SHORT, THOMAS, a native of Scotland, arrived in Edinburgh. He settled in London, and moved to Rotherhithe in 1772. He wrote a "History of the Increase and Decrease of the Population of England, and several other parts of the Natural History of Great Britain," a "Chronology of the Air, Weather, Seasons, &c.," &c.

SHOVEL, SIR JOHN, a British admiral, was born in Norfolk, about 1650. He was a tenant under Sir John Mordaunt, who sent him to the Mediterranean, which the admiral the practical enemy's shipping, formed the same night. For this exploit the command of the fleet was given to him in his professional capacity as admiral. He took part in the expedition to La Hague, and coadjuted with the expedition to Spain, the Mediterranean for England, and in 1707 fell by mistake at Selly, where his ship was struck by some others, and all on board were killed, body being found stripped and buried in the sea, his name is well known, his remains were buried in London, and interred in St Paul's.

SHRAPNEL, Lieutenant-General, received his commission in the royal army in 1757. He attained the rank of Major-General in 1787. Shortly after the invention of the spheroidal shell, he invented the hollow shell, which consists of a hollow globe of iron, filled with musket-balls and gunpowder, which the shell explodes, and sends the balls to a distance of several yards, and does as much mischief as a number of musket-balls. The effects produced by the shell are very great, and it is used in the bombardment of fortified places. On the 17th of August, 1792, it was used by the artillery, and granted a pension on condition of his resignation. **SHREWSBURY**, **CHARLES TALBOT, EARL OF**, **SHUCKBURGH, EARL OF**, **AUGUSTUS WILLIAM**, a British statesman and natural philosopher.

ishing in a ditch (which is said to have given rise to the name Shoreditch), does not appear to be founded upon fact. Where or when she died is not known; but it is certain she was living in the reign of Henry VIII. Sir Thomas More says of her—"Proper she was and fair; yet delighted not men so much in her beauty as in her pleasant behaviour; for a proper wit had she, and could both read well and write; ready and quick of answer; neither mute nor babbling."

SHORE, SIR JOHN. [TEIGNMOUTH, Lord.]

SHORT, THOMAS, physician, was a native of Scotland, and was educated at Edinburgh. He settled first at Sheffield, but removed to Rotherham, where he died in 1772. He wrote a variety of works, among which were the "Comparative History of the Increase and Decrease of Mankind in England, and several Countries abroad," "Natural History of Mineral and Medicinal Waters," a "Chronological History of the Air, Weather, Seasons, Meteors," &c., 2 vols.

SHOVEL, SIR CLOUDESLEY, a gallant British admiral, was born near Cley, in Norfolk, about 1650. In 1674 he was a lieutenant under Sir John Narborough, who sent him to the drey of Tripoli with a requisition, which the latter treated with contempt. On his return he stated to the admiral the practicability of destroying the enemy's shipping, which service he performed the same night without the loss of a man. For this exploit he was appointed to the command of a ship, and he gradually rose in his profession, till he became a rear-admiral. He took part in the battle of Bantry Bay, and contributed to the victories of La Hogue and Malaga. He was afterwards joined with the earl of Peterborough in the expedition to Spain. While in command of the Mediterranean fleet in 1707, he sailed for England, and in the night of October 22nd fell by mistake upon the rocks of Scilly, where his ship was totally lost with some others, and all on board perished. His body being found by the fishermen, they stripped and buried it; but the fact becoming known, his remains were brought to London, and interred in Westminster Abbey.

SHRAPNEL, Lieut.-general HENRY, the inventor of the case-shot known as Shrapnel-shells, received his commission as second lieutenant in the royal artillery in 1779, and attained the rank of lieutenant-general in 1837. Shortly after the siege of Gibraltar he invented the spherical case-shot; this consists of a hollow globe of iron, filled with musket-balls and gunpowder, which, when the shell explodes, are projected about 150 yards, and do as much injury as the same number of muskets, in addition to the effects produced by the splinters of the exploded shell. On the adoption of these shells by the artillery, General Shrapnel was granted a pension of £1200 per annum in addition to his regular pay.

SHREWSBURY, JOHN TALBOT and **CHARLES TALBOT,** Earls of [TALBOT.] **SHUCKBURGH-EVELYN, Sir GEORGE AUGUSTUS WILLIAM,** an eminent mathematician and natural philosopher, was born in

1750. He took the name of Evelyn in addition to his family name of Shuckburgh on marrying the daughter of James Evelyn, Esq., of Falbridge, Surrey. He was a zealous student of astronomy; determined by experiments a formula for the barometrical measurement of the height of mountains; ascertained the relation between the English yard and the length of a pendulum vibrating a certain number of times in a minute; and had a standard measure of length made by Troughton. He was a fellow of the Royal Society and of the Society of Antiquaries; sat in parliament as member for Warwickshire, and died at his seat in that county, in 1804.

SHUCKFORD, SAMUEL, a learned divine, who was educated at Caius College, Cambridge, and became prebendary of Canterbury, and rector of Allhallows, in Lombard Street. He wrote two works, "On the Creation and Fall of Man," and "The History of the World, Sacred and Profane." Died, 1754.

SHUTTLEWORTH, PHILIP NICHOLAS, bishop of Chichester, was born in 1782, at Kirkham, Lancashire. He received his education at Winchester, and New College, Oxford, and was distinguished by his superior attainments. For some time he resided in Oxford, and filled the situation of tutor to his college; and when, in 1822, the wardenship of New College became vacant, he was unanimously elected. In 1840, Dr Shuttleworth was promoted to the see of Chichester; but his episcopal dignity was of brief duration, as he died in January, 1842. His principal works are, "Discourse on the Consistency of the whole Scheme of Revelation with itself and with Human Reason;" "Scripture not Tradition;" in which his objections to Puseyism are stated with great force and learning; a volume of sermons, &c.

SIBBALD, Sir ROBERT, physician and naturalist, born near Leslie, in Fifeshire, about 1643. He was physician and geographer to Charles II.; and contributed to the foundation of the college of physicians at Edinburgh, of which he became the first president. Among his works are, "Scotia Illustrata" and "The Liberty and Independence of the Kingdom and Church of Scotland." Died, 1712.

SIBTHORP, JOHN, a very learned naturalist and regius professor of botany in the university of Oxford, was a native of that city, and received his education at Lincoln College. After studying medicine at Edinburgh, he visited France, Switzerland, and Greece, for the purpose of making botanical researches. In 1794 he revisited Greece, and the same year he published "Flora Oxoniensis," and at his death left an estate of £300 a year to the university, in order to defray the expense of publishing a splendid work, entitled "Flora Græca," and towards the foundation of a professorship of rural economy. The "Flora Græca" was subsequently edited, in 10 vols. folio, by Sir James Edward Smith and Professor Lindley. Died, 1796.

SICARD, ROCH-AMBROISE CUCURRON, an eminent teacher of the deaf and dumb, was

born in 1742, at Fousserot, near Toulouse. On the death of l'Épée, in 1789, the Abbé Sicard was called to Paris, to succeed him in the direction of the establishment there. In 1792 he was arrested amidst his scholars, sent to prison, and was in imminent danger of becoming a victim in the ensuing massacres. He, however, obtained his liberty, and in 1796 took part in compiling the "Annales Catholiques," for which he was sentenced to transportation, but escaped. When this storm had passed away, he resumed his situation as teacher of the deaf and dumb. He wrote several valuable works relating to the instruction of deaf mutes; and died in 1822.

SICKINGEN, FRANZ VON, an illustrious German knight of the 16th century, born at the castle of Ebernburg in 1484. He acquired great distinction as a warrior in the armies of the Emperors Maximilian and Charles V., and at the same time as the champion of the poor and oppressed, and the friend of learned men. While commanding in an expedition against Würtemberg he gave orders to spare the house of Reuchlin, and sent for him to his camp, giving him protection against his monkish persecutors. He was the warm friend of Ulrich von Hutten, and gave him a home in his castle for a long time. Through Hutten's influence Sickingen embraced the doctrines of Luther, and so many of the reformers found a shelter at Ebernburg that Hutten used to call it "the hostelry of the righteous." Among them were Ecolampadius and Martin Bucer. In 1522 he made war on the archbishop of Treves, on behalf of the gospel, he said. Luther attempted in vain to dissuade him. Sickingen was repulsed, and in the spring of the following year he was attacked in turn in his castle of Landstein, severely wounded, and compelled to surrender. Died, almost immediately, 7th May, 1523.

SIDDONS, SARAH, the most celebrated of English tragic actresses, was a daughter of Roger Kemble, manager of an itinerant company, and born at Brecknock, in 1755. She commenced her theatrical career as a singer, but soon relinquished that art, and attempted tragedy. In her 18th year she was married to Mr Siddons; when she and her husband played at Liverpool and other places, gaining both reputation and profit. In 1775 she tried her powers on the London boards, in the character of Portia, Garrick at the same time appearing as Shylock, but was unsuccessful. She then obtained an engagement at Bath, where she improved rapidly, and became a general favourite. Time, with study and practice, matured her powers; and when she reappeared at Drury Lane, in October, 1782, as Isabella, in the "Fatal Marriage," her success was complete, and from that time forward, her theatrical career was one continued triumph. Her great parts were Lady Macbeth, Constance, and Lady Randolph in "Douglas." In 1801 she transferred her talents to Covent Garden Theatre; and in 1812, having acquired an ample fortune, she retired from the stage, appearing only once again in London, which was in 1816, for the benefit of her brother, Mr Charles Kemble, and a few nights at

Edinburgh, to assist her widowed daughter-in-law. Mrs Siddons possessed every requisite, personal and acquired, for the high dramatic walk she aspired to, and those who witnessed her in the meridian of her splendid career, can never forget her surpassing intellectual powers, or her unparalleled dignity of deportment. She died in 1831. Portraits of Mrs Siddons were painted by Sir Joshua Reynolds in 1783, by Gainsborough in 1784, by Sir T. Lawrence and Sir W. Beechey about 1798. The first portrait is in the Grosvenor Gallery, the second and third in the National Gallery, and the fourth in the National Portrait Gallery.

SIDMOUTH, HENRY ADDINGTON, Viscount, &c., was the eldest son of Dr Addington, an eminent physician; was educated at Winchester, and Brasenose College, Oxford, and was intended for the profession of the law, which, however, he abandoned almost as soon as he was called to the bar, in order to follow the political fortunes of his boyhood's friend, the second William Pitt. Entering parliament for Devizes, in 1784, he in 1789 succeeded Lord Grenville as speaker of the House of Commons—an honour, we believe, never before or since conferred on so young a member. In this post he remained for 12 years, during which period he commanded the respect of both friends and foes, and only ceased to be speaker in order to take, in 1801, at the urgent request of George III., the still more arduous post of prime minister. His ministry lasted only two years and four months, but never were an English minister's talents and courage tried during a like space of time by a more perplexing state of public affairs, both foreign and domestic; and, when circumstances led him to resign, he most honourably supported government whenever he believed its measures to be calculated to benefit the country. In 1805 he became president of the council, under Mr Pitt, and was elevated to the peerage. This office he more than once resigned and re-accepted; but, on the formation of the Liverpool administration in 1812, after the assassination of Mr Perceval, he became secretary of state for the home department. The Spa Fields and the Mr. C. Ester meetings, and the City Street conspiracy, furnish abundant proofs alike of the difficulties against which Lord Sidmouth had to contend, and of the sagacity, courage, and firmness with which he opposed and overcame them. In 1823, after passing nearly 40 years in the public service, he felt the infirmities of age pressing heavily upon him, and finally retired to private life. That he was singularly disinterested no one ever ventured to deny; more than once he refused a pension, and on one occasion he refused an earldom and a garter—those dazzling prizes for which so many statesmen have bartered both personal and political honour. He passed the remainder of life in retirement at his official residence as ranger of Richmond Park. Born at Reading, 1757; died, 1844. His portrait, by George Richmond, is in the National Collection.

SIDNEY, Sir PHILIP, son of Sir Henry

Sidney, of Penshurst, 1554, and became a distinguished statesman. After leaving college in Germany, and Italy, he became a favourite of the Emperor Rodolph, which was to Protestant states. In 1581 he distinguished himself in the return of the prince-palantine of the Garter appointed his proxy in honour of knights, in concert with Sir Philip Sidney against the undertaking, from the queen's reluctance also was from being elected "lag," as Camden says, out of the jewel of her quickly appointed general of the Earl of Dudley, earl of Leices, the forces sent to the Spaniards. On 1586, he fell in with enemy to Zutphen; troops were inferior gained the victory chased with the lord who, after one hour mounted another, a till he received a which proved fatal. In the field, languid asked for water, but put to his lips, seeing it wisely not to do it. "This man's necessities," he died on the 15th was brought to England's Paul's Cathedral. "A Defence of P. Poems," and the "Arcadia." Thus amiable, and accomplished, in his 32nd year, object of general regard and acquisitions among the most distinguished of his age and nation. **SIDNEY, MARY**, celebrated for her goodness, was the sister (noted above). She was earl of Pembroke, and religious works, some translated from the "of Life and Death." The "Arcadia" of her for her pleasure, and was called "The Countess of Pembroke's Arcadia." She died, twenty years, in 1621 her epitaph:—

Sidney, of Penshurst, in Kent, was born in 1554, and became one of the most accomplished statesmen and writers of the age. After leaving college, he travelled in France, Germany, and Italy; and, on his return, he became a favourite of Queen Elizabeth, who, in 1579, sent him on an embassy to the Emperor Rodolph, the real object of which was to promote a league among the Protestant states, which he effected. In 1581 he distinguished himself in the jousts and tournaments celebrated for the entertainment of the duke of Anjou; and, on the return of that prince to the continent, he accompanied him to Antwerp. The prince-palatine being invested with the order of the Garter in 1583, Mr Sidney was appointed his proxy, when he received the honour of knighthood. In 1585 he projected, in concert with Sir Francis Drake, an expedition against the Spaniards in America; and he had gone to Plymouth to embark on the undertaking, when an express mandate from the queen recalled him to court. Her influence also was exerted to prevent him from being elected king of Poland; "refusing," as Camden says, "to further his advancement, out of fear that she should lose the jewel of her timea." He was subsequently appointed governor of Flushing, and general of the cavalry under his uncle, Dudley, earl of Leicester, who commanded the forces sent to assist the Dutch against the Spaniards. On the 22nd of September, 1588, he fell in with a convoy sent by the enemy to Zutphen; and though the English troops were inferior to the enemy, they gained the victory; but it was dearly purchased with the loss of their commander, who, after one horse was shot under him, mounted another, and continued the fight, till he received a ball in the left thigh, which proved fatal. As he was borne from the field, languid with the loss of blood, he asked for water, but just as the bottle was put to his lips, seeing a dying soldier looking wistfully at it, he reigned it, saying, "This man's necessity is greater than mine." He died on the 15th of October, and his body was brought to England, and interred in St Paul's Cathedral. He was the author of "A Defence of Poesy," "Sonnets and Poems," and the celebrated romance of "Arcadia." Thus perished the gallant, amiable, and accomplished Sir Phillip Sidney, in his 32nd year, whose fate was the object of general regret, and whose talents and acquirements entitle him to be classed among the most distinguished persons of his age and nation.

SIDNEY, MARY, countess of Pembroke, celebrated for her beauty, intelligence, and goodness, was the sister of Sir Phillip Sidney (noted above). She was married to Henry, earl of Pembroke, about 1576; wrote several religious works, some poetical pieces, and translated from the French the "Discourse of Life and Death," by Philippe de Mornay. The "Arcadia" of her brother was written for her pleasure, and on its first publication was called "The Countess of Pembroke's Arcadia." She died, after a widowhood of twenty years, in 1621, and Ben Jonson wrote her epitaph:—

Underneath this sable hearse
Lies the subject of all verse,
Sidney's sister, Pembroke's mother:
Death I ere thou hast slain another,
Fair and wise and good as she,
Time shall throw a dart at thee.

A fine portrait of this noble lady is one of the most attractive pictures in the National Portrait Gallery.

SIDNEY, ALGERNON, a celebrated English republican, second son of Robert, earl of Leicester, was born about 1620. He was carefully educated under the inspection of his father, and early trained to a military life; served with considerable distinction under his brother, Lord Lisle, during the Irish rebellion; joined the parliamentarians on his return, in 1643; and, having displayed his skill and bravery in several actions, was ultimately made governor of Dover. When the high court of justice was formed for the trial of the king, he was nominated a member; and although he was neither present when sentence was pronounced, nor signed the warrant for the execution, yet he vindicated that measure. During the Commonwealth he retired to Penshurst, and there occupied himself in composing his celebrated "Discourses on Government." In 1659 he was one of the commissioners sent to mediate between Denmark and Sweden; and, conscious of the offence he had given the royalist party, he remained abroad till 1677, when he received a pardon, and returned. In 1698, on suspicion of being implicated in what was called the Rye-house Plot, he was arrested, with Lord William Russell and others; and when arraigned before the chief justice, Jefferies, he was found guilty, though the evidence was defective and illegal. He was executed on Tower Hill, December 7, 1687, and suffered with characteristic firmness and constancy. One of the first acts of the revolution was to reverse his attainder; and the name of Algernon Sidney has since been held in honour by those who maintain the fundamental principles of free government.

SIEGEN, LUDWIG VON, inventor of mezzotint engraving, was born at Utrecht in 1609. He was taken by his father to Cassel when ten years of age, and received his education at the college of Cassel, of which his father was appointed director; by Prince Maurice. He appears afterwards to have served as a soldier. He first made known his invention of a new process of engraving in 1642, while living at Amsterdam; and in 1654, while visiting Cologne, he explained it to Prince Rupert, by whom it was introduced in England. Siegen was for some time in the service of the duke of Wolfenbüttel. Died, after 1675.

SIEYES, Count EMANUEL, usually called the ABBÉ SIEYÈS, was born in 1748, at Fréjus, where his father was director of the Post-office. Having finished his studies in the university of Paris, he was one of the grand vicars to the bishop of Chartres; but at the time of the American revolution, he abandoned his ecclesiastical pursuits to enter into the field of politics, where he boldly promulgated new doctrines, and acquired

very considerable influence. His abilities having soon made themselves known, he was in 1787 named a member of the provincial assembly which Necker had established at Orleans. He advocated the necessity and expediency of calling the States-general in 1787, and in 1789 published his pamphlet "Qu'est ce que le Tiers Etat?" which gained immense reputation, and undoubtedly hastened the crisis of the revolution. Soon afterwards he became one of the deputies for Paris to the States-general; and it was at the instigation that they assumed the title of National Assembly. In 1790 he brought forward a project for repressing the licentiousness of the press, and voted for the establishment of civil and criminal juries. He joined in the attack on Robespierre, was a member of the Committee of Public Safety, and of the Council of Five Hundred, and in 1797 was sent ambassador to Berlin. In the next year he was a member and president of the Directory. After the 18th brumaire he was named one of the three consuls; and from that time he remained steady to the constitutional principles he first asserted, opposing the Jacobins, declining union with Buonaparte, though he remained a member of the senate. When Napoleon returned from Elba, Sieyès protested against his mockery of a constitution, although Napoleon made him one of his peers. In 1816 he was obliged to retire from France, in consequence of the decree against the members of the convention who voted for the death of the king in 1793, and he took up his abode in Brussels. After the revolution of 1830, he, like the other French exiles, returned to his native country; but he never re-appeared on the political scene. He died in June, 1836, aged 88. The Abbé Sieyès, during the various phases of the revolution, published numerous pamphlets, the object of which was to consolidate a constitutional government, opposed at the same time to tyranny, dictatorship, and anarchy, and resting on the broadest possible base of freedom.

SIGAUD DE LAFOND, JEAN RENÉ, an eminent surgeon and natural philosopher, was born in 1740, at Dijon, and died in 1810. He devoted himself chiefly to obstetric practice, and projected a new mode of operation in certain cases of difficult parturition. His principal works are, "Elements of Theoretical and Experimental Philosophy," and "A Dictionary of Natural Philosophy."

SIGISMUND, emperor of the West, and king of Hungary and Bohemia, was second son of the Emperor Charles IV., and was born in 1366. On the death of his father, in 1378, he became margrave of Brandenburg, and was occupied four years in visiting his states, and receiving their homage. He married, in 1386, Maria, daughter of Ludwig (Louis), king of Hungary, and was crowned king the same year. He soon after extended his dominions by the conquest of Wallachia. His queen dying in 1392, his claim to the crown of Hungary was contested by Ladislaus V., king of Poland, but unsuccessfully; and the frequent conspiracies formed against Sigismund by the nobles made him suspicious and cruel. Alarmed by the conquests of the Turks, he sought aid of France and Eng-

land; and a great battle was fought at Nicopolis in 1396, in which the French under the count of Nevers were defeated and almost all slain, the Hungarians fled without fighting, and Sigismund narrowly escaped, and led a wandering life for eighteen months. In 1410 he was chosen emperor by one party of the electors, Jobst, marquis of Moravia, being chosen by another party, and Wenceslaus, who had been deposed, still retaining the title of emperor. So that there were at the same time three rival emperors, as there were also three rival popes. But the death of Jobst and the acquiescence of Wenceslaus left Sigismund without a rival in the following year. He was crowned at Aix-la-Chapelle in November, 1414, and went thence to the great Council of Constance. He surrounded the town with his troops, and remained master of its gates during the Council. The Bohemian reformer, John Hus, had come to Constance under a safe-conduct of the emperor; but he was, nevertheless, burnt, as was also his disciple, Jerome of Prague. Sigismund had a conference with the pope, Benedict XIII., at Perpignan, hoping to induce him to resign the tiara, but he failed. About the same time he sold Brandenburg to Frederick of Hohenzollern, burgrave of Nürnberg; raised Savoy into a duchy for Amadeus VIII., and visited France and England. He professed to negotiate a peace between Charles VI. and Henry V., but perfidiously made a secret alliance with the latter, hoping to recover Arles. By the death of his brother, Wenceslaus, in 1419, he succeeded to the crown of Bohemia, and the Hussite war began, which lasted fifteen years. The famous Zisca defeated Sigismund before Prague in 1420, but agreed to a truce; and Sigismund was crowned soon after. After the death of Zisca the war was ably carried on by the two leaders, named Precopius. In 1431 Sigismund was crowned king of Italy at Milan; and in 1433, emperor at Rome by Eugenius IV. He died at Znaim, in Moravia, Dec. 9, 1437.

SIGISMUND I., king of Poland, fifth son of Casimir IV. and Elizabeth, daughter of the Emperor Albert II., was born in 1460. He was early invested with the duchy of Glogau, and made governor of Silesia, and on the death of his brother, Alexander, in 1490, was chosen to succeed him on the throne of Poland. The revolt of Gliński, governor of Lithuania, led to a war with the Russians, which lasted many years. In 1514 the Russians became masters of Smolensko, which was opened to them by treachery. Sigismund was also engaged in war with the Teutonic Knights. In 1515 he had an important conference with the Emperor Maximilian, at Vienna, at which the kings of Hungary and Bohemia were also present; and which resulted in a firm alliance of Sigismund with the house of Hapsburg. Sigismund had the advantage of superior education, and did much to advance the civilization of his subjects. He also fortified and beautified many of the towns, and set the example of a simple and unostentatious way of life. His physical strength was extraordinary. He opposed the spread of the reformation in Poland, excluded from public

offices those who prohibited the reformation. The German union grand-master of the order became a Lutheran. Sigismund's consort, Prussia. Died, 1512.

SIGISMUND II., John III. of Sweden, was grandson by his mother of Sigismund I. of Poland, and throne on the d. a. 1592. He had the same rival, but defeated him to reconquer the crown; but in consequence of his attachment to the Catholic relations with the alienated from him. He was afterwards crowned, and took the Turks, from 1621 to 1621. He gave the treaty of Westphalia in 1648. A war with Poland followed; and Sigismund died, 1632.

SIGNORELLI, Italian painter, was born in 1474. He was a pupil of Raphael, and began to draw in 1492, and painted till 1520. He holds an important place in the history of art as the first to introduce the knowledge of painting into the north. He was the precursor of Michelangelo, and painted the Sisti, Citta di Castello, Corvara, and his greatest work, the fresco in the church of San Brizzio la Madonna. The series comprises the Resurrection and Paradise. It was painted about 1497. Luca between 1499 and 1500 were studied and adopted, and to a certain extent in the "Last Judgment" works of Luca is the altar-piece of St. Paul of Perugia, painted by a man of high character, as well as artist. His last years in retirement after 1524.

SIGNONIO, CAROLO, scholar and antiquary, was born in 1500. He studied under the Greek at Modena, and was versatile of Bologna, and succeeded to the chair of professor at Verona in 1563, at Bologna, where his reputation attracted many authors of a large number of illustrative of Roman antiquities; though he also and ecclesiastical history. Among his principal works are "Constitutio, Dictatorum, et Fastorum;" "De A-

fought at Nicopolis under the command of almost all without fighting, captured, and led a month. In 1410 the party of the Moravia, being and Wenceslaus, retaining the throne were at the time, as there were at the death of Wenceslaus I. in the following year at Aix-la-Chapelle, went thence to France. He returned, and the Countess of the Countess, Joba Huss, of a safe-conduct, was, nevertheless, a simple, Jerome of conference with Perpignan, hope the tiara, but he he sold Branzelzollern, buried into a Savoy into a France and visited France to negotiate a and Henry V., et alliance with Arles. By the chaos, in 1419, he the Bohemia, and the lasted fifteen defeated Sigismund, but agreed to a crown soon after the war was leaders, named and was crowned in 1433, emperor he died at Znam,

Poland, fifth son of the late king, daughter of as born in 1466. He was the duchy of Silesia, and on the throne of Alexander, in 1496, on the throne of the Russian, in 1514 the Romanovs, which reached. Sigismund in war with the Emperor Maximilian, the kings of the firm alliance of the age of Hapsburg, to advance the He also fortified the towns, and set up unostentatious strength was the spread of the ded from public

offices those who accepted its doctrines, and prohibited the young men from frequenting the German universities. In 1523 Albert, grand-master of the Teutonic Knights, having become a Lutheran, was created, with Sigismund's consent, hereditary duke of Prussia. Died, 1518.

SIGISMUND III., king of Poland, son of John III. of Sweden, was born in 1566. He was grandson by his mother's side of Sigismund I. of Poland, and was called to the throne on the death of Stephen Bathori, in 1587. He had the Archduke Maximilian for his rival, but defeated him, and compelled him to renounce his claim. In 1593 he became king of Sweden on the death of his father; but in consequence of his strong attachment to the Catholic faith, and his close relations with the Jesuits, the Swedes were alienated from him, and, in 1604, he lost the crown. He was afterwards at war with the Russians, and took Smolensko in 1611; then with the Turks, from whom he took Choczim in 1621. He gave it up to them, however, by the treaty of peace signed the same year. A war with Gustavus Adolphus followed; and Sigismund died near Warsaw, in 1632.

SIGNORELLI, LUCA, a distinguished Italian painter, was born at Cortona about 1441. He is sometimes called **LUCA DA CORTONA**. He was a pupil of Piero della Francesca, began to distinguish himself about 1472, and painted till 1512, or perhaps later. He holds an important place in the history of art as the first who applied anatomical knowledge to painting, and thus became the precursor of Michael Angelo. Signorelli painted in the Sixtine Chapel, at Arezzo, Città di Castello, Cortona, Perugia, and Volterra; but his greatest works are the powerful frescoes in the chapel of the Madonna di San Brizio in the cathedral of Orvieto. The series comprises the History of Antichrist, the Resurrection of the Dead, Hell and Paradise. It was commenced by Fra Giovanni, about 1447, and was completed by Luca between 1499—1504. These frescoes were studied and admired by Michael Angelo, and to a certain extent imitated by him in his "Last Judgment." One of the best works of Luca is the "Madonna Enthroned," the altar-piece of St Onofrio, in the cathedral of Perugia, painted in 1484. Luca was a man of high character, and attained municipal as well as artistic honours. He spent his last years in retirement at Arezzo, and died there after 1524.

SIGNORI, CAROLO, an eminent classical scholar and antiquary, born at Modena about 1520. He studied under Portus, professor of Greek at Modena, and then went to the universities of Bologna and Padua. In 1546 he succeeded to the chair of Portus, was afterwards professor at Venice and Padua, and in 1563, at Bologna, whither his learning and reputation attracted many students. He was author of a large number of works, chiefly illustrative of Roman history and antiquities; though he also treated of mediæval and ecclesiastical history and diplomatics. Among his principal writings are—"Regum, Consulum, Dictatorum, ac Censurum Romanorum Fasti;" "De Antiquo Jure Civium

Romanorum—Italico—Provinciarum;" and "Historiæ Ecclesiasticæ, lib. XIV.," the last undertaken by the desire of Gregory XIII. A complete edition of his works appeared at Milan in 6 vols. folio, in 1732—37. Died, near Modena, 1584.

SIGOURNEY, LYDIA HUNTLEY, an American poetess and miscellaneous writer, was born in Connecticut, U.S., in 1791. "Huntley" was her maiden name, and she married Mr. Sigourney in 1819. Her first literary productions appeared in 1815, and from that period she was a very prolific writer, and her works enjoyed great popularity. Among her principal poems are—"Traits of the Aborigines of America," "Zinzendorf," "Western Home," and "Pocahontas." She commemorated her visit to Europe in 1840, in her "Pleasant Memories of Pleasant Lands," partly in prose and partly in verse; and wrote several works in prose. Her last publication was "Past Meridian," which appeared in 1854, and in three years passed through three editions. Her poetry is characterized by grace and tender and pious feeling, and has been flatteringly compared to the poetry of Mrs Hemans. Mrs Sigourney died at Hartford, Connecticut, June 11, 1865.

SILIUS ITALICUS, CATUS, a Roman poet, was born A. D. 25. He became a celebrated orator and advocate, rose to the dignities of consul and præconsul in Asia, and died at his villa of Tusculum, in his 75th year. He wrote a poem in 16 books, on the second Punic war. It is still extant, and is a painstaking and unpoetic versification of material chiefly taken from the historians Livy and Polybius.

SIMEON, CHARLES, an eminent English divine and theological writer, was born at Reading, in 1759, and was brother to Sir John Simeon, bart., recorder of that town, and a master of chancery. He was educated at Eton, and entered at King's College, Cambridge, in 1776, where he made great progress in his theological studies, and received those religious impressions for which through life he was distinguished. In 1783 he was presented to the living of Trinity Church in that university, of which he continued to be the rector and officiating minister during the remainder of his life—a period of 53 years. His works are numerous, and were published entire, in 1832. They consisted of 21 closely printed 8vo volumes, containing 2536 sermons and skeletons of sermons, which form a commentary upon every book of the Old and New Testament; besides various tracts and devotional treatises. When Mr Simeon received from Cadell, the bookseller, the sum of £5000 for the copyright, he appropriated £1000 to the Society for promoting Christianity among the Jews, £1000 to the London Clerical and Missionary Society, and £1000 to the Church of England Society. The death of this venerable pastor took place, Nov. 13, 1836.

SIMEON OF DURHAM, an English historian of the 12th century, who composed a history of the Saxon and other kings of England from 616 to 1130.

SIMEON STYLITES, ST. the famous anchorite, was born in Syria, in the latter

years of the 4th century. From a shepherd-boy he became a monk, entering a monastery at the age of thirteen. He outdid his companions in austerity and mortification of the body, and went such lengths as several times to have narrowly escaped death. He afterwards retired to a desolate mountain-side, chaining himself to the stones; and finally bethought himself of more completely escaping the sinful world, and drawing nearer to heaven, by establishing himself on the top of a column, first of nine feet, and finally of sixty feet in height. Here he lived—abode, rather—for thirty years, through heat and cold, calm and storm alike; stood, kneel, bowed head to feet, sang, prayed, and gave exhortations to the throngs who came to see him, and who venerated him as a celestial more than earthly being. It is affirmed by an eyewitness that thousands were moved by his exhortations to receive baptism, and that he often effected a reconciliation between enemies. A story is told that he, once saw in a vision a chariot of fire, and an angel visiting him to ascend in it to heaven; that mistaking it for reality he raised his foot to mount, when the devil chastised his vanity by a sprain. Simeon died about the middle of the 5th century. His example was followed by a crowd of pillar-saints; his images were superstitiously venerated, and a figure of him was set as an amulet at the entrance of shops at Rome. (See Tennyson's profound exposition of the sentiments which inspired this strange man, in his poem "St Simeon Stylites.")

SIMNEL, LAMBERT, a pretender to the throne of England, was the son of a baker at Oxford, and was born about 1474. While yet a boy, he was trained by one Richard Simon, a priest, to play a part in opposition to Henry VII., and in 1487 he gave himself out to be Edward, earl of Warwick, son of Clarence, and sole heir of the house of York. He landed in Ireland, and finding adherents, was crowned at Dublin as Edward VI. The earl of Lincoln, with troops furnished by the duchess of Burgundy, supported him, and they landed in Lancashire early in June. But Henry defeated them a few days after at Stoke, imprisoned Simon for life, and gave Simnel a place in his household, first as scullion and afterwards as falconer.

SIMON, RICHARD, a celebrated French theologian and controversialist, born at Dieppe, in 1638. He entered into the congregation of the Oratory, in 1659, and for some years lectured on philosophy at the College of Jully, and at Paris. He was engaged in almost continual controversy with Bossuet and the Port-Royalists, and by his angry way of carrying on the discussions he entered upon, offended both Catholics and Protestants. The work which excited most attention, and which led to his exclusion from the Oratory, was the "Histoire critique du Vieux Testament," published in 1678. One of his obnoxious assertions was that the Pentateuch was not written by Moses, but compiled by the scribes of the time of Esdras. This work had a large circulation, and was translated into Latin and English. Among the other works of Simon are, "Histoire Critique du Nouveau Testament," "Histoire

de l'Origine et des Progrès des Revenus Ecclesiastiques," and "Disquisitiones Criticæ de varis per diversa Loca et Tempora Bibliorum Editionibus." Several of his works first appeared under fictitious names. He spent the last twenty years of his stormy life at Dieppe, and died there in 1712.

SIMONIDES, a celebrated Greek lyric poet, was born in the island of Ceos, *c.* 556. He lived at Athens during the reign of Hipparchus, whose patronage he enjoyed, and after a temporary retirement into Thessaly, returned again to Athens, where he lived till at least his 80th year. He was invited to the court of Hieron of Syracuse, and there spent his last years. Simonides especially excelled in the Elegy and Epigram, and celebrated in his poems the principal events of the Persian war. He was the contemporary of Aeschylus, Pindar, and Iamus of Hermione; won very numerous prizes, and even defeated Aeschylus by his elegy on the heroes who fell at Marathon. Only fragments of his poems are extant, and they bear out the high opinion of his contemporaries. Simonides made poetry his profession, and is said to have been the first poet who wrote for pay. He was also in repute as a philosopher; and is said to have added four letters to the Greek alphabet. Died, *b. c.* 467.

SIMPLICIUS, a philosopher of the sixth century, was born in Cilicia. He was the disciple of Ammonius, the Peripatetic, and lived for a time in Persia. Returning to Europe, he applied himself to philosophy, and endeavoured to prove a substantial agreement between the doctrines of Plato and Aristotle. Simplicius wrote commentaries on the works of Aristotle and Epicurus.

SIMPSON, THOMAS, an eminent mathematician, was born in 1710, at Market Bosworth, in Leicestershire, and was the son of a weaver, who brought him up to his own trade, and, perceiving his inclination for reading, took away his books. He in consequence left his father, and, after many vicissitudes, one of which was his becoming a fortune-teller, he rose to be a mathematical professor at the Royal Military Academy, Woolwich, and a member of the Royal Society. He wrote Treatises on Fluxions, Annuities, and Algebra, "Elements of Geometry," and other scientific works. Died, 1761.—Simpson's widow, who was allowed a pension of £200 per annum, reached the extraordinary age of 102.

SIMSON, ROBERT, an eminent mathematician, was born in 1687, at Kilton Hall, in Ayrshire; studied medicine at Glasgow, but never practised; was professor of mathematics at Glasgow during a period of nearly half a century; and died in 1768. Among his works are an esteemed edition of Euclid's Elements, "A Treatise on Conic Sections," "The Locæ Plani of Apollonius restored," &c.

SINCLAIR, CHARLES GIDEON, Baron, a distinguished Swedish general and writer on military tactics. He was engaged in the service of various governments of Europe, during various wars of the last century; and published "Military Institutions," 3 vols. &c. Died, 1803.

professor of philosophy at Glasgow during the period of the Commonwealth. Being a zealous Presbyterian, he lost his situation at the Restoration, but was restored to it on the accession of William III. He was distinguished for his researches in physical science, was an able engineer, and published treatises on hydrostatics and astronomy. He was also believed to be the author of a book, entitled "Satan's Invisible World discovered," which was for a long time popular among the Scottish peasantry. Died, 1698.

SINCLAIR, Sir JOHN, bart., philanthropist and statistician, was born at Thurso Castle, in the county of Caithness, in 1754. He received his education chiefly at the High School, Edinburgh, but subsequently attended the universities of Edinburgh, Glasgow, and Oxford. In 1778 he was admitted a member of the faculty of advocates, and was afterwards called to the English bar. In 1780 he was elected member for the county of Caithness, which he also represented in the parliaments of 1790, 1802, and 1807; and sat for the borough of Lothwithiel in 1784, and for Petersfield in 1794. For more than half a century Sir John Sinclair occupied a prominent position in public life; and there was scarcely any topic in the whole range of political, statistical, or medical science, which had not engaged his active and inquiring mind. His reputation as a promoter of agricultural improvement, in particular, was not confined to Europe; the most eminent political economist in America appreciated his labours. He was the originator of the Board of Agriculture, in 1793; and he also procured the establishment of a society, in Scotland, for the improvement of wool; of both these he was the president. Nor were his patriotic exertions in defence of his country less conspicuous than his endeavours to improve its moral and economical condition. He raised two battalions of 1000 men each, in the counties of Ross and Caithness, which were the first fencible regiments whose services were extended beyond Scotland. To his patriotic and philanthropic disposition he added an unflinching perseverance. His principal works consist of a "History of the Revenue of Great Britain," 3 vols.; the "Statistical Account of Scotland," a work of unexampled labour; "Thoughts on the Naval Strength of Great Britain," "Considerations on Militias and Standing Armies," "Essays on Agriculture," and his publication of the alleged originals of the Oeslantic Poems, with a "Disquisition." It is said that at the time of his death he had made a considerable progress in a "Political Code," and a "Code of Religion." Died, Dec. 21, 1835.

SINDIAH, or SCINDIA, MADHARAJEE, a bold and ambitious Mahratta prince, was born in Hindostan, probably about 1743. He was the son of a Mahratta officer at the court of the peshwa, and was at the battle of Paniput in 1761, where he was wounded and taken prisoner; but made his escape, and took refuge in the Deccan. In 1770 he invaded Hindostan in concert with Holkar, and made himself master of Delhi; he also took Agra, where he established a cannon foundry, and was the first Indian prince whose troops were armed and disciplined

after the manner of Europeans. He was greatly indebted to the talents of Leborgne de Hoigne, a French general whom he had taken into his service, and who commanded the army which gained the famous battle of Patan, in 1790. He possessed an extensive territory, and was engaged in schemes of farther aggrandizement at the time of his death, which happened in 1794. His nephew, Dowla Rao Sindia, succeeded him.

SINGH, MAHA RAJAH RUMJEET, chief of Lahore and Cashmir, was born in 1779. Perhaps neither ancient nor modern times can furnish a more striking proof of the power that lies in an iron and energetic will, than is furnished by the singular career of this chief, who from being the leader of a gang of robbers, became the absolute despot of despots; whose word was law to princes, and who ruled 20,000,000 of men with a rod of iron. Brave, active, and remorseless, his bandit troop swelled its numbers, and became an army; the mere speck of earth which he first seized upon by the right of the strongest, a centre from which he carried the sword or the snare into the dominions of his neighbours. Of education he was so destitute that he could not read; but he had a very powerful memory, much shrewdness, and great discrimination; and he was in the daily habit of being read to in both Persian and Hindoo. Accessible to all ranks of his people, he administered justice with the utmost impartiality, at least when his own interests did not stand in the way of an equitable decision; but in taxing, or to speak more correctly, in plundering the people who were unhappy enough to fall beneath his sway, he was absolutely merciless. Avarice seems to have been fully as much his incentive to warfare as ambition; for he has been known to undertake a military expedition against a distant prince who had the reputation of possessing particularly fine horses, or costly jewels. Among his immensely valuable treasures of the latter kind was the celebrated *Koh-i-Noor*, or Mountain of Light, now in possession of the queen of England. In stature he was very short, and the naturally sinister expression of his countenance was much increased by the loss of his left eye by the small-pox. His long grey tapering beard, which descended below his breast, gave him something of a venerable appearance. At his death, four of his princesses and seven slave girls were permitted to burn themselves upon his funeral pyre. Died, 1839.

SIRI, VITTORIO, an Italian monk and annalist, was born at Parma, in 1613. He obtained the patronage of Cardinals Richelieu and Mazarin, and settled at Paris, where he obtained an abbey, and was appointed almoner and historiographer to the king. Siri made himself known as author of two political journals, "Il Mercurio," a record of current events, in 15 vols., published between 1644-62; and "Memorie Recondite," a similar record of events from 1601 to 1640. Died, 1685.

LAIRE, GEORGE.

in 1773. In 1794 the house of his father, who had been an eminent member of the government of Geneva, was pillaged, two-fifths of his property confiscated, and both father and son condemned to 12 months' imprisonment. The future historian, as soon as he obtained his release, sought safety and peace in Tuscany; but here he was even more unfortunate than in his native country, for the French imprisoned him as being an aristocrat, and the Italian insurgents imprisoned him as being a Frenchman. In 1800 he returned to Geneva, where in the following year he commenced his career as an author, by the publication of "The Agriculture of Tuscany." His subsequent works were numerous and varied, including history, political economy, criticism, and biography. But the works by which he is most widely known are his "History of the Italian Republics during the Middle Ages" (an abridgment of which he wrote for Lardner's Cabinet Cyclopædia), "History of the Fall of the Roman Empire" (also written for Lardner), "History of the Literature of the South of Europe," and his elaborate "History of the French," 81 vols. 8vo. In 1838 he was elected one of the five foreign members of the Institute of France, in the department of moral and political sciences. M. de Sismondi was in principle a rigid republican, and so truly humane in heart and mild in manner, that he won the esteem of all who knew him. Died, 1842, aged 69.

SIX, JAN, a Dutch dramatic poet, was born in 1618, and died in 1700. The works of SIX are remarkable for purity of style. He was the friend and patron of Rembrandt, and his portrait was engraved by that artist.

SIXTUS V., Pope, FELICE PERETTI, was born near Montalto, in the March of Ancona, in 1621. He entered the convent of the Cordeliers at Ascoli, and by his natural good abilities, and his popularity as a preacher, made his way rapidly, notwithstanding a petulant temper, and frequent contentions with his associates. He was successively professor of theology, commissary-general of his order at Bologna, and inquisitor at Venice; whence he fled to Rome, and obtained still higher honours and offices. A remarkable change appeared in his character or manners, he showed himself meek and amiable, and ingratiated himself with all who had to do with him. Pius V., who had been his pupil, got him chosen general of the Cordeliers, named him his confessor, and, in 1570, created him cardinal. He was not in favour with Gregory XIII., and it is said that in his retirement he feigned great feebleness, walked leaning on a stick, his head declined, and his voice broken. These signs of old age vanished with surprising suddenness the moment of his election as successor to Gregory, in April, 1585. He threw away his staff, lifted up his head, and made the placo ring with his loud *Te Deum*. His first care was to repress brigandage, and make Rome and the States of the Church safe from the violence which had long prevailed. One year of his vigorous government made an immense and beneficial change. Before the end of 1585 Sixtus published a bull of excommunication against

Henry of Navarre and the prince of Condé, who boldly protested against it, and had the protest affixed to the gates of the Vatican. After the murder of the duke of Guise and the cardinal of Lorraine, he cited Henry III. of France to Rome, and on his non-appearance excommunicated him. He afterwards publicly praised the zeal and deed of the assassin of Henry. He is said to have felt esteem for Queen Elizabeth, and an aversion against Philip II.; yet, when the latter sent his armada against England, the pope gave it his benediction and a consecrated banner; and, at the same time, by a terrible bull, laid an interdict on England, declared Elizabeth a usurper, a heretic, and excommunicated. During the five years of his pontificate Sixtus formed and executed many great designs for the improvement and adornment of Rome; as a coat which made him so unpopular with the people, that after his death they destroyed his statue. He caused the famous granite obelisk, which Caligula had brought from Egypt, to be set up on a pedestal; completed a great aqueduct for the supply of Rome with water; rebuilt the library of the Vatican, and established the celebrated printing office in connection with it; had new editions of the Septuagint and the Vulgate published at his own expence, and yet left the treasury rich. Sixtus confirmed the order of "Feu" (the established or reformed many congregations for the management of secular or ecclesiastical affairs, and fixed the number of cardinals at seventy. Died, 1590.

SKELTON, JOHN, an English poet and satirist, was of a Cumberland family, and was born about 1460. He appears to have studied at Oxford, and became distinguished for his classical attainments; was ordained priest in 1499, and was appointed rector of Diss, in Norfolk. Henry VII. chose him for tutor to his son, afterwards Henry VIII. Skelton was in great repute for wit, but indulged so much in severe satire, especially against the clergy, and even Cardinal Wolsey, that he was at last ordered to be arrested. This he avoided by taking sanctuary at Westminster, and there he died in 1535. An excellent edition of his poems, with a Life and Annotations by Dyce, appeared in 1843.

SKINNER, STEPHEN, philologist, was born in London, about 1622; was educated at Christchurch, Oxford; settled as a physician at Lincoln, and died in 1667. He was author of "Etymologicon Lingue Anglicane."

SLEEMAN, SIR WILLIAM HENRY, K.C.B., British resident at Lucknow, and miscellaneous writer, was born at Stratton, in Cornwall, in 1798. At the age of 20 he entered the service of the East India Company, and after distinguishing himself both in active service and by his literary accomplishments, he became, in 1820, agent in the Saugur and Nerbudda districts. Here he had the happiness of seeing his energetic efforts successful in the suppression of the infamous Thuggee system, for which, just before his death, he was created K.C.B. Appointed resident at Lucknow by Lord Auckland in 1842, he was charged with preparing the measures necessary in order to carry

out the annexation of the territories of Sleeman was author of "Rambles and Recollections of an Officer," "Military Reminiscences," &c. He died on his way home from India. SLEIDAN, JOHN, historian and diplomatist, was born near Cologne, in 1579; studied at Philippsburg; held several principal universities; was attached to the court of the emperor, but as a Lutheran, he was expelled in 1642; settled at Helmstedt, where he became professor of law, and several political offices; was deputy of Strasburg in 1651. In 1654 he found time to publish an important work on the formation, entitled "De Republica, Caraculo, et Mestrali." It appeared in English, Italian, and is esteemed a valuable work, and its work entitled, "De Periculis," passed through several editions. Charles V. was said Paul Jovius cause the former of the latter too well.

SLINGELANDT, painter, born at Leyden, and pupil of Rembrandt, Douw, and his piece mistaken for those of the latter, known in England as "The Slave."

SLOANE, SIR HANCOCK, naturalist, was born in Ireland, in 1660, and came to London, where he settled in England, where he practised the use of books in a variety of forms, a valuable collection of productions of nature, which he gathered together with his library, of 50,000 volumes and purchased of his exact collection of the British Museum. He created him a baronet, and appointed physician-general on the accession of George II. In 1727 he became president of the Royal Society, of which he was secretary. Died, 1753.

SMART, CHRISTOPHER, born in 1722, at Shipbourne, in Kent, educated at Cambridge, in London, commenced his disposition rendered him a companion to the wit of the day, with many of whom he was intimate. He became intimate with "Ode on St Cecilia's Day" into "Criticalism." into 1

out the annexation of Oude. Sir W. H. Sleeman was author of a "Diary in Oude," "Rambles and Recollections of an Indian Officer," "Military Discipline in our Indian Army," &c. He left India in ill health, and died on his way home, in February, 1856.

SLEIDAN, JOHANN, an eminent German historian and diplomatist, was born at Sleida, near Cologne, in 1506. His family name was Philippon; Sleidan was adopted from his birth-place. He studied at some of the principal universities of Europe, and in 1535 was attached to the Cardinal du Bellay. He took part in the diets of Haguenau and Ratisbon, but as a Lutheran had to quit France in 1542; settled at Strasburg, was named historian to the league of Smalkald, and professor of law, and was employed in several political negotiations. He was sent as deputy of Strasburg to the Council of Trent in 1551. In the midst of his active life he found time for much literary labour, and published many works; of which the most important is his history of the Reformation, entitled—"De Statu Religionis et Reipublice, Carolo quinto Cesare, Commentarii." It appeared in 1555, was translated into English, French, German, and Italian, and is esteemed for its original information, and its impartiality. Sleidan's work entitled, "De Quatuor Summis Imperiis;" passed through more than fifty editions. Charles V., it is said, called Sleidan and Paul Jovius his liars (*mensieurs*), because the former spoke too ill of him, and the latter too well. Sleidan died in 1556.

SLINGELANDT, PIETER VAN, Dutch painter, born at Leyden in 1640. He was a pupil and painstaking imitator of Gerard Douw, and his pieces have been sometimes mistaken for those of his master. They are little known in England. Died, 1691.

SLOANE, SIR HANS, a distinguished physician and naturalist, was born at Killisnoagh, Ireland, in 1660, and studied medicine in London, where he settled. He was the first in England who introduced into general practice the use of bark, not only in fevers, but in a variety of other disorders. He formed a valuable museum of the rarest productions of nature and art, which, together with his library, consisting of upwards of 50,000 volumes and 3566 manuscripts, were purchased of his executors for £23,000 by act of parliament, and formed the basis of the collection of the British Museum. George I. created him a baronet in 1716, and he was appointed physician-general to the army; on the accession of George II., he was named physician in ordinary to his Majesty; and in 1727 he became president of the Royal Society, of which he had previously been secretary. Died, 1752.

SMART, CHRISTOPHER, an English poet, born in 1722, at Shipbourne, in Kent, was educated at Cambridge, and having settled in London, commenced author. The gaiety of his disposition rendered him an acceptable companion to the wits and authors of the day, with many of whom, particularly Pope, Johnson, Garrick, and Hawkeaworth, he became intimate. He translated Pope's "Ode on St Cecilia's Day," and the "Essay on Criticism," into Latin verse; wrote a

poetical version of the Psalms; some original poems, odes, fables, &c. He also translated the works of Horace. Poverty, however, overtook him; and his distresses, aided by intemperance, made him mad. His "Song to David" was written in a mad-house, on the walls of his cell. He died, within the rules of the King's Bench prison, in 1771.

SMEATON, JOHN, an eminent civil engineer, was born in 1724, at Routhorpe, near Leeds. His father, who was an attorney, was desirous of bringing up his son to the same profession; but finding that the law was not suited to his taste, he wisely permitted him to follow the impulse of his genius, and he became a mathematical instrument-maker. In 1754 he visited Holland and Belgium for the purpose of inspecting the principal engineering works. In 1755 the Eddystone lighthouse was burnt down, and Mr Smeaton, being recommended to the proprietors, undertook the work of rebuilding it, and executed it in such a manner, as almost to bid defiance to the power of time, or accident. This was his greatest work. In 1759 he received the gold medal of the Royal Society, of which he was a member, for a paper on the power of wind and water to turn mills; and as an engineer, he rose to the summit of his profession. His last public employment was that of engineer for the improvement of Ramsgate Harbour. Died, 1792. There is a portrait of Smeaton in the National Portrait Gallery.

SMELLIE, WILLIAM, a printer at Edinburgh, distinguished also as a man of science and learning, was born in 1740. He was the translator of Buffon's Natural History, and author of the "Philosophy of Natural History," and of other ingenious works. He was a fellow of the Royal Society of Edinburgh, and was much esteemed among the literati of his native city, where he died in 1795.

SMIRKE, ROBERT, R.A., was born at Wigton, near Carlisle, in 1752; entered, at the age of 19, as a student at the Royal Academy (then in its infancy); in 1786 first became an exhibitor, and in 1792 was elected one of its members. His pictures were generally of a historical or imaginative character, his favourite subjects being taken from the sacred writings, English history, the works of Shakespeare, Cervantes, or other eminent authors. Died, Jan. 6th, 1845.

SMITH, ADAM, the celebrated political economist, was born at Kirkcaldy, in Scotland, in 1723. He was educated first at Kirkcaldy school, then at the university of Glasgow, and in 1740 was sent to the university of Oxford, where he lectured till 1747. He was next engaged as lecturer on rhetoric and belles lettres at Edinburgh, and in 1751 was appointed professor of logic at Glasgow university; a post which he exchanged, in 1752, for that of professor of moral philosophy. His lectures attracted considerable attention, and contained the germs of the views which he subsequently developed in his well-known works. Towards the close of 1763, he accepted an invitation to travel with the duke of Buccleugh, and having resigned his chair, made a long tour in France, becoming acquainted at Paris with some of

the most eminent philosophers and economists. Among them were Turgot, Quesnay, D'Alembert, and Necker. Returning in 1766, he spent the next ten years in retirement at Kirkcaldy, engaged in the composition of his great work, the "Inquiry into the Nature and Causes of the Wealth of Nations," which first appeared in 1776. It has a high rank among the successful books of the world; overthrowing the grave errors which it attacked, and establishing their opposite truths. Its main principle is that labour, not money, nor land, is the real source of wealth. The means of making labour most fruitful, the division of labour, what wealth consists in, the mischiefs of legislative interference with industry and commerce, the necessity of freedom of trade, are admirably discussed and expounded. The book may be regarded as the basis of modern Political Economy, and one of its great objects has been accomplished in England in the establishment of *Free Trade*. In 1788, Adam Smith settled at Edinburgh, where he had the appointment of a commissioner of customs for Scotland. He was the friend of David Hume, of whose last days and death he wrote an account, with a warm panegyric on his character, which was published with Hume's autobiography. He was also author of a "Theory of Moral Sentiments," which appeared in 1759, and the doctrine of which is that Sympathy is the foundation of Morals. It reached a sixth edition in 1790, and has been frequently reprinted. The degree of LL.D. was conferred on Adam Smith by the university of Glasgow, of which also he was chosen rector in 1787. Died, unmarried, 8th July, 1790.

SMITH, ANKER, engraver, was born at London, in 1769. He was for some time assistant to James Heath; was employed on the illustrations to Bell's *British Poets*, and, in 1797, was chosen A.R.A. for his excellent print of the Death of Wat the Tyler, after Northcote. Died, 1819.

SMITH, GEORGE, painter, was born at Chichester, in 1714. He excelled in landscape, and some of his pieces gained prizes from the Society of Arts. Died, 1776.

SMITH, SIR HENRY GEORGE WAKELYN, bart., usually called Sir HARRY SMITH, a distinguished British general, was a native of Whittlesea, in Cambridgeshire. He was born in 1788, entered the army at the age of 17, and first served in the expedition to Monte Video and Buenos Ayres. He was present at the siege of Copenhagen, and afterwards served in the Peninsula, where he took part in almost all the principal battles and sieges of the war. At the storming of Badajoz he saved the life of a Spanish lady, whom, in 1814, he made his wife. He distinguished himself as assistant-adjutant-general at the taking of Washington, in 1814, took part in the unsuccessful attack on New Orleans later in the same year, and in the capture of Fort Bowyer. At Waterloo, he served as quarter-master-general to the 6th division. After being employed in British North America, the West Indies, and the Cape Colony, he was sent to India about 1840, and distinguished himself at the battles of Gwalior, Mharajpore, Moodkee, and Fe-

rozpore. He won the victory of Allwal over the Sikhs, 28th January, 1846, and contributed to the victory of Sobouan in the following month; for which services he received the thanks of the House of Lords, and was made G. C. B. and Baronet. In 1847, he was appointed governor of the Cape of Good Hope, and conducted the Kaffir War to a successful close, in 1852. After his return to England he was made lieutenant-general, and commander of the northern and midland military districts. Died, at London, 12th October, 1860.

SMITH, SIR JAMES EDWARD, an eminent English physician and naturalist, was born at Norwich, in 1759; studied medicine at Edinburgh, and took his degree at Leyden, in 1786; visited France and Italy; and, on his return to England, published "A Sketch of a Tour on the Continent," 3 vols. in which there is much information on subjects of natural history. In 1794, he became the purchaser of the collection of books, &c., of Llanus, which was afterwards sold to the Linnaean Society. He established the Linnaean Society, and was its first president; received the honour of knighthood from George IV., and died in 1828, at his native city, where he had long practised as a physician. Besides his "Tour" before mentioned, he wrote a "Natural History of the Lepidopterous Insects of Georgia," 2 vols. folio; "English Botany," 36 vols. 8vo; "Flora Botanica," 3 vols. 8vo; the "English Flora," 4 vols. 8vo; and an "Introduction to Botany." Sir James was also editor of the splendid "Flora Græca" of Sibthorp.

SMITH, JAMES and HORACE, celebrated literary duumvirate, were the sons of Robert Smith, solicitor to the board of ordnance, and born respectively in London, Feb. 10th, 1775, and Dec. 31st, 1779. James was admitted to his father, and was subsequently taken into partnership, and eventually succeeded to his business as well as to his official appointment. Horace became a member of the stock exchange. Perhaps no two situations in life could at first sight appear less favourable to the cultivation of the muses than a lawyer's desk and Copel Court; but James and Horace Smith triumphed over obstacles that would have crushed less genial natures, and went on from step to step till they left their names deeply graven in the literature of their time. Their first effusions were contributed to the Pic Nic newspaper, established by Colonel Greville, in 1802. They also wrote largely for the *Monthly Mirror* and the *London Review*, and some of the best vers de société appeared in the *New Monthly Magazine*, while under Thomas Campbell's editorship. But the work by which the brothers are best known, and by which they will be longest remembered, is the "Rejected Addresses," which appeared on the reopening of Drury Lane Theatre in 1812, and of which twenty-two editions have been sold. The popularity of this work appears to have satisfied the ambition of the elder brother. But soon afterwards Horace became an indefatigable novel writer. He commenced his novels with "Galatia and Gravities" in 1825, and ended them with "Love and Mesmerism" in 1845; and while

in these 20 years "Brambletye House Apley," "Zillah," "Adam Brown," received. James Dec. 24th, 1839; Wells, July 12th,

In these 20 years he also gave to the public "Bramleye House," "Tor Hill," "Reuben Apuley," "Zillah," "The New Forest," "Adam Brown," &c., all of which were well received. James Smith died in London, Dec. 24th, 1839; Horace died at Tunbridge Wells, July 12th, 1849.

SMITH, JAMES, of Deanston, a name intimately associated with agricultural and manufacturing improvement, was born at Glasgow, 1789. While only a youth of 18, he had attained such a thorough knowledge of mechanics and cotton-spinning, that his uncle gave him the entire management of the extensive cotton works at Deanston, in which he was a partner; and he soon afterwards began to put in practice on the Deanston farm various schemes for thorough draining and deep working, which have since been so generally adopted. In 1831 he published a pamphlet on this subject which attracted great attention; and since that period he rose so highly in public estimation, that he became an authority on all questions connected with agricultural pursuits. In 1848 he was one of the commissioners appointed by Sir Robert Peel to inquire into and report upon the sanitary condition of the manufacturing towns; and the schemes of improvement which he suggested can hardly fail of their effect. Died, suddenly, June 9, 1850.

SMITH, JOHN, distinguished as the heroic leader of the English colonists of Virginia, was born at Willoughby, in Lincolnshire, about 1579. Of a daring spirit, longing for a larger and more adventurous life, he served in early life in the Netherlands, a soldier in the cause of liberty. He then travelled in France, visited Egypt and Italy, and about 1602 greatly distinguished himself in the wars of Hungary against the Turks, gaining the favour of Sigismund Bathori, prince of Transylvania. Wounded and taken prisoner by the Turks, he was sold as a slave, was harshly treated in the Crimea, and made his escape. Rumours of war in Morocco attracted him thither, and thence he returned to England about 1606. He entered with enthusiasm into the project of colonizing the New World, and with Gosnold, Winkfield, Hunt, and others, set out in December, 1606, with a squadron of three small vessels for Virginia, under the authority of a charter granted by James I. Amidst the unhappy dissensions, difficulties, and distress of the first years of the great enterprise, Smith rendered the most important services, by his irrepressible hopefulness, his practical wisdom, and his vigorous government. But for his wisdom and noble exertions the project would probably have been abandoned. He made important geographical explorations and discoveries; in 1607 ascending the Chickahominy, and penetrating into the interior of the country. He and his comrades were captured by the Indians, and he only, by his rare self-possession, escaped with life. He remained a prisoner for some weeks, carefully observed the country, got some knowledge of the language of the natives, and when at last they were going to put him to death, he was saved by the affectionate pleading of Pocahontas, the daugh-

ter of the chief Powhattan, a girl of ten or twelve years old. Reconverted to James, she had need for all his energy to save the desponding colonists. In the summer of 1608 he explored in an open boat the Bay of the Chesapeake and its tributary rivers, a navigation of nearly 3000 miles. He also penetrated inland, established friendly relations with the Indians, and prepared a map of the country. On his return from this great expedition, he was made president of the colonial council. In 1609 he was severely injured by an accidental explosion of gunpowder, and without reward for his splendid services, except in his own conscience and the applause of the world, returned to England. He visited Virginia in 1614, was captured by the French in the following year, and on his return to London after three months, heard of the arrival of his Indian friend, Pocahontas. She had been taken prisoner by the colonists, had become a Christian, married an Englishman, John Rolfe, and with him had come to England. Smith made known her services, and she was presented to the queen, and loaded with marks of honour and gratitude. She was on the point of embarking for America, when she died at Gravesend, in 1617. Smith published in 1608 "A True Relation of such Occurrences and Accidents of note as hath happened in Virginia since the first planting of that Colony, &c." He died in 1631.

SMITH, DR JOHN, an eminent antiquarian and Celtic scholar, was born at Glenorchy, in Argyshire, in the year 1747; studied at the university of St. Andrew's; and, in 1774, was appointed assistant and successor in the parish of Kilbrandon, Lorn, where he preached for 7 years. About this time he translated into Gaelic, "Alleine's Alarm" and the "Catechisms of Dr Watts." In 1781 he became minister of Campbelton. Soon after his settlement in this parish, he published his "Essay on Gaelic Antiquities," "A Dissertation on the Authenticity of the Poems of Ossian," and a "Collection of Ancient Poems, translated from the Gaelic." About 1783 he was associated with Dr Stewart, minister of Luss, in translating the Scriptures into Gaelic. He also wrote a concise commentary on the whole of the Bible. In 1787 he published the "Life of St. Columba, the Apostle of the Highlands," extracted from the Latin of St. Adamnan, &c. About the same time he published a new and improved edition of the Psalms in Gaelic. Besides his unwearied labours for the spiritual improvement of the people committed to his care, he was eager to introduce among them an improved system of husbandry. With this view, he wrote many essays on the subject, and frequently obtained prizes from the Highland Society. Died, 1807, aged 60.

SMITH, JOHN PYE, D.D., LL.D., F.R.S., an eminent Nonconformist divine, was born at Sheffield, 1775. He was the son of a bookseller, and was intended for his father's business. But his piety, talents, and love of learning, marked him out for the ministry, and he became a student at Rotherham College in 1793. When his course was fin-

ished, he was chosen classical tutor of the college; and he was invited, at the early age of 25, to become theological tutor and principal of Homerton College, the oldest of the institutions for training ministers among the Independents. In January, 1801, he entered on the duties of that post, which he filled with the highest efficiency for 50 years. Two or three years after his settlement at Homerton, he became pastor of the church assembling at the Gravel Pits Chapel, and continued to discharge his pastoral duties in that congregation for about 47 years. The mind of Dr Smith was singularly energetic. He was critically acquainted both with ancient and modern languages, and studied both the exact and the experimental sciences. When geology offered its somewhat startling revelations, he embraced it as a part of the communications of the Author of nature and of truth; and by his patient investigations he endeavoured to show the tangible records of creation to be in harmony with the word of God. On the publication of his "Scripture and Geology," the Royal Society enrolled him as one of their fellows. Dr Smith engaged in controversy with Professor Lee, of Cambridge, on the question of the union of church and state; and with the Rev. Thomas Belsham, and other Unitarians, on the Divinity of Christ. Among other works which emanated from his pen were, "Four Discourses on Priesthood and Sacrifice," and "Reasons of the Protestant Faith, with an Exposure of Popish Errors," which he republished, with a new preface, within a few weeks of his death. But the most elaborate of his publications is "The Scripture Testimony to the Messiah," a work of profound learning and candid criticism, which has been admitted, though the work of a dissenter, as an authority in the English universities. Dr Smith was on the side of progress in general politics; shrunk not from advocacy of the repeal of the corn laws; went to an extreme, even, as many deem it, in respect to some modes of social reformation; but whatever he did, it was impossible to doubt either his conscientiousness, the purity of his motives, or the philanthropy and benevolence that filled his heart. Died, at Guildford, Feb. 5, 1851.

SMITH, JOSEPH, founder of Mormonism, was born in Windsor county, Vermont, U. S., in 1805. He was the son of a farmer, and worked on the farm, receiving but a scanty education. He professed that the divisions and differences of Christendom excited in him the desire to discover for himself the divine truth; and that during his retirement, in 1823, he saw a vision, in which an angel appeared and made various prophetic and historical communications to him. Many angel-visits followed, and in 1827 the "Book of Mormon," a mysterious volume composed of thin plates of metal, in appearance like gold, and containing, in all kinds of characters, a history of America from the earliest ages down to the 5th century of our era, was delivered to him. His story found believers in his nearest relations, and excited general curiosity, with many suspicious and ill reports. A copy of

the book, or of one part of it, was shown to Dr Anthon, who declared it to be an imposture. Whether it was got up by Smith, or was appropriated with some modifications from a manuscript tale by one Spaulding, as has been asserted and sworn to, remains uncertain. Certain witnesses pretended to have seen the plates; Smith translated the record, and in 1830 it was published. The same year the new society began to take shape and organization under the name of "The Church of Jesus Christ of Latter Day Saints." It grew and spread rapidly, but success was accompanied by enmity and frequent violence, so that Smith and his adherents had to remove from place to place, and from State to State, to avoid persecution of the coarsest kind. In 1839 Smith founded the city of Nauvoo, on the Mississippi, and got a charter of incorporation for it. It prospered greatly, attracted settlers from various parts of the world, had a fine temple, a university, and a regularly organized militia. By successive "revelations" Smith constituted the church, with himself as prophet and legislator. But dissensions existed between the faithful and the unbelievers in the new city; rival newspapers carried on the war, till the mob took it out of their hands, and the governor of the State in turn out of theirs. In June, 1844, Smith was arrested and imprisoned on a charge of treason, and on the 27th of that month he was murdered by the mob, who burst into the prison. Brigham Young was chosen his successor, and the Mormons had soon after to seek a new settlement. The city found in Utah, which was recognized as one of the United States in 1850.

SMITH, ROBERT, an eminent English mathematician, born in 1689. While still young he became tutor to the duke of Cumberland, and in 1716, on the death of his relative and friend, Roger Cotes, was called to succeed him as Plumian professor of astronomy in the university of Cambridge. Two years later he was chosen F.R.S., and in 1723 was made LL.D., Cambridge. He succeeded Bentley as master of Trinity College in 1742. Dr Smith's original works are, "A Complete System of Optics," published in 1739, and "Harmonics, or the Philosophy of Musical Sounds," which appeared in 1748. He edited, with commentaries, some memoirs of his friend Cotes under the title of "Harmonia Mensuraturæ," and also his "Lectures on Hydrostatics and Pneumatics." He was the founder of two yearly prizes for students in mathematics and natural philosophy. Died, at Cambridge, 1768.

SMITH, SIR WILLIAM SIDNEY, G.C.B., British admiral, was the son of a captain in the army, John Spencer Smith, of Mickleham, Sussex, and was born at Westminster, 1758. He received his education chiefly under Dr Vicesimus Knox, of Tunbridge School, and was sent, before the age of 12 years, as a shipman on board the Sandwich, under Lord Rodney. In 1780 he became a lieutenant, in 1782 a commander; and, in 1783, obtained post rank, with the command of the *Porpoise* of 28 guns. [SMI]

(who was not quite 20) entered into the service of the king of Sweden, who presented him with the grand cross of the order of the sword, for the skill and energy he displayed on several occasions, particularly in an attack on a Russian flotilla, a great part of which he destroyed. A peace between Sweden and Russia again threw him out of active life, and he travelled in the south of Europe. Hearing that Lord Hood had got possession of Toulon, he hastened thither, and offered his services. Soon after his arrival it was determined to evacuate the city; and the destruction of the ships of war, which could not be carried off, was intrusted to Sir Sidney, who performed the hazardous exploit with signal ability. He was now appointed to the command of the Diamond frigate, of 38 guns, in which, with a small flotilla under his direction, he greatly annoyed the enemy; but in a gallant attempt to cut out a ship at Havre in 1796, he was taken prisoner, and, on pretence of having violated the law of nations, by landing assassins in France, he was confined for two years in the prison of the Temple, at Paris. At length, by the address and intrepidity of a French officer, named Philippeaux, and two of his friends, Sir Sidney's escape was somewhat mysteriously effected. By means of a forged order to the gaoler, and false passports, they escaped to Rouen, and thence in an open boat, to the Channel, where they were taken up by the Argo frigate, which soon landed them at Portsmouth. In 1798 Sir Sidney sailed in the Tigre, of 80 guns, for the Mediterranean, to assume a distinct command, as commodore, on the coast of Egypt. In March, 1799, he proceeded to St Jean d'Acres; and, on the 18th, captured a French flotilla, the guns of which he employed in the defence of Acres, against Buonaparte, who invested it two days after. Many fierce contests followed, and the French repeatedly endeavoured to carry the place by storm; but the determined valour of the British commodore and his gallant band, assisted by the troops of Hassan Bey, frustrated every attempt. Buonaparte having quitted Egypt, Sir Sidney negotiated with General Kleber for the evacuation of the country, and by a treaty signed at El Arish, in January, 1800, the return of the French was agreed to. The British government had previously announced that it would agree to no capitulation, and hostilities were recommenced by Kleber. But they nevertheless determined to abide by it. In 1801 Sir Sidney co-operated with the army sent to Egypt under Abercromby; and he was wounded in the battle which proved fatal to that gallant general. On his return to England he received a valuable sword, with the freedom of the city, from the corporation of London; and, in 1802, he was returned to parliament as member for Rochester. He was subsequently employed in the Mediterranean and in South America. On his return to England, in 1804, he was presented with the freedom of Plymouth; in the following year he was made a knight commander of the Bath; in 1805, full admiral, and, in 1830, lieutenant-general of marines, succeeding therein his

Majesty, William IV. In 1814, he endeavoured to procure, from the congress of Vienna, the abolition of the slave trade, and a joint attack of the sovereigns upon the piratical states of Barbary; but his exertions proved fruitless. He then formed an association called the Anti-Piratic, which probably helped to render the subjugation of Algiers a popular measure in France, if it did not immediately lead to that event. At the close of the war Sir Sidney's services were rewarded with a pension of £1000 a year. A more chivalric character than Sir Sidney Smith is not to be found among the heroes of modern times; and those who recollect his brilliant career will be ready to subscribe to the eulogium passed on him by his biographer, E. Howard: "All his public actions seem to have been less the offspring of mere military calculation and naval science, than of the intuition of the most romantic courage and the highest moral feeling, always controlled by prudence and intrepidity, that no danger, however sudden, could surprise, and no difficulty, however menacing, vanquish." There was a time when his very name, like that of Nelson, struck terror into our enemies; and his constitutional activity kept him constantly on the alert to take advantage of every opportunity to harass and annoy them. He died at his residence in Paris, on the 26th of May, 1840, aged 76.

SMITH, SYDNEY, M.A., canon residentary of St Paul's, rector of Combe Florey, Somersetshire, who, for half a century, rendered himself conspicuous as a political writer and critic, was born at Woodford, in Essex; received his education at Winchester College, and was thence elected to New College, Oxford, in 1780. He commenced his ministry as curate of Netheravon, Wilts; but relinquished it soon after, in order to travel with the son of Mr Hicks Beach, M.P. for Cirencester; which event, and its immediate consequences, he thus humourously describes in the preface to his collected writings:—"When first I went into the church, I had a curacy in the middle of Salisbury Plain. The squire of the parish took a fancy to me, and requested me to go with his son to reside at the university of Weimar. Before we could get there, Germany became the seat of war, and in stress of politics we put into Edinburgh, where I remained five years. The principles of the French revolution were then fully afloat, and it is impossible to conceive a more violent and agitated state of society. Among the first persons with whom I became acquainted were Lord Jeffrey, Lord Murray (late lord advocate for Scotland), and Lord Brougham; all of them maintaining opinions upon political subjects a little too liberal for the dynasty of Dundas, then exercising supreme power over the northern division of the island. One day we happened to meet in the eighth or ninth story or flat in Buccleugh Place, the elevated residence of the then Mr Jeffrey; I proposed that we should set up a 'Review;' this was acceded to with acclamation. I was appointed editor, and remained long enough in Edinburgh to edit the first number of the Edin-

burgh Review." He soon after removed to London, and though the editorial department fell into the hands of Mr Jeffrey, he continued for many years one of the most active contributors to this celebrated organ of Whig principles. During his residence at Edinburgh, Mr Smith was minister of the episcopal church there; and when he settled in London, he became in every sense of the word "a popular preacher," who could at once delight and instruct the crowded assemblages of wealth and fashion that resorted to the West-end chapels. Nor were his oral eloquence, wit, and learning confined to the pulpit alone; with equal success he displayed his abilities as a lecturer on the *belles lettres* at the Royal Institution, his fame increasing with every fresh effort of his genius. During the Percival administration, Mr Smith's activity as a political writer was at its height; and it was thought that the celebrated and amusing "Letters of Peter Plymley," which he produced at that period, did more towards effecting Catholic emancipation than any publication of the time. Throughout his whole career, indeed, he exerted himself in favour of "liberal" measures; or, to use his own words, he "always endeavoured to fight against evil." His last literary efforts were made in denouncing the repudiators of Pennsylvania. His "Contributions" to the Edinburgh Review and various other productions of his wise and witty pen have been collected, and have gone through numerous editions; and, more recently, his "Sketches of Moral Philosophy," or lectures upon that subject, delivered at the Royal Institution, have been published. He died, Feb. 21, 1845, aged 76. A Memoir of his Life, with his Correspondence, has been edited by Lady Holland.

SMITH, Dr THOMAS, a learned English divine, historian, biographer, and critic; born in London, in 1638; died, 1710. He wrote numerous works, among which are, "An Account of the Greek Church," two volumes of "Miscellanea" in Latin, a "Life of Camden," and "Vitæ quorundam Eruditissimorum et Illustrum Virorum."

SMITH, Sir THOMAS, a learned English statesman, historian, and critic, was born at Saffron Walden, in Essex; and after having been Greek professor and university orator at Cambridge, became secretary of state in the reigns of Edward VI. and Elizabeth. Born, 1612; died, 1577. His "Commonwealth of England" is the book by which he is best known.

SMITH, WILLIAM, LL.D., F.G.S., an eminent geologist, was born at Churchill, in Oxfordshire; and at the outset of his career he studied geology and land-surveying. In 1806 he published "A Treatise on Irrigation," in which his geological discoveries enabled him to make some valuable improvements. From this time he steadily rose into notice in the scientific world. In 1806 his collection of organic remains was examined by the president and principal members of the Geological Society; and in the first volume of the Society's Transactions, which appeared in 1811, his discoveries are prominently noticed. But it was not until 1815 that he gave

to the world the long-promised "Delineation of the Strata of England and Wales," in the form of a handsome map. This publication led to the purchase, in the same year, by the British Museum, of the whole of his collection; and the task of arranging and describing it led him to publish "Strata Identified by Organized Fossils" and a "Stratigraphical System of Organized Fossils." From 1815 to 1828, Mr Smith published twenty geological maps of various counties of England, delivered lectures in provincial towns, and travelled in search of new facts, having, for a long time, "scarcely any home but the rocks, except one year which he passed at Kirkby Lonsdale, in Westmoreland." In 1835 the degree of LL.D. was conferred upon him by Trinity College, Dublin. But though careful, he became embarrassed; and it was at length well known to his friends, that this excellent and highly-gifted man, now fast falling into the "sere and yellow leaf" of age, was without the means of procuring even the common comforts of life. An application was made to the crown, and a pension of £100 per annum was immediately bestowed upon him. Born, 1769; died, 1846.

SMOLLETT, TOBIAS, novelist and miscellaneous writer, was born of a respectable family, at Dalquhurn, in Dumbartonshire, in 1721. He was educated at Dumbarton school, apprenticed to a surgeon at Glasgow, and served for several years in the navy. He accompanied the expedition to Carthage, and afterwards went to Jamaica. Not succeeding in his profession, he turned to literature for bread, and his first publication was a satire entitled "Advice," in 1746. His long life was one of restless activity, writing, travelling, quarrelling, place-seeking; without earnestness, or depth, or principle. He was for a time editor of the Critical Review, wrote against Wilkes in the "Briton," and published various political satires. His most celebrated novel is "Roderick Random," published in 1748; full of amusing incidents, and characterized by a coarse but hearty humour. His other novels are "Peregrine Pickle," "Adventures of Ferdinand Count Fathom," "Adventures of Sir Launcelot Greaves," and the "Expediton of Humphrey Clinker." He was also author of a "Complete History of England," a translation of Don Quixote, and some worthless poems. His writings are not fit for delicate hands to touch, by reason of their indecency and moral filth. Smollett died at Leghorn, in 1771.

SMYTH, WILLIAM, professor of modern history in the university of Cambridge, was born in 1764. He took his degree of M.A. in 1790, and in 1807 he was appointed to the chair of modern history, which he held for 42 years. Most of his life was passed at Cambridge, in a constant train of quiet studies and innocent pleasures. Endowed with a fine taste and correct judgment, he delighted in nursing the flame of infant genius. He was among the first to appreciate the merits of Henry Kirke White, whom he treated during his life with characteristic kindness, and after his death gave a durable expression of his friendship in the beautiful lines inscribed on the youthful poet's monument in

St. John's Church, Cambridge. Mr Smyth was himself a poet. In 1806 he published "English Lyrics," which was favourably received; but his chief titles to fame are his "Lectures on Modern History" and "On the French Revolution," and his "Evidences of Christianity." Died at Norwich, June 26, 1819.

SMYTH, WILLIAM HENRY, British admiral, a distinguished naval surveyor, astronomer, and antiquary, was born at Westminster in 1788. He is said to have been a descendant of the famous Captain John Smith, the preserver and early historian of the colony of Virginia. [See SMITH, JOHN.] He entered the navy at the age of 17, and continued to serve in it till the close of the war in 1815. He had the command of a gunboat at the siege of Cadix in 1810, and was made a lieutenant in 1813. Having observed the defects of the charts of the Mediterranean Sea, he began to make observations for the correction of them, and being supported by the Admiralty, he employed nearly ten years in surveys of Sicily, the coasts of the Adriatic, and the island of Sardinia. In these surveys he was assisted by Captain Beaufort and Captain Gaultier Parc of the French army. He became post-captain in 1824; returned the same year to England; completed the charts for the "Atlas of Sicily," published by the Admiralty; and published an interesting Memoir on that island. He afterwards settled at Bedford, where he built an observatory, and made a long series of observations on the Pole Stars; the results of his studies and observations appearing in his "Cycle of Celestial Objects," which was published in two volumes in 1844, and includes the "Bedford Catalogue." It is esteemed one of the best handbooks of practical astronomy. Admiral Smyth also made himself known as an antiquary. He formed a collection of Roman brass coins, and published a Descriptive Catalogue of them, and another of the North-berland collection. Having removed to Chelsea, he was for some time a prominent figure in the scientific circles of London; he was a fellow of the Society of Antiquaries from 1821; afterwards vice-president; F. R. S. foreign secretary, and member of the council; member of the council, and president of the Astronomical Society; one of the council and president of the Geographical Society; visitor of Greenwich Observatory; and one of the founders of the United Service Institution. He was also a correspondent member of various foreign academies. Admiral Smyth's principal literary work is "The Mediterranean, a Memoir, Physical, Historical, and Nautical," published in 1854. His other works may be named, his "Sketches of the Present State of the Island of Sardinia," 1828; and translations of Arago's "Popular Astronomy," in conjunction with Arago; the same author's "Biographies of Distinguished Scientific Men," in conjunction with Baden Powell and Grant; and Arago's "History of the New World." He was long engaged on a "Nautical Dictionary," which he has left complete in manuscript, and which is to be published.

His numerous contributions to the "United Service Journal" were also revised by him for republication. Admiral Smyth was distinguished for his good sense, sterling integrity, and especially his love of fun, no less than for his enthusiasm for science, his energy, and varied acquirements. He died at his seat, St John's Lodge, near Aylesbury, September 9, 1863.

SNAYERS, HENRIK, Dutch engraver, was born at Antwerp in 1612. Among his best prints are—the Virgin surrounded by Saints, the Communion of St Francis of Assisi, both after Rubens; and Samson delivered to the Philistines by Dauliah, after Vandyck. He spent his whole life at Antwerp, and attained the reputation of one of the best engravers of his age.

SNAYERS, PIETER, Dutch painter, was born at Antwerp in 1593. He studied under Henrik van Balen, and improved himself by a visit to Italy. He was named painter to the Archduke Albert, and afterwards to the Cardinal Infante of Spain. Snayers excelled in historical, landscape, and battle pieces, and executed many works for the churches of Brussels and the principal mansions. He was the friend of Rubens and Vandyck, and the latter painted his portrait. Died at Brussels, 1670.

SNELL, RODOLPH, an eminent mathematician and philological writer, was born at Oudenarde, in Holland, in 1547. He became professor of mathematics, and afterwards of Hebrew, in the university of Leyden, where he died in 1613. He published "Apollonius Batavius," and several treatises on the works of Pappus.—His son, WILLEBROD SNELL, born at Leyden, in 1591, succeeded his father in the mathematical chair, and died in 1626. He discovered the law of refraction of rays of light; and was the first who undertook the measurement of the earth, or a degree of the meridian, by the application of trigonometry. He published some of the works of the ancient mathematicians, and a few learned treatises of his own on mathematical subjects.

SNIADECKI, JAN, a distinguished Polish astronomer, born in 1756. He studied at the universities of Cracow and Göttingen, visited Holland and France, became acquainted with Laplace, D'Alembert, Condorcet, and other eminent men, and in 1781 was appointed professor of mathematics and astronomy, at Cracow; whence he removed in 1806 to the new university of Wilna, of which he became rector. He retired from the post which he had filled so ably and honourably in 1824, and died in 1830. His scientific and miscellaneous writings appeared in a collected form in 8 vols., in 1837—1839.

SNIADECKI, ANDREW, a distinguished Polish physiologist and chemist, was younger brother of the preceding, and was born in 1773. He was educated at the university of Cracow, studied afterwards at the universities of Pavia and Edinburgh, and, like his brother, was called to fill a chair at Wilna. He rendered great services to science in Poland as professor of chemistry and pharmacy there, and retained that post till 1830, when the university was suppressed by Russia. Sniadecki's work, entitled "The

"Theory of Organic Existences," was translated into French and German. Died at Wlma, 1838.

SNORRO STURLESON, Icelandic poet and historian, was born in 1178. He received a good education, rose to high office in his native island, and was in high reputation for his varied acquirements and his skill as a story-teller. He published the collection of Sagas entitled the "Helmkringla," in which are many songs of his own composition, and which was first printed in 1697. There are Swedish, Danish, German, and Latin translations of it. Snorro was also editor of the collection, entitled "Skalda," or "Snorro-Edda." Snorro was murdered in 1211.

SNYDERS, FRANS, a celebrated painter of the Flemish school, born at Antwerp, in 1579. He studied under Henrik van Balen; and, after visiting Italy for improvement, settled at Brussels, under the patronage of the Archduke Ferdinand. His battles and hunting-pieces are admirable, and in the representation of animals none have ever surpassed him. Died, 1637.

SOANE, Sir JOHN, an eminent architect, was born at Reading, in Berkshire, in 1752; came to London at an early age with his father, who was a builder; was placed with Dance, the architect, when about 15, and afterwards under Holland. In 1772, being a student of the Royal Academy, he was awarded the silver medal for the best drawing of the Imqueeting House, Whitehall. Four years afterwards he obtained the gold medal for the best design for a triumphal bridge. Soon after this he was introduced to George III., by Sir W. Chambers, and was sent to pursue his studies at Rome, with the Academy pension of £60 per annum for three years. There he continued until 1780, and studied assiduously the remains of ancient art. On his return to England he was employed on many public works, as well as private buildings; and on the death of Sir Robert Taylor, in 1788, he was appointed architect and surveyor to the Bank of England. In 1791 he was appointed clerk of the works to St James's Palace, the Parliament Houses, and other public buildings; and in 1795 architect of the Royal Woods and Forests, both of which offices he some years afterwards resigned. In 1794, a committee of the House of Lords directed him to consider what alterations could properly be made to render the house, offices, &c., more convenient and commodious. He accordingly made the requisite surveys, plans, &c., but though his designs were approved by the king, the execution of the work fell to the lot of James Wyatt. In 1806 he was elected professor of architecture to the Royal Academy. At this period, and for many years after, Mr Soane was actively engaged in erecting or improving public edifices in the metropolis and elsewhere. Among these were the Dulwich Gallery, the National Debt Redemption Office in the Old Jewry, the new Law Courts, &c. In 1821 he made a magnificent design for a new palace, to be constructed on Constitution Hill, but Buckingham House was preferred. In 1824 he was elected archi-

tect to the Royal College of Surgeons, and a fellow of the Royal Society. In 1824 he built Freemason's Hall, in Queen Street, and in 1833 completed the new State Paper Office in St James's Park. This was the last of his professional works; and, having passed his 80th year, he retired. He bequeathed his collection of works of art (valued at upwards of £50,000) to the nation, for the benefit of students in the arts, and especially for the advancement of architectural knowledge. This arrangement he lived to see completed by act of parliament; and at his death, which occurred Jan. 20, 1837, his house and museum in Lincoln's Inn Fields became the property of the public. Jackson's portrait of Sir John Soane is in the National Gallery.

SOBIESKI, JOHN (John III.), king of Poland, and one of the greatest warriors of his age, was born of a noble family in the district of Olesko, in 1629. He was sent, with his elder brother, Mark Sobieski, to finish his education in France, and served for a time in the body-guards of Louis XIV. The brothers travelled together, but were suddenly recalled to Poland by an invasion of the Cossacks, in a battle with whom Mark was killed. John distinguished himself very greatly in the continual wars with the Turks and Tartars, Swedes, Russians, and Turks, and attained the dignity of grand-marshal of Poland. One of his most memorable exploits was the great victory which he won over the combined Cossack and Tartar hosts, in a battle or series of battles which lasted seventeen days. He had only 20,000 men to oppose to 100,000, and with them he saved Poland from destruction. In 1671 he again defeated the Tartars in twenty combats, and liberated 30,000 Poles who had been taken prisoners by them. In the following year he obtained a great victory over the Turks, and took Choczim from them. Sobieski was elected king of Poland, as John III., in 1674, and had the arduous task of saving the country from a state of extreme depression and embarrassment. War with Tartars and Turks still went on, and Sobieski justified the confidence of his countrymen. He was crowned, with his wife, Maria Casimire, in February, 1676; and the same year Poland was invaded by an immense army of Turks under Ibrahim, pasha of Damascus, surnamed Shaitan, or the Devil. The armies approached each other by trenches and counter-trenches, but a treaty of peace was concluded. The Emperor Leopold, in dread of the Turks, sought in 1682 the aid of all the Christian powers, amongst them, that of Poland; but Sobieski, whose title Leopold had refused to acknowledge, in turn refused to make an alliance with him. But in the following year he did so. And Vienna being besieged by 200,000 Turks under the grand vizier, Kara Mustafa, and the Imperial family having fled, Sobieski hastened to relieve the city with 20,000 men. He was joined by the duke of Lorraine and the elector of Bavaria, each with 30,000 men; and came in sight of the besieging host on the 11th September. The next day he totally defeated them and became master of their camp, artillery, and immense treasure. The victory was cele-

lege of Surgeons, and Society. In 1838 he all, in Queen Street, of the new State Park. This was a of all works; and, having retired, he began of works of £50,000) to the of students in the advancement of which by act of parliament, which occurred Jan. 20, in Lincoln's Inn property of the public. erated by a *Te Deum* in the cathedral of Vienna, and filled Europe with joy. A short and unsatisfactory interview took place between the emperor and the saviour of Vienna, and they parted in mutual discontent. Sobieski pursued the Turks, was defeated near Gran, but soon after defeated them again. He afterwards led an expedition to recover Camuliek from the Turks; and was on the point of succeeding by negotiation, when the emperor offered in 1686 to aid him in the conquest of Moldavia and Wallachia. He overran these principalities, but failed to make a permanent conquest. This closed his military career, and his strength failing him, he declined gradually, and was at last carried off by apoplexy, 17th June, 1696. His last years were saddened by the failure of all his attempts to introduce reforms in the government. The nobles invariably opposed their constitutional anarchic "Veto," and the priest king confessed himself powerless to give his country.

SOBINUS, LELIUS, theologian, was born at Sienna, in 1525. He was of a distinguished family, was brought up to the law, but applied himself especially to the study of the Scriptures, and became a member of a society formed in the neighbourhood of Sienna for free discussion of theological questions. The denial of the doctrine of the Trinity was the principal result of these discussions, and some of the inquirers being led to death, Lellius with others fled from Italy. He wandered for four years through the principal countries of Europe, visiting Ireland twice, and finding many proselytes there, and spent his last years at Zürich, where he died in 1562. Lellius was an eminent scholar, and the correspondent of many distinguished men, amongst them of Calvin. SOBINUS, FAUSTUS, usually considered the founder of the Socinian system of doctrine, was nephew of the preceding, and was born at Sienna, in 1539. He received only a defective education, and having adopted the theological views of his uncle, he was obliged to exile himself for several years. On his return to Italy he entered the service of the grand-duke of Tuscany, with whom he remained twelve years. He resigned his offices at Florence in 1574 in order to devote himself seriously to theological studies, and went to Basel. Thence he visited Transylvania, and in 1579, Poland, where he was at first refused admission into the Anti-Trinitarian churches. He lived some years at Leov, retired a while into the country, and became connected by marriage with some of the leading families, and after the loss of his wife by death, returned to Cracow. He was there subjected in 1598 to a disgraceful outrage; seized by a mob in his sick-room, and dragged half-naked along the streets, his house robbed, and his papers burnt. He then retired to a village, where he spent his remaining years. The aim of Socinus as a theological teacher was to get rid of all doctrines which appeared contrary to reason. He taught the humanity of Christ, while he insisted on the divine authority of his teaching; and opposed the doctrines of the atonement, predestination, and original sin, and insisted on by the reformers. He did

not invent, but for the most part merely gave a systematic form to the opinions which he maintained. His works form the first two volumes of the work, entitled "Bibliotheca Fratrum Polonorum," published in 1639. They are written in Latin. Died, 1601.

SOCRATES, the great Athenian philosopher, was the son of Sophroniscus and Phænarete, and was born near Athens, B.C. 469. He was brought up to his father's calling, that of a sculptor, and for a time gained his living by it. He was, however, naturally an eager student, and by means of the best teachers and the best works accessible to him, got the best education his country and his age could give him. He was one of the disciples of the great Anaxagoras, and of his successor Archelaus, and soon gave himself up entirely to philosophy. He led an active social life, married—unhappily for himself, a Xanthippe—served his country as a soldier, distinguishing himself by his courage and extraordinary endurance at the siege of Potidæa, at the battle of Delium, and at Amphipolis. At Potidæa he saved the life of his pupil Alcibiades, and at Delium the life of his pupil Xenophon. His robust constitution made him indifferent to the extremes of temperature; he could dress alike and go barefoot all the year round. He appears to have scarcely ever held any political office, and seems to have inclined rather to the aristocratic than the democratic party. Critias, one of the Thirty Tyrants, had been his pupil; Theramenes was his friend; so was Charmides. Yet he fearlessly rebuked Critias for his vices, and thereby made him his enemy; and he with equal courage and disregard of consequences denounced the proceedings of the Thirty, and in one important case refused to obey their command. On the trial of the six generals after the battle of Arginussæ he firmly opposed the injustice of the sentence. But it was as a Teacher that Socrates made himself the foremost man of Athens, and perhaps of the ancient world. He wrote no book, he did not establish a school, nor constitute a system of philosophy. But he almost lived abroad, and mixed with men familiarly, and in the street or any place of public resort, where listeners gathered round him, he talked and questioned and discussed, not for pay, but from the love of truth and a sense of duty. He was persuaded that he had a high religious mission to fulfil, and that a divine voice (afterwards spoken of as his *Dæmon* or *Genius*) habitually interfered to restrain him from certain actions; and instead of encouraging profitless speculations upon nature, or the rhetorical chicanery of the Sophists, he turned the thoughts of men to themselves, their actions, and their duties. Yet even on these things he did not dogmatize; instead of asserting and imparting, he questioned and suggested and showed and led the way to real knowledge. He ruthlessly compelled ignorance and pretence to own themselves, and thus drew on himself the hatred of many. As early as B.C. 424 he was attacked by Aristophanes in his comedy of the "Clouds," as the arch-sophist, the enemy of religion, and corrupter of youth;

substantially the same charges as those on which he was prosecuted twenty years later. He was made to appear not only hateful, but ridiculous; a result the more easy to be attained because of his singularly ugly physiognomy, so easily rendered by the comic mask. He was persecuted during the tyranny of the Thirty, and after their fall he was impeached by Anytus, one of their leading opponents, with whom were associated Meltus, a tragic poet, and Lyeon, an orator. He was charged with not believing in the gods which the state worshipped; with introducing new divinities; and with corrupting the youth. Death was proposed as the penalty. Socrates refused to make use of a speech prepared for his defence by Lysias, and defended himself in a tone of confident innocence and worthiness, which aggravated the ill-will of his judges. He was condemned by a majority of six only; but his additional speech in mitigation of the sentence raised the majority against him to eighty. Thirty days elapsed between his sentence and its execution, in pursuance of the law that no criminal must be put to death during the voyage of the sacred ship, the Theoris, to Delos with the annual offerings. During that period Socrates had the society of his friends, and conversed with them as usual; the last conversation being on the immortality of the soul. He refused the offer of some of his friends to procure means of escape for him; drank the hemlock cup with perfect composure, and so died, in the 70th year of his age, B. C. 399. Socrates opened a new era in philosophy, and without founding a system he originated, by rousing men to reflection and leading them towards self-knowledge, a vast movement of intellect, which produced, first, Platonism and the Aristotelian logic, and then all the systems, even conflicting ones, which rose into more or less importance during ten successive centuries. So true, on a wider scale than he meant, was his own conception of his method as an "intellectual obstetricism." By his religious spirit, his belief in God and in immortality, his aim to reunite religion and morality, and his own noble and beautiful life, the mirror of the truths he taught, he exerted so strong and wholesome an influence that the historian of the Christian religion, Neander, does not hesitate to adopt the saying of the Florentine philosopher, Marsilio Ficino, that Socrates, like John the Baptist, was a forerunner of Christ. Our primary authorities for the life and teaching of this extraordinary man are Xenophon's Memorabilia and Apology of Socrates, and Plato's Dialogues, in which he forms the great central figure. (See Mr Grote's admirable account of him in his History of Greece.)

SOCRATES, an ecclesiastical historian of the 5th century. He was born at Constantinople, and bred to the bar, whence he obtained the name of **SCHOLASTICUS**. He wrote the History of the Church, from the period at which that of Eusebius terminates to the year 440. An English translation forms part of Bohn's Ecclesiastical Library.

SODOMA, IL. [RAZZI.]

SOEUR, HUBERT LE, a sculptor of the 17th century, of whose biography little is known. The country of his birth, and the dates of his birth and death, are not ascertained. He is said to have been a pupil of John of Bologna, and to have come to England before 1600. His best-known works are the equestrian statue of Charles I., at Charing Cross, and the statue of William, earl of Pembroke, at Oxford.

SOISSONS, CHARLES DE BOURBON, Count de, grand-master of France under Henry IV., was the youngest son of Louis I., Prince of Condé, and was born in 1556. Proud, ambitious, and of only middling ability, he constantly pursued his own selfish interests, shifting from side to side in the conflict of parties, and passing his whole life in intrigues. In 1687 he quitted the court of Henry III., and joined the king of Navarre, who had offered him in marriage his sister and presumptive heir, Catherine. He distinguished himself at the battle of Coutras, and for his own ends dissuaded Henry from following up the advantage he had gained. The next year a breach took place between Henry and Soissons, and the latter returned to the service of Henry III., distinguished himself at the siege of Tours, and was named governor of Brittany. He soon after rejoined the king of Navarre, and commanded the English auxiliaries at the siege of Paris. For his service on that occasion he was named grand-master of France. He subsequently rendered important military services to Henry IV., but also quarrelled with and disobeyed him. He was a bitter enemy of the great minister Sully. After the death of Henry IV. he was made governor of Normandy, allied himself with the duke d'Epemon, and proposed to him to murder Sully; which proposal the duke rejected with horror. Soissons assisted at the coronation of Louis XIII., and died in 1612.

SOLANDER, DANIEL CHARLES, naturalist, was born in Sweden, in 1736; studied at Upsal, where he became a pupil of Linnæus, and took his degree of M.D. In 1760 he came to England, obtained an employment in the British Museum, and was elected a member of the Royal Society. In 1761 he accompanied Mr Banks (afterwards Sir Joseph) in his voyage round the world with Captain Cook; and he was subsequently employed in arranging and describing the valuable botanical collections. He was made D.C.L. at Oxford, in 1771; was made one of the assistant librarians at the British Museum, in 1773; and died in 1782.

SOLARIO, ANTONIO, surnamed **LO ZINGARO**, or the Gipsy, an eminent Italian fresco-painter, was born about 1380. He followed his father's occupation of itinerant smith, but falling in love with the daughter of the painter Colantonio del Fiore, he applied himself for ten years to painting, to satisfy her father's wish, and win the lady his choice. He succeeded, and gained a great reputation at Naples, where he executed most of his works. The most important are the series of frescoes in the church of St Severino, illustrating the life of Benedict, which have been esteemed

some critics of the best works of the escape background at Naples, 1455.

SOLIMAN, T, the Ottomans, was born about 1520, his father in 1520, he fell in Syria, the Christians, and he took in August, seat a powerful Rhodes, which had been held by the Jerusalem. He fell in August, Rhodes surrendered. Soliman next attempted in 1520, from the triumph of Christian subjects Hungary. He was back, in which the part of his army was burnt it; he and retook it, in his ally and was a garrison massacre the capitulation were stormed soon were slaughtered of the same year Vienna, but the besieged, headed him, compelled him. In 1534, he engaged in war other towns in England, and made about the same time the celebrated piper Tunis, was taken from him (AROSSA.) War Kingdom of Hungary. Soon after, concluded between Soliman, against the pursuit of which parts of Italy, he returned to the prisoners. Renewed in Hungary, Russian armies of the suit. The disease of the piper being defeated was put to death, 1560, Tripoli was Soliman, and, in the night of St John was attacked; but he was saved by the grant. Soliman died in his captivity, August, 1566. He was the eldest of the sultans.

SOLIMENA, FRAN, was at Naples, in the works are numerous of Italy. His portrait: and the E

a sculptor of the 17th century, little is known of him, and the dates of his life are ascertained. He is the son of John of Bologna, and died before 1650. He is the equestrian statue of Charles Cross, and the earl of Pembroke, at

LES DE BOURBON, a prince of France under the regency of Louis I., was born in 1546. He was of only middling talents, and pursued his own selfish course in the side of the king, and in the end of his life he was expelled from France. He was the father of Louis II., who was king of Navarre, and of the duke of Orleans, who was killed at the battle of Tewkesbury. He was the father of Louis III., who was king of Navarre, and of the duke of Orleans, who was killed at the battle of Tewkesbury. He was the father of Louis III., who was king of Navarre, and of the duke of Orleans, who was killed at the battle of Tewkesbury.

NIEL CHARLES, a Swedish painter, born in 1736; studied in Rome, and became a pupil of Mengs. He received the degree of M.D. in 1760. He was a member of the Royal Society, and was elected a member of the Royal Academy of Sciences. He was the author of several works on the history of art, and was a member of the Royal Society of London.

ONIO, surnamed Lo Sclavo, an eminent Italian painter, born about 1580. He was the son of a painter, and was educated in the art of painting. He was the author of several works on the history of art, and was a member of the Royal Society of London.

some critics of our own day as among the best works of their kind in Italy. Solario was distinguished for the beautiful landscape backgrounds of his paintings. Died at Naples, 1455.

SOLIMAN, THE MAGNIFICENT, sultan of the Ottomans, was only son of Selim I., and was born about 1490. He succeeded his father in 1520, and having suppressed a rebellion in Syria, he turned his arms against the Christians, and besieged Belgrade, which he took in August, 1521. The next year he sent a powerful fleet against the island of Rhodes, which for more than 200 years had been held by the Knights of St John of Jerusalem. He joined the armament himself in August, and after five months' siege Rhodes surrendered to him, December, 1522. Soliman next suppressed a revolt in Egypt; retook it in 1525 the French in his dominions from the tribute imposed on his other Christian subjects; and in 1526, invaded Hungary. He gained the victory of Mohacs, in which the king, Louis II., and great part of his army was killed; entered Buda, and burnt it; lost it in the following year, and retook it, in behalf of John Znpolski, his ally and vassal, in 1529. He had the garrison massacred, contrary to the terms of the capitulation; and at Altenburg, which he stormed soon after, all the inhabitants were slaughtered by his order. In September of the same year he undertook the siege of Vienna, but the heroic resistance of the besieged, headed by Frederick, prince-palatine, compelled him after twenty days to retire. In 1534, he passed into the East, and engaged in war with Persia, took Van, and other towns in Upper Armenia, entered Baghdad, and made himself master of Tauris. About the same time he took into his service the celebrated pirate, Barbarossa, who conquered Tunis, which, however, was soon taken from him by Charles V. [See BARBAROSSA.] War with the emperor for the kingdom of Hungary broke out again in 1540. Soon after, a treaty of alliance was concluded between Francis I. of France and Soliman, against the Emperor Charles V., in pursuit of which Barbarossa attacked the coast of Italy, besieged Nice unsuccessfully, and returned to Constantinople with 7000 prisoners. Renewed war with Persia and Hungary, Russia, and Africa occupied the remainder of the sultan during the following years. The dissensions of his sons, Selim and Bajazet, embittered his domestic life, and Bajazet being defeated, fled to Persia, where he was put to death with his children. In 1560, Tripoli was taken by the fleets of Soliman, and, in 1563, Malta, held by the knights of St John since the loss of Rhodes, was attacked; but it was successfully defended by the grand-master John de la Valette. Soliman again invaded Hungary, and died in his camp before Szeged, 30th August, 1566. He is generally esteemed the greatest of the sultans, both as warrior and

politician. He was the author of several works on the history of art, and was a member of the Royal Society of London.

SOLIMENA, FRANCISCO, painter and poet, born at Naples, in 1637, and died in 1747. His works are numerous in Naples and other parts of Italy. Philip V. sat to him for his portrait; and the Emperor Charles VI. con-

ferred on him the honour of knighthood. He was perhaps as much admired as a poet, and his poems have been several times reprinted.

SOLINUS, CAIUS JULIUS, a Roman geographer, probably of the 3rd century. He compiled a work, entitled "Collectanea Itinerum Memorabilium," to which he afterwards gave the title "Polyhistor." This name was afterwards transferred to the author. The book was a great favourite in the Middle Ages. It was translated into English by Arthur Golding in 1597. A new edition of the "Polyhistor," with a learned preface by Mommsen, appeared at Berlin in 1864.

SOLIS, ANTONIO DE, a Spanish poet and historian, was born at Placenza, in Old Castile, in 1610; was appointed historiographer of the Indies, and wrote the "History of the Conquest of Mexico." His other works consist of dramas, poems, and letters. At the latter part of his life, De Solis entered into orders, and died in 1686.

SOLOMON, ABRAHAM, a popular English painter, born at London, in 1824. He began to study at the Royal Academy in 1830, and exhibited for the first time in 1843. Among the most celebrated of his pictures are, "Waiting for the Verdict," painted in 1857; "First Class" and "Second Class," in 1854; "The Lion in Love," and "The Lost Found." Ill health led him to seek a warmer climate in the south of France, in 1862, and he died at Biarritz, 19th December of that year.

OLON, one of the seven sages of Greece, and the celebrated legislator of Athens, was born at Salamis, in the 7th century B.C. Inheriting but a small patrimony, he had recourse to commerce; but at the same time he applied himself to the study of moral and political wisdom, and soon became distinguished by his superior knowledge in state affairs. After having enhanced the glory of his country by recovering Salamis, he was chosen archon B.C. 594, and having received full power to do whatever he judged needful, he set himself to the task of improving the condition of his countrymen. He abolished most of the cruel laws of Draco, and formed a new constitution, founded on the principle of making property, not birth, the title to the honours and offices of the state. He made a fourfold division of the citizens according to their various degrees of wealth; gave additional important powers to the popular assembly, and made the archons and inferior officers accountable to it. He made many special laws also relating to trade and commerce, marriage, disposition of property by will, &c. One of his laws was directed against the neutrality of any citizen during a sedition. When Solon had completed his laws, he caused them to be engraved on wooden cylinders, and is said to have bound the Athenians by an oath not to make any changes in his code for ten years. He then left the country, to avoid being obliged to make any alterations in them; and visited Egypt, Cyprus, and Lydia. The beautiful story of his visit to the court of Croesus, so celebrated in ancient times, is now numbered with other beautiful myths which can only be admired, not believed. On his return, after an ab-

sence of ten years, he found the state torn by party violence, and his kinsman Plastratus aiming at the sovereignty which he soon seized. Soion then withdrew from public life, and is supposed to have died at the age of 80, about B. C. 558.

SOLVYNS, FRANS RAJTHABAR, traveller and engraver, born at Antwerp, in 1760. He accompanied Sir Home Popham in a voyage to the Red Sea and the East Indies; and having arrived in Hindostan, he studied the languages, manners, customs, and religion of the Hindus, that he might be able accurately to illustrate them by his pen and pencil. After a residence of 15 years, he returned to Europe, settled at Paris, and published, as the result of his labours, "Les Hindous, ou Description pittoresque des Mœurs, Costumes, et Cérémonies Religieuses de ce Peuple," 4 vols. folio. He died at Antwerp, in 1821.

SOMERS, JOHN, Lord, a distinguished statesman and lawyer, was born at Worcester, about 1652. He passed some time as clerk to a barrister, and, when called to the bar himself, evinced talents of a high order. He made himself conspicuous by his opposition to the tyrannical measures of Charles II. and James II.; and acquired great credit as one of the counsel for the seven bishops. He strenuously promoted the revolution, and sat, as one of the representatives for Worcester, in the convention parliament. He became, successively, solicitor-general, attorney-general, lord keeper, and, in 1693, lord high chancellor of England, with the title of Lord Somers, Baron Evesham. After the death of William III., Lord Somers spent his time in literary retirement, and was chosen president of the Royal Society. In 1706 he drew up a plan for effecting an union between England and Scotland, which was so much approved, that Queen Anne appointed him one of the commissioners to carry it into execution. Upon a change of ministry, in 1708, he was nominated president of the council. He died in 1716, having earned a high character for political purity and legal ability. He was also deservedly esteemed as a patron of men of letters.

SOMERSET, DUKE OF. [SEYMOUR, EDWARD.]

SOMERSET, EDWARD. [WORCESTER, MARQUIS OF.]

SOMERSET, Lord FITZROY. [RAGLAN, Lord.]

SOMERVILLE, WILLIAM, the author of "The Chase," and other poems, was born at Edston, in Warwickshire, in 1692, where he inherited a considerable estate, on which he chiefly lived, mingling an ardent attachment to the sports of the field with the studies of a man of letters. Died, 1742.

SOMNER, WILLIAM, a learned antiquarian, was born at Canterbury, about 1598. He was author of "The Antiquities of Canterbury," a "Saxon Dictionary," and a "Treatise on Gavelkind." Died, 1669.

SONNERAT, PIERRE, naturalist and traveller, was born at Lyons, about 1745. After making several voyages to the East Indies, Malacca, the Philippine Islands, &c., he returned to France with a rich collection of

natural curiosities; wrote narratives of his voyages to New Guinea, the East Indies, and China; and died in 1814.

SONNINI DE MANONCOURT, CHARLES NICOLAS SIGISBERT, an eminent French traveller and naturalist, was born at Louville, in 1751; studied the law, which he relinquished for the army; and being sent to Cayenne as an officer of marine engineers, he was enabled at the same time to gratify his love of travelling and taste for natural history. He assisted Buffon in his accounts of foreign birds, visited different parts of Europe and Africa, and employed himself in scientific researches till the revolution, when he narrowly escaped from the tyranny of Robespierre. Under the consular and imperial governments he was unable to obtain employment, in consequence of the prejudice entertained against him by Buonaparte for his remarks on the Egyptian expedition. Among the works of Sonnini are, "Travels in Egypt," "Travels in Greece and Turkey," and an edition, in 127 vols. 8vo, of Buffon's Natural History. He also assisted in the *Dictionnaire d'Histoire Naturelle*, 21 vols. 8vo; and was conductor of the *Bibliothèque Physico-Economique*. Died, 1811.

SONTAG, HENRIETTA, one of the most distinguished singers of her age, was born at Coblenz, in 1805. Sprung from a theatrical family, Henrietta Sontag took the stage when yet a child; playing at the theatres of Darmstadt, Berlin, and Prague. Her talents obtained her admission into the music school of Prague; where she laid the foundation of her sound knowledge of the art. Before she was eighteen she was the prima donna of the Berlin stage, and the idol of the capital; and when she soon afterwards went to Paris, her desertion excited a degree of resentment which did not speedily subside. Her first season at the Théâtre Italien was followed in the same year, 1828, by her début in London, where her youth and beauty, her fresh and lovely voice, and the high finish and exquisite purity of her style, produced universal delight. She left England at the end of the season, not to return for many years. Her retirement from the stage, in consequence of her marriage with Count Rossi, a Piedmontese nobleman, immediately followed. Her virtues, her manners, and her accomplishments, made her everywhere acceptable in the highest circles. But she never lost her love of her art, and she continued to make progress as an artist in the midst of all the enjoyments of high life. After a happy marriage of nearly twenty years, her husband became involved in the political troubles of 1848, and lost his fortune. Without hesitation she resolved to have recourse to her art for the sake of her husband and her children. She accepted an engagement to sing at her Majesty's Theatre for the season of 1849, and reappeared, after one-and-twenty years, on the scene of her early triumphs. Tempted by the success of Jenny Lind and other musical artists, Madame Sontag resolved to visit the United States, and arrived at New York in the autumn of 1851. After a brilliant and successful tour through the Union, she accepted a tempting offer

...the manager of the principal theatre Mexico; where she was cut off by cholera while she was preparing for her first appearance before the public. Died, 1831.

SOPHOCLES, the great Greek tragic poet, the son of Sophilus, and was born at the deme of Colonus, B. C. 495, forty years later than Aeschylus. He received a good education, and at an early age won the prizes in music and gymnastics. He was fifteen when the battle of Salamis was fought, and for his remarkable beauty and skill in music, he was chosen to lead the chorus which sang the psalm of victory. As upon such occasions, he appeared naked, and clothed with oil, and holding a lyre in his hand. His first appearance as a dramatist was in 468, when under memorable circumstances he had Aeschylus for his rival, and won the victory. Of the next 28 years of his life nothing is recorded; but it is known that he made poetry his business, and that he composed a great many plays during that period. Not one of them, however, is now extant. The "Antigone," the best of his extant tragedies, was brought out in 410, and won the prize. The interest the play turns on the conflict between the claims of the state and the family, and the wisdom of its sentiments on public affairs led to the appointment of the poet as one of the ten *Strategoi* (Generals) for the next year. As such he took part with Pericles in the war with the aristocrats of Sparta. The most interesting fact recorded of him on this occasion is, that he became acquainted with Herodotus, then living at Samos, and composed a poem for him. Sophocles does not appear to have taken any other part in politics or war. The number of plays attributed to him, without question, was 113, of which 81 were probably produced after the "Antigone." Seven only are extant, viz. "Antigone," "Electra," "The Trojan Women," "The King Oedipus," "Philoctetes," and "Oedipus at Colonus." These exhibit his art in its maturity, and sustain the verdict of ancient and modern critics that Sophocles carried Greek drama to its highest perfection. He effected a complete change in the construction of tragedy as Aeschylus left it; bringing the connection between the parts of the trilogy and the satyric drama, and making them not one great poem, but four distinct ones; introducing a third actor; and for subjects selecting, not a series of heroic and mythical actions, but for each one a leading fact of real human interest of lasting significance. "Of all the poets antiquity," says K. O. Müller, "Sophocles penetrated most deeply into the recesses of the human heart." Although his works were full of energy and sustained earnestness, he was temperate and moderate, and by the harmonious perfection of his faculties effected the laws of his art. His native genius and gracefulness were indicated by the ancients in the appellation which gave him the name of the Attic bee. And he, as A. W. Schlegel, of all the Grecian poets, is one whose feelings bear the strongest affinity to the spirit of our religion. Sophocles lived to be nearly 90, and in his latest

years most probably wrote the "Oedipus Coloneus," so full of sweetness and tender melancholy and consoling hopes. It was not presented on the stage till five years after the poet's death, but he had read it, or from it, when his son, Iophon, endeavoured to get the management of the property taken out of his hands on the ground of incapacity; and the judges were satisfied, and dismissed the case. Iophon repented of his error, and was reconciled to his father. Sophocles was twice married, first to Neostrate, a free-woman of Athens, mother of his son Iophon; and afterwards to Theoris, of Sicyon, who bore him another son, Ariston. Ariston was father of the younger Sophocles, who was especially beloved by the poet. Sophocles died, B. C. 406. There are English metrical translations of the Tragedies of Sophocles by Francklin (1758), Potter (1788), and Dale (1824). But a new and admirable version has appeared this year (1865) from the pen of E. H. Plumptre, M.A., professor of Divinity, King's College, London; accompanied by a Biographical Essay.

SORBONNE, ROBERT DE, founder of the college of the Sorbonne at Paris, was born in 1201. He was confessor and chaplain to St Louis, who gave him the canonry of Cambrai. He died in 1274.

SOUREL, AGNES, the celebrated mistress of Charles VII. of France, was born at the village of Fromenteau, in Touraine, in 1400. As a maid of honour to the duchess of Anjou, she accompanied her to court in 1431, and the king falling in love with her, she was appointed maid of honour to the queen. She acquired great influence over the king, and she used it to rouse him from the life of sloth and indolence into which he had sunk. She retired, in 1445, to her château of Loches, and was absent from the court five years. The king, however, visited her there, and at the instance of the queen, who was sincerely attached to her, she returned. Died at the abbey of Jumièges, then the winter-quarters of the king, in January, 1450.

SOSIGENES, an astronomer of Egypt, who was invited to Rome by Julius Cæsar, for the reformation of the calendar. He fixed the year at 365 days, called the Julian year, which commenced B. C. 45. No farther particulars respecting him are known, nor are any of his works extant.

SOSTRATUS, an eminent architect, who flourished in the 3rd century B. C., and was patronized by Ptolemy Philadelphus, king of Egypt. Among his works are the famous Pharos, or light-house of Alexandria, which is said to have cost 800 talents, and was reckoned one of the wonders of the world.

SOTHEBY, SAMUEL LEIGH, typographical antiquary, was born about 1800. He became a member of the eminent firm of Sotheby and Wilkinson, to which his father belonged, and showed from his youth the taste for typographical studies, which distinguished him through life. He will be remembered as author of the important work entitled, "Principia Typographica. The Block-Books; or Xylographic delineations of Scripture History, issued in Holland,

Flanders, and Germany, during the 16th century," which appeared in 3 vols. 4to, in 1858. It was projected and partly prepared by his father, Samuel Sotheby. Two hundred and fifteen copies only were printed. Mr Sotheby also published a folio volume illustrating the handwriting of Luther and Melancthon, and "Hambings in the Elucidation of the Autograph of Milton." He was a member of the Archaeological Association. He was found dead in the shallows of the river Dart, near his house, 19th June, 1861.

SOUBISE, BENJAMIN DE ROHAN, Seigneur de, one of the chiefs of the Protestant party in France under Louis XIII., was born about 1589. His first training to arms was under Maurice of Nassau in Holland. In 1621, at the commencement of the civil war, he was named by the assembly of La Rochelle commander in Poitou, Brittany, and Anjou. Having shut himself up in St Jean d'Angely, he was there besieged by the king, and after a month surrendered, promising fidelity to his sovereign. He was soon, however, in arms again, and when Louis marched to oppose him he fled to Rochelle, and sought aid in England. The war was terminated by the edict of pacification, signed at Montpellier in October, 1622. Early in 1623 he sailed from the isle of Rhé, captured the royal fleet at Blavet, and occupied the late of Oleron. After several defeats he again went to England and obtained from Charles I. a fleet under the orders of the duke of Buckingham, but it was refused admission to the harbour, as was also a second fleet. A third sailed, but did nothing, and Soubise, refusing to accept the terms offered by the king, took refuge in England. Died, 1641.

SOUBISE, CHARLES DE ROHAN, Prince de, duke of Rohan, peer, and marshal of France, was born in 1715. He was of the same family as the preceding, entered the army at the age of 19, and served as aide-de-camp to Louis XV. In the campaigns of 1744-1748. He was wounded at the siege of Friburg in 1745, and was appointed in 1751 governor of Flanders and Hainault. Owing to the favour of Madame Pompadour, he had an important command in the Seven Years' War, but he was totally defeated at Rossbach by Frederick the Great, in November, 1757. He enjoyed still the favour of the king, who made him a minister of state, and gave him a rich pension; but he was hated and despised by the courtiers, who made him the butt of their epigrams. A new command was intrusted to him in the following year, and by two victories over the Hessians, Hanoverians, and English, he made himself master of the landgraviate of Hesse, for which he was created marshal. He had a command on the Rhine in 1761, but misunderstandings arose between him and marshal de Broglio, which, through the influence of Madame Pompadour, led to the desertion and exile of the latter. The military career of Marshal Soubise ended with the battle of Johannsberg, and his life was thenceforth that of a venal courtier and favourite. His fidelity to his unworthy master, Louis XV., was touchingly displayed in the circumstance that he was the only

one of the courtiers who followed his master's remains to the grave. He continued to hold his place as minister under Louis XVI., and died in 1787.

SOUFFLOT, JACQUES GERMAIN, an eminent French architect, born in 1713. He studied at Rome, and after travelling in Italy and the Levant, to examine the remains of antiquity, he settled at Lyons, where he built an exchange and a hospital, which gained him so much credit, that he was called to Paris, and made superintendent of the royal buildings. His principal work is the church of Sainte-Genievre, the first stone of which was laid by Louis XV., 6th Sept. 1764. He was a knight of the order of St Michael, and died in 1781.

SOULT, NICOLAS-JEAN-DE-DIEU, a distinguished French marshal, was born at St Amand (Tarn), in 1769, the same memorable year which gave birth to Arthur Wellesley and Napoleon Buonaparte. He entered the Royal Regiment of Infantry in 1785, was made non-commissioned officer in 1790, and then passed rapidly through the intermediate grades, until he reached that of adjutant-general of the staff, when General Lefebvre attached him to his own service, with the grade of chief of brigade. In that quality he went through the campaigns of 1794 and 1795 with the army of the Moselle, and owed to his talents, as well as to his Republican principles, a rapid promotion. Successively raised to the rank of general of brigade and general of division, he took part in all the campaigns of Germany, until 1799, when he followed Massena into Switzerland, and thence to Genoa, where he was wounded and taken prisoner. Set at liberty after the battle of Marengo, and raised to the command of Piedmont, he returned to France at the peace of Amiens, in 1802, and was named one of the four colonels of the guard of the consuls. When the empire was proclaimed in 1804, he was nominated marshal of France, and during the campaign which terminated at Austerlitz, he held the command of the fourth corps of the grand army, and in all the great German battles he took a conspicuous part. In 1808 the marshal entered Spain; and, falling upon Sir John Moore's division, caused the disastrous retreat to Bussunna—only, however, to be repulsed with loss when the English turned to bay below the walls. By his orders the French fired minute guns over the grave of Sir John Moore, and he caused a record of the death of the brave English general to be carried on a rock near the spot on which he fell. From some time thereafter, success attended every operation of Soult's arms. He invaded Portugal, took Oporto, and governed the country so vigorously and fairly that the opponents of the Braganza family made overtures for the permanence of his sway. But the evil luck of the marshal was approaching, and Wellington was advancing to meet him, and he was attacked and routed at the famous passage of the Douro—one of the most gallant exploits ever attempted by an assaulting army. But the French general, nothing daunted, rallied his forces during the night, the disorder of the army was partially mended, and he quickly continued

retreat, when he was stunned by the intelligence that Marshal Beresford had crossed the Douro higher up than Wellington, and held the bridge over the Amarante. He was obliged to leave the whole of his baggage behind him, and retreat by forced marches through the mountains. As soon as Soult heard of the disastrous check to the French arms at Talavera, he managed, by a series of rapid movements, to join Ney and Mortier, and forced Wellington to retire upon Portugal. In 1809 he was appointed major-general of the French forces in Spain; and being thus virtually commander-in-chief, he gained the great victory of Ocaña, which resulted in the subjugation of Andalusia. In 1811 he captured Olivenza and Badajoz; but the British forces laying siege to the latter place, Soult marched to relieve it, attacked the British under Beresford at Albuera, and sustained a bloody defeat. He nevertheless bravely defended the south of Spain. But in 1812 Wellington commenced his offensive movements and captured Badajoz. In 1813 the great battle of Salamanca loosened the French hold of Spain, and Soult, compelled to abandon Andalusia, was recalled to aid the emperor in his great struggle in Germany, and he was chief of the staff of Napoleon at the battles of Lützen and Bautzen. On the news of the French defeat at Vittoria, Soult flew to Spain, and assumed the command. But the game was all against him. He knew it to be hopeless. Yet, upon taking the command of the army in July, 1813, as the "lieutenant" of the emperor, his proclamation to the troops breathed the haughtiest confidence in his cause, and in his chances—declaring, as it did, that if the French had been well commanded at Vittoria, they would have beaten the English. For two days he obstinately defended his entrenched camp, not far from Bayonne; but on Wellington manoeuvring to turn his flank, he continued his retreat, offering a desperate resistance while passing the Pyrenees. At length the British forces entered France. The Bidasoa was passed, Soult's position on the Nive carried, and the allies became an army of invasion. Still Soult fought with the energy of despair. After the battle of Orthez, finding all his efforts useless, he withdrew to Toulouse, where was fought the last and crowning action of the long Peninsular war, a battle claimed by both sides, and in which it is not to be denied that on both sides were displayed consummate military skill and the most determined and stubborn bravery. But the French had the worst of it. On the announcement of the event at Paris, Soult signed a suspension of arms, and adhered to the re-establishment of Louis XVIII., who presented him with the cross of St. Louis, and called him to the command of the thirteenth military division, and then to the ministry of war (Dec. 3, 1814). On March 8, 1815, learning the landing from Elba, he published an order of the day in which Napoleon was treated more than severely. Yet on March 11, he resigned his portfolio as minister of war, and declared for the emperor, who raised him to the dignity of peer of France, and major-general of the army. After

Waterloo, where he fought energetically, the marshal took refuge at Malsieux with General Brun de Villaret, his former aid-de-camp. Being set down on the list of the proscribed, he withdrew to Düsseldorf until 1819, when a royal ordinance allowed him to return to France. He then went to live with his family at St. Amand, his native place, and his marshal's bâton, which had been withdrawn from him, was afterwards restored. Charles X. treated Marshal Soult with favour, creating him a knight, and afterwards peer of France. After the revolution of July, 1830, the declaration of the Chamber of Deputies deprived him of that rank; but he was restored to it 4 days later by Louis Philippe, who appointed him minister of war and president of the council. In 1838, on the coronation of Queen Victoria, Soult was nominated ambassador extraordinary to represent France at the great ceremonial. He was welcomed with great popular enthusiasm, and feted by the duke of Wellington; and the two aged heroes were received with acclamation on their public appearance together. A banquet was given by the corporation of London in Guildhall; and the healths of the duke of Wellington and Marshal Soult were proposed together, and responded to by the illustrious guests. In 1847, Soult resigned his ministerial functions; and King Louis Philippe conferred upon him the dignity of marshal of France. He spent his latter days at his château in the land of his birth; and after the revolution of 1848 took no part in politics. Died, Nov. 26, 1851.

SOUTH, ROBERT, an eminent divine, was born at Hackney, in 1633, and educated at Westminster School, and Christchurch, Oxford. In 1660 he was chosen public orator of the university, and successively became chaplain to the earl of Clarendon, prebendary of Westminster, canon of Christchurch, and rector of Isip, in Oxfordshire. He preached before Charles II., but refused all offers of promotion in the church. He would not take part in promoting the revolution, and was never tired of preaching against the Dissenters. In 1693 he carried on a controversy with Sherlock, on the doctrine of the Trinity, when both disputants were charged with heresy, for attempting to explain an indefinable mystery. He was a man of great wit, and did not spare to display it even on serious occasions. His "Sermons" possess the merits of earnestness and originality, clearness, good sense, lively invention, and forcible expression. Died, 1716.

SOUTHAMPTON, THOMAS WRIOTHESLEY, Earl of lord chancellor of England, was born at London, of an ancient family distinguished as *Heralds*. He was educated at Cambridge, was called to the bar, and in 1635 obtained an office in the Common Pleas. Three years later he was named secretary of state, stood in high favour with the king, Henry VIII., and after the fall of Cromwell was virtually first minister. He was a conscientious Romanist, and was recognized as head of that party in the state. Early in 1543 the king created him a peer by the title of Baron Wriothesley of Titchfield, in Hamp-

shire, and gave him the abbey lands. He succeeded Lord Audley as chancellor in May, 1544, taking the usual oath of abjuration of the pope. A commissioner was appointed to assist him in hearing causes, and he applied himself almost entirely to state affairs. Wriothesley was not wiser than his generation in respect to persecution, and not only promoted the severe measures against the Protestants, but in the case of Anne Askew took part personally in the act of torture. The king commanded him to impeach and arrest the queen, Catherine Parr, for her supposed heterodoxy; but when he arrived to execute the order the king was of another mind, and dismissed him with rough words. Having negotiated a satisfactory treaty with Scotland, he was rewarded with the knighthood of the Garter. It was the influence of Wriothesley which chiefly led to the execution of the earl of Surrey and the attainder of the duke of Norfolk, in 1547. He was one of the executors of Henry VIII., and an opponent of the Protector Somerset. Edward VI. made him earl of Southampton, and at the instigation of Somerset, deprived him of the seals. Restored to the council in September, 1549, he finally retired from public life a few months later, and died at London, 30th July, 1550. He was buried in St Andrew's Church, Holborn.

SOUTHAMPTON, HENRY WRIOTHESLEY, Earl of, a distinguished statesman and courtier, was grandson of the preceding, and was born in 1573. He was a friend of the earl of Essex, whom he accompanied to Cadiz, and afterwards to Ireland; took part in his rebellion, was tried and found guilty and committed to the Tower in 1601. Two years later he was restored to his honours by James I. He suffered subsequently a second imprisonment, served in the war in the Netherlands in 1624, and died at Bergen-op-Zoom, the same year. He is now chiefly remembered as the friend and patron of Shakespeare, who dedicated to him his "Venus and Adonis." A portrait of Southampton, by Mirevelt, is in the National Collection.

SOUTHCOTT, JOANNA, was born in the west of England, of parents in humble life, in 1750. When about 40 years of age, she began to give herself out for a prophetess; and her numerous converts, who are said at one time to have amounted to at least 100,000, put implicit faith in her wild and blasphemous rhapsodies. She described herself as the woman spoken of in the book of Revelation; and, although in the highest degree illiterate, she scribbled a mass of unintelligible nonsense, which she dignified by the title of prophetic inspirations, while she carried on a lucrative trade in the sale of seals, which were, under certain conditions, to be the passports to eternal salvation. At length, she was attacked with a disease which gave her the outward appearance of pregnancy, and she boldly announced to the world that she was destined to be the mother of the promised Messiah. So fully persuaded, indeed, were her deluded followers of its truth, that they made the most splendid preparations for the reception of

the marvellous babe that superstition and credulity could suggest; when, about the end of 1814, her death put an end to their expectations. The body of Joanna underwent an anatomical examination after her death, when she was found to have suffered from dropsy; but the belief in her divine mission was not eradicated from the minds of her votaries, and the sect is not even yet wholly extinct.

SOUTHERN, THOMAS, an eminent dramatic poet, was born at Dublin, in 1680, became a servitor in Pembroke College, Oxford; and then settled in London. He was patronized by James II. while duke of York, and afterwards served in the royal army against the duke of Monmouth. He wrote the "Persian Prince," "Isabella, or the Fatal Marriage," and "Oroonoko," tragedies; the "Disappointment," the "Rambling Lady," and the "Wife's Excuse," comedies. His tragedy of "Isabella" is one of the most pathetic and effective dramas in the language, and is memorable as the play in which, in 1782, Mrs Siddons made her first successful appearance at Drury Lane. Southern held a commission in the army, which with his writings produced him a handsome competency; and he died, aged 68, in 1748.

SOUTHEY, CAROLINE ANNE, whose maiden name was **BOWLES**, was the only child of Captain Charles Bowles, of Buckland, near Lynton, where she was born in 1787. Her earliest production was the "Birthday." For more than twenty years, the writings of Caroline Bowles were anonymous, and although widely circulated and warmly appreciated by the public, she was a stranger by name, save to a few attached admirers and friends; and it was not until after the publication of "Ellen Fitz-Arthur," and several of the pathetic novelettes which she contributed to Blackwood's Magazine under the title of "Chapters on Churchyards," that her name became known beyond that limited circle. Among the first friends attracted to her by her genius were the poets Southey and Bowles; the former of whom reviewed a volume of her poems in a highly complimentary manner, before he had any personal knowledge of its author, and availed himself of other opportunities, in the Quarterly Review and elsewhere, of testifying his admiration of her genius. A cordial friendship subsisted for more than twenty years between Caroline Bowles and Robert Southey, and in 1839 she accepted him as her husband. At the date of the marriage, Southey had been a widower two years; his former wife having been virtually dead to him many more. On his death, Mrs Southey was left with means insufficient to provide her with the ordinary comforts of life; but she was soon relieved from anxiety, by being placed on the civil list for a pension of £200 a year. The order of Mrs Southey's works is as follows:—"Ellen Fitz-Arthur," a poem (1820); "The Widow's Tale," and other poems (1822); "Solitary Hours," prose and verse (1826); "Chapters on Churchyards," two vols. (1829); "Tales of the Factories," and "Robin Hood," a fragment, by the late Robert Southey and Caro-

line Bowles; w
1854.

SOUTH WEL, Jesuit and poet, was at Douai, entered t

line Bowies; with other poems, (1847). Died, 1854.

SOUTHEY, ROBERT, poet, biographer, and miscellaneous writer, was the son of a respectable linen-draper, and was born at Bristol, in 1774. After receiving the rudiments of education from country school-masters, he was sent to Westminster School, and thence to Balliol College, Oxford; his early display of more than ordinary talents and a corresponding steadiness of character having led his friends to choose the church as his destination. At Oxford, however, he remained but two years, he then unsettled state of his opinions as to both church and state causing him to quit the university, and wholly renounce the idea of taking orders, in the year 1794. After travelling in Spain and Portugal, and residing in Ireland as secretary to Mr Corry, he having for some time been married, he at length settled at Keswick, in Cumberland, in 1803. He was already known as author of "Joan of Arc," "Wat Tyler," "Lines on Bradshaw the Regicide," and other pieces, which indicated more poetical and poetical fire than political judgment or personal prudence, and at Keswick he commenced an almost unexampled career of industry in literary composition of every description; his overflowing mind and ready pen being equal to whatever could be demanded of them, a mere list of his separate publications would form a long article, not to speak of his numerous and elaborate contributions to the Quarterly Review. But though he wrote so much he wrote everything carefully and well. His biographies especially are admirable; that of the great Nelson is, perhaps, one of the most perfect biographies in our language; while that of Wesley is highly appreciated, both by churchmen and dissenters, for its candour and impartiality. Southey's views and opinions underwent a similar change with those of his friends Coleridge and Wordsworth, and he became a thorough-going churchman and tory, and the eloquent defender of the church and of the throne. He continued to delight and instruct the reading world by his genius and his industry, until 1840, when the intense labour of a long life at length overpowered his fine mind, and he remained in a state of mental darkness to the day of his death. He had received the appointment of poet-laureate in 1813, and in 1835 he received a pension of £300 per annum. His poetical works, collected in one volume, enjoyed great popularity; and his admirable *philosophic gossiping* romance "The Doctor," &c., which was published anonymously (also in one volume), must long continue to be the wonder and delight of the reading and the thinking world. His "Common-Place Book," a posthumous monument of his reading and research. Died, 21st March, 1843. His *Life and Correspondence*, edited by his son, appeared, in 6 vols., in 1849-50. A portrait, drawn by H. Edridge, in 1804, is in the National Collection.

SOUTHWELL, ROBERT, an English Jesuit and poet, was born in 1560; studied at Douai, entered the order of Jesuits at

Rome, and afterwards returned to England as a missionary. In 1692 he was sent to prison, where he remained three years before he was brought to trial, when, owing that he came to England in order to propagate the Catholic religion, he was condemned and executed, in 1695. He was the author of various prose works and of several poems possessing considerable merit.

SOWERBY, JAMES, an eminent naturalist and artist, was born in London in 1757. He first studied painting at the Royal Academy; and afterwards applied himself to botany; and combining his acquirements in these two fields, produced several great and valuable works. These are — the "English Botany" (in conjunction with Sir J. E. Smith), "English Fungi or Mushrooms," "Mineral Conchology of Great Britain," &c. He was F.L.S., F.G.S., and F.Z.S. Died, 1822.

SOWERBY, GEORGE BRETTINGHAM, son of the preceding, and an eminent naturalist, was born in London in 1788. His principal production is entitled "The Genera of Recent and Fossil Shells," and appeared between 1820—1824. He published also "Species Conchylorum," a catalogue of the Tankerville collection of shells, of which, with other collections, he became the possessor. He was a fellow of the Linnæan Society, and contributed many papers on natural history to periodical journals. Died, 1854.

SOZOMEN (SOZOMENUS), a Greek ecclesiastical historian, who flourished in the 5th century, in the reign of the Emperor Theodosius II. He was a native of Palestine, was sent by his Christian parents to be educated in a monastery, and afterwards settled at Constantinople as an advocate. He wrote a history of the church in nine books, embracing a period of about a century, from 323 to 423. It was dedicated to Theodosius. Sozomen was a contemporary of the church historian Socrates. An English translation of Sozomen, by Walford, is included in Bohn's Ecclesiastical Library.

SPAENDONCK, GERARD VAN, an eminent flower and miniature painter, was born in 1746, at Tilburg, in Holland, settled at Paris, where he became miniature painter to the king, and professor of iconography at the Jardin des Plantes. Died, 1822.

SPAGNOLETTI, (RIBERA.)

SPALDING, JOHANN JOACHIM, a celebrated Swedish divine, born in 1714. He studied at the university of Rostock, and afterwards at Greifswald; and after various engagements as pastor settled, in 1764, at Berlin, as first pastor of St Nicholas church, which post he filled till 1788. The publication of the *Religious-Edict* compelled him to retire. His Sermons were esteemed very highly for their depth both of thought and feeling, and their pure and elegant style, and several collections of them have been published. His work on the "Destiny of Man" was reprinted many times; and his other works, "On the Value of Feeling in Christianity," "On the Utility of Preaching," and "Religion the chief Affair of Man," passed through several editions. Died, at

Berlin, 1804. His son, Georg Ludwig, is noticed below.

SPALDING, GEORG LUDWIG, philologist, was second son of the preceding, and was born at Barth in 1762. He studied first at a Berlin gymnasium, then directed by Hüsching, and afterwards at Göttingen and Halle. After travelling through the principal countries of Europe, he became tutor to the children of Prince Ferdinand, and professor at a gymnasium of Berlin. He was M. A. Halle, and a member of the Berlin Academy of Sciences. In consequence of the "Religious-Edict" he abandoned theology, and devoted the rest of his life to philology. He is chiefly remembered for his excellent edition of the works of Quintilian, in 5 vols., of which three only were completed by him. Died, 1811.

