadian Northern, and having since that time made further advances to both the Canadian Northern and the Grand Trunk Pacific, are not square before the House when they come to us in the face of existing financial conditions of the railroad companies on the one hand and as to the traffic conditions of the country on the other, and give us no word of explanation in the matter and tell us they are going to appoint a commission to inquire into the whole business. I do not agree with what my hon. friend from Calgary (Mr. Bennett) and other hon. members on both sides of the House have said as to the appointment of a commission in this matter. This is not a time nor an occasion for the appointment of a commission; it is a time and an occasion for the Government of Canada to come before the people of Canada with a definite policy as to what they propose on their responsibility to do in handling the railroad situation of this country. What can, by any possibility, be the result of any inquiry that may be made? I have already criticised the Government for its attitude towards the Grand Trunk Pacific. I may be misunderstood if I criticise the Government for its attitude towards the Canadian Northern; but I ask: How can any business enterprise, looking for money in the markets of the world, expect to get that money on fair and good terms in the face of the deluge of adverse criticism that both these railway enterprises have received in this House from the Government as well as from the Opposition? How can it be expected that a company shall be successful in financing, that is to say in borrowing money on its credit, if those who are its principal creditors, who have absolute control of it in every particular, discredit it as a well thought out enterprise and discredit its management as well? Both enterprises may deserve everything that is said in regard to them; but that having been said, it is futile to say that they can carry on their business by ordinary methods from this time forth. Unless the Government can bring forward some better policy than it has yet brought forth, these enterprises are on the hands of the country; we have no choice in the matter, and to ask us to vote $23,000,000 now to put into broken-backed enterprises, as they are labelled on both sides of the House, is only putting $23,000,000 out of the power of the people of Canada when it should not be put out of their power. If we are to take over these railroads, now is the time to do so. That seems to be the only conclusion at present. I do not wish to be understood as agreeing that that is the best policy; but in view of the conditions into which the Government has permitted the matter to drift, and in view of the fact that they have no definite proposition to offer for a solution of the problem, there is no need of any commission of inquiry to find out what must be the result.

Mr. TURRIFF: Will the Minister of Finance state what the policy of the Government will be after this loan is granted, and as I expect it will be granted, as to the Canadian Northern branching out into new fields altogether such as they propose to do in Ontario and which will add greatly to their liabilities?

Sir THOMAS WHITE: I am speaking from memory, but I think, under the legislation of 1914, there is some limitation upon the power of extensions unless with the consent of the Governor in Council. It is the financing of the Canadian Northern that gives immediate concern and that makes this loan necessary. I do not think my hon. friend need be very apprehensive about any extensions of the Canadian Northern—did I understand him to say in Ontario?—because any such extensions would have to be financed, and at present my hon. friend knows how difficult it is to finance.

Mr. TURRIFF: The minister must be aware of the campaign that went on for two months of this session in the Railway Committee and in this House to get authority to revive charters to build lines in Ontario that would take many, many millions; yet those interested said that they had the money to carry on the work.

Sir THOMAS WHITE: I am not familiar with that situation. I understand the reference is to two electric lines proposed in Ontario. They are part of the Canadian Northern, and if the subsidiary companies concerned are able to finance their enterprises, it will increase the earnings of the

company and will not diminish the security of the Government, but will rather enhance that security. I speak with incomplete knowledge, for, though it may seem strange to my hon. friend, I am not familiar with the Canadian Northern legislation that is before the House. I accept what the hon. gentleman says—that they have the money for the completion of these lines. But there is nothing in that situation that would immediately connect with the proposal now before the committee, as near as I can see.

Mr. OLIVER: The Canadian Northern enterprise seems to be completed except that part from Capreol to Montreal. What is the intention or expectation with regard to that portion of the scheme as the result of the loan proposed? Capreol is north of Sudbury and is the point of junction between the Montreal branch and the Toronto branch. I understand that the section from Ottawa to Capreol is being operated with local trains, but that on the line from Ottawa to Montreal no trains are being run. It is quite plain that the Canadian Northern cannot be a profitable and completed enterprise as a transcontinental line unless and until that connection is finished. Has this aid in view the securing of the completion of that part of the enterprise?

Sir THOMAS WHITE: I have no doubt they will complete it as soon as they have the financial strength to do so. But this money is not for that immediate purpose; it is to assist them in the situation in which they find themselves in regard to existing obligations for construction and for payment of interest upon securities.

Mr. OLIVER: Is it not usual for a financial institution, when dealing with a concern in difficulties, to take into consideration how soon and under what circumstances that concern is going to get into a profitable and earning position? This Canadian Northern, considered as a transcontinental line, is not a completed enterprise. It cannot be made profitable—no one can expect it to be profitable—unless this section of the line is completed and the road put in full operation. Surely, that is a matter for the consideration of the Government when they are giving aid of $15,000,000.

Sir THOMAS WHITE: If matters of this kind were to be taken into consideration, as I said the other day, instead of $15,000,000 we should have to give them more. This is the same case as that of the extensions in the West to which my hon. friend (Mr. Oliver) referred the other day. We could give them a minimum of aid to carry them during the present year, looking as I have said, to a permanent solution of the question through the investigation that is to be held. The Canadian Northern officials are well aware of the necessity of completing their transcontinental line as early as possible, and they will endeavour to finance the completion of it, if what the hon. gentleman states is correct, and I do not question his view of it.

At six o'clock the committee took recess.

The committee resumed at eight o'clock.

To provide for inquiry and report upon the railway situation of Canada, $150,000.

Mr. NESBITT: I was not here when the resolution for the Canadian Northern railway was passed, and, with your permission, Mr. Chairman, I would like to say a word or two with regard to it. When these resolutions were first introduced I had made up my mind very distinctly that the only thing to do with the Canadian Northern was to put it into the hands of a receiver. It was necessary, I thought, to find out just what constituted the Canadian Northern in its various branches, and to keep track of the receipts. As to this loan, I have no doubt that the minister will see that the proceeds are devoted to the purpose for which they are intended. In speaking of receipts, I refer more particularly to the general receipts for freight and passenger traffic, etc. I was strongly in favour of the appointment of a receiver for this road, because in that way we could keep close track of what is done with those receipts. The Canadian Northern resolution contains the words "such mortgages to contain such terms and conditions as the Governor in Council may approve." It is possible that under that provision the Minister of Finance may be able to appoint someone to have charge of receipts and disbursements. There is a good deal of feeling in the country, whether rightly or wrongly I am not prepared to say, that the receipts from the railway are not used entirely for the purposes of the railway. I am not as much afraid of the credit of the country being injured by the appointment of a receiver as some people appear to be. However, this is a very serious time so far as finances are concerned, and it is just

possible that the appointment of a receiver for a railway the size of the Canadian Northern might be detrimental to the credit of the country. This being the case, no doubt the difficulty in connection with keeping track of the operation of the railway and knowing exactly its merits and demerits will be overcome by the operations of the commission that the minister proposes to appoint. This will be done, of course, only if the men selected are competent for the position and have an exact knowledge of the conditions affecting the railways throughout this country. As to Government ownership, it is quite possible that through the improvements that may take place in the management of Government railways, we shall be in a position at some time to take over and nationalise the railways, but I do not think that we are in any such position now. The history of the management of Government railways in the past is not such as to encourage us to take on more railways. Last year, according to railway statistics, the proportion of expenses to receipts of privately-owned or corporation-owned railways, including the Canadian Northern, was a little over 72, and of Government railways a little over 102. That would not encourage me by any means to vote for the acquirement and operation of all the railways under Government control. Besides, if the Minister of Finance should have to go to New York or to England or to Europe for money, I do not believe he would get any, because the financiers of this continent, as well as those on the other side of the water, know to a nicety what the cost of the operation of Government railways is in this country, just as they know the cost of the operation of privately-owned or corporation-owned railways. Certainly it would be no inducement to financiers to loan money to Canada in this time of stress if Canada were to pile on top of her present debt, and the debt that has to be incurred during the coming year, the sum of two and a half or three billion dollars for the purchase of these railways. It is possible that time will rectify that condition. When it does, I shall be perfectly willing to see the railways nationalized, but until that time I am not so willing. When I first read these proposals, I was strongly in favour of having the whole of the capital stock of the Canadian Northern assigned to the Government—not handed over to the Government for ownership, but handed over in trust to be handed back when the present operators succeed in paying their liability to the Government. I was in favour of that suggestion in 1914, if I mistake not, but after the minister's explanation this afternoon as to the position of the Government in the matter of taking over the railway in case of default—and they are at present in default—and in view of the fact that this is a demand loan, I am not so much in favour of that proposal now as I was. For the reason which I have given, I am not so strongly urgent upon a receivership, because, as the minister has pointed out, it is possible that to place this road in the hands of a receiver would injure the credit of the country. If, then, we are not going to take the railways over or put them into the hands of a receiver, the next best thing—probably the best thing—is to appoint this commission, provided they are qualified for the work. As the hon. member for Calgary said this afternoon, in a year from now we ought to be in a position to know just exactly what we should do with regard to the railway situation in Canada. It should be discussed, I think, entirely from a non-partisan standpoint; there is no necessity to enter into recriminations or reflections of any kind in dealing with it. The railway situation is here, and we have got to face it. I personally am not at all despondent over the railway situation, and I think that the members of this House, when they have the exact facts before them, will be quite capable of dealing with that situation in the same manner as a Board of Directors would deal with it, without any recriminations or any partisanship, and in a manner that will be in the best interests of the country.

Mr. OLIVER: I should like to know why it is that, when the Government are operating the Transcontinental railway and the Canadian Northern railway are operating their own road, the Transcontinental, instead of operating trains between Winnipeg and Quebec, which is the proper eastern terminus of the Transcontinental, operate their trains from Toronto to Winnipeg in competition with the first-class service of the Canadian Pacific railway and also the Canadian Northern railway. Running trains there, the National Transcontinental must run over 500 miles of line which is either leased or operated under running rights. They operate in competition with the Canadian Northern to the disadvantage of both the National Transcontinental railway and the Canadian Northern.

Mr. PUGSLEY: The Acting Minister of Railways the other day made the announcement that on the 1st of June a direct first-class passenger service would be inaugurated between St. John, Halifax and Winnipeg, over the National Transcontinental railway.

Sir THOMAS WHITE: The hon. member for Edmonton (Mr. Oliver) has drawn attention more than once to the exports of the past year. Without desiring to prolong the discussion, I wish to bring to his attention some very striking figures to show the extraordinary efforts that have been put forth, and successfully put forth, in connection with the export business of Canada. I looked it up and was surprised to find that Canada during the past year had done so well. For the 11 months ended February, 1915, the grain, wheat and flour exported from Canada amounted to 90,000,000 bushels, whereas for the 11 months ended February, 1916, the export of grain, wheat and flour amounted to 180,000,000 bushels, just twice as much. So that for the 11 months ended February, 1916, twice as much grain, wheat and flour was exported from Canada as for the 11 months ending in 1915. There is another curious feature in connection with our export business for the same period. Whereas, for the 11 months ending February, 1915, 36,000,000 of foreign produce, grain, wheat and flour, were exported from Canada, for the 11 months ended February, 1916, only 11,000,000 were exported. So, while the exports of grain, wheat and flour of Canadian produce were doubled, the amount of American produce of the like kind exported from Canada fell from 36,000,000 bushels to 11,000,000 bushels. Then, dealing with totals, I find that the total exports for the 11 months in question in each of the years mentioned were 127,000,000 bushels of both Canadian and foreign produce of grain, wheat and flour, whereas for the 11 months ended February, 1916, no less than 191,000,000 bushels were exported. So we have the extraordinary fact before us that in this year the exports from Canada are enormously in excess of the exports of any other year. I am not saying that this is not as it should be; I am drawing attention to these very striking figures to show that, notwithstanding the shortage of tonnage upon the Atlantic, Canada had been able to increase her exports to such an extraordinary degree as is shown by these figures.

Mr. OLIVER: The figures are certainly very striking and very satisfactory. As figures they are most interesting; but when you say that you say it all, because the fact remains that at the beginning of this month there was, according to the latest returns, 125,000,000 bushels of surplus export grain west of the lakes, and that because of that surplus of grain being west of the Great Lakes at the beginning of this month the people of the West are not able to increase their acreage this season as they would have done if they had been able to dispose of it. As they are not able to increase their acreage, the country does not offer the same attraction to immigration that it would have offered if the acreage could have been increased. My hon. friends on both sides this afternoon were agreed that the question of securing productive occupation of the prairie was the great problem, and they had various ideas as to how it could be solved. I will give a solution of it. If they will secure for the man who now has produced the grain the prompt sale of that grain and a fair price for it, they will then have an effective immigration policy. But they can print all the beautiful literature they please at whatever expense they like, and say what they please in it, and put as many pictures into it as they choose. So long as a man hauls his grain 15 miles to the elevator in the month of May, after he has harvested, and cannot sell it because the elevator is full, and the elevator is full because the railroad did not take the grain away, and because of the embargo put on the transportation of grain by the railway companies, for one reason or another—you cannot argue against such a state of facts as that, and you cannot get the people to come and settle in this country in the hope of developing it when, on the evidence of their senses, they cannot sell the grain they have produced. This is absolutely pertinent to the question. I do not care how much we have exported. We are being asked to finance these two railroads on the plea that we had overbuilt our railroads and did not have traffic to make them profitable enterprises, while the condition is that we have the traffic and it has not been handled. The answer to that is not given by telling us how much we did, when there is so much that we did not do.

Sir THOMAS WHITE: I think that my hon. friend is scarcely fair in his statement, because he has overlooked the salient fact that the crop of last year in the West was really two crops in one. Our railway

system was designed to take care of a certain normal situation. Of course that situation was likely to increase. Last year the West was blessed with two crops in one, and I think it is not an extraordinary fact—although nobody would be more desirous than I to see the crop moved out quickly—that the whole of the crop of last year has not yet been taken out. Personally, I would be very much pleased if it had been taken out, but we all know that the railway companies could not take out a double crop with machinery that might have been perfectly capable of taking out a normal crop, or even a crop considerably in excess of the normal. They had to deal this year with a double crop situation in the West, and I thought that my hon. friend would be interested in seeing the figures which I produced for the information of the committee, because they show that the export of our wheat and wheat flour was twice as large during the 11 months ending February of this year as it was for the same period of the previous year. While we have not been able to meet the situation in its entirety, I cannot help thinking that, having regard to the scarcity of tonnage which has prevailed upon the Atlantic, it is a very notable record which I have exhibited to the committee.

Mr. OLIVER: There is no question that it is a very creditable record, but it is not creditable enough. That is not the point. The point I wish to insist upon is that here we are dealing with what is said to be a desperate situation, which exists for lack of traffic, while the fact is that we have the traffic which we have not handled in the time in which it ought to be handled. That is a situation which the Government has not risen to meet. We are told that we have too many railroads, and the evidence is that we have not handled the products which we had on hand, and which ought to be handled in order to make our business a success. The two conditions of fact do not meet at all. There must be mishandling or mismanagement somewhere, for which our friends who are in control of the affairs of the country must accept their full measure of responsibility.

Another point is that in the statement of exports of Canadian grain—I presume my hon. friend has the figures—I think something like 70 or 75 per cent of our exports of last season's crop went by way of the United States, and only the balance went through Canadian ports. The share of the crop that went to Buffalo went by lake transportation. We have three lines of railways running from the prairies to the sea, and every bushel of grain that finds an outlet over the lakes was a bushel of grain taken away from the possible traffic on one or other of these three lines of railway. When we have the condition that we have to-day, our railways bankrupt for lack of traffic, and our traffic going in such an enormous proportion to the United States, instead of to our own ports, I repeat it is for the Government to make the explanation, and the explanation cannot be made on the basis of a capable and competent management of the affairs of this country.

Mr. GRAHAM: It is now half-past eight, and we have just been handed a mass of documents relating to the Quebec and Saguenay proposition, which, we are told, is to be taken up to-night. It is the first information we have had concerning it, and I just want to say, for the benefit of the Minister of Railways, that it is showing scant courtesy to the House. It is impossible for those who asked for this information to digest it in the time allowed; perhaps they were not expected to have time to digest it.

With regard to this other item, it would have been better, to my mind, if the Government had been able to give us the names of the three commissioners, for the simple reason that the experience of us all is, first, that the work of a commission largely depends upon the calibre of the men who compose it. If the Government cannot give us the names of these men, I think it ought to have given us a copy of the instructions which it proposes to place in the hands of the commissioners. We all know that, no matter what the subject may be, or what the calibre of the men forming a commission may be, their work depends on the powers which are given to them. This commission might be composed of the best men that could be secured in the world, and their report might not be worth five cents to the people of Canada. The Government will say: You can trust us to give them full scope. I am not going to say that Parliament cannot trust the Government, but men have different ideas even as to the meaning of language. What those of us who are not of the legal profession might think was a pretty wide latitude, legal gentlemen might regard as no latitude at all, or longitude either. The commissioners are thus tied up in a box, and can only move a few inches each way. I think

it would have been more satisfactory if the Government had been able to give us a copy of the instructions in the identical language in which they propose to confer certain powers upon this commission, so that every member of this House could judge what the commission intended to do, and how far it could go. The value of the report will depend on the wording of these instructions. Presuming the commission is not armed with as wide powers as it ought to have, it is not stretching one's imagination to think that it might go to the offices of one of the railway companies and be refused certain information which Parliament might desire it to have. The commission might be in quest of some practical information, such as the experience of certain other roads or of financiers; and unless they were given the fullest possible powers, and those powers were clearly defined, they might be unable to get that information for us. I make that suggestion to the minister, and I do not think it would be a very difficult one to carry out. If the Government has in mind just what powers they propose to give to this commission, a discussion for an hour or so, in which we would be able to give our ideas, might put the matter in even better shape.

There is another matter to which I wish to call attention, particularly the attention of the Minister of Finance. I submit that this committee has a right to have placed before it an estimate of the cost of operation of the National Transcontinental for the year. I know I shall be told that there is a statute. But that statute was not designed to cover the enlarged operation now proposed. The House should know what money the Government proposes to expend, so that we could discuss the proposition of the Government intelligently. Every year an amount is put in the Estimates for the Intercolonial, and we discuss it thoroughly, perhaps too thoroughly sometimes; but at all events the rights of the members of Parliament are preserved to them when they have the opportunity of discussing expenditures in that way. When the operation was only on a small scale there was perhaps not so much objection to the Government not submitting estimates, but now that the Government has taken over the Transcontinental and proposes to expend millions in operation each year, it is unfair to the House not to submit an estimate. We should be given the opportunity of discussing what is to be done with the money and the question of operation; and then when the report comes in at the end of the year hon. gentlemen would be able to see whether their directions in regard to the expenditure of the money had been properly carried out.

Mr. REID: I was not in the House when the hon. gentleman rose to speak, but I have been told that he stated that the documents relating to the Bill I have on the Order Paper were not given to the House until 8 or 8.30 this evening.

Mr. GRAHAM: I said they came to the House at 8 or 8.30.

Mr. REID: And the hon. gentleman considered that I had treated him with scant courtesy. I think it is hardly fair for him to say that, because he was sitting in the House this afternoon at two o'clock when I handed in the documents that are now before him, and I think he must have heard me say that I was laying them on the Table.

Mr. GRAHAM: I did not hear anything of the kind.

Mr. REID: The hon. gentleman was in the House at the time, and surely he can not censure me for not having heard what I said. As soon as the Orders of the Day were called, I handed in the papers, and I took it for granted that he heard what I said. A few minutes afterwards I thought I saw the hon. member reading them, but that turns out not to be the fact. I do not think I could have done anything more. I was unable to get the papers at an earlier date. The hon. gentleman walked out of the House shortly after I handed in the papers, and I thought he was reading them. Under the circumstances I think it was hardly fair for him to accuse me of discourtesy. With regard to my hon. friend's suggestion that we should give an estimate of the proposed expenditure on the National Transcontinental, it is quite true, as he says, that a certain amount is placed in the Estimates for the Intercolonial every year. But the Intercolonial was built fifty or sixty years ago, and has been in operation for many years. On the other hand, we have only been operating the Transcontinental for eight or ten months, and it is not fair to ask us to put in an estimate of what it will cost until we have been operating the road a little longer. No man living can give an approximate estimate of the cost of operating the Transcontinental during the coming year. Surely

we should be allowed to operate the road for one year in order to get an idea of what it will cost before being asked to submit an estimate to Parliament. At the end of the fiscal year, on March 31st last, when we had been operating the road for only eight months, how could we tell what a year's operation would cost?

Mr. TURRIFF: Add a third of a year's expenses to the amount spent at the end of eight months.

Mr. REID: We want to run the road for a year and see what it will cost, and then next year we shall be able to submit a statement to the House, and there is no doubt that an amount will be put in the Estimates for the Transcontinental, and that the road will be treated in that respect just the same as the Intercolonial and other railways operated by the Government. I submit that it is only fair that we should be allowed to run the Transcontinental for one year before being asked to submit an estimate. There is no other reason than that why an estimate should not be given.

Mr. GRAHAM: I am sorry there is a misunderstanding between the minister and myself. I regret I did not hear what he said this afternoon. I never repeat private conversations, and I am not going to now, but I understood the minister was going to send me the documents at ten minutes to two; I was told so by a gentleman. I stayed in all afternoon waiting for them. They were not discovered until 8.20 in the Clerk's office. What the minister says about the Transcontinental is loud, but not strong, and for this reason: the Government should not segregate itself from Parliament. It is not the Government that is running this railway, but Parliament, and hon. members are just as much interested in it as is the Government, and have a right to know what the Government propose to do, so far as the Government can tell them. The manager can surely give an approximate estimate of what he proposes to do on the Transcontinental this year; that is always done in the case of the Intercolonial. It is true there is never a year but what he comes back for $1,000,000 or $2,000,000 more. It depends on the traffic; if the traffic is heavy expenses are greater, and if the traffic is light the expenses are less. That is to be expected in the case of enterprises where it is impossible to give a very close estimate. I am not charging the minister with any wrong-doing in holding back this estimate, but what I am saying is that as we are taking the Transcontinental over as a business proposition the manager should give an approximate estimate of what amount will be needed for the year. When hon. members go home to their constituencies they will be asked: "What is it going to cost to operate the Transcontinental? I see you are taking it over." and we shall have to tell them that an estimate was never given to the House. The point I am making is that the Government is taking to itself authority which the Parliament never intended it should have, for it was never thought that the Government would operate the Trancontinental permanently. I say the Government should submit an estimate of the cost just as in the case of any other public work. But as the minister has said that he will submit an estimate next year, I will not say anything further on that point. If the road is to be permanently operated by the Government the appropriation ought to be asked for in the usual way.

Mr. TURRIFF: How does the minister propose to get the money for the operation of this road if he does not put an item in the Estimates?

Mr. REID: Under the Act, all the expenses of operation can be taken out of the Consolidated Fund. The desire of the Government is to get that money in the same way as we got the money for the operation of the Intercolonial. We are waiting until we get our organization complete. We have not the train service thoroughly organized on the Transcontinental between Moncton and Winnipeg, but when we get our power and our cars so that we can give the system a fair trial, we shall know what the road will cost. As soon as we are in a position to make a proper estimate of the cost of operation of the Transcontinental, that will be placed in the Estimates in the usual way, but it must be borne in mind that the road was taken over only last July. The hon. member for South Renfrew (Mr. Graham) states that we know what it is costing from Toronto to Winnipeg, and if we ask him what it is costing to operate the Transcontinental between Toronto and Winnipeg he can give us the figures. If he wants the figures for the cost of operation between Cochrane and Moncton or any other portion of the Transcontinental up to the present time, I will telegraph and get them

for him, because there is no desire to keep the figures secret. As soon as it is possible for the Railway Department as a whole to get the Transcontinental into the same position as the Intercolonial, so that we can come to Parliament and say: Our estimate for the operation of the Transcontinental is so and so, that will and must be done, no matter who is in charge of the Railway Department.

Mr. ROBB: Will the minister tell us what the Government proposes to do in the way of improving the service between Cochrane and Quebec? The minister must know that since the operation of the road was started that service has been most unsatisfactory and unfair to the people of that district.

Mr. REID: Probably the hon. gentleman was not here the other evening when this matter came up. The operation between Cochrane and Quebec has since it was started been a local service. We had neither the equipment nor the organization complete. I stated here the other evening that there will be a through service from Halifax and St .John to Winnipeg commencing, we expect, about the first of June. Of course, you cross at Quebec. Up to the present time the arrangement has been that we run three days a week and the Canadian Northern run the other three days. It is our intention to have a through passenger train that will go right on from Quebec to Winnipeg.

Mr. ROBB: Daily?

Mr. REID: I do not think it will be a daily service to start with. We will run it in connection with the train from Toronto, the two meeting at Cochrane, and the train will go right through. We will, of course, put on whatever service is necessary.

Mr. TURRIFF: Before this item carries, I want again to impress upon the minister that as soon as possible the Transcontinental should be used as a route for the outlet of the western wheat. There is no doubt that wheat can be carried over that road at the summer rate of lake and rail, show a profit, be a big advantage to the grain producer, and give a large amount of freight to the railway. In that way we would take a great deal more of our grain to our own ports. This last year, about 75 per cent of our crop went to American ports, and with the summer rate that the Government has put in force, there is an opportunity of furnishing freight and work for the Government railroads, cutting down the loss, if there is going to be a loss, in operating them, and of operating the roads to the advantage of all concerned. I trust the minister will give the matter his best attention as soon as he can get sufficient rolling stock.

Mr. REID: I certainly agree with the hon. member that we should operate the Transcontinental as much as possible. What is surprising me at the present time is this. Our rate from Armstrong to Quebec is six cents and I understand that the rate from Winnipeg to Armstrong is six cents. I have not made inquiries of late but I am informed that the lake and rail rate from Montreal to Port Arthur is nine cents. Therefore, wheat shipped from the West all rail through to Quebec should get to Quebec for about three cents less than if shipped via Port Arthur, lake and rail, to Montreal. I do not know whether that is the way it works out or not, but those are the rates in force, and if that is the way it works out, why is not the wheat being shipped all rail to Quebec? I understand there are about 18,000,000 bushels of grain along the Grand Trunk Pacific that has to come east, and I cannot understand why that grain is not sent over the Transcontinental to Quebec, instead of via Port Arthur to Montreal. Perhaps my hon. friends from the West will make inquiries as to the situation and find out where the trouble lies, because our six cent rate from Armstrong which is on the same line as Fort William, is still in force, and wheat shipped via Armstrong goes right down to Quebec instead of going to Montreal.

Mr. ROBB: One explanation may be that perhaps there is not vessel space at Quebec to take away the grain as fast as it will come in, the minister must also not forget that this six cent rate is not in force to Montreal where there is the largest miling capacity in Canada, and a great deal of the wheat going out by vessel from Fort William and Port Arthur to Montreal is perhaps consigned to the large millers in Montreal for export.

Mr. REID: As those vessels take full cargoes of wheat, they can take it just as well at Quebec as at Montreal. At all events some grain should be going to Quebec where we have an elevator capacity of one and a half to one and three-quarter million bushels, and yet there is no wheat going that way. If there is that difference of

three cents in the rate, the wheat should go that way, because the vesels can be got at Quebec just as well as at Montreal.

Mr. TURRIFF: I think this is a question for an energetic Minister of Railways who will attend to business, do some advertising and send two or three men over the Grand Trunk Pacific to point out to the shippers the advantage of shipping to Quebec. The shippers are accustomed to shipping via lake and rail and they may not know of the advantage to be gained by shipping by this route. Therefore, instead of depending upon outsiders, I think the acting minister should take the matter up himself.

Mr. REID: I have advertised this rate pretty well this session and it should be known in the West.

Mr. TURRIFF: The minister is going in the right direction, but it is a good plan not to depend upon others for what you can do yourself.

Mr. GRAHAM: Will any member of the Government condescend to reply to my suggestion as to the powers to be given to the commissioners?

Sir THOMAS WHITE: My hon. friend thought we might have explained the terms of the commission which we purpose to issue. The terms of that commission have not been settled, but I stated in general words what we had in view, namely, that full report should be made upon the
9 p.m. physical and financial condition of the railways of Canada and upon the general railway situation, in order that we might be in a position to adopt a policy which would prevent these recurring visits for temporary aid, and settle the railway situation in permanent fashion. The powers which will be given to the commission will have to receive careful consideration on the part of the Government in order that that end which we have in view will be accomplished. I am not able to present the wording of the commission which will be issued, because its terms have not yet been settled, but it seems to me that it is only a matter of language apt to clothe the commissioners with the powers to obtain for us the information which we desire for the purpose which we have in view. I stated in introducing these loan proposals to the House that we not only desired the information which we thought a commission could furnish us respecting the physical and financial conditions of the railways and railway companies of Canada, but that we hoped to obtain from the commission suggestion and advice as to what distribution or rearrangement or linking up of lines and systems would give the best economic result for the enormous amount of capital which had been expended upon the railways of Canada. We have in mind a commission clothed with wide powers which will bring in a comprehensive report, as a result of which we shall know what policy, at least in our view, should be adopted to settle, as I have said, in permanent fashion this railway situation with which we are confronted. This problem cannot be side-stepped or escaped. This loan proposal is a measure of temporary assistance, and if the action which we propose to take were not taken, in all probability at the next session of the House, and possibly at the next after that, we might be confronted with a similar situation to that which confronts us to-day. There is every reason, therefore, why the Government should seek a permanent solution, and obtain the best advice which it possibly can get from the ablest experts available for the purpose in order that it may solve the problem which is presenting itself at recurring intervals and which demands solution.

The personnel of the commission has not yet been settled by the Government. The suggestion is put forward that the Government should be ready with the names of the members of the commission. I need not say that it is not an easy task to settle upon the names of men of the ability and of the impartial judgment which will be required to investigate the railway situation of Canada. Some hon. gentlemen have said that we should find these men in Canada; others suggest that they should be found in the United States. Undoubtedly there will be a difficulty in finding them in Canada, for the reason—speaking only for myself—that it would not be easy to find competent men in this country not connected with the existing railway situation and who could bring impartial judgment to bear upon the matter. The railways are competitors one with the other. It is possible that one or more of the men may be found in Canada, but whether found in Canada or in the United States, my own view is that they should be men of eminent ability and of such standing that they will command the confidence of the public, men who will deal with the matter without bias, without prejudice, unin-

fluenced by any interest in the existing situation. To the problem of finding those men the Government must address itself. We have not fixed on three as the number. We stated that we would appoint three directors upon the board of the Canadian Northern Railway Company and three directors upon the board of the Grand Trunk Pacific Railway Company. I may say that it is not the intention of the Government to appoint so-called dummy directors, as has been suggested this afternoon, as representatives of the Government upon the boards of these two railways. We shall endeavour to find outstanding men who have the interests of the Government at heart and who will command the confidence of the people of Canada. The suggestion has been put forward during the progress of this discussion that there should be an audit of the revenues and expenditures of the Canadian Northern. It was not suggested that there should be a similar audit of the revenues and expenditures of the Grand Trunk Pacific, but the two lines stand on the same footing and there is just as much reason for the one as for the other. We have provided for that. We have an estimate of $10,000 for the purpose of retaining and paying two firms of auditors for carrying on a continuous audit, beginning May 1, of the revenues and expenditures of the Canadian Northern Railway Company and of the Grand Trunk Pacific Railway Company. We feel that by reason of the guarantees and loans which we have made to these two railways we have a very vital interest in the conduct of their business from this time forward, or at all events until they are in such position that they will no longer need Government aid, if such a condition ever arises. It is our intention to appoint firms of auditors of very high standing who will command the confidence of the people. As it has been suggested that the net profits of the Canadian Northern railway system may have been diverted for other than railway purposes, I would call the attention of the committee to this fact,—because I do not believe that any hon. member desires to do any injustice to the Canadian Northern railway management—that the accounts of that company which have been laid before the House are audited by an eminent Winnipeg firm of very high standing, Messrs. Webb, Read and Hegan, chartered accountants. Personally I see no reason to believe that the net earnings of the Canadian Northern Railway Company have been used for any other purpose than the purposes of the railway; in fact, that is borne out by the statement that we have before us. For the fiscal year 1915, which ended on June 30 of last year, there was a net profit of $6,000,000 and for the present year there is an estimated net profit of $9,700,000. The net profits of that road have not been diverted to other than railway purposes. We can see where they have gone. The net profits, that is to say the amount of revenue in excess of operating expenses have gone, generally speaking, to two purposes. They have gone to pay interest upon underlying securities, that is to say, fixed charges; or they have gone to pay indebtedness incurred or expenditure made upon construction, or for the payment of instalments of equipment securities. There is an indebtedness, as I pointed out to the committee, in respect of those items, but the net earnings of the company so far as they went unquestionably were applied to that purpose.

As I stated, you have first the report of the administration of the Canadian Northern itself, and then you have the certificate of a very reputable firm of auditors in Winnipeg. In addition to that, we propose to appoint three directors upon the board of the Canadian Northern and three upon the board of the Grand Trunk Pacific, to keep the Government informed as to the administration of these railways. We propose, also, that there shall be an audit of the expenditures and revenues of each company on behalf of the Government, and it is our intention to name in this connection auditors who will command the confidence of the Canadian public.

Mr. GRAHAM: The minister has brought up another point. I thought it had been decided that there were to be three commissioners, but apparently the Government does not know whether there are to be three or more than three.

Sir THOMAS WHITE: I never mentioned any limitation of the number of commissioners to be appointed; there may be three or more than three, as the Government shall decide.

Mr. TURRIFF: No chance of having less than three?

Sir THOMAS WHITE: For myself, I think there should be at least three.

Mr. TURRIFF: At the rate the Government are going in appointing directors and

commissioners they will hardly find applicants enough possibly.

Sir THOMAS WHITE: Well, you know we have a population of eight millions.

Mr. TURRIFF: But you must not interfere too much with recruiting, you know.

Mr. GRAHAM: The newspapers announced that there were to be three commissioners and how they were to be appointed; the Government to appoint two, one a financier, and the other a railway man, and these two to appoint a third. I discussed that the other night. But, to come back to the other point: Will this commission be instructed to report and make recommendations, and will the Government feel that it is bound to accept the recommendations they make? Or will they be asked to report, as the lawyers say, the evidence, and not make recommendations?

Sir THOMAS WHITE: They will be asked to advise generally as to the railway situation and to report as to what arrangement, distribution, or linking up of the lines or systems will give the best economic results. We cannot make any commission a dictator; we cannot abdicate the functions of the Government or of Parliament in favour of any commission. But we hope the commission will give us the benefit of expert knowledge to enable us to find a permanent solution of the railway situation. Speaking for myself, I should think it extremely inexpedient that the Government should devolve upon the commission the powers of Parliament. Obtaining expert advice is one thing, but whether the Government and Parliament should accept that advice is another. I do not think we should fetter ourselves in advance.

Mr. TURRIFF: As to conferring upon a commission the powers of Government, the hon. minister has forgotten that, only two or three weeks ago, at the instance of the Government, our function in regard to railway charters were turned over to the Railway Commission. But I leave that aside. The appointment of this commission is of vast importance. It seems to me that it would be better to take whatever amount of money the Government intends to spend in the salaries of these commissioners, and spend it in getting say two men, one man to deal with the physical conditions of the railways, and how they can best be worked for the general advantage of the people, and the other to look into the finances of the road. Or, instead of appointing three men at comparatively large salaries, get the best man you can find in America and give him the salary you would pay to the three. If you were to do this, I believe you would have a report that would be worth ten times as much as one made by three men. If you have three men on a commission, the work is done by the best man of the three—he practically decides the whole business. As to the gathering of information, that is a matter for clerical and other assistance. I should be in favour of a small commission.

Mr. GRAHAM: That is part of what I had in mind. The minister will notice that the newspapers are giving him advice as to the personnel of this commission. He has been advised not to neglect to have as one member of the commission a man who is in favour of Government ownership. Another portion of the press tell him that the report will be incomplete unless he has a labour representative on the commission. There are two distinct lines of advice that I have particularly noticed. If suggestions and recommendations are to be asked by this commission, in addition to an investigation of facts, it will be all the more necessary to be very, very careful as to the personnel. If it were possible to have all shades of opinion on the commission, it would be very well; but that might easily make the commission top heavy.

Mr. MEIGHEN: How many does the hon. member suggest as the membership of this commission?

Mr. GRAHAM: I would not have more than three at the outside. I have tried commissions, and I have found that the larger the commission the more trouble you have in arriving at a conclusion. As the hon. member for Assiniboia has said, the acquiring of technical information does not need a commission; the commissioners should be able men who can digest the information when they get it. I do not think I will say more on the subject. The Government has my views. I would merely urge that the instructions to be given to the commission should first be drafted and then thought over for several days, and looked at in the light of full and mature consideration. Upon the powers given to the commission will depend the usefulness of their work.

Mr. McKENZIE: I do not know whether the minister will attach much importance

to my knowledge of railway matters, but I would like to give, not only to the Minister of Railways but to his colleagues, my idea on this subject. I think there is danger in making the mistake of not developing talent in our departments by going all over the country looking for commissioners. I think that the proper policy would be to employ big men in the various departments of the Government—and big men are needed in every department—pay them large salaries if necessary, and place responsibility upon them. That would be very much better than going outside when any big question arises and employing men at high salaries, perhaps to learn the business in hand at the expense of the Government, and then to leave the service of the Government. By having men of ability permanently employed in the departments they would be constantly at hand to give the Government the benefit of their advice and assistance in carrying out the recommendations which they might make, whereas outside commissioners, when employed in this way, are of no further use to the Government after they have made their report. The Government employs a general manager of the Government railways at a salary of $20,000 per annum. He is, I believe, a thoroughly competent man,—if he is not he is not capable of earning this salary,—and the Government will not be able to secure better advice than he should be able to give by the employment of any outside commission. There is the further fact that when a report is made by the outside commissioners, who may be employed, the officers of the department may say: If you had consulted us in the first place we could have given you better advice than you have received; the plan that has been recommended to you is of no use. The practice of employing outside men to do responsible work in the departments is not a good one. We see it constantly in the Justice Department. Not long ago when a little Bill was to be drafted we had lawyers from Halifax, Quebec and Vancouver gathered here to draft it.

Mr. MEIGHEN: What Bill does the hon. gentleman refer to?

Mr. McKENZIE: It was a Bill in connection with the war laws. A few days ago a man was added to the Department of Justice, which of course was carrying out the idea I suggest, and I think is the proper course. We should not have lawyers gathering around, like crows around a carcase whenever there is any legislation to be drafted.

As to the nationalization of railways, I am opposed to it. I believe that we should encourage individual energy, enterprise and initiative instead of putting everything into a common pool, which tends to kill individual enterprise. We should take a leaf out of the book of the United States, where there has been little nationalization. The United States have developed to their present greatness through individual effort and enterprise.

To provide for a continuous audit on behalf of the Government of Canada, commencing May 1st, 1916, of the revenues and expenditures of the Canadian Northern railway and Grand Trunk Pacific railway systems, $10,000.

Mr. NESBITT: This is apparently carrying out what I was suggesting, having an audit of the receipts and disbursements. I did not know, when I made my remarks, that this item was in the Estimates.

Mr. OLIVER: There are two questions in connection with the Canadian Northern railway which I think might well be considered at this juncture. One is in connection with the Hudson Bay railway. The Government-owned section of the road runs from the Saskatchewan river to Hudson bay, and is connected with the railway system of the Northwest, through the Canadian Northern main line at Prince Albert, by a branch line, 90 miles in length. The sole ownership of that branch lies in the Canadian Northern railway. It would seem desirable that, if the Hudson Bay road is to be operated as a Government proposition, it should ultimately be extended southwesterly as far as Regina or Moosejaw; but for the time being there would be an immediate advantage in the ownership of the branch connection from Hudson Bay Junction to the Pas. I think it wise to go on record now as suggesting that that would be a proper matter to be taken under consideration and dealt with, because it will probably have to be done at some time, and this would seem to be as appropriate a time as any to make the arrangement.

Another suggestion has been made by the Quebec Board of Trade; that is, that access for the Transcontinental into Montreal should be secured over the Canadian Northern railway branch from Montreal to Harvey Junction.

Mr. REID: That is 116 miles.

Mr. OLIVER: It seems that the mileage from Winnipeg to Montreal is something

less by that route than by Cochrane, North Bay and Scotia Junction, while of course the traffic is hauled over the rails of the Transcontinental for a very much longer distance, and the grade is good all the way into Montreal. I do not know whether these points have been suggested to the minister, or have come to his attention, or whether he has any views on the subject. It would seem to me that, in dealing with the Canadian Northern, this would be a suitable time to make arrangements with the Canadian Northern for the future to acquire permanent rights over these two pieces of railroad.

Mr. REID: The suggestions are good. With reference to the Hudson Bay connection, the hon. member knows that it will be a year or so before that road is out of the hands of the contractors. The commission which is to go to work almost at once will no doubt consider the whole railway situation, as it concerns the West, as well as other parts of Canada, and no doubt they will take up that point in their investigation. With regard to the connection between Hervey Junction and Montreal, that matter has come before me. The suggestion is a good one, and is being taken up with the view of making the connection, so far as Montreal is concerned. There is no trouble in making arrangements of that kind. We can arrange it satisfactorily either by consulting together, or through the Board of Railway Commissioners. The advantage would be that we would be able to take the whole trainload over the Transcontinental, with the exception of a stretch of about 106 or 116 miles, and where you are dealing with a six cent rate, by bringing it over the Temiskaming and Northern Ontario railway and then over the Grand Trunk railway, there is very little left for the Transcontinental. As I have said, the suggestion is a good one and is being considered, and it may be taken advantage of before another year. I am in hopes that the whole railway question will be in such a shape next session that we will all be seized of the facts through having the advice of good men who will look into the matter thoroughly.

Progress reported.

QUEBEC AND SAGUENAY AND LOTBINIERE AND MEGANTIC RAILWAYS

ACQUISITION OF BRANCH LINES.

Hon. J. D. REID (Acting Minister of Railways) moved the second reading of Bill No. 101, to authorize the acquisition of lines of railway between the city of Quebec and Nairn Falls and between Lyster and St. Jean des Chaillons.

He said: This Bill is for the purpose of acquiring as part of the Government railway system three lines of railway. One is known as the Quebec, Montmorency and Charlevoix railway, extending from St. Paul street in the city of Quebec to St. Joachim, a distance of about 43 1/5 miles. This road has already been in operation for many years.

Mr. GRAHAM: In what direction does it run?

Mr. REID: From Quebec, east along the St. Lawrence—that is the electric railway—to St. Anne de Beaupré, and further on. To Ste. Anne de Beaupré is a distance of about 20 miles, and the railway runs along the St. Lawrence to the point I have mentioned.

Mr. TURRIFF: On the north shore?

Mr. REID: On the north shore. As I have said, this road has been in operation for many years, and has been a paying proposition for some time.

Mr. TURRIFF: They should not sell it then.

Mr. REID: It is a part of the system. We are also acquiring the Lotbinière and Megantic railway extending from Lyster in the county of Megantic to St. Jean des Chaillons in the county of Lotbinière, a distance of about thirty miles. This road has also been in operation for a number of years and is a paying road. The other road we are acquiring is what is known as the Quebec and Saguenay railway, extending from its junction with the Quebec, Montmorency and Charlevoix railway at St. Joachim in the county of Montmorency to Nairn Falls in the county of Charlevoix, a distance of about sixty-two and eight-tenths miles. This road is completed. Nairn Falls is about six miles from Murray Bay, and has some pulp and paper mills.

Mr. OLIVER: How far is that from the Saguenay river?

Mr. REID: About thirty or forty miles. This road was originally to go to Baie St. Catherines. The object in purchasing the Quebec and Montmorency is to have the road run right into the city of Quebec. The earnings of the Quebec, Montmorency and Charlevoix railway are as follows:

1910.	
Gross earnings	$217,802 94
Operating expenses	146,559 40
Net earnings	71,243 54
1911.	
Gross earnings	$245,039 04
Operating expenses	166,719 68
Net earnings	78,319 36
1912.	
Gross earnings	$273,395 84
Operating expenses	197,157 02
Net earnings	76,238 82
1913.	
Gross earnings	$293,985 75
Operating expenses	217,497 23
Net earnings	76,488 52
1914.	
Gross earnings	$311,528 17
Operating expenses	228,496 60
Net earnings	83,031 57

The earnings of the Lotbinière and Megantic railway are as follows:

1912.	
Gross earnings	$14,025 26
Operating expenses	8,047 55
Net earnings	5,577 71
1913.	
Gross earnings	$34,870 07
Operating expenses	27,964 97
Net earnings	6,905 10
1914	
Gross earnings	$30,259 47
Operating expenses	28,993 89
Net earnings	1,265 58

The Quebec and Saguenay railway has not been completed and is not in operation, and has therefore no earnings to show. As to the cost of these railways—the Quebec Light, Heat and Power Company, which owns the Quebec and Montmorency railway, gives the following statement of capital expenditures on the Montmorency division to March 31, 1916: The Quebec Light, Heat and Power Company, Limited, to June 30, 1910, $270,390.84; the Quebec Railway, Light, Heat and Power Company to March 31, 1916, $251,819.05, or a total of $2,992,209.89. The above cost includes all capital cost but makes no provision for the increased value of the different lands owned by the company, particularly its terminal property in the city of Quebec.

Mr. TURRIFF: Do I understand that this 30 miles cost on an average $91,000 a mile?

Mr. REID: That figure includes the terminals in Quebec, which were very expensive. Then the road is electrified.

Mr. McKENZIE: Has the minister any reliable reports on these roads?

Mr. REID: We have had our engineers go over the road, and their reports are included in the papers that have been submitted. The cost of the Lotbinière and Megantic railway, which was purchased only two or three years ago, was $285,075.95, plus cost of surveys of line, legal and trust fees, etc., $64,132.70, or a total of $349,208.85. I am giving the statement of cost as it has been given to me.

The Quebec and Saguenay railway was, I understand, incorporated on May 20, 1905, the incorporators being E. D. Garneau, Hon. Charles Langelier, George Tanguay, M.P.P.; Narcisse Rioux, Hon. Alexander Taschereau, William Price, Mark Workman, McLea Walbank and W. G. Ross. That railway extends from the east end of the Quebec and Montmorency road on to Murray bay, the original intention being to go to St. Catherines bay, and making that a winter port. The charter was amended on the 28th day of February, 1907.

Mr. McKENZIE: Is it a provincial charter or a Dominion charter?

Mr. REID: A Quebec charter. Evidently the work did not begin for some time, because my memorandum shows that construction was begun on the 15th of April, 1911, and the work was stopped in September, 1912.

Mr. TURRIFF: Construction on the Quebec and Saguenay railway apparently had to cease as soon as reciprocity was defeated.

Mr. REID: The fact that reciprocity was defeated, even supposing it caused the stoppage of this work, was a good thing for the Dominion of Canada. This railway will be revived again, and I hope it will be as successful as the defeat of reciprocity was. About 87 per cent of this railway is finished. The amount that has been expended upon it up to the present time is as follows: The company issued bonds to the extent of $4,684,400. $2,500,000 worth of those bonds were sold at 84 cents on the dollar, and $2,184,400 were sold at 82 cents on the dollar, realising together $3,822,315.42. They have expended all this money and $1,050,000 more in cash, all of which has been put into the road. Therefore they have put into the road $4,872,315.42 of actual cash, and there is due for small claims, a balance for right of way and other accounts, $461,000, making a total of $5,333,315.42, which the company claim has been paid out for the construction of this road so far as it has gone. They received from the Dominion Government in cash at

one time for subsidies $132,000, which amount was paid to cancel $144,000 worth of the bonds that I have mentioned. Another subsidy, amounting to $116,000, has been deposited with the trust company, and has not yet been paid out to the Quebec and Saguenay railway. Therefore, they have received altogether in subsidies $248,000, but we get back $116,000 of the subsidies so paid, so that the total subsidy that the railway has received is $132,000. I understand that, according to their charter, they were to have received 189,000 acres of land and $3,000 a mile from the Quebec Government, but of that nothing has been given to them up to the present time.

In regard to the condition of the road, at the present time, according to the report of Mr. Beckwith, from Mile 30 to Mile 51 upwards of 95 per cent of the road is finished; from Mile 51 to Mile 56, which is about the heaviest part of the work, 40 per cent is finished; from Mile 56 to Mile 62, 95 per cent of the road is graded; from Mile 62 to Mile 65, there are several unfinished rock cuts, but about 85 per cent of the total work is finished.

Mr. TURRIFF: Does my hon. friend, when he says that the road is finished, mean that the grading is finished, or that the rails have been laid?

Mr. REID: The roadbed has been graded; the ties are there, but the rails are not laid. From Mile 65 to Mile 79 a number of washouts have occurred, but about 85 per cent of the roadbed has been completed, and we have a great many ties to place on this road. From Mile 79 to Mile 81, 6,000 feet of the light work has gone, but otherwise that part is completed; from Mile 81 to Mile 85, 95 per cent of the work has been completed, and from Mile 95 to Nairn falls it is completed. That is the condition of that part of the road from St. Joachim to Nairn falls. There have been several estimates as to what it will cost to finish the road and put it in the condition in which it was when the contractors ceased work. Owing to the road having been left without any work being done on it since 1912, there are a number of washouts, etc., which must, of course, be repaired.

Mr. NESBITT: Will the minister give the estimates of the cost?

Mr. REID: The contractors thought it would cost about $700,000 to complete the road.

[Mr. J. D. Reid.]

Mr. NESBITT: That is to put it in the condition in which it was before?

Mr. REID: To put the road in the condition in which it was before and to lay the rails, making the road all complete and ready for operation.

Mr. GRAHAM: There are different weights of rails along the road—56 and 67 pound rails?

Mr. REID: There are not many rails there, only enough for about eighteen or twenty miles altogether, and those rails are lighter than the ordinary. The reason this railway has cost so much is that it was built to Transcontinental specifications and there was a great deal of hard rock-cut. The cost for reproducing and placing it in condition for operation and completion one contractor estimates at about $700,000. Our engineer who went over the road estimated it at something over $1,000,000.

Mr. McKENZIE: What engineer?

Mr. REID: I think his name is Beckwith. In fact two or three engineers of the Intercolonial went over this road. The road was originally proposed to give a service to the people who are living on the north shore. We all know that the people on the south shore are well served with railways, while those living on the north shore have no railway accommodation.

Mr. McKENZIE: Perhaps the minister will give us information as he goes along. I see by the Bill that the road is 62.8 miles long.

Mr. REID: Yes, that is the Quebec and Saguenay.

Mr. McKENZIE: How much is completed and open for traffic, and how much unfinished?

Mr. REID: I gave that information at the beginning. Mile 30 is the end of the Quebec and Montmorency and the commencement of the Quebec and Saguenay. From mile 30 to mile 91 is the distance the hon. gentleman mentioned. I stated that from mile 30 to mile 51 the work was upward of ninety-five per cent completed, and according to the statement I have, the road is eighty-seven per cent completed throughout.

Mr. TURRIFF: According to the figures as I have taken them down, something over $5,000,000 has been expended on 62·8 miles, of which the grading is only 87½ per cent completed, with no rails laid, no sta-

tions built, but, I presume, with the bridges built, although I am not sure as to that. Figure that out, and you will find that this road has cost more than completed railways even in difficult parts of the country. I think it would be advisable for the minister to explain where the money has gone.

Mr. REID: I explained that these are the figures given me by the Quebec and Saguenay Railway.

Sir WILFRID LAURIER: Has there been no audit?

Mr. REID: Not by us; but we only agree to pay what it actually cost, up to a certain amount. Perhaps I had better state now what our proposition is, because that will afford me an opportunity to explain an amendment that I shall propose to this Bill when we get into committee. The cost of the Quebec and Montmorency railway, as I stated, was $2,992,209.89. There are bonds on this railway of $2,500,000. We propose, if it is proven to the satisfaction of the Exchequer Court that this money has actually been spent on the road, to assume the $2,500,000 of bonds for the railroad and the terminals.

10 p.m.

Mr. PUGSLEY: About $70,000 a mile.

Mr. REID: If it cost that. The Exchequer Court must be satisfied that the amount has actually gone into the road.

Mr. GRAHAM: Irrespective of whether it is worth it now or not?

Mr. REID: If it is necessary to have this part of the road in order to have the through road from Quebec to Murray Bay and St. Catherine's bay, if it is extended. By taking this road we can reach Quebec city. That is the reason why we require this piece of road, and, as I have stated, it is a paying road. Now, from St. Joachim to Nairn Falls, according to this statement, they have spent $5,533,315. It is with regard to this that I shall propose an amendment, asked for by Judge Cassels of the Exchequer Court, with a view to making it plainer and providing that he may be able to go thoroughly into the matter. I shall propose to add to the Bill the following words:

Said value to be the actual cost of said railways less depreciation, but not to exceed $4,465,000 exclusive of outstanding bonded indebtedness which is to be assumed by the Government, but not to exceed in all $2,500,000.

Mr. NESBIT: That is on the short piece?

Mr. REID: The short piece is the electric road and steam road, which has been earning the amounts I have stated. And even if they can show, as they say they can easily show, that they have expended the amount I have stated, the Judge of the Exchequer Court will not be allowed to exceed $4,465,000, but not that amount unless it is shown that much money has been expended on the Quebec and Saguenay, the Lotbinière and Megantic, and the Quebec and Montmorency.

Mr. PUGSLEY: The amendment seems to rather tie the hands of the Judge of the Exchequer Court, because, while it fixes a low valuation, it makes no provision for a reduction on account of the Dominion subsidy which has been paid. If the minister thinks that the cost ought to be considered instead of the value, ought not the subsidy to be deducted?

Mr. REID: Of that $132,000 has been paid, and $116,000 has not been paid. We propose that they must show that they have actually expended on the three roads $4,465,000 of cash.

Mr. SINCLAIR: Will that include interest on the money that they have invested from year to year?

Mr. PUGSLEY: What I meant was that if he had regard only to the amount actually expended, the judge of the Exchequer Court would not be allowed to deduct the $132,000 which has already been paid by the Dominion by way of subsidy.

Mr. REID: I think the subsidy should be deducted; we can take that up in committee. The Quebec and Saguenay state that they have expended $5,333,315 less the subsidy of $116,000, leaving $5,217,315. Hon. gentlemen can see that if we put in the words "actual cost" without limiting the amount, we would have to pay the $5,300,000. Replying to the hon. member for Guysborough, I may say that during the construction of a road interest is always added to the cost of construction until the road is completed.

Mr. SINCLAIR: At what rate?

Mr. REID: I do not know what the rate is. I can easily have that information when we are in committee.

Mr. TURRIFF: One of these roads, the Quebec and Saguenay, stopped construction in September, 1911.

Mr. GRAHAM: It synchronized.

Mr. TURRIFF: Yes, it synchronized with the defeat of reciprocity. According to what my hon. friend says now, he would propose to pay interest from the time the road began construction up to the present moment.

Mr. REID: No, I said during construction, until the road was completed.

Mr. TURRIFF: My hon. friend talks about paying the cost of the road. Does he mean that whatever statement the present owners of the road put in as the cost of the road would be accepted, or does he mean that the cost would be based upon what it could have been built for? This road may have been built, for all we know, along the same lines as the Canadian Northern was built. Certain men who owned the road taking the contract and switching it to 25 or 30 per cent of the money they were getting for building the road, thus making private profit.

Mr. REID: Tenders were made and contracts let; the prices must have been reasonable, because some of the contractors failed with the work and other contractors had to take it up and complete it. The amount that is to be paid is the amount that actually went into the road, the right of way, and terminals. The judge of the Exchequer Court is the man to decide whether the statements submitted to him are correct as to the money expended on this railway. No person will put in accounts by which there will be any money made out of this transaction. The information I have is that these lines will serve quite a population in that locality. I am informed that in the county of Charlevoix there are 22,000 people without railway accommodation. This line enters the county of Chicoutimi and Saguenay and will be of service to a number of people in that district. The population of that county is some 65,000, as shown by the census. It will serve the county of Montmorency, which has a population of 15,000, and it will be of benefit to the city of Quebec, the population of which is about 90,000. It will also be of benefit to the people in Quebec county, of which the population is 27,000. My view is that this road will be of considerable benefit to the people along the north shore, who should have had railway accommodation before this. Part of this road has been in operation for many years and has been of great benefit to those who have had the advantage of that operation, as is shown by the earnings that I have given. The line from the end of Quebec and Montmorency to Murray Bay, will, I believe, have good earning power. Very many people go down to Murray Bay and along the north shore during the summer. A great many people, many of them farmers, live along that route, and to them this line will be of great benefit. I discussed this matter with our railway management, and they believe that the road will be quite an advantage to our transcontinental system. Having regard to all the conditions, I have no hesitation in recommending that this road be purchased and put in operation at the earliest possible date.

Sir WILFRID LAURIER: What about the railway on the south shore?

Mr. REID: There is a short line, about 30 miles in length.

Mr. PUGSLEY: Is that a branch of the Intercolonial?

Mr. REID: Yes, it is a branch line of the Intercolonial, it is on the south side.

Mr. GRAHAM: It is not a branch line yet.

Mr. REID: It will be when we acquire it.

Mr. PUGSLEY: What I mean is, does it connect with the Intercolonial?

Mr. REID: Yes. As I have shown, the earnings are not very large, but they are on the right side, and this line will be a feeder to the Intercolonial.

Mr. PUGSLEY: Why does not the minister allow that to come under the statute of 1915, which provides for taking over branch lines of the Intercolonial?

Mr. REID: Even if we did take it over under the Branch Lines Act, we would have to come to Parliament and have the transaction confirmed; therefore we might just as well bring it in now and include it in this legislation. We are really bringing it in under the legislation to which my hon. friend refers, and confirming it at the same time. As this line connects with the Intercolonial, we could have brought it in under the branch line legislation, as the hon. member suggests, but we would have to come to Parliament for the other two lines in any case. The Prime Minister assured the House that if any roads were taken over under that Act which were not in connection with the Intercolonial, he would come to Parliament and have the acquiring of them confirmed as we are doing.

Mr. PUGSLEY: The road on the south side of the St. Lawrence does not come within the minister's promise to my right hon. friend the leader of the Opposition, because that would come under the statute of 1915. By this Bill the minister is making an entirely different provision. Under the Act of 1915, an agreement had been come to as to the price; but here he is providing that these two roads shall be picked out, an exception made in their case, and the price to be paid is to be fixed by the Exchequer Court. Whether or not the Government may deem that price to be reasonable, they will be bound to pay. That is the difference, and I think it is very exceptional and favourable treatment that is being afforded to these two roads as compared with the roads enumerated in the statute of 1915.

Mr. REID: Of course we could do as the hon. gentleman says; but this is just as convenient and I cannot see that it is not in the interest of the Government to do it in this way.

Mr McKENZIE: Does the minister not see that he is simply appointing another commission? It is this pernicious practice of appointing commissions; he is making the Exchequer Court a commission. Is it not possible for the minister to bargain for anything?

Mr. REID: It is not fair for the hon. gentleman to make that statement. The Exchequer Court was organized for the purpose of settling any claim that any person might have against the Government, or to adjust matters if the Government is purchasing.

Mr. McKENZIE: The minister need not explain to me what the Exchequer Court is; I know that quite well.

Mr. REID: If the hon. member knows, it is not fair to make the statement he has made. I believe that every hon. member in this House will be satisfied that, whatever decision the Exchequer Court makes in connection with these roads or any other matters that may come before the court.

Mr. GRAHAM: But you tie up the Exchequer Court with conditions.

Mr REID: Only in so far as the maximum amount to be paid is concerned; and I think it is right, in the interests of the Government to do so, because we say that the actual cost is not to exceed a certain amount. The statement is made to the Government that there has been a very much larger amount than this expended on the road, and for that reason we say: We will limit the amount to this maximum. If, when the statements are put before the judge of the Exchequer Court, he is of the opinion that there has not been this amount expended on these roads, then he has power to fix a lower price. That is the reason we limit the maximum.

Sir WILFRID LAURIER: Has my hon. friend taken any steps to verify the figures given to him of how much has been put into the road? He says it has been stated that more than this amount has been put into it. I presume that statement has been made by the company, that they have expended more than appears. Has any audit been made, and have these figures been verified?

Mr. REID: No, we have not gone that far because we have the figures showing what has been paid. We feel perfectly satisfied that, as the whole matter has to come before the Exchequer Court, the court will take good care to see that that amount has actually been expended or has gone into the road; and for that reason it would hardly be necessary for us to go that far. We have confidence in the Exchequer Court carrying out the provisions of the Act.

Mr. GRAHAM: The Exchequer Court, to put it shortly, was established to decide claims of contractors. A contractor does not go to the Exchequer Court and say: I spent so much. The Exchequer Court decides certain disputes under his contract. If the Government were expropriating a building, the Exchequer Court would decide what the building was worth, not what it cost for its construction, although that might be an element in the evidence. What I mean by tying up the Court is that the Government is compelling it to take what was put into the road as a basis, even if one-half of what was put into it has floated away. Suppose the road had been constructed, and a million dollars worth of it had been washed away.

Mr. REID: They have got to reproduce it.

Mr. GRAHAM: That is all right. My hon. friend ties up the Exchequer Court to give a decision based on the amount that was invested. Unless in their judgment value was received for that investment, the basis is no good at all. Suppose the road were extravagantly built, supposing, for reasons that occur sometimes in railway construction, it cost the company one

million dollars and they got value for only one-half a million dollars, there is no provision made for an allowance for that in the Exchequer Court. The judge must take into account what they expended. The basis ought to be the value of the work that is there, no matter what it cost. That, I think, would be the simple way. The Exchequer Court should not be tied up as is here proposed.

Mr. MORPHY: Does the hon. member mean the value based upon the cost at the time of construction, or what, if it were constructed to-day, that same work would be worth?

Mr. GRAHAM: The judge ought to have full liberty to take everything into consideration.

Mr. MORPHY: Then you are opening it up to a dangerous point.

Mr. GRAHAM: If the Government is going to pay the value and no more or less, the judge ought to be the one to determine what the value is. If you take the road as a going concern—my hon. friend need not be alarmed—portions of it have a high value. I am pointing out that the minister is tying up the Exchequer Court on a certain basis on which the court will bring in its findings, and that is not a correct basis; it ought to be the value of the property at present, no matter what it cost.

Mr. MORPHY: My idea is that the present value might be a great deal more than its cost when constructed; and if it is opened up in that way, the country may pay a great deal more than the money put in to build the road.

Mr. GRAHAM: I can assure my hon. friend that will not be the case.

Mr. SPEAKER: I wish to remind hon. members that the question before the House is the second reading of the Bill.

Mr. MEIGHEN: I think I appreciate the point raised by the hon. member for South Renfrew (Mr. Graham). His contention is that no special limit should be placed upon the Exchequer Court in determining the value; that the Exchequer Court should be governed by the same conditions as it is governed by in other matters when values come before it for determination. It is well known that, under the law governing expropriations, the Exchequer Court considers the various elements, all in varying degree, depending on the case that happens to be before it; sums those elements up and reaches a valuation. What these elements are and what the law is, there is no need to dilate upon; it is well known to hon. gentlemen opposite. If in this case no basis were provided for the Exchequer Court, it would be difficult, if not indeed impossible, to arrive at a determination. As the hon. minister has stated, the intimation that a basis of value would be desirable came from the Exchequer Court itself. I can quite understand why such an intimation should come in this case. Ordinarily the basis of allowance by an Exchequer Court, or indeed by any court, on an expropriation, is the damage done to the parties from whom the property is expropriated, and the damage would be the value of the property to that party; the loss he suffers by its severance from him and by its being taken to become the property of the expropriator. It naturally would appear to the judge of the Exchequer Court that in this case it would be very difficult to have any means of arriving at a basis where all these elements would come in. Here is a road for example, the Quebec and Saguenay, 62·8 miles, which runs through a country yet unprovided with railways, which has been built at a very great expense on account of the character of the country through which it runs. That railway if it were completed, would serve a certain population that exists there to-day. I do not know how the value of that railway could be estimated. It is a matter of potentiality. It is a matter of estimating the future, of estimating, not only the conditions that prevail now, while the railway is in embryo, but of estimating what may be the prospects of the road as conditions develop by the operation of the railway itself. It may be that the railway handled by the company in whose hands it is, would be a losing proposition for a time. One man might say that it would be a losing proposition always; another might say differently. There would be nothing of a tangible nature to go upon, because it is a matter, not of existing conditions, but of potentialities that are buried in the nature of the conditions themselves.

Mr. McKENZIE: I understand that we are not expropriating this railway, but taking over the road for what it may be worth?

Mr. MEIGHEN: Yes.

Mr. McKENZIE: It is not in the nature of an expropriation but of a purchase?

Mr. MEIGHEN: That is true in one sense. While I am on the point, I may answer the hon. gentleman in full. The Act of 1915, under which we are empowered to act, gives the minister the power to take over a road, and under a clause in that Act, he may exercise all the powers of expropriation. That power is given in a clause on the second page of the Act, if my hon. friend will turn it up. The minister is not required to exercise the powers of expropriation, but he has the powers of expropriation vested in him by that statute.

Mr. McKENZIE: You are not going to exercise them here?

Mr. MEIGHEN: Oh, yes; we will have the power to exercise them as soon as this Bill passes, because we take the roads under the provisions "of an Act to amend the Government Railways Act and to authorize the purchase of certain railways." Taking the road under that, we get the powers of that Act, and we would be able to exercise the power of expropriation. But whether we choose to exercise it or not, or whether we choose to make an agreement by way of purchase with the necessary provisions for the protection of the Government, and then refer that agreement, either under the Act of this session, or simply under this Act, the course before the Exchequer Court would be to determine the value of the road, the value of what we get, and under the very peculiar circumstances that prevail here, expropriating a railway, part of which is only a railway in embryo, the ordinary rules would be very difficult, indeed, of application. Consequently, it appeared to the judge of that court that a basis of valuation was essential.

Before I deal with the method of arriving at a basis, I may say that the words I have used so far apply pretty accurately, also, to the first thirty miles of the Montmorency and Charlevoix road. That road also has a certain value now. But it may have a much greater value when the addition is completed, the Quebec and Saguenay railway, which connects it up with Nairn Falls. It may have an added value by virtue of the possibility of the extension of that line to St. Catherines Bay, which is claimed to be a winter port.

Mr. TURRIFF: No.

Mr. MEIGHEN: I said what is claimed to be a winter port; I am not giving a decision, because I have not the evidence of my own judgment on that matter which the hon. member for Assiniboia apparently has.

Mr. TURRIFF: I lived until I was grown up 100 miles east of that point on the St. Lawrence river, where you could not see across the river, and there was no winter port there, but solid ice all the winter through.

Mr. MEIGHEN: It may be a long time since my hon. friend was there.

Mr. TURRIFF: It is a long time, about forty years.

Mr. MEIGHEN: Conditions might have changed.

Sir WILFRID LAURIER: Would it not be well to ascertain whether conditions have changed?

Mr. MEIGHEN: It would be before we build the road. We are not holding out the prospect of building it yet. What the hon. member has said only illustrates and emphasizes the point I am making, the very great difference of opinion as to prospects. There would be nothing substantial and tangible upon which the Exchequer Court could proceed in estimating the value of a potentiality like that.

Mr. TURRIFF: You could trust the judge.

Mr. MEIGHEN: We do trust the judge? That is what we are asking the House to do, and the judge asks that Parliament fix a basis, and we propose to trust his judgment in making that request.

Mr. SINCLAIR: How is the amount arrived at?

Mr. MEIGHEN: I will explain that. In arriving at a basis, in getting at something that would be a basis, we had in mind these considerations: The road has been built by a private company. It was intended to be built for gain. The presumption is that they would build it to the best advantage; consequently, it would be clear that even under ordinary conditions the actual cost of the road, not necessarily the bonded indebtedness, but the actual money that was translated into the road would be a very important consideration to the judge. However, the fact also appeared that this part of the road had been constructed for some time, and there would be depreciation, and we knew by virtue of our own officers' reports that there would be wash-

outs and the like. Consequently, it was essential that depreciation should be taken off. I think it also right that the subsidies should be taken off, and the actual money that went in, and is now buried in the road, less that depreciation and less the subsidies, would be the value.

Mr. NESBITT: The depreciation for wear and tear during the time the road was lying idle.

Mr. MEIGHEN: There is tear perhaps, but not wear, because the road has not been used. As to the way the amount is fixed, that is the amount they offer the road at, but not having proof, and not wishing to assume the responsibility of saying that that amount of money has gone into the road, and that there is not sufficient depreciation to make it less than that now, we refer that to the Exchequer Court; but we put a limitation because we do not wish the amount to exceed that at which the company are ready now to dispose of it. I think that that answers all the questions which have been raised.

Mr. PUGSLEY: I have been looking over the amendment which the Acting Minister of Railways said he would propose, and I would like to know whether it applies to the whole three railroads or to the first two only.

Mr. REID: To the three.

Mr. PUGSLEY: Let me read the amendment.

Mr. MEIGHEN: I have seen it.

Mr. PUGSLEY: It strikes me as very peculiar. (Reads):

> The said value to be the actual cost of said railways less depreciation, but not to exceed $4,465,000, exclusive of outstanding bonded indebtedness which is to be assumed by the Government, but not to exceed in all $2,500,000.

That is, the value of the three railroads should be fixed by the Exchequer Court, but it is not to exceed $6,965,000. That applies to the three railroads?

Mr. MEIGHEN: Yes.

Mr. PUGSLEY: Are they all owned by the same company?

Mr. MEIGHEN: Yes.

Mr. PUGSLEY: They seem to be separate corporations.

Mr. MEIGHEN: I would not like to get involved in a discussion as to title, because it is very involved, I can assure the hon. gentleman; but the stock, I understand, is pretty much controlled by the same company, and the intention is that the value of the whole three railroads shall be arrived at by that process. The $2,500,000 are long distance bonds at a low rate of interest, which, I understand, there is no object at all in paying off. They will stand against the Montmorency and Charlevoix Railway. The whole valuation will be taken, and the equity in the whole, over and above that $2,500,000, must not exceed $4,465,000.

Mr. PUGSLEY: I have no objection to urge against the Government acquiring these railways, because I have not sufficient knowledge of the country, or of the railways themselves, to enable me to express an opinion. Therefore, I do not wish to be understood as opposing the acquisition of these railways. That is a matter in regard to which, as far as I am concerned, the Government must be answerable to the House. But one thing that seems to me to require explanation is why this mode of taking over the roads has been adopted. It differs very materialy from the provision made by Parliament in the year 1915 for the taking over of branch lines for the Intercolonial. In that Act it is provided that no branch line shall be taken over unless in the opinion of the minister it can "more conveniently and usefully be operated as a part of the Government Railway system, or which might be deemed necessary or desirable for the more efficient operation of the said system." The Government could not take over any branch line of the Intercolonial unless in the minister's opinion it fulfilled either one or the other of these conditions. But in this case Parliament is asked expressly to authorize the minister to acquire these three roads with the approval of the Governor General in Council.

There is another very great distinction. In the Act of 1915 the purchase is to be a matter of bargain between the Government and the railway company. In this case the Government seems to abdicate altogether its function of determining the price which it will pay to these companies, it being provided that the Government shall pay whatever the Judge of the Exchequer Court might deem a proper amount. And this amendment absolutely ties the hands of the Judge of the Exchequer Court by providing that he shall be bound to allow the actual cost of the railways less depreciation.

Mr. REID: Not the actual cost.

Mr. PUGSLEY: Yes, it says so.

Mr. REID: A maximum amount is fixed.

Mr. PUGSLEY: But not exceeding so much. It does not give the judge of the Exchequer Court or the Government any discretion to take the roads over at a price which it would be reasonable for the Government to pay. In that respect it is different from the Act of 1915, which leaves the discretion entirely to the judgment of the Governor in Council. We know very well that there may be many railroads—we have some in New Brunswick—whose owners would be delighted to get one-half the actual amounts which those roads cost. It is perfectly well understood that the Government had no intention of paying what the roads cost, but would insist on getting them at a valuation which would be likely in the not distant future to yield at all events some return, even though it might be small, on the money invested by the Government. For some reason the Government is making a departure from the Act of 1915 and is specifying that so long as the actual cost of these roads, outside of the bonded indebtedness, does not exceed $4,466,000 the judge of the Exchequer Court shall be bound to allow that amount, even though the roads may cost twice as much as might have been reasonably and necessarily expended on the construction, and even the condition of the roads may be such as to require the expenditure of a very large amount of money to put them in a reasonably fit condition for traffic. I think some explanation should be given why the Government is departing from the provisions of the Act of 1915. It does seem to me that if the Government is going to leave this matter to the Exchequer Court it should at all events provide that the amount should not exceed the actual reasonable and necessary cost of the construction of the lines. Those are the words which Parliament has adopted in reference to subsidies. As you are aware, Mr. Speaker, Parliament provides that where the cost of a railroad exceeds $15,000 per mile the Government may grant an additional subsidy upon the cost of the road up to $21,000, so as to allow of a subsidy of $6,400 a mile being granted. Parliament does not allow that increased subsidy to be given on the actual cost, but stipulates that it shall only be given on the actual, reasonable and necessary cost of the construction of the line. It does seem to me that if the gentlemen who own these roads are desirous of getting rid of them, or of transferring to the Government the burden of completing and operating them, they ought to be satisfied to take what the Judge of the Exchequer Court would deem to be the actual, reasonable and necessary cost of construction. That I think would be a reasonable proposition to make. My contention, therefore, is that the Government, instead of coming down here with a separate Bill providing in respect of these roads provisions entirely different from those which obtain in the Branch Lines Act of 1915, should have amended that Act of 1915 to make it apply to branch lines of the Transcontinental as well. That would have been a simple proposition. While I am on my feet I desire, with all due respect, and in all kindness, to say to the Minister of Railways that there will be a very strong feeling of disappointment among the people of the province from which I come that, before carrying out the provisions of the Act of 1915, which provides for the taking over of branch lines of the Intercolonial, the Government is bringing down now a provision for the taking over of two new lines which were not contemplated by Parliament at that time, and with respect to the taking over of which no provision was made. I wish my hon. friend the Minister of Marine and Fisheries was in his place. He ought to be as deeply interested in this matter as I am, for his constituents are very deeply interested in this question. As long ago as the year 1911, before the general electins, the hon. member for Kings and Albert (Mr. Fowler) sent a hurried S.O.S. call from St. John or Sussex to the then leader of the Opposition, now the Prime Minister, and who was then in Charlottetown, asking in most pressing terms for the views of the right hon. gentleman with regard to the taking over of branch lines of the Intercolonial. It is stated that it was the policy of the Conservative party to take over all those branch lines of the Intercolonial which could be operated to advantage in connection with the Intercolonial. In New Brunswick, there are quite a number of branch lines, the taking over of which has been agitated for a good many years, and the people in the various counties interested were delighted to receive from the then leader of the Opposition that assurance which was published broadcast in the Conservative newspapers and which, no doubt, had a very reassuring effect upon the people. Hon. gentlemen can realize how much it would influence the people of the constituencies interested in

voting in favour of the hon. member for Kings and Albert (Mr. Fowler) and other Conservative candidates. There is a railroad running from Hampton to St. Martins, only some thirty miles in length. There is a railway in York county known as the York and Carleton railway. There is a railway in Kings county known as the Elgin, Petit Codiac and Havelock railway. There is another railway called the Harvey and Salisbury railway. There is another railway known as the Moncton and Buctouche railway, and another from Kent Junction to Richibucto known as the Northern railway.

Mr. REID: Those are all old timers.

Mr. PUGSLEY: There is one from Bathurst to Tracadie in the county of Gloucester; and there are also some in Nova Scotia and some in Quebec. The people interested have been looking for years for the taking over of those branch lines. What I complain of is that these pre-election promises should be regarded just as the Kaiser regarded the treaty which it was thought would preserve the neutrality of Belgium, that is, that they should be regarded as mere scraps of paper which the Conservative party could break at will. I am sorry the hon. member for Kings and Albert and also the Minister of Marine and Fisheries are not here, because their constituencies are interested in this question. They felt that before entering upon new engagements, these old, timeworn promises of the Conservative party ought to be carried out. The taking over of all these branch lines that I have mentioned would not cost anything like the amount which it is proposed to expend on these three railroads which are mentioned in the Bill before the House to-night.

Before I take my seat I want to call attention to the extraordinary statement which my hon. friend the Solicitor General has made to-night, that this amendment is made at the suggestion of the judge of the Exchequer Court. Let me ask how it is that the judge of the Exchequer Court would make a suggestion of that kind before such a Bill is passed, before any proceedings are taken or could by any possibility have been taken in the Exchequer Court. How is it that he could make a suggestion as to the amendment to be made in this Bill and that the Government is not acting upon its own judgment, but upon a suggestion made by that judge? Perhaps the Solicitor General will enlighten us on that?

Mr. MEIGHEN: Perhaps we had better get into committee, as I have already spoken.

Mr. PUGSLEY: I would not like my hon. friend to get out of order, because that would be bad. Not many days ago the Minister of Justice told the House that in his opinion it would be quite impossible for Parliament to constitute this Royal Commission presided over by Chief Justice Meredith and Mr. Justice Duff into a court which would enable them to make inquiries and to issue commissions for the purpose of making inquiries. Almost at the very time that the minister was making that statement, there either stood upon the Order Paper, or had been been passed, a Bill which provided that this Exchequer Court, without having any expropriation proceedings before it, might make inquiries as to the value of property which the Government might think of buying or selling. None of us thought at that time of the purpose for which that Bill was introduced. It appears now that it was introduced and that it has been passed for the very purpose of enabling values to be placed upon those railways which the House is being called upon to consider to-night. I have no doubt whatever that the action of the Minister of Justice, in proposing that Bill to the House and having it passed, has been in anticipation of the railroad legislation which we are now being called upon to consider. It may be, of course, that the attention of the judge of the Exchequer Court was called to that Bill when it passed, and possibly that may be the explanation why he has given this information to my hon. friend.

Mr. REID: That was not it at all.