SPALLANZANI, LAZARO, a celebrated Italian naturalist, was born at Scandiano, near Reggio, in 1729. After studying at the Jesuits' College of Reggio, and the university of Bologna, under the guidance of the latter of the celebrated Laura Bassi, he was chosen, in 1754, professor of logic and Greek literature at the university of Reggio, whence after six years he removed to Modena to fill the same chair there. He had already acquired a great reputation as a scholar, but from that time he devoted himself to his favourite studies in natural history. About 1770 he was called to Pavia as professor of natural history, and was soon after made director of the Museum. He engaged in numerous ingenious scientific experiments, especially for the purpose of illustrating the circulation of the blood, and made many discoveries in physiology and anatomy. He also investigated the subjects of generation, respiration, and digestion, and determined the animal nature of the infusoria. He undertook extensive travels, especially exploring the coasts of the Mediterranean, and in 1785 visited Constantinople. On his return to Pavia he disproved a shameful accusation made against him in his absence, and had a triumphal entry into the city. On a subsequent journey in Italy he made collections for the Museum of Pavia, of which he has been called the second founder. Spallanzani published numerous works embodying the results of his observations and researches, and among them are—"On the Action of the Heart," "On the Phenomena of the Circulation," "Memoirs on Respiration," "Dissertations on Animal and Vegetable Physics," and "On the Reproduction of Animals," and "Travels." He was a member of the principal Academies of Europe, and the correspondent of his most eminent scientific contemporaries. He was offered the chair of Natural History at the Paris *Jardin des Plantes*; and Haller expressed his sense of his great services to science by dedicating to him a volume of his great work on Physiology. Died, 12th February, 1789.

SPANHEIM, EZEKIEL, a learned numismatist and statesman, was the eldest son of Frederick Spanheim, professor of divinity at Leyden, and born in 1629, at Geneva, where he was appointed professor of eloquence at the age of 20. He soon after became tutor

to the son of Charles Louis, elector-palatine, who employed him in several important missions. He assisted at the conferences of Oppenheim and Spire, and at the Congress of Breda. He came to England as minister of the elector-palatine, and was also appointed ambassador of the elector of Brandenburg. In the latter capacity he was sent to Paris in 1680. After the peace of Ryswick he was sent again to France, and from thence to England, where he died in 1710. His principal works are, "De Præstantia et Usu Numismatum antiquorum," 2 vols., "Orbis Romanus," and Letters and Disquisitions on Medals.

SPARRMANN, ANDREW, a Swedish naturalist and traveller, was born about 1747, and studied at Upsal, where, by his attention to natural history, he attracted the notice of Linnæus. He visited China and the Cape of Good Hope, penetrated a considerable distance into the interior of Southern Africa, and accompanied Captain Cook on one of his voyages. He wrote narratives of his travels, and died at Stockholm, in 1820.

SPARTACUS, leader of the revolt of the gladiators in Italy, and one of the most extraordinary men of his time, was a Thracian by birth. He was first a shepherd, and after the conquest of Macedonia by the Romans he was compelled to serve in the Roman armies. He deserted, carried on a harassing warfare against the conquerors, and was captured and sold as a slave. On account of his great size and strength he was trained for a gladiator in the company of Lentulus at Capua. Hero, in B. C. 73, he persuaded about seventy of his fellow-slaves to join him in an attempt to escape. They succeeded, and took up a position on Vesuvius, having possessed themselves of arms on their way. Blockaded there by the prætor, they defeated him, and were rapidly augmented in numbers by slaves and wretched labourers; among whom Spartacus established such discipline as was possible. His band rose in number from 70 to 10,000, and even later to 70,000, and their ravages and repeated victories caused the greatest alarm. Army after army was sent against them only to be defeated, and for two years Spartacus defied the power of Rome. At last Crassus took the field with six fresh legions, and after repeated attacks defeated him on the river Silarus, on the borders of Campania, B. C. 72. Spartacus fought heroically to the last, and was killed; 6000 of the insurgents escaped to the north of Italy, and were slain by Pompey returning from Spain, and 6000 more were captured and sent along the road from Rome to Capua.

SPECKTER, ERWIN, German painter, was born at Hamburg in 1806. He received his first instruction in art from a painter at Altona, and at the age of 16 became acquainted with Rumohr, whose counsel was of great service to him, and who remained his friend. Intense admiration of Oeybeck's painting of "Christ's entry into Jerusalem" induced him to become a pupil of Cornelius, at Munich; and he was commissioned to execute some frescoes in the Picture Gallery, but did not live to do it. Died

to the Berlin still more his change in his early Overhe nearer to natu return from It with frescoes fore they wer interesting "Italy," were

SPEED, JOSEPH, English historian, and is the author of Great Britain. Died at most of his life. **SPEKE, JOSEPH**, English African traveller of the Nile, was at Whiteclack 1827. He cut page of 17, sent division through Jaub, and during made exploring in Tibet, geology, and collecting accompanied the expedition of Eastern the head of the Mountains Victoria Nyang whether the lake, he set out accompanied by southern end of struggles again succeeded in the shores of the Nile at Uron to the lake. The recovery was regraph, in Feb great rejoicing problem of ag had to abate, it tain Speke had contribution to question of the Speke was acciember 15, 1864covery of the s in 1863, and a p to the discover in 1864.

SPELMAN, S, English historian Congham, in No quently employ and he received for his services many valuable "Glossarium A iare Anglicanum—His son, Sir his father's taste and was the aut Great." He w and died at Oxfo **SPENCE, JOSEPH**, was born in 1697 at Oxford, where

to the Berlin and Dresden Galleries, and still more his visit to Italy, led to a great change in his style, freeing him from his early Overbeck worship, and bringing him nearer to nature and reality. After his return from Italy he was employed to adorn with frescoes a Hamburg villa, but died before they were finished, November, 1835. His interesting "Letters of a German Artist from Italy," were published in 1846.

SPEED, JOHN, an English chronologist, historian, and antiquary, born in 1542. He is the author of "The Theatre of the Empire of Great Britain," and "The History of Great Britain, from Julius Cæsar to James I." Died at London, where he had spent most of his life, 1629.

SPEKE, JOHN HANNING, a distinguished African traveller, and explorer of the sources of the Nile, was born of an ancient family at Whitelackington, in Somersetshire, in 1827. He entered the Indian army at the age of 17, served in Sir Colin Campbell's division through the campaign in the Punjab, and during his annual leave of absence made exploring expeditions in the Himalaya and in Tibet, especially studying the botany, geology, and natural history of the region, and collecting specimens. He subsequently accompanied Captain Burton in his exploration of Eastern Africa, and in 1858 reached the head of the great lake Nyanza, under the Mountains of the Moon, and since called Victoria Nyanza. Desirous of ascertaining whether the Nile has its sources in that lake, he set out from Zanzibar in 1860, accompanied by Captain Grant, to find the southern end of the lake; and after heroic struggles against extraordinary difficulties, succeeded in his object, spent some time on the shores of the Nyanza, and striking the Nile at Urondogoni, retraced its course to the lake. The intelligence of this discovery was received in England, by telegraph, in February, 1863, and occasioned great rejoicing as the solution of the knotty problem of ages. If the first enthusiasts had to abate, it is at least certain that Captain Speke has made the most important contribution towards the settlement of the question of the origin of the Nile. Captain Speke was accidentally shot near Bath, September 15, 1864. His "Journal of the Discovery of the Source of the Nile" appeared in 1863, and a pamphlet entitled "What led to the discovery of the Source of the Nile" in 1864.

SPELMAN, Sir HENRY, an eminent English historian and antiquary, was born at Congham, in Norfolk, in 1561. James I. frequently employed him on public business, and he received the honour of knighthood for his services. He died in 1641, leaving many valuable works, among which his "Glossarium Archæologicum" and "Villare Anglicanum" are still highly esteemed. His son, Sir JOHN SPELMAN, inherited his father's taste for archaeological inquiries, and was the author of a "Life of Alfred the Great." He was knighted by Charles I., and died at Oxford, in 1633.

SPENCE, JOSEPH, a divine and critic, was born in 1698, and received his education at Oxford, where he obtained a fellowship,

and was elected professor of poetry. He afterwards held the living of Great Horwood, and a prebend in Durham cathedral. He wrote an "Essay on Pope's *Odyssey*," but his principal work is entitled "Polymetis; or, an Inquiry into the Agreement between the Works of the Roman Poets and the Remains of Ancient Artists." The anecdotes collected by him, concerning eminent literary characters, have been published. His death, which happened in 1768, was occasioned by his having accidentally fallen into a pond.

SPENCE, WILLIAM, F.R.S., was born about the year 1780, and showed at an early age his disposition for that study to which his life was devoted. While engaged in business at Hull, he embraced a casual opportunity of sending a present of a few insects to the Rev. W. Kirby, at Barham; and thus was laid the foundation of a life-long friendship, of which the memory will be preserved by their joint work, entitled "Introduction to Entomology." This work, written in the form of letters, became immediately popular, and ran rapidly through several editions. Almost exhausting the subject of which it treats, it is a most valuable contribution to natural science. Died, January, 1860.

SPENCER, Dr JOHN, an ingenious and learned English divine and critic, was born in 1630, at Boughton, in Kent; became master of Corpus Christi College, archdeacon of Sudbury, and dean of Ely; and died in 1695. His principal and most erudite work is, "De Legibus Hebræorum Ritualibus et eorum Rationibus." His attempt in this work to find the origin of some Jewish ceremonies in those of Pagan nations gave great offence, and brought on him numerous attacks.

SPENCER, JOHN CHARLES, Earl (better known as Viscount ALTHORP), was born in 1782, and was educated at Harrow and Trinity College, Cambridge. He first entered the House of Commons as member for Northampton; but from the year 1806 to 1834, when he succeeded to the peerage, he represented the county of Northampton, generally supporting all the important measures of the Whig party. Shortly after the accession of William IV. he was made chancellor of the exchequer; and, though he occasionally made erroneous calculations, yet in bringing forward the financial details he showed singular industry and candour. He was manly, liberal, straightforward, and disinterested; his honesty of purpose was never questioned; but he possessed not the physical powers requisite for a good orator. In another and a very different sphere of action, however, he was unrivalled. The improvement of agriculture was at all times his great aim; and when he retired from office, he applied himself with zeal and energy to the practice and encouragement of that great branch of our national industry. To his exertions the establishment of the Royal Society of Agriculture was mainly owing; and he was present at nearly all the great agricultural meetings throughout the country; promoting the general good by his example, either as the president, or as an exhibitor of prize cattle, the patron of mechanical and scientific improvements, or as the generous

rewarder of the labourer's skill and industry. Died, Oct. 1, 1845.

SPENCER, the Hon. WILLIAM ROBERT, the best writer of *vers de société* in his time, was the younger son of Lord Charles Spencer, and was born in 1770. He was educated at Harrow and Oxford; and in 1796 published a translation of Bürger's "Lenore," beautifully illustrated by Lady Diana Beauclerk. In proof of his astonishing power of memory, it is gravely asserted that he undertook, for a wager, to get the whole contents of a newspaper by rote, which he did, and repeated it without the omission of a single word. He held the situation of a commissioner of stamps. Died, 1834.

SPENCER, HENRY, ROBERT, and CHARLES. [SUNDERLAND, Earls of.]

SPENCER, PHILIP JACOB, an eminent German Protestant theologian, usually considered the founder of the sect of Pietists, was born in Alsace in 1635. He studied at the university of Strasburg, visiting afterwards several other universities, and in 1662 became public preacher at Strasburg. Two years later he obtained his degree of D.D., and removed to Frankfurt on the Main, where he had the appointment of chief preacher. He distinguished himself by his religious earnestness, and especially insisted on the need of a general reform. He would have sermons less dogmatic and more practical. The special meetings for religious purposes which gave rise subsequently to the sect of Pietists, were first held by him in 1670, and were called "Collegia Pietatis." Spenser removed to Dresden in 1688, as court-preacher, and four years later to Berlin as inspector and first pastor of St Nicholas's Church. Soon afterwards his views were introduced at Halle, which became the head-quarters of Pietism. Spenser was author of numerous theological works, and also of several genealogico-historical and heraldic works. He first introduced the study of heraldry into Germany. Died at Berlin, 1705.

SPENSER, EDMUND, one of the most illustrious English poets, was born in London, about 1553; was educated at Pembroke Hall, Cambridge, and, on leaving the university, took up his residence with some relations in the north of England, probably as a tutor. In 1579 he published his first poem, "The Shepherd's Calendar," dedicating it to his friend, Sir Philip Sidney. In 1580 he accompanied Lord Grey de Wilton, viceroy of Ireland, as his secretary, and procured a grant of 3028 acres in the county of Cork, out of the forfeited lands of the earl of Desmond; on which, however, by the terms of the gift, he was obliged to become resident. He accordingly fixed his residence at Kiccolman, in the county of Cork, where he was visited by Sir Walter Raleigh, who became his patron after the death of Sir Philip Sidney, and whom he celebrates under the title of the "Shepherd of the Ocean." Sir Walter persuaded him to write the "Faerie Queen," the first part of which was printed in 1590, and presented to Queen Elizabeth, who granted the poet a pension of £50 per annum. In 1591 he published his pastoral of "Colin Clout's come home

again;" and, the same year, the second part of his "Faerie Queen;" but the poem, according to the original plan, was never completed. About this time Spenser presented to the queen his "View of the State of Ireland," being then clerk of the council of the province of Munster. This interesting and ministerly work was not printed till 1633. In 1597 he returned to Ireland; but when the rebellion of Tyrone broke out, he was obliged to fly with such precipitancy, as to leave behind his infant child, whom the merciless cruelty of the insurgents burnt with the house. The unfortunate poet came to England with a heart broken by these misfortunes, and died at Westminster, January 16, 1598-9. His remains were interred at the expense of the earl of Essex, in Westminster Abbey, where the countess of Dorset raised a monument to his memory. Spenser is one of the most purely poetic of all poets. Yet, as it is with Milton, so is it with him; his name is spoken with a proud admiration, and his "Faerie Queen" is not read. Some, like Lume, find it more a task than a pleasure to read this poem. Others, like Pope, find it charming in old age as well as in youth. Milton, in his "Areopagitica," speaks of "oursage and serious poet, Spenser, whom I dare be known to think a better teacher than Scotus or Aquinas." And an eminent modern critic asserts that "the shaping spirit of imagination was never possessed in the like degree by any other writer; nor has any other evinced a deeper feeling of all forms of the beautiful; nor have words ever been made by any other, to embody thought with more wonderful art." His verse is exquisitely melodious, and the moral tone of his poetry is of the noblest and purest. The language, though to some extent antiquated, is not so much so as to alarm any but idle readers. The slight difficulty of a first acquaintance soon vanishes, and the trouble is repaid with infinite delight.

SPIGELIUS, or VANDEN SPIEGHEL, ADRIAN, physician and anatomist, was born at Brussels, in 1578. He studied at Louvain and Padua, in which last university he became professor of anatomy and surgery; which office he discharged with such reputation, that the Venetian government made him a knight of St Mark, and gave him a chain of gold. Died, 1625.

SPILLER, JOHN, a young English sculptor, of great promise, was born in London, in 1763, and studied under Iacon. He distinguished himself by his talents at the Royal Academy, and was chosen to execute a statue of Charles II. for the centre of the old Royal Exchange; but the much admired production had scarcely being erected before the artist expired, a victim to consumption, at the age of 30, in 1794. "The energy of his labour, with the strong excitement of his feelings, had already made fatal inroads on his constitution. But he was willing, he said, to die at the foot of his statue. The statue was raised, and the young sculptor, with the shining eyes and hectic flush of consumption, beheld it there, returned home, and shortly was no more."

of Jacopo di Casentino. He studied also the works of the school of Giotto, and soon surpassed his first master. He painted best in fresco, and his finest works are at San Miniato, near Florence, in the Campo Santo of Pisa, and in the Public Palace of Sienna. He worked with ease and rapidity, was a good colourist, and excelled in the draperies. One of his most admirable compositions is the Death of St Benedict, one of the series at San Miniato. In the church of Santa Maria degli Angeli at Arezzo he painted the Fall of the Rebel Angels, and his own hideous devil is said to have frightened him in a vision, and hastened his death. It is known, however, that he lived some years after painting that picture. The National Gallery has one example of this master. Aretno was living in 1406, and died probably about that time, aged 92.

SPINOZA, AMBROSE, Marquis, a celebrated Spanish general, was born about 1569. At the age of 30 he entered the service of Philip III., taking command of a body of troops which he had raised, and undertook to pay. He first served in Flanders, and in 1604 he took Ostend, after a siege of three years, for which he was made commander-in-chief of all the Spanish troops in the Low Countries, where he was opposed by Maurice of Nassau. During a cessation of operations, Spinola went to Paris, and in an interview with Henry IV., the monarch asked him what were his plans for the ensuing campaign. The general, without hesitation, entered into a detail of his projects, and Henry communicated to Maurice the direct contrary, as he could not believe that Spinola had revealed to him his real intentions. Finding, however, that the Spaniard was as good as his word, he exclaimed, "Others deceive by telling falsehoods, but this man by speaking the truth." In the war occasioned by the disputed succession to the duchy of Cleves and Juliers, in 1621, Spinola took Juliers and Breda. He was subsequently employed in Italy, where he made himself master of the city of Casal; but not being able to subdue the citadel, owing to imprudent orders sent him from Madrid, he exclaimed, "They have robbed me of my honour," and fell a prey to chagrin, in 1630.

SPINOZA, or SPINOSA, BENEDICT, a celebrated philosopher, was born at Amsterdam, in 1632. He was the son of a Portuguese Jew, and was first named BARUCH, but adopted that of Benedict on renouncing the faith of his fathers. He was early remarkable for an ardent love of truth, and a keen and logical intellect; and his first serious studies were the Bible and the Talmud. He made no secret of the doubts which grew up in his mind, and was exposed to much persecution on account of them. Taking refuge in the house of the physician Vanden Ende, he studied Latin and Greek, mathematics and metaphysics, and was especially attracted by the philosophy of Descartes. A large bribe was offered him if he would continue to conform outwardly to Judaism; but neither his will nor his poverty consented to such a degradation. An attempt was made to assassinate him, and he had a very narrow escape. He was at last excom-

municated, and being driven from Amsterdam, lived for a time near Leyden, and afterwards at the Hague. He evaded himself wholly to philosophy, earning such a livelihood as contented him by the trade of polishing glasses for optical instruments. His character was most estimable, and endeared him to his personal friends. His system of philosophy has been made odious by the vulgar accusation of atheism; which is the very reverse of the truth. To his thought God is the only being, the only substance, infinite, eternal; before whom all things else have but a phenomenal existence. And his aim was to build up, on the knowledge of God as foundation, a system of morals by a rigorously mathematical method. With more reason Spinoza has been called the father of modern Pantheism. The great defect of his system is the virtual suppression of individuality, and the denial of free-will; all finite things, not excepting human actions, being parts of a necessary chain of sequences. Spinoza has of late been more fairly judged, and both his merits and errors impartially discussed. His influence on the mind of Goethe was overpowering. Cousin says—"The author whom this pretended atheist most resembles, is the unknown author of the 'Imitation of Jesus Christ.' And Schleiermacher thus testifies to the depth of the religious sentiment in Spinoza:—"He was filled with religion and religious feeling; and therefore is it that he stands alone, unapproachable, the master in his art, but elevated above the profane world, without adherents, and without even citizenship." The works of Spinoza are—"Renati Descartes Principiorum pars Prima et Secunda more Geometrico Demonstrata;" "Cogitata Metaphysica;" "Tractatus Theologico-Politicus;" "Ethica;" perhaps the most important of his treatises; "Tractatus Politicus;" "De Intellectus Emendatione;" and "Epistolæ." The last four form his "Opera Posthuma." The works written in defence and refutation of the system of Spinoza are very numerous. Died at the Hague, 1677.

SPIX, JOHANN BAPTIST VON, German zoologist, was born in Bavaria, in 1781. After studying theology for a short time, he turned to medicine, graduating M.D., and became keeper of the museum of Natural History at Munich. He accompanied Von Martius on a scientific expedition to Brazil, in 1817, and was absent three years. Spix was author of a "History and Critique of all Systems of Zoology;" a work entitled "Cephalogenesis;" and several works on the natural history of Brazil. He was a member of the Academy of Sciences of Munich. Died, 1826.

SPOHN, FRIEDRICH AUGUST WILHELM, an eminent German writer on philology. He was born at Dortmund, in 1792; became professor of philosophy and ancient literature in Leipzig, and died in 1824, from the effects of excessive study.

SPOHR, LUDWIG, the celebrated musical composer, was born at Brunswick, in 1784. He early distinguished himself as a violinist, entered the service of the duke of Brunswick, became in 1805 chapel-master at Gotha, in 1813 director of the Theatre at Vienna,

where he produced some of his best works, and after other engagements he accepted in 1833 the office of chapel-master at Cassel, which he held till age compelled him to resign. He was the greatest violinist of his time, both as performer and composer. His compositions produced intense excitement and enthusiastic admiration; which time has quietly abated. The want of good melodies is a fatal defect in them. The principal operas of Spohr are, "Faust," "Jessonda," and "Zemira and Azor." His oratorios are, "The Last Judgment," "The Crucifixion," and the "Fall of Babylon." The last and perhaps the best was composed in 1840 for the Norwich Musical Festival of that year. Among his other compositions is a grand symphony, entitled "The Consecration of Sound" (*Die Weihe der Töne*). Spohr visited England in 1819, and on several subsequent occasions. Died, 1859. His "Autobiography" was soon after published, and an English translation of it appeared in 1865.

SPONTINI, GASPARO, a distinguished musical composer, was born at Majolatti, near Jesi, in the Roman States, 1778. He was educated at the Conservatorio de la Pietà of Naples, and began his career when 17 years of age, as the composer of an opera, "I Puntigli delle Donne." This was followed by some 16 operas, produced within 6 years, for the theatres of Italy and Sicily, but not a note of which has survived. In 1803 Spontini went to Paris; in 1807 he was appointed music-director to the Empress Josephine; and in 1808 he produced his most famous work, "La Vestale," with brilliant and decisive success. His "Fernando Cortez" appeared in 1809; and the next year witnessed his appointment to the directorship of the Italian Opera in Paris, which he held for ten years. In 1820 the magnificent appointments offered by the court of Prussia tempted him to leave Paris for Berlin, in which capital his last 3 grand operas, "Nourmahal" (founded on Laila Rookh), "Alcidor," and "Agnes von Hohenstauffen," were produced with great splendour. Spontini continued to reside as first chapel-master in Berlin till the death of the king in 1840. The latter period of his sojourn at Berlin was embittered by professional disputes; and in 1842 he repaired to Paris, where, in 1839, he had been elected one of the five members of the Académie des Beaux Arts. Died, at the place of his birth, 1851.

SPOTSWOOD, or SPOTISWOOD, JOHN, archbishop of St Andrew's, in Scotland, was born in 1665, educated at Glasgow, and in 1691 went as chaplain to the duke of Lennox on his embassy to France. On the accession of James VI. to the throne of England, he accompanied him to England; and the same year was raised to the archbishopric of Glasgow, and made one of the privy-council in Scotland. In 1615 he was translated to St Andrew's. He crowned Charles I. at Holyrood House, in 1633; and, two years afterwards, was made chancellor of Scotland. The prosecution of Lord Balmerino, in which Spotswood, who was his personal enemy, took a leading part, caused great agitation in Scotland. On the failure of Laud's attempt to introduce the liturgy Spotswood

was deposed, and retired to London, where he died in 1639, and was buried in Westminster Abbey. He wrote a "History of the Church of Scotland," of which the greater part is a narrative of the events of his own time.

SPRAGGE, SIR EDWARD, a brave English admiral, was a captain in the first engagement with the Dutch in 1665, when, for his gallant conduct, he was knighted by the king on board the Royal Charles. He attracted the particular notice of the duke of Albemarle in the four days' battle in 1666; and the year following he burned a number of Dutch fire-ships when they came up the Thames, which threw their whole fleet into confusion. In 1671 he destroyed in the Mediterranean, seven Algerine men of war. He was sunk in his boat in an engagement with Van Tromp in 1673, as he was going from his sinking ship to another.

SPRANGER, BARTHOLOMEW, an eminent painter of Antwerp, was born in 1616, and died about 1625.

SPRAT, THOMAS, bishop of Rochester, poet, and historian, was born in Devonshire, in 1636. He graduated M.A. and D.D. at Oxford, became chaplain to Buckingham, and afterwards to Charles I., was made prebendary of Westminster in 1668, dean of Westminster in 1683, and bishop of Rochester in the following year. He was one of the first members of the Royal Society. Dr Sprat was author of a "Life of Cowley," a "History of the Royal Society," an account of the Rye-house Plot, and a few poems of little merit. He was esteemed an able and eloquent preacher. Died at Bromley, 1713.

SPRENGEL, CURT, a learned German physician and botanist, was born in Pomerania, in 1766. He was first the pupil of his father, a clergyman of great learning, and afterwards studied at Halle, where he graduated M.D. in 1787. He had made great attainments in science as well as in classical literature and oriental languages. In 1789 he was named extraordinary, and six years later ordinary professor of medicine at Halle, and this post, as well as the chair of botany, soon given to him, he filled till his death. He published a great number of works, esteemed for their learning as well as for original observations in science. Among them are to be noted—his "History of Medicine," "Institutiones Medicæ," "Antiquitates Botanice," "Historia rei Herbariæ," "Flora Halensis," a German translation of Theophrastus, &c. Sprengel was an honorary member of many learned societies, and his character was as estimable as his attainments were high. Died at Halle, 1820.

SPRING-RICE, THOMAS. [MONTEAGLE, Lord.]

SPURZHEIM, GASPAR, the phrenologist, was born near Treves, in 1776, and received his medical education at Vienna, where he became acquainted with Dr Gall, the founder of phrenology. To this science Spurzheim was attracted; and he joined Gall in his inquiries into the anatomy of the brain. They quitted Vienna in 1805, to travel; visited Paris, and lectured in England, Scotland, and Ireland, on their novel system.

Spurzheim finally where he died in 1840. SQUARCIAPINTER, but more and as the found was born at Parma much in Italy and of interest, and works of art, the first art-collector paint much, but he established a school a powerful painter. His numerous pupils were among the other Marco Zoppo. This distinguished for the first time which it first clone died, 1474.

STACKHOUSE, church of England curate of Flachford of Benham, in Bedfordshire, the view of the Continent, the "Misericordia," a "Body of Practical Preaching," the most important work reprinted, is his 2 vols. folio. There was another who published "General View of the History, and Geography of the Ancient and Modern States of the Empire of Austria," STAEEL-HOLSTEDT, BARONESS DE STAEEL, was the celebrated minister of the XVI., and was born in 1766; ten years later, temporary, Madame de Staël, intellectual faculty developed by systematic society of the sciences, her father's passionate to a high way, and she was studied and from Paris at Saint-Ouen. Her illustrious side of her father frequent became the object of highest admiration. She was induced to marry Holstein, Swedish prince's man much older already begun to try and in 1788 she attracted publication of her "Et le Caractère de J. J. Rousseau," among the spectators 4th May, 1789, the disputes to the Statutes of Notre-Dame, and so many other noble promise of the revolution with her husband at stormy years, and a safety of many nobles plan of escape for which was not adopted; an eloquent plea for the

Spurzhelm finally went to the United States, where he died in 1832.

SQUARLIONE, FRANCESCO, Italian painter, but more celebrated as a teacher, and as the founder of the school of Padua, was born at Padua, in 1394. He travelled much in Italy and Greece, sketching objects of interest, and also collecting remarkable works of art, thus laying the foundation of the first art-collection in Italy. He did not paint much, but through the school which he established and directed at Padua exercised a powerful influence on the progress of painting. The greatest of his very numerous pupils was Andrea Mantegna; and among the others were Jacopo Bellini and Marco Zoppo. The school of Squarione is distinguished for the sculpturesque character which it first gave to painting. Squarione died, 1474.

STACKHOUSE, THOMAS, a divine of the church of England, who was many years curate of Finchley, in Middlesex, and vicar of Benham, in Berkshire. He wrote a "Review of the Controversy concerning Miracles," the "Miseries of the inferior Clergy," a "Body of Practical Divinity," and a "Defence of the Christian Religion;" but his most important work, which has often been reprinted, is his "History of the Bible," 2 vols. folio. Born, 1680; died, 1762.

There was another **THOMAS STACKHOUSE**, who published "A Greek Grammar," a "General View of Ancient History, Chronology, and Geography;" and an "Atlas of Ancient and Modern Geography."

STAEL-HOLSTEIN, ANNE LOUISE GERMAINE, Baroness de, usually called **MADAME DE STAEL**, was the only daughter of Necker, the celebrated minister of finance to Louis XVI., and was born at Paris, April 22nd, 1766; ten years later than her great contemporary, Madame Roland. Her brilliant intellectual faculties were stimulated and developed by systematic studies, and the society of the scholars and wits who frequented her father's house. Sensitive and passionate to a high degree, her health gave way, and she was withdrawn from her studies and from Paris to a country retreat at Saint-Ouen. Here the poetic and affectionate side of her nature had free growth; her father frequently retired thither, and became the object of her tenderest love and highest admiration. At the age of 20 she was induced to marry the Baron de Staël-Holstein, Swedish ambassador at Paris, a man much older than herself. She had already begun to try her hand as authoress, and in 1788 she attracted attention by the publication of her "Lettres sur les Ouvrages et le Caractère de J. J. Rousseau." She was among the spectators on the memorable 4th May, 1789, of the procession of the deputies to the States-general and the Court of Notre-Dame, and her heart beat high, as so many other noble hearts did, at the first promise of the revolution. She remained with her husband at Paris through the first stormy years, and exerted herself for the safety of many noble victims; projected a plan of escape for the royal family, which was not adopted; and in 1793 published an eloquent plea for the queen. She quitted

Paris during the Reign of Terror, and after her return in 1795 her saloon was the resort of a large circle of eminent men. In the following year she introduced Talleyrand to the director Barras, and procured his appointment as minister of foreign affairs. The ambition of Napoleon excited her suspicion, and she became the decided opponent of his measures. At last, in 1801, she received an order to quit Paris in twenty-four hours, and not come within 40 leagues of it; a sharp blow, which her own ambition and vanity made her feel very keenly. She retired into Switzerland, and then visited Italy. In 1802, she was left a widow, and soon after went to Germany; lived at Weimar, enjoying the society of Goethe, Schiller, and Wieland; and afterwards at Berlin. On the death of her father she returned to Switzerland, again visited Italy, and was living at Rouen by tacit permission of Fouché, when, in 1807, after the publication of her "Corinne," she was ordered to leave France. She then retired to her seat at Coppet, on the lake of Geneva, and occupied herself with her work on Germany; visiting Vienna and Berlin the while, and settling near Blois to see it through the press. On its appearance, in 1810, duly authorized by the censors, 10,000 copies were seized by order of the minister of police, Savary, and "hacked," says Jean Paul, "into beautiful pulp," and the authoress was again ordered to quit France. Even at Coppet she was watched and forbidden to go more than two leagues from her home. With great difficulty she escaped, in 1812, and by a long circuit reached Moscow and St. Petersburg. She afterwards visited Stockholm and London, and only returned to France in 1815. Louis XVIII. received her with favour, and ordered a sum of two million francs to be restored to her, which had been deposited by her father in the treasury. The principal works of this gifted woman are—"Corinne," a novel portraying very poetically Italy and the Italians, full of passion and beauty; "De l'Allemagne," a work which made the discovery, for France and for England too, of the new rich world of German literature; "De l'Influence des Passions;" "Dix Années d'Exil;" "Considérations sur la Révolution Française," her last work; and "Delphine." Her complete works were published by her son, the Baron de Staël, in 17 vols., in 1821. Died at Coppet, July 14, 1817. After her death it was found that she had been privately married a second time, to M. de Rocca, a French officer, in 1811.

STAFFORD, WILLIAM HOWARD, Viscount, the last victim of the "Popish Plot," was born in 1612. He was son of Thomas, earl of Arundel, and was first known as Sir William Howard. On the death of Henry Howard, Baron Stafford, in 1637, he claimed the peerage, and after the compulsory resignation, two years later, of the real heir, one Roger Stafford, Sir William was created baron, and soon after viscount. He was a Roman Catholic, and as such was excluded with other Romish peers from the House, by act of parliament, in 1678. In October of that year, on the accusation of Titus Oates,

Flanders, and was named also ambassador to the states-general. With great difficulty he roused the Dutch to fight on behalf of the queen of Hungary against the French: and soon after, June, 1743, he won the fruitless victory of Dettingen over Marshal Noailles, George II. being present on the field. In 1745 he traced the plan of operations against the young Pretender, and died in 1747.

STANDISH, FRANK HALL, author of the "Life of Voltaire," &c. and well known as a connoisseur, was the son of Anthony Hall, Esq., of Flass, in the county of Durham; but having succeeded to the estates of Sir Frank Standish, bart., as cousin and heir at law, assumed his name by royal licence. He gratified his natural inclination by foreign travels for acquiring information on classic antiquities and literature, and being possessed of an exquisite judgment as a connoisseur, he made an admirable collection of pictures, books, manuscripts, &c.; the whole of which he bequeathed to Louis Philippe, king of the French, "in token (as he says) of his esteem for a generous and polite nation, one that is always ready to welcome the traveller and relieve the stranger, and one that he has ever gone to with pleasure and quitted with regret." The works published by Mr Standish are, "The Life of Voltaire," which appeared in 1821; "The Shores of the Mediterranean," 2 vols.; "Notices on the Northern Capitals of Europe;" "Seville and its vicinity;" and a volume of "Poems." Died, aged 42, December, 1840.

STANHOPE, JAMES, Earl, a celebrated English statesman and soldier, was born in Herefordshire, in 1673. He entered early into the army, and distinguished himself by so much bravery at the siege of Namur, in 1695, that King William gave him a company and the rank of colonel. He entered parliament in 1702. In 1705, he served as a brigadier-general under the earl of Peterborough, at the siege of Barcelona. In 1708 he took Port Mahon, and thus reduced Minorca. He afterwards assisted to the victories of Allobrogi, and being intrusted with the defence of Brihuega, he was obliged to surrender after a gallant resistance, to the French.

From the time of his return to England, he took an active part in politics, and in 1714 was made secretary of state. He attended the king to Hanover two years inter, and in 1717 became prime minister. This office he only filled about three months. He was soon after raised to the peerage, as Viscount Stanhope of Masson, became again secretary of state, was created an earl, and was employed in important negotiations in France and Spain, the result of which was the famous "Quadruple Alliance." Died, 1721. His portrait, by Kneller, is in the National Collection.

STANHOPE, CHARLES, Earl, grandson of the above, a politician and man of science, born in 1753; was educated at Eton and Geneva; and came into parliament for High Wycombe, which he represented until 1786, when he succeeded his father in the peerage. He distinguished himself at an early period of the French revolution by an

open avowal of republican sentiments, and went so far as to lay aside the external ornaments of the peerage. As a man of science he ranked high, and was the author of many inventions, particularly of a method of securing buildings from fire, an arithmetical machine, a new printing press, a monochoord for tuning musical instruments, and a vessel to sail against wind and tide. He was twice married, first to Lady Ester Plitt, daughter of the great earl of Chatham, by whom he had three daughters; and secondly to Miss Gronville, by whom he had three sons. Died, 1816.

STANHOPE, Lady MESTER, a very highly accomplished, but no less eccentric, English lady, was daughter of the preceding by his first wife, and niece of the celebrated William Pitt. Soon after the death of that great statesman, with whom she lived, and with whose pursuits she so much sympathized as to act upon some occasions as his private secretary, she went to Syria, assumed the dress of a male native of that country, and devoted herself to astrology, in which she was a most implicit believer. She had a large pension from the English government, and for many years was possessed of considerable influence over the Turkish pacha, which, however, when habitual carelessness in money matters had deprived her of the means of bribing them, she so entirely lost as to be in actual danger of her life. Of her way of life as well as her way of thinking, some notion will easily be formed from her reply to an English traveller, who humanely advised her to quit her perilous and desolate abode, and return to England: "As to leaving this country," said her ladyship, "your advice is vain; I will never return to England. I am encompassed by perils, true; but I am no stranger to them. I have suffered shipwreck off the coast of Cyprus, I have had the plague here; I fell from my horse near Acre, and was trampled upon by him; I have encountered the robbers of the desert, and when my servants quailed I have galloped in among them, and compelled them to be courteous; and when a horde of plunderers was breaking in at my gate I sallied out among them sword in hand, and having convinced them that they could not hurt me if they would, I fed them at my gate, and they behaved like thankful beggars. Here I am destined to remain. What is written in the great book of life, who can alter? It is true that I am surrounded by perils; it is true that I am at war with the prince of the mountains, and with the pacha of Acre; it is very true that my enemies are capable of assassination, but if I do perish, my fall shall be a bloody one. I have plenty of arms, good Damascus blades; I use no guns, and while I have an arm to wield a *hanjar*, these barren rocks shall have a banquet of slaughter before my face looks black in the presence of my enemies." So completely anti-national were the prejudices of this very eccentric lady, that though at the time of her death she had no fewer than 23 domestics, not one of them was English, and her last sigh was breathed among foreigners and hirelings. Born, 1766; died, 1839.

STANISLAUS AUGUSTUS. [PONIA-TOWSKI.]

STANISLAUS I. [LECZINSKI.]
STANLEY, EDWARD, bishop of Norwich, was the younger son of Sir John Thomas Stanley, bart., of Alderley, in Cheshire, and was born in 1770. Having finished his studies at St. John's College, Cambridge, he was presented by his father to the rectory of Alderley in 1803; and there he laboured for upwards of 30 years in the faithful discharge of his pastoral duties. His connection with the Whig party led to his nomination to the see of Norwich in 1837; and such was his unwearied devotion to every good and useful work, his sincerity, his disinterestedness, and his pure and active benevolence in all the relations of life, that his character truly corresponded with the apostolic portrait of a Christian bishop. Bishop Stanley also attained distinction as an author. Whilst rector of Alderley, he occasionally delivered lectures on various branches of natural history, and contributed papers on the same subject to Blackwood's and the British Magazine, besides publishing various pamphlets on questions more immediately connected with his clerical office. But his most popular work was his "Familiar History of Birds," published in 1835, which has gone through several editions. Died, Sept. 6th, 1849. The Addresses and Charges of Bishop Stanley, with a Memoir of his Life, have been edited by Dean Stanley.

STANLEY, THOMAS, miscellaneous writer, was the son of Sir Thomas Stanley, and born at Cumberlow, in Hertfordshire, in 1624. He received his education at Pembroke Hall, Cambridge, then went on his travels, and on his return took up his residence in the Middle Temple. His works are, "The History of Philosophy," which appeared in 1655-62, passed through many editions, and was even translated into Latin and Dutch, but is now neglected for more critical and trustworthy books; "Poems and Translations;" and an edition of Æschylus, with a Latin translation. Died, 1678. The portrait of Stanley was painted by Lely, and is in the National Portrait Gallery.

STAPLETON, Sir ROBERT, a soldier and poet of the 17th century. On the breaking out of the civil wars, he distinguished himself by his gallant behaviour at the battle of Edgohill, in 1642, for which the king knighted him. At the Restoration he accompanied Charles II. to London, and remained about the court till his decease, in 1669. He translated Juvenal and Musæus, and Strada's History of the Belgic War, wrote four plays, and was created LL.D. at Oxford.

STATIUS, PUBLIUS PAPINIUS, a Roman poet, was born at Naples, A.D. 61. His principal productions are two epic poems, the "Thebais," in twelve books, and the "Achilleis," in two books, which he left unfinished, and the "Silvæ," occasional poems on various subjects, and the most pleasing of his works. Died in his 35th year.

STAUNTON, Sir GEORGE LEONARD, was born in the county of Galway, in Ireland, and educated at Montpellier, where he took his medical degree. About 1762 he went to the island of Grenada, where he practised as

a physician, and purchased lands. He became the intimate friend of Lord Macartney, the governor, who made him his secretary, and took him to Madras, where he successfully negotiated peace with Tippono Saib, and was employed to arrest the commander-in-chief, General Stuart. On his return to England he was created a baronet, and, in 1790, received the degree of LL.D. When Lord Macartney was selected as head of the embassy to China, Sir George was appointed secretary of legation, with the title of envoy-extraordinary. Of that mission, and of the empire and people of China, he published an interesting account in 1797, 2 vols. 8to. He died in 1801.

STEELE, Sir RICHARD, a celebrated essayist and dramatic writer, was a native of Dublin, where his father, an English barrister, was secretary to the duke of Ormond. He was born in 1671, was educated at the Charter-house and at Oxford, obtained an ensignship in the Guards; and while in that service wrote "The Christian Hero," which he dedicated to Lord Cutts, who appointed him his secretary, and procured him a captain's commission in the Fusiliers. In 1702 he commenced dramatic writing, in his comedy of "The Funeral, or Grief à la Mode," which had great success. This was followed by "The Tender Husband" and "The Lying Lover." In 1709, under the name of Isaac Bickerstaff, he established the "Tatler," a periodical paper, in which he had the assistance of Addison, as he also had in the "Spectator" and "Guardian;" the former commenced in 1711, and the latter in 1713. These papers were the first of their class, and in them Steele aimed at a social reformation, which was to a great extent accomplished. His reputation as a writer procured him the place of commissioner of the stamp office, which he resigned on being chosen member for Stockbridge, but was expelled the House soon after for writing two alleged libels under the titles of "The Englishman" and "The Crisis." On the accession of George II. he received the honour of knighthood, and was appointed surveyor of the stables at Hampton Court, and governor of the royal company of comedians. He was also, on the suppression of the rebellion of 1713, made one of the commissioners of the forfeited estates in Scotland. In 1722 his play of the "Censorious Lovers" was acted with great success, and, when published, was dedicated to the king, who gave the author £300; but being always engaged in some unsuccessful scheme or other, and with habits both benevolent and lavish, he wasted his regular income in anticipation of a greater, until absolute distress was the consequence. A paralytic attack at length rendered him incapable of literary exertion; and he retired to Linsay, in Caermarthenshire, where he died in 1729. A new Memoir of his Life and Writings was published by H. B. Montgomery, in 1865. His portrait, by Richardson, is in the National Portrait Gallery.

STEEN, JAN, an eminent painter, was born at Leyden, in 1636. One of his masterpieces was Van Goyen, whose daughter he married, but Steen proved a dissipated character, and totally neglected his family. Died, 1688.

STEENWYK, was born of a father and grandfather. He finished his studies at Groningen. His first work was the "Mortification of the Flesh." This painter was his son.

STEENWYK, HENRIK VAN, Dutch painter, was born in 1550. He was a pupil of his father and of De Vries, and became distinguished for his pictures of architectural interiors. The war in the Netherlands drove him from his home, at IJsselstein, to Frankfurt-on-the-Main, where he died about 1601. This painter was the master of Peter Neefs and his son.

STEENWYK, HENRIK VAN, the younger, was also a painter, was born at Amsterdam, in 1589. He was instructed by his father, and excelled, like him, in architectural subjects. He was the friend of Vandyck, and through his influence came to England, where he enjoyed a high reputation. Died young, at London.

STEEVENS, GEORGE, commentator on Shakespeare, was born at Stepney, in 1736; and was educated at the Grammar School, Kingston, and King's College, Cambridge. In 1768 he published 20 of Shakespeare's plays, in 4 vols. 8vo, carefully reprinted from the earliest 4tos; and in 1770 his notes on the great dramatist were incorporated with those of Johnson in an edition in 10 vols. 8vo, afterwards extended to 15 vols. Steevens, who was an elegant scholar, and well versed in old English literature, was one of the contributors to Nichols's *Biographical Anecdotes of Hogarth*, and also assisted in the *Biographia Dramatica*. He died at Hampstead, in 1800.

STEFFANI, AGOSTINO, an Italian musical composer, was born in 1655. In his youth he was a chorister of St Mark's, at Venice, whence a German nobleman, attracted by the sweetness of his voice, took him to Bavaria, gave him a classical education, and put him under the best musicians. After this he entered into orders, and at last became bishop of Spiga. Died, 1730.

STEFFENS, HEINRICH, a distinguished naturalist, novelist, and miscellaneous writer, was born at Stuvanger, in Norway, 1773; studied at Copenhagen, and delivered lectures at Kiel on natural history, in 1798; and was successively appointed to the chair of natural history in Jena, Halle, Breslau, and Berlin. He took an active part in the German war of liberation, to the success of which he largely contributed, not merely by his personal exertions, but by his spirit-stirring harangues in support of the national cause. Among his chief works are his "Beläge zur inneren Naturgeschichte der Erde," "Grundzüge der Philos. Wissenschaft," "Handbuch der Oryktognosie," and "Walseth und Leith." "Die Vier Norweger," and an interesting autobiographical sketch, entitled "Was ich erlebte," &c. Died, 1848.

STEIN, HENRICH F. KARL, Baron von, a distinguished Prussian statesman, was born at Nassau, in October, 1757, of an old and noble family, which held immediately of the empire. He received the rudiments of his education at Göttingen, and afterwards studied public law at Wetzlar, the seat of the imperial chamber. In 1780, at the age of 23, he first entered the civil service of Prussia, to which he had been early destined by his father, as director of the mines at Wetzlar, in Westphalia; and, in 1784, was appointed ambassador at Asehaftenburg.

His great abilities having become known in these situations, he was, in 1786, appointed to the important situation of president of all the Westphalian chambers, in which office he laboured assiduously and successfully till 1804. In that year he was, on the death of Struensee, minister of finance and trade, promoted to that office; in which he remained till 1806, when, on account of some differences with the king of Prussia, he resigned, and retired to his estates at Nassau. The king, however, recalled him soon after the peace of Tilsit; and it was then that he planned and executed those great, yet cautious, social reforms, which laid the foundations of the restored monarchy. Ever long, however, his patriotic spirit and great abilities excited the jealousy of Napoleon, who had him exiled. He retired to Prague, where he remained, associating much with Arndt, with the banished elector of Hesse-Cassel, and other vehement enemies of Napoleon, till May, 1812, when, on the approach of the French emperor to Dresden, on the eve of the Moscow campaign, he went to St Petersburg, where his firmness and energy were of great service in supporting the Emperor Alexander through that crisis. After the occupation of Saxony by the allied forces, he was placed at the head of the central administration, and put forth all his energies in keeping alive the patriotic enthusiasm which displayed itself on all sides. But the principles proclaimed at the first peace of Paris did not meet the objects which he had in view for the political organization of the German people, and he withdrew in disappointment to his estate, which he continued to cultivate till 1827, when he once more briefly appeared on the stage of politics. Died, 1831. His "Briefe an den Baron von Ungern"—a name afterwards famous throughout Europe—have been published.

STELLA, JACQUES, an eminent painter, was born in 1596, at Lyons, where his father gave him his first instruction. While at Florence he was patronized by the grand-duke. He then went to Rome, where he spent several years, and on his return to France had a pension granted him, with apartments in the Louvre. He there painted several excellent pictures for the king, who honoured him with the order of St Michael. Died, 1647.

STENO, NICHOLAS, a celebrated anatomist, was born at Copenhagen, in 1638. He was a pupil of Bartholin; and afterwards travelled into Germany, France, and Italy, where he abjured the Protestant faith. On his return home, he was made professor of anatomy; but the change of his religion having raised him enemies, he renounced his medical studies for the church; and Pope Innocent XII. consecrated him bishop, *in partibus*, of Heliopolis, and vicar apostolic in the north of Europe. The results of his important anatomical studies are contained in his "Observations on the Muscles and Glands," his "Discours sur l'Anatomie du Cerveau," and other works. Died in 1687.

STEPHEN, king of England, the son of Stephen, count of Blois, by Adela, fourth daughter of William the Conqueror, was born in 1104. On the death of Henry I. he

Immediately came over from Normandy to England, and laid claim to the crown, although he had been one of the most zealous in taking the oath for securing the succession to Henry's daughter, the Empress Matilda. By the aid of his brother, who was bishop of Winchester, he possessed himself of the royal treasure, and was enabled to bribe some of the most restive of his opponents, while he sought the support of the people at large by promising to restore the laws of Edward the Confessor. After a war with the Scots, who were finally defeated at the famous battle of the Standard, the Empress Matilda landed in England with her brother, the earl of Gloucester; and being joined by several powerful barons, a civil war ensued, which for cruelty and devastation proved one of the most calamitous in the annals of the country. After various turns of fortune, Matilda retired to Normandy, and the contest was carried on by her son, Henry Plantagenet, who in 1155 landed an army in England. Being joined by the barons of his mother's party, the competitors met at the head of their respective forces at Wallingford; but an armistice took place instead of a battle; by which it was agreed, that Stephen should reign during his lifetime, and that Henry should succeed him. In the following year Stephen died, aged 49.

STEPHEN BATHORI, or BATHORI, king of Poland, was born in Hungary about 1533. He was of a noble family, and by his great abilities and brilliant actions as a soldier raised himself to the dignity of prince of Transylvania, in 1571. At the close of 1575 he was elected king of Poland, on condition of marrying Anna, sister of Sigismund Augustus, the deceased king. He then resigned Transylvania to his brother. With much wisdom and vigour he settled and regulated the domestic affairs of the kingdom, subdued the party of his rival, Maximilian, and then carried on war with the Russians for five years, the king of Sweden being in alliance with him. The Czar procured the mediation of the pope, and peace was concluded in 1582. Bathori was author of some important improvements in the administration, especially the establishment of the grand tribunal of the crown. Under his rule the Ukraine began to recover from the state of devastation in which it had long lain, and the Cossacks were regularly organized and disciplined. He was a patron of learning, and founded the university of Wilna, and the college of Polocz. Died at Grodno, 1586.

STEPHEN, JAMES, an eminent lawyer and political writer, was a native of Poole, in Dorsetshire, received his education at Winchester, was brought up as a barrister, and became parliamentary reporter for the Morning Chronicle. He obtained an appointment in the prize court at the island of St Christopher's, where he realized a fortune. Having acquired, while abroad, an intimate knowledge of colonial law, he obtained on his return a large practice as an advocate in prize causes before the privy-council. As the violation of territory by the masters of American vessels often came under his notice, he published a pamphlet, entitled "War in Disguise, or the Frauds of Neutral

Flags;" and he was soon after introduced into parliament as member for Trade. He suggested and arranged the whole system of the continental blockade; and for his services the minister appointed him a master in chancery, which office he held during 20 years. He also distinguished himself as the constant friend of African emancipation; and was regarded by the West India planters as their most formidable antagonist. Died, 1832.

STEPHEN, SIR JAMES, K.C.B., was born Jan. 3, 1789, and graduated as bachelor of laws, at Cambridge, in 1812. Till 1823 he practised as a chancery barrister, being employed also as counsel to the colonial department; and this office he retained for the succeeding ten years, together with the post of standing counsel to the Board of Trade. He was afterwards for fourteen years under-secretary of state for the Colonies, on which office he brought to bear the experience and thought of many years with an amount of industry and perseverance very rarely surpassed. For upwards of ten years before his retirement from the public service, he was a contributor to the "Edinburgh Review," and some of his articles contributed to that journal were republished under the title of "Essays in Ecclesiastical Biography," in the same year (1849) in which he was appointed to succeed Professor Smyth in the chair of modern history at Cambridge. Two years later he published his "Lectures on the History of France." He died September 14, 1859.

STEPHENS, properly ESTIENNE, the name of a family of learned French preachers, who flourished from the beginning of the 16th to near the end of the 17th century. The founder of the family was HENRY STEPHENS, born at Paris about 1470. He is said to have begun printing there in 1496, and he died in 1520, leaving three sons, Francis, Robert, and Charles. Of the eldest, Francis, hardly anything is known except that he was partner of Simon de Colines, whose daughter he married.—ROBERT STEPHENS, second son of Henry, and one of the most illustrious scholars of his age, was born at Paris in 1503. At the early age of 19 he superintended, for De Colines, a new edition of the New Testament in Latin, which called forth the angry menaces of the Sorbonne, the first warning of the persecutions which harassed him through life. He appears to have begun printing on his own account about 1525 or a little later, and sent forth an immense number of Latin, Greek, and Hebrew works, many of them edited and the proofs corrected by himself. In 1539 he was honoured with the title of printer to the king of Latin, Greek, and Hebrew works, and he enjoyed the high esteem and steady support of Francis I., who had some new types of great beauty cast for him. Among the most noteworthy of his publications were—the "Biblia Latina," 1528, and several subsequent editions; "Biblia Hebraica," 1516; the Greek New Testament, with a Latin translation, 1550; a set of the Greek Ecclesiastical Historians, the "Evangelical Preparation" of Eusebius, about 1541; the "Roman Antiquities" of Dionysius of Halicarnassus, &c. His work was the "folio, 1531, and the lifetime. The rest of the Sorbonne Francis I. got the prohibited, drove the France. Attache chose Geneva for to escape with his published an and French, to the e and died at Gene Robert Stephens the division of el Bible, since almos is known, howeve system of Pagnini peared in 1529.—C son of Henry, w made himself kn especially several were collected und Reuleaux," and tr French. The wor editions in differa head of the printi after his brother R neve, and was nar Ho died in 1564.—H of that name, and family, was son of Paris in 1528. He ca abilities, and made study of the Gree bearing the latter the family, and the masters. At the ag and spent three ye of the librarie, a ma manuscripts, and many learned n visit to England i of Edward VI., a the Netherlands, and returned a printing-offic 1538, but on the dea he became head of travels and costly pu in money difficulties many years relieve fuggers, a mercant among his numerou which were annotat works of Aeschylus, orus Siclesus, Xenoc the translation by v vols. folio; Homer, Greek lyric poets and works, the greatest in man Greece," which labour, and the great and first appeared in earned him the gra contributed greatly to ology, but had too s second edition was p vols. folio, between third at Paris receiv tendence of Hase a publication of his " Stephens travelled in e made a long stay ter, and was well

ernasmus, &c. His most important original work was the "Latine Linguae Thesaurus," folio, 1631, and several later editions in his lifetime. The repeated attacks of the doctors of the Sorbonne, who after the death of Francis I. got the sale of his Bibles prohibited, drove this eminent scholar from France. Attached to the Reformation, he chose Geneva for his new home, and managed to escape with his family about 1551. He published an answer, both in Latin and French, to the censures of the Sorbonne, and died at Geneva in 1559. It was this Robert Stephens who introduced, in 1555, the division of chapter and verse into the Bible, since almost universally adopted. It is known, however, that he followed the system of Pagninus, whose Latin Bible appeared in 1528.—CHARLES STEPHENS, third son of Henry, was first a physician, and made himself known by various works, especially several on agriculture, which were collected under the title of "Prædium Rusticium," and translated by himself into French. The work passed through thirty editions in different languages. He became head of the printing establishment at Paris after his brother Robert's departure to Geneva, and was named printer to the king. He died in 1684.—HENRY STEPHENS, second of that name, and the most illustrious of his family, was son of Robert, and was born at Paris in 1528. He early showed extraordinary abilities, and made rapid progress in the study of the Greek and Latin languages, learning the latter by hearing it spoken in the family, and the former under the best masters. At the age of 19 he visited Italy, and spent three years in examining the principal libraries, discovering and collating manuscripts, and making the acquaintance of many learned men. He made a short visit to England in 1550, and was presented to Edward VI.; then travelled in the Netherlands, and returned to Paris in 1551. He had a printing-office there before the end of 1556, but on the death of his father, in 1559, he became head of the Geneva office. His travels and costly publications involved him in money difficulties, from which he was for many years relieved by the liberality of theuggers, a mercantile house of Augsburg, which were annotated by himself, are—the works of Æschylus, Maximus Tyrius, Dorotheus Siculus, Xenophon, Herodotus, with the translation by Valla, Terence, Plato, in 5 vols. folio; Homer, and collections of the Greek lyric poets and orators. Of his original works, the greatest is his "Thesaurus Lingue Græcæ," which cost him ten years of labour, and the greater part of his fortune, and first appeared in 5 vols. folio, in 1672. It earned him the gratitude of scholars, and contributed greatly to the progress of philology, but had too small a sale to pay. A second edition was published at London in 3 vols. folio, between 1815 and 1828; and a third at Paris recently, under the superintendence of Hase and Dindorf. After the publication of his "Thesaurus," Henry Stephens travelled in France and Germany. He made a long stay at Paris some years later, and was well received by the king,

Henry III. During his latter years he led a restless wandering life, and was frequently at Paris, his circumstances becoming more and more embarrassed. He died at the hospital of Lyons, in March, 1598.—There were five or six other members of this family who were eminent printers, the last of whom Anthony, died at Paris in 1674.

STEPHENSON, GEORGE, whose name will be for ever identified with the greatest mechanical revolution effected since the days of Watt—the application of steam to railroads—was born near Newcastle in 1781. His father was an engine-tender at a colliery, and he himself began life as a pit-engine boy at 2d. a day's wages. A lucky accident having given him an opportunity of showing his skill, he was advanced to the office of engineman. He was afterwards employed in forming railway planes and engines underground, and all his leisure time was spent in working out the great problem, which he at last so happily solved. Stephenson's early patron and employer, Nicholas Wood, of Hetton, was one of the first English writers of note on railroads. He survived till December, 1865. Stephenson's first locomotive was constructed in 1814. His first railway was at Hetton; he subsequently planned the line between Stockton and Darlington; but his crowning achievement was the Manchester and Liverpool line; a project which, despite the sarcasms and incredulity with which it was assailed, we need not say succeeded beyond even the projector's expectations. Stephenson's subsequent career was as rapid and smooth as the railway locomotion which he had done so much to realize. He at once took the lead in railway engineering, became an extensive locomotive manufacturer at Newcastle, a railway contractor, and a great colliery and iron-work owner; but he always retained the manly simplicity of character which had marked his early career, and his memory will long be cherished by all who appreciate moral worth as well as mental ability. Died, 1848. We are indebted to Mr. Smiles for an excellent memoir of the life of this great engineer.

STEPHENSON, ROBERT, civil engineer, F.R.S., D.C.L., M.P., &c., the inventor and first constructor of tubular plate iron bridges, the only son of George Stephenson (the "Father of the Railway System"), was born at Willington Quay, near Newcastle-on-Tyne, October 16, 1803, and died October 12, 1859. His early years were passed under disadvantages only less than those which his father had surmounted with such signal success. Having received an "English education," and some instruction in the higher branches of mathematics at Bruce's school, Newcastle, he was apprenticed to a coal-viewer. At the close of 1822 he went to Edinburgh, and for about six months attended the university lectures on chemistry, mathematics, and geology. Having assisted his father in making surveys for the Stockton and Darlington railway, and in establishing his locomotive manufactory at Newcastle, he quitted England in the June of 1824, and for three years superintended the working of the gold and silver mines belonging to the

Columbian Mining Association in South America. On his return he assisted his father in laying down the Liverpool and Manchester railway; but his chief field of labour for the next few years was the locomotive manufactory. He there constructed a series of travelling steam-engines, of which the "Rocket" won in 1829 the prize of £600 offered by the directors of the Liverpool and Manchester line, and the "Planet," constructed on the same principles, gave the type to all succeeding locomotives. To Robert Stephenson also is due the merit of raising the locomotive engine of 1829 to that of 1861. The first great work—begun and completed by him, and for the success of which he was solely responsible—was the London and Birmingham railway, opened in 1838. From that time till his death he was personally engaged, or was consulted, on the construction of railways in all the four quarters of the globe. In the memorable parliamentary contests,—the battle of the atmospheric system, and the battle of the gauges—he opposed Brunel, who appeared as the champion of atmospheric propulsion and the broad gauge. The works by which Robert Stephenson will be best known to posterity are his iron bridges,—such as the High Level Bridge at Newcastle, the Conway and Britannia tubular bridges, the tubular bridges over the Nile at Benah and Kaffre Azzayat, on the Egyptian railways from Alexandria to Suez, and the Victoria Tubular Bridge across the St Lawrence River in Canada. More generally successful in his undertakings than Brunel, whom he followed almost immediately to the grave, he was not less free than his antagonist from all professional jealousy, or less valued for the excellence of his disposition and his life. Robert Stephenson was interred in Westminster Abbey,—his body being laid near that of George Telford, and his funeral being attended by those of his contemporaries whose names are most illustrious in literature, art, and science. There are Lives of Robert Stephenson by Smiles and Jefferson.

STEPNEY, GEORGE, an English poet, diplomatist, and political writer; born, 1663; died, 1707.

STERLING, JOHN, an accomplished critic and essayist, whose promising career was broken by long-continued illness, and at last prematurely closed, was born at Kames Castle, in the Isle of Bute, 1806, where his parents happened to be residing. His father, who was a distinguished political writer, and editor of the "Times," had him educated chiefly at home. In 1824 he went to Trinity College, Cambridge, where he had Archdeacon Hare for his classical tutor; and a year later he entered Trinity Hall with the intention of graduating in law; but he left Cambridge in 1827 without taking a degree, and during the next few years he resided chiefly in London, contributing to the Athenaeum and other literary journals, and preparing himself, in familiar intercourse with Coleridge, Wordsworth, and many other distinguished persons, for the peculiar career he had marked out for his exertions. Soon after his marriage, in 1830, he was forced

by threatening pulmonary symptoms to seek a temporary home in St Vincent, where his family held some property. He returned to Europe in 1832, and after much thought and meditation he was ordained a deacon of the English church in 1834, and became Archdeacon Hare's curate at Hurstmoor. But his constitution soon sunk under the severe pastoral duties which he had prescribed for himself; and the rest of his life was spent in travelling from place to place in search of health, varied by inquiries into the more recent philosophical and religious speculations of Germany, towards which he began to show a decided bias, and in contributing to Blackwood's Magazine, the London and Westminster Review, &c., various stories and critiques, which speak no less for his ability and originality as a thinker, than for his love of truth, and his integrity as a man. Died at Ventnor, 1844. His "Essays and Tales" were collected by Archdeacon Hare, and published with an interesting memoir; a "Life of John Sterling" was afterwards published by Thomas Carlyle, whose friendship Sterling had enjoyed since 1835; and a "Sterling" club has been formed to commemorate his many excellent qualities both of head and heart.

STERNE, LAURENCE, a divine and miscellaneous writer, of a very singular and original cast, was a grandson of Richard Sterne, archbishop of York, and born in 1713, at Clonmel, in Ireland, where his father, a lieutenant in the army, was at that time stationed. He was educated at Jesus College, Cambridge, where he took his degree of M.A. in 1740. Having entered into orders, his uncle, Dr Sterne, a wealthy pluralist, presented him with the living of Sutton, to which were afterwards added a prebend at York, the rectory of Stillington, and thecuracy of Coxwold. For many years he was little known beyond the vicinity of his pastoral residences; the only production of his pen being his humorous satire upon a greedy church dignitary of York, entitled the "History of a Watch Coat." In 1759 appeared the first 2 vols. of his celebrated "Tristram Shandy," which drew upon him praise and censure of every kind, and became so popular, that a bookseller engaged for its completion on very invidious terms. During the intervals of the publication of "Tristram Shandy," the ninth volume of which appeared in 1767, he published 3 vols. of "Sermons," with his own comic figure, from a painting by Reynolds, at the head of them. He then spent some years in travelling on the continent, and in 1768 he composed his "Sentimental Journey," which by a number of pathetic incidents, and vivid sketches of national and characteristic delineation, rendered extremely entertaining, and acquired a more general reputation than even its predecessor. Having come to London to see his "Sentimental Journey" through the press, he was seized with a severe illness, which proved fatal, March 18, 1768. That Sterne possessed true wit and the most thoroughly original humour, none who have read his works can doubt; but his occasional indecencies are disgusting, and deserve the severest reprehension. There is a new "Life

of Laurence S. gerald, M.A.

STERNHOLM, with Hopkins Psalms of David in Hampshire, which he became VIII. and Ed. Strahold were remainder weston, and other STENICHOI poet, was a native probably about of his biography being mingled him. It is suping and direct religious festival. STERNHOLD, THOMAS, joint author with Hopkins of the first version of the Psalms of David in English metre, was born in Hampshire, and educated at Oxford; after which he became groom of the robes to Henry VIII. and Edward VI. He died in 1549. Sternhold versified 61 of the Psalms; the remainder were written by Hopkins, Norton, and others.

STESICHORUS, a celebrated Greek lyric poet, was a native of Himera, in Sicily, born probably about B. C. 640. Little is known of his biography, many fabulous reports being mingled with existing accounts of him. It is supposed that the office of training and directing the choruses for the religious festivals was hereditary in his family. He is distinguished for the improved form which he gave to the chorus; substantially that which was adopted and perfected by Pindar. Some fragments of his poems are still extant. Died probably about B. C. 560.

STEWART, SIR JAMES. [STEWART.]
STEVENS, GEORGE ALEXANDER, an eccentric character, was born in London, and brought up to a mechanical business, which he quitted to become a strolling player. He wrote a novel, called "Tom Fool;" "The Birth-day Polly;" and "Religion," &c., two poems; and subsequently invented his popular entertainment, called a "Lecture on Heads," a prose satire on the manners of the times, possessing no small portion of drollery. Several of his songs, including "The Storm," have been much admired. Died, 1784.

STEVENSON, SIR JOHN ANDREW, an eminent musical composer, was born at Dublin, in 1761. At 10 years of age he was received into the choir school of Christchurch, where he soon gave promise of those abilities for which he was afterwards so deservedly celebrated. In conjunction with Tom Moore, he rescued the matchless airs of their native land from oblivion, by adapting them to the words of the "Irish Melodies," and enriching them with graceful accompaniments. He also produced an oratorio, entitled the "Thanksgiving," anthems, glees, &c., many of which still retain their popularity. Died, 1833.

STEVENSON, ROBERT, a distinguished civil engineer, was born at Glasgow in 1772, was initiated into the principles of mechanics by his step-father, Mr T. Smith, and became, in 1797, engineer to the Northern Lighthouse Board; in which capacity he designed the structure of many of the Scottish Lighthouses, the chief of which—that on the Bell Rock—placed him in the foremost ranks of his profession. Died, 1850.

STEWART DENHAM, SIR JAMES, a writer on political economy, was born at Edinburgh in 1713, was educated at the university, and became an advocate. In 1740 he married the daughter of the earl of Wemyss, and great expectations were entertained of his rising in his profession; but these were disappointed by the part he took in the rebellion of 1745. In that last struggle of the house of Stuart, Sir James co-operated so zealously as to be obliged to

go into exile. In 1757 he published, at Frankfort, his "Apologie du Sentiment de Monsieur le Chevalier Nowton, sur l'Antienne Chronologie des Grecs." Ten years after this he was restored to his native country and the estate of his ancestors, and died in 1780. His most valuable work is entitled, "An Inquiry into the Principles of Political Economy," which preceded the great work of Adam Smith by several years.

STEWART, MATTHEW, an eminent mathematician, was born at Rothsay, in the isle of Bute, in 1717. He studied mathematics at Edinburgh, under Machurin, whom he succeeded in his professorship; on which occasion he published his "Geometrical Theorems." In 1761 appeared his "Tracts, Physical and Mathematical," in which he proposed to deduce a theory of the moon, and to determine the sun's distance from the earth. He was also the author of a "Treatise on the Sun's Distance," and one entitled "Propositiones nove Veterum demonstratae." He died in 1785.

STEWART, DUGALD, an eminent Scotch philosopher, was son of the preceding, and was born at Edinburgh in 1753. He received his education at the High School of Edinburgh, and at the university of Glasgow, under Reid. In 1774 he was named assistant professor of mathematics with his father, and in 1785 he was called to the chair of moral philosophy, previously filled by Ferguson. This post he held till 1810, when falling health compelled him to resign. The rest of his life was spent in retirement and literary labour, at his seat on the Frith of Forth. Stewart was very popular as a professor and lecturer, and the elegance, clearness, and good sense of his lectures attracted crowds, who found no depth or speculative height or strain of logic to weary and offend them. His teaching, like his master's, was a protest against the extreme results of the sensualist philosophy. He first appeared as an author in 1792, when he published the first volume of his "Elements of the Philosophy of the Human Mind." The second did not appear till 1814, and the third followed in 1827. Among his other works are, "Philosophical Essays," which passed through several editions, "Outlines of Moral Philosophy," a Preliminary Dissertation, for the Encyclopædia Britannica, on the progress of Metaphysical, Ethical, and Political Science, which appeared in two parts in 1815 and 1821, and had a great run for a time; and biographies of Adam Smith, Dr Reid, and Dr Robertson. Died, at Edinburgh, 1828.

STIEGLITZ, CHRISTIAN LUDWIG, German writer on architecture, born at Leipsic in 1756. He was educated at the university of Leipsic, and graduated LL.D. in 1784; but he devoted himself thenceforth almost exclusively to literary and artistic studies. The most important of his voluminous writings are, the "Encyclopædia of Civil Architecture," "History of the Architecture of the Ancients," "Early German Architecture," and "History of Architecture." He was a contributor to Ersch and Gruber's Encyclopædia, and to several journals. Died, 1836.

STIGAND, archbishop of Canterbury in the 11th century, is first known to us as chaplain and minister of Emma, queen and widow first of Ethelred and then of Canute. He was intimately associated with the great Earl Godwin, and was consecrated bishop of the East Angles, in 1043. But he was almost immediately deposed by Edward the Confessor, who seized his possessions at the same time that he seized those of Emma. In 1044 he was restored, became chaplain to Edward, and procured for the queen-mother her dower and permission to live at Winchester. Stigand was translated to Winchester in 1047, and five years later, on the deposition of Archbishop Robert, was appointed to administer the see of Canterbury. He was probably made archbishop in the following year (1053); assisted in the consecration of Westminster Abbey in 1065; and on the death of the Confessor summoned the Witenagemot which elected Harold II. king. He crowned Harold, and after his defeat and death at the battle of Hastings anointed Edgar the Atheing, who was elected by the council assembled at London. But the Conqueror was irresistible, and Stigand, with other leading men, made formal submission to him, and was received with great outward respect. When William went to Normandy in 1067 he took with him Edgar, Stigand, and the chief of the Saxon nobles. Stigand after his return to England procured a safe retreat for the Atheling in Scotland; and went himself with his immense treasures to the famous "Camp of Refuge" in the Isle of Ely. But the camp was entered by the Normans, the heroic Hereward made his peace with William, and Stigand was put in chains (1072). He had been deposed two years previously, and spent the rest of his life in prison at Winchester, refusing to the last to give up his treasures or betray their place of concealment. Lanfranc succeeded him in the primacy.

STIGLMAYER, JOHANN BAPTIST, a celebrated German bronze-founder, was born near Munich in 1791. He entered the Academy of that city as a student of sculpture in 1810, and, acquiring great skill as a medallist, he was named engraver to the Mint. He afterwards spent several years in Italy, where he acquainted himself with the process of metal-casting, to which he devoted the rest of his life. A foundry was established by the king, Ludwig I., at Munich in 1826, and Stigl Mayer was appointed director. The works he executed are very numerous, and among the principal arcæological statues of the ancestors of Ludwig, for the royal palace; of Jean Paul, Mozart, Schiller, and the elector, Maximilian I., of Bavaria, the last an equestrian group; monument of King Maximilian I.; statue of Goethe, and colossal figure of Bavaria, the last two not completed at his death. Died, 1844.

STILICHO, the great general of the Western Empire, under Honorius, was probably a Vandal, and early served in the Roman armies. The ability with which, in A. D. 384, he negotiated a treaty with the king of Persia, procured him in marriage Serena, favourite niece of the Emperor

Theodosius. He was made successively master of the horse, count of the domestic, and master-general of the armies of the Western Empire, and on the death of Theodosius, in 395, he was charged with the care of his sons, Honorius and Arcadius, and of the Western Empire. His rival was Rufinus, minister of the East, and to clear the way for his ambition Stilicho procured the murder of Rufinus. But the favourite Eutropius succeeded to the power of Rufinus, and was supported by the army which Stilicho had sent. Meanwhile the Goths, under Alaric, were ravaging Greece, and Stilicho set out to oppose them, and in 396 blockaded their camp in Arcadia; but Alaric escaped with his plunder into Epirus, and Stilicho returned to Italy. By his prudent measures he relieved Rome from the severity occasioned by the revolt of Gildo, in Africa, and sent an expedition which put an end to the revolt. At this period the influence of Stilicho was confirmed by the marriage of his daughter Maria to Honorius. On the invasion of Italy by Alaric, in 400, Stilicho directed all his energies to checking his progress, and totally defeated him at Pollentia, in 403. He drove him out of Italy, and shared with Honorius the honour of a triumph at Rome. In 405 Italy was invaded by a host of Vandals, Suevi, and Burgundians, led by the chieftain Radagaisus; Florence was besieged and Rome threatened; but Stilicho defeated him and destroyed his army, and was thus the second time the deliverer of Italy. Stilicho long carried on negotiations with Alaric, and in 408 the claims of the latter were debated in the senate, which ultimately agreed to grant him a subsidy to secure his friendship. The confidence of Honorius in his great minister and general was at last destroyed by the false charges made against him by Olympius, who had risen by his favour; the leading friends of Stilicho were massacred at Paris, and soon after Stilicho himself was murdered, by the authority of Honorius, at Ravenna, in 408. The poet Claudian enjoyed the high favour of Stilicho, and has celebrated his achievements.

STILL, JOHN, bishop of Bath and Wells, died in 1607. He is the reputed author of "Gammer Gurton's Needle," a dramatic piece of low humour, very characteristic of the manners of our ancestors in that day.

STILLING, JOHANN HEINRICH, frequently called **JUNG-STILLING**, being his family name, was a celebrated Pietist, and was born at Grund, in the duchy of Nassau, in 1740. His father was a charcoal-burner, and his early life was a series of struggles with adverse and depressing circumstances. His strong religious faith did not fail him, and after being a coal-burner, and in frequent alternations of going to Strasburg to study medicine, Goethe was there at the same time, and he and Stilling meeting at a dinner, Goethe liked him, and remained his warm friend. Stilling settled as physician at Marburg, and subsequently was professor at Marburg and Heidelberg. He had singular skill in eye-operations, and restored to sight more

than 2000 poor by reward, supported a hospital at his duke of Baden councillor. Still and his works celebrated among geography, entitled "Wandererschaft unlag," and published fanciful "Theoretical antiobiography," cited into English, listed into English, 1817.

STILLINGFLEET, Worcester, and was born at in 1835. He was a fellow of S first appeared as a man of most liberal entitled, "Treatise on the subsequent course retracted. He by his works, a preferences fellow preacher at the and dean of St Paul's, one continuous lists, Nonconformist philosopher, John reformist opponent and Howe. Herastical Commission the accession of the see of Worcester works, filling 6 volumes, the "Account of the Truth and Divinity." Others Britain, "Vindication of the reasonableness of the national Account of testant Religion, 1829.

STILLINGFLEET, a grandson in 1702. He graduated tutor to W. Wadman, and with paid him in that amount in 1741; a "The Calendar of Tracts in Nature on the Principles." Died, 1771. An appeared in 3 volumes.

STILPO, a philosopher, lived about 306 B.C. a reputation for that, when Democritus made any one to property.

STIRLING, W. ANDER.

STORÆUS, J. probably of the era, known only interesting extracts there, including

than 2000 poor blind persons without fee or reward, supporting many of them in the hospital at his own expense. The grand-duke of Baden gave him the title of aulic councillor. Stillling was a popular writer, and his works fill 13 vols. 8vo. The most celebrated among them are his autobiography, entitled, "Jugend-Jüngling-Jahre, Wanderschaft und Alter von Heinrich Stillling," and published in 1777-79; and his fanciful "Theorie der Gelstorkunde." The autobiography was written on the suggestion of Goethe, and both works are translated into English. Died, at Karlsruhe, 1817.

STILLINGELET, EDWARD, bishop of Worcester, and a celebrated controversialist, was born at Cranbourne, in Dorsetshire, in 1635. He was educated at Cambridge, became a fellow of St John's College, and in 1687 rector of Sutton. Two years later he first appeared as an author, and as a churchman of most liberal views, in his treatise entitled, "Irenicum," which by his subsequent course and writings he virtually retracted. He acquired great reputation by his works, and after the Restoration preferments fell fast to his lot. He was preacher at the Rolls, chaplain to the king, and dean of St Paul's. His life was almost one continuous controversy, with Romanists, Nonconformists, Socinians, and the philosopher, John Locke. Among his Nonconformist opponents were Owen, Baxter, and Howe. He condemned the Ecclesiastical Commission under James II., and on the accession of William III. was raised to the see of Worcester. Among his numerous works, filling 8 vols. folio, the most important was the "Origines Sacre, or Rational Account of the Christian Faith as to the Truth and Divine Authority of the Scriptures." Others are—"Origines Britannicæ," the early church history of Great Britain, "Vindication of the Trinity," "Unreasonableness of Separation," and a "Rational Account of the Grounds of the Protestant Religion." Died, at Westminster, 1699.

STILLINGELET, BENJAMIN, the naturalist, a grandson of the preceding, was born in 1702. He graduated at Cambridge, became tutor to W. Windham (father of the statesman), and, with other Englishmen, accompanied him on his memorable visit to Chamouni in 1741; and was known as author of "The Calendar of Flora," "Miscellaneous Tracts in Natural History," and a "Treatise on the Principles and Power of Harmony." Died, 1771. An account of his Literary Life appeared in 3 vols. in 1811.

STILPO, a philosopher of Megara, who lived about 306 B.C. He acquired so great a reputation for his sagacity and virtue, that, when Demetrius took Megara, he forbade any one to injure either his person or property.

STIRLING, WILLIAM, Earl of. [ALEXANDER.]

STOBÆUS, JOANNES, a Greek writer, probably of the 5th or 6th century of our era, known only by his compilation of interesting extracts from earlier Greek authors, including many whose works are lost.

His collection is in two divisions, one entitled "Eclogæ," and the other "Anthologia." The extracts are all classified according to their subjects. Stobæus is supposed to have been a native of Stobi, in Macedonia, but nothing is known of his life. His "Anthologia" was first printed at Venice in 1536, and the "Eclogæ" at Antwerp in 1576.

STOCK, SIMON, general of the order of Carmelites, was by birth an Englishman, and died in 1263. He is celebrated as the institutor of the Scapulary, which Romanists believe he received from the Virgin Mary, in a vision, with a promise that all who wore it, or one consecrated like it, should be sure of her protection in every emergency.

STOLBERG, CHRISTIAN, Count von, German poet, was born at Hamburg in 1748. He was educated with his brother Leopold, noticed below, at the university of Göttingen, and made also with him a tour in Switzerland and North Italy, Goethe and Lavater being their companions through part of their journey. In 1777 he married, and settled on his estate in Schleswig. As a poet he was greatly influenced by Klopstock, and, like him, studied especially the Greek poets. He was warmly attached to his brother, and survived him but a short time. Died, 1821.

STOLBERG, LEOPOLD FRIEDRICH, Count von, a distinguished German historian, traveller, and littérateur, was born in Holstein in 1750. He was younger brother of the preceding, studied with him at Göttingen, and travelled with him in Switzerland and Italy. In 1777 he was appointed minister of the duke of Oldenburg, prince-bishop of Lübeck, at the court of Denmark. Five years later he married, and in 1785 was charged with a political mission to Russia. He lost his wife, whom he tenderly loved, in 1788, married again in 1790, and travelled in Germany, Switzerland, Italy, and Sicily. On his return he was placed at the head of the government of Lübeck, a post which left him full leisure for literary pursuits. In 1800 he renounced Protestantism, was received into the Catholic church, and giving up his office, settled at Münster. Count Stolberg's conversion to the Romish faith gave the first impulse to a great religious movement in Germany. His example was followed a few years later by Friedrich Schlegel. His principal work is the "Geschichte der Religion Jesu Christi," which first appeared in 15 vols. in 1806. A fourth edition was published in 1816, and it was afterwards translated into Italian by order of Pope Pius VII. Among his other works are, "Reise durch Deutschland, die Schweiz," &c., "Leben des Alfreds der Grossen," and "Ein Büchlein von der Liebe." He wrote some dramatic and other poems, and translated the Iliad, several plays of Æschylus, and part of the writings of St Augustine. Died at Sondermühlen, near Osnabrück, 1819.

STONE, EDMUND, an eminent mathematician, was a native of Scotland, his father being gardener to the duke of Argyll. At the age of 18 he was discovered by that nobleman

reading Newton's Principia; upon which the duke entered into conversation with him, and learnt, with astonishment, that he had made considerable acquirements in arithmetic, geometry, Latin, and French. The duke took him under his protection, and placed him in a situation to pursue his favourite studies. He produced a "Mathematical Dictionary," a work on the method of Fluxions, an edition of Euclid, &c. He was chosen F.R.S. in 1725. Died, 1768.

STONE, FRANK, a popular English painter, was born at Manchester in 1800. After following for a time his father's business of cotton-spinner and manufacturer, he began to practise painting, first in water-colours, and was admitted in 1832 to the Society of Painters in Water Colours. He afterwards applied himself to painting in oil, and on the production, in 1851, of his picture from the "Merchant of Venice," of Bassanio receiving the letter, he was chosen A.R.A. Among his earlier works are the well-known "Last Appeal," "Cross Purposes," "The Impending Mate," "Mated," and others of like character. Among his later pieces are some spirited sea-views, "The Gardener's Daughter," "The Master is come," &c. Died, at London, 18th November, 1859.

STORACE, STEPHEN, a favourite musician and composer for the English theatre, was born in London, in 1763; studied in Italy, and, on his return, was appointed composer to Drury Lane Theatre. His music in "The Haunted Tower," "Siege of Belgrade," "No Song no Supper," &c., as well as several pieces composed for the Italian Opera, were well received by the public; his compositions being remarkable for their spirit, melody, and brilliancy. Died, 1796.—His sister, ANNE SELINA STORACE, was an accomplished singer and actress, and became a first-rate favourite in her profession. Died, 1814.

STORCH, HEINRICH FRIEDRICH VON, an eminent political economist, was born at Riga, 1766, studied at Jena and Heidelberg, and on the advice of Count Romanzoff repaired to St Petersburg, where he entered on a brilliant career as a statist and political economist, which procured for him at once the confidence of the Czar, and the highest literary honours in his gift. His chief works are, his "Cours d'Economie Politique," 6 vols. 8vo, which was written at the request of the Emperor Alexander for the instruction of his brothers, the Grand-dukes Nicholas and Michael; and his "Tablicau Historique et Statistique de l'Empire de Russie à la fin du 18me Siecle," 4 vols. 8vo. Died, 1835.

STORY, JOSEPH, a distinguished American judge and juridical writer, was born at Marblehead, in Massachusetts, 1779; studied at Harvard University, where he took his degree in 1798; was called to the bar in 1801, and soon acquired a distinguished reputation as a pleader. After representing Salem in the State legislature for four years, he was sent to Congress in 1809, where his talents as a forensic debater were so well appreciated, that in 1811 he was appointed associate justice in the supreme court of the United States. In this capacity he displayed a

thorough knowledge of the most intricate questions relating to international law, and earned such distinction as a jurist, that his name has been carried far beyond the limits of his native land. His "Commentaries on the Conflict of Laws" is looked upon as an authority in every state in Europe. Died, 1845.

STOTHARD, THOMAS, R.A., an eminent English painter and designer, was born in London in 1756, received his education at a school in Yorkshire, and was apprenticed to a designer in the silk trade, in Spitalfields. During his apprenticeship he showed a decided taste for drawing; and soon found ample employment in drawing illustrations for the booksellers. So fertile was he in resources, that it was a matter of little moment to him what the nature of the subject was that he might be required to illustrate, whether pastoral, historic, humorous, pathetic, or sublime; but it is generally allowed that his fêtes champêtres were among his happiest productions; there beauty, joy, serenity, and innocence are all combined. It is said that the designs of Stothard exceed 5000 in number; his exhibited paintings did not number 100. Among these the best known are the "Canterbury Pilgrims," "The Wellington Shield," etched by the artist himself, "The Four Periods of a Sailor's Life," and "The Flitch of Bacon." His largest work is the painting on the staircase at Burghley, the seat of the marquess of Exeter, the sketch for which is in the National Gallery. To these may be added his illustrations of Milton, Shakespeare, Spenser, Don Quixote, the Pilgrim's Progress, Beil's British Poets, Robinson Crusoe, Rogers's Italy, &c. Stothard was elected R.A. in 1794, and was appointed librarian to the Royal Academy in 1812. Though during the latter period of his life he had many powerful rivals, he did not sustain any very sensible diminution of his reputation. He died in 1834. His portrait, by James Green, is in the National Portrait Gallery.

STOTHARD, CHARLES ALFRED, son of the preceding, was born in 1786. He exhibited at an early age a great fondness for drawing, which ere long ripened into an enthusiastic love for the art; and he became particularly celebrated for the faithful delineation of ancient costume. In 1810 appeared his admirable picture of the "Death of Richard II.," and in the same year he commenced the publication of his "Monumental Effigies of Great Britain." He was a member and historical draughtsman of the Society of Antiquaries; by whom he was deputed to take drawings from the famous tapestry at Bayeux, in Normandy; and in 1819 he also made a series of drawings from the paintings then recently discovered on the walls of the painted chamber in the House of Lords. His death was the effect of an accident while engaged in his professional labours. As he was in the act of tracing the stained glass in a window over the altar of the parish church of Bere Ferrers, in Devonshire, the ladder on which he was standing gave way, and he was instantaneously killed, May 28, 1821.

STOW, JOHN, an English antiquary, was born in London in 1674. He was bred to the study of the antiquities of England, which he was enabled to pursue by the patronage of Parker and the Earl of Arundel. His work was the "Survey of London," published in 1709, and which has since become a classic. He was also the author of "The History and Survey of London," published in 1724, and "The History and Survey of the City of London," published in 1730. He died in 1755.

STOWELL, JOHN, an English merchant and politician, was born in London in 1745. He was the son of a merchant of New York, and came to England in 1765. He was a member of the House of Commons, and was elected Speaker in 1790. He was also a member of the House of Lords, and was elected Lord of the Treasury in 1796. He died in 1800.

STOW, JOHN, a celebrated antiquary and annalist, was born in London, about 1525. He was bred a tailor, but began early to study the antiquities of his country; in which he was encouraged by Archbishop Parker and the earl of Leicester. His first work was the "Summary of the Chronicles of England;" which he enlarged in 1600, and published under the title of "Flores Historiarum, or Annals of this Kingdom, from the time of the Ancient Britons." In 1598 appeared the first edition of his "Survey of London." In his old age he was reduced to such indigence that he was compelled to beg his bread. He was authorized especially to do so by letters-patent of James I. granted in 1604. Died, 1605.

STOWELL, WILLIAM SCOTT, Lord, the celebrated English judge, son of W. Scott, a merchant of Newcastle, and elder brother of Lord Eldon, was born at Heworth, Durham, in 1745, the memorable year of the rebellion in Scotland. Newcastle, like other towns in the north, was in expectation of a visit from the rebels; the town walls were planted with cannon, and every practicable measure adopted to withstand a siege. Many families retired into the country; and it was desirable that Mrs Scott, who was then far advanced in pregnancy, should be removed; but egress in any common way being next to impossible, she was let down in a clothes-basket, from the top of the wall to the quay, where a boat was in readiness to receive her, by which she was conveyed to Heworth, a village about three miles distant. Here she gave birth to twins—the subject of this article, and a daughter named Barbara. Lord Stowell received the rudiments of his classical education, with his brother, the earl of Eldon, at the Newcastle grammar school, and completed it at Corpus Christi College, Oxford. He afterwards removed to University College, and in his 20th year was appointed one of the tutors. About the year 1776, Mr Scott retired from the tutorship, and devoted himself to severe study in that branch of the legal profession of which he afterwards became so great an ornament. In 1779 he took the degree of D.C.L., and soon after commenced his career as an advocate in the civil law courts. Here he rose to the highest eminence with unparalleled rapidity. He was appointed king's advocate-general in 1787; shortly after, judge of the consistory court, vicar-general of the province of Canterbury, and master of the faculties. He was knighted in 1788, and in 1798 became judge of the high court of admiralty and a privy-councillor. In 1790 he entered parliament as member for Downton, and in the following year was unanimously elected as member for the university of Oxford; which he remained till the coronation of George IV., when he was created a peer. "Devoting his brilliant talents and extraordinary acumen to the noblest branch of his profession—the study of international law, and living in times when a general war called all this knowledge into action, his decisions have passed into precedents, equal, if not superior, in authority, to those of the venerable fathers of the science, Grotius, Puffendorf, Vattel, &c." He was

an accomplished scholar, a profound reasoner, and an uncompromising supporter of established institutions in church and state. Died, Jan. 28, 1836. A bust of Lord Stowell, sculptured by Behnes, is in the National Portrait Gallery.

STRABO, a celebrated Greek historian and geographer, was born at Amasia, in Cappadocia, about B. C. 50, and travelled through Greece, Italy, Egypt, and Asia, endeavouring to obtain the most accurate information in regard to the geography, statistics, and political condition of the countries which he visited. The time of his death is unknown, but he is supposed to have died after 20 A. D. His great work, in seventeen books, contains not only a description of different countries, but the chief particulars of their history, notices of eminent men, and accounts of the manners and customs of the people.

STRADA, FAMILIANUS, an Italian historian and modern Latin poet, was born at Rome, in 1572. He entered the Society of Jesuits, and became professor of rhetoric at the Roman college, where he resided till his death, in 1649. His most famous work is the "History of the Wars in the Netherlands," between 1555—1590, which notwithstanding some faults and defects, and a natural bias in favour of Spain, is valuable and esteemed.

STRADA, JOHN, or **STRADANUS**, an eminent painter, born at Bruges, in 1536. He went early to Italy to perfect his art studies, and acquiring great reputation, was employed by Cosmo I., duke of Tuscany, and by the pope, and settled at Florence, where he executed many fine works. One of the most admired is a crucifixion. Strada painted animals with great spirit, and a few battle pieces. He is called sometimes *Giovanni Stradano*. Died, probably about 1605.

STRAFFORD, THOMAS WENTWORTH, Earl of, the great minister of Charles I. and lord-lieutenant of Ireland, was of an ancient and wealthy Yorkshire family, and was born at London, in 1593. He studied at Cambridge, married in 1611, was knighted, and travelled on the continent. He was returned to parliament as member for Yorkshire in 1614, and the next year was named *custos rotulorum* for the West Riding. He sat in several parliaments for Yorkshire, and without going to extremes, took part with the opponents of the court. He was once made sheriff of Yorkshire that he might not be returned to parliament, and was afterwards imprisoned for refusing a forced loan. In 1628 his course was changed, he went over to the side of the king, and was created Baron Wentworth, then viscount, lord president of the council of the North, and in 1629 privy-councillor. As president of the North he exercised arbitrary power, and violated the petition of right; and his love of power still unsatisfied, he was made, by his own desire, lord deputy of Ireland in July, 1633. His government was despotic and cruel; he would fain have driven out of the country all the Scots who had taken the covenant; he raised a large army, which was no doubt intended for the support of tyranny in England; and by his infamous claim of

the whole province of Connaught for the crown created general alarm, and led the way to the rebellion of 1641. Ireland, however, owes to him the introduction of the growth of flax, and the establishment of the linen manufacture. In 1639 Wentworth was created earl of Strafford, and received the title of lord-lieutenant of Ireland. He was soon after called to command against the Scots, but he effected nothing. He took his seat in the House of Lords in November, 1640, and was immediately impeached of high treason, Pym taking the lead against him. He was committed to the Tower, and in March, 1641, his trial took place, one of the most memorable of state trials. The whole House of Commons was present, with their commissioners from Scotland and Ireland, eighty peers as judges, and the king and queen as spectators. The management of the proceedings was intrusted to Pym. For seventeen days, says Guizot, he unflinched against thirteen accusers, who relieved one another, argued the charges which they brought forward. The impeachment seemed likely to fail, and a bill of attainder was proposed. The trial went on, Strafford closed his eloquent defence on the 13th April, the attainder was hurried on, and passed on the 21st, but the king refused his assent. The popular excitement rose to a panic, a report was spread that the House of Commons was to be blown up, and twice within a week a cracking of the floor caused the flight of the members. At last, moved by the tears of his wife, who hated Strafford, and was on the point of fleeing to France; influenced also by the intrigues and sophistry of the bishop of Lincoln, the king gave his assent to the attainder; and his minister, who had trusted in his promise of protection, was beheaded on Tower-hill, 12th May, 1641. Strafford's character is thus sketched by Macaulay:—"He was the first Englishman to whom a peerage was a sacrament of infamy, a baptism into the communion of corruption. As he was the earliest of the hateful list, so was he also by far the greatest; eloquent, sagacious, adventurous, intrepid, ready of invention, immutable of purpose, in every talent which exalts or destroys nations pre-eminent, the lost archangel, the Satan of the apostasy." Strafford's Letters and Despatches have been published in 2 vols. folio, and his life has been written by Forster. The attainder of the earl of Strafford was reversed in 1662.

STRANGE, Sir ROBERT, an eminent engraver, was born in one of the Orkney islands, in 1721. He first studied painting; but having entered into the army of the Pretender in 1745, he for a time lived in concealment, and afterwards went to Paris, where he became a pupil of Le Bas, the celebrated landscape engraver; and, on settling in London, in 1751, he applied himself to historical engraving, in which he arrived at great excellence. In 1760 he went to Italy, where he was chosen a member of the academies of Rome, Florence, and Bologna; he was knighted in 1787, and died in 1792. *Memoirs of his Life*, by James Dennistoun, appeared in 1855.

STRANGFORD, PERCY CLINTON SYD-

NEYSMYTHE, Viscount, diplomatist and miscellaneous writer, was born in 1760, and was educated at Trinity College, Dublin. Before he was of age he had contributed to the "Poetical Register," and he succeeded to his father's peerage in October, 1801. A short time previously he had entered the diplomatic service, and was already secretary of legation at Lisbon. Here he made a translation of the poems of Camoens, which he published in 1803, prefixing to it a *Life of the poet*. In 1806 he was appointed minister at the court of Lisbon; a position which, some two years later, he exchanged for that of envoy extraordinary and minister plenipotentiary, being at the same time created G. C. B., and sworn a member of the privy-council. When the Portuguese court emigrated to the Brazil, he was appointed to accompany it. Returning to England in 1816, in the following year he was sent to the court of Sweden, and was removed in 1820 to the more important post of ambassador at the Porte. In 1825 he was sent ambassador to Russia, and was at St. Petersburg when the Emperor Nicholas ascended the throne. In the summer of 1828 he returned to England. In 1825 he was made a Knight Grand Cross of the Hanoverian Guelphic order, and accepted the English barony of Penschurst, which gave him a seat in the House of Lords. In 1834 he was created an honorary D.C.L. of Oxford, at the installation of the duke of Wellington, with whom he had been associated as coplenipotentiary at the Congress of Verona, in 1822. Lord Strangford was an ardent lover of literature and the fine arts. He was a frequent correspondent of the "Gentleman's Magazine," under the initials of his name, P. C. S. S., and the signature often appeared in "Notes and Queries." He was well-known as a fellow of the Society of Antiquaries, of which he became vice-president. Died, 1855.

STREATER, ROBERT, an English painter, excelling in history, architecture, and landscape. At the Restoration, he was made serjeant-painter to the king. Born, 1624; died, 1680.

STRICKLAND, HUGH EDWIN, geologist and zoologist, was born at Righton, in the East Riding of Yorkshire, in 1811. He studied under Dr. Arnold, at Leham, and then at Oxford University, devoting himself thenceforth to the pursuits in which he became distinguished. Having investigated the geology of his native district, the Cotswold Hills, &c., and contributed many memoirs to the Transactions of the Geological Society, he visited Asia Minor, and published the results of his observations in the same Transactions. Mr. Strickland succeeded Dr. Buckland as reader in geology in the university of Oxford; he was also one of the earliest members of the Geological Society, and took part in establishing the Ray Society. He was an accomplished ornithologist, and among his numerous writings is a treatise on "The Dodo and its Kindred." He was killed by a train on the Great Northern Railway, while examining the cutting near Clarbrough Tunnel, 14th September, 1858.

STROZZI, FALLA, Florentine statesman

and scholar, one of the most illustrious families of Florence, 1372. He early showed a great passion for the study of the collection of Greece. Among his works of Plato, the head of the effected great imitation and worked on many and having associated with the M. of his party, excited the interest of his long retirement at P. 1462.

STROZZI, FIORENTINO, a patriot, was the son of a daughter of the Medici. He took the lead in 1527 led to the republic. The pope an overthrow it through for a time acquired the papacy of Pope Clement VI. enterprise of his country. For to his party Lorenzo younger, who, on the assassination of Venice. The people not answer the call; it; for Cosmo de' Medici government. Fined prisoner, and applied to the torture, he died by a volunteer sword, plunged immediately expired in 1538. Mr. T. Life of Filippo S.

STROZZI, PIERRE, having with the refuge in France, marshal, and signor, both by his descent to Scotland to act against the contributed to the same year he at the siege of the PO, proved as brave but his end was wounded in a fight overboard alive but perished, in 1592.

STROZZI, SEVERINO, mentioned. COLE, father and of whom died at century.—GUILFUSHED himself of the city of edifica." Died STROZZI, who died of two tragedies

diplomatist and minister in 1760, and was in Dublin. Before he succeeded to the October, 1801. A had entered the as already secret. Here he made ms of Camoens, prefixing to it he was appointed (son; a position later, he exchanged min-inary and min-istry at the same time worn a member of the Portuguese Brazils, he was appointed. Returning to the following year he Sweden, and was re important port. In 1825 he was a, and was at St. orocr Nicholas as a summer of 1828. In 1825 he was s of the Hanover-cepted the Eng-which gave him a. In 1854 he was of Oxford, at the of Wellington, associated as co-ress of Verona, t was an ardent fine arts. He was of the "Gentle- the initials of his signature often ueries." He was of the Society of became vice-pres English painter, cture, and land- n, he was made ng. Born, 1624.

ADWIN, geologist at Brighton, in the re, in 1811. He at Laleham, and devoting himself in which he being investigated district, the Con- tributed many s of the Geologi- Minor, and pub- sations in the ckland succeeded geology in the as also one of the ological Society, ological the Ray- sished ornitholo- s writings in "Its Kindred." He Great Northern the cuttings near- eptember, 1858. entiaze statesman

and scholar, one of the most eminent of the illustrious family of the Strozzi, was born in 1372. He early distinguished himself as a zealous promoter of classical studies; devoted a great part of his wealth to the maintenance of learned men in Florence, and to the collection of valuable manuscripts from Greece. Among those he procured were the "Politics" of Aristotle, the "Almagest" of Ptolemy, Plutarch's "Lives," and the works of Plato. In 1428 he was placed at the head of the university of Florence, and effected great improvements in its organization and working. Palla Strozzi was employed on many important political affairs, and having associated himself with the party opposed to the Medici, he was, with the rest of his party, exiled in 1435. He spent the rest of his long life in peaceful and studious retirement at Padua, and died there in 1462.

STROZZI, FILIPPO, a celebrated Florentine patriot, was born about 1488. He married a daughter of the last of the Medici, but nevertheless opposed their restoration to power. He took the lead in the revolution which in 1527 led to the re-establishment of the republic. The pope and the emperor combined to overthrow it three years later, and Filippo for a time acquiesced in the rule of Alessandro de Medici. But after the death of Pope Clement VII., he undertook the hazardous enterprise of restoring the liberties of his country. For this purpose he drew over to his party Lorenzo de' Medici, called the younger, who, on the 6th of January, 1537, assassinated Alessandro, and then escaped to Venice. The perpetration of this crime did not answer the object of those who contrived it; for Cosmo de' Medici succeeded to the government. Filippo having been taken prisoner, and apprehending he should be put to the torture, he resolved to anticipate the trial by a voluntary death, and finding a sword, plunged it into his breast, and immediately expired. This event took place in 1538. Mr T. A. Troilope has written a Life of Filippo Strozzi.

STROZZI, PIERO, son of the preceding, having with the rest of the family taken refuge in France, rose to the rank of field-marshal, and signalized himself by his services, both by land and sea. In 1548 he was sent to Scotland with a body of Italians, to act against the English; and in 1553 he contributed to the capture of Calais; but in the same year he received a mortal wound at the siege of Thionville. His son, FILIPPO, proved as brave as the rest of his family, but his end was unfortunate, for when wounded in a fight with the Spanish fleet, off the island of St Michael, he was thrown overboard alive by order of the admiral, and perished, in 1582.

STROZZI. Several poets of this name may be mentioned. TITO VESPASIANO and ERCOLE, father and son, natives of Ferrara, both of whom died at the beginning of the 16th century.—GIULIO STROZZI, who distinguished himself by a fine poem on the origin of the city of Venice, entitled "Venezia edificata." Died, 1636.—Also NICCOLO STROZZI, who died in 1654. He was author of two tragedies, "David of Trebizonde"

and "Conrad;" also "Idylls," "Sonnets," &c.

STRUENSEE, JOHN FREDERICK, first minister of Christian VII. of Denmark, was born at Halle, in Saxony, in 1737. He was brought up to medicine, and became in 1788 physician to the king of Denmark, whom he accompanied on his tour to Germany, France, and England. Soon after the marriage of Christian with the Princess Caroline Matilda of England, Struensee became a favourite of the young queen; and after a long course of court intrigues, Count Bernstorff and the other ministers were obliged to yield to him and his friend Count Brandt. Taking advantage of the imbecility of the monarch, he gradually came to direct the whole affairs of government. He endeavoured to introduce important reforms in the law and the administration, most of which were vigorously and violently opposed. His monopoly of power at length roused the jealousy of the principal nobility, who, aided by the young queen's mortal enemy, the queen-dowager, entered into a conspiracy to destroy him and his party, which they effected in the following manner. A scandalous charge was made against Queen Caroline Matilda, that she cherished a guilty passion for the hated minister; and on the night of the 16th of Jan., 1772, the conspirators suddenly aroused the king in his bed, and making him believe that his life was in danger, obtained his order for arresting the queen, Struensee, Brandt, and all their adherents. The result was, that they were tried and convicted as traitors on the most preposterous charges. Struensee made a cowardly confession. The queen too confessed her guilt, but it is difficult to admit the truth of it. Struensee and Brandt were beheaded and quartered; and the queen, who was confined in the castle of Cronenburg, would have probably shared a similar fate, had not a British fleet appeared in the Baltic, and conveyed her to Zell, where she died in 1776.

STRUTT, JOSEPH, an artist and antiquary, was born in 1749, at Springfield, in Essex, and was a pupil of Ryland the engraver. Uniting the study of antiquities with the practice of his art, he published, in 1773, his work entitled the "Regal and Ecclesiastical Antiquities of England," containing representations of the English monarchs, from Edward the Confessor to Henry VIII. This was followed, among other works, chiefly of an antiquarian cast, by his "Biographical Dictionary of Engravers," in 2 volumes; and his "Complete View of the Dresses and Habits of the People of England." In 1801 he published his last and favourite work, entitled the "Sports and Pastimes," &c., with numerous plates. He was also the author of "Queen Hoo Hall," "Ancient Times," and "The Test of Guilt." Died, 1802.

STRUVE, GEORGE ADAM, an eminent German jurist, born at Magdeburg, in 1619. He studied at the universities of Jena and Helmstadt, and graduated LL.D. at the latter in 1646. At the close of the same year he was appointed professor of law at Jena, and, in 1648, assessor to the high court of

the circle of Saxony. He removed to Weimar in 1667, where he had the appointment of privy-councillor; but after seven years' service he was again called to Jena as Ordinarius of the Judicial College, and professor of Canon Law. On the appointment, in 1680, of a council of regency during the minority of the duke of Weimar, Struvo was called to the responsible post of president, which he filled ten years. Notwithstanding the pressure of his professorial and judicial duties, Struvo found time to publish numerous learned works on law; among which the most celebrated are—"Syntagma Juris Feudalis," "Syntagma Jurisprudentiæ Civilis," "Jus sacrum Justinianæum," and "Jurisprudentis, oder Verfassung der Landüblichen Rechte," the first treatise of the kind in the German language. It appeared in 1680. Struvo was twice married, and had a large family by each of his wives. He died in 1692.

STRUVO, BURGHARD GOTTHELF, son of the preceding, was a learned and indefatigable German bibliographer. His talents attracted much notice at Jena, where he lectured on philosophy, antiquities, &c. His works on history, law, and philosophy, are numerous and highly esteemed. Born, 1671; died, 1738.

STRUVE, FRIEDRICH GEORGE WILHELM, a distinguished astronomer, born at Altona, in 1793. He was educated at the university of Dorpat, obtained a post in the observatory there in 1813, and was named director in 1817. He applied himself zealously to the study of "double stars," and the works he afterwards published, containing his "Observations," "Catalogue" and micrometric measurements, rank among the most important of their class. Struvo was early engaged in the trigonometrical survey of Livonia, and he took part in various other important geodetic works, especially the measurement of an arc of the meridian in Russia and Scandinavia, the longest ever attempted. This was one of his latest tasks, and was executed in conjunction with General Tenner. Struvo had been director of the noble observatory of Pulkowa since 1839, and he published a "Description de l'Observatoire central de Russie," and a Catalogue of its library. He engaged in laborious researches on the Milky Way, and determined the parallax of the star α Lyra. Died at St Petersburg, November 23, 1864.

STRYKE, JOHN, an ecclesiastical historian and biographer, was born at Stepney, in 1643; was educated at St Paul's School, and at Jesus College, Cambridge; and enjoyed the living of Low Layton, in Essex, 60 years, although he was never inducted. During his residence at this place, he applied diligently to the study of English history, and, by procuring access to numerous collections of manuscripts, was enabled to throw more light upon the period of the Reformation than any writer who went before him. His chief works are, "Ecclesiastical Monuments," 3 vols. folio; "Annals of the Reformation," 4 vols. folio; and an augmented edition of Stow's Survey of London, 2 vols. folio. He also wrote the Lives of the Archbishops Cranmer, Parker, Grindal, and Whitgift; and those of Sir John Cheke, Sir

Thomas Smith, and Bishop Aymer. During the latter part of his life he was rector of Hackney, where he died in 1737, aged 94.

STUART, ARABELLA. [ARABELLA.]

STUART, CHARLES EDWARD. [CHARLES EDWARD.]

STUART, DANIEL, an able political writer, known for many years as the editor and proprietor of the Morning Post and the Courier, was born in Edinburgh, 1766; but removed to London when a mere lad, his brothers, under whose care he was placed, being established there in connection with the press. Through their means he became acquainted with the spirit and views of different parties; and in 1795 he purchased several shares in the Morning Post, of which he ultimately became sole proprietor and editor. His success was rapid and flattering. His own ready pen, aided by that of his brother-in-law, Mr (afterwards Sir James) Mackintosh, Coleridge, Southey, and Wordsworth, raised the reputation of the paper beyond that of any contemporary journal. In 1803 he sold the Morning Post, and having become joint proprietor of the Courier, he increased the fame of this journal by the same sagacity, industry, and talent, that had raised the other. In 1810 he retired into private life, and for thirty years enjoyed in easy competence the fruits of the labours of an active life. Died, 1846.

STUART, LORD DUDLEY COURTS, eighth son of John, first marquis of Bute, by his second wife, Frances, daughter of Thomas Courts, the banker, was born in 1808. Having graduated at Christ's College, Cambridge, in 1823, he proceeded on a continental tour; and in 1824 he married a daughter of Lucien Bonaparte, prince of Canino. In 1836 he became M.P. for Arundel, and distinguished himself by his advocacy of the Reform Bill, and the other measures of reform supported by the liberal party. After being without a seat in parliament for 10 years, he was returned for Marylebone in 1847, and continued to sit for this borough till his death. His chief title to remembrance rests on his attachment to the Polish cause, which he embraced on the outbreak of the insurrection in Poland in 1830, and to which he adhered with undeviating constancy. Died at Stockholm, November 17, 1854.

STUART, GILBERT, historian and miscellaneous writer, was born at Edinburgh, in 1742, and received his education in the university. He studied jurisprudence, but became an author by profession. In his 22nd year, he published a "Dissertation concerning the Antiquity of the British Constitution;" for which he was complimented with the degree of LL.D. His next work was "View of Society in Europe;" but being disappointed of the professorship of law at Edinburgh, he removed to London, and became a writer in the Monthly Review. He, however, returned in 1773, and commenced the Edinburgh Magazine and Review, which was discontinued in 1776. Besides the works before mentioned, he wrote "The History of Scotland," a "History of the Reformation of Scotland," &c. Dropsy, brought on by a life of intemperance, caused his death in 1784.

STUART, GILBERT CHARLES [ARABELLA.]

CAN STUART, an English painter, was born of Scotch parents, at Rhodo Island, brought early to Scotland, graduated at the university, and subsequently became a painter, in 1781, and had among his pupils, Sir Joshua Reynolds, &c. In 1790 he lived at Philadelphia, and was successful in his art among the fine portrait of the late John Adams, Jefferson, &c. of the United States. Died, 1828.

STUART, HENRY, an English painter, was born at Rome, and made a grand effort for the relief of the poor in 1745, proved about 1747 Pope Benedict XIV. The extraction of the French king, and the bounty of the king, had been obliged to flee from France, and the French invaded Italy, his support to a party. Died, 1807.

STUART, JAMES [JAMES.]

STUART, JAMES [JAMES.]

STUART, JAMES, an English painter, was born originally gained his name as a painter; but having travelled to Italy, he visited Athens, in 1766, and employed himself in the architectural and the ravages of time, and returned to England, and to Greenwich Hospital, F.S.A., and published labours in a variety of Antiquities of Athens, 1788. There is a miniature in the National Collection.

STUART, JAMES, an English painter, was born in 1776. He was bred a painter, and became a writer in the Monthly Review. He, however, returned in 1773, and commenced the Edinburgh Magazine and Review, which was discontinued in 1776. Besides the works before mentioned, he wrote "The History of Scotland," a "History of the Reformation of Scotland," &c. Dropsy, brought on by a life of intemperance, caused his death in 1784.

STUART, GILBERT CHARLES [ARABELLA.]

CAN STUART), an eminent portrait-painter, was born of Scotch parents at Narragansett, Rhode Island, U.S., in 1755. He was brought early to Scotland, and is said to have graduated at the university of Glasgow. He subsequently became a pupil of West, in London, and began to practise as a portrait-painter, in 1781. He was very successful, and had among his sitters George III., George IV. (then prince of Wales), Louis XVI. of France, Sir Joshua Reynolds, his master, West, &c. In 1793 he returned to America, lived at Philadelphia, Washington, and Boston successively, and took the highest rank in his art among his countrymen. He painted the fine portrait of Washington which is now in the Boston Athenaeum, besides portraits of Adams, Jefferson, and three other presidents of the United States. Died at Boston, July, 1828.

STUART, HENRY BENEDICT MARIA CLEMENT, cardinal of York, younger brother of Charles Edward, the Pretender, and the last descendant of the royal line of the Stuarts, was born at Rome, in 1725. When the last grand effort for the restoration of his family in 1745 proved abortive, he took orders, and in 1747 Pope Benedict XIV. raised him to the purple. The extraordinary events arising out of the French revolution had the effect of making the cardinal dependent on the bounty of the king of England; for having been obliged to flee to Venice when the French invaded Italy, he was indebted for his support to a pension from the English court. Died, 1807.

STUART, JAMES FRANCIS EDWARD. (JAMES.)

STUART, JAMES. [MURRAY, Earl of.] STUART, JAMES, commonly called ATHENIAN STUART, a celebrated traveller, antiquary, and delineator of Athenian architecture, was born in London, in 1713. He originally gained his livelihood by painting fans; but having made himself master of Greek, Latin, and the mathematics, he travelled to Italy on foot, and afterwards visited Athens, in company with Nicholas Revett, a skilful architect, where they employed themselves in making drawings of the architectural relics which have escaped the ravages of time and violence. On his return to England, he became eminent as an architect, and was appointed surveyor to Greenwich Hospital; became F. R. S. and F. S. A., and published the result of his foreign labours in a valuable work, entitled "The Antiquities of Athens," 4 vols. folio. Died, 1783. There is a miniature portrait of Stuart in the National Collection.

STUART, JAMES, of Duncarn, was a scion of the noble house of Moray, and was born in 1776. He was bred to the legal profession, and became a writer to the signet in 1798. But with great aptitude for business, he became engrossed in political engagements, with which he maintained Whig principles in opposition to what was then called the "dynasty of Dundas" in Scotland. Certain trequent pasquinades reflecting on his honour and courage having been traced to Sir A. Rowell, the son of Dr Johnson's biographer, Mr Stuart fought a duel with him in March,

1822, when the baronet received a shot in the neck, which next day caused his death. Mr Stuart was tried for murder before the high court of Justiciary, and was acquitted. His experiments in farming and commercial speculations in the year 1823 proved so disastrous as to compel him to embark for America. There he resided for three years; and on his return to England he published an account of his travels in the United States, which obtained great success. Soon after, he undertook the editorship of the Courier newspaper, and when Lord Melbourne became premier in 1835, he obtained the office of inspector of factories, which he held till his death. Mr Stuart was distinguished for his taste in the fine arts, and his eminent social qualities procured him a hearty welcome wherever he appeared. Died, 1849.

STUART, JOHN, A.M., F.R.S.A., an antiquarian writer, and professor of Greek in Marischal College, Aberdeen, was born at Castleton, Kincardine, in 1751. He was the youngest son of John Stuart, of Inchbrick, M.D., and lineally descended from Walter Stuart, of Morpeth, in the Mearns, whose grandfather Murdoch, duke of Albany, was grandson of Robert the Second, by Elizabeth Mure, of Rowallan. He was a profound antiquarian, especially on all subjects connected with Scottish history, and was the friend and correspondent of Pinkerton, Chalmers, Jamieson, Generalis Hutton, Ray, &c. He was the author of the "Account of Marischal College and University," published in Sir John Sinclair's Statistical Account of Scotland; "Sketch of the Life of Dr Dunean Liddle," Aberdeen, 1790; and antiquarian essays communicated to the Royal Antiquarian Society of Scotland, consisting of "Observations upon the various Accounts of the Progress of the Roman Arms in Scotland," and "An Account of the Sculptured Pillars in the Northern Counties of Scotland." Died, 1827.

STUART, WORTLEY, Lady EMMELINE, whose name was long familiar to the literary world, was the second daughter of the duke of Rutland, by the Lady Elizabeth Howard, daughter of the 5th earl of Carlisle, and born in 1806. At an early age she gained considerable reputation as an authoress. She was a frequent contributor to the "Keepsake," the "Drawing-room Scrap-book," and other annuals, and confirmed her reputation by her sketches of travels in the United States, published under the title of "Etcetera," as well as by "Portugal and Madeira," "A Voyage in a Russian Steamer to St Petersburg," and by various poems. Lady Emmeline was of enthusiastic and poetic temperament, and probably, during her long residence abroad, had seen more of foreign countries and foreign society than any English lady of modern times. In 1831 she married the Hon. Charles Stuart Wortley, brother of Lord Wharncliffe, but was left a widow in 1844. She died at Beyrout in 1855 from the effects of the kick of a mule, which threw her, and fractured her leg, while she was riding on the hills in the neighbourhood of Jerusalem.

STUBBS, GEORGE, a painter, was born at Liverpool, in 1724; studied at Rome; and,

on his return, settled in London, where he distinguished himself as a painter of animals, particularly horses. He was an associate of the Royal Academy, and published "The Anatomy of the Horse," and a "Comparative Anatomical Exposition of the Structure of the Human Body, with that of a Tiger and a Common Fowl." Died, 1806.

STUBBS, or STUBBE, JOHN, a spirited lawyer, and a celebrated political writer, was born about 1541, and educated at Corpus Christi College, Cambridge, whence he removed to Lincoln's Inn. When the duke of Anjou became a suitor to Queen Elizabeth, Stubbs, who had become a Puritan, published a pamphlet against the alliance, entitled "The Discovery of a gaping Gulph, wherein England is likely to be swallowed up by another French Marriage." For this he was condemned to have his right hand cut off; and when the barbarous sentence was executed, Stubbs, with amazing fortitude, took off his cap with his left hand, and cried "God save the Queen."

STUERBOUT, DIERICK, or DIRK VAN HAARLEM, a distinguished early Dutch painter, who flourished in the 15th century. His fame rests now on the two large pictures of scenes from the history of the Emperor Otto III., and his Empress Mary, painted for the council hall of Louvain, in 1468, and now forming part of the royal collection at the Hague. From the style and execution of these remarkable paintings, it is inferred that Dirk of Haerlem was of the school of the Van Eycks. He is sometimes called Dirk of Louvain.

STUKELEY, WILLIAM, a celebrated English antiquary, was born at Holbeach, in Lincolnshire, in 1687; was educated at Bene's College, Cambridge, where he devoted his time principally to medical studies, and took the degree of M.B. He then settled at Boston, but removed to London in 1717, and in 1720 was admitted a fellow of the College of Physicians. In 1728 he went to reside at Grantham, where he acquired great reputation as a medical practitioner; but repeated attacks of the gout induced him to relinquish his profession and enter into holy orders; and he was presented to the living of All Saints, in Stamford. In 1747 the duke of Montague gave him the rectory of St George the Martyr, Queen Square, London, where he died, 1765. Dr Stukeley pursued his antiquarian researches with an unusual degree of spirit and enthusiasm, and he made important accessions to our knowledge of the early monuments of human art and industry belonging to our native country. But his speculations and theories were most fanciful and often absurd. His principal works are: "Itinerarium Curiosum; or, an Account of the Antiquities and Curiosities of Great Britain," 2 vols. folio; "Palaographia Barica; or Discourses on the Monuments of Antiquity, that relate to Sacred History," 4to; "An Account of Stonehenge," folio; "Palaographia Britannica," 4to; "The History of Carausius," 2 vols. 4to, &c. It was Dr Stukeley who first introduced in England the pretended work of Richard of Cirencester, "De Situ Britannia." (See notice of RICHARD OF CIRENCESTER.)

STÜLER, AUGUST, the distinguished Prussian architect, was born at Herlin in 1800. He was one of the most distinguished pupils of Schinkel, with whom he remained as assistant till 1830. He made himself known by the publication, first, of a volume of novel and beautiful designs for cabinet-work (Vorlegblätter für Moebeltischler), and these of numerous plans for public, useful, and decorative works. Besides many private houses which he built in Herlin, he designed the Council House at Perleberg, in the mediæval Italian style; he restored the Winter Palace of St Petersburg, the Herlin Exchange, and many seats of the nobility. His most celebrated work is the New Museum of Herlin, in the various parts of which he has successfully adopted various styles of architecture according to the destination of the several halls. Among his other works are the Exchange at Frankfort on the Main, the Catholic Church at Rhede, the palace of the grand-duke of Mecklenburg-Schwerin, and several churches at Herlin. Stüler long held the office of chief architect to the king of Prussia, and died at Herlin, in the spring of 1865.

STURGEON, WILLIAM, whose career presents a remarkable illustration of the successful pursuit of knowledge under difficulties, was born at Whitlington, in Lancashire, 1783, and was apprenticed to a shoemaker. In 1802 he entered the Westmorland militia; and two years later he enlisted in the royal artillery, in which corps he remained about 20 years. While in this corps he devoted his leisure to scientific studies, and appears to have made himself familiar with all the great facts of electricity and magnetism, which were then opening to the world. His earliest essays on electro-magnetism appeared in the Philosophical Magazine in 1823 and 1824. In 1825 he published, in the Transactions of the Society of Arts, the description of a complete set of novel electro-magnetic apparatus; and the Society of Arts testified their sense of the importance of this contribution by awarding to its author their large silver medal, with a purse of 30 guineas. He continued to furnish contributions to the Philosophical Magazine from time to time; and in 1830 he published a pamphlet, entitled "Experimental Researches in Electro-Magnetism, Galvanism," &c., comprising an extensive series of original experiments, and exhibiting an improvement in the preparation of the positive plates of the galvanic apparatus, which has not yet been superseded. In 1836, Mr Sturgeon communicated a paper to the Royal Society, which contains the description of a perfectly original magnetic electrical machine, in which a most ingenious contrivance was adopted for uniting the reciprocating electric currents, developed so as to give them one uniform direction. In the same year, the great industry of Mr Sturgeon was rewarded by two other important inventions. The first of these was that of the electro-magnetic coil machine, an instrument devised for the purpose of giving a succession of electric shocks in medical treatment, and which has been generally preferred by medical men to all others intended for similar purposes. The

other was an electric giving motion to works, Mr Sturgeon's Electricity, Magnetism, and Galvanism; and the publication of numerous scientific works.—Soon after appointed to the philosophy in the University of Manchester; but afterwards discontinued his experimental scientific life, overwhelped however, were to be awarded to him by a government.

STURM, CHRISTIAN, a man divine, born in Switzerland, is chiefly known for his frequent reprints in various countries, as well as his "Morgenblätter," every Day in the sacred poetry, &c. Died, 1786.

STURM, JACQUES, a celebrated mathematician, born in Geneva in 1803. The versatility of that tutor to the son of a tutor at Paris, and many of the teachers, to Arago, in May, 1829, he conducted the Academy of the discovery of the lyre; a theoretical attempt by some mathematicians, and by hitherto known, solution of numerous problems. The first account published in the "Encyclopédie Mathématique," with which he was received at soon after called at the Collège Royal professor of Mathematics. The same foreign member of London, and received visited England. Died, 1855.

STURM, JOHANN, a classical scholar at Seldan (Schleiden). After studying in Paris in 1829, and which prospered, decrees against those who had long doctrines, to quit the accepted the post-natalism of Strauss. His abilities raised him that, in 1866, the

other was an electro-magnetic engine, for giving motion to machinery. Besides these works, Mr Sturgeon edited the "Annals of Electricity, Magnetism, and Chemistry;" and published a treatise on electricity and galvanism; and one of his last works was the publication, in a collected form, of his numerous scientific Memoirs, in one vol. 4to.—Soon after he left the army he was appointed to the chair of experimental philosophy in the Honourable East India Company's Military Academy at Addiscombe, which he filled for many years with great credit. In 1842 he became superintendent of the Victoria Gallery of practical science at Manchester; but this institution was soon afterwards discontinued; and this able experimentalist saw himself, in the decline of life, overwhelmed with difficulties, which, however, were to a small extent mitigated by a government pension of £30 a year, awarded to him in 1849. Died, 1850.

STURM, CHRISTOPH CHRISTIAN, a German divine, born at Augsburg, in 1740. He is chiefly known as the author of "Reflections on the Works of God," which has been frequently reprinted in England and other countries, as well as in his own. He also published "Morning Converse with God, for every Day in the Year," several volumes of sacred poetry, highly esteemed in Germany, &c. Died, 1786.

STURM, JACQUES CHARLES FRANÇOIS, a celebrated mathematician, was born at Geneva in 1803. After studying at the university of that city and being engaged as tutor to the son of Madame de Stäel, he settled at Paris, and was soon made known to many of the leading scientific men, among them, to Arago, Ampère, and Fourier. In May, 1829, he communicated in a memoir to the Academy of Sciences the theorem, on the discovery of which his reputation chiefly rests; a theorem which had vainly been attempted by some of the greatest mathematicians, and by which, in the best method hitherto known, the complete analysis and solution of numerical equations is effected. The first account of the discovery was published in the "Bulletin Universel des Sciences Mathématiques, Physiques, et Chimiques, with which he was connected. He was received at the Academy in 1836; was soon after called to the chair of mathematics at the Collège Rollin, and, in 1840, became professor of mechanics at the Polytechnic School. The same year he was chosen foreign member of the Royal Society of London, and received the Copley Medal. He visited England in the following year. Died, 1855.

STURM, JOHANN, an eminent German classical scholar and theologian, was born at Seldan (Schielden), near Cologne, in 1507. After studying at Louvain, he settled at Paris in 1529, and established a school there, which prospered greatly; but the rigorous decrees against Protestants induced Sturm, who had long secretly held the reformed doctrines, to quit Paris in 1538. He gladly accepted the post of rector of the new gymnasium of Strasburg, and by his zeal and abilities raised it to so high a reputation that, in 1566, the Emperor Maximilian con-

stituted it a university. Sturm was its first rector. He was at the same time an active promoter of the reformation, and the steady friend of its persecuted adherents. His moderation and his leaning to the views of Calvin made him many enemies, and, in 1583, he was dismissed from his office, but was allowed to receive the salary. He wrote many works, philological, theological, and educational, in Latin so pure and elegant that he was named the German Cicero. He also edited the works of Cicero. Died, near Strasburg, 1589.

STURT, JOHN, engraver, was born in London, in 1658. He is principally celebrated for the extraordinary minuteness and beauty of his letters. The most curious of his works is the "Book of Common Prayer," which he executed on silver plates. Each page is hoarded with a vignette, and prefixed to the book is a portrait of George I., the lines of the face being expressed by writing so small, as scarcely to be read with a magnifying glass. This writing consists of the Lord's prayer, the decalogue, the prayers for the royal family, and the 21st psalm, &c. Died, 1730.

SUALEZ, FRANCISCO, a celebrated Spanish Jesuit, born at Granada in 1548. While studying at the university of Salamanca, he was induced to enter the order of Jesuits; and after teaching philosophy and theology at Valladolid, Rome, Alcalá, and Salamanca, he was appointed, by Philip II., first professor of divinity at the university of Coimbra, in 1597. He was a man of fervid piety, of retiring disposition, unwearied in the discharge of his professional and religious duties, and a voluminous writer. He took part in the controversy on grace and free-will between the Jesuits and the followers of Molina, and conceived a system called *Congruism*, a modified Molinism. His works were collected and published after his death in 23 vols. folio. Among them is the celebrated "Defensio Catholicæ Fidei contra Anglicanæ Sectæ Errores," which was written by command of Pope Paul V., against the oath of allegiance required by James I. It appeared in 1613, and was burnt publicly by the hangman both at London and Paris. Died at Lisbon, 1617.

SUTTERMANS, JUSTUS, a portrait and historical painter of Antwerp, who died in 1681.

SUCHET, LOUIS GABRIEL, duke of Albuféra, marshal of France, was born at Lyons, in 1772, and entered the army as a volunteer. He distinguished himself in Italy and Switzerland on numerous occasions; and, before the end of the year 1800, he had attained the rank of major-general. The battles of Marengo and Austerlitz added to his fame; and in 1803 he was appointed general-in-chief in Aragon, a post which he retained till the French were expelled from the Peninsula. During that period he displayed great knowledge of the art of war, succeeded in restoring discipline in the army, took Lerida, Tarragona, and other fortified places, occupied Mont Serrat, and was rewarded with the rank of marshal and a dukedom. By the justice of his administration and the humanity with which he

treated the conquered province, he won the grateful esteem of the people. On Napoleon's return from Elba, the frontiers of Savoy were intrusted to his defence. Died, 1820.

SUCKLING, SIR JOHN, poet and courtier, was born at Whitton, in Middlesex, in 1609. His father, who was comptroller of the royal household, sent him early on his travels, and he served a campaign in the army of Gustavus Adolphus. On his return he acquired reputation as a wit and a dramatist; and, at the beginning of the Scotch rebellion, he raised a troop of horse for the king's service, but their conduct in the field disgraced both themselves and their commander. An abortive attempt to effect the escape of the earl of Strafford, confined in the Tower under articles of impeachment from the Commons, implicated Sir John so seriously, that he thought it advisable to retire to France, where he died in 1641. His writings consist of letters, plays, and poems; the last of which have obtained a place in standard collections.

SUE, EUGÈNE, one of the most prolific novelists that France has produced, was born at Paris in 1801. Educated at the Lycée Bonaparte, he studied medicine in the hospitals and schools of Paris, entered a company of the Royal Body Guards as aide-major in 1823, and soon afterwards was transferred to the staff of the French army then preparing to enter Spain, under the Duc d'Angoulême, and was present at the siege of Cadiz, and at some minor operations. In 1825 he exchanged the army for the naval service, and visited America, Asia, and the Mediterranean coasts; thus obtaining a knowledge of ocean scenes and sailor-life which he afterwards turned to good account in his earlier tales. In 1828 he took part in the engagement at Navarino. In the following year, by the death of his father, he came into possession of a considerable fortune, became a painter, and entered the studio of Gudin. After contributing to some minor stage pieces, he wrote various novels, chiefly illustrative of naval life, which had great popularity in France. From 1832 to 1840 Eugène Sue confined himself to that class of fiction in which he endeavoured to emulate Fenimore Cooper in sea adventures, and Sir Walter Scott in historical delineations. But changing on a sudden his political views, he embraced the opinions of the Socialists, and in his "Mathilde," published in 1841, he laboured to expose the wrongs of the lower classes and the miseries of the poor, which he afterwards developed with so much power in the "Mysteries of Paris," and the "Wandering Jew." These two novels, which originally appeared in the "Journal des Débats," and the "Constitutionnel," were welcomed with great enthusiasm in France, and brought him a large accession of fame and fortune. In the columns of the "Constitutionnel," Eugène Sue, in 1846, published his "Martin l'Enfant Trouvé," a socialist romance, and in the following year "Les Sept Péchés Capitaux." "Les Mystères du Peuple," published in 1849-1858, which was intended to be an exposure of the misery to which the common people of every country have been reduced

in all ages of the world by injustice and tyranny, was suppressed by the government, in 1857, as a seditious and immoral publication. In 1848, after the revolution of February, Eugène Sue adopted the strongest democratic and socialist opinions, and was elected in 1850 a member of the National Assembly. His name was thought to shed so much credit over the visions of the *Red Republic* that he was considered one of its chiefs, and accordingly when Louis Napoleon perpetrated the *coup d'état* in December, 1851, Eugène Sue was driven into exile, and died proscribed in 1857.

SUETONIUS TRANQUILLUS, Cæsar, Roman historian, who lived in the 1st and 2nd centuries of our era. He was the son of a Roman officer, became an advocate at Rome, and afterwards secretary (*magister epistolarum*) to the Emperor Hadrian. This place he lost through some familiarities, not clearly described, with the Empress Sabina. Suetonius was the friend of Pliny the younger. He wrote numerous works, of which four are extant. The most important is his "Vite duodecim Cæsarum," which contains a large mass of curious and valuable facts, and though not systematically or rhetorically composed, but chiefly *anecdotic*, is esteemed impartial and trustworthy. It has passed through a great number of editions, and has been translated into almost all European languages. His other extant works are Notices of grammarians, rhetoricians, and poets. An English translation of Suetonius is included in Bohn's Classical Library.

SUETONIUS PAULINUS, a celebrated Roman general, who distinguished himself, A. D. 41, by retarding the revolt of Marstonians. In 69 he was appointed to the government of Britain, subdued the island of Mona (Anglesey) in 61, and the same year vanquished the heroic Boadicea. He soon after returned to Italy, became consul, and took part in the war with Vitellius.

SUEUR, EUSTACHE LE (LESUEUR), was nephew of Sir William Brandon, standard-bearer to the earl of Richmond at the battle of Bosworth, and being early taken to court, became the companion of Prince Henry. After the accession of the house, as Henry VIII., to the throne, Brandon was created Viscount Lisle. He accompanied the king to France in 1513, and on the conclusion of peace in the following year attended the beautiful Princess Mary to France on her marriage with the old almost dying king, Louis XII.; a marriage of policy, arranged by Wolsey, to which the young princess most reluctantly assented, and not without obtaining from her brother Henry a distinct promise that she should be "as she list" next time. The king bore of her love for Suffolk at that time. On the death of Louis, about three months after the marriage, Suffolk was sent ambassador to congratulate Francis I. on his accession. During his stay he was privately married to the widowed queen, and returning with her to England in April, 1515, they were publicly married at Greenwich in the presence of the king and queen, in May. It was displeasing

to the king, but of Wolsey, instead he imposed hard her plate and to binding her to a former marriage, favour of Henry, on various occasions from Calais in 15 took part in the rections in England at the siege and c died in 154 -ve years. H

E. (LESUBUR). BRANDON, Duke of, lam Brandon, count of Richmond at the and being early taken companion of Prince session of the throne, Brandon L'isle. He succeeded in 1513, and in the following utiful Princess Mary age with the old and XII.; a marriage of Wolsley, to which he reluctantly assent- ing from her brother he that she should be The king bore of that time. On the three months after she sent an ambassador on his accession. Dis- tately married to the turning with her to, they were publicly in the presence of It was displeas-

to the king, but, softened by the influence of Wolsley, instead of punishing it as treason, he imposed hard terms on Mary; taking all her plate and jewels and her full dowry, and binding her to repay the expenses of her former marriage. Suffolk still retained the favour of Henry, and was employed by him on various occasions. He made an incursion from Calais in 1523, almost reaching Paris; took part in the suppression of the insurrections in England in 1536-37; was present at the sieges and capture of Boulogne in 1544; died in 1545, having survived Mary seven years. His remains were buried at Windsor. Mary was the third wife of Suffolk, who after her death married a fourth.

SUGER, ABBÉ, first minister to Louis VI. and Louis VII., of France, was born of an obscure family in the 11th century, and was brought up at the abbey of St Denis, where he was the companion of Louis (VI.). On the accession of this prince to the throne, in 1108, Suger became his confidential adviser. He was named abbot of St Denis in 1122, and assumed the usual pomp of high church dignitaries; but the preaching of St Bernard induced him to renounce it. He had a large share in the conduct of the government, both in home and foreign affairs, and showed great practical wisdom. Louis VII. continued him in the same office. He endeavoured to prevent the young king going on the crusade, but failing, accepted the regency during the absence of Louis. In his old age he wished to promote a crusade, and even proposed to raise an army and be its general. This mad project was crossed by his death, in 1152. The Abbé Suger left a Life of his master, Louis VI., and an account of the principal events of his administration.

SUIDAS, a Greek writer, supposed to have lived in the 10th century, was the compiler of a lexicon, which is valuable for the fragments it contains of many lost works, and the information it gives respecting the authors.

SULLA, or SYLLA, LUCIUS CORNELIUS, a celebrated Roman general and statesman, was descended from a branch of the once illustrious family of the Cornelli; passed his youth in dissipation; and having obtained wealth by the bequests of a courtesan and of his mother-in-law, he aspired to political distinction, and in 107 B. C. he was chosen quaestor. He served with reputation under Marius, in Africa, in Pontus, and on various other occasions; and he rose to the consulship in the 49th year of his age. At its expiration he set sail for the East; and having landed in Thessaly, and received the submission of several Greek cities, he besieged and took Athens, and slaughtered multitudes of its inhabitants. He then proceeded to Asia, and after repeatedly defeating Mithridates, he concluded a very advantageous treaty with that powerful enemy. During his three years' absence from Italy, his enemies had regained the superiority in Rome. Marius had been recalled; the blood of the friends of Sulla had been shed in torrents; he himself had been proscribed, and his property confiscated. Meanwhile Marius died; and as soon as Sulla returned with his

victorious army, they entered Rome, and began the dreadful work of retaliation. At length, having glutted his vengeance by the murder or proscription of many thousand citizens, and the desolation of several Italian cities, he celebrated his bloody deeds by a triumph, exceeding in splendour any that preceded it, and caused himself to be named dictator, B. C. 81. He now ruled without restraint, repealed and made laws, abolished the tribuneship, added 300 knights to the senate, and admitted 10,000 slaves of persons proscribed to the rights of citizenship. Having governed the Roman world two years as dictator, he voluntarily laid down his power, and retired to private life. But resuming his early habits of debauchery, he was attacked with a disgusting disease, and he died, B. C. 78, aged 60.

SULLIVAN, JOHN, an American general, who served with reputation in the republican army at the battles of Brandywine and Germantown, in 1777, and subsequently against the Indians; but was deprived of his command, on a charge of peculation, and lived in retirement till 1788, when he became a member of congress, and was afterwards judge of New Hampshire. Born, 1741; died, 1795.

SULLIVAN, JAMES, brother of the preceding, was successively justice, attorney-general, and governor of the province of Massachusetts. He was for many years president of the Historical Society of Massachusetts; and was the author of "Observations on the Government of the United States of America," a "Dissertation on the Constitutional Liberty of the Press," &c. Died, 1808.

SULLY, MAXIMILIEN DE BETHUNE, Duke of, a celebrated French statesman and warrior, was born at the castle of Rosny, in 1559, and educated in the Protestant faith. At an early age he entered the service of the king of Navarre, afterwards Henry IV., of France, to whom he ever continued to be firmly attached. While at Paris with the prince, he narrowly escaped from the massacre of St Bartholomew, having been preserved by the president of the college of Burgundy, who concealed him for three days. In the service of the young king of Navarre, the Baron de Rosny, as he was then styled, distinguished himself on several occasions by a bravery approaching to rashness. He contributed to the victory of the Huguenots at the battle of Coutras; and took part in the battles of Arques and Ivry, at the latter of which he was wounded. But his abilities as a diplomatist and financier were no less remarkable. In 1586 he concluded a treaty with the Swiss, for a supply of 20,000 troops for his master's service; in 1597 he was placed at the head of the department of finance; and, two years afterwards, he was declared superintendent. About the same time he also negotiated the marriage of Henry with Mary de Medici. In his embassies to England, first to Queen Elizabeth, and afterwards to James I., he displayed great penetration and address, and concluded a treaty with James I., advantageous to both countries. In addition to his other offices, he was appointed grand

survivor of France, grand master of the artillery, governor of the Bastille, and superintendent of fortifications throughout the kingdom. His labours as minister of finance were attended with the happiest success; and the revenues of the government, which had been reduced to a state of complete dilapidation, by the combined effect of civil anarchy and warfare, were by his care restored to order. With a revenue of 35,000,000, he paid off, in 10 years, a debt of 200,000,000, besides laying up 35,000,000. Though frequently thwarted in his purposes by the rapacity of the courtiers and mistresses of the monarch, he nobly pursued his career, ever distinguishing himself as the zealous friend of his country, and not the temporizing minister of his master. His industry was unwearied. He rose every morning at 4 o'clock, and after dedicating some time to business, he gave audience to all who solicited admission to him. After his return from his mission to England, he was made governor of Poitou, and grand master of the ports and harbours of Provence; and the territory of Sully-sur-Loire was erected into a duchy in his favour, in 1606. After the death of Henry IV., Sully retired from public affairs, and he died in 1641. His "Memoirs," which are highly important and interesting, were translated into English by Charlotie Lennox, and form 8 vols.

SULPICIUS GALLUS, one of the earliest of the Roman astronomers. Serving in the army of Marcus Paulus, in Greece, during the year 168 B.C., his skill enabled him to discover that an eclipse of the moon would happen on the night previous to the day fixed for giving battle to Persens, king of Macedonia, and thus prevent the panic by which the soldiers would have otherwise been seized. He afterwards filled the office of consul.

SULPICIUS SEVERUS, an ecclesiastical historian of the 5th century. He wrote the "Life of St Martin of Tours," and an "Abridgment of Ecclesiastical History."

SULZER, JOHANN GEORGE, a Swiss philosophical writer, born in the canton of Zürich, in 1720. He was for a short time a country curate, then private tutor, until in 1747 he was appointed professor of mathematics at the Joachimsthal College, Berlin. He was received three years later associate of the Academy of Sciences in the class of speculative philosophy. After the loss of his wife, in 1760, he spent several years in his native country, but, by the desire of the king, Frederick II., he returned to Berlin, and was named professor of philosophy at the Military Academy, with a handsome pension. Sulzer had a great reputation in his day as a philosopher, but he has added nothing of permanent value to the literature of philosophy. His most celebrated work is the "Allgemeine Theorie der schönen Künste," published in 1771-74. His object in this investigation of the fine arts was to find a moral explanation of their influence. Of his other works may be named, his "Moralische Betrachtungen über die Werke der Natur;" and "Vernunftslehre philosophische Schriften." Died at Berlin, 1779.

SUMAROKOF, ALEXANDER, a Russian

poet and dramatist, the son of a general officer, was born at Moscow in 1727. He was educated in the seminary of cadets at Petersburg; and, while a student, wrote a tragedy, called "Koref," which was acted by his schoolfellows, and afterwards performed in the presence of the court, with such applause, as encouraged the author to proceed in his dramatic career. Besides tragedies and comedies, he wrote odes, lyrics, fables, satires, and other poems; together with a few prose pieces. He was created a councillor of state, and honoured with other marks of distinction. Died, 1777.

SUNDERLAND, HENRY SPENCER, first Earl of, was born in 1620. At the age of 13 he succeeded, by his father's death, to the title of Lord Wormleighton. He joined the king, Charles I., at Nottingham, at the beginning of the civil war, but, however, from any sympathy with the royal cause. He fought with distinction at Edgehill, followed Charles to Oxford, was created earl of Sunderland in June, 1643, and was killed at the battle of Newbury (as was Lord Falkland), 20th September of the same year. His wife was the beautiful and accomplished Lady Dorothy Sidney, sister of Algernon Sidney.

SUNDERLAND, ROBERT SPENCER, second Earl of, first minister of James II., was only son of the preceding, and was born about 1641. He spent some time on the continent during the Commonwealth, was sent by Charles II. on embassies to Madrid and Paris, in 1671, and was made a privy-councillor three years later. After another mission to Paris in 1678, he was appointed secretary of state; first opposed and then supported the bill for the exclusion of the duke of York from the throne; for which he fell into disgrace with the king, and was excluded from the council and the secretaryship. He was, however, soon reinstated, and in 1683 was made president of the council by James II. While receiving the full confidence of the king, Sunderland was in the pay of France, and was in negotiation with the prince of Orange. In 1687, he was created Knight of the Garter, and the same year he professed himself a Catholic. Edward Petre, a Jesuit, was his confidential instrument, the two being the chief advisers of the king. In 1688 his intrigues became known to James, and being dismissed from office, he retired, on the landing of the prince of Orange, to Holland. He was excepted out of the act of indemnity, and remained abroad two years. But after his return he gained the confidence of William III., and was his chief adviser. The king honoured him with a week's visit at his seat at Althorpe, in 1695, and soon after made him lord chamberlain and privy-councillor. He retired from public life in December, 1697, and died in 1702. Clever, insinuating, and unscrupulous, Sunderland left a character for baseness that is happily matched by that of few English statesmen.

SUNDERLAND, CHARLES SPENCER, third Earl of, primo minister of England, was second son of the preceding, and was born in 1674. He was returned to parliament as member for Tiverton, in 1695, and succeeded his father in the peerage in 1702. After the

death of his first duke of Newcastle 1698, a daughter thus strengthened the Whig party. In cal missions to the next year in Scotland; and appointed one of state. CHARLES SPENCER,
ter of England, was
ing, and was born
d to parliament in
1695, and succeeded
in 1702. After the

death of his first wife, a daughter of the duke of Newcastle, he married, in January, 1688, a daughter of the duke of Marlborough, thus strengthening his relation with the Whig party. In 1705 he was sent on political missions to Vienna and Berlin; took part the next year in negotiating the union with Scotland; and at the close of 1707 was appointed one of the principal secretaries of state. Dismissed in 1710, he refused the large pension which the queen offered him, and said that if he could not serve his country, at least he would not be a burden to it. On the accession of George I., Sunderland was named lord-lieutenant of Ireland, and took no prominent part in public affairs. In 1715 he was appointed lord privy-seal, and two years later he again became secretary of state and president of the council. In March, 1718, he was made first lord of the treasury. Sunderland, with other ministers, was deeply involved in the South Sea Scheme; but on the investigation of his case by the House of Commons he was acquitted. Though he was dismissed from his offices, he continued to exercise great influence on affairs till his death, which took place in April, 1722.

SURREY, Earl of. [HOWARD, HENRY.]
SUSSEX, Earl of. [RATCLIFFE,
THOMAS.]

SUSSEX, H. R. H. AUGUSTUS FREDERICK, Duke of, was the sixth son of King George the Third, and was born at Buckingham Palace, Jan. 27, 1773. Having made some progress in his studies in England, he was sent to Göttingen to complete them; thence he went to Italy, and while there, and still a minor, he married Lady Augusta Murray, second daughter of the earl of Dunmore. This marriage gave great offence to the king, and the prerogative court pronounced it to be null and void. The young couple, however, continued to live together as man and wife. The lady died in 1830, leaving two children, the elder of whom, Sir Augustus d'Este (since dead), claimed to be considered legitimate. This marriage, and the duke's connection with the Whig party, completely alienated him from his father, and of course from the court; and he had arrived at the age of 28 before he was created duke of Sussex, with an income of £12,000 per annum, which was subsequently increased to £18,000. His royal highness was a steady friend to art, science, and literature; and his presence as chairman at dinners or meetings for the benefit of public charities might always be reckoned on. We shall only add, that though but moderately learned, he knew how to value learning; his library was very extensive, and, perhaps, the richest private collection in England, in Bibles, in various tongues and of various editions. By his will he seemed to wish to be as much separated from his family in his death as he had been in his life, for he gave orders that he should be buried at the cemetery at Kensal Green, and not at Windsor! Died, April 21, 1843, aged 70.—His daughter, Madie d'Este, married Sir Thomas Wilde, who in 1850 became lord chancellor, and was raised to the peerage with the title of Baron Truro.

SUTCLIFFE, MATTHEW, an English divine, was born in Devonshire, and educated at Trinity College, Cambridge. He was admitted a civilian in 1582; but took orders, and became dean of Exeter. He founded a college at Chelsea, the fellows of which were to be employed in writing the annals of their times, and in combating the errors of Popery and Pelagianism. Sutcliffe was himself the first provost; but the establishment fell to decay, and became at last an asylum for invalid soldiers, being part of the present Chelsea Hospital. Ho was an eminent controversialist, and wrote numerous tracts against the Catholic propagandists. Died, 1629.

SUTTON, THOMAS, the founder of the Charter House, was a wealthy English merchant of the age of Elizabeth. Ho was born in 1532, at Knaith, in Lincolnshire; received his education at Eton and Cambridge, and afterwards studied at Lincoln's Inn. On becoming secretary to the earl of Warwick, he was made master of the ordnance at Warwick, where he signalized himself during the rebellion raised by the earls of Northumberland and Westmoreland. On account of his services at that period, ho obtained a patent for the office of master-general of the ordnance in the north, for life. In 1573 he commanded one of the batteries, which compelled the castle of Edinburgh to surrender to the English. While thus employed, he was singularly fortunate in a purchase which he made of two valuable manors from the bishop of Durham, with their coal mines, which laid the foundation of his immense riches. At the time of the Spanish armada he is said to have completely equipped a ship of war at his own expence, called by his own name, and sent to join the fleet under Drake. His personal expenditure was in a princely style, till the death of his wife, in 1602, threw him into melancholy, which occasioned a total change in his mode of living; and he then resolved to dedicate his vast wealth to the benefit of his fellow-creatures. He accordingly purchased from the earl of Suffolk the dissolved monastery of the Chartreux, called Howard House, and there founded the munificent institution, known now as the Charter House; but the founder scarcely lived to witness the completion of his noble establishment. He died in 1611, and his remains, which at first were deposited in Christchurch, Newgate Street, were afterwards removed to a vault prepared for them in the chapel of the Charter House.

SUWAROW, or SUVAROFF, ALEXANDER VASSILOVICH, Count Rymnikski, Prince Italinski, a celebrated Russian field-marshal, was born in 1730, at Suskol, in the Ukraine, and educated at the cadet school of St. Petersburg. He entered the army as a private soldier, distinguished himself during the Seven Years' War; and, after 20 years' service, was raised to the command of a regiment. In 1768 he obtained the rank of brigadier-general, and served several campaigns in Poland, receiving, in reward for his courage and conduct, the crosses of three Russian orders of knighthood. In 1773 he was appointed to the command of a division under Count Romanzoff, and com-

[SWI]

tophica et Mineralia," 1734; "Economia Regni Animalis," and "Regnum Animale." In theology, the "Arcana Coelestia," "De Cultu et Amore Dei;" "On Heaven and Hell," "On Conjugal Love," and the "True Christian Religion." Emerson, who in his "Representative Men" selected Swedenborg as the type of the mystic, remarks that "there is no such problem for criticism as his theological writings, their merits are so commanding; yet such grave deductions must be made." He died in London, in 1772.

SWIFT, Dr JONATHAN, dean of St Patrick's, a celebrated political, satirical, and miscellaneous writer, was born at Dublin, in 1667. He was the grandson of Thomas Swift, vicar of Goodrich, in Herefordshire, who married Elizabeth Dryden, aunt of the poet, and by her had six sons. One of these sons, named Jonathan, who was bred an attorney, had married before he went to reside in Ireland; and, dying soon after, left his widow pregnant. She went to live with her brother-in-law, Godwin Swift, an attorney at Dublin, where she gave birth to the subject of this article. When Mrs Swift returned to her friends in Leicestershire, she left this child to the care of his uncle, who sent him first to the school of Kilkenny, and next to Trinity College, Dublin, where, applying himself to history and poetry, to the neglect of academical pursuits, especially mathematics, he was at the end of 4 years refused the degree of B.A., and even at the end of 7 years he was only admitted *speciali gratia*. In 1688 he lost his uncle, and being left without support, he came to England, where he waited on Sir William Temple, who being related to Swift's mother by marriage, received him with kindness, and made him his companion. During his residence with that statesman, he had frequent interviews with King William, who offered him a troop of horse, which he declined, his thoughts being directed to the church. After some time he quarrelled with his patron, and went to Ireland, where he took orders, and obtained a prebend in the diocese of Connor. But he soon returned to Sir William Temple, who, sinking under age and infirmities, required his company more than ever. During the few remaining years of that statesman's life, they therefore remained together; and, on his death, Swift found himself benefited by a pecuniary legacy and the bequest of his papers. He next accompanied Lord Berkeley, one of the lords justices, to Ireland, as chaplain, and obtained from him the livings of Laracor and Rathbigan, on the former of which he went to reside. During his residence there, he invited to Ireland Miss Johnson, the lady whom he has celebrated by the name of Stella, and who was the daughter of Sir William Temple's steward. She was accompanied by a Mrs Dingley, and the two ladies lived in the neighbourhood where Swift was at home, and at the particular connection lasted till Stella's death. In 1701 he took his doctor's degree, and entered on public life as a political pamphleteer. He also published, anonymously, his humorous "Tale of a Tub," and the "Battle of

the Books." On the accession of Queen Anne he visited England, where he lived during a great part of her reign, and distinguished himself as a powerful writer on the side of the Tories. Having become intimate with Harley and Bolingbroke, he exerted himself strenuously in behalf of their party, taking a leading share in the Tory periodical, the Examiner, while with his battery of pamphlets and pasquinades, replete with bitter sarcasm or bold invective, he kept up a constant and galling fire on their political adversaries. But though immersed in politics, he did not neglect general literature. In 1711 he published a "Proposal for correcting, improving, and ascertaining the English Tongue," in a letter to the earl of Oxford, the object of which was to establish an institution to secure the purity of the language. A bishopric in England was the grand object of his ambition; but Archbishop Sharpe, on the ground, it is said, of his "Tale of a Tub," having infused into the mind of Queen Anne suspicions of his orthodoxy, the only preferment his ministerial friends could give him, was the Irish deanery of St Patrick's, to which he was presented in 1713. He accordingly, though by no means willingly, returned to Dublin, where he attended to his ecclesiastical functions, and made some important reforms in the chapter of St Patrick's. In 1716 he was privately married to Miss Johnson; but the ceremony was attended with no acknowledgment which could gratify the feelings of the victim of his pride and cruelty. The ascendancy which he acquired over Miss Hester Vanhomrigh, another accomplished woman, was attended with circumstances still more censurable. He became acquainted with her in London, in 1712; and as she possessed, with a large fortune, a taste for literature, Swift took pleasure in affording her instruction. The pupil became enamoured of her tutor, and even proposed marriage to him; but being probably at that time engaged to Stella, he avoided giving her a decisive answer. This affair terminated fatally; for, ultimately discovering his secret union with Stella, the unfortunate lady never recovered the shock, and died in 14 months after, in 1723. It was about this period that he made his first great efforts to better the condition of Ireland. He published a "Proposal for the universal Use of Irish Manufactures," which rendered him highly popular; and when his celebrated "Letters" appeared, in which he so ably exposed the job of Wood's patent for a supply of copper coinage, he became the idol of the Irish people. Soon after this, he wrote his admirable "Gulliver's Travels;" and the next event worthy of record is the death of his much-injured Stella. And now the fate which he had often apprehended overtook him; the faculties of his mind decayed, and he sank into absolute idiocy. After three years of mental suffering, he died, in 1745, aged 77; having bequeathed the greatest part of his fortune to a hospital for lunatics and idiots. It would be useless now to enumerate his various writings; the most important are, "The Drapier's Letters," "The Tale of a Tub," and "Gulliver's Travels." From each

and all of these, as well as from his domestic history, a tolerably correct estimate of his real character may be drawn, difficult though it be to delineate a character in which the best and worst of human passions are so strangely blended.

SWIFT, DEANE, a relation of the preceding, was descended, by the mother's side, from Admiral Deane, a naval officer in the time of Cromwell. He was the author of "An Essay on the Life, Writings, and Character of Dr Jonathan Swift," and died in 1783.

SWINDEN, JAN HENRIK VAN, professor of philosophy, logic, and metaphysics at Franeker, and afterwards of mathematics and astronomy at Amsterdam, was born at the Hague, in 1746. In 1803 he was nominated a correspondent of the French Institute; he was also a member of the Directory, under the Batavian republic, and counsellor of state in the service of the king of the Netherlands. He was the author of several scientific works, and died in 1823.

SWITHIN, St, bishop of Winchester in the 9th century, became chaplain to Egbert, educated Egbert's son, Ethelwulf, who, on his accession, made him his chancellor, and, about 852, bishop of Winchester. St Swithin distinguished himself by a diligent and devoted discharge of his ecclesiastical offices, and by great humility and liberality to the poor. After his death he was in great repute as a worker of miracles. Died, 862. He was recognized as a saint in the 10th century, and the translation of his remains to the shrine in Winchester cathedral was fixed for the 15th July, since observed in England as his festival. But, according to the tradition, a long continuance of rainy weather caused a delay of forty days in the translation; and this gave rise to the well-known popular belief about St Swithin's day and the weather.

SYBRECHT, JOHN, an eminent landscape painter, born at Antwerp, about 1630; died in London, where he had many years resided, about 1703.

SYDENHAM, CHARLES EDWARD POULETT THOMSON, Lord, governor-general of Canada, was the son of J. Poulett Thomson, a London merchant, and was born in 1799. When about 20, he became resident in St Petersburg as the correspondent of his father's firm; and, until his accession to public office, in 1832, he continued to be connected with mercantile business. His political life commenced in 1826, as member for Dover; but in 1832 being returned for both Dover and Manchester, he gave preference to the latter. On the formation of the reform cabinet he was appointed vice-president of the Board of Trade, and treasurer of the navy; he became president of the Board of Trade in 1834; and, in 1839, succeeded Lord Durham as governor-general in Canada. He arrived in Quebec in October, 1839, assumed the reins of government, and in the following year her Majesty conferred on him the peerage of the United Kingdom, by the title of Baron Sydenham of Toronto. Under his administration the prosperity of Canada was gradually recovering, but he did not live to carry into execution many judicious mea-

asures for the colony which he had contemplated. Whilst riding near Kingston, Lord Sydenham met with an accident by the falling of his horse, and died, Sept. 12, 1841.

SYDENHAM, FLOYER, an eminent Greek scholar, was born in 1710, and educated at Wadham College, Oxford, where he took the degree of M.A. in 1734. He translated some of the Dialogues of Plato into English; but the want of patronage involved him in embarrassments; he was arrested and thrown into prison for a trifling debt due for his frugal meals, and there died in 1738. Such was the sympathy which his sad fate excited, that it gave rise to that excellent institution, the Literary Fund.

SYDENHAM, THOMAS, the eminent English physician, was born in 1624, at Winford Eagle, in Dorsetshire. He was educated at Oxford, and became about 1649 a fellow of All Souls College. After a visit to the celebrated medical school of Montpellier, he graduated M.D. at Cambridge, and established himself as physician in London. He acquired a high reputation and a very large practice; and by his singular acuteness as observer and his accurate descriptions of the symptoms of diseases, he rendered to the science of medicine services of permanent value. He avoided equally the errors of those who carried the chemical theories to extremes, and of those who went too far with mathematical theories, and followed for himself the safe and fruitful path of observation and experiment. He introduced a most important change in the treatment of fevers and small pox, and carefully studied the relation between the conditions of the atmosphere and epidemic diseases. His works are not numerous, but are much esteemed, and have passed through many editions. Died at London, 1689. The "Sydenham Society," named after this great physician, was instituted in 1843 for the purpose of printing a succession of important medical works, both ancient and modern, and British and foreign. Its first publication was the complete works of Sydenham.

SYDNEY. [SIDNEY.]

SYLLA. [SULLA.]

SYLVESTER II., Pope (GERBERT), was a native of Auvergne. He was of an obscure family, but received a superior education, studying first in the monastery of Auxerre, and afterwards in Spain. He was made abbot of Bobbio by the Emperor Otto II., and became very distinguished as a teacher. His attainments in science procured him the reputation of a magician, which was the numerous useful inventions attributed to Gerbert is the balance-clock, which was in use till the adoption of the pendulum in 1650. Gerbert was tutor to Otto III., and subsequently head of the school of Rheims, which he made one of the first in Europe. Robert, afterwards king of France, was among his pupils. In 992 he was named archbishop of Rheims, on the deposition of Arnoul; was deprived after three years; and in 998, through the influence of Gerbert, was named archbishop of Narbonne. He was called to the papal chair on the death of Gregory V., and administered the

affairs of the church with much prudence and moderation. He was the first French pope. Died, at a great age, 1003. The tomb of Sylvester in the Lateran church was opened in 1618, and his remains, invested with the robes of office, were in perfect preservation; but a touch dissolved them into dust. Some of his letters and *opuscula* are extant.

SYLVESTER, JOSHUA, a quaint English poet, known in his day as the "silver-tongued Sylvester," was born in 1563; and died in Holland in 1618. He translated into English verse "Du Bartas's Divine Weeks and Works;" and wrote, amongst other pieces, a satire against tobacco, entitled "Tobacco battered and the Pipes shattered," &c.

SYLVIVS, ÆNEAS. [PIUS II.]

SYMES, MICHAEL, an English officer, who was sent as ambassador to the Burmese court, at Amrapoora, in 1793, and had the satisfaction of concluding an advantageous treaty of commerce with the Burmese emperor. On arriving in England, Major Symes published the account of his "Embassy to the kingdom of Ava." He died, from fatigue, shortly after the disastrous retreat of Sir John Moore's army, being then colonel of the 66th regiment of infantry, January, 1809.

SYMMONS, Dr CHARLES, was born in 1749, at Cardigan, which town his father represented in three successive parliaments. He was the author of "Inez" and "Constantia," dramatic poems; a metrical translation of the *Æneid*, and a "Life of Milton." Dr Symmons was a zealous supporter of the Literary Fund Society. Died, 1826.—**CAROLINE SYMMONS**, his daughter, was remarkable for precocity of talent. She was born in 1788; and after her death, which took place in 1812, her father published a collection of her poems.

SYNCELLUS, GEORGE, a monk of Constantinople, who flourished A. D. 800. He wrote a "Chronography," or Universal History, which is extant. It is substantially identical with a similar work by Eusebius.

SYNESIUS, of Cyrene, an ancient father, and bishop of the church, who flourished at the beginning of the 6th century. His works, consisting of about 150 epistles on philosophical and polemical subjects, are in high esteem with the learned.

SZALKAI, ANTHONY VON, a Hungarian poet, who is regarded as the founder of the dramatic literature of his country. His "Pikko Hertzeg" is the first regular piece composed in the Hungarian language; he also wrote a tragedy of the *Æneid*. Died, 1804.

T.

TACCA, PIERO JACOPO, a celebrated Italian sculptor, was a pupil of John of Bologna. Two of his greatest works are the statue of Ferdinand III., grand-duke of Tuscany, with four slaves chained at his feet, at Leghorn; and the equestrian figure of Philip IV., at Madrid. Died, 1640.

TACITUS, CAIUS CORNELIVS, the celebrated Roman historian, was the son of Cornelius Tacitus, procurator in Belgic Gaul, and born probably about A. D. 54. He early distinguished himself as an advocate, and in his twenty-first year married the daughter of Julius Agricola. In the seventh year of Domitian, A. D. 88, he became prætor; but soon after he left Rome, and, during his absence, Agricola died. In the short reign of Nerva, he succeeded Virginius Rufus as consul, A. D. 97, and delivered the funeral oration in honour of his predecessor. Under Trajan, Tacitus enjoyed great distinction, and lived on terms of friendship with the younger Pliny, in conjunction with whom he pleaded against Marus Priscus, proconsul of Africa. It was at this period that he published the "History of Rome, from Galba to the death of Domitian," part of which only has escaped the ravages of time. This work was followed by the "Annals," from the year of Rome 767 to the

death of Nero, in 821. He also wrote "The Life of Agricola," "The Manners of the Germans," and a "Dialogue on Oratory." No name stands higher as historian than that of Tacitus, and his writings are a rich storehouse of political and philosophical wisdom. He displays a profound acquaintance with human nature, and with the subtlest influences that affect human character and conduct. His style is remarkable for conciseness, vigour, apparent abruptness, and occasional obscurity; and his writings, like all the productions of great minds, charm most those who study them best. They have been translated into almost every European language. The exact date of his death is not known.

TACITUS, MARCUS CLAUDIVS, Roman emperor, elected on the death of Aurelian, A. D. 275, when in his 75th year. He was descended from the great historian, and had been twice consul; but he reigned only six months, in which short space he displayed singular wisdom, vigour, and moderation.

TAFFI, ANDREA, an Italian artist, born at Florence in 1213. He introduced into Italy the art of designing in mosaic, which he learnt from some Greeks employed at Venice. Died, 1294.

TAGLIACCOZZI, or TALIAIACOTIVS, GAS-

PARK, an eminent Italian surgeon, was born at Bologna, in 1548, where he was for many years anatomical professor. He applied himself chiefly to curing wounds of the ears, lips, &c., but more particularly of the nose. His method of restoring lost noses, which has obtained the name of the *Talpacotian* process, has both been performed and written on by Mr Carque and Mr Travers. It appears, also, that a similar operation had long been practised in India. Died, 1599.

TALBOT, JOHN, Lord, a famous military commander, was the second son of Sir Ilichard Talbot, of Goodrich Castle, in Shropshire, and born in 1373. In the second year of Henry V., he was appointed lieutenant of Ireland, where he suppressed a rebellion, and brought the chief, Donald Maemurrough, to England. In 1420 he attended Henry V. to France, and was present with him at his two sieges and triumphant entry into Paris. In the next reign he laid siege to Orleans, where his name struck terror into the French soldiers; but the appearance of John of Arc turned the scale, and the English army retreated. The battle of Patay completed the disaster, and Lord Talbot was made prisoner. At the end of three years and a half he was exchanged, and again led the English to victory. He took many strong places, and carried his arms to the walls of Paris, for which he was created Earl of Shrewsbury, and raised to the dignity of a marshal of France. On his return from France he was again sent to Ireland, and the earldoms of Wexford and Waterford were added to his honours. He again sought fame on French ground, was made lieutenant-general of Aquitaine, reduced several towns, and was marching to the relief of Châtillon, when his usual good fortune forsook him, and he and his son fell on the field of battle, July 17, 1453. The English on this occasion were wholly routed, and their expulsion from France soon followed.

TALBOT, CHARLES, Earl, afterwards duke of Shrewsbury, lord-lieutenant of Ireland, was son of the eleventh earl of Shrewsbury, and was born in 1660. He became a zealous promoter of the revolution, joining the prince of Orange in Holland, and coming over with him; was made secretary of state, and in 1694 was created marquis of Alton and duke of Shrewsbury. He was appointed one of the lords justices during William's absence in Holland, in 1695, twice held the office of lord chamberlain, spent several years in Italy, was sent ambassador extraordinary to France, in 1712, and in the following year was named viceroy of Ireland. He soon left Ireland, and was sent for by Queen Anne two days before her death, to assume the direction of affairs as lord treasurer, and the peaceable accession of the House of Brunswick was greatly promoted by his prudent and decisive measures. As a statesman he was too changeable to gain the confidence of any party. While openly supporting William III. he secretly corresponded with James II., and he was dismissed from office by George I. soon after his accession. Died, 1718.

TALBOT, ROBERT, an English antiquary and divine, was born at Therp, in North-

amptonshire; was educated at Oxford; obtained a prebend in Wells cathedral, in 1641; and died, treasurer of Norwich cathedral, in 1558. He paid great attention to the antiquities of his native country, and was the first English writer who illustrated the Itinerary of Antonianus, by a commentary and notes.

TALBOT, CHARLES, Lord TALBOT, lord chancellor of England, was the son of William Talbot, bishop of Durham, and was born in 1684. Educated at Oxford, he became fellow of All Souls, early distinguished himself at the bar, and was returned to parliament as member for Tregony, in 1719. He subsequently represented the city of Durham. In 1720 he was appointed solicitor-general, and in 1733 was made lord chancellor and privy-councillor, and created Baron Talbot. He had the reputation of an able lawyer, an upright and sagacious judge, and a good orator. Pope and Thomson eulogized his character. His portrait, by Richardson, is in the National Portrait Gallery. Died, 1737.

TALFOURD, THOMAS NOON, an eminent English judge, poet, and miscellaneous writer, was born at Reading in 1795. His father was a large brewer. His mother was the daughter of a dissenting grammar school, and he afterwards studied for some time under Dr Valpy. In 1813 he became a pupil of Mr Clitty; in 1821 he was called to the bar, and soon after travelled on the Western Circuit, discharging at the same time the duties of law-reporter to the *Times*. Every year brought out more fully his thorough knowledge, his power as an orator, and his painstaking zeal as a lawyer. In 1835 he was returned as a member of parliament for Reading. In his representative capacity he introduced and carried through two useful measures, viz., the Custody of Infants Act, and the Copyright Act of 1811: but he continued as diligent as ever in his professional duties, and he was raised to the Bench in 1849. Mr Justice Talfourd's contributions to literature were both in prose and verse; but it is as a poet, and through his dramas, that he will be best remembered. His three tragedies, "Ion," "The Athenian Captive," and "Glencoe," are amongst the few modern plays that have stood the test of representation and proved successful on the stage. Of these, the first, "Ion," is the most celebrated. It was privately printed, and noticed in the "Quarterly Review" with high praise some time before it was represented in 1833 by Macready, then lessee of Covent Garden. Of Mr Talfourd's prose works, his "Vacation Rambles" is a most genial work, evincing fine literary culture, and the full enjoyment of natural beauty; while the lovers of Charles Lamb will always be grateful to him for his Memorials of that delightful humorist. In 1854, as he was addressing the grand jury at the Stafford Assizes, he was seized with a fit of apoplexy, and died almost before he could be carried out of court. In his address to the grand jury he was lamenting the want of a genuine kindly relation between the upper and lower classes, between employers and employed, and his last words were:—

I were to be asked what is the great want of English society, I would say in one word the want of sympathy between class and class; " a noble utterance, and one specially in harmony with Justice Talfourd's life and character.

TALLAGOTIUS. [TAGLIACOZZI.]

TALISSIN, termed PEN BEIRDD, or Chief of the Bards, is regarded as the most eminent of the ancient British poets. He lived in the 6th century; and his name has been handed down to posterity in conjunction with the two Merlins, under the appellation of the three principal Christian bards.

TALLARD, CAMILLE D'HOSSUN, Duke de, a celebrated marshal of France, was born in 1652. After having distinguished himself under Condé, in Holland, and under Turenne, in Alsace, he gradually rose to be lieutenant-general in 1693. He was, in 1697, sent ambassador to England, to negotiate concerning the succession to the crown of Spain on the death of Charles II. War breaking out in 1702, he received a command on the Rhine, distinguished himself at Kaiserswerdt and Mulheim, took Trarbach, and was honoured with a marshal's staff; and after he had defeated the Imperialists before Landau, and the town had capitulated, he announced his success to Louis XIV. In the following terms: "I have taken more standards than your Majesty has lost soldiers." He was afterwards opposed to the duke of Marlborough and Prince Eugène, and was taken prisoner at the battle of Hochstedt; on which occasion he said to the duke, "Your Grace has beaten the finest troops in Europe." The duke replied, "You will except, I hope, those who defeated them." Marshal Tallard remained in England till 1712, when he returned to Paris, and was created a duke. In 1726 he was made minister of state, and died in 1728.

TALLEYRAND, PERIGORD CHARLES MAURICE DE, the celebrated French diplomatist, was born at Paris in 1764, and was descended from one of the most illustrious houses of France. As he was intended for the church, he entered the seminary of St Sulpice; and his ready wit, insinuating manners, and a quick penetration into the real character of men, caused him, in 1780, to be named agent-general for ecclesiastical affairs. Eight years later he became bishop of Autun, and he had gained a considerable reputation when the revolution commenced. He was chosen deputy by the clergy of his diocese to the States-general in 1789, and at once threw himself warmly on the popular side. Acting as the representative of the clergy, he proposed the suppression of tithes, and brought forward the decree which gave the property of the church to the state. Deaf to every appeal of the clergy, he ceased not to enforce the law which obliged them to swear obedience to the civil power, and officiated in his pontifical robes at the Feast of the Federation in the Champ de Mars, on the 14th of July, 1790, where he was the first to take the oath. He subsequently consecrated the first constitutional bishops, and for this was excommunicated by Pope Pius VI. He then gave up his bishopric, and was elected a member of the administration of

the department of the Seine. He proposed the plan of a great national school on philosophical principles; and in the discussion which followed gave the first ideas for the Institute, which was established five years afterwards. In 1792 Talleyrand was sent to England on a secret mission; but as he was suspected both by the Jacobins and the emigrants, his presence was disapproved, and the English minister, in 1794, gave him and the French ambassador, M. de Chauvelin, orders to quit the English territories within 24 hours. He then left France for the United States, and there employed himself in commercial speculations, until he was recalled in 1798 by a decree of the Convention. On his return he was appointed minister for foreign affairs, chiefly through the influence of Madame de Stael, and supported himself with the utmost sang-froid against numerous attacks from different parties. He knew the ambition of General Buonaparte to make himself supreme; and, with Sieyès as his colleague, he became the mainspring of the movements in the cabinet of the first consul. He was the negotiator with Austria at Luneville, as well as with England in the treaty of Amiens. A brief, issued by Pope Pius VII., having released him from the obligation of celibacy, he married Madame Grand; and on Napoleon becoming emperor, he was made grand chamberlain, and in 1806 prince of Benevento, still retaining the foreign portfolio. In March, 1806, he opened negotiations of peace with the English government, but the death of Fox put an end to them. In 1807 he was made vice-grand elector; having, besides, the titles of grand chamberlain and prince of Benevento; and was superseded, as foreign secretary, by De Champagny, in consequence of his opposition to the project of making Joseph Buonaparte king of Spain. The first reverse of the French arms increased Napoleon's irritation against his clear-sighted advisers, and Talleyrand was excluded from the cabinet and placed under surveillance. Buonaparte saw his error when too late. He recalled Talleyrand; but Talleyrand would not accept his invitation. No one can tell what influence he exercised but himself; and as by his will he has prohibited his heirs from publishing his memoirs before the lapse of 30 years from the day of his death, many a grand secret in diplomacy must till that period be impenetrable. On the capitulation of Paris the Emperor Alexander did the prince of Benevento the honour of taking up his residence at his hotel; and the convention of Paris was negotiated by Talleyrand. He was elected president of the provisional government, and exercised that function till the restoration of the Bourbons; when he was appointed foreign minister, made a peer, and sent ambassador to the congress of Vienna, in which he exercised immense influence. On Napoleon's return from Elba, the latter attempted, vainly, to attach him to his fortunes; but he remained steady to the new dynasty, and urged the personal declarations against Napoleon on the 13th and 25th of March, 1815. After the battle of Waterloo, he returned to Paris with Louis XVIII., and was re-appointed foreign minister, and

named president of the council; but he resigned rather than put his name to the treaty for the occupation of France by the allies. From that time till the fall of Charles X. he placed himself at the head of the opposition in the Chamber of Peers; contributed greatly, by the course he pursued, to the formation of a liberal constitutional party in France; and on Louis Philippe becoming king, in 1830, he was sent ambassador to England, in which capacity he remained there till 1837. Although he then retired from public life, he was frequently consulted by the king on important and difficult matters of state. Throughout the varying situations in which he was placed, open as he is to the charges of duplicity and selfishness, one prevailing sentiment may be remarked—a strong and unceasing interest in his country's greatness. His sincerity was always questionable; but his firmness of character, his diplomatic superiority, his infinite resources, the clearness of his views, the brilliancy of his wit, and the elegance of his language, all combined to form a man capable of influencing the destinies of a nation. He died at Paris, in the 84th year of his age, in May, 1838.

TALLIEN, JEAN LAMBERT, one of the most prominent characters in the French revolution, was born at Paris, in 1769, and was the son of the maître-d'hotel to the Marquis de Bercy, to whom he was indebted for his education. Previously to the revolution he had been clerk to an attorney; but he commenced his political career as secretary to the deputy Broustaret, and neglected no means to bring himself into notice as the violent opponent of the king and his ministers, and thereby gradually acquired considerable influence. He joined the Jacobin Club, published a journal called "L'Ami du Citoyen," was the great friend of Danton, and took part in the insurrection of the 10th of August, 1792. He was one of the promoters of the September massacres, and for his services was returned to the Convention. He strongly urged the immediate trial of Louis XVI., added new charges to the accusation against him, voted for his death, and on the day of his execution he was president of the Convention. He showed equal zeal in defending Marat. Early in 1794 he was sent on a mission to Bordeaux, and there for several months he presided over a band of ruffians, and by the most atrocious proscription and massacres threw the city into hopeless misery. At length, however, he became more moderate, and it was mainly by his courage and eloquence that the downfall of Robespierre was effected. He had formed an attachment for Madame de Fontenai, a lady of great personal charms, whose family name was Cabarrus; and his heart of stone was somewhat softened by her pleadings. He was recalled on account of his milder proceedings, and Madame de Fontenai was thrown into a dungeon by Robespierre. The tyrant offered her life and liberty if she would betray Tallien. But she rejected the proposal; and sent privately this note to Tallien: "The minister of police has announced to me that to-morrow I am to appear at the tribunal, that is to say, that I am to ascend the scaffold. I dreamt last night that Robespierre was no more, and

that my prison-doors were opened. A brave man might have realized this dream; but, thanks to your cowardice, no one remains capable of its accomplishment." Tallien answered, "Be as prudent as I shall prove brave; and, above all, be tranquil." The next day he hurried to the tribune, and, after an animated picture of the atrocities of Robespierre, he suddenly turned to the bust of Brutus, and, invoking the genius of the Roman patriot, he drew a dagger from his bosom, and swore that he would bury it in the tyrant's heart, if the representatives of the people had not courage to order his immediate arrest. The moment was critical; the fate of Tallien hung on a thread, but the assembly joined him, and Robespierre perished on the scaffold. Tallien, who now married Madame de Fontenai, continued to be an active member of the legislature till 1798, when he accompanied Buonaparte to Egypt; but Menou obliged him to return; and the vessel in which he sailed being captured by the English, he was taken to London. On revisiting his native country, he was little noticed by Buonaparte; but he eventually obtained the office of French consul at Alicante. Died at Paris in a state of isolation and great poverty, in 1820.

TALLIS, THOMAS, a celebrated English musician of the 16th century. He is said to have filled the situation of organist of the chapel royal under Henry VIII. and the three succeeding sovereigns; and some of his compositions are still used in our cathedrals. Died, 1585.

TALMA, FRANÇOIS JOSEPH, the most eminent tragic actor France ever produced, was born at Paris, in 1763, but spent his childhood in Flanders and England, where his father was a dentist. When 9 years of age he was sent to Paris to be educated, became passionately fond of the drama, and, returning to England, formed one of an amateur French company, which performed at Hanover Square Rooms, and he was at one time on the point of appearing at Drury Lane Theatre. Circumstances, however, led him to Paris, where he entered the royal school for declamation, and in 1787 made his début at the Théâtre Français, in the character of Seide, in Voltaire's "Mahomet." He was received with applause, and from that moment devoted himself with zeal and perseverance to the study of his art. He sought the society of distinguished literati and artists; studied history for the purpose of becoming acquainted with the manners and customs of nations, and the characters of remarkable individuals; and made himself acquainted with the best productions of ancient sculpture. For many years he continued at the summit of his profession, and acquired by it a handsome fortune. He died in 1826.

TAMERLANE, properly **TIMUR-BEG**, the great Tartar (Mogul) sultan and conqueror, was born at Sebzar, 40 miles to the south of Samarcand, in 1336. At an early age he entered on the career of a soldier, and by his exploits and professions attracted the hopes of his countrymen as their deliverer from foreign invasion and tyranny.

He was gradually joined by bands of confederates, and they cleared the kingdom of Transoxiana of the intruding Getae. In 1370 Tamerlane, who traced remotely his descent to Zenghis Khan, was crowned sovereign of Zagatal, made Samarcand his royal seat, and set out on the path of conquest which he hoped was to lead him to the monarchy of the world. His brother-in-law, Husscin, had been his rival, but after frequent quarrels he was killed by the officers of Tamerlane. After finally making himself master of Carisme and Candahar, Timur invaded Persia, defeated Shah Mansur, near the city of Shiraz, took Baghdad, Ormuz, and Edessa, and subdued all the country along the whole course of the Tigris and Euphrates. He next conquered Turkestan and Kipzak, or Western Tartary, penetrating even into the eastern and southern provinces of Russia, exciting alarm at Moscow, and destroying the cities of Azof, Serai, and Astrachan. In 1398 he undertook the conquest of India, which was facilitated by the internal anarchy and weakness of the country. The Mogul host crossed the Indus at Attok, traversed the Punjab, and besieged Delhi; into which city, after a great victory over the Sultan Mahmoud, Timur made a triumphal entry. He advanced a hundred miles beyond Delhi, crossed the Ganges, and reached the famous rock of Coupele. Tidings of the ambitious schemes of the Ottoman Sultan Bajazet reached Timur on the Ganges, and he returned to Samarcand. After a short interval of repose he assembled his army at Ispahan in preparation for his great expedition against Bajazet, with whom a hostile correspondence was soon begun. In 1400 Timur invaded Syria, defeated the Mamelukes near Aleppo, and sacked that city; marched thence to Damascus, where he was nearly defeated, but getting possession of the city by a perfidious promise, he sacked and destroyed it. Baghdad shared the same fate, and on its ruins was reared a pyramid of ninety thousand heads. In 1402 he made a swift march through difficult country into Anatolia, and began the siege of Angora. Bajazet hastened to the relief of the city, and in the memorable battle which took place, 28th July, Timur won his greatest victory, and made his rival his prisoner. [See **BAJAZET**.] While his subordinates overran the country as far as the Bosphorus, Timur besieged and took Smyrna, and put the inhabitants to death. He was already meditating the conquest of China, and preparations were made for the expedition while he was slowly returning to Samarcand. There he celebrated his triumph in 1404, and received the ambassadors of Egypt, Arabia, India, Tartary, Russia, and Spain. In January, 1405, undeterred by age—he was then 70—or by wintry cold, he set out at the head of his army for China; but near Otrar he was surprised by death, 1st April, 1405. His last ambitious design was thus crossed, and the immense dominions he had conquered and ruled with absolute power, without ministers or favourites, fell to pieces, and became the scenes of new wars and miseries. The history of Timur was written in Persian by Sheref-eddin from authentic records kept by the secretaries of

the sultan, and was translated into French by Petis de la Croix, in 1722. Timur is said to have composed Commentaries of his own life and political institutions, which have been translated from the Persian into English and French, and published under various titles. There are many other Lives of this Tartar hero. Samarcand is still full of grand ruins, the green stone is still shown from which Timur issued his decrees, and so deeply is his image impressed on the hearts of the people that now, after the lapse of four centuries and a half, they speak of him as if he had but just died, and scrupulously obey his posthumous commands.

TANNAHILL, ROBERT, a Scottish poet, was born at Paisley, in 1774, and bred a weaver. He read the works of Burns with enthusiasm, and, like many more of his countrymen, he burned to emulate him; and though he fell immeasurably short of his model, he produced some very sweet and graceful songs. Died, 1810.

TANNER, THOMAS, bishop of St Asaph, a learned antiquary and bibliographer, was born at Market Lavington, in Wiltshire, in 1674. He was educated at Oxford, and became a fellow of All Souls in 1698. He took orders, and among numerous preferments which fell to his lot were a prebend of Ely, the rectory of Thorp, near Norwich, and the archdeaconry of Norfolk. In 1710 he graduated D.D. and in 1723 was named canon of Christ Church, Oxford. He was raised to the see of St Asaph in 1732. In his youth he had shown great fondness for antiquarian studies, and acquired considerable reputation. He was author of an account of the Religious Houses of England and Wales, which first appeared in 1695, under the title of "Notitia Monastica," and was republished and greatly enlarged after the author's death; and of a learned and valuable work, entitled "Bibliotheca Britannico-Hibernica," published in 1748. He also published a new edition of Wood's "Athenæ Oxonienses." Died, 1755.

TANSILLO, LUIGI, an Italian poet, born about 1610. Having composed a poem of a licentious character, Pope Paul V. placed his works in the Index Expurgatorius, or list of prohibited books; upon which the poet made the best reparation in his power by writing a devout poem. He was also author of sonnets, songs, comedies, and "The Nurse," which has been translated into English by Mr Roscoe. He died, in 1668, judge of Gaeta.

TARLETON, RICHARD, a celebrated actor and jester, was born at Condover, in Shropshire. He was author of a play called "The Seven Deadly Sins;" and many of his witticisms have appeared in jest-books. Died, 1589.

TARQUINIUS, surnamed **FRISCUS**, or **TARQUIN THE ELDER**, fifth mythical king of Rome, was the son of Greek parents, and born in the town of Tarquinii, in Etruria. His name was Lucumon Demaratus, which he changed on going to Rome, by the advice of his wife, Tanaquil. He had, according to the legends, a long and prosperous reign, and had reached his 80th year, when he was assassinated by the sons of his predecessor.

To Tarquinius Priscus are attributed several changes in the constitution, the construction of the Cloaca Maxima, and the building of the Forum.

TARQUINIUS, surnamed **SUPERBUS**, or **TARQUIN THE PROUD**, seventh and last mythical king of Rome, was a tyrant and usurper, who rendered himself odious to the Romans by his pride and cruelty. He appears also in the legends as a successful warrior, strengthening and extending the influence of Rome. The rape of Lucretia, by his son, Sextus Tarquinius, is represented as the immediate occasion of the revolution which put an end to the monarchy, and established the republic of Rome, about B. C. 507.

TARTINI, **GIUSEPPE**, an excellent Italian musician and composer, was born in 1692, at Pirano, in Istria. He was sent to study the law at Padua; but having married without the consent of his parents, they discarded him, and he became a player on the violin. A singular story is told respecting one of his most celebrated compositions. One night he dreamed that he had made a compact with the devil, and bound himself to his service. To ascertain the musical abilities of his associate, he gave him his violin, and desired him to play a solo, which Satan executed in so masterly a manner, that Tartini, awaking in the ecstasy which it produced, and seizing his instrument, endeavoured to recall the delicious sounds. His efforts were so far effectual as to produce the piece generally admired under the name of the "Devil's Sonata." He was leader of the orchestra at the church of St. Anthony at Padua; and died in 1770. Besides his musical compositions, Tartini wrote several treatises on the science.

TARVER, **JOHN CHARLES**, lexicographer, was born at Dieppe, in 1790. He was of an English family, and settled in England in 1815, employing himself as a teacher of French. He received the appointment of French master at Eton in 1826, and held it till his death. His reputation rests on his "Phrasological French and English Dictionary," which appeared in 1849. Its preparation had occupied him during many years of his residence in England, and for its fulness, sound critical knowledge, good taste, and mastery of the peculiar difficulties of both languages, it is one of the most important contributions to French lexicography made either in France or England in recent years. Tarver was author also of a Dictionary of French verbs, a French prose translation of Dante's "Inferno," and several other works. Died, 1851.

TASMAN, **ABEL JANSSEN**, one of the most distinguished geographical discoverers of the 17th century, but whose merits were long left almost unrecognized, and of whose private history hardly anything is even now known. While engaged in the service of the Dutch East India Company his capacities and energy recommended him to the governor-general, who in 1642 gave him the command of an exploring expedition on the coast of Australia. In the course of his voyage he discovered Van Diemen's Land, and doubled its southern extremity, imagining it to be

part of the Australian continent. He named it in honour of the governor-general. Soon after he discovered New Zealand, which he also supposed to be part of Australia, and which he named Staaten-Land. He continued his voyage in the neighbouring seas, and made discoveries of various islands, arriving once more at Batavia in June, 1643. In the following year he was charged with the conduct of another exploring expedition, chiefly for the purpose of ascertaining whether Van Diemen's Land was an island. But there are no particulars of this voyage, nor any further notice of Tasman. The name "Tasmania" is now frequently used for Van Diemen's Land.

TASSIE, **JAMES**, an ingenious modeller, was born near Glasgow, and brought up as a stonemason, but having acquired from Dr. Quin, a physician in Dublin, the art of imitating gems in coloured paste, he came to London in 1766, where, by dint of talent and perseverance, he obtained both fame and fortune. The catalogue of his collection of ancient and modern gems, published in 1791, included more than 15,000 articles. Died, 1799.

TASSO, **BERNARDO**, an Italian poet, born at Bergamo, in 1493. He was of a good family, and was successively in the service of the prince of Salerno and the duke of Urbino and Mantua. His chief poem is "Amadigi," a romance founded on the Spanish "Amadis de Gaul." Died, 1569.

TASSO, **TORQUATO**, one of the greatest poets of modern Italy, was son of Bernardo Tasso, and was born at Sorrento, in 1544. He studied law at the university of Padua, but had no heart for it, and vexed his father by liking poetry better and writing it. After being for some years in the service of Cardinal Luigi d'Este, by whom he was introduced at the court of Alfonso, duke of Ferrara, brother of the cardinal, he entered the service of Alfonso, who admired his poetical compositions, and made him his familiar associate. Tasso the while had fallen in love with the fair Princess Eleanora, the duke's sister, and had addressed to her many love-songs, some of them over-passing the line of delicacy and propriety. The princess remained his friend, but nothing more. It appears probable that Alfonso by some means became possessed of some of Tasso's verses to Eleanora, and that this was the cause of his subsequent treatment of the poet. The latter, however, was of a very irritable temper, and on some occasions did not restrain himself from passionate and offensive outbursts. On one such occasion, in 1574, the duke had him arrested and confined in a convent, alleging that he was mad, but Tasso made his escape, and visited Sorrento and Rome. He soon after begged and obtained leave of the duke to return to Ferrara, but it was on condition of submitting to the rules of the physicians, and he was not permitted to see the princess. Again he left Ferrara, went to Mantua, Urbino, and Turin, but was induced to return early in 1578. His demeanour was so violent that he was once more arrested and confined in a mad-house, where after a time he appears to have been kindly treated, and was allowed to

write and to receive the visits of his friends. Among those who came to see him were Montaigne, the great French essayist, and the younger Aldo, one of the famous printers. Through the intercession of several sovereigns—the pope, the emperor, the duke of Mantua, and the grand-duke of Tuscany—on his behalf, he was liberated in 1586, and went first to the court of Mantua. He could not rest, but moved from place to place—now at Naples, now at Rome, then at Florence—and in 1594 he was called to Rome, to receive at the hands of Pope Clement VIII. the laurel-crown. But soon after his arrival he fell ill, and by his own desire was removed to the monastery of St Onofrio, where he died. Tasso's masterpiece is the "Gerusalemme Liberata," an epic poem in 24 books on the events of the great crusade and the recovery of Jerusalem from the Saracens. It was published in 1581, and the savage attacks made on it by the critics wounded the sensitive poet severely. It nevertheless won immense admiration, passed through seven editions within the first year, and took its place among the great poems of the world. It is constantly reprinted, and has been translated into almost all the languages of Europe. There are five or six English translations, the earliest by Fairfax, the most recent by Wiffen. Tasso was induced by the adverse criticism of his great poem to remodel it and make it more what the critics said it should be. He altered almost every stanza, added four cantos, and called it "Gerusalemme Conquistata." But its life was gone. The melancholy altered manuscript is preserved in the Imperial Library, Vienna. Among his other works, which are very numerous, are "Rinaldo," his earliest poem; "Aminta," an exquisite pastoral drama; "Il Torrismondo," a tragedy; many short poems, dialogues, and other prose pieces. His complete works in the edition of Rosini, fill 30 vols. Died at Rome, 25th April, 1595.

TASSONI, ALESSANDRO, an Italian poet, born at Modena, in 1565. His writings display genuine humour; and one of them especially, the mock heroic poem entitled "Secchia Rapita," or the "Rape of the Bucket," is highly esteemed by his countrymen. Died, 1635.

TATE, FRANCIS, an English lawyer in the reign of Elizabeth, who acquired great reputation as a Saxon scholar and antiquary. He was made a Welsh judge in the reign of James I. Died, 1615.

TATE, NAHUM, poet, was born in Dublin, in 1682, and was educated in the college of his native city. On coming to London he succeeded Dryden in some of his works; and altered Shakspeare's play of Lear, and wrote several poems; but he is best known by the version of the Psalms, which he executed in conjunction with Brady.

TAULER, JOHANN, one of the most celebrated German mystics, born about 1294. He became a monk of the Dominican order, and was well versed in the scholastic philosophy, and was one of the most famous preachers and devotional writers of his day. His sermons were composed in Latin, but

delivered in German, and were as free as he could make them of the dialect of philosophy. Tauler not only distinguished himself by his piety and eloquent preaching, whereby he had an extraordinary influence on the religious life of Germany; but also by the excellence of his language and style, which have entitled him to high honours as one at least of the creators of German prose literature. "His sermons contain," says Wachler (quoted by Carlyle), "a treasure of meditations, hints, indications, full of heartfelt piety, which still speak to the inmost longings and noblest wants of man's mind. He was the first that wrested from our German speech the fit expression for ideas of moral Reason and Emotion." Tauler appears to have lived and preached at Strasburg, and there he died in 1361. His tombstone is still in existence there. His works were translated into Latin by Surius in 1518, and there are also French, Italian, and Dutch translations of all or parts of them. An English translation of his sermons with a memoir appeared some years ago.

TAUSAN, or TAGESEN, JOHAN, Danish theologian, and the first apostle of the Reformation in Denmark, was born in Fünen in 1494. While studying at Cologne he was attracted to Wittenberg to hear Luther; whence, after graduating M.A. at Rostock, he returned to his country in 1521. He preached the new doctrine in his convent, and a great agitation being caused, he removed to the monastery of Wiborg. The king, Frederick I., named him in 1526 his chaplain, and authorized him to preach at Wiborg; but so violent was ecclesiastical opposition to him, that the king called him, in 1529, to Copenhagen. Tausan discontinued the Latin service of the church, and introduced the Danish language; crowds came to hear him, and Lutheranism spread rapidly. In 1530 an assembly was held, at which Catholics and Protestants presented and discussed their professions of faith, and the Protestants were authorized to continue their teaching. On the death of Frederick, Tausan was again persecuted for a short time; became preacher at Roskilde, in 1537, and bishop of Ripen in 1542. He was author of many theological works, and died in 1561.

TAVERNIER, JEAN BAPTISTE, a celebrated French traveller, was the son of a Dutch map-seller, who being driven from his country on account of his Protestantism, had settled at Paris. He was born there in 1605, and the continual sight of maps, and conversation about other lands, made him a rambler from his boyhood. By 1627 he had seen great part of Europe, and learnt most of its languages; he was present at the battle of Prague, in 1620, was four years and a half page to the viceroy of Hungary, afterwards visited Italy, France, and Germany, and in 1630 was present at the diet of Ratisbon. On the invitation of Father Joseph, the famous agent of Cardinal Richelieu, he agreed to accompany two young French noblemen to Asia Minor. He parted with them at Constantinople, in 1631, and accompanied a caravan to Persia, visiting Ispahan, Bagdad, and Aleppo, and making his journey a very

fruitful trading speculation. He subsequently made five other journeys to Ispahan, and more frequent ones thence into India. His last journey occupied the seven years from 1643 to 1660. Just before setting out on this expedition he had married. Having made a large fortune by his mercantile ventures, and at the same time rendered great services to his country, he was ennobled by Louis XIV.; and to gratify his craving for titles and display, he bought the barony of Aubonne, in Switzerland, and had a hotel at Paris, but circumstances compelled him to sell his barony and his hotel, and to leave Paris. He went into Switzerland, then to Berlin, and being appointed director of the India Company formed by the elector of Brandenburg, he once more set out for the East. But at Moscow he fell ill and died, in July, 1689. His works are "Nouvelle Relation de l'Intérieur du Serail," and "Six Voyages en Turquie, en Perse, et aux Indes."

TAYLOR, BROOK, a distinguished mathematician, inventor of "Taylor's Theorem," was born at Edmonton, in Middlesex, in 1685. At an early age he excelled both in music and painting, studied with distinction at Cambridge, and in 1712 was chosen a fellow of the Royal Society, of which two years later he became secretary. Visiting France in 1716, he became acquainted with Bossuet and gained the friendship of Lord Bolognoble. He was twice married, but survived both his wives. His works are "Methodus Incrementorum Directa et Inversa," published in 1716, and containing the first announcement of his theorem; "Linear Perspective," "New Principles of Linear Perspective," and "Contemplatio Philosophica," published after his death. His famous theorem remained almost unknown, or was slighted, or not attributed to him, till Lagrange in 1772 adopted it as the basis of the Differential Calculus. Taylor died in 1731.

TAYLOR, Lieut.-gen. Sir HERBERT, entered the army in 1793, and served in the campaigns of that and the following year. He was present at the sieges of Valenciennes and Dunkirk, and at numerous other affairs of minor importance, and in 1795 he returned to England, having the appointment of aide-camp to the commander-in-chief. He was subsequently appointed private secretary to the duke of York, in which capacity he continued, until appointed secretary to George III. As military secretary, Sir Herbert did very much towards bringing the army into a state of excellent discipline and of comfort little thought of in former years; and as private secretary to the duke of York, George III., and Queen Charlotte, it is sufficient to say that he was executor of the will of the first, trustee of the private property of the second, and warmly patronized by the third, who made him master of St Katherine's Hospital in Regent's Park. In addition to his military services, Sir Herbert was on several occasions intrusted with political missions, in which he displayed considerable tact. Born, 1775; died, 1839.

TAYLOR, ISAAC, a distinguished theological writer, was born at Lavenham, in Suffolk, in August, 1786. He was sprung from a family many of whose members have

distinguished themselves in art or literature. His grandfather, Isaac Taylor, was a successful copper-plate printer; his father, of the same name, became eminent as an engraver, was afterwards pastor of a Congregational church, first at Colchester, and then at Ongar, carefully educated his own family, and wrote various books for the young; his uncle, Charles Taylor, was the learned editor of Calmet's "Dictionary of the Bible;" his sisters, Jane (noticed below) and Ann (Mrs Gilbert), made themselves known by their writings for children; and other members of the family are still adding fresh honours to their name. The subject of this notice was educated by his father, and was brought up to the profession of an artist, which, however, he gave up for literature. Soon after the death, in 1824, of his sister Jane, who had been his peculiarly congenial companion, he married, and Edward Irving, his warm personal friend, took part in the funeral ceremony. He settled near Ongar, in the secluded parish of Stanford Rivers, in Essex, and there spent the whole of his uneventful life; busy with brain and pen, busy with the training of his large family, and not many years ago occupied with inventing and getting into use a new process for engraving by machinery the copper rollers used in calico-printing. In 1836 he was a candidate for the chair of logic and metaphysics in the university of Edinburgh, his rival being Sir William Hamilton. He had 14 votes at the election, Sir William getting 18. The works of Isaac Taylor are very numerous, and hold, for the most part, a place by themselves in religious literature. His earliest publications were a translation of Herodotus, which has been highly spoken of; and "Elements of Thought," designed to be a book of reference for terms used in logic and metaphysics, as well as a compendious summary of mental science. His "History of the Transmission of Ancient Ideas to Modern Times," appeared in 1827; "The Process of Historical Proof" in 1828; these were followed by the three remarkable works, published anonymously, parts of an unfinished series, on some spurious or corrupted forms of the religious life, "Natural History of Enthusiasm," "Natural History of Fanaticism," and "Spiritual Despotism;" the first having the greatest popularity, and the last being pronounced by Sir James Stephen the most original and profound contribution of any living writer to the science of ecclesiastical polity. These works were followed by the "Physical Theory of another Life," "Home Education," "Saturday Evening," "Ancient Christianity," a learned treatise, intended to meet the arguments of the high church party drawn from the Fathers, whose writings Mr Taylor was thoroughly familiar; "Loyola and Jesuitism;" "Wesley and Methodism;" "The Restoration of the Church," called forth by some of the developments of modern doubt; "The World of Mind;" "Logic in Theology;" "Climate Civilization;" "Spirit of the Hebrew Poetry," &c. Mr Taylor also contributed many thoughtful articles to some of the leading Reviews. He died at Stanford Rivers, June, 1865.—His son, the Rev. ISAAC TAY-

LOH, a clergyman, is known as a able work ent which he atten planation of t tala.

LOK, a clergyman of the church of England, is known as author of the learned and valuable work entitled "Words and Places," in which he attempts to furnish a complete explanation of the local names of Great Britain.

TAYLOR, JANE, miscellaneous writer, was sister of the preceding, and was born in 1783. She very early in life gave indications of poetic talent, and relinquished the pursuit of art, to which she was trained, for literature. Her first publication, "The Beggar Boy," appeared in 1804; and from that time forward she continued to publish, occasionally, miscellaneous pieces in verse. The principal of these are, "Original Poems for Infant Minds" and "Essays in Rhyme on Morals and Manners," which were long the delight of all nurseries, and are not forgotten yet. She also wrote a prose tale, entitled "Display," which met with much success. Died, 1824.

TAYLOR, JEREMY, bishop of Down and Connor, and one of the most illustrious divines of the 17th century, was born at Cambridge, in 1613. Among his ancestors was the noble Protestant martyr, Dr Rowland Taylor. He was educated at Cambridge university, and having taken orders, became a favourite, and to a great extent a follower, of Archbishop Laud, through whose influence he was led to settle at Oxford, and afterwards obtained a fellowship. About 1633 he was presented by Bishop Juxon to the rectory of Uppingham, and having been named chaplain to Charles I., attended him at Oxford, and adhered to his cause through the civil war. For his services the degree of D.D. was, by the king's command, conferred on him. His living was soon after sequestered, and during the Commonwealth he suffered imprisonment several times. After living for a time in Wales, where, under the protection of the earl of Carbery, he preached and wrote and kept a school, he removed in 1653 to Ireland. At the Restoration, having obtained the favour of Charles II., he was appointed bishop of Down and Connor, and made a member of the Irish privy-council. About the same time he was chosen vice-chancellor of Dublin University. His labours as a preacher do not appear to have been very fruitful. His real works are his books. Coleridge pronounced Jeremy Taylor the most eloquent of divines, adding, "Had I said, of men, Clero would forgive me, and Demosthenes nod assent." He was accustomed to call him Chrysostom, and counted him one of the four great geniuses of old English literature. But Taylor's gorgeous eloquence did not blind Coleridge to his faults and errors. He believed that his "great and lovely mind" was greatly perverted by the influence of Laud: so that while he was a latitudinarian in his creed, he was "a rigorist indeed concerning the authority of the church." In naming him as an excellent author to study, he does so not only for the sake of his noble principles, but for the habit of caution and reflection which must be formed to detect his numerous errors. Taylor's principal works are, his "Discourse of the Liberty of Prophecy- ing," published in 1647; "Holy Living and

Holy Dying," 1651; a "Life of Christ;" "Deus Justificatus," the doctrine of which is profoundly criticised by Coleridge in the "Aids to Reflection;" "Discourse of the Nature, Offices, and Measures of Friendship;" and the famous "Ductor Dubitantium, or Rule of Conscience in all her general measures," published in 1660, and described by Halliam as the most extensive and learned work on casuistry which has appeared in the English language. In addition to these there are various devotional works, and his wonderful sermons. The works of Jeremy Taylor were edited by Bishop Heber in 1819, with an account of his life. The latest complete edition appeared in 1847-54, revised by Eden and Taylor. An admirable critical view of them is given by Halliam in his "Introduction to the Literature of Europe." This distinguished prelate died at Liaburn, in 1667, leaving three daughters by his second marriage.

TAYLOR, JOHN, usually called the Water Poet, from his being a waterman, was born in Gloucestershire, about 1560. In 1598, he served in the fleet under the earl of Essex, and was present at the attack upon Cadix. After his return he plied on the Thames, and was for many years collector for the lieutenant of the Tower, of his fees on the wines imported into London. He also styled himself the king's water poet, and the queen's waterman. When the civil wars began he retired to Oxford, where he kept a public-house, as he afterwards did near Long Acre. At this place he manifested his loyalty by assuming for a sign, the "Crown in Mourning," which proving offensive, he substituted his own portrait. In 1618, he walked from London to Edinburgh and back again, and published an account of his journey under the title of "The Pennyless Pilgrimage." In his "Last Voyage and Adventure" he describes his passage with a small boat from London to Oxford, Gloucester, Bristol, &c., in 1641. He published many occasional pieces, which are interesting for the curious glimpses they afford of the times he lived in. Died, 1654.

TAYLOR, JOHN, an eminent Unitarian divine, was born in Lancashire, in 1694. He was educated at Whitehaven; and after officiating some years as pastor to a congregation at Norwich, he accepted the office of divinity tutor at the newly founded academy of Warrington. His most important works are, the "Scripture Doctrine of Original Sin," the "Scripture Doctrine of Atonement," a "Hebrew-English Concordance," his principal work and the labour of his life, and a "Sketch of Moral Philosophy." Died, 1781.

TAYLOR, JOHN, a divine and civilian, was born at Shrewsbury, in 1704. He was educated at St John's College, Cambridge, where he obtained a fellowship, and proceeded to the degree of LL.D. In 1743 he became a member of Doctors' Commons, and two years afterwards was appointed chancellor of Lincoln; but in 1751 he entered into orders, was presented to the rectory of Lawford, in Essex, and became a canon residentiary of St Paul's. His chief works are an edition of the Greek Orators,

and "Elements of Civil Law." Died, 1766.

TAYLOR, ROWLAND, one of the most learned English divines of the 16th century, but most illustrious in his heroic death as Protestant martyr, was chaplain to Archbishop Cranmer. He quitted Cranmer's family on being presented to the rectory of Hadleigh, in Suffolk, and devoted himself entirely to his duties as parish priest; winning the highest esteem and warmest love of his flock by his great abilities, unfeigned piety, and singular cheerfulness and simplicity of life. On the accession of Queen Mary he was one of the first to suffer for resistance to the attempts to restore the popish worship. Having resisted the performance of mass in his parish church, he was cited, in 1553, to appear before Gardiner, bishop of Winchester, and also lord chancellor. Refusing to yield to the persuasion of his friends who would have had him make his escape, he went to London, had a long conference with Gardiner, which the latter closed by "his strong argument, Carry him to prison." Taylor lay in prison about a year and three-quarters, and after the revival of some old tyrannous laws, was again cited before Gardiner, Bonner, and other bishops, was deprived of his benefice, formally degraded from the priestly office, and conducted by the sheriff from London to Hadleigh. All efforts to induce the cheerful heroic man to recant failed; he had a most affecting farweil interview with his wife and children; and received the blessings of his parishioners, and was burnt at the stake on Aidham Common near Hadleigh, 8th February, 1555. The story of Rowland Taylor is one of the most beautiful and pathetic in Fox's Book of Martyrs; a history, says Heber, which few men have ever read without its making them sadder and better.

TAYLOR, SILAS, an English antiquary, was born at Harley, in Shropshire, in 1624. On leaving Oxford University, he entered into the parliamentary army; and afterwards became sequestrator of the estates of the royalists in Herefordshire, but conducted himself with moderation. At the Restoration he was made keeper of the stores at Harwich. Died, 1678.

TAYLOR, THOMAS, "the Platonist," the translator of the works of Plato, Aristotle, and other Greek authors, was born at London in 1758. He was educated partly at St Paul's School and afterwards by a Dissenting minister. An early marriage compelled him to relinquish his intention of becoming a preacher, and he became clerk in a bank, private tutor, and assistant-secretary to the Society of Arts. But through all these engagements he was a most laborious student, especially of the Greek philosophers, and at the same time by his social habits he made many acquaintances and friends, some of whom proved willing enough to aid him materially in his literary projects. He led a quiet, studious, uneventful life, residing at Walworth from about 1795 till his death. His principal works are the—Translations of the "Works of Plato," published in 6 vols. 4to, in 1804, at the expense of Taylor's friend, the duke of Norfolk; the "Works of Aristotle," in 9 vols. 4to, in 1812, printed

at the expense of another friend of the translator; "Description of Greece, by Pausanias," in 3 vols. 8vo, in 1794; "Select Works of Porphyry;" the writings of Proclus, &c. Taylor was also a contributor to the "Classical Journal." Died, 1835.

TAYLOR, WILLIAM, a distinguished critic, translator, and *littérateur*, was the only son of an eminent merchant of Norwich, where he was born, 1765. He was originally destined for his father's business; but his early bias for literary pursuits proved so strong, that his father gave way to his inclinations, and after one or two somewhat lengthened sojourns in France and Germany, he gave himself up almost entirely to literature and politics. He first became known by a vigorous translation of Bürger's "Lenore;" and stimulated by success, he made other translations from the same author, and from time to time contributed specimens of other German poets to the magazines and periodicals. In 1798 he formed an acquaintance with Southey, which ripened into the warmest friendship; and in 1800, he became editor of the Norwich Iris, which he made the organ of his peculiar political and religious opinions; but he soon abandoned this speculation, and henceforth engaged in reviewing, writing chiefly for the Monthly Review, then under the editorship of Dr Griffiths. Mr Taylor wrote few separate works. Among these, however, should be mentioned his "English Synonyms;" and in 1830 he published a "Historic Survey of German Poetry," consisting chiefly of his collected translations, with commentaries and explanatory notes. This work was reviewed by Mr Carlyle, in the Edinburgh Review, No. 105. See his "Essays," vol. II. Taylor died, 1836. A "Memoir of his Life and Writings" was published by Mr Roberts, in 1843.

TAYLOR, WILLIAM COOKE, LL.D., historical and miscellaneous writer, was born at Youghal, 1800. After prosecuting his studies at the university of Dublin with great distinction, he repaired to the metropolis, and entered upon a literary career, which, for constancy of application, and variety of subject, has had few equals in modern times. Being literally a writer for his daily bread, little profound thought or originality of speculation was to be looked for in his writings; but the care and diligence which he bestowed on every subject he undertook, amply atoned for the absence of these higher qualities, and he has left a name in the literary history of his country which will not soon be forgotten. In his zeal for the promotion of education, he had acquired much vast information, that his opinion was eagerly sought. He was employed in 1816, by the British government, to inquire into the systems of education on the continent; and he was just on the eve of being placed in a position on the establishment of the lieutenantant of Ireland, to carry out his views, when he was cut off by the pestilence which ravaged Great Britain and Ireland in 1832. Among his chief works are, his *Memorial of Anclott and Modern History*, "Life and Times of Sir Robert Peel," "History of Mohammedanism," "Revolutions and Reman-

TEMANZA, TOMMASO, Italian architect
 and biographer, was born at Venice in 1705.
 He is chiefly remembered as author of the
 excellent biographical work, entitled—
 "Lives of the most celebrated Venetian
 Architects and Sculptors," published in 1777.
 He wrote also the "Antiquities of Rimini,"
 and other works. Among his architectural
 works are the church of La Santa Madda-
 sea, at Venice, the façade of Santa Mar-
 gherita at Padua, and the bridge of Dolo
 over the Brenta. Died at Venice, 1789.

TEMPELIÖF, GEORG FRIEDRICH, a
 German officer, author of "The Prussian
 Bombardier," "The Elements of Military
 Tactics," "The History of the Seven Years'
 War," &c. In the beginning of the revolu-
 tionary war with France, he had the com-
 mand of the Prussian artillery; and, in 1802,
 he received the order of the Red Eagle from
 Frederick William III., who nominated him
 lieutenant-general and military tutor to the
 young princes, his brothers. Born, 1737,
 died, 1807.

TEMPESTA, ANTONIO, an Italian painter,
 was born at Florence, in 1555. He was a
 disciple of John Strada, and excelled in land-
 scapes, animals, and battles. Died, at Rome,
 1633.

TEMPESTA, PETER, whose real name
 was MOLYN, but who received the sobriquet
 of Tempesta from his frequent delineation
 of storms and shipwrecks, was a native of
 Haarlem. He went to Rome, and on chang-
 ing his religion, was made a chevalier; but
 was condemned to be hanged for the murder
 of his wife, which sentence was changed to
 perpetual imprisonment. After remaining
 in confinement 16 years, he effected his
 escape. Born, 1637; died, 1701.

TEMPLE, SIR JOHN, son of Sir William
 Temple, secretary to Sir Philip Sidney, and
 afterwards provost of Trinity College, Dub-
 lin, was born in London, and educated under
 his father at Dublin. He studied the law,
 and became master of the Rolls and a privy-
 councillor in Ireland in the reign of Charles
 II. Sir John wrote from his own observa-
 tions, "A History of the Irish Rebellion in
 1641."

TEMPLE, SIR WILLIAM, an eminent
 statesman, the son of Sir John Temple, was
 born in London, in 1628. He was instructed
 by the learned Dr Hammond, his maternal
 uncle, and completed his studies at Emanuel
 College, Cambridge. In his 25th year he
 commenced his travels, and passed six years
 in France, Holland, Flanders, and Germany.
 In 1655 he went on a secret mission to the
 prince-bishop of Munster, after which he
 was employed in negotiating the triple alli-
 ance between England, Sweden, and Hol-
 land. He next became the resident minister
 at the Hague, and in that capacity promoted
 the marriage of the prince of Orange with
 the eldest daughter of the duke of York,
 which union took place in 1677. A change
 of politics at home led to the recall of Tem-
 ple in 1671, who, refusing to sanction the
 intended breach with Holland, retired from

public business to Shcen, and employed him-
 self in writing his "Observations on the
 United Provinces," and part of his "Miscel-
 lanies." In 1674, Sir William Temple was
 again ambassador to the states-general, in
 order to negotiate a general pacification. In
 1679 he was appointed secretary of state;
 but the next year he resigned, and retired
 to his country-seat in Surrey, where he was
 often visited by Charles II., James II., and
 William III. Died, 1700. His portrait, by
 Lely, is in the National Portrait Gallery.

TEMPLEMAN, PETER, physician, born
 at Dorehester, in 1711; was educated at the
 Charter-house, and at Trinity College, Cam-
 bridge, and took his degree at Leyden. He
 practised in London; but a fondness for
 literature and the company of literary men
 diverted his attention from his profession;
 and having, in 1753, obtained a situation in
 the British Museum, as keeper of the read-
 ing-room, he from that time devoted his
 whole attention to pursuits more congenial
 to his disposition. He wrote some medical
 works, and translated Norden's Travels in
 Egypt. Died, 1769.

TENIERS, DAVID, the elder, a celebrated
 painter of the Flemish school, was born at
 Antwerp, in 1622; studied under Rubens,
 and afterwards at Rome. On his return to
 his native country, he occupied himself
 principally in the delineation of fairs, rustic
 sports, and carousals, &c., which he exhib-
 ited with such truth, humour, and originality,
 that he may be considered the founder of a
 style of painting, which his son afterwards
 brought to perfection. His pictures are
 usually of a small size, and are highly valued.
 Died, 1649.

TENIERS, DAVID, the younger, son of
 the preceding, was born at Brussels, in 1610.
 In his youth, such was his facility of imi-
 tating the styles of various masters, that he
 was called the Proteus, and the Ape of
 painting. He confined himself principally
 to the same kind of subjects as his father,
 but excelled him in correctness and finish.
 Died, 1694. The younger Teniers rose to the
 highest reputation in his profession, and was
 patronized by Christina of Sweden, the king
 of Spain, and other illustrious personages.

TENISON, THOMAS, archbishop of Can-
 terbury, a learned and pious prelate, was
 born at Cottenham, in Cambridgeshire, in
 1636, and graduated at Corpus Christi Col-
 lege; obtained the living of St Peter Man-
 croft, Norwich; and was afterwards pre-
 sented to the vicarage of St Martin-in-the-
 Fields, London, where he founded a paro-
 chial school and library. He distinguished
 himself so much by his zeal in favour of
 Protestantism, both before and after the re-
 volution, that in 1691 he was consecrated
 bishop of Lincoln, from whence he was
 raised to the see of Canterbury in 1694, and
 held the primacy with moderation, firmness,
 and ability, till his death, in 1715. He pub-
 lished "The Creed of Hobbes examined,"
 "Baconiana, or Remains of Sir F. Bacon,"
 "Sir Thomas Browne's Tracts," and various
 sermons.

TENNANT, SMITHSON, F.R.S., an eminent
 chemist, was born at Selby, in York-
 shire, in 1761; studied medicine at Edin-

burgh, and took his degree at Cambridge, in 1796. He was chosen professor of chemistry at Cambridge, in 1813; and was killed by a fall from his horse, at Boulogne, in February, 1815. His discoveries appear in several valuable memoirs in the Philosophical Transactions.

TENNANT, WILLIAM, a Scottish poet and philologist, was a native of Anstruther, in Fifeshire; the town where Dr Chalmers first saw the light. Lame in both limbs from his childhood, he early entered on the path of study; and gradually amassed those stores of literary wealth, which raised him to public honour. After filling the office of parochial schoolmaster in various places in Scotland, he was in 1810 elected classical teacher of the Dollar Academy; and in 1837 was presented to the chair of oriental languages in the university of St Andrew's, which he filled with credit till his death. As a poet, Professor Tennant rose into eminence by his "Anster Fair," published in 1812, and since often reprinted; and this was followed by his tragedy of "Cardinal Beaton," and various smaller poems, marked by much originality and poetic power. Died, 1843.

TENNEMANN, WILHELM GOTTLIEB, German philosopher and historian of philosophy, born in 1761, at Brembach, near Erfurt. He studied at the universities of Erfurt and Jena, and after distinguishing himself by the publication of several philosophical works, became, first, professor extraordinary at Jena, and in 1804 ordinary professor of philosophy at the university of Marburg, a post which he filled till his death. He was also appointed, in 1816, librarian to the university. His most important work is the "Geschichte der Philosophie," published in eleven volumes, between 1798—1809. His well-known "Manual of the History of Philosophy," of which an English translation by Johnson appeared in 1832, is an epitome of the "History." The translation, revised and augmented by J. R. Morrell, was republished in 1852, in Bohn's Philological Library. Among Tennemann's other works, are an exposition of the "System of the Platonic Philosophy;" and German translations of Locke's Essay on the Human Understanding, and Hume's "Inquiry concerning the Human Understanding." Tennemann was a disciple of the Kantian philosophy, and employed its terminology. Died, 1819.

TENTERDEN, CHARLES ABBOTT, Lord, lord chief justice of England, was the son of a hairdresser, was born at Canterbury in 1762, and received his education at the King's School of that city. In 1778 he was elected to a scholarship in Corpus Christi College, Oxford, where he was soon distinguished for scholastic attainments and for purity of moral conduct; and, having the good fortune to be appointed tutor to the son of Judge Butler, this gentleman took great interest in his welfare, and with his characteristic acuteness of observation, advised him to turn his attention to the law, and not to the church, for which he had hitherto designed himself. After practising some time as a special pleader he was called

to the bar, being then in the 33rd year of his age, and went the Oxford circuit. His practice soon became extensive, and for twenty years he steadily pursued his way, acquiring both fortune and reputation, and making himself known to the profession not merely as a skillful pleader, but also as a learned and accurate writer. His "Treatise of the Law of Merchant Ships and Seamen," published in 1802, became the standard work upon maritime law. In 1815 his incessant and arduous labour had begun to have a serious effect upon his health and spirits. His sight, too, was impaired, and it is said that but for the dismission of his friends he would have wholly retired from the profession. He had as far back as 1806 refused a seat on the bench, his professional emoluments at that time being far greater than those of a judge. But when, in 1816 he was again offered promotion, his health had become so unequal to the toils of practice, that he closed with the offer, and was made a puisne judge in the Common Pleas. This took place in February, and in the following May he was removed to the King's Bench, on the death of Mr Justice Le Blanc. In 1818, on the retirement of Lord Ellenborough, he became lord chief justice of the King's Bench; and though his inflexible Toryism rendered him unpopular, it was admitted by men of all parties, that a more impartial chief justice had never presided in that court. During the premiership of Mr Canning he was raised to the peerage, but did not long enjoy his title; and it is said that his last words were, "Gentlemen of the jury, you may retire." Died, 1832.

TERBURGH, GERHARD, Dutch painter, born at Zwoll, in 1608. He was taught painting by his father, and improved himself by a visit to Italy. He acquired a great reputation by his portraits and conversation pieces, and practised with success at Paris, London, and Madrid. His most remarkable work is the "Congress of Kammerster," a portrait group of the diplomatists who there negotiated the celebrated Treaty of Westphalia, which closed the Thirty Years' War. Terburgh's pictures are delicately painted and exquisitely finished, and he was fond of displaying his skill in white satin drapery, which is found in most of his works. There are many of his pictures in English collections. Died, burgo-master of Deventer, in 1681.

TERENTIUS AFER, PUBLIUS (TERENCE), the celebrated Roman comic poet, was probably born at Carthage, about B. C. 195. The accounts of his life are scanty and conflicting, and little is certainly known about it. He is said to have become the slave of a Roman senator, who gave him a good education, and set him free. He acquired the patronage and friendship of Lullius and Scipio Africanus the younger, and was assisted, it is said, by them in the composition of his plays. The first of these exhibited was the "Andria," in B. C. 166. This was followed by the "Heccyra," the "Stephmother," in the next year; the "Heccyra-Timorumenos," or *Self-tormentor*, in 163; the "Eunuchus" and the "Phormio" in 162; and the "Adelphi," or the Brothers

acted at the funeral games of *Æmilius Paulus* in 160. These plays are imitations, with certain changes of plan and structure, of the works of the Greek comic poets, *Menander* and *Apollodorus*. Terence was praised by *Julius Cæsar* as a "half *Menander*." Terence, who closely followed *Plautus* in time, had little in common with him in character or in fortunes. He aims far less at exciting laughter by bold coarse jests, and more at the development of plot, and the painting of delicate shades of character. His plays lean to the instructive and sentimental, and contain passages of deep pathos and refined wit. They are also remarkable for the purity of their Latinity, and the variety of their metre. After the appearance of his six comedies Terence left Rome for Greece, and is said to have translated there above a hundred of the comedies of *Menander*. The mode of his death is uncertain; but it is usually said that he died of grief for the loss at sea of his translations of *Menander*, about B. C. 158. There are English translations of Terence by *Colman* and *H. T. Riley*. The latter, in prose, forms part of *Bohn's Classical Library*.

TERRASSON.—Of this name there were several ingenious French writers in the 17th and 18th centuries, the most eminent of whom were *JEAN* and *ANTOINE*.—*JEAN* was born at Lyons in 1670. His first work was a Dissertation on the *Illad*, and appeared in 1715. He adopted the financial schemes of *Law*, and wrote "Trois Lettres sur le Nouveau Systeme de Finances." In the following year, 1721, he was made professor of philosophy at the College of *France*. He was also author of an Egyptian tale entitled "Sethos," and of a translation of *Diodorus Siculus*. He was a member both of the *Academy of Sciences* and of the *French Academy*. Died, 1750.—*ANTOINE* was born at Paris, in 1705. He composed, by order of the chancellor *D'Aguesseau*, the "History of Roman Jurisprudence;" for which he was named censor royal and professor in the royal college. Died, 1782.

TERRAY, JOSEPH MARIE (ABBE TERRAY), the dissolute finance-minister of *Louis XV.*, was born in 1715. At the age of 21 he was appointed to an office in the parliament of Paris, and for a time led a modest and laborious life. But on inheriting a large fortune from his uncle, he threw off all restraint, lived a scandalous life, and sought to make his way at court. He ingratiated himself with *Madame Pompadour*, and cooperated with her in the expulsion of the *Jesuits*. He secretly supported the odious measures of the minister of finance, and at the same time prepared the remonstrances of the parliament against them. At the close of 1763 he reached the height his ambition had aimed at, and was named controller-general of the finances. His edicts fell in showers, and while he ruined France by recklessness and injustice, he enriched himself and his patroness, the *Dubarry*, and insulted with cynical mockery the miseries of the people. He held his post till after the accession of *Louis XVI.*, and fell with his colleagues, the *Chancellor Maupeou* and *D'Aiguillon*, on the 24th August, 1774, a day which has

been called the *St Bartholomew of Ministers*. Died, at Paris, hated and despised, 1778.

TERTULLIANUS, QUINTUS SEPTIMIUS FLORENS, the first and one of the most celebrated of the Latin Fathers, flourished about A. D. 190—214, in the reigns of the Emperors *Severus* and *Caracalla*. He was son of a centurion in the service of the proconsul of Africa, and was born at Carthage; became an eminent rhetorician, was converted to the Christian religion either at Carthage or Rome, and obtained the office of presbyter. After he was past middle age he embraced the doctrines of *Montanus*, to which his ardent, sensuous imagination and ascetic tendencies would naturally incline him. He is said to have been determined to that course by the ill-treatment he received from the Roman clergy. Whether he remained a *Montanist* till his death, or ultimately returned to the Catholic church, cannot be decided. He lived to a great age, and wrote a very large number of works, some of which were early lost. The most important of his extant works are—the "Apologetics adversus Gentes pro Christianis," addressed to the Roman magistrates in 198; "Ad Martyres;" "De Testimonio Animæ;" in which he endeavours to work out the idea of the pre-conformity of the human soul to the doctrine of Christ; "De Præscriptio hæreticorum;" "De Penitentia;" "De Patientia;" "De Oratione;" and "De Baptismo." His works are of four classes, apologetical, practical, doctrinal, and polemical. They are characterized by vast learning, profound and comprehensive thought, fiery imagination, and passionate partisanship, leading into exaggeration and sophistry. His style is frequently obscure. "He had to create," says *Neander*, "a language for the new spiritual matter, and that out of the rude *Punic Latin*, without the aid of a logical and grammatical education, and in the very midst of the current of thoughts and feelings by which his ardent nature was hurried along." The study of *Tertullian* had a marked influence on *Cyprian*, who used to ask his secretary for his works in the words "Da *Magistrum*." The doctrine of the *Millennial Reign of Christ* was taught in one of the lost works of this Father.

TESSIER, HENRI ALEXANDRE, an eminent French writer on agriculture, to which he devoted a long life, died at Paris, in December, 1837, aged 94. During the period of revolutionary anarchy, he lived in retirement in Normandy, still, however, actively engaged in his favourite pursuit. He was the editor of the "French Annals of Agriculture," a voluminous periodical work. He was also the early patron of *Cuvier*, being the first to discover his talents, and introduce him to the scientific world.

TESSIN, NICODEMUS, a senator of Sweden, principally celebrated for his architectural works, was born at *Nikoping*, in 1654. He held several high appointments in the government, and numerous public edifices were erected from his designs. Died, 1718.

TFSTELIN, LOUIS, French painter, born at Paris in 1615. He was a pupil of *Vouet*, and studied the best pictures in the galleries

of Paris and Fontainebleau. Ho was one of the first members of the Academy of Painting and Sculpture, and in 1680 was appointed a professor. His best works are the pictures of "Tabitha restored to life by St Paul," the "Flagellation of St Paul and Silas,"—both in Notre Dame—and "St Louis attending a sick man." Testelin was an intimate friend of Lo Brun. Died at Paris, 1655.

TESTI, FULVIO, an eminent lyric poet, accounted the Horace of modern Italy. He was born at Ferrara, in 1593, of a noble family; was thrown into prison in consequence of having entered into a correspondence with Cardinal Mazarin; and is supposed to have been there put to death, in 1646.

TEZEL, or TEZEL, JOHANN, a Dominican monk of the 16th century, was born at Leipzig, where he studied, and was created bachelor in theology in 1487. He entered the Dominican order two years later, and from 1522 was employed in the sale of indulgences issued by Pope Leo X. He represented them as possessing the virtue of pardoning all sins, past, present, and future. Purchasers came in crowds, and Tetzel realized immense sums of money by his lying trade. He was a man of immoral character, and was once convicted of adultery, and sentenced to an ignominious death. He owed his escape to the elector of Saxony. Luther first heard of him in 1516, and vowed to "knock a nail in his drum." Luther's bold attack on him, and on the sale of indulgences in the following year, was the first occasion of the great reformation. The papal government, seeing the mischief likely to accrue from the indiscreet zeal and bigotry of Tetzel, so severely rebuked him, through the legate Miltitz, that he is said to have died of a broken heart, in 1519.

THACKERAY, WILLIAM MAKEPEACE, one of the greatest of English novelists, belonged to a Yorkshire family, and was born at Calcutta, in 1811, his father being at that time in the civil service of the East India Company. He was early brought to England, and was educated first at the Charterhouse, for which he retained through life a hearty attachment, and then at Cambridge University, which he left without taking a degree. He began life with a fair fortune, and his inclination was for the life of an artist. To prepare himself for such a course he travelled on the continent, visiting Rome, Paris, and Weimar, seeing Goethe there, and associating principally wherever he went with artists. A true love for art and artists distinguished him to the last; but it became necessary for him to work, and instead of pursuing the path of art, he applied himself to literature. At first he wrote for various journals and periodicals, contributing tales, essays, sketches, reviews, and poems. Some brilliant epigrammatic articles in the "Examiner" were from his pen; and for "Fraser's Magazine" he wrote, under the suggestive name of Michael Angelo Titmarsh, some of the best of his minor pieces. Among these were "The Great Hogarty Diamond," and "The Shabby Genteel Story." He joined the staff of "Punch," for which his sparkling wit, refined satire, and genuine

humour so admirably qualified him; and in that honourable position he was associated with Douglas Jerrold, Gilbert A'Beckett, John Leech, and other genia and honoured men who have not yet, like them, passed from among us. The well-known "Snob Papers" and "Jeames's Diary" originally appeared in the pages of Punch. About 1845 he visited the East for the benefit of his health, and soon after published a record of his travels under the title of "Notes of a Journey from Cornhill to Cairo." The same year in which this appeared, 1846, Thackeray began to publish, in monthly numbers, the masterly fiction which first fairly showed the world what he could do, and established his reputation—"Vanity Fair." This was followed in 1849-50 by "Pendennis;" in 1852 by his charming "History of Henry Esmond," the most studied and highly finished of all his works; "The Virginians," a sequel to "Esmond" (which four masterpieces have been happily named by a friendly critic, the "Thackeray Quadrilateral"); "The Newcomes," and the "Adventures of Phillip in his Way through the World." His shorter works are very numerous, but we can only name "Our Street," "Doctor Birch and his Young Friends," and "The Rose and the Ring," the latter a tale for children. In 1851 Thackeray ventured on a new path, and delivered his "Lectures on the English Humourists," first in London and the principal towns of England, and then in the United States. He conquered his natural repugnance to public speaking in order, by these lectures, to make provision for those most dear to him; and he succeeded. He made a second visit to America in 1855, and on that occasion first delivered the "Lectures on the Four Georges." These also were afterwards listened to with admiration in England. In 1857 he stood as a Liberal candidate for the representation of the city of Oxford, and he was beaten by his opponent, Mr Cardwell, by only the small majority of 1085 to 1018. Two years later he started the "Cornhill Magazine," and undertook the task of editor; which, however, he found too heavy, and after a year or two resigned. In the pages of his Magazine appeared his story of "Phillip" and the "Roundabout Papers." Thackeray has been much spoken against and written against as a cynical, ill-natured man, who refused to see or to print any but the dark and ugly sides of things. But whatever ground there may be in his writings for such a charge, it is certain that to those who knew him personally he was one of the most genial and kind-hearted men in the world. "It was impossible," says the *Times*, "to be long with him without seeing his truthfulness, his gentleness, his humility, his sympathy with all suffering, his tender sense of honour; and one felt these moral qualities all the more when one came to see how clear was his insight into human nature, how wide was his experience of life, how large his acquaintance with books, and how well he had thought upon all he had seen, and how clearly and gracefully he expressed himself. A man in all the qualities of intellect, he was a child in all the qualities of heart." In person he was tall and strongly

built, with very white skin, and a few places at the Gardens, 20 were intended, and his number of distinguished artists. A has been pl

built, with a noble head and a mass of silvery white hair. His last public appearance was at the annual Charter-house dinner, a few days before his death; which took place at his house in Kensington Palace Gardens, 24th December, 1863. His remains were interred in Kensal Green Cemetery, and his funeral was attended by a large number of distinguished men, both authors and artists. A bust of Thackeray, by Marochetti, has been placed in Westminster Abbey.

THACKWELL, Sir JOSEPH, G. C. B., K. H., a distinguished British lieutenant-general, was born Feb. 1, 1781. He entered the army early, and served in the latter part of the Irish Rebellion; but purchasing a cornetcy in the 15th Hussars in 1800, he served in that corps for 32 years, during the last eleven of which he held the command. He went to Spain with Sir John Moore, and was present at Corunna. At Vittoria he was severely contused. At Waterloo he received several wounds, losing his left arm, and had two horses shot under him. On receiving the first wound in the fore-arm, he seized his bridle with his mouth, and dashed on at the head of his men to charge the enemy. A second shot taking effect on the same arm, amputation became necessary. He, however, rejoined the army in a few weeks. In India he served with great distinction, commanding the cavalry in the first Afghan, in the Gwalior, and the two Sikh campaigns. He received the thanks of the House of Commons on three occasions. Died, April 8, 1859.

THALES, the chief of the seven sages of Greece, born at Miletus, about B. C. 640, founded the Ionic school of philosophers, and died about B. C. 545. He was an excellent geometer and astronomer, fixed the revolution of the sun at 365 days, and was the first Greek who predicted a solar eclipse. In his physical speculations he regarded water as the first principle of all things. He also united moral and political wisdom to the researches of science, and exemplified his knowledge of mankind by numerous pithy aphorisms.

THELUSSON, PETER ISAAC, a native of Geneva, who settled as a merchant in London, where he acquired a prodigious fortune, and died in 1798. He left about £100,000 to his family; and the remainder of his property, considerably above half a million, is to accumulate during the lives of his three sons and the lives of their sons, and name existing, the whole is to be added to the sinking fund. This singular will being contested by the heirs at law, was established by a decision of the House of Lords in 1805; it, however, occasioned the passing of an act, restraining the power of devising property for the purpose of accumulation to 21 years after the death of the testator.—His eldest son was raised to the peerage by the title of Baron Rendlesham.

THELWALL, JOHN, political and miscellaneous writer, was the son of a London tradesman, and was born in 1764. Quitting, successively, his father's business and the law, he gave himself up in early manhood to a literary life, and first made himself known by his poems, published in 1787. He is

chiefly remembered, however, as a political orator and a member of the Corresponding Society in the first years of the French revolution. He was prosecuted with Hardy and Horne Tooke for treason, but was acquitted. He was afterwards occupied as a popular lecturer, especially on elocution, and he threw out some important suggestions on the cure of stammering. He was a man of thorough uprightness and generous sentiment; was twice married, and had several children; and died at Bath, in 1834. His second wife survived him, and was in great distress at Windsor, in 1865.

THEMISTIUS, an ancient Greek philosopher, Peripatetic philosopher, and critic, who flourished about 360—390. More than 30 orations of Themistius are still extant.

THEMISTOCLES, the illustrious Athenian statesman and general, was the son of Neocles, and was born about B. C. 514. The ambition which inspired him in his manhood, and the great natural genius which fitted him to play a great part, were early manifested. He was wilful and wayward in his youth, eager for real knowledge, careless of mere accomplishments; fond both of getting and spending money, and could not sleep sometimes for thinking of the trophies of Miltiades. He gradually rose into credit with his fellow-citizens, and one of the first occasions on which he took an important part in public affairs was the ostracism of Aristides in 483. This measure he promoted, and it left him the foremost man at Athens. Two years later he was Archon.

His aim was mainly the greatness and security of Athens, but this perhaps in order that he might have the wider field for his personal influence and action. He saw the necessity of naval supremacy for Athens, and succeeded in getting a decree for applying the produce of the silver mines of Laurium to the building of ships. When Xerxes invaded Greece in 480, Themistocles had the command of the fleet, and by his advice the citizens abandoned Athens with their families, and went to Salamis, Ægina, and Troezen. On the appearance of the Persian fleet off Salamis, he could scarcely dissuade the Peloponnesians from leaving; and at the last moment, in order to save the Greeks in spite of themselves, he resorted to the stratagem of sending a secret message to Xerxes, which induced him to make an immediate attack. The Greeks were thus compelled to cease debating and fight; and the great victory of Salamis was won. Themistocles is said to have sent a second secret message to Xerxes after the battle, but its purport is uncertain. His fame among his countrymen was now established. Sparta did him unusual honour; awarding him the chaplet of olive leaves, and the best chariot the city possessed. In the following year under his direction the Athenians undertook the rebuilding of their walls and the fortification of Piræus. A Spartan embassy was sent to hinder the work; but Themistocles by his clever unscrupulous diplomacy thwarted Sparta, and the supremacy of Athens was secured. His influence, however, began to wane. He was accused of enriching himself by exacting contributions from the islands

which had supported the Persians, and of receiving bribes for political services, and he indulged also in the habit of boasting of his services to his country. In 271 he was ostracized, and went to Argos; whence, to escape a threatened arrest on suspicion of sharing the treason of Pausanias, he fled in 466 to Coreyra; next found refuge with Admetus, king of the Molossi, and in the following year went with his family to Persia. He obtained the confidence of the king, Artaxerxes, and promised to render him a great service, requesting a year's delay. The king gave him a pension, in Oriental fashion; three towns, Magnesia, Myus, and Lampsaenus, for his maintenance, and he settled at Magnesia. There he died in 449, and a splendid monument was erected to him in the public place. His bones were, however, carried, it is said, by his own desire, to Athens. (For an earnest vindication of the character of this great Athenian from some of the gravest charges usually brought against him, see Mr Cox's "Tale of the Great Persian War," Part II. ch. 6.)

THÉNARD, LOUIS JACQUES, baron and peer of France, a distinguished chemist, was born at Nogent on the Seine, in 1777. He studied with distinction under Vauquelin, and at the age of twenty was named demonstrator of chemistry in the Ecole Polytechnique. He was subsequently professor in the Collège de France, and in the university of Paris. He was an indefatigable worker in his chosen field, contributed an immense number of memoirs on chemical subjects to scientific societies and journals, and as president of the Council of Public Instruction rendered great services to the cause of scientific education in France. His principal separate work is the "Traité de Chimie Élémentaire, Théorique, et Pratique," which was highly esteemed, and several times republished. Baron Thénard was received at the French Academy in 1833, resigned his professorship at the university in 1840, and died at Paris in 1857. He was honoured with a public funeral.

THEOBALD, LEWIS, editor of Shakespeare, was a native of Sittingbourne, in Kent. He was brought up to the profession of the law, but early turned to literature. He wrote some now forgotten plays, and on the appearance of Pope's edition of Shakespeare, criticised it in a pamphlet entitled "Shakespear Restored." Two years later, 1728, the "Dunciad" appeared, and Theobald was its hero. He worked on at his chosen task, collected old plays, collated the earliest editions of Shakespeare's plays, and published his own edition, in 1733, in 7 vols. 8vo. The merits of Theobald as editor were painstaking accuracy and modesty, which kept him from attempting too much. He made many happy emendations, which have been adopted by subsequent editors, and Pope's edition was superseded. Died, 1744.

THEOCRITUS, the Greek pastoral poet, was a native of Syracuse, and lived in the 3rd century B. C. He visited the court of Ptolemæus Soter, and afterwards returned to Syracuse. He was the friend of the poet Aratus, and addressed to him one of his poems. Theocritus is considered the father

of pastoral poetry; not that he appears to have invented it, but having adopted a form of composition which had been previously cultivated, he carried it to its highest perfection. His poems are called "Idylls," and present simple inartificial pictures of Sicilian rural life. Some of the poems extant under his name are of a different character, and some are spurious. Virgil, in his Eclogues and Bucolics, imitated Theocritus, and is his only rival. The editions of the Idylls are very numerous, and they have been translated into most European languages. The most recent English edition is that of F. A. Paley, M.A., which is esteemed a model of concise, learned, and really illustrative commentary. It is suggested by a writer in the *Saturday Review* (10th Oct. 1863), that the startling resemblances in several of the Idylls to the language of the Psalmist and of Isaiah may possibly have arisen from the poet's acquaintance with the Septuagint, which he may have seen during his residence at Alexandria. There are English translations of Theocritus by Creech, Fawkes, and Peiwhale. The most recent is the very successful metrical translation by Dr M. J. Chapman. The first edition appeared about 30 years ago, and the third in the present year (1866). Its merits are scholarly accuracy, simple, graceful, and musical verse, and a happy echo of the spirit of the original.

THEODORETUS, an ecclesiastical historian and a father of the church, was born at Antioch about the year 393. In 420 he was made bishop of Cyrus, in Syria, where he laboured assiduously in converting a rude people, and opposing the errors of the Marcionites. He was deposed by the second council of Ephesus on the charge of favouring the views of Nestorius, who had been his fellow-pupil and was his friend. Two years later, however, he gave way to the violence of his opponents, and at the Council of Chalcedon pronounced anathema upon Nestorius, and was restored to his see. He left several valuable works, among which are an Ecclesiastical History, a work on the Heresies, and Commentaries on the Bible. Died, 457.

THEODORIC, king of the Ostrogoths and founder of the Gothic kingdom of Italy, was born, of the royal race of the Amal, near Vienna, in 455. He was son of Theodemer, one of the three brother-kings of the Ostrogoths, and at an early age was given up as a hostage to Leo, emperor of the East. He was brought up at Constantinople, and carefully trained, at least in the art of war, but never learnt, it is said, to write his name. At the age of 18 he was allowed to return to his father, on whose death, in 475, he succeeded to the throne. Theodoric became the ally of the Emperor Zeno, who lavished honours and rewards on him; but he appeared as the enemy of Zeno in 483, invading Thrace and threatening Constantinople, and compelled Zeno to sign a humiliating treaty. In 489, the Gothic king set out for the conquest of Italy, the whole nation emigrating under his leadership; and after a march of 700 miles in the depth of winter, crossed which many battles were fought, he crossed

mathematician in the time of Theodosius the Great, was father of the celebrated Hypatia.

THEOPHANES, GEORGE, a Greek historian, was born at Constantinople, of a noble family. Leo, the Armenian, exiled him to Samothrace, where he died in 818.

THEOPHILASTUS, the Greek philosopher and naturalist, was a native of Eresus, in Lesbos, and flourished in the 4th century B. C. He became a pupil of Plato at Athens, and made at the academy the acquaintance of Aristotle; but he quitted the academy after Plato's death, and was absent from Athens for some years. On his return he gladly studied philosophy under his friend Aristotle, who had so high a regard for him as to bequeath to him his library, and to name him his successor. Theophrastus had extraordinary success as head of the Lyceum, and was attended, it is said, by 2000 disciples. Among them were Demetrius Phalereus and Menander. A charge of impiety was brought against him, but he successfully defended himself, and generously interposed to save his adversary from the popular vengeance. He was, however, compelled to leave Athens in 305, under the law which banished all philosophers. The law was soon repealed, and he returned to the system of his master, Aristotle, till his death. His writings were very numerous, but have perished, with the following exceptions; his work entitled "Characters," a set of lively sketches of vicious or ridiculous characters; treatises on the "History of Plants," on the "Causes of Plants," and on "Stones;" a work on the Senses, and several fragments. The "Characters" served as the model for La Bruyère's work with the same title; it has been several times translated into English, French, and German. The works of Theophrastus were first printed by Aldus in 1485.

THERAMENES, an illustrious Athenian, a member of the government of the 400, which he also helped to overthrow. He was present at the battle of Arginusæ, and afterwards took the lead in procuring the condemnation of the six generals. In B. C. 404 he was one of the 30 tyrants, but so zealously opposed his colleagues in their tyranny, as to excite their hatred. Accordingly, Critias denounced him to the senate, and when he perceived a disposition on the part of the judges to acquit the accused, he surrounded the tribunal with his creatures, and denounced sentence of death against Theramenes by his own authority. Theramenes, finding himself overpowered by his enemies, drank the fatal draught prepared for him.

THERESA, ST. reformer of the order of Carmelites, was born in Old Castle, in 1515. She was remarkable almost from infancy for her fervent piety, but through a long course of years, periods of ascetic devotion alternated with periods of gaiety and indulgence in worldly pleasures, according as she was affected by great sorrows or was free from them. She had been placed in the convent of the Augustine order in her native town, Avila, soon after the death of her mother, in 1527, and she took the vows seven

years later. After years of painful interior conflicts, she resolved to attempt the reform of her order, which she commenced by founding, in 1532, another convent at Avila, in which a more close and rigorous observance of the rule should be enforced. The new society was called the "Barefooted Carmelites," and other houses were soon founded. St. Theresa was aided in her pious enterprise by the co-operation of John de Santa Cruz. Died at Avila, in 1582, and was canonized by Gregory XV. in 1621. Her remains were removed to Avila in 1585, but were restored to Alba in the following year by order of the pope. The writings of St. Theresa, chiefly ascetic, were published in 1675, in 2 vols. folio, and have several times been republished. Among them is her Life, written by herself. A new English Life of her, edited by Dr Manning, appeared in 1865. It repeats as historically true, and with evident belief, all the extravagancies and hallucinations of the saint, her fancies, and visions of angels and devils, &c.

THESPIS, a Greek poet, born at Icarus, in Attica. He is considered the inventor of tragedy, from his having, B. C. 535, introduced an actor in addition to the chorus, and was the author of several tragedies.

THEVENOT, MELCHISEDEC, an eminent traveller, was born at Paris, in 1621. He travelled in various parts of Europe; and on his return devoted himself entirely to study and to the promotion of the interests of literature, by collecting books and manuscripts, and by carrying on a correspondence with the learned in all parts of the world. He was appointed royal librarian in 1654, having long before published his "Voyages and Travels," and died in 1692.

THEVENOT, JEAN DE, nephew of the preceding, was born at Paris, in 1633. Being enabled to gratify his love of travelling, he visited several parts of Europe, and afterwards explored many countries in the East. On his second oriental tour, as he was returning from Hindostan, through Persia, he died, near Tauris, in 1667. His various narratives of travel were collected and published under the title of "Voyages de M. Thévenot, tant en Europe qu'en Asie et en Afrique."

THIBAUT, ANTON JUSTUS FRIEDRICH, a celebrated German jurist, was born at Hameln, in Hanover, 1772; studied successively at Göttingen, Königsberg, and Kiel; and after displaying great ability as a private teacher of law at Jena, was appointed to the chair of civil law at Heidelberg in 1805, where he remained till his death, in 1840. A list of his various works would be too long for our columns; but his chief title to fame rests on his "System des Pandekten-rechts," which has passed through numerous editions, and is regarded as an authority by most German lawyers.

THICKNESSE, PHILIP, miscellaneous writer, was born in 1790. He entered the army when young, and went to Georgia with Governor Oglethorpe; after which he served in the West Indies, and, on his return to England, obtained a captain's commission. He married a French lady; and on becoming a widower, he obtained the

hand of the ancient chased to Leadgunson, with title and had some 1761 Mr and shortly by whom travellia he settled at the erection he Boulogne works, t account of titio, "M Thicknes Landgunna to George

THICKNESSE, THOMAS, a distinguished soldier, was born in 1710, in the county of Devon. He was educated at the academy of St. John's, in the city of London, and afterwards travelled in France, Italy, and the East. He was appointed major-general in 1754, and served in the Seven Years' War. He was killed at the battle of Fontenoy, in 1745. He was buried in St. Paul's Church, London. His works are, "The History of the British Army," "The History of the British Navy," "The History of the British Empire," &c.

THIERIAK, ANTON, a celebrated German jurist, was born at Hameln, in Hanover, 1772; studied successively at Göttingen, Königsberg, and Kiel; and after displaying great ability as a private teacher of law at Jena, was appointed to the chair of civil law at Heidelberg in 1805, where he remained till his death, in 1840. A list of his various works would be too long for our columns; but his chief title to fame rests on his "System des Pandekten-rechts," which has passed through numerous editions, and is regarded as an authority by most German lawyers.

THICKNESSE, PHILIP, miscellaneous

head of Lady Elizabeth Touchet, heiress of the ancient barony of Audley; and purchased the office of lieutenant-governor to Landguard Fort. By this lady he had one son, with whom, on his succeeding to the title and estate of his mother's family, he had some very unpleasant disputes. About 1761 Mr Thicknesse lost his second wife, and shortly after married Miss Anne Ford, by whom he had a numerous family. After travelling through France, Italy, and Spain, he settled in Wales, and next at Bath; but at the commencement of the French revolution he went abroad again, and died, near Boulogne, in 1792. He published several works, the most curious of which is an account of his own life, with the following title, "Memoirs and Anecdotes of Philip Thicknesse, late Lieutenant-governor of Landguard Fort, and unfortunately Father to George Touchet, Baron Audley," 2 vols.

THICKNESSE, ANNE, third wife of the preceding, a lady of g. at beauty and acquirements, was the daughter of John Ford, solicitor, and clerk of the arraigns, and was born in 1737. She eloped from her father's house in order to avoid a disagreeable marriage, and her talents and personal attractions having early introduced her into the world of fashion, she took advantage of that circumstance to give three concerts at the Opera House, by which she realized £1500, and acquiring the patronage of Lady Thicknesse, she became domesticated in the family. On the death of this lady she married Mr Thicknesse, and during a union of 30 years, till his death in 1792, she accompanied him on various journeys to different parts of the continent. The French revolution had commenced, and Mrs Thicknesse, in company with several other English ladies, was imprisoned, but escaped the guillotine through the death of Robespierre. She died at her house in Edgware Road, London, in 1824. She was intimate with the leading wits of her time, and spoke several languages with fluency. Her principal works are, "Biographical Sketches of Literary Females of the French Nation," and a novel entitled "The School of Fashion."

THIERRY, JACQUES-NICOLAS-AUGUSTIN, the distinguished French historian, was born at Blois, in 1795. Educated at the college of his native town, he went to Paris in 1814, an ardent enthusiastic youth, full of theories and speculative inquiries, and threw himself into the Socialist school of St Simon, in conjunction with whom he published several political pamphlets. Disappointed in this quarter, he commenced writing for the press, and his pen was engaged in a constant supply of political and historical articles to the "Censeur Européen," and the "Courrier Français." These papers laid the foundation of his brilliant, but not very trustworthy, history of the "Norman Conquest of England," which appeared in 1825, and gained him a world-wide reputation. His fame is sustained by his "Letters on the History of France," published two years later. His sight and his nervous system now failed him; but though he passed the remainder of his days in total blindness, his mental eye remained undimmed, and his

vigour unabated. He continued to issue to the world his philosophic thoughts in various essays, which he subsequently reprinted in a collective form. In 1840 he published his work, entitled "Récits des temps Mérovingiens," in which he explores a considerable portion of the traditional records of that time; and which contains, among other interesting features, an autobiography. His last work was his essay on the "History of and is marked by the same picturesque style and felicity of observation for which his previous works were conspicuous. Died, 1856.

THISTLEWOOD, ARTHUR, memorable as the leader of the "Cato Street" conspirators in 1820, was the son of a respectable farmer near Lincoln, and was born in 1772. He obtained a lieutenant's commission in the supplementary militia, in 1797, and shortly after married a young lady with a considerable fortune, but who died about 18 months after their union. After squandering his property in dissipation and gambling, he left Lincoln for London, and made occasional voyages to America and France. He married again, and thereby improved his circumstances; but he had now become a gambler by profession, and had also connected himself with disaffected characters, which drew on him the notice of government. When the riots in Spa Fields took place, he was arrested as one of the ringleaders; but after being kept some time in confinement he was liberated, there being no proof of his guilt. Shortly after he sent a challenge to the home secretary, Lord Sidmouth, as the author of the bad treatment he had received during his confinement; which occasioned his subsequent detention in prison for a considerable time. Burning with rage, he became the principal agent in the Cato Street conspiracy, the object of which was to murder several members of the administration, while at a cabinet-dinner at Lord Harrowby's, and excite an insurrection in the metropolis. Information, however, having been given to the ministers by a spy employed for the purpose, a party of police officers, with a company of the guards ready at hand, if wanted, proceeded to the place of meeting—a room over some stables in Cato Street—where the conspirators were, at the time, preparing for their enterprise. As soon as the officers entered, Thistlewood seized a sword, and killed the foremost of them on the spot. But he and his coadjutors were quickly secured; and being brought to trial, were condemned, and suffered as traitors, May 1, 1820.

THOM, WALTER, miscellaneous writer, was born at Bervio, in the county of Kincardine, April 14, 1770. He commenced business as a manufacturer in his native town, but not succeeding, he went to Aberdeen, and adopted literature as a profession. During his residence in Aberdeen, he published "The History of Aberdeen," and the "Annals of Pedestrianism." He afterwards went to Dublin, where he was engaged as editor of the Dublin Correspondent, which he conducted for some years. He was author of several articles in Browster's Encyclopædia, and contributed portions of the Sta-

THOMAS AQUINAS. [AQUINAS.]

THOMAS A BECKET. [BECKET.]

THOMAS A KEMPIS. [KEMPIS.]

THOMAS, JOHN, an English sculptor, born about 1813. He executed the colossal lions at the ends of the Britannia Bridge; the large bas-reliefs at Euston Station; the sculpture on the entrance piers at Buckingham Palace, and some sculptures at the Westminster Palace. He was employed by the Prince Consort in Windsor Castle, prepared designs for several public and private buildings, and left unfinished statues of Joseph Sturge and Sir Hugh Myddleton. Among his works of higher class are a "Mussidorn," "Una and the Lion," and a model for a monument to Shakespeare, which was placed in the International Exhibition of 1862. Died, still in his prime, at his residence, Malden Hill, April 9, 1862.

THOMAS, WILLIAM, a grandson of William Thomas, bishop of Worcester, who died in 1689, was born in 1670, and educated at Westminster School, and Trinity College, Cambridge. He obtained the living of Exal, in Warwickshire; and in 1723 was presented to the rectory of St Nicholas, in Worcester. Died, 1738. He published, among other works, an enlarged edition of Dugdale's Warwickshire, 2 vols.; and a "Survey of Worcester Cathedral." He had made collections for a history of Worcestershire, which fell into the hands of Dr Treadway Nash, and served as the foundation of his work.

THOMASIVS, CHRISTIAN, a distinguished German philosopher, was born at Leipsic in 1655. He was educated by his father, the Professor Jacob Thomsius, who was also the master of Leibnitz; graduated M.A. at the university of his native town, in 1672, and LL.D. at Frankfurt on the Oder, in 1679. He soon after became a professor at Leipsic, and there did good service by his bold attacks on the routine of the schools, and on many antiquated prejudices; and especially by setting the example, in 1687, of delivering his lectures, not in Latin, but in German; which practice, after passing through the customary ordeal of angry censure, was gradually adopted, and became universal in Germany. A host of enemies rose against the reformer, and at last the *odium theologium* was stirred by the ridiculous charge of atheism. He had dared to oppose the belief in ghosts and witches, and to assert that polygamy was not contrary to the law of nature, and that there was no harm in marriages between persons of different religions. To escape arrest at the instigation of the enraged theologians, he went to Berlin, and was appointed by the elector, Frederick III., to lecture at the *Ritteracademie* of Halle, in 1690. Four years later Frederick founded the university of Halle, and Thomsius had the chair of jurisprudence. He was subsequently made privy-councillor, rector of the university, and dean of the faculty of

jurisprudence. His works are numerous, and we can only name here—"Introduction to the Art of Reasoning," 1691; "The Art of Living Reasonably and Virtuously," 1697, an introduction to ethics; "History of Wisdom and Folly," several works on natural law, and a collection of minor essays. Thomsius started a Monthly Review in 1668, in which he carried on vigorously the war with prejudice and pedantry. He died at Halle in 1728.

THOMPSON, WILLIAM, a distinguished naturalist, was born at Belfast in 1805, and from his earliest youth was warmly attached to scientific and literary studies. The numerous memoirs published by him chiefly in scientific periodicals, and latterly more especially in the "Annals of Natural History," embrace all departments of zoology, and several are devoted to botanical investigations. He was constantly on the watch for new facts bearing on the natural history of his native island. But he did not confine his inquiries to Irish subjects, but added considerably to our knowledge of the natural history of England and Scotland; and when Professor E. Forbes proceeded to the Aegean at the invitation of Captain Graves, Mr Thompson, himself an intimate friend of the distinguished officer just named, accompanied him, and devoted the short time he was in the Archipelago to interesting zoological observations since published, chiefly on the migration of birds. His love of ornithology was indeed intense, and the results of his labours in that department are narrated with full and charming details in the volumes that have been published of his "great work on "The Natural History of Ireland." His name is associated with many discoveries, and numerous species of animals have been named after him. His reputation stood equally high on the continent and in America. Entirely devoid of any envious feeling, loving to co-operate with others, and to assist in furthering their researches, truthful and energetic, he spared neither time, labour, nor pains, to help in every possible way all who were engaged in kindred pursuits. His love of the fine arts was only second to his love of science, and for many years he was one of their most active promoters, and especially of painting, in Ireland. Died, 1852.

THOMPSON, BENJAMIN. [RUMFORD, Count.]

THOMSON, Dr ANDREW, an eminent modern divine and leader in the national church courts of Scotland, was born at Banquhar, in Dumfriesshire, in 1778. He was ordained minister of the parish of Sprouton, in 1802; removed to the East Church of Perth, in 1808, where he laboured assiduously till 1810, when he received a presentation from the magistrates and council of Edinburgh to the New Grey Friars' Church in that city. Eloquent, indefatigable, and zealous, he came prepared to the discussion of every subject, making an impression on the public mind which has but few parallels in the history of ministerial labours. In 1814 he was appointed to St George's Church, where, labouring in his vocation with surpassing energy, he rapidly extended his re-

works are numerous here—"Introduction," 1801; "The Art of and Virtuously," 1802; "History of Witches," 1803; "History of minor essays. Thoroughly Review in 1868, a vigorous war edantry. He died at

AM, a distinguished Belfast in 1803, and was warmly attached to his studies. He was distinguished by him chiefly in, and latterly more in the journals of Natural History, and in the departments of zoology, and devoted to botanical studies constantly on the earing on the natural land. But he did not to Irish subjects, but our knowledge of the and Scotland; Forbes proceeded to avigation of Captain himself an intimate distinguished officer just him, and devoted the the Archipelago to in- servations since pub- migration of birds. ry was indeed intense, labours in that depart- full and charming that have been pub- rked on "The Natural his name is associated, and numerous been named after him equally high on the rica. Entirely devoted loving to co-operate list in furthering their energetic, he spared minor pains, to help in was so engaged in the love of the fine arts love of science, and as one of their most especially of painting.

AMIN. [RUMFORD,

ANDREW, an eminent under in the national and, was born at Baire, in 1779. He was the parish of Spruce to the East Church of he laboured assiduously received a presentation and council of Edin- burgh Priests Church in , indefatigable, and shared to the discussion ing an impression on has but few parallel ministerial labours. In to St. George's Church, a vocation with sur- ardly extended his re-

pulation, and acquired extraordinary influence. Died, 1831.

THOMSON, ANTHONY TODD, M.D., a distinguished medical writer and practitioner, was born at Edinburgh, 1778, where his father had settled, after having long held an important office in America. He was educated at the high school and university of his native city, and while prosecuting his medical studies, he became a member of the Speculative Society, and thus formed the acquaintance of Lord Brougham, and many other eminent persons, whose friendship he enjoyed till his death. In 1806 he settled as a general practitioner at Chelsea, and practised there for 25 years with great success, laying the basis of his future reputation by the most indefatigable study, and publishing his "Coaspectus," a work of European reputation, and his "London Dispensatory," no less distinguished; editing, in conjunction with Dr Burrows, the Medical Repository; and gaining "golden opinions" by the amiability of his character, no less than by his professional skill. In 1826 he became one of the first professors of the university of London, and held the chairs of Materia Medica and medical jurisprudence till his death. About this period, also, he commenced practice as a physician; and he took advantage of the greater leisure thus procured, to write his lectures on "Materia Medica," which were afterwards published in 2 vols., and to plan various other works which he afterwards gave to the world, besides contributing many articles and reviews to different medical journals. Dr Thomson was a votary of literature no less than of science; and his last works were, a translation of Salvator's Philosophy of Magic, Omens, and apparent Miracles, and an edition of Thomson's Seasons, with numerous explanatory notes. Died, July 3rd, 1849. His "Treatise on Diseases of the Skin" was a posthumous publication.

THOMSON, JAMES, the poet the son of a Scotch clergyman, was born at Ednam, in Roxburghshire, in 1400; and was educated at Jedburgh and at Edinburgh. Relinquishing his first intention of entering the church, he went to London, where, in 1726, he published his "Water." In 1727 appeared his "Summer," which he addressed to Bubb Dodington. This was followed the year after by "Spring," and in 1730 by "Autumn." During the same period Thomson produced "Sophonisba," a tragedy; and a Poem on Sir Isaac Newton. Not long after this he was selected as the travelling associate of the son of Lord Chancellor Talbot, and was thus occupied for three years, in the course of which he visited most of the European courts. On his return he was rewarded with the post of secretary of briefs. In 1735 he published his poem of "Liberty," with the cool reception of which he was much disappointed. Soon after, by the death of Lord Chancellor Talbot, Thomson's office was vacated, and Lord Hardwick, who succeeded to the seals, gave it to another; but he was indemnified by the office of surveyor-general of the Leeward Islands, and a pension from the Princes of Wales. In 1738 he produced a second tragedy, entitled "Aga-

monnon," which was followed by "Edward and Eleanor," "Tancred and Sigismunda," and "Coriolanus;" the masque of "Alfred," in conjunction with Mallet; and "The Castle of Indolence." The "Seasons" and "Castle of Indolence" are Thomson's best works. The former still retains its popularity, especially with young lovers of nature. The latter, though less generally read, is more carefully finished, and in some respects deserves the highest place. He died at Richmond, in 1748. His portrait, by Paton, is in the National Collection.

THOMSON, JOHN, landscape painter, was born at Dally, in Ayrshire, 1778; succeeded his father as minister of that parish in 1800, and was translated to Duddingstone, near Edinburgh, in 1803, where he remained till his death. From his boyhood he evinced a strong predilection for art, which increased with his years; and having early become an honorary member of the Royal Scottish Academy, he produced a great variety of landscapes, which have placed him on a level with the best artists of his native land. Died, 1840.

THOMSON, THOMAS, F.R.S., regius professor of chemistry in the university of Glasgow, who exercised a remarkable influence on the development of the science of chemistry, was born at Crief, in 1773. He was educated at the parish schools of Crief and Sterling, where he acquired a thorough classical education, the benefits of which were manifested in his improvements of chemical nomenclature now generally adopted. After studying at St Andrew's, he went to Edinburgh, and in the season of 1795-96, he attended the lectures of Dr Black, of whom he spoke in terms of the utmost veneration. In 1796 he succeeded his brother in the editorship of the Supplement to the third edition of the "Encyclopædia Britannica," and remained in this position till 1800. During this period he drew up the first outline of his system of chemistry, which appeared in the Supplement to the "Encyclopædia," under the articles Chemistry, Mineralogy, Vegetable Substances, Animal Substances, and Dyelic Substances. In the article Mineralogy, written about 1798, he first introduced the use of symbols into chemical science, acknowledged to be one of the most valuable improvements in modern times. In 1807 he first introduced to the notice of the world, in the third edition of his system, Dalton's atomic theory, which had been privately communicated to him in 1804. He continued to lecture in Edinburgh till 1811, and during that time opened a laboratory for pupils, the first of the kind, it is believed, in Great Britain. During this period Dr Thomson made his investigations for government on the malt and distillation questions, which laid the basis of the Scotch legislation on excise, and rendered him a after-life arbitrator in many important revenue cases. In 1817 he was appointed to the chair of chemistry in Glasgow University; and here he continued to lecture for thirty years, sending forth numerous pupils, who have occupied the highest positions as chemical teachers or manufacturers, and enriching the literature of the country with

numerous works, of which we may mention his "Annals of Philosophy," "Attempt to establish the First Principles of Chemistry by Experiments," "Outlines of Mineralogy and Geology," and, above all, his learned and fascinating "History of Chemistry." Died, 1852.

THOBESBY, RALPH, an eminent antiquary and topographer, was born at Leeds, in 1658. He was educated at the school of his native place, after which he went to Rotterdam to learn the Dutch and French languages, to fit him for mercantile pursuits. On the death of his father he succeeded to a large concern, but he found leisure to cultivate his taste for antiquarian pursuits, and produced two works on the topography of Leeds, entitled "Ducatus Ledlensis," and "Vicinia Ledlensis." He was a fellow of the Royal Society. Died, 1725.

THORLLAKSON, JON, Icelandic poet, was born in 1744. He became a priest, and in 1788 settled in the village of Boegisa, in the dreary northern parts of the island. He had an income of about £7 a year, and lived in a poor hut, with a door four feet high, and furnished only with a bed, a table, and a chair. His wife did not relish the desolate living, and would not share her husband's home. Thorlakson occupied himself with the labours of the farmers, and amused his indoor leisure with writing poems. His chief production is the Icelandic translation of "Paradise Lost," which is said to have become a common household treasure. It was made not from the original, but from a Danish translation, is of much greater length, and written in totally different verse. Henderson, the English traveller, visited the old poet in 1814, and afterwards sent him a helpful gift of money collected in England. A pension was also granted him by the Danish government. Died, 1819.

THORNHILL, SIR JAMES, an eminent English painter, was born in 1676, at Weymouth, in Dorsetshire; and, after studying in this country, greatly improved himself on the continent. On his return, he was much engaged in the decoration of palaces and public buildings. Among his principal works are, the dome of St Paul's, the refectory and saloon at Greenwich Hospital, the hall at Bleuchelm, and some of the apartments at Hampton Court. He displayed great skill in treating allegorical compositions, and he was by no means an indifferent architect. Died, 1734.

THORNTON, BONNEL, a humorous writer and poet, was born in London, in 1724; and was educated at Westminster School, and Christchurch, Oxford. He made literature his profession, and was on terms of intimacy with many of the wits of the age, united with the elder Colman in the *Connoisseur*, and was a fertile contributor to the periodicals of the day. He projected an exhibition of sign paintings; and brought out a burlesque "Ode for St Cecilia's Day," which afforded much amusement. In 1766 he published a translation of *Plautus*; and the year following a poem, entitled "The Battle of the Wigs," in ridicule of the dispute between the licentiate and fellows of the College of Physicians. Died, 1768.

THORNTON, JOHN ROBERT, botanist, was born about 1758, and was educated at Cambridge. Shortly after, having acquired a fortune by the death of his brother, he resolved to make medicine his profession, and became a member of Guy's Hospital. After studying three years in London, he visited the continent; and, returning to the metropolis, commenced practice with considerable success. In 1798 he published a work in support of the Brunonian system, entitled "The Philosophy of Medicine, or Medical Extracts on the Nature of Health and Disease," in 5 vols. Soon after, he brought out a work, called "The Philosophy of Politics," &c., 3 vols.; but he derives his chief fame from his magnificent "Temple of Flora, or Garden of the Botanist, Poet, Painter, and Philosopher." Died, 1837.

THORWALDSEN, ALBERT, the great Danish sculptor, was the son of a carver on wood, and having early shown great talent for drawing, was gratuitously educated at the Copenhagen Academy of Arts. Here he studied so effectually that he obtained two gold medals and a travelling studentship, which entitles the competitor to a salary for three years. Thus far fortunate, Thorwaldsen proceeded to Rome, where he worked with zeal and energy, but where he is said to have been for some time so impressed by the magnificence of ancient art, as to break up not a few of his earlier works as soon as they were completed. The young sculptor was preparing to return home, his three years' allowance being completely exhausted, when the clay model of his *Jason* was seen by that princely patron of art, Henry Philip Hope, who ordered the marble statue at a price which set aside all his thoughts of returning home. The model had received emphatic praise from Canova. The *Jason* once completed, and by Mr Hope's means made known, Thorwaldsen's fortune was virtually made; orders at vast prices poured in upon him from all parts; and the numerous works completed by him from the commencement of 1800 to the close of 1837, give him a high place among modern sculptors. His countrymen were justly proud of him, and honoured him with a public funeral. Among his most celebrated works are the "Triumph of Alexander," a bas-relief; "Night" and "Day;" "Christ and the Twelve Apostles;" "Procession to Golgotha;" monuments to *Operaicus*, *Poniatowski*, *Maximilian of Bavaria*, &c. The character of Thorwaldsen as a man is very unfavourably depicted in a recent biography. The taint of his low birth and want of early cultivation, both intellectual and moral, remained on him through life. He was mean and money-loving, fond of drink and dogs, very licentious and faithless, and basely jealous of rivals in his art. Died, March 24, 1844, aged 73.

THOU, JACQUES AUGUSTE DE (THUANUS), the illustrious statesman and historian, was born at Paris, in 1553. He was third son of Christophe de Thou, first president of the parliament of Paris, and was brought up to the church. At the age of 18 he studied under Cujacius at the university of Valence, and there became the friend of Joseph Scaliger.

JOHN ROBERT, botanist, born at 1758, and was educated at shortly after, having acquired the death of his brother, here medicine his profession, and member of Guy's Hospital. After years in London, he visited and, returning to the metropolitan practice with considerable success in 1798 he published a work in the Brunonian system, entitled "The Nature of Health and Disease." Soon after, he brought out "The Philosophy of Politics," in which he derives his chief fame as an eminent "Temple of Flora," and Botanist, Poet, Painter, and Died, 1837.

THORWALDSEN, ALBERT, the great sculptor, was the son of a carrier and having early shown great talent, was gratuitously educated at the Copenhagen Academy of Arts, and did so effectually that he won gold medals and a travelling stipend, which entitles the country for three years. Thus far Thorwaldsen proceeded to Rome, and worked with zeal and energy, but could not have been for some time in Rome by the magnificence of his talent, and he took up not a few of his earlier works as they were completed. The artist was preparing to return to his native country, and his allowance being completed, when the clay model of his "Jason" by that princely patron, King Philip Hope, who ordered the statue at a price which set aside all other claims of returning home. He received emphatic praise from the King, and Jason once completed, and by means made known, Thorwaldsen was virtually made; orders were poured in upon him from all the numerous works completed the commencement of 1800 to 1837, give him a high place in sculpture. His countrymen were proud of him, and honoured him at his funeral. Among his most celebrated are the "Triumph of Alcmæon," "Night" and "Day," "The Twelve Apostles," "Prophetas," monuments to Copenhagen, Maximilian of Bavaria, &c. The Thorwaldsen as a man is very highly depicted in a recent biography his low birth and want of early both intellectual and moral training through life. He was mean, covetous, fond of drink and profligate, and faithless, and his rivals in his art. Died, 1844, aged 73.

THOU, ACQUÈS AUGUSTE DE (THOU), illustrious statesman and historian at Paris, in 1553. He was third son of Thou, first president of the parliament of Paris, and was brought up at the age of 18 he studied under the friend of Joseph Scaliger.

A New Universal Biography.

He witnessed at Paris the marriage of Henry of Navarre and the Massacre of St Bartholomew, and in 1573 went to Italy. He quitted the church, resigned his benefices, and was named master of requests to Henry III., whose cause, in the sad distractions of that time, he steadily supported. In 1581 made councillor of state, he was present at the States-general at Blois discharged the office of president of the parliament at Tours, and at the time of the assassination of his sovereign was at Venice, engaged in seeking aid in men and money in Italy, as he had been in Germany. Returning next to France, he entered the service of Henry IV., and attended him in his campaigns the next five years; was appointed royal librarian, and in 1604 succeeded his uncle as president & mortier. De Thou assisted in preparing the articles of the famous Edict of Nantes, and energetically defended the liberties of the Gallican church against the pretensions of Rome. His influence declined after the death of Henry IV., and he accepted, with regret, the appointment of joint director of the finances after the resignation of Sully. The influence of the papal court prevented his obtaining the office of first president of the parliament at Paris; and his bitter disappointment, with some personal sorrows, probably shortened his life. His great work is the "Historia sui Temporis," in 139 books, the first portion of which appeared in 1604; and which, after the publication of a further portion, had the honour of admission to the papal Index. It ranks with the few great histories of the world; and as the narrative of so illustrious a man, who was himself part of what he had to relate, who had an eye to see and did see, who, without being indifferent, knew how to be fair, not only in politics but in religion, it must always possess a rare interest and a high importance. It was at once received with hearty admiration in all the countries of Europe, and a sixth edition was preparing at the time of the author's death. A magnificent edition, in 7 vols. folio, was published by Thomas Carter in 1733, with an autobiography and the Letters and Latin poems of De Thou. A French translation appeared in 1734. Died, May, 1617.

THOU, FRANÇOIS AUGUSTE DE, son of the preceding. Inherited the virtues and intelligence of his father; but having been privy to the secret correspondence carried on between Cinquars and the court of Spain, he was beheaded at Lyons, in 1642.

THOUAIS. (PEYIT-THOUAIS.)

THRASYBULUS, an illustrious Athenian, son of Lycus, had a command in the fleet at Samos, in B. C. 411, and not only prevented the establishment of an oligarchical government in that island, but took a leading part in the overthrow of the tyranny of the Four Hundred at Athens. He distinguished himself at the battle of Cyzicus, recovered for Athens the towns of Thrace, and took part in the battle of Arginuse, in 406. He was chosen with Theramenes to visit the wrecks after the fight, and to save all the men they could; but being prevented by stormy weather, the generals were impeached, and banished from Athens by the Thirty Tyrants, he resolved in his retirement at

Thesbea to attempt the deliverance of his country. With a small band of fellow-exiles, and a small supply of arms and money from the Thebans, he seized, in 403, the fortress of Phyle, within twelve miles of Athens; defended, with his increased force, the troops sent against him, and four days after marched by night into Piræus, where the people gladly joined him. He won another victory at Munychia, and the Thirty were deposed, a new college of Ten being appointed. The Ten, however, were equally hostile to Thrasybulus, and asked the aid of Sparta. Lysander blockaded the exiles in Piræus, and Pausanias, the Spartan king, marched into Attica, as if to support him. But he used his influence as mediator, and a treaty was concluded between the opposing parties, under the guarantee of Sparta. The exiles returned, and soon after a complete amnesty was granted to the partisans of the Thirty. Thrasybulus worked quietly for many years for the good of Athens, and was once more called to command the fleet in 369. After many successes, he was murdered the same year by the citizens of Aspenderos, in Pamphylia.

THROCORTON, Sir NICHOLAS, an English diplomatist of the 16th century, was the son of Sir George Throcorton, and was born about 1613. He became page to the duke of Richmond, and was afterwards, successively, in the service of Henry VIII., his queen dowager, and Edward VI., who made him under-treasurer of the Mint, his queen dowager, and Edward VI. in 1553, and in the next year was implicated in Wyatt's rebellion, for which he was committed to the Tower. On his trial he conducted his own defence, and was acquitted; the jury being heavily fined for their verdict, and himself detained in prison for months afterwards. He then went abroad for several years, and on Elizabeth's accession he was made chief butler of England, and subsequently chamberlain of the Exchequer. He was ambassador at Paris four years, and afterwards to Mary, queen of Scots. He at last fell into disgrace by engaging in an intrigue for the marriage of Mary with the duke of Norfolk. Died, 1571.

THUANUS. [THOU, J. A. DE.]

THUCYDIDES, the great Greek historian, was born at Athens, in B. C. 471, nine years after the battle of Salamis. He was the son of Olorus and Hegesipyle, and through his mother is supposed to have been connected with the family of Miltiades. His family was wealthy, and he himself possessed some gold mines in Thrace. That he received the best education Athens could give him is not to be doubted. But we are no longer allowed to accept as historical the beautiful story of his being moved to tears in his boyhood on hearing Herodotus read his History at the Olympic games. Thucydides was at Athens during the plague, in 430, and was seized with it, but recovered. In the 8th year of the Peloponnesian war, 424, he had the command of a squadron off Thasos, and was called to assist Brasidas at Ampolis, but arriving too late, was condemned for neglect

of duty, and exiled. He lived in exile for twenty years, but where is not known; returning to Athens after the democracy had been restored by Thrasybulus, in 403. He is said to have been assassinated at Athens, or, according to some authorities, in Thrace, probably about 401. The great work of Thucydides is the history of the Peloponnesian War, which he recognized as the most memorable event in the history of Greece up to that time. This history is drawn not from other histories, but from personal observation and oral communications; the collection and preparation of materials being carried on during the progress of the war. It is the first example of philosophical history; portraying not so much the merely outward and visible facts and movements, as the development of character in actions, and the cooperation of human action on the world. Motives and the secret workings of things are unfolded, not speculatively, but as ascertained matters of fact. A very marked feature of the work is the *speeches*, introduced sometimes as actually spoken, sometimes as discourses appropriate to occasions, and for the explication of causes. The most conscientious care in the ascertaining of facts and dates, brevity and clearness of narration, perfect consistency in the details of one part with another and of the whole with the laws of nature and the known characters of the actors, inspire the fullest confidence in the truth and fidelity of the historian. This great history was first printed by Aldus, in 1562; was translated into Latin soon after by Valla; and has since been translated into most European languages. It was edited by Dr Arnold in 1830—35. There are several English versions.