Mr. PUGSLEY: I can certainly conceive of no other explanation of the judge of the Exchequer Court obtruding his views upon the Government before any question relating to the subject had come before him. There are no expropriation proceedings before him; there is no intimation; there is no proceeding of any kind or description, and there could be no proceedings of any kind or description before the judge of the Exchequer Court which would justify or explain his making any intimation to the Government, and I can only imagine it is done because the previous Act which has been passed by this Parliament at the instance of the hon. Minister of Justice has been brought to his attention and he has been informed that it was intended to act

with regard to these railways. That would be an explanation why this amendment has been suggested. I can think of no other.

Hon. T. CHASE CASGRAIN (Postmaster General): As two of these railways run through a country with which I am tolerably familiar, I think it is incumbent upon me to give a few words of explanation to the House. As to the railway which runs from St. Jean des Chaillons on the St. Lawrence to Lyster on the Grand Trunk and further north to the intersection of the Intercolonial, I am not so familiar. It runs through the county of Lotbinière and also through a part of the county of Megantic. For the most part it runs through very good timber land, and I have no doubt that if it is properly managed and operated, it will prove a good feeder for the Intercolonial.

I am more familiar with the topography of the country through which the other two railways run. The old Quebec and Montmorency railway runs from Quebec to St. Joachim, through part of the county of Quebec and through part of the county of Montmorency, my old constituency. This runs through parishes which are prosperous and uniformly populous, through what is known as La Côte Beaupré. There is practically one continuous village from the station at Quebec down to St. Joachim.

Mr. PUGSLEY: Is that the electric railway that runs down to Montmorency Falls?

Mr. CASGRAIN: Yes; that railway passes first through the parish of Beauport which is a very prosperous parish in the county of Quebec.

Mr. TURRIFF: Who operates the road at present?

Mr. CASGRAIN: The Quebec Railway, Light, Heat and Power Company, which holds the Quebec street railway also, and which, I believe, is the holding company for this other company, the Lotbinière and Megantic. It then passes through a parish named St. Grégoire below Montmorency falls. It also has a line on the ridge which runs to the upper part of Beauport three or four miles from Quebec, to the Kent House at the Falls. The lower line, after leaving the parish of St. Grégoire, runs through the populous parish of L'Ange Gardien, and through the large parish of Chateau Richer, thence to and through the town of Ste. Anne de Beaupré, where, as hon. members are aware, there is a famous shrine, to which thousands of pilgrims go every year, especially in the summer. It then runs through the parish of St. Joachim which is the terminus of the old Quebec and Montmorency railway. From this the line proceeds to Petite Rivière St. François, through a country that is sparsely populated and most difficult for railway construction, on account of its mountainous character, but coming down to this parish of Petite Rivière St. François, there are two populous parishes on the brow of the hill—St. Tite, which is a mile and a half from the river, and St. Féréol three miles from St. Tite. These must have a population combined of 3,000. There is a considerably wooded country there, and no doubt if the railway is run through the region it will have quite a freight as well as a passenger business. Then, from the parish of Petite Rivière St. François we go on to the populous parish of Baie St. Paul with from 2,500 to 3,000 population, including the parish of St. Urbain. Then, passing along the shore of the St. Lawrence, we come to Les Eboulements and St. Irénée, famous watering places, and then to Murray Bay. This place has been known for many years as a famous watering place and its reputation is increasing every year. I have no doubt that if a railway were run to that point, there would be traffic along the line in lumber and timber; while at Baie St. Paul and also at Murray Bay there would be industries of various kinds.

Mr. NESBITT: What kind of timber is it?

Mr. CASGRAIN: Pulpwood, there are large quantities of it. This country has never been provided with railway communication. A combined railway and steamer route was established some
11 p.m. years ago by which Murray Bay could be reached. At great expense the Government built a spur line from the Intercolonial railway from St. Pacôme to Rivière Ouelle, where communication is maintained with Murray Bay for six months in the year; but for the other six months communication is greatly interrupted by the ice, the winds, and the snow storms on the St. Lawrence. So this population is almost completely deprived of any communication except by stage coach with the city of Quebec. It seems to me that we can profit by the experience gained by the building of the Lake St. John railway. The climate, soil and general characteristics of the country through which this line of railway will run may be compared with that served by the Lake St. John railway. Before the railway was built to Lake St. John there was only 10,000 of a population in that region. There is to-day a population of

almost 100,000, and when I was up there last summer I was surprised at the statistics handed to me showing the exports from that region—cereals, dead meat, cattle, and all kinds of farm products. It is now a rich country, and hon. members will be surprised to find in that northern part of the province so rich a region. There is no reason why the same development should not take place in the region to be served by the railway which it is proposed to purchase if this Bill goes through. A great deal of money has been spent in the construction of the railway from St. Joachim to Murray Bay, and the line has been to a great extent ballasted, and was at one time ready for the rails. Vast sums of money have been expended on this enterprise. When one takes into consideration the fact that this part of the country has always been deprived of railroad communication, why should we not conclude that it is time that the population of the north shore of the St. Lawrence should have the same measure of assistance that other parts of the country have received? There has been a question as to the amendment proposed by the Minister of Railways. It seems to me that the proper time for discussing the meaning of that amendment is when the Bill is in Committee of the Whole. I have no objection, of course, to the very enlightening observations made by hon. gentlemen opposite, especially those of my hon. friend from St. John (Mr. Pugsley). But, if I am not mistaken, the suggestion of the amendment came because a case of this kind had been before the Exchequer Court, and it was found necessary to put wording of this kind into the Bill to meet difficulties such as were encountered in that case. I have forgotten at the moment the name of that case. The amount to be paid is to be an amount ascertained after full investigation by the Exchequer Court. This is the security which the Government gives to the country that no fanciful amount will be paid for the railway, but only its real value to the country. The Bill should go to the committee and then we can discuss more completely and with fuller information the wording of the amendment proposed.

Mr. ROBB: I desire to point out one feature of this proposal which strikes me, and that is that the Government seem to have no confidence in their own administration. This evening the Minister of Railways asked for and obtained a vote of $150,000 to provide the expense of a commission to inquire into the railway situation, and the Minister of Finance made a very pressing speech, and gave to the House the impression that the Government were considering the nationalization of all railways in Canada. Scarcely had this $150,000 been voted to inquire into the railway situation in Canada when the Acting Minister of Railways asked for the passage of a Bill to acquire three railways. Is it because he lacked confidence in the commission that is to be appointed? It seems to me that the logical, business way of going about this would be to await the report of the proposed commission so that we should have full information concerning these railways which we propose taking over, as to their earning value, the country through which they are going, and so on, and be in a position to decide whether or not it would be profitable for Canada to take them over and hitch them up with the Government railway system. I submit that for the consideration of the acting minister.

Mr. CASGRAIN: I wish to correct some statistics I gave a moment ago concerning Baie St. Paul. I said that the population aggregated about 3,000. I am told that the aggregate population of the town and parish of Baie St. Paul is now over 5,000.

Mr. OLIVER: We have been discussing the railroad situation in Canada for a couple of days. We have had before us the question of the two transcontinental railways. We have had information to the effect that the resources of Canada are being strained to the limit in the effort to carry these enterprises to completion and over the present difficult financial situation of the country. Every suggestion that has been made as to the lack of satisfactory character in the proposals of the Government with regard to those railroads has been met by the assertion that the country could not afford more money; that the financial resources of the country were being strained to the limit to meet the needs of these great enterprises in which the whole credit of the country and its future welfare was involved. As my hon. friend the member for Huntingdon said a few moments ago, just as soon as these two proposals were adopted, the Acting Minister of Railways comes forward with a proposition which would argue that Canada had money to throw to the birds; that there was no lack of money in Canada for railroad propositions. A proposal is

being submitted to Parliament to-day such as never was submitted before in the history of this country. Nothing was ever submitted that would approach this proposition in its character, and certainly the country never was in such a condition as it is to-day, so ill prepared to deal with a proposal of this kind. We have no money to adjust matters with the Grand Trunk or with the Canadian Northern that would enable the traffic of this country to be carried, but we have $4,500,000 that we can pay out in cash, we will assume $2,500,000 of bonds and we will be prepared to spend anything from $1,000,000 to $5,000,000 in cash in respect of a railroad of the length of 135 miles. That of itself is a very fair order, but when we remember that of the 135 miles of railroad that is proposed to be dealt with, 30 miles has been completed for I do not know how long, is in operation, is serving the purpose for which it was built, has no connection with the other railroad with which it is associated, has no legitimate claim upon this country, we must come to the conclusion that there is no reason in the world why this railroad should be taken over by the country except that at the present time presumably it does not earn interest on its bonds and the owners deem it desirable that the country should assume the responsibility of paying that shortage of interest. The same condition applies to a portion at any rate, if not the whole of the Quebec and Montmorency railroad, a railroad which has been in operation for years, doing a large business, paying its operating expenses with some surplus, but not enough to pay interest on its bonds. This railroad has no claim whatever on the country in any shape, form or manner except the claim that the owners of the property desire this country to pay for them that which they are not able to earn and pay for themselves. I submit, Mr. Speaker, that no such proposal was ever brought before the Parliament of Canada as in the cases that I have mentioned, the Lotbinière railway and the Quebec and Montmorency railway. The lines are completed, the country has no responsibility, whatever in respect of them; they are in operation. We are asked, at a time when money is more needed than ever it was before, for more urgent purposes than it ever was required before, to hand out millions for the purpose simply of relieving the proprietors of these two properties of the losses of interest which they are carrying at the present time.

There is also a demand that we shall assume responsibility for completion of 62 miles of uncompleted road of the Quebec and Saguenay line. This road is partially completed; grading is done, I understand, to the extent of 85 per cent. We are to pay for this work that has been done, and by so doing we are assuming the responsibility for completing the enterprise whatever the cost may be. While the Acting Minister of Railways suggested that the road was 85 per cent completed and that $1,000,000 would be necessary to complete the 60 odd miles, it has been suggested to me that $2,000,000 or $3,000,000 would be very much nearer the requirement to secure completion of the line. The Postmaster General has put before the House the claims of the people who are living along the line of these two railroads. He has stated their numbers. He has given, I presume, the most favourable facts with regard to their requirements. We do not need to discuss the railroad situation there. No doubt the people of that locality desire railroad communication. No doubt they need railroad communication; no doubt railroad communication would be vastly to their advantage. But there are throughout this broad Dominion thousands of instances where an equal number of people are needing railroad communication just as much as these people are, and where that railroad communication would not cost a fraction of what it will cost in this case.

Then, let it be remembered that these people who will benefit by the construction of this railroad have, during the whole summer season, the advantage of deep water navigation along the whole line. That is to say, they are not at all in the same position as the people living on the St. John railway line. That country was altogether isolated from communication until the St. John railway was built. These people are living along the shores of the St. Lawrence and they have boat communication all season long. So, while they are under a disadvantage during the winter, they are not at all in the same position as people dwelling in an inland locality who have not the advantage of river navigation. The amount of traffic that is to be carried by this railroad, supposing it is completed, has not been represented by the Postmaster General. It may be large; but I submit that the fact that neither of the two completed railroad sections included in the pro-

position earns interest on its cost of construction, is fair evidence that this extension of one of them would be in exactly the same position, if not in a very much worse position because of the higher cost of construction and the smaller volume of traffic available to support that cost. It seems to me that the Minister of Finance, who is the guardian of the treasury—and no one will say that he is not, under ordinary circumstances, an efficient guardian—should be heard from upon this proposition. He has told us how he has limited the aid to be given by the Government to the two great transcontinental railway enterprises, whose success is of vital importance to every man, woman and child in the Dominion, and while he spoke of having been successful in restricting the amounts they are to receive from the Dominion treasury to the limit before the House, he is a party to the placing before Parliament of a proposal that will, on the face of it, call for more money than the proposal that he brought before this House as regards the Transcontinental railway, and more than half as much as the proposal which he places before this House in regard to the Canadian Northern railway. Where is my hon. friend from Calgary (Mr. Bennett)? Surely he should be heard from on this occasion. Surely if it is unfair to the country and to the Treasury to make these proposed loans to the Grand Trunk Pacific and the Canadian Northern railroad, to serve great national enterprises for great national purposes, it must be a far greater wrong to spend this vast amount of money for the purpose of relieving certain gentlemen, no doubt very creditable gentlemen, no doubt very enterprising gentlemen against whom nothing in the world is to be said. Why should they be relieved of their unfortunate responsibility any more than anybody else? Why should these gentlemen have the preference over every other man and every other enterprise throughout the country that has happened to make miscalculations, or possibly to have fallen on evil days. I think the Minister of Finance and the member for Calgary, and our other friends on the opposite side of the House who have been so insistent on protecting the treasury and the rights and interests of the people of Canada during the past few days, should be heard from very strongly in regard to this proposal, which certainly, I think I am safe in saying, is unique in the history of Canada.

Mr. TURRIFF: My hon. friend the Acting Minister of Railways suggested that we should discuss this matter for an hour. We have now discussed it for almost two hours, and it is half-past eleven. We have received some information, and we have before us certain papers that we have had no opportunity of examining. I would like to look at the map to get some idea of where the roads run. I suggest that we have made as much progress to-night as we can make, and that it would be advisable to adjourn now.

Mr. ROGERS: It is still very early, and we know that this legislation has been practically before the House for some considerable time. It is within the knowledge of the hon. members opposite, and the facts in relation to the location are well known. Surely my hon. friends have all the information they can reasonably require to allow the Bill to go to committee, where we could discuss it in detail.

Mr. TURRIFF: We can discuss it for three hours yet if my hon. friends wish.

Mr. NESBITT: The minister says that we have had it before us and have all the information we can get. The Minister of Railways gave us information that we will be able to see in Hansard and to understand and to grasp more completely than it was possible to do from listening to his remarks. It would be better to adjourn so that we can discuss this more intelligently to-morrow.

Mr. MEIGHEN: Would it not be better to get into committee where the information could be given in a more orderly manner.

Sir WILFRID LAURIER: I am ready to allow the Bill to take its second reading. Not that I want to commit myself to it at all; I want to reserve my judgment. I may say to my hon. friend opposite that the information we have received is very scanty. First of all, it is not treating the House fairly that, within two or three days of the period when we expect to have the blessing of a prorogation a matter of this importance should be brought before us for consideration. The matter should have been submitted for the consideration of the House days before. When the second reading was moved at eight o'clock to-night, the very voluminous correspondence was brought down.

Mr. REID: I brought it down at two o'clock.

Sir WILFRID LAURIER: No one could see it until eight o'clock to-night.

Mr. REID: I handed it in at two o'clock, and it was then before the House.

Mr. PUGSLEY: The clerk took it to his office and nobody knew of it.

Sir WILFRID LAURIER: The clerk took it, and nobody on this side saw it until eight o'clock.

Mr. REID: I explained that when the House opened at two o'clock I handed it in.

Sir WILFRID LAURIER: Does my hon. friend think that is an explanation at all?

Mr. REID: No, I am not saying it is.

Sir WILFRID LAURIER: Very good; then, do not bring it up. I have here the report of some engineers; but I do not see a word of the correspondence that has passed between the company and the Government. We ought to have that correspondence so that we can see the reasons why the Government have been induced to take up that road. I do not imagine that the Government have come to a decision on a matter of this kind without having some facts placed before them by the company. Then we are told by the minister that he had the matter submitted to his engineers or the officials of this department and that they recommended the purchase of the road; that the officers in their report highly approved of it. There is not a word of these reports in the papers that have been brought down. Then the minister has told us that the road is not yet completed, that there are some 16 miles still to finish. There are no specifications of the work to be done; not a word of specification, and before we commit ourselves to the building of the road we ought to have a specification as to its character, as to stations, tracking, and so on. Then there are rivers along that line—I do not know how many, but there are a few—and there is no statement as to whether bridges have been constructed or not. Before we take up the matter again, I think we have the right to expect that all this information will be brought down.

Mr. ROGERS: I fail to see how the right hon. gentleman can undertake to leave to the impression that information has not been brought down, for I think a very considerable amount of information has been submitted, all, I presume, that the officers of the department thought was necessary. However, as my right hon. friend suggests, the Bill can be read a second time, and I can assure him that all the information in the department will be available to him when we reach the committee stage to-morrow. We are desirous of placing before the House all possible information at our disposal because there is nothing at all to hide.

Sir WILFRID LAURIER: The Government is full of good intentions, but lacking in execution.

Motion agreed to, and Bill read the second time.

Sir WILFRID LAURIER: Before we pass from that matter, I am informed, and I think it is a fact, that no work has been done on the Quebec and Saguenay railway for the last four years.

Mr. REID: Since 1912, I am informed.

Sir WILFRID LAURIER: I am informed also that a section of the line has been very much damaged in consequence, and I see no statement as to the damage. We ought to have that also.

Mr. PUGSLEY: I think there is a statement of what it would cost to bring it up to what it was before.

Mr. REID: I think there is a lot of information, which the right hon. gentleman said had not been submitted, in the report of Mr. Beckwith, the engineer, who went thoroughly into the whole matter in November, last year. A statement with reference to bridges and other matters will be found in that report.

Mr. PUGSLEY: It seems to me that the minister might favourably consider a provision that the judge of the Exchequer Court should deduct from the actual cost the damage which has been done by reason of the road lying idle, and what it would cost to bring it up to what it was before.

Mr. MEIGHEN: That is in the amendment.

Mr. REID: It says in the amendment "less depreciation."

Mr. PUGSLEY: Does the minister think that that would cover it?

Mr. MEIGHEN: That is what is intended.

Mr. TURRIFF: I would ask that the Minister of Railways be prepared to-morrow to give some reason why, after

having had its own engineers go over the road and make valuations, the Government is not dealing with the matter directly, instead of submitting it to the Exchequer Court.

PARLIAMENT BUILDINGS FIRE.

Mr. ROGERS: I beg to lay on the table of the House the report of the commission appointed to investigate the Parliament Buildings fire in February, 1916, together with the evidence.

On the motion of Mr. Rogers, the House adjourned at 11.31 p.m.

Tuesday, May 16, 1916.

The House met at Two o'clock, the Speaker in the Chair.

REPORT PRESENTED.

Telegraph statistics for the year ended June 30, 1915.—Hon. J. D. Reid.

DAYLIGHT SAVING.

On the Orders of the Day:

Mr. MACDONALD: I am desired by prominent gentlemen in Nova Scotia who are interested in the question of daylight saving to ask the right hon. the Prime Minister whether the Government have considered the passing of any legislation in regard to this matter. It is pointed out that Great Britain, Denmark, and Sweden have passed such legislation. As the right hon. gentleman is probably aware, in the city of Halifax and some other municipalities in Nova Scotia this has been put into effect.

Sir ROBERT BORDEN: Very few representations have come to the Government on this subject, and we have not yet considered it very fully. It seems that the local authorities, in most of the provinces at least, have the power to deal with it themselves, and if that be the case it may be that the matter had better be left to public opinion in the various localities.

Mr. MACDONALD: The difficulty suggested by those interested in the project is in regard to the official closing of public institutions under the control of the Dominion Government, more particularly in connection with railways, which would not be under the control of the local authorities. It therefore might require Dominion legislation.

[Mr. Turriff.]

Sir ROBERT BORDEN: I am not at all sure that legislation will be necessary, because it may be possible for the departments of the Government, if it is thought desirable, to have regard to the local determination of the matter. However, I shall give my hon. friend's suggestion the best consideration I can between now and the next session.

PROHIBITION OF PAPER EXPORTS.

On the Orders of the Day:

Mr. LEMIEUX: Is the rumour prevailing in Montreal this morning to the effect that the Government intends to pass an Order in Council to prohibit the exportation of paper and pulp to the United States true? I am told that a deputation met the Government yesterday or this morning.

Sir ROBERT BORDEN: It has not been considered, so far as I am aware.

THE DAVIDSON COMMISSION.

APPOINTMENT OF COUNSEL.

On the Orders of the Day:

Sir WILFRID LAURIER: In the absence of my right hon. friend yesterday, I inquired if it was the intention to give the Opposition the privilege of counsel before the Davidson Commission on the charges brought the other day by the hon. member for North Cape Breton and Victoria (Mr. McKenzie).

Sir ROBERT BORDEN: I think it was announced by the Minister of Justice and also by the Minister of Trade and Commerce that if the hon. member for North Cape Breton and Victoria, or my right hon. friend, should desire to be represented by counsel before the Davidson Commission, we would not only suggest, but recommend to Sir Charles Davidson that such counsel be allowed to appear. The position up to the present has been that Mr. John Thompson, K.C., was selected by Sir Charles Davidson to represent the people of Canada before that commission. So far as I am aware, he has discharged his duties with great ability, thoroughness, and impartiality. It may further be observed that he has done so without any remuneration whatever except an ordinary allowance for travelling expenses when he has been absent from the city of Ottawa. He has regarded his work as a patriotic duty. I am informed that Mr. Thompson, in view of the criticism that has been passed upon him in this House, does not feel it consis-

tent with his self respect that he should continue to discharge those duties. It may therefore be necessary for the Government to take some action towards appointing counsel to take his place. So far as counsel to represent the hon. member for North Cape Breton and Victoria is concerned, as I have already said, we shall not only suggest but recommend to Sir Charles Davidson that counsel be allowed to appear.

Sir WILFRID LAURIER: On the same terms as Mr. Johnston?

Sir ROBERT BORDEN: As far as remuneration is concerned? We shall not make any undertaking with regard to that at the present time. I think it should be left for future consideration as was the case in connection with the Tarte-Langevin charges. There was no undertaking in advance, on the part of the Government at that time. The hon. member for North Cape Breton and Victoria undertook at once, in the same motion, to censure the Government and to demand an inquiry. He is at liberty to appear before the commission by his counsel and to proceed as he deems fit. The other question which my right hon. friend raised will be considered afterwards. Possibly some gentleman will be found on the other side who will undertake the duty upon the same terms as those upon which Mr. John Thompson undertook it.

EXTENSION OF TERM OF PARLIAMENT

The Orders of the day:

Sir ROBERT BORDEN (Prime Minister): My right hon. friend made inquiry yesterday during my absence about the joint resolution passed by this House and by the Senate in regard to the extension of Parliament. I have no further information than that which I gave some time ago. The joint resolution of the House and of the Senate went forward from the office of His Royal Highness the Governor General in the ordinary way, very shortly after it was passed. As soon as the revised Hansard was available, containing the debates in both the House of Commons and in the Senate, I despatched them in a letter to Sir George Perley, stating to him that they contained the grounds upon which this House and the Senate had thought it desirable to pass the resolution, and directing him to place that information at the disposal of the Colonial Secretary.

Sir WILFRID LAURIER: Has there been any further communication?

Sir ROBERT BORDEN: I have had no further communication except an acknowledgement from Sir George Perley of my letter, and a statement that the information so afforded would be communicated to the Colonial Secretary. If desired, I shall send a cablegram inquiring as to the present position of the matter.

Sir WILFRID LAURIER: Certainly I think that should be done. We want to know where we are with regard to this matter.

QUEBEC AND SAGUENAY AND LOTBINIERE AND MEGANTIC RAILWAYS.

ACQUISITION OF BRANCH LINES.

On the motion of Hon. J. D. REID (Acting Minister of Railways and Canals), the House went into committee on Bill No. 101, to authorize the acquisition of lines of railway between the city of Quebec and Nairn Falls and between Lyster and St. Jean des Chaillons; Mr. Rhodes in the Chair.

Mr. TURRIFF: In accordance with the arrangement that was made last night, I wish to discuss briefly a matter which is really more connected with the Customs Department than with the Department of Railways.

Mr. REID: The arrangement was that as soon as we got through this Bill the other Estimates would come on, and then we could take up the other matter which has been mentioned.

Mr. TURRIFF: That was not the arrangement, as I understood it. The minister asked if I was ready to go on, and I said I would leave it altogether to the minister whether I would go on last night or this afternoon. It will not take very long to discuss this matter, and I have been waiting now for about two months to do so.

Mr. REID: I wanted to proceed with this Bill last evening and I said that we would get through with the Bill last night and take up the Estimates to-day, and on the Estimates of any department we could take up this matter relating to the Customs Department I never had in mind that we would bring up on a Bill of this kind any matter connected with the Estimates; and I say now that as soon as this Bill is passed we can take up the matter on one of the items in the Estimates still remaining.

Mr. TURRIFF: This Bill may never pass. I do not want the item that I wish to discuss to depend on the passing of this Bill. I have been waiting here, attending closely to the sessions of the House in order to bring the matter up when my hon. friend had his Customs Estimates under consideration; but, unfortunately, although I have been away only two days during this session, I was not here when that item was passed. I have been present here day after day for the last month or so waiting for this item to come up, and I would like it to be taken up now.

Sir ROBERT BORDEN: I hope my hon. friend will see the impossibility of discussing Estimates on a Bill of this kind. Even if this Bill did not pass, the Estimates must pass, and there are some items remaining upon which my hon. friend will be at full liberty to discuss the subject which he has in mind.

Mr. PUGSLEY: With regard to this Bill, I would hope that the Minister of Railways has considered favourably the suggestion that the judge of the Exchequer Court should allow only the actual, reasonable and necessary cost of the railway, less the cost of putting in order the road which has been in a large measure destroyed by non-usage, which cost the engineer estimates at about $350,000, and also less the Dominion subsidies. I think that if the roads are to be taken over, that would be a fair basis on which the judge of the Exchequer Court could determine the amount to be allowed. I stated yesterday the reasons why I thought that the same action should be taken as is taken under the Act of 1915; but, if some basis of value is to be laid down for the guidance of the judge of the Exchequer Court which is to a large extent to tie his hands, I think he should be limited in the way I have suggested.

This is especially desirable by reason of what appears in the correspondence which has been brought down by the Acting Minister of Railways this morning. That correspondence discloses a somewhat unusual condition of affairs, in that we have here an offer made by the Quebec Light, Heat and Power Company to give a clear title to the railway, free of all liens or liabilities whatsoever, for the sum of $2,500,000. That is dated 20th October, 1915. There is another offer from the same company to sell the Quebec and Saguenay railway in its present condition for the sum of $3,473,000 free of all encumbrances, and to sell the road upon the south side known as the Lotbinière and Megantic railway, free of all liabilities of every kind, for the sum of $330,000. The total of these three amounts upon which the companies offered to give a clear title would be in the vicinity of a million dollars less than what the acting minister proposes.

Mr. REID: No, $622,000.

Mr. PUGSLEY: Well, $622,000 less; that is a very large sum. I observe, too, in the correspondence that there is a letter dated 2nd May from the President of the road, in which he says that some mistake had been made. It seems extraordinary that, when the companies were making a formal offer to the Government for the sale of the road, they should have asked some $620,000 less than they subsequently discovered they ought to have asked for these roads. I think my hon. friend the Minister of Railways will agree that that very circumstance requires some careful consideration, particularly when it is proposed to tie the hands of the Judge of the Exchequer Court and to lay down for him a basis upon which the amount shall be assessed. My hon. friend the Solicitor General pointed out reasons why the Judge of the Exchequer Court should not be required simply to fix the value of the railway, and indicated the difficulties which would confront the judge if he were to determine the amount upon a basis like that. It would be difficult, he pointed out, to determine what the actual value of the road was. Therefore the minister proposes that it should be upon the basis of cost. If it is to be upon the basis of cost, and the Judge of the Exchequer Court should be so limited, it seems to me that it ought to be upon the basis of actual, reasonable, and necessary cost, because in that way he would be able to fix approximately the value, whereas, if he is to be guided by the actual cost of the road, one can very readily see that that cost might go away beyond what would be the fair value, and away beyond what would be the reasonable and necessary expenditure.

With regard to the Quebec and Saguenay road, it certainly seems to me extraordinary that the cost of this uncompleted road, because it is very far from completion, should have reached, as suggested by the figures of the Acting Minister of Railways, the enormous sum of something like $80,000 per mile, That cost is certainly very large, and the figures are somewhat startling, because the road is not there; the report of the engineer

says that the road is in a very bad condition, and would require the expenditure of a considerable sum of money to bring the work which has been done up to what it was before work ceased in 1911 or 1912. I would therefore urge this upon the Minister of Railways, and I do so from no desire in any way to obstruct or delay the passage of the Bill. I know nothing at all as to the merits of these roads, and, as I stated yesterday, I do not desire to interpose any objection to their acquisition; but as to the mode in which the judge of the Exchequer Court shall determine the amount to be paid, I think that if the minister sees an objection to the judge fixing the value in the ordinary way, which would enable him to determine the value of this road upon a just and equitable basis,—if there are difficulties standing in the way of that, I think the judge should be required to fix the amount at what, in his judgment, was the actual, reasonable and necessary cost of the road so far as constructed. If that course is adopted, Parliament will simply be following the principle which it has laid down in the Acts relating to the granting of increased subsidies for railroads in which case the extra amount can only be given upon determination by the minister, from the report of his chief engineer, of what has been the acutal, reasonable and necessary cost of the construction of the road. That would be following the principle which was laid down years ago, and upon which Parliament and the Government have been acting ever since.

Mr. REID: Before answering the hon. member, I wish to correct the impression he has with reference to the Bill which I submitted to the House, and which was passed, relating to the Exchequer Court. The hon. member stated last night that that Bill, having been introduced this session, and late in the session, had the appearance of being introduced by reason of the Government taking over these railways. I may explain for the information of the hon. member why that Bill was introduced this session. The Government was disposing of a small piece of canal property at Sault Ste. Marie.

The price asked by the Government was considered larger than the parties purchasing thought it was worth. They agreed that it should be submitted to Judge Cassels of the Exchequer Court and I secured the passage of an Order in Council. Judge Cassels approached me and stated that this was not an Exchequer Court case, that he would not act as arbitrator, but that if it were within his jurisdiction he would gladly take it up and of course without any cost or remuneration whatever. Acting on his suggestion, and after discussing the matter with the Minister of Justice, I submitted a Bill to extend the jurisdiction of the Exchequer Court to take in cases such as the sale of lands by the Government. The Minister of Justice prepared a Bill to cover the matters contained therein. There was no question of this railway at that time.

Mr. PUGSLEY: The two merely synchronized.

Mr. REID: Synchronized, that is true. However, I am glad the Bill does give the Exchequer Court that jurisdiction because I believe we all have confidence in that court. I have never heard it criticised since I have been a member of this House. With reference to the suggestion of the hon. member, it does seem to me that the amendment which I propose covers about all that the hon. gentleman wishes and safeguards in every way the interests of the Government. As was stated by the Solicitor Gener last evening, the judge of the Exchequer Court, no doubt, after reading this Bill wished to have some basis in order to arrive at a proper valuation, and he, without any suggestion from any member of the Government, or any other person as far as I am aware, for it was never discussed with any one in connection with the Exchequer Court, wrote to the Minister of Justice suggesting that some basis be put in the Bill in order that the court might arrive at a proper valuation. The basis in the amendment I am suggesting is this:

> Said value to be the actual cost of said railways less depreciation—

That covers the point of the hon. member.

> —but not to exceed $4,465,000, exclusive of outstanding bonded indebtedness which is to be assumed by the Government, but not to exceed in all $2,500,000.

Mr. LEMIEUX: Is that outside of the $4,465,000?

Mr. REID: Yes. As I said last night, we are purchasing three different railways, one on the Quebec, Montmorency and Charlevoix, for $2,500,000. That includes the terminals at Quebec which, I am informed, represent a very large sum of money, which has been placed at $1,000,000 or $2,000,000.

They are located in Quebec city and they are a very valuable asset in connection with this railway. This railway represents $2,500,000 and we assume these bonds. The $4,135,000 is the maximum price that we have to pay the Quebec and Saguenay in case the Exchequer Court comes to the conclusion that that amount has actually been expended.

Mr. GRAHAM: Do the Canadian Pacific get any of these terminals?

Mr. REID: No, they do not.

Mr. GRAHAM: Have they got any?

Mr. REID: I could not say, I am sure. I do not know. Perhaps I could find that out and let the hon. gentleman know. The $4,135,000 will be paid for the Quebec and Saguenay railway and $330,000 for the Lotbiniere and Megantic. The proprietors of the Quebec and Saguenay must show that $4,135,000 have been actually expended on this railway and they must show that that expenditure has been in cash. They tell me that the books of the company have been audited by Messrs. P. S. Ross & Sons, Montreal, and that the audit will show that a much larger amount has been expended on the railway. If the property has been depreciated in any way on account of washouts, or by other causes, it must be put in the condition in which it was at the time this expenditure was made. The Government feel that in taking these roads over in this way, the proprietors must in every case, even in the case of the Quebec and Charlevoix, show that the values are actual and not inflated. For instance, with reference to the Quebec and Charlevoix, they must prove to the satisfaction of the Exchequer Court that they have expended $2,500,000. If they do that we are willing to assume the bonds.

Mr. LEMIEUX: Is the Government going to take the bonds at par?

Mr. REID: We are going to take the $2,500,000 bonds at par.

Mr. TURRIFF: What are they quoted at to-day?

Mr. REID: I do not know what they are quoted at but these are guaranteed bonds.

Mr. TURRIFF: They have been going up within the last month or so on the prospect of handing over this proposition to the Government, but why should the Government pay more than they were worth three months ago?

[Mr. J. D. Reid.]

Mr. REID: There are a good many things that go up on the prospect of things happening in this country and they may have gone up the same as anything else. The hon. gentleman knows that on the prospect of tariff changes many things go up. Probably the hon. gentleman has benefited in that way in the past.

Mr. PUGSLEY: Who gets the tip?

Mr. REID: We cannot help giving a tip when we introduce a Bill of this kind. That is the position as far as the Quebec and Charlevoix railway is concerned. They must show that the amount which I have stated has been actually expended on the Lotbinière and Megantic railway; otherwise the price will be decreased. We have put in the maximum amount. They tell me that instead of $4,135,000 they will be able to show that the actual amount that has been expended on the Quebec and Saguenay is more than $2,500,000 over and above the subsidies. This railway being in this condition, and the people requiring the service that they are entitled to along that shore, we feel that this railway system should be connected up with, and that it will be an acquisition to the Transcontinental railway. There has been considerable profit on the roads that have been in operation. The Quebec and Saguenay will pay its way in the same way as these other roads will. That is the reason why we would like to see this Bill go through and the matter placed in such shape that the people in that part of Canada will have the benefit of a service that they should have had many years ago.

Mr. PUGSLEY: Did the companies give to the minister any explanation of the fact that in October last they offered to give clear title to these roads for $620,000 while in May of this year they ask the amount that is proposed to be paid them and which must have been quite a surprise to the minister? Did they give any explanation of such a very large figure.

Mr. REID: The only explanation I got was that, when I was discussing the matter with them, they said that they had made a mistake in figuring out the amount, and that they had put into the roads about $1,000,000 more than they had stated.

Mr. PUGSLEY: Men must be very rich to make a mistake of that kind.

Mr. REID: Mistakes of that kind are sometimes made. We do not want to pay

any more than has gone into the road, and they must show exactly what that amount is.

Mr. SINCLAIR: Does the minister intend to pay for promotion expenses? I understand that these three companies have had a stock-jobbing career for some years, and that their promotion expenses are very great.

Mr. REID: I have already stated that we only proposed to pay the amount that has actually been spent on the construction of the road. That will not include any promotion expenses whatever; it will include nothing outside of what has actually gone into the road, and the Judge of the Exchequer Court will decide what amount that is.

Mr. SINCLAIR: Why does the minister dispense with the usual requirement that the certificate of the General Manager of the Intercolonial shall be obtained before any branches are taken over?

Mr. REID: It has been the custom to obtain the certificate of the General Manager and his engineers in the case of roads that have been completed and are in operation. But this is a road that has not been completed. If we were to get the General Manager to make a valuation it would probably not be as satisfactory as an independent valuation would be, made by the Judge of the Exchequer Court.

Mr. GRAHAM: That is not what the General Manager was to do. He was to recommend to the Government that the purchase of a certain road would be in the interest of the public and of the road of which it was to become a branch. My opinion is that the General Manager will not do anything of the kind with regard to these particular roads, and he is right. I am not going to waste any time discussing these propositions. They are indefensible from beginning to end, from every point of view, and it is no use going into details. I know, and the Government knows I know, a great deal about these roads, and I make the statement that their purchase in the heyday of prosperity, when we had an overflowing treasury, would be very questionable. But to-day, in the face of our present financial condition, when every man is bearing all he can in the way of taxation, the purchase is nothing short of monstrous to my mind. The road on the south side, exclusive of the line from Quebec to Ste. Anne de Beaupré, is the best of the lot. The line from Quebec to Ste. Anne de Beaupre is run by electricity, and is all right. My judgment is that the line on the south side is a better purchase than either of the other roads that are being purchased on the north side; and yet when I was minister I refused to consider the purchase of this road as a branch line of the Intercolonial. It was owned by a very warm personal friend, but I did not think the purchase could be justified. I am not going to discuss this any further, as I have now made my protest. At this time, when our finances are in such a condition that the Finance Minister has to impose special taxation on the country for war purposes, it seems to me nothing less than an outrage on the business enterprise of Canada and on our taxpayers to take part of the money that the industries of Canada are paying in taxes to put into these schemes. My hon. friend knows that, although only $4,000,000 is mentioned here, he is really committing the country to an expenditure of more than $10,000,000; and that is a small estimate of the amount that will be required to meet the liabilities incurred in the purchase of rolling stock and the completion of these roads, and getting them into running shape. The minister does not expect that the line is going to pay, but I am not going to discuss that side of it, because there are some districts that should be supplied with railway facilities even when we do not expect to make any money out of them; I have always taken that ground, and I do still. But at this particular time, when we do not know what out financial condition will be in the future, and when financial conditions are so strenuous for all the people of Canada, it is unspeakable that the Government should ask this Parliament to commit the country to an expenditure of more than $10,000,000.

Mr. PUGSLEY: There is one point to which I should like to direct the minister's attention. In this estimate, which is to tie the hands of the judge of the Exchequer Court—there is no getting over that—and which is to convey to him the opinion of this Parliament that he can safely adopt the figures mentioned in the amendment of my hon. friend, the amount that is to be assumed by the Government is put at $2,500,000; that is, to provide for the bonds on the electric road. And yet in this very report which has been brought down to Parliament, the total cost of replacing that electric railway is put at $1,115,200.

Mr. REID: That does not include the terminals.

Mr. PUGSLEY. Yes, it does. I do not think my hon. friend can have read the papers. The report, dated November 12, 1915, contains an estimate of reproducing this property; that is the total cost. That estimate necessarily assumed the use in some cases of new material at first cost value, and thus might not be a correct indication of the present value of the physical constituents. The following estimate makes such allowance as appears reasonable for wear and depreciation. Then he gives the figures: 288 acres at $300, $86,400 (this price should cover damages); rights leased from harbour commissioners, including joint right of way with Quebec and Lake St. John railway, $8,700; St. Paul street terminal lot, $41,300; a total of $136,400. Grading, unchanged, $108,300; then bridges and culverts are given in detail, making a grand total of $1,115,200. The engineer gives a summary of the total distributed as follows:

Quebec terminals	$ 68,000
Joint section with Quebec and Lake St. John railway (Canadian Northern)	38,000
Quebec, Montmorency and Charlevoix railway	734,000
Steam equipment	175,000
Electric equipment	99,500
Total	$1,115,200

This statement is signed by Mr. Beckwith, engineer of construction. It strikes me as a very important fact that when the engineer estimates the cost of constructing this electric railway at only $1,115,000, the Government proposes to assume an obligation of $2,500,000; in other words, $1,385,000 more than it would cost to reconstruct and replace the entire system. If I am wrong in these figures I shall be glad if the minister will correct me, but I think I am absolutely correct from the report of the engineer.

If these figures are correct they show very clearly that we should not give them over to a Judge of the Exchequer Court, saying in effect: If you do not reach a higher figure than this you will not do more than is right. It seems to me the duty is imposed upon us of declaring either that the Judge of the Exchequer Court shall fix the actual value of the road, or that he shall determine the amount to be allowed on the actual, reasonable and necessary cost of the road. The amount of the bonds upon one of these roads is more than double the amount that the engineer of the department says the road could be completed and equipped for. What does the minister say as to that, without going into the other? Then, take the Quebec and Saguenay. The engineer says he made a hurried inspection, and that his estimate is approximate, yet he puts the value of the property at only $2,813,500. But the minister is asking Parliament to say to the Judge of the Exchequer Court that he will be justified in allowing as much as $4,135,000 for the property. Is it not an unusual and dangerous proceeding to allow the judge, with the authority of Parliament, to fix as the cost of the road at an amount double that which, according to the report of the engineer of the department, the road is worth and for which it could be reconstructed? I cannot think that the minister has given careful attention to the figures.

Mr. MEIGHEN: I think the hon. member for St. John (Mr. Pugsley) has not quite the correct basis in his mind when he makes his criticism. The duty of the Exchequer Court, under the Act as now before the House, would be, not to assume that the Quebec, Montmorency and Charlevoix road was worth $2,500,000, because these bonds were against it, which we must assume, and then pass on to the other roads and value them. On the contrary, the principle is this: the Exchequer Court will take one road at a time and ascertain the cost of that road, irrespective entirely of what may be against the road.

Mr. TURRIFF: Why not take the value?

Mr. MEIGHEN: I will come to that again if the hon. gentleman desires. Having dealt in this way with the Quebec, Montmorency and Charlevoix road, the court would then come to the Quebec and Saguenay and find the actual money which has been invested there—not the money that may have been paid out by the company, but the money that has found its way into the property. The same would be done with respect to the Megantic and Lotbinière road. The three would be added to ascertain the grand total. From this would be deducted the $2,500,000 bonds which must be left against the entire property though in fact it rests only against the first property. Then, if the balance should exceed the figure allowed, the balance would be reduced to that figure. If, on the contrary, the balance should be be-

low the maximum figure, that balance alone is what the country would pay. There is not in the Bill the slightest intimation to the judge of the Exchequer Court that he would be safe in allowing $4,465,000. If the net cost is less than that amount after deducting $2,500,000, that net cost is all that can possibly be charged against the country for the total purchase. It is argued —by one hon. gentleman, the hon. member for Edmonton (Mr. Oliver)—that whatever might be the claims of this locality in ordinary times, those claims should not be heard because of the strained financial conditions of the present time. I cannot but recognize that there is some force in that contention, and only unusually great necessities should impel us at this time to the taking over of these properties by the Government. But there is greater necessity than could be pointed out in any other part of the country, by one cardinal consideration to which I am about to refer. As regards two of the roads: the Montmorency and Charlevoix and the Lotbinière and Megantic, I do not think there can be any doubt that, from the point of view of earning power, as a good business purchase, they are very desirable for the country to acquire. Their earning power in the past has been given, and one of them particularly is of value to the Intercolonial. It has been admitted by the hon. member for St. John that the criticism that has been offered could not be applied to these roads, and the same is admitted by the hon. member for South Renfrew (Mr. Graham). While I am on the subject of these two roads, I might state that as to them the basis of valuation that is offered to the Exchequer Court in this Bill is very decidedly to the advantage of the country, because it would seem to me that probably a much higher figure would be allowed on the ordinary legal basis of value upon which the Exchequer Court rests its verdicts. However, the extraordinary feature to which I have referred comes when we consider the Quebec and Saguenay. Here is a road in which a great deal of money was invested. It was subsidized by the Government of the right hon. gentleman (Sir Wilfrid Laurier) in 1910, and so had the sanction of that Administration. It is a road that was necessary for the service of the district into which it was to extend. As the result of the assistance given by the Government of Quebec, by the former Dominion Government as well as by this Government in 1912, very considerable progress was made and very considerable moneys were expended.

The road was built from Cap Tourmente right on to Murray Bay so far as acquiring the right of way and the building of the actual roadbed was concerned. Dikes were built along the river St. Lawrence to protect the structure from the inroads of the river; indeed, from Murray Bay to Nairn Falls the road was completed and is now in actual operation and carrying traffic. May I mention in passing, for fear I forget it, that the first road mentioned in the Bill, the Montmorency and Charlevoix, carried last year, my information is, no fewer than 1,800,000 passengers. Such, then, is the work that was done in connection with this Quebec and Saguenay line.

Mr. PUGSLEY: What is the average fare?

Mr. MEIGHEN: Just what would apply to a 30 mile trip—most of it for a 20 mile trip, I presume, to St. Anne de Beaupré.

Mr. OLIVER: Is the road in operation to Nairn Falls?

Mr. MEIGHEN: The Quebec and Saguenay is in operation from Nairn Falls to Murray Bay.

Mr. LEMIEUX: Not for passengers.

Mr. MEIGHEN: I do not know whether for passengers; chiefly, I think, for the carrying of pulp. Passengers are carried on the Montmorency and Charlevoix.

Sir WILFRID LAURIER: What kind of operation is it?

Mr. MEIGHEN: I really could not answer that. There are pulp mills at Nairn Falls and it serves them.

Sir WILFRID LAURIER: What is the production of those mills?

Mr. MEIGHEN: I cannot give the figures, but they can be given in the course of this discussion in committee.

Mr. OLIVER: I understood that Nairn Falls was the terminus of the Quebec and Saguenay?

Mr. MEIGHEN: Yes.

Mr. OLIVER: I understood that the Quebec and Saguenay was not completely railed?

Mr. MEIGHEN: It is not, but a portion between Murray Bay and Nairn Falls is railed.

Mr. OLIVER: Then there is no connection between Murray Bay and St. Anne's.

Mr. MEIGHEN: No. I think about six or seven miles are railed between Murray Bay and Nairn Falls.

Mr. LEMIEUX: But not for passenger business.

Mr. MEIGHEN: Perhaps not. The road is laid; much money was spent in laying it down. Bonds were sold against that Quebec and Saguenay road, and it is claimed by those who ought to know that, expended economically and to the best possible advantage, some $5,000,000 have found their way into that road. However, they came, in the words of the president of the Grand Trunk, "to the end of their tether," and were unable to proceed further with actual construction. Consequently the $5,000,000, or whatever the amount may be, that has found its way into that dump has been assailed by the river St. Lawrence, and is being washed away as time goes on. The dikes are by no means in as good condition as they were when the work was completed to the stage that it was completed. With each day and with each month the money that has been invested there and the hopes that have arisen in the minds of the people who were to be served have been dissipated and as time goes on will be dissipated all the more. Consequently the service that was to be rendered and which it was deemed worth while rendering by the late Government as well as by this Government and the Government of the province of Quebec, is being imperilled more and more as days go by and the money which has been invested and which is being lost will some day have to be recouped if there ever is to be a service in that district. I do not pretend to know the district, but I am informed that the Quebec and Saguenay line should serve a population of something over 60,000 people; that a great many of them or rather their forefathers before them have been in the district for some 200 years and have never known a railway service at all. They have practically no means of transportation and are isolated from all the world. Those of us who come from other portions of Canada—may I say particularly we who come from the West and who have had had railway advantages which our country deserves and which the traffic now in the main warrants

[Mr. Meighen.]

—must remember that in the acquiring of these roads we have had the very great advantage of eastern credit. We should not forget that, when we think of people who have resided in this district so long and who have no railway advan-

3 p.m.

tages. We were reminded yesterday by the hon. member for Edmonton that we were granting aid to the Transcontinental and to the Canadian Northern railways, and he justified that aid on the very good assumption that in those great Transcontinental systems every Canadian was interested and all had something to lose by their failure and something to gain by their success. I am sure that the hon. member for Edmonton, if he considered the habitant of Baie St. Paul or of some of the villages along the Quebec and Saguenay, would find it difficult to convince himself that these people had very much to gain by the success of the Transcontinental or even of the Canadian Northern. These people, at the same time, have borne their share of the credit that has been necessary and of the cash that has gone into the building of roads in various parts of Canada, particularly those that have reached into the Prairie West. When they sit by, therefore, and see their hopes being dispelled by the destruction year by year of the money that has already been spent by private enterprise to reach them, it is no wonder, particularly when they are being called upon to pay their share in connection with other railway projects, that they feel that they have a claim to some recognition at this time. What I want to emphasize is this; These people have a claim that differs entirely from other districts, in that millions of money have gone in there and that that money is being gradually sunk, being almost literally washed away by the river St. Lawrence and by the other corroding acts of time. The longer we wait the more we shall have to pay at some time in order that that district may get the service to which it is entitled. If the population is there—and those who ought to know say it is—and if the population is sure to come—and those who ought to know say it will come—then there will be vindication, there will be justification of this measure let us now look upon the matter in the broad way in which we ought to look upon it, even in a time like this.

Mr. OLIVER: The committee is to be congratulated upon having heard from a member of the Government the Govern-

ment's justification for the proposals now under consideration, looked at from a national standpoint. We heard from the Postmaster General yesterday a justification of the proposals from the standpoint of the people of the locality affected. That was natural, right and proper; every one could understand and appreciate the standpoint of the Postmaster General and of those for whom he spoke. But when the Solicitor General undertakes to justify the proposal upon national grounds on identically the same basis as the reasons given by the Postmaster General, I cannot agree that the grounds offered by him furnish any justification whatever for the proposals; rather do I say that those grounds condemn them absolutely. There are 30,000 people, he says, who need railway communication. As I stated yesterday I can find him many places throughout this Dominion of Canada where 30,000 people need railway accommodation just as much as do the people along the route of this railroad. Nay, I can find people who need it ten times, a thousand times more. The people along the route of this road, during half the year at any rate, have the advantage of the navigation of the St. Lawrence, which certainly can take any product that they have to sell or bring to their doors any requirement that they may have to buy, and do it just as cheaply and just as readily as any railroad will. I will admit that it would be desirable that these people should have a railroad, and, no doubt, if the circumstances were favourable, they would have one. No doubt aid in behalf of such a railroad was warranted at the time it was given; but, the conditions being as they are, I am afraid we shall have to suggest that the money has not always been wisely expended. The fact is that the people have not a railroad, and the people of Canada are called upon to give them a railroad. As I have said, equal numbers of people, in tens, or dozens, or hundreds of other localities throughout the country, are in just as great need of a railroad, and could be supplied with railroad facilities for very much less money. How much is this sixty-two miles of railway going to cost the Dominion of Canada? We are buying forty-two miles of the Quebec, Charlevoix and Montmorency railway, and some thirty miles of the Megantic railway. Whether we buy those railroads or not, the people and the interests served by their existence and operation will continue to be served in the same way. The people along those two sections covered by the proposal now before the House are not in the same position as the people along the line of the Quebec and Saguenay railway. The plea made by the Solicitor General, the plea upon which the Government rests its demand upon Parliament for this sum of money, is based upon the requirements of the people living along the sixty odd miles of the Quebec and Saguenay. It cannot be based upon the requirements of the people living along the Quebec, Charlevoix and Montmorency, or upon the claims of the people living along the Megantic railway, because those railways are in existence and in operation. Therefore, taking the Solicitor General's own argument as it has been presented to the House, we are paying out the amount of money that we are called upon to pay for the benefit of the people living along the sixty odd miles of the uncompleted Quebec and Saguenay railway. The ex-Minister of Railways (Mr. Graham) says that the total amount will be in the neighbourhood of $10,000,000; and, as nearly as I can figure, that $10,000,000, if considered as being the expenditure necessary to afford railway accommodation to the people living along the Quebec and Saguenay railway, comes to about $130,000 a mile that this country is being called upon to pay in order that these 30,000 people who are living along that sixty-one miles of railroad shall have railroad accommodation in addition to the water transportation which they have now.

Mr. MEIGHEN: The hon. gentleman places the figures at about double what they should be.

Mr. OLIVER: I am saying that it comes to $130,000 a mile if we consider the whole expenditure as being made necessary in order to afford accommodation to the people along this 61 miles.

My hon. friend made a plea as between conditions in the West and in the East. I happen to have knowledge of a locality, not in my own but in the adjoining constituency, where a larger population than that along the line of the Quebec and Saguenay, a population having no river navigation to aid them, are living at a distance, not of 10 miles, 15 miles, 20 miles, or 30 miles, or 40 miles from a railroad, but living at a distance of from 60 to 120 miles from the nearest railroad. I have brought the condition of these people before this Parliament on a previous occasion.

Their position is that the Provincial Government guaranteed aid to a line of railroad to be built for their relief. That line is in an uncompleted condition, just as is the Quebec and Saguenay; but this Government has seen fit to take that piece of road as a part of the property on which it holds security against the Canadian Northern Railway.

Mr. MEIGHEN: Is the road uncompleted in the same sense as the Quebec and Saguenay? Is it not completed as far as it goes?

Mr. OLIVER: It is in the same position as the Quebec and Saguenay; it is graded, but there are no rails.

Mr. MEIGHEN: What is the line?

Mr. OLIVER: It is the St. Paul de Metis branch of the Canadian Northern Railway.

Mr. TURRIFF: The same condition exists in Saskatchewan in two or three cases.

Mr. OLIVER: The population of which I speak are largely French-speaking, just as are the people below the city of Quebec. This railroad is taken by the Government as a part of the property upon which it holds security against the Canadian Northern company for the guarantee given two years ago. In the proposals which the Government have placed before the House for a loan to the Canadian Northern railway, they have included money to pay the interest on the bonds issued by the company, guaranteed by the province, for the construction and completion of that road. When the matter was brought to the attention of the Government, my friend the Solicitor General said that the amount realized from the sale of bonds was not sufficient to complete, and that additional money would be necessary in order to complete. In my judgment it would be business on the part of the country to find the money to complete in order that that railroad should earn the interest on its bonds, instead of the interest being paid out of the Treasury on an uncompleted road. In addition to that, the people would get the benefit of facilities for traffic, and the country would be developed because of those facilities. But the Minister of Finance said that that was not possible—that they had gone as far as they could in appropriating money for the aid of railroads at this session, and that he could not reconsider the Government's position or consider the claims of this particular railroad and of the people whose rights and interests depend upon its completion. There is another railroad in my own constituency, the Peace river branch of the Canadian Northern railway, which is graded for about 100 miles, and on which about 30 miles of track has been laid. The trains are in operation on that portion of 30 miles, and for the balance, of something over 50 miles the grading has been completed, but there are no rails. This grading was completed, I think three years ago, and the condition is absolutely identical with that of the Quebec and Saguenay. The grading, trestles, etc., are being damaged or destroyed by the weather.

I brought that case to the attention of the Acting Minister of Railways and the answer he gave was that he could do nothing, that there was no money available to supplement the aid that it was proposed to give to the Canadian Northern, and that would enable these roads to be completed. I did not ask for it in the interests of the Canadian Northern; I asked for it on the one hand, in the interests of the people whom I represent, and who need facilities for the traffic which these roads would give if they were completed, and on the other in the interests of the country, which to-day is paying interest on bonds on roads which by reason of not being completed are not able to earn interest on these bonds, and which, if completed, would earn interest. Under these circumstances, it strikes me, as it must strike a great many other people, anything but favourably that $130,000 should be taken to supplement what has been done already in the way of giving aid for the completion of this railroad, while these other railroads, and the people who are dependent upon them, receive no consideration whatever.

Mr. MORPHY: Along the road to which the hon. gentleman refers, are there any towns say of 2,000 or 3,000 population, any settled conditions such as there are in the area of the railways under consideration?

Mr. OLIVER: Certainly.

Mr. MORPHY: What towns are they?

Mr. OLIVER: I beg my hon. friend's pardon, I thought he meant settlements. There are no towns such as there are at Murray Bay.

Mr. MORPHY: Then the position is different.

Mr. OLIVER: The position is different and very much worse, because ours is a

rural population producing from the land, who, unless given railway communication, cannot produce, and cannot live there and do any good. It is a question of the progress of the country, of the development which we all talk about, of our immigration policy, and of the necessity of settlement. Instead of spending our money to redeem the conditions as they exist there, we are going to spend $10,000,000 upon a project in regard to which we have no obligations, and which certainly is not going to produce results in proportion to the amount of money expended. In a time like this, we have to consider that.

Mr. MORPHY: I take it from the hon. gentleman's argument that if the times had been propitious he thinks that these roads should be built in both places, in the West and also in this portion of Quebec, to give relief to the people.

Mr. OLIVER: If we had plenty of money, I would not object at all, everything else being proper. But if we are short of money where a great necessity exists, we seem to have abundance of money where the lesser necessity exists, and I cannot recognize that as a sound principle, or one that I can support.

Since my hon. friend has projected a certain idea into this discussion very delicately and very cleverly, that is to say, the suggestion of a divergence of interests between the East and the West, let me say that in the matter of railway transportation there is not only no divergence of interests, but there is an absolute inter-dependence of interests. The development of the West demands railroad facilities in the East just as the development of the West is necessary to make the railroads in the East of advantage. We are proposing to spend $10,000,000 on 61 miles of railway, because that is what it amounts to, so far as national benefit is concerned. I admit the private benefit to the gentlemen who own these enterprises, which while they earn more than will pay the cost of operation, do not earn enough, I understand from the statement of the Acting Minister of Railways, to pay interest on the cost of construction. I believe that is correct, that the Quebec, Charlevoix and Chicoutimi railway while it earns more than enough to pay its operating expenses does not earn enough to pay interest on the capital cost as well.

Mr. MEIGHEN: My information is that it does.

Mr. OLIVER: If it does, we are not in any way called upon to spend any money upon it.

Mr. MEIGHEN: Except that the other road cannot be operated without it; the other road would be isolated. It is for our advantage that we are taking the Quebec and Charlevoix railway. I do not see how my hon. friend can add that to the country's burden.

Mr. OLIVER: That proves exactly what I was saying, that the burden of the country is in respect of the sixty-one miles of the Quebec and Saguenay railway. That is the burden upon the country. If we have $10,000,000 to spend on railway development, and we want to spend it in eastern Canada, I would make a suggestion to the minister—I have had occasion to make it before, and I shall make it again—by which we could spend that money in a way that would produce enormous results to the city of Quebec, and to every interest that depends on the city of Quebec, and that would be of enormous benefit to western Canada as well. When we were discussing this matter before the Acting Minister of Railways intimated, as the Minister of Finance had intimated, that only the limitations of finance prevented his dealing with the problem as I presented it. Quebec is the great Atlantic deep water ocean port of Canada. Quebec is the Atlantic summer terminus of the Transcontinental road. Quebec has advantages as a port which no other city in the Dominion of Canada has. We have built a railroad from Winnipeg to Quebec, at a cost of nearly $200,000,000, for the purpose of handling traffic through the elevators at that city, and we did not handle it there during the past winter. Although we have the traffic, although it needs to find its outlet at Quebec, we are not handling it there, partly because we have not the equipment on the railroad, but, more than anything else, because we have not elevator accommodation at the city of Quebec. The success of the Transcontinental railway enterprise depends upon the establishment at the port of Quebec of adequate elevator accommodation more than upon any other consideration. We have there an elevator carrying 1,500,000 bushels.

Mr. MEIGHEN: Has it been filled?

Mr. OLIVER: It has not been filled. Will my hon. friend suggest that it was not

filled because we had not the grain to fill it with?

Mr. REID: They would not ship it there.

Mr. OLIVER: My hon. friend told us that he had not the cars to haul the grain with, and, if he had had the cars and had hauled the grain there he would not have had any place in which to put it, because they have not the elevators. When I asked why he was not providing greater elevator accommodation at Quebec he said it was because the Government could not afford the money, but it can afford the money to relieve our friends in regard to this uncompleted sixty-one miles of Quebec and Saguenay railway. It can do that, but it cannot afford the money to build elevators at the city of Quebec, which would make Quebec the great ocean port of this Dominion during seven months of every year. which it cannot be unless that elevator accommodation is provided there and provided on a scale similar to that which now exists at the head of lake Superior.

Mr. MEIGHEN: Does the hon. gentleman say that any grain was offered for transcontinental shipment that had to be refused for lack of equipment, or that any grain was offered for the elevator at Quebec for which there was not room?

Mr. OLIVER: I do not know.

Mr. MEIGHEN: All the grain offered was shipped on the Transcontinental railway, and there has been room in the elevator at Quebec.

Mr. OLIVER: I do not know anything about that, but I do know that in several cases in the Prairie West railway companies refused to take grain from the farmers and from the elevators, I presume, because they did not have the facilities to send it east.

Mr. MEIGHEN: It was not through our lack.

Mr. OLIVER: It was not through the lack of hon. gentlemen opposite? They are in control of the affairs of this country at the present time.

Mr. MEIGHEN: Not of the railways?

Mr. OLIVER: Of the Transcontinental railway and the elevator at Quebec, and if that condition exists my hon. friend may find any reason he pleases for it; but on this Government must rest the responsibility, and when they come and ask this House to pay $10,000,000 for 61 miles of uncompleted railway to accommodate 30,000 people, I ask them how they can expect us to vote that money without a protest, when the money is so urgently needed to establish elevator accommodation at Quebec, so that the $200,000,000 sunk in the Transcontinental railway may earn interest and so that the people of the prairies, upon whose industry and success depend the earnings of the Transcontinental railway and the development of the city of Quebec, shall be able to progress and develop as they must, or else the whole enterprise falls to the ground. They are in control and, instead of them spending the money of this country in establishing at that port these facilities that will enable it to do the trade of the country, they take untold amounts of money, spend them for other purposes, and refuse these facilities to the port of Quebec. My hon. friends do not seem to like Quebec for some reason, because, while they had a road from Quebec to Winnipeg completed, they did not see fit to give a service on that road last winter. They gave a service from Toronto to Winnipeg over roads that did not belong to them for 500 miles, where they competed with the Canadian Northern and the Canadian Pacific—a very good thing for Toronto, but not a very good thing for Quebec, when every reason suggested that they should put on a service between Quebec and Winnipeg.

If they do not like Quebec, if they propose to put it on the side track, if they propose that that great ocean port of Canada shall be ignored in their policy, notwithstanding the fact that $200,000,000 has been spent on the railway to bring the business to that port, we have another port —the port of Montreal. We have a railway which is proposing to establish terminals in the city of Montreal. The Canadian Northern has a line uncompleted from Montreal to Capreol. Unless and until that line is completed to Montreal, with suitable terminals in Montreal, the Canadian Northern railway system cannot be a successful enterprise. No matter who is at the head of the enterprise, no matter what shall happen, unless and until it secures terminals and facilities to enable the trade to reach Montreal over a completed line, it cannot be a success. I mentioned the matter to the hon. Minister of Finance (Sir Thomas White) when the Canadian Northern Bill was up. The answer was that there was not enough money; we could not take that matter into consideration; we

could loan the Canadian Northern $15,000,000, but we could not do anything to see that the money was spent so that the railway would be a completed enterprise, and, to that degree, able to earn interest on its cost. So that, for the ports of Quebec and Montreal, for the vast interests that centre in each of these great cities, for the transportation interests that are involved in the Grand Trunk Pacific and the Canadian Northern, and for the great interests that are behind them in the prairie West, dependent on these railways and upon their access to these ocean ports, there is no consideration at the hands of the Government, but 30,000 people along the shores of the St. Lawrence, where they have navigation during seven months in the year, covering a distance of sixty-one miles, are to have the benefit of an expenditure of $10,000,000 by this Government. We are to be saddled with $500,000 a year interest by reason of the proposition that our friends put before the House to-day. But we cannot get elevator accommodation at the port of Quebec, and we cannot assist the Canadian Northern into Montreal more than we have assisted it. We are able to pay interest on the bonds of the branch lines in the prairie West, guaranteed by the provincial governments, in order to hold our securities, but we are not able to complete the lines so that the people there will get the same facilities as we are offering to these people below Quebec at this cost. My hon. friend the Solicitor General, I presume, has made the best plea that he can on behalf of the Government for the expenditure that they propose to make, but it is not a plea that appeals to my mind as being in the national interest.

Mr. NESBITT: Yesterday the hon. acting Minister of Railways and Canals (Mr. Reid) gave the capitalization of the Quebec, Montmorency and Charlevoix railway at about $3,000,000 and he gave the earnings for 1914 as being $83,000, for 1913, $76,000 and for the years before that about the same. The Solicitor General says that that pays.

Mr. MEIGHEN: On the Quebec, Montmorency and Charlevoix?

Mr. NESBITT: Yes.

Mr. MEIGHEN: Yes.

Mr. NESBITT: I would much rather have my hon. friend for my law partner than for my business partner if he thinks that that pays on $3,000,000 of capital stock.

Mr. MEIGHEN: I did not say that it paid on the capital stock.

Mr. NESBITT: You said that to my hon. friend.

Mr. MEIGHEN: My information was that it paid the interest on the bonds.

Mr. NESBITT: My hon. friend asked that question, and you said that you thought it paid the interest on the capital stock.

Mr. MEIGHEN: No, I did not say that. What he asked about were the fixed charges.

Mr. NESBITT: He said the capital stock.

Mr. MEIGHEN: I do not think he will say that himself.

Mr. OLIVER: I think I did, but I am not sure I meant it in the sense in which my hon. friend (Mr. Nesbitt) does.

Mr. NESBITT: I still say that if the Solicitor General says that is a paying road, I would rather he put money into it than that I should. We come next to the Lotbinière and Megantic. Last year they made the enormous profit of $1,255 with a capitalization of $349,000. There is nothing in this return to show how much money was spent on repairs or maintenance. In this return there is an engineer's report showing that improvements and repairs must be made upon the road. I notice in one case that 6,000 feet of filling has to be done. Everybody knows that a railway or any other enterprise depends entirely on how you keep up the property. On maintenance depends whether you make any net profits out of it or not.

If you starve the road for the purpose of showing a net profit, you may get the net profit all right, but very much to the detriment of the road. My hon. friend thinks that as there are 30,000 people in that district, the road might pay. Now it is estimated by the best American railway statisticians that it takes 2,000 people to the mile to make a railway pay.

Mr. MEIGHEN: I do not think I made any statement as to whether the road would pay; I do not think I am competent to judge.

Mr. NESBITT: How can a road with only 500 people to the mile pay?

Mr. MEIGHEN: The hon. member knows that besides population bringing railroads, railroads bring population.

Mr. NESBITT: It depends on the country. You cannot dig rocks and grow wheat.

Mr. MEIGHEN: I have done it.

Mr. NESBITT: You did not make much at it. It would be much better for you to let the farmer dig the rocks and you advise him as to the law. I absolutely agree with my hon. friend from South Renfrew (Mr. Graham) that there is no human excuse for taking over these roads nor for building that new piece. The Lotbinière and Megantic railway already has connection with the Intercolonial and the Grand Trunk, and can therefore already feed the Intercolonial, if that is what the minister wants. The road could not be better located, so far as connection with other roads is concerned. There is no earthly excuse for taking over these roads or for building that new piece. There is not even the excuse that this road has a Dominion charter, for it got its charter from the Quebec legislature. We have always been opposed to interfering with provincial rights, and now we have the opportunity of putting our theory into practice. If it is necessary that this road should be built, let the province of Quebec build it by all means, but I do not think we should build it, or take over this other little piece of road. It is an imposition on the people of Canada to ask them to do it at this time of financial strain and stress, and I do not believe there is a man in the Government although they are defending this proposition, and putting it through, who really thinks in his own heart that the road should be taken over. For my part, I want to raise my voice in opposition to the Government's spending one dollar on this proposition this year; we cannot afford to do it in any shape, manner, or form. There is no possible way of showing that any of these roads will pay; they never have paid in the past, as their reports show.

Mr. MEIGHEN: I understand that while the Lotbinière and Megantic railway did not pay last year for some reason connected with the management; in previous years it paid a very good return.

Mr. NESBITT: The net earnings in 1913 were $6,905, and in 1912 $5,577, on a capitalization of $349,000. As I said a moment ago, we do not know how the maintenance of the road has suffered through the net earnings. If there is anything to earn in that district the road should have earned it before this time, and I have no doubt it has been in operation for some years. As far as I am concerned, I am absolutely opposed to the Government spending one dollar on these roads this year.

Sir RODOLPHE FORGET: Knowing something about this road and the district through which it runs, perhaps I might say a few words. The Quebec, Montmorency and Charlevoix railway runs from St. Paul street, in the city of Quebec, to Cap Tourmente, a distance of about thirty miles. Part of the road is double-tracked, eighty-pound rails being used. There is no better roadbed in the Dominion. Last year this road carried 1,843,000 passengers, but the average fare was about 12½ cents, due to the short haul. A great number of pilgrims come every year to the shrine of Ste. Anne de Beaupré, coming over the American lines, over the Canadian Pacific railway, the Quebec Central, and so on. These roads get the biggest percentage of the fare, and we get about forty cents per passenger. This road runs through a thickly populated district, and the right-of-way is very expensive. The hon. member for St. John said a moment ago that the engineers had estimated the cost of this road at $1,300,000. I do not think that figure took into account the right-of-way and the rolling stock.

Mr. PUGSLEY: They are both included.

Sir RODOLPHE FORGET: I have the statement here. There are 22 stations on this 30 miles of road. The station and other buildings—I am not taking into account the land—cost $134,000, and they could not be replaced for that amount to-day.

Mr. LEMIEUX: What are the names of the stations?

Sir RODOLPHE FORGET: Quebec, Limoilou Junction, Maizerets, Park Maufils, de-Salabery, Monument, Beauport, Everell, St. Gregoire, Montmorency Falls, Boischatel, Rivière de Fer, L'Ange Gardien Station, Petit Pre', Lemoine, Laverdière, Chateau Richer, Visitation, Rivière Aux Chiens, Ste. Anne de Beaupré, Beaupré, St. Joachim. The rolling stock and the stations and other buildings are worth $409,000. The terminus at the city of Quebec comprises about 135,000 feet of land and is worth nearer $2,000,000 than $1,500,000. If you put it at $10 a foot, it would be worth $1,350,000. The Government has already taken over about 40 per cent of these terminals.

Mr. LEMIEUX: At what cost?

Sir RODOLPHE FORGET: The Canadian Pacific railway contributed their lands at $12 a foot. The reason why this land had to be taken over in this way was that the Canadian Pacific railway had not sufficient room for the Union station and freight shed, and also our railway stood between their tracks and the St. Lawrence basin, where their Empresses dock. The Canadian Pacific railway, of course, could not expropriate our railway, so the Government took it over and then turned it over to the Canadian Pacific railway. Our road is double tracked part of the way, making the total mileage 43 miles. The cotton company at Montmorency does not benefit this road very much, as the haul is short, and the freight is turned over to the Canadian Northern railway or the Canadian Pacific railway; but when the Government acquires this road the freight will be turned over to the Intercolonial railway. The Saguenay railway was incorporated in 1905 at the request of my Liberal friends of Quebec; I may say that they are nearly all Liberals in Quebec city. The incorporators were: Hon. E. B. Garneau, Hon. Charles Langelier, George Tanguay, M.P.P., Narcisse Rioux, Hon. Alex. Taschereau, William Price, Mark Workman, McLea Walbank, W. G. Ross, They tried to raise the capital in 1907, but did not succeed, owing to the financial crisis. In 1909, being encouraged by the late Government, who gave us the subsidies, and encouraged also by the hon. member for Rouville (Mr. Lemieux), who said he would do all he could for me, but advised me to see the Prime Minister, now leader of the Opposition, we started work in 1911. Work was stopped in 1912—not 1911, as stated by the hon. member for Assiniboia (Mr. Turriff) last night.

Mr. TURRIFF: It was the Acting Minister of Railways (Mr. Reid) who said that; I only quoted his words.

Mr. REID: No, I said it commenced in 1911, and that work was suspended in 1912.

Mr. TURRIFF: No, he said the work stopped in September, 1911.

Mr. REID: Hansard will show what I said.

Sir RODOLPHE FORGET: Work was stopped in 1912. About 87 per cent of the road is completed; the ties, fishplates and spikes are all along the road, and part of the rails. There is a population there that has been waiting for railway communication a little longer than some of the western population of which the hon. member for Edmonton spoke—these people having been waiting for 150 years for transportation facilities. They have paid their taxes for the development of the railways of the West. They do not begrudge that; but we think that they now are entitled to means of transportation. From the 10th of November to the 10th of May in each year, the people are absolutely cut off from civilization. There are no roads—nothing that can be properly called roads—through those mountains. There are severe frosts, extending to 45 degrees below zero, and so transportation by road is almost impossible. The late Government in 1904 established a ferry between Rivière Ouelle and Murray Bay, from the south to the north shore, and built a line nine miles long from Rivière Ouelle junction to the wharf. That service cost last year, as shown by the Department of Marine and Fisheries, $53,240.66. This amount can be saved by the completion of the Saguenay railway. The transportation of mail costs $6,918.69, by railway, boat and team, of which the railway gets $1,500—that is, from Quebec to St. Joachim. The maintenance of the branch from Riviére Ouelle junction to the wharf, according to the Railway Department, cost about $22,000. These sums make a total of $82,159. The earnings of the Montmorency railway are $83,031 above expenses, and of the Lotbinière and Megantic, $3,889. These are all actual figures. The only estimate of earnings is of the Saguenay railway, which is estimated by Mr. E. Evans engineer, of Quebec, at $315,511. These earnings, actual and estimated, together with the savings, make a total of $484,590. Take from this the steamer Champlain's earnings of last year, $7,093.90. The balance would represent about 5 per cent on $9,000,000 of capital. So these roads would not be by any means a "white elephant"—far from it. In my opinion, as soon as the Quebec and Saguenay is completed, the Government should have at least 5 per cent on its investment, which would not be ten millions, nor would it be nine millions, but would be closer to seven millions than eight millions. My hon. friend from Assiniboia (Mr. Turriff) said last night that he at one time lived about one hundred miles east of Murray Bay,—I do not know whether on the south shore or on the north shore,—and he could not believe in a winter port on the St. Lawrence. I would advise him to read the report made on the winter port of St. Catherines bay by Ad-

miral Bayfield in 1882, by engineer J. C. Taché in 1904, and by Edward Evans in 1912; also the report of the commission for exploring the Saguenay in 1829; notes on the Saguenay country in 1829 by Andrew Stuart and by Lieut. Baddeley and Commissioner Ollebar in 1860, and also by the former Deputy Minister of Public Works, Mr. Gobeil, who gave a conference in the city of Quebec; and also a report of Judge Langelier. He will learn from these documents that even at low tide you have in St. Catherine's bay 71 feet of water. It is shown in Mr. J. C. Taché's report that you can take a steamer to within 50 feet of the shore of St. Catherine's bay, and you can winter there in open water all winter. I have my summer home at St. Irénée, and I go there in winter when I can. The north shore channel is always free of ice. The prevailing winds in winter are from the north, and the ice piles up on the south shore. That is why the ferry established in 1904 has not given the service to the north shore. Last winter I tried four times to get there, but unsuccessfully. I went from Montreal to Riviére Ouelle, slept two days at the Riviére Ouelle wharf and returned to Montreal, having made a round trip of 592 miles without reaching St. Irénée. The steamer that is now used in this ferry service is quite obsolete. I have here a letter from Mr. Johnston, Deputy Minister of Marine and Fisheries, in which he says:

> The usefulness of the boat is pretty nearly gone, and if this department is to continue the service, it will be necessary, without delay, to take steps to provide a suitable boat. It is estimated that a suitable boat will cost, at the present time, no less than $175,000.

As to the money spent on the road, the sum may look large, but every cent of it has gone into the road. There were no side-shows, no subcontractors, so far as the company was concerned. The contract was given to two contractors. From Cap Tourmente to Murray Bay was given to M. J. O'Brien, at prices which could not be had to-day, and from Murray Bay to Nairn Falls was given to the Bishop Construction Company, which failed while building the road, and the work was completed by M. J. O'Brien. The road is operated to-day, not for passengers, but for freight. It is paying the expense of maintenance, and something over.

Now, with regard to the Montmorency bonds. These were issued about 18 years ago. I do not know of any of them having changed hands since they were issued. They are in the hands of insurance companies, of such men as F. W. Ross, of Quebec, and of wealthy estates in Quebec that have kept them from the beginning. There is no market; they are not listed. There has been no promotion money expended on the Quebec and Saguenay railway. Not one five cent piece has any director received either as fees, or as salary, or even as expenses, either directly or indirectly. I am not interested in the Quebec and Saguenay, the Lotbiniére and Megantic, or the Charlevoix and Montmorency railways.

So far as that error of $3,473,000 as against $4,465,000 is concerned I am the guilty party. When I came back with the Minister of Railways, he asked me to write a letter on this subject. I was in my office, in Montreal, in communication with the controller in Quebec, and he gave me the figures. So, I wrote the letter. When the matter came before the Government, I went to Quebec to check the figures.

I talked the matter over with him, and the only explanation he gave me was that he was under the impression that we were working under a deed of trust which would give a clear title to the Government if 67 per cent of the bonds of the railway were handed over to the Trust Co. and cancelled.

Every one in the city of Quebec, including the Board of Trade and the city council, have asked for this road and believe that the people are entitled to it. From the 10th of November until the 10th of May the north shore is without service. During the last two years they have asked the Government to go to the rescue by sending the steamer Montcalm there to try to help them.

The population of Charlevoix is 22,000, Chicoutimi and Saguenay 65,000, Montmorency 15,000, city of Quebec 90,000, Quebec county 27,000. The city of Quebec will certainly be a feeder of that railway. There is no means of communication below Quebec, because the boat leaves at 8 o'clock in the morning and summer residents wishing to go down there—clerks, merchants, bankers and so on—cannot leave by that boat. If there was a train the whole district would be populated in a comparatively short time. The cost of these railways was $8,921,476.37, of which amount the cost of the Quebec, Montmorency and Charlevoix was $2,992,209.89, and the Lotbinière and Megantic railway, $349,208.85. This railway was bought from the hon. member

for Richmond and Wolfe (Mr. Tobin) and the hon. member for Sherbrooke (Mr. McCrea) and we were assured that it earned 5 and 6 per cent all the time. If it is not earning that much it is due to the shortage of cars caused by the Grand Trunk being unable to supply cars to go over this Lotbinière and Megantic line. I think it is the only branch line which the Intercolonial has not taken over in the province of Quebec. It runs from Lyster in the county of Megantic to St. Jean des Chaillons in the county of Lotbinière. At Lyster it connects with the Grand Trunk railway, at Villeroy with the Intercolonial railway and at Fortierville with the Quebec, Montreal and Southern railway. Surely these people are entitled to some direct railway communication. The member for Lotbinière (Mr. Fortier) told me a few days ago that although he lives only thirty miles from the city of Quebec, it takes him two days to get there and back. The Lotbinière and Megantic railway consists of thirty miles of main line and about two miles of sidings. The county of Megantic has a population of 31,000, and the county of Lotbinière a population of 22,000. The villages along the lines include Lyster, Lourdes, Villeroy, Kingsbury, Fortierville, Parisville and St. Jean des Chaillons.