THULDEN, THEODOR VAN, a celebrated Dutch painter and engraver, was born at Bois-le-duc in 1607. He was a pupil of Rubens, and painted so well in his master's style, that his own works have been sometimes attributed to Rubens. He assisted his master in the pictures which decorated the gallery of the Luxembourg; and among his own works are, the "St Sebastian," at Mechlin, "Assumption of the Virgin," at Bruges, "Martyrdom of St Andrew," at Ghent, &c. The most celebrated of his etchings are the series entitled "The Labours of Ulysses," executed after some lost paintings of Nicolo Abati, and a series after Rubens, representing the entering into Antwerp of the Infant Ferdinand of Spain. Van Thulden painted many small *genre* pieces, and occasionally figures in the works of other painters. Died, 1676.

THUNBERG, CARL PETER, a Swedish physician and traveller, was born in 1743, studied under Linnæus at Upsala, and was employed, in 1771, by the Dutch East India Company, to proceed in a medical capacity to Japan. While there he was allowed to explore the botany, manners, and customs of that interesting country; thence he proceeded to Ceylon; and, on his return to Sweden, he succeeded Linnæus, whose pupil he had originally been, in the professorship of botany at Upsal. He was also a member of many scientific societies in Europe and America, and died in 1828. Among his

works are "Flora Japonica," "Travels in Europe, Asia, and Africa," "Flora Capensis," &c.

THURLOE, JOHN, a statesman and political writer was a native of Essex, and born in 1616. He was secretary of state during the Protectorate; and though immediately after the Restoration he was arrested on a charge of high treason, yet such was Charles the Second's opinion of his talent and integrity, that he often invited him to take part in the public administration, which he thought proper to decline. Died, 1668. His state papers have been published in 7 vols. folio, and form a very valuable collection.

THURLOW, EDWARD, Lord, lord chancellor of Great Britain, was born in Suffolk, in 1732. He received his education at Canterbury School and Cambridge University, and was expelled from the latter for disorderly conduct. In 1754 he was called to the bar, and his success was rapid and extraordinary. He entered parliament as member for Tamworth, in 1768, was appointed solicitor-general in 1770, and attorney-general in the following year. He became one of the most powerful supporters of the policy of Lord North, and gained the highest esteem and confidence of George III. In 1778 he was appointed lord chancellor, and with the exception of the short period of the existence of the Coalition ministry of Lord North and Mr Fox, in 1783, held that office till 1792. In consequence of his hostility to Pitt, he was then compelled to resign. He had been raised to the peerage as Baron Thurlow in 1778. Died at Brighton, 1806.

THURROT, FRANÇOIS, a French naval officer, born in 1727. Having rendered himself conspicuous by his courage and success while in command of a privateer, he was invited to enter the royal navy, and entrusted with the command of five frigates and a corvette, destined to make a descent on the British coasts. He sailed on this expedition, Oct. 15, 1759, and arriving at Carrickfergus Bay, in Ireland, Jan. 10 following, the troops were landed, and the place surrendered in a few days. Thurrot thought proper, however, to re-embark his troops, and, on his return to France, his vessels were attacked by an English squadron, and he fell in the engagement, Jan. 20, 1760.

THYNNE, FRANCIS, a herald and antiquary of the 16th century, was the son of William Thynne, the editor of Chauver, and steward of the household to Henry VIII. He was educated at Tunbridge School and Magdalen College, Oxford; became a member of Lincoln's Inn, and in 1602 was made Lancaster herald. Hearne published "A Discourse of the Duty and Office of an Herald of Arms," written by Thynne, who also continued Holinshed's Chronicle; and wrote a "History of Dover Castle and the Cinque Ports," which, with many other productions, remain in MS. Died, 1611.

TARINI, ALESSANDRO, a celebrated Italian painter, born at Bologna, in 1577. He was successively the pupil of Prospero Fontana, Bartolomeo Cesi, and then of Domenico da Passigiano at Florence; but his style was ultimately formed after that of Ludovico Caracci. He settled at Bologna,

the "Flora Japonica," "Travels in Asia, and Africa," "Flora Capen-

LOE, JOHN, a statesman and politician was a native of Essex, and born in 1668. He was secretary of state during the reign of William III. and though immediately after the Restoration he was arrested on a charge of high treason, yet such was Charles II.'s opinion of his talent and integrity that he often invited him to take part in the public administration, which he refused to decline. Died, 1688. His works have been published in 7 vols. and form a very valuable collection.

LOW, EDWARD, Lord, lord chancellor of Great Britain, was born in Suffolk. He received his education at Cambridge and Cambridge University, expelled from the latter for disobedience. In 1754 he was called to the bar, his success was rapid and extraordinary. He entered parliament as member for Northampton, in 1768, was appointed solicitor-general in 1770, and attorney-general in the following year. He became one of the most powerful supporters of the policy of Lord North, and gained the highest esteem of George III. In 1778 he was appointed lord chancellor, and with the exception of the short period of the administration of Lord North and Lord Shelburne, in 1783, held that office till 1792. In consequence of his hostility to Pitt, he was compelled to resign. He had been elevated to the peerage as Baron Thurlow in 1783. Died at Brighton, 1806.

LOT, FRANÇOIS, a French naval officer, born in 1727. Having rendered himself conspicuous by his courage and success in command of a privateer, he was ordered to enter the royal navy, and in 1758, with the command of five frigates, he was sent to the coast of Africa, and in 1759, he was ordered to make a descent on the British coasts. He sailed on this expedition, Oct. 15, 1759, and arriving at Carrigrohilly, in Ireland, Jan. 10, 1760, he was ordered to land, and the place was captured in a few days. Thwarted in his return to France, his vessels were attacked by an English squadron, and he was taken prisoner, and died in the engagement, Jan. 20, 1760.

LUNN, FRANCIS, a herald and antiquary of the 16th century, was the son of John Lunn, the editor of Chaucer, and was educated at Tunbridge School and Balliol College, Oxford; became a member of the Inner Temple, and in 1602 was made a herald. He published "A Discourse of the Duty and Office of an Herald," written by Thynne, who also published Helmshead's Chronicle, and wrote the history of Dover Castle and the Chichester, which, with many other productions, are in MS. Died, 1611.

LUNN, ALESSANDRO, a celebrated Italian painter, born at Bologna, in 1575. He was successively the pupil of Prospero Fontana, Bartolomeo Ceati, and then of Domenico da Passigiano at Florence, but his style was ultimately formed after that of the vice Caracci. He settled at Bologna,

and enjoyed a very high reputation. Some of his most admirable paintings have been attributed to other great masters of his time. His works are generally marked by earnestness, and even gloom, by fertility of invention, accuracy of drawing, and skill in foreshortening. They are very numerous at Bologna, Florence, Parma, and other cities of Italy; and among the most celebrated are, the "Deposition from the Cross," the "Miracle of St Dominic," the "Miracle of St Bernard," at Bologna; Exhumation of a Dead Monk, at Rosco; "Repentance of St Peter after his Denial of Christ," at Modena; and the "Repentance of St Joseph," now in the Louvre. Died at Bologna, aged 91, in 1668.

TIBALDI, PELLEGRINO, a celebrated Italian painter and architect, was born at Bologna, probably in 1527. He is sometimes called PELLEGRINO PELLEGRINI, and PELLEGRINO DA BOLOGNA. It is not known who was his first master, and there is some uncertainty about the dates of his birth and death. He visited Rome in 1547, and there carefully studied the lately completed works of Michael Angelo in the Sistine chapel. His admiration of them made him an imitator of that great master, but with a softening grace and delicacy, so that he was called the "reformed Michael Angelo." Among his most remarkable works are the frescoes in the Institute of Bologna, at that time the palace of Cardinal Poggi, and in the Poggi chapel. The former represent scenes in the life of Ulysses. He painted also at Loreto and Ancena, and afterwards in the Escorial. He was employed as an architect by (San) Carlo Borromeo at Milan, and in 1570 was named architect of the Duomo of that city. In 1586 he went to Madrid, and was employed nine years by Philip II. as fresco-painter and architect, and returned richly remunerated and honored with the title of marquis of Valdelsa. Tibaldi designed the facade of the cathedral of Milan. The date of his death, at Milan, is variously given from 1580 to 1606.

TIBERIUS CLAUDIUS NERO, Roman Emperor, was born at Rome, B. C. 42. He was sprung from the patrician family of the Claudii, clearly displayed remarkable abilities, was carefully educated, and began, even in boyhood, to play a part in public affairs. Before he was five years old he became stepson to Octavianus, who procured the divorce of his mother Livia, and married her. Tiberius married Vipsania Agrippina, daughter of Agrippa, and had by her a son, whom he named after his beloved brother, Drusus. During his early manhood he took a distinguished part both in civil and military affairs; made his first campaign at the age of 19, in Spain; retook Tigranes to the throne of Armenia; retook from the Parthians the standards lost by Crassus; was shared with the government of Gallia Transalpana; and, in conjunction with his brother, subdued the Rhodians, and put an end to the war in Pannonia. For his services he was honored with a triumph. In 38 he was chosen consul, and, in the following year, on the death of Agrippa, Augustus

compelled him to separate from his wife and marry Julia, daughter of the emperor and widow of Agrippa. The divorce of Agrippina was a bitter grief to him, and the scandalous conduct of Julia embittered his life still further. In B. C. 8 he test his brother, who died in Germany, whither Tiberius hastened to receive his last breath; and he accompanied the corpse on foot the whole way to Rome. After another campaign in Germany, he was again chosen consul, and had a second triumph. And then, in the flower of his age and the height of his renown, he suddenly withdrew from public life, and retired to the island of Rhodes, B. C. 5. The same year the two sons of Julia were declared successors of Augustus. During his residence in Rhodes, Julia was banished for her vices to the island of Pandataria. Tiberius led a simple and regular life, enjoying open-air exercises, the pursuit of literature and science, and correspondence with eminent men. He returned to Rome A. D. 2, up to which time his character and reputation were unimpaired; and within a short time both the sons of Julia died, and Augustus adopted Tiberius as his successor, compelling him in turn to adopt his nephew Germanicus. During the last ten years of the reign of Augustus, Tiberius rendered the most important services to the empire, especially distinguishing himself in his German campaigns, for which he had a third triumph; and, in A. D. 14, he succeeded Augustus. Suspicions had been excited that the sons of Julia were poisoned; and suspicions of a like kind were awakened by the death of Augustus. Whether well-founded or not, their justice would be in perfect accordance with the character of Tiberius, as it appeared after his accession to the throne. He swept away all vestiges of popular government, guarded his own majesty by severe laws, by spies, and a secret police, and by unscrupulous cruelty. In all which measures he had a worthy agent in his minister Sejanus, who became virtually sovereign in A. D. 22; the emperor gradually leaving the state in his hands, and giving himself up to the most senile and licentiousness. In A. D. 26 he left Rome, and in the next year settled in the island of Caprea, where he gave free scope to his sensuality. Sejanus, suspected of aiming at the empire, was put to death by order of Tiberius, in 31, and Tiberius, falling ill at Misenum in 37, was succeeded by Macro, commander of the Praetorian guards. The character of this emperor, painted by Tacitus in such dark colours, as a despot, cruel, licentious, and above all, a hypocrite, remains to some extent an enigma. Suetonius and Velleius Paterculus depict him in brighter colours. Suetonius made use of a short account written by Tiberius of his own life. In modern times he has not wanted apologists, among whom are Buchholz, and most recently Adolf Stahr. The latter goes the length of a determined panegyrist, and tries to make him out a model of heroic wisdom.

TIBERIUS, surnamed CONSTANTINUS, emperor of the East, was a Thracian by birth, and was brought up at the court of Justinian. He rose gradually to the highest

military honours, and was commander of the imperial guards under Justinus. His character and services endeared him equally to the emperor and the people, and in 574 he was proclaimed Cæsar. The government was left in his hands, and in 578 he was crowned emperor on the abdication of Justinus, who died a few days later. Tiberius then took the surname of Constantinus. He carried on successfully, by his generals, Justinian and Maurice, the war with Persia, and maintained the imperial authority against the Lombards in Italy. Died, 582, after having created Maurice Cæsar, and given him in marriage his daughter Constantina.

TIBULLIUS, ALBIUS, the celebrated Roman elegiac poet, was of an equestrian family, and flourished in the age of Augustus. The dates of his birth and death are not known, but are inferred to have been respectively about B. C. 54 and 18. His life was passed for the most part peacefully on his paternal estate of Pedum, between Tibur and Præneste; which he was deprived of during the proscriptions and confiscations following the civil war, but appears to have had restored to him. He had a patron in M. Valerius Messala, and accompanied him during his campaign in Gaul. Tibullus was the contemporary of Virgil and Ovid. His poems consist of four books of Elegies, chiefly expressions of the passion of love; breathing the most profound sensibility, the tenderest melancholy, and the finest appreciation of the beauties of nature. The authenticity of the last two books is doubted. The poems of Tibullus have usually been printed with those of Catullus and Propertius, but they have also been frequently published separately, and translated into English, French, German, and Italian. Grainger's metrical version with a prose translation is included in a volume of Bohn's Classical Library.

TICKELL, THOMAS, poet and essayist, was born in 1686, at Bridekirk, in Cumberland; and became fellow of Queen's College, Oxford. Through the friendship of Addison, he was made under-secretary of state, and was afterwards appointed secretary to the lords justices of Ireland. Some of his pieces are in the Spectator; besides which, he wrote "The Prospect of Peace," "The Royal Progress," and other poems; and, in rivalry of Pope, translated the first book of the Iliad. Died, 1740.

TIECK, CHRISTIAN FRIEDRICH, German sculptor, chiefly celebrated for his portrait busts, was born at Berlin in 1776. He was brother of Ludwig Tieck, noticed below; was a pupil of Schadow, and of the French painter David; and during a short residence at Weimar gained the friendship of Goethe and many noble and eminent persons. He made two visits to Italy, and became the friend of the crown prince, Ludwig, of Bavaria, of Madame de Stael, and the sculptor Rauch. From the year 1819 he lived at Berlin, and throughout his life was fully employed on public and private works; was admitted to the Academy, and made director of the department of Sculpture in the Mu-

seum. Among his very numerous busts are those of King Ludwig, Goethe, his brother Ludwig, Lessing, Schelling, Voss, Herder, and Wolff. The sculptor, August Kiss, was a pupil of Tieck. Died, 1851.

TIECK, LUDWIG, the distinguished German poet, novelist, and translator, one of the reputed founders of the so-called Romantic School of German literature, was born at Berlin in 1773. After studying at the Gymnasium, he went to the university of Halle, and afterwards continued his studies at Göttingen and Erlangen. From his youth he was chiefly attracted by the poetic side of nature and literature, and he ranged himself on the side of the critical principles set forth by Goethe and Schiller in the "Horen" and "Xenien." He was an ardent student of English literature, especially the dramatic of the 16th century, and among his earliest productions were a novel entitled, "William Lovell," an attempt to depict English life, and a translation from Ben Jonson. After completing his studies he travelled; married at Hamburg; became acquainted with the Schlegels at Jena, and also with Novalis, the fine genius so early lost, and whose fragmentary writings he afterwards edited in conjunction with Friedrich Schlegel. His place of residence was frequently changed in the following years; we find him successively at Berlin, Dresden, Frankfort-on-the-Oder, and then in Italy, 1804—1806. On his return to Germany he settled first at Munich, then again near Frankfort; and in 1818 he visited London, for the purpose of extending his acquaintance with our literature by examining the public and private libraries, to which access was freely given him. Dresden appears to have been his home from that period for about twenty years, and his literary activity was almost incessant. In 1840 he returned to Berlin on the invitation of the king, who honoured him with the title of privy-councillor. There he spent the remaining thirteen years of his laborious and fruitful life. His works are of very varied character, and far too numerous to be named here; they fill 200 volumes. Among those which brought him the highest reputation are his tales and plays, embodying in new forms some of the old familiar Märchen. The publication of these, under the title of "Peter Leberecht's Volkemärchen," in 1797, first brought him into general notice. They were republished in 1812, retouched and combined into a whole by a tissue of eversions, under the title of "Phantasia." They are full of mirth and genial laughter and good-natured satire on the literary world of his time. "Franz Sternbald's Wanderungen," the fictitious history of an art student, and "Kaiser Octavianus," are perhaps his highest achievements as a novelist, and "Genesiveva" his best play. His "Dichtersleben" is a novel in which he attempts to depict Shakespeare and his times. The admirable translation of Shakespeare, in part executed by August Wilhelm Schlegel, and published between 1797—1810, was throughout revised and completed by Tieck, whose edition appeared between 1825—1829. It is esteemed the best German translation. Among his

Among his very numerous busts are King Ludwig, Goethe, his brother Lessing, Schelling, Voas, Herder, &c. The sculptor, August Kiss, was Tieck. Died, 1851.

LUDWIG, the distinguished German novelist, an translator, one of the founders of the so called Biedermeier school of German literature, was born in Berlin in 1773. After studying at Göttingen, he went to the university of Jena afterwards continued his studies in Jena and Erlangen. From his youth he was attracted by the poetic side of literature, and he ranged himself on the side of the critical principles set forth by Goethe and Schiller in the "Horen" and "Kritik." He was an ardent student of German literature, especially the drama of the 16th century, and among his productions were a novel entitled, "Die Leinwand," an attempt to depict life, and a translation from Ben Jonson. After completing his studies he married at Hanburg; became acquainted with the Schlegels at Jena, and with Novalis, the fine genius so early whose fragmentary writings he has edited in conjunction with Friedr. Schlegel. His place of residence was frequently changed in the following years; he successively at Berlin, Dresden, on the Oder, and then in Italy, &c. On his return to Germany he first at Munich, then again near Göttingen, and in 1818 he visited London, with a view of extending his acquaintance with our literature by examining the public and private libraries, to which access was given him. Dresden appears to have been his home from that period for twenty years, and his literary activity most incessant. In 1840 he was elected on the invitation of the king, who conferred on him the title of privy-counsellor, he spent the remaining thirty years of his laborious and fruitful life. He was of a very varied character, and far from generous to be named here; they fill 20 vols.

Among those which brought him the greatest reputation are his tales and plays written in new forms some of the old Märchen. The publication of these, under the title of "Peter Leberecht's Leben," in 1797, first brought him general notice. They were republished, retouched and combined into a single volume by a tissue of conversations, under the title of "Phantasia." They are full of a genuine laughter and good-natured wit. His literary world of his time, "Sternbilds Wanderungen," the history of an art student, and "Octavinnus," are perhaps his achievements as a novelist, and "Genese" is best poetry. His "Dichterberien" is a novel in which he attempts to depict the life and times. The admirer of Shakespeare, in part executed by Wilhelm Schlegel, and published in 1797-1810, was throughout revised by Tieck, whose edition is completed by Tieck, whose edition is completed between 1825-1829. It is esteemed as a German translation. Among his

A New Universal Biography.

other works are, "Minneleeder aus dem Schwäbischen Zeitalter," "Alt-Englisches Theater," "Alt-Deutsches Theater," "Dramaturgische Blätter," and a good translation of Don Quixote. Died, at Berlin, 28th April, 1853.

TIEDEMANN, DIETRICH, German philosopher, was born at Bremervörde, in the duchy of Bremen, in 1748. He completed his studies at the university of Göttingen, and gave up, successively, theology and law to devote himself to philosophy. After being engaged several years as private tutor, he became, through the influence of Heyne, a member of the philological seminary of Göttingen, and soon after was appointed professor of ancient literature at the college of Cassel. In 1786, he was transferred to the university of Marburg, as professor of philosophy, lecturing, however, on various subjects from time to time. His first publication was an Inquiry into the Origin of Language, published in 1772. His principal works are—"System der Stoischen Philosophie," "Untersuchungen über den Menschen," "Geist der spekulativen Philosophie," and "Handbuch der Psychologie." Died, 1803.

TIEDGE, CHRISTOPH AUGUST, a celebrated German poet, was born in 1752. Educated at Halle for the law, he soon abandoned it and became a private teacher, obtaining introductions to several persons of eminence in literature. Among other friendships early formed was that of a lady, Madame von der Recke, who generously made her home his own, and at her death, in 1833, provided for his continued enjoyment of it while he lived. His principal poems are the "Urania," "Wanderungen durch den Markt und das Leben," "Frauenpiegel," &c. His complete works fill 10 vols. 8vo. An interesting account of his visit to Italy, in company with his friend Madame von der Recke, was published by her. Died, 1841.

TIERNNEY, GEORGE, a distinguished statesman and political writer, was born in London, in 1756; received his education at Cambridge, and was designed for the bar at the commencement of his public life, but Tiernney attached himself to the Whigs, and in 1793 he was elected M. P. for Southwark. He soon proved himself an able opponent of Mr Pitt. In 1806 he lost his seat as member for Southwark, and afterwards successively represented Athlone, Bannbridge, Appleby, and Knarborough. During a debate in the year 1798, some words spoken in the House were the cause of a duel between him and Mr Pitt, in which, however, neither party was wounded, when Mr Addington became minister, in 1802, he made Mr Tiernney treasurer of the Admiralty. In 1806, under the Grenville administration, he became president of the Board of Control, but went out of office on the resignation of the ministry early in the following year. On the formation of the new ministry, he was appointed to the mastership of the Mint; from which he resigned, with Lord Goderich, in 1828, and died in 1836.

TIGHE, MARY, poetess, was born in Ire-

land in 1773. Her maiden name was Blackford, and at the age of 20 she married Henry Tighe, a relative by her mother's side. She is remembered as authoress of the charming poem of "Psyche," the subject of which is taken from the well-known story of Apuleius. It was first published, with some shorter pieces, about a year after her death, which took place in 1810.

TILLEMANS, PETER, a Dutch painter, was a native of Antwerp; he came to England in 1708, and was employed by several noblemen in taking views of their seats and pictures of their hunts, races, and horses. Died, 1734.

TILLEMONT, SEBASTIEN LENAIN DE, the celebrated French ecclesiastical historian, was born at Paris in 1637. He was educated at Port-Royal, and was taught logic and church history by Nicole. He was, from his earliest years, remarkable for gentleness, goodness, and a deep sense of religion, and from humility he long refused to take holy orders. The urgent persuasion of his friend, Isaac de Sac, overcame his reluctance, and in 1676 he was ordained priest. Expelled three years later with the other Port-Royalists, he withdrew to his family estate of Tillemont; visited his fellow-refugees in Holland in 1681, and spent the rest of his life in studious retirement. His great works are—"Histoire des Empereurs et des autres Princes qui ont regné durant les six premiers siècles du règne de Clovis," published in 6 vols. 4to, between 1693-1759, and "Mémoires pour servir à l'Histoire Ecclésiastique des six premiers siècles," 12 vols. 4to, which appeared between 1693-1712. These works both consist of passages selected and translated from the original sources of information, with connecting narrative and illustrative notes where necessary. Vast learning, keen sense of fact, and scrupulous accuracy, without any pretence, are the characteristics of Tillemont. Out of his stores of knowledge he furnished matter for the works of several other authors. Died, at Paris, in 1698, and was buried in the abbey of Port-Royal.

TILLI, MICHEL ANGELO, botanist and physician, was born at Florence, in 1655. His greatest work is the "Catalogus Plantarum Horti Pisani," printed at Florence, 1723. He was a friend of the naturalist Redi, and the correspondent of many eminent European botanists. He was also a fellow of the Royal Society of London. Died, 1740.

TILLOCH, ALEXANDER, was born at Glasgow, in 1759. His father was a tobaccoist, and it was his intention to bring up his son to the same trade; but his mind was bent on mechanical improvements, and at length, though totally un instructed, he formed the idea of printing with stereotyped plates. He began his experiments in 1781; and having succeeded in them, Mr Foulis, a printer, of Glasgow, joined him, and a patent was taken out in their names. Circumstances, however, induced them to lay it aside for a time, and it was never afterwards renewed by them as a speculation. In 1787, Mr Tilloch quitted Scotland for London, and soon after purchased the

Star, an evening paper, of which he became the editor, and carried it on till within four years of his death. In 1797 he projected and established the Philosophical Magazine, which he carried on for a number of years with great credit; and, only 15 days before his death, he had obtained a patent for an improvement on the steam-engine. Yet amidst these avocations he found time for theological studies, and published some papers on the Prophecies. In 1823 he printed an octavo volume, entitled "Dissertations on the Apocalypse;" and he was latterly engaged in superintending "The Mechanic's Oracle." Some years before his death the university of Glasgow conferred on him the degree of LL.D.; and he preached occasionally to a dissenting congregation in Goswell Street Road. Died, 1825.

TILLOTSON, JOHN, a distinguished English prelate, was the son of a clothier at Sowerby, near Halifax, and born in 1630. His father, who was a strict Calvinist, brought him up in the same principles, and sent him to Clare Hall, Cambridge. At the Restoration he conformed to the established church, was made king's chaplain, and presented to a prebend of Canterbury. When Charles II., in 1672, issued a declaration for liberty of conscience, for the purpose of favouring the Roman Catholics, he preached strongly against it, but was, nevertheless, advanced to the deanery of Canterbury, and obtained a prebend in St Paul's. He warmly promoted the exclusion bill against the duke of York, and refused to sign the address of the London clergy to the king, on his declaration that he would not consent to it. At the execution of Lord William Russell he attended him with Dr Burnet; and, though afterwards decided friends to that revolution, both these divines urged that nobleman to acknowledge the unlawfulness of resistance. After the revolution he was appointed clerk of the closet; and, on the deprivation of Saneroff, in 1691, he was raised to the see of Canterbury. Died, 1694. His sermons rank amongst the most popular in the English language, and were at one time regarded as a standard of finished oratory. His portrait, by Mrs Beale, is in the National Portrait Gallery.

TILLY, JOHN TZERCLAS, Count von, the famous commander-in-chief of the imperial armies in the Thirty Years' War, was born in South Brabant, in 1559. He was of an illustrious family, and was brought up by the Jesuits; soon, however, quitting the order and becoming a soldier. He first served in the Spanish army, and about 1607 was appointed commander-in-chief of the Bavarian army. To this post was added that of commander-in-chief of the forces of the Catholic League. In this capacity he greatly distinguished himself during the Thirty Years' War. After conquering the Upper Palatinate he won the great battle of Prague against the Bohemians in November, 1620; and after several other victories defeated the duke of Brunswiek and Count Mansfeld at Stadt-Loo, near Munster, in August, 1623, and was made count of the empire. After the disgrace and dismissal of

Wallenstein, Tilly was appointed, in 1630, commander-in-chief of the imperial armies, and at the same time was created field-marshal. In the following spring he besieged and took Magdeburg, which he gave up to pillage and massacre for three days, and then destroyed. After being victor in thirty-six battles, he was at length defeated at Breitenfeld, by Gustavus Adolphus, and severely wounded, in September, 1631. His career closed with the battle on the banks of the Lech, in which he was again defeated by Gustavus, and being mortally wounded, died the next day, 6th April, 1632, at Ingolstadt. Tilly was never married, cared for none of the pleasures of sense, and lived as abstemiously as an ideal monk. A small, taciturn, authoritative man, who fought fanatically for the Catholic church.

TIMÆUS, a Pythagorean philosopher, was a native of Locri, in Italy, and is styled by Plato a "most diligent inquirer into all the works of nature."—TIMÆUS, a Greek historian, banished from Sicily by Agathocles, tyrant of Syracuse. He wrote a "History of the Wars of Pyrrhus," a "General History of Sicily," &c.—TIMÆUS, the Sophist, author of a "Dictionary of Platonic Phrases," who is supposed to have flourished about A. D. 400.

TIMOLEON, the illustrious Greek general, was born of a noble family at Corinth, about four centuries before the Christian era. He early exhibited intrepid courage and a hatred of tyranny; which he carried to such a pitch, that, according to Plutarch, he stood by while his brother Timophanes, who had made himself tyrant of Corinth, was assassinated. When the Syracusans solicited the aid of the Corinthians against an invasion of the Carthaginians, he was appointed to command the auxiliary forces, and, by a happy mixture of valour and prudence, succeeded not only in restoring Syracuse to liberty, but he brought the whole land of Sicily into a more prosperous and tranquil state than it had been in for many years. He fixed his abode at Syracuse, and lived as a private citizen, distinguished only by his influence and the respect paid to his virtues. He became blind in his last days. Died, B. C. 337.

TIMON, a Greek poet and philosopher, was the disciple of Pyrrho, and lived in the third century B. C. He wrote comedies, tragedies, and satyric dramas; besides his satires, called "Sillæ," which are still in part extant.

TIMON, the Misanthrope, was born near Athens, and lived during the Peloponnesian war. The faithlessness of his friends and successive disappointments soured his nature, and drove him into solitude; where he is said, however, to have welcomed Alcibiades. His name has become proverbial, and his story is familiar through the tragedy of Shakspeare.

TIMOTEO DA URBINO, also called TIMOTEO DELLA VITE, Italian painter, was born about 1470. He learnt the art of drawing, but as he had considerable skill in drawing, he was sent to study under Fra Bartolomeo at Bologna, where he remained about 15 years. His first works as a painter were

...Tilly was appointed, in 1630, in-chief of the imperial armies; the same time was created field-marshal; in the following spring he took Magdeburg, which he gave up and massacred for three days, destroyed. After being victor in several battles, he was at length defeated by Gustavus Adolphus, and wounded, in September, 1631. He died with the battle on the banks of the Rhine, in which he was again defeated, and being mortally wounded, died on the 6th April, 1632, at Ingolstadt. He was never married, cared for no pleasures of sense, and lived as simply as an ideal monk. A small, authoritative man, who fought for the Catholic church.

...Timo, a Pythagorean philosopher, disciple of Locri, in Italy, and is called Plato a "most diligent inquirer into the works of nature."—TIMÆUS, an historian, banished from Sicily by Dionysius, tyrant of Syracuse. He wrote a "History of the Wars of Pyrrhus," a "Geography of Sicily," &c.—TIMÆUS, the author of a "Dictionary of Phonic" who is supposed to have flourished about 400.

...TIMON, the illustrious Greek general, of a noble family at Corinth, about 400 years before the Christian era. He was celebrated for his intrepid courage and a hatred of tyranny; which he carried to such a degree, according to Plutarch, he stood up against his brother Timophanes, who had become tyrant of Corinth, was assassinated. When the Syracusans solicited the aid of the Corinthians against an invasion of the Carthaginians, he was appointed to command the auxiliary forces, and, by a mixture of valour and prudence, effected only in restoring Syracuse to its former state but he brought the whole land into a more prosperous and tranquil condition. It had been in for many years in a state of anarchy, and he lived in his abode at Syracuse, and lived as a private citizen, distinguished only by his talents and the respect paid to his person. He became blind in his last days. c. 337.

...TIMON, a Greek poet and philosopher, disciple of Pyrrho, and lived in the 4th century B. C. He wrote comedies, satires, and satyric dramas; besides his plays called "Silloe," which are still in vogue.

...TIMON, the Misanthrope, was born near Athens and lived during the Peloponnesian war. His faithlessness to his friends and his numerous disappointments soured his mind, and he drove him into solitude; where he was, however, to have welcomed Alcibiades. His name has become proverbial, and his story is familiar through the tragedy of Euripides.

...TITO DA URBINO, also called TITICINO, an Italian painter, was born about 1470. He learnt the art of painting from his father, but as he had considerable skill in drawing, he was sent to study under Raphael at Urbino, where he remained about three years. His first works as a painter were

...TITO DA URBINO; but he is said to have gone to Rome by invitation of Raphael, to whom he was related, and to have assisted him in his frescoes of the Sibyls. He soon returned to his native city. The influence of Francia appears in most of his paintings, but his later show also that of Raphael. Died, 1523. It has been conjectured that the dates given for the birth and death of this master are each ten years earlier than they ought to be.

TIMOTHEUS, a celebrated lyric poet and musician of antiquity, was a native of Miletus, in Caria, and flourished at the court of Philip of Macedonia. He died B. C. 357. To him is attributed the completion of the lyre by four additional strings.

TIMOTHEUS, an illustrious Athenian general, lived in the 4th century B. C. He was the son of Conon, also renowned as a general, and the disciple of Isocrates. In 378 he had the command of the fleet which was to act in aid of the Thebans in their war with Sparta, by ravaging the coasts of the Peloponnesus. He took Corcyra, and by his moderation easily won the alliance of many cities, and re-established the power of Athens. He defeated the Spartans in a naval combat, and a peace being made, returned to Athens. By humane interference on behalf of some exiles of Zacythus, he violated the terms of the peace, and provoked a new outbreak of war. He was again sent to protect Corcyra, but being delayed by the necessity of procuring equipments among the allies of Athens, he was superseded in the command by Iphicrates, and only escaped sentence of death on his trial, in consequence of the earnest intervention of his friends, especially of Alcetas, king of the Molossians, and Jason, tyrant of Pheræ, the latter of whom risked his own life by going to Athens to protect him. Timotheus was several times afterwards placed at the head of the army, and rendered important services. In 356 he held a joint command of the fleet with Iphicrates and Chares, against the revolted allies of Athens; but the failure of the expedition against Samos was charged on him, and being tried, he was fined 100 talents; an enormous sum, which he could not pay. He therefore quitted Athens and went to Chalcedon, in Bœotia, and there died, about 354. His son, Conon, was allowed to settle the debt to the state by spending ten talents on the restoration of part of the walls of Athens.

TINDAL, MATTHEW, a celebrated polemical writer, was born at Beer-Ferris, in Devonshire, in 1657. He studied at Oxford, and according to the report of his enemies, led a very immoral life there. But he obtained a fellowship at All Souls' College, and graduated L.L.D. For a short time he went over to the Romish communion, but returned to the church of England. He spent the greater part of his life in London, and was chiefly occupied in literary labour. It is supposed that he may have been called to the bar, but there is no proof that he was. Tindal filled a large place in the view of his contemporaries, as a polemical theologian; his successive writings made a great noise, excited even a panic among certain classes,

and called forth a host of angry replies. He appears to have been a reasonably learned man, careful and fair, and content to write what he meant clearly and plainly. His numerous political pamphlets are now sunk out of sight, but among his theological works are still noteworthy—"The Rights of the Christian Church asserted, against the Romish and all other priests who claim an independent power over it," which appeared in 1706, and was followed by two "Defences;" the three were burnt by order of the House of Commons, in 1710; and his "Christianity as Old as the Creation, or the Gospel a Republication of the Religion of Nature," published in 1730. It was replied to by Waterland, Leland, Conybeare, James Foster, and other writers, and was defended by the author in his "Remarks on Scripture Vindicated (by Waterland) and some other late Writings." Died at London, 1733.

TINDAL, NICHOLAS, nephew to the foregoing, divine, miscellaneous writer, and translator and continuator of Rapin's History of England. Born, 1687; died, 1774.

TINDAL, Sir NICHOLAS CONYNGHAM, lord chief justice of the court of Common Pleas, was born in 1777, educated at Trinity College, Cambridge, and having become a student of Lincoln's Inn, he commenced practice as a special pleader, and in 1808 was called to the bar. He entered parliament, in 1824, as member for the Wigton district of burghs; and in 1828 he was made solicitor-general, and knighted. When Sir John Copley, who had represented the university of Cambridge, was raised to the office of lord chancellor, in 1837, Sir Nicholas Tindal contested with Mr. Banks the honour of representing his alma mater, and was returned by a considerable majority. Two years afterwards he was promoted to the chief justiceship, which position he occupied till his death. Died, July 6, 1846, in the 70th year of his age.

TINDAL, or TYNDALE, WILLIAM, one of the English reformers, was born in 1500; studied at Oxford; but was obliged to leave that university on account of having imbibed the doctrines of Luther. He then withdrew to Cambridge, where he took a degree, and soon after went to reside as tutor in the family of Sir John Welch, near Bristol. While in this situation, he translated Erasmus's "Enchiridion Militis Christiani" into English; but, in consequence of his opinions, articles were preferred against him before the chancellor of the diocese, and he received a reprimand. Upon this he withdrew to London, and next to Antwerp, where he translated the New Testament into English. This version was printed in 1526, and the greater part being sent to England, the prelates Warham and Tunstall bought up all the copies they could procure, and caused them to be burnt. By means of the money thus received, Tyndale was enabled to print a new edition in 1534; after which he began a translation of the Old Testament, in which he was assisted by Miles Coverdale; but they proceeded no farther than the Pentateuch. Through the interference of the English government, Tyndale was apprehended at Antwerp, and, in

1530, being brought to trial at Augsburg, he was condemned to the stake, which sentence he quietly endured, being first strangled and then burnt. His last words were, "Lord, open the King of England's eyes."

TINTORETTO, **TI**, one of the most celebrated Italian painters, was born at Venice, in 1512. His name was **JACOPO ROBUSTI**, and he acquired that by which he is usually called from the fact of his being the son of a dyer (*Tintore*). He was placed in the school of Titian, but only remained there a few days; Titian dismissing him on seeing some of his clever drawings. With utmost energy and patience he then pursued the study and practice of his chosen art, aiming high, aspiring to fellow Michael Angelo in design, and Titian, whose works he diligently copied, in colouring. He also studied anatomy, and by carefully-contrived arrangements, made himself a great master of light and shade. He worked with surprising rapidity, did everything he could get commissions for, and some things besides; for he cared more for the "praise" than he did for the "pudding." His works are consequently very numerous, and also, with the exception of some early ones, carelessly executed. In some of his best paintings he was the acknowledged rival of Titian; but in other works he fell below himself. He painted both in fresco and in oil. He put his name to three pictures only; the "Crucifixion," in the Scuola di San Rocco, Venice; the "Miracolo dello Schiavo," probably his masterpiece, and now in the Academy of Venice; and the "Marriage at Cana," now in the church of Santa Maria della Salute. Among his other works are the "Resurrection of Christ," the "Slaughter of the Innocents," the "Miracle of the Loaves and Fishes," with many others in the Scuola di San Rocco; the great picture of "Paradise" in the Ducal Palace, the "Coronation of Frederick Barbarossa," and the "Siege of Zara," also in the Palace. Tintoretto distinguished himself very greatly as a portrait painter. The National Gallery possesses but one work of this master, "St George destroying the Dragon;" but there are other works of his in several private collections in England. Tintoretto died at Venice in 1594.—His daughter, **MARIETTA**, excelled in portrait painting. She died in 1690, aged 30.

TIPPOO SAIB, sultan of Mysore, the son of Hyder Ally, was born in 1749, and succeeded to the throne in 1782. He continued the war in which his father was engaged with the English, until the peace of Paris (1783), which deprived him of the assistance of the French; and the alliance of the Mahrattas with the British induced him to sign the treaty of Mangalore, in 1784, on advantageous terms. He, however, never ceased to cherish the hope of expelling the British from Hindostan, and carried on repeated wars with our native allies. At length the Marquis Cornwallis, in 1792, compelled him to sue for a peace, which was granted on his paying a large sum of money, ceding part of his territories, and giving up his two sons to the English as hostages. Still implacable, he continued his plots against the English. The result was a second and final

war, which terminated in 1799, by his death at the storming of Seringapatam.

TIPTOFT, **JOHN**, earl of Worcester, a patron of learning in the 15th century, was appointed lord-deputy of Ireland by Henry VI., and afterwards became lord high constable and lord high treasurer. After this he went on a pilgrimage to Jerusalem, and on his return presented many valuable manuscripts to the university of Oxford. On the temporary reverse of fortune experienced by Edward IV. and the house of York, he was accused of cruelty in his Irish administration, particularly towards two infant sons of the earl of Desmond, and condemned to lose his head on Tower Hill, which sentence was executed, Oct. 16, 1470. He wrote many works, and was the great patron of Caxton the printer, who most pathetically lamented his death.

TIRABOSCHI, **GIROLAMO**, an eminent Italian historian, was born at Bergamo, in 1731; entered the society of Jesuits; was librarian and counsellor to the duke of Modena, who knighted him and died in 1794. His chief work is the "Storia della Letteratura Italiana," published in 11 vols. 4to between 1772—1783. It was the first work of the kind, and is highly esteemed. Among the other works of Tiraboschi are, "Biblioteca Modenese," "Notizie di Pittori, Scultori, Inesori ed Architetti Modenesi," "Memorie Storiche Modenesi," &c.

TIRSO DE MOLINA. [TELEZ, **GABRIEL**.]

TISCHBEIN, **JOHANN HEINRICH**, a celebrated German painter, was born near Gotha, in 1722. Through the friendly offices of Count Stadion he went to Paris, and studied several years under Charles Vanloo; improved himself by a visit to Italy; and in 1752 was named painter to William, landgrave of Hesse Cassel. He was subsequently director of the Academy of Cassel and professor at the Caroline College. Tischbein painted many historical pictures, and also many subjects from classical mythology. Among his principal works are named a "Resurrection of Christ," a "Transfiguration," a "Deposition from the Cross," a series of subjects from the life of Cleopatra, &c. He copied and etched some of his own works. Died, 1789.

TISCHBEIN, **JOHANN HEINRICH WILHELM**, nephew of the preceding, and like him, an eminent painter, was born near Gotha, in 1751. After receiving his first instruction from his uncles, Johann Heinrich and Johann Jacob, and visiting Holland, Hanover, Berlin, and Zürich, he went, in 1781, to Italy; became director of the Academy of Naples, and held that post nine years; returned to Germany when the French occupied Naples, in 1799; and spent the rest of his life at Hamburg, and in the duchy of Oldenburg. He published several remarkable works: "Têtes de Différents Animaux Dessinés d'après Nature;" "Collection of Engravings from antique vases;" "Illustration of Sir W. Hamilton's second collection;" and "Homer, nach Antiken Gezeichnet;" with explanations of the figures by Heyne. Died, 1829.

TISSOT, **SIMON ANDRÉ**, an eminent

terminated in 1799, by his death of Seringapatam.

JOHN, earl of Worcester, a baron in the 15th century, was 3rd-deputy of Ireland by Henry Edwards became lord high-constable and high treasurer. After this a pilgrimage to Jerusalem, and then presented many valuable to the university of Oxford. Temporary reverse of fortune by Edward IV. and the house of York accused of cruelty in his Irish on, particularly towards two of the earl of Desmond, and to lose his head on Tower Hill, once was executed, Oct. 16, 1470. Many works, and was the great patron of the printer, who lamented his death.

CILI, GIROLAMO, an eminent physician, was born at Bergamo, and joined the society of Jesuits; was and counsellor to the duke of no knighted him, and died in chief work is the "Storia della Italia," published in 11 vols. in 1772-1783. It was the first kind, and is highly esteemed. Other works of Piraboschi are, "Modenese," "Notizie di Pittori, scultori ed Architetti Modenesi," "Storia della Modenesi," &c.

MOJINA, TELLEZ, GARCIA, JOHANN HEINRICH, a celebrated painter, was born near Madrid. Through the friendly offices of his father he went to Paris, and spent years under Charles Vanloo; himself by a visit to Italy; and named painter to William, landgrave of Cassel. He was subsequently the Academy of Cassel and the Ecole Normale College. Tischbein his historical pictures, and also objects from classical mythology. principal works are named "Assumption of Christ," a "Transfiguration," "Deposition from the Cross," and "Subjects from the life of Cleopatra," painted and etched some of his own, died, 1789.

WILHELM, JOHANN HEINRICH, an eminent painter, was born near Breslau. After receiving his first instruction from his uncles, Johann Heinrich Jacob, and visiting Holland, Berlin, and Zürich, he went to Rome; became director of the Academy of Arts, and held that post nine years. He was in Germany when the French entered, in 1799; and spent the rest of his life in Hamburg, and in the duchy of Schleswig. He published several remarkable "Têtes de Différents Animaux après Nature;" "Collection of figures from antique vases," illustrative of Hamilton's second collection; and "Aachen Gezeichnete," illustrations of the figures by Heyne.

SIMON ANDRÉ, an eminent

physician and medical writer, was born at Brancy, in the Pays de Vaud, in 1728. He was chiefly distinguished by his successful treatment of confluent small pox. Died at Lausanne, in 1797. His works were collected by himself, and form 10 vols.

TITIAN, or TIZIANO VECELLIO, the greatest painter of the Venetian School, was born at Capo del Cadore, in 1477. After studying for a short time under Zuccati and Gentile liolini, he became the pupil of Giovanni Bellini; and he profited also by the example of his fellow-pupil, Giorgione. He rapidly made himself a reputation, and was employed, about 1515, at the court of the duke of Ferrara, where he met Ariosto, and painted his portrait. On his return to Venice he was charged to complete one of the works left unfinished by his master in the Council Hall, and was then appointed to the office of *La Suaneria*, the chief duty of which was to paint the portraits of the Doges of his time. His increasing renown procured him invitations to Rome and to Paris, which, however, he did not accept. Through his intimate friend, Arcellino, he was made known to the emperor, Charles V., visited him at Bologna, in 1530 and 1532, and painted his portrait on each occasion. It is said that Charles took him to Madrid, and created him a count-palatine of the empire and a knight of St. Iago; and that Titian remained three years in Spain, and painted some of his best pictures there. But there is considerable uncertainty about this story. In 1543 Titian visited Pope Paul III. at Bologna, and painted his portrait. Two years later he visited Rome, again painted the pope, and while there was visited by Michael Angelo and Vasari. He was twice called by Charles V. to Augsburg, and was again visited by Vasari, at Venice, in 1566. Titian is especially distinguished for his mastery of colour and his faithful imitation of nature. As portrait painter he is unrivalled. Among his finest works are—the "Assumption of the Virgin," now in the Academy of Venice; the "Tribute Money," now in the Dresden Gallery; the "Eatombment," in the Manfrini Gallery; the "Death of St. Peter Martyr," in the church of St. John and St. Paul, Venice; the "Martyrdom of St. Sebastian," in the Vatican; the "Veaus," in the Dresden Gallery, of which there is a repetition in the Fitzwilliam Museum at Cambridge; the "Martyrdom of St. Lawrence," in the Jesuits' Church, Venice; a "Sleeping Venus," in the Prado Gallery, Madrid; and a "Last Supper," in the Escorial. There are some fine examples in the Louvre, and our National Gallery has nine, among which are—"Bacchus and Ariadne;" "Venus and Adonis;" "Rape of Ganymede;" "Portrait of Ariosto;" and a "Music Lesson." Among the pupils of Titian were Paris Bordone, Bonifazio Veneziano, Girolamo di Tiziano and his son, Orazio Vecellio. Titian enjoyed the favour of Philip II. after the death of the emperor. He died of the plague at Venice, in 1576, aged 99.

TITUS FLAVIUS VESPASIANUS, Roman emperor, was born A.D. 40. He accompanied his father Vespasian to Syria, where

he distinguished himself greatly in the Jewish War. When Vespasian was summoned to Italy to assume the purple, Titus was left in command of the Roman army at the memorable siege of Jerusalem. In A.D. 70, the city was taken, and in spite of the exertions of Titus to preserve it, the temple was burnt. Though his youth was tainted with the vice of dissipation, he happily disappointed the gloomy predictions of the people when he came to the throne, A.D. 79, by the wisdom and beneficence of his government. The Romans, however, did not long enjoy his administration, Titus having been seized with a violent fever, which carried him off in the 41st year of his age, after a reign of little more than two years, A.D. 81.

TOBIN, JOHN, dramatic writer, was born at Salisbury, in 1770, and bred to the law, but the stage had more attractions for him than the attorney's desk. He was author of "The Money Moon," "The Curfew," &c. Died, 1804.

TOCQUEVILLE, ALEXIS C. H. CLEBELLE, an eminent French statesman and historian, was born at Verneuil in 1805, studied law and was admitted a member of the French bar in 1825. In the following year he was appointed Juge d'Instruction at Versailles; which office he held for three years, exchanging it in 1830 for that of Juge-suppléant. In 1832 he was sent on a joint mission with M. G. de Beaumont to America, to inquire into the penitentiary system of the United States, with a view to its introduction into France. There he spent two years, visiting the different States, and inquiring assiduously into the institutions of the country. As the results of his researches and reflections he published in 1835 his "Démocratie en Amérique," which has been pronounced to be the best and profoundest work that has appeared on the political institutions of the United States. In 1839 he became a member of the Chamber of Deputies; and his senatorial efforts were remarkable for largeness of view and that sagacity and foresight which distinguish the statesman from the mere politician. In 1847 appeared his "Histoire Philosophique du Règne de Louis XV.," to which he afterwards added the "Coup-d'œil sur le Règne de Louis XVI." After the revolution of 1849 he was returned both to the National and Legislative Assemblies, when he vigorously opposed the doctrines of the Socialists and M. Louis Blanc's theories, as to the organization of labour. In June, 1849, he was appointed minister of Foreign Affairs, but resigned his portfolio in October, in consequence of the president's message appearing to deviate from the system of moderation to which he was attached. As a private member of the Legislative Chamber, he continued to oppose the personal system of the Elysée: to the last he remained a faithful adherent of parliamentary government; and he was one of those who protested against the *coup d'état* of Dec. 2, 1851, and with the rest of his colleagues was thrown into prison. From this period he devoted himself entirely to literary pursuits; and in 1856 he published his elaborate work, "L'Ancien Régime et la Révolution," which for profound and

original views, and beauty of style, has rarely been surpassed. Died, 1839. A Memoir and several volumes of his Correspondence, and a uniform edition of his works, have since been published.

TOD, JAMES, a lieutenant-colonel in the service of the East India Company; author of "Annals of Rajst'han" and "Travels in Western India," the latter of which was scarcely completed when he died, Nov., 1835. Colonel Tod surveyed Rajpootana, and completed his magnificent map in 1816; and it was by him that the name of Central India was originally given to that important and interesting tract of country. He was a sound scholar, indefatigable in research, and enthusiastic in his zeal to benefit the people for whom he laboured.

TODD, HENRY JOHN, church of England divine, and an industrious littérateur, was born about 1763. He graduated M.A. at Oxford, entered the church, and was for many years rector of Allhallows, Lombard Street. During the same period he had the office of keeper of the manuscripts at Lambeth Palace, of which he prepared a catalogue. In 1820 he was presented to the rectory of Settrington, in Yorkshire, where he spent the rest of his life. He became archdeacon of Cleveland and chaplain to the queen. He edited the poetical works of Milton and Spenser, and Johnson's Dictionary; wrote an "Account of the Deans of Canterbury;" "Illustrations of the Lives and Works of John Gower and Geoffrey Chaucer;" "Life of Archbishop Crumner," and various theological and controversial pieces; prepared a catalogue of Christchurch Library, Canterbury, and assisted in the compilation of Hasted's History of Kent. Died, 1845.

TOLAND, JOHN, the celebrated freethinker, and political and miscellaneous writer, was born in the county of Derry, Ireland, about 1670. His parents were Roman Catholics, but he early renounced the faith of his childhood. At the age of 17 he went to study at Glasgow university, afterwards graduated M.A. at Edinburgh, and completed his studies at Leyden, with the intention of becoming a dissenting minister. He became acquainted there with Leclere and Leibnitz, and maintained a friendly correspondence with them. The first work he published was entitled "Christianity not Mysterious." It appeared in 1696, excited much ill feeling against him, and was burnt by the hangman at Dublin. Among the very numerous publications of Toland are—"A Life of Milton," followed by "Amyntor," "A Defence of it;" "Anglia Libera," occasioned by the act passed for the succession of the line of Hanover; "The State Anatomy of Great Britain;" "Nazareus, or Jewish, Gentile, or Mahometan Christianity;" "Pantheisticon;" and "Tetradymus." Toland was several times employed as a political agent abroad; was patronized by Harley, earl of Oxford, and was concerned in the South Sea scheme, continued to write incessantly to the last, and died at Putney in 1722.

TOLER, JOHN, earl of Norbury, chief justice of the court of Common Pleas in Ireland, was born in 1745, at Beechwood, in the county of Tipperary. He was called to the

bar in 1770; appointed king's counsel in 1781, solicitor-general in 1789, attorney-general in 1798, during which year he was actively engaged in the prosecution of the Irish rebels; and was advanced to the chief justiceship of the Common Pleas in 1800, with the title of Lord Norbury. This high office he retained till 1827, when, on his retirement, he obtained a pension of £3000, and was advanced to the title of Viscount Glandino and earl of Norbury. He died in 1831. He was an able judge; but he was chiefly in reputation for wit and drollery. "Lord Norbury's jokes" were sprinkled very thickly with his law, and the Dublin court of Common Pleas was often thronged with idlers attracted by the amusement which was to be found in the sallies of wit and repartee so freely bandied about from judge, counsel, and witnesses.

TOLETANUS, RODERICUS, archbishop of Toledo, a celebrated Spanish historian, was born about 1170. After studying at Paris, he was in the service of the king of Navarre, Sancho V., and was subsequently appointed, by Alfonso VIII., king of Castile, to the see of Toledo. He was a good scholar, a zealous ecclesiastic, and also a brave soldier, and distinguished himself as such by his courage in fighting the Moors as by his scholarship and eloquence in the Lateran Council. He was author of the following, among other works—"Rerum in Hispania gestarum Chronicon;" "Historia Arabum;" and Histories of the Huns, Vandals, &c., and Ostrogoths. Toletanus was present at the Council of Lyons assembled in 1445, and died in France in 1247.

TOLLENS, HENDRIK CORNELISZON, a distinguished Dutch poet, born at Rotterdam, in 1780. He was brought up to his father's trade, that of a colour merchant, and began to write poetry under the stimulus of the French invasion of his native country. After unsuccessfully attempting dramatic composition, he applied himself to lyrical and narrative poetry, choosing his subjects for the most part from striking passages of Dutch history, and from the scenes and sentiments of home life. In this field he became the most popular poet of his day, and to popular admiration were added public honours; he was made commander of the order of the Dutch Lion, and was presented with a gold medal struck in his honour. He received both these distinctions as testimonies on his 70th birthday. Died, 1856. A collected edition of his works has been published since his death.

TOMLINE, GEORGE, an eminent English prelate, whose family name was Prettyman, was born at Bury St Edmund's, in Suffolk, in 1750. He was senior wrangler at Cambridge, in 1772; and having been chosen fellow of Pembroke College, he served, in 1781, the office of moderator. He had been the academical tutor of Mr Pitt, who, on becoming chancellor of the exchequer, made him his private secretary, and a prebend of Westminister, and, in 1787, raised him to the see of Lincoln; from which, in 1820, he was translated to that of Winchester. In 1798 he published a work, entitled "Elements of

NE, GEORGE, an eminent English
 whose family name was Prettyman,
 at Bury St Edmund's, in Suffolk.
 He was senior wrangler at Cam-
 in 1772; and having been chosen
 Pembroke College, he served in
 office of moderator. He had been
 emical tutor of Mr Pitt, who, on be-
 cancellor of the exchequer, made
 private secretary, gave him the
 of Sudbury, and a prebend of West-
 and, in 1787, raised him to the see
 of Exeter; from which, in 1820, he was
 ed to that of Winchester. In 1799
 shed a work, entitled "Elements of

Christian Theology," 2 vols.; and in 1812
 appeared his "Refutation of the Charge of
 Calvinism against the Church of England."
 He also published the "Life of the Right
 Hon. William Pitt." He took the name of
 Tomline, in consequence of a person, to
 whom he was almost unknown, having be-
 queathed him a very considerable fortune
 on that special condition.

TOBE, THEOBALD WOLFE, founder of the
 "Society of United Irishmen," was born in
 Dublin, in 1763, and was bred to the bar. In
 1790 he published a pamphlet, the object of
 which was to expose the mismanagement of
 the English government respecting Ireland;
 and, in 1793, he established the society above
 mentioned. He afterwards became involved
 in a reasonable correspondence with France,
 but made a sort of compromise with the
 British government, and was allowed to
 withdraw himself. He accordingly went to
 America in 1793, from whence he proceeded
 to France in the following year. By his per-
 suasions, the French Directory fitted out an
 expedition, consisting of 17 sail of the line,
 13 frigates, &c., with 14,000 troops on board,
 and upwards of 40,000 stand of arms, besides
 artillery and warlike stores. Tobe was ap-
 pointed chief de brigade under General
 Hoche, the commander-in-chief. They set
 sail Dec. 15, 1798; but, before they had all
 reached their destination (Bantry Bay), a
 hurricane arose, in consequence of which
 three ships of the line and a frigate only re-
 mained together. This bold attempt being
 thus frustrated by the elements, the scatter-
 ed ships made the best of their way back to
 France, and Tobe was foiled in all his future
 endeavours to persuade the French govern-
 ment to undertake another expedition on a
 large scale. But he still persevered in those
 plans which he conceived would lead to a
 separation of Ireland from Great Britain;
 and he at length embarked in one of those
 petty armaments, the inefficiency of which,
 he thought, perhaps, might be remedied by
 his own courage and experience. He was
 taken prisoner in the Hoche, after fighting
 bravely in a desperate action, was tried by
 a military commission, and sentenced to be
 hanged. The execution of his sentence,
 however, he avoided, by cutting his own
 throat in prison, Nov. 19, 1798.

TONSTALL, CUTHBERT. [TUNSTALL.]
 TOOKE, JOHN HORNE, a politician and
 philologist, who for many years was known
 by his family name of Horne, was born in
 Westminster, in 1736; was educated at West-
 minster and Eton Schools, and St John's
 College, Cambridge; and in 1760 was induct-
 ed to the chancery of New Brentford. The
 clerical profession being little suited to his
 habits and feelings, he took an active part in
 politics, and became the partisan of Wilkes;
 till, on founding the "Society for support-
 ing the Bill of Rights," a quarrel arose be-
 tween them, each charging the other with
 venality and hypocrisy. In 1771 he was
 fiercely attacked by Junius; but he defended
 himself with spirit and success. Resigning
 his living at Brentford, he studied law at
 the Temple, but his ecclesiastical character
 proved no obstacle to his being admitted to
 the bar. He was a warm opponent of the

American war; and, in 1776, was prosecuted,
 and sentenced to a year's imprisonment and a
 fine, on the charge of having libelled the
 king's troops in America. He defended him-
 self with his characteristic spirit and acute-
 ness; and out of this circumstance arose his
 "Letter to Dunning," which formed the
 basis of his subsequent philological work,
 "The Diversions of Purley," published in
 1786. In 1790 he stood, ineffectually, as can-
 didate for Westminster, as he did again in
 1796. In the year 1794 he was committed to
 the Tower on the charge of high treason,
 founded on the presumed objects of the cor-
 responding societies to overthrow the con-
 stitution; but, after a trial of six days, was
 acquitted; and he appears to have been
 much more cautious afterwards in the choice
 of his companions. In 1801 he was returned
 to parliament for Old Sarum, but he sat only
 during that session, a bill being passed to
 render clerical persons ineligible as mem-
 bers of the House of Commons for the future.
 The latter days were cheered by easy circum-
 stances, and he died at Wimbledon, in 1812,
 aged 76. His portrait, by T. Hardy, is in the
 National Collection.

TOOKE, WILLIAM, miscellaneous writer,
 was born in 1744, at Islington. He was origi-
 nally a printer; but, in 1771, he obtained
 episcopal ordination, and was appointed
 minister of the English church at Cronstund.
 In 1774 he became chaplain to the factory at
 St Petersburg; and, after residing there
 many years, he returned to his own country,
 and died in 1820. His principal works are,
 "Varieties of Literature," 2 vols.; "The
 Life of Catharine II.," "A View of the Rus-
 sian Empire," "A General History of Rus-
 sia," and translations of Lucian and Zolli-
 koffer's Sermons.

TOOKE, THOMAS, an eminent merchant
 and writer on financial subjects, was son of
 the preceding, and was born in 1774, at St
 Petersburg. Early in life he entered into
 mercantile pursuits as partner in one of the
 largest houses engaged in the Russian trade;
 and there gained the great experience and
 knowledge of details which are so conspicu-
 ous in his works on financial subjects. In
 1820 he drew up the famous document known
 as the "Merchants' Petition in favour of
 Free Trade," and from this period to the
 close of his life he was an active participator
 in all inquiries and legislation connected
 with social and financial reform. His "His-
 tory of Prices," in six volumes, has secured
 for him a place in the first rank of political
 economists. It embodies a great mass of in-
 formation with respect to the commercial
 history of England during the eventful pe-
 riod of fifty-six years, ending with 1856, and
 is no less valuable to speculative than to
 practical inquirers. Died, 1858.

TOPLADY, AUGUSTUS MONTAGUE, a zealous
 advocate for the Calvinism of the church
 of England, was born at Farnham, in Surrey,
 in 1740; was educated at Westminster School,
 and at Trinity College, Dublin; and died,
 vicar of Broad Heabury, in Devonshire, in
 1778. Toplady was a strenuous opponent of
 Wesley, and brought a large share of meta-
 physical acuteness into the Calvinistic con-
 troversy. His works form 6 vols.

TORDENSKIÖLD, PETER, whose family name was **WESSEL**, was a celebrated Danish admiral, born in 1691, at Droutheim, in Norway; and was killed in a duel, in 1720. For his gallant exploits his sovereign gave him the name of Tordenskiöld, or "Thunder-shield." Among his achievements were the capturing of a Swedish squadron in the port of Dyneklin, and the taking of the town of Mavstrand and the citadel of Carlstein.

TORELLI, GIUSEPPE, an Italian mathematician, born at Verona, in 1721. Besides the Hebrew, Greek, and Latin languages, he was well acquainted with French, Spanish, and English; and he had also an extensive knowledge of antiquities; but his favourite study was the mathematics. His most important work is a complete edition of the works of Archimedes, printed in folio, at Oxford. He died in 1781. Torelli translated Æsop's Fables into Latin, and the first two books of the *Æneid* into Italian.

TORENO, Count JOSE DE, known also as viscount of Matarosa, a distinguished Spanish statesman and historian, was born at Oviedo, 1786; bore a share in all the troubles of his country in the early part of this century; and was repeatedly proscribed by the despotic advisers of Ferdinand VII. But on the accession of the queen he once more returned to Madrid, where he was nominated minister of finance, and soon afterwards of foreign affairs, which he held till 1835. His latter years were spent at Paris, where he published his interesting "History of the Insurrection, War, and Revolution of Spain." Died, 1843.

TORFÆUS, THORMODUS, Danish historian, was born in Iceland, in 1640; educated at Copenhagen, and was afterwards appointed historiographer for Denmark and Norway. Among his works are, "Historia Rerum Norvegiarum," 2 vols.; "Series Dynastarum et Regum Danicæ," and "Historia Vinlandiæ Antiquæ." Died, 1719.

TORQUEMADA, THOMAS DE, the first inquisitor-general of Spain, was born about 1420. He was a monk of the order of St Dominic, became inquisitor-general in 1483, was confirmed in his authority by Innocent VIII., who made him grand inquisitor of Spain, and gave him the title of Confessor of Sovereigns. He died in 1498. During the exercise of his power, in the course of 16 years, it is said that no less than 8800 victims were committed to the flames, 90,000 were condemned to perpetual imprisonment and other severe punishments, and above 80,000 Jews were banished from Spain.

TORRE, GIOVANNI MARIA DELLA, an eminent natural philosopher, was born at Rome in 1713; studied at the Clementine College; became professor of philosophy and the mathematics at Ciudad de Friuli; and afterwards, settling at Naples, was appointed librarian to the king, superintendent of the royal printing office, and keeper of the museum. He made great improvements in the magnifying power of microscopes, and published works on Natural Philosophy, "Microscopical Observations," &c. Died, 1782.

TORRENS, Sir HENRY, adjutant-general, was born at Londonderry, in 1779; received

his education in the military academy at Dublin; entered as an ensign in the 52nd regiment of foot; and, going to the West Indies, was early distinguished for bravery in actual service, and fortitude in enduring hardships. He afterwards served in Holland, where he was wounded; next proceeded to join the army in Egypt; thence embarked at a port on the Red Sea for Bombay; but being seized with a coup-de-soleil, he was obliged to take his passage to England. The ship touched at St Helena, where, recovering his health and spirits, he married Miss Patton, the governor's daughter. He was present at the attack on Buenos Ayres, and gave his testimony on the trial of General Whitelock in a manner that evinced his judgment and integrity. He was appointed secretary to Sir Arthur Wellesley, and accompanied him to Portugal. In March, 1820, Sir Henry was made adjutant-general, in which situation he revised the army regulations, and introduced many essential improvements. Died, 1828.

TORRICELLI, EVANGELISTA, a celebrated Italian mathematician, was born in 1608, at Faenza; began his education under the Jesuits there, and completed it at Rome; was invited to Florence by Galileo, whom he succeeded as professor of mathematics. The grand duke also appointed him his mathematician. He wrote several geometrical works, and to him science is indebted for the invention of the barometer. Died, 1647.

TORREGIANO, PIERO, a distinguished Italian sculptor, born at Florence, in 1472. He was a fellow-student with Michael Angelo in the gardens of St Mark, and one day, a dispute arising between them, he struck a savage blow and broke Michael Angelo's nose. Compelled to quit Florence, he first worked at Rome, and then became a soldier, and served under Cæsar Borgia. He afterwards came to England, and in the service of Henry VIII. obtained a great reputation. His principal work is the tomb of Henry VII., in Westminster Abbey, called by Bacon "one of the stateliest and disintest monuments in Europe." The tombs of Margaret, countess of Richmond, and of Dr Young, the latter in Chancery Lane Chapel, are attributed to him. Torregiano afterwards went to Spain, where he is said to have made, among other works, a terra-cotta statue of St Jerome, and a marble group of the Madonna and Child. There is a duplicate of the St Jerome in the Crystal Palace. Respecting the death of this sculptor, the traditional story is, that having made a copy of his Madonna, and being angry at the low price offered him, he dashed it in pieces; that he was then denounced to the Inquisition for impiety, and imprisoned; and to avoid the death of a heretic, starved himself. Died at Seville, 1522.

TORRIGOS, Don JOSE MARIA, a Spanish patriot, born in 1791, who served against the French during the war of independence, and, gradually passing through the inferior posts, obtained the rank of colonel on the field of battle. He was in disgrace after the return of Ferdinand VII.; but, in 1820, the Cortes made him field-marshal, and chief commandant of Navarre and the Basque pro-

vines. When the French invaded Spain, in 1823, Torrijos held out to the last; he signed the capitulation of Carthagena after Cadix had surrendered, and gave up his arms to General Mina; but having subsequently resolved to renew his efforts for the liberation of Spain, he quitted his asylum at Gibraltar, in 1831, and on repairing to Malaga, he and his companions were made prisoners, tried by a court-martial, and shot, Dec. 11 of the same year.

TORRINGTON, GEORGE BYNG, first Viscount, British admiral, was born in Kent, in 1663. He entered the navy in 1678; served in the fleet sent to oppose the prince of Orange, but went over to his party; was a commander at the battle off Beachy Head; and afterwards served in the Mediterranean under Admirals Rooke and Russell. Rear-admiral in 1703, he served under Sir Cloudesley Shovel, commanded the squadron which attacked Gibraltar in the following year, and distinguished himself at the battle of Malaga. He was then knighted by Queen Anne, and was sent, as vice-admiral, to succour Barcelona, in 1706. The same year he took part in the capture of Alicant. At the accession of George I. he was created a baronet, won a great victory over the Spanish fleet off Cape Passaro in 1719, and two years later was raised to the peerage. He had for some years sat in parliament for Plymouth. The knighthood of the Bath and other honours were conferred on him, and at the time of his death he was first lord of the Admiralty. Died, 17th Jan., 1773. The portrait of Viscount Torrington, painted by Kneller, is in the National Portrait Gallery.

TORRINGTON, GEORGE BYNG, Viscount, British admiral, was the son of John, the fifth Viscount Torrington, and was born in London, in 1768. He was entered a midshipman on board the Thunderer at 10 years of age, and was present in the action between Admiral Keppel and the Count d'Orvillers, on the 27th July, 1778. He joined the flag-ship of Sir Edward Hughes, in the East Indies, and was in the actions with M. Souffrin. In June, 1795, he was made post-captain; in 1797 he had the command of the Galatea frigate, in which he captured a French corvette, and some armed vessels; but ill health compelled him to resign the command in 1802. In December, 1812, his uncle, the fourth viscount, died, to whose title his father succeeded; but he dying 14 days after, Captain Byng became Viscount Torrington. He at that time commanded the Warrior, in which ship he conveyed the prince of Orange from the Downs, in Nov., 1813, and landed him at Schwelling. After that service, he conveyed a fleet of merchant ships to the West Indies. During that period a promotion took place, which made him rear-admiral of the Blue, and he was made vice-admiral in 1821. He died in 1831.

TORSELLINO. [TURSELLINUS.]

TORSTENSON, LEONARD, Count, a celebrated Swedish general, was born in 1595; commenced his career as page to Gustavus Adolphus, and was rapidly promoted for his military talent by that monarch, and dis-

tinguished himself on numerous occasions during the Thirty Years' War. Died, 1654.

TOSCANELLA, PAOLO, an astronomer of the 15th century. He erected on the cathedral of Florence the famous gnomon, of which father Ximenes published a curious description. Died, 1482.

TOTILA, king of the Ostrogoths in Italy, was proclaimed in 541. He at once assembled the Gothic army, and undertook the restoration of the kingdom of Italy. He defeated the Romans near Faenza, passed the Po and the Apennines, and blockaded Naples. The imperial vessels sent to succour the city were intercepted by his fleet, and after a truce Naples surrendered. Cume did the same, and without resistance Totila marched to within a few miles of Rome. His prudence, temperance, and fidelity to his word were equal to his courage, and these qualities gained numbers to his side. He left no garrisons in the conquered towns, but destroyed their fortifications; enforced by frequent harangues the necessity of moral as well as military virtue, and severely punished violations of discipline. In 546, he formed the siege of Rome. Meanwhile the great general Belisarius was recalled from the Persian war and sent to save Italy; but sent without men, horses, arms, and money. When recruits were collected, and succours arrived from Constantinople, he made a vigorous attempt to raise the siege of Rome, in which, however, he failed through the misconduct of his subordinates. Before the end of the year the gates were opened by treachery, and the Goths took possession of Rome. At the prayer of the archdeacon Pelagius the conqueror displayed his clemency to the people in sparing their lives and the chastity of the women, while he gave up the city to pillage. The walls were partly demolished, and Totila was on the point of totally destroying all the noble monuments of ancient art; when on the earnest remonstrance of Belisarius he agreed to spare them. He carried off with his army the senators, sent the citizens and their families into exile, and for several weeks left Rome a solitude. In February, 547, Belisarius once more recovered possession of the city, and repulsed three assaults of Totila, who hastily returned. But Belisarius was ordered away from Rome on other service, and soon after recalled to the Imperial court; and in 549, Totila again took possession of the city. He reduced Rhegium and Tarentum, devastated Sicily and the coasts of Greece, and the Emperor Justinian was at last alarmed by his conquests, and sent an army into Italy to oppose him. It was led by the eunuch Narses, and in the bloody battle fought in the neighbourhood of Rome, in July, 552, Totila was defeated, and being overtaken in flight, was pierced by the lance of Asbad, leader of the Gepidæ, and died a few days after.

TOTT, FRANÇOIS, Baron de, a French negotiator and officer, was born, in 1733, at Champligny, and after having served in the army, was employed in the French embassy at Constantinople. In 1767 he was appointed consul in the Crimea. He subsequently went back to Constantinople, and was

charged by the grand seignior to carry into effect various important reforms in the military department. He was promoted on his return to France, but emigrated in 1700, and died 1793.

TOUR D'AUVERGNE, H. DE LA. [TURNE.]

TOURNEFORT, JOSEPH PITTON DE, an eminent botanist, was born in 1686, at Aix, in Provence. He manifested very early in life a love of botany; studied medicine and anatomy at Montpellier; travelled in various parts of Europe and Asia; was professor of physic in the Royal College, and of botany in the Jardin du Roi at Paris, and died in 1768. The method established by Tournefort was founded upon the varieties of the petals of flowers, taken in conjunction with the fruit; and it soon became highly popular from its facility. Among his works are "Voyages in the Levant," "Elements of Botany," and a "History of Plants in the neighbourhood of Paris."

TOURNEUR, PIERRE LE, French litterateur, born at Valognes in 1736. He appears to have spent the last twenty years of his life in laborious literary occupations at Paris, chiefly as a translator of English works into French. He was for some time private secretary to Monsieur, afterwards Louis XVIII. He deserves mention in every English biographical dictionary for his honest attempt to provide his countrymen with a complete translation of Shakespeare. He executed this laborious undertaking almost unaided, and so fairly that his version, which is in prose, was thought worthy of revision and republication by Guizot in 1824. It first appeared in 1776, and the six following years. Le Tournour's preface was angrily attacked by Voltaire, who could not tolerate even the suspicion that it was an attempt to set the "drunken savage" above the French classical dramatists. Among Le Tournour's other translations were — Young's Night Thoughts and other Poems; Hervey's Meditations; Ossian's Poems; and Clarissa Harlowe. By these labours he contributed to spread the knowledge of English literature and create or foster a taste for it in France; and, through the writings of his friend Diderot, even in Germany. Died at Paris, 1788.

TOUSSAINT L'OUVERTURE, a celebrated negro chieftain, of great courage, intelligence, and activity, was born in 1745, at St Domingo. His early years were spent in slavery on the estate of Count Noe, where his excellent conduct attracted the attention of M. Bayon de Libertas, the agent of the estate, who taught him reading, writing, and arithmetic. When the general rising of the blacks took place, the abilities and courage of Toussaint soon raised him to the highest rank among them. By his wise and vigorous measures, he succeeded in expelling the English, reducing the Spanish part of the island, and restoring peace and order in the colony; for which the central assembly of St Domingo voted him the dignity of president for life. The first care of Toussaint was to form a system of civil policy suited to the state of the colony; for which purpose he introduced many useful regulations, tending

to improve the moral state of the blacks, and to induce habits of industry among them. By these means the colony began to revive, and was rapidly advancing in prosperity under the administration of this negro chief, when suddenly the whole state of affairs was changed. Anxious to recover so valuable a colony, Buonaparte, in 1801, dispatched General Leclerc with a fleet and army; a desperate contest ensued; and, after a short but brave resistance, Toussaint was overcome. He was sent a prisoner to France, and died in the fortress of Joux, near Besançon, in 1803. His fate is the theme of a noble sonnet by Wordsworth.

TOWERS, JOSEPH, political and miscellaneous writer, was born in 1737, in Southwark, where his father was a dealer in second-hand books. He was, successively, a printer, a bookseller, and a preacher among the Unitarians; received the degree of LL.D. from the university of Edinburgh, and died in 1799. Among his works are, 7 vols. of the "British Biography," a "Life of Frederic, King of Prussia," "A Vindication of the Political Opinions of Mr Locke," "Observations on the Rights and Duties of Jurists," and many political and other tracts. He also contributed to Dr Kippis's edition of the *Biographia Britannica*.

TOWNLEY, CHARLES, an English antiquary and collector, was born of an ancient family at Townley Hall, in Lancashire. He resided many years at Rome, where he employed himself in collecting the remains of ancient art; and having formed a museum, replete with valuable manuscripts, medals, vases, urns, &c., he purchased two houses in Park Street, Westminster, for their reception. The Townley marbles are now in the British Museum, of which Mr Townley was a trustee. Died, 1805.

TOWNSHEND, CHARLES, Viscount, statesman and diplomatist, was born in 1676. He succeeded to the peerage on the death of his father, in 1686, and soon after taking his seat in the House of Lords, he joined the Whig party. Lord Townshend was one of the commissioners for the union with Scotland in 1706, and three years later plenipotentiary with Marlborough at the fruitless conferences for peace held at Gertruydenberg in 1710. He remained at the Hague as ambassador to the states-general, and negotiated the celebrated "Barrier Treaty," for which he was afterwards voted an enemy to the kingdom by the House of Commons. On the accession of George I. Lord Townshend was named secretary of state, and chose General Stanhope for his colleague. But during the king's absence in Hanover in 1716, Townshend fell under suspicion, and was dismissed from office; accepting, however, the offer of the lord-lieutenancy of Ireland, as a temporary office. He was soon dismissed from it without having gone to Ireland. His friend and associate in the ministry, Sir Robert Walpole, whose sister he had married, resigned at the same time, and both joined the ranks of the opposition. In 1720, Townshend was received into favour again, and was made president of the council; and was named secretary of state in the following year, Walpole being prime minister. At

unhappy breach afterwards took place between the two friends, Walpole had the highest place in royal favour, and after long wearisome contentions Townshend resigned in May, 1730. He spent the rest of his life at his seat, Rainham Hall, in Norfolk, and died in 1738.

TOWNSHEND, the Right Honourable CHARLES, an eminent British statesman, was born in 1725. He was grandson of the preceding, and early distinguished himself as a member of the House of Commons, to which he was returned in 1747. He was appointed lord of the Admiralty in 1764, and two years later treasurer of the chamber under the administration of the duke of Devonshire. He held the office of secretary at war in 1761-2, and was made in the following year first lord of trade and the plantations. In 1765, he became paymaster of the forces under the ministry of Lord Rockingham, and chancellor of the exchequer under Lord Chatham in 1768. Lord Chatham being incapacitated for business by illness, Townshend was virtually prime minister; and to him belongs the honour or the disgrace of proposing the fatal resolution for taxing the North American colonists, which occasioned the American war, and led to the declaration of independence. He had been a zealous supporter of the American Stamp Act, passed in the previous year. Townshend was a very vain and ambitious man, witty, eloquent, and singularly skilful in saying just the things likely to suit the taste and temper of his audience. Without fixed principles, he shifted from side to side in politics so frequently that he was spoken of as the weather-cock. Died, September, 1767.

TOWNSEND, JOHN, founder of the Deaf and Dumb Asylum, was born in London, in 1737. He settled as minister to an independent congregation at Kingston, in Surrey, whence, in 1784, he removed to Bermondsey, where he continued to reside during the remainder of his life. With the assistance of the Rev. H. C. Mason, rector of Bermondsey, he founded, in 1792, the institution for the deaf and dumb children of indigent parents; which obtained such efficient patronage, that, in 1807, a building, since much enlarged, was erected under the auspices of the duke of Gloucester. Mr Townsend also assisted in the formation of the London Missionary Society, the Female Penitentiary, and other religious and charitable associations; besides instituting a congregational school, for the gratuitous education of the children of dissenting ministers. Died, 1826.

TRADESCANT, JOHN, naturalist, traveller, and antiquary, is usually said to have been a Dutchman. He was, however, settled in England as early as 1608. In the course of his extensive travels in Europe, Asia, and North Africa, he began to make a collection of objects of Natural History, which he subsequently enlarged, and added to it antiques and rarities. He held the situation of gardener to several English noblemen successively, and, in 1629, was named gardener to Charles I. Died, 1638.

TRADESCANT, JOHN, son of the preced-

ing, and like him a naturalist and antiquary, was born in Kent, in 1608. He visited the colony of Virginia, augmented his father's collection, and enjoyed the friendship of many eminent persons. He published in 1656 a descriptive catalogue of the collection; under the title of "*Museum Tradescantium*." The Tradescants lived latterly at Lambeth, and had a garden there with many rare and curious plants. They were the means of introducing many new species of plants into England. Died, 1662. After the death of the younger Tradescant, the library suit was instituted for the settlement of the conflicting claims of his widow and his friend Ashmole to the possession of the Museum. The case was decided in favour of Ashmole, who afterwards gave the Museum to Oxford University. It forms the principal part of the "*Ashmolean Museum*."

TRAJANUS, MARCUS ULPUS, Roman emperor, was born in Spain, A. D. 52. He served with his father in the Parthian and Jewish wars, and was consul in 91. He next served in Germany, and his moral and military virtues not only endeared him to the army, but recommended him to the Emperor Nerva, who in 97 adopted him, and created him Cæsar. Early in 98 he succeeded to the empire, and soon justified by his wise and vigorous administration the hopes of Nerva, and the joy of his subjects. A war with the Dacians began in 100, and occupied him three years. On the defeat of Decebalus, their king, Trajan had a triumph at Rome, and received the surname of Dacicus. In 103 he appointed Pliny the Younger, who was his intimate friend, proconsul of Bithynia; and the difficulty which Pliny felt as to the mode of dealing with the "new superstition" of the Christians led him to get information, and send to the emperor an impartial report, that he might have the benefit of his judgment. This was the occasion of the important rescript of Trajan establishing a legal mode of proceeding against the Christians and illustrating his justice and humanity. In 104 the second Dacian war broke out, which ended in 106 with the defeat and death of Decebalus, and the reduction of Dacia to a Roman province. Trajan then celebrated a second triumph, and the games exhibited lasted 123 days. For the next eight years the empire enjoyed peace, and Trajan applied himself to the duties of government and the execution of many important works for the improvement of Rome. In 114 he set out for the East, carried on war with the Parthians, took Ctesiphon, Edessa, and other towns, subdued great part of Western Asia, and having deposed Cosroes, made Parthamaapis king of Parthia. He then passed down the Tigris to the Persian Gulf, but being soon after seized with illness, he set out to return to Italy. Died at Selinus, in Cilicia, in 117. His ashes were carried to Rome. Trajan was deservedly named "*Optimus*" by the senate, for he was one of the wisest and best of the emperors. He was the first emperor who was not an Italian by birth. His most celebrated public works were the Forum Trajani, in which the famous column was erected in his honour; the bridge over the Danube, built during the second Dacian war

with stone piers and wooden arches; the great road across the Pomptine Marshes, and other roads; and a theatre, library, and other buildings at Rome.

TREGOLD, THOMAS, an eminent civil engineer, born near Durham, in 1788. During the period of his apprenticeship, and while subsequently working as a carpenter, he was a diligent student of architecture and mathematics, and about 1813 he settled in London, taking a situation in the office of Mr Atkinson, architect to the Board of Ordnance. He continued and extended his studies, and began to employ himself in literary labours, contributing articles on various matters of Natural Philosophy to the "Philosophical Magazine," "Annals of Philosophy," and the "Encyclopædia Britannica." During the last six years of his life he was in practice on his own account as a civil engineer. Among his works are—"Elementary Principles of Carpentry," "Essay on the Strength of Cast Iron," "Practical Treatise on Rail-roads and Carriages," and an admirable account of "The Steam-Engine." The last named appeared in 1827, and after the author's death was republished, extended, and beautifully illustrated. This able engineer was of a weak constitution, and his health broke down under the heavy tasks he imposed on himself. He died in 1829.

TREMBLEY, ABRAHAM, an eminent naturalist, was born in 1700, at Geneva. After having been tutor to the families of Lord Bentinck and the duke of Richmond, he returned in 1757 to his native city, where he became one of the members of the great council. He first acquired notice as a naturalist by his "Memoirs on Fresh Water Polypes," and was admitted into the Royal Society, and other learned bodies. He also wrote "Instructions from a Father to his Children on the Nature of Religion," "Instructions on Natural and Revealed Religion," &c. Died, 1784.

TRENCHARD, SIR JOHN, an English statesman, was born of an ancient Dorsetshire family in 1650. He was educated at Oxford, and called to the bar; first sat in parliament for Taunton in 1679; was arrested and imprisoned in 1683, on suspicion of taking part in the Ryehouse Plot; narrowly escaped hanging as a supporter of Monmouth's rebellion, and lived abroad several years; and only returned at the revolution. He was a member of the Convention parliament in 1689, and William III. acknowledged his services by making him chief justice of Chester and knight, and in 1693 secretary of state. Died, 1695.

TRENCHARD, JOHN, a political writer of the Whig party, was born in 1662, in Somersetshire. He was of the same family as the preceding, was brought up to the law, but abandoned it, and was appointed commissioner of forfeited estates in Ireland, and died in 1723. He wrote "The Natural History of Superstition," and various political tracts and pamphlets; and, in conjunction with Gordon, a series of Letters on Civil and Religious Liberty, which appeared under the name of "Cato."

TRENCK, FREDERICK, Baron von, a Prussian officer, celebrated for his adventures and

misfortunes, was born in 1726, at Koenigsberg, and made such rapid progress in his studies, that, at the age of 17, he was presented to the king, Frederick II., as a student who was well worthy the royal patronage. Frederick rapidly advanced him in the army, and manifested much regard for him; but the accomplishments of Trenck having won the heart of the Princess Amelia, the king's sister, his enemies took advantage of some letters, that fell into their hands, and had him accused and arrested. He was imprisoned in the fortress of Glatz, but contrived to effect his escape. He then visited the north of Europe, Austria, and Italy. In 1758 he was seized at Dantzic, and was conveyed to Magdeburg, where, loaded with irons, he was for years incarcerated. On procuring his liberation, in 1763, he withdrew to Vienna, after which he went to Aix-la-Chapelle, where literature, politics, and commerce alternately engaged his attention. He next went to reside at his castle of Zwerbeck, in Hungary, and while there he published his own "Memoirs;" a book which was greedily read all over Europe. In 1791 he settled in France, joined the Jacobins, and, in 1794, was charged with being a secret emissary of the king of Prussia, and died by the guillotine.

TRESSAN, LOUIS ELISABETH DE LA VERGNE, Count de, a distinguished French officer and writer, was born in 1705, at Mons; entered the army in 1723; was conspicuous for his valour during several campaigns, particularly at the battle of Fontenoy; was appointed grand marshal of the court of Stanislaus, the shadow-king of Poland, in Lorraine, in 1750; was admitted into the French Academy in 1781, and died in 1783. His works, published in 12 vols., contain his miscellaneous pieces, and his translations of Amadis de Gaul, the Orlando Furioso, and several old French romances. He did not, however, wholly confine himself to subjects of mere amusement, but produced a "Treatise on Electricity," and some other works of science.

TREVIGI, or TREVISO, GIROLAMO DA, Italian painter, was born at Treviso in 1497 or 1508. He was probably the pupil of his father, Picciria Pennacchi, but he studied the works and imitated the style of Raphael. He painted at Bologna, Venice, Genoa, and Trent; leaving Genoa on account of the success of his rival, Perino del Vaga. He afterwards visited England, and was employed by Henry VIII. as architect and engineer. The reputed masterpiece of Trevigi is the picture of the "Madonna and Child enthroned," now in the National Gallery. It was painted for the church of San Domenico at Bologna. "The Adoration of the Kings," painted from a drawing of Baldassare Peruzzi, is attributed to this master. Both drawing and painting are in the National Gallery. Trevigi excelled in portraits, but his works are now rare. He was killed by a cannon-shot at the siege of Boulogne by his master, Henry VIII., in the autumn of 1544.

TREVOR, SIR JOHN, secretary of state to Charles II., was of an ancient Welsh family, and was born in 1629. At the Restoration he entered the service of the king, and in

IN, secretary of state to
an ancient Welsh family,
26. At the Restoration
ice of the king, and in

1668 was sent on a diplomatic mission to France, where he negotiated the treaty of Aix-la-Chapelle, for peace between France and Spain. The same year he was knighted and made secretary of state, a post which he held till his death. He was opposed to the base negotiations which Charles II. carried on with Louis XIV., and after the passing of the Conventicle Act, endeavoured to restrain the persecution of the Nonconformists; but he appears to have had little influence on the course of affairs. Died, 1672.

TRIBOLO, IL, whose name was NICCOLO BRACCINI, an eminent Italian sculptor, born at Florence, 1485. He was a pupil of Jacopo Sansavino, and in 1525 was called to Bologna to direct the works at San Petronio. The twelve bas-reliefs which he executed for the doors of that church are considered his best works. He was employed at Rome, at Loreto and Florence, visited Venice with Cellini, and again worked at Bologna. Tribolo was the intimate friend of Vasari. Died at Florence, 1550.

TRIBONIANUS, a celebrated Roman lawyer, was born about the beginning of the 6th century, at Side, in Pamphylia; obtained reputation at the bar; and rose, through a succession of state offices, to those of consul and master of the offices. The Emperor Justinian entrusted to him the superintendence of his proposed reformation of jurisprudence, the result of which was the celebrated Code and the Digest or Pandects, which would have transmitted his name with honour to posterity, had not his venality been at least equal to his talents. Died, 547.

TRIMMER, SARA, authoress of many popular works for the young, was born at Ipswich in 1741. She was the daughter of Joshua Kirby, writer on Perspective, and married Mr Trimmer in 1762. She was at that time living at Kew, her father having the appointment of clerk of the works at the Palace. She did not make herself known as an authoress till 1780, when she published her "Easy Introduction to the Knowledge of Nature." Among her numerous writings was a "Sacred History" in 8 vols. Besides her separate works she conducted for a time the "Family Magazine" and the "Guardian of Education," from both of which some of her own contributions were reprinted separately. She died suddenly in 1810, and an Account of her Life appeared four years later.

TRISSINO, GIOVANNI GIORGIO, an Italian poet, was born in 1478, at Vicenza; was educated at Rome and Milan; was employed by Leo X. and his successor, Clement, on various diplomatic missions, and died in 1558. Among his works are, "The Deliverance of Italy from the Goths," an epic poem; a treatise on the "Art of Poetry," and the forgotten tragedy of "Sophonisba."

TRITHEM, FREDERICK HENRY, Sanscrit scholar, was a native of Switzerland, and was born in 1620. He was brought up at Odesa, but completed his education at the university of Berlin, where he was a pupil of Bopp. He came to England about 1841, and three years later he was appointed assistant in the Printed Book Department of

the British Museum. He went in 1845 to Russia, visited Turkey and Egypt, and returning to England, obtained the appointment of professor of modern languages at the Taylor Institution, Oxford, in 1848. An attack of insanity compelled his retirement after only two years' labour in his new post. Died, near Odesa, 1854. He has left few written proofs of his abilities and acquirements, except some articles on his special subjects in the Penny Cyclopaedia, and in the unfinished Biographical Dictionary of the Society for the Diffusion of Useful Knowledge.

TRIVET, NICHOLAS, an English Dominican, born in Norfolk, 1258, was the son of Sir Thomas Trivet, chief justice of the King's Bench. He was educated at Oxford and Paris, and was author of "Annales Regum Angliae." Died, prior of a Dominican monastery at London, 1328.

TROGUS POMPEIUS, a Roman historian, was born in Gallia Narbonensis, and lived in the reign of Augustus. Trogus wrote a Universal History, entitled "Historia Philippica," in 44 books, which is not extant, but portions of which are preserved to us in the epitome or abridgement by Justinus.

TROLLOPE, FRANCES, novelist and miscellaneous writer, was born in 1790; at the age of 19 married a barrister, Anthony Trollope, who had neither good fortune nor good health; and in 1825 was left a widow. She visited America in 1829, and attempted to establish herself there, but after three years returned to England; and urged by the necessity and duty of supporting her family, she wrote in 1832 her "Domestic Life of the Americans," which brought her considerable reputation in England, and called forth much angry criticism in America. From that time her narrations of travel and her novels followed in rapid succession for more than twenty years; all bright, cheery, witty, and not at all reflecting the shadow and sadness of her own life. Among the travels are, "Paris and the Parisians in 1835;" "Vienna and the Austrians;" "A Visit to Italy;" and "Belgium and Western Germany." And among the novels—"Jonathan Jefferson Whitlaw;" "The Vicar of Wrexhill;" "Tremordyn Cliff;" "The Widow Barnaby," &c. Mrs Trollope spent the last years of her laborious life at Florence, and died there, 6th October, 1863. The well-known writer, Mr Thomas Adolphus Trollope, author of the "History of the Commonwealth of Florence," "Life of Filippo Strozzi," and other works, is her son; and the distinguished novelist, Mr Anthony Trollope, is nearly related to her.

TROMP, MARTEN HARPETZCOON, the celebrated Dutch admiral, was born at the Brill, in 1597. He began to serve under his father in the navy at ten years of age, and was captured and detained for two years by an English privateer. He gradually rose to distinction, and in 1637 attained the rank of lieutenant-admiral; in which capacity he served against the Spaniards, captured many of their ships, and was created chevalier of St Michael by the king of France. In October, 1639, he won a great victory over the

Spanish fleet and captured thirteen galleons. He was engaged in the naval campaigns of 1640 and 1641; but his courage and abilities were most strikingly displayed in the war with England in 1652-53. He had Robert Blake for his adversary, and was defeated off Dover in March, 1652. In November following he defeated Blake, and sailed up the Channel with a broom at his mast-head. Another engagement took place in the Channel in February, 1653, when the Dutch lost many of their ships, but Tromp succeeded in saving the 300 merchant-ships he was convoying. After commanding in several other battles against the English, this great seaman fell in the engagement with Monk, 23rd July, 1653.

TROMP, CORNELIS VAN, son of the preceding, was born at Rotterdam, in 1629, and, like his father, rose to eminence as a naval commander. He early distinguished himself under Van Galen in the Mediterranean, afterwards against the Algerine pirates, and in 1665 took part in the engagement of 13th July with the English fleet. He served under De Ruyter against the English in 1666, and in consequence of a quarrel with that admiral, was deprived of his commission, which, however, was restored to him by William, prince of Orange, in 1673. He was again employed on various occasions, visited England, and was made a baron by Charles II.; was created a count by the king of Denmark, and on De Ruyter's death received the appointment of lieutenant-admiral-general of the United Provinces. Died at Amsterdam, 1691.

TRONCHIN, THEODORE, an eminent physician, was born in 1703, at Geneva; and being maternally related to Lord Bolingbroke, he was sent to England, to be educated at Cambridge. He studied medicine under Boerhaave, at Leyden; and having taken the degree of M.D., he first settled at Amsterdam, and afterwards at his native city; but subsequently removed to Paris, on being appointed physician to the duke of Orleans. Tronchin was a man of consummate skill in his profession, and of great benevolence. He was the friend of Voltaire, Rousseau, and many other celebrated characters, who have eulogized his talents and his virtues in their writings. Died, 1761.

TROTTER, THOMAS, M.D., an eminent medical writer, was a native of Roxburghshire, and educated at the university of Edinburgh. After being duly qualified, he was appointed a surgeon in the navy, in 1782; obtained his doctor's degree at Edinburgh, in 1788; was appointed physician to the royal hospital at Portsmouth, in 1793, and in the following year, physician to the fleet. He introduced many improvements into the medical discipline of the navy; was indefatigable in his endeavours to mitigate the pernicious effects of scurvy; and was completely successful in repressing a putrid fever which broke out among the French prisoners taken on the 1st of June, 1794. On his retirement from the public service, he settled at Newcastle as a physician; and died there in 1832. He wrote many useful works, of which the following are the principal; "Medical and Chemical Essays," "Medica

Nautica, or an Essay on the Diseases of Seamen," a "Treatise on Scurvy," a "Review of the Medical Department of the British Navy," "The Noble Foundling," a tragedy; a volume of poems, &c.

TROUGHTON, EDWARD, a celebrated astronomical instrument maker, was born at London, in 1763. He became a partner in the business carried on by several members of his family, took the deepest interest in all the details of his work, and earned himself a distinguished name among scientific men by the numerous improvements he devised in astronomical instruments. Died, 1835. His bust, by Chantrey, was placed in the Observatory at Greenwich.

TROWBRIDGE, SIR THOMAS, baronet, British admiral, began his service in the navy under Admiral Hughes in the East Indies, attaining the rank of post-captain in 1782. Taken prisoner by the French in 1794, he recovered his liberty at the great battle won by Lord Howe over the French fleet on the 1st June of that year. As commander of the Culloden he took a distinguished part in the defeat of the Spaniards by Sir John Jervis, off Cape St Vincent, in February, 1797, and afterwards served under Nelson, in the Mediterranean. His exertions beforehand contributed to the victory of the Nile, but he was accidentally prevented from taking part in the battle. In 1799 he took the castle of San Elmo, Naples, and before the close of the year was made a baronet. He served as captain of the Channel fleet in 1801, was made a lord of the Admiralty, and in 1804 attained the rank of admiral. He sailed from Madras in the Hienhelm in January, 1807, and probably perished with his ship and crew in a storm soon after.

TROY, FRANÇOIS DE, a French painter, was born at Toulouse, in 1645; and died at Paris, in 1730. His principal performances are in the Hotel de Ville and the church of St Geneviève, at Paris.

TROYON, CONSTANT, the distinguished French landscape and animal painter, was born at Sèvres, in 1813. His employment in the celebrated porcelain works of that town first brought out his genius for painting, and, after studying under Riocreux, for whose study of nature he travelled in the most picturesque districts of France and in Holland. He began to exhibit at the age of twenty, and from that time he continued to work indefatigably at his art, and attained high distinction. He was a member of the Academy of Amsterdam, and of the Legion of Honour. Among his most celebrated works are the "Héculs au Labour," "Foire Limousine," "Marché d'Animaux," "La Vallée de la Teuque en Normandie," "Les Chiens courants au Repas," "Le Retour à la Ferme," &c. M. Troyon acquired an immense fortune by his works, and died at Sèvres, March, 1865.

TRUMBULL, JOHN, an eminent American painter, born at Lebanon, Connecticut, in 1756. After finishing his studies at Harvard University, he served in the War of Independence, and was subsequently a pupil of West, in England. He finally settled in his native country in 1786, and applied himself to the execution of a large

JOHN, an eminent Ameri-
an at Lebanon, Connecticut,
finishing his studies at Har-
y, he served in the War of
and was subsequently a
t, in England. He finally
ative country in 1786, and
to the execution of a long

cherished project, of painting a series of
pictures in illustration of the war. Among
those he executed are the "Battle of Bunker
Hill," "Death of General Montgomery,"
"Signers of the Declaration of Independ-
ence," "Surrender of Burgoyne," "Surrender
of Cornwallis," and "Washington surren-
dering his commission." The last four were
commissioned by the government of the
United States, and are now in the Capitol at
Washington. The pictures remaining in
his own possession he presented to Yale
College. In 1817 he was named president of
the American Academy of Arts, and died at
New York, in 1819.

TRUMBULL, Sir WILLIAM, an English
statesman, was born at East Hampstead, in
Herkshire, in 1696. He studied at Oxford,
and having taken the degree of doctor of
laws, was admitted to practice in Doctors'
Commons. After this he was employed in
state affairs, and in 1684 received the honour
of knighthood. He went on diplomatic mis-
sions to Paris and Constantinople; was sub-
sequently made a lord of the treasury and
secretary of state; and died in 1716. Sir
William was the friend of Dryden and the
patron of Pope, in whose correspondence are
many of his letters.

THURO, THOMAS WILDE, Baron, lord
chancellor of England, whose career affords
an eminent illustration of the power of talent
and industry to win for their possessor the
highest offices in the state, was born in 1782.
He received his early education at St Paul's
School, was articled to his father, a solicitor,
in Warwick Square, and admitted an at-
torney in 1805. Soon after his admission he
entered into partnership with Mr Knight,
and practised in Castle Street, Falcon Square,
with much industry and ability. For more
than ten years he remained a member of
this firm, when he abandoned the humbler
branch of his profession, and was called to
the bar of the Inner Temple in 1817. In his
new career he soon became the undisputed
"leader" of his circuit. Together with
Messrs Brougham and Denman, he was en-
gaged as a junior in defending the cause of
Queen Caroline, a distinction which mate-
rially added to his professional reputation,
though it accounted for the fact that he
never attained to political office during the
reign of George IV. In Easter Term, 1824,
he was made a sergeant-at-law, and in 1827
a king's sergeant. In this position he dis-
played an intimate and practical knowledge
of the law, unwearied labour, and indefatig-
able zeal in the interest of his clients. In
1831 he was returned to parliament as mem-
ber for Newark, in which town, at that time,
the influence of the duke of Newcastle was
not so great as it afterwards became. Upon
the general election, however, in December,
1832, he was defeated by a small majority,
but regained his seat in 1835, when he was
elected for the borough in conjunction with
Mr William Ewart Gladstone. In 1839 his
first political prize fell into his hands, in the
shape of the solicitor-generalship, which
then happened to be vacated by the promo-
tion of Sir R. M. Rolfe (now Lord Cran-
worth) to the attorney-generalship. In 1841
he was promoted to be attorney-general, and

at the same time was elected M.P. for Wor-
cester, which he continued to represent till
he was raised to the peerage. On the fam-
ous question of parliamentary privilege,
he delivered a masterly speech, which held
the House enchained for upwards of three
hours, and which was pronounced even by
his opponents to be a consummate triumph of
legal reasoning. Sharing the vicissitudes of
the Whig party when the Protectionists re-
venged the repeal of the corn-laws, by de-
posing Sir Robert Peel, in July, 1846, Sir
Thomas Wilde was again appointed to his
former office, and within the same week was
raised to the bench as chief justice of the
Common Pleas (upon the death of Sir
Nicholas Tindal). In July, 1850, he received
the great seal under Lord John Russell's
administration, and was elevated to the
peerage by the title of Lord Truro, but held
his high office only till February, 1852. Lord
Truro was twice married. His second wife
was Mademoiselle Augusta d'Este, daughter
of H. R. H. the late duke of Sussex and Lady
Augusta Murray, daughter of the earl of
Dunmore. Died, 1855.

TRUSLER, Dr JOHN, was born in Lon-
don, in 1735; was brought up as an apothec-
ary, but entered into orders, and for a time
officiated as a curate. He published abridg-
ments of popular sermons, printed in imi-
tation of mauscript, for the use of the pulpit;
this turned out a profitable speculation, and
led to his commencing business as a book-
seller, by which, and the numerous compila-
tions he produced, he realized a good for-
tune. D. d., 1820.

TSCHIRNHAUSEN, EHRENFRIED WAL-
THER VON, German mathematician and
natural philosopher, was born at Kiesel-
wald, in Upper Lusatia, in 1651. He was of
a noble family, and after studying at the
university of Leyden, served a short time in
the army of the Netherlands, and then travel-
led through the principal countries of Euro-
pe. He had continued his scientific studies,
and in 1682 made himself favourably known
by announcing before the French Academy of
Sciences his discovery of the curve called the
"epicycloid," one of those subsequently
named, from their peculiar properties and
the discoverer, "the *Cuspidae* of Tschirn-
hausen." He was received associate and af-
terwards member of the Academy. The con-
struction of burning-glasses of extraordinary
power next engaged his attention, and he
procured the establishment of several glass-
works in Saxony. Among the lenses which
he made were two, double-convex, 3 feet
in diameter, which were powerful enough
to burn green wood and fuse thin slips of
iron. One of them was presented by the
duke of Orleans to the French Academy, and
the other was given by the maker to the
Emperor Leopold. The Saxon porcelain
manufacture originated in a discovery of
this eminent man. Besides various scientific
memoirs contributed to the academy, Tschirn-
hausen was author of "*Medicina Corporis*,"
and "*Medicina Mentis*." Died in 1708, and
had a pompous funeral at the expense of the
elector of Saxony.

TUCKER, ABRAHAM, an English philoso-
pher, was born in London, in 1705. He was

educated at Merton College, Oxford, and then studied law at the Inner Temple, but was never called to the bar. In 1727 he became owner of a large estate at Hetchworth, in Surrey, and thenceforth paid great attention to agriculture. He married in 1736, and after eighteen years of unusual nuptial content, lost his wife, who left him two daughters. To dull the sharp sense of his sorrow he is said to have copied twice over all the letters of his wife; and soon after began the preparation of the work on which his reputation rests,—“The Light of Nature pursued.” It was published in 4 vols., in 1763, in short portions of it having separately appeared two years previously, under the title of “Free-will, Foreknowledge, and Fate.” On the first appearance of this work the author assumed the name of “Edward Search.” Three additional volumes were published after his death, under the care of his eldest daughter, Judith, who had devoted herself affectionately to his service in his literary labours, and especially during the last three years of his life, when he had become blind. Tucker’s work is unsystematic, very prolix, and full of repetition; practical, and not scientific in its aim; and grounds everything in morals on expediency. Hence Paley’s praise and acknowledgment of obligation to it. The interest and charm of the book is nevertheless considerable. It is original, honest, full of good sense, exact observation, and admirable illustrations from the homeliest sources, and has a vein of genuine humour running through it. Tucker died in 1774. A new edition of “The Light of Nature pursued” was published in 1805 by Sir Henry P. St John Mildmay, son of Tucker’s youngest daughter. It has been several times reprinted, and was abridged by Hazlitt, in 1807.

TUCKER, JOSIAH, political economist, was born in 1711, in Caermarthenshire; was educated at St. John’s College, Oxford; and was successively curate of All Saints, and rector of St. Stephen’s, Bristol, minor canon and prebendary in the cathedral, and dean of Gloucester. During the American war he published many pamphlets, and strenuously recommended the separation of the colonies from Great Britain, as conducive to their mutual interest. But he especially distinguished himself by his able tracts on commerce, in which he preceded Adam Smith in advocacy of free trade. He died in 1798.

TUCKER, ST. GEORGE, an American lawyer and statesman, distinguished in his own country by the title of “The American Blackstone,” was a zealous promoter of the independence of the United States, and bore a part in its accomplishment, not only with his pen, but his sword. Died, 1828.

TUCKEY, JAMES KINGSTON, traveller, was born in 1778, at Greenhill, in the county of Cork; entered the navy at an early age, went to India in 1794, was employed in surveying the coast of New South Wales, was taken prisoner by the French in 1805, and remained in captivity till 1814. He was then selected to command the expedition for exploring the river Congo, where he died, in 1816. He was the author of “Maritime Geography and Statistics,” in 4 vols., written

during his imprisonment, besides Narratives of his Voyages to Australia and Congo.

TUDELA, BENJAMIN OF. [BENJAMIN.] TULL, JETHRO, agriculturist, was a native of Oxfordshire, and born about 1660. He studied at the Temple, and was admitted a barrister; but, returning from his travels, he settled on his paternal estate, and devoted himself to agriculture. Tull was the inventor of the horse-hoeing system of husbandry, on which he wrote a treatise and various tracts. These were reprinted by Mr. Cobbett, who warmly espoused the system.

TULLUS HOSTILIUS, third mythical king of Rome, and successor of Numa. His reign was a series of wars, with Alba, Veii, and the Sabines. The legend of the famous combat between the Horatii and Curiatii forms part of the story of the Alban war.

TULP, NICHOLAS, an eminent physician and distinguished patriot, was born at Amsterdam, in 1693. He not only rose to eminence in his profession, but, being elected burgomaster of Amsterdam at a very advanced age, he so strenuously encouraged his countrymen in their resistance to the invasion of Holland by Louis XIV., in 1672, that a silver medal was struck to his honour, with the motto, “Vires ultra sortemque se necesse.”

TUNSTALL, or TONSTAL, CUTHBERT, an eminent English prelate, was born at Hatchford, in Yorkshire, about 1474. He held various appointments, legal and ecclesiastical; in 1516 he was made Master of the Rolls, and the same year was sent ambassador, with Sir Thomas More, to the emperor, Charles V., then at Brussels. In 1522 he was made bishop of London, in the following year appointed keeper of the privy-seal, and in 1530 he was translated to the see of Durham. Under Edward VI. he was sent to the Tower, where he remained till the accession of Mary, when he obtained his release, and was restored to his bishopric. He conducted himself with great moderation during this sanguinary reign, and would not suffer any Protestants to be molested in his diocese. On the accession of Elizabeth he was again deprived, and committed to the custody of Archbishop Parker, at Lambeth, where he died in 1559.

TURBERVILLE, GEORGE, an English poet, was born at Whitechurch, in Dorsetshire, about 1630. After being educated at Winchester and New College, Oxford, he became secretary to Sir Thomas Randolph, ambassador at the court of Russia, of which country he wrote a description, in three poetical epistles. He published “Songs and Sonnets,” translations of the “Heroical Epistles of Ovid,” and “Tragical Tales.” Died, probably about 1660.

TURENNE, HENRI DE LA TOUR D’AUVERGNE, Viscount de, the great French general, was born at Sedan in 1611. He was second son of the duke of Bouillon, a distinguished Huguenot leader, and Elizabeth of Nassau, daughter of William I., prince of Orange, and was brought up a Protestant. In his fourteenth year he was sent to Holland, where he learnt the art of war under his uncle, Maurice and Henry of Nassau. Sent to Paris as a hostage by his mother, he

dowager-duchess, in 1630, he was at once ap-
pointed to a command in the French army.
He attained the rank of Marechal-du-camp
in 1634; distinguished himself in the cam-
paigns in Germany and Flanders, and in
1639 was made Lieutenant-general. Two
years later he served under Count d'Harcourt
in Italy, and rendered valuable service
at the siege of Turin. In 1643 he was em-
ployed to reorganize the army of Germany,
of which he held the command till the peace
of Westphalia, to the conclusion of which
his exertions and successes greatly con-
tributed. One of his most famous exploits
was the conduct of the retreat after the
battle of Marienthal in 1645. About three
months later he gained or contributed to
the victory of Nordlingen over the Imperia-
lists. For a short time Turenne retired to
Holland, then allied himself with the party
of the Fronde, was defeated at Rhétel, and
soon making his peace with the court, took
command of the royalist forces in 1653. He
was now the adversary of the prince of
Condé, whom he had recently aided and got
released from imprisonment. The campaign
was successfully conducted, and the war of
the Fronde terminated. In 1653 began his
splendid campaign in the Netherlands,
where Condé commanded against him, and
which only terminated with the peace of
the Pyrenees, concluded in 1659, soon after
the defeat of Condé at the battle of the
Dunes. In 1660 he was named by Louis
XIV. marshal-general of the armies of the
king. After the death of his wife he re-
nounced Protestantism, and was received,
in 1688, into the Catholic church; a change
he is said to have long meditated. Turenne
was again called to active service in 1672,
when he was named generalissimo of the
French army in Holland. In this war he
had for his opponent Montecuculli, and he
carried the war into the heart of Germany
with brilliant success; but sullied his reputa-
tion by the devastation of the palatinate,
in which thirty villages were burnt. This
great man, whose private life was as pure
as his military career was glorious, was shot
while making preparation for an engage-
ment near Salsbach, 27th July, 1675. His
remains, placed at first in the church of St
Deuls, were removed to the church of the
Invalides, by order of Napoleon, in 1800.

TURGOT, ANNE ROBERT JACQUES, con-
troller-general of Finance to Louis XVI.,
was born at Paris, of an ancient and illu-
strious family, in 1727. He was educated at
the Sorbonne, for the career of an eccle-
siastic, and had there for fellow-pupils (the
future cardinal) Loménie du Brienne and
(abbé) Morellet. But he had no heart for
the church, and turning to the profession of
the law, was appointed in 1763 Master of
Requests. Pursuing in his leisure hours
the study of ancient literature, physical
and mathematical science, and above all
political economy, he became the friend of
many eminent men, and particularly of
Queasey and Gournay, leading economists.
Already meditating important fiscal, com-
mercial, and sanitary reforms, he was ap-
pointed, in 1761, to the responsible post of
intendant of Limoges. He began at once to

introduce measures for the more just levying
of the land-tax in his province, for the aboli-
tion of the corvées, or repair of roads by
forced labour, for the construction of canals
and new roads, the better cultivation of the
lands, &c. On the accession of Louis XVI.
he was appointed minister of marine, and a
few weeks later was called to the post
which he was most fitted for, that of
controller-general of Finance, or first min-
ister. The task before him was vast, and as
it proved, impossible; but with "a whole
pacific French Revolution in his head," he
set himself honestly, fearlessly, and with
clear insight to execute it. He aimed at
the suppression of servitude and privilege;
"proposed," says Mignet, "to enfranchise
the rural districts from statute labour, pro-
vinces from their barriers, commerce from
internal duties, trade from its shackles, and,
lastly, to make the nobility and clergy con-
tribute to the tax." He, as usual, made nobles,
courtiers, clergy, financiers, all his enemies,
and uniting in their common cause, they
assailed him with various charges, and com-
pelled the king to dismiss him in May, 1776.
Turgot had only been in office 20 months,
and the king had just written to him—
"there is none but you and I that love the
people." He was author of various works,
which fill nine volumes, and was a member
of the Academy of Inscriptions. His in-
cessant labours as minister seriously ag-
gravated the attacks of gout to which he
had been subject, and he died the 20th
March, 1781. There is a Life of Turgot by
Condorcet.

TURNEBUS, ADRIEN, a distinguished
French classical scholar, born at Les Andelys,
in Normandy, in 1512. He studied with
distinction at Paris, and was appointed
professor of humanity at Toulouse, where
he made himself a great reputation. In
1547 he was called to Paris to fill the chair
of Greek and Latin, and among the numer-
ous students attracted by his fame was
Henry Stephens, the learned printer. He
became, in 1552, Joint Superintendent, with
Morel, of the Royal Printing Office for Greek
books, and in 1555 exchanged this post for
that of royal professor. The reputation
which Turnebus enjoyed as a scholar was
matched by the esteem in which he was
held as a man; and he numbered among his
friends some of the greatest of his con-
temporaries—Montaigne, L'Hôpital, and Do-
 Thou. His works, consisting chiefly of
critical and philological treatises, and Latin
translations of Greek authors, were col-
lected and published in 3 vols. folio. This
does not, however, include his detached ob-
servations entitled "Adversaria," which
fill 3 vols. 4to. Died, at Paris, 1565.

TURNER, Dr EDWARD, M.D., F.R.S.,
professor of chemistry at University Col-
lege, London, was born at Jamaica, in 1797;
was educated in England, graduated as
doctor of medicine in Edinburgh, and after-
wards spent two years at Göttingen, under
Professor Stromeyer, in close application
to the kindred sciences of chemistry and
mineralogy. He was appointed professor of
chemistry in the London University on its
foundation in 1828; and by his talents and

the Titianesque manner, and sometimes even his latter years, such as "Venice," the "Golden Age," the "Tusculum," "Burial of Willie," the "Rain, Steam, and the Great Exhibition," and the "Exile," and the fine ruling qualities of comprehension and truth, and for and favour of imagination, and indeed these are only modes of ion with which he enters of nature. In many as an air almost of late mis understood nature perbe and distention; failed to catch a portion of Turner seldom mixed only displayed in the shrewdness of his observations of his wit. Every much of what was in him; est in intelligence, mingled of satire, animated his med to amuse him to be His nearest social ties in the Royal Academy, the oldest member, and to was most warmly attached to habits were peculiar, and at in all that related to rous to unimpaired. He; he was not known to, and his wants were kind. The only ornament in Queen Anne Street ures, which he had copart with at any price. "Rise and Fall of Crossing of the Brook," holdest specimens of his had long lived and at last ings at Chelsea, where he r Brooks," and the only acquainted with his abode. He bequeathed the property to found almshouse of unfortunate and; and he left his pictures no express condition that could be provided for their tion. These works, about ther, are now exhibited in "in" of the National Gallery, Dec., 1851. His remains the crypt of St Paul's, beolds and other great painter's has been written by

UEL, traveller and diplomat in Gloucestershire, about the military service of the any, and having attracted the notice of the governor, War was sent on an embassy to new sovereign of Tibet, ar with Tipoo Saib, this ed himself at the siege of and being afterwards sent a sovereign of Mysore, so much to the satisfaction that they rewarded him

with a handsome present. He returned to England, and published his valuable "Account of an Embassy to the Court of the Tcho Lama in Tibet," &c. Died, 1802.

TURNER, SHARON, the well-known historian of the Anglo-Saxons, was born in London, 1758. Having chosen the law for his profession, he was articled to an attorney at the age of 15. The death of his master before his articles of clerkship were expired left him free to decide on his future career; but at the suggestion of an old client, who promised him support, he took up the business, and notwithstanding the great amount of time occupied by his literary pursuits, he continued to conduct a large professional business. His chief works are, the "History of England from the earliest Period to the Death of Elizabeth," and the "Sacred History of the World;" they have been repeatedly reprinted, and form part of the standard literature of the country. Shortly before his death he published a poem, entitled "Richard III." Died, 1817.

TURNER, T. HUDSON, a distinguished British archaeologist, and for some time secretary of the Archaeological Institute, was originally brought up as a printer, and acquired a taste for antiquarian pursuits, which led to his obtaining a situation in the record office in the Tower. Here he made active use of the facilities thus afforded him for research. He is understood to have contributed largely to the "Athenæum;" and his published works consist of a volume of "Early Household Expenses," edited for the Roxburgh Club, some papers in the "Archæological Journal," and the learned work "On the Domestic Architecture of the Middle Ages." Died, 1852, in his 37th year.

TURNER, WILLIAM, an English naturalist and divine of the 16th century, was born at Morpeth, in Northumberland; was educated at Pembroke Hall, Cambridge; became dean of Wells, and died in 1568. He wrote, among other things, a "History of Plants," which is the earliest English herbal. The first part appeared in 1551, and the second eleven years later. He was also author of several theological works.

TURSELLINUS, HORATIUS, the Latin form of the name of ORAZIO TORSELLINO, a learned Italian Jesuit, was born in Rome in 1645. At the age of 17 he entered the Order of Jesuits, was afterwards employed as teacher in various seminaries, and during twenty years held the post of rector of the Roman College. He was especially distinguished as a Latin scholar, and published, in 1598, a valuable treatise entitled, "De Particulis Latinæ Orationis," which has been many times reprinted. He was also author of an interesting Life of S. Francis in Latin, and frequently republished. The French translation of the Universal History was burnt, by order of the parliament, in 1761. Turcellinus died at Rome in 1599.

TUSSAUD, Madame, the well-known proprietress of the wax-work collection in the metropolis, was born in Berne, 1760. Adopted by her uncle, M. Curtius, an artist in Paris, she repaired thither early in life, and soon became, under his care, so proficient in the

fine arts, that she received the appointment of drawing-mistress to the family of Louis XVI., whose sufferings she witnessed, and in some measure participated. In 1802 she came to England, and commenced her exhibition, travelling with it from town to town; but in 1812, while crossing over to Ireland, the vessel in which she had embarked was wrecked, and her goodly collection fell a prey to the waves. Nothing daunted by this disaster, the enterprising artist began the world anew, with what success, all who have beheld her interesting exhibition, which is justly considered one of "the sights" of the metropolis, can testify. Died, April 16, 1850.

TUSSER, THOMAS, an early English poet, was born about 1515, at Rivenhall, in Essex. After having been a chorister at St Paul's, he was educated at Eton, and at King's College, Cambridge; spent 10 years at court under the patronage of Lord Paget, and then became a farmer in Suffolk, where he composed a book on husbandry, and dedicated it to his patron. His work is in homely verse, and is entitled "Five Hundred Points of Good Husbandry." It was first published in 1557, but was subsequently considerably enlarged. Died, about 1580.

TWEDELL, JOHN, a highly accomplished scholar, was born in 1769, at Threepwood, near Hexham; was educated first at Hartforth School, Yorkshire; next under Dr Parr; and, lastly, at Trinity College, Cambridge, of which he became a fellow in 1792; gained the highest honours in classics at the university; became a student of the Middle Temple; began his travels in 1795, and, after remaining abroad four years, died suddenly at Athens in 1799. He examined with intense interest the remains of ancient art, had drawings made by a French artist who accompanied him, and kept a regular journal of all noteworthy occurrences and objects during his travels. It was known that he had amassed large materials with a view to publication; but the manuscript of the observations which he made in his journey was unfortunately and somewhat mysteriously lost in the course of transmission to England. All that is left to us of the productions of this promising scholar are his "Prologues Juveniles" and a Selection of his private Letters, which were published, together with a Memoir, by his brother, in 1815.

TWISS, HORACE, a miscellaneous writer, was the eldest son of Francis Twiss, Esq., author of a verbal Index to Shakespeare, and of Frances, second daughter of Roger Kemble, the father of the illustrious family of actors. Called to the bar in 1811, he travelled the Oxford circuit for some years, and became one of its leaders; but he subsequently attached himself to the equity courts. His political life commenced in 1820 as member for Wootton Bassett. He represented this borough for ten years, during which he won great distinction by his business talents, and his speeches in favour of Catholic emancipation and law reform. On the formation of the duke of Wellington's administration in 1828, he was appointed under-secretary to the colonies, having previously been counsel to the Admiralty and judge-advocate during Lord

Liverpool's administration. In 1830 he sat for Newport; but the reform bill, which he opposed, cut short his parliamentary career, for though he represented Bridport from 1835 to 1837, all his subsequent attempts to obtain a seat in parliament proved abortive. From this period he devoted his talents to the press. He occasionally contributed leading articles to the *Times*. In 1844 he received the appointment of vice-chancellor of the duchy of Lancaster. From an early age, Mr Twiss had been devoted to literary pursuits. He gained distinction by slight dramatic productions, poetry, jeux-d'esprit, and other publications, chiefly on constitutional subjects; but his literary fame rests on his elaborate "Life of Lord Eldon," which will long be consulted, not merely as one of the best biographies ever written, but as a repository of the most remarkable political transactions of the era to which it refers. In private life Mr Twiss was no less esteemed than in the world of literature and politics. Died, 1849.

TWISS, RICHARD, an English traveller, born at Rotterdam, in 1747, was a man of fortune, and spent several years in visiting various parts of the continent. He was a fellow of the Royal Society, and died at London in 1821. Among his works are, "Travels through Spain and Portugal," "A Tour in Ireland," "A Trip to Paris in 1792," "The Game of Chess," and "Miscellanies."

TWYSDEN, SIR ROGER, the second baronet, was born at East Peckham, in Kent, in 1597. His father, Sir William, accompanied James I. to England, and was created a baronet. Sir Roger, who was an excellent antiquary, suffered severely in the civil war from his attachment to the royal cause. Besides contributing to Philpot's Survey of Kent, and the publication of the "Decem Seriptores," he was author of "The Historical Defence of the Church of England." Died, 1672.

TYCHSEN, OLAUS GERHARD, a celebrated Danish orientalist, was born in 1734, at Tondern, in the duchy of Schleswig, studied at the university of Göttingen; and became professor of oriental languages and librarian at Rostock. He wrote several able works on the Hebrew, Arabic, and Syriac tongues. Died, 1815.

TYNDAL, WILLIAM. [TINDAL.]

TYRREL, JAMES, historian and political writer, was born in 1642, in London; was educated at Queen's College, Oxford; studied in the Inner Temple, and was called to the bar, but never practised professionally. He is the author of a "General History of England," and other works. Died, 1718.

TYRTEUS, an ancient Greek poet, celebrated for his martial strains, flourished about B. C. 680. His birthplace is unknown. He was lame, and blind of one eye. In the war between the Lacedæmonians and Mæsseniensians, the former applied to the Athenians for a general; and the latter, it is said, in derision, sent them Tyrtæus. The bard, however, so inspired the Spartans by his warlike songs, that they reduced the Mæsseniensians to subjection. He was accordingly treated with great respect, and received the

rights of citizenship. Some fragments of his songs are extant.

TYRWHITT, THOMAS, an eminent scholar and critic, was born at Westminster, in 1730, and was educated at Eton, and at Queen's College, Oxford. In 1756 he was under-secretary in the war department; and, in 1762, clerk to the House of Commons; but he resigned his situation in 1768, in order to devote himself to literature. He was a fellow of the Royal and Antiquarian Societies, and one of the curators of the British Museum. Among his works are, editions of "Chaucer's Canterbury Tales," 5 vols., and "Rowley's Poems," the latter of which he proves to be the composition of Chatterton; also "Dissertatio de Babrio," "Notes on Euripides," &c. Died, 1786.

TYSON, EDWARD, physician, was born at Bristol, in 1643; and educated at Magdalen Hall, Oxford. He became a member of the College of Physicians and the Royal Society; and he was physician to Medullar and Eridwell Hospitals. Dr Tyson was a very skillful anatomist and an able writer; he published "The Anatomy of a Porpoise," "The Anatomy of a Pigmy, compared with that of a Monkey, an Ape, and a Man, with a Philosophical Discourse concerning the Pigmys of the Ancients;" and several clever essays in the Philosophical Transactions. Died, 1758.

TYSSENS, PETER, a Flemish painter, born at Antwerp in 1625. In historical composition, it is said, he was very little inferior to Rubens. Died, 1692.—He had two sons, also painters of some note, but less eminent than their father.

TYTLER, JAMES, an eccentric, laborious, and able writer, was born at Brechin, in Scotland, in 1747. His first work, entitled "Essays on the most important Subjects of Natural and Revealed Religion," was printed by the author himself, without any manuscript or notes whatever, but just as the ideas arose in his mind. His other principal works are, "A System of Geography," a "Geographical, Historical, and Commercial Grammar," a "History of Edinburgh," and a metrical translation of Virgil's *Eloques*. He also edited several periodical works, viz. the *Historical Register*, the *Gentleman and Lady's Magazine*, the *Weekly Review*, &c., and contributed largely to the *Encyclopædia Britannica*. Having joined the society of the "Friends of the People," he was outlawed, and died in America, in 1805.

TYTLER, WILLIAM, an historical and miscellaneous writer, was born at Edinburgh, in 1711; was educated at the university of his native city; followed the profession of writer to the signet; and died in 1792. His principal works is, "An Historical and Critical Inquiry into the Evidence produced against Mary, Queen of Scots." He was also a contributor to the *Transactions of the Edinburgh Antiquarian Society*, of which he was one of the vice-presidents.

TYTLER, ALEXANDER FRASER, Lord Woodhouselee, son of the preceding, was born in 1747, at Edinburgh, in which city he was educated. After having been professor of universal history at the university, and judge-advocate for Scotland, he was raised to

his songs several years earlier. Taking a deep interest in political affairs, he became, in 1819, a member of the State Assembly of Württemberg, and was always an earnest champion of liberal principles and measures. In 1830 he was appointed to the chair of the German language and literature at Tübingen, but held it only three years, preferring to take part in the discussions of the Diet, to which he was elected. After a period of literary retirement he was chosen deputy to the National Assembly at Frankfurt, in 1848. This was his last participation in public life. Uhland's "Gedichte" appeared in a collected edition in 1815, and have been repeatedly republished with numerous additions. The eleventh edition appeared in 1853. Their charm lies in their vigour, truth, and simplicity, their fervent patriotism and deep reverence for the past. Uhland was author also of the following works:—"Ueber Waither von der Vogelweide;" "Ueber den Mythos der nordischen Sagenlehre vom Thor;" and a collection of ancient "Volkslieder." Since his death the first volume of his critical works (Schriften zur Geschichte der Dichtung und Sage), from manuscripts left in a rough and unfinished state, has appeared. There is an English translation of his poems by the Rev. W. W. Skeat, M.A. Died at Tübingen, Nov. 13, 1862.

ULFILAS. [ULPHILAS.]

ULLOA, DON ANTONIO, a Spanish mathematician, and commander of the order of St Jago, was born at Seville, in 1716. He was one of the mathematicians employed in measuring a degree of the meridian in Peru, in 1735; and remained there 10 years. On his return, he was taken prisoner by the English, but was soon released, and was chosen F.R.S. He published his "Travels," and a physico-historical work on South America. Died, 1795.

ULPHILAS, or ULFILAS, bishop and apostle of the Goths in the 4th century, probably sprang from a Christian family of Cappadocia, his ancestors having been carried off by the Goths in one of their incursions into that province. The chronology of his life is involved in obscurity; in general he appears to have begun his pious labours among the West Goths in the reign of Constantine, and to have continued them through great part of the reign of Valens. He won the love and confidence of his people by his blameless life and religious earnestness; and did them important service, not only by his teaching and ministrations, but by successfully conducting important negotiations between them and the Roman empire. In doctrine he appears at first to have held with the orthodox; but through his later intercourse with the empire and the Arian bishops was led to embrace the Arian creed. The most memorable service rendered to his countrymen by Ulfilas was the translation of the Bible into their language; for which he had first to devise an alphabet. He omitted the four Books of the Kings, lest their warlike spirit should excite too much the naturally fierce spirit of the people. A volume containing the Four Gospels of this Gothic version, very imperfectly discovered in a monastery near Cologne, and after singular fortunes found a permanent rest in the university of Upsal. It is bound in silver, and is therefore called the "Codex Argenteus." Its text was first published in 1665. Additional portions were subsequently discovered in the library of Wolfenbüttel and at Milan, and an edition of the whole appeared in Germany between 1836-46. The Version of Ulfilas possesses very high interest and importance as the most ancient monument of the Teutonic family of languages. The close resemblance between the Gothic and Anglo-Saxon Versions is shown in Dr Bosworth's edition (1865) of the two printed in parallel columns, with the Versions of Wycliffe and Tyndale. More recently (1868) some fragments of the Gothic version of St Paul's Epistles have been discovered in the monastery of Bobbio, by Dr Reifferscheid of Bonn.

ULPIANUS, DOMITIUS, an eminent Roman civilian, the tutor, friend, and minister of the Emperor Alexander Severus, who made him his secretary and afterwards prætorian prefect. Having offended the soldiery by his reforms, they broke out into open mutiny, and Ulpianus was murdered by them, in A. D. 228. His writings on law were very numerous, and many excerpts from them are included in the "Digest."

ULUGH-BEGH, or OLEG BEK, a Tatar prince of the 15th century, celebrated for his astronomical knowledge, was grandson of Tamerlane, and was born in 1394. His real name was Mohammed Taragai. He formed a seminary, chiefly for the study of mathematics and astronomy, constructed an observatory at Samarcand, and was a patron of learning. After a reign of about 40 years, first as regent till his father's death, in 1447, and then in his own name, he was put to death, in 1449, by one of his sons who had rebelled against him. Science is indebted to him for a series of observations on the fixed stars; and his works on chronology, geography, and astronomy were published in Latin by Greaves and Hyde.

URBAN II., Pope, ODON, or EUDES, was a native of France, was educated by St Bruno, at Rheims, became a canon of the cathedral and a monk of Clugny, and in 1073 was sent by the abbot to Rome, where he gained the confidence of Gregory VII., who made him bishop of Ostia. He was chosen to succeed Victor III. in 1088. Urban took for his guidance as pope the example of Gregory VII., and the quarrel of Guelf and Ghibelline continued. The antipope, Guibert, was driven from Rome, but after the capture of Mantua by the emperor, Henry IV., he was recalled, and took possession of Rome. Such alternations of fortune continued to take place throughout this pontificate. In 1095 Urban presided at the council of Clermont, and there excommunicated Philip I. of France for having put away his wife, Bertha, and married Bertrada, wife of Fulk of Anjou. The most memorable act of Urban II. was the publication of the first crusade. Moved by the pleadings of Peter the Hermit, the pope first announced the design of a crusade at the council of Placcenza, and published it

monastery near Cologne, fortunes found a permanent university of Upsal. It is said to be therefore called the "Upsal." Its text was first published in 1600. Additional portions were discovered in the library of Milan, and an edition was printed in Germany between 1600 and 1605. It is a translation of the Vulgate and is important as the monument of the Teutonic language. The close resemblance to the Anglo-Saxon version is shown by Dr Bosworth's edition printed in parallel columns, and by Wycliffe and Tyndale. It contains some fragments of the Vulgate. St Paul's Epistles have been discovered in the monastery of Bobenheim of Bonn.

URBANUS, an eminent Roman philosopher, friend, and minister of Alexander Severus, who was secretary and afterwards tutor. Having offended the emperor, they broke out into a quarrel. Urbanus was murdered by the emperor. His writings on law, astronomy, and many excerpts are included in the "Digest." URBANUS, or OLEG BEK, a Tatar prince of the 13th century, celebrated for his knowledge, was grandson of Batu Khan. He was born in 1294. His real name was Taragai. He formed a plan for the study of mathematics, constructed an observatory, and was a patron of the reign of about 40 years, first as a prince, and after his father's death, in 1347, as a ruler. He was put to death, and his sons who had rebelled against him are indebted to him for their freedom. His works on chronology, geography, and astronomy, were published in Latin by the emperor.

URBANUS, ODON, or EUDES, was a French philosopher, was educated by St Bernard, became a canon of the abbey of Clugny, and in 1073 was elected abbot to Rome, where the pope Gregory VII., who was chosen pope in 1073. He was chosen pope in 1088. Urbanus took the example of Gregory VII. and the quarrel of Gueif and Godwin. The antipope, Guibert, was elected from Rome, but after the death of the emperor, Henry IV., he was elected, and took possession of the papacy. Urbanus died in 1099. Urbanus presided at the council of Clermont, and there excommunicated the emperor. He was elected pope of France for having put down the emperor. He married Bertha, and married Bertha of Anjou. The most famous of Urban II. was the publisher of the crusade. He was the Hermit, the pope who designed a crusade at Piacenza, and published it

more fully, in a most impassioned and pathetic speech, at Clermont; when the assembly cried—"Dieu le veut, Dieu le veut." Two other councils were held in France for the furtherance of the crusade, and in 1096 the pope returned to Italy. In 1098 he had an interview with Roger, count of Sicily, at Salerno, and then named him and his successors perpetual apostolic legates in Sicily. The same year he presided at the council of Bari, at which discussions took place on the famous phrase "filioque," several bishops of the eastern church, and Anselm, archbishop of Canterbury, taking part in them. Urban II. lived to hear of the first successes of the crusaders, but died at Rome before the news of the capture of Jerusalem could reach him, in July, 1099.

URBAN V., Pope, GUILLAUME DE GRIMOARD, was born in France in 1302, and was educated at the university of Montpellier, where he afterwards professed civil and canon law. He entered the Benedictine order (the dress of which he is said to have worn night and day till his death), and became successively abbot of St Germain of Auxerre and of St Victor of Marseilles. In his absence, and without being created cardinal, he was chosen to succeed Innocent VI., in 1362. The tidings of his election reached him at Florence, and he was proclaimed and crowned at Avignon, where he took up his abode. He was there visited by John, king of France, and the famous Pierre de Lusignan, king of Cyprus, and with them endeavoured, but without success, to get up a new crusade. In 1367, in compliance with the urgent wishes of the emperor and the Romans, but against the will of the king of France, Urban quit Avignon, and once more established the papal court in the Vatican. Rome, and indeed the whole of Italy, was at this time in a miserable condition. The city was half depopulated, and the country was desolated by almost incessant petty wars, and overrun by the bands of mercenaries. And although the emperor led an army into Italy for the purpose of suppressing the disorders, he dismissed his forces, and left things as they were. The pope received him at Viterbo, and they made their entry into Rome together; the coronation of the empress being soon after performed. The visit of the eastern emperor, John Palæologus, took place in 1369; but his professed conformity to the Roman church in doctrine failed to procure him the solid help against the Turks which he went to ask. In the following year Urban once more returned to Avignon; but he died three months after his arrival, December, 1370. He was zealous in promoting better discipline in the church, and much for the advancement of learning, and sent Franciscan missionaries into Tartary and Georgia. The palace at Avignon was built under his direction.

URBAN VI., Pope, BARTOLOMEO PRIGNANO, by birth a Neapolitan, was archbishop of Bari, and about 60 years of age, when he was elected to succeed Gregory XI., in 1378. Of the sixteen cardinals who formed the conclave four only were Italians, and the rest Frenchmen. The sitting was

stormy, and the decision in favour of Urban was determined by the violence of the populace, who insisted on having an Italian pope. By his imprudent severity of rebuke, and demand for reforms of discipline, he soon alienated the cardinals from him; and quitting Rome, they annulled their own act so far as they could by electing another pope at Anagni, Robert of Geneva, who took the title of CLEMENT VII. Thus began the schism in the papacy, which lasted forty years, and was prolific in dissensions, confusion, and even wars. The rivals held councils, excommunicated each other and each other's adherents, proclaimed crusades, and employed bands of mercenary troops. Urban was recognized by great part of the empire, by England, Hungary, and Bohemia; and Clement by France, Savoy, and Naples. But the question of the real pope who could answer? To make up for the loss of his cardinals Urban created a large batch of new ones. To support the crusade which he proclaimed against the papacy of his rival, he ordered the levy of a tenth on all the English benefices. The "fighting bishop" of Norwich, Henry Spenser, took the command of an expedition into Flanders, which came to nothing, and was censured by parliament. Urban also called to his aid Charles of Durazzo, crowned him king of Naples, and sent him to conquer that kingdom, which he did; putting Joanna to death. Urban soon after quarrelled with Charles. While at Nocera, in 1388, six cardinals formed a conspiracy against the pope; but being warned of it, he arrested and imprisoned them; put them to the torture without extorting a confession except from one; carried them with him to Genoa, where they were kept in irons, and again put to the torture; and, finally, without any proof of their guilt, had five of them strangled. The sixth was an Englishman, Adam Easton, and he alone escaped, through the intervention of the king, Richard II. The popular indignation drove Urban from Genoa, and he went to Lucca and to Perugia; and was on his way to Rome, when he was severely hurt by a fall from his mule, and died in October, 1389.

URBAN VIII., Pope, MAFFEI BARBERINI, was born at Florence, in 1568. He studied law at Pisa; after which he entered into orders, and, in 1606, attained the rank of cardinal. In 1623 he was elected to the papal chair; and proved himself a zealous advocate for the interests, spiritual and temporal, of the Romish church. He was also a patron of learning, and founded the college "De Propaganda Fide." No less than 74 cardinals were created by this pontiff. Died, 1644.

URBAN, FERDINAND DE ST, an eminent artist, born at Nancy, in 1654. He became first architect and director of the cabinet of medals to Pope Innocent XI., and his two immediate successors, for whom he executed a great number of moulds or matrices of exquisite beauty. Died, 1731.

URE, Dr ANDREW, an eminent chemist and writer on chemistry and the kindred sciences, was born in Glasgow in 1778. After pursuing his studies at the universities of Glasgow and Edinburgh, he succeeded Dr Birkbeck as Andersonian professor of

chemistry and natural philosophy at Glasgow in 1806, where he gained great fame by his lectures, and his class experiments. In the year 1818 he brought forward his "New Experimental Researches on some of the leading doctrines of Caloric, particularly on the relation between the elasticity, temperature, and latent heat of different vapours, and on thermometric measurement and capacity," which was read before the Royal Society, and published in their "Transactions" for that year. In 1821 appeared the first edition of his well-known "Dictionary of Chemistry," which procured him the friendship of Sir H. Davy, Dr Wollaston, and Dr E. D. Clarke. This was followed by various papers which he contributed to philosophical journals, his "System of Geology," published in 1825, and by his "Philosophy of Manufactures," and his work on the "Cotton Manufactures of Great Britain," published respectively in 1830 and 1831. His last great work was the "Dictionary of Arts, Manufactures, and Mines," a work of immense labour and research, which has gone through many editions, and has been translated into the leading continental languages. Distinguished as a sound chemical philosopher, he was no less remarkable for accuracy in chemical analysis, and it has been ascertained by competent authority, that none of his results have ever been upset. He was one of the original Fellows of the Geological Society. He had also belonged to the Astronomical Society, and was a member of several scientific continental societies. Dr Uro resided in London since the year 1830. Died, 1857.

URFÉ, HONORÉ D', a French romance writer, was born in 1557, at Marseilles. He distinguished himself as a soldier during the wars of the League, and as a negotiator in Savoy and at Venice. He was author of the romances of Astrée, which was once exceedingly popular in France. Died, 1625.

URQUHART, or URCHARD, Sir THOMAS, of Cromarty, in Scotland, was a philologist and mathematician. He was a cavalier officer among the followers of Charles II., and was present at the battle of Worcester; relative to which he published a piece, entitled "The Discovery of a most rare Jewel, found in the Kennel of Worcester Streets," &c. He was also the author of a work on trigonometry; but the performance which he regarded as his most admirable invention was called "Logopandectelion, or an Introduction to the Universal Language." Sir Thomas Urquhart is also known by his excellent translation of Rabelais published in 1653.

URQUIJO, LUIZ DE, a Spanish statesman, born in Old Castile, in 1768. He passed some of his early years in England, and is supposed to have there acquired those liberal notions in politics, which he afterwards displayed. During the ministry of Godoy, he became secretary of state for foreign affairs; but having at length offended the royal favourite, he was disgraced in 1800, and for several years closely confined in the citadel of Pampeluna. On the accession of Ferdinand in 1808, he was set at liberty; followed the royal family to Bayonne, was

afterwards minister of state, and died in 1817.

URSINUS, ZACHARIAS, one of the early reformers, was born at Bircalan, in Silesia, in 1534. He studied at Wittenberg, where he acquired the friendship of Melancthon, whom he accompanied to the conference at Worms. He afterwards became master of the school at Breslau; then went to Heidelberg, where he obtained a professorship; and died, professor of divinity, at Neustadt, in 1583. The celebrated Heidelberg Catechism was compiled by Ursinus, who also wrote a commentary on it.

USSIER, JAMES, (USSERIUS,) archbishop of Armagh, the celebrated chronologist, was born at Dublin, of an ancient and honourable family, in 1580. His father was a clerk in the Irish court of chancery, and his uncle was archbishop of Armagh. He received a careful education in his native city, first at a school and then at the newly-founded Trinity College, where he graduated M.A. in 1600. His reputation for learning was already high. Ordained priest in 1601, he had an appointment as preacher in Dublin, and six years later was named professor of divinity at Trinity College, a post which he filled for thirteen years. About the same time he was chosen chancellor of St Patrick's Church. During this period he was an indefatigable student, and made repeated visits to the Libraries of Oxford, Cambridge, and London, gaining the friendship of several eminent scholars; among them, Sir Thomas Bodley, Sir Robert Cotton, Seiden, and Camden. He obtained his degree of D.D. in 1612, became bishop of Meath in 1620, member of the privy-council of Ireland, and in 1624, archbishop of Armagh and primate of Ireland. After many years of tranquillity his home was broken up by the rebellion of 1641, and from that time he remained in England. After several changes of abode he settled at London, in the house of the countess of Peterborough, and for eight years was preacher to the society of Lincoln's Inn. Archbishop Ussher was attached to the cause of Charles I., preached before him at Oxford, and in 1648 was consulted by him in the Isle of Wight. The works of this learned prelate are very numerous, and in the latest edition, that by Eirington and Todd, fill 17 volumes. The most celebrated is his great work on sacred chronology, entitled the "Annales Veteris et Novi Testamenti," first published in 2 vols. folio in 1650-54. Ussier's system of chronology is founded on the authority of the Hebrew text of the Bible, and is now rejected by all scholars as far too contracted, inconsistent with the records and monuments of other nations, and even with the history of the Jews. It was introduced into our English Bibles, but by whose authority is not known. Of Ussher's other works may be named—"De Ecclesiis Christianis successione et statu;" "Emanuel, or a Treatise on the Incarnation;" "Britanniarum Ecclesiis Antiquitates;" "Dissertatio de Macedonum et Asianorum anno solari;" and "Chronologia Sacra." Ussher married, in 1613, a daughter of Dr Luke Challoner, by whom he had one daughter,

who survived him. His wife died in 1654, and himself in 1656. His last days were spent at Ryegate, in the family of his friend, the countess of Peterborough. His remains were interred in Westminster Abbey by Cromwell's order.

USTARIZ, JEROME, a Spanish writer on political economy, who died about the middle of the 18th century. His "Theory and Practice of Commerce and Navigation" was translated both into the French and English languages.

UVEDALE, ROBERT, LL.D., an eminent botanist, was born in London, in 1642; and was educated at Westminster School, and Trinity College, Cambridge. He was a good classical scholar, and became master of the Foundation School, at Enfield, where his botanical garden was cultivated with great care, and contained a number of choice exotics. Dr Uvedale assisted Dryden and his associates in translating Plutarch's Lives. The date of his death is not known.

UWINS, DAVID, M.D., an eminent physician, was born in London, in 1760. After completing his studies at Edinburgh, he commenced practice as assistant-physician to the Pinbury Dispensary; subsequently settled at Aylesbury; and, returning to London shortly after he had married, was elected physician to the City Dispensary in 1815. He particularly directed his attention to mental diseases; and an essay on "Insanity and Mad-houses," in the Quarterly Review for July, 1816, established his power as a medical writer. He also wrote "Reports" in the Monthly Magazine, and afterwards became editor of the Medical Repository. In 1828 he was appointed physician to the lunatic asylum at Peckham, and published a work on "Insanity," which was eagerly read. But his last production, a pamphlet on "Homeopathy," injured his professional reputation. He died in September, 1837.

V.

VAGA, FERINO DEL, whose family name was BUONACCORSI, a celebrated Italian painter, was born at Florence, in 1500. He was first a pupil of Ridolfo Ghirlandajo, then of another Florentine painter, Vaga, whom he accompanied to Rome. There he became one of the scholars and assistants of Raphael, who employed him to paint some of the frescoes in the Vatican. He lost his property at the sack of Rome, in 1527, and thence lived some time at Genoa, where he executed his best works in the Doria Palace. He became the founder of the Genoese school of painting, and had some distinguished scholars. His reputation was very high, and on his return to Rome he was employed and pensioned by the pope, Paul III. Died at Rome, 1547.

VAHL, MARTIN, a Norwegian botanist, was born at Bergen, in 1749; studied natural history and botany under Linnæus; and travelled over various parts of Europe and Africa. In 1785 he became professor of natural history, and, about 1800, professor of botany, and inspector of the botanic garden at Copenhagen; and died in 1804. He wrote "Symbola Botanica;" "Eclogæ Americanae;" "Enumeratio Plantarum," and was the continuator of the "Flora Danica."

VAILLANT, FRANÇOIS LE. [LEVAILLANT.]

VAILLANT, JEAN FOI, a celebrated French numismatist, was born at Beauvais, in 1532. He first studied medicine, and took the degree of doctor, but quitted the profession for the study of antiquities, and was employed by Colbert to travel in quest of medals for the royal cabinet. In

1674 he sailed from Marseilles for Italy, but was taken by the Algerines, and kept in slavery about five months, when he recovered his liberty, and twenty medals which had been taken from him. On his voyage home, the ship was chased by another corsair, and the dread of being again captured induced him to swallow his medals, which fortunately did him no serious injury. He afterwards travelled into Persia and Egypt, great augmented the treasures of the king's cabinet, and published some excellent works on numismatology. Died, 1706.—JEAN FRANÇOIS FOI, his son, followed the pursuits of his father. Died, 1708.

VAILLANT, SEBASTIEN, botanist, was born, in 1669, at Vigny, near Pontoise. He was first a musician, next a surgeon, and afterwards secretary to Fagon, physician to Louis XIV. By the interest of his patron he became director of the Jardin du Roi, where he was made professor and demonstrator of plants. His great work is the "Botanicon Parisiense." Died, 1722.

VALCKENAER, LUDWIG CASPAR, an able philologist and critic, was born at Leewarden, in Friesland, in 1715; and became professor of Greek literature and antiquities, and also of National History, at the university of Leyden, where he died in 1765. His works are numerous and erudite.—His son, JAN VALCKENAER, who was professor of jurisprudence at Franeker, having joined the patriot party against the house of Orange, was obliged to take refuge in France, but returned to Holland on the invasion of that country by the French, in 1795, and took a very active part in politics. He was subse-

quently employed in diplomatic missions to Prussia, Spain, and France. Died, 1820.

VALDÉS, or VALDESSO, JUAN DE, one of the small band of Spanish Reformers, was born at Cuenca, about 1493, of a noble and wealthy family. He was early introduced, with his twin brother, Alfonso, at the court of Ferdinand and Isabella, where they both profited by the influence and example of Cardinal Ximenes, and other enlightened and liberal men. Juan was for a time in the service of Pope Adrian VI., and then of the Emperor Charles V. Sympathizing with and aiding in the temporary movement of free thought and liberal policy, he fell under the suspicion of the Inquisition and, to avoid persecution, retired to Naples, his brother remaining in Germany. The rest of his short life was passed in retirement, study, and the society of a small circle of congenial friends; among whom were Bernardino Ochino, Peter Martyr, afterwards teacher of divinity at Oxford, Vittoria Colonna, and the noble-hearted Giulia Gonzaga. They spent their Sundays together at Juan's country-house, reading in the morning the Scriptures, inquiring and discussing; and afterwards enjoying discourse on less grave matters. Valdés led in his various works a fair representation of the nature of those delightful gatherings. But it was not permitted him long to enjoy so calm a life. He died about the close of 1540. The influence of Valdés had been powerful enough to attract the notice of the pope, and to attach his name, as leader of a sect, to his opinions; and, in 1542, "Valdesianism" was attacked in Naples by a special inquisitor. Many of his friends were proscribed and put to death, and his writings narrowly escaped destruction. Valdés wrote the "Hundred and Ten Considerations," the "Dialogue on the Spanish Language," and probably the small work entitled "Beneficio di Christo." The last was printed at Venice, in 1542; the "Considerations" appeared (in Italian) at Basel in 1560, and the "Dialogue" was not printed till 1737, nor in a complete state till 1860. The "Considerations" were translated into French and Dutch, and into English by Nicholas Ferrar. The life and works of this illustrious man have been recently studied and lifted out of the obscurity in which they have long lain, by a German scholar, Dr Böhmer, who in Herzog's Encyclopædia. An English scholar, Mr Benjamin B. Wiffen, was at the same time engaged in a like task, and the fruit of his investigations has just appeared (Dec. 1865), in the "Life and Writings of Juan de Valdés," with a translation of the "Considerations," by J. T. Betts. Valdés, though a reformer, was not a Lutheran, nor did he question any church doctrine. The position he held of a *religious mediator*, who saw more in spiritual fellowship with Christ than in any forms either of word or observance, exposed him to the angry denunciation both of the Romish and the Reformed churches. There are some points of resemblance between his "Hundred and Ten Considerations" and Arndt's work, entitled "True Christianity."

VALDEZ, JUAN MELENDEZ. (MELENDEZ-VALDEZ.)

VALDO, or WALDO, PETER, reputed founder of the sect of the Valdais, or Waldenses, in the 12th century, was born at Vaux, in Dauphny, and acquired a fortune as a merchant of Lyons. The sudden death of a friend had such an effect on his mind, as to induce him to sell his property, give the produce off to the poor, and devote the remainder of his life to acts of piety. Like the Quakers, he taught that the laity might conduct the offices of religion without the intervention of priests; but a heresy so obnoxious to the ecclesiastics soon met with the direst persecution; Valdo and his followers fled to the mountains of Dauphny and Piedmont, and the Waldenses were everywhere exterminated, except in the valleys of Piedmont, where a remnant of them still exists.

VALENS, FLAVIUS, Roman emperor, born in Pannonia, about A. D. 328, and admitted to a share of the imperial authority by his brother Valentinian, in 361, when he took the government of the East. He perished in a revolt of the Persians and Goths, who he had previously subdued, A. D. 378.

VALENTIN, MOISE, an eminent French painter, was born at Condomiers, in Lorraine, in 1690. He studied in Italy, and became the intimate friend of Nicolas Poussin. His usually painted scenes of familiar life; but his masterpiece is the "Martyrdom of St. Processo and Martiniano," in St Peter's at Rome. Died, 1692.

VALENTINIANUS I., FLAVIUS, Roman emperor, the elder brother of Valens, born in 321, in Pannonia; succeeded Julian in 364, made his brother Valens emperor of the East, carried on war with the Alemanni and the Quadi, and died in 375.—**VALENTINIANUS II.**, his son, succeeded to the empire with his brother Gratian, in 375; and had Italy as his share. He was disposed of by Maxima, but was afterwards restored; and died, as is supposed, by strangulation, in 392.—**VALENTINIANUS III., FLAVIUS PLACIDIUS**, emperor of the West, was born in 419, at Ravenna. He was proclaimed Augustus at the age of six years. Having intrigued with the wife of the patrician Petronius Maximus, he was assassinated by him in 455.

VALERIANUS, PUBLIUS LICINIUS, Roman emperor, proclaimed by his soldiers in Rhætia, in 254. He was defeated and taken prisoner near Edessa, by Sapor, king of Persia, who kept him prisoner for the rest of his life, and when he died had his skin stuffed and kept as a trophy.

VALERIUS MAXIMUS, a Roman historian, who lived in the reign of Theodosius. After having served in Asia, under Severus Pompeius, he devoted his leisure to the composition of a collection of anecdotes and observations, entitled "De Factis Dictisque Memorabilibus." It was much read in the middle ages, and was one of the earliest books that issued from the press after the invention of printing.

VALETTE, JEAN PARISOT DE LA, grand-master of the order of St John of Jerusalem, was born in 1494, and succeeded to the grand-mastership in 1657. He and his troops gallantly repulsed Solymán, the Turk,

sultan, in his attempt to take Malta, in 1665, compelling the besiegers to retire with a loss of 30,000 men. Died, 1668. The city of Valetta was founded by this grand-maester on the site of the fort of St Elmo, destroyed during the siege.

VALLA, LORENZO, or LAURENTIUS, one of the greatest classical scholars of the 15th century, was born at Rome about 1407, and was educated there. He became professor of rhetoric at Pavia, Milan, and other cities; became the friend of Alfonso V. of Aragon (I. of Naples), and attended him in his wars and journeys for several years; again went to Rome, and there published a book, in which he disproved the alleged donation of Constantine to the holy see, for which he had to flee for his life; took refuge at Naples, and there got into trouble through a vehement theological controversy; and was afterwards invited by Pope Nicholas V. to Rome, and made his secretary and canon of the Lateran. Valla was a bold and original thinker, and contributed by his writings to shake the authority of the scholastic philosophy and theology, to revive learning, and to set reason above tradition. He carried on his polemical discussions with Poggio, Filelfo, Beccadelli, and others in the violent and calumniating style of the age, and was subject to much persecution. His most important philological work is the "Elegantiae Sermonis Latini," which gives him the highest rank as a Latin scholar, and has been frequently republished. As philosopher he wrote, "De Dialectica contra Aristoteles," "De Libero Arbitrio," and "De Voluptate et Vere Hono." Among his other works are a "History of Ferdinand of Aragon;" "Notes on the New Testament;" Latin translations of the Iliad (in prose), Herodotus, Thucydides, and Æsop's Fables; and Commentaries on Livy and Sallust. Valla was the first critic bold enough to doubt the infallibility of Livy. Died, at Rome, about 1457, or perhaps several years later. Niebuhr visited his tomb in the church of the Lateran, and had it restored.

VALLANCY, or VALLANCE, CHARLES, was born in 1721. During his residence in Ireland, as officer in a corps of engineers, he devoted himself to the study of the language, topography, and antiquities of that country; made a survey of the island, for which he received £1000; and wrote a "Grammar and Dictionary of the Irish Language," "Collectanea de Rebus Hibernicis," &c. He attained the rank of a general, was a member of several scientific institutions, and died, aged 80, in 1812.

VALLE, PIETRO DELLA, a celebrated traveller of the 17th century, was born at Rome, in 1636, of a noble family. His travels, though not free from traces of credulity and a love of the marvellous, are highly interesting. He visited Turkey, Egypt, Arabia, Persia, and India, passing upwards of 11 years in these countries, and studying the languages and manners of the inhabitants. At Baghdad he married a beautiful Georgian, who accompanied him on his travels until her death, at Mina, in Caramania, in 1692. Her death so affected him, that he caused her body to be embalmed, and took it

about with him until his return to Rome, where he buried it with great magnificence, and pronounced the funeral oration himself. Died, 1692.

VALLI, EUSEBIO, an eminent Italian physician, born at Pistoia, in 1702. He travelled to Smyrna and Constantinople, in order to make observations on the plague; and exposed himself to it, to determine the efficacy of vaccination as a preventive. At length he fell a victim to his imprudence; for in September, 1816, having gone to the Tavannah, to add to his observations on the yellow fever, he purposely exposed himself to the contagion, and caught the disease, of which he died. His works on the subjects he so closely investigated are considered valuable.

VALLISNERI, ANTONIO, Italian naturalist and physician, was born in the duchy of Modena, in 1661. He was educated by the Jesuits at Modena, and then pursued the study of medicine and of natural history, under Malpighi at Bologna. By his observations and discourses he gained a high reputation, and at the same time found himself at variance with established systems and their adherents. In 1700 he was appointed professor of practical medicine at Padua, and in 1711 first professor of the theory of medicine. He contributed greatly to the advance of medical science, was honoured by offers of various high appointments, was chosen F. R. S. London, and died at Padua, in 1730. A genus of plants has been named in his honour *Vallisneria*. A collected edition of his writings, "Opere Fisico-mediche," appeared in 3 vols. folio, three years after his death.

VALOIS, HENRI DE (HENRICUS VALESIVS), French philologist, was born at Paris, in 1603. Educated by the Jesuits, he practised for a short time as a lawyer, but soon gave himself up wholly to literature. From excessive application he injured his sight, and about 1662 became totally blind. His principal work is an edition of the Greek Ecclesiastical Historians, which appeared in successive volumes between 1659 and 1673. He edited also Amnianus Marcellinus, and wrote various lesser critical works, which were published together in 1740. Died, 1676.

VALPERGA DI CALUSO, TOMASO, a Piedmontese mathematician and astronomer, was born at Turin, in 1737. He first served in the navy, but quitted the profession of arms for that of an ecclesiastic, and devoted much of his attention to science. He was member of the grand council and director of the observatory of Turin, a member of the Legion of Honour, &c. Died, 1816.

VALPY, DR RICHARD, F. A. S., an eminent classical scholar, was a native of Jersey, and born in 1754. At 10 years of age he was sent to the college of Valognes, in Normandy, where he remained five years; thence to the grammar school at Southampton; and completed his studies at Oxford, having been appointed to one of the scholarships founded in Pembroke College for the natives of Jersey and Guernsey. From Oxford he removed first to Bury St Edmund's, and afterwards (1781) to Reading, where he

had been unanimously elected head-master of the school founded by Henry VII. His unwearied industry in discharging the duties of a public instructor was not confined to the school-room; all the hours he could spare were spent in his study, and numerous elementary works of acknowledged excellence were the result of his praiseworthy exertions. About six years before his death he retired from his scholastic labours, when his youngest son, the Rev. F. Valpy, was elected as his successor. Died, 1836.

VALSALVA, ANTONIO MARIA, a distinguished Italian physician and surgeon, born at Imola, in 1666. He graduated M. D. at Bologna, in 1687, having been there a pupil of Malpighi. Ten years later he was appointed professor of anatomy in the same university, and in 1705 surgeon to the Hospital for incurables. He was an enthusiastic student, observer, and lover of science, and rendered great services by his improvements in surgical instruments, anatomical discoveries, and better methods of treatment. The anatomy of the ear was one of his special subjects of study. He was several times chosen president of the Institute of Bologna, and was a fellow of the Royal Society of London. Valsalva wrote but little, leaving only the classical work entitled "De Aure Humana Tractatus," published in 1704, and often reprinted, and three Anatomical Dissertations, published after his death. The illustrious Morgagni was the scholar of Valsalva. Died at Bologna, 1723.

VAN ACHEN, HANS. [ACHEN, JOHANN.

VANBRUGH, SIR JOHN, dramatist and architect, descended from a Flemish family resident in England, was born in 1666, and entered into the army. In 1697, his comedy of "The Relapse" was represented; and, in the following year, he produced "The Provoked Wife" and "Æsop," afterwards altered by Garrick. When Betterton and Congreve obtained a patent for erecting a theatre in the Haymarket, Vanbrugh wrote the "Confederacy," the most witty and licentious of his productions. As an architect, Vanbrugh gained distinction by the palace of Castle Howard built for Charles, earl of Carlisle, and afterwards by the palace of Blenheim, erected for the great duke of Marlborough. He obtained the office of Clarenceux king-at-arms; and, in 1714, received the honour of knighthood. He was also appointed comptroller of the board of works and surveyor of Greenwich Hospital. Died, 1726.

VANCOUVER, GEORGE, circumnavigator, and a captain in the British navy. He served as a midshipman under Captain Cook; and a voyage of discovery, to ascertain the existence of any navigable communication between the North Pacific and North Atlantic oceans being determined on, he was appointed to command it. "Vancouver's Voyage" was afterwards published by him. Died, 1798.

VANDAMME, DOMINIQUE, a French general, born in 1771. He entered the army very young, and was made general of di-

vision in 1799, after distinguishing himself in the campaigns of the Rhine. He served in Napoleon's German campaign in 1805-7-9; but was not in the Russian campaign of 1812, having been disgraced in consequence of some dispute with Jerome Buonaparte. But he had the command of the 32nd division in 1813. With that corps he fell into an ambuscade at Kulm, his forces were nearly all cut to pieces, and himself, being made prisoner, was sent to Kasan, near the borders of Siberia. He was restored to freedom by the peace of 1814, but ordered to quit Paris in 24 hours. He joined Buonaparte during the Hundred Days, and served in Grouchy's division at the battle of Waterloo. He made a skilful retreat, and offered the provisional government to defend Paris with the 80,000 troops he had saved and collected; but was compelled by the negotiations to retire behind the Loire. In 1816 he was banished by ordonnance to Ghent, and afterwards fixed his residence in the United States. By a subsequent ordonnance he was permitted to re-enter France, and put on half-pay in 1824. He died in 1830.

VANDER HELST. [HELST.]

VANDER MEULEN. [MEULEN.]

VANDER NEER. [NEER.]

VANDERVELDE, or VANDEVELDE,

WILLEM, called the Old, a celebrated painter, was born at Leyden, in 1610. He excelled in marine subjects, and with his son, whose pursuits in art were similar to his own, he came to London, and received a pension from Charles II. At the great naval fight between the duke of York and the Dutch admiral Opdam, Vanderveelde sailed between the hostile fleets in a light skiff to mark their positions and observe their operations; and in this manner he is said to have been also a spectator of the memorable three days' engagement between Monk and De Ruyter. Died, 1693.

VANDERVELDE, or VANDEVELDE, WILLEM, the younger, son of the preceding, and like him an admirable marine painter, was born at Amsterdam, in 1633. With his father he settled in England, and was in the service of Charles II. This painter is pronounced by Horace Walpole to be without a rival in his sea-pieces. The National Gallery possesses two of his small works. Died at London, 1707.

VANDER WERFF, ADRIAN, Dutch painter, was born at Rotterdam, in 1659. He was a scholar of Vander Neer, and began to practise his art as a portrait painter, but soon turned to historical subjects. The elector-palatine took him into his service in 1697, giving him a large pension and a patent of nobility. Most of the paintings executed by him for the elector are now in the Munich Gallery. His works, notwithstanding their excellent design and colouring, and their high finish, are cold and hard in effect, and fail to charm the spectator. Among them are an "Ecce Homo," "Abraham with Sarah and Hagar," a "Magdalene in the Wilderness," a "Holy Family," two "Judgments of Paris," &c. Died at Rotterdam, 1722.

VANDER WEYDEN, ROGER, an early Flemish painter, born at Brussels or Louvain

after distinguishing campaigns of the Rhine. He Leon's German campaigns is not in the Russian campaign been disgraced in economic dispute with Jerome but he had the command of in 1813. With that corps ambuscaded at Kulm, his forces cut to pieces, and himself, yner, was sent to Kas-nn, near iberia. He was restored to peace of 1814, but ordered to hours. He joined Buonaparte Hundred Days, and served division at the battle of Waterloo, a skilful retreat, and offered government to defend Paris troops he had saved and as compelled by the negotia- behind the Loire. In 1816 he by ordonnance to Ghent, fixed his residence in the by a subsequent ordonnance to re-enter France, and in 1824. He died in 1830.

born at Rotterdam, in 1639. He of Vander Neer, and began to et as a portrait painter, but to historical subjects. The e took him into his service him a large pension and a lity. Most of the paintings m for the elector are now in gallery. His works, notwith- excellence of design and col- their high finish, are cold and and fail to charm the spectator. He are an "Ecco Homo," "Abra- ah and Hagar," a "Magdalene ness," a "Holy Family," two f Paris," &c. Died at Rotterdam.

WEYDEN, ROGER, an early

er, born at Brussels or Louvain

about the beginning of the 15th century. He was trained in the school of the Van Eycks, whose style he contributed to spread; painted in distemper and in oil; preferred linen cloth to wood to work on; and made a great improvement in the Flemish style of design. In 1436 he was named painter to the city of Brussels, was in Italy in 1430, and died at Brussels, in 1464. The National Gallery possesses a "Deposition in the Tomb," by this master.—There was another ROGER VANDER WEYDEN, also an eminent painter, who died at Antwerp, in 1529. There are four small pictures attributed to him in the National Gallery, one of which is an "Ecco Homo," presented by the queen.

VANDYCK, Sir ANTHONY, the most eminent of all portrait painters, was born at Antwerp, in 1599. He received his first instructions from Van Balen, but afterwards became the favourite pupil of Rubens, who advised him to apply wholly to portrait painting, and to visit Italy. Accordingly he set out for that country, where he studied the colouring of Titian with such success as to excel Rubens in his tints, and almost to become the rival of the great master whose art he imitated. In 1632, on the invitation of Charles I., he came to England, obtained a pension, and was knighted. He lived in splendid style, kept the first company, and was himself a liberal patron of the arts. Died at London, 1641. Vandyck's portraits are very numerous, and the most celebrated are in England. Among his historical paintings the finest perhaps is his "Crucifixion." Five of his works are in the National Gallery, one of which is the fine head named "Ge- vartius;" which, however, is now known to be the portrait of Cornelius Vander Geest. This picture is by some attributed to Rubens.

VANE, Sir HENRY, the son of a baronet who was secretary of state, and treasurer of the royal household, was born in 1612; received his education at Westminster School, and at Magdalen College, Oxford; after which he resided for a time at Geneva, and returned a republican and puritan. He then emigrated to America, and was elected governor of Massachusetts; but becoming involved in religious disputes, he returned to England, and was appointed joint treasurer of the navy. In 1640 he was elected member of parliament for Hull, and took an active part against the royalists. He was the principal mover of the solemn league and covenant, and also of the self-denying ordinance; but he did not sit on the king's trial; and he resisted Cromwell to such a degree, that he was sent to Carisbrook Castle. He afterwards strenuously exerted himself to establish a republican government. At the Restoration he was arrested and committed to the Tower. Although accused only for transactions that occurred after the king's death, he was found guilty, and beheaded on Tower Hill, in 1662. After describing his execution, Mr Forster says of him, "one of the greatest and purest of men that ever walked the earth, to adorn and elevate his kind, had left the world which was not worthy of him."

VAN EFFEN. [EFFEN.]

VAN ERPEN. [ERPENIUS.]

VAN HUYSBUM. [HUYSUM.]

VANINI, LUCILIO, a Neapolitan free-thinker, whose writings were deemed atheistical, was born in 1685. After travelling through Germany, Holland, and England, he went to Genoa, where he taught philosophy, and afterwards to Toulouse, where he was arrested, and condemned by the parliament to be burnt alive as an atheist. He wrote "Amphitheatrum Aeternæ Providentiæ," and "De Admirandis Naturæ Arcanis," for which latter work he suffered in 1619.

VAN LOO, JEAN BAPTISTE, an eminent French painter, was born at Aix, in Provence, of a family distinguished in art, in 1684. He was a pupil of his father, painted at Toulon and Aix for some years, and having obtained the patronage of the prince of Carignano, was sent to study at Rome at his expense. He had Benedetto Luti for his master. In 1719 he accompanied the prince to Paris, where he was in high reputation, especially for his portraits, and was employed by the regent Orléans at Fontainebleau. He was received at the Academy of Painting, and became a professor. In 1738 he visited England, and while he remained took the lead as a portrait painter. Failing health induced him to visit his native place, and he died there in 1745. Two of his sons distinguished themselves as painters.

VAN LOO, CHARLES ANDRÉ, a distinguished French painter, was younger brother of the preceding, and was born at Nico, in 1705. A pupil of Jean Baptiste and of Benedetto Luti, he accompanied his brother to Paris, and assisted him in the restorations on which he was employed at the palace of Fontainebleau. After a short visit to Italy he settled at Paris, in 1729, was admitted to the Academy a few years later, became professor, painter to the king, and director of the Academy. Louis XV. made him chevalier of the order of St Michael, and Frederick the Great attempted to entice him to Berlin, but unsuccessfully. His works are very numerous, and were at first over-praised; as they have since been perhaps underrated. Died, 1765.

VAN MANDER, CAREL, a Flemish painter, biographer, and translator, was born, in 1548, of an ancient and distinguished family. He was a pupil of Lucas de Heere; spent several years at Rome; was driven from his home by the civil wars, and settled at Haarlem, in 1583. He founded a school of painting there, and also occupied himself, as he had all his life, with literary labour. Van Mander painted historical, landscape, and portrait pieces in fresco and in oil. He is now chiefly remembered for his "Het Schilder Boek," or "Lives of the Painters." He wrote poems, and translated Homer and Virgil. Died at Amsterdam, 1606.—His son CHARLES was also a good painter, and entered the service of the king of Denmark.

VAN MILDERT, Dr WILLIAM, bishop of Durham, was born in London, in 1765; received his education at Merchant Taylors' School, and at Queen's College, Oxford; and entered into holy orders in 1788, as curate of Sherbourne and Lewknor, Oxfordshire. He obtained in 1796 the rectory of

St Mary-le-Bow, London. His abilities as a preacher soon attracted public notice, especially as displayed in his "Boyle Lectures." He was soon after presented with the vicarage of Farningham, Kent, and he subsequently became preacher of Lincoln's Inn and regius professor of divinity at Oxford. In 1819 he was made bishop of Llandaff, and dean of St Paul's in the following year. He then resigned his chair at Oxford; and on the death of Dr Shute Barrington, in 1826, he was raised to the see of Durham. As a theological writer, Dr Van Mildert stands in the first class; his "Life of Waterland" is a luminous and comprehensive performance, filling up a void in our ecclesiastical history; and many of his sermons are perfect specimens of pulpit eloquence and logical reasoning. Died, Feb. 21, 1836.

VANNI, FRANCESCO, Italian painter, born at Siena about 1565, was of a family distinguished in art. He was first taught by his father, and afterwards studied at Rome under Giovanni de Vecchi. He improved himself by copying some of the works of Coreggio and Parmigiano, and adopted the style of Broccoli so successfully that some of his pictures have been attributed to Broccoli. He painted at Rome, for Pope Clement VIII., an altar-piece in St Peter's, of Peter rebuking Simon Magus, and the pope created him *Cavaliere*. Vanni was also an etcher and a skilful architect. Among his best pictures are—"St Raymond walking on the Sea," at Siena; the "Scourging of Christ;" and "Death of St Cecilia," at Rome. Died, at Siena, 1609. He left two sons, named Michael Angelo and Raphael, who distinguished themselves as painters.

VAN OS, PIETER GERARD, a Dutch painter and engraver, born in 1776. He was first the pupil of his father, a flower-painter at the Hague, and afterwards became an imitator of Paul Potter. He excelled in painting animals, and his pictures are highly esteemed. He was also a good etcher. Died at the Hague, in 1839.

VANSOMER, PAUL, portrait painter, was born at Antwerp, in 1576; and died in 1621. He resided in England many years, and painted portraits of many of the nobility and gentry.

VAN SWIETEN, GERARD, an eminent physician, was born at Leyden, in 1700. He studied under Boerhaave, and in 1745 went to reside at Vienna, and there laid the foundation of a medical school, established chemical lectures in one of the hospitals, enlarged the botanical garden, and prevailed upon the government to rebuild the university. His principal work is a "Commentary on the Aphorisms of Boerhaave," 5 vols. 4to. Died, 1772.

VANUCCHI, ANDREA. [SARTO.]

VAN VEEN. [VENIUS, OTTO.]

VANVITELLI, LUIGI, a celebrated Italian architect, was born at Naples, of a Flemish family, in 1700. He early distinguished himself as a painter, but preferring architecture, studied under Ivrea, and was first employed by the Cardinal di Sar. Clemente to restore the Alban Palace at Urbino. His success in this work, and in the two churches which he built in the same city, procured him the

place of architect of St Peter's at Rome in 1728. He executed many works at Ancona, Perugia, Siena, and other places, but the work on which his reputation rests is the magnificent palace erected by him at Caserta for the king of Naples. It was commenced in 1752. He also constructed the vast aqueducts by which the palace is supplied with water. A volume of his designs for this palace was published in 1757. Vanvitelli died at Caserta in 1773.

VARGAS, LUIS DE, a Spanish painter, born at Seville, in 1502. At the age of 21 he went to Rome, and did not return to his native place for nearly 30 years. He excelled both in oil and in fresco-painting, and executed many fine works for the churches of Seville. Few of his works are still preserved. Died, 1568.

VARIGNON, PIERRE, an eminent French mathematician, was born at Caen, in Normandy, in 1654. He studied at Paris, and in 1688 was admitted to the Academy of Sciences, and made professor at the college Mazarin. He was afterwards professor of mathematics at the college of France. Among his works are, "Projet d'une nouvelle Mécanique," "Nouvelles Conjectures sur la Pesanteur," "Nouvelle Mécanique Statique," 2 vols., "Traité du Mouvement et de la Mesure des Eaux Courantes," &c. Died, 1722.

VARIUS, LUCIUS, a Latin poet, the intimate friend of Virgil and Horace. He was patronized by Mæcenas, and his poems, epic and dramatic, were very highly esteemed. Some fragments of them are preserved. Died, after B. C. 19.

VARNHAGEN VON ENSE, KARL AUGUST, the distinguished German historian, biographer, and diplomatist, was born at Düsseldorf, in 1785. He first studied medicine at Berlin, but with more ardour applied himself to philosophy and literature; in which the influence of Fichte and A. W. von Schlegel contributed to attach him. In 1804, in conjunction with Chamisso, he published a "Muscenalmanach." He was at Berlin at the time of the battle of Jena, and witnessed the occupation of the capital by the French. He continued his studies at Berlin and at Tübingen, extending his acquaintance with the most eminent of his countrymen, and, especially, getting introduced in 1808 to Daniel Levin, a Jewess of singular intellectual endowments, and the central figure of a circle of men of letters, politicians, and artists. In 1809 he entered the Austrian army, and was severely wounded at Wagram; followed Prince Bentheim to Paris, and witnessed the festivities, and the terrible calamity attending them, of the marriage of Napoleon with the Archduchess Maria Louisa, and then for some time lived in retirement. In 1812 he served in the Russian army under Tettenborn, whom he followed to Paris in 1814, and there met Madame de Staël. The same year he entered the diplomatic service of Prussia, married the noble Rachel, who had embraced the Christian faith, and accompanied the chancellor Hardenberg to the congress of Vienna. His wife went with him. In the following year he was sent ambassador to Baden, and then

1819 he took no public office for ten years. He was then sent as envoy extraordinary to Cassel. Varnhagen was a voluminous writer, and his works have received very high praise. He was an earnest patriot, and his noble instincts and aspirations were not deadened or corrupted by official life. The steady foe of absolutism, and the keen detector of attempts to encroach on popular freedom, he felt deeply the degradation of his country under the rule of Frederick William IV., and had gloomy forebodings of its future. In his books, and especially in his "Diary," of which eight volumes have been published, he most vividly and truthfully depicts both the men and the events he lived amongst; and for these portraitsures he will perhaps be chiefly remembered. Among his works, too numerous to be fully set forth, are "Deutsche Erzählungen," "Vernichtete Gedichte," "Biographische Denkmale;" "Lives of Generals Seydlitz, Winterfeldt, Schwerin, and others;" "Räsel: ein Buch des Andenkens für ihre Freunde;" and "Galerie von Bildnissen aus Imheils Umgang." Varnhagen owed much to the influence, both intellectual and moral, of his wife, whose death he had to mourn in 1833. She was born in 1771, and was there- fore a good deal his senior. She left no written work, but many of her letters are published in her husband's memorial, "Räsel." She was as much distinguished by feminine grace and delicacy, and by child-like simplicity, as by vigour, freshness, and vivacity of intellect. In society she was wholly supreme. Varnhagen von Ense died at Berlin, October 10, 1868. The volumes of his Diary (*Tagebücher*), edited by his niece, have been seized by the Prussian government, as they have appeared. The last (8th) volume was printed at Zürich. His niece is a refugee.

VARRO, MARCUS TARENTIUS, the learned and voluminous Roman writer, was born at Rome, B. C. 116. He appears to have had the best education his age could give him; took part with distinction in public affairs; commanded under Pompey the Great against the pirates of the Mediterranean; adhered to his party in the civil war, and served under him in Spain; but after the battle of Pharsalia made his peace with Julius Caesar, and was charged by him with the formation and management of the public library founded at Rome. Varro narrowly escaped the proscription under the second triumvirate, and did actually lose his large collection of books. He enjoyed the favour of Augustus, and lived to a great age, busy with his books the rest of his life. He has the reputation of being the most learned of the Romans, and his learning was surprisingly various. He wrote many books; some historical, some antiquarian; others poetical, philosophical, and scientific. But of the whole number two only with fragments of others are extant. The work on which his chief fame rested was the "Antiquitatum Libri," now lost; but from the division of which, the "Antiquitates Rerum Divinarum," Augustine derived much of the material for his "City of God." His extant works are—"De Re Rustica," and "De Lingua Latina." The first is

in three books, and is the best treatise on ancient agriculture left to us. The last is also of great value. Varro died B. C. 28.

VARTHEMA, LUDOVICO DI, a Venetian traveller of the 16th century. He left Europe about the close of 1602, whether merely to gratify a natural inquisitiveness or as agent for the merchant princes of Venice does not appear, and visited Egypt, Syria, Arabia,—making the pilgrimage to Medina and to Mecca,—Persia, India, and the islands of Borneo and Java, returning to Europe in 1608. The narrative of his travels appeared in 1610, and an English translation by Mr Winter Jones, with notes and an Introduction by Mr Badger, was published in 1863. The book is not only highly curious and amusing, but valuable for its accuracy of description and information; especially for the account of Yemen, and of the pilgrimage to Mecca. It contains an allusion both to Australia, and to a great southern continent, earlier than the earliest evidences of the discovery of that country, or the first known reference in maps to such a continent.

VASA. [GUSTAVUS VASA.]

VASARI, GIORGIO, Italian painter, the celebrated biographer of the Italian artists, was born at Arezzo in 1512. His father was his first master, and he was afterwards the pupil of Michael Angelo and Andrea del Sarto at Florence. He became the friend and imitator of the former; was patronized successively by Cardinal Ippolito de' Medici, Pope Clement VII., and the grand-duke Cosmo I.; executed a large number of paintings, in which, however, he was assisted by his pupils; but sacrificing quality to quickness, left little that is of lasting worth. Some of his portraits are commended, especially one of Lorenzo the Magnificent. Vasari was skilled also in the arts of the goldsmith and the architect. But he is now remembered not for his own achievements as an artist, but for his voluminous, graphic, and delightful account of the lives and works of others. His work is entitled, "Lives of the most excellent Painters, Sculptors, and Architects," and was first published in 1550. It comprises a period of four hundred years, beginning with the age of Cimabue. Vasari published a second edition during his lifetime, and it has passed through many editions since, and has been translated into French, German, and English. Notwithstanding the sharp attacks of criticism, and its admitted numerous errors, strange omissions, and partial views, the book holds, and must hold, an important place in the history of art which cannot otherwise be filled. Successive editors and translators have made important corrections and additions; and amongst them must be named Bottari, Della Valle, Schorn, and Förster, and especially Le Monnier, the latest editor. The English version forms part of Bohn's Standard Library. Died at Florence, 1574.

VATTEL, EMMERICH, the celebrated publicist, born at Couvet, in Neuchâtel, in 1714. He studied at Basel and Geneva, intending to enter the church, but his ambition drew him towards public affairs, and the advancement to be hoped for that way.

Failing to make his way at the court of Frederick the Great, to which he went in 1741, he was induced to visit Dresden; and the flattering attentions of the minister, Count von Hühli, kept him in the service of Saxony. The king, Augustus III., gave him, in 1746, the title of "consillier d'ambassade," and sent him to Berne as Saxon minister there. He had little to do as diplomatist, and lived chiefly at Neufchâtel. In 1758 he was recalled to Dresden, and named privy-councillor, but his now work was too heavy for his health. He married in 1764, visited his native country two years later, and died there in 1767. The work on which the reputation of Vattel rests is the "Droit des Gens, ou Principes de la Loi Naturelle Appliqués à la Conduite et aux Affaires des Nations et des Souverains." It was published in 1758, and recommended by its clearness and method, as well as by its easy superficiality, it became fashionable; was a text-book of universities, was again and again republished, and translated into most of the European languages. It was founded more upon the writings of earlier publicists than upon any original investigations of the subject, and does not display either much historical or practical diplomatic knowledge. Vattel was also author of "Questions de Droit Naturel," and several collections of light literary productions.

VAUBAN, SÉBASTIEN LE PRESTRE DE, marshal of France, one of the greatest of military engineers, was born in Burgundy, in 1633. Early left an orphan, and poor, he was brought up by a charitable prior, and in his 17th year entered the Spanish army, and served under the prince of Condé. He zealously studied the art of war, especially fortification, and had given promise of distinguishing himself, when in 1653 he was taken prisoner by a party of his countrymen—royalists—and was persuaded by Cardinal Mazarin to enter the French army. Placed under Clerville, he made so great progress in his art that in 1658 he was charged with the direction of the sieges of Gravelines, Ypres, and Oudenarde. From that time his life was full of great enterprises and achievements; in war he was indispensable to conduct sieges, and in peace equally so to restore decayed fortifications or construct new ones. To detail his deeds would be to tell almost the history of France during his life. He had the conduct of fifty-three sieges, was present at one hundred and forty battles, erected thirty-three fortresses, and renewed the work of three hundred old ones. Among the most important sieges directed by him were those of Lille, in 1667; Maestricht, in 1672, at which he introduced the system of parallels; Valenciennes, in 1675; Courtrai and Luxembourg, in 1690; Philippsburg, in 1688; Mons, in 1691; Namur, in the next year; and Charleval, in 1693. Vauban was named brigadier of the armies of the king in 1674, *maréchal de camp* in the following year, and on the death of Clerville accepted with modest reluctance the office of commissary-general of fortifications. He was created marshal of France in 1703, but notwithstanding his high rank, he could not deny himself the satisfaction of serving at

the siege of Old Brisach. His last service as engineer was to strengthen the defences of Dunkirk. Although his life was full of active service, Vauban was a voluminous writer; his published works consisting of memoirs on sieges, frontiers, &c.; treatises on military matters, and miscellaneous writings. He left also no less than 13 folio volumes of manuscript memoirs, projects, notes, &c., which he named "*Mes Oisivetés*." The character of this great man has drawn forth the highest praise from some of the most distinguished of his countrymen—Carnot, Voltaire, Fontenelle, and St Simon. The latter pronounced him the most upright, simple, true, and modest man of his age. He was one of the first chevaliers of the order of St Louis, and an honorary member of the Academy of Sciences. Died in March, 1707, leaving two daughters.

VAUGHAN, HENRY, called *The Silurist*, an English poet of the 17th century, who deserves a higher place in general esteem than he has yet attained, was born in the parish of Llansantffraid on the Usk, in 1621, and was descended from an ancient and wealthy family. With his twin-brother, Thomas, he studied at Jesus College, Oxford, making occasional visits to London, and becoming an ardent royalist. He chose the medical profession, graduated M.D., and practised first at Brecknock and then in his native parish. A severe illness produced a great change in his character, and his new religious life was fed by the writings of George Herbert, which he made three-fourth his models. His first volume of "Poems" appeared in 1646; a second, entitled "Olor Iscanus" (Swan of the Usk), was ready in 1647, but not printed till three years later. Meanwhile he had given to the world, not heedful of the gift, a series of his "Sacred Poems and Pious Ejaculations" under the quaint title of "*Siles Scintillæ*." An additional series of similar poems was published with the first a few years later, but few heard the voice, and the sweet singer remained silent. Henry Vaughan was author also of several devotional works in prose, and another volume of his poems was published by a friend, under the title of "Thalia Rediviva." He was twice married, and had several children; passed his last years amidst the beautiful scenery of his native valley, and died, 23rd April, 1693. An edition of his Poems, with a *Memoir* by the Rev. H. F. Lyte, appeared in 1841, and another edition, with a reprint of the *Memoir*, in 1858.—THOMAS, twin-brother of the above, also studied at Oxford, fought on the king's side in the civil war, entered the church, was expelled from his living as a royalist, and spent the rest of his life in the study of chemistry and magic. He was long in the service of Sir Robert Murray, Scottish secretary of state, published several books on his favourite subjects, one of which involved him in a controversy with Henry More, and died at Albury, Oxfordshire, in 1665.

VAUGHAN, WILLIAM, an English Welsh poet, was born in Carmarthen, in 1577; and was the author of some miscellaneous poems, the principal of which were

"De Spherarum Grove Moralibus," Died, 1640.

"De Sphærarum Ordine," "The Golden Grove Moralised," "The Golden Fleece," &c. Died, 1640.

VAUX, the name of a noble English family originally of French extraction.—NICHOLAS, the first Lord VAUX, was a gallant officer, and ranked deservedly high in the favour of Henry VIII., and was present with him and the French monarch at the "field of the cloth of gold." Died, 1530.—His son, THOMAS, born in 1510, inherited his father's valour, and was besides a poet. He attended Henry VIII. to Calais and Boulogne, was made governor of Jersey, and died about 1553.

VECCHIETTA, IL, whose name was LORENZO DI PIETRO, Italian painter, sculptor, and architect, was born in the Sicilian territory in 1412, and was a pupil of Quercia. His best work as a painter is the "Assumption of the Virgin" at Pienza. He executed the bronze tabernacle now above the altar in the Duomo of Siena, and the monument to the jurist Marino Socino, and figures of Christ, St Peter, and St Paul. Died, 1460.

VEGA, LOPEZ DE LA, or LOPE FELIX DE VEGA CARPIO, a celebrated Spanish poet, was born at Madrid, in 1562. After studying at Alcalá, he entered into the service of the duke of Alva, at whose instance he wrote the heroic pastoral of "Arcadia." Soon after this he married; but, on the loss of his wife, he embarked in the Armada, prepared for the invasion of England. In the course of this voyage he wrote a poem, called "Hermosura de Angélica," to which, when published, he added the "Dragontea," an invective against Drake and Queen Elizabeth. In 1590 Lope married a second time, and again became a widower, on which he entered into the order of St Francis. He still, however, cultivated poetry, and scarcely a week passed without seeing a drama from his prolific muse. Honours and wealth flowed in upon him, and he was idolized by the whole nation. At his death, which happened in 1635, the highest honours were paid to his remains, and all the poets of the age vied in encomiastic tributes to his memory.

VELAZQUEZ, DON DIEGO RODRIGUEZ DE SILVA, one of the greatest Spanish painters, was born at Seville in 1599. From his first master, Francisco Herrera the elder, he acquired his "naturalist" style, to which Francisco Pacheco, with whom he remained five years, he gained little, except indeed his daughter in marriage. He therefore sought himself as well as he could, taking a peasant lad for a model, and painting him studiously, accurately, in all varieties of attitude. He visited Madrid in 1622, to see the works of the great masters there; and in the following year he returned to that city on the invitation of the duke of Olivarez, his first minister and favourite of Philip IV. Velazquez painted first the portrait of the minister, then that of the king, so successfully that he was at once named court painter. Prince Charles, afterwards Charles II. of England, sat to him in 1623, but the portrait was not finished, and is lost. In 1625 Velazquez became acquainted with

Rubens, who was sent on a political mission to Spain. The next year he went to Italy; spent a year at Rome, the pope assigning him an apartment in the Vatican during part of that time; next to Naples, where he became the friend of his countryman Ribera, and was particularly impressed by the works of the painter Stanzioni; and in 1631 returned to Madrid. Philip IV. made a friend of the great painter, gave him a studio in the royal palace, and an office also in his person. In 1648, he was sent to Italy to buy pictures and casts of Greek sculptures for the king, and after his return, in 1651, he was created a knight of the order of St Jago, and was appointed *Aposentador Mayor*, or quartermaster to the king. In this capacity he had to make the arrangements for the conferences on the *Bidasson* in 1660, which resulted in the marriage of Louis XIV. with the Infanta, and his over-exertions brought on the illness which soon ended fatally. The works of this original and extraordinary painter are rare except in Spain, and even in Spain except at Madrid. He attained the highest excellence in portrait, landscape, historical, and animal painting, had such perfect mastery over his materials, and made his subjects so live and breathe before you, that he seems, it has been said, to have painted by mere will and not by hand. But he was intensely realistic, painted only what he saw, no angels, no ideally lovely women; and remained entirely unaffected in his style, not only by the examples of gorgeous colouring of his friend Rubens, but also by the study and copying of the grand designs of Michael Angelo and the serenely beautiful compositions of Raphael. Among his greatest works are the equestrian portrait of Philip IV., portraits of his queen, Elizabeth of Bourbon, the Infanta Margarita, Pope Innocent X., the count duke of Olivarez, and Admiral Pareja; "Las Lanzas," "Las Hilianderas," "Los Bebedores," and "Las Meninas." The last-named represents the Infanta Margarita surrounded by her ladies and dwarfs, posed for her portrait in the painter's studio. A sketch, supposed to be the original, for this fine work, is in the possession of H. J. P. Bankes, Esq., and was exhibited at the British Institution in 1804. Four other works of Velazquez with this sketch formed the chief attraction of that exhibition. The National Gallery possesses three of his paintings—"Philip IV. hunting the Wild Boar," which has been to a large extent repainted, a "Nativity, or Adoration of the Shepherds," a good example of his early style, and the "Orlando Muerto," or Dead Warrior. His "Aquador" (Water-carrier) is in the collection at Apaley House. Fourteen of his works were exhibited at the Manchester Art Treasures in 1857. Velazquez died at Madrid, 7th August, 1660, and was buried with much pomp in the church of San Juan. His wife died broken-hearted seven days after him, and shared his grave. No monument has ever been erected to him.

VENDOME, LOUIS JOSEPH, Duke of, a celebrated French general, great-grandson to Henry IV. He was born in 1654, served in the wars of Louis XIV., in Holland, took

Barcelona in 1697, was very successful against the Imperialists in Italy, and was sent in 1708 to succeed Villeroi in the command in Holland. In the same year he was defeated at Oudenardo by Marlborough and Prince Eugenio. He contributed greatly to the establishment of Philip V. on the Spanish throne, by the victory of Villaviciosa, in 1710; and was admitted to the honours of a prince of the blood-royal. Died, 1712.

VENEZIANO, AGOSTINO, a celebrated Italian engraver, was born at Venice about 1490. He was one of the most able pupils of Marc-Antonio, whom he almost equalled in delicacy of execution, while he was far inferior to him in design and in the treatment of light and shade. His most admired print is that of "the Skeletons" after Bandinelli, executed in 1518. Agostino engraved many of the works of Raphael and many fine portraits. Died at Rome, probably about 1540.

VENEZIANO, ANTONIO, Italian painter, who flourished 1370—1386. He was a native of Venice, but learnt painting at Florence, and became one of the best fresco painters of his time. He painted in the cathedral of Siena, at Florence, and at Pisa. His three frescoes in the Campo Santo of Pisa were the finest to be seen there.

VENEZIANO, DOMENICO, an Italian painter, whose birth and training are involved in obscurity. It is concluded by the most recent historians that he was of a Venetian family, was born early in the 15th century, studied at Florence, was long connected with the Medici family, was well acquainted with the great Florentine painters of his time and their works, lived some time at Perugia, and died at Florence in May, 1461. He is said to have painted the choir of Santa Maria Nuova at Florence, but the frescoes have perished. Two only of his pictures are now extant; the best of them being in Santa Lucia de' Bardi, at Florence, of St Lucy, the Virgin and Child, and several Saints. The long current story that Domenico learnt the secret of oil-painting from Antonello da Messina, and that Andrea del Castagno cunningly acquired it from him, and then from jealousy murdered him, is now shown to be false. Domenico survived Andrea four years.

VENIUS, or VAN VEEN, OTTO, a Dutch painter, was born at Leyden, in 1556. He studied at Rome under Zuccheri, and after visiting Germany, where the emperor offered to take him into his service, he returned to his native country. He became painter to the prince of Parma, and was named director of the mint by the Archduke Albert. But Van Veen's chief title to distinction is that he was the master of Rubens. Died, 1634.

VENN, HENRY, an English divine, was born at Barnes, in Surrey, in 1725; and died at Clapham, in 1796. He was author of "The Complete Duty of Man," first published in 1764; "Mistakes in Religion exposed," &c.

VERE, EDWARD, earl of Oxford, a courtier poet in Elizabeth's time, was educated at St John's College, Cambridge. In 1586 he held the office of lord high chamberlain, and as such sat upon the trial of Mary, queen of Scots; he had also a command in

the fleet sent against the Spanish armada. Died, 1604.

VERE, Sir FRANCIS, a renowned English general of the reign of Queen Elizabeth, was born in 1554. His wholomilitary career forms part of the history of the war between the Spaniards and the Dutch after the declaration of independence by the United Provinces. He was sent to Holland with the auxiliary forces under the earl of Leicester, in 1585, and distinguished himself on many occasions during the war; took part in the defence of Sluys and Bergen-op-Zoom, relieved Blerg, and had his horse killed in the combat, accompanied the expedition to Cadiz, under Lord Essex and Howard of Effingham, and was named governor of the Brill. He contributed to the victory over the Spaniards at Nieuport, in 1600, and though twice severely wounded, remained on the field till his horse was shot. His last active service was the defence of Ostend in 1601—2. He held out for eight months with 1700 men against 12,000 of the enemy. Died, in England, in 1608. A monument was erected to him in Westminster Abbey.

VERE, Sir HORACE, baron of Tilbury, younger brother of the preceding, was born in 1565. He served with his brother in the Netherlands, and had a considerable share in the victory near Nieuport, and in the defence of Ostend. In the reign of James I. he commanded the forces sent to the assistance of the elector-palatine; on which occasion he effected a memorable retreat before Spinola, the Spanish general. He was the first person raised to the peerage by Charles I. Died, 1635.

VERELST, SIMON, an eminent Flemish painter, who excelled in flowers and fruit. He was born at Antwerp in 1664, and came at an early age to England, where he attained extraordinary popularity. It is not known when he died.

VERGIL, or VIRGIL, POLYDOR, historian and miscellaneous writer, was born at Urbino, in central Italy. He took holy orders, was a friend and correspondent of Erasmus, and after making himself known as a writer, was selected by Pope Alexander VI., soon after 1500, to visit England as collector of the tribute called Peter-pence. In this ungrateful office Vergil had no successor; but although the tax finally ceased to be paid under Henry VIII. he remained here till 1550, and held successively various church preferments. In 1513 he became prebendary of St Paul's. His principal work is the "Historia Anglica," dedicated to Henry VIII., and published at Basel in 1534. It is highly praised for its elegant Latinity, but does not possess weight as a historical authority. Polydore Vergil also wrote a treatise, "De Rerum Inventoribus," and a work in the form of dialogues, "De Prodigis." His first publication was a collection of proverbs. Died, probably at Urbino, in 1555.

VERGNIAUD, PIERRE VICTORIN, born in 1758; one of the chiefs of the Girondin party in the French revolution, remarkable for the brilliant energy of his oratory; who, with Gensonné and Gaudet, opposed the sanguinary measures of Robespierre; and

being before to the g his colle prepare there w time, he them.

being beaten in the struggle, were accused
 before the revolutionary tribunal, and sent
 to the guillotine. Vergniaud, like many of
 his colleagues, refused to escape; he had
 prepared a subtle poison for himself, but as
 there was not enough for all his fellow-vic-
 tims, he generously resolved to suffer with
 them. Died, 31st Oct., 1793.

VERMIGLI, PIETRO. [MARTYR,

PETER.]
 VERNET, CLAUDE JOSEPH, a French
 painter, was born at Avignon, in 1714. He
 studied for many years in Italy, and before
 his return to France became the first marine
 painter in Europe. In 1753 he was admitted to
 the Academy of Painting, and was employed
 to paint a series of views of the principal
 French seaports. Died, 1789. His "Castle of
 St Angelo, Rome," is in the National Gallery.

VERNET, ANTOINE CHARLES HORACE,
 better known as CARLE VERNET, a cele-
 brated French painter, was the son and pupil
 of the preceding, and was born at Bordeaux
 in 1758. He won the grand prize of the Aca-
 demy in 1782, and went to study at Rome.
 He excelled as a painter of battle-pieces,
 but also executed many small *genre* pictures,
 and was esteemed one of the best painters
 of horses. Among his principal works are,
 the "Triumph of Æmilius Paulus," "Re-
 view in the Court of the Tuilleries by the
 First Consul," the Battles of Marengo,
 Rivoli, and Wagram, "Morning of the Battle
 of Austerlitz," &c. He also painted some
 good portraits. Carle Vernet was the father
 and teacher of the more distinguished
 Horace Vernet, noticed below. Died, at
 Paris, 1836.

VERNET, JEAN EMILE HORACE, usually
 called HORACE VERNET, the distinguished
 French painter, was son of the preceding,
 and the last scion of a family of artists,
 originally of Avignon. He was born, in
 1789, in the Louvre, where his father, Carl
 Vernet, and his grandfather, Joseph, had
 official apartments. His earliest years were
 passed amid the agitations of the revolution,
 and his education was comparatively
 neglected. But he soon began to use the
 pencil, and his first sketches were of
 soldiers. At the age of 13 he could support
 himself by the payments received for his
 drawings. His father was his master in
 painting, and from him he caught that
 spirit of independence and love of reality
 which made him the opponent of the class-
 ical orthodoxy of the school of David.
 Failing to win the grand prize and the
 scholarship at Rome, he exhibited the same
 year (1810) his picture entitled, "Prise du
 Camp Retranché de Gatz," which laid the
 foundation of his reputation as a painter of
 battles. About the same time he married
 Louise Pujol, who was his sympathizing
 companion for forty years. The popularity
 which Horace obtained by his first battle-
 piece grew constantly, and did not wane
 throughout his life. In 1814 he took part,
 for a few days, in the defence of Paris, and
 received from Napoleon the cross of the
 Legion of Honour. After the fall of the
 emperor Vernet excited the ill-will of the
 government of the Restoration by his litho-
 graphic caricatures, and in 1822 the Salon

was closed against his works. He then
 opened a private exhibition in his own
 studio, which was very successful. Public
 honours came in time. In 1825 he was
 made officer of the Legion of Honour; the
 next year was received at the Institute, and
 in 1828 was appointed director of the Aca-
 demy of Fine Arts at Rome, a post which he
 filled till the end of 1834. On his return
 to Paris the king, Louis Philippe, who,
 while duke of Orleans, had been his patron,
 received him well, and commissioned him to
 paint the historical galleries of the Museum
 of Versailles. This task occupied him more
 than five years. Among the most remark-
 able of the pictures are the "Attack on the
 Citadel of Antwerp," the "Assault of Con-
 stantinna," and the "Opening of the Breach
 at Constantinna." After completing the
 series he visited Egypt, Palestine, and
 Syria, returning in 1840. In 1842 he visited St
 Petersburg—it was his second visit, and he
 was received by the Emperor Nicholas with
 much kindness. Vernet accompanied him
 on a journey to Sebastopol, and was none
 the less honoured for his frankness and fear-
 lessness of speech. In 1845 he visited Spain
 and Algeria; and the same year lost his
 noble and beautiful daughter, Louise, the
 wife of Paul Delarocche, one of the largest
 sorrows of his life, from the darkness of
 which he never wholly escaped. During
 the revolutions of 1848 he was actively em-
 ployed as colonel of the National Guard of
 Versailles; in 1853 he followed the French
 army to Varna, but soon returned to Paris,
 and painted his last great picture, the "Bat-
 tle of the Alma." The death of his wife
 added to the sadness which had long brooded
 over him, and a second marriage, in 1858,
 was soon after followed by a last long and
 painful illness. The great painter died in
 his apartment, at the Institute, 17th Janu-
 ary, 1863. The Academy resolved, out of
 respect to his memory, not to appoint his
 successor till after six months of mourning.
 To the works already named must be added
 the great picture of the "Taking of La
 Smala," Battles of Montmirail, Foutenoy,
 Wagram, &c., &c., "Arrest of the Princes,"
 which, with other fine works, was destroyed
 at the revolution of February, 1848, "School
 of Raphael," "Prayer in the Desert,"
 "Council of Arabs," and portraits of Napo-
 leon, Charles X., and Brother Philippo.
 A pleasant record of the Vernets has just
 appeared (1866) entitled, "Joseph, Carle, et
 Horace Vernet, Correspondance et Bio-
 graphies," by Amédée Durande.

VERNON, EDWARD, a brave English
 admiral, born in Westminster, in 1684, was
 a son of James Vernon, secretary of state to
 William III. After a variety of service
 under different commanders, he was made
 vice-admiral of the Blue in 1739, and sent
 with a squadron to Spanish America, where
 he took Porto Belle, and destroyed the
 fortifications; but in 1741 he proved un-
 successful in an attack upon Carthagena.
 Died, 1757.

VERNON, ROBERT, a distinguished patron
 of the fine arts, was born, 1774. Originally
 a dealer in horses, he, by his integrity,
 prudence, and assiduity, amassed a large

fortune, which he liberally expended in assisting struggling talent, and in befriending men of genius. His munificent gift to the nation, in 1847, of the "Vernon Gallery," a collection of pictures, the works of modern British artists, on which he is said to have laid out £150,000, has gained for him a lasting name. Died, 22d May, 1849. A portrait of Vernon, by H. W. Pickersgill, and a bust, by Behnes, the latter presented by the Queen, are in the National Gallery.

VERONESE, PAOLO. [CAGLIARI.]
VERRES, CAIUS, the rapacious pro-prætor of Sicily, was, in B. C. 82, one of the party of Marius, but went over to Sulla and became legatus to Dolabella in Cilicia, whom in turn he deserted and betrayed. He was appointed pro-prætor in Sicily B. C. 73, and the island was left at his mercy during the two following years. By his unbounded avarice and the unscrupulous cruelty and tyranny with which he gratified it, the island was completely desolated, and the inhabitants reduced to want and despair. It was resolved to prosecute him, and the conduct of the proceedings was intrusted to Cicero. All attempts of the friends of Verres to get it out of Cicero's hands, and to put it off, failed; and by mere weight of testimony, without flourish of oratory, the case was decided against him. He quitted Rome before sentence was actually passed, his own advocate, Hortensius, giving up the defence. Verres settled at Marseilles, and was afterwards proscribed by Antony. There are seven Orations of Cicero against Verres, of which only two were spoken.

VERROCCHIO, ANDREA DEL, a distinguished Italian painter and sculptor, was born at Florence in 1432. He was first apprenticed to a goldsmith, and executed many exquisite works in metal, which are lost. He learnt the art of sculpture under Donatello, and soon gave up painting, of his skill in which only one example is left, — a "Baptism of Christ," in the Academy of Florence. His great works as a sculptor are the bronze group of the "Incredulity of St Thomas," for the church of Or San Michele, which he began in 1466, but did not complete for nearly 20 years; the monument of Piero and Giovanni de' Medici; silver statuettes of the Apostles, and the tomb of Selvaggia Tornabuoni, executed at Rome, the statue of David, and the magnificent equestrian statue of Bartolomeo Colonna, the great condottiere, at Venice. Verrocchio was the master of Leonardo da Vinci and Lorenzo di Credi. In power and versatility of talent he greatly resembles Leonardo, and their drawings are frequently difficult to distinguish. It is believed that Leonardo assisted his master in painting the "Baptism." Died, at Venice, 1488.

VERSCHURING, HENDRIK, a Dutch painter, born at Gorcum, in 1627. He principally excelled in battle-pieces; and, in order to insure accuracy, he made a campaign in 1672. Accidentally drowned, 1690.

VERSTEGAN, RICHARD, an ingenious writer on English antiquities, was born in London, of Dutch parents, and resided at Antwerp. He was the author of a curious work on the persecution of the Papists under

Queen Elizabeth, entitled "Theatrum Crudelitatum Hæreticorum Nostri Temporis." His chief work, now little valued, is the "Restitution of decayed Intelligence concerning the Antiquities of the noble and renowned English Nation." Died, 1633.

VERTOT D'AUBEUF, IRENÉ AUBERT DE, a French historian, was born at Meautot, in Normandy, in 1655. He entered into the order of Capuchins; but the necessities of that society not agreeing with his health, he was induced to exchange it for the Premonstratensians, in which he became prior; but this order he also quitted, and settled at Paris as a secular ecclesiastic. His talents soon procured him distinction, and he was appointed secretary to the duke and duchess of Orleans, historiographer of the order of Malta, and commander of Santeroy. His chief work is the "Histoire des Révolutions de la République Romaine." He also wrote histories of the revolutions of Portugal and Sweden; but though they are lively, elegant, and interesting, they have no value as histories. Died, 1733.

VERTUE, GEORGE, a distinguished engraver and antiquary, was born in London, in 1684. After being instructed in engraving first by a Frenchman, and afterwards by a Dutchman, he began to practise on his own account in 1709. He was aided by the favour of Sir Godfrey Kneller, and soon making way by his excellent prints, he found many noble and wealthy patrons; among them, Harley, earl of Oxford, the earl of Walschelsea, the duke of Dorset, lord Coleraine, and subsequently the prince of Wales. He was one of the first members of the Academy of Painting established in 1711, and engraver to the Society of Antiquaries. Having projected an extensive work on the history of the fine arts in England, he undertook extensive researches, made many journeys in company with one or other of his noble patrons, and collected a large mass of materials, which after his death became the property of Horace Walpole, and were published by him under the titles of "Anecdotes of Painting in England," and "Catalogue of Engravers." Vertue's prints are very numerous, and among the best of them are the set of twelve portraits of English poets, ten portraits of Charles I. and his friends, and portraits of the kings of England for Rapa's History. He was a man of singular piety, modesty, industry, and scrupulous truthfulness; he could not bring his mind to engrave portraits that were not true, nor increase his business by the arts of puffery. Died, 1756, and was buried in the cloisters of Westminster Abbey.

VESALIUS, ANDREAS, the great anatomist, was the son of an apothecary in the service of the Princess Margaret, governess of the Netherlands, and was born at Brussels in 1514. From his boyhood he showed a strong bent to the study of anatomy, and with great courage and determination he applied himself to it at Louvain and at Paris, running great risks to obtain subjects. He accompanied for a short time the imperial army, for the sake of increasing his knowledge; taught at the universities of Pavia, Bologna, and Pisa, with extraor-

th, entitled "Theatrum Cæcæ Nostræ Temporis," now little valued, is the of decayed Intelligence antiquities of the noble and ish Nation." Died, 1635.

VESPAUCIUS, RENE AUDERT historian, was born at Beaumandry, in 1656. He entered of Capuchins; but the auant society not agreeing with was induced to exchange it onstratenses, in which he heut this order he also quitted, Paris as a secular ecclesiastic. on procured him distinction, appointed secretary to the duke of Orleans, historiographer of Malta, and commander of chief work is the "Histoire de la République Romaine." e histories of the revolutions and Swedes; but though they elegant, and interesting, they as histories. Died, 1733.

GEORGE, a distinguished antiquary, was born in London, r being instructed in engraving enclman, and afterwards by e began to practise on his own e. He was aided by the favour ey Kneller, and soon making xcellent prints, he found many ealthy patrons; among them, of Oxford, the earl of Wichele- of Dorset, Lord Coleraine, and the prince of Wales. He was t members of the Academy of ublished in 1711, and engraver to Antiquaries. Having projected work on the history of the fine

nd, he undertook extensive re- many journeys in company ither of his noble patrons, and rger mass of materials, which eath became the property of e, and were published by him tes of "Anecdotes of Painting" and "Catalogue of Engravings." ists are very numerous, and most of them are the set of twelve English poets, ten portraits of d his friends, and portraits of England for Rapin's History. an of singular piety, modesty, and scrupulous truthfulness; he ing his mind to engrave portraits t time, nor increase his business of puffery. Died, 1736, and was e cloisters of Westminster Ab-

VS, ANDREAS, the great anatom- son of an apothecary in the ser- Princess Margaret, governess of rands, and was born at Brussels rom his boyhood he showed a to the study of anatomy, and courage and determination he at self to it at Louvain and at gling great risks to obtain ng accompanied for a short time y, for the sake of increasing dge; taught at the universities ologna, and Pisa, with extror-

diary success; acquired wider renown by the publication of his great work in 1542; and two years later was appointed first physician to the Emperor Charles V., whom he had thenceforth to accompany in all his movements. He held the same office under Philip II, and in consequence of the claims on his time as royal physician, he did not prosecute his scientific studies. Suddenly, in the height of his honours and prosperity, he resolved on making the pilgrimage to Jerusalem. For this strange step a reason is assigned still more strange, and hardly credible; that he was found guilty of murder by the Inquisition for having opened a body for dissection before death had really taken place, the heart, it was said, quivering in his hand; and that he was allowed to expiate the crime by a pilgrimage instead of death. Vesalius was at Jerusalem in 1564. During his absence he was invited to fill the chair of anatomy at Padua, vacant by the death of his eminent scholar Fallopius. But on his return voyage he was wrecked, and perished of hunger or exhaustion in the island of Zante, in October, 1564. His great work is entitled "De Corporis Humani Fabrica," and by its original views, important discoveries, and convincing evidence, it constituted the science of human anatomy, and opened a new era in the progress of medical science. Its daring attacks on established doctrines, and the venerated authority of Galen, brought down on its author a storm of bitter reproach and opposition; but the storm soon allayed itself, and Vesalius was honoured by the next generation as the discoverer of a new world. He was author of several other works, and the whole were edited by Boerhaave and Albinus, in 2 vols. folio, in 1725.

VESLING, JOHANN, an eminent writer on natural history and anatomy, born at Minden, in Germany, in 1598; studied at Vienna, and after a journey to Palestine became professor of anatomy and botany, and keeper of the botanic garden at Padua. He afterwards visited Egypt, and wrote several works on his favourite sciences. Died, 1649.

VESPASIANUS, TITUS FLAVIUS, Roman emperor, was born of a poor family in the country of the Sabines, A. D. 9. He served in the Roman armies, gradually rising to distinction, and in 41-2 was employed as legatus in Germany, and in 43 in the same capacity in the expedition under Claudius into Britain. He was again in Britain in 47, served afterwards as proconsul in Africa, and in 66 was charged by Nero with the conduct of the Jewish War. He was still engaged in it when Nero died; and while the civil war was going on between Otho and Vitellius, Vespasian was proclaimed emperor, A. D. 69. He returned to Italy, leaving the conduct of the Jewish War to his son Titus, and applied himself to the re-establishment of order, and the improvement of the administration. He contented himself with the outward life of a private citizen, and contributed the force of his own example towards the introduction of a simpler mode of life, and purer morals. The Jewish War ended in 70, and the next year Vespasian and Titus had a joint triumph. The

expedition under Agricola to Britain took place during the reign of this emperor. Vespasian died in his native country, whither he had gone for the benefit of his health, A. D. 79. He left two sons, Titus and Domitianus, who both became emperors. **VESPUCCI, AMERIGO**. [AMERIGO.] **VICENTE, GIL**. [GIL VICENTE.]

VICO, GIOVANNI BATTISTA, an Italian philosopher, one of the most original thinkers of his age, was born at Naples in 1668. He was of an obscure family, and for the most part was self-educated. For some years he supported himself as a private tutor, devoting all his spare time to the pursuit of his beloved studies. Like all great minds, he was attracted to the great works of the ancients, head-springs of thought and wisdom, and cared little for the literature of the moderns; except the few works which rise nearest to the first great ones. He studied Plato most of all; strove to form his style upon that of Cicero; and loved the sad wisdom of Dante. In 1697 he was appointed professor of rhetoric at the university of Naples, and held that post nearly forty years. Throughout life, notwithstanding the reputation he acquired, he had to struggle with narrow circumstances, and probably missed promotion because he had not a supple knee. In his old age, and when worn down with long laborious studies and accumulated cares, he was named historiographer to the king of Naples, his son being at the same time appointed professor of rhetoric. The great work of Vico is entitled "Principj di una Scienza Nuova," and first appeared in 1725. It is a philosophy of history, founded on the recognition of certain laws determining the course of events, and the progress of the human race. Vico speculated in some important points the speculations of some of the most eminent thinkers of a later time. His work passed through three editions in his lifetime, and then seems to have been long lost sight of. In 1827 Michelet published a French translation of it, and a German translation had appeared a few years earlier. A collected edition of Vico's works appeared at Naples in 1818, and was reprinted in 1835. Died, 1744.

VICTOR AMADEUS II., duke of Savoy and king of Sardinia, was born in 1666, and succeeded his father, Charles Emmanuel, under the regency of his mother in 1675. At the instigation of Louis XIV., who had just revoked the Edict of Nantes, he renewed in 1696 the cruel war against the Waldenses, whose sufferings thirty years before had provoked the effective intervention of Cromwell. In 1690 the duke joined the league of Spain and the empire against France, and Savoy was invaded by the French. The same year, through the influence of England and the Netherlands, the Vaudois were restored to their homes and possessions, and freedom of worship was granted them. In 1692 the duke invaded Dauphiny, was defeated the next year at Marsaglia by Catinaut, and by the peace with France, concluded in 1696, recovered all his territories. In the war of the Spanish Succession he was named generalissimo of the combined forces of France and Spain, in Italy, and at the same time

had a secret understanding with the house of Austria. Declaring himself against the king of Spain, his son-in-law, in 1701, his duchy was again overrun by the French, and Turin was besieged in 1706. But joined by Prince Eugene, he won a great victory over the French near Turin, thus delivering the city and regaining his states. He soon after acquired the duchy of Montferrat, and by the treaty of Utrecht, in 1713, he was recognized as heir to the crown of Spain in default of issue of Philip V., and received Sicily and its dependencies with the title of king. He was crowned with his wife at Palermo. But Sicily was afterwards seized by the king of Spain, and on the accession of Victor Amadeus in 1720 to the Quadruple Alliance, Sardinia was given him by way of compensation, with the title of king. After ten years of peace, devoted to the internal improvement of his dominions, he abdicated in favour of his son Charles Emmanuel. In 1731 he attempted to resume the crown, and was arrested by order of the king and imprisoned. Died, 1732.

VICTOR, CLAUDE PERRIN, duke of Belluno and marshal of France, was born at Marche (Vosges) in 1766, and entered the army in 1781. He distinguished himself at the siege of Toulon in 1793, was twice wounded, and was named general of brigade. Serving next in the army of the Eastern Pyrenees, he passed thence into the army of Italy, and took a brilliant part in the campaigns of 1796-97. For his success at the affair of St George, when he compelled 8000 Austrians to lay down their arms, he was named general of division. He took Ancona, and thereby determined the conclusion of the treaty of Tolentino. As commander of La Vendée he did much by his wise moderation to establish peace and order in the province. Recalled to Italy in 1799, he contributed to the victories of Montebello and Marengo; was sent after the peace of Amiens ambassador to the court of Denmark; resumed his command in the army in 1806, greatly distinguished himself at the battles of Jena and Friedland, and on the field of Friedland was created marshal of France. After holding the office of governor of Berlin for more than a year, he served in the Peninsula, obtained several victories over the Spanish forces, and was defeated at Talavera by Sir Arthur Wellesley. The blockade of Cadiz occupied him above two years, and then he joined the great expedition to Russia, in all the successes and disasters of which he took a prominent part. The French army was saved by his heroic services at the passage of the Beresina in November, 1812. He reaped fresh honours in the campaigns of 1813 and 1814, was severely wounded at the battle of Craonne, hastened to submit to the restored Bourbons, and displayed great ingratitude towards Napoleon. Marshal Victor followed Louis XVIII. to Ghent, and after Waterloo was created peer of France, and named commander of the 16th military division. He was minister of war from 1821 to 1823; accompanied the expedition to Spain under the Duke d'Angoulême; and was for a short time ambassador to Vienna. Died at Paris, 1841.

VICTOR, SEXTUS AURELIUS, a Roman historian, who lived in the 4th century. He was governor of part of Pannonia in 361, and probably consul with Valentinian in 373. The works attributed to him are, "Origo Gentis Romanæ," "De Viris Illustribus Urbis Romæ," "De Cæsariis Historiæ," and "De Vita et Moribus Imperatorum Romanorum excerpta."

VICTORIUS, or VETTORI, PIETRO, an eminent Italian scholar, was born at Florence, in 1499. After the revolution which took place in his native city, in 1529, he went to Rome, and resided there till Cosmo de' Medici invited him home, and appointed him to the Greek and Latin professorship. He wrote commentaries on Aristotle, and published editions of Terence, Sallust, and other ancient authors; "Varie Lectiones," and Latin poems and orations. Died, 1568.

VIDA, MARCO GIROLAMO, a modern Latin poet, was born at Cremona, about 1490. After studying in his own country he went to Rome, when his poem, entitled "Scaccia Ludus" (Game of Chess), procured him the patronage of Leo X., who suggested to him the composition of his celebrated "Christiad." Clement VIII. made VIDA apostolical secretary, and afterwards bishop of Alba, in which capacity he attended the council of Trent. Died, 1567.

VIEN, JOSEPH MARIE, a celebrated French painter, born at Montpellier in 1718. He went to Paris in 1741, obtained the grand prize two years later, and was sent to study at Rome. He applied himself with enthusiasm to the study and imitation of the antique, thus beginning the work carried on afterwards by his pupils, David and Vincent. After his return to Paris in 1750, he became successively member of the Academy of Painting, professor, and rector. He held the office of director of the French Academy at Rome for ten years, returning to Paris in 1781. He was afterwards named first painter to Louis XVI., lost his places and income at the revolution, was one of the first members of the Institute, and was named by Napoleon senator, count, and commander of the Legion of Honour. His paintings are very numerous, and among the most celebrated are—the Preaching of St. Denis, in the church of St. Roch; the Sleeping Hermit; Slaughter of the Innocents; Julius Cæsar before the statue of Alexander; St. Louis investing Blanche of Castile with the Regency, and the Parting of Hector and Andromache. He left also many drawings, sketches, and etchings. Died at Paris, 1809.—His wife and son were also distinguished painters.

VIETA, FRANÇOIS, a celebrated mathematician, was born at Fontenay, in Poitou, in 1540, and died in 1603. He held various public offices during the reigns of Henry III. and Henry IV. He succeeded in discovering the key to the cipher employed by the Spanish government in its secret correspondence; and afterwards made a sharp attack on the Gregorian Calendar. His principal writings of Vieta are "In Arithmetica Analyticam Isagoge," "De Equatione Recognitione," "Harmonicorum Cyclicorum," and "Canon Mathematicus."

VIGNOLA, or GIACOMO BAROZZIO, a

at the battle of Aboukir, and escaped with several ships to Malta. In 1805 he joined the Spanish admiral, Gravina, off Cadiz, and the combined fleet sailed for the West Indies, Nelson the while at a loss to conjecture their course and purpose. He started in pursuit four weeks later, and only arrived in the West Indies when Villeneuve was far on his way back to Europe. The tidings of his movements however reached England, and a squadron was sent out under Sir Robert Calder and Admiral Stirling in search of the French and Spanish fleet. The engagement took place on the 22nd July, about 50 leagues westward of Cape Finisterre, and was terminated by the darkness of the night. It was not renewed the next day, and Sir Robert Calder sailed with his prizes for the north, and Villeneuve took refuge in Ferrol. Villeneuve distinguished himself at the Battle of Trafalgar, but was taken prisoner and sent to England. Released in April, 1806, he feared to present himself at Paris, and received no encouragement to do so. On the 22nd he was found dead in his bed at Rennes; and it was clear that he had killed himself.

VILLIERS, GEORGE. [BUCKINGHAM, Duke of.]

VILLOISON, JEAN BAPTISTE GASPARD D'ANSE DE, a celebrated French scholar, was born at Corbeille-sur-Seine, in 1750. He devoted his time to bringing to light valuable but forgotten Greek manuscripts; for which purpose he visited the principal libraries in Europe, and travelled to the East. He published Apollonius's Lexicon to Homer from a manuscript in the library of St Germain-des-Prés; also "Anecdota Græca," "Epistolæ Vimaricensis," a Greek translation of the Old Testament, made by a Jew in the 9th century, &c.; but his most important discovery was a copy of Homer, probably of the 10th century. He suffered considerably in his property during the revolution; but on the restoration of order he resumed his literary career, and was appointed by Buonaparte professor of Greek at the college of France. Died, 1805.

VINCE, SAMUEL, F.R.S., an eminent mathematician and astronomer, was a native of Fressingfield, in Suffolk. His parents were in a humble station of life; but by the generosity of Mr Tilney, of Harleston, he was educated at Calus College, Cambridge, where he soon distinguished himself by his superior acquirements; and he eventually became Plumian professor of astronomy and experimental philosophy. His works on astronomy and the mathematical sciences are numerous and important; the principal is, "A complete System of Astronomy," 3 vols. 4to; others are, "Elements of Conic Sections," treatises on Fluxions, Hydrostatics, Trigonometry, &c.; "The Credibility of Christianity vindicated," "A Confutation of Atheism from the Laws of the Heavenly Bodies," &c. He obtained preferment in the church, and at the time of his decease was rector of Kirby Bedon, vicar of South Creake, and archdeacon of Bedford. Died, 1821.

VINCENT DE PAUL, ST., the eminent French philanthropist, was born at Rn-

quines, in the department of the Landes, April 24, 1577. After studying in a convent of the Cordeliers, he went to the university of Toulouse, and, in 1600, was ordained priest. On a voyage from Marseilles to Narbonne, he was captured by pirates, and sent to Tunis, where he was in slavery for two years under three masters, the last of whom he re-converted to Christianity, and escaped with him to France, in 1607. He soon after settled at Paris, devoting himself to works of charity. An absurd accusation of theft was brought against him there, the falseness of which could not be proved for six years. He was named almoner to Margaret of Valois, held for a short time the cure of Clichy, and, in 1613, became tutor to the sons of Philippe de Gondi, one of whom was afterwards celebrated as the cardinal de Retz. In 1616 he began the course of labours as a missionary which occupied so large a part of his life, and the next year he founded the first *confrérie de charité*, model of so many others afterwards established. His next great task was the reform of the condition of criminals condemned to the galleys; for which great service he was appointed almoner-general of the galleys. This unwearied philanthropist founded, in 1632, the Congregation of the Mission, which was constituted by royal letters patent, and approved by the pope. In 1634 he instituted the "Sisters of Charity," the most widely known perhaps of all his foundations. But the charitable institutions which owed their origin to him are too numerous to be even named here. He attended Louis XIII. on his death-bed; was named by the queen-regent Anne of Austria, president of the council of conscience; took part in the controversy between the Jesuits and the Jansenists, against the latter; and died in the convent of the Lazarists, September 27, 1662. He left several theological writings, and was canonized by Pope Clement XII., in 1737.

VINCENT, Earl St. [JERVIS.]

VINCENT, WILLIAM, a distinguished classical scholar, head-master of Westminster School, was the son of a London trader, and was born in 1739. Educated at Westminster and at Trinity College, Cambridge, of which he became a fellow, he was appointed second master of the school in 1771, and head-master in 1788. He held various preferments in the church, graduated D.D. in 1776, and was named dean of Westminster in 1802. The principal works of Dr Vincent are—"The Voyage of Nearchus to the Euphrates," and "The Perilous of the Erythraean Sea," subsequently published together under the new title of "History of the Commerce and Navigation of the Ancients in the Indian Ocean." He was also author of "The Greek Verb Analyzed, an Hypothesis," a "Defence of Public Education," &c.; besides contributions to the Classical Journal and the British Critic. Died, 1816.

VINCI, LEONARDO DA, the great Italian painter and sculptor, &c., was born at Castel da Vinci, near Florence, in 1452. He was the son of a notary, and showing in his boyhood a rare intelligence, and especially a wonderful faculty for drawing, was sent

"Vital Christianity," in the English translation; "Théologie Pastorale," "Etonnes Evangeliques," &c. Among the latter see the "Histoire de la Littérature Française au XVIIIe siècle," "Études sur la Littérature Française du XIXe siècle," and "Chronomathie Française." The year before his death he prepared and got adopted a constitution for the free church of the canton of Vaud. Died, May 16, 1847.

VIOTTI, GIOVANNI BATTISTA, a celebrated violist, was born in Piedmont, in 1755; and, in his 21st year, was made first violist at the royal chapel in Turin. From the year 1784 till 1788, he was leader in the orchestra of the Italian Opera at London. Having received an order to quit the country, he retired to Holland, and thence to Hamburg. In 1801 he returned to London, engaged in the wine trade, and lost the whole of his property. After the restoration of the Bourbons, Louis XVIII. invited him to preside over the Académie Royale de Musique, at Paris. In 1822 he settled finally in London, and there remained till his death, in 1824. He was author of a great variety of music for the violin, and the first performer of his age.

VIRGILI, PUBLIUS VIRGILIUS MARO, the great Roman epic poet, was born at Andes, a village near Mantua, b. c. 70. He received a learned education, studying first at Cremona, then at Mediolanum (Milan); and is said to have learnt Greek from Parthenius and philosophy from Syrus the Epicurean. The small estate which he inherited from his father, and to which he probably retired after finishing his studies, was assigned with the neighbouring lands to the soldiers of Octavian, and the poet was dispossessed. But through the influence of Asinius Pollio and Mæcenas, the estate was restored to him; and the first of his Eclogues is supposed to be the expression of his gratitude to Octavian. Virgil was of feeble health, and appears to have led for the most part a private retired life; sometimes at Rome, sometimes at Naples or Tarentum. Horace was his most intimate friend, and with him he accompanied Mæcenas on the journey to Brundisium, celebrated in one of the satires of Horace. In a. c. 19 Virgil visited Greece, and meeting Augustus at Athens, set out with him for Rome. But his health, long failing, at last gave way, and he only lived to reach Brundisium. The principal works of Virgil are the "Bucolics," also called "Eclogues," the "Georgics," and the "Æneid." The Bucolics are ten in number, and are supposed to be his earliest compositions. He took Theocritus for his model, but fell far short of him in truth to nature and graphic power. Indeed, few of these poems have any claim to be called "Bucolics." Such is the case with the fourth, entitled "Pollio," the most celebrated of all, which critics almost give up as an insoluble enigma. The "Georgics" are didactic, and treat of agriculture and its related subjects. They are the most finished, and the most pleasing of his works. In the "Æneid" Virgil imitates Homer without rivaling him, and treats very learnedly of the adventures of Æneas after the fall of Troy, and of his suc-

cesses in Latium. With the ancient legends he associates the glory of Rome and the emperor, his patron. The works of Virgil became school books within a short time of his death, and were the subject of numerous commentaries in after times. His high place in mediæval times may be seen from the fact that Dante calls him his master, and represents him as his guide through the invisible world. The first printed edition of Virgil appeared about 1400. Of translations into modern languages, the German, by Voss, is probably the best. There are English translations by Ogilby, Dryden, Pitt and Warburton, and others. Virgil died at Brundisium, b. c. 19, and was buried near Naples, where a tomb is still shown as his.

VIRIATHUS, an illustrious Lusitanian chief, who, in his patriotic endeavors to throw off the yoke of Rome, repeatedly defeated the Roman armies, and for 14 years successfully defended his country and a part of Spain. He was at last murdered by his friends, who had been bribed by Cæsar, the Roman general, b. c. 140.

VISCONTI, TIBI, one of the great historical families of Italy, who rose to the sovereignty of Milan. The first who stands out distinctly in history is **OTONE**, who was nominated archbishop of Milan by Pope Urban IV., in 1263, against the will of the Milanese and the powerful family of the Torriani. The latter besieged Otone in Arcore, took the place, and compelled him to return to Rome. The city of Milan was soon afterwards laid under an interdict for refusing to receive the new prelate; who, nevertheless, remained an exile, and carried on a desultory warfare for his see. After fifteen years had thus passed, the popular feeling turned against Napoleone della Torre, then lord of Milan, and Ottone struck a decisive blow, being joined by many of the exiled nobles, he defeated his rival at Desio, in January, 1277, made his entry immediately into the city, took possession of the see, and was unanimously elected lord of Milan. The Torriani and their adherents, driven away, long kept up a desultory warfare, and made attempts to recover their possessions; but at last, in 1286, were completely defeated, and made peace with Ottone. The personal sovereignty was transferred to Ottone in 1292 to his nephew, **MATTEO VISCONTI**, succeeded the Great, who in 1294 was named by the emperor when of the empire in Lombardy. Ottone died in 1295, and was succeeded by Matteo. The sovereignty of Milan thus acquired by the Visconti remained with them till the death of Filippo Maria, in 1447, when it passed into the Sforza family.

VISCONTI, GIOVANNI BATTISTA ASTONIO, an Italian antiquary, was born at Verucchia, in 1722, and educated at Rome. He succeeded Wueckelmann as commissary of antiquities, in 1763; had the chief hand in forming the museum of the Vatican under Popes Clement XIV. and Pius VI., and died in 1784.

VISCONTI, ENNIO QUIRINO, eldest son of the preceding, was born at Rome, in 1751, and was intended by his father for the church; but having formed an attachment

to a lady, he refused to enter into orders. His knowledge of archaeology was superior to that of his father, and his general talents were of the highest order. He was appointed conservator of the museum of the Vatican; and when the French took possession of Rome, and established a provisional government in 1797, he was nominated minister of the interior. He afterwards retired to France, became a member of the Institute, professor of archaeology, and surveyor of the Museum of Antiquities. His most important works are the "Iconographie Grecque," "Iconographie Romaine," and "Il Museo Pio-Clementino." Died, 1818.

VINCHER, CORNELIUS, a very distinguished Dutch engraver, of whose life we have only the scantiest information. He was born in 1629, and died, at the age of 29, in 1658, having executed a surprising number of admirable prints. A full classified and descriptive catalogue of Vincher's works, by William Smith, F. R. S., has recently appeared in the successive numbers of the Fine Arts Quarterly Review (1863-64). His subjects are variously religious, historical, portrait-pieces, and prints after designs by himself and by celebrated painters.

VIRI, TIMOTEO DELLA. (TIMOTEO DA VIRINO).

VITRUVIUS, MARCUS POLLIO, a celebrated writer on architecture, who flourished under Julius Cæsar and Augustus, and is supposed to have been born at Forum, in Campania. His celebrated work, "De Architectura," is a compendium of the works of various Greek and Roman writers on the same subject. It was written in his old age, and was dedicated to Augustus. It was first printed about 1480, has passed through very numerous editions, and has been translated into English, French, German, Dutch, and Italian.

VIVES, JOHN LOUIS, one of the revivers of literature, was born at Valencia, in Spain, in 1492. He studied at Paris and Louvain, after which he visited England, and in 1517 was chosen one of the first fellows of Corpus Christi College, Oxford. He was employed by Princess Mary, for whose use he composed the "De Ratione Studii puerilis" and "De Institutione Fœminæ Christianæ;" but venturing to argue and write against the king's divorce from Katharine, he was disgraced and imprisoned. On regarding his liberty he went to Brussels, where he married, and remained for the rest of his life, occupied as a teacher of the belles lettres. He died in 1540.

VIVIAN, RICHARD HUSSEY, Lord, was born in 1776, the eldest son of John Vivian, esq., of Turo, Cornwall, warden of the tanneries. In 1793 he commenced his military career as ensign in the 20th Infantry. His active service commenced within three months of his joining his regiment, which formed part of Lord Molra's army on the coast of France; and for the following two years he was present at various battles and sieges of outposts, in which his zeal, courage, and conduct were especially conspicuous, in Holland and in the West Indies. In

1808 he sailed in command of the 7th dragoons for Corunna, which he reached in November, and had the perilous honour of covering the retreat of Sir John Moore in January, 1809. Unlike his chief, he reached England in safety, received the brevet of colonel in 1812, and in 1813 embarked with his regiment for the Peninsula. From this time to the battle of Waterloo, he was continually in active service. In the advance upon Toulouse, on the 8th of April, 1814, he was severely wounded in the right arm while making, as the duke of Wellington's despatch remarked, "a most gallant attack upon a superior body of the enemy's cavalry, which was driven through the village of Orla d'Orade." In June, 1814, he returned to England, received the rank of major-general, was appointed to the staff at Brighton, and had a splendid piece of plate presented to him by the officers of the 7th Hussars. In 1820 he was made lieutenant-general, and in 1827 colonel of the 1st dragoons. Subsequently to the battle of Waterloo, General Vivian, who was created a baronet in 1829, when he also had a grant of arms alluding to his services, took an active part in politics, both as a debater in the House of Commons and in his character of master-general of the ordnance, to which office he was appointed in 1835. He was called to the House of Peers by patent, in August, 1841. Died, October, 1842.

VIVIANI, VINCENTO, a celebrated Italian mathematician, was born at Florence, in 1622. He was the disciple of Galileo and Torricelli. He entered into the service of the grand-duke of Tuscany, who appointed him his first mathematician and chief engineer. He restored a part of the lost works of Aristæus and Apollonius, and wrote several valuable treatises on geometry, &c. Viviani was a member of the French Academy of Sciences, and a fellow of the Royal Society of London. Died, 1703.

VOET, or VOETIUS, GISEBERT, a Dutch theologian, was born at Heusden, in 1593. Having studied at Leyden, he first settled as a minister at his native place, where he remained till 1634. He then went to Utrecht, as professor of divinity and the oriental languages. He distinguished himself by his attacks on the Arminians; and when the Cartesian philosophy was engaging the public attention, he wrote against Descartes with much asperity and illiberality. His principal works are, "Selectæ Disputationes Theologicæ," 5 vols. 4to; and "Politica Ecclesiasticæ," 4 vols. 4to. Died, 1677.—PAUL VOET, his son, who also died in 1677, was, successively, professor of logic, metaphysics, and civil law, at Utrecht; was the author of several learned works on theology and jurisprudence.—JOHN VOET, son of Paul, professor of law at Leyden, was the author of a valuable "Commentary on the Pandects." Died, 1714.

VOGELWEIDE. [WALTHER VON DER VOGELWEIDE.]

VOISENON, CLAUDE HENRI FUSÉE DE, a French dramatist and poet, was born near Melun, in 1708; was educated for the ecclesiastical profession, and became grand-vicar of Boulogne. He was of a lively, humorous

disposition, and conscientiously refused the bishopric of Honlogne, from a sense of his unfitness for the episcopal office; but chose to pursue those studies for which by nature he was qualified. In 1693 he was admitted a member of the French Academy, and he spent his life in literary pursuits, too freely mingled with dissoluteness. Like Piran, he had his days of dissoluteness and his moments of devotion. He wrote "Literary Anecdotes," comedies, and fugitive poetry; and died in 1775.

VOLTURE, VINCENT, a celebrated French wit and poet, born at Anicena in 1598. His manners were highly agreeable, and he became master of the ceremonies to Gaston, duke of Orleans. In 1634 he was admitted into the French Academy, and was subsequently sent on a mission to Spain, where he was much esteemed, and where he composed some verses in such pure and natural Spanish, that they were ascribed to Lope de Vega. Under the administration of Cardinal Mazarin, Volture was in the zenith of his reputation, and enjoyed large pensions; but gambling, and other vicious habits, kept him poor. He wrote verses in French, Spanish, and Italian; but his letters were the chief basis of his literary reputation, and in their day were extravagantly admired. He died in 1648.

VOLKOFF, THEODORE, a Russian dramatist, was born at Kastrova, in 1729. He wrote several plays, and erected a theatre at Jaroslav, where his success was such, that the Empress Elizabeth sent for him to St Petersburg, and appointed him director and first actor of the Russian theatre. In 1799 he was sent to establish a national theatre at Moscow; and Catherine II. bestowed on him an estate, with a patent of nobility. He died in 1763, and his funeral obsequies were celebrated with great magnificence.

VOLNEY, CONSTANTIN FRANÇOIS CHASSERON, Count de, peer of France, a celebrated French writer, was born at Craon, in Brittany, in 1737. He was educated at Angers, and studied medicine at Paris; but coming into possession of a small estate, he was enabled to gratify his ardent love of travel. He spent nearly three years in Egypt and Syria; and on his return to France, in 1787, published his "Voyage en Syrie et en Egypte," 2 vols., which was translated into English and other languages, and procured him an extensive reputation. He was elected a member of the states-general; was confined nearly a twelvemonth during the Reign of Terror, was appointed professor of history at the normal school in 1794; went to America in the following year, and resided there till 1798; was created a senator and count, during the consulate; and, on the restoration of the Bourbons, he was designated a member of the Chamber of Peers. In all situations, however, he was the defender of liberal principles. Among his principal works are his "Ruins, or Meditations on the Revolutions of Empires," "Lectures on History," and "New Researches on Ancient History." Died, 1820.

VOLFATO, GIOVANNI, an eminent Italian

engraver, born at Massana, in 1733. He was a self-taught artist, and acquired a degree of excellence in his profession rarely equaled. He was engaged to make engravings from the paintings of Raphael in the Vatican, in 1802. Volpato wrote the "Principles of Design." And Raphael Morglia was his pupil and son-in-law.

VOLTA, ALESSANDRO, a celebrated experimental philosopher, was born at Como, in 1745. He laid the foundation of his fame by two treatises, which described a new electrical machine; was for 30 years professor of natural philosophy at Pavia, was made an Italian count and senator by Napoleon, and died in 1826. Volta directed his attention particularly to the subject of galvanism, or animal electricity, in which science he made many discoveries and improvements; but the great invention which immortalizes his name is the Voltaic pile, or electrical column. Volta was a fellow of the Royal Society of London, and in 1794 received the Copley medal for his important communications. His works form 3 vols. 8vo.

VOLTAIRE, FRANÇOIS MARIE AROUET, the celebrated French Deist, distinguished as a poet, historian, and philosopher, was born at Chateaux, near Reaux, 20th February, 1694. His baptism was deferred for nine months on account of his extreme feebleness. His family name was AROUET, and at what time, or on what account, Voltaire assumed the name by which he is universally known is uncertain. Carlyle seems to have settled the puzzling question whence he got the name "Voltaire," by the discovery that it is a possible anagram on "Aronet J." &c. "Aronet le Jeune." He was educated by the Jesuits at the college of Louis le Grand, and already showed so clearly the characteristics which marked him through life, that one of his teachers foretold his eminence as the "Coryphée du Génie." He was early introduced at the salon of Ninon de l'Enclos, and became familiar with some of the most distinguished persons of the time. Ninon, pleased with his remarkable intelligence and liveliness, left him a legacy of 2000 francs to buy books. His father's ambition was that he should become not author, but lawyer and judge; and to break off his associations in Paris, sent him away in 1713, as page to the Marquis de Châteauneuf, ambassador to Holland. He was soon sent home, however, after getting into trouble about a love affair, and was next placed with a lawyer. Quickly and finally escaping this attempt to tame and train him for official life, he soon appeared in Paris again, and from this time he pursued his course as a literary man. His life was so full of action, incident, and vicissitude, that to give a mere epitome of it would require far more space than can be allotted in the Biographical Treasury to a single life. A general notion of its leading features, with an account of his principal writings, is all that is possible. In 1716 he was committed to the Bastille on suspicion of being the author of a satirical poem on Louis XIV., and remained there a year. His first literary work of mark was the

Massano, in 1733. He was and acquired a degree of profession rarely equaled to make engravings from engravings in the "Vain" and wrote the "Principes" which Morghen was his w.

PHILO, a celebrated scholar, was born at Combray, the foundation of his fame which described a new; was for 30 years professor of philosophy at Paris, was knight and senator by Napoleon. In 1820, Volta directed attention to the subject of animal electricity, in which many discoveries and improvements the great invention which name is the Voltaic pile, and Volta was a fellow of the Royal Society of London, and in 1794 he received the Copley medal for his inventions. His works form 3

FRANÇOIS MARIE AROUET, French Deist, distinguished as a philosopher, was born near Reuoux, 20th February, 1694. His baptism was deferred for account of his extreme family name was AROUET, or on what account, Voltaire's name by which he is uncertain. Carlyle seems a puzzling question whence "Voltaire," by the dis- a possible anagram on "Aronet le Jeune." He the Jannits at the college of and already showed so distinct characteristics which marked him as one of his teachers foretold the "Coryphée du Démon." introduced at the table of the, and became familiar with the most distinguished persons of the age, pleased with his remarks and liveliness, left him 700 francs to buy books. His name was that he should be a lawyer and judge; and his associations in Paris; sent him as ambassador to Holland. He came, however, after getting out a love affair, and was with a lawyer. Quickly and with this attempt to tame and his official life, he soon appeared and from this time he pursued as a literary man. His life action, incident, and vicissitudes a mere epitome of it far more space than can be given. Biographical Treasury to a general notion of its leading characters an account of his principal that is possible. In 1716 he was sent to the Bastille on suspicion of the author of a satirical poem on and remained there a year. His work of mark was the

tragedy of "Oedipe," which with much difficulty he got represented in 1718. During a visit to Brussels in 1721, Voltaire was introduced to Rousseau, but their interview made enemies of them once for all. He was sent to the Bastille a second time in consequence of a quarrel at the duke of Sully's house, and after his release spent three years in England, where the prevalence of "free-thinking" made an atmosphere congenial to him. Here, in 1728, he published his celebrated epic poem "La Henriade," under the title of "La Ligue," and applied himself to other literary labours. His elegy on the death of the actress Adrienne Lecouvreur, to whose remains the rites of burial were refused; his "Lettres Philosophiques;" and his "Épître à Uranie," raised successive storms of indignation and threats of prosecution against him, which however he escaped by unscrupulous dissimulations and timely running away. After the publication of several plays he retired about 1733 to Cirey, to the estate of the Marquise du Châtelet, his "divine Emilie;" the strangest compound of intellectual superiority, scientific attainment, and mere vulgar debauchery that perhaps was ever seen in the form of woman. They studied science together, and the quiet of a country life was diversified by frequent travelling, and perhaps more frequent outbreaks of the sharp temper of the modern Xanthippe. A new epoch opened in Voltaire's life, when, in 1736, he was flattered by a letter from Frederick, prince royal of Prussia, afterwards Frederick the Great. These two remarkable men first met after the accession of Frederick to the throne in 1740. The meeting was at a chateau near Clèves, and a second took place soon after at Berlin. The first Silesian war separated them, and Voltaire returned to Holland. They continued, however, to correspond. In 1743 Voltaire was a candidate for a seat in the French Academy, but through the influence of an intriguing bishop he was excluded. He was soon after sent on a secret diplomatic mission to the court of Berlin, and succeeded in his purpose; but he was cheated of his hoped-for reward by the revenge of the mistress of Louis XV. Her successor, the celebrated Madame de Pompadour, was his warm friend, and procured him the appointments of historiographer of France and gentleman of the king's bedchamber. He was at the same time received at the Academy. Soon losing favour at court, he went to Stanislaus, king of Chatelet to the court of Stanislaus, king of Poland, at Lunéville, and there in the following year, 1749, took place the *accouchement*, and a few days later the death, of "Emilie." Her husband, Voltaire, and a mere recent and favoured lover, M. de Saint-Lambert, were all present at the closing scene. Voltaire returned to Paris, and in 1750 accepted the often-renewed invitation of Frederick II. to settle at his court. His residence at Potsdam, where he had a magnificent pension, the key of a chamberlain, and the cross of merit, was fruitful chiefly in jealousies, dissensions, and all kinds of uneasinesses, and ended after three years by the flight of Voltaire. At Frankfort he was

joined by his niece, Madame Denis; and at the same city he was arrested by the Prussian resident, and detained till a volume of Frederick's poems was given up. After a short stay at Colmar, and some trouble about his "Essai sur les Mœurs," he settled with Madame Denis at Ferney, then a mere hamlet, near the Genevese territory. There he passed the last twenty years of his life, unceasing in writing, and at the same time active in promoting the interests of the little village, which under his fostering care grew up into a neat little town, and became the seat of a flourishing colony of watch-makers. As the home of Voltaire Ferney became a centre of attraction for the most distinguished persons of all countries. Voltaire carried on correspondence with Frederick the Great and Catherine II. of Russia; pleaded eloquently and successfully for the Calas family; educated the grand-niece of Cornouille, and gave her a marriage portion; offered Rousseau an asylum; but above all, continued to wage war with unabated virulence against the Christian religion and all its representatives. All the while blind to the holy light of it; seeing nothing but books, institutions, and official persons; having no deep, original word to say against them, but only repeating and popularizing what had been said for generations past. All Voltaire did or could do, being what he was, was to deny and to destroy. To affirm and build up is the task of men that see and love truth for its own sake, and in its service forget themselves. The end of Voltaire's career was remarkable and singularly appropriate. At the age of 84, yielding to the importunities of his niece, who grew sick of the dull monotony of Ferney, he once more visited Paris; and his whole journey and his reception there was one continuous splendid triumph. He was everywhere attended by crowds; occupied the director's seat at the Academy, was crowned at the theatre; and then, exhausted by the excitement and loss of sleep, took opiates, and after great sufferings, fell into a lethargy, and so died, 30th May, 1778. The *crâne* of St Sulpice refused the rites of burial, and the body of the "great" mocker was interred by night in the abbey of Bullières, whence it was removed at the revolution, and deposited in the Pantheon. The works of Voltaire, in the most complete edition, fill 70 vols. 8vo, and range over almost all subjects. In addition to those already named, we mention, of his plays, "Alzire," "Mahomet," "Mérope," "Mort de César," and "Greste;" his poem "La Pucelle;" the "Histoire de Charles XII.," "Histoire de Russie," "Siècle de Louis XIV.," "Siècle de Louis XV.," and "Mélanges Historiques;" the "Essai sur les Mœurs et l'Esprit des Nations," one of his most noteworthy works; the "Éléments de la Philosophie de Newton," and other works on physical science; the "Dictionnaire Philosophique;" his metaphysical and theological writings, and his correspondence, the latter forming 19 vols. Memoirs of Voltaire and documents relating to him and his works have accumulated to a portentous height; and his works have passed through a great number of editions.

His life, especially in its relations with Frederick the Great, is very fully treated by Carlyle in his recent "History" of that monarch; and no more profound, lucid, and fair estimate of Voltaire and Voltairism is to be found in English literature than is presented in Carlyle's masterly "Essay."

VOLTERRA, DANIELE DA, whose family name was **KICCIARELLI**, a celebrated Italian painter and sculptor, born at Volterra in 1509. He was instructed in painting by several masters; assisted Perino del Vaga and Michael Angelo at Rome, and became one of the most eminent scholars of the latter. He succeeded Perino del Vaga as director of the works in the Vatican, but he was deprived by Julius III. His masterpiece is the "Descent from the Cross," the best of a series of frescoes executed by him in the church of the Trinita de' Monti at Rome. It is said to have been partly painted by Michael Angelo. This great work was destroyed by the French, who attempted to detach it from the wall. The famous picture by Rubens in the cathedral of Antwerp is in composition almost a repetition of Volterra's fresco. Volterra was employed by the Pope Paul IV. on the singular task of draping some of the nude figures in the "Last Judgment" of Michael Angelo, whence he received the nickname of **BRAGHETTO**. In his latter years he was engaged chiefly in sculpture, and at the time of his death had partly executed an equestrian statue of Henry II. of France. Died at Rome, 1566.

VOLUSENUS. [**WILSON, FLORENCE**.] **VONDEL, JOOST VAN DEN**, the celebrated Dutch poet, was born in 1587, at Cologne; his parents, who were Anabaptists, being refugees from the persecution of the Spanish government in their native land. They soon returned thither, and the poet spent his life at Amsterdam. He had little school instruction, and carried on the business of a hosier; to which, however, his wife chiefly attended, and thus secured him leisure for his higher work. After her death his affairs became embarrassed, and he accepted a situation as banker's clerk. His last ten years he spent in comparative ease, his modest wants satisfied by the continuance of his salary as a pension. The principal works of Vondel are the tragedies of "Palamedes," "Ghisbert van Amstel," "The Exile of Ghisbert," "Jephtha," and "Lucifer." The first appeared in 1625, and brought him not only great reputation, but a government prosecution, and a heavy fine, on account of its fervent patriotism and its censure of the execution of Barneveldt, the grand-pensionary. The "Lucifer" is thought worthy of comparison with "Paradise Lost," which was published a few years later. The lyrical poems scattered through the plays of Vondel are the most admired of his works. Vondel meditated and commenced a poem on Constantine the Great, but had not energy to go on with it. Died, 1679. A new edition of his works was published in 1829, by De Vries.

VORSICUS, FLAVIUS, a native of Syracuse, who flourished A. D. 304. He wrote the history of Aurelian, Tacitus, Florianus, Probus, Firmus, Carus, &c.

VORST, CONRAD (Latin, **VORSTIUS**), an

eminent German theologian, was born of a Roman Catholic family at Cologne, in 1564. With his father and the rest of the family he became a Protestant; studied at Dusseldorf and Cologne, and later at Herborn. He graduated D.D. at Heidelberg in 1594. He visited Switzerland, and gave lectures at Geneva; and in 1596 accepted the post of professor at a new theological college at Steinfurt. He acquired a wide reputation, but suspicions of his orthodoxy were spread, and he had to defend himself before the theological faculty of Heidelberg. In 1610 he published his "Tractatus Theologicus de Deo," which at once brought a storm of persecution on him, as an adherent of Arminianism. He was the same year called to succeed Arminius as professor of theology at Leyden, and notwithstanding the bitter opposition of the Gomarist party, he accepted the chair. But he was beaten. The book was intolerable to the Calvinists; it was denounced even by James I. of England, and by his order burnt at London, Oxford, and Cambridge. Vorst had to appear before the states, then to flee the country, and after the Synod of Dort to hide himself and his family; and in 1622 he took refuge in Hoolstein. But he died there the same year, and was buried at Friedrichstadt.

VORTIGERN (GWORTIYERN), a British chieftain, who after the final departure of the Romans from the island, appears to have become supreme ruler. It is scarcely possible to fix the chronology of his reign, or to discover the facts of it; so overlaid are they with the legends of the Chronicles, and the passionate denunciations of the Triads. The year A. D. 424, about six years after the departure of the Romans, probably saw Vortigern first invested with the sovereignty of all the Britons. Pressed by foes on all sides,—the Picts and Scots, the sea-rovers, and domestic rivals,—he invited or accepted the aid of the Saxons against them. The arrival of these warriors is variously assigned to the years 428, 445, and 449; when under their leaders (named in the legends Hengst and Horsa) they landed on the coast of Kent, and soon received for their services the Isle of Thanet. Vortigern is said to have been so fascinated at a banquet by the fair Rowena, daughter of Hengst, that he enforced his wife to marry her. But the marriage alliance did not prevent the pagan invaders from soon joining the Picts and Scots, and ravaging Britain from one end to the other. They appear then to have returned to their own land, and Vortigern was restored to his throne. Of his subsequent history nothing is certainly known. There is, however, a story of a subsequent meeting between the Britons and Saxons for making terms of peace, at which the latter, on a signal from Hengst, massacred all the Britons present except Vortigern, who was made prisoner.

VOS, MARTIN DE, a Dutch painter, was born at Antwerp, about 1534, and died there in 1604. He studied in Italy under Titian, retto, and painted history, portraits, and landscapes.—**SIMON DE VOS**, another artist of Antwerp, was born in 1603, and died about 1670. He painted historical subjects and

a theologian, was born of a family at Cologne, in 1496, and the rest of the family he spent; studied at Düssel-dorf and later at Herborn. He was at Heidelberg in 1524, and gave lectures at the university in 1526. In 1526 he accepted the post of professor of theology at the new theological college at Marburg, where he acquired a wide reputation, and his orthodoxy was spread, and he defended himself before the synod of Heidelberg. In 1540 he was elected to the chair of Tractatus Theologici, and since brought a storm of persecution upon an adherent of Arminius. A year after to succeed Arminius of theology at Leyden, and during the bitter opposition party, he accepted the chair of the book was later denounced: It was denounced even in England, and was burnt in London, Oxford, and Cambridge, before the states, then destroyed, and after the Synod of Dort, he fled to his family; and in 1572 he fled to Holstein. But in the same year, and was buried at

(GORTIYERN), a British scholar, the final departure of the island, appears to have been. It is scarcely possible to trace the history of his reign, or to distinguish it; so overlaid are they by the works of the Chronicles, and the annals of the Frisians. He died about six years after the Roman conquest, probably saw Fortified with the sovereignty of the Pressed by foes on all sides, Scots, the sea-rovers, and he invited or accepted the Saxons against them. The warriors is variously as 428, 445, and 449; when leaders (named in the legends) they landed on the coast received for their services. Vortigern is said to have been at a banquet by the side of Hegeat, that he did not marry her. But the marriage did not prevent the pagan in joining the Picts and Scots, Britain from one end to the other then to have returned, and Vortigern was none. Of his subsequent history is certainly known. There is, of a subsequent meeting between and Saxons for making at which the latter, on a visit, massacred all the Britons, Vortigern, who was made

Y DE, a Dutch painter, was born, about 1534, and died there, died in Italy under Titian's hand, history, portraits, and MON DE Vos, another artist, born in 1603, and died about 1670, painted historical subjects and

portraits, but excelled in hunting-pieces. There were several other painters of the same name.

YOSS, JOHANN HEINRICH, the distinguished German poet, philologist, and translator, was born in Mecklenburg in 1751. He studied first at the school of New Irnsdenburg, was then engaged for several years as private tutor, diligently continuing his classical studies, and making himself known by occasional poems, and in 1772 went to complete his studies at Göttingen. He soon took a distinguished place in the circle of literary men, among whom at that time were Heyne, Klopstock, and Claudius. Jealousy and ill-will soon appeared between him and Heyne, which time unfortunately only aggravated. In 1778 he had the appointment of rector of the college at Otterndorf, in Hanover; but after four years he removed to a similar post at Eutin, in Holstein, which he held for twenty years. After a residence of three years at Jena, full of the delights of congenial society, he accepted a pressing call to Heidelberg, in 1803, where he was to receive a handsome pension without holding any special office. There he spent the rest of his life. A collected edition of the poems of Voss appeared in 4 vols. 8vo in 1802. The most admired is "Louise," which is said to have suggested to Goethe the idea of his "Hermann und Dorothea." His translations of the Iliad and Odyssey are in hexameter verse, and are probably the most accurate representations of the originals ever produced. He translated with equal success all the works of Virgil, Hesiod, and Theocritus, and a commentary of great value accompanied the "Georgics." Besides several other translations of classical authors, he commenced in his old age one of Shakespeare. Among his critical and other works are the "Mythologische Briefe," "Antisymbolik," and numerous papers collected under the title of "Kritische Blätter." There was much that was painful in the quarrels between Voss and Heyne, nor less in the controversy on which he entered with his old friend, Count Friedrich von Stolberg. It was probably his intense love of religious and political freedom that made him write so severely against the apparent revival of Romanism and mysticism; but he is to be measured for indulging in personalities. His great scholar and true poet died at Heidelberg, in 1826.

YOSSIUS, GERARD, a learned Dutch philologist, was born near Heidelberg, in 1577, and was educated at Dort, and the university of Leyden. He became director of the college of Dort, and in 1614 director of the theological college at Leyden. The latter office he had to resign in consequence of suspicions arising as to his theological views. He was the warm friend of Grotius, and had published a history of Pelagianism, and was therefore supposed to favour the doctrinal system of Arminius, which was condemned by the synod of Dort. Yossius accepted the chair of eloquence and chronology, and was soon conditionally restored to his theological professorship. He was twice invited to England, and through the influence of Laud was made prebendary of Canterbury. On a visit

to this country in 1629, he was created LL.D. Oxford. In 1633 he was called to the chair of history in the gymnasium of Amsterdam, and there spent the rest of his days. His most important writings are—"Aristarchus," a treatise on Grammar; "De Historicis Latinis;" "De Historiis Græcis;" and "De Veterum Poetarum Temporibus." The manner of his death was singular. He fell from a ladder in his library, and was found dead, 1649.

VOSSIUS, ISAAC, son of the preceding, was born at Leyden, in 1618, and, possessing great natural talents, very early acquired a high reputation among the learned. He went to Sweden in 1648, and spent ten years at the court of Queen Christina. He returned to his own country, and in 1670 he came to England, and obtained from Charles II. a canonry of Windsor, and the degree of doctor of laws from the university of Oxford. He died in 1688. His works are numerous and erudite. He was rude in his manners, and sceptical in his religious notions, but so credulous in other matters, that Charles II. said, "he is a strange man for a divine, for there is nothing which he refuses to believe except the Bible."

VOUET, SIMON, an eminent French painter, was born at Paris, in 1582; and, after a residence of 14 years in Italy, was recalled by Louis XIII. to assist in the decorations of the Louvre and the Luxembourg. Died, 1641.

VOYER D'ARGENSON. [D'ARGENSON.] VOYER DE PAULMY. [PAULMY.]

VRIES, HANS FREDMAN DE, Dutch painter, was born at Leeuwarden, in 1527, and studied under a painter of Amsterdam. He was celebrated for his mastery of perspective, and painted many architectural pieces, some of which had so vivid a reality as to deceive the sharpest eye. The figures in his paintings were often executed by other artists. He was still living in 1604.—His two sons, Paul and Solomon, were also painters of similar subjects to their father's.

VROLIK, WILLEM, a distinguished Dutch comparative anatomist, was born at Amsterdam, in 1801. He studied at the university of Utrecht and at Paris, and graduated M.D. at the former in 1823. After practising medicine for several years at his native city, he was appointed, in 1829, professor extraordinary of anatomy in the university of Groningen, and in 1831 professor of anatomy, physiology, and zoology, in the Athenæum of Amsterdam, a post which he filled with distinction till 1863. He was a knight of several orders, and a fellow of various scientific societies. Among his works are—"Recherches d'Anatomie Comparée sur le Chimpansé;" "Handboek der zielekundige Outeleekkunde;" "Tabulae ad illustrandum Embryogenesis Hominis et Manuallium." He contributed articles to Todd's Cyclopædia of anatomy and physiology. Died, 22nd December, 1863.

VROOM, HENRIK CORNELIS, a Dutch painter, born at Haarlem, in 1586. He was famous in sea-pieces, and drew the designs for the tapestry in the House of Lords, representing the details of the defeat of the Spanish armada.

W.

WACE, ROBERT, an Anglo-Norman poet of the 12th century. He was native of Jersey, and became "reading clerk" to Henry I. and Henry II. of England. The latter gave him a canonry in the cathedral of Bayeux. He wrote, in Norman-French verse, a history of England, an account of the Norman conquest, and some romances. Died in England, about 1184.

WADING, or WADDING, LUKE, a learned Irish ecclesiastic, born at Waterford, in 1588. He held a divinity professorship in the university of Salamanca; but having accompanied the bishop of Carthagena to Rome, he continued to reside there during the remainder of his life. He refused a cardinal's hat, and founded the college of St Isidore for Irish students of the Franciscan order; he is said to have encouraged the Irish rebellion in 1641. He wrote a "History of the Order of St Francis," and edited the works of Duns Scotus, Calasio's Concordance, &c. Died, 1667.

WADHAM, NICHOLAS, the founder of Wadham College, Oxford, was born in 1536, in Somersetshire, and was educated at Christchurch College. He died about 1610, and the college which bears his name was completed in 1613.

WADSTROM, CHARLES BERN, a Swedish traveller and philanthropist, was born at Stockholm, in 1746. Having visited Africa, with a view to acquire information that might lead to the abolition of the slave trade, he was, on his return to Europe, examined at the bar of the English House of Commons upon that subject; and he afterwards published his "Observations on the Slave Trade," &c. Died, 1799.

WAFER, LIONEL, an English traveller, was originally a surgeon in the navy. Having accompanied Dampier, the circumnavigator, and quarrelled with him, he was left on the isthmus of Darien; but, owing to his medical skill, the Indians treated him kindly, and gave him his liberty when an English vessel arrived on the coast. On his return, in 1690, he published an interesting account of his adventures.

WAGENAAR, JAN, a Dutch historian, was born at Amsterdam, in 1709. He was author of a History of Holland, 21 vols., for which he was appointed historiographer to his native city. He also wrote "The Present State of the United Provinces," &c. Died, 1773.

WAGENSEIL, JOHANN CHRISTOPH, an eminent German scholar and polemic, was born at Nürnberg, in 1633. He was, in 1667, made professor of history and jurisprudence, and afterwards of oriental languages, at Altdorf. His "Teia Ignea Sathana," a controversial treatise, in refutation of the Jewish writers on the Christian religion, is a work of great ability. Died, 1705.

WAGHORN, Lieut. THOMAS, R.N., whose name is associated with the great achieve-

ment of steam communication between England and India, was born at Chatham, 1800. At 12 years of age he was appointed a midshipman, and before he had completed his 17th year he became lieutenant. After a short cruise he volunteered for the Arracan war, and having received the command of the East India Company's cutter, *Mitchelson*, and seen much service by land and sea, he returned to Calcutta in 1827. From this period he turned his attention to the great project he had long secretly at heart—a steam communication between England and India; and the ardour, perseverance, and firmness with which he worked it to completion, have gained him a name among the benefactors of his race. But we regret to say that fame was all that he achieved by his arduous and long-continued exertions; for the gigantic operations in which he had been engaged exhausted his resources, and he met with but scanty assistance from those whom every consideration of humanity and liberality should have induced to lend him a helping hand. Died, 1850.

WAHLENBERG, GEORGE, an eminent botanist, was born in the province of Wästmeland, in 1780. He visited the remote parts of the Scandinavian peninsula, and most of the northern countries of Europe, for the purpose of making botanical and geological researches; and on his return to Upsal, where he was superintendent of the Museum of Science, he published his "Flora Laponica," "Flora Carpathorum," "Flora Upsaliensis," and "Flora Suecica," besides some geological treatises. Died, 1851.

WAILLY, CHARLES DE, an eminent French architect, was born in 1729, at Paris, studied at Rome; was a member of the Institute, and chief founder of the Society of the Friends of the Arts. He died in 1796. Among the buildings which he designed are the Spinola palace at Genoa, the chateau of Ormes in Touraine, and the Odéon at Paris.

WAKE, Sir ISAAC, an able diplomatist and miscellaneous writer, born at Billing, in Northamptonshire, in 1575. He became fellow of Merton College, Oxford; and, in 1604, was chosen public orator of the university. He was afterwards employed as ambassador to several foreign courts; and, in 1619, received the honour of knighthood. He wrote several works, the principal of which was his "Rex Platonicus." Died, 1632.

WAKE, WILLIAM, archbishop of Canterbury, a learned and exemplary prelate, was born at Blandford, in Dorsetshire, in 1657, and educated at Oxford. Having entered into orders, he soon distinguished himself by the zeal with which he espoused the Protestant cause, though in opposition to the wishes of the court; and he was accordingly well received by William III. on his accession to the throne. He was, successively, king's chaplain, rector of St James's,

[WAL

A New Universal Biography.

[WAL

Westminster, and dean of Exeter. In 1705 he was advanced to the bishopric of Lincoln; and, in 1716, he was raised to the see of Canterbury; in which station he distinguished himself by his moderation, firmness, and liberality. He endeavoured to promote a union of the English and Gallican churches, for which he was grossly calumniated, though the measure was well meant. He published a translation of the "Epistles of the Apostolical Fathers," an "Exposition of the Church Catechism," "The State of the Church and Clergy of England," and three volumes of "Sermons." Died, 1737. There is a portrait of Archbishop Wake in the National Collection.

WAKEFIELD, EDWARD GIBBON, founder of the "Wakefield System of Colonization," was born about 1786. He was one of the sons of Edward Turner, author of a book "Ireland, Statistical and Political," and was himself first known to the public in 1808 as the hero of an abduction case, which ended with his three years' imprisonment in Newgate, and the dissolution, by act of parliament, of the marriage, which had been performed at Gretna Green. He turned to and recount his prison experiences; made himself familiar with all the details of our convict settlements, and gave the world the fruits of his reflections in his "Letters from Sydney," which attracted the attention of statesmen. In 1833 he published his "View of the Art of Colonization," and was appointed a committee of the House of Commons to inquire into the disposal of colonial lands. Wakefield gave evidence before the committee; but meanwhile his system had been adopted by the founders of the colony of South Australia. The principle of his system is that the new lands of the colony should be sold in small allotments at low prices to settlers, and the funds thus obtained be expended in carrying out fresh emigrants. Mr Wakefield next attacked the system of transportation; gained the support of Mr Millatou, the able founder and editor of the "Spectator," and of Sir W. Molesworth; and by the conclusive evidence produced before the committee on the subject secured in a few years the abolition of convict transportation. In 1837 the New Zealand Association was established, and Mr Wakefield as director took a leading part in the formation of the new colony. At the same time he pointed out the real cause of the disaffection then showing itself in Canada, and as private secretary to the earl of Selbourn, who was sent out as governor-general, he rendered valuable service, and contributed to the introduction of the new form of government. The distinguished statesman, Charles Buller, too early lost, was official secretary to Lord Durham on this time broken Mr Wakefield's health, and he had to retire from public life. He spent some time in the south of France, and at last settled in New Zealand. He died at Wellington, in that colony, May 16, 1852.

WAKEFIELD, GILBERT, an eminent scholar and critic, was born at Nottingham, in 1756. He took his degree of B.A. at St John's College, Cambridge, in 1776, and at

the same time was elected to a fellowship. On entering into orders, he held a curacy at Steekpart, in Cheshire, and next at Liverpool; but he grew dissatisfied with the doctrines of the church of England, and left it to become classical teacher in the academy at Warrington. In 1790 he removed to the dissenting college at Haekney, his connection with which he ended in about a year. Soon after this he published a pamphlet against public worship, which startled many of his most ardent admirers, and was answered chiefly by dissenters. He wrote some pamphlets against the government, of which no notice was taken, until his letter to the bishop of Llandaff appeared, when the attorney-general instituted a prosecution against him and the publisher. Mr Wakefield was sentenced to be imprisoned two years in Dorchester gaol, from which he was liberated in May, 1801, but died of a fever in September following. The principal of his works are, a "Translation of the New Testament," 2 vols.; an edition of Lucretius, 3 vols.; an "Inquiry into the Opinions of the Christian Writers of the Three first Centuries, concerning the Person of Jesus Christ," 4 vols.; and the "Silva Critica."

WAKEFIELD, FRISCILLA, well known by the many ingenious works which she wrote for the young. She was the original promoter of banks for the savings of the poor. She resided for many years at Tottenham, in Middlesex; but died at Ipswich, in Suffolk, in 1832, aged 82.

WALDENIS, THOMAS, an English Carmelite, whose real name was Netter, was born at Walden, in Essex, about 1367. He studied at Oxford; and, in 1409, was sent, as a champion of the church against heretics, by Henry IV. to the council of Pisa. Henry V. reposed entire confidence in him, made him his confessor, sent him to the council of Constance, in 1415, and died in his arms at Vincennes. He became no less a favourite with the young monarch, whom he attended to France, and died there in 1430. Waldensis was author of a work in 3 vols. folio, entitled, "Doctrinale Antiquum Fidei Ecclesie Catholice." Russel, bishop of Lincoln, made a compendium of this work, to facilitate for his successors the detection of heresy.

WALDO, PETER. [VALDO.]

WALLES, WILLIAM, mathematician and astronomer, was born about 1734; went to Hudson's Bay, in 1769, to observe the transit of Venus; accompanied Captain Cook in two voyages round the world; became mathematical master at Christ's Hospital, and secretary to the Board of Longitude; and died in 1798. Among his works are, "Astronomical Observations on the Southern Hemisphere," a treatise on the "Discovery of the Longitude by Time-keepers," and an "Inquiry concerning the Population of England and Wales."

WALKER, CLEMENT, a political writer of the 17th century, was born at Cliffo, in Dorsetshire; was educated at Christchurch, Oxford; and became M.P. for Wells. In parliament he acted with the Presbyterians, and he was violently hostile to the Independents, against whom he published, in 1648, his "History of Independency." He

communication between England and America was born at Chatham, 1800. He was appointed a midshipman before he had completed his education, and became Lieutenant. After a short service he volunteered for the American war, and received the command of the Company's cutter, Matilda, in service by land and sea, he was promoted to the rank of Lieutenant in 1827. From this time his attention to the great question of the communication between England and America was directed, and he laboured with ardour, perseverance, and success, which he worked it to contain him a name among the great names of his race. But we regret to say that he was all that he achieved by long and continued exertions, and operations in which he had exhausted his resources, and but scanty assistance from his friends. A very considerate consideration of humanity should have induced him to stop here. Died, 1850.

WALLEN, GEORGE, an eminent naturalist, was born in the province of Warwickshire, in 1760. He visited the remote parts of the Scandinavian peninsula, and the northern countries of Europe, in the course of making botanical and mineral collections; and on his return to England he was superintendant of the Botanic Garden, and published his "Flora Carpethorum," "Flora Sibirica," and "Flora Succica," besides several other treatises. Died, 1831.

WALLEN, CHARLES DE, an eminent naturalist, was born in 1729, at Paris. He was a member of the Académie des Sciences, and the principal founder of the Society of Naturalists of the Arts. He died in 1794. His writings, which he designed as a treatise on the elements of natural science, and the Odeon at Paris, were published by M. de Lamoignon. ISAAC, an able diplomatist and statesman, was born at Billing, in Hampshire, in 1875. He became a member of the House of Commons, and was public orator of the nation. He was afterwards employed in several foreign courts, and distinguished himself by the honour of knighthood. His principal works, the principal of which is "Rex Platonicus." Died,

WALLEN, WILLIAM, archbishop of Canterbury and exemplary prelate, was born at Wotton, in Dorsetshire, in 1600. He was educated at Oxford. Having entered the church, he soon distinguished himself by his piety, and with which he espoused the cause, though in opposition to the court; and he was accordingly promoted to the see of Exeter by William III. on his accession to the throne. He was, successively, chaplain, rector of St James's

was committed to the Tower by Cromwell, and while imprisoned wrote his violent treatise, entitled "The High Court of Justice, or Cromwell's New Slaughter-House." He died in prison in 1651.

WALKER, Sir EDWARD, historian and herald, was born at Netherstowey, in Somersetshire. He was made clerk of the privy-council in 1644, and received the honour of knighthood; attended Charles II. in his exile, and was appointed by him garter-king-at-arms. Died, 1677. He is said to have written "Iter Carolinum, or an Account of the Marches, &c., of King Charles I.," "Military Discoveries," "Historical Discourses," &c.

WALKER, GEORGE, was born of English parents, in county Tyrone, in Ireland; and is celebrated for his heroic defence of Londonderry against James II. He enjoyed much favour with William III., whom he accompanied throughout his Irish campaigns, and fell at the battle of the Boyne, in 1690.

WALKER, JOHN, the lexicographer, was born in 1732, at Friern Barnet, in Hertfordshire. He was at one time master of a school at Kensington, and subsequently a lecturer on elocution, which art he had studied with a view to the stage. His principal works are the well-known "Critical Pronouncing Dictionary," "a Rhyming Dictionary," "Elements of Elocution," and a "Rhetorical Grammar." Died, 1807.

WALKER, ROBERT, an English portrait painter, who flourished about the middle of the 17th century. Nothing seems to be known of his life, but he is remembered as the principal painter employed by Cromwell. One of his portraits of the Protector is in the British Museum, another is in the Pitti Palace at Florence, and there are several others in English collections. The portraits of many of Cromwell's great captains were painted by Walker, amongst them that of Blake, now in Wadham College, Oxford. Died about 1639.

WALL, WILLIAM, who for upwards of half a century was the incumbent of Shoreham, in Sussex, was author of a work, entitled the "History of Infant Baptism." He also wrote "Critical Notes on the Old Testament," 2 vols. &c. Died, 1728.

WALLACE, W. VINCENT, musical composer, was born at Waterford, in Ireland, in 1814. Born with a passion for music, which was early cultivated by his father, a military band master, he seems to have had an equal passion for travelling. Having attained considerable skill as a pianist and violinist, he set out at the age of 18 on a long course of wanderings, visiting successively Australia, New Zealand, India, South and North America, practising his art, and winning a high reputation as a performer. The first work which made him known in England as a composer was the opera of "Maritana," produced at Drury Lane in 1846, and which had a long run. This was soon followed by "Matilda of Hungary." He then visited Vienna and Paris, and for the recovery of his health took a long sea-voyage. In 1864 he produced "Lurline," one of his best works, and also one of the most suc-

cessful. His other works are, "The Amber Witch," "Love's Triumph," and "The Desert Flower." Wallace was essentially a melodist, and many songs of great sweetness are scattered through his works, and have become popular favourites. Among these are his "Frisale Song," "Go, thou Restless Wind!" "Sweet and Low," "Bird of the Wild Wing," &c. After a protracted illness at Paris, in 1864-65, he was removed for milder air to the Château de Hagen in the Haute Garonne, and there he died, October 12, 1865. His remains were brought to England, and interred in Kensal Green Cemetery. Wallace was a true artist and a genial man, attracting not only public admiration, but the warmest love of his private friends.

WALLACE, Sir WILLIAM, the national hero of Scotland, was born probably about 1270. He is said to have been a son of Sir Malcolm Wallace, of Ellerslie, in Renfrewshire, and to have been educated at Dundee. After Edward I. had got himself acknowledged sovereign lord of Scotland, Wallace appears to have become leader of a band of outlaws, and to have done many deeds of daring in defiance of the English authorities; and thereby to have won the confidence and revived the patriotic hopes and resolution of his countrymen. So that when the insurrection broke out, in 1297, he was chosen to be commander-in-chief. Some of the principal nobles were associated with him, but they submitted to Warrenne, the guardian appointed by Edward, and signed the treaty of Irvine. Wallace, however, kept the field. He was already a knight. With his followers, still numerous, and rapidly multiplied, he carried on the war, took several towns in the north of Scotland from the English, and was besieging Dundee when the English army, led by Earl Warrenne, arrived near Stirling. Marching without delay to meet it, he won a great victory at Cambuskenneth, September 19, and his country was independent once more. Pursuing the English, who abandoned all the strongholds, he crossed the border and ravaged Northumberland; and on his return was recognized as guardian of the kingdom in the name of King John (Balliol), then in the Tower of London. The jealousy of the Scottish nobles made his high position very unstable, and in the following year, 1305, Edward made a truce with France, hastened home, and without delay marched into Scotland, his fleet sailing to the Frith of Forth. The famous battle of Falkirk was fought on the 22nd of July, in which Wallace and the Scots were totally routed with great slaughter. Wallace ceased to be governor of the kingdom, and appears to have resumed the guerilla warfare in which he first distinguished himself, and thus held out for several years. After the conclusion of the treaty with Edward, in February, 1304, in which Wallace did not join, he was declared an outlaw, and being captured near Glasgow in 1305, by what means is unknown, was sent to London, and hung as a traitor at West Smithfield, August 23. His head was set up on London Bridge, and his limbs disposed at Newcastle, Berwick, Perth, and

his other works are, "The Ambrosian Love's Triumph," and "The Deceiver." Wallace was essentially scattered through his works, and among his popular favourites. Among his "Fireside Song," "Go, then Wind!" "Sweet and Low," "Bird Wing," &c. After a protracted illness, in 1864-65, he was removed to his air to the Château de Nages in Garonne, and there he died, October 25. His remains were brought to London and interred in Kensal Green. Wallace was a true artist and a man, attracting not only public admiration but the warmest love of his pupils.