Mr. PUGSLEY: In the engineer's report the total population served by the Lotbinière and Megantic railway is stated to be only a little over 5,000.

Sir RODOLPHE FORGET: I am taking the census and the statement made by the hon. member for Lotbinière. The census gives the county of Lotbinière a population of 22,000.

Mr. PUGSLEY: In his report, the engineer mentions the villages referred to by my hon. friend, and gives the total population as 5,220.

Sir RODOLPHE FORGET: There may be some villages back from the railway which have escaped the engineer's notice. As to the possibilities of the Quebec and Saguenay railway, I may say that it is not very encouraging for people to try to develop industries in the district when they have communication for only six months in the year. The Mount Mur-

4 p.m.

ray Pulp and Paper Mill Company, which is controlled exclusively by the New York World, was established in that district. They have bought, during the last four years, in the county of Charlevoix, timber lands for which they have paid over $600,000. For the last three years they have produced over 150,000 cords of pulpwood each year, but have been unable to get a cord of it out owing to the lack of railway facilities and harbour accommodation. They proceeded to spend their own money in making the necessary improvements, and this year they will be able to get out some. The Baie St. Paul Lumber Company, which is controlled by some Americans from Syracuse, New York, obtained from the seminary of Quebec certain timber rights in that district, for which they paid $280,000. They have spent a large sum of money there, but they have been discouraged because of the lack of transportation facilities. They can get schooners, but they cannot get steamers, because the water is not deep enough in the bay.

Mr. NESBITT: Can they not get ordinary schooners to carry their pulpwood?

Sir RODOLPHE FORGET: It would take schooners a long time to carry out 60,000 cords of pulpwood. Besides, they do not navigate in winter.

Mr. NESBITT: They can use teams in winter.

Sir RODOLPHE FORGET: I wish my hon. friend would come down to that district with me in the winter, and see the conditions.

Mr. TURRIFF: All the way along the St. Lawrence there are scores of big ships that carry timber, sawn timber, and deals all the way from Metis to Rivière du Loup. These vessels do not go into the harbours; they anchor a mile or two outside and are loaded by barges.

Sir RODOLPHE FORGET: You are talking of the south shore, where they have the Intercolonial railway wharves, and all that they want in that line. On the north shore the only wharf at which there is water deep enough to accommodate a steamer is at Murray Bay. There is an iron mine in the county of Charlevoix in which at least $250,000 must have been sunk. I know that some of our Quebec friends are only waiting for the construction of this railway before commencing to exploit that mine.

Mr. NESBITT: I could tell the hon. gentleman about a lot of mines in which

more money than that was sunk, and in which I myself put some money.

Sir RODOLPHE FORGET: The man in charge of the Quebec and Saguenay construction was the engineer, Arthur Bruce. The estimates were based on reports by Edward Evans and Beresford Fox, of Sir Douglas Fox and partners, of London. Other engineers engaged in the work were J. G. Guay, S. A. Demeules, and E. S. Lovelace. They were absolutely wrong in their estimates, which were just as bad as the estimates of the cost of the Transcontinental. The railway is absolutely level; there are no grades and the roadbed is largely solid rock. I would call the attention of the committee to the terminals which it is necessary for the Transcontinental to have at Quebec. Without terminals you cannot run a railroad, and the same may be said of the Quebec, Montmorency and Charlevoix and the Quebec and Saguenay railroads.

Sir WILFRID LAURIER: How will this railway benefit the population of Chicoutimi and Saguenay?

Sir RODOLPHE FORGET: It will do that when it is taken down to St. Catherine's bay.

Sir WILFRID LAURIER: How will this railway benefit the county of Megantic? If the railway is projected through Sherbrooke it will assist the county of Megantic; otherwise it will be of no value to that county.

Sir RODOLPHE FORGET: I am simply taking the statement of the hon. member for Lotbinière.

Mr. LEMIEUX: I asked if the bonds would be paid at par by the Government. He said, "Yes." Does he mean the bonds of the Quebec and Montmorency and the bonds of the Quebec and Saguenay?

Mr. REID: Oh, no.

Mr. LEMIEUX: What bonds?

Mr. REID: We take the road clear of all encumbrance, and the $2,500,000 of bonds are the original bonds, as stated by the hon. member from Charlebois.

Mr. LEMIEUX: Does that apply to the two sections?

Mr. MEIGHEN: No, just the one section.

Mr. LEMIEUX: The object of my question is that I understand that the Quebec and Saguenay has been built; the surveying, the locating of the line and the grading, has been done with money invested by the French people. I understand that this money was obtained on the Paris market to the extent of something over $4,000,000. Is that right?

Sir RODOLPHE FORGET: Oh, yes, more than that.

Mr. LEMIEUX: I do not think that any Canadian money was invested in that section from St. Joachim to Nairn Falls, and surely the people who have invested their money, with whose savings you have built the road, are entitled to reimbursement if the Government are going to absorb it. Personally I am not opposed to the Government taking over that section of the railroad which runs from St. Joachim to Murray Bay. I wish to explain, however, that the Quebec, Lotbinière and Megantic should not be taken over by the Government. This road was built some years ago by some very enterprising lumbermen for the purpose of exploiting their timber limits. In 1902, if I mistake not, it was bought by Messrs. Tobin, McRae and Pennington for $235,000. This included 60,000 acres of timber land. A few years afterwards, when the limits had been practically exhausted, the road was sold to the Quebec Eastern for $285,000. As was stated a moment ago by the hon. member for Edmonton (Mr. Oliver), the road is connected with the Intercolonial. It is not a highly paying concern, but still it pays its way. I do not see why, in these days of hard times, when the people of Canada are called upon to pay such heavy taxation as they will this year, they should be asked to saddle themselves with this railway, especially when we are told by the Minister of Railways and by the Minister of Finance that the Transcontinental railway, to which this road is going to be added, is already a dead weight on the Government. I may be told, it is true, that I should be perhaps more provincial; and that as it is a matter which concerns my own province I should keep silent and let the Government acquire this railroad. My answer is that I am elected to the Parliament of Canada not to represent one county or one province, but to represent the people of Canada; and I care not what may be said about the advantage which might accrue to a special locality by the gift of a railway, or rather by the acquiring by the Government of a certain railway. The people of Canada at the present moment are not in a mood

to pay any such amount of money as this. The war will cost this country an enormous amount of money. The national debt is increasing by leaps and bounds. The people will pay it cheerfully because the people understand that the war must be ended and ended victoriously and that all legitimate sacrifice must be made towards securing that end. Therefore, I think the Government might well ponder and pause before deciding to acquire this small bit of a railroad. As regards the other part of this scheme, that is the railway running from Quebec to St. Joachim. I know that section of the country; it is a rich territory; the railroad runs through alluvial lands, and really I think it is a paying concern. But it is a tramway, and the people are well served as there are twenty-two or twenty-five stopping places; not stations exactly but stopping places. It is the continuation of the tramway system of the city of Quebec. It pays its way and I think that if it was disconnected from the other stretch of railway which was added to it, the Quebec and Saguenay, there would be no need of acquiring it. Therefore I say that there is no reason for the Goverment acquiring the Quebec and Lotbinière section of the railway. There is no reason for them to acquire the tramway from Quebec to St. Joachim, which pays its way. But I would say to the Government, as being interested in the welfare of the north shore of the river St. Lawrence, that the Government should help towards the completion of the road from St. Joachim to Nairn Falls. Really I cannot object to that, because there is a large and old settled population in that district, and that population really requires some mode of transportation. In that respect I may say that I have received a letter from the President of the Board of Trade of Quebec, a well known gentleman, Mr. J. G. Scott. I shall read his letter:

Quebec, 9th May, 1916.

Dear Mr. Lemieux,—May I take the liberty of writing you a line with regard to the Quebec and Saguenay railway.

I think the people of Quebec are pretty nearly unanimous in approving the course of the Government in making this railway part of the Transcontinental. I know that in the Board of Trade—of which I am the president, and we have a very influential board of nearly 600 members—there has never been a dissenting voice, when the matter has been discussed as it often has. Our people feel that the people of Montmorency, Charlevoix and Saguenay, a large population, have as good claims as those of the Northwest to railway facilities and that this project will help towards winter navigation, or at least the prolongation of the season, a matter which is very dear to us in Quebec.

Moreover, a great many people in Quebec are interested financially, and the failure of this project would not only cause them to lose their money, but it would injure the city generally and perhaps cause us to pay dearer for gas and electricity—We pay too dear as it is.

Yours truly,

J. G. Scott.

I have not the copy of my answer, but I wrote back to Mr. Scott that I was certainly not opposed to the Government helping towards the completion of the road between St. Joachim and Murray Bay, provided the people who had invested their good, sound money in that enterprise were recouped. I may be treading on dangerous ground, but I wish to say that this part of the Quebec and Saguenay, which runs from St. Joachim, the terminus of a good paying tram line, to Nairn Falls, was financed in France. I do not think that any Canadian money was invested in that section. If I am wrong my hon. friend from Charlevoix (Sir Rodolphe Forget) will correct me.

Sir RODOLPHE FORGET: About $1,250,000 of Canadian money was invested and $4,600,000 from France.

Mr. LEMIEUX: I have the various prospectuses which were issued in France at the time when this enterprise took form, and the people in France were induced to invest their money not only in that enterprise, but in a series of enterprises, which were known as the Quebec merger, and which included the Quebec and Saguenay railway, the Quebec, Montmorency and Charlevoix railway, the Quebec Public Utilities, that is, Gas, Electricity, and so on, and the Lotbiniere and Megantic railway. As my hon. friend from Charlevoix said, they parted with their money on the strength of the statements made in these prospectuses. We know how people abroad are induced to invest their money. The French people thought that this would be quite a remunerative enterprise, and they paid their good money in the hope that they would get good returns.

Sir RODOLPHE FORGET: Is my hon. friend aware that these good French people got back their good money plus 6 and 8 per cent of interest?

Mr. LEMIEUX: The whole enterprise was guaranteed by the Quebec merger, and the bondholders of the company received their interest, if I am well informed.

Sir RODOLPHE FORGET: And the money for their bonds.

Mr. LEMIEUX: That is the point. I am informed—my hon. friend knows better than I do—that the French bondholders were offered 40 and 50 cents on the dollar for their bonds, and that afraid, as they were, at the failure of the company to proceed with the work, and discouraged, as they were, by the reports of their engineer, they parted with their bonds. It seems to me that in all fairness, and in all justice, these French bondholders, who very cheerfully and very willingly invested their money in that enterprise, should be reimbursed up to the figure which they paid when they subscribed for the bonds of the concern.

Mr. MORPHY: Have they not sold their bonds outright, and lost possession of them?

Mr. LEMIEUX: Yes, that is what I am stating. The French public admittedly—my hon. friend from Charlevoix says so, and he knows better than anybody else—subscribed to the amount of over $4,600,000. They paid that amount in hard cash. The money was spent on the roadbed, on the grading on the small section of the railroad which runs from Murray Bay to Nairn Falls. Nobody will deny that since then French investors have seen their folly. They have been acquainted with the fact that the enterprise was a failure and I say that without any disparagement. It was a serious failure; they were induced to sell their bonds to a committee of purchasers.

Sir RODOLPHE FORGET: By whom were they induced to sell?

Mr. LEMIEUX: I have the information here.

Sir RODOLPHE FORGET: Would my hon. friend say that the French people who invested in Canadian Pacific railway stock at 280 and sold it at 165 should be reimbursed?

Mr. LEMIEUX: I am not speaking of the Canadian Pacific railway. I believe that the bondholders of the Canadian Pacific railway in France and England, and all the world over, are quite satisfied with their stock even at the low figure to which it has fallen, because it is a gilt-edged security. There is no comparison.

Sir RODOLPHE FORGET: Yes, there is.

[Mr. Lemieux.]

Mr. LEMIEUX: In the present instance the French people were induced by rosy prospectuses to invest their good money in this enterprise when the name of Canada was very prominent and very popular in the French money market. I have all the various prospectuses here, but I will not read them. Those people invested their money, and now the Government of Canada proposes to acquire these lines of railway. The Government declares that it will buy the bonds at their par value for the section running from Quebec to St. Joachim. Why not pay the French people the par value on their bonds for the section from St. Joachim to Nairn's Falls. That would be dealing out equal justice. It seems to me that the French people should be treated by this Government in a fair way. Why one policy for one section of railway, and another policy in regard to the other section? My hon. friend from Charlevoix asked a moment ago who offered to purchase the bonds.

Sir RODOLPHE FORGET: Who induced them to sell?

Mr. LEMIEUX: I have here a copy of L'Office National des Valeurs Mobilières, a financial review published in Paris. I will translate the paragraph into English. It reads as follows:

The Defence Committee—

They appointed a Defence Committee in Paris.

The Defence Committee of the bondholders of the Quebec railway, Saguenay and Eastern, have been offered the total purchase of their bonds in France at the cost of $60, plus payment of all the coupons due.—
—the committee has consented to present that for the bondholders, but as requested, before their doing that, indisputable guarantees are to be given which guarantees have not yet been given by the group.

I do not know what that group is but I answer that my hon. friend induced the French bondholders to accept $60 for their bonds. I do not say that originally they paid $100 for their bonds.

Mr. REID: They paid $82 and some $84.

Mr. LEMIEUX: Well, certainly, offers were made by a Canadian group through the Committee of Defence of Bondholders in Paris, at $60 for each bond for which they paid, as the minister says, $82.

Mr. CASGRAIN: I wish I could get the same amount for some bonds I have now.

Mr. LEMIEUX: I would like to know where the protection will be for the people

who have built that section of road. How will they be reimbursed? I am not opposed to the Government aiding that section of road but I am opposed to the acquisition of the Lotbinière and Megantic. I say that this last proposition is absolutely indefensible because this road occupies a territory served by the Intercolonial railway for many years past and nobody in that district has made a demand that the Government should acquire that road. As regards the Quebec, Montmorency and Charlevoix, I do not see why the Government acquires that tramway. It is a good tramway and it pays well.

Sir RODOLPHE FORGET: It is not a tramway; it is a railway with a federal charter, run by steam and electricity, and it has a telegraph office in many stations. There is a tramway to serve local traffic.

Mr. LEMIEUX: Is it double-tracked?

Sir RODOLPHE FORGET: Double-tracked and both tracks are electrified.

Mr. LEMIEUX: My hon. friend says that this road is not in need of help. It serves a large population, and the people are not anxious that their railway should be absorbed by the Transcontinental. The people I am caring for particularly are the people on the line from St. Joachim to Murray Bay. Let the Government help to complete the line. I would not object to that, but I say that if they are still determined to acquire that line the least they can do is to recoup those who have built it. The hon. member for Charlevoix himself admits that the French investors have sunk in that railway $4,600,000.

Sir RODOLPHE FORGET: They got back their money and they got 6 to 8 per cent interest on it.

Mr. LEMIEUX: Did they get their capital back? Surely my hon. friend does not contend that the French investors have had returned all their capital invested?

Sir RODOLPHE FORGET: The road must be given free of encumbrance; that is, the lien on that road must be released.

Mr. LEMIEUX: By whom?

Sir RODOLPHE FORGET: By the Quebec Railway Company.

Mr. LEMIEUX: That comes to exactly what I said a moment ago. The French investors were induced to put their money into the construction of that road, the Canadian company accepted their money, they located the road, they surveyed it, they graded it; to-day the Government will acquire that road free of encumbrance. I am told and my hon. friend says that the Quebec Railway Company will wipe out any encumbranc existing on it. It means, therefore, that the Quebec Railway Company has purchased the bonds from the French investors.

Sir RODOLPHE FORGET: No.

Mr. LEMIEUX: If my hon. friend will make the matter clearer I will thank him for it. All I have in mind is to protect the rights of those who have invested their money.

Mr. MEIGHEN: Mr. Chairman,—

Mr. LEMIEUX: My hon. friend will pardon me; I would like my hon. friend from Charlevoix to give me an explanation. Who has disinterested the French bondholders and how much was paid to them?

Sir RODOLPHE FORGET: They disinterested themselves by getting rid of their bonds.

Mr. LEMIEUX: Who purchased the bonds?

Sir RODOLPHE FORGET: I do not know; they were sold on the Paris Bourse, and I do not know who bought them. A great part of them were exchanged for Canadian bonds at 50. The Canadian bonds are now selling at 70, which gives them a premium of ten francs on their money, plus 6 to 8 per cent interest. That came about because friends of mine in Paris asked, as the value of the rentes stood at the ratio of 94 to 60, if we could give 60 for these Canadian bonds, as it would help to bring the French rate of exchange up to 60. I said that I would do so. We got some of our friends together, and we made that offer, but it has never been taken advantage of.

Mr. LEMIEUX: Even on the statement made by the hon. member for Charlevoix, there is the admission that the French investors, although they invested their money in good faith for the building of a Canadian enterprise, will be deprived of a part of the value of the bonds which they secured. I am not opposed to the completion of that section of the railway. I am in favour of it, but I do not say that the Government should acquire the road. The Government has not the means to acquire any railway,

especially when the Government comes before Parliament with the declaration that before long this country may be obliged to nationalize the three transcontinental railways. But I say: let the Government help substantially the Quebec and Saguenay portion of the line and they will get my unreserved support. If the Government acquire that railway, which is not built, but which is graded, and in which the French people have sunk so many millions of dollars, the least the Government can do is to protect those unfortunate bondholders. My hon. friend from Montmagny (Mr. L'Espérance) smiles. Unless I am a simpleton, I do not see how else the Government can conscientiously act. Is it fair—I put it to my hon. friend, as a friend of the Quebec district—that the people in France who have invested their money after having read the alluring prospectuses which were distributed throughout France should be eliminated and that they should only save a part of their investment? Is it fair for the Government to take over the road and return to the French investors only a portion of the money they invested? My hon. friend from Charlevoix has admitted that the bonds of the road were undersold to a Canadian group of financiers.

Sir RODOLPHE FORGET: Were exchanged.

Mr. LEMIEUX: If my hon. friend would only be as frank as he usually is and unravel the whole thing, he would tell us that a group of financiers in Montreal and Quebec, knowing that the bonds would largely increase in value later on, induced the French investors to sell their bonds at a low figure.

Sir RODOLPHE FORGET: The company has never induced anybody to sell their bonds. The bonds are quoted on the Paris Bourse, and I know that some have been sold on that exchange. This is no more unfair than when I was induced to buy 500,000 francs of the Est Parisien Tramway Company and only got back 5,000 francs. My hon. friend might as well say that the Grand Trunk shareholders and bondholders who invested their money in this country thirty or forty years ago ought to be reimbursed.

Mr. LEMIEUX: My hon. friend may think what he likes about that, but I am loath to believe that the French would induce foreigners to invest their money in an enterprise under false pretenses.

[Mr. Lemieux.]

Sir RODOLPHE FORGET: You know the Est Parisien Company.

Mr. LEMIEUX: I do not know about that. I know that they are very severe in France on schemers.

Sir RODOLPHE FORGET: Your friend ex-Controller Macdonald of Montreal was manager of it.

Mr. LEMIEUX: He is more your friend than mine. I understand that ex-Controller Macdonald was employed by my hon. friend when he was connected with the Montreal Tramways. I think the Government should see that the French are reimbursed for the money they have invested in this enterprise. I should like to ask the Acting Minister of Railways whether interested parties will be able to bring their claims before the Exchequer Court when this matter comes up?

Mr. REID: The Exchequer Court will determine the value of the properties, also any claims, I suppose, against the road. The owners must give us a clear title.

Mr. MEIGHEN: The hon. gentleman must acknowledge that whatever money is paid for the Quebec and Saguenay railway must go to those who have first claim on it; that is, the bondholders. Therefore, the bondholders will be paid in full up to the purchase price of the road, and the only way to pay them further, if the purchase price is not sufficient, would be to add to that purchase price, and we do not feel we can do that.

Mr. TURRIFF: I do not think any one will object to the building of a road that is a reasonable proposition, and that the country is well able to afford. In the last few days it has frequently been impressed upon the House by hon. gentlemen on both sides that we have overbuilt in this country, and that the time had come when we should cease to extend our railway mileage. The hon. member for Calgary (Mr. R. B. Bennett) pointed out yesterday that there are in this country 2,500 miles of track that should be taken up and laid elsewhere. The Minister of Finance also touched upon this subject yesterday, and his whole argument was that the railway companies should go to the provinces for assistance in completing their lines. The Minister of Finance is not here to-day, and I do not wonder at it.

Mr. REID: He was here a moment ago.

Mr. TURRIFF: He is ashamed to be present and countenance this proceeding.

Mr. REID: That is absurd. He was here only a moment ago.

Mr. TURRIFF: The Minister of Finance said yesterday that if the company wanted assistance for its incomplete line in Alberta it ought to go to the Government of Alberta, and similarly with Saskatchewan, and the Solicitor General took the same ground. He said that if the provinces wanted the roads completed they should assist them, because we were not in a financial position to do it. One point that has not been touched on, I think, is the assistance these roads have received from the province of Quebec.

Mr. REID: I mentioned that last night. The road was granted a subsidy of $3,000 a mile, but nothing was ever paid on it.

Mr. TURRIFF: Was there not a land grant?

Mr. REID: Yes, but nothing was ever given on it.

Mr. TURRIFF: Why?

Mr. REID: I do not know why.

Mr. TURRIFF: Perhaps the hon. member for Charlevoix can tell us.

Sir RODOLPHE FORGET: This was granted in March, 1912, and the road stopped in August, 1912; so nothing was earned.

Mr. TURRIFF: On account of the railroad falling down in its construction they have not received anything from the province of Quebec. But they have received a subsidy from the Dominion Government.

Mr. REID: They have received $132,000.

Mr. TURRIFF: On a railway that is incomplete; that is the great objection. Why should the Government at this time, and with financial conditions as they are, take over a tramway running out of the city of Quebec? The hon. member for Charlevoix and the Acting Minister of Railways tell us that the proposition is paying its way. But why take over this particular tramway, even though it has a railway track on which cars can be run? Why should we have anything to do with the Lotbinière and Megantic, which road, as I understand, is running? The only part that we ought to deal with is that which is uncompleted, the part from St. Joachim to Nairn Falls, a distance of 62 miles. I understand from the statement of the hon. member for Charlevoix that people in France put in $4,600,000.

Mr. REID: That is the par value of the bonds. They were sold at 82.

Mr. TURRIFF: But the hon. gentleman is proposing to pay the face value of the bonds.

Mr. REID: No.

Mr. TURRIFF: In addition to the $4,600,000 put in by the people of France; $1,500,000, the hon. gentleman says, was put in by the people in Quebec province.

Sir RODOLPHE FORGET: In Montreal.

Mr. TURRIFF: Well, in the province of Quebec. That money was put in for this sixty-two miles of railway of which only 87 per cent of the grading is done, and a lot of that washed out. That amounts to $98,000 a mile for grading 87 per cent of a railroad. Either the money was practically taken out of it, or else the country is so rough that it should not have a railway. If the grading of 87 per cent of this mileage costs $98,000 a mile, it will cost $125,000 a mile to put the road in running shape. Now, $125,000 a mile may be a paying proposition in such country as the state of Pennsylvania, where they have trains running every five minutes of the twenty-four hours, but in a sparsely settled country a railway cannot get the traffic that would justify the Government in paying so much money for it.

Why not get down to the facts of the matter? This whole proposition, in my judgment, is nothing but a political steal. And the thirty thousand people along this line are not going to get the advantage. Hon. gentlemen opposite are going to get the advantage, for the Government is simply paying for the political support they got the other day—that is what it amounts to. At a time when the Minister of Finance says that we are not in a position to go on and build railroads we are called upon to put in ten millions of dollars, and all we get is sixty-two miles of railroad. We are actually told that we are to pay $98,000 a mile for a road on which not a bridge is built, on which not only the rails are not laid, but the grading is not completed, on which there is not a station house, for which there is no telegraph line—absolutely nothing but 87 per cent of the work of grading done. The Minister of Railways has the nerve to come to this House and ask us to put ten millions into such a scheme as that. Of all the propositions that have ever been

put before this House in connection with railroad building—and I know there have been many bad ones in the past, and I am not going to say that one side is worse than the other—there was never such an outrageous proposition as this. Yesterday we voted $8,000,000 for the Grand Trunk Pacific and $15,000,000 for the Canadian Northern. Are you aware, Mr. Chairman, I opposed these grants? But there is this to be said in connection with the Canadian Northern—that the provinces of Canada and the Dominion of Canada combined have already put in $208,000,000 into that system. So, we were committed to a certain extent. But here is a gigantic piece of folly, simply a political proposition, by which the Government wants to recoup some of its political friends and supporters, and to that end asks Parliament to vote $10,000,000 to add 62 miles to the railways of Canada. I have never heard anything like it; and if this Government persists in such a proposition, especially in these times, it should be driven from power.

See what this proposal means. The Minister of Finance is putting a business impost on the people of Canada by which he proposes to tax every business man coming within the scope of his Bill 25 per cent on what he earns in his business over 7 per cent. By this tax he expects to raise about $25,000,000 a year. And now it is proposed that a sum equal to more than one-third of this special tax for a year is to be paid for a railway 62 miles long serving a country with only 30,000 people.

Let us put it in another way. From the Atlantic to the Pacific the people of Canada, men, women and children, have been busy since this war began paying, working, doing everything that was in their power to maintain the Patriotic Fund, the Red Cross Fund and others intended to alleviate the sufferings of our men at the front. And the whole of that amount so contributed in a year, if I remember the figures correctly, would not amount to what this Government here proposes to hand over to a few men. Montreal put up a million or two, Toronto a million or two; the provinces put up large sums of money, and all this money is taken with one hand and thrown into this concern with the other. With this money it is proposed to take over railroads that, at the price suggested, will be a millstone around the neck of the Dominion of Canada as long as the Dominion of Canada lasts. I am not opposed to helping railroads in the province of Quebec. Quebec is my native province. There I was born and brought up and I have always had the kindliest feelings for my old province of Quebec. If this road is in the condition that it is represented to be in, let the Government come forward with a sane, reasonable proposal to put that 62 miles of road on its feet and add it to the mileage of the railways of Canada. No man would support that quicker than I would, because that would be a reasonable proposition. This company got hold of French bonds at 60 cents on the dollar, for which they are now going to get 100 cents on the dollar from my hon. friend the Acting Minister of Railways. Then, we are going to issue $4,400,000 of securities that can be turned into cash; these we are going to hand over to the present stockholders, a little group of men who have manipulated the French bondholders and every one else. In this political deal they are now going to draw $4,400,000 out of the Treasury for their own purposes. And that is not the end of the trouble. In addition to that, the Acting Minister of Railways has to complete those roads. He has to add to the roads that are now operating and also to complete this 62 miles of road.

I have pointed out on more than one occasion that within five years we shall have a debt of about $2,000,000,000, with an annual interest charge of $100,000,000. My hon. friend the Acting Minister of Railways now deliberately proposes to add another half million to our yearly interest account. I say again that if this Parliament passes this measure they will have to take the responsibility before the people of Canada, and I venture to say that the people of Canada will not justify that action in any shape or form. The hon. member for Edmonton (Mr. Oliver) suggested a much better way to spend this money and at the same time get value for it—by building up transcontinental railway facilities in the city of Quebec. If you do that, and this railway is as advantageous as hon. gentlemen opposite say it is, the province of Quebec will come to the rescue of this railway company and see it through. But the Government and the Legislature of the province of Quebec, who know the circumstances much better than we do, would not justify what has been done in connection with this road, would not justify the expenditure of $98,000 a mile on an uncompleted grade. The thing is too absurd for argument. That is one reason why this

Bill should be defeated—so that members of the House and the people of the country should have an opportunity of getting some information on the subject. We have not been able to get any information worth speaking about from my hon. friend the acting minister or from the Solicitor General. The very fact that the Acting Minister of Railways has to get the Solicitor General at his elbow to wiggle and twist and turn this thing around is enough to make the people suspicious as to the merits of the case. The Solicitor General is very adroit on railway matters and when we see the Solicitor General take his place at the acting minister's elbow, we know that the acting minister is in deep water. Not knowing what to do, he sends out an S.O.S. call and the Solicitor General rushes to his rescue. Well, the Solicitor General may be able to engineer this legislation through, but he will have to take a good deal of responsibility for it.

5 p.m.

The hon. member for Charlevoix spoke about a winter port. I am free to admit that the hon. member ought to know more about that than I do, for it is now over forty years since I left the province of Quebec. But I have seen twenty vessels frozen in the ice in the month of November.

Sir RODOLPHE FORGET: On the south shore?

Mr. TURRIFF: On the south shore. If my hon. friend is right in saying that Murray Bay can be made an open port—I think it is only 40 miles from Quebec, is it not?

Mr. CASGRAIN: 90 miles.

Sir RODOLPHE FORGET: From St. Catherine's bay, 130 miles.

Mr. TURRIFF: Of course, the further you get down the easier it is to navigate in winter. Ice-breaking steamers have had a great deal of difficulty at times in navigating the St. Lawrence during the winter months. I do not know of any vessels other than ice-breakers that have navigated to any considerable extent during the winter months, and you cannot have all your freight steamers built as ice-breakers. In my judgment it will be many years before you will have a winter port any place along the St. Lawrence where it is as narrow as it is at St. Catherine's bay. I will not be too sure about that, however, because I am not as well posted as my hon. friend is.

If the Government does intend to carry out this proposed legislation why do they not do it in a businesslike way? What is the reason why the Railway Department should not deal with this matter? I will tell you the reason: it is right there among the papers that have been brought down. Their own engineer gives the value of the property a trifle over half what my hon. friend the Solicitor General and the Acting Minister of Railways are prepared to pay. This is not a matter that ought to go before the Exchequer Court. The Exchequer Court, as I understand the matter, was established in order that any one having a claim against the Government might go there to have that claim settled. Who has a claim against the Government in connection with these three railways? We gave them a subsidy; we do not owe them a dollar. The Intercolonial does not need the roads, nor does the Grand Trunk Pacific need them. We have no liability; we have no responsibility, therefore why go to the Exchequer Court? This Government is losing all the power of government that it ever had—and it never had much. Commissions are appointed for everything, and now, when they want to take over about 70 miles of operating road and 62 miles of grading, they cannot trust their own engineers and they cannot trust themselves. They cannot trust themselves, and so they pass a Bill here in order to have an excuse for handing the matter over to the Exchequer Court to have that court pass on the value of the road. They do not even trust the Judge of the Exchequer Court, because they tie his hands behind his back. If this Government are going to take over this road, why do they not say to the Judge of the Exchequer Court, if they are bound to put it up to him: "Here, go out and value the road, find out what it is worth"? My hon. friend the Acting Minister of Railways and the Solicitor General say: No, we must find out how much it cost. When you find that $98,000 per mile was put into 87 per cent of the length of line graded, I do not wonder at the hon. member for Charlevoix (Sir Rodolphe Forget) not wanting the road to be paid for at its value. I can quite understand how he would prefer to have paid back what the road has cost, or what they claim it has cost. Supposing that, in the locating of that road, as in the case of the locating of a great part of the Canadian Pacific railway when it was first constructed, the worst possible route was chosen, although there were much better routes near at hand, why should this Gov-

ernment, in taking over the road, pay for the mistakes made by those who built the road? Or why should they take it over at more than what it is worth to them? We are buying this for the people of Canada. I ask, is there one man who is sitting on the Government benches to-day who, if he was putting his own money into this road, would take it over on such a plan as this? Would he say: "Well, I will pay you what you put into it with interest on your money"? Or would he say: "I will take the road over at what it is worth to me"? There is the whole position. My hon. friend is putting it to the Judge of the Exchequer Court instead of trusting his own officers. One of his officers has made a report showing the value of the road to be about one-half what the Acting Minister of Railways proposes to pay. But the minister refuses to go by that, because it would not enable him to put in a large sum of money to those supporters who sit behind him, and put it in, not to the advantage of the people of the country, but for political advantage and nothing else. I hope that when this matter comes to be fully considered by the Government we will have this Bill withdrawn, and I would ask my hon. friends on the Government benches to consider well what the effect of this will be. If this road is bought under such circumstances, how are the Government going to get out of taking over the branch lines of the Intercolonial, many of which they have promised to take over? Will the owners of those roads not also demand that they be taken over, not under the Bill that was passed not long ago for the purpose of enabling the Government to take over branch lines, but on the same terms as this road. Do you not see where it leads us? It will be just one thing such as this after another, and that at a time when the Government of the country cannot afford it. We have heard the ministers talking of economy. What economy are they practising? They are bringing forward now, in the dying days of the session, when members cannot post themselves fully on the enormity of what is proposed, legislation of a most important character. I venture to say that we do not know one-half about this matter yet, and they are coming forward with a proposal to add another $10,000,000 to the debt of Canada for an enterprise that, I venture to say, will never pay one cent of interest. It will be just like the Intercolonial; if it pays working expenses it will be doing mighty well. So we shall have added $10,000,000 to our debt, which will involve half a million dollars each year for interest as long as time lasts, unless we pay off the principal.

As I said before, this is the most vicious proposition that has ever come before Parliament, and I ask the Acting Minister to take it into his further consideration and decide if, in the interest of the people of Canada, he should not withdraw the Bill; because I know perfectly well that my hon. friend the acting minister cannot go into his own constituency and, before any audience, justify the handing over of this $10,000,000. He cannot go into any constituency in Canada, except perhaps those that will immediately benefit, and justify this course. I say again I am quite willing that the Government should give the necessary aid to secure the completion of this road; but they should not buy it. I trust that if anything is done it will be done along the line of assisting the road, not of purchasing it.

Mr. MEIGHEN: The hon. member who has just spoken has made complaint that we have not provided the House with sufficient facts. Of all hon. members of this House, the last who should complain of the absence of provision of facts is the hon. member for Assiniboia. I have never been able to discover that facts are of the slightest value to him; in fact, they seem to impede the progress of his rhetoric rather than to help him. His first task, whenever he gets on his feet, is to divorce himself from anything in the nature of facts and truth, and to substitute the figments of his fancy, and to proceed with a very well-stocked supply of superlatives to denounce the Government from every standpoint. If I could add to his armoury of adjectives, of superlatives in particular, I know that I would be doing him a great deal more service than if I attempted to supply him with facts on any subject at all.

We have got to that stage of the argument where hon. gentlemen opposite recognize the necessity, from the point of view of the interest of the country itself, of in some way, taking care of the situation with respect to the Quebec and Saguenay railway.

Mr. LEMIEUX: The uncompleted portion.

Mr. MEIGHEN: The uncompleted portion of it, the Quebec and Saguenay is all uncompleted. For the moment I leave out the other two roads, the Lotbinière and Me-

gantic and the Montmorency and Charlevoix, which are admitted to be paying concerns by the hon. member for Rouville (Mr. Lemieux), who, of all hon. gentlemen opposite, should know best. The duty of the Government, according to hon. members opposite, is to take care of the situation in respect of the Quebec and Saguenay by reason of the necessity of providing railway service for the inhabitants of that country, numbering not a few thousand but very many, something in the neighbourhood of 100,000, depending on how far back from the line you go.

Sir WILFRID LAURIER: Not 100,000.

Mr. MEIGHEN: And from the further point of view of saving to the country the tremendous amount of money already invested in that line and avoiding the necessity of repeating that expenditure when the road comes to be completed.

Mr. OLIVER: Does the hon. member suggest that that is the position taken on this side of the House?

Mr. MEIGHEN: Yes.

Mr. OLIVER: I would like to dissociate myself from that position.

Mr. MEIGHEN: The hon. member is ready to lead his friends all to their fate. He prefers, instead of serving the people along the banks of the St. Lawrence, to build more elevators where those already built are unfilled, and to put a Pullman car service between Quebec and Cochrane. I understand he wants the Government to operate a Pullman service there, although the prospects are that such a service would get about one passenger a month. That is the alternative proposition put forward by him.

Mr. OLIVER: You could get more traffic between Edmonton and Cochrane than between Quebec and Nairn Falls.

Mr. MEIGHEN: I question that myself. I would rather undertake to operate six miles than to operate several hundred.

Of course, we all know the railway policy of the hon. member for Edmonton (Mr. Oliver). He was a member of the late Government. We know the railway policy of the late Government. He, of all men, has the right, of course, to talk about a blockade in western Canada. The hon. member for Edmonton should know what a blockade in western Canada is, because every year during which he was a member of that Administration we had a blockade of western wheat.

Every year, during which he was a member of that Administration, the wheat was sent back to the farmers' doors, and they could not get it out for months, yes, sometimes for a year. It was a regular occurrence right up to 1911 and including 1911, and in those days they did not have half the crop that we had last year. The Government, of which my hon. friend was a member, spent millions of dollars on lines that could not be of service for many years to come. What was the railway policy of my hon. friend from Edmonton and of the Government of which he was a member? It was a policy of waste and want. Not a dollar to assist 100,000 people on the banks of the St. Lawrence, but millions for the wilds of the north where no human being could live. A policy of freight without railways in one half of the Dominion, and railways without freight in the other. Wheat rotting in Alberta, rails rusting in Quebec. An annual paralysis in western grain; an annual orgy of eastern contractors. That was the railway policy to which the hon. member for Edmonton for seven years adhered. I do not wonder that we dismiss rather hurriedly any suggestions which he offers at the present time.

However, I will take up the more reasonable proposal which seems to be adhered to very generally by hon. gentlemen on the other side, that, in respect to this Quebec and Saguenay railway, instead of taking the railway by virtue of expropriation at a price not to exceed $4,135,000, or not to exceed the actual cost, we should loan sufficient money to enable the owners to complete the road. Let me take that alternative proposition of hon. gentlemen opposite—and they all seem to agree on this, even the hon. member for Edmonton.

Mr. LEMIEUX: I would like to put my hon. friend right on that matter. There are three railways. The Lotbinière and Megantic railway is on the south shore of the St. Lawrence, and for my part I do not think the Government should acquire that road. There is no need for it. Then there is the Quebec and Montmorency railway, which runs from Quebec city to St. Jean des Chaillons. That railway is completed; it runs well; it is paying, and there is no need for the Government to acquire that road. But, in my judgment, the Government should put an item in the Estimates, or bring down further railway aid towards

the completion of the Quebec and Saguenay railway, which runs from St. Jean des Chaillons to Nairn Falls.

Mr. MEIGHEN: That is exactly the alternative I was referring to. Hon. gentlemen opposite want an estimate by way of loan to the Quebec and Saguenay railway for the completion of that line. It would have to be by way of loan, unless we took over the line. Now hon. gentlemen opposite say that this Bill means an investment of $10,000,000 before the road is complete. It means, first of all, an investment —the way we are taking it—of $4,135,000 to get down to details, for the Quebec and Saguenay line, and from that sum comes off $116,000, which is in the trust account, making virtually $4,019,000. There is $330,000 for the Lotbinière and Megantic line, making a total of $4,349,000, to which add $2,500,000 for the Quebec and Charlevoix line, or a total of $6,849,000. That is the total for the three roads at the outside under the present Bill, and it will be less unless it is shown that actually that money or more than that money has gone into the road. Let us suppose that it will reach the maximum of $6,849,000. Hon. gentlemen opposite say that, before this road is completed, the total will have reached $10,000,000. There is only one road to complete, the Quebec and Saguenay road, consequently they claim that it will take $3,251,000 to complete the Quebec and Saguenay line, and they ask this House to put in the Estimates a sum of $3,251,000 by way of loan to the Quebec and Saguenay railway.

Mr. TURRIFF: I did not.

Mr. MEIGHEN: The hon. gentleman did not suggest any method, but he wanted aid to be given to complete the Quebec and Saguenay railway, and he said it would take $10,000,000 altogether, or, in other words, that it would require $3,251,000 to complete that line.

Mr. TURRIFF: Why not the usual subsidy?

Mr. MEIGHEN: How are you going to complete it with the usual subsidy, if, as hon. gentlemen opposite say, it will take $3,251,000 to complete it?

Mr. TURRIFF: Let the owners do something.

Mr. MEIGHEN: The hon. gentleman said that he would supply a liberal allowance to complete the road, and you cannot complete it unless you supply the money, and that, according to hon. gentlemen opposite, is the amount of money that it will take. There is no other way of getting it. The proposition of hon. gentlemen opposite is to loan them $3,251,000.

Mr. TURRIFF: It is not.

Mr. MEIGHEN: Then, where would we be? We would have $6,100,000 in bonds against the road according to the figures given; $4,600,000 of French bonds, and $1,500,000 Canadian, making a total of $6,100,000. We would have a total charge against the road, therefore, of $9,351,000, and we would have a second mortgage.

Mr. TURRIFF: I wish to state absolutely and positively that I for one did not say, and I did not hear any one else on this side say, that we ought to put in the Estimates three million and some odd thousand dollars to complete the road. The hon. member is putting words in our mouths that we never uttered, and he knows it.

Mr. MEIGHEN: That is the only contention the hon. member could make unless he was talking absolute nonsense. What is the use of talking about voting $3,000 a mile when he says it will take $10,000,000 to complete the road. Our maximum is $6,849,000, and, according to the contention of my hon. friends, that leaves $3,251,000 as the balance necessary to complete it. You cannot complete it in any other way.

Mr. TURRIFF: Does my hon. friend lay down the proposition that the owners should not do anything?

Mr. MEIGHEN: I am laying down no proposition; it is the hon. member's proposition that I am dealing with. I say that there is no way of completing the road except by providing the money, and when they come before Parliament and talk about voting $3,000 a mile, hon. gentlemen opposite are talking nonsense, and transparent nonsense.

Mr. OLIVER: Might I suggest—

Mr. MEIGHEN: The hon. gentleman will have time to make any suggestions he pleases, and I will commend him for doing so.

Mr. OLIVER: What the hon. member for Assiniboia said was, as I understood him, that he was willing to aid the road. He did not say that he was willing to build it. I take it that he meant he was willing to

give the ordinary railway subsidy, and it would then be for the owners to find the money and to finish the road. It is their road, not ours.

Mr. MEIGHEN: The ordinary subsidy has been given, and it has failed to complete the road. Nothing else will complete it except the provision of money; the company are at the end of their tether. The position of hon. gentlemen opposite was as I have stated, until they saw that they were caught.

Mr. OLIVER: I beg the hon. member's pardon, he must not assert a position that does not exist.

Mr. MEIGHEN: I do not think the hon. member for Edmonton did so; I did not charge him, but the hon. member for Assiniboia (Mr. Turriff) and the hon. member for Rouville (Mr. Lemieux) advocated that we should provide the money to complete the road.

Some hon. MEMBERS: No.

Mr. TURRIFF: I state absolutely that I did not, and that the Solicitor General is deliberately putting words in my mouth that are absolutely false.

The CHAIRMAN: Order. I must ask the hon. gentleman to withdraw that statement.

Mr. TURRIFF: I will withdraw that statement when the Solicitor General withdraws his, and not before.

The CHAIRMAN: I do not think that the conduct of debates in this House will be assisted by the hon. member taking up that attitude, and I think the hon. member will be the first to realize it. If there is any point of order to be raised in regard to anything that the Solicitor General said, I will be very happy to deal with it. As I understood him, the Solicitor General was making an argument on a general statement which he assumed had been made by hon. gentlemen opposite. I did not understand his remarks in any other way. I must ask the hon. member for Assiniboia to withdraw his remark, as it is clearly out of order.

Mr. TURRIFF: In deference to your ruling, Mr. Chairman, and as I do not wish to trespass on the rules of the House, I will withdraw the statement, and I will now ask that the Solicitor General withdraw the statement which he made and which I absolutely deny. I say that there was not one word of truth in the statement which the Solicitor General made. I ask him to withdraw the statement.

Mr. MEIGHEN: If I have in any way mis-stated what the hon. gentleman said, all I have to say is that the way I put it was much more sensible than the way he put it, and the way that does far more credit to his intelligence.

Mr. TURRIFF: I want that statement withdrawn.

The CHAIRMAN: I do not apprehend that the Solicitor General refused to accept the statement of the hon. member for Assiniboia. Will the hon. member for Assiniboia state what particular remark of the Solicitor General he objects to.

Mr. TURRIFF: The Solicitor General stated, referring to me, that the members on this side of the House proposed to advance to this uncompleted road from St. Joachim to Nairn Falls over $3,000,000. I never made any such statement, and I would like the Solicitor General to acknowledge that.

The CHAIRMAN: As I understand, the Solicitor General never said that the hon. member for Assiniboia did say so. I understood him to say that that was the logical effect of the argument made by the hon. gentleman, and if that is so, I do not see how any complaint can be made.

Mr. TURRIFF: Well, I will let it go at that. We have one sort of ruling for one side of the House and another for the other.

Mr. MEIGHEN: What the Chairman says I was arguing is exactly what I was arguing, and, unless the hon. gentleman's statement means that, I am afraid it does discredit to his intelligence. In the interval, I have been doing a little figuring to ascertain what the hon. gentleman's contention would really mean. He states to the House—and these are his figures, not mine—that it will take $10,000,000 altogether to these roads complete, and $3,251,000 to complete the Quebec and Saguenay. The $10,000,000 is his own figure. That, I find amounts to about $55,000 a mile. He proposes to get a $55,000-a-mile road completed by a grant of $1,200 a mile. That is the suggestion of the hon. gentleman.

Mr. TURRIFF: The hon. gentleman knows better than that.

Mr. MEIGHEN: I know that I know better, but the hon. gentleman does not.

Mr. TURRIFF: My hon. friend knows as well as any member of this House that the subsidy given a railway that costs as much as has already been expended on this is $6,400 a mile.

Mr. MEIGHEN: I will help the hon. gentleman out to that extent. That would be $6,400 a mile, which would leave about $49,000 a mile to be provided, and he wants to suggest to this House that we would be taking care of the situation and be providing to complete the road by supplying $6,400 a mile out of $55,000.

Mr. TURRIFF: I never said anything of the kind.

Mr. MEIGHEN: Does not the hon. gentleman see the almost childish nonsense of such a suggestion?

Mr. TURRIFF: No, I do not; my hon. friend is still mis-stating everything I said.

Mr. MEIGHEN: The hon. gentleman's own way of putting it means that we would supply $6,400 more per mile in the vain and delusive hope that we would acquire from some one else the $49,000 or $50,000 a mile still necessary to complete the road.

Mr. OLIVER: This is not our road.

Mr. MEIGHEN: I know it is not, but hon. members behind my hon. friend say that it is our duty to see it completed. We could only get it completed by giving the company a loan of money. Every other means have been exhausted. There are against the road to-day some $6,100,000 in bonds; at all events there is about $5,000,000 against it in bonds, and the rest is against it in some form or other. But, take it at $5,000,000: it means that we would be taking a second mortgage for whatever sum we advanced subject to a mortgage of $5,000,000. Now, we are getting the whole road in its present condition for a trifle over $4,000,000 from the owners. I appeal to my hon. friend from Rouville (Mr. Lemieux) to say if that is not better business, if it is not better policy, than to advance against the road with a $5,000,000 mortgage ahead of us the sum of $3,251,000. Is that policy not preferable to the one advocated by the hon. member for Rouville?

I believe the hon. member for Rouville wants to be fair. I do not think that he saw when he was arguing that it would take the money that he said it would. What would become of it according to his own argument? As a matter of fact it would not take that money because we do not propose to invest $10,000,000. These are the figures of hon. gentlemen opposite. But, it would never pay this country, and it would never be business, to make a loan on this Quebec and Saguenay railway and have that loan subject to the mortgage indebtedness that is now against it when we have the other alternative of getting the line for $4,019,000. I appeal to the business sense of the members of this House if it is not better to take over this road at a cost to this country of $4,019,000 than to advance money into the hands of these people—the Quebec and Saguenay Railway Company—and take a lien against it subject to a charge of $5,000,000.

Sir WILFRID LAURIER: As we are now in the dying days of the session, I think it might be well that we should try to come to a perfectly solid basis for discussion of this very important question, because a great many of the arguments which have been presented are irrelevant and unfounded in fact. The hon. Solicitor General (Mr. Meighen) has stated that these three railways which are to be acquired by the Government, and which are to be made part of the Government Railway system, will assist 100,000 people. He is altogether in error as to that. Take first the Lotbinière and Megantic railway. That railway extends from the St. Lawrence up to the Grand Trunk in the county of Megantic. Some hon. gentleman stated, I think the hon. member for Charlevoix (Sir Rodolphe Forget), that the county of Megantic would be assisted by this road. The county of Megantic has a population of about 20,000 souls, but this road is of no use at all to that county. The people of Lyster, which is at the extremity of the county, going to Montreal and Quebec, are better served by the Grand Trunk than they will be by this railway. This railway would be useful to part of the population of Lotbinière, a small number; but, as far as that goes, I do not object that it should be made part of the Government system. Now, we come to the other side of the river. The two railways on the north shore, the Quebec, Montmorency and Charlevoix and the Quebec and Saguenay, will serve part of the population of the county of Quebec, perhaps 20,000, and of the county of Charlevoix, perhaps 20,000. The line will be of no assistance whatever to the people of Chicoutimi and Saguenay unless it is extended from Murray Bay to the Saguenay river. Then, of course, it will be of some

use to the people of that district; but otherwise I do not think it will serve anybody. An argument which has been presented here, and which has struck me as having force, is that there are in that part of the country people who are amongst the oldest settlers in the country, and who have no railway communication at all. But the railway will not serve the purpose which I heard mentioned yesterday by the hon. Acting Minister of Railways and Canals (Mr. Reid), who said that it would develop agriculture in that part of the country. It cannot be developed more than it is. The country is mountainous, but it is pretty well settled now. It might develop the lumbering industry somewhat, but I doubt if the lumbering or any other industry would be better served than it is served at the present time by the river. But people, in these modern days, want to have railway communication, and the people here have been for a long time led to believe they would have railway communication. They have been deceived in that expectation.

It is very unfortunate for the people of that locality that the company has found itself unable to complete the enterprise. I do not know the circumstances very well, but it was not for lack of funds, because according to the statement made by the Acting Minister of Railways yesterday, the company had expended upon that part of the railway between Quebec and Saguenay a little over $5,000,000. The distance from St. Joachim to Murray Bay is about 62 miles, and from Murray Bay to Nairn Falls about 6 miles; say 70 miles altogether. Surely $5,000,000 was ample with which to complete a railway of this character. I know the locality very well, and it is not a difficult country to build through, except in one part when you come to Cap Tourmente. The rest of the road is perfectly level, and where that obtains railway construction is always easy. Labour was also at hand and there were no obstacles of any kind. So, in my estimation, the company had ample means with which to complete the road, but they have failed to do so. I do not want to be severe or to pass judgment. I only know that the people of that locality for want of the company extending this railway, are without communication for the greater part of the year. The usefulness of the railway has been recognized by all Governments. The Dominion Government subsidized it in the ordinary way to the extent of $6,400 a mile, and the Quebec Government also gave subsidies to a large amount; I do not know the precise amount, but I understand it was fairly generous. With all this assistance the company should have been able to construct the road and have it in operation to-day. But it has not done so. However, the people must not suffer; I admit that. I am prepared to take a generous view of this business and give the assistance to which the people in that part of the country are entitled. It is true we are living in strenuous times, and that perhaps now is not the most propitious time we could choose; it is true also that we should be as careful as possible about launching into new enterprises. Unfortunately, this is not a new enterprise, and for my part I should like to see it completed.

But I should like to know why the Government are proceeding in this way. Last year they introduced a Bill for the acquisition of branch lines. Why do they not proceed under that Bill to acquire the roads in question? Why are they changing their mode of procedure? The present method is full of difficulties. Let me read what the Bill says:

1. The Governor in Council may authorize and empower the Minister of Railways and Canals to acquire, under the provisions of an Act to amend the Government Railways Act and to authorize the purchase of certain railways, chapter sixteen of the statutes of 1915, and upon such terms and conditions as the Governor in Council may approve, the railways described in the schedule hereto, together with such equipment, appurtenances and properties used in connection with such railways as the Governor in Council may deem necessary for the operation thereof.

2. The consideration to be paid for each of the said railways and for any equipment, appurtenances and properties that may be acquired as aforesaid shall be the value thereof as determined by the Exchequer Court of Canada.

The price is to be determined by the Exchequer Court. It may be $1,000,000, $2,000,000 or $4,000,000, whatever the judge decides. So far, so good. Then the money is to be paid to whom? The price so fixed by the Exchequer Court is to be paid by the Governor in Council to parties who are not even mentioned here. If we pass this Bill everything is uncertain; we are parting absolutely with all control of the money, we do not know what the price will be, to whom it will be paid or how it will be paid. Once this Bill is passed we shall have no say whatever. Now this is a matter of some importance. Let me now read the amendment which has been proposed by the minister:

Said value to be the actual cost of said railways less depreciation, but not to exceed $4,-

465,000 exclusive of outstanding bonded indebtedness which is to be assumed by the Government, but not to exceed in all $2,500,000.

We know that on the Quebec and Saguenay road there is outstanding bonded indebtedness to the amount of $4,480,000; that is a fact. We also know that upon the Quebec and Montmorency there are certain bonds outstanding, but just to what amount I do not know.

Mr. MEIGHEN: $2,500,000.

Sir WILFIID LAURIER: That is nearly $7,000,000 altogether. The bonds of the Quebec and Montmorency railway are not listed. As stated by the hon. member for Charlevoix, they are in the hands of wealthy owners in Quebec, who, I am sure, will not part with them for less than 100 cents on the dollar; I think they are worth that too. But not so with regard to the bonds that are outstanding of the Quebec and Saguenay railway. Those to-day are quoted at 70. We are to take the road free of all indebtedness; all the bonds are to be wiped out, and we are to pay to the company who owns the road $4,465,000. That, as I understand it, is the price we are to pay the company. In addition to that, we are to pay the bonded indebtedness, but not to exceed $2,500,000.

Mr. MEIGHEN: The $2,500,000 is intended to lie still against the Montmorency and Charlevoix railway only; the other is to be cleared entirely; and, of course, the money for the purchase price must go to these bondholders.

Sir WILFRID LAURIER: I quoted that simply to show how unsatisfactory the Bill is. It is "intended" to do this, that and the other thing; whereas if you had proceeded under the Bill of last year the agreement would have been down in black and white, and we should have known exactly where we were. But under this procedure everything is at the discretion of the Governor in Council, and I submit that that is not the way. My hon. friend the Solicitor General had a good deal to say last year on the Bill for the acquisition of branch lines. That Bill provided that the contract should first be made by the Minister of Railways, authorized by the Governor in Council, and then brought to Parliament for ratification.

Why do not you follow this practice this year? Why ask Parliament to vest in the Government so much power as will give them control over the whole matter? The best way to have the question looked into and properly disposed of is under the terms of last year's statute. The Government has come to the conclusion, and I find no serious objection raised to it on the part of anybody, that the situation is such that we must come to the rescue of the people who are served by this railway. But the fairest way, the only way, to dispose of a matter which is already so much complicated, is under the terms of the Bill passed last year.

Mr. MEIGHEN: I have not in mind the clause to which the right hon. gentleman refers, under which the contract must come back to the House for ratification. I do not deny that it may be there. But, speaking without very careful thought on that phase of the subject, I would say that, inasmuch as this Bill provides that we may acquire this road under the statute of last year, we are not relieved from any of the obligations imposed upon us by this statute. So, if this statute provides that such a contract must be ratified by Parliament, then we shall be obliged to come to Parliament for that purpose. We do not ask for more authority. We thought—in our innocence—that we were really limiting rather than extending our powers by this Bill. We wished to acquire the road under the statute of 1915, and under whatever obligations and limitations are provided by that statute. Our desire was to still further limit ourselves by providing that we are not permitted to pay any price until it is not only voted by Parliament, but ratified by the Exchequer Court on a fixed basis.

Section 1 agreed to.

On section 2—values fixed by Exchequer Court:

Mr. REID: I wish to move that this clause be amended by adding the following words:

Said value to be the actual cost of said railways less depreciation, but not to exceed $4,465,000 exclusive of outstanding bonded indebtedness which is to be assumed by the Government, but not to exceed in all $2,500,000.

Sir WILFRID LAURIER: In answer to what has been stated by the hon. Solicitor General, that the money has to be voted by Parliament, I submit to my hon. friend that Parliament would not be free to refuse to vote the money, because this Bill binds Parliament. We refer the matter to the Exchequer Court, but only on the question of price. If Parliament were to go back

upon the price so made, and refuse to pay, that would be a repudiation of a contract.

Mr. MEIGHEN: I cannot see that Parliament's hands would be tied in the slightest, any more than they already are tied by the statute of 1915. Under that Act the agreement is made by the Government with the railway concerned, and the money must subsequently be voted or the agreement falls. The mere fact that on arriving at the price the assistance of the Exchequer Court is asked in no way ties the hands of Parliament or adds to its obligations to vote the money. The obligations are the same—no more and no less.

Sir WILFRID LAURIER: No. Let me read the statute of the last year:

> Provided further that no contract for the construction of a line of railway exceeding twenty-five miles in length shall be entered into or the purchase price of any such railway or other work be paid until after a sum of money for the purpose has been appropriated by Parliament.

In that case you take your appropriation and then you make your contract; but here you make your contract and then provide for the appropriation. I submit very seriously to my hon. friend that if he would agree that the matter be referred to Parliament, he would remove a good deal of my objection. Let it be provided that this contract shall be subject to ratification of Parliament.

Mr. MEIGHEN: I am speaking solely for myself and without consultation, but I will say this: If it is in the Act of last year, I am very strongly of the opinion that it is necessary and that it will be done. I do not feel any doubt about it.

Mr. MACDONALD: Why not provide to make it clear?

Mr. MEIGHEN: I will after eight o'clock.

At six o'clock the House resumed, and then took recess.

The House resumed at eight o'clock.

PRIVATE BILLS.

THIRD READINGS.

Bill No. 102, for the relief of Martha Isabella Kenny.—Mr. Nickle.

Bill No. 103, for the relief of William Thomas Craig.—Mr. Pardee.

GOVERNMENT RAILWAYS SMALL CLAIMS ACT AMENDMENT.

MESSAGE FROM THE SENATE.

Mr. SPEAKER: I have the honour to inform the House that a message has been received from the Senate to acquaint this House that the Senate doth not insist on its amendment made to Bill No. 91, an Act to amend the Government Railways Small Claims Act, to which the House of Commons hath disagreed.

QUEBEC AND SAGUENAY AND LOTBINIERE AND MEGANTIC RAILWAYS.

ACQUISITION OF BRANCH LINES.

The House again in Committee on Bill No. 101, to authorize the acquisition of lines of railway between the city of Quebec and Nairn Falls and between Lyster and St. Jean des Chaillons; Mr. Rhodes in the Chair.

On section 2—values fixed by Exchequer Court:

Mr. MEIGHEN: Just before six o'clock I understood the leader of the Opposition to intimate that under chapter 16 of the statutes of 1915, under which, with the additional clauses that are inserted, it is proposed to acquire the railways in question, we would be obligated to come to Parliament later for ratification of the agreement that we might enter into with the owners of these railways for the purchase. He asked whether, if that were the case, we would come back to Parliament later with the agreement that we would make in this case. My reply to him was that, while I did not recollect such a clause being in the Act of 1915, I felt that, as we were proposing to act under the authority of that statute, we would be subject to all its obligations, and that if that were one of those obligations, we would be subject to it. I promised to let the committee know at eight o'clock. I find, however, upon reference to the statute, that, if I understood the right hon. gentleman aright, there is no such clause. The statute of 1915 provides that we may acquire roads by purchase or by expropriation, gives certain powers to and imposes certain obligations upon the minister and makes certain conditions. Among the conditions is this: No purchase shall be complete until the money is voted by Parliament for the purpose. But there is no provision to the effect that the agreement so made, embodying such terms and conditions as it may embody, must afterwards be ratified by any special act or

action of this Parliament. We are in just the same position now. We come to Parliament with this Bill; we propose to acquire by this Bill certain railways, the acquiring to be done under the provisions of the statute of 1915. We shall be obligated by all the provisions of that statute; but there is no provision that we should come back to Parliament with our agreement, whatever the agreement might be. We do, of course, have to come to Parliament for the appropriation, and we shall have to come to Parliament for the appropriation in this case just as in the other.

Sir WILFRID LAURIER: The clause to which I referred is in these words:

> Provided further that no contract for the construction of a line of railway exceeding 25 miles in length shall be entered into or the purchase price of any such railway or other work be paid until after a sum of money for the purpose has been appropriated by Parliament.

Mr. MEIGHEN: That applies in this case.

Sir WILFRID LAURIER: I am not sure that it applies in this case. You depart from the statute. If you had proceeded under the statute the Minister of Railways should have made an agreement with the company for the purchase of that road, and then you would have to come to Parliament. But here, as I understand the Bill, the contract is complete the moment this Bill becomes law. There are two conditions—the fixing of the price, which is left to the Exchequer Court, and the application of the price so determined. When these two conditions shall have been fulfilled, in my judgment this Paliament will have lost all its control. Of course, the money will not be paid until it has been appropraited by Parliament; but when this Act has been passed, when the court, acting under this legislation, has fixed a price, would it be within the power of this Parliament not to make the appropriation? This would be a contract binding upon Parliament, and that is why I say that we should provide here that in any case the contract which is to be made, the application of the money, and all the conditions of the purchase should be referred to Parliament.

Mr. MEIGHEN: The right hon. gentleman said that under our Bill we have two conditions to be fulfilled, and he apprehends that these will be all we need to fulfill. Well, I do not know that I could limit them to two. Certainly one condition is very essential: that the price must be ratified by the Exchequer Court.

Sir WILFRID LAURIER: Must be fixed.

Mr. MEIGHEN: Must be fixed by the Exchequer Court. And necessarily there will be conditions, as to the purchase, because certain matters in respect to power and the possibility of competing lines, etc., have to be taken care of in the interest of the country, and these conditions are especially provided for in this Bill. But, none the less, all the provisions and all the conditions that are in chapter 16 of the statutes of 1915 are binding upon us; there is no doubt about that. The condition as to the precedent of a vote by Parliament is just as binding in respect of this purchase as in respect of any purchase or acquirement under the Act of 1915—just as binding, but not more binding. There is nothing in the statute of 1915 as to when the appropriation shall be made by Parliament; but it must antecede the going into effect of the acquiring contract. The same is true here: the appropriation by Parliament, whatever it may be, must antecede the going into effect of the acquiring contract. We are under all the obligations of the Act of 1915 and the additional obligations of this Act. The obligations of the Act of 1915 apply with exactly the same, and no more, effect to this acquirement as to any other acquirement under that Act.

Amendment agreed to.

Mr. SINCLAIR: Before this Bill passes I want to enter my protest against this measure. I have not hitherto participated in the discussion, chiefly because I was not very well acquainted with the facts. I have been listening to the discussion last night and this afternoon, and have learned something with regard to the proposal, and I think that I would not be doing my duty to my constituents if I did not place myself on record as opposed to it. The condition of our finances in Canada is becoming alarming. Everyone will admit that we are face to face with a very large expenditure. The appropriations already made in connection with the war, and the enormous expenditures in which we shall have to share, that are now being incurred in Europe for war materials and for other purposes in carrying on the war, will probably, at the end of the present year, amount to at least one billion dollars. The interest on

this enormous sum will exhaust more than one half the current revenue of this country; and, in the face of these enormous expenditures that are confronting us, it appears to me to be most reckless for the Government to embark upon an expenditure of this kind. The credit of the country will be affected by the liabilities that we are incurring during the present session. Our credit is not as good now as it was three or four years ago. The little province of Nova Scotia is able to-day to secure money in the United States at a lower rate of interest than the Dominion of Canada. That was not the case five years ago, but it is the case to-day, showing you that the way in which we are embarking on these extravagant liabilities is affecting the credit of this Dominion to a very alarming extent. One would suppose that the liabilities that are being incurred at the present time would have acted as a check upon the Government in regard to incurring further liabilities; but during the present session our proposed capital expenditure amounts, if I remember rightly, to somewhere in the neighbourhood of $50,000,000. That is an enormous amount to add to our liabilities in one year, altogether independently of the war. That strikes me as unjustifiable and as endangering the future credit of the country. In my own constituency, when railroad extension was asked for, the Minister of Railways told me that it was impossible to do anything in that part of Canada at the present time, owing to the fact that the Minister of Finance was unable to provide the funds. He said that if the Finance Minister could provide the funds there would be no question at all about going on with that very necessary expenditure. This was the answer he gave me.

Mr. Sinclair: I understand that the minister says he would build these branch lines this year if the Minister of Finance could furnish the money.

Mr. Reid: I said that while the war was on I would not ask for money for this railway.

I was satisfied with that reason, because the war is on and we are incurring enormous expenditures in connection with it. I intended to explain that to my constituents, and I felt that it was a fair explanation. But what am I to say now? Am I to go back and tell them that since this statement was made to me by the acting Minister of Railways, he has asked this House to vote $15,000,000 for the Canadian Northern railway, $8,000,000 for the Grand Trunk Pacific, and is involving us to-day in a liability which it is estimated will amount in the end to about $10,000,000? The large appropriations to the Canadian Northern railway and to the Grand Trunk Pacific can be justified on national grounds. It may be said that these are great national undertakings and that they must be kept up. I see the force of that argument. But that argument does not apply to the railways that we are proposing to take over under this agreement. I fear that we shall not be able to accept the sincerity of the acting Minister of Railways, who assured me that the only reason why he refused to entertain any further railway extension in the province of Nova Scotia was that there was no money available for that purpose. The minister should explain why he discriminates in this way between one province and another. The statement has been made by the Solicitor General that this railway will accommodate some 30,000 people. The railway that was proposed in eastern Nova Scotia, to which I am referring, would have accommodated more than 30,000 people. It is estimated that it would accommodate about 40,000 people, and it could be built for about one-quarter of the expenditure we are proposing to make in connection with this railway.

The Prime Minister himself gave a promise some few years ago that that railway to which I am referring would be built. I would expect the Prime Minister, before embarking on a wild scheme of this kind, to think of the pledges he had given in my constituency. Those pledges ought to be kept. I fear, Sir, that the true reason is not a public reason. The true reason dates back to the election of 1911. My hon. friend from Charlevoix (Sir Rodolphe Forget), as every one knows, was a very prominent supporter of this Government in that election. He came back after September, 1911, to this House with quite a number of scalps in his belt, and now the people of Canada are expected to pay this very large price for his services on that occasion. I have heard that several men have been claiming the leadership of the Nationalist party in the province of Quebec. At one time we were told it was Mr. Bourassa; another time Mr. Armand Lavergne claimed that honour, and the Secretary of State (Mr. Patenaude) has also been named in connection with it. But I think we may say that the real chief of the Nationalist party in the province of Quebec, the one who has stood behind that party and who has brought its members here, is my hon. friend from Charlevoix. $10,000,000 is a very large

price to pay for about 20 Nationalists who support the Government in this House. That is about half a million dollars apiece that the people of Canada are asked to pay for their services. The Prime Minister himself will admit that half a million dollars is a very large price to pay for a Nationalist.

In the other Chamber a discussion took place a few days ago in regard to the war, and an hon. gentleman there, who has been very prominent in connection with this scheme of the Quebec and Saguenay railway, made a speech in which he condemned the Government for spending so much money in connection with recruiting and the war.

He said it would be far better to put the money in the Quebec and Saguenay railway than to spend it in assisting the Empire in this war. I thought that that was a very impertinent proposal when I read it in the Hansard of the other chamber, but it never entered my mind that within two or three weeks the Government would accept the advice of that hon. gentleman and do what he told them to do with the public money. If we were building railways, I could make a great many comparisons showing the necessity for railway extension in other parts of Canada; that is, if we were building railways in the public interest. But, as we are paying political debts with this appropriation, and not building railways at all, it would not be worth while to enter into any discussion as to what might be done with this $10,000,000 in other directions. Comparisons would be useless in face of the fact that we are all aware that this money is not being given in the public interest, but for the purpose of settling an old score with my hon. friend on the other side who is so prominent in this matter. My purpose in rising was to place myself on record against this measure, and to enter my protest against this measure, which I regard as the most unjustifiable proposal that was ever made in the Canadian Parliament.

Mr. GIRARD: (Translation.) Mr. Chairman, before the Bill carries I wish to give my opinion on the matter now being discussed and reply to my hon. friend from Guysborough (Mr. Sinclair), who has registered a protest against the measure now before this House.

I want to place on record that I am in favour of the Government proposal regarding the Quebec and Saguenay railway.

[Mr. Sinclair.]

I understand that the subsidizing of that road dates back to a period previous to the advent of this Government. Many years ago subsidies were voted, but conditions became such that the work had to be delayed for a time. It must be said that the enterprise was launched in proper time, but there came a stringency which resulted in the work being suspended.

I am free to state that the hon. member from Charlevoix (Sir Rodolphe Forget), who is a man of note in the province of Quebec, a French Canadian who has reached a foremost place in the world of finance, has undoubtedly helped in a great measure the development of the province of Quebec by different schemes, some of which he has himself launched, and others which he has promoted with all the energy for which he is noted. But if this proposal anent the Quebec and Saguenay railway is before this House it cannot be said to be in recognition of political services rendered, because the question had been agitated long before this Government came into power. As a matter of fact, the hon. member for Charlevoix had undertaken, in common with people from the city of Quebec, to put through this railway scheme in order to help the people of Charlevoix, who are cut off during winter from the rest of the world on account of their particular situation. Furthermore, the idea was to show that it was possible to secure a winter port on the coast of the province of Quebec as elsewhere in Canada. That is the point I especially want to make. Is the scheme nothing but a dream, or is it feasible? This Government, by their policy incorporated in the Bill now before the House, have solved the question.

That policy was entered into by the late Government, and the present Administration now seeks the means to carry it out. Should this great undertaking materialize it will open up for the province of Quebec immense commercial possibilities.

Some hon. gentlemen, during this debate, have raised doubts as to the possibility of winter navigation on the St. Lawrence. I will not deny any of my fellow-members the right of giving their opinions on that point, but I have the honour to represent a constituency part of which, the Saguenay district, is deeply interested in that road, because that district extends over the whole north shore from Tadoussac to Belle-Isle.

I know that seven years ago the Department of Marine had a special survey made of the ice situation on the St. Lawrence be-

tween Belle-Isle and Murray Bay, on the north shore, and Cape Race and river Quelle, on the south shore, in order to determine the possibility of winter navigation on the St. Lawrence. The survey was continued the next winter, and demonstrated clearly—the report is on file at the Department of Marine—that for 98 per cent of the season the north channel is open, because during winter the prevailing wind blows from the north, and, of course, drives the ice against the south shore. I have not to-night the official reports here, but anyone can see them at the Department of Marine.

For a century previous to the last twenty-five or thirty years the fishermen of the north shore, in small wooden schooners, more or less seaworthy, used to make their way every winter through the ice floes of the St. Lawrence in search of the sea-wolf; they came back with a fair catch and without ever an accident. At that time the price of oil made the venture a paying one. But twenty-five or thirty years ago, I think I said, oil so dropped in price that the fishermen, who could no more make a living out of it, quit that pursuit, which was reputed dangerous. In the last few years the price of oil rose up considerably, and the fishermen put to sea again after the sea-wolf.

This morning I had a letter from one of the leading men of Sept-Iles, stating that the fishermen had just returned to the village, after a three-months' cruise through the St. Lawrence floes, with a catch of 35,000 sea wolves, without having encountered the least danger; the trip means a haul worth about $200,000.

When the poor fishermen—I mean no disparagement—with their meagre means, can encounter in the gulf the dangers of the ice floes the best part of the winter to earn their living and their families' without any loss of life or vessel, is there not sufficient reason for this Government to introduce a Bill with the aim of solving the important problem of winter navigation on the St. Lawrence? True it is these are war times, but the war will not be everlasting, at least so we hope, and when the end comes we have reason to hope that Canadian trade and industry will spring into renewed life; should not, therefore, the Government get ready to meet the new conditions that will arise?

For my part, that is the main motive underlying the Government's policy to-day. They are not paying any debt of gratitude to the hon. member for Charlevoix; his worth is well known, and requires no tribute from me. We are face to face with a problem which concerns the future of the province of Quebec, which is of the utmost importance, and which will be solved by the Government measure now before the House. Therefore I will vote for the measure.

Doubts have been raised as to the possibility of a winter sea port on the St. Lawrence. Let us see. At St. Catherine's bay, the proposed terminus of the Quebec and Saguenay railway, the Government has subsidized for the last twelve years a small wooden steamer, which plies regularly twice a day between Tadoussac and St. Catherine's bay, without the service ever suffering any accidents or delays. This same boat has, moreover, taken successful trips, four to eight per month, from Tadoussac to Fraserville, on the south shore, a distance of thirty miles. At that point, the crossing being further east, is considered more difficult than the crossing between Murray bay and river Ouelle.

Every one knows that the straits of Belle Isle are open all winter. The surveying party I have spoken of have reported that the northwest channel, in the Belle Isle straits, are always open to navigation. Now, if account is taken of the additional protection afforded by the vessels, and different points along the coast being provided with the wireless, thus providing telegraphic communications with the Government line on the north shore, it will be understood that at any time the captains of vessels can always be warned of the presence of ice floes and be given information as to the state of the channel; in that way all possible safety is insured.

As a result of the enactment of this Bill the city of Quebec will become, through the contemplated railway, a winter terminus, which, compared with other Canadian winter ports, will shorten the distance to Europe by several hundred miles, to the general benefit of the country, and especially to the benefit of the city of Quebec, the capital of my province, and a subject of pride to all French Canadians.

Those considerations demonstrate the unfairness of the suggestions made here, and spread throughout the country by party organs that the only object of the Government is to be kind to its political friends and reward the hon. member for Charlevoix for services rendered. The Administration's sole purpose is to do justice by Quebec and

to build new roads, shorter and easier roads, for the large trade that Canada may expect after the war. I must congratulate the Government on the courage it has shown, at the present juncture, in having had the courage to put through this undertaking.

If the Quebec and Saguenay railway were a mere convenience for the people of Quebec and Charlevoix, the scheme might be open to objection, but the terminus at St. Catherine's gives it national importance for Canadian trade. The Government's policy looks to the whole country and is nothing if not national. All those reasons should secure its acceptance without further discussion.

I noticed that the right hon. leader of the Opposition has departed from the position taken by some of his followers, and appears to favour the project. I congratulate him on his stand.

Sir WILFRID LAURIER: If I understood the remarks of the hon. member for Chicoutimi and Saguenay (Mr. Girard) rightly, he said that he knows that it is the intention of the Government immediately to extend that road to St. Catherines bay on the Saguenay river. If I did not understand him correctly, then I can be corrected; but I certainly understood him to say that.

Mr. REID: I certainly did not understand it in that way.

Sir WILFRID LAURIER: Then, do I understand that the Government has no such intention?

Mr. REID: Certainly not; we have no such intention.

Mr. McKENZIE: I am afraid I am in the same box as the acting Minister of Railways, in not being able to follow very closely the hon. member for Chicoutimi and Saguenay; but I take it for granted that he was not criticising the railway policy of the late Government.

In those days we remembered his association with that party and his love and fidelity to the Laurier Government. If anybody was to receive consideration with regard to this railway, as has been hinted by my hon. friend from Guysborough (Mr. Sinclair), when considerations were being passed around, I would not be surprised if the hon. member for Chicoutimi and Saguenay (Mr. Girard) heard something about it. I understand that in the latter days of the last election he saw a great light, and that all of a sudden the things that were beautiful and strong and good became everything that was dark and dreary and forbidding. Posters and manifestos setting forth his real and true heart up to election day were immediately scored off, and a new proposition was submitted to the people of the county. If the hon. gentleman who is supposed to be leader, and whom my hon. friend from Guysborough referred as the leader, of the Nationalist party, has made any proposition to the hon. gentleman who has just spoken, I would ask him to be cautious, to carry out this part of the deal, if deal it be, on the instalment plan, and to be pretty careful about his sinking fund, because this hon. gentleman will not stay bought.

With that preliminary information, I simply wish to put myself on record, like my hon. friend from Guysborough, in regard to this railway. The right hon. the Prime Minister knows better than any other hon. gentleman sitting on that side of the House our attitude towards railway building in eastern Canada, particularly in Nova Scotia. During the years 1908-9-10-11 the then leader of the Opposition, now the Prime Minister, and the members from eastern Nova Scotia, were pulling on the same oar for the purpose of getting railway extensions in that part of Nova Scotia. We succeeded in 1911 in having an amount of money granted by this Parliament for the purpose of certain railway extensions in that province. Everybody from Nova Scotia was satisfied, and things went along first rate. The moneys were voted for Victoria, the county which I have the honour to represent, the county of Halifax, represented by the then leader of the Opposition, and the counties of Pictou and Guysborough, represented by the hon. gentlemen who represent them to-day. But what a change has taken place in the policy of the right hon. gentleman in regard to the building of railways! I have on several occasions taunted the Prime Minister with having built his own railway and having left us out. I think he should have built the railways in Guysborough, Pictou and Victoria, because we were all pulling together, and I suppose the fact that he was pulling with us helped to get the Government of that day, the Government of Sir Wilfrid Laurier, to commit themselves to the policy of building these roads. Without repeating that charge too often, I submit that when one of the roads went on, the road in Halifax county from Dean Settlement to Dartmouth, they

all should have been placed in the same category and dealt with in the same way. However, matters have gone otherwise. In 1912, 1913 and so on, we were told that it was only a matter of a short time when the same policy would be carried out in the other counties. In the county of Victoria, the gentleman who ran against me in 1911, the candidate of my right hon. friend, and those who were supporting him, said: Do not vote for Mackenzie, because it would procure this railway; but defeat Mackenzie and defeat the Government and the road will be built all the same. The Conservatives in Victoria believed that, stood to their guns and voted for that gentleman. But they have discovered since that the promises made to them were not carried out by the Government and party which they supported. I, and other gentlemen, have been told during the last two years that proposals of this kind could not be carried forward because the finances of the country could not stand it on account of war conditions. That is a fair proposition, that is something that we can tell our people and the people can understand. The Government have found it necessary to put extraordinary taxation on the poor people of this country, taxes that they can ill afford to pay. We might very well understand that new enterprises would be allowed to stand until we were better off than we are to-day. But this is a new proposition. There was never a word of this railway during the later years of the Government of Sir Wilfrid Laurier. I never heard the Prime Minister, when he was leader of the Opposition, or any of his friends from Quebec, or any other part of Canada, put this forward or mention this road as a scheme that we might look forward to as a part of the railway system of Canada. There was never one word about it.