WALLACE, SIR WILLIAM, the national hero of Scotland, was born probably about 1696. It is said to have been a son of Sir Wallace, of Ellerslie, in Renfrewshire, to have been educated at Dundee, and that he had got himself acknowledged as the sovereign lord of Scotland, and to have become leader of a band of robbers, and to have done many deeds of violence to the English authorities; but he is said to have won the confidence of the patriotic hopes and revolutionaries of his countrymen. So that when the Jacobite broke out, in 1797, he was appointed to be commander-in-chief. Some of the principal nobles were associated with him, and they submitted to Warrenne, he was appointed by Edward, and signed the Declaration of Irvine. Wallace, however, was a field. He was already a knight, and had many followers, still numerous, and he carried on the war, and several towns in the north of Scotland were taken. He was besieged in the English army, led by Bannockburn, arrived near Stirling. Marching to meet it, he won a great victory at Cambuskenneth, September 19, 1314. His country was independent once more. He was the English, who abandoned his highlands, he crossed the border into Northumberland; and on his return he was recognized as guardian of the kingdom of King John (Balliol, the first of the house of London). The jealousy of the nobles made his high position very precarious, and in the following year, 1320, he made a truce with France, hastened to the aid of the French, and without delay marched into Scotland to meet the French. He was defeated at Falkirk, was fought on the 22nd of July, in which Wallace and his army were totally routed with great slaughter. He was appointed to be governor of the castle of Wallace, and appears to have resumed the warfare in which he first distinguished himself, and thus held out for several years. After the conclusion of the treaty of Edinburgh, in February, 1304, in which he did not join, he was declared a traitor, and being captured near Glasgow, he was by what means is unknown, was taken to London, and hung as a traitor at Tyburn, on London Bridge, and his limbs were cast at Newcastle, Berwick, Perth, and

Aberdeen. Extant contemporary notices of Wallace are very few and scanty. But the large spaces in his life left blank by history have been filled up by poetry and legend, whose testimony on the matter, out of Scotland, is at least doubtful. But whatever history has told, or legend forged, or criticism questioned, it is certain that

—Wallace fought for Scotland; left the name

Wallace to be found, like a wild flower, All over his dear country; left the deeds Of Wallace, like a family of ghosts, To people the steep rocks and river banks, Her natural sanctuaries, with a local soul Of independence and stern liberty.

A "Life of Sir William Wallace," by Carrick, appeared in 1840; and more recently "Sir William Wallace; a Narrative of his Life and Times," by Watson; and "Wallace, the Hero of Scotland," by Paterson.

WALLACE, WILLIAM, a Scottish mathematician, was born at Dysart in 1768. At the age of 16 he was apprenticed to a bookbinder at Edinburgh, but employed his leisure hours in study, especially of mathematics. After several successive engagements in trade, he quitted it in 1793, and in the following year became assistant mathematical tutor in the academy. In 1803 he exchanged this post for that of mathematical master at the Royal Military College, which he ably filled till 1819. In that year he was chosen professor of mathematics at the university of Edinburgh. He was one of the first fellows of the Royal Astronomical Society, F.R.S.E., and LL.D., Edinburgh. His writings consist of memoirs presented to the Royal Society of Edinburgh, and the Astronomical Society, contributions to several journals, and numerous articles in the Edinburgh Encyclopædia and the Encyclopædia Britannica. He retired from the professorship in 1838, and after a long illness, died at Edinburgh in 1843. A government pension had been conferred on him.

WALLENSTEIN, ALBRECHT WENZEL EUSEBIUS, Count von WALDSTEIN, the great general of the Imperialists in the Thirty Years' War, was born in 1583, of an ancient and noble family of Bohemia. His family were Protestants, but he early lost by the Jesuits at Olmutz, and being educated there. He received the best education the age could give him, studying at the universities of Altdorf, Pavin, and Bologna. Astrology was among his studies, and the belief in it early life, he served his first campaign against the Turks in Hungary, and displayed his valiant courage at the siege of Gran. Moreover, soon after, he spent the next ten or eleven years on his estates, growing richer and richer, till he became the richest noble in Bohemia. He rendered important service to the Archduke Ferdinand in the war with the Venetians in 1617, and was soon after made a count of the Holy Roman Empire. He was for a short time commander of the Moravian landwehr (militia); and on the outbreak of the war in Bohemia was appointed quarter-master-general of the im-

perial army, and he not only served the emperor with his sword, but also with his purse. In 1621, and again in 1623, he defeated Bethlem Gabor, prince of Transylvania; and was soon after created duke of Friedland and prince of the Holy Roman Empire. In 1626, at the head of a large army raised by his own efforts and at his own expense, and in cooperation with the army of the League under his rival Tilly, he fought a successful campaign against Count Mansfeld and Bethlem Gabor. He conducted a second memorable campaign against the Danes in the following year, negotiated the Peace of Lubeck, and was invested with the duchy of Mecklenburg. His enemies, jealous and profoundly irritated not only by his success, his enormous wealth, and accumulated dignities, but also by his haughty and despotic behaviour, pressed their accusations against him with so much vehemence, that in 1630 he was deprived of his command. He retired silently to his estates, just as Gustavus Adolphus was on the point of invading Germany to give his support to the Protestant cause. The victories of the great Swede and the death of Tilly left no choice for the emperor but to pray his dismissed general once more to take the command. Wallenstein, after some prudent show of reluctance, agreed to do so, on condition of being absolute master of his army. Gustavus having taken up his position in an entrenched camp at Nürnberg, whose citizens enthusiastically supported him, Wallenstein, after a general review of his army at Neumark, entrenched himself in a strong position opposite Nürnberg, intending by a tedious blockade to wear out his great foe. The Swedes intercepted a large convoy from Bavaria, on its way to the Imperialists, captured the whole of it, and destroyed the escort. Want and pestilence afflicted both armies, and Gustavus, having been reinforced, made an attack on Wallenstein's lines, 24th August, 1632; but after a ten hours' action and repeated assaults, Wallenstein remained unconquered within his lines, and the Swedes had to retire. Fifteen days later the latter broke up their camp and marched towards Bavaria; Wallenstein immediately breaking up and burning his camp, and marching towards Saxony. They next met at the memorable battle of Lützen, fought in November; Gustavus fell early in the battle, but Wallenstein was defeated. The conduct of his officers was rigorously investigated, and many were punished with death. Wallenstein next marched into Silesia, then into Bavaria; carrying on negotiations with France and other courts, and evidently aiming at a high place in the empire. Fresh accusations were urged against him; his officers signed at Pilsen a declaration of their fidelity to him; and the emperor declared him a rebel, and ordered his capture, alive or dead. His estates were confiscated, some of his trusted officers were traitors, and on the 25th of February, 1634, the great commander was murdered in the castle of Egra. His memory has been cleared of the long-credited charge of treason against the emperor, and it is certain that his fall was brought about by the intrigues and lies of his personal enemies. "Waldsteins

briefs" were published in 3 vols. 8vo, in 1828; and a biography by Förster in 1834. The story of Wallenstein furnished Schiller with the subject of his splendid trilogy; "Wallenstein's Camp," "The Piccolomini," and "The Death of Wallenstein," well-known through Coleridge's magnificent translation.

WALLER, EDMUND, an English poet, was born at Coleshill, in Hertfordshire, and was educated at Eton, and at King's College, Cambridge. He was elected a member of parliament when in his 17th year, and at the age of 23 he married a rich heiress, who died soon after, and left him an infant daughter. Waller then paid his addresses to Lady Dorothea Sidney, daughter of the earl of Leicester, whom he has immortalized under the poetical name of Sagarissa; but though she admired his verses, she slighted his offers, and married the earl of Sunderland. He then married a lady of the name of Bresse, by whom he had 13 children. In the Long Parliament he represented Amersham, and was appointed one of the commissioners to treat with the king; but in 1643 he was taken up for a plot, when, to save his life, he made a confession, and after a year's imprisonment, and paying a fine of £10,000, obtained his liberty. He then went to France, and resided there till he found himself getting to the end of his resources, when he applied to Cromwell, who gave him leave to return, and restored his estate. Waller repaid the favour by a panegyric on the Protector; but he was equally lavish of his praise on Charles II., with whom he was a favourite; as he also was with James II.; and he appears to have taken advantage of his intimacy with that monarch to give him very sound advice. He now turned his thoughts to devotion, and composed "Divine Poems." He died at Beaconsfield, in 1687, aged 82. His intellectual powers were of a superior order; he was at once a prompt, elegant, and graceful speaker, while the wit and pleasantness of his conversation made him a favourite, even with those whom his subject pliancy must have disgusted. English versification is much indebted to him; and for ease, gaiety, brilliancy, and wit, his amatory poetry has not been surpassed. His portrait, by John Riley, is in the National Portrait Gallery.

WALLER, Sir WILLIAM, an eminent general of the parliamentary army in the reign of Charles I., was born in 1597, in Kent, and was educated at Magdalen College and Hart Hall, Oxford. On his return from Germany, where he had served as a volunteer in the army of the Protestant princes against the emperor, he was elected for Andover as a member of the Long Parliament. He belonged to the Presbyterian party, and, on the breaking out of the war, was made second in command under the earl of Essex. The West of England was the scene of his principal exploits; and in the early part of his career he fought with signal success, but was ultimately removed from service, and he became so much an object of suspicion to the republicans, that he was twice imprisoned. He died in 1668. He

wrote "Divine Meditations" and a "Vindication" of his Character and Conduct.

WALLERIUS, JOHAN GOTTSCHALK, an eminent Swedish chemist and mineralogist, author of "Systema Mineralogicum," "Chemia Physica," and other excellent works. Died, 1785.

WALLIS, JOHN, an eminent English mathematician and divine, was born in 1616, at Ashford, in Kent, and educated at Emanuel College, Cambridge. He was chosen, in 1649, Savilian professor of geometry at Oxford, and made keeper of the archives there, in 1658; was one of the earliest members of the Royal Society; and, after a long life devoted to science and his clerical duties, died in 1703. His mathematical works are included in three volumes, and his "Sermons" form a fourth.

WALMESLEY, CHARLES, a Roman Catholic divine, and an eminent mathematician, was a doctor of the Sorbonne, a monk of the Benedictine order, and vicar apostolic of the western district of England. He died at Bath, in 1797, aged 76. He was a member of the Royal Society, and the author of several mathematical treatises.

WALPOLE, Sir ROBERT, earl of Orford, prime minister of England, was born in 1676, at Houghton, his father's seat in Norfolk, and was educated at Eton, and King's College, Cambridge. He entered parliament in 1701, as member for Castle Rising, which borough his father had represented; but in the following year he was elected for Lynn. In 1708 he was appointed secretary of war; in 1709, treasurer of the navy; and, in 1710, one of the managers of Sacheverell's trial; but on the dissolution of the Whig ministry, he was dismissed from all his offices, expelled the House, and committed to the Tower, on the charge of breach of trust and notorious corruption. This was looked upon as a mere party proceeding by a majority of the people, and, on the accession of George I., the Whigs being again in the ascendant, he was made paymaster of the forces, and, subsequently, prime minister. In consequence of disputes with his colleagues, however, he was induced to resign in 1717, and he remained in opposition till 1720, when he once more became paymaster of the forces. His reputation as a financier drew all eyes towards him on the occurrence of the disaster arising from the bursting of the South Sea bubble; and Lord Sunderland being obliged to retire, Walpole was again made premier, an office which he retained for more than twenty years, in spite of incessant attacks from political enemies of the most splendid talents. In 1742 he resigned, and was created earl of Orford. He had long before received the knighthood of the Bath, and also that of the Garter. He was an able financier, a good tactician in debate, a most serviceable minister to the house of Brunswick, and a zealous friend of the Protestant succession. He died in 1745. His portrait, by Van Loo, is in the National Portrait Gallery.

WALPOLE, HORATIO, Lord, brother of the preceding, was born in 1678, held various offices under the government, and was an able diplomatist, was created a peer in 1726, and died in 1757. He wrote an answer to

Meditations" and a "Vindictive Character and Conduct.

JOHAN GOTTSCHALK, an chemist and mineralogist, "Chem. and other excellent works.

JOHN, an eminent English and divine, was born in 1616, and educated at Emanuel College. He was chosen, in 1668, professor of geometry at Oxford, and keeper of the archives there, one of the earliest members of the society; and, after a long life devoted to his clerical duties, died in 1700. His mathematical works are in volumes, and his "Sermons"

CHARLES, a Roman Catholic and eminent mathematician, was of the Sorbonne, a monk of the abbey, and vicar apostolic of the West of England. He died in 1708. He was a member of the Society, and the author of several treatises.

SIR ROBERT, earl of Orford, of England, was born in 1676, his father's seat in Norfolk, and educated at Eton, and King's College. He entered parliament in 1701, and was chosen, in 1702, member for Eton, which he held till 1704. He was elected for Lyme, appointed secretary of war, and, in 1705, secretary of the navy; and, in 1706, secretary of the Admiralty. He was distinguished by his talents, and his conduct in the House of Commons, and his services to his country.

This was looked upon as a proceeding by a majority of the House of Commons on the occasion of George I. being again in the ascendant. He was master of the forces, and, in 1708, minister. In consequence of the death of his colleagues, however, he resigned in 1717, and he was reappointed till 1720, when he was dismissed from the office.

As a financier drew all eyes to him, the occurrence of the disaster of the bursting of the South Sea Bubble, Lord Sunderland being obliged to resign, Walpole was again made premier, which he retained for more than twenty years, in spite of incessant attacks from his enemies, the most able and able of his age. He had long before received the good of the Bath, and also that of the sea. He was an able financier, and a man in debate, a most servile tool in the house of Brunswick, and a member of the Protestant succession.

His portrait, by Van Loo, is in the National Portrait Gallery.

JOSEPH, HORATIO, Lord, brother of the Earl of Sandwich, and a member of the government, was created a peer in 1744. He wrote an answer to

Bolingbroke's Letters on History, and some political pamphlets.

WALPOLE, HORACE, earl of Orford, the youngest son of Sir Robert, was born in 1717, and was educated at Eton, and at King's College, Cambridge. Gray, the poet, was his fellow-collegian, and accompanied him in a continental tour; but they quarrelled, and separated before their return. In 1741, Walpole entered parliament, successively representing Caillington, Castle Rising, and Lynn. But it was soon apparent that he took little interest in politics, he seldom joined in the debates, and in 1768 he retired wholly from public life. Literature and the fine arts were the great sources of his delight, and much of his time was dedicated to the embellishment of his Gothic villa at Strawberry Hill, near Twickenham, and to the formation of a splendid collection of works of art and relics of antiquity. He also established a private press, and printed several works there. In 1791 he succeeded to the earldom, but never took his seat in the House of Lords. His principal works are, "The Castle of Otranto," a novel, which became very popular, and is not yet forgotten; "Historic Doubts on the Life and Reign of Richard III.," "The Mysterious Mother," a tragedy; "Catalogue of Royal and Noble Authors," "Anecdotes of Painting in England," and a "Catalogue of Engravers." The two last-named works are substantially the work of the engraver. [See VERTUE.] He also wrote Memoirs of the last ten years of the reign of George II., and of the first twelve years of George III. But his reputation as a writer rests chiefly on his letters, in which he is admitted to be without a rival in our language. His correspondence extends over the 62 years from 1735 to 1797, and in the last complete collection, edited by Cunningham, occupies 9 vols. 8vo. Some interesting additional glimpses into his private life are furnished in the "Journals and Correspondence of Miss Berry," just published (1865). Horace Walpole died at his London residence, 2nd March, 1797. His portrait, by an unknown hand, is in the National Portrait Gallery.

WALSH, WILLIAM, a minor English poet of the 17th century. He was the friend of Dryden and the patron of Pope, held a situation in the household of Queen Anne, and died in 1708. His poems are chiefly of an amatory character.

WALSINGHAM, SIR FRANCIS, an eminent statesman in the reign of Elizabeth, was born at Chischurst in Kent, in 1536. After receiving his education at King's College, Cambridge, where he acquired an excellent knowledge of languages, he entered on public life, and was sent ambassador to Paris in 1570; was there during the period of the Massacre of St. Bartholomew; and after his return, in 1573, he was appointed one of the secretaries of state, and knighted. In 1583 he went on an embassy to James VI., king of Scotland; and three years afterwards sat as one of the commissioners on the trial of Queen Mary. He was a man of subtle policy, sparing neither time, trouble, nor expense in carrying such measures as he thought likely to serve the cause of the queen and embar-

ass her enemies. It has been said, that "he outdid the Jesuits in their own bow, and over-reached them in their equivocation," and that he kept 53 agents and 18 spies in foreign courts. He died in 1600.

WALSINGHAM, THOMAS, an English chronicler of the 15th century, was a native of Norfolk, and a Benedictine monk of St Alban's. He wrote "A History of England, from 1273 to the death of Henry V.," and a work entitled "Ypodigma Neustrie." His writings are for the most part plagiarisms, and contain very little original information.

WALTER, JOHN, whose name has become inseparably connected with the gigantic achievements of the press in modern times, was the son of Mr John Walter, printer to the customs, and for many years chief proprietor of the *Times* newspaper. He was born in 1773, and having, on the completion of his education, made himself acquainted with all the technicalities and routine of a large printing establishment, he, in 1803, became a joint proprietor and exclusive manager of the *Times*; and from this period, during the long course of 44 years, he devoted himself to the moral and material improvement of what is termed "the fourth estate" of the realm. Besides being among the first to impart to the daily press its vast range and celerity of information, its accuracy, and its universal correspondence, he was the first to bring the steam-engine to its assistance. The first application of steam-power to printing took place Nov. 29, 1814; and familiar as it is now, it was not made without an amount of risk, labour, and anxiety, which few men could have undergone. Mr Walter's success in the establishment of the *Times* as the "leading journal" was attained not so much by his own brilliant abilities, as by the discernment with which he sought out, and the munificence with which he rewarded, talent, wherever it could be found, and by the intuitive sagacity with which he, from time to time, felt the pulse of the nation, and prescribed accordingly. In adopting this course he necessarily exposed himself to the charge of inconsistency, and incurred the hostility of all party politicians and class interests; but for these sacrifices he was amply compensated, in witnessing the growing success of that great organ of public opinion, which it had been his glory to found, and his chief pleasure to assist and advise. Mr Walter sat in parliament from 1823 to 1837 for Berkshire, where his estate, Benwood, was situated; in 1840 he contested Southwark unsuccessfully; in April, 1841, he was returned for Nottingham; and it is a curious circumstance that Mr Walter's vote in parliament may be said to have sealed the fate of the Melbourne administration, which he had long been combating in the press (the motion of want of confidence, which led to its overthrow, being carried only by a majority of one). Died, 1847.

WALTHER, BERNARD, an eminent astronomer of Nürnberg, in the 15th century. He studied under and assisted Regiomontanus, and is regarded as the first discoverer of the regular effect of atmospheric refraction. Died, 1504.

WALTHER VON DER VOGELWEIDE, the celebrated Minnesinger, one of the earliest German poets, belonging to the period called the "Swabian Era." He was born probably soon after 1160, and passed his life in going from court to court, patronized successively by Frederik, duke of Austria, Phillip, king of the Romans, Otto, margrave of Saxony, Hermann, landgrave of Thuringia, the Emperor Frederik II., and other princes. Walther made extensive travels, seeing Paris, North Italy, Constantinople, and the Holy Land. In 1208 he took part in the crusade of Frederik II. in the Wartburg, and in the crusade of Frederik II. in 1229. His poems consist of love-songs and patriotic appeals to his countrymen, and they possess in a high degree the best qualities of the poetry of their age. The Life of this German Troubadour has been written by Uhlend, and a new Life by Dr R. Menzel has appeared this year (1865). His poems have been frequently republished, and translated into modern German.

WALTON, BRIAN, a learned prelate, was born at Cleveland, in Yorkshire, in 1600. He was educated at Cambridge, and became prebendary of St Paul's, and chaplain to Charles I. He suffered considerably at the breaking out of the civil war, fled to Oxford, and there formed the plan of his "Polyglot Bible," which was published in 6 vols. folio, and to which he principally owes his literary reputation. In 1661 he was preferred to the see of Chester, but died in London soon after.

WALTON, IZAAK, the "Angler," was born at Stafford in 1593, and was carrying on the trade of a hosier in Fleet Street, near Chaney Lane, in 1624. Two years later he married a lady who was a descendant of Archbishop Cranmer. Left a widower in 1640, he married in 1647 a sister of Bishop Ken, by whom, as well as by his first wife, he had several children. His sympathies and connections were with the royalist party in the civil war, and he discharged a dangerous office for Charles II. after the battle of Worcester. His changes of residence it is hardly possible to ascertain, but after the death of his second wife, in 1662, he appears to have gone to live at Winchester, with his friend Dr Morley, then bishop of that see. Walton numbered among his friends Dr Donne, Sir Henry Wotton, Bishop Sanderson, and Charles Cotton. His principal work is the "Complete Angler, or Contemplative Man's Reereation," which first appeared in 1653, and soon established itself as a general favourite, not only with lovers of the sport, but with readers of all classes, especially with those who love nature and rural life, and can relish the quiet simple utterance of pure sentiments of morality and piety. It was extended by the addition of a treatise by Cotton in the author's lifetime, and has since been constantly in demand. A good edition by Sir Harris Nicolas was published in 1833. Walton's pleasant Lives of Hooker, Sanderson, Wotton, Donne, and Herbert have enjoyed a popularity almost as great as his "Angler," and deserve to retain it. Izaak Walton was editor of the work entitled,

"Reliquiæ Wottonianæ." He lived to the age of 90, and died at the house of his son-in-law, at Winchester, 16th December, 1683. A small half-length portrait of him, by Huysman, was bequeathed in 1838 by one of his descendants to the National Gallery. New editions of Walton's Angler, and the Lives, have recently (1864) appeared in Bell and Daldy's beautiful Elzevir Series of standard works.

WANLEY, HUMPHRY, bibliographer, was born at Coventry, in 1672, and educated at Edmund Hall, Oxford; became secretary to the Society for Promoting Christian Knowledge, and afterwards librarian to the earl of Oxford, in whose service he died in 1726. Mr Wanley formed a catalogue of Saxon manuscripts for Dr Hicke's The-saurus, and made numerous collections relative to archeology and bibliography.

WARBECK, PETER, or PERKIN, whose real history has been the subject of much speculation, and is still involved in uncertainty, made his appearance in Ireland, in the reign of Henry VII. (1492), and assumed the character and title of Richard, duke of York, the younger son of Edward IV., supposed to have been murdered in the Tower, together with his brother, by order of Riehard III. Having been acknowledged by Margaret, duchess of Burgundy, as her nephew, and by France and Scotland, he proceeded to claim the crown of England, and, landing in Cornwall in 1497, was joined by some thousands of insurgents. He laid siege to Exeter; but, on the approach of the royal army, he fled to Beulleu Abbey, in Hampshire, which sanctuary he was induced to quit, under the promise of pardon, and he was sent in custody to the Tower of London. He was there treated as an impostor, and eventually, in 1499, was hanged, drawn, and quartered. Henry VII. published an alleged confession of the captive, purporting that he was the son of one Warbeck, or Osbeck, a converted Jew of Tournay, but many have asserted that he was an illegitimate son of Edward IV.

WARBURTON, ELIOT BARTHOLOMEW, historical and miscellaneous writer, was born near Tuillamore, in Ireland, in 1811. He completed his education at Trinity College, Cambridge, and adopted the profession of the law; studying in London under Mr. Procter (Barry Cornwall) and others. After keeping terms at the Inner Temple he was called to the Irish bar, but he did not long follow his profession. In 1843 he visited the East, and afterwards published an account of his travels in the work entitled, "The Crescent and the Cross," which obtained immense popularity, and has passed through a great number of editions. After his return he lived in London, and was one of the most genial and welcome associates of many of his distinguished contemporaries. He rendered generous and valuable services to the tenantry on his estates in Galway and Kildare during the famine of 1846-47. Continuing to apply himself to literature, he published "Memoirs of Prince Rupert and the Cavaliers," "Reginald Hastings," and "Darlen, or the Merchant Prince," besides contributing papers to periodicals. His last

ly himself to literature, he
moirs of Prince Rupert, and
"Reginald Hastings," and
Merchant Prince," besides
papers to periodicals. His last

work, "Darlen," has a peculiar interest
from the fact that it contains a vivid de-
scription of the burning of a ship at sea;
thus strangely foreshadowing the disaster
which closed the author's career shortly
afterwards. He was one of the passengers
on board the steamer "Amazon," in Janu-
ary, 1852, and perished with the burning
vessel in the bay of Biscay, 4th January.

WARBURTON, JOHN, an English an-
tiquary and herald; author of "Valium
Romanum." Born, 1682; died, 1759.

WARBURTON, WILLIAM, bishop of
Gloucester, a very eminent theological
writer, critic, and controversialist, was born
at Newark-upon-Trent, in 1698. He com-
menced his clerical career in 1728, as vicar
of Griesley, in Nottinghamshire; was ap-
pointed, in 1746, preacher to the society of
Lincoln's Inn; and rapidly advanced in his
profession, becoming, in succession, chap-
lain to the king, prebendary of Durham,
dean of Bristol, and, finally, bishop of Glou-
cester in 1759. His works are very numerous;
but those for which he is most celebrated
are, "A Critical and Philosophical Inquiry
into the Causes of Prodiges and Miracles, as
related by Historians," "The Alliance be-
tween Church and State," "The Divine
Legation of Moses," "Vindication of Mr
Pope's Essay on Man," and editions of
Shakespeare, Pope, &c. Dr Warburton was
a man of vigorous faculties, a mind fervid
and vehement, supplied, by incessant and
unlimited inquiry, with wonderful extent
and variety of knowledge; but he was proud
of his literary powers, and treated all who
opposed him with haughty disdain. He died
in June, 1779. A portrait of Warburton, by
Phillips, is in the National Portrait Gallery.
A new life of him was recently published
by the Rev. J. S. Watson.

WARD, JAMES, a celebrated animal
painter, was born in London in 1769, and
was first apprenticed to an engraver. After
practising engraving for several years he
turned to painting, and took Morland for
his model. Many of his early pictures were
so much in Morland's manner that they were
long sold as his. In 1794 Ward was ap-
pointed painter and engraver to the prince
of Wales, was elected A.R.A. in 1807, and
R.A. four years later. He was a regular
exhibitor at the Royal Academy for more
than sixty years, his last pictures appearing
in 1854. In some attempts which he made
in historical and allegorical painting he was
not successful. One of his best works is the
"Landscape with Cattle—Alderney Bull,
Cow, and Calf," now in the National Gal-
lery. It was painted in 1820-22, in express
rivalry with Paul Potter's famous "Bull,"
and was exhibited at the British Institution
in 1823, and at Manchester in 1837. Among
his other well-known works are the "Council
of Horses," and "Lake and Tower in
Tabley Park," both in the National Gallery;
"Deer-Stalking," "Horse and Serpent,"
and "Bulls fighting across a Tree." Died,
1859.

WARD, JOHN, professor of rhetoric at
Gresham College, was born in London in
1679, and died in 1758. He was a fellow of
the Royal and Antiquarian Societies, and

wrote the "Lives of the Gresham Pro-
fessors," "Lectures on Oratory," 2 vols. &c.

WARD, ROBERT PLUMER, statesman and
miscellaneous writer, was born in London,
1765. His father was a Spanish merchant
resident at Gibraltar, where his son Robert
passed his early years. When about eight
years of age, he was sent to England. He
received his education at Walthamstow,
where he had Mr Justice Park for a school-
fellow; thence he was transferred to Christ-
church, Oxford; and, after a short period of
continental travel, was called to the bar at
the Inner Temple, in 1790. For some years
he went the western circuit, spending his
long vacations at the house of his elder
brother, in the Isle of Wight; and here he
wrote his "Inquiry into the Foundation and
History of the Law of Nations in Europe,"
&c., which was published in 1795, and proved
successful. He was now frequently em-
ployed in cases before the privy-council;
and the works relating to international and
maritime law, which he produced from time
to time, secured him the friendship of Lord
Grenville, Sir W. Scott, and Lord Eldon,
who offered him a judgeship in the ad-
miralty court of Nova Scotia. This offer,
however, he declined, and in 1802, through
the influence of Pitt and Lord Mulgrave, to
whom he was related by marriage, he was
elected to parliament for Cockermonth, aided
the premier both by his speeches and his
pen, and had just been nominated to a Welsh
Judgeship, in 1805, when he relinquished it
for the under-secretaryship of foreign affairs,
Lord Mulgrave being his chief. On the
death of Mr Pitt, 1806, he retired into the
country; but on the formation of the Port-
land ministry, in 1807, he was made one of
the lords of the admiralty, exchanging this
office in 1811 for the clerkship of the ordi-
nance, which he held till 1823. He then re-
tired from parliament and from public life.
But he once more resumed the pen, and
wrote "Tremaine," which, though pub-
lished anonymously, produced a great sensa-
tion in literary circles, and became exceed-
ingly popular. This was followed, in 1827,
by "De Vere," which was hardly less
successful; and, after some years spent in
retirement, by "Illustrations of Human
Life," "Pictures of the World," "Historical
Essay on the Revolution of 1688," and "De
Clifford," a novel in 4 vols. Mr Ward was
thrice married. His second wife was Mrs
Plumer Lewis, of Gilston Park, in Herts;
and shortly after his marriage he assumed
the name of Plumer before that of Ward.
Died at Okeover Hall, Stafford, 1846, aged
81. His "Memoirs and Literary Remains"
were published by the Hon. E. Phipps.

WARD, SETH, bishop of Salisbury, a
learned prelate, chiefly distinguished for his
skill in mathematics and astronomy. He
was born in Hertfordshire; studied at Sid-
ney Sussex College, Cambridge, of which he
became a fellow; lost his fellowship during
the civil war, became private tutor, and in
1649 was appointed Savilian professor of
astronomy at Oxford. He subsequently
became principal of Jesus College, and pre-
sident of Trinity College; had various pre-
ferments after the Restoration, and was

named bishop of Exeter in 1662, and bishop of Salisbury in 1667. The dignity of chancellor of the Order of the Garter was afterwards conferred on him. Bishop Ward was public-spirited and munificent, contributing to several liberal undertakings, besides founding and endowing a College of Matrons for 10 clergymen's widows. He was one of the first fellows of the Royal Society. Born, 1617; died, 1689.

WARDLAW, DR RALPH, an eminent nonconformist divine, was born in Dalkeith in 1779, and studied at Glasgow for the ministry in connection with the United Secession Church. Tracing his descent to Ralph Erskine, he felt an hereditary attachment to that church; an attachment which he was ever ready to avow. But when on the eve of being licensed, he avowed his preference for Congregationalism, and in 1803 was ordained in North Albion Street Chapel, where he continued to labour for about twenty years, when he and his congregation removed to a splendid chapel in West George Street, which they had erected at a cost exceeding £10,000. About seven years after his ordination he became tutor in the Glasgow Theological Academy, a position which he filled with much efficiency and acceptance till his decease; and for many years he discharged his professional duties without fee or reward. His fame as a theologian attracted students of all evangelical denominations to his class-room. Dr Wardlaw was a voluminous and varied writer. He wrote on the Social Contract, Infant Baptism, Christian Ethics, Church Establishments, &c.; published several volumes of discourses, and many single sermons, besides an interesting Memoir of Dr M'Al, and a Treatise on Congregationalism. In private life he was greatly beloved. His manners were unaffected and conciliatory, and he was a genuine pattern of the refinements, accomplishments, and virtues which mark the scholar and Christian gentleman. Died, 1853. A Memoir of Dr Wardlaw has been published by the Rev. W. L. Alexander.

WARDLAW, HENRY, bishop of St Andrew's, and founder of the university there, was preferred to that see by Pope Benedict XIII. in 1404. Though a man of strict morals and great simplicity of character, he was a still greater enemy to what he believed to be heresy than to immorality; and he condemned to the stake those who questioned the doctrines of the Romish church. Died, 1440.

WARE, Sir James, an eminent antiquary and historian, was born at Dublin, in 1594, and died in 1666. He wrote "De Prasullibus Hiberniæ," the "History and Antiquities of Ireland," and several other works.

WARTHAM, WILLIAM, an English prelate and statesman, was born in Hampshire, and educated at Winchester School, and New College, Oxford. He successively became master of the Rolls, lord chancellor, bishop of London, and archbishop of Canterbury. In 1515 he resigned the great seal on account of the differences between him and Wolsey, and died in 1532. He was the friend of Erasmus, and a great patron of literature.

WARING, EDWARD, Lucasian professor of mathematics at Cambridge, was born in Shropshire in 1736. He studied at Magdalen College, Cambridge, and was senior wrangler in 1757. In 1760 he obtained the Lucasian professorship, the duties of which occupied him till his death. He was author of several mathematical treatises: "Miscellanea Analytica," "Meditationes Algebraicæ," "Proprietates Algebraicarum Curvarum," &c., and contributed some valuable papers to the Philosophical Transactions. He was chosen F.R.S. in 1763, and died in 1798.

WARNER, JOHN, a learned prelate, born at Westminster, in 1585. He was educated at Oxford, and became successively prebendary of Canterbury, dean of Lichfield, and bishop of Rochester; suffered much for his loyalty in the civil war, but recovered his see at the Restoration; and died in 1666. He was the founder of the college at Bromley, Kent, for the widows of clergymen.

WARNER, WILLIAM, an English poet of the 16th century; author of "Albion's England," a poem once in great repute, and which passed through several editions, and "Syrinx, a Sovenfo'1 History." Born, 1548; died, 1609.

WARREN, CHARLES, an eminent engraver, was a native of London, and for many years held a distinguished rank in his profession. He was the first who effectually removed the difficulties of engraving on steel. Died, 1823.

WARREN, Sir JOHN BORLASE, an eminent naval officer, was born in 1724, in Nottinghamshire; was educated at Winchester School, and at an early age entered the navy. He, however, afterwards studied at Cambridge, and in 1774 entered parliament. During the American war he performed several gallant actions, and rose to the rank of post-captain. On the breaking out of the French revolutionary war he equally distinguished himself; particularly in capturing, off the coast of Ireland, the Hogue man-of-war, and three frigates laden with troops for the conquest of that island. After the peace of Amiens, he was appointed ambassador to Russia, in which post he remained until 1805. He attained the rank of admiral in 1810, and died in 1822.

WARREN, Sir PETER, an able English admiral, born in 1703, entered the navy when very young, and gradually rose to the rank of commodore. In 1745 he commanded a squadron, with which he attacked and took possession of Louisbourg; and in 1747 he fell in with a French squadron, which he completely defeated, capturing several of their men-of-war. This last exploit rendered him very popular, and he was returned M.P. for Westminster. Died, 1752.

WARRINGTON, Earl of. [BOOTHE, HENRY.]

WARTON, Dr JOSEPH, son of Thomas Warton, professor of poetry at Oxford, was born in 1722, at Dunstford, in Surrey; was educated at Winchester School and Oriel College, Oxford; became curate of Chelsea, and rector of Tunworth; and, in 1766, was advanced to the station of head-master at Winchester, where he presided with high reputation nearly 30 years. In 1788 he ob-

D, Lucasian professor of Cambridge, was born in 1650. He studied at Magdalen and was senior wrangler. He obtained the Lucasian chair of which occupied him until he was author of several works: "Miscellanea Anatomica Algebraica," "Program Curvarum," &c., & valuable papers to the Philosophical Transactions. He was chosen Bishop of Exeter in 1798.

WATSON, an eminent prelate, born in 1685. He was educated at Cambridge successively prebendary, dean of Lichfield, and Bishop of Exeter; suffered much for his liberal views, but recovered his health and died in 1666. He was one of the college at Bromfield of clergyman.

WATSON, an English poet and author of "Albion's England," in great repute, and published in several editions, and "The History of" Flora, 1588;

WATSON, an eminent engraver of London, and for his distinguished rank in his profession the first who effectually introduced the art of engraving on steel.

WATSON, JOHN BORLASE, an eminent naturalist, born in 1704, in Norfolk. He was educated at Winchester and early on entered the army, afterwards studied at Cambridge and entered parliament. In 1744 he was elected knight of the Bath, and he performed several military operations, and rose to the rank of major-general. He was the breaking out of the American war he equally distinguished himself particularly in capturing the island of Ireland, the Howe frigates laden with treasure from that island. After the war, he was appointed admiral in which post he remained until the rank of admiral in 1822.

WATSON, an able English general, entered the army when he was 16, and gradually rose to the rank of major-general. In 1745 he commanded a regiment which he attacked and took the town of Bourbourg; and in 1747 he commanded a squadron, which he defeated, capturing several standards. This last exploit rendered him popular, and he was rewarded with the rank of major-general. Died, 1732.

WATSON, JOHN, Earl of BOOTHBY, an eminent English poet of Oxford, was born in 1650, in Surrey; was educated at Winchester School and Oxford, and became curate of Chelsea, and in 1768, was appointed head-master of the school. He presided with ability over the school for 30 years. In 1789 he ob-

tained a stall in the cathedral of Winchester, and the rectory of Easton, which he exchanged for Upham. In 1793 he retired from the school to his rectory of Wickham, in Hampshire, where he died in 1806. His chief works are, an "Essay on the Writings and Genius of Pope," and translations from Virgil.

WARTON, THOMAS, brother of the preceding, was born in 1728; received his education at Winchester School and Trinity College, Oxford; and in his 20th year he distinguished himself by his "Triumph of Isis," a poetical vindication of Oxford against the reflections of Mason. His "Observations on Spenser's Fairy Queen," published in 1764, made him advantageously known as a critic, and prepared the way for his election, in 1767, to the professorship of poetry at Oxford, which he filled for 10 years with great ability. The first volume of his "History of English Poetry" was published in 1774, and the second and third, respectively, in 1778 and 1781. His plan was extensive, including the period from the 11th to the 18th century; but when he had gone as far as the Elizabethan writers he suspended, and ultimately abandoned, the undertaking. He succeeded Whitehead as poet-laureate, and died in 1790. Besides the works above noticed, he wrote some elegant poems, and performed various other literary labours.

WARWICK, JOHN DUDLEY, Earl of [DUDLEY.]

WARWICK, RICHARD NEVILLE, Earl of, "the king-maker," was born about 1428. He was the eldest son of Richard Neville, earl of Salisbury, and having by marriage become possessor of the immense estates of the Warwick family, was created earl of Warwick, when about the age of twenty-one. His personal character and great abilities, his enormous wealth and lavish expenditure, and his extended and important family connections, made him at once the mightiest English noble of his time, and the favourite of the people. The story of his life would be also that of the Wars of the Roses, in which he is the most prominent figure. A family alliance with Richard, duke of York, father of Edward IV., led him to take the side of the house of York, and his dash of courage at the battle of St Alban's in 1455, when he led the van, chiefly decided the victory of the duke of York. He was then appointed to the important post of governor or captain of Calais, which, with a short interval, he held till his death. In May, 1458, he attacked a fleet of Lübeck vessels, and after a sharp combat, captured several of them. A few months later an attempt was made in London to assassinate him, and the war soon after was renewed. But after some trifling successes the Yorkist army was dispersed, and Warwick with his father retired to Calais. After carrying on a piratical warfare for a short time, he landed in Kent with an army in 1460; was joined by large numbers, marched on London, and on July 10th defeated the Lancastrians at Northampton, and took Henry VI. prisoner. Queen Margaret escaped and raised an army, with which she defeated the duke of York at Wakefield, in December, and the

earl of Warwick at St Alban's, in February, 1461. But these victories were fruitless, for Warwick joined by Edward, now duke of York, compelled the royal army to retire to the north, and occupied London, where Edward was at once proclaimed king. Warwick defeated the Lancastrians at Towton, and was rewarded for that and other important services by various appointments and large grants of forfeited estates. He was made captain of Dover, warden of the West Marches, and lord chamberlain, his two brothers being similarly honoured with high appointments. But Warwick and his family did not long retain the favour of the king. Edward married in 1464 Elizabeth Woodville, and jealousies naturally grew up between the Nevilles and her relations. Other causes probably contributed to the alienation, which was shown in 1467 by the king's depriving George Neville, archbishop of York, of the great seal; afterwards by insurrections in the north; and in 1470 by the alliance of Warwick with Queen Margaret, and the marriage of her son, Prince Edward, to Anne Neville, younger daughter of the great earl.

Warwick then invaded England with a fresh force, proclaimed and restored Henry VI., and with the duke of Clarence, Edward's brother, entered London in triumph. The Nevilles were reinstated in their dignities and offices, and Warwick was appointed in addition lord high admiral. But once more the tide turned; Edward, landing in Yorkshire in March, 1471, was joined by Clarence and the archbishop of York, and won the decisive victory of Barnet, 14th April, at which the king-maker and his brother, Lord Montague, were killed. Their bodies were exposed to public view in London, and afterwards buried in Bisham Abbey, in Berkshire. The widow of Warwick long survived him, taking refuge for a time at Beaulieu; was reduced to penury, and was still living in 1490.

WASHINGTON, GEORGE, founder and first president of the United States of America, born in Westmoreland County, Virginia, in 1732. His family, which came from the north of England, had settled in Virginia about the middle of the 17th century. At ten years of age he lost his father, and his education appears to have been of very limited character. At 16 we find him studying mathematics and land-surveying, and through Lord Fairfax he obtained an appointment as public surveyor. In 1751 he was set over one of the military districts of Virginia as adjutant-general, and discharged with great energy and success an important mission rendered necessary in 1753 by the encroachments of the French on the province. Washington served his first campaign against the French in 1754. In the following year, war having been declared between Great Britain and France, he served under General Braddock, and distinguished himself at the disastrous battle of Monongahela. He resigned his commission as commander of the Militia in 1756, and devoted himself for the next fifteen years chiefly to his private affairs. He was, however, very constant in attendance as a representative in the House of Burgesses. In 1789 he mar-

ried. During the unhappy contests which arose between the colonies and the parent state Washington firmly opposed the right of taxation claimed by the latter. He was a member of the first congress in 1774, and in the following year was named commander-in-chief of the continental army. His first task was the reorganization of the army, the difficulty of which was seriously increased by the want of discipline, the unfriendliness of the officers, and the interference of the civil powers. The first important operation undertaken was the fortifying of Dorchester heights, near Boston, in 1776, which led to the evacuation of the city by the British, who, however, soon gained possession of New York. In the following year the battles of the Brandywine and Germantown were fought, and the Americans were defeated in both. In 1778 an alliance was formed with the French, and Philadelphia was evacuated by the British. The campaigns of the two following years were not marked by any decisive events. In 1781 a mutiny broke out in the American army, which was promptly quelled. In the autumn of that year a joint attack was made on York-town, then held by the British under Lord Cornwallis, by the American and French armies. It was completely successful; Cornwallis being compelled to capitulate. The struggle was virtually at an end. In 1783 the British evacuated New York, peace was signed, and the independence of the States acknowledged. Washington resigned his commission, and received the warmest acknowledgment from congress of the great services he had rendered to his country. After several years of retirement, full, however, of activity not for private ends alone, Washington was elected in 1789 first president of the United States. To this high office he was re-elected in 1793, and was succeeded by John Adams in 1797. He took leave of the nation in a proclamation worthy of him, and died in December, 1799. Washington left no children. He was tall, and of noble and graceful bearing; a man of singular good sense (which it has been said was his genius) and of consummate prudence; above all, true, inflexibly just, and absolutely brave. He was a man of action, not of words, and his success was as perfect as his task was singular and difficult. No example is to be found of a purer, more unselfish devotion to the service of one's country, than that furnished by the career of Washington.

WAT TYLER, or WAT THE TYLER, leader of the insurrection which broke out in Kent, in the reign of Richard II., was a working man of Dartford, in Kent. A poll-tax having been granted by the parliament in 1380, on every person above 15 years of age, one of the collectors demanded it for Wat's daughter who was not of that age, and behaving scandalously to enforce the claim, Wat killed him on the spot. The smouldering discontent of the rural population at once burst into a flame; and Wat, as if by mere accident, found himself captain of the host, June, 1381. After assembling them on Blackheath, he led them to London, where they sacked Lambeth Palace, burnt the palace of the duke of Lancaster and

other great buildings, seized the Tower, and killed the archbishop of Canterbury, the royal treasurer, and many wealthy persons. On June 15th the young king met the insurgents in Smithfield, and during the conference Wat Tyler was killed by the lord mayor of London. Richard then got his followers out of London by smooth promises of granting them their reasonable demands; and as soon as danger was past the royal promises were broken, and 1500 of those who had trusted in them were executed.

WATELET, CLAUDE HENRI, a French writer on art, was born at Paris in 1718. He was the son of a receiver-general, and on his father's death, in 1740, succeeded him in his office. He learnt painting and etching in his youth, visited Italy twice, travelled in the Netherlands, and on his return was received as associate of the Academy of Painting. His poem entitled "L'Art de Peindre" gained him admission to the French Academy. He was also a member of several foreign academies. Watelet's principal work is the "Dictionnaire de Peinture, de Gravure et de Sculpture," which was completed by Levesque, and published in 1791. Died, 1786.

WATERLAND, DANIEL, a learned divine and controversialist, was born in 1633, at Wasely, in Lincolnshire, and was educated at Magdalen College, Cambridge, of which he became master. At his death, in 1740, he was chancellor of York, archdeacon of Middlesex, canon of Windsor, and vicar of Twickenham. Among his works are "A History of the Athanasian Creed," "Scripture vindicated," "A Defence of Christ's Divinity," and "A Review of the Doctrines of the Eucharist."

WATERLOO, ANTHONY, an eminent Dutch painter, born about 1618, and died in 1682. He excelled in landscapes, and was distinguished as an engraver.

WATERTON, CHARLES, the celebrated naturalist, was born in 1782. He was the son of Thomas Waterton, Esq., of Walton Hall, near Wakefield, representative of an ancient and honourable Lincolnshire family, zealous adherents of the Catholic faith. Through his grandmother he was lineally descended from Sir Thomas More. He was educated at Stonyhurst College, but had far more relish for out-of-door sports, especially such as enlarged his knowledge of natural history, than for books. He, nevertheless, made respectable attainments in classical literature. After completing his education he spent many years in foreign travel; visiting Spain, managing some estates in Demerara, and making several visits to South America for the purpose of studying its rich and varied forms of life and nature. Record of these journeys he gave to the world in his very lively and charming volume, entitled "Wanderings in South America." Settling in his ancestral home, built on a small island in the midst of lovely landscapes, he was surrounded with the scenes and the creatures that he loved; and by prohibiting the use of fire-arms on his grounds, he made them the chosen haunt of many rare and shy birds and animals. A zealous Catholic, but no bigot, genial, cultivated, and hospitable,

A New Universal Biography.

[WAT]

he enjoyed the hearty esteem and respect of his friends, tenants, and dependents. His health was sound to the last, and his death was caused by a fall in his own grounds, May 26, 1865. He was buried in his favourite wood, and his funeral was a very imposing ceremony, conducted according to his own directions. Besides the well-known "Wanderings," he published a volume of "Essays on Natural History," originally contributed to Loudon's Magazine.

WATSON, CHARLES, British admiral, was born at Westminster in 1714. Entering the navy at an early age, he soon earned promotion, and in 1738 was appointed captain. He served in the Mediterranean, was employed to cruise off Cadiz, and took part with distinction in various engagements with the French, in 1747. In the following year he was promoted to the rank of rear-admiral. He was sent in 1754 to India, in command of the squadron forming part of the expedition of Clive, to the success of which his skill and daring greatly contributed. His last service was to co-operate in the attack on Chandernagore, in March, 1757. Five months later his health gave way, and he died in India, August, 1757. A monument was erected to him in Westminster Abbey.

WATSON, RICHARD, a celebrated English prelate, was born in 1737, at Heyvorsham, in Westmoreland; became a sizar, and afterwards a fellow, of Trinity College, Cambridge; was chosen, in 1764, professor of chemistry; and in 1771 he succeeded to that of divinity. He had been chosen two years earlier fellow of the Royal Society. He early distinguished himself by a display of his political opinions, in a sermon preached before the university, which was printed under the title of the "Principles of the Revolution vindicated," and excited an unusual degree of public attention. In 1776 he printed his "Apology for Christianity," which he addressed to Gibbon. In 1782 he was advanced to the bishopric of Llandaff, Ely, his professorship, and other ecclesiastical preferments. On this promotion he published a letter to the archbishop of Canterbury, containing a plan for equalizing church revenues. In 1798 the bishop appeared a second time as the defender of revealed religion, in his "Apology for the Bible," designed as an answer to Tom Paine's "Age of Reason." The "Apology" is an inadequate reply to the most weighty questions raised so fiercely and ignorantly by Tom Paine, but it is still worth reading, not only as a book of some historical importance, but as a masterpiece of style; handling a coarse and vulgar opponent with the "splendid courtesy and candour" of an accomplished scholar and gentleman. Bishop Watson was also the author of "Chemical Essays," 5 vols.; "Sermons," and "Theological Essays." Died, 1816.

WATSON, ROBERT, historian, was born at St Andrew's, in Scotland, in 1730. He obtained the professorship of logic, rhetoric, and belles lettres at St Andrew's, where he also became principal of the university, and died in 1780. Dr Watson wrote "The History

of Philip II.," and commenced that of Philip III., which was completed and published, for the benefit of his family, by Dr Thomson.

WATT, JAMES, the great civil engineer, who for the important improvements which he made in the steam-engine almost merits the title of its inventor, was the son of a wealthy and honourable citizen of Greenock, and was born there January 19, 1736. Of feeble health but unusually quick intelligence, signs were not wanting in his childhood of the passion that was to rule him as a man. Acquiring a taste for mechanics, he chose the trade of mathematical instrument maker, learnt it in London, where he spent a year (1755-56), and settled at Glasgow. He was refused leave to establish a shop because he was not a freeman of the borough, but what the town refused the university gave him, and he took up his quarters within the university buildings. Diligent and successful in his trade, he was at the same time a close student, and enjoyed the kindly regard of the leading men of the university, among them Adam Smith, Dr Black, the chemist, Simpson, the mathematician, and Dr Dick. His studies and experiments on the applicability of steam as a motive power began about 1768, and were shared by his friend Robison, afterwards professor of natural philosophy. Three years later he constructed a model high-pressure engine, and in 1763 the examination and repair of a model of Newcomen's engine led him straight into the path of original invention. The principal features of his own engine were clearly outlined in 1765, and he made a second model. A third and larger one was completed three years later, and in January, 1769, he obtained a patent for it. He had just before given up his original trade, and now being prevented by untoward circumstances from continuing his experiments, he occupied himself with various engineering works, canals, bridges, harbours, &c. He practised also as a surveyor, and invented an improved micrometer. Early in 1774, on the invitation of Matthew Boulton, founder of the Soho Works, Birmingham, he entered into partnership with him; that by the combination of scientific faculty and business experience and sagacity, the manufacture of steam-engines might be hopefully undertaken on a large scale. A fourth model was constructed, the term of the patent was extended, and by the frank and liberal policy of the firm all kinds of difficulties, mechanical, financial, and social, were overcome, and Watt's wonderful steam-engine with its separate condenser, uniformly worn planet, steam-pressed piston, and sun-and-manufactories. The credit of the invention of the crank and fly-wheel was warmly disputed between Watt and Pickard, who got a patent for it. To Watt belongs the invention of the double-acting principle, parallel motion, and the regulating action of the governor. Years of vexatious and most unjust litigation harassed the noble inventor, and in 1800 he retired from the business, his sons having been admitted to it several years previously. Watt was the inventor of the "copying press," and of a method of

warming houses by steam. He also introduced into this country the method of bleaching by chlorine, and by his researches and suggestions on water came very near to the honour of the discovery of its composition, which was the triumph of Cavendish. The evening of his laborious and useful life was calm and cheerful. His intellect remained unimpaired to the last, and his vast stores of knowledge, admirable powers of conversation, simplicity of nature, and affectionate disposition, made him the charm of an admiring circle. Public honours were not wanting as acknowledgments of his great services to the world. He was chosen fellow of the Royal Societies of London and Edinburgh, correspondent of the Institute of France, and foreign associate of the Academy of Sciences; and was created LL.D. by the university of Glasgow. Died, August 25, 1819. A statue by Chantrey was erected to the memory of Watt in Westminster Abbey by national subscription; and a copy in bronze is placed in front of the Infirmary at Manchester. In 1854 appeared an important work on the Life of Watt, entitled "The Origin and Progress of the Mechanical Inventions of James Watt, illustrated by his Correspondence with his Friends and the Specifications of his Patents," by James F. Muirhead, M.A., in 3 vols. 8vo. And a new work has just appeared (1865), entitled "Lives of Boulton and Watt," by Samuel Smiles, author of "Lives of the Engineers." A portrait of Watt, by C. F. de Breda, R.A., is in the National Portrait Gallery.

WATT, GREGORY, son of the preceding, by his second wife, was born in 1777. He completed his education at the university of Glasgow, and being sent on account of his delicate health into Cornwall, he lodged in the house of the mother of Sir Humphrey Davy, and a warm friendship grew up between the two young students of science. Although Gregory Watt had been admitted to partnership in his father's business, he took no practical part in it, but his ill health did not prevent him from pursuing with zeal scientific studies and experiments. The only monument left of his rare ability is the paper entitled—"Observations on Basalt, and on the transition from the vitreous to the stony texture in the gradual Refrigeration of melted Basalt," written in 1804. Died October 16, of the same year.

WATT, ROBERT, a physician and bibliographer, was born in 1774, in Ayrshire; became president of the Faculty of Physicians and Surgeons at Glasgow, and died there, in 1819. He compiled the "Bibliotheca Britannica," and wrote some medical treatises.

WATTEAU, ANTOINE, an eminent French painter, was born in 1684, at Valenciennes. He commenced as a scene painter at Paris, but his genius soon raised him above that humble occupation; and having produced a picture which gained the prize at the Academy, his ardour to fame. His works were very numerous, but his subjects were almost limited to the class of *scènes champêtres*, representations of a sham rural life. The fashion which he set long prevailed in French art. Died, 1721.

WATTS, ISAAC, the Nonconformist divine, poet, and miscellaneous writer, was born at Southampton, July 17, 1674. He was the eldest son of a Nonconformist schoolmaster, was fond of books from his earliest years, and received his first instructions at the Free School of his native town. In 1696 he was sent to London, and passed the next three years in an academy conducted by Mr. Itow, a dissenting minister. Watts seriously injured his health by his excessive application to his studies; and he had already begun to try his hand as verse-maker, and on Latin essays. After leaving Mr. Itow he spent two years in private study at his father's house, and in 1698 became tutor to the son of Sir John Hartopp, then residing at Stoke Newington. Watts had been brought up a Nonconformist, he continued one from conviction, and his purpose was to devote himself to the ministry. He preached his first sermon on his birthday, 1698, having been chosen assistant to Dr Chauncy. About three years later he succeeded to the pastorate of the church which then met in Mark Lane, but in consequence of a severe illness which immediately attacked him, an assistant was appointed. A still severer attack broke him down in 1712, and for rest and change he visited his friend Sir Thomas Abney, at Theobalds. This visit, fruitful of good and joy to himself and the family, was prolonged for six-and-thirty years, Watts remaining the guest of Sir Thomas and of his widow till his death. Lady Abney revived him. Watts remained pastor of his church, and preached as often as his health allowed; refusing his salary when incapacitated for his work. In his retirement he pursued his studies, and composed and published his various theological and literary works, which in their day had a large circulation, and steadily served the cause of popular education as well as of religion. His sermons and theological dissertations are very numerous. His "Logic, or the right Use of Reason in the Inquiry after Truth," was published in 1725, and became a favourite text-book in the higher schools. Among his other writings are his "Improvement of the Mind," an expansion of passages in Locke's "Conduct of the Understanding;" an "Essay towards the Engagement of Charity Schools;" and the "Horæ Lyricæ." But Dr Watts has probably exerted his widest influence, and earned his most enduring celebrity by his metrical version of the Psalms of David, and his Hymns. These are, perhaps, now in danger of being underrated. But while it cannot be pretended that they are as a whole at all adequate expressions of the new and rich spiritual life and experience of men, it is certain that they would not have gained and held the place they occupy in religious observances unless they had much solid and appreciable truth and worth. And after all concessions are made to the depreciating critic, it must still be acknowledged that among Watts's Psalms and Hymns not a few possess the charms of truth, deep feeling, simple and felicitous expression, and are as truly pious as they are pious. These the world will let die. His "Divine and Moral Songs" will

 series, and school-rooms, and home firesides;
 they seem as permanent a part of children's
 books as *Aesop's Fables*, *Robinson Crusoe*,
 Grimm's *Fairy Tales*, and the *Pilgrim's Pro-*
 gress, and are likely to remain so in defiance
 of grave criticism and light laughter. Two
 handsomely illustrated editions of these
 Songs are among the publications of this
 year (1865). The last years of this venerable
 man were passed in great physical weak-
 ness, and were saddened by the unkindness
 of some of his relations. He died peacefully,
 November 25, 1748, and was buried in Bun-
 hill Fields. His monument was erected by
 Lady Abney and Sir John Hartopp.

WAYNELYTE, WILLIAM, a magnificent
 peccato of the 15th century, whose real name
 was Patten, was born at Wainfleet, in Lin-
 colnshire; and was educated at Winchester
 School, and at Oxford. He was made prov-
 ost of Eton, in 1442; bishop of Winchester,
 in 1447; and lord chancellor, in 1456. Died,
 1486. He was the founder of Magdalen Col-
 lege, Oxford, and of a free school at his
 native place.

WEAYER, JOHN. [WEEVEL.]
 WEBBE, SAMUEL, an eminent English
 musician, particularly celebrated for his
 glees, was born in 1740, and was apprenticed
 to a cabinet-maker, but he abandoned his
 trade, and gained a subsistence by copying
 music. By study and perseverance he be-
 came an excellent composer, and also ac-
 quired several languages. Died, 1816. His
 and are part songs form three volumes,
 and are much admired.

WEBER, CARL MARIA VON, the cele-
 brated musical composer, was born at Eutin,
 in Holstein, in 1786. His father was a mu-
 sician, and had him carefully educated. He
 learnt for a time painting and engraving,
 but music was his passion, and took its right-
 ful place. Among his musical teachers were
 Haueschkel, Michael Haydn, and Kalcher,
 and he began to compose at the age of
 twelve. After a short indulgence in the
 practice of lithography, he made various
 musical tours with his father, and about
 1803 visited Vienna, where he became ac-
 quainted with the celebrated Haydn and
 valuable Vogler, from whom he received
 become widely known, and filled successively
 by the offices of chapel-master at Breslau
 and Carlsruhe, and director of the opera at
 Prague; making in the mean time other
 professional journeys in Germany. At the
 close of 1816 he settled at Dresden, where
 he was the founder and director of the Ger-
 man Opera. In 1822 he went to Berlin to
 bring out his "Der Freischütz," the most
 celebrated of his compositions, and which at
 once gave him rank with the great masters
 of his art. It was produced in London and
 Paris two years later. In 1826 Weber visit-
 ed London to superintend the production of
 his "Oberon," which he had composed for
 Covent Garden Theatre. It was well re-
 ceived, and twenty-four representations
 were directed by the composer. He was,
 however, seriously out of health, and died
 at London, June 5, 1826. Weber was a man
 highly cultivated mind, of refined and

gentlemanly tastes and manners, and pure
 and upright in life. Of his other composi-
 tions may be named the operas of "Das
 Waldmädchen," recast under the title of
 "Aylvana," "Rübenahl," and "Euryanthe."
 A Life of Weber has been published by his
 son, and an English translation, by J. Y.
 Simpson, M.A., appeared in 1863.

WEBER, HENRY WILLIAM, archaeologist
 and miscellaneous writer, was born in 1783,
 at St Petersburg, of German parents; studied
 medicine at Edinburgh and at Jena; settled
 in Scotland, where he devoted himself to
 literary pursuits, and died in 1818. Among
 his publications are, "Metrical Romances of
 the Thirteenth, Fourteenth, and Fifteenth
 Centuries," "The Battle of Flodden Field,"
 a poem, &c.

WEBSTER, DANIEL, one of the greatest
 statesmen and orators of the United States,
 was born at Salisbury, in New Hampshire,
 in 1782, the last year of the revolutionary
 war, and, after finishing his legal studies,
 was admitted to practice in 1803, in New
 Hampshire, where he soon obtained business
 and reputation. But a career in the pro-
 vincial courts of that State was not very
 lucrative; and in 1810 he went to Boston,
 which was thenceforth his home. His pro-
 fessional fame and income increased rapidly;
 and he held the first rank both in the Mas-
 sachusetts courts and in the Supreme Court
 of the United States. Many of his forensic
 arguments have been published, and have
 attracted much praise for the subtlety and
 closeness of reasoning and the great extent
 of legal learning which they display. But
 it is as a statesman that Daniel Webster won
 his chief celebrity. He took his seat in
 Congress as member for New Hampshire in
 May, 1813, and from that time to his death
 he was prominently before the world as one
 of the mightiest leaders of the great Trans-
 Atlantic democracy. When he was first
 elected to congress, war was raging between
 America and England, and Mr Webster at
 once attracted attention by his fervent
 eloquence in urging his countrymen to at-
 tack England by sea, and also by the histori-
 cal knowledge and full acquaintance with
 international law which he displayed in the
 debates respecting the communication be-
 tween America and France as to the Berlin
 and Milan decrees. Probably his personal
 advantages did much to insure his success as
 an orator. His figure was commanding;
 his countenance was remarkable even in re-
 pose, but when animated by the excitement
 of debate it "spoke no less audibly than his
 words." His gestures were vehement, with-
 out being undignified; and his voice was
 unrivalled in power, in clearness, and in
 modulated variety of tone. In 1827 he became
 a member of the Senate. On various occa-
 sions he was an unsuccessful candidate for
 the presidency. In 1839 he visited Europe,
 and was received both in England and re-
 spect. In 1841 he became secretary for
 Foreign Affairs under President Harrison;
 and during his administration he settled
 with Lord Ashburton the great question of
 the "Boundary Line," which had more than
 once threatened to embroil England and the

United States. In 1830, on the accession of President Fillmore, he again became secretary of state, in which office he remained till his death. Mr Webster throughout his long political career was a steady supporter of whig principles, as the Americans then termed the principles which we designate as conservative. In 1832 he again became a candidate for the presidency; and to gain the favour of the Southern States he abandoned the opinions he had long maintained on the question of slavery, though in this case his sacrifice of principle was in vain; and it is conjectured that disappointment hastened his end. Died, 1852.

WEBSTER, JOHN, one of the greatest of early English dramatists, lived in the 17th century. So scanty is the information respecting him that his biographer and editor, Mr Dyce, confesses that he can do little more than enumerate his works. Webster's first play was that entitled "The White Devil," published in 1612. He had, however, previously composed several plays in conjunction with other dramatists, Chettle, Decker, Drayton, Heywood, &c. His "Duchess of Malfi," produced in 1616 and published seven years later, and "Appius and Virginia," published in 1654, are perhaps his greatest works. The works of Webster were first collected and edited by Mr Dyce in 1830, and a new edition, revised by him, was published in 1857.

WEBSTER, NOAH, LL.D., the eminent American lexicographer, was born in West Hartford, United States, in 1758. His ancestor, John Webster, was one of the earliest English settlers in Hartford, and was subsequently governor of Connecticut. Noah, his father, and two other Websters, were in the army on the occasion of Burgoyne's expedition to Canada. Restored to more peaceful pursuits, he continued his studies, and in 1781 was called to the bar. He abandoned the law, however, became a schoolmaster and author, and published the "First Part of a Grammatical Institute," "Sketches of American Policy," and other works, and also established and conducted a daily paper in New York. But the work on which his reputation is founded is his elaborate English Dictionary, which, notwithstanding it contains some very serious mistakes in etymology and the analogy of languages, is a vast monument of his ability and industry. Died, May 28, 1843; aged 85.

WEBSTER, THOMAS, professor of Geology in the London University, was a native of the Orkneys, and was educated as an architect. Having become acquainted with Count Rumford, whom he assisted in his researches into the principles of domestic economy, he abandoned his original profession, and engaged in scientific pursuits. His favourite study was geology; and a paper on the "Fresh-water Beds," in the Isle of Wight, which appeared in the Transactions of the Geological Society, in 1814, not only brought him into notice in that department of science, but obtained for him, in the first instance, the office of keeper of the Society's museum and draftsman, and, subsequently, those of house-secretary and curator. His last literary occupation was the "Encyclopedia of Domestic Economy." Died, Dec. 26, 1844, aged 71.

WEDDERBURN, ALEXANDER, (ROBBERLYN, Earl of.)

WEDGWOOD, JOSIAH, the great English potter, was born at Burslem in 1730, of a family long settled there as potters. The youngest of thirteen children, he was early left an orphan, and was apprenticed to his elder brother; but a severe illness left him lame and incapable of continuing his occupation as a "thrower." He soon showed great skill in the production of novel kinds of ornamental and coloured pottery. After carrying on business with two partners successively, he established himself at Burslem in 1760, and his business grew rapidly. He made tortoise-shell and marble plates, flower-vases, white stone-ware, and green glazed earthen ware, and soon produced his beautiful cream-coloured Queen's-ware, and the unglazed black porcelain. In this ware he imitated the vases of the ancients. In 1766, requiring larger works, he founded the village of Etruria, opened a house in London, which was conducted by his new partner, Bentley, and soon after engaged the great sculptor Flaxman as a designer. Wedgwood by his energy, good taste, and success almost created a new branch of commerce, and by the beautiful works of art which he produced—cameos, medallions, miniature sculptures, painted vases, &c.—greatly raised the standard of national taste, and excited a healthy rivalry abroad. In 1790 he achieved his greatest triumph in his fine imitation of the Portland (Barberin) Vase, of which he executed fifty copies. He was chosen F.R.S. and F.S.A.; was chief promoter of the Grand Trunk Canal; established schools, and made roads for the potters; amassed a great fortune, and died at Etruria, in 1795. A new life of this artist by Mr Jewitt has recently appeared, 1865, and another by Miss Meynard is in course of publication.

WENIX, or WENINX, JAN BAPTISTA, the elder, an eminent Dutch painter, was born at Amsterdam in 1621. He was the son of an architect, and early displaying remarkable talent for drawing, became a pupil of Bloemart at Utrecht, and afterwards of St. Nicholas Major. He visited Rome, and spent several years there. His pictures are of almost all classes of subjects, and though rapidly executed, are sometimes finely finished. He excelled in painting birds. Wenix married a daughter of the painter Gles Hondelcoeter. Died, 1660.

WENIX, JAN, the younger, son of the preceding, and also an excellent painter, was born at Amsterdam in 1644. He was taught by his father, and ultimately surpassed him, especially in colouring. His reputation rests chiefly on his hunting-pieces and pictures of dead game. He was for some time in the service of Johann Wilhelm, the elector-palatine. Died at Amsterdam, 1719.

WEYER, JOHN, an English antiquary, was a native of Lancashire, and educated at Cambridge. He published a work of great interest and value, entitled "Ancient Funerary Monuments in Great Britain and Ireland, and Isles adjacent," and died about 1630.

WEIGEL, ERARD, an eminent mathematician and astronomer of the 17th century. Died, 1699.

JOHAI, the great English artist at Burslem in 1730, of a d there as potter. The on children, he was early and was apprenticed to him at a severe illness left him of continuing his occu-
"ower." He soon showed production of novel kinds of coloured pottery. After success with two partners established himself at Burslem business grew rapidly, shell and marble plates, to stone-ware, and green ware, and soon produced the coloured Queen's-ware, and k porcelain. In his various of the ancients. In gress works, he founded the, opened a house in London, acted by his new partner, n after engaged the great n as a designer. Wedgwood taste, and success almost ranch of commerce, and by rks of art which he prece-
dillions, miniature sculp-
, &c.—greatly raised the ount taste, and excited a
brond. In 1790 he achieved uph in his fine imitation of
rberful) Vase, of which he
s. He was chosen F.R.S.
a chief promoter of the
and; established schools, and
the potteries; amassed a great
at Etruria, in 1793. A see
by Mr Jewitt has recently
and another by Miss Nic-
of publiction.

AVENINX, JAN BAPTISTA, eminent Dutch painter, was
in 1621. He was the son
and early displaying remark-
drawing, became a pupil of
recht, and afterwards of M.
He visited Rome, and spent
ere. His pictures are of all

Died, 1660.

AN, the younger, son of the
also an excellent painter, was
tam in 1644. He was taught
and ultimately surpassed him,
colouring. His reputation
his hunting-pieces and pic-
me. He was for some time
of Johann Wilhelm, the elect-
at Amsterdam, 1719.

JOHN, an English antiquary,
Lincolnshire, and educated at
published a work of great
entitled "Ancient Funer-
in Great Britain and Ireland
ent," and died about 1632.
WARD, an eminent math-
astronomer of the 17th cen-
99.

WEIMAR, ANNE AMALIE, Duchess of. [SAXE-WEIMAR.]

WEINHENNER, FRIEDRICH, an eminent German architect, born at Carlsruhe, in 1766. After studying in Italy, and travelling over the continent for the purpose of examining works of art, he returned to his native country, and founded an institution for the study of architecture; and from this school issued many distinguished artists. He erected several splendid edifices at Carlsruhe, Lelpsic, and other places, and wrote treatises on architecture. Died, 1826.

WEISS, CHRISTIAN FELIX, a German poet and litterateur, born at Annaberg, in Saxony, in 1726. He studied at the university of Lelpsic, where he gained the friendship of Lessing; attempted the composition of tragedies, then of comedies, more successfully, and at last found his right place as a writer of books for children, and of works on education. The most celebrated of these is that entitled "Der Kinder-Freund," or "Children's Friend," which was published periodically, and in its complete form fills many volumes. It furnished Berquin with the model and some of the materials of his "Ami des Enfants." Weiss wrote also some "Lieder für Kinder." He was editor for several years of the "Bibliothek der schönen Wissenschaften und freien Künste." Died, 1804. His son, CHRISTIAN ERNST, was an eminent jurist, and his grandson, CHRISTIAN HERMANN, a Lelpsic professor of philosophy.

WELD, THOMAS, an English cardinal, was born in 1773, at Lutworth Castle, Dorsetshire, and was the eldest son of Thomas Weld, Esq., founder of the Roman Catholic College at Stonyhurst, in Lancashire. He succeeded to his ancestral estates in 1810; but, on the death of his wife, in 1818, he took orders, and was some years afterwards consecrated condutor bishop of Canada. Being in Italy with his daughter, Lady de Clifford, in 1829, Pope Pius VIII. elevated him to the dignity of a cardinal. For many years previous he had devoted the whole of his time, and a great part of his fortune, to pious and charitable purposes; and he now relinquished his estates to his brother, Joseph Weld, Esq., who, in 1830, received Charles X. of France, and his family, as guests at Lutworth Castle, previous to their removal to Holywood House. He died, April 16, 1837.

WELLESLEY, SIR ARTHUR. [WEL- LINGTON, Duke of.]

WELLESLEY, RICHARD COLLEY, Marquis, a distinguished British statesman and diplomatist, was the eldest child of the first earl of Mornington, and was born at Dublin, in June, 1760. At an early age he was placed at Eton, and in due time transferred to Oxford; and at both those seats of learning his superior classical attainments attracted the notice of his contemporaries. His father dying in 1781, the young earl of Mornington took his seat in the Irish House of Peers; but it was not till after his entrance into the British House of Commons (first as member for Brecalston, and subsequently for New Windsor) that his statesman-like qualities could find ample room for their develop-

ment. He was created a British privy-councillor in 1793; and in 1797 he succeeded Lord Cornwallis as governor-general of India, being at the same time raised to the British peerage by the title of Baron Wellesley. Accompanied by his illustrious brother, Colonel Wellesley, afterwards duke of Wellington, he arrived in India at a most critical period, to take the supreme command. Buonaparte had accomplished the conquest of Egypt, and was supposed to meditate an attack upon our Indian possessions. The spirit of Tippoo Sultan, sovereign of the Mysore, rankled under his losses; and emissaries from the French government encouraged him in his secret plans for the recovery of the district of Colubatoor and the hill fortresses which he had been compelled to surrender. The first step taken by his lordship was to secure and fortify the island of Perim, which commands the entrance to the Straits of Babelmandeb; the next was to negotiate with Tippoo for the purpose of inducing him to abstain from intercourse with the French. The sultan, however, entertained a strong conviction that his true interests would be promoted by an alliance with the Directory of France. This being evident to the governor-general, he determined to strike an immediate blow, and the army, under General (afterwards Lord) Harris, was ordered to invest Seringapalam. The siege lasted a month, the town was taken by assault, the sultan slain, and his dominions partitioned. The governor-general was immediately raised a step in the Irish peerage, and received the title of Marquis Wellesley. He soon made a viceregal progress through the northern provinces of India, visiting the native princes, redressing grievances, and laying upon a broad basis the foundations of that vast empire. We pass over the various achievements by which, under the governor-general's direction, his illustrious brother and other British commanders succeeded in bringing to a successful termination the desperate wars in which they were engaged. At length, in 1805, he was, at his own request, recalled; the East India Company having, in the course of his wise administration, raised their revenue from seven millions to upwards of fifteen millions annually. On his return the ministers of the crown, as well as the East India Company, expressed the deep sense they entertained of his splendid services; but as there were many who thought his administration had been needlessly expensive, and that his conduct was, in some instances, unjust to the native princes, articles of impeachment were presented against him by Mr Parnell, a member of the House of Commons; they were, however, soon withdrawn, and a vote obtained in his favour. In 1809 his lordship was appointed ambassador to the supreme central junta of Spain; but dissensions in the British cabinet, and the fact that in the Peninsula military services were more required than diplomatic negotiations, caused his speedy return. On the death of the duke of Portland the Percival government was formed, and the Marquis Wellesley was prevailed upon to accept the office of secretary of state for foreign affairs.

This he held from Dec., 1809, till Jan., 1812; but differing from his colleagues on the Roman Catholic claims, and on other material points, he withdrew from the government. On the formation of Lord Liverpool's administration, after Mr Perceval had been assassinated, his lordship remained in opposition during which time he repeatedly called the attention of parliament to the situation in which his illustrious brother was placed in the Peninsula. He described the conduct of the Spanish government as feeble, irregular, and ill-directed; while he deplored the system adopted by the British ministers as "timid without prudence, and narrow without economy—profuse without the fruits of expenditure, and slow without the benefits of caution." In Dec., 1821, Lord Wellesley was appointed lord-lieutenant of Ireland, Sir Robert Peel being the home secretary. This, while it raised the hopes of the Roman Catholics, naturally disappointed the Protestants; and his arrival was converted into a signal for the renewed jealousy and rancour of both parties. His duties were, consequently, most arduous; and it is but bare justice to say that throughout his viceregal career he evinced great wisdom, discretion, and impartiality. His brother the duke having come into power, the noble marquis, in 1828, resigned his post, and continued out of office till Lord Grey became head of the government, when a second time, in 1833, he was appointed to the lord-lieutenancy of Ireland, having for a short time previously filled the office of lord-steward. During the administration of Sir Robert Peel, 1834-5, Lord Wellesley held no official appointment; but on the formation of the second Melbourne ministry, in April, 1835, he accepted the appointment of lord-chamberlain. His lordship, however, resigned it in the course of the same year, and never afterwards filled any public office. He had attained the age of 77, his health began to decline, and he thought the time had at length arrived for a season of repose. His death took place on the 26th of September, 1842. He had been the subject of five successive sovereigns—namely, George II., George III., George IV., William IV., and Victoria. His mother survived her husband half a century, and died in 1831, at the age of 89 years. She lived to see four of her sons attain to seats in the House of Lords by their own merits, and in reward for perhaps the greatest public services ever rendered by the members of one family. There is a bust of Marquis Wellesley, by Bacon, in the National Gallery.

WELLINGTON, ARTHUR WELLESLEY, Duke of, third son of the earl of Mornington, was born at Dangan Castle, or, as some allege, in Merrion Square, Dublin, in the early spring of 1769, the same memorable year that gave birth to Napoleon Buonaparte, Marshal Soult, Chateaubriand, and Alex. Humboldt. While still very young he was sent to Eton; and soon afterwards, to the military academy at Angers, where he remained six years. Before he was 18 he was gazetted as ensign in the 73rd regiment of foot, and in the same year moved as lieutenant into the 76th, passing during the sub-

sequent six years through the following grades—subaltern in the 41st and 12th light dragoons, captain in the 58th foot, major in the 33rd, and finally lieutenant-colonel in the same regiment. At the age of 21 he was returned to the Irish parliament for the borough of Trim, a portion of the Morleston estate, while his elder brother, Richard, who had early come under the notice of Pitt, was appointed commissioner for the affairs in India. Placed in command of the 33rd regiment by the influence of his brother, in his 24th year, he embarked at Cork in May, 1791, for Ostend, under somewhat inauspicious circumstances; for at that time the prestige of British valour had been lost by the repulse of the duke of York's troops in a series of engagements with the French. He joined the main body of the army at Antwerp, and was employed in covering the retreat, displaying that coolness and judgment in keeping in check a superior force, which won for him the commendations of his superior officers. In 1795 his regiment embarked for the West Indies, but the fleet was driven back; and next year his regiment was despatched to Bengal, Colonel Wellesley leading at Calcutta in Feb., 1797, at a most critical moment for the British power in India. War had just been declared against Tipoo Sultan, and an army of 80,000 men, of which Colonel Wellesley's regiment formed part, marched against him. The siege of Seringapatam, in 1799, was the first great military operation in which he was engaged. After this the rise of Colonel Wellesley was comparatively rapid, and in little more than 2 years he had attained to a station of independence and almost vice-regal command, having been appointed civil and military governor of Seringapatam and Mysore. His next military adventure was the chasing of Doondiah Waugh, "the King of the Two Worlds," a robber chieftain, who had made himself formidable by his bravery and his strategic resources. But his military genius was first fully established by the great battle of Assaye, fought Sept. 23, 1803, which was gained under every disadvantage of locality and pre-arrangement, and inflicted a blow on the Mahratta power from which it never recovered. After this great achievement Wellesley became the hero of India. Rich gifts poured in upon him. The British inhabitants of Calcutta voted him a sword valued at 1000 guineas, the army a sword of plate valued at 2000 guineas, and the civil authorities poured in their congratulations and addresses; and what he valued more than all the rest, and exhibited on many occasions in after-life, was an address of the native inhabitants of Seringapatam, praying "that the God of all castes and colours would bless and reward him for his just and equal rule in Mysore." Wellesley, now Sir Arthur Wellesley, Knight Companion of the Bath,—the first instalment of that rich store of rank and honour that were subsequently showered upon him,—returned to England in September, 1805. After his marriage with the Hon. Miss Pakenham in April, 1806, he was engaged in the military and diplomatic movements which terminated in the surrender of Copenhagen, in

years through the following

morts on this occasion being acknowledged
 by the thanks of parliament. In 1806 he was
 elected M.P. for Lynn; in 1807, for Midshill;
 the same year he was appointed secretary
 for Ireland and privy-councillor, and was
 elected M.P. for Newport, in the Isle of
 Wight. Meanwhile Napoleon had swept
 over Europe, dictating laws from the Vistula
 to the Po, and almost threatening the in-
 tegrity and independence of England. Spain
 had been seized upon, and Joseph Bona-
 parte had been placed upon the throne, when
 the British government determined upon a
 military expedition to resist this aggression.
 On the 1st of August, 1808, Sir A. Wellesley
 landed in Mondego Bay, with 13,000 troops,
 midway between Lisbon and Oporto, march-
 ing rapidly on Lisbon, and would in all
 human probability have finished the cam-
 paign victoriously, when Sir H. Burrard, the
 general commanding-in-chief, in spite of the
 remonstrances of Sir A. Wellesley, counter-
 manded the manoeuvre, and thus embled the
 French general Junot to return to Lisbon.
 A series of disasters, followed by the treaty
 of Cintra, ensued; and, chagrined and indig-
 nant, Sir Arthur returned to England, after
 having gained two decisive battles, Itellen
 and Vimera, and driven the usurpers out of
 Portugal. Soon afterwards, Sir Arthur Wel-
 lesley submitted a plan for the defence of
 the Peninsula, which exhibited unusually
 comprehensive military views; and the eyes
 of the nation were instinctively turned upon
 its author as the man best able to conduct
 it. Resigning his office of secretary for
 Ireland, and his seat in parliament, to take
 the command of the British army, on the
 22nd of April, 1809, we find him on the
 Tagus, where his presence caused the most
 unbounded joy to the Portuguese. The famous
 passage of the Douro, and the defeat of
 Soult which followed, are among the most
 masterly exploits of this campaign. On the
 28th July was fought the great battle of Tal-
 avera, when the British troops were opposed
 by double their number of picked French
 veterans under Victor and Jourdain, encour-
 aged by the presence of King Joseph. This
 was the first great Peninsular engagement in
 which the French and British measured their
 relative strength; and for this victory the
 government raised the triumphant general to
 the peerage, and voted him a pension of
 £2000 per annum for two generations. In
 1810 he fought the battle of Busaco; after
 which he made his famous defence in the
 lines of Torres Vedras, where he maintained
 his position ten weeks in the face of a well-
 disciplined army of 50,000 men. In 1811 he
 advanced from Torres Vedras, and defeated
 the French at Fuentes d'Onore. In 1812 he
 took Ciudad Rodrigo and Badajoz by storm,
 the rapidity of which so astonished the
 French generals that they confessed them-
 selves "unable to account for it." In the
 same year Lord Wellington fought the battle
 of Salamanca, one of his most splendid vic-
 tories: French loss, 14,000; British, 5200.
 On the 12th August, 1812, the victorious
 general entered Madrid. Honours continued
 to be showered upon him by both countries;
 he received the thanks of parliament, was
 raised to the dignity of a marquis, and a

sum of £100,000 was voted to purchase him
 an estate. It is needless to follow his trim-
 phant career from the shores of Portugal to
 the frontier of France, where he ended the
 campaign by the decisive battle of Vittoria,
 in which the French lost their cannon,
 stores, and treasures, and a vast number of
 killed and wounded. In return for the
 £400,000 of Journalin, which was found in the
 field and transmitted to the Prince Regent,
 the latter sent Wellington the £400,000 of an
 English field-marshal. In 1814 the victory
 at Orthez was gained, with a loss on the
 French side of 14,000 men, the greater portion
 deserting; British loss 2300 men: "In the
 battle the French met the charge like lions,
 but the pursuit was like hare-hunting;
 prisoners were literally caught by the skirts
 as they ran." In the same year was fought
 the battle of Toulouse, in which Soult's best
 troops were routed, and the way opened for
 the British army to the heart of France. In
 six weeks, with scarcely 100,000 men, Lord
 Wellington had marched 600 miles, crossed
 six great rivers, gained two decisive battles,
 invested two fortresses, and, after driving
 120,000 veteran troops from Spain, stood on
 the summit of the Pyrenees a recognized
 conqueror. On the 28th June, 1814, Lord
 Wellington, who, while in Paris, had been
 advanced to the dignity of a duke, appeared
 in his place in parliament. The vocation
 was as splendid as one as could well be con-
 ceived. He appeared in his field-marshal's
 uniform, decorated with the Garter, and
 was introduced by the dukes of Beaufort
 and Richmond, when his various patents,
 as baron, viscount, earl, marquis, and duke,
 were severally read over. "The circumstance
 is without parallel in the history of this
 country; and, when the thanks of parlia-
 ment were read over to him, his reply was
 in his usual brief and characteristic style,
 two words for his comrades and one for
 himself. A feature of no little interest on
 this memorable occasion was the presence
 of Lady Mornington, the duke's mother,
 and the duchess of Wellington, his wife.
 The Commons had previously voted him
 £500,000 for the support of his dignity as a
 peer, and he soon afterwards left London
 for Vienna to assist at the congress for re-
 adjusting the affairs of Europe. But mean-
 while Napoleon had escaped from Elba, and
 all was again in commotion—the duke wrote
 at once to Lord Castlereagh, expressing his
 readiness to join the army, or do anything
 else the government pleased. No other
 man could of course be selected for so im-
 portant a duty; and he reached Brussels in
 April, occupying himself with preparing
 plans of the campaign, and organizing an
 efficient army out of the raw levies and
 incongruous materials he had to deal with.
 Napoleon's game was promptitude, while
 delay was that of his opponents; and early
 in June a powerful French army was as-
 sembled on the frontiers of Belgium, headed
 by Napoleon himself, and supported by all
 his veteran marshals and generals. The
 army of the Allies was opposed to an army
 of 70,000 French troops, chosen veterans,
 commanded by Napoleon himself; while the
 force commanded by the duke of Well-

ton consisted of English, Scotch, and Irish, and also of Dutch, Bruhwickers, Hanoverians, Belgians, and Nassau troops, forming in the whole, what the duke himself thought a "sad mixture," compared to his old trained veterans of the Peninsula—many of whom had sailed for America, with which country we were then at war. But fortune was once more on the side of the duke, and he gained his crowning victory at Waterloo, June 18, 1815, which changed the destinies of Europe, and hurled the French emperor from his throne to a prison and a grave. When the news of the victory of Waterloo reached this country, an additional grant of £200,000 was made to purchase a mansion and estate for the duke. A subscription of upwards of £100,000 was made up for the widows and orphans of the slain, the duke generously giving for the same purpose half of the parliamentary compensation due to him for the Peninsular prize-money. He was created prince of Waterloo by the king of the Netherlands, received a splendid sword from the corporation of London, and £60,000 as his share of the Waterloo prize-money, a magnificent dessert service of Dresden china from the king of Saxony, a silver plateau, valued at 10,000 guineas, from the king of Portugal, and a splendid silver-gilt shield; while a colossal trophy, formed of cannon taken at Salamanca, Vittoria, Toulouse, and Waterloo, was erected in Hyde Park by the ladies, at a cost of £10,000. It was not till some time after the great events of 1815 that the duke of Wellington took any prominent part in home politics. In 1818 he was appointed master-general of the ordnance; attending in parliament with great regularity, and voting with the Tory ministry of the day, but rarely taking any part in the debates. In 1823 he was nominated plenipotentiary to the congress of Verona; in 1826 he went to St Petersburg as ambassador; and in 1827 he succeeded the duke of York as commander-in-chief. The same year, Mr Canning being called on to form an administration, to the great annoyance of the Tory part of the government, Wellington, Eldon, and Peel and others refused to join him in any capacity, or upon any conditions. The duke even went so far as to throw up the commandership-in-chief. When charged with factious opposition in the House of Lords, for the purpose of obtaining the premiership for himself, he boldly denied it, being sensible that he was unqualified, and that he "should have been mad to think of it." In August, 1827, on the death of Canning, he resumed the commandership-in-chief under Lord Goderich. But this administration never came to maturity; and in 1828 the king sent for the duke, who assumed the office for which, eight months previously, he had declared his total incapacity. His position, however, was one of embarrassment; for the repeal of the Test and Corporation Acts, which the Government strenuously opposed in the House of Commons, was carried against them by a majority of forty-four. The cabinet was divided, but the duke cut the Gordian knot by supporting the bill in the House of Lords. His next difficulty was the Catholic Emancipa-

tion Bill. The duke had long been opposed to the removal of the Catholic disabilities; but in February, 1829, he gave his sanction to the introduction of a measure for this purpose, though his change of opinion laid him open to the most bitter assaults, as guilty of dereliction of principle. Amongst other attacks on the Ministry, the earl of Winchester did not scruple to write that the design of the premier had been all along to break down the constitution of England, and insidiously to introduce Popery into every department of the State. After explanation had been refused, the duke challenged his assailant, and they met in Battersea fields. It was, however, creditable to Lord Winchester's feelings, that, as an acknowledgment that he had been in the wrong, he drew his pistol in the air, and wrote a handsome letter of retraction. The question, however, could no longer be trifled with, and the duke's memorable declaration on that occasion is well known, "That if he could avoid even one month of civil war in the country, by any sacrifice, he would lay down his life in order to do it." In little more than a month the bill became the law of the land. The great question of Reform at length came on, and here the usual sagacity of the duke was at fault. George IV. having died in June, 1830, parliament was necessarily dissolved. But in the interval the French revolution had occurred, and given an impetus to the reform movement unknown before. The new parliament met on the 2nd of November, and, at the first sitting, in answer to a question from Earl Grey, the duke of Wellington made a speech which has become famous, in which he declared that the institutions of this country deserved the confidence of the country—that they could not be improved, and should not be altered, so long as he had power to prevent it. The sentiment of the speech was unmistakable, the tone was exasperating, and every one saw that the end of the Government was come. Notices of motion for reform were instantly given in both Houses, but before they could come on, ministers were defeated in the House of Commons on the question of the civil list; and on the 16th of November the duke of Wellington and his colleagues left office—not to resume it, except for a short interval, for upwards of ten years. In the reform debates in the new parliament the duke of Wellington took a prominent part as a member of the opposition, as well as the measure had reached the House of Lords. As might have been expected, he became more unpopular than ever in the worst days of the Liverpool administration. He was hooted in the streets, and accused of intriguing with Polignac, of aiding and encouraging the mad fatuity of Charles X. of making secret military preparations for the general massacre of the people of London; and the saviour of Europe was obliged to get iron blinds put to his windows to keep out the stones, and it was a serious trait in the duke's character that he never removed them. On the passing of the Reform Bill, the duke of Wellington retired, for some time, from anything like a leading

uke had long been opposed to the Catholic disabilities; but in 1799, he gave his sanction to the Bill for a measure for this purpose, and in consequence of opinion laid him open to severe assaults, as guilty of demerit. Amongst other attacks, the earl of Winchelsea wrote that the design had been all along to break the constitution of England, and to introduce Popery into every department of the State. After all explanations, the duke challenged his enemies to meet in Battersea fields. The result was creditable to Lord Winchelsea, that, as an acknowledgment of the duke's conduct, he was to be named in the air, and wrote a handsome notice in the Standard. The question, however, was no longer to be trifled with, and the duke's declaration on that occasion was, "That if he could avoid the death of civil war in the country, he would lay down his life for it." In little more than a year, he became the law of the land, and the question of Reform at length was decided in his favour. George IV. having died, the duke, in 1820, parliament was necessarily dissolved. In the interval the French Revolution occurred, and given an impetus to the movement unknown before. The House of Commons met on the 2nd of November, at the first sitting, in answer to a message from Earl Grey, the duke made a speech which has been recorded in which he declared that the duty of this country deserved the name of the country—that they could not be divided, and should not be altered, and he had power to prevent it. The speech was unmistakable, and was exasperating, and every one at the end of the Government was in a state of motion for reform was in motion in both Houses, but before any measure came on, ministers were defeated in the House of Commons on the question of the Reform Bill; and on the 16th of November, 1820, the duke and his colleagues were called upon to resume it, except for a short time, for upwards of ten years. In the debates in the new parliament, the duke took a prominent part, as a member of the opposition, as soon as the measure had reached the House of Commons might have been expected, he was unpopular than ever. In the year 1821, the Duke of the Liverpool administration was attacked in the streets, and was severely wounded by Polignac, of siding with the mad faculty of Charles I. secret military preparations for the massacre of the people of London, the saviour of Europe was at that time in the iron blinds put to his windows, the stones, and it was a circumstance of the duke's character that he never returned. On the passing of the Reform Bill, the duke of Wellington retired, far from anything like a leading

part in public life; but he did not relax his attendance at the House, where he continued to take a share in the more important debates. The reform ministry went on, for a while, prosperously and vigorously. The popular demand having been complied with, the general excitement abated; and the people, who seldom bear long grudges, began once more to recognize in the fancied colleague of Prince Polignac the hero of the Peninsula and of Waterloo. Accordingly, his popularity grew apace, and the hostilities of a year before changed to acclamations. In 1834 he was installed as chancellor of the university of Oxford. Meantime, the Whigs having been greatly weakened by the withdrawal of Earl Grey, and afterwards by the death of Lord Spencer, and the consequent transference of Lord Althorp to the Upper House, in November, 1834, King William IV. suddenly dismissed the cabinet, and called in the duke of Wellington, who advised his Majesty to send for Sir Robert Peel, who was then in Italy. Meanwhile his Grace offered, as a temporary arrangement, to carry on the government. This plan was agreed to, and the duke of Wellington became for the time the whole cabinet, to the strong indignation of the liberal party, who denounced the arrangement as utterly unconstitutional, and proclaimed that its author ought to be impeached for usurpation. On Sir Robert Peel's return from Italy, the duke of Wellington assumed the duties of the foreign office. This was the last definite political post which he held. In 1835 he resigned his office on the defeat of Sir Robert Peel in the House of Commons; in 1839 he supported Sir Robert in his refusal to take office on the ground of the so-called "Bedchamber Plot;" and in August of the same year, as lord warden of the Cinque Ports, he was entertained at a great banquet at Dover, which is memorable for having brought his old antagonist Lord Brougham forward as his panegyrist. In 1841, on the return of Sir Robert Peel to power, the duke became a member of the cabinet, but without office, and supported that able minister throughout all his plans of commercial reform. In 1842 he was re-appointed, on Lord Hill's retirement, to the commandership-in-chief of the army, which post he retained till his death. Down to his latest moments no man was ever more frequently summoned to give counsel to royalty in difficulties, and he was always regarded as the indispensable adjuster and regulator of state affairs. Meanwhile years came on apace. Still his Grace—who was now familiarly and universally designated "The Duke"—appeared regularly in his place in the House of Lords, and took part in every discussion of importance. It has been truly said that the duke knew no dotage. Bright and clear in intellect, though growing feeble in bodily power, he was to the last, if we reckon ripeness of wisdom along with honesty of purpose and vigour of action, what Talleyrand called him long ago, "the most capable man in England;" and what Tenyson, in his noble "Ode," has more eloquently called him—

" * * * that tower of strength,
Which stood four-square to all the winds
that blew!"

The last speech he delivered in parliament was on June 22, 1852. After the dissolution of parliament he went to reside at Walmer Castle; and on the 13th Sept. he retired to rest, apparently in the full enjoyment of health, though in his 84th year. Next morning the duke's servant went to rouse his venerable master at the accustomed hour of six; but he refused to rise, and desired that a surgeon might be sent for. An hour or two later the veteran was seized with speechlessness and incontinence. In the course of the day he recovered his consciousness, but not speech; and in the afternoon he gently sank beneath the stroke that had missed him in a hundred battle-fields. The sensation produced by the announcement of this sudden though long-anticipated event was universal and profound. On hearing of it, her Majesty, and her family and household, in their privacy at Balmoral, immediately paid those outward tokens of respect for the memory of the duke of Wellington which, in courts, are usually reserved for royalty alone. At the same time she signified, through her prime minister, her desire that public honours should be paid to the deceased; but that the Interment should be postponed until after the meeting of parliament, in order that the representatives of the people might determine the mode of paying due respect to the ashes of the great commander, and that those honours might be the expression of the mind of the British nation, and not the dictate of persons, though royal, partiality. This was accordingly done; and on the 18th November, 1852, the body of the illustrious duke, after lying in state in Chelsea for five days, was conveyed with unprecedented honours to St Paul's Cathedral, where the hero of the land now reposes, side by side with Nelson, his brother hero of the sea. In every relation of life Wellington's guiding principle was an energetic and unhesitating obedience to the call of duty. Amidst the glory of a thousand victories, and the opulence of honours reaped as a harvest grown on the very heights of civilized Europe, perhaps his most lasting distinction will be that he grew with time, and that a nature plastic enough to be moulded by the pressure of successive events adapted itself, to the last, to a condition of things the most opposite to that which surrounded him in his youth. With native aristocratic tendencies, which no less than his constitutional temperament led him far towards absolutism, he accepted the Reform Bill, emancipated the Catholics, and liberated the commerce of the country. A Spartan in his native manners, he was the dignified Athenian of polished society; a soldier almost from his birth, he was the head of one of the most celebrated universities in the world; while, as if to complete the circle of his glory, his immortal "Despatches," forming, with the "Supplementary Despatches, Correspondence, &c.," 24 vols. 8vo., have gained for him a literary reputation which even few professed writers are destined to obtain. Several biographies

of the duke have been published. A bust, after Nollekens, by Baily, is in the National Gallery.

WELLS, CHARLES WILLIAM, physician and natural philosopher, was born of Scotch parents at Charleston, in South Carolina, in 1757. He was sent to Scotland to be educated, and in consequence of the events of the American war, crossed the Atlantic several times. He graduated M.D. at Edinburgh, began to practise in London in 1785, and distinguished himself both in his profession and as a man of science, became physician to St Thomas's Hospital, and fellow of the Royal Society. He is deservedly remembered for his "Essay on Dew," published in 1814, of which Sir John Herschel, in his "Discourse of the Study of Natural Philosophy," speaks as "one of the most beautiful specimens of inductive experimental inquiry lying within a moderate compass." Dr Wells contributed several memoirs to the Royal Society, and numerous papers on general subjects to periodical literature. A collected edition of his writings, with an autobiography, appeared after his death. Died, 1817.

WELSTED, LEONARD, an English poet, dramatist, and miscellaneous writer. His name would probably have been forgotten but for Pope's lines on him in the "Dunciad." Born, 1699; died, 1749.

WENCESLAUS, king of Bohemia, and emperor of the West, was eldest son of the emperor Charles IV., and was born in 1361. When two years old he was crowned king of Bohemia, at sixteen king of the Romans, and in 1378 succeeded his father in the empire. He had been faultily educated, and his life is depicted as a tissue of sensuality, cruelty, and meanness. His tyrannies roused the free cities of the empire to form a league in self-defence, and this in turn led to a counter-league of the princes, and a war between them. The emperor was powerless to suppress these troubles, as he also was to put an end to those growing out of the schism in the papacy. Among his unjust and cruel measures was that of cancelling all debts due to Jews. He tortured and had John Nepomuk, a Bohemian preacher, drowned, in 1393; and the same year his Bohemian nobles imprisoned him for some months. The doctrines of Wycliffe having penetrated into Bohemia, and the preaching of Huss causing much excitement, Wenceslaus attended the diet at Frankfort, and pretended to be desirous of promoting the peace of the church. Soon afterwards the electors consulted as to deposing him, and this was effected in 1400. He still continued to call himself emperor, although another was elected, and he retained the crown of Bohemia till his death. The entrance of Zizka and his armed Hussites into Prague, in August, 1419, agitated him so deeply that he died of apoplexy a few days later. It is noteworthy that Aeneas Sylvius, in speaking of this king, says nothing of the enormities commonly laid to his charge.

WENTWORTH, THOMAS. [STRAF-FORD, Earl of.]

WERGELAND, HENRIK ARNOLD, a Norwegian poet and miscellaneous writer,

born at Christiansand in 1808. He finished his education at the university of Christiania, became a clergyman, and curate to his father in the parish of Eidsvold, and at first attracted public notice by his political articles and poems. He was the passionate advocate for the separate existence of Norway, in opposition to the party who desired to see a close political union of Sweden, Denmark, and Norway. In 1836 he had the appointment of librarian to the university, having quitted the church two years previously. Habits of intemperance broke up his health, and he died in 1845. His writings were published after his death, in nine volumes, under the editorship of Lassen.

WERNER, ABRAHAM GOTTLÖB, a celebrated German mineralogist, born in Upper Lusatia, in 1750. His treatise, "On the external Characteristics of Minerals," procured him the professorship of mineralogy at Freyberg, where his lectures on geology and mineralogy were attended by students from various parts of Europe. He was also keeper of the Cabinet of Natural History, and councillor of the mines in Saxony. His cabinet of minerals, consisting of 100,000 specimens, and which was unrivalled for completeness and arrangement, he sold for 40,000 crowns, reserving the interest of 33,000 to revert, at the death of his sister, to the Mineralogical Academy of Freyberg. To him the science is highly indebted for its systematic arrangement; and he may, in fact, be considered the Linnaeus of mineralogy. Died, 1817.

WERNER, FRIEDRICH LUDWIG ZACHARIAS, a German dramatist, was born at Königsberg, in 1768, and studied philosophy under Kant. In 1801 he published, at Berlin, "The Sons of the Valley," which was followed by "The Templars in Cyprus," and "The Brethren of the Cross." He was very eccentric in his thoughts and habits, and occupied himself with many romantic projects. At length, in 1811, he embraced the Catholic faith, studied theology, and was ordained a priest. He wrote several tragedies and religious pieces, and died in 1833.

WERNER, PAUL VON, a celebrated Prussian general, born in 1707. He displayed great bravery at the head of his troops at the battles of Prague, Kollin, Breslau, &c., and, in 1759, he drove General de Ville out of Silesia, and raised the siege of Colberg. He was afterwards taken prisoner by the Russians, and the most advantageous offers were made him by the Czar Peter III. to induce him to enter into his service, but he rejected them, and, returning to Prussia, was again successfully employed in his country's service, and died in 1785.

WESLEY, SAMUEL, an English divine, was born about 1662, in Dorsetshire; was admitted a servitor of Exeter College, Oxford; and, on taking orders, obtained the living of South Ormesby, in Lincolnshire, and afterwards the rectories of Egworth and Wroote. He wrote a volume of poems, entitled "Maggots," "The Life of Christ," an heroic poem, "The History of the Old and New Testament, in verse," 3 vols. &c. Died, 1735.

WESLEY, SAMUEL, eldest son of the

anaand in 1808. He finished at the university of Christiania, clergyman, and curate to his parish of Eldavold, and at first no notice by his political views. He was the passionate separate existence of Norway to the party who desired political union of Sweden and Norway. In 1836 he had the honor of being elected librarian to the university, and the church two years later the party of intemperance broke up and he died in 1846. His writings published after his death, in 1848, under the editorship of

ABRAHAM GOTTLOB, a celebrated mineralogist, born in Upper Saxony. His treatise, "On the characteristics of Minerals," procured him the professorship of mineralogy at Halle, where he gave his lectures on geology and was attended by students from all parts of Europe. He was also keeper of the cabinet of Natural History, and counsellor in Saxony. His cabinet consisting of 100,000 specimens, was unrivalled for completeness. He sold for 40,000 rix-dollars, interest of 33,000 to convert, at his sister, to the Mineralogical Museum at Freiberg. To him the science of mineralogy is systematically arranged, and may, in fact, be considered the foundation of mineralogy. Died, 1817.

FRIEDRICH LUDWIG ZACHARIAS, a dramatist, was born at Koenigsberg in 1768, and studied philosophy at Halle. In 1801 he published, at Berlin, "The Valley," which was followed by "The Camps in Cyprus," and "The Cross." He was very peculiar in his thoughts and habits, and self-willed with many romantic notions. In 1811, he embraced the Catholic religion, studied theology, and was ordained priest. He wrote several tragical pieces, and died in 1835.

PAUL VON, a celebrated Prussian general, born in 1707. He displayed great talents at the head of his troops at the battle of Prague, Kollin, Breslau, &c., and raised the siege of Colberg, and afterwards taken prisoner by the Russians. He was the most advantageous officer in the army of the Czar Peter III. He entered into his service, but he was soon dismissed, and, returning to Prussia, he was again employed in his successful military career, and died in 1765.

SAMUEL, an English divine, born about 1662, in Dorsetshire; was professor of Exeter College, Oxford, on taking orders, obtained the rectory of Ormesby, in Lincolnshire, and the rectories of Epworth and Thoresby. He wrote a volume of sermons, entitled, "The Life of Christ," and "The History of the Old Testament, in verso," 3 vols. 8vo.

SAMUEL, eldest son of the

preceding, was born at Epworth, about 1692; was educated at Westminster and Christchurch, Oxford; became usher in Westminster School, and in 1732 was appointed master of the grammar-school at Tiverton, where he died in 1739. He was a rigid high-churchman, and wholly disapproved of the course of his brothers John and Charles. He was the author of "The Battle of the Sexes," and other poems.

WESLEY, JOHN, founder of Wesleyan Methodism, was the son of Samuel Wesley the elder, and was born at Epworth, in 1703. In 1730, while at Oxford University, he and his brother, with a few other students, formed themselves into a society for the purpose of mutual edification in religious exercises. So singular an association excited considerable notice, and, among other nicknames bestowed upon the members, that of Methodists was applied to them. Mr Wesley, with some others, chiefly Moravians, went to Georgia, in America, in 1735, with a view of converting the Indians. After a stay there of two years, he was compelled to leave the country in consequence of a love affair, and the quarrel in which it involved him. He therefore returned to England, where Whitfield's preaching was then producing much excitement. The same year, 1738, was marked by a great religious change in the mind of Wesley, and by his visit to the Moravian settlement at Herrnhut. In the following year he commenced itinerant preacher, and gathered many followers. The churches being shut against him, he built spacious meeting-houses in London, Bristol, and other places. For some time he was united with Whitfield; but differences arising, respecting the doctrine of election, they separated, and the Methodists were denominated according to their respective leaders. He had already separated himself from the Moravians. Wesley was indefatigable in his labours, and almost continually engaged in travelling over England, Wales, Scotland, and Ireland. His society, though consisting of many thousands, was well organized, and he preserved his influence over it to the last. He published some volumes of hymns, numerous sermons, political tracts, and controversial treatises. In Wesley's countenance mildness and gravity were blended, and in old age he appeared extremely venerable: in manner he was social, polite, and conversable: in the pulpit he was fluent, clear, and argumentative. The approach of old age did not in the least abate his zeal and diligence; he was almost perpetually travelling; and his religious services, setting aside his literary and controversial labours, were almost beyond calculation. His married life was very unhappy. His wife, whom he married about 1760, appears to have tormented him with jealousy and refractory conduct. She several times left him, and the 8th year of his age. A portrait of Wesley, by Home, is in the National Collection.

WESLEY, CHARLES, younger brother of the preceding, was born at Epworth in 1708. He was educated at Westminster School, and at Christchurch, Oxford, and was asso-

ciated with his brother John in all his labours in the establishment and spread of Methodism. Yet he was very unlike him in character and disposition. Charles Wesley was of a more genial and generous nature, and did not think liveliness and laughter incompatible with genuine piety. He wrote many of the hymns for his brother's collection, and some of them have much poetic spirit and elegance of expression. Died, at London, 1788.

WESLEY, SAMUEL, an eminent musician, born in 1766, was the younger son of the preceding Charles Wesley, and nephew to the celebrated John Wesley. When only three years old he could play and extemporize freely on the organ; and he became not only one of the most astonishing extemporaneous players in Europe, but a fine composer and an excellent classical scholar. In 1787, from an accidental fall, which nearly proved fatal, Mr Wesley so seriously injured his head, that for seven years after he remained in a low desponding state, and during the remainder of his life was subject to periodical attacks of nervous irritability. During his intervals of health he prosecuted the science of music with the utmost ardour; he composed many pieces, and was much engaged in public performances on the organ. His compositions are grave and masterly; his melodies sweet, varied, and novel. He possessed remarkable energy of mind, united with rare simplicity of character. Died, Oct. 11, 1837, aged 71.

WESSEL, JOHN, a celebrated Dutch theologian, sometimes called a precursor of Luther, was born at Groningen in 1419. He became a great Hebrew and Greek scholar, taught theology at Heidelberg, Cologne, Louvain, and Paris, and in the disputes between the Realists and Nominalists he adopted the views of the latter. He was the friend of Francisco della Rovere (afterwards Pope Sixtus IV.), and spent some years at Rome during his pontificate. He never took orders, but published several treatises on theological and ecclesiastical subjects, and fearlessly attacked what he believed to be false doctrines, as well as flagrant abuses in practice. Of course he was suspected of heresy. Died at Groningen in 1498. Professor Ullmann published in 1834 an interesting work entitled, "Johann Wessel, ein Vorgänger Luthers," which was republished in 1842 under the title "Reformatoren vor der Reformation." It has been translated into English.

WEST, BENJAMIN, the celebrated painter, president of the Royal Academy, was born in 1738, near Springfield, in Pennsylvania, of Quaker parents. After exercising his pencil in different parts of America, he went to Italy in 1760, and came to England in 1763. One of his earliest friends was Dr Drummond, archbishop of York, who introduced the young American artist to George III., by whose order he executed his picture of "The Departure of Regulus from Rome," and whose patronage he enjoyed about 40 years. On the death of Sir Joshua Reynolds, in 1792, Mr West, who had been a member of the Royal Academy

from its foundation, was elected president; which chair he enjoyed, with the exception of a short interval, till his death, in 1820. His "Death of General Wolfe" was among the first of his productions that attracted public notice, especially for the rational innovation on which he had ventured in it, of painting historical persons in a modern dress. And among his last and largest works were, "Death on the Pale Horse" and "Christ healing the Sick." West was buried in St Paul's, London. Five of his pictures are in the National Gallery; which also possess portraits of West, by Lawrence and Gilbert Stuart.

WEST, GILBERT, poet and miscellaneous writer, born in 1706, was educated at Christchurch, Oxford. He obtained the offices of clerk to the privy-council, and treasurer of Chelsea College; was the author of "Poems" and "Observations on the Resurrection;" and translated some of the Odes of Pindar. Died, 1756.

WESTALL, RICHARD, an eminent draughtsman and designer, born in 1765, was apprenticed to an engraver in heraldry on silver, &c.; but having studied at the Royal Academy, in 1786 he commenced his career as a painter, imparting to his water-colour paintings a brilliance and vigour before unknown. About this time he became the friend of Mr (afterwards Sir Thomas) Lawrence. Mr Westall produced a few historical paintings; but he is best known by his designs for Boydell's superb editions of Milton and Shakespeare, and as the illustrator of numerous other works. From the great facility with which he produced book designs, he was led into a great degree of mannerism. Like his friend, Sir Thomas Lawrence, he enjoyed royal patronage, giving her present Majesty (then Princess Victoria) lessons in drawing and painting. He died, aged 71, Dec. 4, 1836.

WESTALL, WILLIAM, a younger brother of the preceding, and like him an eminent artist, was born in 1782. In early life he accompanied Captain Flinders in his voyage round the world, on his return from which he illustrated Captain Flinders's work, and opened an exhibition in Brook Street, of his foreign sketches. In 1813 he was elected an associate of the Royal Academy. "Though little celebrated," says a contemporary, "for his oil pictures, he had a pleasant feeling for landscape nature, lake scenery more especially." He worked largely for book-sellers; and among other works which he illustrated may be mentioned, "A Series of Views of Picturesque and Romantic Scenery in Madelra, the Cape of Good Hope;" &c. fol. 1811-14; "Views of the Caves near Ingleton, &c. in Yorkshire," fol. 1818; "Britannia delineata," "Views in London and its Environs," 1825; "Picturesque Tour of the Thames," &c. Died, Jan. 22, 1850.

WESTMACOTT, Sir RICHARD, R.A., one of the most distinguished sculptors of modern times, was born in London in 1775. Having received the first rudiments of instruction in the studio of his father, who was a sculptor of some eminence in Mount-street, Grosvenor-square, he visited Rome in 1793, and studied for a time under Canova, and re-

ceived the following year from the Academy of Florence their first premium for sculpture. Having passed some years in the classic regions of Italy, and made himself familiar with the best remains of ancient art, he returned to England, and established himself in the west-end of London, where he soon gained an extensive reputation. In 1803 the Royal Academy elected him so as a sociate of their body, and he became in 1816 a Royal Academician. The works of art by which he is best known are his statues of Addison, Pitt, and Erskine, those of the duke of Bedford and of Charles James Fox, in Bedford and Russell Squares, and his monuments to Sir Ralph Abercromby, Lord Collingwood, and others, in Westminster Abbey and St Paul's Cathedral, together with the elegant and classical figure of Payche, so much admired by every lover of art for its elegance of form and chastity of expression. Besides these, he designed the colossal statue of Achilles in Hyde Park, and the statue of Nelson at the Liverpool Exchange, and, together with Flaxman and Baily, a portion of the figures on the frieze of the marble arch originally erected at Buckingham Palace, but now standing at Cumberland-gate. His latest work was the sculptured pediment of the British Museum. In 1827 he succeeded Flaxman as professor of sculpture in the Royal Academy, and held that appointment until his decease. Among the best known of his productions are "The Distressed Mother," which he executed in 1822 for the marquis of Lansdowne; "The Houseless Traveller," a copy of which is in Westminster Abbey; his "Euphrosyne," for the duke of Newcastle in 1837; his two statues, "Cupid" and "Psyche," in the possession of the duke of Bedford; together with a large alto-relievo, "The Death of Horace," which he executed for the earl of Egremont. He received the honour of knighthood, as an acknowledgment of his artistic merits, in 1837. Died, 1856. His son, Richard Westmacott, is professor of sculpture at the Royal Academy, and author of the "Handbook of Sculpture."

WESTON, STEPHEN, an eminent classical scholar and orientalist, was born at Exeter, in 1747; educated at Eton, and Exeter College, Oxford; obtained the living of Morehead, Devon, in 1777; but resigned his ecclesiastical preferment in 1780, and thereupon devoted himself wholly to literary pursuits. We can here find space for the enumeration of only a few of his works; among which may be mentioned, "A Specimen of the Conformity of the European Languages, particularly the English, with the Oriental Languages;" "Letters from Paris," 2 vols.; "Specimen of a Chinese Dictionary," besides various translations from the Chinese and Persian, in prose and verse; sermons, and works relative to philology, divinity, and antiquities. Died, 1830.

WESTON, WILLIAM, rector of Cambridge, in Gloucestershire, where he died in 1800, was the author of two very learned works, one entitled, "An Enquiry into the Rejection of the Christian Miracles by the Heathens;" the other, "Dissertation on

 Antiquity."

WETHERELL, SIR CHARLES, a distin-
 guished chancery lawyer, was the son of the
 learned Dean of Hereford, who for more
 than half a century was master of Universi-
 ty College, Oxford. He was born in 1770,
 received his education at Magdalen College,
 and in 1794 was called to the bar. For
 many years he practised, though but with
 moderate success, at the common law bar;
 and he resolved on quitting the courts of
 King's Bench and Common Pleas soon after
 Lord Eldon received the great seal. In 1818
 Mr Wetherell obtained a seat in parliament
 as member for Shaftesbury; and though he
 displayed much power and energy in debate,
 he slovenly attire, uncouth gestures, patch-
 work phraseology, fanciful illustrations,
 odd theories, recondite allusions, and old-
 fashioned jokes, tempted men to call him a
 buffoon when they ought to have admired
 his ingenuity, revered his learning, and
 honoured his consistency." From 1820 to
 1823 Sir Charles represented the city of
 Oxford; subsequently he sat for Plympton;
 and in 1830 he was elected for Boroughbridge,
 which was disfranchised by the Reform Act.
 In 1824 his just ambition was gratified in
 being appointed solicitor-general, and re-
 ceiving the honour of knighthood. Three
 years afterwards he succeeded Sir John
 Copley as attorney-general, but on Mr Can-
 ning assuming the reins of government he
 resigned. He again, however, came into
 office in 1828, under the duke of Wellington,
 but remained only 15 months, being inveter-
 ately opposed to Catholic emancipation,
 and determined, as he expressed himself, to
 have no connection with "the scarlet indi-
 vidual whose seat is on the seven hills." To
 the latest moment of his parliamentary
 career his zeal for Protestantism and his
 opposition to reform—either whig or radical—
 knew no abatement; and amidst a
 torrent of eloquence, learning, drollery, and
 enthusiasm, he closed his senatorial life, ex-
 claiming, "This is the last dying speech
 and confession of the member for Borough-
 bridge." Sir Charles held the office of re-
 corder of Bristol; and it was expected that
 his great unpopularity, as the marked op-
 ponent of the reform bill, would render him
 particularly obnoxious in that city, when
 he appeared there to hold the Michaelmas
 sessions for 1831. This was intimated to
 him, but he was unwilling to shrink from
 the discharge of a public duty, and (after
 consulting Lord Melbourne, the home sec-
 retary) he resolved to proceed to Bristol as
 his carriage was surrounded by an infuriated
 mob, who hooted at and pelted him with
 stones; and it was with the utmost diffi-
 culty that he and the other corporate
 authorities who accompanied him escaped
 without sustaining mortal injury. Of the
 disgraceful riots and burnings that took
 place on the following day and night, it is
 sufficient here to observe, that the subject of
 this memoir escaped the deadly peril that
 was designed for him, and continued to
 fulfil the duties of his office until his death
 in 1846, aged 76.

WETSTEIN, JOHANN JACOB, a learned
 theologian, was born in 1693, at Basel (whom
 several others of his family also distin-
 guished themselves by their acquirements).
 He was pastor in his native city from 1713
 till 1730, when his orthodoxy being suspected,
 he retired to Holland. He was soon recalled,
 but preferred to remain at Amsterdam, where
 he was made professor of Greek, and after-
 wards of ecclesiastical history. He devoted
 himself, with great assiduity and perseverance,
 to the restoration of the purity of the text
 of the New Testament; and, after collating
 the various Greek manuscripts which he
 could find in the principal European libra-
 ries, he published, in 1730, his "Prolego-
 mensa" to the Greek Testament. His
 valuable edition of the Greek text itself was
 published in 1751—52. Wetstein visited
 England several times, and was chosen fel-
 low of the Royal Society. Died, 1784.

WEYDEN, ROGER VANDER. [VANDER
 WEYDEN.]

WEYSE, CHRISTOPH ERNST FRIED-
 RICH, a dramatic and lyric composer of great
 eminence, was born at Altona, in 1774. From
 his relations, who were musical, he received
 instructions from his infancy; and his
 fine natural capacity was thus so much im-
 proved, that in 1799, when he was barely 25
 years old, the "Allgemeine Musikalische
 Zeitung," a very high musical authority, said
 of him, "He is one of the first performers on
 the pianoforte now living; in his fantasias
 he unites the science of Bach and the inex-
 haustible genius of Mozart; if he can succeed
 in reaching the taste of the latter, the art
 cannot be carried to greater perfection." Though
 to his musical studies he added a
 very diligent and extensive cultivation of
 philosophy, astronomy, medicine, and lan-
 guages, his compositions were very numerous
 and various. He composed "Floribella"
 and "Kenilworth," two admirable operas;
 "An Adventure in the Garden of Rosen-
 burg," a very spirited comic operetta; almost
 innumerable songs, so popular, that they are
 everywhere sung by the peasantry of Swe-
 den, where he found constant patronage.
 But it was chiefly in oratorios and other
 sacred music that he excelled; of which his
 "Ambrosian Chant," "Pentecost," "The
 Sacrifice of Jesus," &c., are excellent spec-
 imens. Died, 1842, aged 68.

WHARTON, HENRY, a learned divine
 and ecclesiastical historian, was born at
 Worstead, in Norfolk, in 1664. He was edu-
 cated at Caius College, Cambridge; became,
 in 1686, assistant to Dr Cave in the prepara-
 tion of his "Scriptorum Ecclesiasticorum
 Historia Literaria;" and soon after gradu-
 ated M.A., and entered the church. He
 obtained the favour and friendship of Dr
 Tenison, afterwards archbishop of Canter-
 bury, and of Archbishop Sancroft, who made
 him his chaplain. Wharton's life was spent
 in close literary labour, and his original
 works and learned compilations are very
 numerous. His most valuable work is that
 entitled "Anglia Sacra," a collection of
 biographies of English archbishops and
 bishops from the earliest times. It appeared
 in 2 vols. folio, in 1691. Wharton edited
 some of the writings of the Venerable Bede,

and Land's own Account of his Troubles and Trials; and made a sharp attack on the errors and defects of Burnet's History of the Reformation, and published several treatises against Romish errors. Died, at Newton, Cambridgeshire, in 1695.

WHARTON, THOMAS, Marquis of, was born in 1640, sat in several parliaments during the reigns of Charles II. and James II., in which he strenuously opposed the court, and at the revolution he joined the Prince of Orange, and was made a privy-councillor. He succeeded to the peerage in 1696, and the next year was made chief justice in eyre. He took part in negotiating the union with Scotland, and for two years held the post of lord-lieutenant of Ireland. Being a zealous Whig, and a firm supporter of the Hanoverian succession, he was raised to the rank of a marquis by George I. Died, 1715.

WHARTON, PHILIP, Duke of, son of the preceding, was born in 1698, and very early gave signs of those talents which he afterwards displayed in a manner that more disgraced than honoured their possessor. After having, during his travels, accepted the title of duke from the Pretender, he returned to England, and evinced the versatility of his political principles by becoming a warm champion of the existing government. Having impoverished himself by extravagance, he again changed his politics, and, retiring to the continent, intrigued with the Stuarts. He died in indigence, in Spain, 1731. His poems, letters, and miscellaneous pieces form 2 vols.

WHEATLEY, RICHARD, D.D., archbishop of Dublin, one of the most distinguished theological writers of his age, was born in London, in 1787. He was educated at Oriel College, Oxford, became a fellow of his college in 1811, and the next year took his master's degree. Among his contemporaries at Oxford were Keble, Arnold, Pusey, John Newnham, and many other men since of world-wide fame. In 1822 he was presented to the rectory of Halesworth, in Suffolk, and applied himself with characteristic energy to the duties of a parish clergyman, besides finding time to write. His country life did not last long, for in 1825 he was recalled to Oxford as Head of Alban Hall, a post which he held for five years. His literary activity during this period was extraordinary, and the subjects of his works very various. In 1831 he was appointed, by Earl Grey, archbishop of Dublin. It was two years after the passing of the Roman Catholic Relief Act, and he had the difficult task of carrying out, in the details of social, political, and religious life, the principle which it embodied. His known liberal views and sympathies, and his energy and honesty of work, fitted him for the task; and he won the hearty confidence and co-operation of Archbishop Murray. But many of his own clergy regarded him with suspicion or dislike, and after twenty years of hard labour, especially in the promotion of the system of unsectarian education, he retired from the National Board, finding it impossible to co-operate with Dr (now Cardinal) Cullen, Murray's successor. His clergy were gra-

dually reconciled to him, and his family, with his tacit acquiescence, took a very active part in the promotion of Irish Church Missions, and Ragged Schools and Refuges. Dr Wheatley took little part in the wider and more concerning religious controversies which arose after his settlement in Dublin. Among his distinguishing personal qualities were a "large munificence, genial hospitality, ever-ready wit, and solid common sense." During his Oxford life he was feared and disliked by many for his singular contempt for the prophecies, and his intolerance of mediocrity and pretentiousness. With his free thought, fearless questioning, and suspected orthodoxy, he had "a quill up for everybody," and Oxford, it has been said, breathed more freely when Wheatley left for Halesworth. The writings of Archbishop Wheatley are very numerous, and among the principal are—"Elements of Logic," first published in 1826, and very often reprinted; "Elements of Rhetoric," 1828 (both these works were originally contributed to the *Encyclopædia Metropolitana*); "Errors of Romanism traced to their Origin in Human Nature," 1830; "The Kingdom of Christ delineated," 1841; "Essays on some of the Difficulties in the Writings of St Paul," "Introduction to Political Economy," the substance of his lectures while he held the chair of political economy at Oxford, in 1830—31; and "Historic Doubts relative to Napoleon Bonaparte," 1821, a nut for certain freethinkers to crack. Dr Wheatley wrote several instructive manuals for the National Schools, but after the death of Archbishop Murray they were proscribed by the Board. He became bishop of Kildare, in 1846, by the union of that see with Dublin; was visitor of Trinity College; president of the Royal Irish Academy, and chancellor of the Order of St Patrick. He was also the founder of a professorship of political economy, in Dublin University. Dr Wheatley married in 1821, was left widower in 1860, and after a long decline, died at Dublin, October 8, 1863.

WHEATLEY, CHARLES, a divine of the church of England, and author of a "Rational Illustration of the Common Prayer." Died, 1742.

WHEATLEY, FRANCIS, a painter of some eminence, born in London, in 1747; died, 1801. He was a self-instructed artist, attained celebrity as a portrait painter, and excelled in the representation of rural scenes. He became R.A. in 1791.

WHEATON, HENRY, the distinguished American publicist and diplomatist, was born in Rhode Island, U.S., in 1785. He studied at Brown University, adopted the profession of the law, and was called to the bar. After a visit to Europe he settled at New York, where he became, in 1815, a judge in the Marine Court, and soon after reporter in the Supreme Court of the United States. In addition to his heavy professional duties he found time also for much miscellaneous literary labour, contributing to the "North American Review," and lecturing before several learned societies. After being employed for some years in the revision of the constitution and laws of the State of New

ENRY, the distinguished e and diplomatist, was born U.S. in 1785. He studied ity, adopted the profession as called to the bar. After e, he settled at New York, e, in 1815, a judge in the d soon after reporter to art of the United States. e heavy professional duties o for much miscellaneous ontributing to the "North w," and lecturing before ocieties. After being con- ars in the revision of the laws of the State of New

York, he was sent, in 1827, as charge d'affaires to Copenhagen. He held a similar post at Berlin from 1834 to 1837, when he was named minister plenipotentiary. In this important position he remained till 1846, enjoying the highest esteem and confidence not only of his countrymen, but of the governments and statesmen of Europe. Whately's great work, "The Elements of International Law," appeared in 1836, has passed through several editions, and is generally regarded as an authority. Among his other works are a "History of the Law of Nations in Europe and America from the earliest times to the Treaty of Washington;" "Reports of Cases argued and determined in the Supreme Court of the United States;" "History of the Northmen," &c. Whately received the degree of LL.D. from both Brown and Harvard Universities. Died, March 11, 1848, having been just appointed professor of International Law at Harvard University.

WHEELER, or WHEELER, SIR GEORGE, divine and traveller, was born in 1650, at Breda; was educated at Lincoln Hall, Oxford, travelled into Greece and Asia Minor, became a prebendary of Durham, vicar of Baslagstoke, and rector of Houghton-le-Sprigg, and died in 1723-4. Besides his "Journey into Greece," a valuable and authentic work, he wrote "The Protestant Monastery," and "An Account of the Churches of the Primitive Christians." He built a chapel on his estate in Spitalfields, which still bears his name.

WHEWELL, WILLIAM, D.D., F.R.S., master of Trinity College, Cambridge, was born at Lancaster about 1795. He was the son of a notable tradesman, was educated at the Free Grammar School of Lancaster, and at Trinity College, Cambridge, graduating B.A. in 1816, and becoming successively fellow, tutor, professor, and master. In 1829 he was elected professor of mineralogy, a post which he held four years; and in 1838 professor of moral philosophy. Three years later he was nominated to the mastership, and in that office actively promoted the introduction of the natural and moral sciences tripos, thus widening the basis of education, and founded prizes for the encouragement of the new studies. Early distinguished for his scientific attainments, he was chosen F.R.S. in 1820; was president of the British Association in 1841, and drew up the reports on the tides, and on the theories of heat, magnetism, and electricity. He was also an active fellow of the Geological Society, and of the Cambridge Philosophical Society. In 1855 he resigned his professorship on becoming vice-chancellor of the university. Dr Whewell was a man of singularly wide and varied attainments; of great physical and intellectual power; of great audacity in venturing upon any topics of discussion; manly and generous, and incapable of jealousy and manners. Sydney Smith's witty saying is well known, that "science was his forte and omniscience his foible." His chief fault was perhaps a certain roughness of manner, a bolsterous, overbearing spirit, offensive to those whom he silenced; but this manner was much softened by years;

and it could hardly abate the esteem, reverence, and love, with which he was regarded as the intelligent representative and champion of the university. He was rector of his college, and the university was proud of him. Some years before his death he built, as a gift to his college, a "Master's Hotel," or set of chambers for undergraduates. The works of Dr Whewell are numerous. The most important are—the Bridgewater "Treatise on Astronomy and General Physics;" "History of the Inductive Sciences," published in 1837; "Philosophy of the Inductive Sciences," 1840; "History of Scientific Ideas;" "Philosophy of Discovery;" and "Lectures on Systematic Morality;" the brilliant "Essay on the Plurality of Worlds," which was published anonymously, and gave rise to so much controversy, was written by Dr Whewell. In philosophy Dr Whewell was the most powerful antagonist of the system at present dominant, under the sway of John Stuart Mill; stoutly maintaining the transcendental against the sensualist theory. These great men avowed the highest respect for each other; Mill, in the preface to his "Logic," stating that "without the aid derived from the facts and ideas contained in Dr Whewell's 'History of the Inductive Sciences,' the corresponding portion of this work would probably not have been written." Dr Whewell was twice married, lost his first wife in 1854, and his second in April, 1865. He died at Cambridge, from the effects of a fall from his horse, on the 6th March, 1866.

WHISTON, WILLIAM, a learned divine and mathematician, was born at Norton, in Leicestershire, in 1667. He studied at Clare Hall, Cambridge, was chosen a fellow of his college, and entered into holy orders. In 1703 he succeeded Sir Isaac Newton as professor of mathematics, but having conceived doubts concerning the doctrine of the Trinity, and, at length, adopted Arian opinions, he was expelled from the university in 1710, and deprived of his office. He then removed to the metropolis, and gave lectures on astronomy; but was prosecuted as a heretic, though the proceedings were ultimately terminated by an act of grace in 1715. Being refused admission to the sacrament at his parish church, he opened his own house for public worship, using a liturgy of his own composition; and towards the close of his life he became a Baptist. Having subsequently distinguished himself by an abortive attempt to discover the longitude, and by his opinions on the millennium and the restoration of the Jews, he died in 1752. His translation of "The Works of Josephus" became very popular, and has passed through many editions. It is still read, although superseded by more able and trustworthy translations. His other works are now neglected.

WHITAKER, JOHN, divine and historian, was born at Manchester about 1735, and died, rector of Ruan Lanyhorne, Cornwall, in 1808. Among his numerous works are—"The History of Manchester;" a "Vindication of Mary, Queen of Scots," 3 vols.; "The Course of Hannibal over the

[WHI]

Alps," 2 vols.; and "The Origin of Government."

WHITAKER, THOMAS DUNHAM, an English topographical antiquary, was born at Rainham, in Norfolk, in 1759. He completed his education at St John's College, Cambridge; entered the church, and became, in 1787, perpetual curate of Holme, in Lancashire, where his family had held an estate for more than three hundred years. He was afterwards presented successively to the vicarages of Whalley and Blackburn, which he held till his death. He graduated L.L.D. in 1801. Dr Whitaker had the feeling and the enthusiasm of a poet as well as the antiquarianism of a scholar, and his attainments as a classical scholar were above the average. Among his works are histories of the parish of Whalley, Honour of Clitheroe, and Deanery of Craven, and a fragment of an unfinished History of Yorkshire; and editions of Thoresby's "Ducatus Leodiniensis," and the "Visions of Piers Ploughman." Died, 1821.

WHITBREAD, SAMUEL, a distinguished member of the House of Commons, was the son of the eminent brewer in Chiswell Street, London, and born in 1758. Educated at Eton and St John's College, Cambridge, he made the grand tour, married the daughter of Earl Grey, and in the following year, 1790, entered parliament. He represented Bedford in parliament many years, and was one of the most vigorous opponents of Mr Pitt. He also conducted the impeachment of Lord Melville, and was uniformly in opposition to the government. In a fit of insanity, supposed to be occasioned by his over-anxious attention to business, and particularly to the intricate concerns of Drury Lane Theatre, with which he was connected, he destroyed himself in 1815.

WHITBY, DANIEL, a Church of England divine and celebrated controversialist, was born at Rushden, in Northamptonshire, in 1638. He studied at Trinity College, Oxford, of which he became a fellow, in 1664. Through the patronage of Dr Seth Ward, bishop of Salisbury, he obtained two prebends in the cathedral, and was rector of St Edmund's Church from about 1673 till his death. Dr Whitby was a very learned theologian and voluminous writer, but the greatest part of his writings had reference to controversies of his time, and, like them, now lie forgotten. He wrote many works against the Papists; pleaded for the Dissenters in his "Protestant Reconciler," a book which was burnt by order of the university of which he was a member, and the principles of which he formally disavowed; wrote against Calvinism, and afterwards against the doctrine of the Trinity, his most important work was the "Paraphrase and Commentary on the New Testament," in 2 vols. folio, which was first published in 1703, and has been frequently reprinted. Many editions have been sold of his "Discourse concerning the true Import of the words 'Election' and 'Reprobation,'" familiarly spoken of as "Whitby on the Five Points." Died at Salisbury, in 1726.

WHITE, GILBERT, the naturalist of Selborne, was born in that village, in 1720.

He was sent to school at Hasingsloke, and had for his master the Rev. Thomas Warton, then vicar of that parish, and father of Dr Joseph Warton, and Thomas Warton, professor of poetry at Oxford. He was admitted student at Oriel College, Oxford, in 1739, became fellow of his college, graduated M.A. in 1746, and was one of the senior proctors of the university in 1762. An ardent lover of nature, he settled early in his native village, a secluded and picturesque spot in the eastern corner of Hampshire, and on the edge of Sussex; and there, in patient observation and faithful recording of facts and phenomena, which to many seem trivial, he passed the years of his tranquil, uneventful life. His well-known "Natural History of Selborne" was first published in quarto, in 1789. It consists of a series of letters, originally addressed to Thomas Pennant and the Hon. Daines Harrington; written with so much enthusiasm, painstaking accuracy, and simplicity of style, that it soon became, what it still remains, one of the standard popular favourites, without which no English library is complete. The best editions contain White's account of the antiquities of Selborne and his Naturalist's Calendar. Gilbert White lived to the age of 73, and died unmarried, June 28, 1793.

WHITE, HENRY KIRKE, the poet, was born at Nottingham, in 1785, and from his infancy manifested an extraordinary love of learning. He was first pined with a stocking-weaver, from which business he was removed to the office of an attorney, where he devoted all his spare time to the acquirement of Latin and Greek; and at length, through the generosity of Mr Whiteford, he was admitted student of St John's College, Cambridge. There he applied himself to his studies with such unremitting labour that he died in 1808. The "Remains of Henry Kirke White," consisting of poems, letters, and fragments, were edited by Southey. A medallion profile of the young poet, by Chantrey, is in the National Portrait Gallery.

WHITE, JOSEPH, an eminent divine, and orientalist, was born at Stroud, in Gloucestershire, in 1746; was educated at Wadham College, Oxford; and was elected Lecturer in Arabic, in 1775. Having, in 1780, as Bampton lecturer, delivered a series of sermons on the evidences of Christianity, which were highly approved, he was presented to a prebend at Gloucester, and took the degree of D.D.; though it afterwards appeared he was much indebted to Mr Baskcock and Dr Parr in the composition of them. In 1800 he published his "Dissertation on the Harmony of the Gospels in Latin, which was followed by his "Description, or Observations on certain Antiquities of Egypt;" "Griesbach's Greek Testament," &c. Died, 1814.

WHITE, JOSEPH BLANCO, theological and miscellaneous writer, was born of an Irish family settled at Seville, in 1775. He was brought up a Roman Catholic, educated at the Dominican Convent of Seville, and in 1799 was ordained priest. But falling into a state of religious doubt, he left the church

of knighthood. He in the grand cross of the order of the Garter, and was made by the king of France's escape from Elba, and for Sir William Pitt. He was governor of Dover, and subsequently of the Madras establishment in India. He was promoted to the command of the army in the West Indies, and was permitted to resign this command in 1795. He was to take the command of the army where he arrived in London in January, 1801.

Sir RICHARD, lord of the manor, born of a good family in the 14th century. He was a great favourite of the king, and his cat, famous in the annals of the court, was to be nothing more than a common cat. He has been recently discovered by an antiquary, the Rev. Mr. A.; and he has succeeded in recovering many facts, and in ascertaining the probability of the cat being the property of the late Richard's father, Sir Richard, lord of the manor of Westbury, died in 1380. His son, had to seek his fortune, and he was appointed there; and he was arrested by the king, as he sat at the foot of the throne, and returned and stuck to the king's side. He was very rich, married the daughter of a nobleman, and his master's daughter, and lord mayor of London, in 1419, besides being once married to Richard II., to succeed to the throne during his term of office. He was on one occasion worth 100,000 of our currency—in another occasion 700,000.

His trade was that of a scrivener, and the curious documents which he collected to certify his relations of his life, are his interesting *troussseau* of the late king, and Philippa, daughter of King Edward I., who left no children, and he bequeathed his wealth among these were the records of the founding of the library at Guildhall, the repair of St. Dunstons, &c. He shared with the expense of rebuilding Westminster Abbey. For the repairs of the cat story, and his which make every thing possible, we must refer to the interesting Memoir, entitled "The Cat of the Middle Ages," by Whittington died in 1423.

CHARLES, Lord, diplomatist, born of a Staffordshire family about 1680. After holding a high position, he was named to the diet of Ratisbon, and was envoy to St. Petersburg in great favour with the emperor, in 1710 he was again sent

as ambassador extraordinary to avert the vengeance of the Czar, Peter I., for the arrest for debt of his minister in London. He succeeded in this delicate mission. He was subsequently sent in various diplomatic capacities to the diets of Augsburg and Ratisbon, to Berlin, the Hague, and the Congress of Cambray. In 1721 he was created Baron Whitworth of Galway, and three years later retired from public life. Lord Whitworth was author of an Account of Russia as it was in 1710. Died, 1725.

WHITWORTH, CHARLES, Earl, an able diplomatist, was born in 1754, at Laybourne Grange, in Kent, and was educated at Tunbridge School. He was ambassador to Poland in 1786, and to Russia in 1788, at which court he resided 12 years. In 1801 he negotiated a treaty with Denmark, was sent as plenipotentiary to Paris in 1802, and early in the following year had the memorable interview with Napoleon, then first consul, the report of which caused so great a sensation in Europe. Lord Whitworth went to Ireland as viceroy in 1814, and died in 1825.

WICKLIFFE, or WYCLIFFE, JOHN, the "Morning Star of the Reformation," was born probably at Wyellife, near Richmond, in Yorkshire, about 1324. He was educated at Oxford, where he attended the lectures of the learned and pious Bradwardine at Merton College. The terrible pestilence of 1348 appears to have profoundly impressed his mind and aroused him to earnest reflection. While he pursued diligently his studies in various departments he especially devoted himself to philosophy and theology. Like Bradwardine, he drank deep at the Biblical fountains, and early began to call others to them. Nor was he slow to see and to expose the ill and abuses prevailing both among the monks and the clergy. He took a leading part in the contests between the Mendicant Orders and the university, and between the Crown and the papacy. In 1361 he was elected warden of Balliol, and about the same time was appointed rector of Fyningham, in Lincolnshire. Four years later he became warden of Canterbury Hall, from which office however, he was soon removed, and he unsuccessfully appealed to the pope against the sentence of the archbishop. In 1372 he took his degree of doctor in theology, and became professor of divinity in the university. His reputation and influence were so great that in 1374 he was one of the commissioners sent by Edward III. to Bruges, to treat with Pope Gregory XI. respecting the repeal of the statutes of Provisors and Premunire. A compromise was agreed to, and on Wickliffe's return, in 1375, he was named prebendary of the Collegiate Church of Lutterworth, in Leicestershire. He laboured incessantly as a preacher and pastor, and his sharp sayings about the pope and the Church could not but excite attention in high quarters. His opinions spread rapidly among the common people, and the Church grew alarmed. The zealous and haughty Courtenay was then bishop of London and in February, 1377, he cited the bold preacher to appear before a convocation at St Paul's. Wickliffe appeared there on the 19th Febru-

ary, attended by Lord Percy, marshal of England, and John of Gaunt, duke of Lancaster. The cathedral was densely crowded; hard words passed between the bishop and the duke, then the most powerful noble in England; blows followed, and the meeting broke up in confusion. In May following three bulls of Gregory XI. were addressed to the king, the primate, and the university of Oxford, requiring them to proceed against Wickliffe; who early in 1378 answered the summons of the primate, and went unattended to the chapel at Lambeth. "Men expected he should be devoured;" but the proceedings were stopped by an order from the queen-mother, and Wickliffe was dismissed, like the apostles Peter and John, with a warning not to say such things again. About this time he appears to have commenced sending out his "poor priests," evangelists, and missionaries to propagate in the country places the truth of the gospel. The same year, 1378, began the great schism in the papacy. Early in 1379 Wickliffe fell dangerously ill at Oxford, and an attempt was made by a party of monks, who visited him, to induce him to recant. With an energy startling in one so feeble and pale, he faced them and said, "I shall not die, but live; and again declare the evil deeds of the friars." He did live, and in the following year he dealt the hardest blow of all to error and evil by the completion and publication of his English Bible, on which he had worked between ten and fifteen years. It was translated from the Vulgate, and is believed to have been the first complete version in English. In 1381 he publicly attacked the doctrine of transubstantiation; sentence of condemnation was pronounced by the university, and even Lancaster could not support him. The breaking out of Wat Tyler's insurrection the same year intensified the alarm which his opinions excited. A synod was held in London, at which Courtenay, now primate, presided; Wickliffe's opinions were declared heretical; and soon after a royal ordinance was issued for the arrest and imprisonment of Lollards, his followers. Wickliffe addressed a petition to the Commons, and they demanded the repeal of the ordinance. In November, 1382, he was cited before the primate at Oxford; presented two confessions, one in Latin, the other in English; and without being again formally condemned, withdrew to his cure at Lutterworth. He is said to have been summoned to Rome by Urban VI., and to have been prevented by bodily weakness from obeying it. He spent his remaining days in peace, writing and preaching fearlessly to the last. He was struck with paralysis while standing before the altar at Lutterworth, 29th December, 1384, and was carried to his house, where on the last day of the year he peacefully died. No statute *de heretico comburendo* had yet been passed, and heresy was regarded in England as a spiritual offence, punishable only by spiritual censures; or Wickliffe must have been burnt. His doctrine was condemned by the council of Constance, and his remains were, by order of the council, exhumed, burnt, and cast into the Swift, a brook running by Lutterworth.

"Thus this brook," says Fuller, "hath conveyed his ashes into Avon, Avon into Severn, Severn into the narrow seas, they into the main ocean; and thus the ashes of Wickliffe are the emblem of the world over," which now is dispersed all the world over." Most of Wickliffe's writings still remain in manuscript, and a catalogue of all the MSS. extant in London, Oxford, Cambridge, Lambeth, and Lincoln, Dublin, Paris, Vienna, and Prague, as well as in private collections, has just been printed (1865), at the Clarendon Press, by Dr Shirley. Wickliffe's New Testament has been several times printed, but his whole Bible was not printed till 1850, when it appeared in 4 vols. 4to, under the editorship of Forshall and Madden. There are Lives of Wickliffe by Lewis, Le Bas, and Dr Vaughan. A portrait is preserved in the vicarage of Wycliffe, of which the earl of Denbigh possesses a replica. Its value as a likeness has been curiously verified. A living representative of the Wycliffe family, a Yorkshire clergyman, was accosted at Geneva, from his resemblance to this portrait, by an enthusiastic German student. The replica is now (June, 1866) in the National Portrait Exhibition at South Kensington. Wickliffe's church at Lutterworth is about to be restored.

WIELAND, CHRISTOPH MARTIN, German poet, novelist, and translator, was born near Biberach, in Suabia, in 1733. He was the son of a Pietist clergyman, and was educated at the school of Klosterbergen, near Magdeburg, and at the university of Tübingen. In 1752 he went to Zurich, where after a short residence with Bodmer, during which he made the acquaintance of many eminent men, he was engaged as tutor in several families, and in 1758 he went to Berne. Two years later he settled at Biberach, and became a member of the municipal council; married in 1765; and in 1769 was appointed professor of philosophy at Erfurt. Three years later he removed to Weimar, as tutor to the sons of the Duchess Amalie. Here, on Goethe's subsequent settlement, he became his friend. Wieland retired to a beautiful country seat in the neighbourhood in 1798, but after the loss of his wife and his favourite grand-daughter, he returned to Weimar, and there spent his last years. He found a new friend in Schiller. The works of Wieland are very numerous, and very diversified in kind and character. His principal poem is the epic romance, entitled "Oberon," published in 1780. His most admired novel is "Agathon," 1766. Among his other works are, the poem entitled "Die Grazien;" "Musarion;" "Die Abderiten," and "Erzählungen und Mährchen." Wieland made the first German translation of Shakespeare. It appeared between 1762 and 1766. In his latter years he made translations from Horace and Lucian, wrote several pieces in imitation of the latter, and translated Cicero's letters; founded and edited the "Deutscher Mercur;" and edited alone, or with others, two other literary journals. In 1808 he was presented to Napoleon at Erfurt, and received from him the decoration of the Legion of Honour. The same year he made the acquaintance of

Madame de Stael. Wieland was a foreign member of the French Institute and chevalier of the Russian order of St Anne. The death of the accomplished Duchess Amalie, in 1807, deeply affected him, and his own death took place the 20th January, 1813.

WIFFEN, JEREMIAH HOLME, a Quaker poet, was born in 1792, and brought up to the profession of a schoolmaster, in which he was for some years engaged. The work on which his poetical fame rests is a translation of Tasso, in which he adopted the Spenserian stanza; but he wrote many other works, and was a contributor of poetry to the Annuals. He was also author of a prose work, "The History of the Russell family." With a liberality befitting his wealth and station, the duke of Bedford appointed Mr Wiffen his private secretary and librarian; and under the patronage of his Grace, surrounded by rare books, paintings, sculpture, and objects of *virtu*, he spent his hours in an enviable state of mental luxury; for he was not a mere book worm, but had a taste for the fine arts generally. He died in 1836. His sister married Mr Alaric Watts.

WILBERFORCE, WILLIAM, the distinguished philanthropist, was born in 1759, at Hull. He completed his education at Cambridge, and there obtained the friendship of Mr Pitt. He was elected M.P. for Hull directly he was of age. It was in 1787 that he began to distinguish himself by his exertions for the abolition of the slave trade, which, after a contest, was finally decreed by the British legislature in 1807. Mr Wilberforce approved the principles of the French revolution, as they exhibited themselves at its commencement; and, on the motion of M. Brissot, in August, 1792, was voted the right of French citizenship. But in 1801 he denounced the designs of Buonaparte, and supported all the ministerial measures of vigorous opposition to France. In his exertions to emancipate the hapless African from the chains of slavery, Mr Wilberforce never relaxed; and he lived to see the second reading of the "Emancipation Act," carried by the House of Commons. He published a "Practical View of the prevailing Religious Systems of Professed Christians," and an "Apology for the Christian Sabbath." Died, aged 73, in 1833. His Life was published by his sons, in 6 vols., in 1833, and subsequently his Correspondence. More recently appeared "Recollections of Wilberforce," by Harford; and "William Wilberforce; his Friends and his Times," by J. C. Colquhoun. The unfinished portrait, by Lawrence, is in the National Portrait Gallery.

WILBRORD. (WILLIBROD.)

WILBYE, JOHN, an English musician, composer, of whom hardly anything is known, except that he was living in London in 1568, and was author of some very charming and highly scientific madrigals. One book especially in the year just mentioned, and appeared in the year just mentioned, from another eleven years later. Selections from them have been published by Warren, at the close of the last century, and more recently by the Society of Musical Antiquaries.

WILD, HENRY, the learned tailor of Norwich, who made himself master of the He-

Wieland was a foreign
institute and cheva-
rder of St Anne. The
med Duchess Amalie, in
him, and his own death
January, 1813.

WILHELM HOLME, a Quaker
1792, and brought up to
schoolmaster, in which
he was engaged. The work
his fame rests is a trans-
lation which he adopted the
title he wrote many other
contributor of poetry
was also author of a
History of the Russell
liberality befitting his
the duke of Bedford as
his private secretary and
for the patronage of his
rare books, paintings,
of *virtu*, he spent his
state of mental luxury;
mere book worm, but
in the arts generally. He
later married Mr Alarie

distinguish himself by his
opposition of the slave trade,
and was finally decreed by
Parliament in 1807. Mr Wilber-
force's principles of the French
exhibited themselves at
and, on the motion of
August, 1792, was voted the
membership. But in 1801 he
signs of Buonaparte, and
ministerial measures of
to France. In his exor-
cise the hapless African
slavery, Mr Wilberforce
he lived to see the second
"Manumission Act" carried
into effect. He published a
series of the prevailing Religious
of "Unassessing Christians," and an
"Christian Sabbath." Died,
His Life was published by
in 1838, and subsequently
e. More recently appear-
ed "of Wilberforce," by Har-
riet Martineau. His Friends
by J. C. Colquhoun. The
life, by Lawrence, is in the
Library.

[WILBROD.]
WILBROD, an English musical com-
poser, of which hardly anything is known,
is living in London in 1850.
He wrote some very charming and
melodious madrigals. One book ap-
parently just mentioned, and
others later. Selections from
published by Warren, at
the last century, and more re-
cently of Musical Antiquities,
by the learned tailor of Nor-
wich himself master of the He-

brew, Arabic, and other Oriental languages;
and was indebted to Dr Prideaux for a place
in the Bodleian Library. He translated from
the Arabic, Mahomet's Journey to Heaven.
Born, 1684; died, probably about 1734.

WILFORD, FRANCIS, an eminent orient-
alist, was a native of Hanover, and went to
India in 1761, as an officer with the foreign
troops sent there by the British government.
He became one of the first members of the
Asiatic Society of Calcutta, and published
many valuable memoirs on the history and
antiquities of Hindostan, in the Asiatic Re-
searches. Died, 1822.

WILFRED, ST, archbishop of York, cele-
brated as the supporter of papal authority,
was born, probably in the kingdom of North-
umbria, in 631. Having studied theology,
he went with Benedict Biscop to Rome in
638, made a long stay at Lyons with the pre-
late Desinus, and on his return received
from the king of Northumbria the monastery
of Ripon. In 654 he was ordained priest by
Egilbert, bishop of Paris, and the same year
he distinguished himself at the synod of
Whitby as the advocate of the Roman views
on the Easter question and other matters, in
opposition to the Scottish teachers. He was
appointed archbishop of York, and preferred
to be consecrated at Paris by Egilbert. In
his absence another appointment had been
made by the British party, and he did not
get possession of his see till 667. His ambi-
tion, pride, and pompous way of living made
him enemies, and in 678 he was deposed, and
his diocese divided into three. He set out
for Rome to make appeal to the pope; but
preached for some months in Friesland,
on the way obtained the pope's decree in his
favour, which the king slighted; was im-
prisoned, and making his escape, preached in
the kingdom of the South Saxons. Restored
to York in 687, and again deposed, he again
appealed to the pope, and after his return, in
705, held the see of Hexham. Died at Oundle
in 709, and was buried at his monastery of
Ripon. Wilfred was canonized, and many
churches in the north of England are de-
dicated to him.

WILKES, JOHN, an alderman of London,
distinguished for the violence of his political
conduct, was born in the metropolis, in
1727. He received a liberal education; and
after travelling on the continent, married
a lady of fortune, and became a colonel
of the Buckinghamshire militia. In 1761
he was elected M.P. for Aylesbury; but on
publishing an offensive libel in No. 45 of his
periodical paper, the North Briton, a general
warrant was issued by the secretary of state
to seize him and his papers, and he was
committed to the Tower. In a few days
after, however, he was brought, by writ of
habeas corpus, before Chief Justice Pratt of
the Common Pleas, who decided that general
warrants were illegal, and he was conse-
quently discharged, amidst the general re-
joicings of the populace. In the mean time
Wilkes incurred another prosecution for
printing an obscene poem, called an "Essay
on Woman;" and, for not appearing to re-
ceive judgment, was outlawed. He then
went to France, where he resided till 1769,
when he was elected for Middlesex; but was

prevented from taking his seat, and com-
mitted to the King's Bench prison, which
occasioned serious riots in St George's
Fields. He had now attained the height of
his popularity; a large subscription was
entered into to pay his debts; and in 1774,
the year of his mortality, he was again
elected for Middlesex, and permitted to take
his seat without farther opposition. He died
in 1797.

WILKIE, SIR DAVID, the distinguished
painter, was born near Cupar, in Fifeshire,
in 1785, his father being a minister of the
Scotch Church. In 1805 he came to London,
and soon attracted notice by the excellence
of his earliest efforts; his career of fame
commencing with his "Village Politicians,"
"Blind Fiddler" (now in the National Gal-
lery), "Rent Day," &c. His reputation was
soon established, and in 1811 he was made a
Royal Academician, from which period he
regularly produced, and as regularly sold at
increasing prices, his most celebrated pic-
tures, of which we shall merely mention
a few; as "Distraint for Rent," "The
Penny Wedding," "Blind Man's Buff,"
"The Village Festival" (now in the National
Gallery), "The Reading of the Will," and
"Chelsea Pensioners reading the Gazette of
the Battle of Waterloo" (painted for the
duke of Wellington, in 1821, for £1200). In
consequence of ill health, brought on by close
application and some serious pecuniary
losses, a continental tour was recommended
by his physicians; and he accordingly visited
Italy and Spain, where he remained till 1828.
But his love of art and his habitual industry
could neither be restrained by the injunc-
tions of physicians nor the entreaties of
friends; and, accordingly, several finished
pictures, altogether different from his former
style of execution, soon appeared. Upon
this total change of style and choice of
subjects it has been remarked, that, in
departing from the principle of the Flem-
ish and Dutch schools, and adopting that
of the Spanish, "he determined on the
hazardous experiment of resting his future
fame on a style utterly opposite to that in
which he then stood unrivalled amidst
European artists." In January, 1830, on the
death of Sir Thomas Lawrence, he was ap-
pointed principal painter in ordinary to
George IV., whose portrait in the Highland
costume, and "His Majesty's reception at
Holyrood House," he was at that time occu-
pied in painting. On the accession of Wil-
liam IV. the royal favour was continued to
him, and he was knighted in 1836. Queen
Victoria honoured him with sittings for his
splendid picture of her Majesty's "First
Council;" and by the queen's command he
went to the Turkish capital to paint the por-
trait of the sultan. This was his last and
fatal mission. On his return, on board
the *Oriental* steamer, after having touched
at Malta and Gibraltar, he was taken sud-
denly ill, and died in Gibraltar Bay, aged 56,
June 1, 1841; the last sad offices of com-
mitting his body to the deep being rendered
necessary by the strict orders of the govern-
or, who could not allow it to be brought on
shore. Among the principal pictures painted
by Sir David, in his second or Spanish style,

may be named "The Maid of Saragossa," "The Guerilla's Departure," and "Return," "John Knox preaching," "Columbus," "Peep-o'-day-Boy's Cabin" (in the National Gallery), "Mary Queen of Scots escaping from Lochleven Castle," "The Cotter's Saturday Night," "The Empress Josephine and the Fortune-teller," and "The Discovery of the Body of Tippoo Saib" (painted for the widow of Sir David Baird, at £1500). He also produced many celebrated portraits. As a man, Sir David Wilkie had the character of being mild and unassuming; as an artist no difficulties could daunt him, nor could any labour be too great for him to undertake with a view to the attainment of excellence. A Life of Wilkie, with his Journals, Tours, Correspondence, &c., was published by Allan Cunningham in 1843. His portrait, painted by himself in 1814, is in the National Portrait Gallery; and another, by Phillips, painted in 1829, is in the National Gallery; which also possesses the marble statue of Wilkie, by S. Joseph.

WILKIE, WILLIAM, a Scotch poet; author of "The Epigoniad." Born, 1721; died, 1772.

WILKINS, Sir CHARLES, F.R.S., &c., an eminent oriental scholar, was a native of Somersetshire. He went to Bengal, in the civil service, in 1770. While thus employed he undertook the study of the Sanscrit language, and translated the Bhagavad Gita into English. Warren Hastings, then governor-general, presented the manuscript of his translation to the court of directors, and prefixed to it an elegant dissertation. Mr Wilkins possessed great mechanical ingenuity, and prepared with his own hands the first Bengali and Persian types employed in Bengal. After residing 15 years in India he returned, but continued to pursue his oriental studies, and published a translation of the Hitopadesa, or the Fables of Vishnoo Sarma; and in 1800 he was made librarian to the East India Company and keeper of the valuable collection of MSS. which the court of directors possessed through the conquest of Seringapatam. He was afterwards appointed visitor in the oriental department of the company's colleges at Halleybury and Addiscombe. In 1808 Sir Charles produced his excellent "Sanskrit Grammar;" he also edited and enlarged Richardson's Dictionary of the Persian and Arabic languages, in 2 vols., 4to. He was a member of the French Institute, admitted to the honorary degree of D.C.L. in the university of Oxford, and was a knight of the Guephic order. Born, 1749; died, 1836.

WILKINS, DAVID, a learned divine, born in 1688, who became archdeacon of Suffolk, and published "Leges Anglo-Saxonice," "Concilia Magnæ Britannicæ," 4 vols., &c. Died, 1745.

WILKINS, JOHN, bishop of Chester in the 17th century, was born in 1614, at Fawley, in Northamptonshire, and educated at Oxford. He married Oliver Cromwell's sister, and was appointed warden of Wadham College, and master of Trinity College; and though he was deprived of these preferments at the Restoration, he afterwards

found favour in the sight of Charles II., and, in 1668, was raised to the bishopric of Chester. He was one of the founders of the Royal Society, produced several mathematical and theological works, and died in 1672.

WILKINS, WILLIAM, an eminent architect, was a native of Norwich. He studied at Cambridge, visited Greece and Italy, became architect to the East India Company, R.A., and succeeded Sir John Soane as professor of architecture at the Royal Academy in 1837. His chief buildings are St George's Hospital, the London University, the University Club House, and the National Gallery, which last provoked much caustic criticism. His additions to some collegiate buildings, both in England and Ireland, show great taste and learning. His very numerous and extensive engagements in his profession did not prevent him from undertaking various literary labours. Among his published works are "Antiquities of Magna Græcia," "Prolusiones Architectonicæ," &c. Born, 1778; died, 1839.

WILLAN, ROBERT, an eminent English physician, was born in Yorkshire, in 1757. He studied at Edinburgh University, and graduated M.D. in 1780. Having settled in London, he was appointed physician to the Dispensary in Carey Street, and soon after was admitted to the Royal College of Physicians. His life was spent in quiet devotion to the study and practice of his profession, relieved occasionally by antiquarian pursuits. He contributed a few papers to the Society of Antiquaries, of which he was a fellow, and some professional memoirs to various periodical publications. But the work on which his reputation rests is the "Description and Treatment of Cutaneous Diseases," four volumes (4to) of which appeared between 1798 and 1808, leaving it still incomplete. The remainder, however, for which he had prepared the material, was published by Dr Bateman, under the title of "Deincations of Cutaneous Diseases." Dr Willan obtained the Fothergill gold medal of the medical society of London in 1789, and was chosen F.R.S. in 1809. Died in Madeira, whither he had gone for the benefit of his health, in 1812.

WILLAUMEZ, JEAN BAPTISTE PHILBERT, a distinguished French admiral, was born at Belle-Isle, in 1763. He entered the navy in his fourteenth year, and before he was nineteen had become first pilot, a post at that time of great importance. He loved his profession, and devoted himself to the study of the science of navigation. His reputation rapidly rose, and the revolution broke down the barriers of exclusiveness which would have kept him from attaining the rank he merited. He rendered important services on the expedition sent in search of the unfortunate Lapérouse in 1791; was blockaded in the Isle of France by the English; and by a stroke of brilliant courage and skill, broke through the blockading squadron, and freed the island. He served as captain in the expedition sent to oppose the English in the Indian seas; took part in the disastrous expedition of St Domingo; and the commander of the "Poursuivante" maintained a successful contest with the "Herc-

light of Charles II., to the bishopric of the founders of the several mathematical, and died in 1672. He was an eminent architect. He studied Greece and Italy, became an East India Company, as John Soane as professor at the Royal Academy. Chief buildings are St. Paul's London University, the House, and the National. Provoked much caustic on some collegiate land and Ireland, showing. His very numerous in his profession on undertaking various. Among his published "Magnæ Græciæ," &c. Roma,

T, an eminent English In Yorkshire, in 1757. Edinburgh University, and 1780. Having settled in a physician to the Street, and soon after Royal College of Physicians in quiet devotion of his profession, by antiquarian purchase a few papers to the of which he was a professional memoirs to publications. But the reputation rests in the treatment of Cutaneous (4to) of which 1798 and 1808, leaving the remainder, however, prepared the materials, Dr. Bateman, under the of Cutaneous Diseases. Edited the Fothergill gold society of London in F.R.S. in 1809. Died in he had gone for the benefit.

JEAN BAPTISTE PHILIPPE, French admiral, was in 1763. He entered the 17th year, and before he became first pilot, a post at importance. He loved a devoted himself to the of navigation. His repose, and the revolution of excludence kept him from attaining. He rendered important expedition sent in search of Lapérouse in 1791; was of France by the English of brilliant courage through the blockading the island. He served expedition sent to oppose the Indian seas; took part in the expedition of St. Domingo; and the "Poursuivante" maintained contest with the "Her-

cules," a British ship of the line; was soon after made rear-admiral by Napoleon, and commander of the light squadron of the armament of Brest; and was next charged with an expedition against the English colonies and ships wherever he could do them most damage. The emperor's brother, Jerome Buonaparte, accompanied the expedition. The squadron, after accomplishing much of its task of destruction, was itself dispersed and almost destroyed in 1806 by a storm and by the attack of the English off the Havannah. Four English squadrons were despatched in pursuit of Willaumez. In 1809 he made an unsuccessful sortie from Brest against the English stations before Lorient and Rochefort, and from that period to the end of the war he commanded the flotilla of the Zuyder-Zee. During the years of peace which followed Admiral Willaumez took an active part in improving the organization of the navy. Died, dean of the French admirals, at Surscenes, in 1846. His "Dictionnaire de Marine" is highly esteemed.

WILLEDENOV, CARL LUDWIG, a celebrated botanist, born at Herlin, in 1765. After having filled the chair of natural history, he was made director of the botanic garden at Berlin, which he greatly improved, and also presented to the museum a zoological cabinet of his formation. In 1811 he was invited to Paris by Humboldt, to classify and describe the multitude of new plants brought by that traveller from America. Among his principal works are, "Prodromus Floræ Borealis," "Grundriss der Kräuter-kunde," and "Species Plantarum," which was not quite completed when he died, in 1812.

WILLEMS, JAN FRANS, a Dutch poet and scholar, distinguished as the zealous promoter of the cultivation of the Dutch language, was born near Antwerp, in 1793. He attracted public attention in 1818 by a poetical address to his countrymen on the importance of using the tongue their fathers spoke, and in the following year appeared the first volume of his "Dissertation on the Dutch Language and Literature in connection with the Southern Provinces of the Netherlands." This was followed five years later by the second and concluding volume, and much warm debate was excited on the subject. Willems was editor of the "Belgisch Museum," of which ten volumes were published. Among his other works are a Flemish version of "Reynard the Fox," editions of several Chronicles, and "Miscellanies on National Subjects." Died at Ghent, 1846.

WILLIAM I., the CONQUEROR, king of England, was the natural son of Robert, duke of Normandy, and was born at Falaise, in 1027. He was brought up at the court of the king of France, and succeeded to the duchy at the age of eight. But during his minority there were frequent revolts of the nobles, and his authority was not fully established for many years. On the death of Edward the Confessor, king of England, William made a formal claim to the crown, alleging a bequest in his favour by Edward, and a promise which he had extorted from Harold. His claim being denied, he at once prepared for an invasion of England; effected a landing at Pevensey, September 28, 1066,

while Harold was engaged in opposing the Norwegians in the north, and fortified the camp near Hastings. The decisive battle of Hastings was fought on Saturday, October 14, 1066, Harold was defeated and slain, and the Norman Conquest was commenced. His rival, Edgar Atheling, was supported by some of the leading men for a short time, but they all made submission to William at Berkhamstead, and on the following Christmas day he was crowned at Westminster by Aldred, archbishop of York; a riot occurring in which some lives were lost, and some houses burnt. The first measures of the new king were conciliatory, but served merely for a show for a short time. The inevitable conflict was not long deferred. Early in 1067 William went to Normandy, leaving the government of his new dominions in the hands of Odo, bishop of Bayeux, and William Fitz-Osbern. Tidings of revolt in various quarters recalled him, and he was occupied through most of his reign in the conquest of the country. Of the military events the most terribly memorable is his campaign in the north in 1069; when he mercilessly devastated the whole district beyond the Humber with fire and slaughter, so that from York to Durham not an inhabited village remained, and the ground for more than sixty miles lay baro and uncultivated for more than half a century afterwards. The order established was that of death; famine and pestilence completing what the sword had begun. This campaign was followed in 1071 by the attack on the fortified camp of Here ward, the resolute and unconquered English chieftain, in the Isle of Ely. The settlement of the country was as cruel as the conquest. The English were dispossessed of their estates, and of all offices both in church and state; William assumed the feudal proprietorship of all the lands, and distributed them among his followers, carrying the feudal system out to its fullest development; garrisoned the chief towns, and built numerous fortresses; re-established the payment of Peter's-pence, indignantly refusing, however, to do homage to the pope; and converted many districts of the country into deer parks and forests. The most extensive of these was the New Forest in Hampshire, formed in 1079. He ordered a complete survey of the land in 1085, the particulars of which were carefully recorded, and have come down to us in the *Domesday Book*. According to tradition the *Curfew Bell* was introduced by the conqueror; and the attempt was made to supersede the English by the Norman-French language, which was for some time used in official documents. In his latter years William was engaged in war with his own sons, and with the king of France; and in August, 1087, he burnt the town of Mantes. Injured by the stumbling of his horse among the burning ruins, he was carried to Rouen, and died in the abbey of St. Gervas, 9th September. He was buried in the cathedral of Caen, where a monument was erected to him by his son William II. This monument perished during the Huguenot wars. William married, while duke of Normandy, his cousin Matilda, daughter of Baldwin, count of Flanders, by whom he had four sons, two of whom, William and Henry,

became kings of England, and several daughters. The building of the Tower of London was begun by William I. about 1080. Hattio Abbey was also built by him in commemoration of his victory at Hastings. A statue of William I. was erected at Falaise, in 1853. Domesday Book has been recently reproduced by the photozincographic process, under the direction of Sir H. James.

WILLIAM II. *ITUFUS*, or **THE RUDDY**, king of England, was third son of William I., and was born in Normandy, about 1060. He was educated by Lanfranc, and appears to have been from childhood his father's favourite son. On his father's death, and by his express desire, he hastened to England, obtained possession of the royal treasure at Winchester, and was crowned by Lanfranc, then archbishop of Canterbury, at Westminster, 26 September, 1087. An insurrection in favour of his elder brother Robert, duke of Normandy, broke out in the following year, headed by Bishop Odo, and several Norman nobles; but by politic promises of good laws William obtained the assistance of his English subjects, and quelled the rising. In 1090 he made war on Robert in Normandy, but their quarrel was ended by a treaty. Similar ending had the war begun with Malcolm, king of Scotland, who was, agreed to do homage to William. It was, however, afterwards renewed, and Malcolm fell at Alnwick, in 1093. Renewed war in Normandy, campaigns against the Welsh, a long quarrel with Anselm, the new primate, from whom William long kept the temporalities of the see, and other troubles, filled up the rest of his reign. In 1086 he acquired, perhaps subject to a right of redemption, the duchy of Normandy for a large sum of money; Robert going on the first crusade. In the following year he began building the first Westminster Hall, and a bridge over the Thames, and completed the Tower of London. His avarice, profligate life, and severity as a ruler made him universally hated, and the manner of his death was considered an expression of God's judgment against him. He was shot while hunting in the New Forest, August 2, 1100; by whose hand, and whether by accident or otherwise, it is impossible to tell. He was buried in the cathedral of Winchester.

WILLIAM III., king of England, was the son of William II., prince of Orange, by his wife Mary, daughter of Charles I., and was born at the Hague, November 4, 1650. His father, stadtholder of the United Provinces, died a few days before his birth; and through the influence of the Republican party he was long excluded from that office; his exclusion being demanded also by Cromwell on the conclusion of the treaty with Holland in 1654. But in 1672 the serious peril of the Republic from the aggressions of Louis XIV. led to the annulment of the edict by which the stadtholderate had been abolished, the De Witts were imprisoned and massacred, and William of Nassau was installed in the office of stadtholder. Though only 22 years of age he showed himself the worthy descendant of William the Silent, founder of the Republic; and in two campaigns drove the French out of the Dutch territory. He

was defeated by the prince of Condé at Senef, and the war lasted till 1678. In the previous year William had married Mary, daughter of James, duke of York, afterwards James II., and this alliance gave him far greater importance as head of the league subsequently formed against France, and leader of the Protestants of Europe. When the arbitrary measures of James II. became intolerable to his subjects, the hopes of the leading friends of freedom and Protestantism naturally turned to him, and he accepted the call sent him, to come and save their rights and liberties. He landed at Torbay, 5th Nov., 1688; the king fled, but was captured and brought back; William arrived in London in December; and by the convention, assembled in January, 1689, the crown was offered to William and Mary, and was accepted by them. They were crowned, 11th April, by Compton, bishop of London, and the sermon was preached by Bishop Burnet. The primate Saneroff and seven of the bishops, refusing to take the oaths to the new government, were suspended from their office, and Saneroff with five of the bishops (all who then survived) were subsequently deprived. Some of the clergy followed the example of the prelates, and with them are known as the party of the *Nonjurors*. Resistance was made in Scotland, but ended with the defeat of Dundee at Killiecrankie; while a more serious conflict raged in Ireland, in which James II. and William personally took part, and which was closed by the victory of the latter at the battle of the Boyne. The principal aim of the king thenceforth was to humble France, and he spent much of his time abroad, engaged as leader of the army of the confederates. He took Namur, but was defeated by the French at Steenkirk, and Neerwinden (Lauden), and by the Peace of Ryswick, in 1697, was recognized as king of England. Three years before he had lost his queen, a great personal sorrow, but the throne was secured to him by the provisions of the Bill of Rights. He was, however, very unpopular with his subjects, and hostile intrigues, conspiracies, and projects of assassination troubled his reign. Whigs, Tories, and Jacobites alike distrusted him. He continued to take an active part in the affairs of Europe, and especially in the negotiation of the famous Partition Treaties for the disposal of the dominions of the Spanish king. He was provoked to prepare a new war against France by the recognition by Louis XIV. of the son of James II. as king, but this project was set aside by his death. The reign of William III. forms one of the great epochs of our Constitutional History—the final recognition by law of those great principles of regulated liberty for which the statesmen and heroes of the Commonwealth had contended. The character of William has been both extravagantly lauded and passionately depreciated. His taciturn and manner, his preference of his foreign friends, and the way in which he stood aloof from both the political parties naturally excited prejudice and ill-will against him. But it is not possible to doubt his great intellectual and moral qualities, clear-sightedness, courage

(often to rashness in the field), declivity and indomitable energy, and persistency of purpose. One dark stain on his character is laefaceable; he distinctly sanctioned the atrocious massacre of Glencoe, deposed by the muster of Stair. William III. died at Kensington Palace, in consequence of a fall from his horse, 8th March, 1702, and was buried in Westminster Abbey.

WILLIAM IV. king of England, known before his accession to the throne as WILLIAM HENRY, duke of Clarence, was the third son of George III., and was born August the 21st, 1765. At 14 years of age he entered the navy as a midshipman on board the Prince George, a 68-gun ship, commanded by Admiral Digby; and he was placed on the same footing, in every respect, with other youths of the same rank in the service. Prince William Henry was present with Admiral Rodney at the capture of the Caracas fleet, commanded by Don Juan Langara. The prince served nearly all the residue of his time as a midshipman in the West Indies, and off the coasts of Nova Scotia and Canada; and many characteristic anecdotes, honourable to his bravery and humanity, are related of him during the period of his naval career. He was afterwards removed to the Warwick, of 50 guns, commanded by Lord Keith, and was present when that officer captured the frigates L'Alge and La Sophie, and the Terror sloop-of-war, off the Delaware, in 1782. He then joined Lord Hood, who was in quest of the French fleet under De Grasse and Vaudreuil, and on board the Barfleur first became acquainted with Nelson, then in command of the Albemarle. In June, 1783, Lord Hood's squadron returned to England; and in the summer of 1785 the prince was appointed third lieutenant of the Hebe frigate. In 1786, as captain of the Pegasus, of 28 guns, he sailed for Nova Scotia; whence he proceeded to the Leeward Islands station, and remained for some months under the orders of Nelson, when a strong and lasting friendship (honourable to both) sprang up between them. In December, 1787, the prince returned to England, and was appointed to command the Andromeda frigate, in which he again sailed for the West Indies. In 1789 he was created duke of Clarence and earl of Munster, in Ireland, took his seat in the House of Lords, and was made rear-admiral of the Blue in 1790. From this time, however, he saw no more active service afloat. In 1811 he succeeded Sir Peter Parker as admiral of the fleet. In that capacity he hoisted his flag for the last time, for the purpose of escorting Louis XVIII. to France; and on board the Impregnable he received the emperor of Russia and the king of Prussia. For many years the duke lived the life of private English gentleman, residing at Bushy Park, of which he had been appointed ranger, on the death of the countess of Gufford, in 1797. [His connection with Mrs Jordan has been noticed in our memoir of that lady.] After the death of the Princess Charlotte of Wales, in 1817, a new era opened in the position and prospects of the duke of Clarence; and on the 11th of July, 1818, he married the Princess Adelaide, eldest

daughter of the duke of Saxe Meiningen. Two daughters, the eldest of whom died on the day of her birth, and the youngest when only three months old, were their only offspring. Having become heir-presumptive to the throne, in 1827, by the death of the duke of York, he received an additional parliamentary grant, which raised his income to £40,000 a year. He was also appointed lord high admiral of England, a post revived for the occasion; but owing to some objections made by the duke of Wellington to the expense of his royal highness's progresses, he resigned the office. On the 26th of June, 1839, the duke of Clarence succeeded his brother, George IV., as king of England, and was crowned, with his royal consort, in Westminster Abbey, September the 8th, 1831. A marked difference was soon observable in the conduct of William IV. and his predecessor. The secluded habits and fastidious retirement that had distinguished the last years of his brother's life, gave place to an obvious desire of popularity on the part of the new monarch; while the Wellington administration was succeeded by that of Earl Grey, under whom the reform of parliament was effected. Political animosities were at their height; but still the king was on the popular side, and the court offered, in every respect, an example worthy of imitation. In May, 1837, his Majesty was taken ill, and in four weeks from that time, June 29, 1837, he died.—“A man,” said Lord Grey, “more sincerely devoted to the interests of his country, and better understanding what was necessary for the attainment of that object, there never did exist; and if ever there was a sovereign entitled to the character, his Majesty may truly be styled a PATRIOT KING.”

WILLIAM (FREDERICK) I., king of the Netherlands, grand-duke of Luxembourg, prince of Orange, and duke of Nassau, was son of William V., prince of Orange, and was born at the Hague, 24th August, 1772. He received at his birth the title of hereditary prince of the United Provinces. At the age of 16 he was sent to the court of his uncle, Frederick William II. of Prussia; went two years later to study at Leyden; and in 1791 married his cousin, Frederica Louisa Wilhelmina, daughter of the king of Prussia. He had received a military training, and on the French invasion of Holland, in 1793, he was commander-in-chief of the Dutch army. After the final triumph of the French arms, in 1795, he accompanied his father to England; lived afterwards at Berlin, and at Fulda; served in the Prussian and Austrian armies against the French, distinguishing himself at Jena and at Wagram; and in December, 1813, after an insurrection in Holland in his favour, he was proclaimed sovereign prince of Holland. The French were driven from the fortresses then in their possession; a constitution was drawn up and sworn to; and by a decree of the congress of Vienna, Belgium and the bishopric of Liège were united with Holland, and William became in March, 1815, king of the Netherlands and duke of Luxembourg. A new constitution thus became necessary, and was adopted. The union of Holland and

Belgium lasted fifteen years; but notwithstanding the general wisdom of the administration, and great commercial and manufacturing prosperity, the religious, political, and social discordance of the Dutch and the Belgians could not but tend to their ultimate separation. One month after the French revolution of July, 1830, a revolution broke out in Brussels; the war was terminated by the intervention of the Great Powers and the recognition of the independence of Belgium. The Dutch in 1831 rushed to arms, and invaded Belgium, led by the prince of Orange; but the arms and diplomacy of France and England could not be resisted; the citadel of Antwerp, which William had retained in his possession, was taken by the French, after a long siege, in December, 1832; and after six years more of difficult and wearisome negotiations, conducted by the conference of London, matters were adjusted, and the king signed the treaty by which the separation of the two countries was established. Financial embarrassments and great popular discontent led the king to abdicate in favour of his son, William II., in October, 1840. He retired to Berlin, and there died, enormously rich, in November, 1843. He had married in February, 1811, the Countess d'Onfremont, a Roman Catholic lady.

WILLIAM II., king of Holland, better known in England as the prince of Orange, son of William I., was born in 1702, at the very moment when revolutionary France invaded the Netherlands, and thus compelled the young prince to be brought to England, where he passed his youth. Educated under the care of Dr Howley, afterwards archbishop of Canterbury, he at 19 years of age joined Wellington in Spain as extra aide-de-camp, and in this capacity he followed the fortunes of the British army from 1811 to 1814, and gained great distinction at the sieges of Ciudad Rodrigo and Badajoz, as well as in the battles of Salamanca and Vittoria, the Pyrenees, and the Nivelle. After the expulsion of the French from Holland in 1813, the young prince was designated as the husband of the Princess Charlotte of Wales; but she evinced the most decided objection to the union; and many years subsequently, when Prince Leopold, who afterwards became her husband, was elected to the throne of Belgium, the coincidence was remarked that he should have been successful against his princely competitor in obtaining from him both a kingdom and a wife. During the whole of the campaign of 1815 he commanded the army of the Netherlands, and distinguished himself at Waterloo, where he was severely wounded. After this event he chiefly resided in Brussels, till the revolution of 1830, separating Belgium from Holland, compelled his departure for the Hague. The abdication of his father (see above) in 1840, raised him prematurely to the throne, and he continued to govern with great prudence and moderation, till his death in March, 1848, a few days after the outbreak of the third revolution of that country, which it had been his fate to witness.

WILLIAM of NASSAU. [ORANGE, Prince of.]

WILLIAM of NEWHURY. [LITTLE, WILLIAM.]
WILLIAM of MALMESBURY. [MALMESBURY.]
WILLIAM of WYKEHAM. [WYKEHAM.]

WILLIAMS, DANIEL, a Presbyterian minister, was born at Wrexham, in Denbighshire, in 1611, and died in 1710. He founded the library in Redcross Street for dissenting ministers.

WILLIAMS, HELEN MARTA, miscellaneous writer, was born in the north of England in 1762. In 1790 she settled at Paris, and soon after appeared her "Letters from France," the object of which was to recommend the doctrines of the Girondists; and on their fall she was arrested, imprisoned, and narrowly escaped their fate. Besides other poems and works, she made an English translation of the Personal Narrative of the Travels of Humboldt and Bonpland in America, 6 vols.; she also wrote a "Narrative of Events in France in 1815," &c. Died, 1827.

WILLIAMS, JOHN, archbishop of York, and lord-keeper of the great seal, was born at Aber-Cowmy, in 1655, and was educated at Ruthin School, St John's College, Cambridge. Although he led a gay and expensive life at college, he was at the same time a hard student, and amassed almost incredible stores of various knowledge. Three hours of sleep in the twenty-four were enough for him. He learnt Greek and Hebrew; read the Fathers and the Schoolmen, knew all the Greek and Latin canons, was thoroughly versed in ecclesiastical history, and no less in general history; and he had some work continually on the loom. He graduated M.A. in 1695, was ordained priest in 1699, and in the following year became chaplain to Lord Chancellor Ellesmere; the first step to his worldly success. He was soon introduced to the king, James I., was appointed one of his chaplains in 1619, and soon after dean of Salisbury, and both by his learning and his Toryism made himself a great favourite with James. He succeeded in ingratiating himself also with Buckingham, the "pipo through which all royal graces flowed," and he was made dean of Westminster. As adviser of the duke he used his influence against monopolies and illegal exactions; and, on the fall of Bacon, in 1621, Williams was named Lord Keeper, and about the same time was raised to the see of Lincoln. His labours at this period were enormous, as chancellor, statesman, and bishop. He is said to have had in his employ a number of court spies; to have been greedy of preferments, of which he had so many as to be a "doceoso" in himself, yet his conduct in the court of Star Chamber is praised and also blamed for mildness. He had a large share in the negotiation about the Spanish marriage, and made Buckingham his bitter enemy. He also offended Prince Charles, on whose accession he was dismissed from his office of chancellor. He supported the Petition of Right in the parliament of 1628, and was half-reconciled to Charles I. But Laud, who owed his first preferment to Williams, became his enemy, and aimed at his ruin. He instituted three

prosecutions against him in the Star Chamber (besides dreaming ill dreams of him, as carefully noted in his diary), and after eight years' harassment Williams was sentenced to pay a fine of £10,000, to be imprisoned, and suspended from his office as bishop. On the third prosecution he was fined £8000 more. After four years' confinement he was released, in 1640, by the Long Parliament. In 1641 he was made archbishop of York; suffered another year's imprisonment in the Tower; returned a firm royalist through the civil war, and held Conway Castle for the king, whose execution broke his heart; and died at Aber-Conway in March, 1650. His "Life," by Bishop Thetket, appeared in 1693.

WILLIAMS, JOHN, the devoted missionary to the Islands of the South Seas, was born at Tottenham, near London, in 1796. He was brought up to the trade of iron-monger, but at the age of 20 his strong religious feelings led him to become a missionary, and he was sent as agent of the London Missionary Society to the Society Islands; his young wife accompanying him. After a short time he settled in the island of Tahiti, where he zealously laboured not only for the religious instruction, but for the social and secular interests of the people, with marked success. He got a government organized a chapel built, taught the natives how to build houses, contrived a sort of sugar-mill, and in order to promote the commerce of the islands, bought a ship, named the "Endeavour," with which to pass from island to island. In 1823 he discovered the island of Rarotonga; reduced the dialect to writing, and made a translation of the New Testament into it; built himself a ship to return to Tahiti; made afterwards several voyages in it among the various groups of islands; and in 1834 visited England, where he remained about four years. During this period he wrote and published his profoundly interesting "Narrative of Missionary Enterprises in the South Seas," which had a very large circulation, and was afterwards republished in a cheaper form. He sailed again in April, 1838, with a company of missionaries in the "Camden," purchased for the service of the mission, and after making visits to Rarotonga, Tahiti, Mataneu, and other islands, landed at Errouanga. And there this pure-hearted, self-denying, and indefatigable Christian missionary was attacked and murdered by the natives, November 20, 1839.

WILLIAMS (AB ITHEL), JOHN, a distinguished Welsh scholar and antiquary, was born at Llangynhafel, Denbighshire, in 1811. He was educated at Jesus College, Oxford, where he graduated B.A. in 1834, and M.A. in 1838. Having entered the church, he was minister successively of several parishes in Wales, was appointed rector of Llanymowddwy, Merionethshire, in 1852, and ten years later rector of Llaneddwyn, in the same county. He began early to write for English and Welsh periodicals, and to translate into Welsh English devotional works; and at length by his studies in Celtic archaeology, and his editions of ancient Welsh manuscripts, made himself a considerable reputa-

tion, not only in Great Britain, but on the continent. He wrote "The Ecclesiastical Antiquities of the Cynry," 1844; "Druidic Stones;" "A Glossary of Terms used for the Articles of British Dress and Armour," &c. Among the works edited by him are a Poem by Aneurin, with translation and notes; an ancient Welsh grammar; an ancient Welsh medical work; and, for the series of memorials of Great Britain and Ireland published under the direction of the master of the Rolls, the "Annales Cambriae," and "Itrt y Tywysogion, or the Chronicle of the Princes of Wales," both published in 1840. Mr Williams was an Examiner at Llandovery College; editor of the "Cambrian Journal," and for some years of the "Archæologia Cambrensis," published by the Cambrian Archaeological Association, of which he was one of the founders. Just before his death he published a work entitled "Barddas," a collection of documents illustrative of the Bardic-Druidic System. Died, August 27, 1862.

WILLIAMS, ROGER, the founder of the State of Rhode Island, U.S., and nobly distinguished as the first assertor in modern Christendom of the sacred and perfect freedom of conscience, was a native of Wales. Born in 1599, he studied at Oxford, entered the church, and naturally joined the Puritan party. To escape the persecutions to which the Puritans were subject in England, he, like so many others, fled to the New World to find what was denied them here, freedom to worship God. He arrived at Boston, New England, in February, 1631, and holding already in perfect clearness the grand truth of which he was the first modern apostle, soon found himself in collision with the churches already existing there; for they still acted on the very principles of which they had been the victims at home. He was invited to settle as pastor at Salem, but the court of Boston would not allow it, and he withdrew to Plymouth. Two years later the church of Salem elected him for their pastor; but the hostility to this "troubler of Israel" grew fiercer, and the breach widened, Salem was disfranchised, and sentence of exile was pronounced against Williams. Permission being given him to remain till the winter was past, he used to preach to the people who flocked to his own house to hear him. But at length, in 1636, he was ordered to embark for England. To avoid this he left Salem in the winter weather, wandered homeless and half-fed for fourteen weeks, then found friends and hospitality among the Indians, whose language he had learnt. He preached to them, won their love, and was their friend and peace-maker till his death. He had resolved on founding a new settlement, and after beginning to build and plant at Beekonk, had to abandon the spot, and selected Rhode Island, on which he landed from an Indian canoe, with five comrades, in June, 1639. He called the place "Providence," and commenced building. In the course of two years he was joined by others, who were glad of such an asylum. Williams founded a commonwealth in the form of a pure democracy, and his system has had its in-

fluence on the whole political history of the State. He showed no spirit of revenge towards those who had persecuted him; and when the colonies were threatened with a general rising of the Indian tribes, he nobly risked his own life, and undertook the mission to the Narragansetts to dissolve the conspiracy; in which he succeeded. To secure the permanent existence of Rhode Island as a separate State, Roger Williams was chosen to visit England in 1643, to obtain a charter. He was received with the greatest favour by the Long Parliament, found a warm and sympathizing friend in Sir Henry Vane, and took back with him the desired charter. Ten years later he was again sent to England, and succeeded in averting a threatened dismemberment of the little State. Sir Henry Vane was again the most powerful friend of the colony. Williams refused the office of governor, to which the colony wished to appoint him; laboured on for its good, rewarding himself in doing it; had a warm controversy with George Fox; and died at Providence in 1683. Hanroft, in his "History of the United States," writes of Roger Williams with the highest admiration and genuine eloquence.

WILLIAMS, SAMUEL, one of the best engravers on wood whom this country has produced, was born at Colchester, in Essex, in 1788. When a mere boy he determined to become a painter; and in the green meadows and lanes around his native town he had ample range for the study of his favourite art. But his wishes were not destined to be fulfilled. Apprenticed to a printer in Colchester, he found a remunerative employment for his leisure hours in designing and engraving on wood, and when his apprenticeship was expired he started on his own account as an engraver, first at Colchester, and afterwards in London. His first work was a series of 300 cuts for a "Natural History," published by Crosby. His skill in design recommending him to Messrs. Harvey and Darton, to and to other booksellers, who were glad to have a design and an engraving from the same hand, he executed in this way many anonymous engravings—evincing skill in design and dexterity in the nice touches of his art; and it is not going too far to say that to his spirited drawings of the Months in Hone's "Every Day Book," the Illustrations to "Robinson Crusoe," Wiffen's "Tasso," the "Olio," and the "Parterre," the modern school of drawing on wood owes its chief vigour and character. Nor was his industry less remarkable than his skill; he was seldom without a graver or a pencil in his hand; and, both by the number and excellence of his designs, he has gained a name which will be long associated with the history of art in England. Died, 1853.

WILLIAMSON, Sir JOSEPH, statesman, was born about 1630, at Bridekirk, in Cumberland. In 1674 he became principal secretary of state; but, in 1678, he was sent to the Tower, for granting commissions to Popish recusants. The king, however, released him the same day, and Sir Joseph resigned his place soon after. He died in 1701, leaving a valuable collection of manu-

scripts, with £6000, to Queen's College, Oxford, where he had been educated; he also founded a mathematical school at Rochester.

WILLIAMSON, HUGH, an American physician, was born in Pennsylvania, in 1735, and received his education at the college of Philadelphia; but relinquished the clerical profession, for which he had been intended, and turned his attention first to mathematics, and subsequently to medicine. After visiting Edinburgh and Leyden, at which latter university he obtained the degree of M.D., he returned and practised in Philadelphia. He was one of the committee appointed by the American Philosophical Society, 1769, to observe the transit of Venus, and he attracted considerable attention by his observations on the remarkable comet which then made its appearance, as he came to the conclusion that comets, instead of being ignited masses, are inhabited planets. He was appointed to the medical staff of the revolutionary army; and, at the restoration of peace, he became a member of congress. Among his works are, "The History of North Carolina," 2 vols.; and "Observations on the Climate of America." Died, 1819.

WILLIBROD, ST., apostle of the Frisians, was born in the kingdom of Northumbria about 658. He was brought up in the monastery of Ripon, just founded by St. Willfred, and after spending twelve years in Ireland, embarked with ten or eleven other monks for Friesland. The country had recently been conquered by Pepin d'Heristal, who received the missionaries with great favour. Willibrod went to Rome and obtained the sanction of the pope for his undertaking; and after several years of apparently successful labour he was sent to Rome a second time, and was consecrated bishop. He established his see at Utrecht; made a missionary journey into Denmark; enjoyed the favour of Pepin's illustrious son, Charlemagne, and founded the abbey of Epternam, near Treves, which he governed till his death. Willibrod is described as of winning and dignified manners, lively in conversation, wise and unwearied in his chosen office. He nearly succeeded in converting the pagan duke of Friesland, Radbod, of whom the story is told, that when on the point of receiving baptism, he turned away from the font on hearing, in reply to his express inquiry, that his unbaptized ancestors were in hell. He declared he would rather be with them there than in heaven without them. Died, and was buried at Epternam, in 738.

WILLIS, Dr BROWN, an English antiquary, who made and published a "Survey of the Cathedrals of England," and wrote other works. He was born at Blandford, in Dorsetshire, in 1682; became F.S.A. in 1718, and subsequently LL.D. Oxford, died, 1760.

WILLIS, FRANCIS, a celebrated physician, born about 1717, distinguished for his skill in the treatment of mental disorders, was a native of Lincolnshire, and received his education at Brasenose College, Oxford, of which he became a fellow. He took the degree of M.A. in 1740, entered into holy orders, and obtained the living of St.

John's, Wapping. He then studied medi-
cine, and, devoting his attention to maniacal
diseases, established a private asylum for
lunatics at Greatford, in Lincolnshire. The
anomaly of a clergyman keeping a mad-
house being sharply animadverted upon by
the faculty, he proceeded to take his degrees,
and properly qualified himself as a phy-
sician. When George III. was seized with
the mania which for a time suspended the
royal functions. Dr Willis was called in,
and, in opposition to the other physicians,
pronounced it as his decided opinion, that
his majesty would recover. The doctor
was, in consequence, intrusted with the
principal care of the royal person; and the
result confirmed the accuracy of his judg-
ment. His success was rewarded with a
handsome gratuity from parliament, and a
vast accession of professional practice very
naturally flowed in upon him. He died in
1807.

WILLIS, THOMAS, an eminent physician
and anatomist, born at Great Bedmin, in
Wiltshire, in 1621. He was educated at
Christ Church, Oxford, and graduated M.A.
in 1642. He first practised at Oxford, and
being a thorough royalist in his sympathies,
he obtained at the Restoration the Sedi-
clan professorship of natural philosophy. After
professing M.D., and obtaining great re-
putation by the publication of his work on
the Brain, he settled in London, and became
physician to Charles II. Willis's principal
work is entitled, "Cerebri Anatomie; cui
accessit Nervorum Descriptio et Usus," and
contains a distinct announcement of the
now generally accepted conception of the
brain as a cluster of organs of the mind. He
wrote also "Pathologia Cerebri et Nervosa
Generis Specimina," "De Anima Brutorum,"
and other works, all written in good Latin,
and frequently reprinted. Died, 1675.

WILLMOTT, ROBERT ARIS, an English
littérateur, was born at Bradford, in Wil-
shire, in 1809. He was educated at Merch-
nt Taylors' and Harrow Schools, and after being
engaged for several years, first in Suffolk as
private tutor, and then in London as man of
letters, entered Trinity College, Cambridge,
in 1832. Having graduated B.A. in 1841, he
entered the church, held a London curacy
for a short time, and in 1848 became incum-
bent of Bear Wood, Hants, a position in
which he remained for 16 years, discharging
his duties with much fervour and devoted-
ness, but often interrupted by ill health.
He published numerous works, chiefly col-
lections or selections from other writers,
with general illustrative notices. Among
them are a volume of his poems, "Journal
of Summer Time in the Country," of which
a fourth edition appeared in 1864, with a
pleasing Memoir by his sister; editions of
George Herbert's Works, of Cowper, Akens-
side, Burns, and Percy's Reliques, and an
illustrated volume entitled, "The Poets of
the Nineteenth Century." He was also
author of an original biography of Jeremy
Taylor, which appeared in 1847, and was
highly spoken of. He contributed papers to
Fraser's Magazine, the Critic, the Church
Quarterly Review, and other periodicals.
After long suffering from want of sleep,

he was attacked with paralysis, and died
at Nettledon, in Oxfordshire, 27th May,
1863.

WILLOUGHBY, SIR HUGH, an early
Arctic voyager, of whom almost nothing is
known, except that he was commander of
the expedition of discovery, consisting of
three vessels, sent out in 1553 by the com-
pany of Merchant Adventurers; that the
ships got separated by storms in the North
Sea, and not one of them reached England
again. It is believed that some of Wil-
loughby's men were living in January,
1654, and a few of those belonging to an-
other of the ships returned to England.
Richard Chancellor was captain of one
of the vessels in this expedition, which
was the first step towards our trade with
Russia.

WILLSHIRE, SIR THOMAS, Bart., British
general, born at Halifax, North America, in
1789. He was educated in England, and was
named a lieutenant at six years of age. After
serving in the West Indies, and in the ex-
pedition of the Rio de la Plata, under
General Whitelocke, during which he took
part in the attack on Buenos Ayres, in 1807,
he served in the Peninsula, and was in the
retreat to Corunna; was at Waicheen
in 1809, and in 1812 returned to the Penin-
sula, and distinguished himself at the as-
sault of San Sebastián. He took part in
the passage of the Bidassoa and the battles
of Nivelle and Nive. In 1818 he was em-
ployed on the frontiers of Kafraria, where
he did good service as road and bridge-
maker, and built a fort named after him,
Fort Wiltshire. His most important service
there was his defence of Grahamstown
against the chief Makann, the capture of
Makanna, and the acquisition of the terri-
tory between the Keiskamma and Great
Fish Rivers. He next served in India
against the Mahrattas, and, in 1827, became
lieutenant-colonel in the 2nd Queen's Royal
regiment he brought into a high
state of discipline. The dignity of C. B. was
conferred on him in 1838, and in the follow-
ing year he commanded under Sir John
Keane through the Afghan campaign, dis-
tinguished himself at the siege of Ghuznee,
and took the fortress of Kheilat, for which
he was made a baronet, and received the
thanks of parliament. Returning to Eng-
land in ill health, in 1840, he held for five
years the command of Chatham, resigned,
and was made major-general in 1847, and
spent his remaining years in retirement.
He was invested with the Grand Cross of
the Bath in 1861, and died suddenly at Hill-
house, near Windsor, 31st May, 1862.

WILLOUGHBY, FRANCIS, a celebrated
naturalist, born in 1635. He studied at Cam-
bridge, and had John Ray for his master,
with whom he formed a firm friendship,
and travelled through the principal countries
of Europe for scientific purposes. He paid
particular attention to ornithology and
ichthyology, and formed a rich museum of
animal and fossil productions. His friend
Ray arranged and published his works after
his decease. These are the "Ornithologie
Libri Tres," and the "Historiæ Piscium
Libri Quatuor." Died, 1672.

WILMOT, JOHN. [ROCHESTER, Earl of.]

WILMOT, JOHN EARDLEY, a learned judge, was born at Derby, in 1709; and, passing through the ordinary legal promotions, became chief justice of the Common Pleas in 1766. Died, 1792. His "Notes of Opinions" were published in 1802.—His son, JOHN WILMOT EARDLEY, born at Derby, in 1748, was an eminent chancery lawyer, and died in 1815. He published Gianvil's "Treatise on the Laws and Customs of England," "Memoirs of his Father," "Life and Letters of Bishop Hugh," &c.

WILSON, ALEXANDER, a celebrated ornithologist, was born at Paisley, in 1766. He was brought up as a weaver, but his poetical disposition, and relish for the quiet beauties of nature, made him long for an opportunity to escape from the bondage of trade. After having been imprisoned for libelling the master-weavers of Paisley, during a violent dispute between them and the journeymen, Wilson emigrated to America, where he landed in July, 1794, with his fowling-piece in his hand, and only a few shillings in his pocket, without a friend or letter of introduction, or any definite idea in what manner he was to earn his livelihood. In the varied occupations of a weaver, pedlar, and schoolmaster, he toiled on for upwards of 8 years, during which time he tasked his powers to the utmost in his efforts at self-improvement; and among the acquirements he made were the arts of drawing, colouring, and etching, which afterwards proved of incalculable use to him. In October, 1804, he set out for the Falls of Niagara; and, wading on through the mud and snow, encumbered with his gun and fowling-bag, the latter of which was of course always increasing in bulk, he arrived safely at home, after an absence of 59 days, during which he had walked 1260 miles. From this time forward Wilson applied his whole energies to his ornithological work, drawing, etching, and colouring all the plates himself; and Mr Bradford, a bookseller of Philadelphia, having agreed to run all the risk of publication, in 1808 the first volume of his "American Ornithology" made its appearance. Another and another volume followed, and their indefatigable author travelled from one end of the American continent to the other, for the purpose of obtaining subscribers to his work, as well as to increase his collection of birds. In 1811 he thus writes to his brother: "Since February, 1810, I have slept for several weeks in the wilderness alone, in an Indian country, with my gun and my pistols in my bosom; and have found myself so reduced by sickness as to be scarcely able to stand, when not within 300 miles of a white settlement, and under the burning latitude of 25 degrees. I have, by resolution, surmounted all these and other obstacles, in my way to my object, and now begin to see the blue sky of independence open around me." Honours as well as profit soon after began to pour in upon him; he was a member of several learned societies, and there was not a crowned head in Europe but had then become a subscriber to the "American

Ornithology." He was attacked with a dysentery in August, 1813, which carried him off in a few days.

WILSON, FLORENCE, or in Latin VOLU-SENUS, a Scottish writer, born probably near Elgin, about 1600. He studied at the university of Paris, became an accomplished scholar, made the acquaintance of several distinguished men of his time, and was for some time master of the school of Carpentras. He wrote, amongst other works, a dialogue "De Animi Tranquillitate," which has been several times republished. Died, in Douphiné, on his way to his native country, in 1646.

WILSON, GEORGE, regius professor of technology in the university of Edinburgh, and director of the Industrial Museum of Scotland, was born at Edinburgh, 21st February, 1818. He early showed a superior intelligence, energy, and vivacity, was fond both of books and animals, and for the sake of the studies which it would make necessary he chose the medical profession, and served his apprenticeship in the laboratory of the Royal Infirmary. During the same period he attended the Medical Classes at the university. But a short trial of the duties of a surgeon convinced him of his unfitness for the profession, and he relinquished it, devoting himself thenceforth to chemistry. He became assistant in the laboratory of Professor Christison, and in 1838 he came to London and took a place as unpaid assistant in the laboratory of Professor Graham at University College. One of his classmates there was David (now Dr) Livingstone. Recalled to Edinburgh by the sudden death of a beloved relative, he resolved to settle there; obtained soon after the degree of M.D., was admitted an associate of the "Maga Club," and was chosen president of the Physical Society. In 1840 he began his career as lecturer on chemistry, and at the same time his health began to fail. But with passionate love of science, and desire to teach it, he bravely held on, struggling with the vigour of a hero, the hopeful calmness of a Christian philosopher, and the most beautiful sweetness of disposition, against frequently recurring physical weakness and suffering. In 1855 he was appointed Director of the Scottish Industrial Museum, and almost immediately after professor of technology at the university of Edinburgh. These posts he held till his death. His ambition was to fill the chair of chemistry, and he had the prospect of success the year before he died, but he felt compelled to retire from the candidatedship on account of his want of strength to face the labour. George Wilson was one of the most successful of lecturers on science, and no less able as a writer and expounder. He also made many important chemical investigations and experiments, and cleared up points previously obscure. The most complete were the "Researches on Colour-Blindness," an account of which was published in 1855. His ability as popular expounder of science is shown in his admirable "Chemistry; an elementary Text-Book," in Chambers's series, published in

1850, in his "1857, and his "Electric Tele Stars," the "burgh Review Quarterly," "Traveller," a biographer and self by his "able Henry S. John Reid," and Works of Robert Boyd Quarterly. A chemistry era through societies. 1822, 1839, and a sister-ground artist. A condensed 1866).

1837, and his articles on "Electricity, and the
Electric Telegraph," and "Chemistry of the
Stars," the former contributed to the Edin-
burgh Review, the latter to the British
Quarterly, and both reprinted in the
"Travellers' Library." As scientific bio-
grapher and historian he distinguished him-
self by his "Life and Works of the Honour-
able Henry Cavendish," printed for the
Cavendish Society, 1851; his "Life of Dr
John Reid," and his sketches of the Lives
and Works of John Dalton, Wollaston, and
Robert Boyle, contributed to the British
Quarterly. He also wrote numerous papers
on chemistry and physics, which are scat-
tered through the transactions of scientific
societies. Died, at Edinburgh, November

burial-ground. A charming Memoir, by his
sister, Jessie A. Wilson, appeared in 1860.
A condensed edition is announced (May,
1866).

WILSON, HORACE HAYMAN, one of our
most distinguished oriental scholars, was
born about the year 1780. In 1808 he went
to India as assistant surgeon, but was soon
appointed assay master and mint secretary
at Calcutta, and, on the death of Dr Hunter,
in 1811, secretary of the Asiatic Society of
Bengal. In 1819 he completed a dictionary
of the Sanskrit language, which at once
raised him to eminence as an Orientalist,
and he afterwards made known to the En-
glish public four ancient Sanskrit dramas
under the title of the "Hindu Theatre." He
was the first to introduce the study of the
English language and literature in the edu-
cation of the natives of India, and himself
directed the studies of the Hindu College at
Calcutta from the time of its establishment.
While still engaged in a course of practical
usefulness as well as learning in India, he
was elected, in 1833, without solicitation, to
the Sanskrit professorship in the university
of Oxford, then founded by the magnificent
bequest of Colonel Boden; and from that
time until his death, at the age of 74, in May,
1860, he continued without intermission his
eminent services in the progress of Sanskrit
scholarship, publishing many original works,
as well as editing others, and contributing a
series of elaborate articles to the Journal of
the Royal Asiatic Society.

WILSON, JAMES, a well-known financier,
was born in 1805, and commenced his career
as a hatter, in which he at first failed. He
then turned his mind to political economy,
in which his great powers soon raised him
to a high reputation. In 1839 he published
a volume on "The Influences of the Corn
Laws." This was followed by others on the
"Fluctuations of Currency, Commerce, and
Manufactures," "On Capital, Currency,
Banking," &c. In 1843 he set up the "Econ-
omist" newspaper, in 1848 was appointed
secretary to the Board of Control, and sub-
sequently financial secretary to the Treas-
ury. In 1859 he went as finance minister
to India, where he immediately introduced
many financial alterations, the most import-
ant being the establishment of an income-
tax comprehending the native population.
He was, however, soon cut off by cholera,

and died at Calcutta, August 11, 1860, aged
55.

WILSON, JOHN, a distinguished poet,
critic, and prose-writer, the well-known
"Christopher North" of Blackwood's Maga-
zine, was the son of a prosperous manu-
facturer in Paisley, where he was born, in
1785. From the university of Glasgow he
passed to that of Oxford, entering Magdalen
College as a gentleman commoner, and win-
ning the Newdegate prize for English verse.
On quitting the university, the young poet
took up his abode on the banks of Wlader-
mere, at Elleray, a beautiful place which he
had purchased, and where he continued for
several years to enjoy the society of Words-
worth, and the other distinguished men of
letters, who then shared the retirement of
the English Lakes. Here he wrote the first
poem which made his name known beyond
college circles—an "Elegy on the Death of
James Graham," the author of "The Sab-
bath." This was followed in 1812 by "The
Isle of Palms," a work which advanced its
author's reputation so highly that it can
hardly be said to have been materially ex-
ceeded by his later and more elaborate com-
position of "The City of the Plague."

Leaving the path of poetry, he addressed
himself to prose fiction, and enriched our
literature, in rapid succession, with those
beautiful and fascinating books, the "Lights
and Shadows of Scottish Life," the "Trials
of Margaret Lyndsay," and "The For-
resters." But it was chiefly in periodical
literature that he earned his well-merited
fame. Soon after the establishment of Black-
wood's Magazine, in 1817, he became its chief
editor; and it was in this field that all his
varied gifts were summoned into activity,
and that he produced, month after month,
that series of articles which long filled the
public with mingled delight and astonish-
ment, by their extraordinary combination
of the most opposite qualities—pathos the
purest, the deepest, and the most tender;
wild, wanton, and withering sarcasm; senti-
ment, refined and exalted to the pitch of de-
votion; and humour of the freest, broadest,
and most exuberant vein. Mr Wilson was
called to the Scotch bar in 1815, but never
practised. In 1820 he was appointed to the
chair of moral philosophy in Edinburgh
University, then vacant by the death of Dr
Thomas Brown; and it is remarkable that,
even thus early, Sir Walter Scott had rec-
ognized in him talents, which only wanted
proper direction "to make him the first man
of the age." In 1851 he resigned his pro-
fessorship in consequence of ill health; and
about the same time he received a pension
from the crown of £300 a year. Professor
Wilson's academical selections will never
be forgotten by those who had the good for-
tune to hear them. Nor was it only the
force and splendour of his eloquence that
endeared him to all his students. He was
the never-failing friend of every youth who
sought his help; the counsel which he was
ever ready to impart attested not less the
kindness of his benevolent heart than the
sagacity of his discriminating judgment;
and the disinterested integrity of his charac-
ter, and the conscientious consistency with

which he ever maintained his principles, were acknowledged as sincerely by his most resolute opponents as by his firmest friends. Died, 1854. *Memoirs of Wilson*, by Mrs Gordon, have since appeared.

WILSON, RICHARD, an eminent English landscape painter, was born in 1714, in Montgomeryshire. He began his career as a portrait painter, which line he quitted, by the advice of Zuccarelli, and went to Italy, where he studied landscape painting with a success that obtained for him the appellation of the English Claude. The first picture he exhibited was Niobe, and in 1765 he produced a view of Rome. Although whatever came from his easel bore the stamp of elegance and truth, yet, during the latter part of his life, he was doomed to undergo neglect, and he was reduced to solicit the office of librarian to the Royal Academy, of which he had been chosen one of the first members. Among his best works are the "Niobe," the "Ruins of the Villa of Mæcenas" (now with several other of his works in the National Gallery), "Phaeton," "Ceyx and Alcyone," "Snowdon," &c. Died, at Llanferris, in Denbighshire, 1782. A *Memoir of his Life*, by T. Wright, appeared in 1824.

WILSON, SIR ROBERT, a distinguished general officer, who played also a conspicuous part in the party politics of his time, was born in London, 1777. Educated at Westminster and Winchester, he went into a solicitor's office, with a view to qualify himself for the law; but an accidental introduction to the duke of York induced him to exchange the desk for the field, and in 1793 he went to Flanders as a volunteer, and bore a distinguished part in all the cavalry actions of that campaign. During the rebellion in Ireland he served on the staff; in 1799 he made the campaign in Holland, and the following year he took part in Abercromby's expedition to Egypt. He afterwards published an account of this expedition, which derived especial popularity from its charges against Buonaparte of cruelty towards the prisoners at Jaffa. In 1805 he accompanied Sir D. Baird to the Brazils, and was present at the capture of the Cape of Good Hope. On his return he accompanied Lord Hutchinson to the continent on a secret mission. He was attached to the combined armies, and present in all the operations, battles, and actions, from Pultusk to Friedland. We next find this active officer in Lisbon, where, in 1808, he superintended the levy of the Portuguese refugees; and he subsequently commanded a legion in Spain, and wound up a career of great gallantry and peril in the Peninsula by a successful engagement with the French at Balmos. His reputation for courage and ability was still further increased by the Russian and German campaigns of 1812, 1813, and 1814; and the Emperor Alexander testified his admiration of his exploits by hanging the cross of St George round his neck in the presence of the assembled army. After the peace in 1815 he visited Paris, where he drew upon himself great notoriety by aiding in the escape of Lavalette, as detailed in our sketch of that remarkable man. In consequence of this act he

incurred the displeasure of the prince regent, and his conduct at the funeral of Queen Caroline having completed his disgrace at head-quarters, he was dismissed from the army in 1821, and all the foreign orders he had received were resumed by their respective sovereigns. But a public subscription was made to indemnify him, and after the lapse of a few years he was restored to his rank. Sir R. Wilson sat from 1818 to 1831 in parliament for Southwark; in 1841 he obtained the full rank of general, and in 1842 he was appointed governor of Gibraltar, and had just returned from that post after seven years of command, when he died suddenly, May 9, 1849. His "Private Diary, kept during the Campaigns of 1812-14," and a "Life" from his own memoirs, &c., have been since published.

WILSON, THOMAS, bishop of Sodor and Man, born, 1663; died, 1755. He was educated at Trinity College, Dublin, was ordained priest in 1689, and three years later became tutor to Lord Strange, son of the earl of Derby. He was consecrated bishop of Sodor and Man in 1698. He applied himself zealously to the moral and religious improvement of his diocese, but carried out his views of discipline with too high a hand, and in 1722 suffered imprisonment at Castle Rushin. He was released on appeal the following year. His works consist of "Religious Tracts," and "Sermons," with a short "History of the Isle of Man." A Life of this prelate was written by Keble.

WILSON, WILLIAM RAE, LL.D., chiefly known by his "Travels in the Holy Land," was born in 1774. At an early age he became acquainted with the duke of Kent, who remained his steady patron through life, and who furnished him with every species of recommendation likely to facilitate his travels in the East. He was one of the first of a class of travellers, since become numerous, whose object has been to illustrate the statements of holy writ by observations on the scenery and manners of those parts of the world in which its events took place. In all his works he preserved a religious tone, with a strong bias against the Roman Catholic Church; but, on the whole, his writings display an unusual freedom from false colouring and affectation. Died, June 2nd, 1849.

WILTON, JOSEPH, an English sculptor, born in London, in 1722. He studied in Holland, France, and Italy; was joint-director with Cipriani of the duke of Richmond's Gallery for art-students, and one of the founders of the Royal Academy. He was employed by George III., executed a great many statues and busts, and grew very rich by his art. Among his works are monuments of Wolfe in Westminster Abbey, of Stephen Hales, and Admiral Holmes; and busts of Cromwell, Newton, Chatham, &c. Wilton died in 1803.

WINCHESTER, WILLIAM PAULET (or POULET), Marquis of, a distinguished English statesman of the 16th century, was descended from a Somersetshire family, and had his chief estates in Hampshire. Born about 1475, he indulged in early life in such extravagant modes of living that he was

the displeasure of the prince re-
sulting from his conduct at the funeral of Queen
Anne, having completed his disgrace at
the court, he was dismissed from the
1721, and all the foreign orders he
had received were resumed by their respect-
ive sovereigns. But a public subscription
was raised to indemnify him, and after the
few years he was restored to his
rank. He sat from 1818 to 1831 in
Parliament for Southwark; in 1841 he
was elected full rank of general, and in 1842
was appointed governor of Gibraltar, and
returned from that post after seven
months' command, when he died suddenly,
on the 18th of August, 1849. His "Private Diary, kept
during the Campaigns of 1812-14," and
"Memoirs from his own memoirs, &c.," have
been published.

WINDHAM, THOMAS, bishop of Sodor and
Man, 1663; died, 1755. He was edu-
cated at Trinity College, Dublin, was
ordained in 1689, and three years later
became tutor to Lord Strange, son of the
Duke of Derby. He was consecrated bishop
of Sodor and Man in 1698. He applied him-
self assiduously to the moral and religious im-
provement of his diocese, but carried out his
disciplinary work with too high a hand,
and in 1722 suffered imprisonment at Castle
Rising.

He was released on appeal the follow-
ing year. His works consist of "Re-
tracts," and "Sermons," with a short
treatise of the Isle of Man." A Life of
the author was written by Keble.

WINDHAM, WILLIAM RAE, LL.D., chiefly
known by his "Travels in the Holy Land,"
published in 1774. At an early age he be-
came acquainted with the duke of Kent,
and remained his steady patron through-
out his life. He furnished him with every
facility of recommendation likely to facil-
itate his travels in the East. He was one of
a class of travellers, since become
rare, whose object has been to illus-
trate the scenery and manners of those
countries, and in all his works he preserved a re-
fined tone, with a strong bias against the
Catholic Church; but, on the whole,
his descriptions display an unusual freedom
of style, colouring and affectation. Died,
London, 1849.

WINDHAM, JOSEPH, an English sculptor,
born in London, in 1722. He studied in Hol-
land, France, and Italy; was joint-director
of the gallery of the duke of Richmond's Gal-
lery, and one of the founders of the
Royal Academy. He was employed by
George III., executed a great many
portraits, and grew very rich by his
art. Among his works are monuments of
George III. in Westminster Abbey, of Stephen
Austen and Admiral Holmes; and busts of
William Pitt, Lord Nelson, and William
Pitt, at Newington, Chatham, &c. Died,
London, 1803.

WINDHAM, WILLIAM PAULET (de
la Warr), Marquis of, a distinguished Eng-
lish statesman of the 16th century, was de-
scended from a Somersetshire family, but
his chief estates in Hampshire. Born
in 1475, he indulged in early life in such
extravagant modes of living that he was

compelled to sell his lands, and then went to
court, and "on the bare stock of his wit,"
says Fuller, "trafficked so wisely and prosper-
ed so well, that he got, spent, and left more
than any subject since the Conquest." He
was first in the service of Henry VII.,
was treasurer of the household to Henry
VIII. and Edward VI., the former of whom
made him a peer and K. G., and the latter a
marquis and lord-high-treasurer in 1551.
He was clever and supple enough to hold
that office also under Queen Mary and Queen
Elizabeth. "No oake, but an osler," was
his character as drawn by himself. Died,
10th March, 1572. Basing House, which was
besieged by Cromwell, was built by this
marquis of Winchester. His portrait, by an
unknown hand, is in the National Collection.

WINKELMANN, JOHANN JOACHIM, a
celebrated writer on art, was born of poor
parents at Stendal, in Prussia, in 1717. He
was enthusiastically fond of books and
study in his childhood; was sent to study
theology at Halle; passed many years in the
taskwork of a schoolmaster, private tutor,
and librarian, and in 1755, after becoming a
Roman Catholic for the sake of an offer
made to him by the papal nuncio at Dresden,
he went to Rome, where his great accom-
plishments as art-student soon made him
the friend of the most distinguished persons.
The painter, Mengs, was his intimate friend.
After various temporary engagements he
became librarian to Cardinal Albani, and
devoted himself thenceforth to the composition
of his numerous works. The principal of
these is his "Geschichte der Kunst des Al-
tertums," which, though inadequate as a
history, was highly appreciated at the time
of its publication for its learning and criti-
cism, and was the means of inciting others to
a more full investigation of the subject it
treats of. Among Winkelmann's other
works are, "Monumenti Antichi Inediti," a
treatise on the Imitation of Greek works
of Art, Observations on the History of Art,
and a large collection of Letters. In 1768
he visited Vienna, and was received there
with great honour; but on his return-
journey to Italy he was assassinated at
Trieste, 8th June, by a man named Arcan-
geli, who had accompanied him during part
of his journey.

WINDHAM, JOSEPH, an eminent anti-
quary, was born at Twickenham, in 1739;
was educated at Eton, and Christ's College,
Cambridge; went to Rome, and there took
drawings of the monuments of antiquity;
composed the principal parts of the "Ionian
Antiquities," published by the Dilettanti
Society, and assisted Stuart in his work on
Atheus. He was a fellow of the Royal and
Antiquarian Societies. Died, 1810.

WINDHAM, WILLIAM, an eminent Eng-
lish statesman, was born in London, in 1750.
He was of an ancient Norfolk family, whose
seat, since 1461, was Felbrigg Hall; was edu-
cated at Eton, Glasgow University, and
University College, Oxford; and began his
political career in 1778, by a speech at Nor-
wich, in condemnation of the American
War. Two years later he was an un-
successful candidate for the representation of
Norwich in parliament, but in 1783 he was

electd for that city. He took part in the
conduct of the impeachment of Warren Has-
tings; held the office of secretary-at-war un-
der Pitt's ministry for seven years; was
one of the leading members of opposition
under the Addington administration, and
in consequence of his condemnation of the
short-lived peace of Amlens, in 1802, lost
his seat for Norwich. He was returned for
a small borough, and remained in opposition
under the succeeding Pitt ministry; but in
1806 he accepted the post of secretary-at-
war, and also for the colonies, in the "Ad-
ministration of the Talents," which only
lasted about a year. Mr Windham showed
himself always a man of honour, temperate,
liberal, and highly accomplished. He was
an advocate for the removal of Catholic dis-
abilities; condemned the attack on Copen-
hagen and the Walcheren expedition; but
was an opponent of parliamentary reform.
Died, 1810. Mr Windham married, but left
no children, and bequeathed Felbrigg to
Admiral Lukin, who assumed the name of
Windham. His grandson, whose foolish,
profligate life has been too notorious, sold
the estate, and died early this year (1866).
The portrait of the statesman, by Reynolds,
is in the National Gallery; another, by Law-
rence, is in the National Portrait Gallery.
His "Diary," kept at the suggestion of Dr
Johnson, whose friendship he enjoyed, has
lately appeared, edited by Mrs H. Barling.

WINDISCHGRATZ, ALFRED, Prince,
Austrian field-marshal and commander-in-
chief, was son of Joseph Prince Windisch-
gratz, and was born at Brussels, in 1787. He
succeeded to his father's title in 1802, and
two years later entered the Austrian army.
He took part in the campaigns of 1805, 1809,
and 1813-14 against the French, and attained
the rank of lieutenant-general in 1833. He
is chiefly remembered for the part he played
in opposing the revolutionary movements of
1848-49. He was governor of Prague at the
outbreak of the Slave insurrection of June,
1848; the princess, his wife, was shot by the
insurgents as she looked from a window;
and the prince bombarded the town for 48
hours, and after a severe conflict, defeated
the insurgents and suppressed the move-
ment. He was created in October following
field-marshal, and named commander-in-
chief of the forces of the empire out of Italy,
and marched on Vienna, which was then in
the power of the revolutionary party. He
proclaimed a state of siege, and after some
days' delay commenced the attack, which
was supported by the Croats under Jela-
chich. The conflict was very sharp, and
only ended after four days' fighting with
the capture of the city, 1st November. The ex-
ecution of the republican leader, Robert
Blum, a fortnight later, produced a very
painful feeling throughout Europe. In the
following year Prince Windischgratz was
employed against the Hungarians, but after
some favourable movements and the occupa-
tion of several towns, he was unable to ac-
complish anything more, and had to quit
Buda before the increasing forces of the
enemy. He had fought on the side of abso-
lutism all his life, and his last days were
embittered by the discovery that it was the

losing side. Died at Vienna, 24th March, 1862.

WINGATE, EDMUND, an eminent mathematician, was born in 1593, in Yorkshire, studied at Queen's College, Oxford, and at Gray's Inn; went to France, instructed the Princess Henrietta Maria in the English language; espoused the popular side in the civil war; was an M.P.; and died in 1656. Among his works are, "A Natural and Artificial Arithmetic," "Ludus Mathematicus," "Maxims of Reason," and an "Abridgment of the Statutes."

WINSLOW, JACQUES BENIGNE, a celebrated Danish anatomist, was born in 1669, at Odensee; settled in France; and in 1743, succeeded M. Innault as professor of anatomy and physiology, at the Royal Botanic Garden. His principal work, which has been translated into English, German, Italian, and Latin, is entitled "Exposition Anatomique de la Structure du Corps Humain." Died, 1760.

WINSOR, FREDERICK ALBERT, an enterprising projector, to whom we are indebted for the gas lights which illuminate our streets, &c.; made his first public experiments at the Lyceum, in the Strand, in 1803. He afterwards lighted with gas the walls of Carlton Palace Gardens, on the king's birthday in 1807; and during 1809 and 1810 he lighted one side of Pall Mall, from the house which he then occupied in that street. He followed up his object with great perseverance, and at length obtained a charter of incorporation for a gas-light and coko company. In consequence, however, of some misunderstanding with the parties with whom he was associated, he did not obtain his expected remuneration. In 1815 he went to Paris, where he also erected gas-works, and established a company. Died, 1830.

WINSTON, CHARLES, an eminent writer on glass-painting, was son of Benjamin Sandford, vicar of Farningham, in Kent, and was born in 1814. His father afterwards took the name of Winston. The son was brought up to the law, entered the Inner Temple about 1834, and was called to the bar in 1845. From his youth he had taken great interest in glass-painting, and having spent a large part of his time for many years in the study of it, he published in 1847 his valuable "Inquiry into the Difference of Style observable in ancient Glass-painting, especially in England; with Hints on Glass-painting." It appeared anonymously, but he soon after published a summary of the work, with his name. It is highly esteemed, and has contributed to a great improvement in the art. Died suddenly at his chambers, 3rd October, 1864. A volume of his "Memoirs Illustrative of the Art of Painting on Glass," with a short biography, has since appeared.

WINT. [DE WINT.]

WINTER, JAN WILLEM DE, a Dutch admiral, was born in 1750. Having been an active partisan in the revolution which broke out in 1787, he was obliged to take refuge in France, when the party of the stadtholder prevailed. In France he entered the army, served under Dumouriez and Pichegru, and in a short time rose to the rank of general of brigade. In 1795, when Pichegru invaded

Holland, De Winter returned to his country, where the states-general made him vice-admiral and commander of the naval forces at Texel. Here, with 29 vessels, of which 16 were ships of the line, he was completely defeated by Duncan, Oct. 11, 1797. Died, 1812.

WINTER, PETER VON, an eminent German musician, born at Mannheim, in 1734, and, at the age of 10 years, was appointed a member of the orchestra of the elector. He composed operas, oratorios, and other vocal and instrumental music, much of which has considerable merit. Died, 1825.

WINWOOD, SIR RALPH, statesman, was born about 1565, at Aynhoe, in Northamptonshire. He was twice envoy to Holland, was knighted in 1607, and was secretary of state from 1614, till his decease, in 1617. He wrote "Memorials of Affairs of State in the Reigns of Queen Elizabeth and King James I.," 3 vols. folio. His portrait, by Mireveldt, is in the National Portrait Gallery.

WISE, FRANCIS, an English antiquary and Radcliffe librarian at Oxford, was born at Oxford in 1695. He was educated at Trinity College, graduated M.A. in 1717, and became fellow of his college in 1719. Employed for a time as assistant in the Bodleian Library, he was afterwards tutor to the Hon. Francis North, who gave him the living of Ellesfield, near Oxford. He led a retired, studious life, published several books and pamphlets, and was named Radcliffe Librarian in 1748. His writings are two pamphlets on the curious ancient work known as the White Horse, in Berkshire, a catalogue of the coins in the Bodleian Library, "Enquiries concerning the first Inhabitants, Learning, and Letters of Europe," &c. Mr Wise was a fellow of the Society of Antiquaries. Died at Ellesfield in 1767.

WISE, MICHAEL, one of the best English composers of sacred music, was a native of Wiltshire, and in 1660 became one of the choristers of the Chapel Royal. He was subsequently organist of Salisbury Cathedral, gentleman of the Chapel Royal, and almoner of St Paul's. He enjoyed for some time the favour of Charles II., and was at last killed in a street quarrel, in 1687.

WISEMAN, NICHOLAS, Cardinal, Roman Catholic Archbishop of Westminster, was born at Seville, in 1802. He was of a very ancient English family, traceable as holders of estates in Essex in the time of Edward IV., one of them being knighted by Henry VIII., and another made a baronet by Charles II. After studying for eight years at the College of St Cuthbert, near Durham, he went, in 1818, to Rome, and was one of the first members of the English College there. Created D.D. in 1821, he soon after took holy orders, and became professor of oriental languages in the university, and rector of the English College. At the same period he had gained some reputation as one of the few orientalist scholars of Europe by the publication of his "Horsæ Syriacæ." After his return to England, in 1835, he was engaged in a controversy with Dr Turton, afterwards bishop of Fly, respecting the Eucharist. In 1840 Dr Wiseman was appointed coadjutor to Bishop Walsh, then vicar apostolic of the Midland

Winter returned to his country, states-general made him vice-commander of the naval forces there, with 29 vessels, of which 5 of the line, he was completely Duncan, Oct. 11, 1797. Died.

PETER VON, an eminent German, born at Mannheim, in 1734, of age of 10 years, was appointed a member of the orchestra of the elector. He was a composer, orator, and other vocal and instrumental music, much of which has merit. Died, 1825.

WIS, Sir RALPH, statesman, was born in 1565, at Aynhoe, in Northamptonshire, was twice envoy to Holland, was made a knight in 1607, and was secretary of state to James I. till his decease, in 1617. He wrote several tracts of Affairs of State in the Reigns of Elizabeth and King James I., &c. His portrait, by Mirceveldt, is in the National Portrait Gallery.

FRANCIS, an English antiquary and librarian at Oxford, was born in 1695. He was educated at Balliol College, graduated M.A. in 1717, and received the degree of his college in 1719. Employed as an assistant in the Bodleian, he was afterwards tutor to the Duke of North, who gave him the living of St. Andrew, near Oxford. He led a retired life, published several books and tracts, and was named Kndelife Librarian. His writings are two pamphlets on the curious ancient work known as the Book of the Horse, in Berkshire, a catalogue of the MSS. in the Bodleian Library, "Concerning the first Inhabitants of Europe," &c. &c. He was a fellow of the Society of Antiquaries, and died at Ellesfield in 1767.

MICHAEL, one of the best English composers of sacred music, was a native of the city of London, and in 1660 became one of the organists of the Chapel Royal. He was subsequently organist of Salisbury Cathedral, and of the Chapel Royal, and afterwards of the Chapel of St. Dunstons. He enjoyed for some time the patronage of Charles II., and was at last killed at the battle of Marston, in 1687.

MAN, NICHOLAS, Cardinal, Roman Catholic Archbishop of Westminster, was born at Seville, in 1802. He was of a very distinguished English family, traceable as holders of the title of Baron of the time of Edward IV. He was knighted by Henry VIII. He then made a baronet by Charles I. He studied for eight years at the College of St. Albans, near Durham, he went to Rome, and was one of the first members of the English College there. Created a Cardinal in 1824, he soon after took holy orders, and became professor of oriental languages in the University, and rector of the English College at Rome. At the same period he had gained a reputation as one of the few critics of the Rev. Mr. Sylvester. After his return to England, in 1835, he was engaged in a controversy with Dr Turton, afterwards bishop of Durham, respecting the Eucharist. In 1840 Dr Man was appointed coadjutor to the Bishop of Exeter, then vicar apostolic of the Midland

District, and at the same time president of St Mary's College, Ossett, near Birmingham. At that period he was deeply interested in the Tractarian movement at Oxford, which he zealously promoted, and from which he hoped more than he realized. He was censured for the unseemly haste with which he sought to make priests of the "distinguished converts." In 1819 he became vicar apostolic of the London District. In the following year he was summoned to Rome, and soon after Pius IX. issued an "apostolical letter," re-establishing the hierarchy in England, and by a brief named Dr Wiseman "archbishop of Westminster." This was the too celebrated "papal aggression," which raised such a storm in England, and led to the passing of a special act against the assumption of certain ecclesiastical titles. Dr Wiseman was at the same time created cardinal, being the seventh English cardinal since the Reformation. He was for many years joint editor and a frequent contributor to the "Dublin Review," and his essays therein were separately published in 1853. His name was frequently before the public as a lecturer on art, science, history, and other topics; his ambition being rather to shine in many fields than to be thoroughly master in one. He is said to have declared before his death that he had never in his life a doubt respecting any article of the Catholic creed; no wonder that he failed to understand the times in which he lived. It was through his influence that the "Home and Foreign Review," the able organ of the liberal party in the church of Rome, was commenced, and its discontinuance necessitated. Among his works, besides those named above, are "Lectures on the Connection between Science and Revealed Religion;" "High Church Claims," strictures on the Tractarian movement; "Enbiola," a tale; "The Four Last Popes," and various Letters and Lectures on ecclesiastical matters. One of his latest literary papers was a "Proposal for a Tercentenary Edition of Shakespeare," which appeared in the Fine Arts Quarterly Review. Cardinal Wiseman had been in ill health for several years; he visited Rome in 1860; and died at London, 25th February, 1865. He was interred with great pomp and ceremony in the Roman Catholic Cemetery near Kensal Green.

WISHART, GEORGE, the friend of John Knox, and usually called THE MARTYR, was a Scottish schoolmaster, and having received the doctrines of the Reformation, began to preach them, probably about 1536. Fear, however, drove him from his native country, and he was some years in England, where he also preached, and by persecution was induced to recant. After his return to Scotland, in 1543, he distinguished himself as one of the boldest and most vehement promoters of the Reformation, riots and destruction of churches sometimes following his discourses. Recent investigations have made it all but certain that Wishart was concerned in the riots formed against the life of Cardinal Beaton. He was seized at Haddington by the soldiers in the service of Beaton, tried for heresy, and burnt at St Andrews, 28th March, 1546.

WISHART, GEORGE, a Scottish historian, was born in 1602, became a parish minister at St Andrews, but refusing to sign the covenant, was more than once imprisoned. He was several years chaplain to the marquis of Montrose, on whose execution, in 1650, he held the like situation in the household of the queen of Bohemia. He returned to England at the Restoration, was appointed rector of Newcastle, and two years later bishop of Edinburgh. Wishart was author of a history of the campaigns of Montrose, written in Latin, and published in 1650. It was translated into English, and has been several times reprinted. Died, 1671.

WITHER, GEORGE, poet, whose works, long neglected, have been brought into repute by Sir Egerton Brydges and others, was born in 1588, at Bentworth, in Hampshire, and was educated at Magdalen College, Oxford. In 1613 he was committed to prison for his satires, called "Abuses Strip and Whipt." In the civil war he espoused the popular cause, raised a troop of horse, and rose to the rank of major-general; but having published a piece, called "Vox Vulgi," he was again incarcerated after the Restoration. Died, 1667.

WITHERING, WILLIAM, physician and botanist, was born in 1741, at Wellington, in Shropshire; studied at Edinburgh; practised at Stafford, and afterwards at Birmingham; and died in 1799. He was a fellow of the Royal Society. His chief work is, a "Systematic Arrangement of British Plants;" but he wrote several others, and the native ennoblement of barytes was discovered and first described by him.

WITHERINGTON, WILLIAM FREDERICK, R.A., an English landscape painter, was born in London in 1786. He became a student at the Royal Academy at the age of nineteen, and first exhibited at the British Institution in 1811. In 1830 he was chosen A.R.A., and ten years later R.A. Among his best known pictures are "the Cornfield," "the Orchard," "the Hop-garden," "the Stepping Stone" (the last two are now in the National Gallery), "John Giltipin," and "Sancho Panza and Don Quixote." Died, April 11, 1865.

WITT. (DE WITT.)

WITTGENSTEIN, LUDWIG ADOLF, Count von, field-marshal of Russia, was born of a noble German family long settled in Westphalia, in 1769. He began his military career in 1793, serving in the army of Prussia against the French Republic, and afterwards served with distinction in the Russian army. During the French invasion of Russia in 1812, he successfully protected the capital against Marshal Maedonald, and in the following year was named commander-in-chief of the allied Russian and Prussian forces. Defeated by Napoleon at Lützen and Bautzen, he took part as commander of a division at the great battle of Leipzig in October, 1813, and in the campaign of 1814. After Waterloo he retired, receiving as a reward the grant of large estates from the Emperor Alexander. He was created field-marshal in 1826, and two years later commanded in the first campaign against the Turks; received the title of Prince in

1834; and died at his seat, in Podolla, in 1843.

WODROW, ROBERT, a Scottish historian, was born in 1679, at Glasgow; studied at the university of that city, of which he afterwards became librarian; and attained great popularity as a preacher. He wrote a "History of the Sufferings of the Church of Scotland from the Restoration to the Revolution." The narrative is pervaded by intense party spirit, and though generally accepted as trustworthy, recent discussions have tended to throw doubt upon the accuracy of some parts of it. A large mass of materials collected by Wodrow for other works are preserved in the Advocate's Library. Died, 1734.

WOFFINGTON, MARGARET, a celebrated actress, was born at Dublin, in 1718. Her first appearance in London was at Covent Garden Theatre, in 1733, in the character of Sir Harry Wildair, in which she was eminently successful, as she generally was, in fact, in whatever parts she assumed. Her attractions in private life were also universally acknowledged, and her society sought by persons of rank and talent. Died, 1760.

WOHLGEMUTH, MICHAEL, early German painter and engraver, was born at Nürnberg in 1434. He surpassed his German predecessors in his art, and received large prices for some of his works. These are now very rare. But the matter of chief interest about him is that he was the master and friend of Albert Dürer, who in 1516 painted the portrait of him now in the Royal Collection at Munich. Died, 1519.

WOIDE, CHARLES GODFREY, a learned orientalist, was born in Holland or in Poland, in 1725. He became a Socinian minister, but in 1770 came to England as preacher at the German Chapel Royal. He was subsequently preacher at the Savoy; became, in 1782, assistant librarian at the British Museum; was made D.C.L., Oxford, and chosen F.R.S. His most important work was an edition of the Greek New Testament, from the Alexandrine codex in the British Museum, to which he wrote a critical preface. Woide was a friend of Sir Joseph Banks. Died, at London, 1790.

WOLCOTT, JOHN, the humourist and satiric poet, known by the name of Peter Pindar, was born, in 1738, at Dodbrook, in Devonshire, and was apprenticed to his uncle, an apothecary at Powey, who ultimately left him the bulk of his property. Having taken the degree of M.D., he accompanied Sir William Trevelyan to Jamaica as physician. While residing in that island he took orders, and was presented with a living. On his return to England he settled at Truro, whence he removed to Helston; and it was while he resided in Cornwall that he drew from obscurity the painter Opie, with whom, in 1780, he came to London. After his arrival in the metropolis he soon rendered himself conspicuous by his satires, which rapidly succeeded each other, and were highly popular. Among his most finished works are, "Lyric Odes to the Royal Academicians" and "The Lousiad." In the decline of life he became blind, and died in 1819. His

works have lost much of their interest, owing to the temporary and personal nature of the subjects; but they exhibit a racy humour and freshness, often imitated but rarely equalled. A portrait of Woicott, a miniature by Lethbridge, is in the National Collection.

WOLF, FERDINAND, a distinguished German historian of literature, was born at Vienna in 1796. He was educated at the university of Graz, and in consequence of his fondness for literature, abandoned the profession of the law, and at the age of 23 obtained an appointment in the Imperial Library of Vienna. In that city he spent the rest of his life, his knowledge and efficiency as librarian ultimately earning him the responsible post of Keeper of the Manuscripts. His earlier writings were essays on some obscure portions of medieval literature; his later, chiefly on Spanish and Portuguese literature, for which he had almost a passionate admiration. Among his principal works are a critical edition of ancient Spanish ballads, "Studien zur Geschichte der Spanischen und Portugiesischen National Literatur," and "Le Bréal Littéraire." He contributed also to Ebert's "Jahrbuch für Romanische und Englische Literatur," and to the Transactions of the Imperial Academy of Vienna, of which he was honorary secretary from the time of its foundation. Died at Vienna, 18th February, 1866.

WOLF, FRIEDRICH AUGUST, one of the greatest of modern German scholars, was born near Nordhausen, in 1759; studied at Göttingen, and was successively professor of philology at Halle and Berlin. His commentaries on the classic authors are models of learning and critical sagacity; but he is chiefly known in England for his attempt to prove that the Iliad and the Odyssey did not proceed from one hand, but were the work of several rhapsodists, subsequently put together, and made up into the two epics bearing the name of Homer. He first published these views in his famous "Prolegomena ad Homerum," which appeared in 1804, a work of profound learning and wonderful critical acumen, and which not only excited great sensation on its first appearance, but originated a controversy of far-reaching character, in which the greatest scholars of Europe have taken part, and which is not yet closed. Wolf was a great antiquarian. Heyne. Died, 1824.

WOLF, JOHANN CHRISTOPH, divine and philologist, born in 1683. He was professor of oriental languages at Hamburg, and author of many works on Hebrew and Greek literature, and he bequeathed a vast collection of rabbinical and oriental books to the public library at Hamburg, where he died, in 1739.

WOLF, JEROM (HIERONYMUS), a distinguished German philologist, born at Göttingen in 1516. Bent strongly on study, he was of a strange, restless temperament, and went to the universities of Tübingen and Wittenberg; was afterwards employed as a teacher at Nürting, Mühlhausen, Strassburg, and Basel; and, in 1551, settled at last at the university of one of the Fuggers at Augsburg.

ave lost much of their interest, the temporary and personal nature of subjects; but they exhibit a rare freshness, often imitated but rarely equalled. A portrait of Wolcott, a miniature by Leitchbridge, is in the National Col-

WOLFF, FERDINAND, a distinguished German historian of literature, was born at Göttingen in 1796. He was educated at the University of Göttingen, and in consequence of his proficiency for literature, abandoned the study of the law, and at the age of 23 obtained an appointment in the Imperial library at Vienna. In that city he spent the rest of his life, his knowledge and industry as librarian ultimately earning him the responsible post of Keeper of the manuscripts. His earlier writings were on some obscure portions of medieval literature; his later, chiefly on Spanish and Chinese literature, for which he had a passionate admiration. Among his principal works are a critical edition of the Spanish ballads, "Studien zur Geschichte der Spanischen und Portugiesischen National-Literatur," and "Lehrbuch für Romanische und Englische Literatur," and to the Transactions of the Imperial Academy of Vienna, of which he was honorary secretary from the time of his appointment. Died at Vienna, 18th February, 1862.

WOLFF, FRIEDRICH AUGUST, one of the best of modern German scholars, was born near Nordhausen, in 1759; studied at Göttingen, and was successively professor of logic at Halle and Berlin. His commentaries on the classic authors are models of learning and critical sagacity; but he is chiefly known in England for his attempt to translate the Iliad and the Odyssey did not succeed from one hand, but were the work of several rhapsodists, subsequently put together, and made up into the two epics, under the name of Homer. He first published these views in his famous "Prolegomena ad Homerum," which appeared in 1796. His work of profound learning and wonderful critical acumen, and which not only excited attention on its first appearance, but also originated a controversy of far-reaching character, in which the greatest scholars of Europe have taken part, and which is not yet closed. Wolff was a great antagonist of Niebuhr. Died, 1824.

WOLFF, JOHANN CHRISTOPH, divine and theologian, born in 1683. He was professor of oriental languages at Hamburg, and author of many works on Hebrew and Greek literature, and he bequeathed a vast collection of rabbinical and oriental books to the public library at Hamburg, where he died, in 1739.

WOLFF, JEROM (HIERONYMUS), a distinguished German philologist, born at Dillingen in 1516. Bent strongly on study, he was a strange, restless temperament, he went to the universities of Tübingen and Wittenberg; was afterwards employed as a teacher at Nürnberg, Mühlhausen, Strassburg, and Basel; and, in 1551, settled at last as a lecturer to one of the Fuggers at Augsburg,

where he afterwards became professor of Greek, rector of the gymnasium, and public librarian. He had made the acquaintance and gained the esteem of Melancthon at Wittenberg. Wolff edited and translated the orations of Demosthenes, Eschines, and Isocrates, the Lexicon of Suidas, and other Greek authors. He was never married; laboured in astrology; and died at Augsburg, in 1580.

WOLFE, CHARLES, an Irish divine and a poet of great promise, was born in 1791, at Dublin; was educated at High Abbey School, Winchester, and at Trinity College, Dublin; obtained the curacy of Ballyclog, which he exchanged for that of Castle Caulfield; and died, of consumption, in 1823. Among other poems possessing considerable merit he wrote the well-known "Burial of Sir John Moore," commencing, "Not a drum was heard;" which was pronounced by Lord Byron "the most perfect ode in the language."

WOLFE, JAMES, Major-general, the son of Lieutenant-general Edward Wolfe, was born at Westerham, in Kent, in 1727. He entered early into the army, and distinguished himself by his bravery and the decision of his character on many occasions during the German war. He was present at the battle of Dettingen, took part in the campaign of Fontenoy, was present at the battles of Falkirk and Culloden, and at the siege of Maestricht. Returning to England in 1749, he commanded a regiment in the Highlands the next five years. In 1757 he served in the expedition against Rochefort, and the following year under General Amherst in North America. On his return he was appointed to the command of the expedition against Quebec. The enterprise was great and hazardous; but General Wolfe, in spite of failing health and a very inadequate force, surmounted all obstacles, and on the heights of Abraham, Sept. 13, 1759, encountered the French; when, in the moment of victory, he received a ball in the wrist and another in the body, which obliged him to be carried into the rear. There, while in the agonies of death, being roused by the sound of "They run!" he eagerly asked, "Who run?" and being told the French, he exclaimed, "I thank God, and die contented." A touching story is told how General Wolfe, on the eve of the battle, recited, in a boat on the river, nearly the whole of Gray's "Elegy," then recently published, and said he would rather have been his author than have the glory of beating the French next day. His remains were brought to England and interred at Greenwhich, and a monument was erected to his memory in Westminster Abbey. The death of Wolfe was the subject of one of the best works of the painter West. His portrait, by Highmore, belonged to the Princess Charlotte, and was presented by Leopold, king of the Belgians, to the National Portrait Gallery, in 1858. An interesting Memoir, by R. Wright, was lately published.

WOLFF, JOSEPH, D.D., the celebrated traveller, and missionary to the Jews, was the son of a Jewish Rabbi, and was born at Wellebsbach, near Bamberg, in 1796. At a

very early age he had a wish to become a Christian; and after studying at Stuttgart and Bamberg, getting turned out of doors by his friends, and wandering about in South Germany teaching Hebrew for bread, he was received into the church of Rome at Prague in 1812. He had already become acquainted with Goethe and Voss; and at Vienna, where he entered the university, he made the acquaintance of Professor Jahn, Von Hammer, Friedrich von Schlegel, Theodore Körner, and the general of the Redemptorists, Hoffbauer. He was much influenced by his friend Count von Stolberg, and Bishop Seiler. After continuing his studies at Tübingen he went, in 1816, to Rome, meeting on his way the mystic Madame Krudener and Madame de Staël. Through the patronage of Niebuhr, then Prussian minister at Rome, the young convert was presented to the pope, Pius VII., and was received as a student in the Roman college, and then in the college of the Propaganda. During his stay at Rome he became a friend of the painter Overbeck. In 1818, in consequence of his daring dissent from the opinions and practices of those about him, he was expelled from the Propaganda, and from Rome; entered the Redemptorist monastery of Val-Sainte, in Switzerland; and in 1819 came to London, joined the church of England, and was sent to Cambridge to study the oriental languages under Dr Lee, and thus prepare himself for the work of a missionary to the Jews under the auspices of the London Society. At Cambridge his chief friend was the celebrated preacher, and professor of theology, Charles Simeon. He set out on his first missionary journey in 1821, visiting Malta, Alexandria, Mount Sinai, Jerusalem, Cyprus, Baghdad, Ispahan, Tiflis, &c., and returning to England in 1826. The next year he married Lady Georgiana Walpole, daughter of the second earl of Orford, who accompanied him soon after on a second missionary journey as far as Malia; whence he went alone through Persia, Bokhara, India, and Egypt. He returned to England in 1834; set out two years later for Abyssinia, Arabia, India, and the United States, where he was ordained deacon, and made D.D., and in 1833 was ordained priest. He made a second journey to Bokhara in 1843, to discover the fate and effect the liberation, if possible, of the English envoys, Stoddart and Conolly. On his return, in 1845, he was presented to the vicarage of Isle Brewers. His wife dying in 1859, he married again in 1861, and died at Isle Brewers, May 2, 1862. The most fascinating of the writings of this extraordinary man is his Autobiography, entitled "Travels and Adventures of the Rev. Joseph Wolff, D.D.," 2 vols., 1860 and 1861. Among his other works are—"Journal of Missionary Labours, 1827-1838;" "Mission to Bokhara;" and a second series of "Missionary Labours."

WOLFF, JOHANN CHRISTIAN VON, German philosopher and mathematician, born at Breslau in 1679. He was educated at the universities of Jena and Leipsic, and in 1707 was named professor of mathematics at Halle. Notwithstanding the nature of his

professional duties, he pursued with the deepest interest and persistent attention those metaphysical studies which always chiefly attracted him. Through the influence partly of personal enemies, and partly of the "odium theologium," aroused by some of his opinions, he was deprived of his chair and banished from Prussia, in November, 1723. He long held the chair of mathematics and philosophy at Marburg; but on the invitation of Frederick the Great he returned to Halle, in 1741, as professor of International Law. He was also honoured with the appointments of privy-councillor and chancellor of the university. He was a fellow of the Royal Society of London, member of the French Academy of Sciences, and Baron of the Empire. His chief philosophical work is entitled, "Philosophia Rationalis," which appeared in 1728, and was followed by "Philosophia Prima," "Theologia Naturalis," and several others. His principal mathematical work is the "Elementa Matheseos Universae." Wolff wrote many of his works in German—an offensive novelty at that time—and he greatly contributed to the final downfall of the scholastic philosophy in Germany. He was less an original thinker than a successful methodizer and expositor of the views of others. His system is for the most part coincident with that of Leibnitz. A host of adversaries rose against him, and he was called fatalist and atheist, but he had also many disciples, and his school long held its place.

WOLLASTON, WILLIAM, an ethical and theological writer, was born in 1659, at Cotton Clanford, in Staffordshire; was educated at Sidney Sussex College, Cambridge; took orders; but having come into possession of considerable property, he relinquished the clerical profession, and devoted his time to literary researches. His principal work is, "The Religion of Nature delineated." It appeared the year of his death, and became very popular. It has passed through several editions. Died, 1724.

WOLLASTON, WILLIAM HYDE, physician and experimental philosopher, was great-grandson of the foregoing, and born in 1766. He studied at Cambridge, and graduated M.D. in 1793. He was soon after admitted to the Royal Society, of which he subsequently became secretary. His want of patronage as a physician induced him to give up his profession in disgust, and devote himself to scientific pursuits, the result of which was, that he became one of the most eminent chemists and experimentalists of modern times. Among his discoveries in mineralogy are the two metals palladium and rhodium, and the method of rendering platinum malleable, by the last of which he is said to have gained £30,000. He invented a sliding scale of chemical equivalents, a goniometer, and the camera lucida. His papers in the Philosophical Transactions are numerous. Died, 1828.

WOLLSTONECRAFT, MARY. [GODWIN, Mrs.]

WOLSEY, THOMAS, the celebrated cardinal archbishop of York, and minister of state under Henry VIII., was the son of a butcher at Ipswich, and born there in 1471.

After finishing his education at Oxford, he became tutor to the sons of the marquis of Dorset; was subsequently domestic chaplain to the archbishop of Canterbury; and, on going to court, he gained the favour of Henry VII., who sent him on an embassy to the emperor, and on his return made him dean of Lincoln. Henry VIII. gave him the living of Torrington, in Devon, and afterwards appointed him register of the Garter and canon of Windsor. He next obtained the deanery of York, and, attending the king to Tournay, in France, was made bishop of that city. In 1514 he was advanced to the see of Lincoln, and the year following to the archbishopric of York. Insatiable in the pursuit of emolument, he obtained the administration of the see of Bath and Wells, and the temporalities of the abbey of St Alban's, soon after which he enjoyed in succession the rich bishoprics of Durham and Winchester. By these means his revenues nearly equalled those of the crown, part of which he expended in pomp and ostentation, and part in laudable munificence for the advancement of learning. He founded several lectures at Oxford, where he also erected the college of Christ Church, and built a palace at Hampton Court, which he presented to the king. He was at this time in the zenith of power, and had a complete ascendancy over the mind of Henry, who made him lord chancellor, and obtained for him a cardinalship. He was also nominated the pope's legate; and aspired to the chair of St Peter. In this he failed, and a few years later he lost all the power and the possessions he had gained. His advice in the matter of the king's divorce from Queen Katherine, the ruinous taxation he had imposed, and the personal enmity of some powerful persons, combined for his overthrow. He was prosecuted under the statutes of Premunire, deprived of everything, and sent to live in retirement at Esher. Although the king restored him to some of his offices soon after, and he returned to his see of York, a charge of treason was brought against him. In 1530 he was apprehended at York, but was taken ill, and died at London on his way to London, exclaiming, "Had I but served my God as faithfully as I have served my king, he would not have given me over in my grey hairs." An account of his life was written by his secretary, man-usler, George Cavendish; portions of which are appended to Galt's "Life of Wolsey." The portrait of the great Cardinal, by Holbein, is in Christ Church College, Oxford. There is one by an unknown painter, in the National Portrait Gallery.

WOOD, ANTHONY, an eminent English biographer and antiquary, was born in 1675, at Oxford, and was educated at Merton College. His "History and Antiquities of Oxford," which was translated into Latin by Dr Fell and others, appeared in 1694, and his "Athenæ Oxonienses" was published in 1691. An attack upon Lord Clarendon, in the last of these works, subjected him to a sentence of expulsion from the university, and his prejudices in favour of Jacobitism rendered him an object of hatred to the other party. Died, 1695.

his education at Oxford, he was subsequently domestic chaplain to the sons of the marquis of Cambridge; and, as archbishop of Canterbury; and, in 1756, he gained the favour of George III., who sent him on an embassy to the court of France, and on his return made him bishop of Exeter. Henry VIII. gave him the manor of Torrington, in Devon, and afterwards appointed him register of the Garter and dean of Windsor. He next obtained the bishopric of York, and, attending the king's journey, in France, was made bishop of Lincoln. In 1514 he was advanced to the archbishopric of York. Inseparable attendant of emolument, he obtained the administration of the see of Bath and the temporalities of the abbey of Bath, soon after which he enjoyed in the rich bishoprics of Durham and Ely. By these means his revenues equalled those of the crown, which he expended in pomp and magnificence, and part in laudable munificence and advancement of learning. He founded lectures at Oxford, where he also held the college of Christ Church, and a palace at Hampton Court, which he presented to the king. He was at this time in the zenith of power, and had a complete ascendancy over the mind of Henry, who made him lord chancellor, and obtained for him the cardinalship. He was also nominated legate a latere, and aspired to the chair of St. Peter. In this he failed, and a few years later he lost all the power and the influence he had gained. His advice in favour of the king's divorce from Queen Catherine, the ruinous taxation he had introduced, and the personal enmity of some of the great persons, combined for his overthrow. He was prosecuted under the statute of Praemunire, deprived of everything, and confined to live in retirement at Exeter. The king restored him to some of his estates soon after, and he returned to London, a charge of treason was brought against him. In 1530 he was apprehended, but was taken ill, and died at Exeter, on his way to London, exclaiming, "I but served my God as faithfully as I served my king, he would not have me over in my grey hairs." An account of his life was written by his publisher, George Cavendish; portions of it are appended to Galt's "Life of Wolsey." The portrait of the great Cardinal is in the Christ Church College. There is one by an unknown painter in the National Portrait Gallery.

WOOD, ANTHONY, an eminent English engraver and antiquary, was born in London, and was educated at Merton College. His "History and Antiquities of Oxford," which was translated into Latin by John Fell and others, appeared in 1694, and his "Athenæ Oxonienses" was published in 1724. An attack upon Lord Clarendon, in the last of these works, subjected him to a sentence of expulsion from the university, on account of his prejudices in favour of Jacobitism. He died in 1695, an object of hatred to the Whig party.

A New Universal Biography.

WOOD, JAMES, proprietor of the Old Gloucester Bank,—a millionaire, whose riches and parsimonious eccentricities entitled him to a place among the "remarkable characters" of the age,—was born at Gloucester in 1756, and succeeded to the bank, which had been there established, in 1716, by his grandfather. In conjunction with the bank, he kept a shop to the day of his death, and dealt in almost every article that could be asked for; nothing was too trifling for "Jemmy Wood" by which a penny could be turned, and nothing too extensive for him to supply—a farthing rushlight, or a merchant's shipping order. He was a bachelor, and spent the whole week in his banking-shop, or rather his shop-bank (for the business of the "Old Gloucester Bank" was transacted at one end of his chandlery store); he entertained no company, visited none, took his country walk of a Sunday in order to enjoy a frugal meal in the open air, and never made it his especial care not to diminish his wealth by attending to the calls of humanity. He died April 20, 1836, leaving his vast property to be divided between his four executors. His personal property was worth under £200,000; but Mr James Wood, of Salisbury, stated to be one of nine cousins of the deceased, entered a caveat against the probate. A codicil was afterwards discovered, by which various legacies are bequeathed to his kindred, besides a very large sum to the corporation of Gloucester; this codicil, however, was not satisfactorily authenticated.

WOOD, Alderman Sir MATTHEW, bart., M.P., was the son of a serge manufacturer of Tiverton, and was apprenticed to a chemist and druggist. After serving his time, and being for a few years employed as a traveller in the drug trade, he commenced business in London, at first as a chandler, and subsequently as a hop merchant, in which latter trade he acquired a very handsome fortune. After serving some minor offices in the city, Mr Wood was elevated to the mayoralty in 1815, and re-elected in 1816; his departure from the ordinary course that was unprecedented during several previous mayoralties. During his second mayoralty he acted a still higher position in public favour for his humane conduct in saving the lives of three Irishmen who were sentenced to be hanged, on the perjured testimony of three police officers. The lively sent his name up for a third time for the mayoralty; but the court of Aldermen deeming this too irregular, passed his name over. During his second mayoralty he was elected M.P. for London, and from that time till his death he was invariably returned, and on all occasions saved at the head of the poll. Of Mr Wood's conduct as a magistrate it is not possible to speak too highly; but we can by no means say the like unqualified praise to his course as a senator, for, in his place in parliament, he displayed more obstinacy than candour, and was less zealous than wisdom. He gained great popularity for the zeal with which he attached himself to the fate and fortunes of the ill-fated Queen Caroline. His political course procured him the friendship of a maiden lady, daughter of the wealthy James Wood, banker

of Gloucester. At her death she bequeathed him a handsome property, and her brother subsequently left him a fourth of his vast fortune. He was created a baronet during the Melbourne administration, in 1837. Died, Sept. 25, 1843, aged 76.

WOOD, ROBERT, an accomplished scholar, was born in 1716, at Riverstown, county of Meath; made the tour of Greece and Palestine in 1751; and was appointed under-secretary of state in 1759. He wrote "The Ruins of Baalbec," "The Ruins of Palmyra," and an "Essay on the Genius and Writings of Homer," which was published after his death. Died, 1771.

WOODDESON, RICHARD, an eminent civilian, was born in 1745, at Kingston, in Surrey; was educated at Pembroke and Magdalen College, Oxford; and chosen Vinerian professor, on the resignation of Sir Robert Chambers. He wrote "Elements of Jurisprudence," "A Systematic View of the Laws of England," and "A Brief Vindication of the Rights of the British Legislature." Died, 1822.

WOODFALL, WILLIAM, printer and parliamentary reporter, who became in some measure a public character from his being exposed to a prosecution as publisher of the famous "Letters of Junius." Being gifted with a wonderfully retentive memory, he reported the debates in parliament with great ability and precision, and was the first who introduced them to the public after their present fashion. Died, 1803.

WOODHOUSE, ROBERT, an eminent mathematician, was born at Norwich in 1773, and educated at Cambridge. He was elected Lucasian professor in 1820, Plumian professor in 1822, and keeper of the observatory in 1824. He wrote "The Principles of Analytical Calculation," "A Treatise on Trigonometry," another on "Plane Astronomy," &c. Died, 1827.

WOODHOUSELEE, Lord. [TYTLER, ALEXANDER FRASER.]

WOODVILLE, or WYDEVILLE, ELIZABETH, widow of Sir John Grey, who was slain in the battle of Barnard's Heath. On her applying for the restoration of her husband's estate, Edward IV. fell in love with, and married her. The princess Elizabeth who married Henry VII., and thus united the houses of York and Lancaster, was the fruit of this marriage. See WYDEVILLE.

WOODVILLE, WILLIAM, an eminent physician, was born in 1752, at Cokermouth; studied at Edinburgh; and settled in London, where he became physician to the Middlesex Dispensary and the Smallpox Hospital. He was the author of "Medical Botany," and the "History of the Smallpox Inoculation." Died, 1805.

WOODWARD, JOHN, the geologist, was born in Derbyshire in 1665. He was brought up to the medical profession, graduated M.D., and became fellow of the Royal College of Physicians, and professor at Gresham College. He was also a fellow of the Royal Society. But he is now remembered for his researches and writings on geology, to which he was early attracted by the limestone of Gloucestershire, and their interesting fossils. His principal work is entitled

WOO]

"A Natural History of the Earth," and appeared in 1695. In reply to several able attacks on his views, he published a defence of the work in 1724, with a classified list of fossils. He also left in manuscript "An attempt towards a Natural History of the Fossils of England," which was published immediately after his death. By his writings, his large collection of geological specimens, and by his foundation of the professorship of geology at Cambridge University, to which he also bequeathed his collection, he contributed greatly to the progress and development of the science. Died, 1728.

WOOLLETT, WILLIAM, one of the best English engravers of the last century, was born at Maldstone, in 1735. He excelled chiefly in landscape, but executed also some good historical subjects, among the latter, the prints after West's "Death of General Wolfe" and "Battle of La Hogue" being most noteworthy. He engraved some of Wilson's best landscapes very successfully, was named engraver to George III., and died at London in 1785. His portrait, by Gilbert Stuart, is in the National Gallery.

WOOLSTON, THOMAS, theologian, was born in 1669, at Northampton, and became a fellow of Sidney Sussex College, Cambridge. His first work, "The Old Apology for the Truth of the Christian Religion revived," was meant to prove that the actions of Moses were typical of Christ and the church; but he gradually became a deist, and his "Six Discourses on Miracles" subjected him to a prosecution, and he was fined and imprisoned. Died, 1732.

WORCESTER, EDWARD SOMERSET, Marquis of, distinguished as the inventor of the steam-engine, was born about 1601. He was son of the first marquis (known as chief of the Catholic party, and one of the most devoted adherents of Charles I. in the civil war), and bore successively the titles of Lord war, and bore successively the titles of Lord Herbert, earl of Glamorgan, and earl and marquis of Worcester. He spent some years in foreign travel, married about 1628, then gave himself up to his favourite mathematical and mechanical studies, at his father's seat, Haglan Castle, and in 1641 entered into the service of Charles I. At the head of the troops, raised and maintained at the expense of his father and himself, he obtained several important successes. But about 1645 the king sent him on a secret commission to treat with the Irish Catholics, and to raise troops for service in England. The secret was discovered, Glamorgan was imprisoned on a charge of treason, and Charles with his usual unscrupulous treachery disowned his agent. To procure his release, however, the king informed the lord-lieutenant that Glamorgan had acted by his orders. After a voluntary exile of several years, he returned to England in 1652, and suffered an imprisonment in the Tower till 1655. In that year he drew up his famous "Century of Inventions," which was first printed in 1663. Among them is that for which he is deservedly remembered, "an admirable and most forcible way to drive up water by fire;" which was, in fact, a steam-engine. Although it was seen by eminent persons, the invention seems to have been little thought

of, and the inventor was equally slighted. He spent a large sum of money on the erection of his great water-works at Vauxhall, and died in April, 1687. His character, abilities, and inventions have been admirably illustrated by Mr. Dircks, C.E., in his work entitled "The Life, Times, and Scientific Labours of the Second Marquis of Worcester," published in 1865. It includes a reprint of the "Century of Inventions." Mr. Dircks has still more recently published "Worcesteriana," consisting of notices of 180 works relating to the marquis of Worcester or his family connections.

WORCESTER, JOHN, Earl of. (TIPTOTT, JOHN.)

WORDSWORTH, WILLIAM, one of the greatest poets of our age and country, was born at Cockermouth, in Cumberland, April 7th, 1770. He received the rudiments of his mental culture at Hawkshead School, and in the year 1787 was entered at St John's College, Cambridge. Having completed his studies, and taken his academical degree, he made the tour of France and Switzerland at a period when the revolution in France had attained its grand crisis; and its influence upon the fiery imagination and sensitive mind of Wordsworth was no less forcible than that produced upon those of his friends and frequent companions, Coleridge, Southey, and Lloyd. The earliest thoughts that had been generated by his continued meditations upon this theme found an utterance in his "Descriptive Sketches" and "Evening Walk," both of which made their appearance in 1793. In 1797 he had conceived a plan for the regeneration of English poetry. In 1798 he published, in conjunction with Coleridge, a collection of "Lyrical Ballads." The majority of these were from his own pen. This book, so far from making converts to Wordsworth's peculiar way of thinking, met everywhere with the bitterest contempt and ridicule. The Edinburgh Review denounced his theory as puerile, and stigmatized his verses as a species of second-rate nursery rhyme. There can be no doubt that Wordsworth in his zeal to redeem the English muse from a corrupted and inane character, other re-actionists of a sterner character pushed his favourite theory too far. Still many of his readers sympathized with his views; and through their encouragement he was induced to publish two other volumes of poetry in 1807. In 1813 he settled at Rydal Mount, which was his home thenceforward till his death. In 1814 appeared his great work, "The Excursion." About this period Wordsworth obtained the situation of distributor of stamps for Westmoreland, which office he retained during 23 years, retiring in 1842 on a pension of £200, while his son filled the vacancy thus occasioned. Several works followed the "Excursion," among which may be mentioned the exquisite "White Doe of Rylstone," and a series of "Sonnets," and in 1843 appeared a volume containing several poems written in the poet's early youth, accompanied by others written in his old age. In 1843 he succeeded his friend Southey as laureate. It would be almost impossible to

inventor was equally slighted. A large sum of money on the occasion of the great water-works at Vauxhall, in April, 1667. His character, abilities, and inventions have been admirably described by Mr. Dirccks, C.E., in his work "The Life, Times, and Scientific Labours of the Second Marquis of Worcester," published in 1865. It includes a reprint of the "Inventory of Inventions." Mr. Dirccks has more recently published "Worcester," consisting of notices of 180 works of the marquis of Worcester on his inventions.

WESTER, JOHN, Earl of. (TIPTOTT.)

WORDSWORTH, WILLIAM, one of the greatest poets of our age and country, was born at Cockermouth, in Cumberland, April 13, 1767. He received the rudiments of his education at Hawkshead School, and in 1787 was entered at St John's College, Cambridge. Having completed his studies, and taken his academical degree, he spent the tour of France and Switzerland in 1790, a period when the revolution in France attained its grand crisis; and his indignation upon the fiery imagination and sentimentality of Wordsworth was no less forcibly evinced than that produced upon those of his friends and frequent companions, Coleridge, Southey, and Lloyd. The earnest feelings that had been generated by his continued meditations upon this theme, and an utterance in his "Descriptive Sketches" and "Evening Walk," both of which made their appearance in 1793. In 1794 he had conceived a plan for the reformation of English poetry. In 1798 he published, in conjunction with Coleridge, a collection of "Lyrical Ballads." The majority of these were from his own pen. This book, by its power from making converts to Wordsworth's peculiar way of thinking, met everywhere the bitterest contempt and ridicule. The Edinburgh Review denounced his poetry as puerile, and stigmatized "his verses as species of second-rate nursery rhymes." There can be no doubt that Wordsworth's zeal to redeem the English muse from corruption and inane phraseology, like the heroic re-actionists of that time, furnished his favourite theory too far. Still, many of his readers sympathized with his views; and through their encouragement he was induced to publish two other volumes of poetry in 1807. In 1813 he settled at Rydal Mount, which was his home thenceforward until his death. In 1814 appeared his poem, "The Excursion." About this period Wordsworth obtained the situation of distributor of stamps for Westmorland, which office he retained during 28 years, retiring in 1842 on a pension of £200, while his son filled the vacancy thus occasioned. Several works followed the "Excursion," of which some may be mentioned as the "White Doe of Rylstone," and the "Poetical Works," and in 1840 appeared a series of "Sonnets," and in 1841 appeared a volume containing several poems written in the poet's early youth, some of which were written by others written in his old age. In 1843 he succeeded his friend Southey as laureate. It would be almost impossible

over-estimate the importance of the influence which Wordsworth, in conjunction with Coleridge, has exercised in the formation of the intellectual characteristics of the present age. Many of our greatest thinkers have sat at the feet of Coleridge, that "old man eloquent;" while almost the whole of our recent poetry has been tintured and coloured by the genius of Wordsworth. "During the last 30 years," said a contemporary critic, "the regenerative power of his genius has so operated upon the public taste, that the pure, the simple, and the good are now the more regarded elements of poetry, while the Laras, Glours, and the other dilt-tempered objects of a feverish imagination are ceasing to be among the attractive imagery of song. Perhaps the most remarkable triumph of his genius is its conquest over that very review which scorned and sneered at him in the beginning of his career; for his spirit now undoubtedly pervades this very organ which scoffed at him so bitterly, and even rejected his language as too puerile for the nursery." For many years, Wordsworth enjoyed that querdion of love and admiration which are too frequently reserved for departed genius. Thousands of his admirers made a pilgrimage to the poet's home, Rydal Mount; and not a few crossed over from other lands to catch a glimpse of that great man who has filled the world with his fame. Died, 1850. His noblest autobiographical poem, "The Prelude, or the Growth of a Poet's Mind," was a posthumous publication. Memoirs of Wordsworth were published soon after his death by his nephew, Canon Wordsworth. His portrait, by I. W. Pickersgill, is in the National Portrait Gallery.

WORDLIDGE, THOMAS, a portrait painter and engraver, born at Peterborough, in 1700, whose etchings after Rembrandt were peculiarly excellent. He published a book of drawings of antique gems. Died, 1760.

WORMIUS, OLAVUS, an able Danish physician and antiquary, was born in 1538; was made a canon of the cathedral of Lund by Christian IV. as a reward for his medical services; and died in 1634. His principal works relate to Danish and Norwegian history and antiquities.

WORONZOW, MICHAEL SEMENOVICH, Prince, an eminent Russian statesman and general, was born of an illustrious family, at Moscow, in 1732. He was educated in England, where his father was Russian ambassador more than 20 years; entered the Russian army in 1801, served against the Turks, and distinguished himself in the great war with France. He was severely wounded at the battle of Leipzig, and commended the cavalry at the later he was named governor of New Russia and Bessarabia, and in 1844 governor of the heroic mountain-tribes, and took Shanly's stronghold, Dargo. The love for England which he acquired in early life was not quenched by age, and he is said to have disapproved the Crimean War. Died at Odessa, 18th November, 1856. The sister of Prince Woronzow was married to the earl of Pembroke, and was the mother of Lord Herbert.

WORSLEY, SIR RICHARD, bart., was born

in 1751, in the Isle of Wight; and became governor of the island, comptroller of his Majesty's household, and member of parliament for Newport. He resided in Italy many years, and made a large collection of antiquities, of which a catalogue was published, under the title of "Museum Worsleyanum." Sir Richard also wrote the "History of the Isle of Wight." Died, 1805.

WORTHINGTON, WILLIAM, a learned divine, was born in Merionethshire, in 1703; was educated at Jesus College, Oxford; and obtained prebends in the cathedrals of Assaph and York. His principal works are, an "Essay on the Scheme of Redemption," "On the Historical Sense of the Mosaic Account of the Fall of Man," and "The Scripture Theory of the Earth." Died, 1778.

WOTTON, SIR HENRY, diplomatist and political writer, was born in 1568, at Honghston Hall, in Kent; was educated at Winchester and Oxford; spent some time in travelling through the principal countries of Europe; became secretary to the earl of Essex, whom he accompanied on his expedition to Spain, and into Ireland; and, on the fall of that nobleman, he went to reside at Florence. About 1602 the grand-duke of Tuscany sent him on a secret mission to James VI. of Scotland, which he so distinguished as to obtain the lasting favour of the king. After James's accession to the throne of England he employed him on various missions to Italy and Germany. He was made provost of Eton College in 1624, and died in 1639. He wrote "Elements of Architecture," "The State of Christendom," a "Survey of Education," some Poems, &c., a collection of which was published by Izaak Walton under the title of "Reliquie Wottonianæ."

WOTTON, WILLIAM, an English divine, critic, historian, and miscellaneous writer of great learning; born, 1669; died, 1728. He had a remarkable facility in acquiring languages, and extraordinary force of memory. He graduated B.A. at Cambridge before he was 13, and M.A. at 17 years of age. His chief works are, "Reflections upon Ancient and Modern Learning," an edition and Latin translation of the ancient laws of Wales, and "The History of Rome from the Death of Antoninus Pius to the Death of Alexander Severus."

VOUVERMANS, PHILIP, an eminent painter, was born at Haarlem, in 1620. His hunting pieces, landscapes, and battle scenes are admirable. The Dulwich Gallery possesses many of his works. Died, 1668.

WRÄNGEL, CARL GUSTAF, a distinguished Swedish naval and military commander, born in 1613. After a course of foreign travel, and a year spent in Holland in studying navigation, he was taken into the service of the king, Gustavus Adolphus, whom he attended as officer of the guards at the famous battle of Lützen, in November, 1632. After the fall of his royal master he contributed to the completion of the victory. He served with much distinction under Banier, then under Torstenson; contributed to the defeat of the Imperialists at Leipzig, in October, 1642; won a naval victory over the Danes in 1644, and rescued the Swedish admiral, Clas Flemming, from blockade; won

a similar victory near the isle of Femern; and about 1645 succeeded Torstenson in the chief command in Germany. A series of successful operations procured him the dignities of field-marshal and senator of Sweden. He united his army with the French forces under Turenne, and with him entered Bavaria, and afterwards Bohemia, where in 1647 they took Egra. Wrangel especially distinguished himself at the battle of Sommershausen, in 1648, the result of which was that Bavaria fell into the hands of the Swedes and the French. At the peace of Westphalia he received the title of Count, and considerable estates for his services. Wrangel took the command of the fleet in the war with Poland, blockaded Dantzic, took part in the battle of Warsaw in 1656, and captured Fredriksudde in the following year. He was then named admiral of the kingdom, rendered further important services, and in 1660 was raised to the dignity of marshal of the kingdom, and president of the College of War. He was also chosen by Charles Gustavus one of the governors of his son, afterwards Charles XI. Died, 1676.

WRAXALL, SIR NATHANIEL WILLIAM, bart., an eminent traveller and historical writer, was born at Bristol, in 1751. He entered the civil service of the East India Company in 1769, and acted as judge-advocate and paymaster of the forces for the presidency of Bombay. In 1772 he returned to England, and then travelled on the continent, visiting almost every country from Naples to Lapland. He published several tours, the "History of the House of Valois," "Memoirs of the Courts of Berlin, Dresden, Warsaw, and Vienna," "The History of France," 6 vols. 8vo, &c. In 1813 he was created a baronet, and, in 1815, he published his last work, "Historical Memoirs of my Own Time," 2 vols. 8vo. In these memoirs, which contain a fund of anecdote, was a libel on Count Woronzow, the Russian ambassador; for which Sir Nathaniel was sentenced to a fine, and six months' imprisonment. He died at Dover, while on his way to Naples, in 1831, aged 80. Several volumes of additional "Memoirs" were published after his death.

WRAY, ROBERT WATEMAN, a celebrated engraver of gems, was born at Broadchalk, in Wiltshire, in 1715. He learnt drawing of his uncle, Edward Byng, a portrait painter, and was apprenticed to a seal-engraver in London. He aimed at success in a higher field, and by enthusiasm and persistent effort achieved it, and gained a European reputation for his engravings on gems in the manner of the ancient Greek artists. His Dying Cleopatra, Head of Medusa, Magdalene, Madonna, Milton (front face and two profiles), and some female heads, are among the finest of his works. In 1759 he settled at Salisbury, and there died in 1770.

WREDE, KARL PHILIPP, Field-marshal, Prince, an eminent Bavarian soldier and statesman, whose fate it was to be a most formidable foe to the gigantic military genius under whom he obtained his earliest distinction. In 1805 he served as a Bavarian lieutenant-colonel against Austria and as the ally of France, and distinguished himself so

much, that Napoleon personally conferred upon him the grand cross of the Legion of Honour. In subsequent campaigns he still further distinguished himself, and was created a field-marshal when dangerously wounded at the decisive battle of Wagram. In the memorable campaign against Russia, too, the contingent furnished by Bavaria to France was commanded by him; and covered the retreat of the French with such dogged determination, as to lose nearly the whole of its cavalry. In 1813 Marshal Wrede, as Bavarian plenipotentiary, signed the treaty by which Bavaria declared herself separated from the confederation of the Rhine, and also from the cause of the emperor. Shortly afterwards Wrede, at the head of a combined Bavarian and Austrian army, made a gallant and skilful, though unsuccessful, attempt to intercept Napoleon at Hanau, after the battle of Leipzig. In 1814 he was actively engaged in France, and with his usual gallantry; and, at the conclusion of the war, he was elevated to the rank of a prince, and shortly afterwards, nominated an honorary knight grand cross of the English order of the Bath. The termination of the war did not terminate his services to his country. He was appointed minister of state, and inspector general of the army. Born, 1757; died, 1839.