Now, it is most extraordinary that railways which were expecting to receive consideration years ago, and for which moneys were voted unanimously by both sides of this House, are passed over, forgotten and neglected, and a new proposition altogether is brought forward which is going to involve an expenditure of some $10,000,000. When an expenditure of this kind is proposed, it gives colour to the statements made by my hon. friend from Guysborough. It looks as if some sinster motive, some reason more urgent than the building of an ordinary piece of road, were behind it, when the Prime Minister and his Government break away from a line of policy that they have laid out for themselves in the last two or three years and come in asking for an expenditure of this kind. I can only tell the people of Victoria that the Government of the day and the Prime Minister broke faith with them, that they did not carry out their promise to them, and that other people were stronger in the affections and regard of the Prime Minister than they are, for some reason unexplainable to me except that which was set forth by my hon. friend from Guysborough. Whether it is true or not, I suppose we shall not be able to find out; but there is no other satisfactory reason. This reason having been given, I am content to leave it there until some more satisfactory one is afforded. We have for the past few years been leaving public works in different parts of Nova Scotia idle and dormant, and no progress has been made.

We were not asking for them to be built, because we were told there was no money. I am sure I am within the mark when I say that there are dozens of places in the county I have the honour to represent where an expenditure of public money is more needed, and would be more in the general interests of Canada than the expenditures which the Government are making to-day, not only in connection with railways, but other public works. But we have been silent because we thought the Government did not have the money and were in earnest when they said that nothing could be done, as all our energies and all our finances had to be concentrated on the main purpose, the winning of the war. It looks now as if the poor people were to be taxed not only for the war, but for other purposes that were never mentioned when the war taxes were imposed, and when explanations were given in that connection not only by the Prime Minister, but by the Minister of Finance.

My purpose in rising was to protest against the Government going on with a work of this character when other undertakings of a like character which had the inside track, so to speak, and which were spoken of long before there was ever a word said about this road, were more urgently needed. I submit that when anything of this character is undertaken by the Government the question of going on with all these other branches should be considered at the same time. They should all be dealt with under the same policy, so that all sections of eastern Canada where railway extensions of this kind are neces-

sary should receive the same consideration and at the same time. I am not saying that these people in Quebec should not have this railway; I am not saying anything about that; I assume that they should have it. But not a whit more do they require railway facilities, not as much indeed, as the people in the county of Victoria who live, not thirty or forty, but some places over a hundred and twenty miles away from a railway, and in which county are some of the oldest settlements in America. After I have been pressing hard to get these people a road, and when I had hopes at one time that all the provisions were made and that the road was at hand, you will pardon me, Mr. Chairman, if I feel disappointed now that I see we have been passed over, and other places not a bit more deserving receiving the consideration which is given by this Bill and by the vote which it involves.

Mr. LEMIEUX: The right hon. the Prime Minister was not in his seat this afternoon when I was speaking on this Bill. Of course, I understand that he is very busy and cannot be here every moment; but now that he is here I wish to make an appeal to him, for I look on him as a friend of France. I stated very briefly this afternoon that I opposed the Government in acquiring the line from Lyster to St. Jean des Chaillons and the line from Quebec to St. Joachim, but upheld the aid to the line from St. Joachim to Nairn Falls, as I thought it would be better to do something towards the completion of that road. However, the Government has decided to acquire these lines, and the Acting Minister of Railways has stated that the bondholders will be paid at par for their holdings. I asked whether the bondholders in France, who had sold their bonds at below par, would be allowed the difference between the price they sold at and what they had originally paid, and the answer was in the negative. The reason why I insist upon the right hon. gentleman taking a favourable view of this question is this: as I stated this afternoon, and as was confirmed by the hon. member for Charlevoix, nearly all the money for the construction of that section of the line from St. Joachim, in the county of Montmorency, to Nairn Falls, was obtained in the French financial market. The hon. member for Charlevoix stated this afternoon that $1,000,000 odd had been subscribed in Canada, and $4,600,000 in the French market. To be accurate, I must state that the bonds were sold at 82. Later on, when the French bondholders got discouraged at the failure of the company, they were induced to sell their bonds at a low figure; this was not denied. These bonds were bought up by a Canadian group of financiers, and, if I understand the situation correctly, this group will be paid the face value of the bonds which they secured at so low a figure. The reason why the Canadian Government should view with favour the suggestion I make is this—and I direct the attention of the right hon. gentleman particularly to this: first of all, we are the allies of France, and we must play fair in our financial dealings with them; secondly, this money was secured after some very alluring prospectuses had been issued on the French market; nobody will deny that. Among the names that appeared on one prospectus was that of an ex-member of this Government, the late Postmaster General, the Hon. Mr. Pelletier. It is true that after a while his name disappeared from the prospectus because he found it inconsistent with his position as a minister of the Crown to figure in any financial venture in a foreign market. Among the inducements which were held out to French investors, they were told, for instance—and it was quite an inducement—that this line of railway would run not merely to Nairn Falls, or even to St. Catherine's bay, but as far as Cape St. Charles, on the Labrador coast.

This was a great inducement; for they were told that the ocean trip between Europe and Canada would be greatly shortened; that in three days at most the steamers would cross the ocean and would reach the terminus of this railway. All this, stated in the prospectus, no doubt did much to influence French investors to put their money into this enterprise. Another inducement which certainly had its effect in getting money from the French investor is to be found in the statement of the assets and the revenue of the company, which was published broadcast. It was stated that a subsidy of $400,000 would be paid by the Dominion Government, and that the land subsidy from the provincial Government was valued at $840,000. As to the revenues of the road, it was stated that 160,000 passengers would be carried at $1 per passenger, giving an annual revenue of $160,000. It was stated also that the road would command freight traffic to the amount of 420,000 tons, yielding a revenue of $630,000. The expenditure was represented to be only

$528,000, leaving a net profit for the investors of $264,000. Now, I quite understand that this was only a calculation made by the Canadian promotors. But here is where the Government, it seems to me, is morally responsible for the inducements offered to the French investor.

Mr. REID: That is, the Quebec Government?

Mr. LEMIEUX: No.

Mr. REID: Yes, they were granting so many acres and also $3,000 a mile.

Mr. LEMIEUX: Does the hon. gentleman say that this inducement was given by the Quebec Government?

Mr. REID: I say they were to give 180,000 acres of land and $3,000 a mile.

Mr. LEMIEUX: The Quebec land subsidy was valued at $840,000 and the Ottawa subsidy was represented at $400,000.

Mr. REID: And the Quebec Government gave $3,000 a mile besides the land.

Mr. LEMIEUX: No, only a land subsidy.

Sir RODOLPHE FORGET: Both statements are true. The land subsidy was valued at $840,000.

Mr. LEMIEUX: But it was a land subsidy, not a money subsidy.

Sir RODOLPHE FORGET: A land subsidy.

Mr. LEMIEUX: Where the federal Government is perhaps still more responsible is in this, that besides these assets which were advertised broadcast, it was stated that a postal subsidy of $50,000 would be paid by the Dominion Government. So, the French investors were led to believe that there would be a total net revenue of $314,000. I have here a copy of the prospectus; the date of the issue is not given.

Now, bearing these facts in mind, it seems to me that, as the Government has now decided to acquire the railway and to pay the bondholders the face value of the bonds, those who advanced the money to build that section of the road which is being taken over by the Government, those who were discouraged because the enterprise failed and were induced to sell their bonds—

Sir RODOLPHE FORGET: Induced by whom?

Mr. LEMIEUX: They were induced by the Canadian group.

Sir RODOLPHE FORGET: No.

Mr. LEMIEUX: How do you explain the fact that a Defence Committee was appointed in Paris in order to protect these bondholders when an offer was made to them of $60 for bonds which, the hon. member for Charlevoix stated, cost them $82 four or five years ago? They sold at a low figure because they were discouraged. They saw that the enterprise had failed, and they thought they might as well take the sum offered them instead of keeping their bonds. I appeal to the right hon. Prime Minister as a friend of France. We are all proud of the fact that last year he was honoured by the French Government, being made Grand Cross of the Legion of Honour. I believe he would not remain silent knowing that the French bondholders would lose, when they were really the people who put the money into the enterprise. My hon. friend from Charlevoix has stated that the French investors put into that road more than $4,000,000. If the Government is going to redeem these bonds at face value, and if the Exchequer Court is going to adjust all these questions of value, it seems to me that the bona fide bondholders should be recouped the difference between what they paid and what they sold for.

Sir RODOLPHE FORGET: A bond is payable to bearer. Suppose that Mr. Smith had a bond, and sold it, by what means are you going now to find out Mr. Smith? What proof would be required that Mr. Smith held this bond and ought to be recouped for the difference between the price at which he bought and the price at which he sold? Would you take his word?

Mr. LEMIEUX: I would not take his word. But there are means of finding out who are the bona fide bondholders. The first French investors were induced to invest by the representations that were made to them. I do not qualify these representations, but I have stated some of them; they were told that this road would reach Cape Charles on the Labrador coast; also that it would have subsidies from both Governments; also—which was not a fact, I am informed—that the Dominion Government would give a mail subsidy of $50,000. On the representations made they invested their good money in a Canadian enterprise which is to-day absorbed by the Government. I say that we should find out who were the real builders of the road by virtue of the money which they invested in it for its construction, and see that they are not made to lose in the enterprise. With two scratches of your pen, Mr. Chairman, you could insert in the Bill such an

amendment as would give a Judge of the Exchequer Court the right to determine who are the real bondholders and what amount should be paid to them for the difference between what they really paid in at the beginning of the enterprise and what they were induced to sell for when they got discouraged. It may not seem business-like—I see that the hon. member for North Perth (Mr. Morphy) smiles. I can assure him, however, that in my judgment this proposed action is nothing more than honesty. Here are people who, upon the inducements offered, have disbursed $4,600,000 to build a Canadian railroad which will belong to the Canadian people. Let the Canadian Government pay them what they have disbursed; it seems to me that that is only fair.

Mr. MORPHY: These gentlemen were business men, I understand. They sold their bonds on the open market; they parted with their securities. They had the money, invested it, lived on it ever since. It would be ridiculous that they should come back now after some years and ask to be recouped when they dealt with their own money, on their own responsibility and in their own way.

Mr. LEMIEUX: It is true that they have parted with their securities, but at a very low figure.

Mr. MORPHY: They were of age; they were business men.

Mr. LEMIEUX: They were of age, but can any Government worthy of its name and reputation honestly make the answer made by the hon. gentleman, knowing what representations were made to these French investors? They were told that this little bit of a road from St. Joachim to Nairn Falls was practically another transcontinental railway; that it would run as far as Cape Charles on the Labrador coast. It was on the assumption that this road would be built that they invested their money. I must say that it is not the first time that that has happened. We have heard the history of the Chignecto railway; I do not know whether the member for North Perth (Mr. Morphy) has heard of that scheme. I suppose that every year the right hon. gentleman sees a ghost in the person of a certain gentleman who represents the bondholders of the Chignecto Ship railway, who has been waiting very patiently for the last thirty or thirty-five years. The English people of that day were induced to invest their money in that scheme; the scheme fell through and the investors lost their money. In the present instance the amount involved is, perhaps, not so large, yet it represents a considerable sum, and it seems to me, now that the Government is referring the whole matter to the Exchequer Court, that means should be taken to recoup the French investors to the extent of the total sum that they disbursed in this case. It is not fair that their good money should go to the speculators who bought these securities knowing that some day the Government would take over the road.

Sir ROBERT BORDEN: It is hardly necessary to appeal to any one in Canada on the score of the relations between our Empire and France at the present time. We all know that these relations are of the warmest character, and we are giving very good evidence of that in this country through the splendid expeditionary force which is fighting for the liberties of France as well as for those of the Empire in the battle-line at the front at the present time. When my hon. friend suggests that we should enter into some inquiry with a view of making good to all persons who have become interested in the bonds of this railway the amount that they may have originally invested, he asks the Government to embark upon a proposal that would have very far-reaching consequences. On various occasions when I have visited Great Britain during the past ten or twelve years I found people over there who had invested in some enterprise in Canada which had not proved remunerative. Many of these persons would have been glad to get even 10 cents on the dollar in respect of some of the enterprises into which they had put their money. I have no doubt that my hon. friend himself can look back and see in the course of his career some investments made by him in respect of which he would be very glad to get 10 or 25 cents on the dollar to-day. If a paternal Government would come to his assistance and make that good, I have no doubt that he would be very much gratified; but he could hardly expect it. This road runs through an old, long-settled community which is shut out from all communication with the world for five or six months of the year. The late Administration gave this enterprise its sanction and its imprimatur by granting it a subsidy. The Legislature of Quebec did the same thing

under the condition that the enterprise should be somewhat greater than that which we have now under consideration, and should extend to a point farther down the coast. A great deal of money was invested in the construction of the road, and for the last three or four years all the money so invested has lain absolutely idle. More than that, the work which it represents has been deteriorating from year to year. So that the prospect of having the enterprise, as originally proposed, completed for the benefit of those people, has seemed to be getting farther and farther away. The late Administration or this Administration would no doubt have been very glad if those who had invested their money in the enterprise in the first instance, when they realized that there was not enough money to finish it, had undertaken the burden of completing it, taking the chance of saving their money to the fullest extent by making it a success. But there was no disposition of that kind. There has been no attempt on the part of bondholders, so far as I am aware, to raise money for the purpose of completing the road, and it has been in the condition which I have described from year to year. Under the circumstance, it did not seem desirable in the interests either of the district or of the whole country that an enterprise of this kind, designed to serve a very considerable community in a district which had been settled so long, should be almost nine-tenths completed and remain in that condition for a number of years to come. We were not prepared to embark upon the proposal which my hon. friend suggests, which would have involved a great deal more money, perhaps twice as much as we are proposing to expend. My hon. friend observes the reception which our more modest proposal has had from some of his friends on that side of the House We were not prepared to embark upon that plan; but we were prepared to propose to the House that what might be called the reasonable value of the road should be paid, and that the road should be completed and made to serve the purpose for which it was originally designed by the late Administration when it subsidized the road and by the Government of the province of Quebec when it extended aid. The proposal which we make to the House is in effect that the reasonable value of the road, a certain sum of money not exceeding the amount named in the Bill, should be paid for the road, and that in determining that sum the cost of the road and subsequent depreciation should be taken into consideration.

I regret that we could not go to the extent that the hon. member for Rouville suggests. The proposal which the Government has submitted to the House is designed, on the one hand, to do justice, so far as justice can be done, to those who are the holders of the securities, by paying the reasonable value of the road, and, on the other hand, to carry out the proposal as it was first sanctioned by Parliament, involving the completion of this line in order that it may serve the purpose for which it was originally intended. That, in a word, is the proposal of the Government, and it is one, which, it seems to me, ought to command the approval of hon. members. I do not wish the hon. member for Guysborough (Mr. Sinclair) and the hon. member for North Cape Breton and Victoria (Mr. McKenzie), to imagine that the interests of the communities to which they have referred have been overlooked or will be forgotten. This enterprise stands in this position. It had been sanctioned by the late Administration; it had been subsidized, it had been endowed with a subsidy by the Provincial Government, and a very large sum of money had been expended upon it. Yet the road was lying as an uncompleted affair, of absolutely no use to any person in the world in the condition in which it has been during the past three years. More than that, it was deteriorating all the time by the action of the elements, making it worth less and less each year. For these reasons the Government, while it would have greatly preferred that the persons interested in the road should come forward and undertake the additional burden necessary to complete it and make it a success, nevertheless, seeing that that apparently could not be done thought Parliament should interpose in the way now proposed by this Bill and should complete a road which has been lying almost completed for three or four years.

Mr. SINCLAIR: I am glad to hear the Prime Minister say that the basis on which the amount to be paid will be fixed will be the reasonable value of the road. I was somewhat misled by hearing members say that the basis was to be the expenditure that had been made, up to a certain amount. But if it is to be the reasonable value of the road, that is a very different matter. I have been puzzled over the enormous amount expended on the road, according to the hon. member for Charlevoix, who informs us that $4,600,000 was received from

the French investors and that Canadian investors put $1,500,000 into the enterprise. That makes $6,100,000.

Sir ROBERT BORDEN: I think my hon. friend is not taking into consideration the fact that the bonds were not sold at anything like par.

Mr. LEMIEUX: At 82.

Sir ROBERT BORDEN: My hon. friend says they realized 82; so that the amount actually available for the road was very much less.

Mr. SINCLAIR: I do not know the amount of the subsidy. The subsidies were not included in the amount put in by Canadian investors, and would probably make up the difference. If that is correct, the enormous amount of $98,000 a mile was expended in the construction of this road. Even if you take off the discount on the bonds, you will find that the expenditure is still $85,000 per mile, which is an extravagant expenditure for the amount of work that seems to have been done. The Grand Trunk Pacific railway cost only about $100,000 a mile at the very outside, with interest to date and everything. There we have a completed road, one of the finest grades in the world, with stations, heavy steel and all the appliances of a completed enterprise. Here we find that almost the same amount per mile has been expended on 62 miles of road; and what have we got? Only seven miles of it have rails, inferior rails at that; the rest of it is a track through the woods, with no bridges, no grades, no rails, no sleepers, no stations. Where did all of this enormous amount go? I think some hon. gentleman opposite should give the committee some explanation in regard to the matter.

Mr. McKENZIE: I forgot to point out that I think the sending of this to the Exchequer Court is not a very good way to arrive at the price. We all know that judges are honourable men and desirous of doing the very best they can; but, while a judge may be a good lawyer, he is not a railroad man. As a rule, he knows nothing about the construction of railways, nothing about engineering, and, taking it all in all, it is a fair proposition to say that judges are not railway men. I cannot understand why a railroad, particularly one of this kind that is in a half-finished condition, and one that has been allowed to deteriorate for the last few years, with the embankments wearing away, should be submitted to a judge for valuation. Where the railroad was raised to grade level some years ago, no doubt these grades have washed away; and I am sure I am right when I say that no part of that road is up to grade now. I know something about the grading of a railway, and I am sure that a railroad, particularly on an embankment, that was graded four years ago and since then has been subject to the upheavals of frost and the action of weather, etc., is nothing like up to grade. I venture to say it is in very poor condition. We are going to ask a judge to take into consideration all these things which appertain particularly to the judgment of a railway man. I would suggest that the Railway Department, with any assistance they might wish to obtain, would be far more capable than a judge sitting alone to determine the proper value of this road. I submit further that human nature is human nature. Who are the two sides to this controversy about this road's value? Who are fighting it out? We have the Prime Minister and his colleagues fighting their friends. They have clearly come to the assistance of their friends in this case. They are willing to give them money to help them out.

Are they going to fight them very vigorously when they get before the man who is to name the amount? I have seen these trials before. I have seen judges with the very best intentions trying to arrive at the true value of lands taken for right of way when politicians were concerned in the value of the lands, and when it was impossible for the judge to get evidence because nobody would give it; nobody was anxious to cut down the value of the land. Those representing the Government were anxious that the politicians who owned that land should get big value for it, and no witnesses were put on the stand at all. This House should have the strongest assurance that this action, for action it is, will be properly defined and placed before the judge, and that the issues, in one form or another, will be fought out. We should have the assurance that this matter is to be fought out the same as if the party who is going to get the money were not a friend and supporter of the Government.

Sir ROBERT BORDEN: So far as ascertaining the value is concerned, the evidence of experts must, of course, be given. If the Government undertook to fix the value themselves, my hon. friend realizes, and has indeed said, that their estimate would

depend on the valuation of persons who are familiar with such matters. Members of a government could not personally undertake to value such a road. In arriving at the value the Judge of the Exchequer Court will have to depend, I suppose, on testimony of the same kind. The hon. member for North Cape Breton and Victoria says he would prefer to have the Minister of Railways and Canals fix the value. We thought it would be fairer and more reasonable, under all the circumstances, that a Judge of the Exchequer Court should fix it. That is very frequently done by a government, even in cases where the value is less difficult of determination than in the present case. For example, one of the latest acts of the late Administration was to pass an Order in Council by which certain land in the suburbs of Calgary, belonging to the Northwest Mounted Police, should be transferred to the Grand Trunk Pacific Railway Company. The Government did not undertake to fix the value themselves; they directed that it should be referred to the Exchequer Court of Canada for valuation. Unfortunately, they had overlooked the fact that the Exchequer Court of Canada had no jurisdiction to do anything of the kind, and so we had to take the matter up at a somewhat later date. The only way in which the matter could be worked out was to appoint one of the Exchequer Court judges as arbitrator for the purpose of estimating the value, and that course was taken. We agreed with our predecessors that it was better that the value should be fixed by a judge of the Exchequer Court as valuator than that the Government should attempt to determine it themselves. There was the question of prospective value and considerations of that character, which it would have been unfortunate, probably, for the Government to determine; and so in this case. I think there are considerations connected with the value of the road and the reasonable price to be paid for it which, under the circumstances, might better be determined by a judicial inquiry than by the Government themselves.

Mr. PUGSLEY: I agree with my hon. friend that the tribunal of the Exchequer Court would be a very good one to determine the value if that question were left to the judge of the Exchequer Court. But it is not. If my right hon. friend will look at the amendment he will see that the judge of the Exchequer Court has not a word to say about the value. He is simply to take the cost, and, so long as the cost does not exceed $6,849,000, he is bound to allow it under the statute. That obligation is imposed on the judge; there is not the slightest discretion left to him to determine the value. To my mind, it is the most extraordinary proceeding which I have ever seen taken. Parliament purports to leave to the Exchequer Court the fixing of the value, and then tells the judge of the Exchequer Court how he is to fix the value—that he is to take the cost, whether it is twice or three times the value of the property, and be governed by that cost provided it does not exceed a certain amount. Section 2, as amended, would read as follows:

> The consideration to be paid for each of the said railways and for any equipment, appurtenances and properties that may be acquired as aforesaid shall be the value thereof as determined by the Exchequer Court of Canada.

That would have been all right if the section had been left there. That would have met the view which my right hon. friend the Prime Minister has presented to the committee, as affording a good reason why the judge of the Exchequer Court should be appointed to deal with the matter. But the amendment proposed by the Acting Minister of Railways ties the hands of the judge of the Exchequer Court in this manner:

> The said value to be the actual cost of said railways, less subsidies and less depreciation, but not to exceed $4,349,000 exclusive of outstanding bonded indebtedness, which is to be assumed by the Government, but not to exceed in all $2,500,000.

My right hon. friend will see that if the total cost, less depreciation and less subsidies, does not exceed $6,849,000, the judge of the Exchequer Court must allow this company that amount of money even although, in his own opinion, the value of the road is not one-third of that amount. That is the objection which I see to this amendment. The very first thing to do—no doubt it was the first thing which the Minister of Railways thought of doing when the proposition was made by this company to sell these railroads to the Government—was to refer the matter to the General Manager of Government Railways; and it is a very singular fact that there is no recommendation of the general manager in respect to the taking over of these three roads. But the matter was referred by him, evidently at once, to his chief engineer, and the chief engineer, Mr. Beckwith, made an examination of these three lines of rail-

way. The structural value of what is called the Quebec and Montmorency line, that is the line which is in operation, is put at $1,115,200, and that includes the terminals, equipment, the whole completed railway. That is the value which is fixed by the Government's own engineer. My hon. friend will find it on page 6 of the report made by Mr. Beckwith to Mr. Brown, the Chief Engineer of Government Railways at Moncton. But I understand that that line is bonded for $2,500,000, and, presumably, that is the cost which the company will be able to show to the judge of the Exchequer Court.

Then, if we take the Quebec and Saguenay part, the engineer in his report, which was submitted to the Government by Mr. Brown, the Chief Engineer of Government Railways, puts the total value of that property at $2,813,500.

There we get the valuation of these two principal roads, made by the engineering department of the Government railways at a little over $3,928,000. Then, if you take the small road on the south side of the St. Lawrence, the statement of the engineer is that the fair cost would be $466,000, of which subsidies were received to the extent of $240,000, leaving $220,000 as the money which was put into the road. If you take the total cost of $466,000, you have about $4,300,000 as being the value of these three lines of railway, or as being the amount of money which it would cost to construct them when this report was made in 1915. Yet this amendment requires the judge of the Exchequer Court to allow these companies, not what the engineering department says they are worth, but if it is shown that they have cost that much, the judge is bound to allow them $6,949,000, or $2,600,000 more than the engineering department of the Government railways declares these roads are worth. This is not proper legislation. Surely the judge of the Exchequer Court ought to be allowed to call witnesses before him and the Government ought to be able to submit evidence. The judge of the Exchequer Court ought to be permitted to allow the companies what these three roads are fairly worth. So far from that being the case, his hands are tied, and if these companies show the judge that the cost may have been $6,949,000, the judge is bound to allow that enormous sum when the roads ought to have cost only what the engineer states. In other words, the judge is not limited to the fair or necessary value or cost, but is bound to allow them $6,949,000 even although that amount is $2,600,000 more than the Government's own engineer says is the value of these three railways.

[Mr. Pugsley.]

On the preamble:

Sir WILFRID LAURIER: The Acting Minister of Railways told us a moment ago that it was not the Government's intention to extend this railway farther than Murray Bay. Is it the intention to at once proceed with the completion of the road?

Mr. REID: Yes, certainly.

Sir WILFRID LAURIER: There is no appropriation for it in the Estimates.

Mr. REID: We will provide for that.

Mr. LEMIEUX: When—this session?

Mr. REID: Yes, this session.

Bill reported.

On the motion of the third reading:

Sir WILFRID LAURIER moved:

That the Bill be not now read the third time, but that it be referred again to the Committee of the Whole with instructions to amend it by providing that any contract made by the Government under this Act shall not be valid and binding until submitted to and ratified by Parliament.

Amendment negatived, on division, motion agreed to, and Bill read the third time, and passed.

ENCOURAGEMENT OF SHIPBUILDING.

On the motion for Committee of Supply:

Mr. E. M. MACDONALD (Pictou): Mr. Speaker, we are getting near the end of the session, and an important matter has been brought to the attention of Parliament in regard to which I think it would be desirable, in the interest of the country, to know whether the Government have any proposals to make or any policy to announce. I refer to the encouragement of the shipbuilding industry in Canada. I need not go into detail or repeat the many arguments that have been advanced in favour of encouragement being given to the shipbuilding industry.

Sir ROBERT BORDEN: Perhaps the hon. gentleman would be kind enough to allow his observations to await the presence of my hon. friend the Minister of Trade and Commerce (Sir George Foster), who has been giving the subject a good deal of attention.

Mr. MACDONALD: I have no desire to press it to-night.

Sir ROBERT BORDEN: I understand the minister proposes to make some statement in regard to it. However, I do not wish to interrupt my hon. friend.

Mr. MACDONALD: I have no desire to proceed to-night, but we do not know how much longer Parliament is going to sit, and I shall not detain the House. My reason for speaking on the subject at all is that I notice that my right hon. friend the Prime Minister, speaking at Montreal yesterday, referred to the question of aid to shipbuilding in a manner which I think it would be quite desirable to quote. Any one who reflects for a moment must realize that the time has arrived when Canada must begin to prepare for transportation by the sea. We cannot leave it until another year has gone by. The mercantile marine of the nations of the world is gradually being dimished by the events of the war, and the needs of shipping facilities in Canada are becoming more acute. A year's delay will only make the problem very much more difficult of solution than if some action were taken now before the House prorogues. At the present time we have in operation three transcontinental lines of railway. We boast of our tremendous production of natural products, and look forward with hope and confidence to the time when, after the expenditure on war supplies in Canada has ceased, we shall be able to cope with the conditions that will then present themselves, by reason of the great natural and industrial productions which the country will furnish. But if when that time comes we are without means of transportation by the sea, we shall be at a very great disadvantage indeed. The Government of British Columbia where the situation is very acute on account of the inability to get facilities for the transportation of the lumber products of that province, is trying to solve the problem. I read in the Monetary Times of a few days ago:

> The British Columbia government's measure to aid the building of ships in the province and to subsidize them when completed has just been placed before the legislature for its consideration. The Bill constitutes a shipping credit commission with power to loan money for the construction of ships, to subsidize them after the war is over, when charter prices will not be so high, and to guarantee the bonds of shipbuilding concerns to the extent of 6 per cent. The proposed shipping credit board will be organized on the same principle as the agricultural credit commission.

Among other things it also provides that, after the war, freight rates on these particular vessels shall be no greater from British Columbia ports than the rates charged in the state of Washington. There is also a provision to guarantee 55 per cent of the actual cost of construction and repair of ships. The necessity which has been recognized on the Pacific coast is equally great, if not greater, on the eastern seaboard, because naturally the products of this country east of the Rockies, whether agricultural, mineral or industrial, if exported, must find an outlet through our Atlantic ports. My right hon. friend the Prime Minister, speaking at the launching of the ice-breaker from the Canadian Vickers yard, Montreal, yesterday, is reported in the Montreal Daily Star as follows:

> Sir Robert made the announcement that the Canadian Government favoured the subsidizing of shipbuilding in Canada. There would come a time, he said, when the Canadian Vickers, Ltd., would surpass the parent from which it was sprung and when Canada would have a shipbuilding industry equally as great as that in Great Britain.
>
> "I am sure that both political parties are thoroughly in sympathy with that development," said Sir Robert, "and I am absolutely satisfied that both political parties will be willing to pledge themselves to give all reasonable assistance to help bring about that end."

There was a time not so long ago when it was stated and reiterated in this House that the idea of Canada engaging in the manufacture of steel ships was absurd. Without raising in any way the old issue, I am quite sure that any one who will reflect on the subject for a moment will realize that suggestions of that kind are absolutely absurd. It has been proved in the last two years, in respect of munitions of war and other manufactures that we have developed since the war began, that the assertion we on this side of the House made some three years ago to the effect that the Canadian manufacturer and artisan could construct anything that was made by the manufacturer and artisan of any other country, was absolutely correct.

There is no profound mystery in the building of steel ships. It is a legitimate industry, based on the iron and steel industry, and it is because Great Britain had many years start on us in the iron and steel industry that they are able to build ships as they are to-day. When we recall that twenty years ago there was no steel industry in this country that was capable of producing steel ingots, we shall at once realize how it is that Great Britain, which had developed the steel industry thirty years before that time, when we were

in our very infancy, is able to build ships as she is to-day, and manufacture everything else arising out of the iron and steel industry. But to-day Canada has reached the stage where our steel institutions are capable of producing everything that is required in the iron and steel trade. Any one who has made inquiries on the subject knows that the rolling of steel plates in any one of the three or four great steel industries in Canada is just as easy for them to do as to produce steel ingots out of which shells are made, or to make steel rods, or anything else in steel. The steel industry has grown to a wonderful extent in Canada, and a tremendous number of artisans are now employed in developments of that industry. Montreal, for instance, launched an ice-breaker yesterday which had been built in the yards there. Ten submarines were turned out there and went across the Atlantic under their own power last summer and are now fighting on the other side. These facts show that we have passed the preliminary stages, and that the time has now arrived when Canada must develop a steel shipbuilding industry in this country.

The suggestion has been made in some parts of Canada that aid should be given to the building of wooden ships, but with that I do not agree. Modern conditions demand the utilization of steel vessels, more particularly as regards the carriage of freight. Steel ships are very much in advance of the old wooden type, and have many advantages which I need not go into now. I do not propose to elaborate at great length on the manifest necessity of action. The hon. member for St. John and other hon. gentlemen on this side of this House have spoken frequently on this matter since this session began, and I have no doubt the subject is engaging the attention of the Government. I am bringing this matter forward, not in any partisan spirit, but because I regard it as one of the greatest problems the country has to grapple with, and it should be grappled with at the earliest possible moment. Any hon. gentleman in this House, no matter on which side he sits, would be lax in his duty who, realizing the condition that will confront us in the days to come, did not urge on the Government the necessity of immediate action in this matter. I feel that before this House prorogues we should have some assurance from the Government not merely that the matter has received their attention, but that this nation is going to go ahead and provide something in the way of transportation on the sea—something which we absolutely lack at the present time, and which is absolutely essential to the future welfare of our country.

Sir ROBERT BORDEN: With respect to the ability of Canada to build steel ships, I am not aware that that ability has been denied in the way that the hon. gentleman has suggested. On the occasion to which he has made allusion there was a comparison of the cost at which steel ships could be built in this country and in Great Britain, and also a comparison of the expedition with which they could be constructed. A country that has a great iron and steel industry, as Canada has, could undoubtedly engage, and must at some time eventually engage—and I hope that in our case it will be in the immediate future—in the construction of steel ships. That industry is undoubtedly associated with many others, the steel industry itself as well as a number of subsidiary industries. The question of transportation is a very important one to Canada, and that points to the desirability, and indeed the necessity, that the industry of building steel ships should grow up in this country. My hon. friend, however, seems to me to confuse two ideas. If I understood him correctly, he confuses the future development of the shipbuilding industry in Canada, and the necessities of Canada, in common with the whole Empire and the whole world, for tonnage at the present time. I have not yet discovered any one in Canada who is prepared to construct steel ships of a considerable size within a period which would probably make them available before the end of this war.

Mr. MACDONALD: But unless they start some time, they will never get them built.

Sir ROBERT BORDEN: I understand: but there is something else to be said about that. If you begin the construction of steel ships when the cost is at its highest, and are not sure that you will have these ships available at a time when tonnage is mostly needed, there is room for consideration as to whether the enterprise should be entered upon. At least, it has impressed the members of the Government that way, and I am inclined to think it would impress any hon. hon. gentleman in that way who would give to it much reflection. If we are to build ships when they cost at least double what they would under ordinary conditions, and if, after paying double for them, or subsidizing them to the necessary extent, at a time they are not

to be available when tonnage is most needed, of what advantage would a proposal of that kind be? The want of tonnage has been felt by all nations of the world, more or less, during the past eighteen months. On the whole, however, the arrangements by the Allied nations amongst themselves, particularly by the British Admiralty, have helped the situation a great deal, and I think, on the whole, the available supply of tonnage has done all the work that we could expect it to do. During the past winter I have had occasion to refer to the daily reports sent out by the Department of the Naval Service with respect to Halifax and St. John, and I have found eight, ten, sometimes twelve, transports loading at each of these ports—I think hardly ever fewer than half a dozen—except within recent weeks. So that the supply of tonnage, considering all the conditions imposed by the war, has been better than we could have anticipated, although not all that we could have desired.

10 p.m.

If such action could be taken at once as to insure the delivery of ships at the time when tonnage is most wanted, no one would hesitate very much as to the question of the cost, because the importance of transportation is most imperative at this time, notwithstanding all that I have said as to the arrangements made by the Admiralty. But in what form, one might ask, should that action be taken? The Government itself might embark in the project of constructing ships in Canada. But all that could be constructed in Canada at the present moment, with any possibility of making them available before the conclusion of the war, would not amount to very much in proportion to the needs of the country as a whole. On the other hand, the Government might consider the proposals of corporations or syndicates which have come forward with the idea of building ships if subsidies were granted by the Government. Up to the present time we have not received any proposals of that kind which were of so reasonable a character that we could feel ourselves justified in proceeding with them further.

Then the hon. gentleman speaks as if, when the war is over, the demands for tonnage and the lack of tonnage will be very much as they are at present. I do not speak at all with the authority of an expert, but I think that any of us who desire to apply common sense to the anticipation of conditions as they will then exist must reach one conclusion. Two considerations impress me—doubtless other considerations would impress those who speak with more authority on the subject than I can. One of these is the enormous amount of tonnage now diverted from commercial purposes which will be released and will be then available for commercial purposes. That will take place within a very measurable period after the conclusion of the war. In the next place, the world's demand for tonnage will, I suppose, be reduced also by the termination of the war, for the reason that an enormous quantity of stores and enormous numbers of troops must now be transported for the purposes of the war, and such purposes take precedence over all others. With the conclusion of the war there will, for a time, be less work, I should think, for the tonnage of the world to do. So that, looking at it in that way, you will have a much greater amount of tonnage available, and on the other hand, I suppose, you will be confronted with a smaller demand than confronts the nations of the world at present. So it is not absolutely clear that there will be a dearth of tonnage when the war is over—although the considerations that have to be taken into account are so vast, so intricate and complicated in their character that one, speaking with as little authority as I do on the subject, would not venture a very confident prediction. This, in one sense, is beside the really important question the hon. gentleman has raised.

Leaving out other considerations, I agree with the view the hon. gentleman has put forward, that Canada ought to be a country in which the business of building steel ships will be carried on. We have the material for it, and we can soon train our men, I think, to undertake the work. In the past the difficulty has been the cost. Some four or five years ago I met delegations of the shipbuilders of Canada and discussed the subject with them. There has always been the suggestion of a tonnage subsidy. About eight or nine years ago, I think, I asked them frankly to give me a statement as to whether or not they could name any period within which the industry could be made self-sustaining, so that after that we might expect the business of building ships in Canada to be carried on without any tonnage subsidy. I cannot recall that on either of those occasions they were able to give me a definite statement on that point, which I regarded as a somewhat

important one. There is this to be said in that connection: the impression which I got from those with whom I discussed this subject upon the occasion of a visit to several shipyards in Great Britain four years ago next summer—I discussed it with a great many of the leading shipbuilders—was that the cost of building ships in Great Britain and the cost of building them in Canada would yearly tend to approximate. One very experienced man with whom I discussed the subject told me he believed that within twenty years at the outside the cost of building steel ships in Canada would be approximately the same as the cost of building them in Great Britain. If that opinion could be relied upon, it would afford an answer to the question which I put to some of the shipbuilders of Canada on the occasions to which I have alluded. However, the Minister of Trade and Commerce has been giving the subject very careful attention, and I am under the impression that he expected to make some statement to Parliament before the conclusion of the present session. He is chairman of the subcommittee of Council, which has been devoting a good deal of attention to the subject, and I hope that on some other occasion before we prorogue he may be able to speak at greater length and in more detail than I have been able to do to-night, as I was not aware that the hon. member for Pictou intended to bring the subject to the attention of the House to-day.

Mr. PUGSLEY: I am not sure whether my right hon. friend is aware of the fact that the Minister of Trade and Commerce did make quite an exhaustive statement.

Sir ROBERT BORDEN: How long ago?

Mr. PUGSLEY: About a week ago.

Sir ROBERT BORDEN: It was since then.

Mr. PUGSLEY: I regret to say that while his statement was a very interesting one, it looked forward rather to what might be done in the somewhat distant future than to some measure designed to meet the present necessities. I am very sorry indeed that my right hon. friend has been able to see so many difficulties in the way of encouraging shipbuilding. Apparently he is not able, at the present time at all events, to present to the House any policy which the Government is prepared to adopt. It has been stated, I think by the Minister of Trade and Commerce,that one or two gentlemen have been asked for the figures which they would regard as satisfactory for the building of ships—I think he was referring more particularly to wooden ships. But I think the best procedure would be to determine upon a policy; to determine whether or not they would give bonuses, and then let it be known publicly so that the people would be in a position to take advantage of it. The Prime Minister states that in consequence of the high prices of materials and of the uncertainty as to how long the war will last, it might not be very good policy to do what would be necessary to ensure the building of steel ships at present. Well, Sir, we have heard a good deal as to the probability that the war will last only a short period. The Minister of Finance stated not long ago, to my astonishment, that when the war broke out it was thought that it would not last more than three or four months.

Sir THOMAS WHITE: I said that it was thought by some, or by many.

Mr. PUGSLEY: The way the minister made the statement would rather imply that that view was entertained by some in whose judgment he had confidence, because he was putting it forward as a statement of opinion which had been greatly disappointed by the subsequent results. Having regard to the great preparations which had been made by our enemies for many years, one might reasonably expect that the war would last for a considerable period. I think, however, that in the matter of shipbuilding and everything else connected with our part in the war, we ought to proceed upon the theory that the war may last not for one year or for three years, but for five years, and if the war should come to an end at an earlier period, we shall all be thankful. I say that we ought to make preparations ahead and do everything that is necessary to enable Canada to do her part, no matter how long the war may last. My right hon. friend has truly stated that owing to arrangements which had been made by the British Government with this Government, there has been no undue complaint in the matter of transportation, or, rather that the conditions have not been as bad as they might have been. That is very true, although the cost of transportation has increased from 800 to 1,000 per cent beyond what it was when the war broke out. But it must be remembered that ships are getting scarcer every week, every day almost. The submarine menace is a very great menace to shipping, and British ship-

ping is feeling the effect of that menace. Ships are becoming scarcer and the question of transportation is becoming more difficult day by day. Canada should look at the matter in this light; not that the time will come, but that the time may come when in the interests of Canada and in the interests of the Empire there will be absolute need of having greater ocean tonnage than we shall have if Canada does not do her part in the providing of transportation. Suppose we do pay out hundreds of thousands of dollars more than might be necessary if the war should come to an end quickly. Suppose the amount should even run into millions; if in that way Canada is better able to supply the Empire with her needs in the way of foodstuffs, it will be money well expended; nobody will regret it. I do not want to find fault, but we have lost very nearly two years of time upon this important question. It does seem to me—and I say this in all sincerity and all kindness—that when this war broke out the Government ought to have anticipated the very state of affairs which exists to-day. A condition of war between England and her Allies and a strong resourceful enemy such as Germany and her Allies must necessarily exhaust the resources of the Empire. Knowing, as everyone knows, that the submarines would be effective in the destruction of shipping, we ought to have anticipated that the ocean tonnage would become scarcer as the months went by. But let us not criticise too much as to the inaction of the Government in the past. Let the Government, if it is at all possible, take hold of the question now and submit its policy to Parliament and the country. I venture to say that if a broad, liberal policy of assistance is laid down it will be found that the people of Canada are resourceful enough to take advantage of the opportunity afforded them and will engage upon the building not of steel vessels only, but of wooden vessels, which would prove of enormous advantage and would be fairly profitable for a good many years to come. Canada was once one of the greatest shipbuilding and shipowning countries in the world, if not the greatest of these in proportion to her population. Ships built by our own mechanics were found upon every sea, and performed a great part in the carrying trade of the world.

I believe that, were reasonable encouragement given, we would be able, in a comparatively few months, to have in Canada a large number of wooden vessels which would be capable of doing a great deal in the way of transportation. In addition to giving aid by way of reasonable bonuses, the Government should assist the ship builders to provide auxiliary powers for wooden sailing vessels by admitting machinery, the most modern engines for use as auxiliary power, free of duty into Canada. This would prove of great assistance, because the duty which has to be paid on this machinery is very heavy, and proves a serious burden upon the ship builder. I have quite recently received a great many telegrams from gentlemen who believe that wooden ship building ought to be encouraged, and that if it were encouraged it could be made very successful. I have talked with people who are interested in the subject, and I do believe that if the Government would come down with its policy, if it was a reasonable policy so far as giving assistance by way of bonuses and the admission into Canada, free of duty, of machinery of a class not made in Canada, we would very soon see shipyards established upon both the Atlantic and the Pacific coasts, upon the Gulf, and upon the Great lakes; and that before many months rolled by we would find a large number of vessels upon the stocks. It would not be many months before Canada would be able to do her part and a very creditable part, in the transportation business of the Empire.

Mr. G. H. BARNARD (Victoria, B.C.): I wish to say just a word or two on this matter, and to join my voice with those of the hon. member for Pictou (Mr. Macdonald) and the hon. member for St. John (Mr. Pugsley) in urging upon the Government the desirability of giving some aid to shipbuilding. It is a very vital matter with us on the Pacific seaboard, particularly since the war; although I may say that the shortage of tonnage was felt on that coast even before the war commenced. As the gentlemen of the House are undoubtedly aware the interests of the province of British Columbia are very vitally bound up with the prosperity of the lumber trade. The great difficulty with the lumber trade there is to get overseas tonnage. There is no doubt that probably the finest stand of timber left in the world is found within the confines of the province of British Columbia. The difficulty we find there is that nearly all the ships that are in the lumber-carrying trade are under charter, and that the charters are controlled by San Francisco interests, which, naturally, send them to their own lumber mills on Puget Sound, with the result that our mills stand idle on

account of the difficulty of getting tonnage for the export trade.

I find that the Government of British Columbia has, within the last few days, brought down a Bill in the Legislature for the very purpose of aiding the shipbuilding business. The contemplation is, I think, largely to build wooden ships out of good British Columbia timber. We have demonstrated beyond question that ocean-going vessels of the very finest kind can be built out of timber on the coast.

Mr. PUGSLEY: Hear, hear.

Mr. BARNARD: The idea is to get the people interested in the lumber business to contribute timber for the building of the ships, and to take payment for it in stock in the ships. I may say that I received a copy of this Bill only to-day, and I have not yet had an opportunity of perusing it with any great care; but the main idea of it is that a commission is to be appointed which will give loans to persons building ships, to the extent of 55 per cent of the value of the ship, the balance of the loan to be guaranteed on very stringent conditions as to operation, etc. The Bill also provides for a subsidy, or loan, to shipbuilding plants, of 55 per cent of the value of the plant. The total amount the province proposes to set aside for this purpose is some $2,000,000, and with that it is hoped to build up a home-carrying trade. The conditions of the subsidy are that the ships must return to a British Columbia port to re-load. It seems to me that if the Government could see its way to further this policy in some direction it would be of great benefit not only to my friends in the Maritime Provinces, but very much more even to us on the Pacific coast, and for my part I would be very glad, indeed, to see some action taken along these lines.

Mr. J. H. SINCLAIR (Guysborough): I have listened with great interest to my hon. friend from British Columbia (Mr. Barnard). I quite agree with him that this industry is of the greatest importance to that province. It will be impossible to develop the lumber industry of British Columbia and the coal-mining industry of that great province without transportation facilities on the sea. My hon. friend, along with his colleagues, form a solid representation from the province of British Columbia supporting this Government. They have been here now for several years. This question has been discussed in this House year after year, yet nothing has been done. If my hon. friend has to go home at the end of the session without the Government having done anything at all in regard to this important question I fear it will be felt in the province of British Columbia that the influence of my hon. friend and his colleagues from that province is not felt as it should be by the present Government.

I take a very special interest in this question, coming, as I do, from a province by the sea, a province that has a great interest in the shipbuilding industry. And I am glad to inform the House that while we are talking here in regard to this matter, and doing nothing more than talking, in the town where I live an enterprising firm is laying a yard, preparing to build a steel steamer, and is starting the industry. That is being done, though under a great handicap, owing to the tariff that we have in this country. That, to my mind, is the great difficulty in regard to steel shipbuilding. There is no special difficulty so far as the work is concerned. Any person who visited Montreal yesterday and saw the splendid shipyard of Vickers, Limited, and the fine ship that was launched there on that occasion, could see that the workmen in this country are well able to do that kind of work.

I was sorry that we did not have Lord Churchill, the late First Lord of the Admiralty, yesterday with us in order that he might see that we already have done in this country what he advised the Prime Minister we could not do in fifty years. The foundations were all right; they appeared quite solid, although we were told that there was not on the coast of Canada any place where the foundation could be found solid enough for a shipyard. The cranes were, I doubt not, able to carry the 50 tons weight, although that gentleman said it would be found impossible to have such cranes in Canada. The way the rivets were driven and the general manner in which the ship was built, was a great credit indeed to the workmen of Canada. All those things that we were told by that English Lord could not be done seemed to have been well done. We saw none of those disheartening things that were read to us a few years ago by the Prime Minister of this country, who was cheered by his supporters at the time. These matters are now settled, and we have at least one good shipyard in Canada that has produced ships that

are now being usefully employed in the navy. A fine fleet of mosquito vessels is also being built in that same yard, and everything looks very prosperous indeed, and it looks as if it might grow into a great industry. As I said, the great handicap is the tariff. It costs more to get steel in Canada than it does in Great Britain. It costs more to get engines; and, if you have to import them from the United States, as we might have now to do, the tariff on these engines would be enormous.

As I understand our present tariff, articles that are not made in Canada are admitted free for the construction of a ship. If the plates are not made in Canada, and they are not, they can be imported free for ship construction, but most of the articles that go into the construction of a ship, and they are numberless, are subject to a very high duty, and in that way the Canadian builder starts with a very heavy handicap. If a ship cost about $20 a ton more than on the Clyde you have to pay a dividend on that additional capital, and she has to compete with the ships that are built under free trade conditions in the yards of England. That might be overcome to a large extent in Canada by a rebate, and it is an amazing thing to me that this Government, and the late Government, have not dealt with this question.

Sir THOMAS WHITE: Does the hon. member think that that would be sufficient to establish a ship-building industry in Canada?

Mr. SINCLAIR: I fear it would not be sufficient; at the same time there are ships being built in Canada. On the Great Lakes quite a fleet is being built; ships are also being built in a small way, on the Atlantic coast, and, as I have said, they are being built in Montreal. But they are all subject to that very heavy handicap which should not exist at the present time. It does not exist in regard to other manufactures. The manufacturer of agricultural implements who imports steel from the United States for his reaper or his mower, and exports it to a foreign country goes, to the Custom house and gets back, I think, 99 per cent of the duty he has paid. But the shipbuilder gets nothing; he gets no rebate, and that is a condition of things which should not exist, and which might be rectified by an Order in Council. I trust that the Minister of Finance will see that the very next time the Government meets an Order in Council is passed that will enable shipbuilders in Canada to import their material from abroad and give them a rebate. I see no reason why it should not be done, and I am sure that my hon. friend the Minister of Finance sees no reason why it should not be done. It would be some encouragement, and everybody will agree that encouragement ought to be given to the shipbuilding industry in a greater degree than to the industry of which I have spoken, because when a ship is complete she has to compete with the whole world for business. If there is any product that ought to have an even chance it is the ship that carries freight on the ocean. If there is any freight to carry in any part of the world, the ship has to compete for it, and all the other ships in the world are competing for it. The brokers in London, New York and other great centres throughout the world know that there is freight to carry from Australia, for example, to London. They are all trying to get it in normal times, and each one is competing against the other. Consequently when you launch a ship on the sea, she has to compete with the whole world for business, and she ought to be free from those charges which make ships so expensive in Canada.

Mr. REID: I do not want to interrupt the hon. member, but he knows that articles necessary for shipbuilding are on the free list.

Mr. SINCLAIR: The hon. minister was not in the House when I explained that. I think I understand what the tariff is. There are a large number of articles on which no rebate is given. On articles that are produced in Canada, and that go to the construction of ships, there is no rebate. For example, if you produce marine engines in Canada, you cannot import marine engines from the United States and get a rebate.

Mr. REID: The articles are:

> Masts, iron or steel, or parts thereof, and iron or steel beams, angles, sheets, plates, knees and cable chain, for wooden, iron, steel or composite ships and vessels; and iron steel or brass manufactures which, at the time of their importation are of a class or kind not manufactured in Canada, when imported for use in the construction or equipment of ships or vessels, under regulations prescribed by the Minister of Customs.

Mr. SINCLAIR: That is what I said; articles that are not manufactured in Canada. Not only the iron and steel, but the paint, bolts, locks, the articles for finishing the inside of ships, and innumer-

able other things, are all subject to heavy duty under the present tariff. Duty must be paid to the Government by the manufacturer if a Canadian is going to embark in the shipbuilding industry, and that must be evened up in some way if the shipbuilder is to have a chance. I hope the Minister of Finance will look into this question and endeavour to deal with it.

There is one phase of the shipbuilding question which I have brought repeatedly to the attention of the present Government, and why it has not been dealt with passes my comprehension. Sailing ships on the eastern coast of Canada are not allowed at the present time to sail further south than 5 degrees north latitude. The most profitable business for the ships at the present time is in South America. There are good freights for the river Plate and for Rio and other ports on the coast of South America, but the coasting vessels of Canada cannot engage in that trade because we have a silly and absurd clause in the shipping law which does not allow a coasting captain to go further south than 5 degrees north latitude. The captain can go as far north as he likes, he can go to the North Pole if he can get there; he can sail in the most dangerous waters in the world, but when he gets in the waters of the sunny south, where the trade winds are and everything is favourable he must stop at 5 degrees north latitude. The Minister of Marine and Fisheries has struggled to justify this several times, but he has not been able to tell the House why the Government maintain that regulation in the shipping law. Each session during the last three years, I have introduced a Bill to correct that condition, and to enable the Canadian coasting vessels to earn money by going as far as the river Plate. In old times they went round the Horn. I remember the time very well when the coasting vessels of Nova Scotia went round to California. A coasting captain never had any trouble in navigating; he could go anywhere on the ocean, but in the Marine Department at Ottawa they have the absurd idea that a coasting captain sails along the coast, sees a lighthouse at one point, watches for the next one, and crawls along in that way until he gets to his destination. When these men were examined in the room upstairs, the Marine Department officials could not understand how it was that a coasting captain could cross the gulf of Mexico because there were no lighthouses to guide him. That is the idea entertained in the Marine Department regarding coasting captains. The people who know anything about the matter are laughing at the notions which they have in the Marine Department in regard to that matter. Why should the coasting captains not be allowed to go where the business is profitable? In the whole history of shipbuilding in this country there was never a case of a coasting captain who did not get to his destination. The Deputy Speaker knows that. None of the captains who sailed for any of the ports in the south ever failed to get there because it was too far away. But that is the idea they have in the Marine Department. I have been trying during the last three or four years to get this amendment passed. The Bill now before this House has passed the second reading stage, and it has passed the Marine and Fisheries Committee, but it is at the foot of the list of Bills, and, of course, being a private member, I cannot proceed further unless it is adopted as a Government Bill. If there are any members on the Government benches who take the slightest interest in shipbuilding, or in transportation by sea, I wish they would look up the amendment and ask why it has not been passed into law. It would take only five minutes to pass it. It would be a great relief to the shipping industry of this country, and would mean hundreds of thousands of dollars during the coming year to the people who own coasting vessels.

We like to have vessels sailing under the Canadian flag. We are proud of the Canadian flag and we are fighting to maintain it. But we are driving the coast shipping of this country away from the Canadian flag. Every year a number of vessels that were formerly registered under the Canadian flag and owned by Canadians, are driven outside and forced to seek a home somewhere else in order that they may carry on their business. Some sixty coasting vessels from Nova Scotia are registered in Barbadoes because they could not remain under Canadian register and carry on their business or go to these southern ports. Some are registered in the United States. When American registry was opened no less than fourteen Canadian vessels were registered in a short time in the United States, but when the war came the British Government passed a regulation, and the Canadian Government a similar regulation, that Canadian vessels could not be sold or registered in a foreign country during the war. Consquently, that was stopped. Otherwise many of these vessels

sailing under the Canadian flag would have gone under the American flag. That is the condition in regard to coastal shipping. If there is any one in this Government who takes an interest in this matter I wish he would look into it and try and rectify it. I wish we could have something done in regard to it because this is the most important question that is before the Canadian people to-day. The question of the Quebec and Saguenay railway is a small question compared with this. I have no doubt that the expenditure would be small and that if you had a bounty for the first few years, it would not amount to very much. The money we voted a few minutes ago to a worthless property in Quebec would keep the shipyards of this country busy as far as construction is concerned for the next five years and produce a large number of Canadian ships. That would be something big for the Canadian Government to do. I do not know whether they are big enough to do it or not, but at all events I think it is time the Government formulated some policy that would be a credit to themselves and that would promote this great industry which is so important for the future of Canada.

Sir THOMAS WHITE: My hon. friend (Mr. Sinclair) has raised the question as to whether this Government is big enough to do anything to encourage the shipbuilding industry. That implies that the Government of which he was a follower for many years was not big enough to do anything, because nothing was done. My hon. friend suggests that a bounty for the encouragement of the shipbuilding industry should be provided. The very item of the tariff to which my hon. friend has drawn attention was either inserted at the instance of the late Government, or remained through its term of office, because it is not a new item. The item that my hon. friend called attention to provides that the materials used in shipbuilding shall be subject to a duty if made in Canada. The object of that provision of the tariff is quite obvious. It is for the purpose of giving Canadian steel and other manufacturers the business of supplying the material which may be used in connection with the building of ships. My hon. friend has suggested that the duty should be removed. Without passing for the present upon the advisability of such action on the part of the Government, I desire to say to my hon. friend that that would not afford sufficient encouragement for the establishment on a large scale of the shipbuilding industry in Canada. My hon. friend, I think, agrees with me in that, because I understand him to say that that would not be sufficient, but that further steps should be taken. This matter can be looked at from two points of view: In the first place, from the standpoint of the desirability of establishing upon a large and permanent scale the shipbuilding industry in this country; and, secondly, from the standpoint of providing for the transportation needs of Canada in addition to the ocean tonnage available for carrying Canadian produce to foreign markets. In so far as that is concerned, it is a very important question. I have given very careful consideration to the question of how to establish on a large and permanent scale in Canada the shipbuilding industry. We have coal, we have steel and iron manufactures, and what would seem to be a desirable adjunct to these great industries would be the shipbuilding industry on a large scale.

It is to be pointed out that in the establishment of an industry like the iron and steel industry, or an industry such as the shipbuilding industry, the usual mode of encouragement is by bounty in the first instance. But it has been demonstrated that a bounty in itself is not sufficient unless it is supplemented by a protective tariff. The iron and steel industry has been built up in this country by the granting of a bounty in the first instance, and by a protective tariff, and there we have the case of an industry which has been established in a large way. But, in so far as the shipbuilding industry is concerned, it does not seem possible to encourage it by a protective duty, because, as I understand the situation—I am not absolutely clear as to this—I am speaking from memory—there seems to be a difficulty under the Merchant Shipping Act in the way of the Government of Canada giving protection in so far as ships are concerned as it has been able to give protection in so far as manufactured products are concerned.

Great Britain has an enormous advantage over Canada in shipbuilding. There is a labour market that gives her an advantage. I mean to say that labour in normal times is cheaper in the United Kingdom, that capital is cheaper, and, besides, that shipbuilding is an old-established industry. By reason of doing an enormous business, doing the shipbuilding of the world, she is able

to observe economies that would not be possible in a new country embarking upon the shipbuilding industry. The United Kingdom possesses that advantage over Canada in the building of ships. That difficulty might be overcome in whole or in part by the granting of a bounty for the protection and encouragement of shipbuilding. My own view would be that such a bounty would have to be one extending over a long period, much longer than has been the case in connection with industries which it is possible to protect by protective duties. Therefore one way of assisting in the establishment of a shipbuilding industry would be by the granting of bounties to get it established, and to maintain it until such period as it would be able to compete with the shipbuilding industry of Great Britain.

There is another aspect of the matter—and I am only referring to these to show that it is a question that cannot be solved without much patient thought and consideration. In the case of the bounties which were given upon iron and steel, it was provided that they should only apply where the iron and steel was sold for domestic consumption and not to iron and steel exported. The reason is obvious. Foreign Governments would have ground to complain if steel and iron upon which a bounty had been granted in the country of manufacture entered into competition with the same products in the country in which they were sold. A countervailing duty in such a case might be imposed by the Government of the country to which such products were exported. Once a ship is built it may be used for home trade or it may be sold abroad. The result is that the granting of a bounty for the encouragement of shipbuilding, while it might build up a large shipbuilding industry, would not necessarily have the effect of ensuring that the ships so built would be available for the purpose of Canadian trade, for they might be sold to ship-owners of the United States or of some other country.

Mr. SINCLAIR: You would not favour any restrictions in that respect?

Sir THOMAS WHITE: That is a point for consideration, and personally I shall be glad to have any views that will be helpful in the solution of this question. I do not see how it would be possible under the bounty system so to fetter the disposition of a ship after it had been built that it could be ensured that that ship would be available for the purposes of Canadian trade and would not be sold abroad. I am the first to admit that the building up of a great Canadian shipbuilding industry is in itself a desirable object, provided we can secure that by the giving of a reasonable bounty, for it does not seem possible to impose protective duties upon ships trading to Canada.

I have been speaking about the desirability of establishing a shipbuilding industry in normal times. As to the present situation, I have talked with many men who are competent to give advice, and whose opinion is worth having upon this question, and it seems perfectly clear that any ship built at the present time will command a price which will give a handsome profit on the cost of construction. Having regard to the freights that can now be obtained it also seems clear that it would be profitable for any shipbuilder to build a ship at the present time, supposing that the war lasts another year, because the freights that he would earn would largely liquidate the cost of the vessel. But, while what I have stated is correct, it must be borne in mind that at the present time the cost of material is twice or three times as much as normally and there is also a scarcity of labour. For these two reasons shipbuilding is exceedingly expensive. My own view is that if at the present time the shipbuilder is not attracted by the high prices which he could obtain for the ship when built, or by the high freights he could obtain when using the ship, he is not likely to be encouraged to build ships by reason of a bounty only. The bounty would have relation to the establishing of a shipbuilding industry looking to the future. So far as the present is concerned the shipbuilder will be largely governed by his view as to the length of the war. These are two aspects of this exceedingly important question.

I much regret that the Minister of Trade and Commerce is not in the House to-night, but he was not aware that this subject would be brought up. I think, however, that the Prime Minister has explained that the matter is under consideration by a subcommittee of the Council, and we hope to go into it thoroughly with a view to considering what policy would best encourage the shipbuilding industry in Canada, and tend to increase the tonnage available for the movement of Canadian produce. It seems clear, as the Prime Minister has said, that the two questions are separable. The building of ships is in itself a great national industry. As to the tonnage available for the moving of Canadian products, one does not like to offer a conjecture as to the

length of the war, but unless the war lasts for a much longer period than most expect, it seems hardly probable that any large ships built at the present time would have any appreciable effect in increasing the ocean-going tonnage.

I have offered these observations rather at random. The problem is one which appeals to every member of the House and will undoubtedly engage the best attention of the Government, with a view to the solution of both questions to which I have adverted. As to the question of controlling ships built in Canada, for the purpose of Canadian trade, I was struck by the remarks of my hon. friend from Victoria (Mr. Barnard) just now, to the effect that the Government of British Columbia had brought down legislation under which it would make loans up to a certain percentage of the cost of the vessel, and I understood him to say that there were conditions attached to the loan which would ensure that the ship would be available for the carrying of the products of British Columbia. No doubt that legislation had in view the point I touched upon earlier in my remarks, that is, the desirability of coupling the aid with a condition which would make ships subserve the purpose of Canada's export business. I have offered these observations without having given this matter consideration in the expectation that the debate would be brought on to-night; but I can assure the House that the Government is entirely agreed as to the desirability of the establishment of a shipbuilding industry in Canada, and of adding to the fleet which must carry Canadian products to Europe and other countries.

Mr. D. D. McKENZIE: There is just one observation made by the Minister of Finance which I think should not pass unchallenged. It is difficult for him to make any observations without a political fling; he seems to think that nothing has the proper zest unless it has the leaven of partyism thrown in. He could not say anything about this great national question without a fling at the Liberal party, alleging that they did nothing when they were in power along the line of encouraging the shipping industry. In that I must take issue with the Minister of Finance in the sharpest possible way, and point out to him that the policy of the Liberal Administration was to establish shipbuilding plants in this country of the very best class and on the very largest scale. It is true that the intention of the Liberal party was to encourage and commence the building of warships in this country; but if we were capable of building warships, which are of the highest class of vessels afloat, we certainly should be able to build commercial vessels. Once we had the shipyards and plant in this country it would follow as the night the day that when they were not engaged in the building of war vessels they would give their attention to the building of ships of other classes. In that way the policy of the Liberal Government, if carried out, would of necessity have established first class shipbuilding plants in this country, and not only shipbuilding plants, but drydocks as well. The drydock policy of the former Administration was a well matured policy and would have been carried out in connection with the other. Every prophecy put forward with regard to that policy, and every excuse offered by the present Administration for refusing to carry it out has fallen through. As the hon. member for Guysborough (Mr. Sinclair) said, it was suggested, for one thing that we had a vacuum under the ground, and so did not know what weight we could safely place upon the land at Montreal, Halifax, St. John or Sydney—that Providence had not propped up the earth enough in Canada to support a shipbuilding plant—I am surprised that the Minister of Finance seems to have been willing to father these excuses.

As to the part of the Dominion from which I come, there was every prospect of a first class shipbuilding plant being built in Sydney, and nothing took it away except the policy of this Government. Had the policy of the Liberal Administration been carried on, there is not a question but that a shipbuilding plant would have been erected in Sydney. We have in this country an enormous shipping of our own. On the coast of Nova Scotia we have a great coal carrying business from Sydney to Montreal. But we cannot keep the Norwegian ships out of the business until we have ships of our own. We have legislation enough on the Statute books to prevent foreign ships from carrying on our coasting trade, but the Government has seen fit to suspend its provisions from time to time by Order in Council because we have not ships to carry on the business. This is not because we have not the men or the material, if they were properly handled. We have in Nova Scotia the finest sailors in the world, and

I assume that on the Pacific coast our men are almost as good as on the Atlantic coast. But we must have something more than a mere wish to see the business carried on. It is quite unnecessary to point out what has been done by wooden ships. The age of wooden ships has not altogether passed away. Since the war broke out wooden ships have been built in Nova Scotia and I think it would be worth while to encourage the building of those ships there unless we are able to carry on the building of a larger class of vessels. Had the policy of the former Government been supported, as it should have been, it would have resulted in a vastly different state of affairs from what we have to-day. There is just one observation of a party character and relating to the Minister of Finance which I wish to make. I am glad we have the hon. gentleman with us this evening. But I presume he was very much occupied during this afternoon, last night and yesterday afternoon when the extraordinary financial proposition was before the House from the consideration of which we have just passed. That was an important measure from the point of view of the country's finances, and I am sure we should have been glad to have heard from the minister upon it. When propositions of that kind are before the House he should be on deck.

Sir THOMAS WHITE: Is the hon. gentleman making the statement that I have not been present during the discussion of the Quebec and Saguenay matter?

Mr. McKENZIE: We have not heard the hon. gentleman's voice upon that subject.

Sir THOMAS WHITE: Because the Bill was in charge of the Minister of Railways. I was in the House yesterday afternoon, and have been here three or four times to-day. The hon. gentleman is making an absolute mis-statement, and he knows it.

Mr. McKENZIE: I do not know whether it is worth while to take notice of that or not. If the Minister of Finance thinks that that is big enough for him, it is big enough for me. If he thinks that he can stand in his place in this House and say that I am making a false statement and know it, I can only leave it for the Canadian people, who know us both, to say how large we are.

Sir THOMAS WHITE: The hon. gentleman made the statement that I was absent from the House last evening and to-day. That statement is incorrect, and I ask him to withdraw it.

[Mr. McKenzie.]

Mr. McKENZIE: I have nothing to withdraw. I say the Minister of Finance should have taken part in the discussion of this financial question in connection with a railway. By all means he should have told us where the country was going to get the money, and also how it was going to get value for what it was to give. If he had any knowledge about it, the House was entitled to that knowledge. He did not express an opinion upon the matter, and if he was here it was but for a short time. If he thinks it worth while—

11 p.m.

Mr. SPEAKER: The Speaker cannot see what connection there is between the remarks of the hon. member for North Cape Breton and of the Minister of Finance and the subject under discussion. I think it would be better for the hon. gentleman to come back to the consideration of the shipping industry.

Mr. McKENZIE: I am talking of the shipbuilding industry, and also on the motion that Your Honour leave the Chair. I do not know that there is anything else before the Chair, and I think that on that motion I can talk about anything. I like to talk of the Minister of Finance; he makes a good subject, perhaps the best on that side. Although we do not always see eye to eye, yet generally we get along all right. I am so constituted that when I can get a fling at a good, big man, I am tempted to take it.

I say again to the minister that we had a policy which would establish shipbuilding in this country beyond peradventure, and that hon. gentlemen opposite got hold of that policy and tore it to tatters, not having the courage to carry it forward. Hence we have no policy in regard to shipbuilding to-day.

Mr. WILLIAM THOBURN (North Lanark): I have listened with a great deal of interest to the discussion that has taken place with reference to shipbuilding. I must say that if there is any hon. member of this House who should try to dissociate himself from politics when he rises to speak, it is the hon. member for North Cape Breton (Mr. D. D. McKenzie) for I have seldom heard him address this House without dealing in pretty bitter partisanship.

In reference to shipbuilding, if I were to make the bold statement that hon. members from the Maritime Provinces do not deserve to have ships built, I think I should be only saying what has been borne out by their own speeches in this House. When

this question was under discussion a few weeks ago hon. gentlemen opposite disagreed among themselves as to the policy under which shipbuilding should take place. One wing of the party opposite wanted ships built under a free trade policy and another wing of the party wanted ships built under a protective policy. What Government under the sun could build ships to suit some hon. gentlemen opposite? As to free trade, of course, all hon. gentlemen opposite are not of the same opinion. The catechism of the hon. member for Assiniboia (Mr. J. G. Turriff), for instance, is one which is based on free-trade wheat, although he knows well that there is no such thing and can be no such thing so far as Canada is concerned as granting free-trade wheat. Then, the hon. member for Guysborough (Mr. J. H. Sinclair) wants ships built under a free-trade policy. The Minister of Customs has told the member for Guysborough that most of the articles of iron and steel that enter into the building of ships are admitted free of duty. In the interests of the great iron and steel industries of Nova Scotia, why should such steel as is manufactured in Nova Scotia be admitted into this country free so long as we have a general policy of protection? Why should we discriminate against that great industry in Nova Scotia, which it has cost the Governments of this country a considerable sum of money to put in its present shape? I ask some hon. gentlemen opposite: What encouragement do they give to Canadian manufacturers to launch out upon new industries? What encouragement was given to Canadian manufacturers when they started to manufacture shells for the protection of our own country? They were derided by hon. gentlemen opposite from one end of the Dominion to the other. How many hon. gentlemen from the lower provinces have engaged in the manufacture of shells or in the manufacture of anything else, for that matter? If they want ships; if they think that the building of ships would be such a great improvement to their own part of the country, why do they not build some? Why do they come to this Government begging them to build ships for them? If it is a profitable industry, why do they not engage in it themselves? The great trouble with many hon. gentlemen opposite is that they preach too much free trade to encourage any men to launch into new enterprises. Nobody feels like investing in a new industry when there is such a strong feeling on the part of hon. gentlemen opposite with regard to free trade. Let them drop those ideas and join in with hon. gentlemen on this side of the House in devising some scheme to encourage shipbuilding in this country. As the Minister of Finance has said to-night, you could not start to do this in a more unfavourable time than the present on account of the enormous cost of the raw material that enters into the manufacture of ships. I think it is time that some hon. gentlemen on the other side should look at these questions from a different standpoint from that of finding fault with everything the Government does. One hon. gentleman made the statement that if the Government were to come down with a policy designed to encourage the building of ships, their proposals would meet with the hearty approval of hon. gentlemen opposite. I doubt, however, if the Government could frame a policy to build ships or to do anything else, for that matter, that would meet with the approval of hon. gentlemen opposite.

Mr. W. F. CARROLL (South Cape Breton): Mr. Speaker, I am one of those who take a keen interest in the matter of shipbuilding. I am glad to see the subject before the House again, and I hope that the discussion to-night will bear some good fruit. I am sorry to hear the hon. member for North Lanark (Mr. William Thoburn) say that members from the Maritime Provinces do not deserve to get shipbuilding down there because in some few details in the matter of shipbuilding we do not agree. Some of us, he says, want ships built under free trade, while others want them built under protection. For my part, I do not care under what system, whether protection or free trade, ships are built; what I say is that this Government should do something to encourage shipbuilding in Canada at the present time. The hon. member for North Lanark says also that we on this side of the House are asking the Government to build ships. We are not asking the Government to build ships; we are asking the Government to do something to encourage the people to take up the business of shipbuilding. This Government and every Government in the past have done something towards encouraging industry in Canada. They encourarge industry by building up a tariff to protect certain manufactures—woollens and that kind of thing.

I suppose the hon. member for North Lanark finds no fault with that.

The time has come when the Government should do something to encourage shipbuilding. Some hon. gentlemen who have spoken on the other side of the House say that any encouragement which might now be given to shipbuilding would not be well advised as to time, because ships which might be built in the near future could not be used to make up for the lack of shipping resulting from the present scarcity of ships. Let us look for a moment at that phase of the question. There is going to be a great change in this country after the war. In the first place, all those who are at present engaged in the manufacture of munitions will have lost their means of earning a living. Two things will be affected by that. First, labour will be affected; the people who are at present engaged in the manufacture of munitions will have to look elsewhere for work in order to support themselves and their families. Secondly, thousands of returned soldiers will come back to this country, many of whom will be able to take their part in the industrial activities of the country. They will be looking for something to do, and they will have to be placed. Another aspect of the case is that a great deal of our iron and steel is being used in the manufacture of shells. All that will be taken away and our steel makers will have to look elsewhere for a market in Canada. Railway construction will not be carried on in the future on such a large scale as it has been in the past, and there will be no other chance for our steel companies to get a market for their steel.

Taking all these things into consideration, is the time not opportune for this Government to do something, to formulate some plan whereby shipbuilding, steel or wood, would be encouraged? I think it is.

The Minister of Finance has said that, if bounties on shipbuilding were given, they would have to continue for a long period of time. There were people in this country, who, 12 or 14 years ago, thought that the steel industry of this country could not be built up within the space of a quarter of a century, that it would have to be bonussed for that length of time before it could get a standing, first to supply the home market, and then to compete with other countries in the foreign market. That is not correct. The steel industry of this country began to come into boyhood between 1900 and 1902. It had reached such a state in 1910 or 1911 that the Government of this country thought the time was ripe to remove the bounty, and they so acted. The bounties were removed, but the steel industry still flourished to a great extent, except in times of stress.

Sir THOMAS WHITE. At the time the bounties were discontinued there was a protective duty upon steel and iron.

Mr. MACDONALD: Very moderate.

Sir THOMAS WHITE: The point I made was that bounties on shipbuilding would have to be continued for an extended period by reason of the fact that it would not be possible to protect the shipbuilding industry by a tariff as in the case of the iron and steel industry.

Mr. CARROLL: When my hon. friend says there was a protective duty on iron and steel in 1910 and 1911, I rather disagree There was a duty, but I do not think he will say it was a protective duty. This Government did undertake to increase that tariff to a considerable extent a few years ago. I venture to say that we have not yet what would be called a protective duty on iron and steel in this country. But, be that as it may, there is no doubt that had it not been for the bounty which the late Government gave on the manufacture of steel in this country, these great industries which has been developed in Ontario and in Nova Scotia in steel-making would not have been as successful as they have shown themselves to be. There were people in those days in my own province who said it would be an impossibility for us to manufacture steel and compete with the great corporations of the United States. Time, and may I say the bounties which were given to these industries in their infancy, have shown that these men were mistaken. I am glad to hear the Minister of Finance say that the Government is giving this question some consideration. I hope that their consideration will have such a result that in a very short time they will have formulated some plan to encourage this industry, which must be a great industry in this country if other industries are to flourish.

Another argument made against encouraging shipbuilding in this country was that in Great Britain shipbuilding was more advantageously carried on than in Canada, I presume from the standpoint of cost. If we pursued that argument we would not be building anything at all in this country;

we would not be building locomotive engines, we would not be manufacturing woollen goods, because I believe there is not one article manufactured in this country to-day that could not be and is not being more advantageously manufactured in Great Britain. I fail to see the strength of the argument that because shipbuilding can be more advantageously performed in Great Britain we should not undertake it in this country. The same argument extends to the manufacture of any other article we can mention. Everybody knows that if we could possibly build ships in Canada to-day it would be a most profitable industry. But let us lay the foundation for shipbuilding in this country, notwithstanding that we are not in normal times. We should lay plans now, if we are to compete in the markets of the world after the war is over; and if we are to take our correct place in commercial business, we must have ships to carry on that business. There are only two ways by which we can get those ships: we must either buy them abroad or build them in this country. Is there a man who calls himself a Canadian who will say that, in the long run, even if he could buy a ship and pay a thousand dollars less than it could be built for in Canada, it would be more profitable to Canada to buy than to lay the foundation of a great shipbuilding industry in this country? I say that, notwithstanding the fact that you can buy them cheaper in England, it is for us here, representing the people of this country, to lay the foundation, to do everything we can to encourage shipbuilding in this country, so that when the war is over, and even before the war is over, we will have something to lay before the capitalists of this country which will encourage them to put their capital, their time, their ability into shipbuilding within the borders of Canada.

I do not discuss this matter from the standpoint of there being a steel and iron industry in my constituency. I do not care, so far as shipbuilding is concerned, whether steel is allowed to come in free or not. I say that, in whatever way we get the steel, it will not affect the question in my mind. I believe that there are some parts used in the manufacture of ships that, notwithstanding the statement made by the Minister of Customs, bear heavy duties. It might be well for the minister to look into that more deeply, and I am sure he will find that the hon. member for Guysborough (Mr. Sinclair) is quite correct in saying that a reduction or abolition of duties on certain materials used in shipbuilding might tend to encourage that business. To my humble way of thinking, there is no better plan for building up this industry, or encouraging our moneyed men in this country to take up this work, than by the method of bounties. I do not think it would hurt the faith of our high protectionist friends, because, after all, bounties are the most logical kind of protection, according to my hon. friend from Red Deer (Mr. Michael Clark), who is always right in matters of trade policy. Therefore, I do not think that my hon. friends opposite will be, after all, running away from their policy of high protection if they give a substantial bounty to encourage shipbuilding in this country.

Mr. MACDONALD: Do the Government regard this question of assisting the shipbuilding industry as coming within the purview of the War Measures Act, or as one on which they could take action by reason of the $250,000,000 vote that is given for certain purposes?

Sir THOMAS WHITE: Very wide powers are given to the Government under the War Measures Act, sufficiently wide, I think, to enable them to deal with a part of the question, if it should be thought expedient to do so. My hon. friend has asked whether any portion of the war vote would be available. I think it would, provided that the action of the Government was connected with the war or deemed to be a measure taken by reason of the state of hostilities now continuing. But, so far as the matter of granting a bounty is concerned, it would be possible to do it by legislation or by announcement subject to legislation being obtained later. As I stated to my hon. friend, and I think the Prime Minister stated likewise, the matter is under the consideration of the committee of the council, which is charged with the duty of considering the question in all its bearings, that is to say, the bearing it has on the matter of the establishment of a shipbuilding industry, and upon the question of increasing the tonnage available for the carriage of Canadian products.

SUPPLY.

The House in Committee of Supply, Mr. Rhodes in the chair.

Department of Public Printing and Stationery —to appoint Frederick Cook Assistant King's Printer and Controller of Stationery, at $4,000 per annum, from July 1, 1915, $3,000.

Mr. MACNUTT: The matter to which I wish to refer concerns the collection of duties, and particularly the valuation of the duties as applied. A farmer in my district named Mr. D. J. Lowe, purchased a traction outfit from the Rumely Products Company, a large American manufacturing company, with a branch office in Winnipeg. He had occasion to send for repairs, and he received them with this invoice:

Winnipeg, October 27, 1915.

D. J. Lowe,
Harrowby, Man.

2 Crank pins bushing, at $10 .. .. .. $20 00
6 Cap screws at .10 60
Making a total $20.60.

To that was added $6.18 duty, making a final total of $26.38. It is a small matter, but there is a principle behind it. That figure works out exactly at 30 per cent on the retail price, that is, $6.18 is 30 per cent of $20.60. Mr. Lowe thought there was something wrong, and he wrote to the collector at Winnipeg, and received the following letter in reply:

Winnipeg, November 2, 1915.

D. J. Lowe, Esq.,
Harrowby, Manitoba.

Sir:

I have the honour to acknowledge receipt of your letter of the 30th ultimo, referring to the duty charged you on babbit bushings, brought in for you by the Rumely Products Company, Winnipeg.

In reply I wish to state it is not the custom of this department to give information regarding transactions between buyer and seller.

I would state however, for your information that the rate of duty on babbit bushings as mentioned, is 15 per cent with 7½ per cent war tax, making a total of 22½ per cent ad valorem.

In the invoice it is 30 per cent. I have received a memorandum, however, from the department as follows:

If these babbit bushings were repairs for a portable engine or a traction engine for farm purposes they would be subject to duty under the general tariff at 20 per cent ad valorem under item 447A and in addition 7½ ad valorem war tax.

That would make 27½ per cent, but that differs from the statement of the collector at Winnipeg. It does not matter whether it is 22½ per cent or 27½ per cent; it is not 30 per cent. Mr. Lowe did not want to have any trouble with the firm in regard to the invoice, but either the duty charged the company was greater than was authorized by this House, or the Rumely Products Company were trying to get money under false pretences. I can hardly see why they should take that course to increase their profits, because they could easily do so by adding to their regular invoice price. On the face of it, it looks as if they had been charged 30 per cent on the retail price of those articles when the outside duty is 27½ per cent, and we would presume that it should be on the factory price. This is a very large company which does a large business. They must get their repairs by the carload, and one would think that the duty would be applied to the factory price. I do not think the Rumely people would lower themselves by charging more than they had to pay, but that is what Mr. Lowe desired to find out, and what I would like to find out from the minister, as evidently the collector would not give any information regarding the matter. I would like to know if the amount of duty stated in the invoice is correct, also upon what basis the valuation is made, and whether it is the habit of officials to apply duties greater than are authorized by this House. I have seen a number of other invoices exactly similar to this, in which the duty was 30 per cent of the retail price. I think the people have enough to pay by way of taxation, and should not be compelled to pay more than is authorized.

Mr. REID: This matter was brought to my attention some time ago, but I did not have the full information to enable me to trace the matter up and get at the facts of the case. Of course, babbit bushings are made from lead, and under item 339 manufactures of lead, not otherwise provided for, the duty is 30 per cent, while under item 447A, the parts for portable engines, boilers and so on, it is 20 per cent with 7½ per cent added as war tax. If these articles were imported as repairs for portable engines or traction engines for farm purposes, they would come under the 20 per cent duty.

Mr. MACNUTT: That is what they were.

Mr. REID: But if they were imported under the other class, that is under the manufactures of lead, the duty would be 30 per cent. The collector of customs at Winnipeg, evidently made a mistake in the reply which he sent. Of course, in the interpretation of the various items, mistakes often do occur, in which case they are remedied. As I understand it, the Rumely Company added 30 per cent to the invoice. The goods were imported by the Rumley Company, and they paid the duty to

the Customs and then invoiced the repairs to Mr. D. J. Lowe, Harrowby, Manitoba. Rumley Bros. are the ones that have put on the invoice the amount of duty they paid. I would suggest that in a case of this kind Mr. Lowe, without reflecting at all upon the Rumleys, could write to the department, or if the hon. member will let me have the invoice on which the 30 per cent was charged, our officials will trace that very entry for the repairs imported by Rumley Bros. and see if the 30 per cent was actually paid. If the Messrs. Rumley paid 30 per cent on these repairs for portable engines, they are entitled to a refund but they may have imported babbit or bushing for some other purpose and paid the 30 per cent. With the invoice, I think our officials will be able to trace this entry and get full information. We will take this matter up at once in the regular way and have it traced up. If a mistake has been made the duty will be refunded. If there is no mistake we will be able to give a full explanation so that Mr. Lowe will be thoroughly satisfied as to the way in which the matter was dealt with. But we will send the information to the hon. member and he can forward it to Mr. Lowe so that he will see that he has given his attention to it.

Mr. MACNUTT: The most important feature is the valuation upon which the duty is applied, that is the retail price at which the article is sold to the customer, whereas it cannot be possible that the department apply the duty, no matter what the article may be, upon the retail price. It must be upon the wholesale price.

Mr. REID: The regulation as to value is this: The duty is paid on the value for home consumption as shown by the invoice at the time the goods are imported into this country. If I understand it, Rumley Bros. went across the line and purchased these things and the price at which he purchased them will be the value for duty even though it may be the retail price. The duty must be paid on the price that is paid for the goods on the American side at the time the goods are purchased and exported into this country. If Rumley Bros. brought in a carload of parts of engines, or any other goods, whatever they paid for them at the time of export is the value for duty.

Mr. MACNUTT: They would have to pay the freight. These repairs came from their own factory, but in reporting them they charged more than the factory price and they would have to add the freight. It does not seem possible that the duty was applied on the Winnipeg retail price.

Mr. REID: No. I can not explain the matter until I get the full facts. I will send a detailed statement to the hon. gentleman's home within the next two or three weeks so that he will thoroughly understand the matter.

Mr. MacNUTT: Thank you.

Mr. TURRIFF: A matter of this kind is a far reaching one. In the three Prairie Provinces the amount paid by the farmers for repairs to machinery will run into many hundreds of thousands of dollars during one season. If it should turn out on the minister's investigation that any company is importing goods and paying duty, as they should, only on the wholesale price, and, when they come to deliver these goods to their customers, charging them—because there is no doubt that the bushings were not brought in as lead—an additional 2½ per cent over what they had paid, and in addition charging them on the retail price, they are taking a very considerable amount more out of the farmers than they are entitled to. If the minister finds that that is the case, I think it should be made known not only to my hon. friend from Saltcoats (Mr. MacNutt), who brings this matter up, but to farmers generally, so that they may know that they are liable to be overcharged. The matter ought to be looked into.

Mr. REID: The hon. member is absolutely right. It would not only be an injustice to the farmer who is purchasing goods if it should happen to turn out in that way, but it would be an injustice to the Government if these people were charging a higher amount of duty than that which they really paid. Of course, we cannot come to any conclusion until we know what the real facts are. We will take it for granted that everything has been right until we have the facts before us, and then, if there is anything wrong, it will be remedied no matter who is affected.

Mr. VERVILLE: If I understand the procedure, a member can bring almost anything to the attention of the House, and I therefore have a few remarks to offer you on what I regard as a subject of importance. In a letter which I received I have been asked to bring some facts in regard to the city of Montreal to the attention of the

House. The conditions to which I desire to call the attention of the House apply generally throughout the country but more especially in Montreal. I will read a letter, and that will be followed by a report in one of the newspapers which I am also asked to read. The letter is as follows:

Mr. Alphonse Verville, M.P.,
Montreal.

Dear Sir:

Having in mind the fact that prorogation is near at hand, we take the liberty of asking you to bring to the knowledge of the House as soon as possible an article that appeared in the Labour World, of May 13, which is self explanatory.

We are informed that similar circumstances prevail in other centres throughout the Dominion, but are of the opinion that they are more pronounced in the city of Montreal.

In view of the fact that there is considerable agitation in certain quarters to promote conscription, which we consider unnecessary, and to which we are emphatically opposed, we feel that arbitrary action in turning down, for minor causes, those who have shown their willingness to do their bit, cannot but tend to discourage voluntary enlistment, and is of such importance as to merit the most serious consideration of those in authority.

Yours very truly,

J. T. FOSTER,
President.

GUS. FRANCQ,
Secretary.

I might say that this letter is signed by the president and secretary of the Montreal Trades and Labour Council. I want to read this article in order to have it on Hansard, and, as the letter says, it explains itself:

You are "Unfit"—More than 25 p.c. of our recruits are discharged in the Montreal Battalions—What are they aiming at?

Great excitement has been noticed lately amongst the local overseas regiments.

The reason is simple. Many of our volunteers have to pass a second medical examination and the number discharged is considerable. Some battalions have lost as many as twenty per cent, others twenty-five per cent.

Why are these examinations so rigid? At the beginning a young man who did not enlist at once was called a "slacker." If he listens to the persuasive voice of the recruiting officer he puts his name down and to the office he goes. There, despite his modesty, he is stripped naked and closely examined as to his fitness. Not a detail seems to have been overlooked. He is passed. Off he goes to his duties, happy in the idea that he is serving his country and the civilization incident thereto. Finally, after the various stages of routine, he dons khaki, shoulders his rifle, and is ready to die for his home and country.

Dressed in his uniform he attracts the admiration of his friends, his sisters, and sometimes wives, sweethearts and parents, all in the possession of the proud feeling that he is serving his king. Blessed with native enthusiasm he goes forth a real soldier. He is put through all the drills; he is put on guard duty despite bad weather; in fact he serves like all soldiers do in all the exercises, the drills and the marching, bayonet drills and what not. In short, he is ready with eyes straight and tightened lips to brave the trenches of Flanders dreaming of his return to his country as a hero having done his duty.

After five or six months of this new life, a new inspection from the doctor is ordered. He cannot understand that this is necessary, having already undergone this experience. However, he goes forward in great confidence because he has to use a vernacular, "been there before." And he is the most surprised man in the world to hear the doctor saying: "You are unfit."

Is it that his anatomy is not fit to be destroyed by a machine gun or shot down by a German sniper? What is the matter? Oh! nothing, except perhaps a crooked toe, or an eye that cannot tell an "O" from an "A" at fifty yards, or may be something less important because he has already passed his examination as quite perfect a few months previously.

Is it the time he has spent in the barracks that has caused this degeneration in body?

Is the first medical examination serious, or is it done just to give reason for a second which is just the contrary? One or the other is a farce.

Take then the life of the soldier. He has no doubt left a position before enlisting; perhaps a good one. Having been discharged as unfit, his certificate may militate against him when applying for a new job, wherein medical examination is necessary. There is every probability that he will be classed by certain people among the "Misfits," or in other words a man who has been discharged from the army because of some misconduct. The poor lad has spent four or five months in a training which is of no use to him and which he will never practice. At the same time he is sore on society and disgusted more or less with himself.

Take then the country itself. It has been paying out useless money; costing as it does more than two dollars a day for a soldier, and this is a very low estimate—the cost amounts to the neat sum of three hundred dollars, which is absolutely thrown away. It must be remembered that we have had, during the last weeks, in Montreal alone, more than five hundred soldiers, volunteers, discharged unfit for service and the money goes from—us, the taxpayers—paid absolutely for nothing.

It is money wasted because either the first medical doctor did not understand his business, or the second one did, as one declared the soldier fit and the other unfit.

Why then is that recruiting does not go ahead more rapidly?

How are you going to get young men to enlist?

Have we too many soldiers that we can afford to dismiss them on the slightest pretext?

Why should it be so easy here when it is so hard in the army of France or Belgium?

Is it made easy so that more opportunities may be given to the young officers of the city to study "High Life" and remain swelling "around the city." We do not believe it to be so.

On the other hand, we must ask, is it a trick intended to belittle recruiting in the province of Quebec? This province has the finest record for bearing children and will it, at the same time, have the poorest recruitng record?

From another point of view, it may be that

many of our boys are discharged because there are far too many battalions recruiting and in their eagerness almost any one is taken.

We do not know the real reason. Who will tell us?

Next week further questions will be asked.

This article appears in the Labour World, a bilingual paper; it is printed in both French and English, and may contain a few typographical errors. As the writer states, a man has to be almost a cripple before the Belgian or the French army lets him go. Let me give a case that came under my notice last Sunday night. Francq, one of the men who sign this letter from the Montreal Trades and Labour Council, has three sons whom he has given to the country. One left eighteen months ago for Belgium, and has been in charge of a machine gun in the trenches for ten months. He has returned, but will be off again shortly in another regiment. Two other sons joined the 163rd nearly six months ago. I saw these two men on Sunday night; both had had to leave the army.

Mr. PARDEE: Why?

Mr. VERVILLE: They were unfit; that is all we know. Now, there are soldiers all over the country guarding bridges and canals and other public works. Why should not these men who are discharged as unfit be allowed to take the place of able-bodied soldiers doing guard duty in Canada, for they surely would be fit enough to guard a canal, or a bridge or anything of that kind? Many of the men discharged as unfit have left good positions; I know some myself who have. Now if they had been to the front, they would have some chance of getting their old positions back, but the chances are slight when they have been discharged as unfit and have never been overseas. Again in large cities the different provinces have opened employment bureaus for returned soldiers, but these men who have been discharged as unfit are unable to get any work through them because they have not got the necessary papers. This kind of thing is going on in other places in Canada but, as the article says, it is more acute in Montreal, and for the life of me I cannot see why it is allowed to go on. Anyone who understands anything about military affairs knows that thousands of men are required besides those who do the fighting at the front, and many of these young men who have been discharged as unfit are quite capable of doing service at home.

There is another point I should like to bring to the attention of the Government. I do not know whether the practice prevails in other cities, but in Montreal, when a man enlists, he has to pay $10 as a guarantee for his outfit. If he stays six months this amount is refunded, but if he stays only five months and twenty-eight days, it is not. I know one officer who paid $28 for his outfit when he joined the army. He was sent out in different parts of the city to help in the recruiting campaign, and he left part of his outfit at the officers' quarters, thinking it would be quite safe there. A short time ago he was discharged as unfit, and they told him that if he turned in his outfit they would allow him the $28, althougth he had not been in the army quite six months. When he went to the officers' quarters to get his outfit it had disappeared, and he couldn't find it anywhere. So the authorities said "Well, we shall have to deduct $28 from your pay." And they did so. I do not know what the rules and regulations of the Militia Department are, but I do know that that man is out $28. I do not know whether that is made necessary under the regulations of the Militia Department, but it seems to me there is no reason to put down $10 as a guarantee of any kind. Is it a guarantee of good faith. I do not know whether it is done throughout Canada or not.

An hon. MEMBER: No.

Mr. VERVILLE: I hope not. If they do it down home, that is enough. In fact, one place is too many. All this does not go to help recruiting in Montreal, nor will it help it anywhere else. In Montreal they are trying to raise a regiment of mechanics, and I have been asked to give my sanction to some extent to a regiment of that kind. But how can you expect to enlist men when you tell them: "Enlist, and you will not have to go to the war." I told the officer who told me that that he ought to be ashamed of himself. I said: "Do you think the mechanics are cowards? If you go on in that way, I hope you will not get a mechanic in all Canada." As a mechanic myself, if I were told that I should enlist because I was not going to the front, I would not take the job; for I am not afraid to go. The article says there are about 500. It may be about 500 more inside of two or three weeks. I know there are any number of young men who have enlisted, having been told: "You might as well enlist; you will never get to the front." If that is the way you are going to swell the number of

soldiers in order to make up a total of 500,000 men, it would be better to have 250,000 men and have them actually go.

This is probably more important than it seems at first sight. I know as a fact that it is going to hurt recruiting. I would not go so far as the article does when it says that probably this has been done more in Montreal than elsewhere. I do not see why this should be done in Montreal, because the men there are as healthy as those elsewhere. To show what is sometimes done, let me give an instance. An effort is made to get a battalion of shantymen. I know some of these men who were refused because they had flat feet. But I would like to find the doctor who rejected any such men who is man enough to walk all day with these woodsmen. This class of men can stand more hardship than any others in the country. The doctor should have known that the work of these men and the conditions under which it is carried on make it necessary that they should be that way, and they grow that way. But that does not say that they would not be good soldiers.

I call the attention of the Government to this matter, and I hope they will tell us whether this first examination is false, or whether it is because they had so much per head to examine them, or whether it was to increase the number of men for a show. If this first examination is a farce, I hope the Government will stop it. Let us have a good examination, and those that are not fit to pass, let them not wear a uniform at all.

Mr. ROGERS: I can understand that if there are many in Montreal who share the view of my hon. friend from Maisonneuve that recruiting might be delayed in that portion of Canada. If the statements he presented are such as he believes, I can see that misunderstandings would arise. It is true, of course, that a certain number of soldiers are rejected by reason of physical defects. But, speaking with a somewhat general knowledge of a great
12 p.m. portion of the Dominion, I can say that I never heard anything about the matters that have been referred to by my hon. friend. I do not understand that those conditions exist even in Montreal, beyond what has been stated in the paper from which he has read. Hon. members know that the Government have taken every step possible to see that we get the largest possible number of recruits. We are putting forth every effort to that end, and probably in no part of Canada are efforts more continuously exerted than in the city of Montreal. I am at a loss to understand the statements made by my hon. friend, because I am satisfied from my knowledge of the administration of the Militia Department that it is not their intention to hamper or reflect upon those who so generously come forward and offer their services either in Montreal or in any other part of Canada. Not only do they not reflect upon these individuals, but they appreciate their willingness to offer their services. The statements of my hon. friend will be recorded in Hansard, and I will have them looked into carefully. I cannot understand the statement, for example, with respect to a double examination. One gets the impression from what was read that this applied to recruiting in Montreal particularly. I assure my hon. friend that this is not the case. I know the minds of those responsible for the administration of the Militia Department and their desire to afford every facility for every individual who comes forward in placing his services at the disposal of the country in this crisis. I can only assure my hon. friend and those responsible for that article that that is the position taken by the Government in regard to securing recruits in all parts of Canada. We have to-day something over 300,000 already recruited, and we are most anxious to have the number increased to 500,000. I cannot understand the statements of my hon. friend. However, we will have them looked into closely. I should be very sorry indeed to have the statement as placed on Hansard go to the world and be accepted as a statement of the facts, because so far as my knowledge of the facts goes, the statements are far from correct.

Mr. OLIVER: I am sorry to be compelled to say that my knowledge differs from that of my hon. friend the Minister of Public Works. I have the most positive knowledge that the conditions as set out by my hon. friend from Maisonneuve do exist in other parts of the country.

It is only a short time since the Prime Minister, in making a statement to this House as to the number of enlistments, stated that what he called wastage amounted to over 20,000. I questioned him as to what was meant by the word "wastage" and he said, if I remember correctly, that it meant men who had enlisted and afterwards were discharged as being unfit. Over 20,000 instances of wastage of that charac-

ter certainly substantiates very thoroughly what the member for Maisonneuve has said. Besides, I am aware of my own knowledge of the fact that officers, being anxious to fill their battalions quickly, were not particular as to the men they accepted and that when they had filled their battalions they proceeded to follow what they were pleased to call the "weeding-out process." Men who were taken on when they should not have been taken on were subsequently discharged, as I suppose they properly had to be. It was a cruel and unjustifiable thing; it was everything objectionable that my hon. friend has stated it to be, and the effects must necessarily be as he has stated them—a sense of injustice, because an injustice was certainly done. We must admit, of course, that a man may pass the doctor on his enlistment as being perfectly sound, and afterwards, during the period of training, may develop a weakness that would prove his unfitness, and it would not be wise to take him overseas on active service. There is necessarily and properly a re-examination of soldiers before they leave for overseas to find out whether or not anything has developed. There must always be some wastage because of that second examination and the possibility of weakness developing. But I am prepared to support absolutely of my own knowledge what my hon. friend has placed before the House, as well as what the Prime Minister placed before the House, that officers raising battalions have not always been careful in the interests of the men they enlisted only to take those who they were sure were physically fit. In doing so they have ultimately done an injustice not only to the men, but to the service and to the cause.

Mr. WRIGHT: I think that possibly the gentlemen who are criticising the Militia Department in connection with this matter are rather severe. Certainly a considerable number of men are finally rejected who pass the medical examination on the first instance, and perhaps properly pass it. The officer who would be responsible would be the medical examiner, and I rather think the suggestion that men unfit for service are passed is a reflection upon the medical profession. After a man has passed his examination and is enrolled as a soldier, many causes might affect his final acceptance. It may be the case that some illness or defect may have escaped the observation of the preliminary examiner or that the physical training may have brought out some incipient disease or weakness. Then, men sometimes develop or betray characteristics which render them unfit for service, such as mental defects, quarrelsome dispositions, and so on. Sometimes they turn out to be notorious criminals; sometimes they develop other characteristics which makes it impossible for the officers to get on with them. So that out of the total number enlisted the number that are finally weeded out before the battalions go overseas may not be abnormal after all. I do not think it follows that because a considerable number of these men have been weeded out there has been any prearranged plan of padding or filling up on the occasion of the preliminary enlistment, because I take it that the medical examiner would hardly be influenced by the officers to the extent that he would be induced to pass men who were unfit for medical service. I hardly think that the medical profession would engage in that kind of work. I do not see how they could do it, unless they deliberately disregarded the rules and regulations laid down by the Department of Militia, and if they did that to an appreciable extent we would have to weed out some of the medical men that have been appointed. If I understand the matter correctly, the heads of the battalions are largely responsible for the medical men who are appointed and they are supposed to be men who will do their duty. I take it that on the whole they are performing their duties fairly well.

Mr. TURRIFF: The statement that is made by the member for Maisonneuve that in certain cases soldiers in Montreal have been obliged to put up $10, and under certain circumstances do not get it back is one that my hon. friend the Minister of Public works, who is leading the House should have investigated at once. It is quite possible that some unscrupulous officer might be doing that without the knowledge of the department. It certainly would have a bad effect, if it became known that this was done without the Government's authority, and I would like to see the matter investigated and a public statement made in regard to it as early as possible.

Mr. ROGERS: I have already stated that the matter will be taken up in the department to-morrow.

Mr. OLIVER: Is it a fact that a man must deposit $10 when he enlists as a guarantee of his uniform?

Mr. KEMP: Did the hon. member for Edmonton ever hear of such a thing in Edmonton?

Mr. OLIVER: I have never heard of it, but the member for Maisonneuve has the statement that in Montreal a deposit is demanded, and I am asking whether that is recognized by the Militia Department?

Mr. KEMP: I never heard of it.

Contingent expenses in connection with the voters' lists—further amount required, $25,000.

Mr. TURRIFF: I have a matter that I wish to bring to the attention of the House; it is pretty late.

Mr. REID: The hon. member is entitled to go on; of course, the hour is late, and if it could be done to-morrow we might take it up then.

Mr. TURRIFF: It will take me about half an hour. I do not want to discuss it on concurrence; it is a time when the House does not want to take up any time in discussion. I would like to discuss it to-morrow if there is some item to be put through.

Mr. ROGERS: I was hoping to get through with all Estimates to-night, if not with Concurrence as well.

Mr. REID: There will be another Estimate to-morrow. We will be going into Supply again, even if all these Estimates are passed.

Mr. ROGERS: We will see that you have a chance to go on on Estimates to-morrow.

Mr. OLIVER: There is an item which I want to discuss before the last Militia Estimate passes. I can deal with it either now or to-morrow.

Mr. ROGERS: There will be an opening to-morrow on Supply.

Mr. REID: We will have an Estimate to-morrow, and on that hon. members can talk on any department.

Mr. GRAHAM: I wish to refer to the case of C. C. McNab, of Braeside, who was a telegraph operator, I think, in the employ of a private company, during the Northwest rebellion. He tells me that on account of disease which was contracted while rendering service at that time, he became blind and has been blind for many years. He made application to the late Government and the Militia Department informed him that after investigation they had decided that as he was not in the employ of that department they could not deal with his case. I think that probably, speaking technically, he may have no claim upon the Government, but under all the circumstances, as the evidence seems to point to the substantiation of his claim that he became blind on account of service to the country, although paid by a private company, the Government might well consider if he could not be treated in the same manner as a man who had become maimed or afflicted in the country's service. The then acting minister and myself had some correspondence, but we never arrived at any conclusion.

Mr. KEMP: I remember the question to which my hon. friend refers. I took it up with the deputy minister, who looked over the file and directed my attention to the decision already arrived at. I communicated that to the hon. gentleman. I presume the only way that a matter of that kind could be dealt with would be through a special Estimate, a compassionate allowance or something of that kind. I shall draw it to the attention of the acting minister, the Prime Minister, and ask him if he will take it up.

Mr. GRAHAM: I imagine it will have to be dealt with by the Minister of Finance or the Prime Minister, because it is admitted that the Militia Department, as a department, is not especially concerned with this.

Progress reported.

FURTHER SUPPLEMENTARY ESTIMATES FOR 1916-17.

A message from His Royal Highness the Governor General transmitting further Supplementary Estimates for the year ending March 31, 1917, was presented by Sir Thomas White (Minister of Finance), read by Mr. Speaker to the House, and referred to the Committee of Supply.

On the motion of Mr. Rogers for the adjournment of the House:

Mr. GRAHAM: What will be the business to-morrow? The report of the committee investigating pensions has to be presented. Does the Government intend introducing legislation based on that report? The Prime Minister rather intimated to me the other day that he thought that might be necessary.

Mr. ROGERS: My understanding of the matter is that legislation will not be necessary to carry out the recommendations of the committee; they can be carried out under the Militia Act.

Mr. GRAHAM: Can the hon. gentleman tell me if any conclusion has been arrived

at as to prorogation—what the Government's idea is as to the time when we can prorogue?

Mr. ROGERS: I think we ought to get through the business very easily to-morrow. We could then prorogue on Thursday at the latest. I was in hopes that we would get through in time to prorogue to-morrow night. If we had got through Concurrence this evening, we could have prorogued to-morrow.

Mr. GRAHAM: The Senate has to deal with all these matters.

Mr. ROGERS: We have to give them some time, and that is why I hoped to have Concurrence to-night. The Senate meets at 11 o'clock in the morning, and we will be able to hand them over some business. They have some business to take up, and they will have the Bill that was passed to-day. That no doubt will receive some consideration, and by the time they are through with it, we will probably be able to present them with Concurrence.

Mr. GRAHAM: I suppose Supply will be the first business to-morrow, in order to get the Supply Bill to the Senate before we take up pensions.

Mr. ROGERS: We can take that up after we get through with Concurrence.

Motion agreed to, and the House adjourned at 12.33 a.m. Wednesday.

Wednesday, May 17, 1916.

The House met at Two o'clock, the Speaker in the Chair.

REPORTS.

Annual report of Canal Statistics for the season of navigation, 1915.—Mr. Reid.

Report of the Auditor General for 1915, vol. III.—Sir Thomas White.

QUESTIONS.

[Questions answered orally are indicated by an asterisk.]

MR. A. DEWITT FOSTER.

Mr. THOMSON:

1. Is Mr. A. DeWitt Foster, late member for Kings, N.S., in the employment of the Government?
2. If so, in what capacity, and at what salary?

Sir ROBERT BORDEN: No.

MR. R. H. KENNEDY.

Mr. A. K. MACLEAN:

1. Is R. H. Kennedy, M.L.A., employed for recruiting purposes in Colchester county, N.S.?
2. If so, when was he appointed, and is he still acting as a recruiting officer? If not, when was he relieved?
3. What is his remuneration and the total amount paid to him to date on account of salary and expenses?

Sir ROBERT BORDEN: R. H. Kennedy, M.L.A., was appointed recruiting officer for Colchester county on October 10, 1915, with pay at the rate of $3 per day till January 31, 1916. Since January 31, he has been a voluntary recruiting officer for that county, and is still acting. Amount of salary paid, October 10, to January 31, $183. Travelling expenses, same period, $161.50. Total amount paid to date, $344.50.

ESTATES OF DECEASED SOLDIERS.

On the Orders of the Day:

Sir ROBERT BORDEN: I beg to lay upon the Table a memorandum which has been prepared by the Estates Branch of the Department of Militia and Defence with regard to the distribution of the estates of soldiers who have lost their lives while on active service with the Canadian Expeditionary Forces. It was thought that this information might be of use, and without reading it perhaps I may be permitted to have it incorporated in Hansard. The memorandum is as follows:

On the death of a soldier whilst on active service in France the casualty is notified, by cable, to England, and then to Ottawa; his personal effects are collected, placed in a package, and forwarded to the Base. There they are checked and an inventory is sent with them to the office of the director of pay and records services (estates branch), London, England, where they are there again checked and rewrapped for distribution.

When there has been very heavy fighting there is little chance of collecting any effects, and in many cases if death has been caused by heavy shell fire there are unfortunately, neither effects nor remains; but in some cases the London office receives the personal effects of soldiers dying in territory occupied by the enemy.

If a man has left any personal effects in England before going to the front, these are collected and forwarded to the London office and the whole of his personal effects are thence forwarded to the estates branch, Ottawa, that is, if the beneficiary or next of kin resides in this country.

The deceased's pay account is closed as soon as his death is officially reported, and it is then known as his non-effective account. A lapse of four or five months is necessary before a non-effective account can be properly certified as correct, and in some cases six months. If the next of kin, or beneficiary resides in this country, the account is forwarded here for settlement.

The pay books are all forwarded to the London office, and if the same contain a will, it is extracted and placed on file for safe keeping and properly indexed.

When the non-effective account, personal and surplus effects reach the office of the Estates Branch, Ottawa, the legal domicile of the deceased is carefully gone into and in the case of an intestacy the military estate is distributed according to the law of the province or country of the deceased's domicile.

It is worthy of note that a minor (unmarried) cannot acquire a domicile of choice but has the same domicile as his father—that of origin.

A soldier, even if he is not of full age, may, under section 9 of the Wills Act, whilst on actual military service, dispose of his personal estate either by a holograph will, by letter, or by a verbal statement substantiated by witnesses. This section applies to all the provinces in Canada, with slight difference in Quebec. Section 849 of the Civil Code of Quebec provides that a soldier on military service may make a will which if valid in England as regards its form would likewise be valid in Quebec, though by section 835 a minor is incapable of bequeathing any part of his property by will. So, therefore, a soldier domiciled in Quebec, if a minor, is declared from making a valid will; but if of full age can dispose of his personal property without the necessity of the regular form.

All wills are carefully examined here, the domicile decided, and the intention of the testator is carried out as far as possible. A military will can only dispose of personal estate. Real estate is in no way affected unless there is a will duly executed and attested by witnesses according to the ordinary legal practice. This is a point which should be brought to the attention of the soldier when he is making his will, as sometimes it is impossible to carry out his full wishes after death.

The legatees named in the wills are all notified, a certified copy is forwarded to them, and an identification form is enclosed for completion and return to the office of the Estates Branch.

The officer in charge of the Estates Branch is fully empowered by an Order in Council, dated 28th March, 1916, promulgated under the authority of the Regimental Debts Act, 1893, and an order made by the Secretary of State for the Colonies, dated 3rd December, 1915, to decide all questions of domicile, of validity of wills, of law and of fact, and to distribute all military estates in the manner laid down by the different sections of this said Act. No appeal can be taken from this officer's decision.

All estates are distributed without delay as soon as the necessary papers reach the office of the Estates Branch; but it must be borne in mind that it is always from four to six months at the very earliest before an estate can be legally distributed.

Numerous cases are delayed by a will turning up at the last moment, but every care is taken that no wrongful distributions are made.

In the case of missing men, thirty weeks must elapse before the necessary steps can be taken to presume death (a presumption entertained for official purposes only) and the estates of such missing men cannot be distributed until four months after such presumption of death has been made.

H. Spencer-Relph,
Captain,
Officer i/c Estates for A. & P.M.G.

[Sir Robert Borden.]

TRADE COMMISSION.

On the Orders of the Day:

Mr. LEMIEUX: Can the hon. Minister of Trade and Commerce give the House the names of the gentlemen who have been selected as members of the commission to promote better trade relations with the allied countries?

Sir GEORGE FOSTER: I have not the names in full, but I can give my hon. friend the surname of each member: Mr. André Dupuis, Vice-President of the Chinic Hardware Company of Quebec; Mr. Waddleworth, of Montreal, President of the Chemical Society, and a member of the Board of Trade of Montreal; Mr. Pauze, President last year of the Chambre de Commerce, Montreal; Mr. J. M. Wood of the Gordon McKay Company, Toronto; Mr. Geo. W. Allan, of Winnipeg; and, from the Maritime Provinces, Mr. Frank Hathaway, of St. John; six in all. The commission will be provided with a secretary and the secretary who has been selected is Mr. Roy Campbell, a graduate of the University of Toronto, who has lately been secretary or assistant secretary of the Manufacturers' Association in the city of Montreal.

Mr. PUGSLEY: Is the Mr. Frank Hathaway referred to a former member of the Provincial Legislature of New Brunswick? The reason I ask is that I saw in a newspaper that it was his son who had been appointed.

Mr. HAZEN: Mr. Frank Hathaway has no son.

Sir GEORGE FOSTER: It is Mr. Frank Hathaway, the gentleman to whom my hon. friend referred.

ENLISTMENTS IN NORTHERN ALBERTA.

On the Orders of the Day:

Mr. OLIVER: In discussing the militia Estimates, I asked the Prime Minister if he would have prepared a detailed statement of enlistments in Northern Alberta. He was good enough to promise that that would be done. I hope it will be available before the close of the session.

Sir ROBERT BORDEN: I understood that the deputy minister had taken a note of everything the hon. member had asked for. However, I do not think he has furnished me with that statement, but I will call his attention to it.

PLANS OF NEW PARLIAMENT BUILDINGS.

On the Orders of the Day:

Mr. ROGERS: I would once again invite the attention of the members of the House to the matter of the reconstruction of the Parliament Buildings. The committee who have the matter in charge have reached the point of considering the advisability of providing an additional story. We have the plan of the old building, as it stood, and of the building proposed to be constructed. They are in Room 1, and the committee will be very pleased, I am sure, if hon. members would take the trouble some time during the afternoon to visit that room, where they will meet one of the architects who will explain everything they might desire to know in respect to the proposal which is approved by the committee.

Sir WILFRID LAURIER: Have the committee come to any decision upon that?

Mr. ROGERS: We have considered it very fully, and I think the committee are fairly unanimous in favour of the additional story.

Mr. PUGSLEY: As a member of the committee, perhaps it would not be out of place for me to say that the committee had before them the strong recommendation of Mr. Pearson, one of the architects—the other architect not being present at the time—in favour of an additional story. My own view was that, as we trust that the reconstructed building will last for a very long time, and as the number of members of Parliament is likely to increase very considerably in the not distant future, it would be desirable, if possible, to give considerably increased accommodation, providing that it would not interfere with the architectural aspect of the building. I think the view of the committee was quite unanimous that that result could be obtained, and that with the additional story the building would be a very handsome one indeed, and one of which the country would be proud.

Sir WILFRID LAURIER: Have the architects expressed any preference in the matter?

Mr. ROGERS: The architects have, I think, a preference for the additional story.

TEMISCOUATA COUNTY PUBLIC WORKS.

On the Orders of the Day:

Mr. MARCIL: I am requested to ask the hon. Minister of Public Works (Mr. Rogers) whether he has authorized the sending of a despatch down to anybody at Ile Verte, Temiscouata county, stating that an expenditure of $1,000 would be made on wharves out of a sum voted for that purpose by this House. It is reported that the message was sent by the hon. Postmaster General (Mr. Casgrain):

Mr. ROGERS: I have no knowledge of the message referred to.

LOBSTER FISHERY IN NORTHUMBERLAND STRAITS.

On the Orders of the Day:

Mr. MACDONALD: I am advised that the lobster fishing in Northumberland straits only opened on May 11, or six days ago. I would ask the hon. Minister of Marine and Fisheries (Mr. Hazen) to take that fact into consideration, and to regard favourably an application which will be made to him by the fishermen and packers for an extension in order to make up the time during which they would have been entitled to fish had the season opened at the regular period.

Mr. HAZEN: It frequently happens that, although the fishing season is somewhat late in opening, the catch of lobsters is so good during the balance of the season that the average catch is as good as it is in other years when the fishing season opens earlier. The whole situation will be very carefully watched, and instructions have been given to that effect already by the officials of the department. The facts will be considered when the time comes for a decision as to whether the season shall be extended or not. As an ordinary proposition, it is not desirable to extend the season for catching lobsters. The seasons have been fixed by commissions that have been appointed to deal with the lobster question and the question of fishing generally, and when the last commission made its report it was evident that unless something was done in some way to restrict the amount of fishing that was being carried on, there would be great danger of the lobster fishery of the country being destroyed. It was in consequence of this that provision was made for a shortened season.

Last year, in many parts of the country, the lobster fishery was very satisfactory, and larger lobsters were caught than had been caught in past years, showing that the shortening of the season in the past three years had some effect in that direction. I understand, however, that there are some occasions when, in consequence of ice conditions and other weather conditions, the fishermen are unable to fish for many days during the season. We have had cases of that sort, and upon investigation we have found that, while they had several slack days in which they could not follow their calling as they have done in some previous seasons, yet the catch has been quite as large, and that being the case there was no necessity for the extension of the lobster season. All these are facts which have to be taken into consideration. I will instruct my officails very carefully to watch the conditions that exist along the Northumberland straits this year, and give such consideration as is possible, having regard to the preservation and perpetuation of the lobster-fishing industry.

Mr. MACDONALD: With the consent of the House, I wish merely to point out that the report of the commission having fixed the season in each particular year, if the season has been shortened this year on account of ice conditions from April 26 to May 11, it causes an absolute loss to the men who depend on that industry for their living.

WAR SUPPLIES—CLOTHING.

On the Orders of the Day:

Mr. MACDONALD: At the request of my hon. friend from Richmond (Mr. Kyte), I would like to ask the Chairman of the War Purchasing Commission whether he is going to give us, before the House rises, the return which was ordered by the House six weeks ago in regard to clothing which was purchased by the commission.

Mr. KEMP: A few days ago the hon. member for Richmond (Mr. Kyte) brought this question up. We had a personal conversation in regard to the matter, and he intimated that he would see if he could not modify the order in such a way that it would be possible to comply more readily with it. I expected to hear from the hon. member before this, but I have not heard anything from him since.

Mr. MACDONALD: He is in Nova Scotia.

NEW MILLS FISH POND.

On the Orders of the Day:

Mr. MARCIL: I am requested by a citizen living along the Restigouche river, who takes an interest in salmon fishing, to ask the Minister of Marine and Fisheries the following question:

I understand that the fish pond at New Mills has been destroyed this spring and that they will not be able to use it this summer. Would you find out from the department where this fish pond is to be placed?

Mr. HAZEN: I have no information to the effect that the fish pond at New Mills has been destroyed. I understood that some injury had been done to it by ice, or something of that sort, but I did not know that it had been destroyed to such an extent that it could not be put into condition to be used this year. Suggestions have been made by people living along the Restigouche river as to the proper place for a fish pond. One suggestion favoured the establishment of a fish pond on the Quebec side of the river, somewhere, I fancy, in the constituency of my hon. friend (Mr. Marcil). But, as far as I am aware at the present moment, I think the pond at New Mills will be available for use during the present season.

ENLISTMENT IN GASPE AND BONAVENTURE.

On the Orders of the Day:

Mr. MARCIL: I would like to ask the hon. Acting Minister of Militia and Defence another question, and I do so at the request of a citizen in Bonaventure, who takes great interest in recruiting. Recruiting is now being done in Gaspé and Bonaventure for Quebec regiments, and I would like to know if there is any way by which we could ascertain how many men from Gaspé and Bonaventure have been enlisted in New Brunswick regiments. At the outbreak of hostilities a large number enlisted in those regiments. Now they are enlisting in Quebec regiments, and we would like to know how many of our people have enlisted in New Brunswick regiments. Is there any way by which that information could be obtained?

Mr. KEMP: My hon. friend has directed his question to me. My right hon. friend the Prime Minister is the Acting Minister of Militia and Defence at the present moment and I shall refer the matter to

him and ask him if it is possible to furnish my hon. friend with the information he asks.

THE CIVIL SERVICE.

PAY OF LOWER GRADE EMPLOYEES.

On the motion for Committee of Supply:

Mr. PROULX: Mr. Speaker, before you leave the Chair, I would like to bring to the attention of the Government a matter of public importance. At the end of the session of 1914 my hon. friend the Minister of Finance (Sir Thomas White) said that at the next session it was his intention to introduce a Bill to increase the salaries of civil servants of the lower grades; but nothing has been done in that direction yet. Shortly afterwards war broke out, and since then it has been the alleged policy of the Government not to give any salary increases during the war. This matter was brought before the House a few weeks ago by the hon. member for Two Mountains (Mr. Ethier), and I was in hopes that something would be done this session, but I see nothing in the Estimates providing for an increase in the salaries of the lower grade employees. Some of these men—packers, messengers, sorters and so on—receive only from $500 to $600 a year, and they cannot get more than $800, which is the maximum for that class. Many of these men are married and have families to support, and the Government must know that it is impossible in these days, when the cost of living is so high, for a man to bring up his family properly on $500 or $600 a year. I would suggest that the Government grant a flat increase of $100, but not go beyond the maximum of $800. When this matter was up a few weeks ago the Minister of Public Works said that there would be no salary increases during the war. I have made inquiries, and find that in the Interior Department alone, in 1915, ten persons received salary increases ranging from $150 to $500. The annual increase in the lower grades is ordinarily $50 a year, but in the higher grades it depends upon the recommendation of the head of the department. The Minister of Public Works suggested that these employees who were dissatisfied should enlist and go to the front. I might tell him that seventy-five of these employees are between the ages of forty-five and seventy-seven, so it is impossible for them to go. Another suggestion the minister made was that they might go west and take up land. Many of these men have had no experience on the land and have no capital, and, of course, it would be impracticable for them to take up farming. I therefore consider that the minister has not given any sufficient explanation why the Government is not doing anything for the employees of this class. I trust that the Government will do something even now, before the session closes, and that next session, or perhaps after the war, the Minister of Finance will provide for this class permanently.

Sir THOMAS WHITE: It is not the intention of the Government to bring down any further proposals dealing with the salaries of civil servants. I do not think it advisable that that question should be dealt with in piecemeal fashion; it should be dealt with as a whole or not at all. The Government is of the opinion that it is not advisable to consider increasing the salaries of the Civil Service during the war.

Mr. PROULX: In 1908 there was a flat increase of $100 or $150 to the Civil Service.

Motion agreed to.

SUPPLY.

The House in Committee of Supply, Mr. Rhodes in the Chair.

Civil Government—House of Commons—to appoint M. Crossley Sherwood to second division, subdivision A, as assistant clerk of Orders and Records of the House of Commons, $1,600.

Mr. TURRIFF: I am glad the Minister of Finance and the Minister of Trade and Commerce are in their seats, because when I point out the facts of this case, I think they will see that it is only reasonable that this item should be withdrawn. What are the facts? Mr. Sherwood may be a very worthy young man; I do not happen to know him. He has been a sessional clerk for the last two years, and the late Speaker, Hon. Dr. Sproule, said that if he wanted to get into the service of one of the departments he would have to pass the usual examination. Mr. Sherwood has not passed that examination, and is therefore ineligible for this position. Some time ago I asked for the correspondence to be brought down in connection with this matter, and I find that on the 17th of January, 1916, the Clerk of the House wrote to the Civil Service Commission asking to have Mr. Sherwood appointed. This was done at the request of His Honour the Speaker. That letter was answered by the Civil Service Commission on January 26, as follows:

Dear Sir,—The commissioners have had under consideration the statement of the clerk of the House of Commons that the Speaker of the House is desirous of filling the position of assistant clerk of the Orders and Records Office, a position in subdivision B of the second division. It was stated that the Speaker wishes to have Mr. H. C. Sherwood appointed to the position, provided he can comply with the requirements of the Civil Service Act.

The commissioners have no objection whatever to issuing a certificate for Mr. Sherwood under those conditions. It has been pointed out to him, however, that in order to qualify for appointment he would require to become a successful candidate at one of the regular examinations for Grade B of the second division. He went up for the second division examination in May, 1915, but failed to qualify as a successful candidate. He did not apply for examination in November last. Mr. Sherwood is, therefore, not qualified under the Civil Service Act to receive the necessary certificate from the Civil Service Commission.

It may be added for the information of the Speaker and the Clerk of the House of Commons that as the result of the last semi-annual examination in November, 1915, there was a considerable number of fully qualified candidates for Grade B of the second division, from whom selection may be made for the position in question. The Civil Service Commissioners would be pleased to have either the Speaker or the clerk make a selection from the list of successful candidates. In any case the person selected will be subject to the usual six months' probation in order that his capacity to meet the requirements of the position may be passed upon by those responsible for the work to be performed.

Yours truly,

(Sgd.) Wm. Foran.
Secretary.

Thos. B. Flint, Esq.,
Clerk of the House of Commons,
Ottawa.

I want the Minister of Finance to bear in mind that this is a position in Subdivision B of the Second Division. It is obvious from the letter I have read that this young man is not entitled to the position; he has failed to qualify, and the Civil Service Commission will therefore not recommend him. Under the Act they cannot give Mr. Sherwood the necessary certificate. What is the use of holding examinations if it is not for the purpose of selecting men for positions such as this? Even if Mr. Sherwood had passed the examination he would be entitled to a salary of only $800 a year.

But in face of the fact that he cannot qualify, the Government proposes, by means of this vote in the Estimates, to put him in at a salary of $1,600 a year over the heads of men who have qualified, and who would only be entitled to receive $800 if they were appointed to this place. That is manifestly unfair. This matter has been brought to my attention by half a dozen civil servants outside the House of Commons altogether and connected with other departments, who point out the unfairness of putting a man over the heads of others who have been fifteen or sixteen years in the service, and who have passed their examinations, and giving him a bigger salary than they could receive if appointed to a similar position. I am satisfied that when this matter went through council my hon. friend the Minister of Finance and my hon. friend the Minister of Trade and Commerce did not understand the facts of the case, or they would never have consented to this item being put in the Estimates, nor would the Prime Minister have consented.

In addition to that, the young man has a very prosperous business on Sparks street. Walk along Sparks street between Elgin and Metcalfe, and at No. 65 you will find a handsome store owned by this young man—a good and prosperous business. He says, and makes no bones about it, that he would never have accepted this position if it meant giving up his business. Naturally he thinks that if he can get $1,600 a year on the side, there is no reason why he should not take it. I do not blame the young man so very much. Yet the fact remains that other men who have passed the examinations would gladly take the position at $800.

Mr. REID: What is this business?

Mr. TURRIFF: Photographic supplies—at 65 Sparks street.

Mr. REID: Is not that his father's store?

Mr. TURRIFF: No. Look up the telephone directory and you will find the name there—H. Crossley Sherwood, photographic supplies. It is this young man's own business. Now, why should he be put in at double the regular salary when he has not even passed the examination? The only reason I can see for it—and I judge from what I know of how appointments are made—is that my hon. friend the member for Ottawa desires to force this through. And why? Because this young man's father is secretary of the Conservative Association in the city of Ottawa. That secretaryship is an honourable position, and I have no possible objection to any man holding it; but I do not think that the Minister of Finance, who has been preaching economy to us during this session, should allow anything like this to take place at a time when we should be practising economy. Surely

the members on the Treasury benches did not understand the position when they put this item in the Estimates. This is a small matter, if you like: it means the paying of $1,600 a year instead of $800 a year. But it means also the pitchforking of a man into a position over the heads of others who have been in the service for many years. If there is one thing more than another that is affecting the Civil Service and making trouble and dissatisfaction, it is such acts as this. The young man writes a letter to the Speaker, and you would think he was the Government by the way he points out how his appointment should be made. He shows that he cannot be appointed under section 21, and goes on to say that the way that is here proposed is the only way in which he can be appointed.

Mr. SINCLAIR: Why could he not be appointed under section 21?

Sir WILFRID LAURIER: That provides for the appointment of experts.

Mr. TURRIFF: This young man is not an expert, as I shall show, unless he can qualify as an expert in showing how he can be appointed—in that respect I think he has some claim to be counted an expert. Here is a letter written by the Clerk of the House to the Speaker. I will not read the whole of it:

You, in January last, requested me to take the proper steps to have Mr. Sherwood appointed and I at once communicated with the Civil Service Commission and the commission replied. This correspondence is annexed.

It shows that the grade of the office being subdivision B of the second division, the certificate of qualification of that grade under the Act must be issued to Mr. Sherwood before he can be appointed, and the commissioners have no objection to giving him the certificate if he can comply with the law on that subject.

I have carefully read Mr. Sherwood's letter to you, and would point out that Mr. Sherwood cannot be appointed under section 21 as the office does not require a person of any profession or technical or any peculiar qualification, and I could not report to that effect, as it is, like most all the clerkships of the House, a mere ordinary clerkship, requiring no profession or technical qualifications whatever.

This being so, Mr. Sherwood cannot be appointed under section 21.

The reference to Mr. Glazier's apointment as clerk of the Agricultural Committee—

This was referred to by Mr. Sherwood in his letter to the Speaker.

—is not in point. Mr. Glazier was appointed in February, 1911, as a practical and experienced agriculturalist at the special request of the committee which insisted that the clerk of the committee should be a farmer of experience, and Mr. Glazier went before the Civil Service Commission and got his certificate as such.

That is, he passed his examination.

I have reported to the Speaker of the day that "the knowledge and ability requisite for a proper discharge of the duties of his position are, from an agricultural standpoint, partly professional, partly technical, and otherwise peculiar, and that Mr. Glazier has special qualifications for such work, having been himself a practical agriculturalist and having had a large experience in parliamentary work." The certificate of the Civil Service Commission was to the same effect.

If Mr. Sherwood is to be appointed under the Civil Service Act there is no way that I know of by which we can omit obtaining the Civil Service certificate of qualification for the grade referred to. I have not spoken to the Parliamentary Counsel on this subject, but I would respectfully suggest to your honour that his opinion be requested on the legal aspects of the case and that the correspondence be placed in his hands for consideration before further action. I have no objection whatever to Mr. Sherwood's appointment, but it is important that when it is made it should be unobjectionable from a legal standpoint. Any other course would lead to many difficulties.

I am, Sir,
Your obedient servant,
T. B. Flint,
Clerk of the House of Commons.

That was on February 14 last. On February 16 His Honour the Speaker, not paying much attention to that recommendation, wrote to Dr. Flint as follows:

Dr. T. B. Flint,
Clerk, House of Commons,
Ottawa, Ont.
Re H. C. Sherwood.

Dear Sir,—I am in receipt of your letter of the 14th instant, and thank you for your information.

Will you kindly communicate with the Finance Minister and tell him that I desire to give the position of assistant clerk in the Orders and Records Office of the House to Mr. H. C. Sherwood at the salary of $1,600 per annum, and that I would like to have direct legislation naming Mr. Sherwood in the appropriation Bill for that office.

Will you please see Mr. King, Chief Clerk of Votes and Proceedings and Records, about this matter and ask him also to take the proper steps to settle this matter, as above mentioned, and oblige.

Yours sincerely,
Albert Sevigny.

When that recommendation left the office of the chief clerk to come before the House it stated that the application was for a clerkship in subdivision B of the second division; but when it appears before the House it is for a clerkship in subdivision A of the second division. I do not know where the mistake occurred, if it was a mistake; but anyway, these are the facts of the case. It is evident that an effort was made to railroad this young man in at double

salary, even though he had not passed an examination. I think that no more glaring case ever occurred. Then the Clerk of the House, in accordance with the letter from the Speaker, wrote to the Minister of Finance as follows:

Dear Sir Thomas:

I am directed by His Honour the Speaker to communicate with you as to his wishes in the matter of an assistant clerk in the Orders and Records Office of the House of Commons.

He desires to appoint Mr. H. C. Sherwood of Ottawa to that office at a salary of $1,600 per annum, and he desires to have this done by direct appointment in the Appropriation Act. The grade of the office is B of the second division.

All these appointments, I understand, have to be recommended by a certain board. The Chairman of the Civil Service Commission, the Speaker of the House, and Sir George Perley were the members of the last board. You will find in the Civil Service list of 1915, page 273, the following: "Vacancy, 2-B, assistant clerk in Votes and Proceedings office." The board recommended that this position be filled, and I understand that as there was no vacancy in the staff of the House of Commons in subdivision A of the second division it was not competent for this House to put a clerk in subdivision A without a resolution or Order in Council. In order to do this, as I have said, it would be necessary to pass a resolution or Order in Council. In the face of these facts, simply because the young man in question has some political pull, everything is overridden, dissatisfaction is caused throughout the Civil Service and the country is out $800 a year that it should not be out, especially under the present conditions and in view of the economy urged by the Minister of Finance. I think that the Minister of Finance and the Minister of Trade and Commerce, in view of the facts that I have stated, ought to see that this item is withdrawn. I depend a little more on the Minister of Trade and Commerce and the Minister of Finance than upon some of their colleagues in a matter of this kind. One thing I cannot understand is how the change came to be made from subdivision B to subdivision A. I point out further to the Minister of Finance that as we are going to prorogue to-morrow there will be six or eight months during which this clerk will have absolutely nothing to do. Under these circumstances, in the interests of the Civil Service and of the country generally, I ask that this item be withdrawn.

[Mr. Turriff.]

Mr. ROGERS: In answer to my hon. friend, who seems very much disturbed about the item now before the committee, at this late hour in the session it is not my purpose to discuss the treatment meted out by the present Government to its employees in the city of Ottawa and elsewhere. I can only say in a most respectful manner that the statement of my hon. friend regarding this case simply adds insult to injury so far as it concerned the treatment that we have extended to employees of the late Administration. The hon. gentleman has dwelt at some length upon Mr. Sherwood securing a salary of $1,600 a year in the position which he is now filling. The position is a very important one, requiring special knowledge of the work. We have had the services of Mr. Sherwood temporarily in this office for four years, and he has performed his duties with entire satisfaction to those associated with him in the office, and, I think, to the House. As to the assertion of my hon. friend respecting political pull, Mr. Sherwood did not require to rest his case upon that consideration, because he was so eminently qualified to fill the position that the Speaker was justified in making the recommendation to the Minister of Finance that this amount be placed in the Estimates. The best justification that I can give the committee for the action of the Speaker in making the recommendation that he did is a letter written by Mr. Colwell, who is head of the branch, and who has had Mr. Sherwood associated with him during the past four years. It was as I understand it, on this strong recommendation of Mr. Colwell that the Speaker made the recommendations which we are now considering.

Mr. TURRIFF: I see no record of it in the papers brought down.

Mr. ROGERS: I have not seen the papers brought down; but I have here a letter from Mr. Charles S. Colwell.

Mr. TURRIFF: It was kept off the file.

Mr ROGERS: It is addressed to the Speaker, dated 6th of March, and reads as follows:

Hon. Albert Sévigny,
Speaker, House of Commons,
Ottawa.

Dear Mr. Speaker,—In compliance with your recent request for some particulars regarding the official qualifications of Mr. H. Crossley Sherwood, who is seeking a permanent appointment in the House of Commons service, I have

much pleasure in submitting for your approval the following information.

Mr. Sherwood has been, by my request, with the approval of the Speaker and Clerk of the House, temporary assistant in the office of Routine and Records during the past three sessions of Parliament; and his services have always been eminently satisfactory. By my request also, Mr. Sherwood was recalled for the present session, or until some one else equally acceptable was permanently appointed as assistant.

During all the time Mr. Sherwood has been associated with me as temporary assistant, I have invariably found him to be an efficient, energetic and courteous clerk,—always willing to learn. In my opinion Mr. Sherwood is a young man of unusual talents and rather superior ability and diplomacy, who is likely to make a success of anything he undertakes and applies himself diligently to, either in official or commercial life.

If Mr. Sherwood should be favoured with the permanent appointment of assistant clerk of the Routine and Records Branch, and if he decides to remain in the service, I have no doubt whatever that, with his natural ability and experience, he would be, within a few years at most, sufficiently familiar with the numerous duties of the office to eventually become a creditable successor to me, when in course of time my retirement from official life may be necessary.

The duties pertaining to the Routine and Records Branch are somewhat complicated as also decidedly peculiar and technical in their character. This fact is not always properly recognized, understood or appreciated as it should be by the "powers" and others who ought to be interested. And no man, young or old, no matter how clever he might be, can possibly become capable of properly handling the affairs of this office, without outside assistance, in less than several years of actual experience and close application. The Routine and Records Branch is one of the most important links in an exceedingly important chain of the House of Commons Service. This conclusion is reached as a result of my fifteen years personal experience in that branch of the service, and can be easily verified.

Trusting, Mr. Speaker, that what I have herein written you may be of some assistance to Mr. Sherwood in his efforts to obtain a permanent place in the House of Commons service.

I have the honour to be,

Obediently yours,

Ch. F. Colwell,

Chief Clerk of Routine and Records.

Sir THOMAS WHITE: That is from his superior?

Mr. ROGERS: That is the gentleman who was at that time the head of the department, who has since been temporarily dismissed; and so far as I am concerned I sincerely hope that he will be permanently dismissed.

Mr. PROULX: Was it for writing this letter?

Mr. ROGERS: No, it was for writing the speech delivered by my hon. friend from Assiniboia (Mr. Turriff).

Mr. TURRIFF: That is not true.

Mr. ROGERS: Because I have here a memorandum prepared by Mr. Colwell giving the history and the story of the letter that was written by Mr. Sherwood, and recounting all the facts here. It seems that my hon. friend was a very regular attendant at the office of Mr. Colwell during the session, where he was able to have the assistance of Mr. Colwell in placing certain orders on the Order Paper from time to time. I have no desire to go into the details. Mr. Colwell has admitted to the Speaker that he wrote certain memoranda which I shall not trouble the House by reading, because it would be only a retailing of affairs that I would regard as unworthy of the House. Therefore, all I have to say is that we have evidently been fortunate, according to Mr. Col-

3 p.m. well, in having secured the services of a man so eminently qualified to fill the position; and if it is filled as well as Mr. Colwell says it will be, by Mr. Sherwood. then $1,600 a year is a very reasonable salary. I may say that when Mr. Colwell was appointed a few years ago he started in at once, in the same position, under the reign of hon. gentlemen opposite, with a salary of $1,800.

Mr. TURRIFF: As chief of the office.

Mr. ROGERS: As chief of the office, but he started in at that, and he was not as well qualified and prepared at that time as apparently Mr. Sherwood is to-day, after his four years' experience. I do not think my hon. friend has much to complain of or very much reason to take the time of the House in bringing up this trivial matter, because I am sure the record of the present administration stands high—at least, it ought to stand high in the estimation of hon. gentlemen opposite—for the manner in which we have respected their appointments both in Ottawa and elsewhere. That is a condition of affairs which I do not approve of myself, and I frankly acknowledge it here in this House. If we are going to have, in return for that record, insult added to injury, then I for one will endeavour, with whatever little energy I may possess, to correct this condition of affairs by cleaning out a lot of the staff we have in Ottawa and elsewhere who devote 90 per cent of their time, as Mr. Colwell has been doing, to political affairs rather than to the duties of the offices to which they are appointed. I think, therefore,

that hon. gentlemen opposite have no grounds for complaint.

Mr. TURRIFF: I think it is only fair to Mr. Colwell for me to say that this matter was brought to my attention by half a dozen civil servants outside of the House of Commons altogether, and I went to Mr. Colwell for information, just as I would go to any other chief clerk or deputy minister when I wanted information in connection with anything concerning their departments. It is absolutely unfair to Mr. Colwell if he has been suspended and is going to be dismissed, as my hon. friend suggests, if he can bring it about, on the ground that he gave me information, because he gave me no information that I did not go to him and ask him for.

Sir WILFRID LAURIER: The very natural observations which have been presented to the House by the hon. member for Assiniboia have been met, I am sorry to say, by the Minister of Public Works in a manner which I hope he will, on reflection, regret. It is useless to wrangle over this matter. When he insinuates that the late Government did not deal with civil service appointments as they should have done, I retaliate by calling his attention to the manner in which dismissals have been made by the thousands in certain departments. I will make an offer to my hon. friend in this matter. We have a law which regulates the Civil Service. I ask nothing more than that law shall be observed, for the Civil Service or against the Civil Service, as the case may be. Is he prepared to do anything else? Does he not think that is a reasonable offer? Does he not now think that appointments should be made according to the law which we have laid down in reference to this matter? This appointment is an exception to the law which has been laid down for the regulation of the Civil Service. It was made on the application of Mr. Speaker, and I call the attention of the House to the manner in which it was made. This is a letter addressed by the Speaker to Dr. Flint, the Clerk of this House. It has been read, but I shall read it again, because the whole germ of the difficulty is to be found in it:

re H. C. Sherwood.

Dear Sir,—I am in receipt of your letter of the 14th instant, and thank you for your information.

Will you kindly communicate with the Finance Minister and tell him that I desire to give the position of assistant clerk in the Orders and Records Office of the House to Mr. H. C. Sherwood at the salary of $1,600 per annum, and that I would like to have direct legislation naming Mr. Sherwood in the Appropriation Bill for that office.

Why is it that the Speaker asks for an appointment of that kind and asks to have a special appropriation of Parliament?

Why is it? Simply because the gentleman in question is not qualified under the Civil Service Act. No one questions his ability. Mr. Colwell gave him a good certificate, and upon that certificate it was quite within the province of the Speaker to recommend his appointment. But there is a condition attached to such appointments; it is that the man who is recommended for the position should qualify for that position as the law requires. The law was passed in 1908, with the concurrence of both parties in the House, to put an end, as was suggested, and, as I believe, rightly suggested, to appointments being made matters of patronage. That law was passed, and it requires that every man, before being appointed to an office, must pass an examination. Is that a fair regulation, or is it not? Is it not quite proper that an applicant for a position in the Civil Service should, by passing an examination, show that he is competent to serve the country? Mr. Colwell wrote this letter on the 26th March. I do not know the circumstances. Mr. Colwell evidently wanted to be agreeable to the Speaker. The Speaker wanted this young man appointed. I do not inquire what were the circumstances. It is stated that he is the son of an official of the Conservative Association in Ottawa. That does not matter, if he was entitled to be selected. They say that he is intelligent. My hon. friend says that he is also in business. Evidently he has given more attention to his business than to his studies, because he knew that to get the appointment he must pass the Civil Service examination, and he took that examination and failed. If he wanted to be appointed, having failed once—that he is intelligent is admitted—he should have applied himself to the studies which would have qualified him to pass when he tried again. It was open to him to go to his books and acquire the necessary knowledge, and apply again to the Civil Service Commission. But to-day, after this young man has failed in his examination, after it is recorded by the Civil Service Commission that they cannot give him the certificate which the Speaker must have in order to appoint him, he very

coolly asks that Parliament should appoint him, thus setting aside the law altogether. I ask, can anything be said in reply to the observations which have been made by my hon. friend from Assiniboia, that this is not the way to improve the Civil Service? Is it to be believed by anybody that a man can disregard the law relating to the Civil Service and that, for some reason or another, he can override that law and obtain his appointment from the party in office? Does any one believe that this would be conducive to the dignity of the Civil Service, or to the good administration of the country? My hon. friend the Minister of Trade and Commerce during this session, spoke very forcibly upon the evils of patronage. Nothing could have been more charming than what he said on that occasion. This is an example of the evils of patronage. Can my hon. friend justify this appointment which is in direct disregard of the law? I think my hon. friend will not rise in his seat in defence of such a course.

Sir THOMAS WHITE: Will the right hon. gentleman say whether or not, from 1908 till 1911, officials were named in the Estimates under his Administration, just as this man is named in these Estimates?

Sir WILFRID LAURIER: Mr. Speaker—

Sir THOMAS WHITE: I ask the question. My right hon. friend says the law is being violated because we are naming an official in the Estimates. I ask my hon. friend whether or not, from 1908 till 1911, a similar course was not pursued in regard to any official or officials.

Sir WILFRID LAURIER: I can not say at this moment.

Sir THOMAS WHITE: I can.

Sir WILFRID LAURIER: Let us assume that several appointments were made in that manner. Certain officials in the customs and other officials have to be appointed in this way; but here we have a man who failed to pass his examination and who is trying to pass over the rules of the Civil Service Act. I do not think that such an appointment was made by the late Government. I may be in error; perhaps my hon. friend has something in his mind, but I do not think so. I will put another question to my hon. friend: does he approve of this Government doing wrong because we did wrong when we were in office? Is that what he told the people of this country in 1911? Where would it lead to if a party coming into office disregarded its pledges and said, "Our opponents did the same?" I repeat that I do not believe —I do not know, because matters which took place between 1908 and 1911 are far away from my memory—I do not think the late Government was guilty of making an appointment under the circumstances in which this appointment has been made. If my hon. friend has a case in mind I shall be glad to hear of it. Even if we had done so—and I do not believe it—would that be a precedent or a justification for what the Government is doing to-day? Let us follow the Act or abolish it. Everybody knows that we must have a good Civil Service if we want to have the affairs of this country properly administered. Nobody will deny that. My hon. friend will be the first to admit that. We have an Act; let us follow it. There are circumstances in which some justification might be made for disregarding the law. I am not so positive, or so dogmatic, as to say that there is to be no exception, but the exceptions must be justified, and in this case there is no justification at all. It is an abuse of the rules of the Civil Service, an abuse of the law passed by this Parliament. When it is considered that this man attempted to qualify himself and failed, and that he will not attempt to qualify himself, I say that there is no possible justification for such an appointment.

Sir THOMAS WHITE: My right hon. friend, like the rest of us, occasionally loses his sense of proportion, and this is one of the occasions. He suggests that the Government is doing something wrong in inserting the name of this man in the Estimates. The Government is doing nothing wrong. The Civil Service Act is in full force and effect, and it would be impossible to appoint this man to the position to which he has been appointed without the sanction and authority of Parliament. If Parliament approves of this Estimate the Civil Service Act is to that extent repealed with the consent of Parliament, so that I entirely dissent from the view put forward that anything wrong is being done. Here we have before us an exceptional case, the case of a man well qualified for the position, but unable, presumably, to pass the Civil Service examination. What has been done in this case has been done in fifty, in a hundred cases since 1908, namely, where a man is qualified for the position and is not able to

pass the Civil Service examination, an exception is occasionally made and the man's name is inserted in the Estimates. I may say that I do not know this man.

Sir WILFRID LAURIER: Neither do I.

Sir THOMAS WHITE: My hon. friend produced some correspondence which had taken place between the Speaker and myself. The Speaker passes on the name of the party whom he thinks suitable for the position. The presumption is that the Speaker has given the matter consideration, or that the Committee on Internal Economy has given it consideration. It comes before the Minister of Finance, who inserts the item in the Estimates, and it is considered by the Treasury Board and by the Council. The question asked is whether the man is qualified, whether he has had experience in the office. According to the letter read by the hon. Minister of Public Works from the chief of the department, this man is eminently qualified for the position. The salary is $1,600 per annum.

From the way that the hon. member for Assiniboia brought the matter forward one would imagine that this was a question of international importance instead of being that of the appointment of a $1,600 clerk to a position requiring the skill and experience which apparently it does. The Civil Service Act, while serving a useful purpose in regard to the great majority of public appointments, is inflexible to a degree. Cases arise continually, and it is perfectly clear to any one who has common sense, in which the service is debarred from taking on men well qualified for the positions because they are not able to pass an academic examination. One case was brought to my attention the other day in which a first class messenger—and they are difficult to get to-day—was debarred from taking a position in the Civil Service because he could not do long division. I doubt very much whether my right hon. friend the leader of the Opposition could pass the examination at which this would-be messenger failed. He could not be a messenger because he was not able to divide 5,685 by 334.

Mr. LEMIEUX: Could he do subtraction?

Sir THOMAS WHITE: I think better than my hon. friend can; my hon. friend could not pass that examination. I doubt very much if any of these hon. gentlemen could qualify for the 2nd division. I doubt if any hon. gentleman opposite, even my right hon. friend the leader of the Opposition, could to-morrow pass the matriculation examination. They could do it once, but they could not do it to-day. I am just instancing this case because it illustrates how the Civil Service is suffering by a strict adherence to the letter of the law. I agree that the Act is a useful one and that its provisions generally should be observed, but to regard in the letter all the provisions of the Civil Service Act and to make no exceptions, such as that which is being made to-day, would, instead of being to the advantage of the Civil Service, prove a detriment to it. It would prevent the Civil Service from obtaining desirable appointees who might not be able to pass the examination although eminently qualified for the positions in question. A business man seeking a clerk for his office does not submit the applicant to a test such as that to which he is subjected by the Civil Service Commissioners. He inquires generally as to the education he has had, and then he estimates whether he is qualified for the position. While I am saying this in regard to exceptions to the Civil Service Act, I desire to say that I regard the Civil Service Act as a highly desirable enactment, but that no exceptions should ever be made to it would appear to me to be against the public interest rather than advantageous, and I am quite certain, although I have no particular cases in mind, that I could find fifty cases from 1908 to 1911 in which parties who could not pass the Civil Service Act were named in the Estimates of my right hon. friend. My right hon. friend to-day has put forth the common law view, the fixed view of the letter of the statutes. I know that he, like myself, is an admirer of Abraham Lincoln. I would commend to him an extract from a letter which Abraham Lincoln once wrote to one of his officers in the Northern army on behalf of a junior officer whom he desired to be promoted. In that letter he said something like this to the commanding officer: I want you, if you can, to consider favourably the promotion of So-and-So to such a rank irrespective of whether or not he can tell the shade of Julius Caesar's hair. What he had in mind was that he wanted him to be appointed to this office on his merits, but he did not want him to be necessarily debarred from the position by reason of his not being able to pass an examination as to the military history of the Romans.

Sir GEORGE FOSTER: It is said that Caesar wore a wig.

Sir WILFRID LAURIER: He did not have much hair to show.

Mr. PROULX: There is one phase of this question that has not been touched upon by the hon. Minister of Finance (Sir Thomas White) or the hon. Minister of Public Works (Mr. Rogers). My hon. friend from Assiniboia (Mr. Turriff) said that under the Civil Service law this appointment came under 2B, where the minimum salary would be $800 and the maximum $1,600. It was changed to 2A. I do not know at whose direction this was done, but he is getting $800 more than he should have received. When we are told that poor messengers getting only $500 cannot get any increase to enable them to support their families, notwithstanding that they are employed not only during the session, but the whole year round, a man with a business in town is appointed at a salary of $1,600 instead of $800. While an appointment of this kind is made poor men are starving with salaries of $500 and $600.

Mr. TURRIFF: The hon. Minister of Public Works and the hon. Minister of Finance have laid stress on the point that this was a particular appointment needing skill and ability. Let me read again to my hon. friends the statement of the Clerk of the House of Commons, who knows what the office requires. Here is what Dr. Flint says to the Speaker on February 16:

> The office does not require a person of professional or technical or any peculiar qualifications, at it is, like most all the clerkships of the House, a mere ordinary clerkship, requiring no professional or technical qualifications whatever.

I have nothing to add to that.

Mr. SPEAKER: I might be permitted to say a few words on this. It is true that Mr. Sherwood was recommended to me and to the Government for the position. Mr. Sherwood is represented to the committee as being a young man; one would believe that he was a young man of about 15 or 16 years of age.

Mr. DOUGLAS: That is a boy.

Mr. SPEAKER: Mr. Sherwood is a married man with a family living in Ottawa, and the recommendations which I received on his behalf could not have been better. I asked for some information from the Clerk of the House as to the appointment, and it is true that in his letter of the 14th February the Clerk of the House advised me that Mr. Sherwood would have to get a certificate from the Civil Service Commission. That point was mentioned by the hon. member for Assiniboia (Mr. Turriff); but in that letter from the Clerk of the House there is also another point which the hon. gentleman omitted to mention. Here is what the Clerk of the House said:

> If Mr. Sherwood is to be appointed under the Civil Service Act there is no way that I know of by which he can omit obtaining the Civil Service certificate of qualification for the grade referred.
>
> The only other method is the one suggested by him in his letter, viz., a direct legislative Act naming him in the appropriation Bill for the office and fixing his grade and salary after its insertion in the Estimates. This is a matter solely in the jurisdiction of the Government.

This course has been followed in a great many cases not only this session but in other sessions, and it is the course which I have adopted on this occasion. Mr. Sherwood has had a very good certificate given him by his chief, Mr. Colwell, who has described him as a very good man and perfectly qualified. At the opening of the present session, when Mr. Colwell was ill, Mr. Sherwood was in charge of the office and everything went well. Mr. Sherwood has been attending to his duties during the session, and he is doing well; he could not do better, according to his chief, and he desires appointment to the office.

Would it be possible for Mr. Sherwood, who is attending to his duties here morning, afternoon and night, to prepare for the Civil Service examination? I submit that consideration to the House, and I think that every hon. gentleman who wants to be fair will admit that it would not be easy for Mr. Sherwood to prepare for an examination. The Speaker is responsible for the good administration of this department. Here is a man who is perfectly qualified. His functions are very, very important, as can be judged by the letter of Mr. Colwell, which was read this afternoon. If there is anything wrong in connection with the work of this office any member can come to this House and place the blame upon the Speaker. I ask the House if I was not well advised in asking the Government to put this amount in the Supplementary Estimates?

Mr. PROULX: Why was the grade changed from subdivision B of the second division, to subdivision A of the second division?

Mr. SPEAKER: Because it is a very important position; and I think that this is

a matter that can be decided by the members of this House just as well as by the Civil Service Commission. I think that, for a married man who has a family, the salary of $1,600 a year, especially in these hard times, is a very reasonable salary for any position.

Mr. PROULX: Is it not a fact that he works only during the session?

Mr. SPEAKER: When this legislation has passed he will be a permanent officer, and will have to come here every day.

Mr. PUGSLEY: We have had no answer to the question why, when the Clerk of the House stated that the only position to which Mr. Sherwood could be appointed was subdivision B of the second division, and when Mr. Speaker had that request transmitted to the Government, the classification was changed by somebody from subdivision B to subdivision A. The result is that, whereas if Mr. Sherwood had been appointed to subdivision B, his salary could not rise above $1,600 without his passing later on an examination and qualifying for the higher division, his classification has been changed in these Estimates from subdivision B to subdivision A, so that he begins immediately at $1,600 and his salary will increase automatically up to $2,100. That has not been explained to the committee and I think it ought to be. It appears from the statement of the Clerk of the House that Mr. Sherwood is being appointed to a class in which there is no vacancy, a class which is already filled; and is being appointed to a higher position than Mr. Speaker apparently recommended he should be appointed to. I do not think this is a mere trivial matter, as the Minister of Finance has said, because there is a principle involved. The principle is whether we should have any regard whatever to the Civil Service Act or whether whenever anybody who has some influential friends is desirous of an appointment to a position under the Government, it will only be necessary for him to go to those who have influence and his name will be put in the Estimates and he will be appointed, irrespective of the requirements of the statute. It does seem to me that, to take a young man who is unable to pass the Civil Service examinations necessary to qualify him for the discharge of the duties of a routine clerk, and put him at once in this high division, starting at a salary of $1,600, in a higher class than that which many employees of the Government who have been for years in the Civil Service have been able to attain, is excedingly unfair. We know that there are hundreds of clerks working all the year round, not merely during the four months that Parliament is in session, who are receiving less than $900 per year; men who are better qualified than Mr. Sherwood, but who cannot rise above the $900 because they have not been able to pass the qualifying examination. It is very discouraging to them that a young man, not able to fulfil the requirements of the Civil Service Act, should be pitchforked into a higher position at a salary $700 more than they are able to attain, and with the certainty that his salary will increase automatically until it reaches $2,100. That is very discouraging to the hundreds of employees in the Civil Service who have passed examinations and who cannot rise beyond $900 a year without passing further examination and being recommended by their chiefs for promotion. I do not think my hon. friend the Minister of Public Works ought to threaten dire vengeance upon employees of the Civil Service simply because there is some little criticism of the attempt which the Government is making to override the Civil Service Act. This young man has simply been employed as a temporary clerk, and has not been able to pass the Civil Service examination; yet he is to receive immediately a salary of $1,600 a year for four months work, because, say what you like, that is all he will have to do. He is employed for four months in the year, and during the rest of the time he will be able to attend to the ordinary mercantile business he is carrying on in Ottawa. He will be receiving a salary about equal, considering the time he is employed during the year, to that which a deputy minister receives. The salary of a deputy minister, as provided by the Civil Service Act, is only $5,000 a year; and he has to work the whole year round and to carry very great responsibilities. Yet this young man, as I have said, who has been only a short time in the service, for this short period of from three months to four months, about one-quarter of the time that a deputy minister has to work, is to receive a salary practically equal to that which a deputy minister receives. I do not think it is at all encouraging to the Civil Service. I cannot see why my hon. friend the Minister of Trade and Commerce (Sir George Foster) has approved of this. That hon. gentleman, during this session, made

remarks with regard to subsidies which aroused very warm approval throughout the country; but I am very much afraid that, in respect of patronage as in respect of many other matters, my hon. friend the Minister of Trade and Commerce reserves his eloquent remarks and his strong arguments for the ears of the private members of this House and for the ears of the public, instead of for the benefit of his colleagues in Council, because we find that continually the Government is bringing down to this House measures of which, if we are to judge the Minister of Trade and Commerce from the speeches he makes here, he cannot be expected to approve. I should like to hear whether the Minister of Trade and Commerce approves of this departure from the terms of the Civil Service Act, approves of this yielding to the demands of those having influence with the Government, and approves of the making of this appointment in defiance of the provisions of the Civil Service Act. It is surely a step towards yielding to those pernicious views with regard to patronage which are of the very worst description.

Mr. SINCLAIR: I wish to call attention to an answer which I received in this House during this session in regard to the frequent overriding of the Civil Service Act. It strikes me as an extraordinary circumstance. The hon. gentleman will remember that when the Act was passed in 1908 it was drawn to the attention of the House that there would be cases in which experts were required for the service of the Government —eminent engineers, for example, coming from outside of Canada and entering the Government's service for a time. It was clear that it would not be practicable to submit such men to examination. Clause 21 was put in the Act to enable the Government, by going through a certain process, to have men of that class appointed. I asked the question during the present session, how many men had been appointed in the different departments of the Government under section 21 since this Administration came into power, and the answer I received was that these appointments numbered 220. That is an alarming number. Of course, 220 experts were not appointed. A large number of appointments were made of men who were more than thirty-five years of age and could not be appointed under the terms of the Civil Service Act. But dozens and scores of these people were appointed in violation of the Act, by calling them "experts." I would ask the Minister of Finance to look into this matter. If we are to have a Civil Service Act that is to be of any use it will not do to ignore its provisions in this way.

Sir THOMAS WHITE: If the hon. gentleman would like to know to what extent the Civil Service Act has been ignored, I would recommend him to look over the Estimates under the late Liberal Administration from 1908, when the Civil Service Act came into force, until 1911, when this Government assumed office. He will find cases on all fours with this case—

Mr. SINCLAIR: I am not talking about this case.

Sir THOMAS WHITE: I have not had an opportunity of looking into the matter carefully, but I would call attention, for instance, to item 319 of the Supplementary Estimates for the fiscal year ending March 31, 1909. I find the following:

> To provide for the appointment of F. X. Saucier to a second-class clerkship at $1,200, from 21st July, 1908.

Mr. REID: In what department?

Sir THOMAS WHITE: In the House of Commons. Why was it necessary to name Mr. Saucier? I do not know Mr. Saucier; I assume that he was a man qualified for the position. But the right hon. leader of the Opposition—I am sorry he is not in his place at the moment—was doing wrong in this matter according to the views of his supporters. Here is a case of an appointment made under authority of the Estimates, just as in the case of Mr. Sherwood who is named in this Estimate. Then I would call the attention to the Supplementary Estimates for the fiscal year ending 31st March, 1911.

Mr. LEMIEUX: If Mr. Saucier had not passed the examination, the item would have read "Notwithstanding anything in the Civil Service Act."

Sir THOMAS WHITE: Not at all. Let the hon. gentleman look at the Estimate now under consideration. He will not find there the words "Notwithstanding anything in the Civil Service Act." That is implied.

Mr. PUGSLEY: I think the hon. gentleman will find that the late Administration, upon the advice of the Minister of Justice of that day, inserted these words. If they

did not appear, it was assumed that the party had passed the examination.

Sir THOMAS WHITE: The Minister of Justice, I have no doubt, advised it, but they did not carry it out. The Government named officials whom they desired to have appointed—no doubt for good and sufficient reasons—who were not able to take the Civil Service examinations. The Supplementary Estimates for the fiscal year ending 31st March, 1911, contains this estimate:

To provide for Miss Kate M. Fraser in third division, subdivision B, $500.

Why permit a special item referring to Kate? Why not name the position to which Kate was to be appointed instead of naming Kate in the Estimates? Then there is another item No. 399:

To provide for the appointment of the following officers, now in the Outside Service in Victoria, B.C., to the Inside Service at Ottawa at the following salaries; from April 1, 1910:
W. B. McLaughlin, second division, subdivision A.. .. .. $2,000
H. G. Dalby, third division, subdivision A. 1,000

Why was it necessary to name these gentlemen? It would not have been necessary at all unless the Civil Service Act stood in the way of their being given appointments which they are given by this estimate.

Mr. PUGSLEY: The Civil Service Act distinctly provides for bringing in officials from the outside service.

Sir THOMAS WHITE: If the Civil Service Act is complied with. But in this case the Civil Service Act was not complied with, and that is the reason it was necessary to name them in the Estimates. I am not finding fault with the naming of these officers in the Estimates. What I say is that what was done in these cases is what is done in this present case, and what has been done in scores of cases since the Civil Service Act came into effect.

Mr. LEMIEUX: The hon. gentleman is wrong. If he will take the Estimates under the late Government, he will find that wherever there is a case—and it was very exceptional—when the terms of the Civil Service Act were not complied with, the words "notwithstanding anything in the Civil Service Act" were inserted.

Sir THOMAS WHITE: I have no doubt that by reason of a certain predilection or bias that he has in favour of the late Administration, the hon. gentleman is confident in his present view. But I want to tell him he is wrong. Appointments were made continually by means of the Estimates where the provisions of the Civil Service Act—for some good reason, no doubt—could not be complied with. There is no doubt about it; it has been done repeatedly.

Mr. LEMIEUX: The hon. gentleman is absolutely wrong.

Sir THOMAS WHITE: Well, I think we shall have to agree to disagree, because I know I am absolutely right. Now, my hon. friend from Assiniboia (Mr. Turriff) states that instead of $800 a year a salary of $1,600 a year has been fixed, and calls attention to the fact that the Clerk of the House stated that the grade of the position is B of the second division. Now, my hon. friend will observe that in the same paragraph of the letter in which that statement appears, the Clerk stated that the Speaker desires to appoint Mr. Sherwood to this office at a salary of $1,600, and desires to have this done by direct appointment under the Appropriation Act. The Clerk of the House made a mistake as to the grade, because the subdivision of the second division which carries a salary of $1,600 is A and not B. The Estimate, as it is now before the committee, is correct—it refers to second division, subdivision A.

Mr. PUGSLEY: If Mr. Sherwood had been appointed in subdivision B he could have had a salary of $1,600. But, placing him in subdivision A of the second division means that his salary increased automatically to $2,100.

Mr. SINCLAIR: The Minister of Finance has not dealt with my point at all. I suppose the reason is that he could not blame the same fault on the late Government.

Sir THOMAS WHITE: What was the hon. gentleman's point?

Mr. SINCLAIR: It was that over 200 so-called experts have been appointed under section 21 of the Act, since 1911. You see by the facts of the appointments that many of the men appointed under section 21, as "experts," were unable to get in legally, because they were too old.

They could not pass their examinations; they were over age. In these cases section 21 was resorted to in violation of the law, because that section was intended to apply only to cases in which experts were required by the Government. In those cases exam-

inations were dispensed with because the men to be appointed were eminent professors, eminent engineers, or persons well qualified to do the work required by the Government.

Sir GEORGE FOSTER: There may be great experts and there may be lesser experts, but whether the man in question be a greater expert or a lesser expert he cannot be appointed unless he gets a certificate from the Civil Service Commission that as regards that office he is to be looked upon as an expert.

Mr. SINCLAIR: There has to be action on the part of the Government as well.

Sir GEORGE FOSTER: The Civil Service Board has to give a certificate that as regards the office in question he has expert qualifications which enable him to be appointed.

Mr. SINCLAIR: It may be that the board is subservient to the Government; I do not know about that.

Sir GEORGE FOSTER: I would not say that. I think that the Civil Service Board has been, on the whole, a fair board; I do not think it is prejudiced in favour of the Government. As a matter of fact, if I have one complaint more frequently put to me than another it is that the Civil Service Board is rather against the Government than in favour of it.

Mr. PUGSLEY: They were against the late Government.

Mr. GRAHAM: They are against all Governments.

Sir GEORGE FOSTER: That is not a bad attitude.

Mr. SINCLAIR: I remember when the Civil Service Act was passed in 1908 that my hon. friend gave very valuable assistance. After due deliberation he agreed that 35 years of age should be the maximum age of persons appointed to positions in the Inside Service. But if he examines the appointments made by his Administration he will find that in scores of cases section 21 has been resorted to in order to get men into the service who are much over 35 years of age. I think the fixing of that maximum age was a good provision, because if men were appointed over that age they would be pensioned later and these pensions would increase the cost of the service. I do not mention this for any political purpose or in order unnecessarily to condemn the Government. I simply want my hon. friend the Minister of Trade and Commerce to look into it and if that abuse is going on to use his influence to prevent its recurrence during the coming year.

Mr. GRAHAM: It is a fact that from the very outset of the operations of the Civil Service Act those having charge of appointments in the House of Commons staff have objected to recognizing it. The ground was taken, if I remember correctly, that while the Act was all right for the rest of the staff, they did not care to have it applied to the staff of the House of Commons. I think Mr. Sherwood is a good man; anything that I have entrusted to his care has been well performed. The situation is this: the Speaker of the House of Commons has recommended Mr. Sherwood in violation of the Civil Service Act. Had the Civil Service Act been complied with, some other appointment would have been made—we may as well face the facts. However, Parliament approves of this course and the Speaker is upheld. I hope that sometime when I have a recommendation to make, Parliament will be soft-hearted as it has been in the present instance, and approve of some appointments that I may suggest in violation of the Civil Service Act.

Sir GEORGE FOSTER: It will all depend on its merits.

Mr. GRAHAM: It will depend more largely, I think, on the man who makes the recommendation. Speaking of the Civil Service Commission, last year the acting Minister of Railways lead off in lambasting not only the law but the men who were enforcing it. I think that other members of the Government have become infected with the same microbe. The Minister of Trade and Commerce will remember the scene in the House of Commons and what took place before and after. As a matter of fact, some members of the Government did not like the Civil Service Commission, and for that reason they did not intend to obey the law. They ought to have the courage to repeal the law if they do not intend to obey it or even approximately to obey it. The Act does impose some hardships. This case is but a mild one compared with one that I could mention. When I was minister I could not get a messenger because he could not pass the Civil Service examination. He was a trustworthy young man; I think he could have done long division, although I am not so sure about short division. Any-

way he would have made a good messenger, but the Civil Service Commission absolutely declined to grant a certificate, and I went no further. There is another case. A young man who had not quite reached the age required of those presenting themselves for examination had enlisted and he wanted to write on his Civil Service examination before going into camp. He did not want his certificate until he became of proper age. The Civil Service Commission, however, would not let him write. Legally, of course, they were right, because the law says that an applicant must have reached the age of eighteen years. It struck me that this was a hardship, particularly as conditions exist now that never existed before. If the young man had been going on a pleasure trip or had been going into business, I could easily see the absolute necessity of complying with the law. But he has enlisted, and because he lacks a few months or weeks of the age required, he was not allowed to write. I am not sure that the Act should not be amended or made a little flexible under exceptional conditions such as that.

Mr. ROGERS: How would it do to make the commissioners a little flexible?

Mr. GRAHAM: They have no power to go beyond the Act unless they violate the law. They are not like the Government, because the Government can introduce an Act in violation of the law, but the commissioners cannot. Many universities have in cases of this kind given their students the advantage of unusual privileges in the matter of taking examinations. For instance, in connection with the Boer war I know several cases where young men who were taking part in the war were allowed to take their examinations under special conditions. I would suggest to the Government that they either repeal the Civil Service Act or sail a little closer to it. If the staff of the House of Commons is not to come under it—and it does not come under it very much—the law had better be amended to provide that that staff shall not come under it. In the next place, I think that some amendment ought to be made to give the commissioners power to act in such cases as I have mentioned. It is absolutely ridiculous that we should have a law on the statute-book by which a young man who wants to pass the Civil Service examination before he goes to fight for his country is not allowed to do so, simply because he is a few weeks under age, even though he does not want a certificate until he does attain the proper age.

Mr. TURRIFF: There is a matter which I desire to bring to the attention of the Government in connection with the shipping of goods from any part of Canada to British Columbia via the Panama canal. This matter has been brought to the attention of the Government on several occasions by the people of British Columbia, more particularly by the business interests of Vancouver, Prince Rupert and Victoria. All that these people are asking for is that the Minister of Customs appoint a customs officer to assist in the bonding of goods going from any part of Canada to British Columbia via the Panama canal. It appears that, under the present regulations, it is almost impossible to handle the trade unless an officer of the Canadian customs is located at New York for the purpose of seeing to the transhipping of the goods to the steamers that will go via the canal. This matter was first taken up by the business interests of British Columbia, and I think I could not do better than to read to the minister the resolutions passed there. On the 4th of November, 1914, at a meeting held at Vancouver of men representing financial interests and investments in British Columbia, on behalf of principals and clients in Canada, Great Britain, France and other countries, a resolution to the following effect was passed:

Appreciating the facts that—

The development of the resources of this province, especially the coast cities,

The exportation of products of this and adjoining provinces,

The importation of raw materials for factories now established and to be established here,

As well as the importation of goods necessary to be brought here for consumption, are largely dependent upon our water facilities;

Realizing the great possibilities for the people of this province, to be derived as a result of the Panama canal route,

Realizing that these possibilities can only be converted into realities by placing ourselves in a position to utilize the water facilities offered,

Are resolved that we put forth the most vigorous effort to encourage shipping to come to this coast, particularly at this time when the Dominion Government are nearing completion of the dock and grain elevator at this port, and the prospect so bright for moving the prairie grain through the coast ports in the near future,

We further resolve that we heartily endorse the request of the British Columbia Boards of Trade to the Government at Ottawa, for the appointment of a customs officer at New York, firmly believing that the opening of this new channel of trade will bring to British Columbia unlimited benefits.

This is a question affecting not British Columbia alone, but more particularly Ontario, Quebec and the Maritime Provinces. The people at the coast ask that they should be allowed to import their goods by the cheapest possible route, and if that is not done the loss will fall not upon the people of British Columbia alone, but on the manufacturers of the eastern provinces as well. We must all recognize that Canada is a great stretch of country extending from the Atlantic to the Pacific and that many classes of goods manufactured in Ontario and Quebec could not possibly be shipped to Vancouver by rail. Canned goods of all descriptions and heavy hardware and many other classes of goods cannot possibly be shipped by rail to British Columbia. Unless they can be taken by water from eastern Canada to Vancouver, their use on the Pacific coast of Canada will be impossible.

4 p.m. The result is a direct loss to the people of the eastern provinces, as well as to the people of British Columbia. Not only is this route via the Panama canal necessary for the goods that are manufactured here and consumed in British Columbia, but it will put our merchants in the coast cities in a very much better position than they are now for exporting to China and Japan and many other foreign countries. At all events, the people of British Columbia, the merchants, manufacturers and financial institutions, and everybody interested in that province, are demanding the right to bring in goods by water freight instead of by railway freight, especially classes of goods that cannot stand the 3,000 mile railway haul. I ask the Minister of Customs on what ground the people of this part of Canada should dictate to the people of British Columbia as to how they shall bring in their goods. If the people of British Columbia can get goods in by water freight at from 30 per cent to 50 per cent less than they can get them in over the railways, why should we interfere with their doing that? I wonder what the people of Ontario and the Prairie Provinces would think if this Government undertook to say that they would not be allowed to use water carriage on the Great Lakes because we have built railroads that can carry this freight and we have got to keep the traffic in the hands of the railroads because we have put a lot of money into their construction. The people of the East and of the prairies would not stand that for one moment. It would be too absurd. Well, it is not more absurd than the action of my hon. friend the Minister of Customs who, for the last couple of years, has deliberately and emphatically denied to the merchants of British Columbia the privilege of bringing in their freight by water instead of by land. All that is necessary to accomplish this is to have a Canadian customs officer in the port of New York; and one of the steamship companies, British company at that, which intends to put on a line of steamers from New York to Vancouver via the Panama canal, has undertaken to pay the salary of a Canadian customs officer; so that this plan will not cost this Government anything, while it will accomplish a great deal to help out the merchants at the coast, and also the manufacturers in the eastern provinces. My friend the Minister of Customs has stated in the correspondence that has taken place on this matter that a country cannot send custotms officials into foreign countries. But let me point out to my hon. friend the minister that a great deal of transcontinental trade carried over the Canadian Pacific railway has been American through freight, and in order to enable the Canadian Pacific railway to carry the freight, the American Customs Department have placed American customs officers in Vancouver for the purpose of facilitating the transfer of that freight. What has been the result? The Canadian railways have reaped a rich harvest by carrying American goods over the Canadian Pacific Railway line, and that has been brought about by the Americans doing exactly what the people of Vancouver and Victoria are asking the Minister of Customs to do, and what he has so far persistently refused to do. To my mind the reasons that have been given in the past have not been sufficient reasons. At first it was stated that the railways were against this proposition. Well, I am not sure that the railways are against the proposition. The railroads are not going to lose anything in connection with this proposition for the simple reason that they are not now getting the freight. Take a carload of canned goods put up in the province of Ontario. You have to ship that cargo of goods over one of the transcontinental railways and land it in Vancouver. One man attempts to bring in a carload of goods in that way. Another man buys a carload of the same class of goods manufactured in the United States, ships them to New York, gets a rate by the Panama canal so low in com-

parison with the railway rate that he is enabled to pay the duty on the American manufactured goods and to land them in the city of Vancouver at a very considerably lower rate than it would take him to land the same class of goods manufactured in the province of Ontario. My hon. friend, the Minister of Customs, in his endeavour to prevent goods manufactured in Canada from going by water to the people of Vancouver, is cutting the Canadian manufacturer out of his own market, and he is not benefiting the railways in any degree, because the railways cannot get the freight as the people of Vancouver can buy American goods cheaper.

Mr. PUGSLEY: Do I understand my hon. friend to say that the Minister of Customs would refuse to allow goods which are being shipped say from Montreal, Quebec, or St. John or Halifax to Vancouver, to pass through American waters to the Panama canal to be landed in Vancouver or Victoria?

Mr. TURRIFF: Yes. What I understand from the correspondence I have here and from the statements made by members of the Boards of Trade of Vancouver and other cities on the coast is that the Minister of Customs has given instructions to the collectors of customs in these coast cities that they are not to take entry of any goods shipped in that way, that is, goods which have passed over a short haul on American railroads to get to New York.

Mr. PUGSLEY: When they are on the vessel all the way does the Minister refuse?

Mr. REID: There is no objection to that.

Mr. PUGSLEY: I would be surprised if there was.

Mr. REID: In the case of a vessel loaded at St. John and going through the Panama canal and discharging its cargo at Vancouver—there is no objection.

Mr. TURRIFF: There is no objection to that; the objection is that there is no service either from Montreal or from Quebec in summer or from St. John or from Halifax in winter to Vancouver by the Panama canal, and that in order to take advantage of the water rate by the Panama canal you have to ship goods at the present time from New York. It is pointed out that it is very much further from Montreal or from St. John to Vancouver, taking the summer and winter ports, the difference being some 1,400 miles, than from New York. It is very much further from the manufacturing establishments of Ontario and Quebec to the Canadian ports by rail in many cases than it is to New York. In the meantime we have no steamship company that will undertake to make a trip from Montreal or St. John, summer and winter, to Vancouver by the Panama canal. Therefore, there is no method by which the Canadian manufacturer can ship his goods by water from a Canadian port at the present time. No doubt he may be able to do so later, but in the meantime if he wants to take advantage of the low water rate by the Panama route he has to ship from New York. The difficulty, they claim, is that you cannot send your goods to New York and have them transhipped in bond without a Canadian customs officer being there to look after the shipping. All they ask is that a Canadian customs officer be placed there. The Maple Leaf Steamship Company of Great Britain has offered to pay the salary of a customs official, if appointed, in order to get this trade. They would make regular sailings; the merchants of British Columbia would get their goods cheaper. and they would get them from Canadian manufacturers, whereas in the meantime they have to buy American made goods in order to get them cheaper. At one time it was thought that the Canadian Manufacturers' Association was opposed to this proposition, but I notice from the correspondence that that body is not against it. The railway companies are not opposed to it and, so far as I can find out, the only person that stands in the way of the wishes of the people of British Columbia is the hon. the Minister of Customs. It is a little thing to ask for. The carrying of freight does not belong to the railway companies any more than to the steamship companies. We have spent, and are spending tens of millions of dollars in providing dockage and harbour facilities in those British Columbia cities, while at the same time my hon. friend is refusing to allow the people of British Columbia to take advantage of a condition that would be to the betterment of British Columbia and the people of eastern Canada.

I desire to give the British Columbia view of the matter in order to make the situation clear, and I shall quote from an article published in The Sun of Vancouver, B.C., on Wednesday, February 9, 1916:

Many moons have waxed and waned since this port was offered a service by the Maple Leaf line from New York to Vancouver, sailing out-

bound from here to the United Kingdom and France. It was just such a service as Vancouver was absolutely in need of. It would have provided cheap water transportation for Canadian goods to be used in this province, besides furnishing tonnage for our exports.

As a condition of securing this valuable service it was necessary that the ships of the line should call at New York rather than at Halifax or any Canadian port. The distance from Vancouver to Halifax is 1,450 miles greater than from Vancouver to New York.

Mr. PUGSLEY: Who says that?

Mr. TURRIFF: The Vancouver Sun.

Mr. PUGSLEY: It is all wrong.

Mr. TURRIFF: I have a statement here from the Board of Trade of Vancouver, dated September 10, 1915, and this is what it states:

Vancouver to New York, 6,000 miles; Vancouver to Montreal, 7,450 miles.

So that the difference from Vancouver to Montreal is 1,450 miles. The other statement apparently is not correct.

Mr. PUGSLEY: We can do all the business from St. John and Halifax.

Mr. REID: That is what I say.

Mr. TURRIFF: That is what those people say, but there are no steamers sailing, and there is nothing in view. Meantime the people of British Columbia suffer, and they ask this Government to appoint an official. All they have to do is to name an official and it will not cost them a dollar. Let him be stationed in New York in the meantime and the moment you have a service, from St. John in the winter and Montreal in the summer, to Vancouver, then withdraw your man from there and see that the freight goes from Canadian ports to Canadian ports. But, in the meantime, are the manufacturers of Ontario to be punished because there are no facilities to ship by water either from Montreal or St. John to Vancouver? That is the position. I am not asking, when you are able to ship from Montreal or St. John that you should then help trade to go by way of New York, but in the meantime, if you cannot get a service from St. John or Montreal to Vancouver, why not take advantage of the water route? It is not as if you were hurting anybody. You are not hurting the railways, which do not get the freight in any case, and you are giving an advantage to the people of British Columbia, who, irrespective of every other consideration, are a unit in demanding that they should have the privilege of taking advantage of the cheap freight rates. Is there any argument, any reason, against it? The reasons which have been put up by the Government are two in number. The first is that it would throw the trade largely into the hands of another country. While it is true that we are not getting this trade, we would have this trade carried by a British line of steamers, not an American line. But rather than allow a line of British steamers to carry this trade, apparently, my hon. friend the Minister of Customs absolutely refuses to pay the slightest heed to the demands of his own friends from British Columbia that he should simply name a customs officer, have him sent down there and allow these goods to be carried by a British steamship company. That is all the people of British Columbia are asking.

Mr. PUGSLEY: Why not have them come to St. John? We would treat them well.

Mr. TURRIFF: My hon. friend from St. John is quite right in asking: why not have them come to St. John? But my hon. friend should address that inquiry not to me, as I have no power in this matter, but to my hon. friend the Minister of Customs.

Mr. PUGSLEY: The Panama canal has only been opened recently.

Mr. TURRIFF: The Panama canal has only been opened recently but the people of British Columbia are waiting to take advantage of that canal and they have been prohibited from doing so by the Minister of Customs. The second reason that the Government offer is the following:

We have spent immense sums of money in building railways across Canada and something is due to the Government and these railway facilities.

All I can say is that the railway companies are not going to get any of this trade simply because the class of freight I am speaking of is not able to stand a 3,000 mile rail haul. The consumers and exporters in Vancouver can buy American made goods, pay the duty on them and land them in Vancouver at a considerably cheaper rate than they can buy Canadian goods and ship them over the railways without paying any duty whatever. As long as that condition continues, you will have a dissatisfaction in British Columbia that cannot be avoided, and you will still have a widening of a certain amount of feeling that exists between the East and the West which the legislation of this Government, and more par-

ticularly this particular item, is hardening every month of the year and every year as the years go round. It may have bad effects in the future. If the people of British Columbia become accustomed to trading across the line, it is always more or less difficult to get the trade back again, even although you may have a steamship line from Montreal or St. John to Vancouver. Would it not be better that in the meantime Canadian manufactured goods should go to the customers of the manufacturers in British Columbia via the Panama canal on British ships, even if they had to be shipped a couple of hundred miles on American railways to get them into New York in order to take advantage of the British line that sails from New York to Vancouver? There is the proposition. Would it not be better to encourage Canadian manufacturers by having their goods carried to the people of British Columbia, even if the steamers do call at New York instead of Montreal or St. John in the meantime, or until we can make the necessary arrangements to have a line of steamships from St. John to Vancouver? Now, I want to continue this article from the Sun:

> The distance from Vancouver to Halifax is 1,450 miles greater than from Vancouver to New York.

That should be that the distance from Vancouver to Montreal is 1,450 miles greater than from Vancouver to New York.

> 1. To the eastern Canadian manufacturers—By their thus being able to ship their products "in bond" to British Columbia—thence to Russia, Japan, China, New Zealand and Australia—at the minimum rates, in competition with the manufactured goods from Europe or the United States.
>
> 2. To the manufacturers and producers of British Columbia, as it will provide lowest cost of transportation "inwards" for raw materials, as well as lowest rates for export of products "outwards."
>
> 3. To the consumers of British Columbia, and to those of western Canada up by rail through British Columbia, in getting a fairer ratio of prices for all commodities.
>
> 4. To the ports of Vancouver, Victoria, New Westminster and Prince Rupert, by encouraging shipping, especially from Britain, to call at New York for Canadian goods for British Columbia, the Orient, and vice versa.
>
> The only thing which prevents us from profiting by the offer of the Maple Leaf Line is a letter from the Minister of Customs to the Customs Department at this port prohibiting the admission of Canadian goods arriving by sea if they have passed by the short haul over United States rails to such ports as Boston and New York.

You see, if that is a correct statement, the Minister of Customs is prohibiting the entry of such goods into the ports of British Columbia.

> It is not necessary to amend a statute or repeal an order in council. It has never been pretended that the action of the Minister of Customs was dictated by the Government as a matter of policy. Beyond their apparent reluctance to order a withdrawal of the letter, there is nothing to show that British Columbia's unfortunate position is due to anything but the personal act of the Hon. J. D. Reid, dictated by the manufacturers of Ontario or eastern railway interests, and both these interests, we submit, have acted on a narrow and mistaken view as to the results which would follow from allowing British Columbia to enjoy the use of the great advantages supplied by nature.

From the correspondence that I have received I believe that neither the railways nor the Manufacturers' Association are particularly opposed to this.

Mr. NESBITT: That man is off about the manufacturers being opposed to it because they want to get their goods in the cheapest way they can.

Mr. TURRIFF: The people of British Columbia could not understand the minister's action on any other ground. The article goes on:

> All that is necessary is the withdrawal of the Hon. Mr. Reid's letter, and the stationing of a Canadian customs officer at New York to ship and receive goods departing from or arriving for Canada. The bonding privilege is freely extended to American railways by Canada, and will be as easily extended to Canadian railways by the United States. The only reason given by the minister for not granting British Columbia's request—that no country in the world has appointed a customs officer in a foreign country—does not possess even the elements of truth. United States freight is handled through Vancouver in both directions under the supervision of the United States customs inspector, and the fish business of Prince Rupert is handled in the same way. If instead of advancing such a fatuous argument, Dr. Reid will candidly admit that he is assisting in the gentle act of throttling the trade and shipping of British Columbia at the dictation of certain eastern interests, we will respect his candour, however we may regard his judgment and statesmanship.

That is the position. Both the East and West are losing valuable trade, simply because the minister or the Government will not try to meet the wishes of the people of British Columbia. As we are trying to prorogue by to-morrow, I do not feel like taking up the time of the House in reading several letters on this subject that I have here from the Minister of Trade and Commerce and from manufacturers and others, all putting up strong arguments why British Columbia should not be throttled in this way. These are not statements of

newspaper editors, but the deliberate opinion of different boards of trade. Let me read a telegram from Vancouver, dated March 20, 1916:

By resolution of the Intermunicipal Industrial Committee of the lower mainland, consisting of delegates from the Municipal Councils of South Vancouver, Burnaby, Point Grey, North Vancouver city and city of Vancouver, am directed to advise you that this representative municipal committee is strongly of the opinion that this coast should receive its full share of benefit to be derived from opening of Panama canal, which can only be done by our ability to ship goods of Canadian manufacture through port New York until such time as a line be established from eastern Canadian ports. We therefore urge the immediate inauguration of requisite arrangement at port of New York.

(sgd.) M. McBEATH,
Mayor of city of Vancouver,
Chairman Com.

The Boards of Trade of Vancouver and Victoria have also taken action on the same line. The correspondence shows that the people of British Columbia are a unit on this matter; there is not a dissenting voice among them; they all claim that their trade is being throttled by the Government. They say they have seen the Prime Minister and the Minister of Trade and Commerce, who gave them a more or less sympathetic hearing, but that the difficulty lay with the Minister of Customs, and I now appeal to the minister whether he cannot do something to meet the wishes of the people of the coast cities. Why should he not take action that would result in the trade that belongs to Canada being kept in Canada for our own manufacturers and merchants, and in a British steamship line transporting the goods from New York to Vancouver? The only advantage American interests would get out of the whole transaction would be the short haul over the American railways, plus whatever they might get in trans-shipping the goods from cars in New York city to the steamship line. I trust the minister will be able to see his way clear to meeting the wishes of the people of Vancouver and other coast cities of British Columbia.

Hon. J. D. REID (Minister of Customs): This matter has been before me for some little time, as has been stated by the hon. member for Assiniboia, and it has given me great concern. I personally am anxious to do all I can for the province of British Columbia or any other part of the Dominion. I must say that my hon. friend treats this question very lightly. All we have to do, he says, is to put an officer in New York and the whole matter is settled. He tells us that American officers are at Vancouver for the purpose of seeing that American goods are sent through from there to the United States. That may be true. But let me explain the bonding privileges between Canada and the United States. The bonding privileges allow a car that is loaded with goods and sealed at Vancouver to be shipped through to its destination and the seal broken by the officers of the same country. In the case mentioned by my hon. friend, the fish caught in American waters up at Alaska, and brought down to Vancouver, have to be transported as quickly as possible. The American officers see the fish loaded on to the cars, the American seal is put on the car, and when the car gets to New York the seal is broken by an American officer; so the car is both sealed and unsealed by American officers. Similarly, if a manufacturer in eastern Canada wants to route through the United States some goods he is shipping to British Columbia or some place in the West, the car is sealed by a Canadian officer before it leaves Canada; it then passes through the United States, comes into Canada again, and the seal is broken at the car's destination by a Canadian officer. My hon. friend can see that there is therefore no possible chance of these goods being exchanged or getting out of the possession of Canadian Customs officers.

Mr. TURRIFF: My hon. friend would not suggest that it would be impossible for a Canadian Customs officer in New York to see the goods transferred from the car to the steamship without being changed.

Mr. REID: I was coming to that. The hon. member says that the Maple Leaf line is willing to pay for an officer, and he says that all these goods that are going to New York will be carried by a British line of steamers. The Maple Leaf Line is owned by the United States Steel Corporation, which is one of the largest corporations in the United States; and which, I believe from information I have received, is the one that is raising this agitation and is trying to prove to the people of British Columbia that they would gain great advantage if their line of steamers were to carry this freight from eastern Canada to British Columbia. They have also used the argument that the goods would always be carried on British steamers. Now, we cannot control the port of New York or any

other American port. Would the hon. member advise us to put a customs officer in New York to see to it that goods shipped to a British Columbia port or elsewhere should not be carried by American steamers leaving for those ports, but must be carried on British steamers? Would not that be likely to cause trouble with the United States? Our relations are most friendly, and for us to absolutely refuse to allow our products to go out of an American port on an American vessel would be very likely to raise trouble.

Mr. NESBITT: They do not want you to confine yourself to British boats. But would it be possible to establish a customs office and have the shipping that way?

Mr. REID: I was just coming to the question of putting it on another vessel. I have stated that the bonding privileges must always apply to a Canadian or British vessel, for you could not ship in a foreign vessel and keep control. We, as British subjects, would have no control over that vessel.

Mr. NESBITT: Then, you cannot ship in bond via New York to Vancouver?

Mr. REID: It is a very difficult matter to arrange. I have found so many difficulties in it that I have not been able to carry out the wishes of those who have raised this agitation. Another question has come up. This House has always been of the opinion that, if possible, we should carry our goods through our own country.

Mr. TURRIFF: We all agree with that.

Mr. REID: When some of the people from British Columbia were here to interview me on this matter, they led me to believe that the freights via New York were very much lower than they would be overland to Vancouver—that is, from such ports as Montreal, Toronto, or Hamilton.

Mr. NESBITT: By rail?

Mr. REID: Yes. They said that the rate from New York to Vancouver would be, I think, 50c. per 100 lb. I asked the Chairman of the Railway Commission to instruct his officials to make out a statement showing the rates by rail on a long list of articles commonly shipped between eastern Canada and Vancouver. Then I had the officials put alongside these rates the rates from such places as Montreal, Toronto, and Hamilton, to New York, with the 50c. per 100 lb. added as the freight to Vancouver. To these rates must be added insurance and wharfage charges, I find that there is very little difference between the charge on a full carload, shipped from eastern Canada by rail to Vancouver, and the same quantity shipped to New York and thence by vessel to Vancouver. Of course, all that I am saying now refers to rates under normal conditions, not rates charged under war conditions. The difference of these rates under normal conditions would be so small that I do not believe there is a member of the House who would ever discuss the matter if he had before him the statement which I have had prepared. I also had a statement made out showing the local freights on smaller lots such as a ton or 500 lb. Of course, on these small lots and with local rates, the rates were very much higher by rail, and it would pay better to send by New York. But I do not consider it quite fair to make comparison with the local rates in this way. As to goods going in carload lots, there is very little ground of complaint when the whole matter is looked into. Besides, the only points to which these lower rates via New York would apply, would be Victoria and Vancouver. In inland places, like Kamloops for instance, the same would not apply.

Mr. TURRIFF: But the minister will find that the rail rate from Montreal to Kamloops, which is a couple of hundred miles east of Vancouver, is very much higher than the rate to Vancouver.

Mr. REID: I was just about to say that. I suppose that it is on account of the water competition at coast points. There are two other reasons why I have had to give this matter most serious consideration before disposing of it.

We have built up in this country a great railway system between eastern and western Canada. The province of British Columbia has incurred large liabilities in connection with railways that have been built in that province. The Dominion Government itself is trying to develop the territory betwen here and British Columbia as well as to develop the Canadian Railway systems. The hon. member for Assiniboia advocates that instead of sending freight to British Columbia by our railway system we should send it to New York and thence by steamer through the Panama canal to Vancouver and Victoria. I think we

should consider carefully any proposed action which would tend to injure our railway system. Two years ago an agitation was started in British Columbia, Saskatchewan, Alberta and Manitoba for the reduction of freight rates. It was shown on that occasion that if reduction were granted the railways would not be able to pay the expenses of operation, and that great injury would result to the West. No member of this House has been more strongly in favour of the development of our own great harbours than I have. I have been a party to assisting Vancouver and Victoria in their harbour development. I have also done what I could in the matter of the development of the ports of Montreal, Quebec, St. John and Halifax. If there is to be connection by water through the Panama canal between eastern and western Canada, I believe that a line of steamships should be established leaving Montreal and Quebec in the summer and St. John and Halifax in the winter. I have asked persons with whom I have discussed this matter if some arrangement could be made by which the Maple Leaf line in the summer should come to Montreal and Quebec and in the winter to St. John and Halifax in order that our goods carried between the East and the West should go through our own Canadian ports. It is suggested that we put an officer in New York until the war is over or until we can arrange for the operation of this line. My experience, however, has been such as to lead me to believe that if you establish a route by putting an officer at a port of this kind, the route will remain for all time to come. If we should do that in this case, when we should come to arrange for the operation of a line of steamers leaving Montreal and Quebec in the summer and St. John and Halifax in the winter, we would be handicapped by that arrangement which we had made. It does not seem to me that the present is the proper time to bring this matter up. It is true that it is about two years since this agitation started. But it is nearly two years since war was declared between Great Britain and Germany and since that time it has been practically impossible to get vessels to carry the traffic between Canada and the Mother Country. I understand that at the present time the Maple Leaf Line have no sailings via the Panama canal; and my information is that you cannot count on any line of steamers doing this work at least until the war is over. Even if steamers could be obtained to carry freight between New York, Seattle and Vancouver by the Panama canal, rates are so high owing to war conditions that there would be no advantage in shipping by that route. I have given the reasons why I believe that this matter should remain in abeyance at least until the war is over. Having regard to the existing conditions, to the railway situation, to the intention of the Government to hold an investigation into railway matters with a view of reorganizing our railway system and to the policy of the Government in the matter of the development of our harbours—Montreal, Quebec, Halifax, St. John, Vancouver and Victoria—I feel that the committee will agree that the matter should rest until a later date.

Mr. G. H. BOIVIN (Shefford): Under the permission which was given to the members by the Minister of Customs last night to bring up any subject when the House went into Supply to-day, I would like to bring to the attention of the minister and of the committee the case of an elector of the county of Missisquoi, one Albert Ernest Lagrange of Frelighsburg. On June 23, 1913, Mr. Lagrange, who is a cattle buyer, purchased from different farmers throughout his locality a car-load of hogs, which he loaded for shipment to Montreal. It was later ascertained by a very vigilant officer of the Department of Customs, Mr. Frank Fyles, of Abercorn, that there were in this carload three or four hogs which had been imported from the United States and on which no duty had been paid. These hogs were imported not by Mr. Lagrange, but by the party from whom he had purchased them. The entire car-load was held up and seized and in order to release the car from seizure, Mr. Lagrange followed it to St. Johns, the port of entry, and there placed in the hands of the collector of customs his cheque for $1,600, the full value of the car-load of hogs. The hogs were released the next day and sent to Montreal. After having been sent to Montreal and disposed of, steps were taken to ascertain where the different hogs were purchased and it was discovered that four of these hogs had been smuggled in from the United States by a farmer called Peter Larose, of Frelighsburg. He was a tenant farmer and had no property except a team of horses, a very valuable wagon, and a set of harness. The outfit which he used to smuggle in the hogs was seized by an officer of the

department. Mr. Larose, however, happened to be a friend of the party in power, and had voted for the defeated Conservative candidate in Missisquoi county. That defeated Conservative candidate came to the rescue. After he had had an interview with some official in the Department of Customs at Ottawa this team of horses, the harness and wagon, which were worth $250 to $300, were released upon the payment of $50 to the department by Peter Larose. In the eyes of the department he had paid the penalty for having smuggled the hogs into Canada. This occurred in 1913, and we are now in the year of grace 1916, and the $1,600 deposited by this man LaGrange is still in the hands of the department, and the department absolutely refuses to refund this money to him. I have looked through the reports of the Auditor General and of the department, and I can find no entry showing to what purpose this money has been applied. I will go further. About a year after it had been proven that this man had had nothing to do with the smuggling in of the hogs which happened to be in his carload, he went to a Conservative member who occupies a seat on the other side of this House and gave him a synopsis of his case. I prefer not to mention this member's name publicly, but I can give it privately to the minister if he so desires. This Conservative member told the man he would have no difficulty whatever in getting the money, and he asked him to make a deposit of $25, which the Conservative member still has while the department still has the $1,600.

This matter was brought to my attention on April 24 of the present year, and naturally I took the step that any hon. member of Parliament would have taken in connection with the matter. I did not bother the minister, but went direct to the department and saw Mr. McDougald, the Commissioner of Customs. He reported that this matter had been pending for three years, and that no decision had yet been given by the minister. The matter was still pending when I saw the Commissioner of Customs on April 28, 1916. I asked him then if there was any reason why this deposit should be forfeited and he told me that he did not know as the matter was still in the hands of the minister, who was taking a very long time to make up his mind. I asked him to bring the matter to the attention of the minister at once and he promised to do so, and on May 1, 1916, he wrote me as follows:

5 p.m.

Ottawa, May 1, 1916.

Geo. H. Boivin, Esq., M.P.,
House of Commons,
Ottawa.

Re Seizure No. 18860/89—A. E. LaGrange.

Dear Sir,—Referring to your inquiry as to the above seizure, I am to state that the deposit of $1,600 is held as forfeited.

I have the honour to be,
Sir,
Your obedient servant,
(Sgd.) John McDougald.
Commissioner.

Mr. REID: He got off cheap; he could have been prosecuted as well.

Mr. BOIVIN: Remember that the charge was for smuggling in three or four hogs, that these hogs were in a carload which was shipped to Montreal by an indirect route at a great loss to this man, that it was discovered that these hogs had been imported by somebody else, that the party who smuggled them in paid the penalty exacted by the department—and, after all this, the deposit is still held by the department. I am bringing this matter up in order to ascertain from the minister what I could not ascertain from the Commissioner of Customs, and that is, why the full value of the whole cargo of hogs was confiscated by the department when only three or four hogs had been smuggled into Canada by another party?

Mr. REID: The hon. gentleman must understand that hundreds of cases of this kind come before me, and each case is dealt with on its merits. In some cases we exact merely the value of the article seized, in other cases we impose a penalty as well, and in other cases we have prosecuted. In this particular case a seizure was made by our officers. I do not know whether my hon. friend knows this man, but my information is that he has been buying American hogs for many years all along the line, and shipping them to Montreal. This had a double effect. In the first place, the farmers living along the line where he was buying had to compete with American hogs that were smuggled in, and this man knew he was doing the farmers the greatest possible injury by bringing in American hogs and breaking the price on this side. The hon. member knows that drovers, when they are buying hogs or cattle, go right into a man's place and see the stock; they know whether that man has had those hogs before. The reason I made the man pay the full value of the carload was that I was of the opinion that he knew well

enough those hogs had been smuggled in by this poor man; perhaps he wanted to benefit by the lower price and got the poor man to smuggle them in. I had certain other information, and I do not believe the hon. member could get that man to make an affidavit that he did not know that those hogs had been smuggled in. According to my information he has been getting American hogs in for years, thereby doing great injury to our own Canadian farmers and to the treasury of Canada. Furthermore, although he knew that the Department of Agriculture had prohibited American hogs from coming into Canada, he had been bringing them in for years and taking chances of spreading hog cholera and other diseases amongst our Canadian stock. The hon. gentleman may think that the penalty was severe, but I can tell him that the man would not make an affidavit that this was the only case of smuggling in of hogs that he knew of. I think he got off very lightly. I maintain that he got off very easily, and if he ever does the same again while I am minister, I want the hon. member to tell him that I will not only impose the penalty of a fine, but prosecute him as far as the law will allow.

Mr. BOIVIN: The hon. minister seems to forget altogether that it was the other man who smuggled the hogs and was punished for doing so.

Mr. REID: I will explain that. This man was a poor man who had nothing in the world but a team of horses.

Mr. BOIVIN: He is a tenant farmer.

Mr. REID: He was probably sent over by the other man to smuggle the hogs in. The hon. member says I should have treated this poor man as I treated the other man who is a wealthy man and has been smuggling in hogs for years and bringing disease into the country. He wants me to treat this poor unfortunate man who has nothing in the world but a team of horses the same as the other man who is wealthy, but I will not do that. The penalty I imposed on the man with the team of horses was a fine of $50, and to him that $50 was five times more of a penalty than it would be to a man who had a carload of hogs. I say that this poor tenant farmer was led into the difficulty by the other man, and I think that the warning which the latter got was not only good for him but for all the people in that district who may have been induced by him to do the same thing. I do not want, nor does this Government or any other government want to take the last dollar from a poor man. We want to give him a chance and a fair warning. With regard to the man who paid the $1,500, I want to say that if ever he gets into a scrape again he will not get so easily off.

Mr. BOIVIN: I quite agree that a man who is caught smuggling ought to pay the penalty. I think that everybody in this House agrees with that view, but I do not think that a man should be punished because the minister has heard through a third or fourth party that he may possibly have smuggled in years gone by. That is not the question before the House now, and it is not the question which should have been considered by the hon. minister, and the minister knows it. I will go further and say that if this man had been a good political supporter of the defeated Conservative candidate as Peter Larose is, he would have been treated differently. This man proved to the satisfaction of the department that every hog in that car had been purchased from a bona fide Canadian farmer who had got for it the bona fide Canadian price. Peter Larose was not merely a teamster who had nothing in the world but a team of horses and a wagon. He was a tenant farmer, residing upon the farm of Miss Chamberlain, at Frelighsburg, and the cheque which was given to him for the hogs was made payable to the order of the owner of the farm. It is impossible for the minister to say that one single hog in that car was smuggled with the knowledge of the man who put up the $1,600. The minister says that in years gone by this man had smuggled hogs from the United States. All I can say is that, if the minister has on that part of the line collectors of customs who will allow any man to smuggle in hogs for four years, and go unpunished, they should be dismissed, and officials should be appointed in their place who would do their duty and punish the smugglers. This man is willing to go before any court in the country and to pay any fine that may be imposed on him by any court in the country if he is found guilty, but having made in good faith a deposit with the collector of customs at St. Johns, which the collector promised would be returned to him in full if he established where the hogs came from, and having lost the interest

on the money for four years without receiving any communication from the minister and without being told of its confiscation, he objects to receiving a curt letter informing him that the deposit is to be held, but without giving any reason for the minister's action. One thing the minister could at least do. This man gave a Conservative member of Parliament $25 to use his influence on his behalf, and I would ask the minister to use his influence with the Conservative member of Parliament to have the money returned to Mr. La Grange. If the minister has any proof to offer against him, he should prosecute him, but I do object, and I think every fair-minded member in this House should object to the Minister of Customs constituting himself judge and jury in every case that comes before him, especially when he has no evidence before him but hearsay evidence that the man may have smuggled two or three years previously.

ALLOWANCES TO DEPENDENTS OF SOLDIERS.

Hon. FRANK OLIVER: I have taken some interest in the discussion of the Militia Estimates, and when they were under consideration on the last occasion it was arranged with the Prime Minister that an item should be left standing so that I might have the privilege of discussing a certain matter. I will not delay the House to any great length; I merely wish to express in a formal manner the opinion which I hold very strongly, and which I know is held by others, that the time has come when there should be a more liberal allowance to the dependents of soldiers who are serving. When the war broke out it was arranged that a separation allowance amounting I think to twenty dollars a month should be given to the families of soldiers who had enlisted. That is supplemented in some cases by assigned pay. It was agreed that the separation allowance and the assigned pay were not adequate support for the dependents under the existing conditions of the country, and so the Patriotic Fund was organized for the purpose of collecting money from the public at large to supplement the separation allowance and the assigned pay and so bring the measure of support available to the dependents of soldiers up to a point which, in the words of the Patriotic Fund circular, would provide a decent living.

Last year I took the view which I propose to express at the present time, namely, that while the Patriotic Fund organization is most desirable and most necessary in order to deal with the special cases that continually arise in regard to dependents left by soldiers who have gone to the front, it is not right or reasonable that these dependents should have to depend upon public subscriptions for any part of that amount which is recognized to be a necessary allowance for their support. When the war broke out, of course, everything was done hurriedly, and it can easily be understood that every condition could not be adjusted at that particular time. But time has gone on, it is a year and a half now since the war broke out, conditions have developed that possibly were not expected to develop at the time and it is found that the Patriotic Fund is called upon to pay a fixed amount, forming part of the necessary allowance for the family and dependents of a soldier, over and above the extraordinary circumstances which frequently arise and which naturally would be dealt with by such an organization as the Patriotic Fund. I find that in eastern Canada there is a stated allowance from the Patriotic Fund to the dependents of a soldier of $5. In the western provinces the amount is very much larger. I maintain that when, by experience, it has been demonstrated that a soldier's family requires an amount over and above the separation allowance and the assigned pay, that man's separation allowance should be increased to that amount and the Patriotic Fund should not be called upon to meet that requirement. Until conditions had developed and become adjusted, the Patriotic Fund was created for the purpose of filling the gap between the Government provision and the requirements of dependents, but now that these requirements have come to be recognized as established, I see every reason why the Government's separation allowance should be increased so as to relieve the Patriotic Fund from that permanent liability, so to speak, which is such a tremendous call upon the patriotism and benevolence of the people of the country.

It has been said by the gentleman who so ably manages the Patriotic Fund that this fund is necessary to intervene between the requirements of depenedents and the arrangements of the Government because conditions differ in different provinces, and because the Government could not make an arrangement whereby the separation allowance would be different in one

province from what it is in another. That argument was perfectly good at the outbreak of hostilities when conditions were new, but now that conditions have become settled and adjusted, it is absolutely established that in British Columbia the family of a soldier require a certain fixed amount to give them a decent living, while in Prince Edward Island a certain less amount is required. The facts are now thoroughly understood from one end of the Dominion to the other, and I maintain that the time has arrived when the Patriotic Fund should be relieved from that burden which it now carries and which is properly a part of the burden to be carried by the nation at large. I recall having heard the gentleman who is at the head of the Patriotic Fund suggest, as another reason for the existence of this fund, that it gave an opportunity to those who were not able to render personal service to do service by the contribution of their wealth, their earnings or their savings as the case might be. That is a perfectly good position to take providing it is not pushed too far. But I submit that when the people of a patriotic, liberal and benevolent disposition are called upon to supply a fixed requirement that properly rests upon the nation at large, it is not a fair proposition and that requirement should not be continued. As long as the burden was light it mattered comparatively little which way it was carried. Now, the burden has become very great upon the people who are liberal minded and who have responded, I may say, magnificently to the demands that have been made upon them up to the present time. These demands are still increasing, and must necessarily increase. It is not fair that, because certain of our citizens are liberal minded, patriotic and benevolent, that section of the community should carry this burden on their shoulders when it is a burden that properly rests upon the shoulders of every citizen of the country and should be shared in equally by those citizens according to their tax-paying power.

Sir THOMAS WHITE: Is the hon. gentleman suggesting that the Patriotic Fund should come to an end?

Mr. OLIVER: No.

Sir THOMAS WHITE: I gather that from what my hon. friend has said.

Mr. OLIVER: No.

Sir THOMAS WHITE: He suggests that the burden be placed upon the public?

Mr. OLIVER: Yes.

Sir THOMAS WHITE: If I understand him correctly he asks that the burden, as carried by the Patriotic Fund, should cease.

Mr. OLIVER: No, that part of it, that is a fixed and stated amount, should be borne by the state and not by private subscription. When it becomes a fixed fact, that in the province of Ontario, we will say, instead of a dependent wife being able to get along with $20 separation allowance and $15 assigned pay, she requires in addition $5 from the Patriotic Fund, the state should assume the burden of providing that $5 and the Patriotic Fund should not be called upon to meet that requirement. The idea that is present in my mind as to the proper function of the Patriotic Fund is to take care of extraordinary conditions which always arise and which no Government could possibly take care of. That is the proper purpose of it, as I would understand it. But it certainly is not proper that this fund, depending on public subscriptions, and levied on a part of the people, should be depended upon to meet those requirements which are stated and fixed requirements, thoroughly well understood, and which certainly should be borne by the state as a whole, by which means every citizen has a share in the burden and responsibility.

Mr. SCHAFFNER: Would you increase the separation allowance?

Mr. OLIVER: Yes.

Mr. SCHAFFNER: Under the Patriotic Fund people do not receive the same amounts in different provinces.

Mr. OLIVER: No.

Mr. SCHAFFNER: Then how could the Government arrange that they could give people in one province a certain separation allowance and in another province another separation allowance? They could do that, could they?

Mr. OLIVER: Yes. After the declaration of war, when nothing was adjusted, when conditions had not settled down, there was possibly a very good reason for the use of this fund to the extent to which it is at present used, and that reason I have heard stated by the president of the fund, but that condition does not exist to-day. It is settled now that in British Columbia a

family requires a minimum amount, a part of which is now provided by the Patriotic Fund. There is no reason why the Patriotic Fund should be called upon to supplement the present allowance in order that the minimum amount may be allowed. There is no reason why the Government should not provide a proper amount.

Mr. HAZEN: I understand my hon. friend to argue that the amount dependents of soldiers require for their wants and requirements, over and above the assigned pay, separation allowance and what they may get from the Patriotic Fund, should be supplied by the state. If that is done, what is left for the Patriotic Fund to do?

Mr. OLIVER: The proper purpose of the Patriotic Fund is to take care of special circumstances that may arise, in which the requirements are over and above the ordinary. I need not say, after the discussions my hon. friend and I have had on recent occasions, that these special cases come up by the hundred, and there is every reason for a Patriotic Fund for the benefit of these dependents. But apart from that, it is thoroughly understood that a certain fixed requirement exists in British Columbia, for instance, and a certain fixed requirement in Ontario, and Prince Edward Island, and so on, and I say that public benevolence and patriotism should not be called on to meet that requirement. It is a fixed requirement and should be met out of the public treasury. It is not fair, either to the soldier or his dependents, or the Service, or to the state, that the present condition of affairs should continue. Let me point out in this connection that it is recognized in many places throughout the country that the money is not collected on a fair basis. A county council will say: We will contribute so much to the Patriotic Fund, and will then proceed to raise the amount by taxation. This is done by municipal and county councils throughout the Dominion; they meet their contributions to the Patriotic Fund by levying a tax. I maintain that the time has come when the state at large should levy the necessary taxation to meet those requirements, instead of calling upon the benevolence and patriotism of the people. That is the view I desire to bring before the House, and desire to bring it forward very strongly for this reason. As the demands increase and they must increase —I fear that the next call for subscriptions to the Patriotic Fund will not meet with the same generous response that has been met with in the past; and certainly we cannot afford to allow the dependents of our soldiers to fail to receive that contribution that was the expectation of the soldier when he enlisted. When the soldier enlisted he expected his family to receive certain assistance: separation allowance, assigned pay, and a certain fixed amount from the Patriotic Fund. While that was not a legal and a binding bargain I maintain that this country is bound in honour to see that every dollar of that money is paid, and that the allowance is kept up to what the soldier when he enlisted, understood his dependents would receive. I am sorry to say that during the past months, for reasons said to be good—and very likely good, because it was believed the Patriotic Fund was not able to stand the strain that was being put upon it—there have been certain readjustments and a certain scaling down of the allowance paid to the families of soldiers at the front. I need hardly say that a case of that kind leaves a very unfavourable impression; it is unfortunate that cases of that kind should ever occur, but they do occur, and it certainly is not for the good of the cause that they should occur. I maintain that the State should fully discharge its obligation in respect of the dependents of soldiers at the front and that the Patriotic Fund should take care of extraordinary conditions that may arise in regard to those dependents; in that respect, it has a responsibility, and that is the only responsibility the country at large should expect it to fulfil.

There is another matter that I feel to be so very important and so very serious that I cannot allow it to go by without noticing it. I have had occasion when the Estimates of the Department of Militia have been up to consider the arming of the troops both as to rifles and machine guns. The Prime Minister said that a report had been made in regard to the Ross rifle, with which the Canadian troops are armed. I asked if that report could be made public, and he said no. The only conclusion I can reach is this: That if the report had been favourable it could and would have been made public. But from the fact that it is not considered sound policy to make it public, the only conclusion to be drawn is that the report could not have been considered favourable. I appreciate very deeply the responsibility I take, but I ap-

preciate also the responsibility that rests upon a representative of the Canadian people in this House—a responsibility that demands that no effort shall be left undone to secure to the highest possible degree the efficiency of our troops, and particularly the efficiency of the weapons with which they are armed.

The Ottawa Citizen of this morning publishes what purports to be extracts from a letter from Gen. Alderson, who is spoken of as Commander-in-Chief of the Canadian forces at the front, and the letter is said to be in reply to a communication from Ottawa on the subject.

Mr. ROGERS: Who is it addressed to, and what is the date of it?

Mr. OLIVER: I could not say. The paper does not give the date. This responsible journal, published in the capital of Canada, publishes what purports to be extracts from a letter which it tacitly represents to be an official letter from General Alderson, recently commanding the Canadian forces in France. I cannot imagine any Government allowing such statements to appear in the public press for one hour without taking steps to contradict them, if they are susceptible of contradiction.

I read an extract from what purports to be a letter from General Alderson. The suggestion of the newspaper in which it appears is that it is an official letter:

> I may say that "very soon after we got out here with the First Division," says General Alderson, "I found that the men were picking up the Lee-Enfields whenever they could and throwing away the Rosses. I issued an order that this was not to be allowed, and prior to the second battle of Ypres that order was carried out. The experience of the battle showed that the Ross jammed so badly that I was obliged to let this order die a natural death. When the division was re-armed with the Lee-Enfield the men cheered loudly on hearing the news, and it was found that there were already more than 3,000 of the rifles in the division.
>
> I hold no brief for the Lee-Enfield, and I did, and still do as regards the 2nd and 3rd Divisions, discourage any crying down of the Ross, although I know, as does every one else, that the Lee-Enfield is out and out the best active service rifle.
>
> I believe the Ross to be a closer shooting rifle and I think, and I often say so, that with teams of equal shots on the range and using the rifles as single loaders the Ross would win.
>
> General Alderson then refers to a statement that with three certain marks of ammunition, which he names, the Lee-Enfield "cannot be relied upon to fire fifteen rounds."
>
> "This is absolute invention," he declares. "I attach a copy of a report on the test of ammunition we had when Carson and Max Aitken were last here together. From this you will see that the Lee-Enfield fired from 100 to 125 rounds, as rapidly as possible, with all three marks of ammunition named, while the Ross jammed from the 25th to the 50th round.
>
> "This report, which as you will see was signed by both Carson and Aitken, does not state, as it should, that the Lee-Enfield, although handled by men not trained to it, fired (owing to it being much easier to charge the magazines) its 100 rounds in about one-third less time than the Ross. Nor does the report state, as was the case, that the hands of the men using the Ross were cut and bleeding owing to the difficulty they had in knocking back the bolts.
>
> "None of those present, and there were many commanding and other officers there, could have failed to notice these important points."
>
> General Alderson then refers to a statement by a writer of a certain letter that the classes of ammunition in question have "again in some mysterious way" found their way to the Canadian trenches. "That, too, is against the Ross," General Alderson continues. "Moreover, it emphasises what we have been told officially, viz., that while we are stationary it will be possible to keep this ammunition away from the units armed with the Ross, but that when we get on the move it may not be possible."

Mr. PUGSLEY: What ammunition is that?

Mr. OLIVER: I could not say. It is ammunition that is complained about in some way. I am sorry that the Prime Minister was not in his place when I brought this matter up, but the item was under discussion and I was compelled to deal with it now or not at all. I am glad to see the right hon. gentleman now in his place. I have stated that I appreciate the very serious character of this statement, but it appears in a newspaper published in the capital, and I cannot conceive that such a report would be allowed to have publicity for an hour without being specifically contradicted if it could be contradicted.

Sir ROBERT BORDEN: My hon. friend might have been better advised to submit the matter to some member of the Government, and perhaps to myself, before bringing it up in the House. The statement that has appeared in the press was brought to the attention of the Government this morning, and, after consultation with my colleagues, I have already taken certain action with regard to it. I desire to say, in the first place, that even if the Ross rifle were the best rifle in the world it would be possible to destroy its usefulness by making and circulating public statements of that character about it; and it is far from a patriotic service to discredit the only rifle which we are capable of producing in Canada at present. No one is more convinced of the absolute necessity that our

men fighting in the trenches shall be armed with an efficient and effective weapon than the members of the Government, in common with all good citizens. As I stated in a debate in this House during the present session, there has been criticism of the Ross rifle. There has also, I believe, been criticism of the Lee-Enfield rifle. I repeat what I have already stated on that subject, that probably each of these rifles may have some special advantages over the other.

So far as I am aware, no such letter as that which appeared in the Citizen of this morning has come to the attention of the Government. However, I shall make further inquiry before eight o'clock to ascertain the facts. Diligent inquiry as to the existence of such a letter will be made, and the subject is already under investigation. Even if such a letter were written, it is my judgment that its publication without any communication with the Government, without any inquiry as to the existing situation is not a patriotic service to this country at this time. I am not alluding to my hon. friend from Edmonton (Mr. Oliver); he has taken it from the public press, but his action does, of course, give it greater publicity than it otherwise would have had.

I desire, further, to announce this—within the past week a communication has been sent to the Commander-in-Chief at the front, desiring him, on his own behalf, and for the information of the Government of Canada, to make a thorough test of the Ross rifle under precisely the same conditions as those under which that rifle is ordinarily used by our men at the front, and to make also a corresponding test and investigation of the Lee-Enfield rifle. I have no reason to believe that there will be any lack of effective action by Sir Douglas Haig in making that test and investigation. When it has been made, it will be for the Government and for the military advisers of the Government to consider whether and to what extent it should be made public. It is desirable in view of all these allegations that such a test and investigation should be made; and I felt it my duty after careful consultation with the Minister of Militia and Defence during the past week to request that that course should be taken.

I repeat that we are making inquiry into the reasons which led to the publication of this alleged letter in the press and of the source from which it emanated. We shall take such action in regard thereto as may seem proper and appropriate under the circumstances and in the interest of the people, especially in the interest of the gallant men who are using this rifle at the front.

Mr. OLIVER: I understand that the Prime Minister will give some information to the committee at eight o'clock?

Sir ROBERT BORDEN: Yes.

Mr. OLIVER: Will there be an opportunity then to say something in regard to it?

Sir ROBERT BORDEN: Yes.

Mr. PUGSLEY: It seems to me that the hon. member for Edmonton should not be found fault with for bringing this very important matter to the attention of the committee. It must be borne in mind that this letter purports to be a letter from the gentleman who has been commanding the Canadian forces at the front and who is, I understand, in charge of the Canadian expeditionary forces in Great Britain.

Sir ROBERT BORDEN: He is not in charge of them.

Mr. PUGSLEY: He has been in charge of the Canadian forces at the front.

Sir ROBERT BORDEN: He has been in charge of the Canadian forces at the front, and the post which has been suggested—I do not know whether he occupies it as yet—is that of Inspector General of the Canadian forces in Great Britain.

Mr. PUGSLEY: We can hardly believe that the Citizen would publish a letter of such great importance unless they were satisfied that it was a genuine letter from General Alderson. It bears on its face evidence of its being a reply to some one who had the right to communicate with General Alderson with regard to the Ross rifle. I would assume that it is in reply to a letter which has been sent to him by the Minister of Militia. It bears evidence of that on its face, because it is evidently written in reply to some one who has been defending the Ross rifle. Besides, the familiarity with which General Alderson refers to Mr. Carson and Sir Max Aitken shows that it is written to one with whom his relations have been intimate from a military standpoint. I suggest to my right hon. friend that he should, in connection with the inquiries which he makes, endeavour to ascertain whether a letter was written by the Minister of Militia to General Alderson, and whether or not this letter is in reply. This is a subject in which the House and

the people take a very deep interest, and it would be well that full information should be afforded in reference to the matter. It is desirable that any question with regard to the arms which are supplied to our boys at the front should be settled in satisfactory manner. Every one will agree that no equipment should be furnished to them except it be of the very highest character. There is one very singular remark which is made in the letter, in reference to ammunition. I would judge from the statement of General Alderson that in some inexplicable manner ammunition has been supplied to the soldiers which ought not to have been supplied to them. This is a matter which ought to be inquired into and with regard to which the House and the country are entitled to information. There is certainly no very great harm in bringing these matters before the committee for the purpose of having any mystery in regard to them cleared up, as compared with the injury which might result through defective ammunition or arms being supplied to Canadian soldiers at the front. I think the hon. member for Edmonton has performed a very important duty in bringing the matter to the attention of the committee.

Mr. ROGERS: I wish to suggest an amendment to the resolution now before the committee with a view to correcting a clerical error. I move that the word "Randolph" be substituted for the word "Robert" in the item providing for a compassionate allowance to the late Mr. Fanning. The name should be Randolph Fanning.

Mr. LEMIEUX: I have been requested by the widow of the late Mr. Laplante to ask the Government whether something better could not have been done for her. I think that Mrs. Laplante was deserving of a little more consideration on the part of the Government. Was the matter discussed with members of the family?

Mr. ROGERS: I do not know that.

Mr. CASGRAIN: We took pains to get information and to consider very carefully all the circumstances surrounding the condition in which Mrs. Laplante was left. A less amount was at first suggested, but after investigating the matter we came to the conclusion that $5,000 would be a reasonable amount to pay. I think that my hon. friend will come to the same conclusion

Mr. LEMIEUX: I am speaking from hearsay. I was told that the family of Mr. Laplante lost in the fire some very valuable papers which, if edited as they were intended to be edited by him, would have given his family quite a revenue. That is the reason I bring this matter to the attention of the Government. Of course, if it has been thoroughly investigated I have nothing more to say.

Amendment of Mr. Rogers agreed to.

At six o'clock the committee took recess.

The committee resumed at eight o'clock, Mr. Rhodes in the Chair.

Sir ROBERT BORDEN: I find that the communication to Sir Douglas Haig, the Commander in Chief, to which I alluded was not sent as long ago as I thought. It was sent about three days ago. It stated that, in consequence of some criticism which had arisen, the Canadian Government were prepared to leave all questions as to the Ross rifle to the judgment of the Commander in Chief after he had made all necessary tests made under such conditions as are experienced at the front. That is the situation to-day.

Mr. OLIVER: Was that a cablegram?

Sir ROBERT BORDEN: That was a cablegram, yes. As to the letter which has been published in the press, I communicated with General Hughes, who told me that he had received no such letter, and that there is no official letter of that character. That is all the information I can give to the committee about it.

Mr. OLIVER: The letter is of such a character, the statements contained in it are so serious, that I should think the Government would be very well warranted in pushing inquiry as to how such statements came to be published under the presumed authority under which they were published. We have a censorship in Canada, and if this letter is not a bona fide letter of General Alderson's, it certainly ought to come within the range of the activity of the censor.

Sir ROBERT BORDEN: Inquiry was made by the Solicitor General, whom I asked to take up the subject with the censor. The censor informed him that he had no knowledge of the proposed publication or of the letter, and that the first intimation he had of it was the appearance of this alleged communication in the press

We do not propose to drop the matter without further inquiry.

Mr. LEMIEUX: Without making any disparaging statements, I may call attention to the fact that last year I read to the Minister of Militia a letter which was published in the Canadian Courier, signed by one of our boys at the front, in which he stated that the first thing they did when they left the camp in England for France was to discard the Ross rifle.

Sir ROBERT BORDEN: And I might say that possibly some incidents of that kind may have taken place to which not too much importance should be attached. I believe that a good deal of the equipment which the First Canadian Division took over was left on Salisbury Plain when the troops went to the front.

A Board of Inquiry was called by the representatives of the Canadian Government on the other side for the purpose of determining whether that equipment was inefficient for use. As a result of that inquiry it was declared to be perfectly good equipment, although in some respects not precisely of the same character as that adopted in Great Britain. Thus the people of this country got credit for that equipment which was taken over, after being declared perfectly efficient for the purpose for which it was designed.

Mr. NESBITT: I questioned all the boys who came back from the front to our town about this, and they all agreed that the Ross rifle was perfectly all right.

Mr. ROGERS: The statements before the House are undoubtedly very serious. They have a deep meaning and must be of deep interest to a great many people in the country. I rather regard the statements that have been made, such as that of the hon. member for Rouville of a moment ago, which I am sure he really did not intend to make—

Mr. LEMIEUX: I was simply recalling the fact that these attacks against the Ross rifle are not new. Last year, just for the purpose of inquiry, I read to the Minister of Militia a letter published in the Canadian Courier, signed by one of the boys at the front, in which he stated, inter alia, in giving news about the departure for France and that sort of thing, that one of the first things they did was to discard the Ross rifle. I am not passing judgment on the Ross rifle. I am well aware that there are several competitors for the supply of weapons in time of war, and it might be quite possible that it is the policy of certain people to play an unfair game as against the Ross rifle. I am not passing judgment, but I am saying that it is not at all a new accusation.

Mr. ROGERS: I appreciate what my hon. friend has just said. It is certainly not a new accusation, and the letter that has been quoted, if we are to understand it at all, is not new either, although it has been published without any date and without the address of the person to whom it was sent. But the letter seems to leave an impression that there is something very seriously wrong, although a correct reading of the letter, with a knowledge of the circumstances, would not bear out that impression. We have already had information that when our men went over at first, in the using of the different series of ammunition with which they were supplied, a certain amount of jamming took place in the Ross rifle it is said and also in the Lee-Enfield rifle. That is information which I believe to be correct, and which we have had; and if this letter was written of that date, why then, of course, it is a thing of the past. The conditions complained of at that time have been remedied. The chamber of the Ross rifle has been enlarged in such a manner that the difficulties that were met with a year ago or more have been corrected. So far as I know, with any information it has been possible for me to obtain, there has been no difficulty and no jamming of the Ross rifle for many months past, especially since the chambers were corrected to receive almost any series of ammunition that might be supplied. It is true that in the early days, before they had the war ammunitions running as correctly as they are to-day, certain difficulties arose, and it seems unfortunate that we should have this letter published without any date, with a view, evidently, of trying to create a very false impression and to create a feeling of unrest in the minds of the mothers, and the sisters and the wives of the bravest and the best of our sons, who are now doing duty on the firing line, fighting for us. It is most unfortunate that there should be published such a letter as that which appears in the Citizen newspaper of the city of Ottawa. I am not surprised that that paper would be guilty of publishing this letter, or anything else by which they could hope to create excitement.

I should like to read a letter or two from gentlemen who have a knowledge of the facts, in order that we may, if we possibly can, correct the false impression that has been created by the publication of this letter, because I say that, so far as I can ascertain, this letter is not an official letter. I know from the statement of my friend the Prime Minister that it has not been received by him, and I know from the Minister of Militia that it has not been addressed to him. Therefore, if such a letter is in existence, the individual, if he is an employee of the Government or if he is a member of the staff, or if he holds any other position in this country, who would be guilty of publishing this letter in the mysterious form in which it is published —the proper place for him would be in the tower of this building; and so far as I am concerned, I should be glad to be a party to placing him there.

Mr. PUGSLEY: But the tower is down.

Mr. ROGERS: I will promise my hon. friend to provide a suitable tower for the individual who wrote that letter if we can locate him, and we will take good care of him, too. Allow me to read the following letter dated London, 14th April, 1916:

Sir,—It will be of interest to you to know that Lieutenant Ross, 17th Battalion, in practice this afternoon fired 145 rounds in 7 minutes. I believe a speed of 160 rounds is attainable. Best rate claimed by Hythe Staff with Enfield is, 121 rounds.

In one minute test Ross rifles averaged 21 rounds (nearly) against 17 (nearly) for Enfield. Expect to see Ross record improved, but not Enfield.

An interesting test was made with eight firers. Four men trained with Enfields were given Ross rifles. Four Ross men were given Enfields. As might have been expected Ross men did not do well with Enfield, but the remarkable thing was that all Enfield men without training, exceeded or equalled best previous records with Enfield. Detailed records will be sent you shortly.

Respectfully,

(Sgd.) Roy B. Gibson.

Major-General Sir Sam Hughes.

I read this report from Capt. C. H. Ackerman to the Minister of Militia:

Kingston, Ontario, 18th January, 1916.

From,—Captain C. H. Ackerman,
2nd Battalion Canadians,

To,—Major-General Sir Sam Hughes,
Minister of Militia and Defence,
Ottawa, Ont.

Report on Ross rifle.

Sir,—I have the honour to report on my experiences in the trenches with the Ross rifle.

The Ross rifle used by the First Canadian division in France was exchanged for the Lee-Enfield rifle during the second week in June by the Second Battalion to which I was attached. I myself, used this rifle in the trenches and I felt I did very much more effective work than I could have done with a Lee-Enfield, owing to the improved rear aperture sight of the Ross and the protected block foresight which is covered with a hood and permits of a more uniform light which is essential to good shooting. The rear aperture sight is a decided improvement on the open back sight because the full sighting power of the eye is concentrated on one point through this aperture and this power is, when the rifle is properly sighted, directly in line with the block foresight and the target; this, I consider the one outstanding advantage over the Lee-Enfield rifle. (If it is not conducive to better shooting than the Enfield, why did the National Association object to its use at Bisley in 1913).

In the second battle of Ypres, at St. Julien and Langemarck, when we were first called upon to put the rifle to a severe active service test, we had trouble extracting the shell or in pulling the bolt back after a shot was fired, and I believe other battalions experienced the same difficulty. After our battalion came out to rest I had occasion to test, under orders, from my commanding officer, all the rifles in my company that had given trouble. In my test I discovered the Canadian ammunition to work perfectly and some series of British worked comparatively well, but the most of the British ammunition caused the bolt to stick after each shot was fired. Even without firing the same difficulty was experienced, so that proved conclusively that the various series of ammunition used were not uniform, shortly afterwards the rifles were all taken from the First Canadian division and the chambers were slightly enlarged .459" to .464" at the base, overcoming the difficulty of having the bolt drag during the extraction of the shell.

I, myself, left the trenches wounded in June and was unable to observe personally the results of the enlarging of the chamber, but have inquired since coming home and I find that difficulty has been overcome and now I consider the Ross rifle the most perfect of the four rifles that I had the opportunity of trying, viz., Mauser (German with no protection for foresight and with open back sight.) Lebel (French with same sighting apparatus) and Lee-Enfield (British with partially protected foresight).

I have heard it said that the aperture back sight of the Ross rifle was too frail, but in more than four months of trench warfare, I had trouble with no more than three sights in my platoon of 55 men. This trouble was caused by permitting the rifle to fall against some hard body with the leaf raised; this same trouble might easily happen to an Enfield.

When our men first saw the Lee-Enfield what appealed to them most was the magazine which held two charges or ten pounds of ammunition. This, at first, appeared to be an advantage, but actually it resulted in a greater waste of ammunition than was experienced with the Ross. It must be remembered that in actual trench warfare, many hundreds of thousands of rounds of ammunition are fired from rifles and wasted, owing to the lack of a suitable target and when the difficulty of bringing in ammunition under fire is taken into consideration, the man with a ten round magazine is bound to fire off his whole magazine of ten in all probability waste all ten.

'Tis true that in case of a German attack on our trenches, a man has more confidence in a

rifle when he knows he has ten rounds ready to fire without unloading, but in my own experience, I found that the responsibility of breaking up a German attack on our trenches very seldom rested on the fire of our rifles. It rested on the support of our artillery, machine guns, bombs and the usual defensive works in front of the trenches such as ditches, wire entanglements, etc.

The above report is a true statement of my own experience with the Canadian service rifle and I feel that personally I would want no better rifle to go into action with again.

I have the honour to be, sir,
Your obedient servant,
(Sgd.) C. H. Ackerman,
Captain,
2nd Battalion Canadians.

Here is another letter from J. C. Macdougall, Shorncliffe:

With reference to the minister's cable of the 14th instant regarding the jamming of the Lee-Enfield and Ross rifles when using bad ammunition.

No cases of jamming of either rifles have occurred here for months, and the confidence of the men in both weapons and ammunition has been established. Both rifles jammed in the past when using B.14 and G.14 and certain Marks of D.C. ammunition. The steps then taken were to withdraw the bad ammunition.

I desire to read, also, a report from a gentleman whose name will be received with respect, not only by the members of this House, but by the people of Canada at large, in respect to this important matter. I am troubling the House with the view of putting this on record so that there may be no feeling of unrest among the people of Canada, who have such a deep interest in the welfare of our soldiers at the front. This letter is dated Headquarters, Shorncliffe, 26th April, 1916, and is addressed to Sir Sam Hughes:

Re DEMONSTRATION OF RAPID FIRE

Ross and Lee-Enfield Rifles.

I enclose you herewith a report (which has just reached me) of a demonstration of rapid fire with both the Ross and Lee-Enfield rifles which was carried out on the Hythe Ranges on the 8th April, 1916, together with statements showing results, and from which it will be seen that the Ross rifle is a superior small arm to the Lee-Enfield, capable of developing a higher rate of fire, whilst still maintaining its accuracy.

With kindest regards,
Yours faithfully,
(Sgd.) S. B. STEELE,
Major-General.

The report which General Steele transmits for the information of the department, and for the information of the people of Canada, is as follows:

Musketry Office,
Headquarters,
Canadian Training Division,
Shorncliffe,
11th April, 1916.

From: Lieut.-Colonel E. Prismall,
Att'd. G.S. (Musketry).
To: The General Officer Commanding,
Canadian Training Division.

Sir,

DEMONSTRATION OF RAPID FIRE.

I have the honour to report:—

A demonstration of rapid fire with both Ross and S.M. Lee-Enfield rifles was carried out on "A" Range, Hythe, at 2.30 p.m. 8th April, 1916.

Officers present.

Major-General S. B. Steele, G.O.C. Troops, Shorncliffe.
Brig.-General Landry, G.O.C. 11th C.R.I.B.
Lieut.-Col. Ashton, O.C. 12th C.R.I.B.
Lieut.-Col. Cowan, O.C. 13th C.R.I.B.
Lieut.-Col. Prismall, Musketry Staff Officer, and other officers from the Divisional and Brigade Staffs and Battalions of the Canadian Training Division.
Executive Officer, Lieut. A. Raker.

The demonstration was divided into two parts. In the first part a number of men fired as many rounds in one minute as they were able.

In the second part two firers, one with the Ross rifle and the other with the S.M. Lee-Enfield fired for seven consecutive minutes as many rounds as they were able.

The results, which are attached, show that a high rate of fire can be reached by trained firers. Constant practice in loading and handling the rifle, however, is necessary if a high standard of efficiency is to be reached and maintained.

The seven-minute continuous fire illustrated practically the limitations of rapid fire and the effect on both rifle and firer. The fatigue of the firers, the heating of the barrel and consequent difficulty in aiming were apparent.

Both rifles worked well, extraction was good, and the bolts worked smoothly.

The ammunition used was D.A. 1915.

After this demonstration was concluded, a series of shots with defective ammunition (B. 14) was fired, and greater trouble was experienced in extraction with the Lee-Enfield than the Ross rifle.

I have the honour to be, Sir,
Your obedient servant,
(Sgd.) E. PRISMALL,
Lieut.-Colonel,
Att'd. G.S. (Musketry)
Can. Training Division.

Attached to this letter is a table showing the number of shots fired by each individual and giving the names of the men in the test. I will give it to Hansard, so that it will go out to the country and satisfy the people that we have the good fortune to possess a rifle that takes second place probably to none at the present time. It will reassure them that it is not the misfortune of our soldiers to suffer from the effects of a bad rifle. It is true that in the earlier stages of the war they did suffer from the effects of bad ammunition, but that

defect has been corrected. I repeat that it is most unfortunate that any uneasiness should be caused by the publication of the letter which has been referred to, and which is probably of old date and intended simply to create uneasiness and unrest. It is most unfortunate in the interests of the country, and in every other way, and it is only fair, and, indeed, the duty, of the hon. members of this House to correct any such impression, and to assist in punishing, if possible, the individual, whoever he may be, who was guilty of committing such an offence as to publish a letter without the proper heading, without date, and containing information that is not correct. The following is the table of results of the test referred to by General Steele:

Conditions—Distance 200 yards; targets, 2nd class figure, position, lying, firing over cover; 5 sighting shots allowed; each firer to fire at his best rate for 1 minute.

Mr. OLIVER: I do not wish to exaggerate the importance of this report, but I can hardly agree with the tendency of the Government to minimize its importance. I have here a copy of the Toronto Globe of this morning, and on the front page it contains the same article, taken from the Citizen of yesterday evening. It would seem therefore that the article really appeared in the Evening Citizen, which I did not see, and has been telegraphed all over the Dominion of Canada, I presume. I think that under these circumstances the question of whether such a letter was written by General Alderson is an important one to be considered. General Alderson was in command of the Canadian forces in France, and must have had some reputation and experience before he was given that command. When a man having the tremendous responsibilities that he had, as the officer in command during a very considerable period of the most serious fighting, puts pen to paper and makes the statements that are made in this letter, if they were made by General Alderson, all I can say is that I am sorry that the Government does not see fit to deal with the matter in a different way. It is not a matter of arguing at this end of the line, nor is it a matter of producing evidence of what is the opinion of some person in regard to the advantage of this particular rifle under experimental conditions, or at target practice. The question is, what is the value of the rifle while in service in the field. That is the serious point, and that is the point upon which General Alderson is absolutely definite. He makes the most definite and precise statements upon that point. That is a serious question and it is a question that cannot be answered except by contrary evidence as to the result of the use of the rifle in the field. I would respectfully suggest that the first thing to be done is for the Government to satisfy itself as to whether General Alderson wrote this letter or not. If General Alderson wrote this letter, then General Alderson is absolutely discredited as a military man, or else we are left entirely without defence as to the field service qualities of this rifle.

Sir ROBERT BORDEN: I do not know what my hon. friend (Mr. Oliver) means in suggesting that the Government should have taken some other course. We have sent a communication to the Commander-in-Chief, Sir Douglas Haig, who has supreme command of the British and Canadian forces at the front. We have told him that we leave the matter in his judgment after making tests of both rifles under precisely the same conditions as those through which they must pass when in use at the front. That means, as I understand, and I have referred the matter to General Hughes, that means, among other things, that there should be the ordinary shooting test; further, that the rifle must be thrown into the mud or sand, and otherwise put through the very same conditions as those which would be experienced in the ordinary course at the front so that it will be possible to see whether or not, after passing through these conditions, it jams or whether anything goes wrong with it. After these tests have been made, and after the evidence and reports in regard to them have been placed in the hands of Sir Douglas Haig, the British Commander-in-Chief, the whole question is left to his judgment to come to a just conclusion and determination. If there is any better course I would be glad to have my hon. friend suggest it because I am only too anxious to do everything possible to ensure the possession, by our troops at the front, of the best rifle that is available. Up to the present, I have not heard any course suggested which seems to be more useful than the course which has thus been taken.

Mr. REID: I would like to say that I discussed the Ross rifle with my brother-in-law, Col. R. L. Labatt, who was in the battle of St. Festubert, and he said that the Ross rifle was very satisfactory and as good as the Lee-Enfield. He informed me that some soldiers from the British Islands, who were using the Lee-Enfield, were only too glad to exchange it for the Ross rifle. I also discussed the matter with Captain Kidd, another officer of the 56th. He told me that the Ross rifle was very satisfactory. I also discussed the matter with several others who have returned and in every case they have said that they preferred the Ross rifle to the Lee-Enfield. On every occasion upon which I have discussed the Ross rifle with men who have returned from the front, they have praised the rifle.

Mr. MORPHY: Mr. Chairman, I had no desire to take part in this discussion, but when the subject came up, I went to my room and got the memorandum of a conversation which I had with an officer who returned from the front two months ago. I had a long conversation with him about the equipment of our troops, of which con-

versation I made a few notes and I find this under the heading of " The Ross Rifle ":

There is no better weapon in Europe than this Ross rifle which is being brought to assimilate with the Lee-Enfield. The difference between the two, which has been the subject of much discussion in England, is in favour of the sights of the Lee-Enfield, but if the Ross had the same sights, or sights of a similar kind, having great durability, it is thought that it would be the best rifle on the ground.

That was this officer's opinion, given to me in a general interview concerning the condition of the equipment of our troops at the front. I noticed in the press some time ago a statement that there appeared through the lines of the Canadian troops, in either typewriting or printed form, a series of questions, most leading in their character, concerning the preferences of the troops as between the Ross and Lee-Enfield rifles. The questions, a list of which I have seen, were entirely leading and designed to bring an answer favourable to the Lee-Enfield and antagonistic to the merits of the Ross rifle. It may be that the hon. member for Rouville (Mr. Lemieux) had in his mind something that I think would be liable to generate in the mind of anybody, that this propaganda may be carried on by interested parties selling another rifle. As a Canadian it is cheering to me to know that the country sent about 50,000 rifles of Canadian manufacture to assist the troops in the field at a time when there were not enough rifles available from any source for service at the front. I think the country and the Government are to be congratulated upon the foresight that resulted in their being sent to our troops, even if the rifle were not the best on the ground, a serviceable rifle, which, after all, is spoken of highly by a great many people who understand it. I would like to call the attention of the Government particularly to another statement of this officer to whom I have already referred. He said that:

All changes that are being made in the borings of the Ross rifle and the sights could be, and should be, made in Canada.

I would commend the suggestion to the Government, as a matter for consideration, that if further borings or enlargements are to be made, the work should be done here so as to give employment to our own workmen in Canadian institutions.

Mr. PUGSLEY: I think, in view of what the Minister of Public Works (Mr. Rogers) has stated, and the very satisfactory information which he gave with regard to the qualities of the Ross rifle, it is fortunate that my hon. friend from Edmonton has brought the matter up, because this letter, or this alleged letter, will necessarily have very wide publicity throughout Canada, and very great unrest and anxiety will be caused by its publication. It is very desirable to have a public statement made in Parliament in regard to the matter. I quite approve of what my right hon. friend the Prime Minister (Sir Robert Borden) says the Government propose to do, but it seems to me that this letter, or alleged letter, of General Alderson's cannot be disregarded. I would respectfully suggest that it is the duty of the Government to ferret this matter to the bottom, find out whether this letter is a genuine letter that was sent by General Alderson, and, if so, the conditions under which it was sent. It is certainly a most serious matter for General Alderson to have written such a letter. Of course, it is a most serious matter for anybody to have written a letter professing to have been written by General Alderson, it is a very serious matter for a newspaper to publish this alleged letter from General Alderson if it was not written by him, and it is a serious matter for General Alderson to have written a letter disparaging the Ross rifle, which is, as my hon. friend has stated, the only rifle of Canadian manufacture. It is a very serious matter for him to have disparaged it, and the Government ought to find out by communication with General Alderson, or with somebody knowing General Alderson, whether he wrote that letter and what was his justification for having done so. I would think it would be quite possible to follow the matter up and get the requisite information on that point.

Sir ROBERT BORDEN: It would undoubtedly be a serious matter for General Alderson or any one else to write a letter of that character, and the only possible justification for writing it would be to bring about the remedying of conditions that he thought undesirable. But it would be equally a serious thing for any person to cause that letter to be published except under proper sanction. There are thousands of communications, I suppose, every week and every month, important in themselves, designed to improve conditions in the military or naval service or at the front, which it would be most undesirable to make public not only for the reason that they might cause public disquietude, but for the further reason that they would give information to the enemy which it

would be most unfortunate from our point of view for the enemy to have. I must confess my conviction that whoever has caused this letter, or alleged letter, to be published has taken a very grave responsibility. The Canadian Army Corps is, to my knowledge, holding at present a very important position—what one might call a post of honour—in the line in France and Belgium At such a juncture, when operations are impending which may possibly prove to be of the greatest magnitude, it is most dangerous to convey to the enemy, even if it were true, the information that the rifle with which the Canadian army, or a part of it, is armed is not a serviceable and efficient weapon. Indeed, I should not like to speak my full mind about such a course of conduct, but I do venture to say that, according to the view I entertain, it is about as grave a responsibility as any man could take upon himself. We shall certainly endeavour to find out whether that letter is authentic, and if it is not authentic, upon what authority it has been published as authentic. If it should prove that the letter is authentic, the inquiry must go still further: By whose authority, under what sanction, and for what reason was a letter made public which might be of service to the enemy and could not be of service to the people of Canada Why, especially, was it made public without inquiry and at a time when, if the Commander in Chief has acted upon our request, an investigation such as I have described to-night is already in progress? I can assure my hon. friend that the matter will not be allowed to drop.

Mr. OLIVER: I just wish to draw attention to one statement of fact, or alleged fact, contained in this letter, in order to strengthen the view I have expressed that a target or camp test is not an efficient test of a rifle for field service.

Sir ROBERT BORDEN: That is not the test we have suggested.

Mr. OLIVER: General Alderson is alleged to have stated that in the second battle of Ypres the Ross rifle jammed so badly he was obliged to let die a natural death the order that our soldiers were not to throw away the Ross rifles and take up the Lee-Enfield. He says: "When the division was re-armed with the Lee-Enfield the men cheered loudly on hearing the news, and it was found that there were already more than 3,000 of the rifles in the division." That is to say, according to this letter, contrary to the General's orders, 3,000 men had thrown away their Ross rifles and picked up the Lee-Enfield. Now the factor upon which more than anything else depends the lives of these men and their success in the field is the efficiency of the rifle in their hands, and under those circumstances I cannot imagine that 3,000 men—intelligent men, earnest men, men of our own—would throw away the more efficient rifle and pick up the less efficient rifle. This is either a statement of fact or it is not a statement of fact. If this letter was written by General Alderson, we are bound to assume that it is a statement of fact. If it is a statement of fact, I do not think there is anything further to be said. It is now, not what is to be said, but what is to be done. The Prime Minister has outlined the course he proposes to take, and it is certainly the course to be taken. The only criticism that I would offer is that it is a course that should have been taken very long ago, because if the conditions alluded to in this letter as existing prior to the second battle of Ypres actually did exist, surely those conditions must have in some manner come to the attention of the Government, and in such a form as to have claimed their consideration. I cannot imagine that not to be the case; and, assuming it to be the case, action and not words was certainly what was required. It is a terrible responsibility to have any part in exposing this alleged condition, but allow me to say that the responsibility for the existence of such a condition is ten thousand times greater.

Sir ROBERT BORDEN: My hon. friend, I think, must have forgotten what has been said in this House more than once, or he would not have made the observations which have fallen from him just now. The only difficulty with the Ross rifle that I ever heard of before I went to Great Britain last year was with regard to jamming. So far as I can remember, I heard of no other difficulty during my visit. That jamming was not confined to the Ross rifle; it occurred in a very great measure—in almost equal measure, I think—with the Lee-Enfield rifle; and if we had taken away from our men the Ross rifle and armed them with Lee-Enfields, jamming would still have occurred if the same ammunition had been used. Moreover, so far as we are aware, no Lee-Enfields would have been available. I cabled to Great Britain about five or six weeks ago in connection with further orders for the Ross rifle extending beyond April,

1917. I asked whether, if the war should not be over at that time and we should need further supplies,we could depend upon obtaining rifles from the British Government after April, 1917, to any, and if so, to what extent. We did not receive a reply that would justify us in depending upon them for one single rifle even after that date.

When it was discovered that the Ross rifle, as well as the Lee-Enfield rifle, did jam with certain types of ammunition—but not with others—it was thought desirable to enlarge the chamber of the Ross rifle. It was thought desirable by the British Government, as I am informed, to enlarge the chamber of the Lee-Enfield. This course was taken with regard to each rifle for precisely the same reason. I do not affirm that there was the same amount of jamming in the Lee-Enfield as in the Ross. I do not know about that; I have heard contradictory statements with regard to it. The Minister of Militia directed that the enlargement made in the chamber of the Ross rifle should make that chamber slightly larger than the enlarged chamber of the Lee-Enfield, in order that we might be on the safe side. I am informed that the Ross rifles were all called in and the alteration in the chamber was made, and in the new Ross rifles afterwards produced the chamber was made of the enlarged size. My hon. friend suggests the Government should have taken some earlier action. I have not heard of any difficulty except with regard to the jamming. The Government took the advice of the best experts it could obtain, and took the same course with regard to the Ross rifle that was taken with the Lee-Enfield under the advice of the British military experts. We made our chamber, as I have said, slightly larger than that of the Lee-Enfield. Notwithstanding this, we have since heard occasional rumours of criticism upon the Ross rifle. We have tried to keep in touch with the conditions with regard to it. We have communicated many times with Sir George Perley. Sir George has been present at tests in which, he tells me, when good ammunition was used, he had seen one hundred rounds each of two kinds of good ammunition fired from the Ross rifle and the Lee-Enfield, without the slightest difficulty —without any back-firing or mishap. But he has seen inferior ammunition used with both rifles and difficulties experienced with both. If there is anything we should have done, beyond what is suggested, I should be glad to have the views of my hon. friend with regard to it.

In view of later developments, we have asked the Commander in Chief—this is not something we propose to do, as one hon. member has suggested, but something we have done—we have sent a communication to the Commander in Chief asking him to have tests made of the Ross rifle and the Lee-Enfield rifle under conditions precisely similar to those experienced at the front, so that we may know what the efficiency of each rifle is under the conditions which the soldiers encounter in actual warfare in the trenches, so far as those can be duplicated; dropping the rifles into sand or into mud; embedding them in mud and pulling them out and then using them; dropping them into water; using them under every condition that can be imagined as likely to occur in active service. If there is any better test than this that can be devised I do not know what it is. I am perfectly willing to receive suggestions and, if reasonable, to act upon them.

Mr. OLIVER: Can the Prime Minister say what is the occasion of the exchange of the Ross rifle for the Lee-Enfield in the First Canadian Division?

Sir ROBERT BORDEN: We have no information about it except that the exchange was made. We imagine and presume that General Alderson, finding that a number of the rifles had jammed, through the use of the ammunition to which I have alluded, thought it better to make an exchange, and the exchange was made. We had no voice in it and made no objection to it. But when, at a later date, the subject was brought up during the visit of the Minister of Militia to Great Britain, it was decided to take the course which has been mentioned—to enlarge the chamber of the Ross rifle.

Mr. OLIVER: What became of the Ross rifles that were taken from the First Division?

Sir ROBERT BORDEN: I presume they were called in and the chamber enlarged.

Mr. OLIVER: What became of them afterwards?

Sir ROBERT BORDEN: I really do not know.

Mr. OLIVER: Is the Second Division armed with the same?

Sir ROBERT BORDEN: It is armed with the Ross rifle, as I understand it.

Mr. OLIVER: Those that were called in?

Sir ROBERT BORDEN: I do not know whether they were armed with those that were called in or whether new rifles were sent over. But I understand that they are armed with the Ross rifle with the enlarged chamber.

Mr. OLIVER: I do not wish to prolong the discussion, and particularly I do not wish to bring in here any discussion of the alleged imperfections of the Ross rifle. I have never given any opinion of my own with regard to this weapon, and have given no information as to what has come to my ears. I am merely desirous of bringing to the attention of the Government in this way which admits of no question, the alleged opinion of General Alderson, for the purpose of finding out whether this is the opinion of General Alderson or not. I am prepared to let the matter rest at that, with this exception—that I am compelled to repeat in a measure what I have said before: that at the time when the change was made of the rifles of the First Division, that is when the first division was disarmed of Ross rifles for the purpose of arming it with Lee-Enfields, it appears to me that, in view of the rumours that must have reached the ears of the Government at that time, that would have been the time when the action now taken should have been taken.

Sir ROBERT BORDEN: A great many tests of the Lee-Enfield rifle and the Ross rifle have been made on different occasions within the past year.

Mr. NESBITT: I desire to say a word before these Estimates go through. The Minister of Finance this year brought down Main Estimates amounting to $188,981,218. He told us that, owing to the war and the needs of the country, it was quite necessary that the country generally should economize, and that each individual in the country should do the same. We on this side innocently supposed that that included the Government. The Supplemenary Estimates for 1915-16, which were afterwards brought down amounted to $4,485,537. Then we had Supplementary Estimates for 1916-17, the total of which was $28,284,081. Add the $4,000,000 in the vote before us, and you have a total of $225,741,836. The hon. minister said that $25,000,000 of the Main Estimates would not be used. Deducting that amount you still have an estimated expenditure for this year of $200,000,000 in round figures. Then, we have a war vote of $250,000,000 which will largely have to be borrowed. I think the hon. Minister of Finance was absolutely right when he said that the country and the individuals who make it up would have to economise this year, and probably for several years, owing to the heavy expenditure which the country was being called upon to make. I congratulated him at that time upon his giving that notice, because coming from the Minister of Finance it has some weight. But in spite of that we find the Government including in the Estimates certain amounts the expenditure of which is unnecessary. We are reminded of the old adage, "Example is better than precept," which I think may well be applied to this case. We discussed the question of providing for the purchase of the Quebec, Montmorency and Charlevoix railway and the other railways mentioned in this item, and I shall not discuss them at any length to-night. The Lotbinière and Megantic railway is in just as good a position now from a financial standpoint as it possibly can be, and there is no reasonable object in purchasing it. It has been there for some years, and it connects with the Intercolonial. The other piece of railway from Quebec to St. Joachim is, they say, a paying road. I have no desire to take that road from its present owners if it is a paying road; I would like to see them make some money out of it. The other piece of road that is proposed to be taken over, from Montmorency Falls to Nairn Falls—

Mr. LEMIEUX: From St. Joachim.

Mr. NESBITT: I cannot pronounce that. Anyway, a portion of this Quebec and Saguenay road is only partially finished. The excuse for taking it over is that 30,000 people have lived in that district for one hundred and fifty years and are looking for a railway. In my judgment they will not have heart trouble if they wait a couple of years longer until the war is over.

Sir ROBERT BORDEN: A couple of hundred?

Mr. NESBITT: Well, in a couple of hundred years perhaps we shall have got over this war indebtedness. Another excuse offered is that it is to relieve certain gentlemen who have invested in this pro-

ject, which is not supposed to be a paying proposition. If the Government are going to turn philanthropist and come to the relief of people who have invested in things which have not been profitable, I would like them to commence with me, because, like many other persons I could mention, I have invested in many things that did not pay. If the Government are going to proceed along this line they will have their hands full. These are the only two excuses that the Government have given for taking over this railway. This vote is for $4,000,000, but I firmly believe, with the hon. member for South Renfrew, that to put these roads in running order and equip them will cost $10,000,000 or $11,000,000; so that this is only the commencement. Therefore, as no reasonable reasons have been given for this expenditure, I beg to move that the item be struck out.

Sir THOMAS WHITE: The hon. member has referred to my statement in the Budget as to keeping down the expenditures of the Dominion. I think I have shown on many occasions since the Budget was brought down that it has been the object of the Dominion since the war broke out to keep its expenditures within as reasonable bounds as possible. The figures themselves show that. Speaking from memory, the expenditures of the Dominion for the fiscal year immediately preceding the outbreak of war was in the neighbourhood of $180,000,000. This year we shall have to pay interest charges in connection with our increased public debt to the amount of about $25,000,000 in excess of interest charges which were paid for the fiscal year preceding the outbreak of war. Notwithstanding that fact, the expenditure on ordinary and on capital account of this Dominion for the present fiscal year will be less by $15,000,000 than it was for the fiscal year preceding the outbreak of war. I say that this is an absolutely creditable record, if we can accomplish it. Practically no public works have been gone on with except those under contract.

9 p.m.

Mr. NESBITT: Did not the hon. minister tell us, when he made his Budget speech, that the expenditure would not be over $155,000,000?

Sir THOMAS WHITE: I said that $160,000,000 would be our expenditure on ordinary and on capital account. If we keep within that Estimate, as I hope, we shall be doing $20,000,000 better than we did for the fiscal year preceding the outbreak of the war. Since the main Estimates have been brought down we have been obliged to face the Canadian Transcontinental railway situation, which has been discussed in the House. I need not say that we have not been looking for railways to which to give public moneys. A certain railway situation exists, and we have to meet that situation. The course that we have followed has been such as to meet the approval of the great majority of the members of this House and the people of the country so far as the Transcontinental railway situation is concerned. Therefore, what I understood to be the argument of my hon. friend that we had added some $23,000,000 to the main Estimates falls to the ground. I would point out, further, that that expenditure cannot be classed as either ordinary or capital expenditure; it is an investment. We borrow the money in New York at 5½ per cent or thereabouts, and we lend the money out to a railway company at 6 per cent.

Mr. NESBITT: My argument was not against the expenditures on the transcontinental railways. It was that, owing to that and the war expenditure, there was no necessity for us to enter upon this expenditure.

Sir THOMAS WHITE: My hon. friend was developing his argument, and I understood him to say that, in addition to the Main Estimates, we brought down $23,000,000 for the railways.

Mr. NESBITT: I did not say that.

Sir THOMAS WHITE: I pointed out that that expenditure would be on investment account, and that the Dominion Government would lose nothing on that, provided the interest was paid. My hon. friend next comes to the item of $4,000,000 to provide for the acquisition of the lines of railway which he has mentioned, and to provide for expenditure on account of construction. That is undoubtedly expenditure upon capital account.

Now what is the position with regard to these railways to which my hon. friend has drawn attention? In the first place, the little railway which he mentioned, the Lotbiniere and Megantic, involves the expenditure of how much? About $330,000. That is certainly not a large amount in the Estimates of the Railways and Canals Department, a department which, almost every year, takes over some branch line.

So that, so far as that particular item is concerned, I think it can be put on one side. I understood it to be stated in the House that there were earnings in connection with that railway, and the probabilities are that it will not be any considerable charge upon the revenues of the Dominion. At all events, it is not a very large amount; and, as far as I can make out, it has been the policy of both this Government and the late Liberal Government to add to the Intercolonial those branch lines. I have heard discussions in this House time and time again since I have had the honour of occupying a seat here, in which the view was put forward that the Government should, in the interest of the public, acquire most of the branch lines connecting with the Intercolonial. We now come to the Quebec, Montmorency and Charlevoix and to the Quebec and Saguenay railway. For what is the Government taking over these roads?

Mr. NESBITT: That is what I would like to know.

Sir THOMAS WHITE: I have given this matter a good deal of consideration. One might ask himself why, in the first instance, men should embark upon the construction of such a railway. The names connected with the railway at its inception are the names of men of some eminence in the province of Quebec. They are men of standing in the community, and the fact is that they believed in the Quebec and Saguenay. They acquired a charter which was granted by the Provincial Government in 1905. The names of the parties who took up that project originally are names of some standing in the province of Quebec. The charter was a provincial charter, and the Government of Quebec must have been impressed with the desirability, in the public interest, of constructing that road, or the province of Quebec would not have granted a subsidy, as they did grant a subsidy in lands and in money, for the construction of the road. That seems to me to be clear. We must assume that the Government of the province of Quebec knew what it was doing when it authorized a charter in the first place, and granted a subsidy in the second place. Further than that, the late Liberal Administration gave a subsidy for the construction of the Quebec and Saguenay. They also must have been convinced that it was required or desirable in the public interest, or they would not have taken the responsibility of making a grant of public money for the construction of that line.

Mr. LEMIEUX: Are not all railways entitled to subsidies?

Sir THOMAS WHITE: I do not think they are. My hon. friend would never lay down the proposition that, because men desire to build a railway, they are, as a matter of course to get a subsidy. My hon. friend knows as well as I or any gentleman in this House that the late Government did grant a subsidy to this line, and that they must have come to the conclusion that it was a proper line to subsidize in the national interest or they would not have taken the responsibility of doing so. Now, what can be said in favour of building a line of railway along that north shore? My right hon. friend the leader of the Opposition (Sir Wilfrid Laurier) gave some reasons the other day which appeared to me to have great weight. It is an old settled district of the province of Quebec. Settlement has been there for 150 or 200 years. The only access, for certain portions of the year, to the city of Quebec is by stage coach, at least that was stated. While it might be extremely imprudent from the standpoint of private enterprise to build a road—although I do not pass upon that because I am not sufficiently familiar with the situation—at the same time it might be very desirable in the public interest that the Government should either build or assist in building a road which would give access to that district and give these people a means of getting out in the winter time, in fact at all seasons of the year, to Quebec. It is by no means a conclusive argument against either the Government of Quebec or the Government of Canada assisting in the construction of or building a road of that kind, that private enterprise might find it unprofitable, because a Government must consider the various sections of the country, and if it reaches the conclusion that a certain line of railway should be built for the benefit of a particular district, it need not too closely scrutinize the question of whether or not that line will be immediately remunerative. That is my view. But I admit that a strong case must be presented before a Government takes any action of that kind. We have not been desirous of paying out public moneys, especially in times like these, except in cases which were regarded as urgent. What is the position?

Let us assume that the north shore should be served, that it is in the interests of the public that the 30,000 people in that district should have communication with the city of Quebec. There is the position this Government found. Some $5,000,000, as has been explained, had been expended by private enterprise on the Quebec and Saguenay, from the terminus of the Quebec, Montmorency and Charlevoix to Murray Bay. Some $5,000,000 has been spent and what is the condition of that road? For the last two years the proprietors have been unable to find the money to finish it. The road therefore has been deteriorating. The capital which has been invested in the road represents a larger sum than the road to-day represents, with the deterioration which has occurred. That depreciation or wastage is going on from year to year; washouts are occurring; the roadbed is being impaired. The way this matter has appealed to me is that if it is in the public interest of that section of the province of Quebec that that railway should be built —and that is the assumption upon which I am proceeding—then it is not economy to allow the road to continue as at present —with a deterioration of probably half a million dollars a year. My premise is that it is desirable in the public interest that that road should be completed and if that is so, then I think, instead of allowing the deterioration which we know is going on to continue, it would be the part of economy, if the Government is ultimately to complete the road, that it should do so and prevent the wastage. I lay that down as a common sense proposition. My hon. friend has raised the question, why do you buy the electric line between Quebec and St. Joachim?

Some hon. MEMBERS: Hear, hear.

Sir THOMAS WHITE: I leave it to my hon. friend from Rouville, who is a master of the French language, to say if my pronunciation of that name is not truly Parisian.

Mr. LEMIEUX: It is very good. It would not be good French if it were Parisian. That Parisian French is good French is a mistaken idea, common among my friends from Toronto.

Sir THOMAS WHITE: Some of my hon. friend's colleagues think that they know French, but they do not. My hon. friend has asked about the electric line from Quebec east. My hon. friend is a pretty good business man, but will he tell me why the Government should have acquired the Quebec and Saguenay alone, a line which begins about 30 miles east from Quebec?

Would he tell me why the Government should acquire the Quebec and Saguenay line, which begins about thirty miles east of the city of Quebec, unless we acquire also the Quebec, Montmorency and Charlevoix line? A line thirty miles away from the terminus of the Transcontinental railway would not be of much use either as a feeder, or as a line to be operated in connection with it.

Mr. NESBITT: I am afraid that my hon. friend is quite right, and I said that we should not acquire it.

Sir THOMAS WHITE: That may be. I am positive that the interests of that portion of the province of Quebec which lies to the north of the St. Lawrence river require it. My hon. friend, as a private individual, might not desire to put money into it, or to build such a railway.

Mr. GRAHAM: If he did he would try to get it out again.

Sir THOMAS WHITE: Quite so, but if the public interest is such that that railway is required it is the duty of the Government not to allow that large amount of capital to go to waste. It is necessary, therefore, to acquire the Quebec, Montmorency and Charlevoix railway in order that we may connect with the Quebec and Saguenay and have a continuous line from the city of Quebec to Nairn Falls.

Mr. NESBITT: My hon. friend just commenced at the wrong end of his argument. He took it for granted that we should acquire the part that is not built.

Sir THOMAS WHITE: The point of my argument is that there was a very large sum, some $5,000,000, invested in the Quebec and Saguenay railway, and if it is desirable that the Government should complete that road, as we submit it is, it is absolutely necessary that we should acquire the Quebec, Montmorency and Charlevoix railway in order to have a continuous line. These are the considerations that have appealed to me in connection with this transaction. So far as the Quebec, Montmorency and Charlevoix line is concerned, there are $2,500,000 of bonds issued some years ago, and bearing 5 per cent. The Government takes over that

line and assumes the obligation of the bonds. So far as the Quebec and Saguenay line is concerned, the Government is acquiring that railway on a basis of actual cost, not to exceed some $4,000,000, which, as a matter of fact, is much less than the actual construction cost. That is the situation, and it all comes back to the question whether it is in the public interest—in the interest of that large section of the province of Quebec which lies to the north of the St. Lawrence, that the Government should come to the aid of this road, acquire it, and complete it in order that the district may be served; or whether, on the contrary, the road bed of the Quebec and Saguenay line should be allowed to deteriorate from year to year at a loss of hundreds of thousands of dollars annually, and, ultimately, of all the capital invested.

It seems to me that that is the question. My right hon. friend the leader of the Opposition dealt with it very fairly. He had no objection to our acquiring the line. He knows the district down there, and my hon. friend from Rouville (Mr. Lemieux) also knows the district. I doubt very much if either of those hon. gentlemen would stand up and say that it is not in the public interest that the road should be acquired in order that that district may have railway facilities. If you look at it from the standpoint of a railway promoter desirous of making a large amount of money out of the enterprise, that is one thing; but if you look at it from the standpoint of the people down there, who belong to one of the oldest settled districts in Canada, who are, I suppose, among the worthiest people in Canada, and who are debarred from getting to the city of Quebec for so many months in the year, I think these are considerations which would appeal to any public man. Take the National Transcontinental railway, built at a cost of $150,000,000, or $160,000,000, or $170,000,000. No one would stand up in this House and say that that would give a return on the investment. A return of four per cent on that investment would be some $6,000,000 or $7,000,000 per year. No one will say that the Government is obtaining a return upon that railway. Private enterprise would not build a road of that kind, and yet it was built—I am not passing upon the merits—it was built, and hon. gentlemen opposite will defend the building of that road. They will not say that it is immediately profitable. They will say it was built for the purposes that have been so often mentioned in this House.

I do not want to make any special argument on this question. It is a matter involving the expenditure of a large sum of money, and the considerations which have influenced me favourably are that it is in the public interest of that northern district, lying along the St. Lawrence, to have railway communication with the city of Quebec. We are acquiring these railways for the Dominion of Canada. We are not making loans; we are not giving guarantees; we are not subsidizing. We are buying these roads, and when they are bought they will belong to the Dominion of Canada. The price is to be fixed by the Exchequer Court, and it is not to exceed a certain amount, which is much less, in the case of the Quebec and Saguenay railway, than the amount that has been spent upon it. These are the considerations which have had weight with me in this transaction.

Mr. TURRIFF: In the past four years we have heard in this House, week after week, month after month, session after session, hon. gentlemen on the treasury benches complaining of what the Grand Trunk Pacific railway cost, and of all the hon. members who complained none was louder or stronger than my hon. friend the Minister of Finance.

Sir THOMAS WHITE: What is that?

Mr. TURRIFF: I say that of all the members on the Government benches who have fulminated week after week, and month after month, in this House against the cost of the Grand Trunk Pacific railway from Moncton to Winnipeg, none was louder than my hon. friend the Minister of Finance.

Sir THOMAS WHITE: I think there were some.

Mr. TURRIFF: None was louder in pointing out that the cost had been excessive, and that there was no justification for the cost of the Grand Trunk Pacific. Let me tell my hon. friend the Minister of Finance one or two things. Leaving out the question of interest, the cost of the Grand Trunk Pacific railway from Moncton to Winnipeg, the best built railway on the continent of America, was less than $85,000 per mile. With a grade of 4-10 of one per cent one way, and 6-10 of one per cent the other way, with heavy rails, telegraph lines, station houses, everything complete, and in

first-class shape, it cost less than $85,000 per mile. Now my hon. friend the Minister of Finance comes forward and from his place in this House justifies the purchase of a right of way. It is only a right of way, on which 87 per cent of the grading has been done, and a great deal of that has been washed out. He defends the purchase of that road at a cost of $98,000 per mile.

Mr. REID: That statement is not in accordance with the facts, and the hon. member should not make it.

Mr. TURRIFF: The Acting Minister of Railways may say that that statement is not correct, but, taking the figures given by my hon. friend from Charlevoix, $4,500,000 worth of bonds was issued on that road and $1,500,000 in addition. If you figure that out you will find that the Government is taking over a road which cost, it is claimed, $98,000 per mile, and it is not taking it at its full value.

They are tying up the judge of the Exchequer Court hand and foot so that he cannot take the value of the road, but he must take the cost as shown by the present owners who are selling to the Government, subject to the fact that it is not to be more than $2,500,000 bonds, plus $4,465,000, less all subsidies paid; whereas you have a completed road, the finest on the continent, at a cost of $85,000 a mile, and the Government now, to help out political friends, are willing that the Canadian people should pay $98,000 a mile for a right of way only, not a tie, not a bit of telegraph wire, not a telegraph post, not a station house, not a rail, not a bridge, not anything. I heard the statement made by some hon. gentleman in the House yesterday that this was just a lumber road in the first place. Now they put it over on the country, and they propose to put it in such a shape that the judge of the Exchequer Court has to take the cost of the road as shown by the owners. The owners claim that they have put into the road the proceeds of the sale of $5,600,000 worth of bonds and $1,500,000 of Canadian money, but they have nothing to offer for all that, not even a rust streak, but some grading. Hon. gentlemen opposite come forward and load on to the people of Canada, not a completed road, but a road which, when completed, will cost $10,000,000. The Minister of Finance, in spite of all the difficulties that he has pointed out during this session in the way of financing the debt of Canada in the future, now deliberately adds $500,000 to the fixed charges of Canada. I hope, after this transaction, we will never hear another word from hon. gentlemen opposite about the cost of the Grand Trunk Pacific. That cost may have been excessive, that cost may have been too heavy, but we certainly got a first-class road completed for $85,000 a mile, and here we have an expenditure of $98,000 per mile when even the grading has not been done.

Mr. LOGGIE: I would like to make a few remarks about this matter. If I understand it correctly, the Government propose to take over 136 miles of railway at a cost of about $50,000 a mile, a part of which is completed and a part not completed. What I object to strongly is the departure of principle as to the acquisition of branch railways. If you are going to adopt a principle with regard to the taking over of branch railways, you ought to apply the same principle to the taking over of branch railways along the line of the Intercolonial. I want to recall to the committee how a branch line was taken over some few years ago. They did not set about to value the railway on the basis of what it cost and then deduct from that cost the subsidies paid and depreciation, but they put valuators on the railway and they purchased 125 miles between Fredericton and Loggieville at a rate of $6,000 per mile, equipped. The railway was purchased from the Gibson Manufacturing Company at the very low price of $6,000 per mile. A railway 125 miles in length was acquired for an outlay of $750,000, including equipment, cars and everything in connection with the operation of the road. If the principle that now applies had applied to the purchase of the Canada Eastern at that time I venture to say that it would have cost twice as much as it did. If you are going to adopt a principle regarding the purchase of branch lines, then I want you to apply it to the branch lines you purchase in the future. There are branch lines along the Intercolonial that it is most urgent in the public interest the Government should take over. The districts that they traverse are not properly served, and the mercantile interests are retarded because there are not proper railway facilities. If you are starting out now on a new principle of taking over branch railways, valuating them at the cost price, less depreciation and bonuses paid, you should apply the same principle in the purchase of other branch lines. I cannot say

that I am against the taking over of this road in the public interest. I believe that there is a good deal in what the minister has said that if the company is not strong enough to complete the undertaking, then strong men must come in and rescue it in the public interest. But, the same principle ought to apply to other branch lines.

Mr. LEMIEUX: I must say a word in connection with the vote I am about to give. If I were seeking for popularity, it would be quite easy to give a vote this evening, because I would vote for the interests of Charlevoix county and the city of Quebec. But there are other considerations, and I think the Minister of Finance (Sir Thomas White) has not given the same attention to this question that he gives to other business. He seems to forget that this country is loaded with a colossal debt, and that we will have to find money for the interest charges. He forgets that the people of the country, individually and collectively, in municipalities, cities and towns, have to bleed themselves white in order to do their share towards helping the great cause we have at heart. I quite believe my hon. friend the Minister of Finance when he says that the uncompleted section of the Quebec and Saguenay should be aided. I think that the promoters of the line should be aided materially and substantially to enable them to complete it. The people have been waiting for years for connection with the city and district of Quebec, and now material assistance should be given toward the completion of the line. But, Mr. Chairman, what my hon. friend has not explained to the committee, and what he will not be able to explain, is the fact that instead of aiding the only road which requires assistance, he is a party to a scheme which involves the Government in the taking over of three railways. The members of the committee this evening are not aware that the Minister of Finance, and the Acting Minister of Railways and Canals, are not, with this amount of money, buying one continuous railway system. That ought to throw some light on this scheme. Does my hon. friend believe, in his heart of hearts, that at the present moment he is asking Parliament to devote a sum of money to the acquisition of a continuous railway system?

Sir THOMAS WHITE: The Lotbinière and Megantic is on the other side of the river.

[Mr. Loggie.]

Mr. LEMIEUX: The Lotbinière and Megantic has no connection whatever with this. It starts from Lyster in the county of Megantic and runs to St. Jean des Chaillons in the county of Lotbinière. It is a little bit of railway that looks after the lumbering needs of the district.

Sir THOMAS WHITE: How much has been paid for that?

Mr. LEMIEUX: The Government is paying $330,000. Now this railway is paying its own way; the people are not clamouring for the Government to acquire the road. Are there any petitions from the people of this district asking the Government to take over this road? I make bold to say there is not one such petition on the files of the Department of Railways and Canals. Why then should the Government saddle the people of this Dominion with this unnecessary obligation? The other railway starts from Quebec and runs to St. Joachim in the county of Montmorency. This is a tramway, and it is also paying its way. Nobody has ever clamoured for the Government to take over this road. The other railway which the Government intends to take over is the Quebec and Saguenay, which runs from St. Joachim to Murray Bay. And I quite agree that that section of the country should be generously aided by the Government. But why is the Government taking over three roads at a cost of $6,000,000 when only one of them needs assistance? With substantial assistance from the Government the Saguenay road could be completed and its trains run right into the city of Quebec, if running rights were secured over the Quebec, Montmorency and Charlevoix railway. This item should be reduced by at least $2,000,000; the balance of the vote would allow the Quebec and Saguenay road to be completed and fully equipped. I ask the Minister of Finance what reason in the world is there, at this present juncture, when the people all over the country are being bled white in taxes for the war and contributions to the Red Cross, the Blue Cross, the French, and Servian and Belgian Relief Funds, why the people of this country should be saddled with this $6,000,000, when the only one of these three roads which is not completed is the Quebec and Saguenay, and when that could be completed for $2,000,000?

Sir ROBERT BORDEN: Under the conditions to which my hon. friend has alluded,

why did he ask us last evening to pay out, in addition to this $6,000,000, a couple of million dollars to the gentlemen who had invested in this road in the first instance?

Mr. LEMIEUX: That is a different proposition entirely. My argument was this, and as the Finance Minister was not here last night I may as well repeat it. The hon. member for Charlevoix stated last night that the Quebec and Saguenay had sold its bonds partly on the French market and partly on the Canadian market, and that $1,000,000 was absorbed by a group of financiers in Montreal and Quebec, and $4,600,000 by investors in France.

Sir RODOLPHE FORGET: The $4,600,000 of bonds produced only $3,800,000. The Canadian money has no mortgage whatever; it comes after the French bonds.

Mr. LEMIEUX: French investors subscribed the greater proportion. Now the road has failed.

Sir RODOLPHE FORGET: No, it hasn't.

Mr. LEMIEUX: The French investors were lured into investing in this enterprise by prospectuses which were circulated broadcast in France, and which contained the name of an ex-colleague of my hon. friend the Minister of Finance. The French investors were told that the road would extend not merely as far as Murray Bay, or even St. Catherines Bay, but as far as Cape St. Charles on the Labrador coast. The road was represented as being nearly half a transcontinental railway. It was further represented that there would be a surplus of over $300,000 the first year. The prospectus stated that the present Canadian Government was granting the road a mail subsidy of $50,000 per anum—which was untrue. Afterwards, I admit, the promoters modified the prospectus and stated that the mail subsidy would not be $50,000. Later on, too, the Hon. Mr. Pelletier, who was then Postmaster General, withdrew his name from the company. But before he resigned the company had obtained the millions that have been referred to by my hon. friend the Postmaster General tonight. French investors put their good money into this road in good faith, and I say that their claims should be considered if the claims of these other people are to be considered. If, as the Acting Minister of Railways says, the bondholders of the Quebec, Montmorency and Charlevoix are to get a hundred cents on the dollar for their bonds, why should not the French bondholders be given the same treatment? Is it because they are on the other side of the ocean?

Surely the fact that they are our allies is no reason why we should treat them as enemies. I am told: But the French bondholders have sold their bonds. Yes, but, as I explained to the House yesterday, they sold their bonds because of the failure of a company to carry out the rosy scheme which was represented to the bond holders as being actual and possible.

Sir RODOLPHE FORGET: By whom?

Mr. LEMIEUX: And also they were told that they would lose everything if they did not sell their bonds at the price offered them. So much was this felt by them that a vigilance committee was appointed which received the offers which were made. My hon. friend from Charlevoix (Sir Rodolphe Forget) asked by whom the offers were made to sell the bonds? They were made by the Canadian group. I do not give the names of that group; I do not know them, but I suspect who they are. My hon. friend from Charlevoix knows more who they are, because he belongs to the financial world in Montreal, and I do not. The French bondholders had to sell their bonds at forty cents, thirty cents, twenty-five cents, on the dollar. If you give the Canadians one hundred cents on the dollar for these bonds, the French bondholders should be given that value.

Sir THOMAS WHITE: Why does the hon. member say that it is proposed to pay one hundred cents on the dollar for the bonds of the Quebec and Saguenay?

Mr. LEMIEUX: The Acting Minister of Railways (Mr. Reid) said that yesterday.

Mr. REID: I did not say so. When the hon. gentleman is through I will explain what I did say.

Mr. LEMIEUX: Well, let the hon. gentleman explain.

Mr. REID: The statements made by the hon. member for Rouville (Mr. Lemieux) in regard to this matter are not in accordance with the facts. I said that, under the arrangement made the judge will take up these several roads with a view to ascertaining what actual money has actually gone into them.

First, let us suppose, he will take up the Quebec, Montmorency and Charlevoix

and will ascertain what has been actually and legitimately expended on that road. In the same way, he will take the Quebec and Saguenay, and also the Lotbinière and Megantic. Then the three amounts will be added together. Assume that $2,500,000, an amount equal to the bonds of the Quebec, Montmorency and Charlevoix, is found to have been expended on that road. Then, assume that an amount equal to $4,039,000 as a maximum is found to have been expended on the Quebec and Saguenay. In either case the amount may be less. Then, assume that it is shown that $330,000 has been expended on the Lotbinière and Megantic. Now, what is the hon. member asking us to do? He has no objection, he tells us, to a loan of $2,000,000 to the Quebec and Saguenay, in order to complete the road. He knows that there is $4,680,000 of bonds on that railway to-day; the French investors only paid $3,822,000 for those bonds. He knows also that the contractors have a claim for over $1,000,000 on the road. Besides, there is $500,000 to be paid for right of way and other claims. This makes a total of over $6,000,000. Yet the hon. gentleman comes here and tells us that, instead of getting the whole road for $4,039,000, we should loan the company $2,000,000 and come in behind this $6,000,000 which now stands against the road. If I am not representing his position correctly, I hope he will tell me. We say that instead of loaning $2,000,000, leaving to stand against the road $4,680,000, of bonds with interest, it is much better to pay a maximum amount of $4,039,000 and own the road free of incumbrance.

Mr. GRAHAM: But you are not going to get a road.

Mr. REID: The hon. gentleman's leader (Sir Wilfrid Laurier) has stated in the House that this road is a necessity.

Mr. GRAHAM: But you are not going to get a road for this money.

Mr. REID: We will get a clear title to the road for $4,039,000.

Mr. GRAHAM: Only to what is there.

Mr. REID: We will get a clear title to a road eighty-seven per cent of which has been completed.

Mr. GRAHAM: No.

Mr. REID: The engineers say that the road has been completed to the extent of eighty-seven per cent.

[Mr. J. D. Reid.]

Mr. LEMIEUX: There are no rails, no ties.

Mr. REID: The hon. member had the papers before him yesterday. Among them was the report of Mr. Beckwith, an engineer of the Intercolonial, which, I think, stated that there were 470,000 ties. We are not only getting the road in its present condition, but we are getting an equipment with the Quebec, Charlevoix and Montmorency road. The engineer said that eighty-seven per cent of the road is completed. I discussed this matter with the contractor who had this work at the time the work stopped.

Mr. LEMIEUX: How many miles of rail have been laid on the Quebec and Saguenay?

Mr. REID: There are 9 miles in operation.

Mr. LEMIEUX: At the end of the line.

Mr. REID: Yes. Supposing there were no rails on it at all, the contractor who had the work told me at the time that he was willing to complete that road and put it in operation for $700,000. This contractor received nearly all of the $5,000,000 that have been expended up to date. Therefore, for any member to say that the road is not completed to the extent that it really is completed is most unfair. If we pay $4,039,000 for the Quebec and Saguenay instead of accepting the proposal of the hon. member for Rouville, we will save exactly $4,000,000. The hon. gentleman wants us to loan $2,000,000 behind the $6,000,000 that is now against the road. The hon. member claims that this road is only a tramway. I cannot for the life of me see why the member for Rouville wants to belittle that piece of road from Quebec to St. Joachim. From all the information I have that road is as well built as any part of the Transcontinental. It has 80 pound rails, is double tracked and is equipped with an electric system. There is a good equipment and there are valuable terminals in the city of Quebec. Any hon. member knows that to have the Quebec and Saguenay commence nowhere and end nowhere, not going into the city of Quebec, would be an unreasonable proposition. Furthermore, when it is extended into Quebec we shall be increasing the terminal facilities in connection with the Transcontinental railway. This proposal will be of very material benefit to the city of Quebec, and to that part of the province extending down to Murray Bay. To Murray Bay people

come from one end of the Dominion to the other—yes, from all over the United States. The only way they have been able to get there has been by crossing by ferry from the south shore, or by taking the Richelieu and Ontario steamer. I think that the hon. member is unfair to his native province when he does not help that province as I think he ought to. The hon. gentleman was one of the members of the Government who did their best to have this road proceeded with. He advocated the subsidy; he was in favour of tying the people of this Dominion up to that great enterprise. After taking that attitude, I do not think the people will justify his making a proposal which would involve the expenditure of $6,000,000 instead of $4,000,000.

Mr. LEMIEUX: My hon. friend has stated what is true. I advocated the construction of that road; I helped to secure subsidies for it, both provincial and federal. I am still willing, in the interests of the county of Charlevoix, to vote for a substantial amount in order to complete that line. But that does not justify the Government in buying three roads when only one should be aided. That is what I object to. It would be quite easy for me to vote with the Government in favour of this item. It would certainly be welcomed by the members of the Government and probably by the people in the county of Charlevoix; but I care not. I am here to do my duty. The people of Charlevoix would rather see that road completed than be taxed as they will be taxed, in addition to the taxa-
10 p.m. tion that they are carrying now, in order to acquire two other roads which have nothing to do with this one. That is my reason, Mr. Chairman, for supporting the motion made by the hon. member for South Oxford.

Mr. NICKLE: On an occasion like this I hardly think that I would be warranted in voting for the resolution to strike out this amount without giving some explanation of my vote and my conduct. I think it is singularly unfortunate—I do not want to preach to the committee—that legislation of the important character that has been introduced during the past two or three weeks should be brought down in the dying hours of the session.

I do not know what position other members of the House who occupy the humble position that I do, find themselves in, but I find myself absolutely unable to get a comprehensive grasp of the questions that are brought before me for consideration and determination when they are launched on me as important questions have been during the last two or three weeks. I practically find myself in the same position that I sometimes found myself in when I was a child. If I had a nauseous dose to take, the wisest way was to take it at a gulp, or refuse to take it at all—and to-night I refuse to take the gulp. I am not going to discuss the merits or demerits of the scheme. It is complex; it is ten o'clock in the evening of the last day of the session, and there is much important business yet to be considered. But this I do want to say: in a time when the Empire is at war, when every dollar that Canada can raise is required for the legitimate purposes of the war—and as to this I have been deeply impressed by the speeches that the Minister of Finance has delivered in this House and elsewhere—I cannot bring myself to add anything to the burdens of the people of this country. If these were ordinary times I might not feel so strongly on the question, but being influenced by the judgment of the Minister of Finance—and I have great respect for his judgment—and realizing that a commission is about to be appointed to consider the whole railway problem in Canada, I cannot see my way clear to voting for the continuance of this amount in the Estimates.

Motion (Mr. E. W. Nesbitt) negatived on division: Yeas, 12; nays, 29.

Mr. OLIVER: May I be privileged to explain, on behalf of the mover of the motion (Mr. Nesbitt), that he found it necessary to leave in order to catch his train, and therefore was absent when the vote was taken. He was paired with the hon. member for East Simcoe (Mr. W. H. Bennett).

Sir ROBERT BORDEN: Before the committee rises I should like to give some information in reply to a question asked by the hon. member from Maisonneuve (Mr. Verville) with regard to recruiting in Montreal. This information consists of a report from General Hodgins, the adjutant general, to which is attached a report from Lieut.-Colonel Potter, the acting-director general of the medical services. These reports are somewhat lengthy, and perhaps the committee will agree with the assent of the hon. member for Maisonneuve.

whom I have consulted, that they should be incorporated in Hansard without being read, in order that they may appear in Hansard for the information of the hon. gentleman. The reports are as follows:

Criticism by Mr. Verville, M. P. of the medical examination of recruits at Montreal and elsewhere, Hansard, pages 4219 et seq. 16th May, 1916.

The following reply is submitted herewith to the criticisms marginally noted:

1. Telegram from Brigadier General Wilson, officer commanding military district No. 4 received to-day. "Examination being carried out by Medical Board in accordance with instructions from headquarters. Not more than three hundred discharged in this district in the last six weeks. Certain civilian practitioners in outlying districts have recently been discovered passing men in defiance of definite instructions. Many of these men acknowledged that they had not been even stripped. The cases of rejection are not for minor defects but for hernia, potts' disease of the spine, hip joint disease, flat feet, under age and over age. Rejections for defective eye sight have been in accordance with regulations, and the test has been carried out at a distance of twenty feet only".

2. A full memorandum (attached hereto) prepared by Colonel Potter, the Acting Director General of Medical Services, setting forth the whole system with regard to physical examination of recruits.

3. Recent editoral (attached hereto) from the London Times clearly demonstrating the value and necessity of carrying out a very careful weeding-out process before submitting them to the thorough training for and the hardships of active service in the field.

This matter has received special care not only at headquarters, but in Military District No. 4 (Montreal) as well as in all other military districts, and it is confidently submitted that the criticism is not justified, and that what has been and is being done is in the best interests, both of those desirous of serving efficently and of the Canadian Expeditionary Force.

W. E. Hodgins,
Major General
Adjutant-General.

Physical Examination of Recruits.

Particular attention has been paid to the issuing of instructions regarding the physical examination of recruits. The assistant directors of Medical Service of the various military districts have, from time to time, sent out such instructions as appeared necessary to correct any particlar point which appeared not to be receiving sufficient attention.

The regulations for the Canadian Medical Service have been used as a guide. The standards of physical fitness were amended with regard to the condition of the teeth, and such are now practically disregarded, as the Dental Service immediately give any necessary attention. Standards of vision have been slightly modified and are now in accordance withe the standards in use by the British service.

Medical examiners of recruits have, from time to time, made mistakes at the original examination, with the result that, with later medical inspections, it was found that men were unfit, and had to be discharged, as they obviously were not physically fit for the hardships of overseas service.

Very recently, the whole matter of physical fitness of recruits was again given attention and instructions, with more particulars given, prepared. The examination of recruits, to be carried out successfully, requires a special training, and it can be understood how a good general practitioner might overlook points which, from a military standpoint, are considered as impairing efficiency, but which, in civil life, are not considered to be causative of physical unfitness. Men suffering from disabilities which, apparently, do not impair, in their civil occupations, often have disabilities which, when under the hardships of active service, are very likely to render them invalids, and, if such men are sent overseas, they only have to be returned to Canada and perhaps become the subjects for consideration in the matter of pension or other claims.

In the larger centres, as for example—Montreal, the Standing Medical Board carry out the inspections, as far as possible, of recruits, and thus a greater degree of efficiency is obtained. The instructions sent out in Military District No. 4, in which Montreal is situated, show that very careful attention has been given to the matter of the physical fitness of recruits. Reference is made to a second physical examination being carried out at some time subsequent to the primary physical examination when the man is recruited. This, obviously, would not be necessary, unless there were good reasons for such action being taken, and, with the large numbers of men enlisted, there is bound to be a weeding-out process at some stage before they proceed overseas. It is obviously much more economical and in the interests of the public to discharge a man found medically unfit than to carry him overseas and have him return as an invalid at considerable expense to the public.

Medical examiners of recruits are widely scattered throughout Canada, and many of them, prior to the outbreak of the war, had but little experience in this particular line of work, and it is hardly to be expected that a certain number of mistakes will not be made.

In the case of any man physically unfit for overseas, he may be utilized on home service in Canada, provided his disability does not impair his efficiency for the duty on which he is to be employed and it is certified that his disability is not likely to suffer from such employment. In each case, a decision will have to be made upon the merits of the case. Once the standard of physical fitness is lowered from that required in the cases of men sent overseas, it becomes an extremely difficult matter to lay down general rules.

I may say that this matter is receiving special consideration with a view to giving the men who are unfit for overseas service every opportunity to replace those who are physically fit for duty in Canada, in order that the men may have an opportunity to serve overseas.

Following your instructions, I rang up Lt.-Colonel Patch, the Assistant Director of Medical Services, Military District No. 4, and asked if he had anything special to report as distinguishing the Montreal situation from that in other parts of Canada. He reported that every care is being taken to avoid the sending of men, medically unfit, overseas, and that, before troops are sent to camps, or otherwise, either as whole units or as drafts, a very careful medical inspection is carried out. Recently, the number was large, and he considered that

this was probably due to the regular medical inspections of the men not being carried out as strictly as should be expected.

Inquiry was made as to the nature of the disabilities for which discharge was carried out. He informed that, in every case, the disability which rendered the man physically unfit was a serious one, and that they were not being discharged for minor disabilities. Disabilities which tend to materially impair the efficiency of a man as a soldier were given special attention.

In the cases of all men discharged in Military District No. 4, they appear before a Medical Board. It would appear that whatever action is being taken by the medical officers is with the best interests of the service in view.

J. J. POTTER, Colonel,
A.D.G.M.S.

Editorial from the London Times.

Medical Tests for Recruits.

We fear that there are still very serious defects in the method of medical examination for recruits, similar to those on which we remarked when Lord Derby's scheme was begun. The problem is two-sided. On the one hand there are men who are determined to join the Army, and do everything on their own account to "dodge" the doctor. A less praiseworthy influence is also at work, in that certain people are anxious at this moment to get on paper as many voluntary recruits as they can, irrespective of their quality. Whatever the motive, the results of admitting men who are physically unfit are certain to be lamentable. Modern warfare is all against the weak in body, however great may be their soul. The test of the trenches—with their wet or frost; their constant strain on the nerves; their demand for the unceasing and infinitely laborious labour of the spade—all this is almost sure to detect latent weakness. Then the man who has gone in under the false pretence of physical efficiency is apt to let his comrades down. This may seem a brutal way of putting it, but it is the truth. There is, too, the cost of medical attendance for men who break down in this way, not to speak of the dangers that may arise from the discovery that an unduly large percentage of unfit men is being brought into the Army by the new recruiting methods. Far less should those who are responsible for the admission of recruits allow any other motive than zeal in preventing the recruiting of unfit men to govern their supervision of the tests applied.

Progress reported.

HOUSE OF COMMONS.

TRANSFER OF MR. HORTON TO SENATE STAFF.

Mr. SPEAKER: I have the honour to recommend, upon the request of the Senate, the transfer, under the provisions of the Civil Service Amendment Act, of Mr. Albert Horton, editor of Debates of the House of Commons, to the staff of the Senate, where he has been appointed to a similar position; and that a message be sent to the Senate to acquaint their honours that this House doth concur in their request.

Sir ROBERT BORDEN moved that the recommendation of His Honour the Speaker with reference to the transfer of Mr. Albert Horton, editor of Debates of the House of Commons, to the staff of the Senate be approved; and that a message be sent to the Senate to acquaint their honours therewith.

Mr. GRAHAM: Is it promotion?

Mr. SPEAKER: No, there is no promotion.

Mr. GRAHAM: Can we afford to lose him? He is a good man. Should we allow the Senate to steal one of our best officials if they are not giving him any more money?

Mr. ROGERS: How can we prevent them? They are the bosses.

Mr. GRAHAM: I am not sure of that. They are the bosses of everything but the cash.

Sir ROBERT BORDEN: Really I am not very familiar with the matter. It was mentioned to me for the first time by the Clerk this evening.

Mr. GRAHAM: Does he want to go?

Sir ROBERT BORDEN: I understand that the Senate desires to obtain his services, and Mr. Horton is quite willing to go.

Mr. GRAHAM: He is not the first man who has been willing to go from this House to the Senate, and I suppose he will not be the last.

Motion agreed to.

PROHIBITION OR RESTRICTION OF INTOXICATING LIQUORS.

CONSIDERATION OF SENATE AMENDMENTS.

On the Order for the consideration of amendments made by the Senate to Bill No. 66, in aid of provincial legislation, prohibiting or restricting the sale or use of intoxicating liquors.

Hon. C. J. DOHERTY (Minister of Justice): I desire to say that it is only after a great deal of hesitation indeed that I have decided—I would rather say to submit to than to accept all of the amendments which have been made by the Senate to this Bill. The amendments consist in striking out the penalty of suspension of a license proposed to be imposed upon manufacturers violating this law for the first and second offences, leaving the penalty of forfeiture for the third offence to stand. It is not in that regard that I have my greatest hesitation in

accepting the amendments. There has been struck out of the Bill clause 5. That is a provision which enabled prosecutions for violations of this Act to be instituted as well at the place to which the liquor had been sent as at the place whence it had been sent. The striking out of this provision, I think, will very materially and in a most serious manner prejudice the effective enforcement of the Act. I feel this so strongly that, were it not that I have good reason to believe that if this House refused to concur in the amendments and sent the Bill back, we might run the risk of losing the measure entirely, I would not make the motion which I am about to make. I may say that in making the motion to concur in these amendments I do it with the hope of having an early opportunity, of which I shall be glad to avail myself, of submitting again to this House for its adoption and for transmission to the other House, the disposition which that House has seen proper to strike out of this Bill.

Motion agreed to, and amendments read the second time.

SUPPLY—CONCURRENCE.

The House proceeded to consider resolutions reported from Committee of Supply.

Resolutions concurred in.

WAYS AND MEANS—THE SUPPLY BILL.

On motion of Sir Thomas White (Minister of Finance), the House went into Committee of Ways and Means, Mr. Rhodes in the Chair:

Sir THOMAS WHITE moved:

Resolved, that towards making good the Supply granted to His Majesty, on account of certain expenses of the public service for the financial year ended 31st March, 1916, the sum of $4,485,537.26 be granted out of the Consolidated Revenue Fund of Canada.

Motion agreed to.

Sir THOMAS WHITE moved:

Resolved, that towards making good the Supply granted to His Majesty, on account of certain expenses of the public service for the financial year ending 31st March, 1917, the sum of $115,077,465.72 be granted out of the Consolidated Revenue Fund of Canada.

Motion agreed to.

Resolutions reported and concurred in.

THE SUPPLY BILL.

Sir THOMAS WHITE thereupon moved for leave to introduce Bill No. 104, for granting to His Majesty certain sums of money for the public service for the financial years ending respectively the 31st March, 1916, and the 31st March, 1917.

Motion agreed to, and Bill read the first and second time, considered in committee, reported, read the third time, and passed.

CANADA SHIPPING ACT AMENDMENT.

Hon. J. D. HAZEN (Minister of Marine and Fisheries): I would like to call the attention of the House to Order No. 26, Public Bills and Orders, Bill No. 21, to amend the Canada Shipping Act, which was introduced by the hon. member for Guysborough (Mr. J. H. Sinclair). This Bill at my suggestion was referred to the Select Standing Committee on Marine and Fisheries. After hearing the evidence and statements from officials of the Marine and Fisheries Department and others interested in marine matters, that committee made a report recommending the Bill to the favourable consideration of the House. I may say that the Department of Marine and Fisheries agrees with the report of that committee, and under those circumstances I beg to move that public Bills and Orders be now taken up in order that Bill No. 21 may be referred to the Committee of the Whole.

Motion agreed to, and the House went into committee on Bill No. 21—Mr. Sinclair—to amend the Canada Shipping Act, Mr. Rhodes in the Chair.

On section 1—definition of coasting voyages extended:

Mr. HAZEN: There are some amendments.

Mr. GRAHAM: What are they?

The CHAIRMAN: The amendments are verbal.

Mr. SINCLAIR: The meaning is not changed in the slightest degree. The wording was a little involved owing to the fact that the old statute was followed, and the law clerk advised that these changes should be made in order to make it clearer.

Section agreed to.

Bill reported, read the third time and passed.

BUSINESS OF THE HOUSE.

Mr. ROGERS: This practically cleans the Order Paper. When the House met at two o'clock the right hon. leader of the Opposi-

tion mentioned the question about the Public Printing. We promised that the subject would be discussed before adjournment to-night. We have yet for discussion this matter of printing, and the question of pensions; and I am sure that the hon. members of the House would not like to separate without having a few parting words from our friends from the Maritime Provinces about fish. We meet at two o'clock to-morrow, and prorogation has been arranged for four-thirty o'clock. If we can discuss the three questions between two o'clock and four-thirty we could now adjourn.

Mr. GRAHAM: If we postpone the discussion until two o'clock we will have to get through by four-thirty, so it has its bright side. If we start now we do not know when we will get through. The leader of the Opposition is interested in the printing question, and he is not here to-night. I imagine that the discussion of pensions will not take long, as there is to be no legislation.

Mr. ROGERS: We might have as the order of the discussion pensions first, then printing, and then fish.

On motion of Mr. Rogers, the House adjourned at 11.10 o'clock p.m.

Thursday, May 18, 1916.

The House met at Two o'clock, the Speaker in the Chair.

EXTENSION OF TERM OF PARLIAMENT.

Sir ROBERT BORDEN: Mr. Speaker, I sent a telegram, through His Royal Highness the Governor General, to the Secretary of State for the Colonies, in regard to the position of the Bill to extend the life of this Parliament one year. The telegram was sent two days ago, but I have not yet received a reply. However, I have a memorandum from the law clerk of the House of Commons, who states that he has just received a copy of the Bill, and that it was introduced into the Imperial House of Commons by the Secretary of State for the Colonies on the 3rd day of May.

AGRICULTURAL LABOUR.

SOLDIERS FOR SEEDING AND PLOUGHING.

Sir ROBERT BORDEN: I have a memorandum from the Deputy Minister of Militia and Defence showing, for each military district, the number of members of the Canadian Expeditionary Force on leave of absence for seeding and ploughing. The total number of those so reported to be on leave of absence is 18,506. The details are as follows:

Number of Members of the C.E.F. on Leave of Absence for Seeding and Ploughing.

Military District.	Number.	Date of reports.
No. 1..	1,975	13-5-16
No. 2..	3,500	12-5-16
No. 3..	396	13-5-16
No. 4..	27	13-5-16
No. 5..	3	13-5-16
No. 6..	2,285	16-5-16
No. 10	5,445	13-5-16
No. 11	375	15-5-16
No. 13	4,500	12-5-16
Total..	18,506	

CANADIAN ARMY DENTAL CORPS.

Sir ROBERT BORDEN: I had a memorandum handed to me at my request by the Director General of the Dental Service of the Canadian Expeditionary Force which I thought would be of some interest to the members of the House. I believe that Canada is the second nation in the world which has adopted the proposal to establish such a service. According to this report, Germany first established such an organization in connection with her army and Canada was the first to follow in that regard. The memorandum is as follows:

Report on Canadian Army Dental Corps.

Organized less than a year ago, without precedent to guide its footsteps, and with a total at that time of 57, this organization has now grown to practically one thousand all told. So great and various are its ramifications today that, in that short time the need for its existence has been amply demonstrated. Its clinics and laboratories extend all the way from Vancouver Island on the West, all over the Dominion of Canada to Bermuda across the seas to Cairo and Alexandria in Egypt, to Salonika in Greece over France and Belgium wherever Canadian troops are to be found and also in England wherever Canadian troops are stationed.

Its officers and men are found not only with the various regiments but hospitals, field ambulances, ammunition columns, C.A.S.C., and all other units, are provided for as fast as men can be despatched and accommodated for these various units.

To provide men, equipment, supplies and administrative operation for a field geographically as large as the one over which our services extend, and at the same time perform nearly one half million operations of a dental nature, is a task of which any corps might be proud.

The number of operations performed may or may not be an index to the value of services rendered, but the supreme test is efficiency; and to be able to say without fear of contradiction that the efficiency of a man or a battalion is

greater as a result of these services is what is demanded. Tried by this exacting standard, what do we find? We find that over 50,000 men now doing splendid service for their country and Empire owe their presence there to-day to the services rendered by the Canadian Army Dental Corps.

In addition to this there is the huge task of keeping fit, dentally, men who are already in the service and are constantly needing attention. Over 10 per cent of an army are unfit for active service all the time owing to dental troubles, and the economic loss thus entailed in an army of only 100,000 men is tremendous, for here you would have an army of 10,000 out of action all the time on account of these very troubles.

A service that can reduce this to the irreducible minimum and keep these men in the trenches with the least possible loss in time and expense, consistent with efficiciency is doing a very real service.

Experience is teaching us that the nearer we can place our operators to the front with the greater despatch can we carry out all ordinary operations, thus saving many days loss which is occasioned by not allowing our officers up close to the firing line. They can in many cases be accomplished with two days' loss what under the present method entails from ten days to two weeks absence of the soldier from his post. This is a very vital matter for it is most important that a highly trained man whose services are valuable, shall be kept in service with the least possible loss of time.

Nothing so soon unfits a man for service as tooth troubles and nothing is more sensitive to trench life if trouble exist, than the teeth; and as a consequence the morale of troops is barometrically high or low in proportion to the state of their teeth.

Under a new establishment the C.A.D.C. will now have the services of a purely scientific dental officer whose whole time will be devoted to scientific research work which our experience has convinced us is necessary.

That part of the service whose duty it is and will be for years to come, to care for, and make fit dentally the soldiers of the casualty branch has an important service to perform.

Here, highly skilled and efficient dental surgeons of experience are needed, and more inducement in the way of rank is needed that the service become sufficiently attractive to this type of practitioner. We are doing the best we can at present, but are not able to do the service we would like as we lack the experienced men.

The Canadian Army Dental Corps has many shortcomings and has made mistakes; but who hasn't in this war?

The Germans in this as in other matters saw the necessity and prudence of organizing and equipping every unit of energy making for efficiency and not least on their list is their army dental corps.

We are not the first in the field, but are a close second and will we hope at the close of the war demonstrate our right to the first position from an humanitarian point of view.

(Sgd.) N. B. Clayton, Major,
Director General Dental Services.

MEREDITH-DUFF AND DAVIDSON COMMISSIONS.

PRINTED COPIES OF EVIDENCE.

Sir ROBERT BORDEN: Mr. Speaker, the hon. member for Rouville (Mr. Lemieux), during my absence the other day, referred to the desirability of having a greater number of copies of the evidence taken before the Royal Commission known as the Meredith-Duff Commission. The matter stands in this way: It was suggested that it would be more convenient, and very little more expensive, to have copies of the evidence printed rather than to have a large number typewritten. That was arranged and, I think, 100 copies have been printed daily up to the present time. I have a memorandum from the King's Printer who states that there is no order of the House for the printing of the report, but the King's Printer, on his own responsibility, gave orders to strike off a few additional copies so as to supply the leaders in both Houses. However, the matter is in type and it is being held awaiting action. I would think it proper that, without any definite order from Parliament, a sufficient number might be struck off to enable all the members of the Senate and House of Commons to be supplied with copies. If that is the desire of the hon. members, and if there is no objection to it, an arrangement will be made accordingly. I shall inquire whether or not it would be possible to supply copies of the evidence already taken. As the type is standing perhaps it might be done.

[Sir Robert Borden.]

Mr. GRAHAM: Knowing what that means, there will not be much difficulty in doing that if the type is standing. I would like to ask if the same course will be followed in connection with the evidence taken by the Davidson Commission.

Sir ROBERT BORDEN: As far as I am aware, the evidence has not been printed in that case. However, I shall make inquiry, and if it is being printed so that it can be distributed, there would be no objection to that.

Mr. GRAHAM: If the evidence has not been printed heretofore, I would suggest the advisability of having it printed now, and sending it out with the copies of the other.

Sir ROBERT BORDEN: I will consult with my hon. friend the Minister of Justice (Mr. Doherty) and give my hon. friend's suggestion consideration.

HOUSE OF COMMONS.

APPOINTMENT OF EDITOR OF DEBATES.

Mr. SPEAKER: I have the honour to inform the House that I have directed the

Clerk of the House to lay upon the Table his report and my recommendation in the matter of the promotion of Mr. T. P. Owens to the position of Editor of Debates and chief of the reporting branch of the House, and in the matter of the confirmation of the title of Mr. W. H. Dickson as "Chief Reporter of the Committees of the House." The recommendation of the clerk of the House is as follows:

Ottawa, May 18, 1916.

The Hon.,
The Speaker of the House of Commons,
Ottawa.

Sir,

The transfer of Mr. Albert Horton to the Senate Debates Staff creates a vacancy in the position of Editor and Chief of Reporting Branch of the House of Commons.

I beg to report that Mr. T. P. Owens, Associate Editor, is the proper person to be promoted to the position of Editor of Debates and Chief of Reporting Branch of the House of Commons.

I also beg to report that Mr. W. H. Dickson, who has been acting as Chief Reporter of the Committees of the House with the approval of the Speaker since 1906, should have the said title officially confirmed.

I am, Sir,
Your obedient servant,
(Sgd.) THOS. B. FLINT,
Clerk of the House of Commons.

Sir ROBERT BORDEN moved:

That the recommendation of His Honour the Speaker of the House of Commons with reference to the promotion of Mr. T. P. Owens as Editor of Debates and Chief of the Reporting Branch of the House, and the official title of Mr. W. H. Dickson as Chief Reporter of the Committees of the House be confirmed.

He said: The memorandum placed in my hands informs me that the promotion referred to in this motion, and in the recommendation of His Honour the Speaker, and the confirmation of Mr. Dickson's title, involves no change in grading and no expenditure or charge of any kind. The proposal is merely the confirmation of a change and of a title.

Mr. MARCIL: I have no objection to either of their appointments. I have had the pleasure of knowing these gentlemen for a great many years, and I know they are very competent for the positions. But I would just like to say that in this arrangement the Debates Committee seems to have been overlooked entirely. The organization of the branch took place on the recommendation of the Debates Committee. I do not desire to precipitate a debate or to prolong the session, for the purpose of having a meeting of the Debates Committee, but I think that when we have a Debates Committee, when appointments of this kind are to be made, its existence should not be overlooked.

Sir ROBERT BORDEN: I was not aware as to the origin of the proposal. As I understand my hon. friend, the proposition did originate with the Debates Committee.

Mr. MARCIL: Yes, the organization originated on the recommendation of the Debates Committee. I am merely calling attention to it, because this committee does exist for some purpose or it does not. If it exists for any purpose, it might be well hereafter that it should be asked formally to agree to these matters.

Motion agreed to.

SOLDIERS' PENSIONS.

REPORT OF SPECIAL COMMITTEE.

Hon. J. D. HAZEN (Minister of Marine and Fisheries) moved:

That the Report of the Special Committee appointed on the 14th day of March last, to consider and report upon the rates of pensions authorized, the establishment of a Pension Board and other matters relating thereto, presented to the House on the 10th day of May last, be received and that the rates of pensions, and the methods of procedure and administration therein recommended be commended to the consideration of the Government.

Mr. PUGSLEY: Mr. Speaker, I have a good deal of doubt myself, with all deference, as to whether the House has the power to adopt the report, because it is committing Parliament and the Government to a very large expenditure of money. I would think that the report might be received and perhaps some mild expression of opinion given to the House. The proper way, it seems to me, would be for the Government to bring the matter before the House on the recommendation of His Royal Highness the Governor General.

Sir ROBERT BORDEN: The provisions of the British North America Act and the rules of the House which bear on this question are, of course, very well known. I mentioned to some members of the committee when it was first organized that there might be difficulty in reporting to the House proposals to increase the scale of pensions. I have not been able to give much personal attention to the question, but it has been referred to the Law Clerk. My own idea with regard to it was that, in order to comply with the British North America Act, perhaps the best course would be merely to commend the proposals to the consideration of the Government. However,

a somewhat different form has been followed, and possibly it would not be objectionable. All difficulty would be removed, however, if we amended the motion to read, after the formal part, "that the rates of pensions and the methods of procedure and administration therein recommended be commended to the consideration of the Government."

Mr. PUGSLEY: Rates of pension?

Sir ROBERT BORDEN: It might be better perhaps to use the expression I had in mind in the first instance as one that would not be objectionable. It is desirable that we should do nothing in the House that would have the semblance of contravening any provision of the British North America Act. If the motion were passed in the form I have suggested, the objection of my hon friend and other possible objections of a like character would be met, and the motion would be equally effective so far as future action by the Government is concerned.

Mr. PUGSLEY: I approve of my right hon. friend's suggestion. I think it is desirable that we should always observe very carefully the regulations of the British North America Act. If the change suggested by my right hon. friend is made, the same result would be attained.

Mr. HAZEN: I beg to move that the motion be altered to read: "Be commended to the consideration of the Government." Before the motion is carried, I think it is only proper that I should say a few words in regard to the report; and, as several matters of importance have to be considered within the short time remaining before prorogation, my remarks will be somewhat shorter than might otherwise have been desirable. The committee, which reported on the 10th instant, consisted of nine members representing both sides of the House, and the report which has been submitted to the House was signed by every member of that committee. The committee had the advantage of hearing the views of several gentlemen who were interested in this question—gentlemen connected with the Militia Department, representatives of some of the labour associations in the country, gentlemen who have given special attention to matters of this kind, medical men, and gentlemen interested in vocational training; and, while the information obtained from these gentlemen was of great value, and while many of them went to a great deal of trouble in getting valuable information placed before the committee, I think I may be pardoned for saying that the committee were very much indebted to a gentleman from the city of Toronto, Mr. Frank Darling, for the information he gave us and for the active and intelligent interest he took in this question.

Passing briefly over the recommendations made, I may say that the committee dealt solely with the question of pensions for soldiers who have enlisted in the Canadian Expeditionary Forces. The report does not deal in any way with the question of pensions for the ordinary active militia or the permanent force in this country, but only for those who have enlisted for active service since the breaking out of the great European war. The committee were of opinion that the administration of the pensions should be entrusted to a commission consisting of three members. The language of the report in that regard is as follows:

> That three persons, to be known as the Board of Pension Commissioners, hereinafter called the commission, be appointed to hold office, during good behaviour, for ten years unless removed for cause, and to this commission be entrusted the consideration, determination and administration of all military and naval pensions.

The object which every member of the committee had in view was the establishment of a board that would be entirely removed from all considerations of a political character, and with that object in view they have provided that there shall be no appeal from the decision of the Board of Pension Commissioners, either to the Government or to anyone else. The only appeal that will be allowed is that of a soldier who is dissatisfied with the pension that has been awarded him in due course, on the documentary and other evidence that is produced in support of his claim, and that appeal will be heard by the full Pension Board; but from the decision of that board there shall be no appeal whatever. It is desired that there shall be a finality with regard to the board's decisions, and that no impression shall be allowed to get abroad in the country that a man's claim to a pension can be influenced in the slightest degree by pull or influence of any kind. Every claim will be considered absolutely on its merits, and no one will have any influence whatever in the matter except the Board of Commissioners, who will adjudicate upon the claim. The language used in the report with regard to this Pension Board and the duration of

its term is the same as that used in regard to the appointment of the Railway Commission. They will "hold office, during good behaviour, for ten years, unless removed for cause," and to this commission will be entrusted the consideration, determination and administration of all military and naval pensions.

Mr. GRAHAM: I understood my hon. friend to say that this scale of pensions will apply only to those who have gone overseas and are at the front.

Mr. HAZEN: No. These rates will apply to all those who have enlisted in the Expeditionary Forces for active service. If a man, immediately after enlisting, goes to a camp and meets with an accident there that costs him his life, or disables him while in the discharge of his military duties, he or his family will be entitled to the pensions provided for here, just as much as if he had been injured overseas in the face of the enemy.

Mr. MORPHY: What does my hon. friend mean by the word "camp?"

Mr. HAZEN: I use the word in a general sense. These rates would apply to a man who had been injured while training, at Valcartier camp, for instance, or at any other military camp.

But perhaps I should make the matter a little clearer by saying that any man who, subsequent to enlistment, meets with an accident in the discharge of his duty is entitled to a pension just as much as if the accident he met with was caused overseas on the battlefield in the face of the enemy.

The report goes on to say:

> That the commission have full authority and responsibility to deal with and determine all matters pertaining to pensions, and from their decision there be no appeal; provision, however, should be made for any complainant so desiring to present his case, either personally or by counsel, before the full commission sitting for the purpose of hearing the complaints of those who may have been dissatisfied with awards given in the ordinary course of administration.

There is a provision authorizing the commission to engage such clerical and other assistance as may be considered by them requisite for the transaction of their duties, at such salaries as may be approved by the Governor in Council, and to make such rules and regulations as may be necessary to facilitate administration, such rules and regulations to be submitted for approval to the Governor in Council.

There is a rule that the pension awarded to any member of the force, or any dependent of such member, should not be capable of being assigned, charged, attached, anticipated, or commuted. We are anxious that steps should be taken to ensure that no pension awarded to any soldier shall be used for any other purpose than that for which it was intended.

We had a great deal of discussion with regard to the rates of pensions. We had before us the old scale in force at the time that the war broke out, and we gave every possible consideration to it, having regard to the rates of pensions awarded in other countries, and having regard to the conditions that exist in the Dominion of Canada. The result is that we recommend a very substantial increase in the rates of pensions to those in lower ranks. From private up to lieutenant, we recommend what is a substantial increase in the pensions. From lieutenant on, we do not recommend any increase, with the exception of the rank of captain, where the increase is ten dollars, that increase being given for the purpose of convenience in the department in the working out of the pension scale. The committee were face to face with this condition of affairs, that over 300,000 men had enlisted under a certain pension scale, and, while it was perfectly right and proper and while no complaint could be made in regard to an increase in the pension scale, yet the committee felt that it would not be proper to reduce in any case the pension that had been in force at the time that such enlistment had been made. There was a very general feeling in the committee that in the existing scale there was too great a discrepancy between the pensions granted to those in the higher ranks of the service and those of the rank and file; and, had the Pension Committee been framing the scale in the first instance, my belief is that they would not have given to those who have commissions above the rank of lieutenant as high a rate as was given in the scale that we had before us. The fact, however, that over 300,000 men, of whom a percentage were officers, had enlisted with that scale in force, led us to the conclusion that, while there was no contractual relationship, yet it would be regarded as a hardship and an unfair thing for us to reduce any of the pensions that had been in force at the time that those enlistments had taken place. Therefore we left the pensions from the rank of lieutenant up generally as they were in the old scale. In some of the newspapers the criticism is

made that we are giving too low an amount to officers in the higher ranks. The reason I am giving for that must appeal to the sense of fair play and justice of any man who is familiar with the facts.

With regard to the lower ranks, we found that the old scale of pensions was: For a private, $264 a year; for a sergeant, $336 a year; for a sergeant-major, $372 a year; for a master gunner, $430 a year; for a warrant officer, $480 a year; for a lieutenant, $480 a year; for a captain, $720 a year; for a major, $960 a year; for a lieutenant-colonel, $1,200 a year; for a colonel, $1,440 a year; and for a brigadier-general, $2,100 a year. These are all if unmarried; if married, an addition was made—and I want to compare the old scale for married men with the scale that we recommend. On the scale as it existed on the first of August, 1914, a private, if married, received $396 a year. Under the scale we submit a private receives $480. Under the old scale a sergeant received $504; under our scale he receives $510. Under the old scale, a sergeant-major received $612; under our scale he receives $620. Under the old scale a lieutenant received $702; under our scale he receives $720. We, however, draw no distinction between married and single men. We have not in any sense reduced the amount that is paid to the married soldier; we have increased the amount that is paid to the single soldier, bringing it up to the same rate as is paid to the married soldier. That subject caused a great deal of discusion in the committee; it was viewed and discussed from almost every standpoint, with the result that the committee, with the exception of one member, who had some doubts on the subject, were of the opinion that if a man was single he was entitled to just as large a pension as though he were married, for the reason that in many cases a single man when he came back from the war would marry, and there was no reason why he should not receive the same allowance as a man who was married at the time the war commenced. Further than that, there was a good deal of discussion as to the case of a man who had to be taken care of, and it was generally felt that a man who had a wife was likely to be better cared for than a man who was single, and that the single man would be put to extra expense to have himself cared for. We made the condition that in the case of total disability, that is, in the case of a man totally unable to help himself, he could be allowed, in the discretion of the Pensions Board, an extra sum of $250. That applied to both married and single men and to all ranks up to and including the rank of lieutenant. We felt that the amount of pension allowed to those above the rank of lieutenant was sufficient to enable them to get the necessary attendance without the extra amount of $250.

The committee further decided to recommend that those entitled to be awarded pensions should be divided into six classes, and that to each member of such class there should be awarded a pension in the direct proportion of his disability to total disability. The man who is totally disabled receives $480 a year, and if he is totally helpless, so far as attendance on his physical wants is concerned, the board may make, subject to annual review, a further grant not exceeding $250 a year.

Total disability is regarded at 100 per cent. Of total disability, the matter will have to be worked out by the Pensions Board; the only examples would be these: loss of both eyes; loss of both hands, or all fingers and thumbs; incurable tuberculosis; loss of both legs at or above knee joint; insanity; permanent extreme leakage of valves of heart. Class 2 would be disability of 80 per cent and less than 100 per cent, and the pension would be 80 per cent of that for total disability. The examples in class 2 are loss of one hand and one foot, loss of both feet, dislocation of leg at hip; and so on with class 3, class 4, class 5, and class 6. Class 6 is where the disability is under 20 per cent, a gratuity not exceeding $100 being given. An example of that would be where a man gets deafness in one ear or loses his index or other finger. In that case there would be a gratuity of $100, but no pension.

Then we provide for pensions for children. "A disabled member of such force, up to and including the rank of lieutenant, entitled to a pension in the 1st, 2nd or 3rd class, in addition to his personal pension, shall be entitled to draw $6 a month for each child; of the rank of captain, $7 a month for each child; of the rank of major, $8 a month for each child; of the rank of lieutenant colonel, colonel, or brigadier general, $10 a month for each child, a child to include a step-child in respect of which such member was in loco parentis"—in the place of a parent, whether his own child or not.

I wish to call the attention of the House to the provision that we make in regard to the widow. We provide that if a member

of such force has been killed or has died as the result of injuries received or disease contracted or aggravated while on active service, the widow until remarriage is entitled to the equivalent of the pension mentioned in class 2, and is also entitled to draw the allowance recommended for children. Upon her re-marriage her personal pension ceases, but she is entitled to draw a gratuity of an amount equal to one year's pension. If a man who is a widower dies on active service as the result of injuries and leaves a child or children, the orphan children are entitled to receive $12 a month each.

Then, there is this very important provision: in the even of application being made for a pension on behalf of a woman who has, without being married to a member of such force, lived with him as his wife, or on behalf of the child or children of any such man or woman, the commission is authorized to grant the customary pension for a wife or for a child or children upon being satisfied that the circumstances were such as to warrant the conclusion "that the woman had at the time of enlistment and for a reasonable time previously thereto been publicly represented as the wife of said member of such force, or if the commission is satisfied that justice would be done by the recognition of such woman, for the purpose of pension, as the wife of such member. On the marriage of the woman her personal pension ceases, but she is entitled to draw a gratuity of an amount equivalent to one year's pension."

The committee is of opinion that in the case where a man and a woman have been living together as husband and wife without any marriage ceremony having been performed, the woman ought to be placed on the same basis as in the case of actual marriage, and that the children should be provided for in the same way.

It is provided also that "no payment will be made on account of any child, if a boy over the age of sixteen, or if a girl over the age of seventeen, unless owing to mental or physical infirmity the child is incapable of earning a livelihood, in which case the pension may, if in the discretion of the commission it seems best, be continued until the child is twenty-one."

I cannot in the time that is at my disposal go fully through this report, but I wish to call attention to a provision the effect of which is that a widowed mother, step-mother, or grandmother wholly or mainly dependent upon a member of such force who is killed or dies as the result of injuries received, or disease contracted, or aggravated while on active service, if such member was without dependent children and unmarried, or a widower, be entitled to a pension of class 3, provided, however, that no such woman be entitled to more than one pension, and that on the marriage of the woman such pension do cease. There is also a provision that a father wholly or mainly dependent upon a son who is a member of such force and who is killed or dies as a result of injuries received, or disease contracted, or aggravated, while on active service will be entitled to a pension under similar circumstances.

In the case of a man who had served at the front, had been wounded, had come back and received his pension and subsequently died, no provision being made for his widow, we make provision for the widow in case of total disability or in case of total disability or in case of pension under the 80 per cent disability clause. In those cases the man would be unable, because of his wounds or infirmities, to make provision for his wife, and the opinion of the committee was that it was only fair that under such circumstances some aid should be given to the wife by the State. But that provision is to be applicable only to the case of a woman who was married to the soldier at the time that he received the wound or injury or contracted the disease which subsequently led to his receiving a pension. If a man returned from the war and married afterwards, the widow would not be entitled to a pension.

Another matter that was urged strongly on the committee, but upon which we did not take any decisive action, was with regard to the question of reservists. There were a considerable number of people in Canada who at the outbreak of war were called to the colours of the countries to which they owed allegiance. Britishers, French, Belgians, Russians, Italians, have been called to the colours of their respective countries. It was urged very strongly on the committee, especially by the member for St. Antoine, Montreal (Mr. H. B. Ames), secretary of the Patriotic Fund, that we should place these men in the same position as men who enlisted in the Canadian overseas expeditionary force; or, rather, that we should pay to these men the difference between the amounts which they would receive from their respective Governments

by way of pension and the amounts they would have received had they enlisted in the Canadian overseas expeditionary force. That would be limited to the case of men who were married and whose families had been living in Canada at the outbreak of war and who after the war returned to Canada for the purpose of settling in the country. With the amount of information before us, however, we did not feel like making a recommendation in this respect at the present time. Some gentlemen who were interested in English pensions appeared before the committee and one of them said that he understood that the British Government was considering that question with a view of determining whether they would not give an increased pension to those who came to join the colours from countries overseas in which larger pensions were provided than are provided by the British Government. We were unable to ascertain what would be done in that regard; besides, we were unable to get accurate information in the time at our disposal as to the number of those who had actually joined the colours of the countries to whom they owed allegiance. We therefore recommended, in section 25 of the report, as follows:

That strong recommendations were made to your committee that the reservists of the Allies who were bona fide residents of Canada at the time they were called to the colours of their respective countries, and who left their dependents with the intention of returning to Canada after the war to make it their home, should be treated on the same basis as those enlisting from Canada in the Canadian Expeditionary Force, and that this country should supplement the pension granted respectively by the Allies.

As your committee were unable to get definite information as to the policy of the other Governments, and sufficient information to warrant a sound conclusion being reached, your committee recommend that the commission give the matter of pensions to reservists and their dependents careful consideration and investigation, so as to permit a full report being made to the House at its next session.

The attention of the Canadian Patriotic Fund should be directed to the advisability of its aiding in the meantime the dependents in Canada of such reservists as have become disabled, and whose dependents as a result require assistance.

Your committee are, however, of the opinion that if provision be subsequently made for supplementing pensions given to reservists by their respective Governments, it should apply to men who, at the time of their being called to the colours, had dependents bona fide residing in Canada and who continued in Canada during the war.

And that such supplementary pensions be not continued beyond the time that the dependents of such Reservists actually continue to reside in Canada.

We make the recommendation that the gentlemen who are appointed to administer the pension fund should deal with all applications with the utmost despatch; that in due course legislation should be introduced confirming this report; and that, in the meantime, proceedings be taken forthwith to bring it into operation. That can be done under the provisions of the War Measure Act. The desire of the committee was that, as soon as possible, the new board should be constituted and should proceed with its duties. It will be the duty of the Government, as soon as the session is over, to consider this report and, if it commends itself to the Government, to deal with it under the provisions of the War Measures Act.

We also recommend that our recommendations with regard to the pension scale become operative as from the 4th day of August, 1914, the day on which war was declared. This makes it retroactive as to every man who has enlisted since the 4th day of August, when the war broke out—and an appeal was made for volunteers. The result will be that all members of the forces will be placed on the same footing as regards the pensions they will receive; the men who enlisted in the earlier days of the war will receive the same pensions as those who enlist now.

The changes which we recommend involve a very considerable increase in the amount that the country will have to pay for pensions. Under the scale in force at the present time, it is estimated that for a force of 100,000 men of all ranks in the field for one year the pension list of Canada will amount to $5,481,500. It is estimated that, under the pension laws which we recommend, the total pensions for a similar force in the field for a similar length of time will be $7,184,181 a year. So hon. gentlemen will see that, based on the estimate of a force of 100,000 men in the field for a period of one year, there is an extra cost under the scale we propose of $1,702,681. That statement is based on figures received from the War Office with regard to casualties that have taken place during the present war. The estimate of the War Office for a force of 100,000 men in the field for one year is as follows: Deaths, 15 per cent; total disablement, 3 per cent; partial disablement, 6 per cent; and slight disablement, 9 per cent. The militia

authorities tell us that judging from the experience of the Canadian forces for the past year, the above estimate as to the percentage of deaths, is high.

The increase is a very substantial one, and the amount that this country will have to pay for pensions in the future will be a large annual charge upon the finances of the country. Even although that is the case, the members of the committee, and I am sure the members of the House, and I think everybody in this country, are desirous that justice and fairness and liberality—generosity, in fact—should be extended to the men who, at this crisis in the history of our country, have come forward to fight our battles and are willing, with the red blood that flows in their veins, to sacrifice their lives for that liberty which we all hold so dear.

Mr. E. M. MACDONALD (Pictou): Mr. Speaker, I have much pleasure in seconding the motion of the hon. Minister of Marine (Mr. Hazen). In my experience in this Parliament I have never served on a committee in which every gentleman, on both sides, seemed to be actuated by so sincere a desire to arrive at the best solution of a very important question as were the members of this committee. I regret that the report is necessarily being considered on the last day of the session, and that the recommendations contained in it have not formed the subject of special legislation on the part of the Government. It is true that, under the War Measures Act, power is vested in the Government to deal with this question; but, after all, the provisions of the War Measures Act vest only temporary powers in the Government of the day in order to enable them to deal with situations occasioned by the war. This problem of pensions, while it is one that arises immediately on account of the war, is yet a permanent problem and one which will remain with the Canadian people long after the war will have been successfully concluded.

I assume, however, notwithstanding the fact that we have not legislation of a special character, that in the carrying out of the recommendations of this report during the coming year, the Government will be actuated by the same spirit, in the formation of the Board and all other phases of this question, as they would have been in asking for a parliamentary ratification of this proposal; and that at the next session of Parliament it will be the duty of the Government to present to the House an Act dealing permanently with this question. The figures which the minister has just given indicate the tremendous importance of this question to the Canadian people from a financial standpoint. On the basis of the estimate prepared for us by the officials of the Militia Department, and, assuming the percentage of disabled men to be similar to that contained in the calculation, for the 300,000 men who are already under arms the annual cost to the Canadian people for pensions would be $21,552,543. For 400,000 men, the annual charge to the Canadian people would be $28,736,724. If hon. gentlemen will pause for a moment to estimate what this annual charge would amount to if capitalized, they will realize the tremendous extent of the onerous charge placed on the whole people, and the importance of this matter from a financial standpoint will be recognized.

Alongside of that great question there is, of course, the other equally important consideration, which I am sure actuates every member of this House and every loyal citizen of the Dominion, just as it impressed, in the most serious way, every hon. gentleman composing the committee—that is, the duty which falls upon us, as representatives of the people, to do everything that is possible for the men who bear the burden and go out to make the great sacrifice in this terrible war. Let me state clearly that the idea which may naturally occur, if not to the minds of some hon. members, to others outside of this House, that this country proposes to give a pension to every one who has gone across, is not the idea at the basis of these proposals. Only those who have enlisted in the Canadian overseas expeditionary force and who become disabled, whether they are disabled at home or at any period of the war, become entitled, under these proposals, to any monetary consideration from the Government. The extent to which they do become entitled to such consideration depends entirely upon their disability, and the minister has stated very clearly the different grades under which these pensions are to be paid. We have recommended that the extent of assistance to be given be determined according to the extent of the disability, and the figures which we have published in the report and in the press indicate the maximum amount which a person suffering from any disability is entitled to receive. That amount is graded according to the extent of the disability. As we pass through this war

and the years succeeding it, proposals will no doubt be made from various sources in the direction of the extension of the liability of the country in regard to the pension system. What has occurred in the United States gives an illustration of what may be expected in this country in that particular, and hence it is that I regret that legislation has not been formulated so that a definite policy might be laid down by Parliament. It may be that in the intervening year further light may be had upon this question, so that the legislation, when it is finally brought down, will be the result of perhaps riper judgment and more information than the committee has had before it.

Realizing, to the full, the importance of all these considerations, it was the unanimous judgment of those composing the committee that the members of the board, which has been recommended in this report, ought to be independent men, not mere office holders or office seekers, but men whose position, character and status in the country are such that there will be no question about their absolute independence and integrity, and whose position will be recognized by all classes in the country as being above party. It was felt by the members of the committee representing both sides of the House that the appointment of this board should only be made by the Government after a consultation with the right hon. the leader of the Opposition, in order that the members should not be merely appointees of the Government, but, to a very great extent, the representatives of the Parliament of Canada chosen by the leaders of the two great political parties. The annual expenditure of at least $25,000,000 will constitute this board, once it is organized, one of the most important bodies in the whole Dominion, in so far as the disbursement of funds are concerned. I am sure that what I have said in that respect will, upon reflection, commend itself to every hon. gentlemen in this House.

I am not going into this matter in detail, but there are a couple of considerations to which I would like to refer. One is the point emphasized by the Minister of Marine and Fisheries in regard to the difference in the scale of pensions paid to the men of the rank and file and the men in the higher ranks. In the short discussion which took place upon the motion, which I had the honour to move on the subject earlier in the session, I pointed out that there was not between the men in the ranks and the men who hold commissions that difference in status, either socially or otherwise, in this country which warranted any very great line of demarcation being drawn between the two classes in the awarding of pensions. In that respect, the conditions in Canada differ from those that exist in the Mother Country and in other countries across the ocean. That view was fully entertained by every hon. member of the committee, but the conclusion at which we arrived, and which has been so well stated by the Minister of Marine and Fisheries, expresses the difficulty which confronted us when we came to deal with the question of final adjustment. The fact that men had gone out, had suffered and died for their country, that their dependents were entitled to feel that they had a vested right in the scale of pensions originally introduced, created a situation in which we felt the great difficulty of interfering with the scale of pensions allowed to the men in the upper ranks of the overseas forces. As a consequence, we have recommended that the scale should be levelled up on the basis described by the minister. We provide not merely for the man who is disabled and who survives the conflict, but, as the minister pointed out, for his widow and his children, and, in addition to that, where a man may not leave a widow or child, we provide for the widowed mother, the step-mother, or the grandmother in the way which is set out in section 21 of the report.

Just one word more in regard to the proposition that the pension aid should be extended to the men of other nationalities who left Canada to fight or to the reservists who belong to Great Britain.

Sir ROBERT BORDEN: Before my hon. friend proceeds to deal with that, there are one or two questions which I would like to ask for information. I observe that in clause 8 it is provided that after an extension of one year, no pension can be reviewed. Does it not sometimes happen that a disability, which seemed very serious at first, may in the course of two or three years be completely removed, so that the man is restored to health and to his usual strength and energy? I have known instances of that character in accident cases during my own practice in the legal profession. Is it intended to debar any further inquiry in a case of that kind? A board can be held under the law as it is at pre-

sent, for the purpose of establishing the fact that the injury is greater than was supposed, or for the purpose of establishing the fact that the disability has been completely removed.

With regard to single and married men, I would like to know, merely for information, whether or not the committee had under consideration a suggestion that some difference might be made in the first instance, but that if the returned soldier should afterwards marry, he would be placed on the same footing as if he had been married in the first instance. I do not know whether that was under consideration or not.

I do not suppose that the language of these clauses is intended to be construed with the utmost exactness; but it seems to me that clause 17, taken literally, would lead to the conclusion that if a woman had been living a number of years with a member of the Expeditionary Force, though not married to him, she might, in the event of his death, be entitled to a pension, although the conditions might have very greatly changed in the meantime. I suppose that a consideration of that kind is not intended to be excluded by the committee's report.

Mr. MACDONALD: With reference to the first question suggested by the right hon. gentleman, section 8 provides for a review at the end of the first year after the grant had been made in the first instance, and each pension must be applied for, if I recollect rightly, within two years of the date of discharge. But there is no review. There may be in those cases where the disability is obviously permanent, but there can be no further review. If my right hon. friend will look at the clause which is included in what is known as class 1, he will see that where the disabilities consist of the loss of both eyes, both hands, incurable tuberculosis, the loss of both legs, insanity, or permanent extreme leakage of the valves of the heart, you have cases in which the permanent disability is settled and determined, and upon which there is not much room or necessity for further review.

Sir ROBERT BORDEN: Yes, but I suppose that these illustrations are not intended to be exhaustive. For example, I have known of cases of very severe injury to the spine in which medical men testified that there could not possibly be any relief, that the man was permanently injured, and would be incapable all his life, but, in the course of two or three years, the anticipations of the physicians were not realized, and the man recovered his strength completely. I had in mind cases of that kind which possibly might occur.

Mr. MACDONALD: All these matters were fully discussed before the committee, and I think that every hon. gentleman composing the committee will agree that I am only stating what is true when I say that the suggestion of my hon. friend from Kingston (Mr. Nickle), who gave very careful consideration to all those questions and details, included the matters to which my right hon. friend refers.

Sir ROBERT BORDEN: I am not criticising at all.

Mr. MACDONALD: I quite understand. My right hon. friend is only inquiring whether these considerations were before the committee and were considered. As a matter of fact, they were. The attention of the committee was exhaustively directed to matters such as have been referred to by my right hon. friend. No doubt my hon. friend from Kingston may have a word or two to say in regard to them, and I will leave to him the task of dealing with the points suggested by my right hon. friend.

A very important question upon which the committee came to no final conclusion was the question of whether we should include in our pension list those men who enlisted in Canada for service in any of the Allied countries or who went as reservists to the British Isles. It was felt by the committee that the inclusion of this class in our pension list at this juncture would not be prudent. Some members of the committee were very strongly of the opinion that provision should be made at once for the inclusion of this class, but it was deemed wise and prudent to take at least a year for deliberation and consideration of the question. I may point out that the estimate which has been given of the extra annual charge which would be involved by the inclusion of that class is $1,000,000, and, in view of this fact, together with the other consideration that it was thought desirable before final action was taken to obtain full information from the other countries interested as to how they deal with pensions in Canada, it was felt that the recommendation made was the best way of solving this question. In conclusion, I may say that every hon. gentleman on the committee worked with the greatest unity, interest and enthusiasm upon this very important question with the view of arriving, if possible, at some scheme

which would enable this country to feel that it was doing its duty towards those who go out and suffer and die on behalf of the issues involved in this great war. We were guided by these feelings and by the desire that Canada should do what is right and proper and generous towards our soldiers.

Mr. LEMIEUX: I have just one word to say. I subscribe unreservedly to what has been said by my colleague from Pictou and by my hon. friend the Minister of Marine and Fisheries. I was a member of the committee, and I am proud to say that there was never a ripple of disagreement between the members composing it. We reached those conclusions after long and friendly deliberations. I am glad that we have provided generously, as I believe, for the disabled soldiers and their families. I hope that the commission to be appointed will be on the lines suggested by all the members of the committee, that it will be a non-partisan commission. I make a special appeal to my hon. friend the Minister of Marine and Fisheries and to the patriotism of the right hon. the Prime Minister to see that it is of a non-partisan character. I also beg to recommend the Government to take a broad view as regards the reservists, both British and French, and possibly the Belgian reservists too, who answered so nobly to the call of duty when war was declared. I refer to the reservists who had taken up their homes in Canada, and who were Canadian citizens, practically speaking. It seems to me that if the Governments of their respective countries are not as generous, for obvious reasons, as the Canadian Government is towards our own kith and kin, we should not begrudge the little difference that would have to be made up in order to put them on a footing of equality with our own boys. I agree unreservedly with the remarks which have been made by the mover and seconder of the report.

Mr. NICKLE: As a member of the committee which had under consideration the question of pensions, it may not be amiss if I say a word or two. In the first place, I can unreservedly bear testimony to the fact that the whole conduct of the committee was characterized by the fullest sympathy and accord, and that from beginning to end there was not one jarring word or difference. We were confronted at the inception by a difficulty which was found to be insurmountable. The scale of pensions, which came into effect in 1914, made a most radical distinction between pensions granted to men of the lower ranks, and those who held more exalted positions. For some time the committee considered and canvassed the wisdom of bringing in a report dealing de novo with the entire situation. Mature consideration made it clear that it would be eminently unfair, after 300,000 men had enlisted, with a certain scale of pensions in view, to reduce the pensions that were held out to the men of higher rank. The result was that the committee determined to increase the pensions where they were thought to be inadequate and to leave to the higher ranks the pensions that were promised under the scheme of 1914. I understand that there is very little time available this afternoon to consider this subject in detail, and this, I am sure, is a matter of regret. However, if I may be permitted I should like to put on Hansard section 641 and 648 of the Pension Act of 1914 and the report of the committee. They outline what the pension allowance was under the scheme of September 1, 1914."

Scale of Pensions—Pay and Allowance Regulations effective Sept. 1, 1914.

641. The following rates of pension will be granted militiamen wounded or disabled on active service, during drill or training, or on other military duty, provided the disability was not due to his own fault or negligence.

Rank held at time of injury or illness.	First Degree.	Second Degree.	Third Degree.	Fourth Degree.
	$	$	$	$
Rank and file	264	192	132	75
Sergeant	336	252	168	100
Squad, Battery or Co. Sgt.-Major	372	282	186	108
Squad, Battery or Q.M. Sergt.				
Colour Sergeant				
Staff Sergeant				
Regimental Sgt.-Major, not W.O.	432	324	216	132
Master Gunner, not W.O.				
Regimental Q. M. Sergeant				
Warrant Officer	480	360	240	144
Lieutenant	480	360	240	144
Captain	720	540	360	216
Major	960	720	480	288
Lieut.-Colonel	1,200	900	600	360
Colonel	1,440	1,080	720	456
Brig.-General	2,100	1,620	1,050	636

(a) The first degree shall be applicable to those only who are rendered totally incapable of earning a livelihood as the result of wounds or injuries received or illness contracted in action, or in the presence of the enemy.

(b) The second degree shall be applicable to those who are rendered totally incapable of earning a livelihood as a result of injuries received or illness contracted on active service, during drill or training or on other duty; or are rendered materially incapable as a result of wounds or injuries received or illness contracted, in action or in the presence of the enemy.

(c) The third degree shall be applicable to those who are rendered materially incapable of earning a livelihood, as a result of injuries received or illness contracted on active service, during drill or training, or on other duty; or rendered in a small degree incapable as a result of wounds or injuries received, or illness contracted in action or in the presence of the enemy.

(d) The fourth degree shall be applicable to those who are rendered in a small degree incapable of earning a livelihood as a result of injuries received or illness contracted on active service, during drill or training, or on other duty.

(e) Where the injury is great enough to require the constant services of an attendant, such as the loss of both legs or both arms or the loss of sight of both eyes; or where the use of both legs or both arms has been permanently lost, the rates shown in columns "1st degree" and "2nd degree" may be increased one-third.

(f) In addition to the above rates, a married officer, warrant officer, non-commissioned officer, or man, totally incapacitated may draw for his wife half the rate, provided in Article 642 for the widow and the full rate for the children of an officer, etc., of his rank, subject to the limitations respecting the age of children. After the death of the officer, warrant officer, non-commissioned officer or man, the widow may then draw the full rates provided in Article 642 for widows and children.

(g) The widowed mother of a totally disabled soldier may be granted a pension at half the rates fixed in Article 642 for a widow, provided the soldier is her sole support and unmarried. In the event of the soldier's decease, she may draw the full rate referred to.

642. Pensions may be paid to the widows and children of those who have been killed in action, or who have died from injuries received, or illness contracted on Active Service, during drill or training, or on other military duty, at the following rates; provided the soldier's death was not due to his own fault or negligence, and was clearly due to the carrying out of his military duties:

Rank held by Husband, Son or Father at time of death.

Rank and file, $22 a month for widow and $5 a month for each child.

Sergeant, $28 a month for widow and $5 a month for each child.

Squad., Battery, or Company Sergeant-Major; Squad. Battery, or Q.M. Sergeant, $30 a month for widow and $5 a month for each child.

Colour Sergeant or Staff Sergeant, $30 a month for widow $5 a month for each child.

Regimental Sergeant-Major, not W.O.; Master Gunner, not W.O.; or Regimental Quartermaster Sergeant, $30 a month for widow and $5 a month for each child.

Warrant Officer, $32 a month for widow and $5 a month for each child.

Lieutenant, $37 a month for widow and $6 a month for each child.

Captain, $45 a month for widow and $7 a month for each child.

Major, $50 a month for widow and $8 a month for each child.

Lieut.-Colonel, $60 a month for widow and $10 a month for each child.

Colonel, $75 a month for widow and $10 a month for each child.

Brig.-General, $100 a month for widow and $10 a month for each child.

(a) A widowed mother whose son was her sole support, and unmarried, shall be eligible for a pension as a widow without children, and subject to the same conditions as hereinafter set forth.

(b) In the case of orphans, the rates shown above for children may be doubled, and the pension paid to legally appointed guardians.

643. Pensions to widows and children shall take effect from the day following that on which the death of the husband, etc., occurred, and a gratuity equivalent to two months' pension shall be paid the first month, in addition to the pension.

644. The pension of a widow, a widowed mother, or child may be withheld or discontinued should such widow, etc., be or subse-

quently prove, unworthy of it, or should she be or become wealthy.

The decision of the minister as to whether a pension should be so withheld or discontinued shall be final.

645. The pension to a widow or widowed mother shall cease upon her re-marriage, but she will be eligible for a gratuity of two years' pension payable to her immediately after her marriage.

646. Neither gratuity nor pension shall be paid on account of a child (or orphan) over fifteen years of age, if a boy, or over seventeen years of age, if a girl, unless owing to mental or physical infirmity, the child (or orphan) is incapable of earning a livelihood, in which case the pension may be continued till the child (or orphan) is twenty-one years of age, but no pension will be paid to a child or orphan after marriage.

647. Individual cases for which the Regulations do not provide or sufficiently provide, may be specially considered by the Governor in Council.

648. Pensions may be paid monthly in advance.

The report of the committee reads as follows:

The special committee, appointed to consider and report upon the rates of pensions to be paid disabled soldiers of the Canadian Expeditionary Force and the establishment of a Permanent Pension Board and any other matters relating thereto or connected therewith, have carefully considered the questions submitted to them, and beg to submit the following as their third report:

(1) Your committee, appreciating the probable short duration of the present session of Parliament, and the difficulties that might be encountered and not adequately met if the entire pension system of Canada were reviewed, have limited their inquiries and recommendations to pensions and assistance for the members of the Canadian Expeditionary Force in the great war which began in August, 1914, and to the system of pension administration likely to secure the most equitable and satisfactory results.

(2) That all pensions, expenses for appliances—such as artificial limbs—and for vocational training, or other advantages awarded to members of the Canadian Expeditionary Force, or their dependents, be paid by the Government of the Dominion from the national funds.

(3) That three persons, to be known as the Board of Pension Commissioners hereinafter called the Commission, be appointed to hold office, during good behaviour, for ten years unless removed for cause, and to this commission be entrusted the consideration, determination and administration of all military and naval pensions.

(4) That the Commission have full authority and responsibility to deal with and determine all matters pertaining to pensions, and from their decision there be no appeal; provision, however, should be made for any complainant so desiring to present his case, either personally or by counsel before the full commission sitting for the purpose of hearing the complaints of those who may have been dissatisfied with awards given in the ordinary course of administration.

(5) That the Commission have authority to engage such clerical and other assistance as may be considered by them requisite for the transaction of their duties, at such salaries as may be approved by the Governor in Council, and to make such rules and regulations as may be necessary to facilitate administration; such rules and regulations to be submitted for approval to the Governor in Council.

(6) That the pension awarded any member of such force, or any dependent of such member, should not be capable of being assigned, charged, attached, anticipated or commuted.

(7) That all pensions awarded to members of such force be determined by the disability of the applicant without reference to his occupation prior to enlistment.

(8) That each case be subject to review at the end of the year from the time the pension is first granted, except in those cases where the disability is obviously permanent, and then there be no further review.

(9) That, to encourage industry and adaptability, no deduction be made from the amount awarded to such pensioner owing to his having undertaken work or perfected himself in some form of industry. The welfare of the State demands that so far as possible those who are at all able should endeavour to augment their pension allowance. If the pension granted were subject to reduction owing to the recipient having remunerative work, your committee are of the opinion that a premium would be put on shiftlessness and indifference. That provision be made by the Commission for vocational training for those who are desirous of taking advantage of it, and for the supplying of artificial limbs and appliances, from time to time, to those who would thereby be benefited. This subject is within the province of the Military Hospital Commission, and is now receiving attention.

(10) That provision be made by the Commission for entrusting to a reputable person for administration, the allowance to any pensioner or to any dependent when the Commission is satisfied that it is being improvidently expended by the ordinary recipient, the expense of such administration, if any, to be borne by the Commission.

(11) That a member of such force, on account of disability incurred on active service or aggravated thereby, be pensionable at the following rates for total disability:

	Yearly.
Rank and file	$ 480
Squad Battery or Company Sgt.-Major Squad, Battery or Company Q.M. Sergeant Colour Sergeant Staff Sergeant Regimental Sgt.-Major not W.O. Master Gunner not W.O. Regimental Q.M. Sergeant	510 620
Warrant Officer	680
Lieutenant	720
Captain	1,000
Major	1,260
Lieutenant-Colonel	1,560
Colonel	1,890
Brigadier-General	2,700

(12) That those who are entitled to be awarded pensions be divided into six classes, and to each member of each class be awarded a pension in the direct proportion of his disability to total disability, as follows:

Class 1.—Total disability, 100 per cent.
For example—
Loss of both eyes.
Loss of both hands, or all fingers and thumbs.
Incurable tuberculosis.
Loss of both legs, at or above knee joint.
Insanity.
Permanent extreme leakage of valves of heart.

Class 2.—Disability 80 per cent and less than 100 per cent—pension 80 per cent of Class 1.
For example—
Loss of one hand and one foot.
Loss of both feet.
Disarticulation of leg at hip.

Class 3.—Disability 60 per cent and less than 80 per cent—pension 60 per cent of Class 1.
For example—
Loss of one hand.
Loss of leg, at or above knee.
Loss of tongue.
Loss of nose.

Class 4.—Disability 40 per cent and less than 60 per cent—pension 40 per cent of Class 1.
For example—
Loss of one eye.
Loss of one foot.
Total deafness.
Loss of two thumbs.

Class 5.—Disability 20 per cent and less than 40 per cent—pension 20 per cent of Class 1.
For example—
Loss of one thumb.
Anchylosis of elbow, knee, shoulder, wrist or ankle.

Class 6.—Disability under 20 per cent, a gratuity not exceeding $100.
For example—
Total deafness in one ear.
Partial deafness in both.
Loss of index or other finger.

(13) That, to those, up to and including the rank of Lieutenant, who are totally disabled and in addition are totally helpless so far as attendance to their physical wants is concerned, the Commission may make a further grant subject to annual review of not exceeding $250 a year.

(14) That a disabled member of such force, up to and including the rank of Lieutenant, entitled to a pension in the 1st, 2nd or 3rd class, in addition to his personal pension, be entitled to draw $6 a month for each child; of the rank of Captain, $7 a month for each child; of the rank of Major, $8 a month for each child; of the rank of Lieut.-Colonel, Colonel or Brigadier-General, $10 a month for each child, a child to include a step-child and a child in respect of which such member was in loco parentis.

(15) That, if a member of such force has been killed, or has died as the result of injuries received, or disease contracted or aggravated while on active service, the widow, until re-marriage, be entitled to the equivalent of the pension mentioned in Class 2, and also be entitled to draw the allowance recommended for children; on the re-marriage of the widow her personal pension cease, but that she be entitled then to draw a gratuity of an amount equivalent to one year's pension.

(16) That, if a member of such force who has been killed, or has died, as the result of injuries received, or disease contracted or aggravated while on active service, was a widower, but leaves a child or children, as defined by this report, said child or children receive $12 per month each.

(17) That, in the event of an application being made for a pension on behalf of a woman who has, without being married to a member of such force, lived with him as his wife, or on behalf of the child or children of any such man or woman, the commission be authorized to grant the customary pension for a wife or for a child or children, on being satisfied that the circumstances were such as to warrant the conclusion that the woman had at the time of enlistment and for a reasonable time, previously thereto, publicly been represented as the wife of said member of such force, of if the commission is satisfied that justice would be done by the recognition of such woman, for the purpose of pension, as the wife of such member; on the marriage of the woman her personal pension cease, but that she be entitled to draw a gratuity of an amount equivalent to one year's pension.

(18) That no payment be made on account of any child, if a boy over the age of sixteen, or if a girl over the age of seventeen, unless owing to mental or physical infirmity the child is incapable of earning a livelihood, in which case the pension may, if in the discretion of the commission it seems best, be continued until the child is twenty-one. That no pension be paid in respect of a child after the marriage of such child.

(19) That no pension be paid, when disability or death was occasioned by the negligence of the member of the Canadian Expeditionary Force, to any person claiming, or on whose behalf a pension is claimed, unless the commission otherwise consent.

(20) That in all cases the claims for personal pensions must be made within two years of the date of the appearance of the disability in respect of which the claim is made.

(21) That a widowed mother, step-mother, or grandmother, wholly or mainly dependent upon a member of such force who is killed or dies as the result of injuries received, or disease contracted or aggravated while on active service, if such member was without dependent children and unmarried, or a widower, be entitled to a pension of Class 3, provided, however, that no such woman be entitled to more than one pension; on the marriage of the woman such pension cease, but that she be entitled then to draw a gratuity of an amount equivalent to one year's pension.

(22) That a father, wholly or mainly dependent upon a son who is a member of such force and who is killed or dies as a result of injuries received or disease contracted or aggravated while on active service, if such member was without dependent children and unmarried, or a widower, be entitled to a pension of Class 3.

(23) That if a member of such force to whom a pension has been granted in either Class 1 or in Class 2 dies, leaving a wife to whom he was married at the time of his incurring the disability in respect of which his pension was granted, or a woman occupying at said time the position of a wife within the purview of Clause 17 of this report, or leaving children by such wife or woman, the pension for the class next below that granted the said member be given said wife or woman, and the allowance on behalf of any child or children be continued subject to the restrictions as to age

as provided by Clause 18 of this report; on the marriage of the wife or woman her personal pension cease, but that she be entitled to draw a gratuity equivalent to one year's pension.

(24) That pensions to widows and children take effect from the day following that on which the death of the member of such Force, in respect of which said pension is granted, occurred and that a gratuity equivalent to two months' pension be paid the first month in addition to the pension.

(25) That strong recommendations were made to your committee that the reservists of the Allies who were bona fide residents of Canada at the time they were called to the colours of their respective countries, and who left their dependents with the intention of returning to Canada after the war to make it their home, should be treated on the same basis as those enlisting from Canada in the Canadian Expeditionary Force, and that this country should supplement the pension granted respectively by the Allies.

As your committee were unable to get definite information as to the policy of the other Governments, and sufficient information to warrant a sound conclusion being reached, your committee recommended that the Commission give the matter of pensions to reservists and their dependents careful consideration and investigation, so as to permit a full report being made to the House at its next Session.

The attention of the Canadian Patriotic Fund should be directed to the advisability of its aiding in the meantime the dependents in Canada of such reservists as have become disabled, and whose dependents as a result require assistance.

Your committee are, however, of the opinion that if provision be subsequently made for supplementing pensions given to reservists by their respective Governments, it should apply to men who, at the time of their being called to the colours, had dependents bona fide residing in Canada and who continued in Canada during the war. And that such supplementary pensions be not continued beyond the time that the dependents of such reservists actually continue to reside in Canada.

(26) That, in the administration by the Commission, in order to obviate the annoyance and distress incidental to delay, great care be taken to insure all applications being considered and determined with the utmost despatch.

(27) That in due course legislation be introduced confirming this report, but that in the meantime, proceedings be taken to forthwith bring it into effect.

(28) That the provisions of this report relating to the granting of pensions be made effective as and from the date of the declaration of war, August 4, 1914.

Your committee also recommend that this report and the evidence and the statements submitted herewith, together with a suitable index to be prepared by the secretary of the committee, be printed forthwith for distribution, and also printed in the appendix to the Journals of 1916, and that Rule 74 be suspended in relation thereto.

The Minister of Marine and Fisheries, in his remarks, directed attention to the fact that the scheme as outlined in the report made no distinctions as between the pensions that were suggested for married men and unmarried men. All the members of the committee, with one exception, agreed that no distinction should be made and I think I might outline the reasons that brought them to this conclusion. The Canadian Expeditionary Force is a purely voluntary army; it is an army of men who came from all over the country, without premeditation and in response to the national call. Some were married at the time of enlistment, some married subsequent to enlistment, and later on a regulation was made that to the wife of a man who married subsequent to enlistment, no separation allowance would be granted unless he obtained the consent of his commanding officer. Some men obtained the consent of their commanding officers and were married. Others abandoned the hope of securing the separation allowance and married without the consent of the commanding officer. Another group of men who had contemplated matrimony and were engaged to Canadian girls, went overseas without marrying, no doubt with the understanding that on their return they would be married. The committee felt that it would be unfair to make any distinction between these various groups and classes and they therefore laid down the rule that they would make no distinction between married and unmarried men, that they would not take from the unmarried man and give to the married man, but that they would give the same pension to the unmarried man as to the married man, so that when the war was over and the men returned, all men, no matter whether they had married before the war broke out or subsequently, or before going to the front or thereafter, would be put on exactly the same plane.

An object of the committee was to increase the pensions in these groups in which the committee were of opinion that inadequate pensions had been granted. Perhaps a comparative statement showing the rate of pensions granted a totally disabled soldier or his widow under the present scheme and under the suggested scheme may not be amiss.

Comparative rates of pensions for totally disabled soldiers; present and suggested schemes:

	Unmarried Soldier		Soldier and Wife.		Soldier Wife and 3 Children.	
	Present.	Suggested.	Present.	Suggested.	Present.	Suggested.
	$ cts.	$ cts.	$ cts.	$ cts.	$ cts.	$ cts.
Rank and file	264 00	480 00	396 00	480 00	576 00	696 00
Sergeant	336 00	510 00	504 00	510 00	684 00	726 00
Warrant officer	480 00	680 00	672 00	680 00	852 00	896 00
Lieutenant	480 00	720 00	702 00	720 00	918 00	936 00
Captain	720 00	1,000 00	990 00	1,000 00	1,242 00	1,252 00
Major	960 00	1,260 00	1,260 00	1,260 00	1,548 00	1,548 00
Lieut-Colonel	1,200 00	1,560 00	1,560 00	1,560 00	1,920 00	1,920 00

Comparative rates of pensions for widows of officers and men killed on active service; present and suggested scheme:

	Widow.		Widow and 3 Children.	
	Present.	Suggested.	Present.	Suggested.
	$ cts.	$ cts.	$ cts.	$ cts.
Private	264 00	384 00	444 00	600 00
Sergeant	336 00	408 00	516 00	624 00
Warrant officer	384 00	544 00	564 00	760 00
Lieutenant	444 00	576 00	660 00	792 00
Captain	540 00	800 00	792 00	1,052 00
Major	600 00	1,008 00	888 00	1,296 00
Lieut-Colonel	720 00	1,248 00	1,080 00	1,608 00

The committee were of opinion that a pension scheme on that scale made a living reasonably secure for a married man, an unmarried man, or a family man, if the man should return totally disabled. If, perchance, the breadwinner were killed at the front, the pension to the widow was not quite as great as it was to the man who returned totally disabled. Under the present scheme the widow of a private would receive $264, whereas under the suggested scheme, the widow would receive $384. If the widow has, in addition, three children whom she will have to support, under the present scheme, she would get $444 and under the suggested scheme $600. I think that a consideration of these figures would indicate that in so far as the report of the committee goes, Canada is prepared to deal generously with her soldiers. A comparative statement of the pensions that would be received by soldiers, or the widows of officers and men, under the suggested scheme, as compared with that adopted in other parts of the Empire, might also be of interest:

A.—Comparative rates of pensions for totally disabled soldiers, pursuant to report.

Rank.	—	Unmarried Soldier.	Married Soldier and Wife.	Soldier and 3 Children.	Remarks.
		$ cts.	$ cts.	$ cts.	
Rank and file (i. e. corporals and privates)	Canada	480 00	480 00	696 00	Rates may be increased by $250 if helpless.

	Australia	377 00	566 00	
	New Zealand	379 60	569 38	
	British	175 00	307 00	Increased on attaining 35 years and again at 45.
Lieutenant	Canada	576 00	792 00	
	Australia	443 00	632 00	
	New Zealand	506 12	695 90	
	British	400 00	625 00	
Captain	Canada	800 00	1,052 00	
	Australia	492 00	681 00	
	New Zealand	569 38	759 16	
	Britsh	500 00	770 00	
Major	Canada	1,008 00	1,296 00	
	Australia	565 00	754 00	
	New Zealand	657 96	847 74	
	British	700 00	1,015 00	
Lieut-Colonel	Canada	1,248 00	1,608 00	
	Australia	638 00	827 00	
	New Zealand	768 92	958 70	
	British	900 00	1,260 00	

I direct attention to the unfortunate position that the widows of reservists in this country are going to be in after this war is over and I shall allude more fully to that matter later on. When a comparison is made between the pensions suggested by Canada and those paid in other parts of the Empire, I think the House will agree that the committee was not ungenerous in the amounts suggested as being fair and reasonable pensions to be paid.

My hon. friend the Minister of Marine and Fisheries in his address alluded to certain changes and alterations with regard to pensions to be made in differentiating between the suggestions of the committee and the old pensions scheme. The pension scheme now in force makes provision for a pension being paid to a man who has received injury or contracted a disease subsequent to enlistment. It totally overlooks the fact that many men, without being aware of any physical failing, have been received into the ranks by medical officers throughout the country as being sound and fit; then, as a result of exposure, exhaustion or exertion, diseases have developed that have resulted in the men's health being permanently impaired, and, in some cases, in their death. The committee felt that this was radically unfair. If a man who had within him the germs of a disease, of which he had no knowledge, offered his services to the state in the belief that he was sound and fit, and was received by the medical officer in that condition, it was thought unfair that his wife and children should suffer because he came to a premature death owing to the development of a disease that was aggravated by his military service. As a result, the suggested scheme of pensions widens the range of those to whom a pension may be granted and it says that a pension may be granted to a member of the Canadian Expeditionary Force on account of disability incurred on active service or aggravated thereby. It will permit of a pension being granted to a man who may have been suffering from some complaint of which he was not aware or which escaped the watchful eye of the medical examiner.

The committee made another change, a change that, in my judgment, is only right and fair. The original pension scheme made a distinction between the pension granted to a man when his injury or disability resulted from something that occurred when he was in action or in the presence of the enemy, or from something that occurred during ordinary drill subsequent to his enlistment. The committee were at a loss to understand why a distinction should be made between an injury suffered by a man who may have been thrown by his horse, or injured by his horse stumbling on a charge across the drill ground, and the same injuries resulting to a man in action. They took the ground that the injury that a man received subsequent to his enlistment should be the determining factor and in their report they lay it down as a principle that all men shall be treated on an equality provided their injury was received in their military work subsequent to their enlistment, or as a result of some disease contracted or aggravated by their military training or experience.

The committee made one other variation, a variation that in my judgment will meet with the enthusiastic support of the people of Canada. Under the old scheme men of the rank and file, were awarded a pension in respect of their children of $5 a month provided boys did not exceed the age of 15 and girls the age of 17. The committee thought that was radically unfair. If there is one thing more than another that a child is entitled to whose bread-winner is taken away by having voluntarily assumed military risks, it is a fair chance in life. The committee felt that to stop the pension when the boy was 15 was unfair. Accordingly they raised the age to sixteen. As you know, Mr. Speaker, the majority of boys and girls throughout this country enter our secondary schools at about fourteen. And when the pension is discontinued when a boy reaches the age of fifteen it practically means this: when he leaves the public schools the expense of education increases, and if the pension that is paid his mother is to be cut off when he enters the secondary school, and the expense of education is at the same time increased, it practically means that the boy or girl is to be deprived of the opportunity of an education. The Committee felt that the children have the right to a fair chance to secure an education, and that it was not unreasonable that a pension should be continued until the boy was not past sixteen and the girl not past seventeen, and that the pension paid on account of the child of a private should be increased from five to six dollars a month.

The committee took perhaps a radical step in another matter, but a step that

seems to me to have been fair. They said that a man in receipt of a pension should be entitled to the fruits of his labour, that if a man who had lost his eyes adapted himself to circumstances and was able to earn the means of life, if he had lost his feet or his hands and had the pluck to again face life and through the advantage of vocational training or otherwise was able to secure employment in another sphere of activity, that man was entitled to keep what he earned. The committee took the stand that if those who had suffered greatly in this war had the courage when they returned to endeavour to earn a fresh place for themselves in civil life, they should be paid their pension in respect of the physical disability they had suffered, and should also be entitled to what earnings they made, and that the earnings should not be deducted from the pension.

To adopt any other scheme than this seemed to the committee to have as an inevitable result the encouragement of shiftlessness and laziness, and the committee felt that in a country like this everything possible should be done to encourage the men to take on themselves fresh employment when they again returned to this country.

In regard to administration, under the pension regulations the court of final resort is the Minister of Militia, and no matter what Government was in power that would mean a certain amount of political intrigue, and, perhaps, a certain amount of political unpopularity. The committee, therefore, came to the conclusion that a non-partisan board should be appointed, who would hold office for a protracted period, and who would be the sole arbiters of what pension should be granted, and from the full board no appeal should lie. It seems to me that that will commend itself to the country at large.

The ex-Postmaster General (Mr. Lemieux) has directed attention to the peculiar position that reservists of the Allies occupy in this country. The committee canvassed this matter rather thoroughly and endeavoured to secure such information as was available, but, unfortunately, could not get complete information that would justify a conclusion. The pensions paid by the Governments of the Allies are quite inadequate to permit of anything like decent living in this country. Something must be done either by the municipalities, the country of the reservists, or by this country to supplement the

pensions that are going to be paid to these people. The committee could not reach a conclusion, and, therefore, said in their report that the matter should be carefully inquired into by the Board of Pension Commissioners during this year, and that they should report to the House at the next session. They also suggested that the Patriotic Fund should carry these people during this year, so that there would not be hardship and discontent throughout the country. I realize the danger of endeavouring to prove a general rule by a specific case, but my attention was directed only yesterday to a heart-rending case where the widow of a reservist—her husband had been killed at the front—received the munificent pension of fourteen shillings a week, less than four dollars, to maintain herself and one small child in this country! It must be abundantly clear to you, Sir, and I am sure it is clear to the House, that a pension of this amount is quite inadequate, and the inevitable result will be that if in some way means cannot be devised to supplement the pension paid to these reservists, the municipalities are going to have the burden thrown upon them, and there is going to be discontent. And, as a national asset, it seems to me it is worth while for this country to give the children of these reservists every opportunity to do well in this country. We have encouraged immigrants to come to Canada, and many have come with the idea of making this land their home, and the breadwinner has left only at the call of his country. If a scheme can be devised, or if co-operation can be secured with the governments of the Allies, I feel sure that it will relieve the strain and stress that otherwise is going to bear very heavily on a class of people in this country who deserve our sympathy.

I will not speak further this afternoon, as I understand other matters of pressing importance must be discussed, but from what I have heard, in so far as my going about the country in one direction and another has brought me in contact with the people, I believe that the people at large in this country are quite prepared to deal generously by those who have risked their all for the maintenance of the national life and the Empire at large.

Mr. FRANK OLIVER: The chairman of the committee (Mr. Hazen) has alluded to an exception in the unanimity of the committee in regard to some matters. I must confess that I occupy the position of the

historic juryman who complained that he was locked up for twenty-four hours with eleven of the most obstinate men he had ever seen. I regret being compelled to differ with a majority of the committee on what seemed to me a vital question, and, as it has already been mentioned by my hon. friend the chairman and by my hon. friend from Kingston (Mr. Nickle), I should like to say a word or two on the subject. I held the view that those who have wives are entitled to special consideration in the matter of pensions, over and above the amount paid to the single men. I took that view for two different reasons. The first reason has relation to the raising of the further forces that will be required. It must be admitted that in the case of a married man the strongest influence in securing his enlistment is that of his wife. Certainly, if he is the man he ought to be—and if he is not the man he ought to be, he will not make the best soldier—the views of his wife will have great weight with him in his decision. If we expect to recruit largely from amongst the married men for the future needs of the war, it appears to me that one of the first considerations is that the wives of those upon whom we must depend shall be dealt with liberally and generously, or, at any rate, justly. It is not possible to maintain two people at the same expense as one. The single man who is disabled can secure bed and board under entirely suitable circumstances at a very reasonable rate; but the married man must set up house or he does not carry on life under normal and proper conditions, and the setting up of a household absolutely and unquestionably involves a greater expenditure than does the providing of bed and board for the single man. It appears to be elementary that the requirements of two persons are greater than the requirments of one, and I maintain that when we are dealing with a minimum requirement, the requirement of a man and a woman are greater than the requirements of two single men. I speak of the minimum requirement that is necessary to establish the minimum household. For these reasons I did press my views upon the committee. I regret that I was not able to impress the majority favourably, but I take this opportunity of placing my views before the House so that there will be no misunderstanding as to what my position was.

I would be very glad, if it were possible, to consider, in the light mentioned by my hon. friend the ex-Postmaster General (Mr. Lemieux) and the hon. member for Kingston (Mr. Nickle) the case of the reservists more definitely than is suggested in the report. That is a matter which is particularly interesting in the western country, because we have there such a very large proportion of reservists whose condition is a matter of concern to everyone. The responsibility must rest upon somebody, and we believe that as those men have rendered equal service in the same cause, we would only be doing justice to ourselves as well as to them if we gave them equal recognition.

Mr. A. C. MACDONELL (South Toronto): Mr. Speaker, just a word in addition to what has been said so ably upon both sides of the House. As a member of the Pension Committee, I beg to approve so far as I can, the language of the hon. member for Rouville and the hon. member for Pictou (Mr. Macdonald) in regard to the harmony that prevailed in the committee and the diligence with which they devoted themselves to their work. I do not know anything that was omitted; in fact, I think that every possible effort was made to get from all classes and sections of the public their different opinions upon this question. Every opportunity was given to all and sundry who were interested, to come to the committee, and the hon. member for Kingston (Mr. Nickle) has very ably summarized what has been done. The best efforts that the committee could put forth has produced this report. We cannot hope that it is perfect, but we believe that if it is given a proper trial, it will be found to work out very well. In a word, the bones of the question are put together by the committee, but the filling of it out and the growth of it will have to depend upon the manner in which the commission works it out as the needs require.

One point mentioned by the hon. member for Edmonton (Mr. Oliver) was very fully considered. I would like to point out the effort that we have made to bring up to a living scale the pension to be given to the private soldier. Under the old pension scale, the married private soldier received $396 a year; under the scale we have recommended he will get $480 a year. There is a very considerable advance in the case of the single man amongst the rank and file; under the old scale he received $264 a year; under the new scale he will get $480 a year. The reasons for giving both the unmarried

man and the married man the same rate of pension were the reasons given by the hon. member for Kingston a few minutes ago, and there was the further reason that in the majority of cases where a single man returned to Canada he might wish to establish a home, and it was felt that he should be given an opportunity of doing so. It was felt that if he were left without any other means of support than the pension under the old scale, he could not marry and settle down and make his home in this country.

The committee thought that every inducement should be held out to him to lead the same life as his married neighbour, and that the pension recommended was not any more than fairly adequate to meet his requirements in that condition. The pension for the married man was increased by about $100 so that we have added considerably to his pension; we have added still more to the pension of the single man in order that he may marry if he so desires, and, as the hon. member for Kingston has pointed out, many men have married since enlistment.

I conclude by saying that the labours of this committee have been faithful. We have done our best, and, if inequalities are found in the working out of this scheme, they can be remedied either by the Pension Board or by subsequent legislation.

Sir ROBERT BORDEN (Prime Minister): Mr. Speaker, the committee is to be congratulated that its deliberations have been so earnest, so indefatigable, and so harmonious, and that, with the exception of the point which has been alluded to by the hon. member for Edmonton (Mr. Oliver) there was really no difference of opinion amongst them as to what should be done. The proposals, when carried into effect, will, of course, entail a very considerable increase in the public charges, but I do not believe there is anyone in the Dominion who would not be willing cheerfully to bear his share of the increased burden.

My hon. friend the member for Pictou (Mr. Macdonald) expressed his regret that legislation was not being enacted this session for the purpose of carrying these proposals into effect. I am not inclined to agree with my hon. friend in that regard. It will be the duty of the Government in the immediate future to create a Pension Board, and I am inclined to the opinion that, after the proposals of the committee have been tested in actual practice by that board, there will be a better opportunity for this House to come to a conclusion as to legislation than there would be if we hurried it through at this stage of the session.

If I had been a member of the committee it is possible I might have entertained a different view on some points from that which has been put forward, but nevertheless the report of the committee embodying their recommendations must be considered with all respect, and I see no reason at the moment why they should not be carried into effect in their entirety.

With regard to the point raised by my hon. friend from Edmonton, I am not sure that I would have adopted either the view which he has put forward, or the view which commended itself to the majority of the committee.

There is certainly some force in the view which the hon. member for Edmonton has presented to the House. There is force also in the view with which the majority of the committee were impressed. It does seem to me that the reasons advanced by the majority of the committee would rather have pointed to this conclusion: that there should be a difference between the pension allowed to the single man and the pension allowed to the married man, but that the pension to the single man should be increased upon his marriage. In my judgment this would have been a more logical conclusion from the reasons put forward by the majority of the committee than that which in the end did commend itself to their judgment. I say that not by way of criticism, but merely by way of expressing a view which has impressed itself upon my own mind, without having had the opportunity of considering the whole matter which the members of the committee enjoyed for many weeks.

The hon. member for Kingston (Mr. Nickle) has alluded to the possibility of political influence or political pressure under present conditions—at least, I so understood him. I know something about the operation of the pension law as it is at present. I have known something about it during the past year or 18 months, and I desire to affirm to this House, lest there should be any impression of that kind throughout the country, that on no single occasion have I ever heard even the suggestion of political influence or political pressure from any man within this House or from any man without this House with regard to pensions. On no single occasion

have I ever heard even the breath of a suspicion that any such thing had taken place or was possible. I may tell the House, in case any hon. member or any man outside the House may be under the impression that political influence or political pressure is exerted in such cases, just how the matter is dealt with. During the past four or five weeks I myself have been dealing with this matter, and I know precisely how it is done. These matters go before the Pension Board. The Pension Board have reports prepared, make their inquiries and put everything into documentary form. They append their recommendation with these documents attached, and the recommendation comes for signature before the minister or the acting Minister of Militia and Defence. I sign as many as 40 or 50 of them in one day, and the demands upon my time are such that I do not even know the name of the man who is recommended in any one of these. I am not able in the time at my disposal even to read the papers; I pass them on as a matter of course, after they have been considered by the permanent officers of the Pension Board, to the permanent officers of the Treasury Board. How any one can reasonably suppose that political influence or political pressure comes into the matter under these conditions is entirely beyond my comprehension. I desire to affirm that during the year or eighteen months that I have had to do with these pensions, particularly during the past four or five weeks in which I have been responsible for signing these documents and sending them forward to the proper officers of the Treasury Board, there has never come to my knowledge even the breath of a suspicion that any man inside or outside of the House has exerted political pressure or political influence. If there is anything of that kind to the knowledge of hon. gentlemen in this House, I should be glad to know of it.

Mr. NICKLE: What I intended to say was that a non-partisan board would obviate the possibility of political intrigue or unpopularity.

Sir ROBERT BORDEN: It has been suggested, I think, on previous occasions in this House that something of this kind had taken place. I understood my hon. friend to suggest that; if he did not, I desire to withdraw any comments I made upon it. I say this merely for the purpose of indicating so far as my knowledge goes and so far as my experience is of any value, that nothing of the kind has ever taken place. We will give to the recommendations of the committee the most careful and respectful consideration and attention. As I have said already, I see no reason why they should not be carried out in their entirety. There were some matters as to which I asked for information this afternoon which may demand a little consideration when the recommendations of the committee are to be put in the form of regulations. I hope that in the immediate future everything will be put in train. I realize also that the Pension Board as constituted must be one which will command the respect and confidence of the people of Canada as a thoroughly representative and independent commission.

Mr. LEMIEUX: When this question of a commission was discussed in the committee, it was suggested that the appointment should be of a non-partisan character and that the right hon. gentleman should, perhaps, consult the leader of the Opposition as regards the appointees.

Sir ROBERT BORDEN: I shall, of course, be pleased to take that into consideration. We may be assured that the board as constituted will be one which, according to the view of the Government, will command the approval and confidence of the Canadian people. In conclusion, I think that the thanks of all the members of the House and of the country as a whole are due to the committee for the splendid work which they have done, and especially to the hon. member for Kingston, who, as I understand, has assumed a very large burden in connection with the work and whose presence and assistance on that committee have been invaluable throughout their deliberations.

Mr. OLIVER: I would not wish the Prime Minister to think that any such suggestion in regard to political influence was in the mind of the committee at any stage of the proceedings. It is true that we did discuss from time to time the possibility of political influence being exercised in the future with regard to pensions, having regard to the conditions in the United States. I beg to assure him that, so far as my knowledge goes, there was no suggestion that political influence had played any part in the matter of dealing with pensions at the present time.

Mr. NICKLE: What I intended to say—I am not sure whether I succeeded or not

—was that the committee recommended the appointment of a non-partisan board to avoid the possibility of political intrigue and political unpopularity. I had no reference to the present or past administration of pensions.

Motion agreed to.

APPOINTMENT OF ACCOUNTANT.

Mr. SPEAKER informed the House that a message had been received from the Senate to acquaint this House that the Senate doth concur in the nomination of Mr. A. M. W. Carter as accountant in the library of Parliament.

THE 163rd BATTALION.

Mr. LEMIEUX: With the consent of the House, I beg to say that I took some interest in the formation of the 163rd Battalion in Montreal, known as the Asselin Battalion, and I would like to have a statement from my right hon. friend the hon. Acting Minister of Militia and Defence (Sir Robert Borden) of the reason why the battalion has been ordered to Bermuda. This battalion has been organized in practically three months' time, and is an excellent battalion. I suppose that the regiment has been sent to Bermuda for training purposes, and that it will ultimately go to England and France. Possibly I am giving the answer myself, but I have been asked by some people who are interested in the corps to put the question to the Minister of Militia and Defence.

Sir ROBERT BORDEN: If my hon. friend had given me notice that he was going to ask for this information I might have procured it for him if it were available. As a matter of fact, I cannot answer the question, because I did not know that the regiment had been ordered to Bermuda.

Mr. LEMIEUX: Yes, I received a telegram from Major Asselin saying how proud he was to inform me that he had been ordered to go to Bermuda. I suppose it is for training purposes, as other battalions have been sent to Bermuda, and that ultimately it will go to France. It is very anxious to go to the front.

Sir ROBERT BORDEN: It is very probable that my hon. friend's conjecture is correct. He will see how impossible it is for me to answer him; I did not even know that the regiment had been ordered to Bermuda.

[Mr. Nickle.]

PUBLIC PRINTING.

PROPOSED REDUCTION IN COST.

Mr. HUGH CLARK (North Bruce) moved:

That the third report of the Joint Committee of both Houses on Printing be commended to the attentive consideration of the Government with the recommendation that the attention of each department of Government be directed thereto with a view of having the recommendations contained in the said report carried into effect so far as may be practicable and with the view to effecting all possible economy in the matter of public printing, and that a report be prepared by each department of the Government for presentation to this House at the next session in which shall be set forth the extent to which such recommendations have been carried into effect and the reasons, if any, which render it impossible or undesirable to carry into effect such recommendations in any particular department.

He said: There were three committees to report this afternoon, but the Pensions Committee has very generously and unselfishly left twenty-five minutes for the other two committees. However, I may make a few remarks, because my hon. friend from Digby (Mr. Jameson) has told me that he will not go on with the third inasmuch as the first report has left so little time for the rest. The Committee on Printing have had in view all along that the Government's recommendation of production and thrift should be the slogan, particularly during war time, and they have been endeavouring to produce thrift by reducing production—reduction in the amount of printing that is done for the Government. We have had in mind the increasing cost and the increasing scarcity of paper, and we have been advised as well by my hon. friend the Minister of Trade and Commerce (Sir George Foster) that, in view of the shortage in the supply of white paper, the public should be asked to conserve paper as much as possible. I do not know of any place where that conservation could be carried into effect more than in these Parliament and Government buildings. We have entirely too many Government publications. They are altogether too large, and the cost has gone up so tremendously that something has to be done in order to reduce it. The cost has more than quadrupled within the last fifteen or sixteen years. Something has already been done by the present King's Printer, Mr. Taché, and by his assistant, Mr. Cook. They have started out in a proper manner, and if you will look over some of the reports you will see how well the work has

been done. Take, for instance, the blue-book of "Unclaimed Balances," and the blue-book containing a list of the shareholders of banks, and you will see that by an arrangement of the forms and of the type they have put the same material in half the space, the size of the volumes has been greatly decreased and a considerable saving has been effected in that way alone. A great many publications are sent out all over the country that are not in demand at all, that are not being used, and that are simply burned up as soon as the supply becomes too large. The Department of Agriculture was sending out 110,000 copies of a certain periodical when they sent out return post cards to ascertain how many people really wanted this publication. The result was that only 25,000 people wanted it. The balance is still there and is waste paper. The committee have recommended that the post card system be used in connection with every department and that post cards be sent out annually. We found that a great many blue-books and sessional papers were being sent out, for instance, to Mechanics' Institutes that had been out of existence for a great many years, to public libraries, to members of Parliament and to others who did not require them. The lists of the Canada Gazette, until recently, had not been revised since 1892. Other lists have not been revised for twenty or twenty-five years. In this report we have recommended that copy sent to the King's Printer be typewritten. We recommend the creation of a board of editorial management, consisting of men already in the service, who will revise the copy that is sent, and blue-pencil it to some extent, so that the volume will not be so large. If ministers would tell their officers that in the preparation of copy of this sort, brevity would be considered a virtue, it might have a good effect in the meantime.

We have recommended that this editorial board should revise all the copy and say whether or not certain copy should be published. There is a great deal of waste material in many of the publications. I was looking over one of them in which there are four pages of dedications. The chief engineer dedicates the report to the superintendent, the superintendent has a page dedicating it to the deputy, the deputy has a page dedicating it to the minister, and the minister has a page dedicating it to His Royal Highness. That may not seem to be a great deal, but when you are printing ten or twenty thousand copies it involves a considerable additional expense.

Then, there is the matter of the Agricultural Gazette. The reason this is commended to the attention of the minister is that, since the report was published, representations have been made to us on behalf of the publishers of agricultural magazines and newspapers to the effect that if this Agricultural Gazette were sent free as recommended to farmers, it would practically put them out of business. It would certainly seriously interfere with such publications as the Farmers Advocate, a farm newspaper published in London, Ontario. When this publication was started by the department, I understood, and I still understand, that it was merely for the purpose of disseminating information among the different branches of the Agricultural Department, those engaged in connection with the experimental farms and the various provincial agricultural services. It was not the intention to interfere with or to compete in any way with farm publications. It is not supposed to be distributed generally. In fact, I read in it just now that it is not to be distributed generally, but that any person desiring it may procure a copy for a dollar a year. The recommendation of the Printing Committee was that it should be distributed free to all who might apply for it. The reason for the amendment is that, in view of these representations and of several other things, we prefer to have the Government consider whether or not it is advisable to adopt this suggestion. As to having the copy typewritten and having a board of editors to look over it, the cost last year on account of typographical corrections of copy was something like $48,000, and at that it was $5,000 less than the year before. A tremendous saving can be made in that way alone.

Mr. SCHAFFNER: I regret that we have not more time at our disposal for the discussion of this report. I wish to protest, on behalf of the Debates Committee, against that part of the report which refers to the Debates of the House. I am in sympathy with the economy that is suggested in connection with the printing of this House and of the departments generally. The statement of the hon. member for North Simcoe (Mr. Currie), who introduced this motion the other day, that the mailing lists of these different reports were not properly revised, does not apply to the Debates of

4 p.m.

this House. The list of recipients of the Debates is revised every year. My hon. friend who introduced the motion said that sometimes these publications were being mailed to the homes of men who had been dead for 15 years. The Debates Committee look after their mailing lists very carefully. The lists are revised absolutely every year with the very closest attention.

Mr. LEMIEUX: I wish to record my agreement with the remarks which have just been made by the hon. member for Souris (Mr. Schaffner). The work of the Debates Committee is, I believe, well managed, and the members are living up to what should be expected from them by their colleagues in the House of Commons in the work of publishing our little portion of the official literature. For that they are certainly not deserving the opprobrium which naturally falls on other departments of the Government. The officials who are working in co-operation with the members of the Debates Committee have taken scrupulous precautions to see that the Debates are circulated only to people who should receive them, and who do receive them. The list is scanned every year and blue-pencilled—I hope it is red-pencilled sometimes. There is no reason why this little investigation should extend to the work of the Debates Committee. I stand for the autonomy of our committee, and I agree perfectly with what has been stated by the hon. member for Souris.

Mr. BURRELL: Mr. Speaker, I have not been guilty of trespassing very much on the time of the House this session, and I do not intend to do so now. One word in answer to my hon. friend who has just spoken on behalf of the Printing Committee. I say that, in spite of whatever faults may obtain in the service or in the departments generally in regard to this matter, we owe a debt of gratitude to the Printing Committee for analysing the whole subject and putting the resolution in the way they have, that is, asking the departments to thoroughly examine into the methods adopted, with a view to simplification and economy. I do not know to what publication of our own department my hon. friend referred when he said that 25 per cent of the people who received it did not want it. We have endeavoured to increase very largely the publications of the department, believing that the educational work of the department was of great value to the country generally. In regard to the Agricultural Gazette, I may say that it was not my intention, when we founded that Gazette, nor has it been since, that it should be a journal that would be of special use to, or that would be specially desired by, the average farmer; the idea was rather that it should reflect the official work of all agricultural departments in the country, and have a special reference to the Agricultural Instruction Act, in connection with which we are expending a large amount of money. It has therefore been distributed to all agricultural educational bodies, as well as to the press. I am not at all sure that it would be advisable to extend the free circulation of that particular magazine, nor do I think that it is the business of the department to endeavour in any way to interfere with or detract from the useful work now being done by the agricultural press of the country. I appreciate the work the committee has done; and, in so far as my own department is concerned, I myself and all the officials will be only too glad to give the recommendations of the committee the fullest consideration, and if we cannot carry them out, to give reasons for not doing so.

Perhaps I may be permitted, by the courtesy of the House, to express to the members on both sides of the House my appreciation of the kind way in which they have shown their sympathy for me during my unfortunate illness occasioned by the fire in the Parliament buildings. It has been my misfortune, and not my fault, that I have not attended the House for so long a time.

Motion agreed to.

PROROGATION OF PARLIAMENT.

Mr. SPEAKER read a communication from the Governor General's Secretary, announcing that His Royal Highness would proceed to the Senate chamber this afternoon at 4.30, for the purpose of proroguing the present session of Parliament.

At that hour a message was delivered by Lieutenant Colonel Ernest J. Chambers, Gentleman Usher of the Black Rod, as follows:

Mr. Speaker, the Right Honourable the Chief Justice of Canada, acting as Deputy of His Royal Highness the Governor General, desires the immediate attendance of this honourable House in the Chamber of the honourable the Senate.

Accordingly, Mr. Speaker, with the House, went to the Senate chamber.

In the Senate chamber His Honour the Deputy of His Royal Highness the Gover-

nor General was pleased to give, in His Majesty's name, the Royal Assent to the following Bills:

An Act relating to the Superior Courts of Saskatchewan and to amend the Judges' Act.
An Act respecting Colonial Bank (Canada).
An Act respecting British Trust Company.
An Act respecting The High River, Saskatchewan and Hudson Bay Railway Company.
An Act respecting The Toronto, Hamilton and Buffalo Railway Company.
An Act to amend The Dominion Forest Reserves and Parks Act.
An Act to amend The Bank Act.
An Act for the relief of Christopher Sinclair.
An Act for the relief of Hope Fothergill Baily.
An Act for the relief of Robert Charles Vondrau.
An Act for the relief of Percy Lynn Woods.
An Act respecting certain patents of The Pedlar People, Limited.
An Act to incorporate The Fire Insurance Company of Canada.
An Act respecting The Governing Council of The Salvation Army in Canada and to change the name thereof to "The Governing Council of The Salvation Army, Canada East."
An Act to incorporate The Governing Council of The Salvation Army, Canada West.
An Act respecting the investments of Life Insurance Companies.
An Act to authorize certain School and Dominion Lands to be included in the Taber Irrigation District in the Province of Alberta.
An Act to amend the Prisons and Reformatories Act.
An Act to incorporate The Manitoba and Saskatchewan Bible Society.
An Act respecting Rentals Payable to the Mount Royal Tunnel and Terminal Company, Limited.
An Act to levy a tax on Business Profits.
An Act to amend the Canada Shipping Act.
An Act for the relief of David Whimster Rhodes.
An Act to provide for the payment of Bounties on Zinc produced from Zinc Ores mined in Canada.
An Act to incorporate The Eastern Canadian Union Conference Corporation of Seventh-Day Adventists.
An Act to amend the Canada Temperance Act.
An Act to aid in the construction of certain lines of railway of the Saint John and Quebec Railway Company and to confirm an agreement between the Company and the Governments of Canada and New Brunswick.
An Act to amend The Exchequer Court Act.
An Act for the relief of Martha Isabella Kenny.
An Act for the relief of William Thomas Craig.
An Act respecting The Niagara, St. Catharines and Toronto Railway Company.
An Act respecting The Toronto, Niagara and Western Railway Company.
An Act to amend The Government Railways Small Claims Act.
An Act relating to the St. Peters Indian Reserve.
An Act to authorize the acquisition of lines of railway between the City of Quebec and Nairn Falls and between Lyster and St. Jean des Chaillons.
An Act in aid of Provincial Legislation prohibiting or restricting the sale or use of Intoxicating Liquors.

[Mr. Speaker.]

An Act to amend the Canada Shipping Act.
An Act for granting to His Majesty aid for Military and Naval Defence.
An Act for granting to His Majesty certain sums of money for the public service of the financial years ending respectively the 31st March, 1916, and the 31st March, 1917.

To these Bills the Royal Assent was pronounced by the Clerk of the Senate in the following words:

In His Majesty's name, His Honour the Deputy of His Royal Highness the Governor General doth assent to these Bills.

Then the hon. the Speaker of the House of Commons addressed His Honour the Deputy of His Royal Highness the Governor General, as follows:

May it please Your Honour:

The Commons of Canada have voted Supplies required to enable the Government to defray the expenses of the Public Service.

In the name of the Commons I present to Your Honour the following Bills:

"An Act for Granting to His Majesty certain sums of money for the Public Service for the financial years ending respectively the 31st March, 1916, and the 31st March, 1917."

"An Act for granting to His Majesty aid for Military and Naval Defence."

To which Bills I humbly request Your Honour's assent.

To these Bills the Clerk of the Senate, by command of His Honour the Deputy of His Royal Highness the Governor General, did thereupon say:

In His Majesty's name, His Honour the Deputy of His Royal Highness the Governor General thanks His Loyal Subjects, accepts their benevolence, and assents to these Bills.

After which His Honour the Deputy of His Royal Highness the Governor General was pleased to close the Sixth Session of the Twelfth Parliament of the Dominion with the following Speech:

Honourable Gentlemen of the Senate:

Gentlemen of the House of Commons:

In this crisis of our national life your attention has been directed to affairs of supreme importance; and it is with gratitude that I recall the care and devotion with which you have considered and approved all necessary measures for effective prosecution of the war. Our Empire, with unexampled singleness of purpose, is defending not only its own integrity and institutions, but also the rights of mankind. It is my sincere conviction that your efforts will materially aid in the achievement of that unquestioned victory for which we shall not cease to strive until it is attained.

The struggle still proceeding in many widespread theatres, has recently become more intense on the western front, where, for more than a year the Dominion troops have been engaged. The Canadian Army Corps has been entrusted with an important position, and the people of the Dominion justly cherish a calm confidence that it will fully maintain the hon-

ourable and distinguished record already established by the First Division.

Throughout our country the response to the urgency of the Empire's need has been unfailing, and unaccustomed burdens have been accepted with an unfaltering spirit. Nearly 170,000 troops have gone overseas and more than 140,000 are undergoing training in Canada. To supply the needed reinforcements, men have offered themselves in even greater numbers during the first four months of this year than in any similar period during the war.

I am convinced that the important measures which you have taken for the economic well-being of the Dominion will meet the needs of the situation and will be attended with marked advantage to the public interest.

The magnificent crops harvested during the past season have materially assisted in maintaining the stability of our national fabric. You will rejoice to learn that the vastly increased volume of Canada's exports is still maintained, and that the general prosperity of the country has not been perceptibly diminished by the war.

In dealing with national problems of railway development you have made provision by which present needs will be met. Steps will be taken by my advisers without delay to insure an effective inquiry into the conditions by which those problems are surrounded and the most efficient methods by which they can be solved.

The provision for supplementing, with such aid as is required from the federal power, the operation of provincial legislation restricting the sale or use of intoxicating liquors, is in accordance with the marked advance of public opinion to which the provincial enactments are due.

I deplore with you the partial destruction of the historic building in which the deliberations of Parliament have been held since the founding of this Dominion. It is anticipated that in its restoration the distinctive features of its architecture will be preserved while at the same time more spacious and convenient accommodatio will be provided.

Gentlemen of the House of Commons:

I thank you on behalf of His Majesty for the liberal provision which you have made for the public needs and for the increasing demands of the war.

Honourable Gentlemen of the Senate:

Gentlemen of the House of Commons:

It is my privilege now to relieve you for the present from your arduous labours; and I do so with an ever-growing confidence that, notwithstanding any temporary reverse, victory will crown our high cause; with a fervent prayer also and an humble faith that out of this time of trial and suffering our country will assuredly advance to a greater and nobler future.

[Mr. Speaker.]