WREN, SIR CHRISTOPHER, the celebrated architect, was born at East Knoyle, in Wiltshire, in 1632; studied at Wadham College, Oxford; was chosen fellow of All Souls, in 1653; was appointed professor of astronomy at Gresham College, in 1657; and, in 1661, was nominated to the Savilian professorship, and created LL.D. He had very early shown remarkable fondness for scientific studies, and made several ingenious instruments, but his genius for architecture had scarcely yet appeared. In 1661 he was named assistant to Sir John Denham, the surveyor general, and two years later he received a commission to produce designs for the restoration of St Paul's Cathedral, then one of the most remarkable Gothic edifices in the kingdom. To prepare himself for the execution of this great undertaking he made a visit to France, in 1665, and then finished the designs; but while they were under consideration the cathedral was destroyed by the fire of 1666. Wren had now an opportunity for signaling his talents by the erection of an entirely new structure. The contemporaneous destruction of fifty parochial churches and many public buildings also furnished an ample field for his genius; and he would have had the honour of founding, as it were, a new city, if the design which he laid before the king and parliament could have been adopted; but private interests prevented his acceptance. On the death of Sir John Denham he succeeded to the office of surveyor of the works; and, in 1674, received the honour of knighthood. The first stone of the grand work was laid in June of the following year, and the whole was completed in 35 years. Of his other works we may name the Monument, Greenwich Hospital, Hampton Court, the churches of St Mary-above-Bow; St Michael, Cornhill; St Dunstan in the East; St Magnus, London Bridge; and

Napoleon personally conferred the grand cross of the Legion of Honour on him in consequence of his subsequent campaigns he distinguished himself, and was made-marshal when dangerously wounded at the decisive battle of Wagram. His meritorious campaign against Russia, skilfully conducted by Bavaria to be commanded by him; and covered the French with such good fortune, as to lose nearly the whole of the army. In 1813 Marshal Wrede, as plenipotentiary, signed the treaty of Vienna, which declared her separate confederation of the Rhine, and the cause of the emperor. Shortly afterwards, at the head of a cavalry and Austrian army, made a skilful, though unsuccessful, attempt to intercept Napoleon at Hanau, after the battle of Leipzig. In 1814 he was actively engaged in France, and with his usual gallantry, at the conclusion of the war, he was promoted to the rank of a prince, and afterwards, nominated an honorary member of the cross of the English order of St. Michael. The termination of the war did not terminate his services to his country; he was appointed minister of state, and lieutenant-general of the army. Born, 1757;

Sir CHRISTOPHER, the celebrated architect, was born at East Knoyle, in Wiltshire, in 1692; studied at Wadham College, and was chosen fellow of All Souls, in 1715. He was appointed professor of astronomy in the Savilian professorship, in 1716. He had very early shown a considerable fondness for scientific studies, and several ingenious instruments, and a genius for architecture had scarcely appeared. In 1661 he was named architect to Sir John Denham, the surveyor-general, two years later he received a commission to produce designs for the restoration of the choir of the Cathedral, then one of the most venerable Gothic edifices in the kingdom. He executed himself for the execution of this undertaking he made a visit to France, and then finished the designs; but they were under consideration when the cathedral was destroyed by the fire of 1666. Wren had now an opportunity of displaying his talents by the erection of a new structure. The contemporary reconstruction of fifty parochial churches and many public buildings also furnished a field for his genius; and he would not lose the honour of founding, as it were, a new city, if the design which he had before in mind, and parliament could have been carried into effect; but private interests prevented his success. On the death of Sir John Denham he succeeded to the office of surveyor-general of the works; and, in 1674, received the honour of knighthood. The first stone of his new work was laid in June of the following year, and the whole was completed in 1682. Of his other works we may name the monument, Greenwich Hospital, Hampton Court, the churches of St. Mary-le-Bow, St. Michael, Cornhill; St. Dunston in the East; St. Magnus, London Bridge; and

St Stephen, Walbrook. In 1680 he was chosen president of the Royal Society; was afterwards appointed architect and commissioner of Chelsea Hospital, and comptroller of the works at Windsor. He was elected M.P. for the borough of Plympton, in 1685, and for Weymouth, in 1700. After having long been the highest ornament of his profession, he was, in 1718, to the disgrace of the administration, deprived of the surveyorship of the royal works, merely from political motives; he was then in the 85th year of his age. He died, Feb. 25, 1723, aged 90, and was buried in St Paul's Cathedral. Over his tomb was placed the fitting inscription—"Si monumentum queris circumspice." His portrait, by Sir G. Kneller, is in the National Portrait Gallery.

WREN, CHRISTOPHER, son of the preceding, was a learned antiquary, and collected memoirs of his family, which in 1750 were published by Dr. Stephen Wren, his son, under the title of "Parentalia."

WREN, MATTHEW, bishop of Ely, was born in London in 1585; studied at Pembroke Hall, Cambridge, of which he was chosen fellow; took orders, and in 1621 was named chaplain to Prince Charles (Charles I.). He accompanied the prince and Buckingham on their journey to Madrid in 1623, and gained great influence with Charles. Wren was appointed in 1629 one of the judges of the Star Chamber, a post for which his scold rigorous temper well fitted him. He accompanied the king to Scotland in 1633; was promoted in rapid succession to the sees of Hereford, Norwich, and (in 1638) Ely; composed the form of prayer for the 29th of May, and assisted in preparing the Scottish liturgy, the first use of which had such memorable consequences. Articles of impeachment were brought against him by the Commons at the close of 1640, the court of Star Chamber and the High Commission Court being abolished about the same time; and Wren was a prisoner in the Tower for eighteen years. He was released at the Restoration, and died in 1667.

WRIGHT, JOSEPH, painter, usually styled "Wright of Derby," was born in that town in 1734. He was first placed under Hudson, the portrait painter; afterwards visited Italy, where he made great advances in his profession; returned to England in 1775, and was elected an associate of the Royal Academy in 1782. He settled at Derby, painted many admirable landscapes, &c., and died in 1797. He especially excelled in representing effects of firelight, or storm-scenes. Among his best pictures are the well-known and pathetic "Dead Soldier," "Belshazzar's Feast," "Eruption of Vesuvius," the "Forge," and the "Air-Pump." The last is in the National Gallery. Wright's portrait of himself is in the National Portrait Gallery.

WRIOTHESLEY, THOMAS, 4th earl of Southampton, lord high treasurer of England, under Charles II., was son of Henry Wriothesley, 3rd earl, the patron of Shakespeare. After supporting the popular party against Charles I. and the encroachments of prerogative for a time, he went over to the king's side, opposed the attainder of Stra-

ford, and was made a privy-councillor. He was employed to convey the king's proposals of accommodation to the parliament immediately after the royal standard was set up at Nottingham, in August, 1642, and was one of the royal commissioners to discuss terms of peace at Uxbridge, in January, 1645. During the commonwealth he lived in retirement in England; but soon after the Restoration he was appointed lord high treasurer. He was highly distinguished for his political wisdom, and no less for his unassailed honour and integrity. He sent large supplies of money to Charles II. during his exile, and was the intimate friend of Clarendon. His character is eloquently portrayed both by Clarendon and Burnet. Died, 1697.

WRIOTHESLEY, THOMAS, and WRIOTHESLEY, HENRY. [SOUTHAMPTON, Earls of.]

WURMSER, DAGOBERT SIGISMUND, Count von, an illustrious Austrian general, was born in Alsace in 1724, and served through the campaigns of 1745-46-47 in the French army. Having removed with his family to Vienna, he entered the Austrian army, served with distinction at the battles of Prague, Lissa, Moehlkirchen, and Liegnitz, and was rewarded with successive promotions, and the cross of the Order of Maria Theresa. He became lieutenant-general in 1778; won a victory over the Prussians at Kuberschwedt in the following year; held afterwards the post of commander of Galicia, and was called to take an active part in the war with France, which broke out in 1793. He co-operated with the prince of Condé and the duke of Brunswick, took part in forcing the French lines at Weissenbourg, and was after many successes driven back by Pichegru across the Rhine. In October, 1794, he defeated the French on the Neckar, bombarded and took Mannheim, and subsequently received the grand cross of Maria Theresa. Repulsed by Moreau, Wurmsers was next called to command in Italy, and was there opposed by Napoleon, who defeated him at Lonato, Castiglione, Roveredo, and on the Brenta, in the first week of August, 1796. He succeeded in reaching Mantua, but after a brave defence was compelled to capitulate to his great antagonist. Napoleon generously refused to make him a prisoner, and Wurmsers, with answering honour, disclosed to Napoleon a plot against his life. Wurmsers died, unmarried, at Vienna, in 1797.

WYATT, JAMES, an eminent architect, was born at Burton, in Staffordshire, about 1743, and studied architecture and painting at Rome. On his return to England he erected the Pantheon in Oxford Street, and he succeeded Sir William Chambers as surveyor-general to the Board of Works. He also became a member, and for a short time president, of the Royal Academy. Wyatt was employed to build Fonthill Abbey for Beckford, a palace at Kew, which has been demolished, the Military Academy at Woolwich, &c., and to make alterations in Windsor Castle, Salisbury Cathedral, Magdalen College, Oxford, &c. He died in 1813.

WYATT, MATTHEW COLES, an English sculptor, born in 1777. Educated at Eton,

he was at an early age employed by George III. at Windsor Castle, and long enjoyed the patronage of the court and aristocracy. He designed the monument to Lord Nelson at Liverpool, executed the cenotaph of the Princess Charlotte in St George's Chapel, Windsor, a group of George and the Dragon, the beautiful monument of the duchess of Rutland at Belvoir Castle, and many equestrian statues. One of his most successful works was his figure of the favourite dog of the earl of Dudley. Died, at Paddington, 10th January, 1862.

WYATT, R. J., an accomplished sculptor, was born on the 3rd of May, 1795, in Oxford Street, London, where his father, Edward Wyatt, was then settled. At an early age he was articled to Charles Rossi, R. A., for the term of seven years; and during that term his studies at the Royal Academy were so successfully prosecuted, as to entitle him to the award of medals upon two occasions. At the time Wyatt was under the tuition of Rossi he executed a monument in the church of Esher, in memory of Mrs Hughes, and another in the chapel at St John's Wood. When Canova visited this country he became so far interested in Wyatt, as at once to promise him his protection and the permission to work in his studio at Rome. Thither he went in 1821, after having spent some time in Paris under the celebrated Italian sculptor Bozio; and so devotedly did he prosecute the labours of his profession, that only once did he revisit his native country. It was during Wyatt's visit to England, in 1841, that he was honoured by the queen with a commission for his statue of "Penelope," which in Rome was considered the best of his works. His group of "Ino and the Infant Bacchus," a statue of "Glycera," "Mysidora," a statue, and two statues of Nymphs, are all works of high merit. The industry of Wyatt was singularly constant. In summer, long before five in the morning, he was to be seen on his way to the Caffè Greco, where artists of all nations assemble; and in winter, long before daylight, he was to be seen at the same place reading the papers by the light of a taper which he always carried with him for that purpose. At daylight he was in his studio, and remained at work sometimes until midnight. Died, suddenly, at Rome, May 29, 1850.

WYATT, Sir THOMAS, a distinguished courtier, statesman, and poet, was born in 1503, at Allington, in Kent; was educated at Cambridge and Oxford, became a favourite of Henry VIII., and was employed by him on various diplomatic missions to Spain and the Imperial Court, and died in 1541. His poetical works consist of odes, love elegies, &c., and possess a considerable degree of elegance.

WYATT, Sir THOMAS, the younger, was only son of the preceding, and was born about 1520. He married young, and succeeded to his father's estates at the age of twenty-two. He soon distinguished himself as a soldier, and took part in the siege of Landrecies, with a troop raised at his own expense. He held a command at Boulogne for some time; but he is chiefly remembered

as one of the leaders of the rebellion which broke out in 1544, in consequence of the conclusion of the marriage between Queen Mary and Philip of Spain. At the head of the Kentish men he occupied Rochester Castle, and was there joined by a band of Londoners sent against him under the duke of Norfolk, the duke fleeing with the loss of his guns and ammunition. Wyatt marched on London, plundered the palace of the bishop of Winchester at Southwark, and after retiring to Kingston, again entered London, but was repulsed, and in a skirmish at Temple Bar surrendered, and was committed to the Tower. Among his leading accomplices were the duke of Suffolk, Sir Peter Carew, Sir Nicholas Throckmorton, Sir Thomas Grey, and others. Wyatt pleaded guilty on his trial, and was executed, 11th April, 1544. Several other of the leaders were executed, and about fifty of their followers. The execution of Lady Jane Grey and her husband took place within a week after the suppression of this rebellion.

WYCHERLEY, WILLIAM, a dramatic writer and man of fashion in the time of Charles II., was born in 1640, at Cleve, in Shropshire; studied the law; but having a taste for poetry and the drama, he came into notice as the author of "Love in a Wood," a comedy, and obtained through it the patronage of the duchess of Cleveland, the profligate duke of Buckingham, and the monarch himself. He at length lost the king's favour by clandestinely marrying the countess of Drogheda, a young, rich, and beautiful widow; and although at her death she settled her fortune on him, yet his title being disputed, the law expenses produced embarrassment and arrest, and he remained in confinement 7 years. He was at last released from prison by James II., who gave him a pension of £200 per annum. He was the author of the comedies of the "Plain Dealer," the "Gentleman Dancing Master," and the "Country Wife," besides poems, &c. Died, 1715.

WYCLIFFE, JOHN. [WICKLIFFE.]
WYDEVILLE, or WOODVILLE, ANTHONY, Earl RIVERS, an accomplished nobleman of the 15th century, was born in 1442. In consequence of his sister having been married to Edward IV., he shared in all the vicissitudes which befell that warlike and luxurious monarch, and became governor of Calais and captain-general of the king's forces. He was also made governor of Prince Edward, and chief butler of England. On the death of the king the earl assembled a body of troops, with the intention of crowning his nephew; but his design was defeated by the machinations of the duke of Gloucester, afterwards Richard III., who caused the gallant nobleman to be beheaded, without trial, in the castle of Pontefract, June, 1483.

WYKEHAM, WILLIAM OF, bishop of Winchester, and lord high chancellor of England, was born in 1324, at Wickham, in Hampshire, of respectable parents, but poor, and was indebted for his education to Nicholas Uvedale, governor of Winchester Castle. On the completion of his studies he became private secretary to his patron, and was by

studies he became
patron, and was by

him eventually recommended to the notice of Edward III. The talents, diligence, and integrity he displayed in the service of the king raised him gradually to a distinguished place in the royal favour; and being appointed surveyor of his works at Windsor, under his directions the castle was rebuilt. He now gradually, but rapidly, rose to the highest dignities both in church and state. In 1357 he was presented to the rectory of Pulham, in Norfolk, to which was added a prebend in the church of Elichfield; and in 1360 he was made dean of the collegiate church of St Martin le Grand, London. He was also successively appointed keeper of the privy-seal, secretary to the king, and governor of the great council. In 1366 he was advanced to the bishopric of Winchester, and in the following year was made chancellor of England. These high dignities he sustained with honour and ability, dedicating a large portion of his temporalities to the restoration of the numerous palaces belonging to his see. He resigned the seals in 1371. Owing to the influence of a party, headed by John of Gaunt, who were strongly opposed to the increasing influence of the clergy, he was prosecuted on various charges, and deprived of his temporalities in 1376; but the esteem in which he was held by the people generally compensated for the loss; and on the accession of Richard II. he was restored to his dignities and emoluments. In 1386 he completed his munificent foundation of New College, Oxford; in the chapel of which is still to be seen his crossier, or pastoral staff, supposed to be the only one in England. He also built and endowed St Mary's College, at Winchester; and having, in 1391, a second time resigned the chancellorship, he devoted the remainder of his life to the rebuilding of the cathedral, and the exercise of Christian benevolence. He died, Sept. 24, 1404, and was buried in Winchester cathedral, where a splendid monument is erected to his memory.

WYNANTS, JOHAN, Dutch painter, born at Haarlem about 1600. Little is known of him, and his pictures are very rare. He is supposed to have been the master of Wouwermans, excelled in landscape, and had the figures in his works painted by other artists. Indolent and self-indulgent, he is said to have destroyed his health by habits of dissipation. Died, probably, about 1677. Several of his pictures are in the Dulwich Gallery.

WYNDHAM, Sir WILLIAM, a celebrated statesman, was a native of Somersetshire, and born in 1697. Having been elected M. P. for the county, he soon became conspicuous as one of the ablest senators in the House. He was appointed secretary of war, and, in 1713, chancellor of the exchequer; but being dismissed on the death of Queen Anne, he took a leading part in opposition, and signalized himself by his defence of the duke of Ormond and the earls of Oxford and Strafford, when impeached by the Commons. He was committed to the Tower in 1715, on the charge of being concerned in the rebellion of the earl of Mar, but was never brought to trial. Died, 1740. His portrait, by Highmore, is in the National

Collection.—His eldest son, CHARLES WYNDHAM, became earl of Egremont, and died in 1763.

WYNN, Right Hon. CHARLES WATKINS WILLIAMS, a distinguished member of parliament, born about 1776, and, at the time of his death, the oldest member of the House of Commons, having sat for Montgomeryshire since 1797, and about a year previously for Old Sarum. He held the offices of secretary-at-war (in the Grey administration) and chancellor of the duchy of Lancaster from December, 1834, to April, 1835. Next to Sir Robert Peel, perhaps, there was no parliamentary character more prominent than Mr Wynn, whose age and experience made him an oracle upon questions of privilege and doubtful points of precedent and order, even amid the infirmities of accumulated years. At one period he was nearly chosen to fill the speaker's chair. He was the fast friend of the poet Southey, was attached to literature, an able exponent of political measures, and altogether a man to be respected and esteemed during a lengthened career, in which everything praiseworthy and honourable attached to his name. Died, 1850.

WYON, WILLIAM, R.A., a medal engraver of admirable skill, was of German descent; the son of Peter Wyon, a die-sinker at Birmingham, where he was born in 1795. Apprenticed to his father, he evinced when very young that taste and skill in his art of which he has left behind him so many admirable examples. In 1816 Mr Wyon came to London; and in that year he was appointed second engraver in the Royal Mint. Here he had a fair field and an honourable career before him; but his hopes were darkened by official difficulties, on which we need not dwell. In 1832 he was elected an associate of the Royal Academy; and in 1838 a full academician. Mr Wyon's works may be classified under the several heads of coins—pattern-pieces not coined—medals—and seals. His medals include the war medals of the Peninsula, Trafalgar, Jelaiahad, and Cabul,—the civic medals of the Royal Academy, the Royal Society, the Royal Institution, the Geological Society, the Geographical Society, the Bengal Asiatic Society, and indeed of almost every learned society, home and colonial. His heads have both force and deficiency,—and are always admirable in point of likeness. His reverses are conceived in the manner of Flaxman, for whose works he evinced greater enthusiasm than for those of any other modern artist. Died, 1851.

WYTHIER, GEORGE. [WITHER.]
WYTENBACH, DANIEL, a learned philologist, was born at Berne, in 1746; studied at Marburg and Göttingen, obtained the professorship of philosophy and literature at the Remonstrants' College at Amsterdam; and was subsequently professor of philosophy at the Athenæum in that city. He became afterwards professor of eloquence at Leyden, and held that chair till incapacitated by age. Among his works are "Vita Ruhnkenii," "Opuscula Oratorica, Historica, Critica," and an edition of the Moral Works of Plutarch. Died, 1820.

X.

XAVIER, ST FRANCIS, a celebrated Jesuit missionary, born in Spain in 1506. He was sent to study at Paris, and there met Ignatius Loyola, whose affectionate disciple and ally he thenceforth became. He assisted Loyola in the formation of the new society, and gladly undertook, in 1540, the laborious mission to the East Indies. After very devoted service at Goa, on the Malabar coast, in Travancore, and in the islands of the Archipelago, he went to Ceylon. Meeting there a Javanese refugee, he accompanied him, in 1549, to Japan, and established there the mission, which was maintained by the Jesuits more than a century. On his return to India he fell ill, and died on an island off the coast of China, in December, 1552. He was beatified in 1619, and canonized by Gregory XV. three years later. He left five books of epistles and other small works. It has been recently shown that there is much exaggeration in the common accounts of the successes of this eminent preacher. An account of his "Missionary Life and Labours," by the Rev. H. Venn, was recently published.

XENOCRATES, a Greek philosopher, remarkable for the severity of his manners, and his incontestable integrity, was born at Chalcidion, about B. C. 400. He was a pupil of Plato, and sent on embassies to Phillip, king of Macedonia, and afterwards to Antipater. It is said that the Athenians caused him to be sold as a slave, because he was too poor to pay the taxes. Demetrius Phalereus, however, discharged the debt, and gave him his freedom. He was for many years head of the Academy. Died, B. C. 314.

XENOPHANES, a Greek philosopher and poet, was a native of Colophon, and settled at Elea in Magna Græcia. He lived in the latter half of the 6th century B. C., and was a contemporary of Pythagoras. He is recognized as the founder of the Eleatic School, the characteristic doctrine of which was an idealistic pantheism. Xenophanes was the first philosopher who endeavoured to set the idea of the Deity free from the degrading images previously associated with it. Fragments of his poem "On Nature" and of his elegies are all that are preserved to us of his writings.

XENOPHON, the illustrious Athenian historian, was born probably about B. C. 450. He was a disciple and friend of Socrates, who saved his life at the battle of Delium. With his friend Proxenus he joined the army of Cyrus the younger as a volunteer in the expedition against Artaxerxes. After the death of Cyrus, at the battle of Cunaxa, and the treacherous murder of the Greek generals, Xenophon took the lead in conducting the famous "Retreat of the Ten Thousand" from Upper Asia to their native land. He afterwards served in the Spartan army against the Persians, and sentence of banishment being passed on him by the

Athenians, he retired into Elis, and lived there about 20 years. It is not known whether he availed himself of the permission to return to Athens, nor when or where he died. He was living B. C. 357. The principal works of Xenophon are the "Anabasis of Cyrus," the history of the expedition in which the historian took so prominent a part; the "Cyropædia," a fascinating picture of an ideal state based on the traditions respecting the elder Cyrus; the "Memorabilia of Socrates," a very precious memorial of the great practical philosopher; and the "Hellenica," a historical narrative. He wrote several shorter works. Xenophon's mode of thought is practical, not speculative, and his style is singularly lucid, simple, and manly.

XERXES I., king of Persia, was the son of Darius, and succeeded him on the throne B. C. 486. After suppressing a revolt in Egypt he prepared for the invasion of Greece. In 480 he set out at the head of an enormous host, which he reviewed at Dorisæus, and succeeded in reaching the pass of Thermopylæ. Great part of his fleet was destroyed by a storm, the rest of it engaged the Greek fleet off Artemisium. At the same time took place the memorable battle of Thermopylæ, in which Leonidas and his band of Spartans heroically withstood the Persian host for several days, and then fell through treachery. Xerxes then advanced to Athens, and at the battle of Salamis saw his fleet defeated by Themistocles. He returned to Persia, leaving his general, Mardonius, to carry on the war in Greece. Murdered by Artabanus, B. C. 465.

XIMENEZ DE CISNEROS, FRANCISCO, cardinal, archbishop of Toledo, a distinguished Spanish statesman, was born in Castile in 1437. He studied at the university of Salamanca, then visited Rome, where he acquired a great reputation, suffered a long imprisonment in consequence of a dispute with the archbishop of Toledo, and in 1482 entered the Franciscan order, to the rule of which he devoutly and rigidly conformed. Ten years later Queen Isabella of Castile chose him for her confessor, an office which he would fain have declined. He succeeded Cardinal Mendoza in the archbishopric of Toledo, in 1495. In 1506 he became regent of Spain, and distinguished himself by the wisdom and energy of his administration. Though seventy years of age, he even conducted an expedition into Africa and conquered Oran. He was again regent after the death of Ferdinand in 1516, and died in the following year. Cardinal Ximenes was one of the greatest men of his age, and the services which he rendered as statesman, as churchman, and as patron of literature, were very important. He founded the university of Alcalá de Henares, and had the celebrated Complutensian Polyglot compiled at his own expense. Spain owes to him the first estab-

lishment of the rule which excludes papal bulls not sanctioned by the king, and the first measures towards the emancipation of the tows from the tyranny of the feudal nobles.

XIMENEZ, FRANCISCO, one of the 12 friars who first preached Christianity to the Mexicans in the 16th century. During his residence in Mexico he collected a great deal of information relative to the plants and

animals of that country, and published a treatise on the subject, which is allowed to possess considerable merit.

XIPHILINUS, JOHN, patriarch of Constantinople in the 11th century, was a man of great erudition and exemplary character. Died, 1075. — His nephew, of the same name, was the author of a Greek abridgment of Dion Cassius, and is often confounded with his uncle.

Y.

YALDEN, or YOULding, THOMAS, divine and poet, was born about 1671, and educated at Magdalen College, Oxford, where he formed an intimacy with Addison and Sacheverel, which lasted through life. He obtained the rectories of Charlton and Cleanville, in Herefordshire; and, in 1713, was appointed preacher to Bridewell Hospital, on the resignation of Dr Atterbury. Among his poetical pieces are, "The Temple of Fame," "The Conquest of Namur," "Hymen to Darkness," &c. Died, 1736.

YARRELL, WILLIAM, an eminent naturalist, was born in London in 1784, where his father carried on the business of a newspaper agent. From the earliest age he manifested a strong inclination for natural sports, and while engaged in them he studied minutely the natural history and habits of the game he hunted. In 1828 he sent a paper to the Zoological Journal on "Some rare British Birds," and from this period for nearly thirty years he continued to furnish contributions on similar subjects to many scientific journals; but the works on which his reputation mainly rests are his "History of British Birds," and "History of British Fishes," the former published in 1836, and the latter in 1843.

YATES, FREDERICK HENRY, a popular and versatile actor, first made his appearance on the stage in a piece called "The Actor of All Work," in 1817. In the following year he was engaged at Covent Garden, subsequently performed in every line of character from Shakspeare's tragedy to the broadest farce, and it was not easy to decide whether his pathos or his humour were most admirable. As manager of the Adelphi Theatre his taste and skill were also universally acknowledged. Died, June 21, 1842, aged 45.

YATES, THOMAS, orientalist, author of excellent grammars of the Hebrew and Syriac, a most laborious editor and translator of portions of the Scripture, and distinguished in his day for a variety of biblical labours of considerable value. In early life he was a member and secretary of the Society for promoting Constitutional Reform, but for many years previous to his death

he took no part in politics. Born, 1768; died, 1839.

YEZDEGERD III., king of Persia, last of the dynasty of the Sassanides, came to the throne A. D. 632. He was only fifteen years of age, and the conquests of the Moslems were creating alarm in Persia. The command of his army was given to his favourite Rustam, and a great battle, lasting several days, was fought in the plains of Cadesia in 634 or 636, in which the Persians were defeated, and Rustam killed in his flight. Ctesiphon was occupied by the Moslems in 637, and Yezdegerd fled to the Median hills. Farther successes of the invaders drove him still farther from his kingdom; he passed the Oxus, reached the Jaxartes, and obtained the friendship and aid of the emperor of China. But he was betrayed, overtaken, and killed by Turkish cavalry in the 19th year of his reign, A. D. 651. With him fell the Persian kingdom and the religion of Zoroaster. The era of Yezdegerd commences from the 16th June, 632.

YORK, FREDERICK, Duke of, second son of George III., was born August 16, 1763, and in the February following he was elected prince-bishop of Osnaburg, in Germany. In 1780 he was appointed a brevet-colonel in the British army, and went to study military tactics in the school of the great Frederick at Berlin. In 1784 he was created duke of York and Albany; returned from the continent in 1787; took his seat in the House of Lords the same year; and, in 1789, fought a duel, which had nearly proved fatal to him, with Colonel Lennox, afterwards duke of Richmond. In 1791 he married the eldest daughter of the king of Prussia; was placed at the head of the British army in Flanders, in 1793, took part in the siege of Valenciennes, and after repeated defeats by the French, was compelled to return to England. He was, however, made field-marshal and commander-in-chief, and in 1799 was again sent to Holland. He was again unsuccessful, and had to sign a disadvantageous convention. In 1809 a series of charges were preferred against him in the House of Commons by Colonel Wardle, for having suffered a female favourite to indu-

n, an English poet, Thoughts, was born am, in Hampshire, in at Winchester School , obtained a law fee- College, and, in 1719, had before that time by the publication of and held the situation Lord Burleigh; which ence of an offer by the larger income. This ect of a lawsuit after Young was ordained as appointed chaplain e years later rector of shire. He continued e of poems, each with on to some influential being one of Young's aracteristics. He was rk of the closet to the

princess dowager of Wales. Young's principal work as a poet is the "Night Thoughts," which appeared between 1742-48, and by reason of the seriousness of its subject—the immortality of the soul, and the practical duties which flow from that fact—and the force and showiness with which it is set forth, obtained an immense reputation, and long held its ground as a household book in England. Its style is wearisome and offensive to a cultivated taste, but there are lines and passages in it which will not be forgotten. His other poems are—"The Last Day;" "The Force of Religion;" a series of clever but superficial satires entitled "The Universal Passion;" three tragedies, entitled "Busiris," "The Brothers," and "The Revenge;" and several odes, epistles, and short pieces. In prose he wrote "Remarks on Original Composition," and "The Centaur not Fabulous." Died, April 12, 1765, leaving one son by his wife, Lady Elizabeth Lee, whom he married in 1731. She died in 1741.

YOUNG, MATTHEW, an Irish mathematician and divine, was born in 1760, in the county of Rosecommon; was educated at Trinity College, Dublin, where, in 1786, he became professor of philosophy; was raised to the see of Clonfert, by Marquis Cornwallis, and died in 1800. He was the author of "An Analysis of the Principles of Natural Philosophy," and "The Method of Prime and Ultimate Ratios."

YOUNG, DR THOMAS, a distinguished natural philosopher, was born of a Quaker family at Milverton, in Somersetshire, in 1773. He was carefully educated, and was a zealous student of ancient and modern languages, mathematics, and natural philosophy. At the age of 19 he went to London to study medicine; became a pupil of John Hunter; and, through his uncle, Dr Brocklesby, made the acquaintance of Burke and Sir Joshua Reynolds. At this period he began to shake off his Quakerism, and to dress and live like the people he was thrown amongst. After studying a short time at Edinburgh, he made a tour through Germany, and early in 1797 entered Emmanuel College, Cambridge. He began to practise as a physician in London, in 1801; was chosen the next year professor of natural philosophy at the Royal Institution, a post which he held only two years; and, in 1802, became foreign secretary to the Royal Society. Dr Young was subsequently physician of St George's Hospital, secretary to the Board of Longitude, and foreign associate of the French Academy of Sciences. His principal work is the "Course of Lectures on Natural Philosophy and Mechanical Arts," published in 2 vols., 4to, in 1807. In this work was announced the beautiful undulatory theory of light, and the principle of interference of rays, which is characterized by Sir John Herschel, in his well-known "Discourse," as a principle in optics which, regarded as a physical law, has hardly its equal for beauty, simplicity, and extent of application in the whole circle of science. Dr Young also distinguished himself as a student of the hieroglyphical inscriptions of Egypt, and was the first to suggest the dis-

covery, for which Champollion obtained the chief credit. He contributed many articles to the Encyclopædia Britannica, the Quarterly Review, the Philosophical Transactions, and various scientific journals. Died, May 10, 1829. A Life of this eminent man of science was published, in 1855, by Dr Peacock; who also edited his Miscellaneous Writings. His Hieroglyphical Essays and his Correspondence were edited by Leitch.

YPSILANTI, PRINCE ALEXANDER, the first active agent in the Greek revolution, son of Demetrius, hospodar of Wallachia, was born at Constantinople, in 1792. About the year 1805 Ypsilanti's father received a summons from the grand seignor to repair to Constantinople, and judging that obedience to the command might cost him his life, he determined on retiring into Russia. The son, adopting the military profession, entered into the Russian army; was a captain of hussars, when a ball, at the battle of Dresden, carried away his right hand; attained the rank of major-general, and was made aide-de-camp to the emperor. In 1820 he became acquainted with the Hetaireia, of which association he eventually became the leader. When he saw that the breaking out of the insurrection in Greece could no longer be delayed, he resolved to plant in Moldavia the standard of revolt. He crossed the Pruth with a few attendants, and in March, 1821, he issued a proclamation, announcing that Greece had kindled the torch of freedom, and thrown off the yoke of tyranny. The Emperor Alexander, to express publicly his disapprobation of the undertaking of the Hetairists, summoned Ypsilanti to make his defence; and, as he did not obey, he caused his name to be struck from the rolls of the Russian army. After sustaining repeated defeats, Ypsilanti gave up the cause of Greece. Having crossed the frontiers, he was arrested in Transylvania, and long held captive, as a prisoner of state, in the fortress of Mungatsch. He died at Vienna in 1828, aged 36. Ypsilanti undoubtedly possessed the necessary courage, but his ridiculous pride and tenaciousness of ceremony due to his rank rendered him wholly unfit for the duties of a patriot chieftain.

YRIARTE, JUAN DE, librarian to Philip V. king of Spain, was born of a Spanish family at Orotava, in Teneriffe, in 1702. He was sent to France to be educated, and studied eight years at the college of Louis le Grand. On visiting Madrid in his 22nd year, his great acquirements attracted the notice of influential persons, and after various honourable employments, he became royal librarian in 1732. This office he filled till his death; and during the forty years of his librarianship he greatly increased the collection both of printed books and manuscripts, and prepared several catalogues. The office of translator to the chief secretary of state was given to him in 1740, and this also he held till his death. He was an active member of the Royal Academy of Madrid, and began to compile a Spanish-Latin Dictionary. Died at Madrid, 1771.

YRIARTE, TOMASO DE, an eminent Spanish poet, youngest son of the preceding,

who, in 1792 and 1794, distinguished himself among his countrymen in their efforts to shake off the yoke of Russia. On the Russians being driven out of Warsaw in 1794, he was appointed president of the national council; but when that city fell into the hands of Suwarrow, the implacable Catharine caused him to be arrested, and imprisoned with Mostowski, Potocki, and other patriots, at St Petersburg, where he remained till the accession of the emperor Paul, who set him at liberty.

ZALEUCUS, a renowned legislator of the Locrians, who flourished about 360 B. C. It is related that having made a law to punish adulterers with the loss of sight, he refused to exonerate his own son when convicted of the crime, but submitted to the loss of one of his own eyes, instead of exacting the penalty of both from the offender. The laws of Zaleucus were long in force, and are said to have been the earliest written laws in Greece.

ZALUSKI, JOSEPH ANDREW, a Polish noble, founder of the Zalusk Library, was born in 1701. His passion for book-collecting was remarked in his youth, and his whole life and fortune were dedicated to its gratification. He was assisted in forming the library by his brother, the bishop of Cracow, and, in 1748, it was opened to the public at Warsaw. For a political offence Zaluski was banished by the diet under Russian influence, in 1767, and not allowed to return to Warsaw for six years. Meanwhile many of the books had been stolen, and the whole collection was in a state of neglect and decay. Zaluski died at the beginning of 1774. After various misfortunes this great library, in spite of great losses, numbering about 260,000 volumes, was seized and carried off to St Petersburg, where it was subsequently enlarged, and is known as the Imperial Library.

ZAMBECCARI, Count FRANCESCO, a celebrated Italian aeronaut, born at Bologna, in 1756. His experiments and researches were chiefly directed to the means of guiding balloons in the air, by availing himself of currents at different heights, by employing oars, and by the occasional diminution and augmentation of the gas. He perished in making one of these experiments in 1812, the balloon which conveyed him having entangled itself in a tree, and caught fire.

ZAMOYSKI, JOHN SARIUS, a distinguished Polish statesman and general, born in 1641. After studying at Paris and Padua, and becoming rector of the university at the latter city, he returned to Poland, and was one of the ambassadors sent to Paris in 1673, to offer the Polish crown to the duke of Anjou, afterwards Henry III. of France. When Stephen Bathori came to the throne, he gave his niece in marriage to Zamoyski, whom he also made grand-chancellor of the realm and general of his armies. He distinguished himself as a warrior, and in 1680 rescued from the Muscovite yoke many of the Polish provinces. On the death of Bathori Zamoyski promoted the election of Sigismund, prince of Sweden, to the throne. He afterwards commanded with great distinction against the Turks, the Tartars, and

the Swedes. He also founded colleges, and patronized the arts; and at his death, in 1695, he was honoured with the title of defender of his country, and the protector of the sciences.

ZAMOYSKI, JOHN, Polish general, grandson of the preceding, was born in 1626. As castellan of Kalisch he assisted at the election and coronation of John Casimir in 1649; greatly distinguished himself two years later in the campaigns against the Cossacks, and was named palatine of Sandomir. He took a distinguished part in the war of the succession, and in 1659 contended with the Russians in the Ukraine. He assisted at the diet in the following year, and sanctioned the peace of Oliva. Died at Warsaw, 1665.

ZAMOYSKI, ANDREW, a distinguished Polish statesman, a member of the same family as the preceding, was born in 1716. Having completed his education at the universities of Liegnitz and Paris, he gave up his fortune in 1740 to his brothers, and entered into the Saxon army, in which he served till 1754. Returning to Poland, he was appointed to a high office in the magistracy, and ten years later he was made keeper of the seals. His influence was exerted for the reform of abuses, the promotion of education, and the increase of the army. Indignant at the seizure and exile, under Russian influence, of Zaluski and other nobles in 1767, he resigned the seals, and went into retirement. He was surprised by the commission intrusted to him in 1776 to prepare a code for the kingdom; at once applied himself to the task, and on its completion had the profound grief of seeing it rejected by the diet. Russian influence was at the time predominant and thwarted every measure likely to save the country from anarchy. Zamoyski withdrew to Italy, and there in 1791 he had the consolation to hear that his code was at last adopted in the new constitution. He hastened to return to his country, and died there in February, 1792.

ZAMPIERI, DOMENICHINO, was born at Alzano, in 1616; and having formed a close intimacy with the celebrated Peter Martyr, while they were canons regular of San Giovanni di Laterano, the conversation and example of this distinguished convert had such an effect on the mind of Zanchi, as induced him to throw off the monastic habit and abjure the Romish faith. He was accordingly under the necessity of quitting Italy, and, after seeking a refuge first at Geneva, and next at Strasburg and Chlavenna, he accepted the divinity professorship at Heidelberg, in 1669; where he settled, under the immediate patronage of Frederick III., elector-palatine, at whose instigation he composed his great treatise against Antinomianism. The death of this prince, in 1678, occasioned his resignation, and he removed to Neustadt; but he returned to Heidelberg in 1685, and died there in 1690. His treatise "On the Doctrine of Predestination" was translated into English by Dr Toplady.

ZANOTTI, FRANCISCO MARIA, a mathematician, was born at Bologna, in 1692, and

La Musica," a poem; ns." Died, 1790.

Heidelberg, where he till his death. His Vierzig Bücher vom Handbuch des Franz. "Die Einheit des" &c. Died, 1843.

AEEL NIKOLAJEVICH, d novelist, was born y was a comedy enich was well received Petersburg, and pro- t in the Imperial Li- removed to Moscow, to produce comedies- st popular novel in "a clever picture of ng of the 17th century, as are "Rostavlev," a d the Moscoviers," a at Moscow, 1862.

CHRISTIAN CHRISTO- and hydrographer to born about 1793. He e age of 12, and served 1815. In his capacity prepared and published on of the seas round rt of the North Sea. him the esteem of his hood of the Danne- ign orders, and several ns also honorary mem- ographical Society of

N., a deputy of Poser, bravo and liberal Pole.

became librarian, secretary, and president of the institute of his native city. He was at first a Cartesian, but afterwards became a zealous defender of Newton's system. He was a good Latin and Italian poet. Died, 1777.

ZELOTTI, BATTISTA, Italian painter, was born at Verona, in 1532. He was a pupil of Antonio Badia at the same time with Paul Veronese, whose assistant and rival he afterwards became. Zelotti excelled in fresco painting, and his principal work was a series of illustration of the exploits of the Obizzi. Some of his works have been mistaken for those of Paul Veronese, whose style he imitated. There is a portrait by Zelotti in the National Gallery. Died about 1592.

ZENDRINI, BERNARDO, an eminent Italian mathematician, was born at Savio, in 1679, and settled at Venice as a physician. His profound knowledge of hydraulics obtained for him the appointment of chief engineer to the Venetian republic, with the superintendence of all the rivers, ports, &c. He was also employed by the Austrian government and the republic of Lucca; and many works of great importance were executed by him. Died, 1747.

ZENO, of Elea, a Greek philosopher, was born about B. C. 490, at Elea, in Magna Græcia, and was a disciple of Parmenides. He is said to have visited Athens with Parmenides, and to have lived there some time. The invention, or at least the development, of dialectics is ascribed to him. His native city having fallen under the dominion of a despot, he endeavoured to sell her, but failed; and, being put to the torture, he is said to have bitten off his tongue, in order to prevent himself from betraying his companions.

ZENO, the Greek philosopher, founder of the Stole School, was born at Citium, a small town in Cyprus. The date of his birth is uncertain, but it was probably about B. C. 335. His father, Mnasæus, was a merchant, and brought him up to the same calling. But the writings of the Socratic philosophers fell in his way, and attracted him to a higher field, and the accident of his shipwreck, with the loss of a valuable cargo, on the coast of Attica, left him poor and free to follow his genius, and become a philosopher. He first attended at Athens the lectures of Crates, the cynic; but soon, unsatisfied and dissatisfied, turned to Stilpo of the Megaric school; and afterwards to the philosophers of the Academy, Xenocrates and Plato. He did not permanently adhere to any of these schools, but after twenty years' ardent inquiry and pursuit of truth, began to teach a system of his own. He gathered his disciples in the *Stoa*, or Portico, painted by Polygnotus; whence the name of his school—the *Stoic*. Zeno was of feeble health and deeply thoughtful aspect; lived very abstemiously, presided over the school for 66 years, and reached, it is said, the age of 95. His personal character was the faithful counterpart of his doctrine, and he was held in such high honour by his fellow-citizens that they are said to have placed in his keeping the keys of their citadel. The aim of Zeno was

to found a system of human knowledge, which should take the place of the scepticism then prevalent, and arrest if possible the decay which he saw fast spreading over Greek civilization. He had some of the best qualities of the early Romans; mainly energy, severe simplicity of life, and profound regard for moral obligation. His philosophy therefore had a practical rather than a speculative aim. He derived all knowledge from sensation and reflection—the exercise of reason upon impressions received through the senses; taught that the highest aim of man is to live according to right reason; that the way to virtue (perfect manhood) is through wisdom; that virtue alone is the ground of blessedness; that all good actions are equally good, and all evil ones equally evil; that the passions must be eradicated and tranquillity secured by "apathy" (freedom from passion). The system of the Stoics was more fully developed by the great followers of Zeno, among whom were Cleanthes, his pupil and successor, Chrysisippus, Diogenes of Babylon, and others. Many great thinkers and noble characters went forth from this school, and its doctrines were peculiarly attractive to the noblest Romans. But the system also produced many examples of extravagant egotism, pride, and asperity, and some of its most distinguished adherents availed themselves of the liberty it gave them of putting an end to their own lives. Zeno is said to have done so, in consequence of an accident as he quitted the *Stoa*. The date of his death is probably about B. C. 263. After his death the Athenians are said to have honoured him by the decree of a crown of gold, a public funeral, and a statue of brass.

ZENO, emperor of the East, got himself proclaimed emperor in A. D. 474. He was father of Leo II., who was appointed by Leo I. to succeed him; but being an infant, Zeno assumed the government and the purple, and the young Leo soon after died. In the following year Zeno made peace with Gezeric, king of the Vandals; and was soon after driven into exile by a revolt headed by Basiliscus, who reigned till 477. In that year Zeno returned to Constantinople, and the usurper being betrayed to him, was banished with his wife and family to die of hardships in Cappadoeia. Another revolt broke out in 479 under Marcian, son of the emperor Anthemius, but it was easily suppressed. Zeno had no capacity for government, and led a sensual corrupt life; but he undertook to interfere in ecclesiastical affairs, and attempted, by the publication, in 482, of his famous *Hemoticon*, to put an end to the miserable disputes and disgraceful disorders of the churches. But instead of leading to union, this concordat was the fruitful germ of new divisions. In 491 Verina, the widow of Leo I., promoted another revolt, and had Leontius proclaimed emperor at Tarsus; but he was defeated, and after being blockaded in a fortress for several years was taken and put to death. Zeno died, A. D. 491.

ZENO, APOSTOLO, the father of the Italian opera, was born at Venice, in 1669. He established the academy of the *Animali* at

his native city in 1710, the celebration of the 11th Gloriosa observations on 4to; and his in 1744, in 11 ZENO, CA was born at the university engaged in the cessation of in the war defended Tre threatened the rich trading agia defeat Chiozza. the father of the the at Venice, in 1699. He demy of the Animal an

his native city, in 1694, and commenced, in 1710, the celebrated periodical work called "Il Giornale di Letterati." He wrote "Observations on the Italian Historians," 2 vols. 4to; and his dramatic works were printed in 1741, in 11 vols. Died, 1750.

ZENO, CARLO, grand admiral of Venice, was born about 1334. He was educated at the university of Padua, served as a soldier, engaged in commerce, and in 1376 negotiated with the emperor John Paleologus the cession of the Isle of Tenodos to Venice. In the war of Chiozza which followed, he defended Treviso, defeated the Genoese fleet, threatened the coasts of Genoa, convoyed the rich trading fleet from Bey out to Venice, again defeated the Genoese, and recovered Chiozza. He was made grand admiral in 1390, and distinguished himself by various military and diplomatic services during the thirty years following. Died, 1418.

ZENO, NICCOLO and ANTONIO, two celebrated Venetian navigators of the 14th century, to whom the discovery of America, prior to the voyage of Columbus, has been attributed. Washington Irving, however, considers that they merely visited Greenland, and that the rest of their story is a fabrication.

ZENOBIA, the celebrated queen of Palmyra and of the Enst, was the daughter of an Arab chieftain of Mesopotamia, but claimed descent from the Macedonian kings of Egypt. Lovely, learned, and heroic, she married the chieftain Odenathus, who made himself master of the East, and received the title of Augustus from the emperor Gallienus in A. D. 261. On her husband's death, 267, she succeeded to the government; and displayed in her new position the qualities of prudence, ambition, hardihood, and adventurous courage which had previously contributed to her husband's success and elevation. She had been taught Greek by the great Longinus, and he became her chief adviser. She extended her dominions, and probably purposed to found an independent monarchy; but in 273 Aurelian led an expedition against her, defeated her in two great battles near Antioch and Emesa, and then besieged and took Palmyra. Zenobia escaped on a fleet dromedary, but was overtaken and captured by the Romans on the banks of the Euphrates. In the presence of Aurelian, her courage failed her, and she betrayed Longinus, as the instigator of her resistance to the Roman power, to death by the executioner. Zenobia herself was taken to Rome, and led in triumph, in 274, before the chariot of Aurelian, who permitted her to spend the rest of her days with her children at Tibur (Tivoli). The time of her death is not known.

ZEUXIS, one of the greatest Greek painters, was a native of one of the many cities named Herculæ, and flourished in the latter half of the 5th century B. C. He travelled a good deal, spending some time at Athens during the Peloponnesian war, visiting the court of Archelaus, King of Macedonia, and afterwards Italy and Sicily. He excelled in form, light and shade, and colouring, in dramatic composition of grand subjects, and in imitation of inanimate objects. He made a large

fortune, was enormously vain, and at last used to give away his pictures because he thought them worth more than any price that could be set on them. One of his most celebrated works was the picture of Helen, painted for a temple at Croton. Five of the most beautiful girls of that city were his models for the work. Among the other famous works of Zeuxis were his "Infant Hæculeus strangling the serpent," "Female Hippocentaur," "Zeus in the assembly of the Gods," &c. Parrhasius was a younger rival of Zeuxis, and in a competition between them was allowed by Zeuxis to surpass him. On that occasion Zeuxis painted a bunch of grapes which birds pecked at, and Parrhasius a curtain which deceived Zeuxis.

ZHUKOVSKY, VASILII ANDREEVICH, a celebrated Russian poet, was born in 1783. His native village, Mishensky, stands pleasantly on the river Oka. There, at the age of 19, he wrote a translation of Gray's *Elegy* into Russian, which at once made him famous. In 1812 he served as volunteer in the great French war, and at the same time stimulated his fellow-soldiers by his patriotic songs. A life-penion was soon after granted him, and he settled at St Petersburg. He enjoyed great favour at the Imperial court, was tutor to the son of the emperor Nicholas, and accompanied the prince (Alexander II.) on various extensive tours. In 1841 Zhukovsky married, and spent his last years in retirement in Germany. His most admired poem is entitled "Svietlana." A large number of his compositions are ballads, and many are translations. Among the latter are the "Shah-Nameh" and the "Odyssey." Died at Baden, 1852.

ZIETHEN, JOHANN JOACHIM VON, a distinguished Prussian general, was born at Wustrow, near Rupplin, in 1699. Of a noble but not wealthy family, he entered the army at the age of 14, and after several untoward chances, attained the rank of captain in 1735. His ability procured him the marked favour of Frederick William I., and he became the esteemed personal friend, as well as one of the greatest generals, of Frederick II. He took part with great distinction, at the head of his hussars, in the first Silesian war, 1741; contributed to the victories of Mollwitz and Czeslau, and was named major-general in 1744. Ziethen displayed his skill and courage in covering the retreat from Bohemia in the following year, and in subsequently re-establishing communication between the main body of the Prussian army and the force under the Margrave Karl, then separated by an Austrian army of 20,000 men. He was severely wounded at the ensuing battle of Hengersdorf, and peace being concluded, he retired to his native place. Slanderous tongues malignd him to the king, and his worth and services seemed for a time to be forgotten. In vain was Winterfeldt sent with words of friendship and reconciliation; and only by the personal visit and earnest pleading of Frederick was he induced once more to quit his retreat. Created lieutenant-general in 1756, he made the campaign of Saxony, the first of the Seven Years' War,

and contributed to the famous capture of the camp of Pirna, and to the victories of Reichenberg and Prague. He distinguished himself at Leuthen and at Liegnitz, and crowned all his exploits with that which decided the victory of Torgau in November, 1760; the march by a long circuit to the rear of the enemy, and the decisive attack from the heights of Siptitz. After the peace Zieten lived at Berlin, married, and enjoyed the highest honours, especially the warmest and most touching regard of the king, who usually called him *his dear Zieten*. Died at Berlin, 27th January, 1786. A monument was soon after erected to him, on which was inscribed, *Zieten zu Siptitz, 3rd Nov., 1760*. His life was written by his niece, Luise de Blumenthal.

ZIMMERMANN, JOHANN GEORG VON, the distinguished physician and moralist, was born at Brugg, in the canton of Berne, in 1728. He completed his education at the university of Göttingen, where he lived in the family of his great countryman, Haller. After a short visit to Holland and to Paris, he settled as physician at Berne; but he soon after had the appointment of town physician in his native place. He was already in great repute, and his practice became very large, yet he found time for much literary work, and by his successive publications made himself famous throughout Europe. He was not, however, mentally at ease; had no congenial society; shunned that which was uncongenial, and took refuge in solitude and study. The melancholy, which ultimately deepened into mania, distinctly showed itself during this period of his life. In 1768, after declining several offers of honourable posts, he settled at Hanover as physician to the king, George III. of England, and received the title of aulic councillor. He soon after lost his wife, and being seriously out of health, he went to Berlin. During his stay there he was presented to Frederick when his return to his daughter, soon after to him; but he was restored to tranquillity for a time by the kindly influence and society of a second wife. Zimmermann was called to Potsdam in 1786, to attend Frederick, then seriously ill, and he at once saw that it was the last illness. From this period his mind became more and more disordered, his imagination was a prey to torturing delusions, and he became completely insane. His most celebrated work is that entitled, "Ueber die Einsamkeit" (Essay on Solitude), which appeared complete in 4 vols. 8vo, in 1784-85, a first sketch of it having been published in 1756. This work was read all over Europe, and gained an extraordinary popularity; procuring its author, among other marks of honour, an invitation to St Petersburg as physician to Catherine II. Zimmermann wrote also a valuable work on Experience in Medicine, and another on National Pride, both of which were widely circulated. He was author of a Life of Haller, of two books on Frederick the Great, and some miscellaneous smaller writings. Died, at Hanover, 7th October, 1795.

ZIMMERMANN, EBERHARD AUGUST

WILHELM VON, a German naturalist, was born at Weitzten, in 1743; studied at Göttingen and Leyden; and obtained the professorship of natural philosophy at the Caroline College at Brunswick. His first work was a treatise on the "Analysis of Curves," and in 1777 he published "Specimen Zoologie;" the outline of his "Geographical logie;" of Man and Quadrupeds," 3 vols. He visited England three times, and printed here, in 1787, his "Political Survey of the Present State of Europe;" and he subsequently employed his pen in opposing the revolutionary statesmen of France; for which he was ennobled by the Emperor Leopold II. After this he published several geographical works; one of the best of which was a "General Survey of France and of the United States of America," 2 vols. Died, 1815.

ZINCKE, CHRISTIAN FRIEDRICH, a celebrated painter in enamel, was born at Dresden, about 1684. He came to England in 1706, studied under Bolt, whom he soon far surpassed; and was patronized by the royal family. Died, 1767.

ZINGARELLI, NICOLO, Italian musical composer, was born at Naples in 1732. He first applied himself to the composition of operas, which had great success in that city. He visited Paris at the beginning of the revolution, became organist to the cathedral of Milan, and in 1806 chapel-master of the Vatican. He was subsequently appointed director of the conservatory of Naples, a post which he held till his death. He composed only sacred music after his return to Italy, masses, oratorios, and metes. His best oratorio is "The Destruction of Jerusalem." Died at Naples, 1837.

ZINGARO, LO. [SOLALIO, ANTONIO]. ZINZENDORF, NICOLAUS LUDWIG VON, founder of the Moravian settlement of Herrnhut, and restorer of the sect, was son of George Louis Count von Zinzendorf, Saxon minister of state, and was born at Dresden in 1700. He was piously brought up, and fell early under the influence of the Pietist teacher, Spener. He was educated under the care of Franke, the philanthropist, at Halle, and at the university of Wittenberg; and in opposition to the wish of his friends, resolved to enter the church. For a short time he led, it is said, a loose and dissipated life. After a stay of three years at Wittenberg, during which he gained the friendship of Frederick von Watterville, a young Silesian noble, and the missionary Ziegenbalg, he visited Holland and France, making the acquaintance of many eminent persons, and winning general esteem. After his return to Saxony, in 1721, he married a sister of his friend, the count of Reuss-Ebersdorf, and soon after he generously offered a home at his estate to such of the Moravian Brethren as wished to escape the persecution of the Austrian government. The settlers, few, poor, and industrious, established themselves on the spot afterwards so celebrated under the name of Herrnhut. Nine years later Count von Zinzendorf carried out the project he had long cherished of sending missionaries to the heathen, and the first were sent to Greenland. Ordained minister of the

Lutheran Church from Sweden, and travelled in Holland. He had several interesting meetings, made a tour in 1737 he was made a member of the society. After a visit to the colonies of North Carolina, and founded Bethlehem. In England and America he was a second wife, and fully at Herrnhut in 1760, and his fur then from all other author of many many hymns. J. Spangenberg, his Duvernoy, Müller. Another memoir appeared.

ZIZKA, JOHANN, born at Troczno or 1380. He was came a page at the but soon disgusted vice he witnessed life. He served France; then in distinguished him Tannenberg, in were finally defeated the Turks, and fell in the English same year the Jerome of Prague and whose doctrine Constence. Failed chamberlain he Zizka resolved to defend of the was organized, and began with a retreat, and trained in 1420, and won Emperor Sigismund Mount Witkow in July. In himself master of soon after lost his lost one in his continued to hold the imperial armies and engagements defeated. To with him on equal worship to their hero gave tarnished his faith practised on the like some other tasks, justified that he was the a in inflicting vent the emperor was engaged in the sie

naturalist, was studied at Göttingen. He obtained the prophesy at the Court of the Emperor. His first work was "Specimen Zoologicum Geographico-Itinere," 2 vols. He published a "Natural Survey of the Alps," and he succeeded in opposing the Emperor's plan of France; for by the Emperor's plan several millions of the best of France and America," 2 vols.

FRIEDRICH, a celebrated, was born at Göttingen, whom he soon patronized by the Emperor.

Italian musical compositions in 1752. He composed several operas in his day, beginning with "L'Alfano," the first to the cardinal chapel-master of the Emperor, who was frequently appointed to Naples, in 1754. He died in 1760. He composed several operas in his day, beginning with "L'Alfano," the first to the cardinal chapel-master of the Emperor, who was frequently appointed to Naples, in 1754. He died in 1760. He composed several operas in his day, beginning with "L'Alfano," the first to the cardinal chapel-master of the Emperor, who was frequently appointed to Naples, in 1754. He died in 1760.

Lutheran Church in 1734, he was banished from Sweden, and soon after from Saxony; travelled in Holland, Livonia, and Prussia; had several interviews with the king, Frederick William I., and was ordained bishop. In 1737 he was in London, where he held meetings, made John Wesley's acquaintance, and got a Moravian society established. After a visit to the West Indies, where he rendered great services to the missionaries, he made a journey through the British colonies of North America, gained the esteem of the Friends, travelled among the Red Indians, and founded a Moravian settlement at Bethlehem. In 1747 he was allowed to return to Saxony. He made a second visit to England and America, and after travelling again in Holland and Switzerland, married a second wife, and spent his last years peacefully at Herrnhut. He died there, 9th May, 1760, and his funeral was attended by Brethren from all parts of the world. He was author of many short religious works, and many hymns. His life has been written by Spangenberg, his disciple and friend; by Duvvernoy, Müller, and Varnhagen von Ense; Another memoir, by F. Bovet, has recently appeared.

ZIZKA, JOHANN, the Hussite leader, was born at Trocnow, in Bohemia, about 1360, or 1380. He was of a noble family, and became a page at the court of King Wenceslaus; but soon disgusted with the frivolity and vice he witnessed, he entered on a soldier's life. He served in the English army in France; then in the Polish army, and greatly distinguished himself at the famous battle of Tannenberg, in which the Teutonic Knights were finally defeated; next fought against the Turks, and in 1415 distinguished himself in the English army at Agincourt. That same year the reformers, John Huss and Jerome of Prague, countrymen of Zizka, and whose doctrines he held, were burnt at Constance. Falling to rouse the king, whose chamberlain he was, to decisive action, Zizka resolved to take arms himself as the defender of the Hussites. A body of troops was organized, and the terrible Hussite war began with a riot at Prague, in July, 1419. Zizka took the chief command, built fortresses, and trained the troops, took Prague in 1420, and won a great victory over the Emperor Sigismund, who attacked him on Mount Wittkow, since named Zizka-Berg, in July. In the following year he made himself master of the citadel of Prague, and soon after lost his remaining eye—he had lost one in his childhood. He nevertheless continued to hold the command, and to beat the imperial armies, and among all the battles and engagements he fought, he was only once defeated. The emperor at last treated with him on equal terms, granted freedom of worship to the Hussites, and appointed their hero governor of Bohemia. Zizka tarnished his fame by the cruelties he practised on the enemies of his faith; and like some other men called to like grave tasks, justified his course on the ground that he was the agent of Divine Providence in inflicting vengeance. The treaty with the emperor was not completed when Zizka, engaged in the siege of a castle near Czaslau,

was seized with the plague, and died there, 12th October, 1424. His remains were interred at Czaslau, and the Emperor Ferdinand I., visiting the church in 1656, is said to have gone with terror from the town to sleep elsewhere. The awe inspired by the name of this great soldier is illustrated by the myths which have grown up around it. The war between the Catholics and the Hussites continued for eleven years after Zizka's death.

ZOEGA, GEORGE, an eminent Danish archæologist, who resided for many years at Rome as consul for Denmark, and was much esteemed by Pius VI. Among his works are, a treatise "De Origine et Usu Obeliscorum," "Nummi Egyptii," and the "Ancient Bassi Rilievi of Rome." Born, 1753; died, 1809.

ZOFFANY, JOHANN, a German painter, born at Frankfort-on-the-Main, or at Ratisbon, in 1735. After studying in Italy, he settled at Coblenz, but came to England, and was one of the earliest members of the Royal Academy. He went to India about 1782, worked successfully there, and came back rich after fourteen years' absence. Among his works are portraits of George III., one with the royal family; portraits of Garrick and Footo; the "Life-School of the Royal Academy;" the "Florentine Picture-gallery;" "Embassy of Hyderbeck to Calcutta," &c. Died at Kow, in 1810.

ZOLLUS, a Greek rhetorician, who lived in the 4th century before the Christian era, and whose criticism on the works of Homer, Plato, and others, procured him an unenviable notoriety. His name has become a byword for illiberal and captious pretenders to criticism.

ZOLLIKOFER, GEORGE JOACHIM, an eminent Swiss divine, born at St Gall, in 1730. He was educated at Bremen and Utrecht; after which he became, successively, pastor to congregations at Murten, Monstein in the Grisons, Isenburg, and Lelpsic; distinguished himself by great purity of doctrine, eloquence, and general abilities. His "Devotional Exercises" and "Sermons" have been translated into English.

ZONARAS, JOHANNES, a Greek historian of the 12th century, who compiled a "Chronicle, or Annals from the Creation to A. D. 1118." He was also the author of "Commentaries on the Apostolic Canons."

ZOPPO, MARCO, an Italian painter, who flourished at Bologna in the second half of the 18th century. He was the fellow-student of Andrea Mantegna in the school of Squarcione; became the instructor of Francia, and founder of the Bolognese School. He painted chiefly Madonnas and other sacred subjects. One of his best works is preserved in one of the churches of Bologna, others are at Venice and Berlin. The dates of his birth and death are not known. He was living in 1498.

ZOROASTER, or ZERDUSHT, was the reputed founder of the Magian religion. His history is involved in obscurity; some asserting that there was but one of that name, the Zerdusht of the Persians, while others speak of several, and carry the name back to the patriarchal ages.

ZOSIMUS, a Greek historian of the 5th century, of whose life nothing is known except that he held a public office under Theodosius the younger. He wrote a History of the Roman Empire, which is to a large extent compiled from earlier writers. Zosimus was a pagan, and spoke very freely of the faults of the Christian emperors, but he is esteemed on the whole a trustworthy writer.

ZOUCH, RICHARD, an eminent civilian, born at Anstey, in Wiltshire, about 1690. He was educated at Winchester and New College, Oxford; became professor of law and principal of St Alban's Hall, warden of the cinque ports, and judge of the admiralty; wrote numerous works in Latin, on civil, military, and maritime jurisprudence; and died in 1660.

ZUCHI, DR THOMAS, a divine and biographer, was born in Yorkshire, in 1737; received his education at Trinity College, Cambridge; became rector of Scrayingham, and prebendary of Durham; refused the bishopric of Carlisle in 1808, on account of his advanced age; and died in 1815. Among his works are, "The Crucifixion," a Seatonian prize poem; "An Inquiry into the Propheetic Character of the Romans," Memoirs of Sir Philip Sidney, Dean Sudbury, &c. George Wheler," &c.

ZSCHOKKE, HEINRICH, whose name occupies an important place in the annals of German literature and Swiss history, was born at Magdeburg, 1771. He commenced life as a strolling player, but afterwards found means to study philosophy and divinity at Frankfort-on-the-Oder; and, after many years of travels and varied adventures, he devoted himself to the education of youth, and fixed his residence in Switzerland in 1796. Here he rendered great political services to his adopted country; and for more than 40 years sent forth, at intervals, from his peaceful retreat at Aarau, various works of philosophy, history, criticism, and fiction; displaying at once the versatility of his acquirements, his fertile imagination, and a power and felicity of expression attained by few. His chequered life had given him a deep insight into the springs of human action; and few writers have more largely contributed to entertain and improve their fellow-men. His chief productions are, "Miscellen für die neueste Weltkunde," "Des Schweizerlandes Geschichte," "Bilder aus der Schweiz," "Des Goldmachersdorf," "Stunden der Andacht," &c. His works have been collected in 40 vols., including his autobiography, which has been translated into English. Died, 1842.

ZUCCARELLI, FRANCISCO, a celebrated Italian painter, born near Florence, in 1702. He came to England about 1752, and met with such encouragement, that he made a handsome fortune, was one of the first members of the Royal Academy, and returned to his own country, where he died in 1788.

ZUCCHERO, or ZUCCARO, TADDEO, an Italian painter, born at Sant' Angelo, in Vado, in 1529. He was instructed by Pompeo da Faeno and Giacopone da Faenza; and having gone at the age of 14 to Rome, he was employed by Daniello da Parma to

assist him in some frescoes at Alvito, near Sora. He worked afterwards for Pope Julius III. and Paul IV., for the duke of Urbino, and for Cardinal Alessandro Farnese. His best paintings were those executed for the cardinal at Caprarola, and the frescoes in the church of the Consolazione at Rome. Died at Rome in 1566, and was buried in the Pautheon, by Raphael's side.

ZUCCHERO, or ZUCCARO, FEDERICO, younger brother and pupil of the preceding, was born at Sant' Angelo, in Vado, in 1543. He early became assistant to Taddeo, and painted in his manner, but fell short of him in excellence. He was employed to paint the cupola of the Duomo at Florence, and covered it with three hundred figures forty or fifty feet high, and among them a Lucifer towering like a giant above their heads. This "great" work procured him immense reputation, and plenty of work. He painted in the Vatican, but quarrelled with and caricatured some of the pope's attendants, for which he had to leave Rome. In 1574 Zucchero was in England, and while here painted portraits of Queen Elizabeth, Mary queen of Scots, Sir Nicholas Bacon, and other eminent persons; and also of the queen's huge porter, the last now at Hampton Court. He soon returned to Rome, made his peace with the pope; was employed in the Escurial in 1588, and in 1595 founded and became first president of the Academy of St Luke at Rome. He wrote a book on art, entitled "L' Idea de' Pittori, Scultori e Architetti," which is severely criticised by Landi. Died, at Ancora, 1609.

ZUMALACARREGUI, TOMASO, DON, a distinguished Spanish military commander, first entered the army as a guerrilla officer, under Mina, in 1808, when the French invaded Spain. Being opposed to the new constitutional government, he took an early opportunity of joining the army of the Faith under Quesada, in 1822; and, on the rising of the Navarrese, became general-in-chief of the troops and partisans attached to the cause of Don Carlos. In this service he displayed the greatest skill and bravery, performing the most brilliant exploits, and keeping in check the regular army of Donna Maria, which, under various generals, was sent to oppose him. Born at a village near Villareal, 1789; died, from a wound he received at the siege of Bilbao, 1835.

ZUMMO, GAETANO JULIO, a celebrated modeller in wax, was born at Syracuse, in 1656. His profound knowledge of anatomy, combined with his skill in executing his works in coloured wax, obtained the admiration of connoisseurs. Some of his specimens represent, with astonishing accuracy, the different stages of decomposition in the human body. He died at Paris, in 1701.

ZURBARAN, FRANCISCO, a distinguished Spanish painter, born, 1598. His genius showing itself early, he was sent to Seville, where he studied the art under Juan de las Roelas. His style bears a strong resemblance to, and is probably an imitation of, that of Caravaggio; so that he early acquired the title of the Spanish Caravaggio. Most of his works are at Seville, and among them

his picture considered the most employed at Madrid to Philip II. less important one, a National Gallery, 1682.

his picture of "St Thomas Aquinas" is considered the best. He was some time employed at Madrid, and had the title of painter to Philip III. and Philip IV. One of his less important works, but still a characteristic one, a "Franciscan Monk," is in the National Gallery. Died at Seville or Madrid, 1622.

ZURIL, GERONIMO, a Spanish historian, was a native of Saragossa. After having been employed in various offices at home, and on a mission to Germany, he was appointed historiographer of Aragon. His principal work is the "Annales de la Corona de Aragon." Born, 1512; died, 1591.

ZWINGLI, or ZWINGLI, ULRICH, the great reformer of Switzerland, was born at the hamlet of Wildhaus, in the Tockenburgh, January 1, 1484, seven weeks after the birth of Luther. His father, an Alpine herdsman, was *amman* of the commune, and highly respected for his character as well as his office. Ulrich showed high intellectual endowments in his earliest years, was brought up piously, and after receiving instruction from his uncle, parish priest of Wesen, was sent to study first at Basel, then at Berne, and afterwards at Vienna. At the age of 18 he returned to his native village, but only to quit it again almost immediately, and renew his studies at Basel. He applied himself to scholastic theology, but gave it up in disgust, as a mere waste of time; and soon after rejoiced to hear the teaching of Thomas Wittenbach. Zwingli eagerly studied the classics, and became one of the best scholars of his time. He was also passionately fond of music, and learnt to play well on the flute, the lute, the violin, and other instruments. In 1506 he was ordained priest—he had been master of arts for several years—and accepted the place of pastor of Glarus, which he filled with zeal and devotedness for ten years. During this period thoughts were working in his mind, which were the germs of the reformation to come. He twice accompanied the Swiss auxiliaries to the wars in Italy, fought at the battle of Marignano; and used his influence with his countrymen to dissuade them from foreign military service. In 1514 he had visited Erasmus at Basel, and was greatly influenced by his writings. His visits to Italy were of service to Luther; making clear to him the evils, errors, and corruptions of the church, and the necessity of reform. The year 1516 Zwingli has noted as the period of the commencement of the Swiss Reformation. That same year he removed to the secluded monastery of Einsieden, of which he was appointed priest and preacher. His clear and eloquent announcement of scriptural truth astonished his new hearers, and drew crowds from the surrounding country to hear him. When the friar Sansom appeared in Switzerland, and carried on with matchless impudence the traffic in indulgences, Zwingli boldly opposed him, so that he was refused admission at several places. In the following year, 1519, through his high reputation for learning, piety, and eloquence, and the

active influence of his friend, Oswald Myconius, Zwingli was appointed preacher at the cathedral of Zurich, and was thus brought into the centre of the political movements of Switzerland. His preaching produced immense excitement, by its novelty, freshness, sincerity, and truthfulness; but while most were charmed, not a few were alarmed and angry. In the autumn of the same year he was attacked by the plague (known then as "the great death"), and it was reported that he was dead. He however recovered, and with a new vigour, and devotedness, and fullness, resumed his work as a teacher of the truth. In 1522 began the action of the court of Rome against the reformation in Switzerland; the bishop of Constance by letter to the chapter at Zurich attempted to stop the preaching of Zwingli. The latter replied in his "Architeles," and the attempt failed. But an order of the Diet was soon after obtained, which prohibited preaching against the monks. About the same time Zwingli married Anna Reinhold, a widow, and mother of Zwingli's beloved disciple and friend, Gerold. He did not make his marriage known till two years later. Meanwhile enmity was growing into persecution, and the reformer was sometimes overwhelmed with the forebodings of evil to come, and the failure of his holiest hopes. Early in 1523 a conference between the advocates and opponents of the new doctrines was held at Zurich, by order of the Great Council; but the discussions, which lasted three days, left the controversy as it was; and their opponents for the canon law, and there being no first principles in common to them. Not long after the reformation was publicly established in Zurich, pictures, and statues, &c., were taken out of the churches, and instead of the mass a simple form of celebrating the Lord's Supper was adopted. Education was provided for, and convents were suppressed, just regard being had to the interests of their inmates. In 1528 Zwingli attended the important conferences of Baden, and in 1529 that of Marburg, where he agreed on certain articles of faith with Luther and Melancthon. Two years later the long-suppressed enmity of the cantons which remained Catholic broke out in open war against Zurich and Berne. Delay, indecision, and half-heartedness among the citizens of Zurich made their cause hopeless; and at the battle of Cappel their handful of disorderly troops was easily destroyed or dispersed by the superior numbers and discipline of the Catholic army. Zwingli fell on that field, October 11, 1531. His body was discovered, burnt, quartered, and his ashes mingled with those of swine, and scattered to the winds. The works of this noble man were published in 1581, in 3 vols. 4to. His Life has been written by Myconius, Hess, Vögelin, Hottinger, and others; and full accounts respecting him may be found in "Hottinger's History of the Swiss Reformation," and Merle D'Aubigné's "History of the Reformation in the 16th Century."

SUPPLEMENT
TO THE
BIOGRAPHICAL TREASURY.

AALI PASHA, MEHEMET EMIR, Grand Vizier of the Ottoman Empire, was born at Constantinople in 1815. His first official appointment was obtained in 1830, and after filling various diplomatic posts, he was sent, in 1841, ambassador to England, where he remained for three years. He was next a member of the Council of State, interim Minister of Foreign Affairs, and Chancellor of the Imperial Divan. In 1846, he was appointed Minister of Foreign Affairs, and in 1852 filled the office of Grand Vizier for a few months. Disgraced and in retirement for a short time, he was recalled in 1854 and made President of the Council of the Tanzimat and Minister of Foreign Affairs. He took part in the conferences at Vienna in 1855, was appointed Grand Vizier in his absence, and the next year attended the Conference of Paris. Six months after the conclusion of the Treaty of Paris, he resigned his office. Grand Vizier a third time in January 1858, he again retired in October 1859: was appointed a fourth time in June 1861, and was removed to the Ministry of Foreign Affairs in the following November. He presided at the Conference of Paris on the affairs of Roumania in 1864, and became Grand Vizier for a fifth time in February 1867. The same year he was charged with the regency of the Empire during the absence of the Sultan on his visit to the Courts of Western Europe. Aali Pasha was a zealous advocate of reforms in the Turkish government. He received the decorations of many orders of knighthood, Turkish and foreign. Died, 7th September 1871.

A'BECKETT, Sir WILLIAM, Chief Justice of Victoria, and miscellaneous writer, was born in London, in 1806. He was brought up to the profession of the law, entered Lincoln's Inn, and was called to the bar in 1825. He received the appointment of Solicitor-General of New South Wales, became in due course Attorney-General, was afterwards Resident Judge at Port Phillip, and ultimately Chief Justice of Victoria. He was editor of the "Universal Biography," and was known to have compiled most of the memoirs contained in the "Georgian

Era." Died in June 1869, about six years after his return to England.

AFANASTIEF, ALEKSANDR NICOLAEVICH, an eminent Russian scholar and critic, was born in 1826. He was educated at the University of Moscow, in which city he long held an official appointment. He applied himself especially to the collection, study, and publication of the popular tales of Russia, and contributed numerous valuable papers on his favourite subjects to newspapers and journals. His most important works are a collection of "Russian Popular Tales" in 4 vols., completed in 1863, and a treatise on the "Poetical Views of Nature entertained by the Old Slavonians," in 3 vols., completed in 1869. Died, October 1871.

ALFORD, HENRY, Dean of Canterbury, theologian and biblical critic, was born in London in 1810. He entered Trinity College, Cambridge, in 1828, obtained a scholarship in the following year, and in 1831 one of Bell's university scholarships. Having taken his degree of B.A., as double first class, in 1832, he took holy orders, was elected fellow of his college, and in 1835 was presented to the vicarage of Wymeswold in Leicestershire, which he held for eighteen years. In 1853 he settled in London as minister of Quebec Chapel, and four years later was appointed Dean of Canterbury. His principal work is the edition of the Greek Testament, with annotations and commentaries, to the preparation of which he had strenuously applied himself almost from his college days. His aim was to put the English reader in possession of the most valuable results of the labours of the great German scholars. The first volume, with *Prolegomena*, was published in 1849, the second in 1852, the third in 1856, the first portion of the fourth in 1859, and the second portion, completing the work in 1861. Meanwhile, the earlier volumes had been carefully revised for new editions. Dean Alford was also author of "The School of the Heart, and other Poems," which appeared in 1835, and passed through several editions, and of "Chapters on the Poets of Greece." He was Hulsean Lecturer in 1841-2, and Examiner in Logic and Moral Philosophy in London Uni-

versity from 1841 to 1857. For several years he was editor of the newly-established "Contemporary Review," and was one of the leading promoters of the scheme for the revision of the authorised version of the Holy Scriptures, and one of the most energetic members of the company appointed to carry it out. The Dean married in 1835, and had a family of two sons, who died in early life, and two daughters. He died suddenly at Canterbury, 12th January 1871.

ALIGNY, FELIX CLAUDE THEODORE CARUELLE, a distinguished French landscape painter and etcher, was born in La Nièvre in 1798. At the age of ten he went to Paris, where he became the pupil first of Regnault, afterwards of Watelet. He began to exhibit at the Salon in 1822, and during the next twenty years attained considerable reputation. In the character and style of many of his works he belongs to the school of Poussin. In 1861 he was appointed Director of the Fine Arts School at Lyons, a post which he held till his death. Among his more noted works are—"The Massacre of the Druids" (1831), "Prometheus" (1837), now in the Luxembourg, "Roman Campagna" (1839), "Defeat of Duguesclin" (1840), now at Versailles, "Acropolis of Athens" (1852), &c. In 1846 he published a volume of etchings. Died at Lyons, 25th February 1871.

ALISON, Sir ARCHIBALD, the eminent historian, was the son of Archibald Alison, author of the once well-known "Essays on the Nature and Principles of Taste," and was born at Kenley in Shropshire, on the 29th Dec. 1792. He studied at the University of Edinburgh, to which city his father removed in 1800, and was called to the Scottish bar in 1814. With the practice of his profession he combined the pursuit of literature, his first work relating to the criminal law of Scotland. He was appointed Deputy-Advocate for Scotland in 1822, and some years later filled the office of Sheriff of Lanarkshire. In 1845 he was chosen Rector of the Marischal College, and six years after Rector of Glasgow University. He was created a baronet in 1852, and the next year the honorary degree of D.C.L. was conferred on him by Oxford University. His most important work is the "History of Europe, from the Commencement of the French Revolution in 1789 to the Restoration of the Bourbons in 1815," which appeared between the years 1833 and 1842. In spite of its strong Tory bias, it is a work of great value for the information it contains, and for its impartial statements of views opposed to those of the author. A continuation of the history appeared in 1853-59, bringing it down to the revolutionary changes which followed the fall of Louis Philippe. Alison's other works are a treatise on the "Principles of Population," a "Life of Marlborough," "Lives of Lord Castle-

reagh and Sir C. Stewart," and several volumes of "Essays, Historical, Political, and Miscellaneous." The latter first appeared in "Blackwood's Magazine." Died at Glasgow, 23d May 1867.

ALLEN, WILLIAM, an American scholar and miscellaneous writer, was born at Pittsfield, Massachusetts, in 1784. He graduated at Harvard College in 1802, and three years later succeeded Channing as Regent of the College. In 1810 he was chosen minister of the Congregational Church in his native town, and continued to hold that office till 1817, when he was appointed President of Dartmouth University. He exchanged this post for a similar one at Bowdoin College in 1820, which he held nineteen years. The rest of his life he spent at Northampton, engaged in literary pursuits and occasionally preaching. As deputy of the American Peace Society he attended the International Peace Congress at Paris in 1849. Dr Allen's principal work is the "American Biographical Dictionary," the first edition of which appeared in 1809, a second in 1832, and a third in 1857, each revised and enlarged. Among his lesser writings are an essay entitled "Junius Unmasked," an attempt to identify the unknown writer with Lord Sackville; "Memoirs of Dr Wheelock," and several volumes of sacred poems. Died at Northampton, 16th July 1868.

ANDREA, GERONIMO D', Italian cardinal, was born at Naples in 1812. Educated in France, he rose rapidly in the Church, and being at Rome during the revolutionary movements of 1848, showed himself zealously attached to the Pope. On the re-establishment of the old order in the following year, Monsignore Andrea was appointed Prefect of the Congregation of the Index. In 1852 he was promoted cardinal. He discharged the duties of his difficult office with the utmost fairness and courtesy, but in 1861, on his refusal to condemn the famous book of Liverani, entitled "The Empire, the Papacy, and the Kingdom of Italy," the Jesuits appealed to the Pope. The book was sent back to the Congregation with positive orders for its condemnation. Cardinal Andrea immediately resigned his post. Suspected of Liberal tendencies, and inclined to favour a reconciliation of the Church with Italy, he was thenceforth a marked man. Ordered by his physician to remove to Naples for the sake of his health, the Pope steadily refused the usual leave of absence. In June 1864, Andrea withdrew to Naples without leave. Disregarding the orders sent him to return, and the threats by which they were accompanied, the Pope, in June 1866, deprived him of his bishopric of Sabina. He protested in vain, and in September 1867 he was again ordered to return within three months, on pain of being deprived of his dignity and privileges as cardinal. This brief was against law and precedent in

his very numerous works the "Muette de Portici" (Masaniello) is generally admitted to be the masterpiece. It was produced at Paris in 1828. Among the best of his other works are—"Fra Diavolo," "Domino Noir," "Diamants de la Couronne," and "Haydée." Died at Paris, 13th May 1871.

AUSTIN, SARAH TAYLOR, miscellaneous writer and translator, was a member of the Taylor family of Norwich, and was born in 1793. At the age of 26 she married John Austin, afterwards so distinguished as a philosophic jurist. She resided with him for several years in Germany, and at a later time at Paris, whence they returned to England in 1848. She lost her husband in 1850. Her works are—translations of the "Travels of Prince Puckler-Maskau," of Carove's fairy tale, the "Story without an End," Falk's "Characteristics of Goethe," Guizot's "Causes of the Success of the English Revolution," and Ranke's "History of the Popes" and "Popes of Rome." After the death of her husband, she prepared for publication his valuable lectures on the "Province of Jurisprudence" (1861). Mrs Austin was also a contributor to the "Athenaeum" and other critical journals. Died at Weybridge, 8th August 1867.

AYTOUN, WILLIAM EDMONSTOUNE, a Scottish poet and miscellaneous writer, and Professor of Rhetoric and Belles Lettres in the University of Edinburgh, was born at Edinburgh in 1813. He studied at the University, was admitted an advocate in 1840, and five years later was appointed to the chair of Rhetoric. In early life he belonged to the Radical school in politics, and was a contributor to "Tait's Magazine." But his views changed, and in 1839 he joined the staff of "Blackwood," on which he remained till his death. His most popular work is the "Lays of the Scottish Cavaliers," first published in a collected edition in 1848, and which has since passed through seven-teen editions. Among his other writings

are some of the best of the "Bon Gualtier" ballads; "Firmilian, a Spasmodic Tragedy" (1854); "Bothwell, a Poem" (1856); and translations, in conjunction with his friend Theodore Martin, of the "Poems and Ballads of Goethe." He also published a collection of the ballads of Scotland. Professor Aytoun married, about 1845, the youngest daughter of Professor Wilson; and after her death, in 1861, Miss Kinnear, who survived him. He received the degree of D.C.L. from the University of Oxford. Died at Black-hills, Elgin, 4th August 1865.

AZEGLIO, MASSIMO TAPPARELLI, Marquis d', the distinguished Italian statesman and writer, was born at Turin in 1800. High-spirited, and with a passion for art, he quitted the army after a short period of service, and devoted himself to his favourite pursuit. He studied eight years at Rome, returned to his native city in 1829, and the next year settled at Milan. The influence of Manzoni, with whom he became acquainted there, and whose daughter he married, drew him from the field of art to that of literature, and he soon became known as one of Italy's purest patriots, and one of the most ardent advocates of Italian national unity. He propagated his views at first through the medium of fiction, and his two novels, "Ettore Fieramosca" (1833), and "Niccolo di Zappi" (1841), were received by his countrymen with great enthusiasm. More celebrated, perhaps, was his later work, "The Last Events in the Romagna" (1848). After the revolution of that year, D'Azeglio was the supporter of all liberal measures, and was named President of the Council in May 1849. This high office he filled till 1852, when Cavour succeeded him. He took no conspicuous part in politics after that time, but lived to see the dearest aims of his life almost attained, and his country once more a nation. Died at Turin, January 11, 1866.

B

BABBAGE, CHARLES, the mathematician, was born in 1791. He studied at Peterhouse, Cambridge, and there graduated B.A. in 1814, but declining to compete with Herschel he left the University without taking honours. Contributing soon after a valuable paper to the "Philosophical Transactions," he was chosen F.R.S. in 1816, and was on two occasions elected member of the Council. He held the Lucasian Professorship of Mathematics at Cambridge about eleven years, being appointed to it in 1828, but it

ls said that he delivered no lectures. The Royal Astronomical Society and the British Association number Mr Babbage among their founders, and he is regarded as the father of the Statistical Society. His name is most generally known as the inventor of a Calculating Machine, the project of which he announced as early as 1822. He devoted much time and money to its construction, and was aided for years in his task by government grants, which were at last discontinued. His published works are very numerous, and

embrace a wide range of subjects. Among the more noteworthy are the "Reflections on the Decline of Science in England," "Economy of Manufactures and Machinery," the "Ninth Bridgewater Treatise," "Exposition of 1851," and "Passages from the Life of a Philosopher." He contributed many important papers to the "Philosophical Transactions," to the "Transactions" of the Astronomical Society, the Royal Society of Edinburgh, and the Cambridge Philosophical Society. The articles "Diving-Bell," and "Essay on the Application of Machinery," in the "Encyclopædia Metropolitana," were from his pen. In his later years his name was frequently before the public in connection with the nuisance of street organs. Died in London, 18th October 1871.

BABER, HENRY HERVEY, Keeper of the Printed Books in the British Museum, was born in 1775. He was educated at St Paul's School, and at All Souls' College, Oxford, where he took his degrees of B.A. in 1799, and M.A. in 1805. For some years he was associated with Mr (afterwards Sir) Henry Ellis as Assistant-Librarian of the Bodleian. In 1805 he was appointed Vice-Principal of St Mary Hall. Two years later he entered the British Museum as Assistant-Librarian, and in 1812 was made Keeper of the Printed Books. This post he held till 1837, when he retired, and was presented to the rectory of Streatham, near Thetford. The work on which his reputation as a scholar rests, is the fac-simile edition of the Old Testament after the invaluable Alexandrian Codex, published in 4 vols. 4to, between 1816 and 1828. With Sir Henry Ellis, he edited, in 1813, a "Catalogue of Printed Books in the British Museum." Mr Baber was elected F.R.S. in 1816, and he was one of the founders of the Royal Society of Literature in 1823. He married in 1809. Died at Streatham rectory, 28th March 1869.

BABINET, JACQUES, French physicist and mathematician, was born at Lusignan in 1794. He studied successively at the Lycée Napoleon, the Ecole Polytechnique, and the Ecole d'Application of Metz, served for a short time in the army, and then devoted himself to the teaching of mathematics. He became Professor first at Fontenoy-le-Comte, then at Poitiers, at the College Saint-Louis, at the Athenæum, and in 1838 was Deputy-professor for Savary at the Collège de France. Two years later he was admitted to the Academy of Sciences. He was chevalier of the Legion of Honour from 1831. His writings consist almost entirely of valuable Memoirs, contributed to the "Annales de Physique," or the "Comptes Rendus" of the Academy of Sciences. They treat both of the physical and the mathematical sciences. M. Babinet was also known as author of various scientific inventions; amongst these are an im-

proved pneumatic machine, an absorption hygrometer, and a goniometer. He pronounced a decided judgment against the project of an Atlantic cable, and gave scientific reasons which facts disregarded. He was author of a popular "Traité Élémentaire de Géométrie Descriptive," and of a volume of excellent "Etudes et Lectures sur les Sciences d'Observation et sur leurs Applications Fratiques." He also contributed to the "Révue des deux Mondes," and the "Journal des Débats." Died at Paris, 19th October 1872.

BACHE, ALEXANDER DALLAS, Superintendent of the American Coast Survey, was born at Philadelphia in 1806. He was a great-grandson of Benjamin Franklin, his grandfather having married Franklin's only daughter. Graduating at West Point Academy in 1825, he was at once employed by the government in important engineering works. After holding the chair of Mathematics in Pennsylvania University for five years, and being charged with the organisation of the new Girard College, he was appointed in 1843 to the responsible office of Superintendent of the Coast Survey. The survey, although undertaken nearly thirty years before, had made very little progress, and it was reserved for Dr Bache to give new life to the scheme. His scientific attainments, his remarkable energy, and his great practical ability, fitted him for the vast undertaking. He set himself to the task zealously; devised the plan, organised the separate parties of workers, and directed all the details. He lived to see the entire work almost completed. Dr Bache was one of the founders of the American Association for the Promotion of Science, and of the American Academy of Science, and he was an earnest promoter of scientific education. Died at Newport, Rhode Island, 17th February 1867.

BAILY, EDWARD HODGES, a distinguished English sculptor, was born at Bristol in 1778. He was the son of a skilful carver. In 1807 he became a pupil of Flaxman, in London, with whom he remained for two years, and then entered the Royal Academy as a student. He was elected A.R.A. in 1817, and R.A. in 1821. After producing various mythological figures, he obtained a wide reputation by his figure of "Eve at the Fountain," exhibited in 1818, now the property of the Bristol Literary Institution. A companion figure, "Eve listening to the Voice," was produced in 1841. Among his numerous poetic figures and groups, admired for their simplicity, grace, and finish, are a "Psyche," "Sleeping Nymph," "Maternal Love," and "The Grass-seed." In his early years Mr Baily employed on the decoration of Buckingham Palace and the sculptures of the Marble Arch; in his later life he executed a large number of portrait busts and figures. Died at Holloway, 23rd May 1867.

BALFE, eminent musician, was born in Dublin in 1810. He received his lessons in music from a regimental bandmaster, and afterwards a pupil to London in 1831, as a violinist, rapidly into the principal towns of the return to London. BAMFORD, miscellaneous writer, was born in Lancashire. He was an active part in the reform, of which he was the headquarter, and was prominent in gathering at 1819. Arrested on suspicion with Henry Brough, he was sent to Lancaster on bail, and in 1820. With a view to enter into the peace and better months. In 1821, he was imprisoned for the King's Bench. He was a man of great energy, with a strong mind, and he nurtured and sympathized with the men, among whom he lifted him above the labour and so was obtained the House. But his folk. He was a genuine interest of a Radical. "Homely Rhymes," in 1841. He was born in Manchester, and was honoured by the Middleton.

BALFE, MICHAEL WILLIAM, an eminent musical composer, was born at Dublin in 1808. He received his earliest lessons in music from the bandmaster of a regiment at Wexford, and was afterwards a pupil of Charles Horn. He came to London in 1823, and was at first known as a violinist at Drury Lane. He rose rapidly into popularity, visited the principal towns of France and Italy, and on his return to London in 1835 produced his first opera, the "Siege of Rochelle." This established his reputation, and was followed by a long series of works. He became conductor of the Italian Opera in London in 1845. Among his works are—the "Maid of Artois," written for Madame Malibran, "Bohemian Girl," "Four Sons of Aymon," "Rose of Castille," "Puritan's Daughter," "Armourer of Nantes," &c. Died at Rowney Abbey, in Hertfordshire, 20th October 1870.—His second daughter, Victoire, distinguished herself for a short time as a *prima donna*, singing in England, Italy, and Russia. In 1863 she married Sir John Crampton, then British ambassador at Madrid; was divorced, and then married to the Duke of Erias. She died at Madrid in January 1871.

BAMFORD, SAMUEL, political and miscellaneous writer, was born at Middleton, in Lancashire, in 1788. He took an active part in the local agitation for reform, of which his native place was the headquarters, and led the Middleton contingent to the mournfully-celebrated gathering at Peterloo on the 16th August 1819. Arrested on a charge of high treason with Henry Hunt and others, he was sent to Lancaster Castle, but was liberated on bail, and was tried at York in March 1820. With his comrades he was required to enter into a recognisance to keep the peace and be of good behaviour for six months. In the following April the Court of King's Bench sentenced him to a year's imprisonment in Lincoln gaol. Bamford was a man of remarkable ability and energy, with considerable literary taste, and he numbered among his admirers and sympathisers several distinguished men, among whom was Mr Carlyle. To lift him above the need of hard day-labour and severe privations, a situation was obtained for him in 1852 at Somerset House. But he soon returned to his own folk. He was author of several books of genuine interest: "Passages in the Life of a Radical," published in 1841-42; "Homely Rhymes," in 1843; and "Early Days," in 1849. Died at Harpurhey, near Manchester, on the 13th April 1872, and was honoured with a public funeral at Middleton.

BARANTE, AMABLE GUILLAUME PROSPER, Baron de Brugière, statesman and historian, was born at Riom in 1782. He was educated at the Ecole Polytechnique, and obtained an appointment in the Civil Service in 1802. Under the first

empire he held successively the offices of sub-prefect and prefect, and on the restoration of the Bourbons he was made councillor of state, and Secretary-General of the Ministry of the Interior. He was at the same period elected by two departments a member of the Chamber of Deputies. Being under the required age, he could not take his seat. In 1816 he was made Director-General of Indirect Taxes, a post which he held till 1820. Created a peer of France in 1818, he was for several years an active member of the Opposition, and during the same time devoted much attention to literature. From the accession to the fall of Louis Philippe M. de Barante was a steady supporter of his government, and, after the revolution of February 1848, he retired from public life. He had been sent ambassador to Turin and to St Petersburg, and was Grand Cross of the Legion of Honour. As a writer he made himself a great reputation by his learned "Histoire des Ducs de Bourgogne de la Maison de Valois," first published in 3 vols. in 1824, and which procured him admission to the French Academy. Among his other works are—"Des Communes et de l'Aristocratie," "Histoire de la Convention Nationale," "Questions Constitutionnelles," a translation of "Schiller," and one of "Hamlet" for M. Guizot's "Shakespeare." Died at his country seat in Auvergne, 22d November 1866.

BARNES, ALBERT, American theologian, was born at Rome, in the state of New York, in 1798. At the age of 22 he graduated at Hamilton College, studied theology at Princeton, and in 1825 was chosen minister of the Presbyterian church at Morristown, in New Jersey. Five years later he removed to Philadelphia. His name is widely known and esteemed as author of voluminous "Notes on the New Testament," published at intervals between 1832 and 1848, and of similar "Notes on the Old Testament," completed in 1851. He was author of several other works, and of many papers for periodicals. Died at Philadelphia, 24th December 1870.

BARTH, HENRY, a distinguished African explorer, was born at Hamburg in 1821. He completed his education at the University of Berlin, and made a first visit to Africa in 1845, having previously studied Arabic in London. On his return journey he was attacked on the borders of Egypt by brigands, robbed of his papers, and left half dead. In 1846 he travelled in Western Asia, and visited Greece in 1847. He then occupied himself at Berlin as a private tutor, and in the preparation of an account of his researches, the first portion of which, entitled "Wanderungen durch die Küstenländer des Mittelmeeres," appeared in 1849. At the close of that year he joined the English exploring expedition into Central Africa, which

occupied four years, and the fruits of which he described in his "Travels and Discoveries in North and Central Africa," published in 1857. He was afterwards appointed Professor - Extraordinary at Berlin University, and President of the Berlin Geographical Society. Dr Barth died at Berlin, 26th November 1865.

BASEVI, JAMES PALLADIO, mathematician and engineer, Deputy-Superintendent of the Trigonometrical Survey of India, was a son of the architect, George Basevi, and was educated at Rugby School, Cheltenham College, and Addiscombe. Having obtained a commission in the East India Company's corps of Engineers, he went to India in 1852. Four years later he obtained an appointment on the great Survey, in the various and difficult operations of which he took a prominent part. From 1864 till his death he devoted himself with great ardour and heroic patience to the conduct of pendulum observations for the determination of the force of gravity at various points along the great arc measured by Lambton and Everest. In July 1871 he had reached his last station, More, and hoped to complete his observations in ten days. But he fell ill there, no medical aid was within reach, no one was with him but his native attendants, and on the 17th July he died. "Thus," says Colonel Walker, Superintendent of the Survey, in a letter to the "Times," "passed away, in the prime of life, a man of sterling worth and excellent abilities, a public servant of whom it may be truly said that it would not be easy to find his equal in habitual forgetfulness of self and devotion to duty."

BECHER, LADY WRIXON (*Miss O'Neil*), a distinguished actress, was born in 1792. Her father was an actor and manager of a provincial theatre in Ireland, and she made her first attempt as an actress at Drogheda, with marked success. After gaining fresh honours at Belfast and Dublin, she made her appearance at Covent Garden as "Juliet" in 1814, enjoyed a brilliant career of five years, dividing the attention of London playgoers with Edmund Kean, and in the part she took—that of the emotional, the sweet, and sad—being confessedly without a rival. Byron refused to go to see her lest she should appear to him a rival of Mrs Siddons, and Mrs Siddons herself grew jealous of her fame. She finally left the stage in December 1819, when she was married to Mr (afterwards Sir William) Wrixon Becher, M.P. for Mallow. She was left a widow in 1850, and from that time lived in retirement. She died at Mallow, 29th October 1872.

BEDFORD, PAUL, singer and comedian, was born at Bath in 1798. He made his first reputation on the stage at his native town, added to it at Dublin, and first appeared in London at Drury Lane Theatre in 1824. During his long connec-

tion with the Adelphi company, he chiefly appeared in farces and melodramatic pieces. He was author of an autobiographical volume entitled "Recollections and Wanderings," published in 1864. Died at Chelsea, 11th January 1871.

BEKKER, IMMANUEL, the distinguished German philologist, Professor at the University of Berlin, was born in that city in 1785. He studied for four years under Professor F. A. Wolf at the University of Halle, and in 1807 was called to the chair of Philosophy at Berlin. In 1810 he went to Paris, and worked in the Imperial Library till the close of 1812. Three years later he was admitted to the Berlin Academy of Sciences, and was sent by that learned body first to Paris and afterwards to Italy, for the purpose of making philological researches. During his Italian visit, he enjoyed the friendship of Niebuhr, through whose influence many libraries were opened to him. He visited Paris a third time in 1819, and England in the following year. With industry equal to his ability and attainments, he applied himself to the recension of the texts of the Greek and Roman classics. Among the more important of his editions are those of "Plato," the "Attic Orators," "Aristotle," "Theophrastus," "Theognis," "Aristophanes," "Tacitus," &c. He contributed more than twenty volumes to the "Corpus Scriptorum Historie Byzantine," and numerous papers to the "Proceedings of the Berlin Academy." Died at Berlin, 7th June 1871.

BELL, ROBERT, miscellaneous writer, editor of the "British Poets," was born at Cork in 1800. He was educated at Dublin, and for a time held there a situation in a government office, and edited the "Patriot" newspaper. In 1828 he came to London, where he spent a long and laborious life in literary pursuits. He first undertook the editorship of the "Atlas." Subsequently he edited the "Monthly Chronicle," the "Story-teller," the "Mirror," and "Home News." For "Lardner's Cyclopædia" he wrote several volumes of the "History of England," which had been commenced by Sir James Mackintosh; additional volumes of the "Lives of British Admirals," commenced by Southey; and a "History of Russia." One of his most important undertakings was an annotated edition of the "British Poets," which he commenced in 1854, and of which he published 29 vols. A careful memoir of each poet accompanies his works. Mr Bell was also author of "Life of Canning," "Outlines of China," "Memorials of the Civil War" (Fairfax Correspondence), "Wayside Pictures" through France, Belgium, and Germany, two tales, "The Ladder of Gold" and "Hearts and Altars," several dramatic pieces, &c. He was the founder of the Dublin Historical Society, and one of the most active directors of the Royal Lite-

ary Fund. to our por- and genero- pen, and w- wit, his ge- virtues, I

ANUEL, the dictionarist, Professor at Berlin, was born in that city for four years. A. Wolf at the University at Berlin. In 1807 was called to Berlin. In 1812, and worked in the close of 1812. He was admitted to the sciences, and was sent first to Paris and for the purpose of researches. During his stay he enjoyed the friendship of those whose influence opened to him. He died in 1819, and following year. With his ability and attainments he contributed to the renaissance of Greek and Roman literature more important of the age of "Plato," the "Aristotle," "Theophrastus," "Aristophanes," and the "Corpus Aristotelicum Byzantinum," and the "Proceedings of the Academy." Died at Berlin.

miscellaneous writer, and Poet, was born at Dublin, and as educated at Dublin, there a situation in the office and edited the "Patriot." In 1828 he came to London to spend a long and laborious pursuit. He first edited the "Atlas," and then the "Monthly Repository," the "Mirror," and "Lardner's Encyclopaedia." He wrote several volumes of "The History of England," which had been edited by Sir James Mackintosh, and the "Lives of the Kings of England," commenced by "The History of Russia," an important undertaking of the "British Museum," commenced in 1854, and numbered 29 vols. A careful poet accompanies his works, and was also author of "Outlines of China," "The Civil War" (Fairfax), "Wayside Pictures," "Belgium, and Germany," "The Ladder of Gold," and "The Ladder of Gold," several dramatic works, as the founder of the "Theatrical Society," and one of the founders of the Royal Literary

Fund. He was a constant contributor to our periodical literature, was a ready and generous friend to his brethren of the pen, and was admired and beloved for his wit, his genial kindness, and great social virtues. Died in London, 2d April 1867.

BELLIANGE, JOSEPH LOUIS HIPPOLYTE, French historical painter, was born at Paris in 1800. Fond of drawing battlescenes in his childhood, he entered the school of Baron Gros, and became one of the most distinguished painters of France. His most famous works are the great battles of modern French history. He was made chevalier of the Legion of Honour in 1834, and was promoted officer in 1861. Died, 12th April 1866. An exhibition of his works was opened at the School of Fine Arts in the following winter.

BENEDEK, LUDWIG VON, a distinguished Austrian general, was born at Oedenburg in Hungary, in 1804. He entered the army in 1822, became lieutenant-colonel in 1843, and three years later rendered important service in the suppression of the insurrection in Gallizia, for which he received the cross of the order of Leopold. As colonel, he was sent in 1847 to Italy, and there distinguished himself in the campaigns of 1848 and 1849, especially at the battle of Curtatone, at the capture of Mortara, and the battle of Novara. During this period he was created knight of the order of Maria Theresa. As major-general, he served in the army of the Danube, and took part in the war in Hungary. He then passed again into Italy. In the war with Sardinia and France he covered the retreat from Milan to the Mincio, and fought with distinction at Solferino. After the peace of Villafranca he was appointed Governor of Hungary, and in November 1860, was called to the chief command of the army of Italy. On the outbreak of the war with Prussia in 1866, Benedek was appointed commander-in-chief of the Northern army. He enjoyed at that time the full confidence of the Emperor and of the army; but on the advance of the Prussians into Bohemia he retired, and was totally defeated by them at the decisive battle of Sadowa (or Königgrätz), fought on the 3d of July. After the peace he was deprived of his command, and retired from the service. Died, 14th November 1871.

BENNETT, JAMES GORDON, American journalist; originator of the "New York Herald," was born of a Catholic family in Scotland in 1800. He was destined for the priesthood, but at the age of 19 he left his school at Aberdeen and went to America. Entirely destitute, he first obtained employment in a printing-office at Boston, afterwards wrote for the newspapers, projected several newspaper schemes, tried public lecturing, &c. In 1835 he started the "Herald," at a very low price, and was at once its pro-

prietor, editor, reporter, and business manager. His enterprise, indefatigable industry, audacity, and unscrupulousness obtained him the success he aimed at, and great wealth. He continued to edit the "Herald" till his death. The latest instance of Mr Bennett's remarkable enterprise was the despatch, at his own expense, of a correspondent, Mr Stanley, in search of Dr Livingstone, which resulted in the discovery of the latter in April 1872. Died at New York, 2d June 1872.

BERBRUGGER, LOUIS ADRIEN, French archaeologist and philologist, was born at Paris in 1801. He undertook for the English government, in 1834, the task of collecting original documents relating to the occupation of France in the 15th century. In the following year he accompanied Marshal Clausel, as his private secretary, to Algeria, where he collected many Arabic manuscripts, and edited for several years the official journal of the colony. In 1838 he was made chevalier of the Legion of Honour, and the next year was named correspondent of the Academy of Inscriptions. He was promoted commander of the Legion of Honour in 1865. His principal works are—"Algérie, Historique, Pittoresque, et Monumentale," "La Grande Kabylie sous les Romains," and "Epoques Militaires de la Grande Kabylie." Died at Algiers in 1869.

BERGENROTH, GUSTAV, historical scholar, was born in E. Prussia in 1813. Educated for official life, he passed through several subordinate offices, and in 1843 was named Assessor to the High Court of Berlin. In consequence of his sympathy with the revolutionary movements of 1848, his removal to a lower post was ordered, but he withdrew from the public service. After some years of travel, he came, in 1856, to England, to collect materials in the Record Office for his projected history of the Tudors. Four years later he went to Spain, and obtained permission to investigate the archives preserved at Simancas, where he worked hard and suffered great privations. Soon after he undertook, for the Master of State Papers relating to English history in the Simancas collection. His work extended to several volumes. Died in Spain, 14th February 1869. Several interesting papers on historical subjects accompany the "Memorial Sketch of Bergenroth," by Mr Cartwright.

BERLIOZ, HECTOR, a celebrated French musical composer, was born in the Department of Isère, in 1803. He was brought up to the medical profession, and went to Paris in 1823 to complete his studies; but his passion for music led him away from the profession, and he became a pupil at the *Conservatoire*. Having obtained the first prize in 1830, he went to Italy to continue his studies. In 1839 he was created chevalier of the Legion of Honour, and was subsequently appointed Librarian to the *Conservatoire*. As con-

ductor of an orchestra he obtained distinction, not only in France, but in England, Germany, and Italy. Among his works, too numerous for mention, are the cantata, "Sardanapalus," with which he won the first prize; overture to "King Lear," "Requiem" for the funeral of General Darnémond, "Romeo and Juliet," a dramatic symphony; "Funeral and Triumphant Symphony;" "Hymn to France," &c. M. Berlioz was author of a "Traité d'Instrumentation," and was widely known as the musical critic of the "Journal des Débats." Died, 12th March 1869.

BERRYER, PIERRE ANTOINE, a very distinguished French advocate and politician, was the son of an advocate, and was born at Paris in 1790. He studied at the College of Juilly, and was admitted advocate in 1811. Although an ardent royalist, like his father, he courageously took part in the defence of Ney and other generals, who were prosecuted after the Restoration as adherents of Napoleon I. during the Hundred Days. Notwithstanding a censure pronounced by the Council of Advocates on one of his speeches for the generals, he remained the firm supporter of moderation on the part of the government, and of the liberty of the press. Shortly before the fall of Charles X., Berryer was elected a member of the Chamber of Deputies, and he made an effective speech in support of the measures of the King. After the Revolution of July, he alone of the Legitimists continued a member of the Chamber, and resisted, unsuccessfully, the abolition of the peerage. In 1832 he left Paris to meet the Duchess of Berry, who had just landed in France, and failing in his attempt to prevent an insurrection, he set out for Switzerland. He was, however, apprehended, imprisoned, and tried as a participator in her attempt, but was acquitted. Among his most memorable speeches were those in defence of Châteaubriand in 1833, of two deputies on a government prosecution for libel in the following year, and of Louis Napoleon after his attempt at Boulogne in 1840. At the close of 1843 he came to England for the purpose of offering his recognition of the Duke of Bordeaux (Comte de Chambord) as legitimate sovereign of France. M. Berryer was a member of the National Assembly of 1848, and was one of those who firmly protested against the *coup d'état* of 2d December 1851, after which he retired from Parliamentary life. In 1854 he was received at the French Academy. He returned to parliamentary life in 1863, as a deputy to the Legislative Body. In 1865 he visited England as the guest of Lord Brougham, and was entertained at a special banquet by the benchers of the Temple. Died at Angerville, 29th November 1868.

BEWICK, WILLIAM, an English printer, was born at Darlington in 1795. He was of the same stock as Thomas Bewick,

the great wood-engraver. Educated at a Quaker school, he early showed taste for art, and leaving the business of his father at 20 he came to London, and soon was received as a pupil by Haydon. One of his earliest works was a cartoon from the Elgin Marbles for Goethe, a work afterwards placed in the Academy of Fine Arts of Würtemberg. He made drawings (full size) from the cartoons of Raphael; taught anatomy to a drawing-class at Edinburgh; painted life-size portraits of Lord Eldon, Sir D. Brewster, Lord Jeffrey, Dr Jamieson, &c. He afterwards visited Dublin; spent some days with Scott at Abbotsford; and went to Rome. Among his other works are—a composition from Spenser's "Faery Queen," "Jacob meeting Rachel," copies of Michael Angelo's "Delphic Sibyl" and "Jereimiah," in the Sistine Chapel; and a copy of a Rembrandt, which sold for £4000. Bewick sat to Haydon for the magnificent head of Lazarus, in the large picture of the "Raising of Lazarus;" and an early study of a donkey by Bewick was transferred by Haydon to his picture of "Christ entering into Jerusalem." Died at Haughton House, near Darlington, 8th June 1866. The "Life and Letters" of this painter, edited by Thomas Landseer, appeared in 1871.

BOECKH, AUGUST, a distinguished German archæologist and philologist, was born at Carlsruhe in 1785. He studied at the University of Halle, went to Berlin in 1806, and the following year was appointed Professor Extraordinary at the University of Heidelberg. In 1809 he became Ordinary Professor, and two years later removed to Berlin, where he accepted the chair of Greek Language and Literature. In 1814 he was received at the Academy of Sciences, of which he afterwards was named a Secretary. He was also chosen an Associate of the French Academy of Inscriptions, and a correspondent of many other academies and societies. In 1811 he commenced the publication of a critical edition of "Pindar," with a Latin version of the poems, a commentary, notes, &c. It extended to 3 vols. 4to, and was not completed till 1822. His next great work was the "Staatshaushaltung der Athener," which appeared in 1817, and was translated into English by Sir G. Cornewall Lewis. Among his other works are an investigation of the doctrines of Philolaos the Pythagorean, and a very learned treatise on the "Coins, Weights, and Measures of Antiquity" (1838). Boeckh originated and commenced in 1824 the great collection of Greek inscriptions published at the expense of the Berlin Academy of Sciences, which was continued by Frantz, and not completed till 1862. Died, 3d August 1867.

ELF, German poet and at Leipzig in 1851. the Thomas School of that city. His

reputation rests chiefly on a series of admirable translations of English poets, among which that of "Byron's Complete Works" was the first, and is the most celebrated. It was published in 1840, and has passed through five or six editions. It was followed by translations of "Goldsmith's Poems," "Milton's and Pope's Poetical Works," and "Ossian," with several of Shakespeare's plays. Among his own poems, some of which are Byronic in character and style, are "Habana," "Düstere Sterne," "Cameen," "Ein Frühlingmårchen," "Pilgerfahro der Blumengeister," "Till Eulenspiegel," &c. Died at Leipzig in November 1870.

BOND, GEORGE PHILLIPS, one of the most distinguished American astronomers, was born at Dorchester, in Massachusetts, in 1826. He was the son of Professor William Bond, the Director of Harvard Observatory. He studied at Harvard College, graduated B.A. there in 1845, and was appointed Professor of Astronomy and Director of the Observatory in 1859. He published a work on "Donat's Comet of 1853," for which, shortly before his death, the gold medal of the Royal Astronomical Society of London was awarded to him. He was a member of the American Academy of Sciences, and was author of valuable papers on the rings of Saturn, the nebula in Andromeda, on various comets, and on stellar photography. Died at Cambridge, Mass., 17th February 1865.

BONER, CHARLES, traveller and miscellaneous writer, was born near Bath in 1815. At the age of sixteen he entered the family of Constable, the landscape painter, as tutor to his two sons, and remained there five or six years. A visit to Germany in 1836 led to his accepting a tutorship in the family of Prince Thurn and Taxis, at St Emeran, near Ratisbon, which he held about twenty years. He visited England several times during that period, and made the acquaintance of Wordsworth, Charles Darwin, Miss Mitford, and other eminent persons. With Miss Mitford he carried on a correspondence for ten years. In 1860 he settled at Munich, visited England again in 1862, and in 1865 went to reside at Vienna as special correspondent of the "Daily News," a post which he filled about a year. In August 1869 he went in ill health to live with his married daughter, Madame Horschelt (wife of the eminent painter), at Munich, and there he spent peacefully his last days. Charles Boner's principal works, remarkable and fascinating as transcripts of his own keen enjoyment of nature as sportsman, naturalist, and poet, are—"Charles Boner's Book" (1849), "Chamois Hunting in Bavaria" (1853), "Forest Creatures" (1861), and "Transylvania" (1865). Died at Munich, 7th April 1870. In the following year appeared "Memoirs and Letters of C. B.,

with Letters of M. R. Mitford to him," edited by R. M. Kettle.

BOPP, FRANZ, one of the greatest philologists of the age, was born at Mentz in 1791. He received his earliest education at Asohaffenburg, and there, under the influence of Windischmann, was strongly attracted to Oriental studies. He applied himself to these exclusively at Paris, whither he went in 1812, and where he studied five years, assisted by a small annuity from the King of Bavaria. In his studies he enjoyed the friendly aid of Chézy, De Lacy, and A. W. Schlegel. After visiting London and Göttingen to complete his studies, he was appointed in 1821 Professor Extraordinary at the University of Berlin. In the following year he was received at the Berlin Academy of Sciences, and in 1825 was made Ordinary Professor of Oriental Literature and General Philology. He was subsequently created a Knight of the Order of Merit, and elected a Foreign Associate of the French Institute. The masterpiece of Bopp is his "Comparative Grammar of the Sanscrit, Zend, Greek, Latin, Lithuanian, Old-Slave, Gothic, and German Languages," in which he laid the foundations of the new science of comparative philology. It was first published in six parts between 1833 and 1852; a second edition, with additions, and partly re-cast, appeared in 3 vols. in 1856-61. It has been translated into English by Eastwick, and into French by Bréal. Bopp's other works are—a "Grammar of Sanscrit," published in 1827, and twice re-written; a work on the "Conjugation System of the Sanscrit, compared with Persian and German," a "Sanskrit Glossary," "On the Celtic Languages," "On the relation of the Malay-Polynesian Languages to the Indo-Germanic," &c. He also published several portions of the great Indian epic, the "Mahabharata," with translations and annotations. In 1862, the 50th anniversary of his taking his doctor's degree was celebrated at Berlin with great magnificence, and at the same time a Bopp Endowment was originated for the promotion of the study of comparative philology. Died at Berlin, 23d October 1867.

BOTTA, PAUL EMILE, French traveller and archaeologist, was born about 1805. He was the son of the eminent Italian historian. In 1826 he accompanied an expedition of discovery round the globe, in which he was engaged three years. As physician to Mehemet Ali, he accompanied in 1830 his expedition to Sennar. He was subsequently appointed Consul at Alexandria, Consular Agent at Mosul, and in 1836 Consul-General at Tripoli. In this situation he remained more than twenty years. It was during this period that he made his memorable explorations of the mounds of Konyunjik and Khor-sabad, on the site of Nineveh, which were continued by an official commission, and

on a more extensive scale by Layard. M. Botta was promoted Officer of the Legion of Honour in 1845. His great work is the "Monument de Ninivé, découvert et décrit par P. F. Botta, mesuré et dessiné par E. Flaudin," in 5 vols. folio (1849-50). Died, near Poissy, in April 1870.

BOWRING, Sir JOHN, an eminent linguist, translator, and political and miscellaneous writer, was born at Exeter in 1792. In early life he was the intimate friend of Jeremy Bentham, whose politico-economical views he adopted and steadfastly advocated. At the same time he became known for his remarkable attainments in languages, especially those of eastern Europe, and published as early as 1821-23 two volumes of "Specimens of the Russian Poets." In 1825 he was appointed editor of the "Westminster Review," then the powerful representative of philosophical radicalism. In the articles which he contributed to the "Review" he advocated free trade, parliamentary reform, popular education, and catholic emancipation. In 1828 he visited Holland, and received from the University of Groningen the degree of LL.D. In the following year he went to Denmark, and collected materials for a work on the Scandinavian poets. After the death of Bentham, in 1832, the duty devolved on Mr Bowring, as his literary executor, of preparing a collected edition of his works, and this appeared in 11 vols. in 1838-39. Having devoted much attention to the commercial relations of Great Britain with foreign states, he was selected by the Government in 1834 as head of a commission sent to France to investigate and report on the state of commerce between the two countries. Subsequently he visited Switzerland, Italy, Syria, and the States of Germany for the like purpose, and presented similar reports. Mr Bowring sat in Parliament from 1835 to 1837, and again from 1841 to 1849. Under the Melbourne administration he was appointed Commissioner for investigating the Public Accounts, and in 1849 he accepted the post of British Consul at Hong Kong, and Superintendent of Trade in China. Returning to England in 1853, he was soon after knighted, and in the following year went to Hong Kong as Governor, with the chief military and naval power. It was during his governorship that the dispute arose which led to the second war with China, in 1855. Retiring at the close of his period of service, he received a pension. His last government employment was on a mission to Italy in 1861, to report on our commercial relations with the new kingdom. He afterwards acted as Hawaiian Minister plenipotentiary to the European courts, and in that capacity negotiated treaties with Belgium, Holland, Spain, Italy, and the Swiss Confederation. Sir John Bowring's literary works, in addition to those already mentioned, are—"Batavian Anthology" (1824),

"Ancient Poetry and Romances of Spain," "Specimens of the Polish Poets" (1827), "Servian Popular Poetry," "Poetry of the Magyars" (1830), and "Cheskanian Anthology" (1832). Later in life appeared his translation of a collection of "Old Bohemian Poems," a work on the "Decimal System" (1854), "The Kingdom and People of Siam" (1859), translations from the works of the Hungarian poet, Petöfi (1856), and various pamphlets, &c. Sir John was a Fellow of the Royal and the Royal Geographical Societies. He was twice married, and left his second wife surviving him. Died at Exeter, 2d November 1872.

BRANDE, WILLIAM THOMAS, D.C.L., F.R.S., &c., one of the most eminent chemists of his age, was born in 1786. He was the grandson of the Hanoverian physician of George III.; was educated at Westminster School, and as early as 1805 began to lecture on chemistry. Chosen F.R.S. in the following year, he was named assistant to Sir H. Davy at the Royal Institution, and succeeded him as Professor of Chemistry in 1813. The same year he received the Copley medal, and was appointed Secretary to the Royal Society. This post he filled till 1836. Dr Brande was for many years associated with Mr Faraday in the editorship of the "Quarterly Journal of Science." He also held the Professorship of Chemistry and Materia Medica of the Apothecaries Company, of which he was chosen Master in 1851. His well-known "Manual of Chemistry" was first published in 1819. His other works are—"Outline of Geology" (1817), "Elements of Chemistry" (1831), the "Dictionary of Science, Literature, and Art," of which a third edition appeared in 1853, and a fourth, in 3 vols., edited by Dr Brande and the Rev. G. W. Cox, M.A., in 1866; and a "Dictionary of Materia Medica." Dr Brande was F.R.S.E., D.O.L. Oxford, Fellow and Examiner of the London University, and, from 1825, Superintendent of the Die Department of the Mint. Died at Turbidge Wells, February 11, 1866.

BRIMMER, FREDRIKA, the popular Swedish novelist, was born at Abo, in Finland, about 1802. She was, however, brought up in Sweden, to which country her father removed on the cession of Finland to Russia. After some experience as a school teacher, and a residence in Norway, she began to make herself known as a writer. Her first simple tale attracted general attention in Sweden, and were soon followed by the works which procured for her a reputation in Europe. The principal of these are—"The President's Daughters," "Rime," "The Neighbours," "The Home," and "Strife and Peace." They depict with much simplicity, tenderness, humour, and vivacity, the every-day life and manners of Sweden and Norway. They were successively translated into German, and

about 1842 were read by Mr. The Neighbour, travelled a good America, and travels. In active philanthropic her sex in Sw Stockholm, an (Arta), where 1865.

about 1842 were introduced to English
readers by Mary Howitt's translation of
"The Neighbours," and were at once re-
ceived with warm welcome. Miss Bremer
travelled a good deal both in Europe and
America, and published accounts of her
travels. In her latter years she was an
active philanthropist, and effected some
important changes in the condition of
her sex in Sweden. In 1864 she quitted
Stockholm, and retired to her early home
(Arsta), where she died, 31st December
1865.

BREWSTER, SIR DAVID, a distin-
guished Scottish natural philosopher, was
born at Jedburgh in 1781. Educated for
the church, and licensed to preach, he
nevertheless chose another path, and
devoted himself to the pursuit of science
instead of the profession of divinity. At
Edinburgh he was the associate of Pro-
fessors Robison, Playfair, and Dugald
Stewart, and there began the long series
of his optical studies. The honorary de-
gree of M.A. was conferred on him by the
University in 1800, and that of LL.D. by
the University of Aberdeen in 1807. In
this year, too, he was made D.C.L. of
Oxford, and M.A. of Cambridge Uni-
versity. In the following year he was
elected F.R.S.E. At the same time he
undertook the editorship of the Cyclopæ-
dia known as "Brewster's," or the "Edin-
burgh," a task in which he was engaged
till 1830. He began early to contribute to
the "Transactions of the Royal Society
of Edinburgh," and in 1813 sent his first
paper for the "Philosophical Transac-
tions." Two years later he was elected
F.R.S. London, and received the Copley
medal for his discoveries on Polarization
of Light. The invention of the Kaleido-
scope, in 1816, made his name universally
known, and the little toy, says his
biographer, Mrs Gordon, "spread over
Europe and America with a *furor* which
is now scarcely credible." In 1818 he
received the Rumford Medal of the Royal
Society for his further discoveries on
polarization. Brewster paid much atten-
tion to the subject of lighthouses, and as
early as 1812 had made known his inven-
tion of the *Polygonal Lens*, the use of
which was introduced in France by Fresnel.
In 1827 he renewed his attempt at im-
provement of illumination for lighthouses,
but it was still some years before any
practical result was obtained. The Royal
medal of the Royal Society was awarded
him in 1830. At this period he was
engaged, in conjunction with Babbage
and others, in the establishment of the
British Association for the Advancement
of Science, the first meeting of which was
held in 1831. In 1832 he was knighted by
William IV. In 1841 he was appointed
Principal of St Leonard's College, St An-
drews; was made a Knight of the Prussian
Order of Merit some years later; was
President of the British Association in
1849, and the same year was elected to

succeed Borzellini as Foreign Associate of
the French Institute. He had been
corresponding member of the Paris Aca-
demy of Sciences since 1825. He was
afterwards admitted a chevalier of the
Legion of Honour. Besides his contribu-
tions to the "Transactions" of the Royal
Societies of London and Edinburgh, to
the "Edinburgh" and "North British"
Reviews, the "Library of Useful Know-
ledge," the "Philosophical Magazine" (of
which he was joint-editor), Sir David
Brewster published a "Treatise on the
Kaleidoscope," "Notes and Introduction
to Mr Carlyle's Translation of Legendre's
Elements of Geometry," "Treatise on
Burning Instruments," "Life and Letters
of Euler," "Treatise on Optics," "Letters
on Natural Magic," a "Life of Sir Isaac
Newton" (1831), extended and republished
in 1855 under the title of "Memoirs of the
Life, Writings, and Discoveries of Sir I.
Newton," one of his most important
works; "Martyrs of Science," and "More
Worlds than One" (1854). Sir David was
a Fellow of the Royal Astronomical and
the Geological Societies, and of the Royal
Irish Academy. He was twice married,
first, in 1810; lost his wife in 1850; and
married again in 1857. Died at Allery,
near Melrose, 10th February 1868. At the
close of 1869 appeared an account of
"The Home Life of Sir D. Brewster," by
his daughter, Mrs Gordon.

BRODIE, GEORGE, historian, Historio-
grapher Royal of Scotland, was born in
Haddingtonshire in 1798. He was edu-
cated at the High School and the Uni-
versity of Edinburgh, and in 1811 was called to
the Scottish bar. After attaining some
literary distinction, he was appointed
in 1836 Historiographer Royal for Scot-
land. His first work was a "History of
the British Empire from the Accession of
Charles I. to the Restoration" (1822),
which he subsequently re-cast, and in 1865
republished under the title of "A Con-
stitutional History of the British Empire."
He was also author of "Commentaries on
Stair's Institutions of the Laws of Scot-
land" (1826). Mr Brodie was twin-brother
of Alexander Brodie, author of a "His-
tory of the Roman Government." Died
in London, 22d January 1867.

BROFFERIO, ANGELO, an eminent
Italian advocate, politician, and poet, was
born at Castellnuovo, in the province of
Asti, in 1802. He was educated for the
law, graduated doctor of law at Turin,
and after travelling through Italy and
visiting France, he commenced practice
at the bar. In 1830 he was imprisoned
on a charge of conspiracy, but was re-
leased in a few months. He then estab-
lished a journal, the "Turin Messenger,"
for the promotion of Italian independ-
ence. During the reform agitation of
1846-47 he redoubled his activity, espe-
cially aiming at the suppression of the
Jesuits and the establishment of a con-
stitution in Piedmont. In 1848 he was

Academy of Sciences knight of various orders engaged on the "Chambre de France," seized by the police, and against the Procureur of the copies were Brogius married, in 1780, to the daughter of Mme. de widower in 1838. He died in 1870. A collection of "Discours" appeared in

MES, Rajah of Sarawak in 1803. He entered the East India Company, and in 1812 joined the British in the Birmese war. In 1815, on his return to England, he returned to England, and did not return to England until 1817. In the service of the Company, he was in Sarawak, and during a voyage to the archipelago he is said to have been the executioner of a project, to the execution of which he devoted himself. He was the archbishop of piracy and the evils of civilization. A second voyage confirmed him in his views. In 1838 he sailed from Sarawak on his own vessel, and, on his great expedition in Sarawak, a project he assisted Muda Hasan in an insurrection of Sarawak, a title which was conferred on the Sultan of Borneo in 1842 and 1846 by the British government. He was the author of laws, and then engaged in negotiations against the pirates, and the assistance of several vessels and vessels of war, and the capital of the island, and the Sultan's army. For the pirates a very large sum of money was returned home, in 1842, by the British government. D.C.L. was conferred by Oxford University in 1812. He was created K.C.B. and appointed governor of Sarawak, which was bought by the British, and made a colony. He was engaged in his operations in Sarawak, and money received, was returned to him in Parliament, and he was engaged in the island for the purpose of himself. The evidence is conflicting that the charge of a royal commission, which they were declared "enemies." But Sir James was deprived of the government. In 1857 his house was attacked and burnt by His "Private Letters

were published in 3 vols. in 1853. Died in Devonshire, 11th June 1868.

BROUGHAM AND VAUX, HENRY, Lord, Lord Chancellor of England, was born at Edinburgh in 1779. He was the eldest son of Henry Brougham, a member of a very ancient family, whose seats were in Cumberland and Westmoreland. By the mother's side he was grand-nephew of Robertson the historian. He was educated at the High School and the University of his native city, and was early distinguished by his passion and talent for mathematical and scientific studies. As early as 1796 he contributed a paper on light to the "Philosophical Transactions," and other papers in the two following years. He studied, however, for the law, and was admitted to the Scottish bar in 1800. About the same time he became a member of the famous "Speculative Society" of Edinburgh, and the associate of a group of rising young men, among whom were Horner, Jeffrey, Sidney Smith, and Brown the philosopher. He took part in founding the "Edinburgh Review" (1803), to which he soon became, and long continued to be, one of the most regular contributors. Called to London in professional business in 1807, he remained there and qualified himself for the English bar, to which he was called, at Lincoln's Inn, in 1808. He greatly distinguished himself about that time by a powerful speech in denunciation of the orders in Council which had been issued in consequence of the "Berlin Decree" of Napoleon I. In 1810, by the influence of the Earl of Darlington, he obtained a seat in Parliament as member for the "rotten borough" of Camelford, and in March of that year he made his maiden speech. From that time his career was for four or twenty years one of astonishing, almost unparalleled, energy and activity. So multitudinous and diversified are the merits of his life as advocate, politician, author, law reformer, educational reformer, man of science, and Lord Chancellor, that nothing more than a meagre summary of them can here be given. In Parliament he continued to denounce the Ministers in Council, till they were repealed in 1812; spoke against flogging in the army, and against Roman Catholic disabilities; advocated reform in the Government of India and in the management of the colonies; and took a prominent part in all matters on home or foreign policy. On several occasions he was engaged in the defence of the Hunts, proprietors of the " Examiner," in actions for libel. He lost his seat in the House in October 1812, and did not regain it till 1816, when he was called for Winchelsea, for which he sat seven years. Three times he contested, unsuccessfully, the county of West-land. To narrate in detail the substance of his parliamentary speeches would be to sketch the leading features of the local history of England during his

period of activity. The most important of his labours were perhaps those in favour of popular education, which commenced in 1816, and were continued for long years with unflagging devotion. In 1818 he procured the appointment of the famous Commission on Public Charities connected with Education, which continued its labours till 1829 and inquired into the state of 19,000 foundations. In 1820 and 1821 he was engaged, as Attorney-General of Queen Caroline, and in conjunction with Mr. (afterwards Lord) Denman, her Solicitor-General, in the proceedings connected with the bill of pains and penalties against the queen, and on the argument before the Privy Council for her coronation. He continued, at the same time, to take part in the debates in Parliament. From the time of the formation of the "Holy Alliance," Mr. Brougham had vehemently denounced it, and the policy of the government in connection with it. In the session of 1823 his memorable quarrel with Mr. Canning occurred, in the course of a debate on the Catholic claims. The same year he took part with Birkbeck in founding the London Mechanics' Institute. Two years later he was one of the founders of London University, and the same year was elected Rector of Glasgow University. He was one of the most zealous promoters of the establishment of the Society for the Diffusion of Useful Knowledge, in 1827, was named chairman of its committee, and contributed largely to its publications. In the session of 1828 he made one of his greatest speeches—that on law reform—which took six hours in the delivery. In 1830 he resigned his seat for Winchelsea, and was elected member for Knaresborough. But a general election soon following, he was returned for Yorkshire. He immediately took a prominent place among the advocates of parliamentary reform, and prepared a Bill. On the fall of the Wellington ministry, in November of the same year, he became a member of the Whig ministry under Earl Grey, as Lord Chancellor of England, and was at the same time created a peer, by the title of Baron Brougham and Vaux; and in the Upper House he took part with Earl Grey in carrying through the great measure known as the Reform Bill of 1832. In the important measures which followed it during the next two years he had a large share. He continued at the same time to discharge the duties of the chancellorship with astonishing industry and rapidity. In November 1834 Lord Brougham retired from office with his party, and he was excluded from the Melbourne ministry, formed in April 1835. He continued, however, as an independent peer, to take part in almost all important debates, especially urging on measures of law reform, on which subject he made another great speech in May 1845, and did not flag in his devotion to it for many

years afterwards. He had been elected Foreign Associate of the Institute of France in 1833. In 1859, he was elected Chancellor of Edinburgh University. The literary works of Lord Brougham, published after his retirement from the woolsack, are numerous. Among them are—an edition of Paley's "Natural Theology," "Historic Sketches of the Statesmen of the Time of George III.," "Dialogues on Instinct," "Lives of Men of Arts and Science of the Time of George III.," and, in conjunction with Routh, an "Analytical View of Sir Isaac Newton's 'Principia.'" A collected edition of his "Speeches" appeared in 1833, and his "Contributions to the 'Edinburgh Review'" in 1856. He was author also of a novel entitled "Albert Lunel," written in his old age, and in which the characters are most of them his contemporaries, slightly veiled under French names. In 1850 and the following years he contributed several papers on Light to the Royal Society and the Paris Academy of Sciences. Lord Brougham married in 1819. He spent his last years at Cannes, in the south of France, and died there, 7th May 1868.

BROUGHTON, JOHN CAM HOBBHOUSE, Lord, statesman and miscellaneous writer, was born at Redland, near Bristol, in 1786. He was the eldest son of Sir Benjamin Hobbhouse, the first baronet, and was educated at Westminster School and Trinity College, Cambridge, where he graduated B.A. in 1808. He became there the intimate friend of Lord Byron, and in 1809 set out with him on a prolonged tour in Greece and southern Europe. He accompanied the allied armies in the German campaigns of 1813 and 1814, and was present at the battle of Dresden. In 1816 he published, anonymously, "Letters written by an English Gentleman resident at Paris during the Last Reign of the Emperor Napoleon." It was translated into French, and was so offensive to the authorities both in England and in France that in 1819 the French translator, printer, and publisher were fined and imprisoned, and in December of that year the author was arrested under the Speaker's warrant, and committed to Newgate. Released after a few months, he became at once a popular favourite, and was returned to Parliament for Westminster as the colleague of Sir Francis Burdett. He had previously contested the borough unsuccessfully. He supported zealously all the Liberal measures of the ensuing years, and soon after succeeding to the baronetcy, in 1832, was appointed Secretary for War under Earl Grey. In the following year he was made Chief Secretary for Ireland, but lost his seat at the election. In 1834 he was elected for Nottingham, and held for some months the office of Chief Commissioner of Woods and Forests in Lord Melbourne's ministry. In 1835 he became President of the Board of Control, which post he held till 1841,

and again from 1846 to 1852. In 1847 he was returned for Harwich, and in 1853 was raised to the peerage as Lord Broughton. From that time he took little part in public affairs. He was author of a volume of "Imitations and Translations from the Classics," "Journey through Albania and other Provinces of Turkey with Lord Byron," and "Historical Illustrations of the Fourth Canto of Childe Harold." He was also a frequent contributor to reviews and periodicals. Lord Broughton married in 1828, survived his wife many years, and left no son. Died in London, 3d June 1869.

BROWNE, CHARLES F., an American humourist, better known by his assumed name of "Artemus Ward," was born at Waterford, in the state of Maine, about 1835. He was brought up to the business of a printer, became a reporter for a newspaper, and discovering the direction in which his talents promised success, soon commenced the humorous lectures which were to make him famous. A visit to California and Utah in 1862 gave him fresh materials for his popular lectures, and about the same time appeared a collection of his papers under the title of "Artemus Ward—his Book." In 1866 he came to England, and, after some delay, caused by failing health, he delivered his lectures here with great success. Died at Southampton, 6th March 1867.

BRUCE, JOHN, antiquary and miscellaneous writer, was born in London in 1802. He completed his education at the Grammar School of Aberdeen, and entered on the profession of the law, which he practised till about 1840. He had already commenced his literary labours, and from that time devoted himself wholly to them. He was one of the earliest and most active members of the Camden Society, of which he became Treasurer and afterwards Director. For that society he edited thirteen volumes, among which were—"The Restoration of Edward IV.," "The Annals of Elizabeth," "Loycester Correspondence," "Verney Notes on the Low Parliament," "Letters of Elizabeth and James VI.," &c. For the Parker Society he edited the "Works of Roger Hutchinson," and was joint editor of the "Correspondence of Archbishop Parker." He was a frequent contributor to, and for some years editor of, the "Gentleman's Magazine;" a Fellow, Treasurer, and Vice-President of the Society of Antiquaries; a Trustee of the Soane Museum, and contributor to the "Archeologia." He also contributed to the "Edinburgh Review," the "Athenaeum," and other literary journals. Died suddenly in London, 4th November 1869. He had had a wife a few years before.

BUCHANAN, JAMES, President of the United States, was born in Pennsylvania in 1791. He was of Irish origin, his father having emigrated from Donegal in 1783. He graduated with high honours

Dickinson in 1809, then admitted to the bar. After practicing with great success in his profession, he had become a member of the Legislature. Elected a member of the Congress in 1814, he was re-elected in 1815, and in 1816 to St Petersburg, where he was elected Senator for five years later. He supported the war as a leader, and opposed the peace under discussion. Secretary of the Treasury in 1823, and during his administration a settlement of the national debt was advocated, but he supported the relation to Mexico of some years. In 1853 as minister to France, which he held that period. In 1857 he was elected by the United States to be elected to the schism of the developing it. President Lincoln in Pennsylvania. **BURGOYNE**, Field-Marshal, was born in 1732, of the Hon. command of the army in 1777, and the American Revolution. He was educated at the Royal Military Academy, and after study, he entered the army as lieutenant in 1750. In 1758 he served in the Mediterranean, and took part in the capture of Valletta. Captain in 1761, he was employed in the capture of Anapa. In 1762, John Moore was defeated at the battle of Corunna, and he was active in the Peninsular War, and fought in the battle of Salamanca. He was at the siege of Badajoz, and wounded at the

Dickinson College, in Pennsylvania, in 1809, then studied for the law, and was admitted to the Lancaster bar in 1812. After practising for nearly twenty years with great success, he retired from the profession. During the same period he had become known as a politician. Elected a member of the State Legislature in 1814, he was chosen member of Congress in 1820, and was four times re-elected. In 1831 he was sent as minister to St Petersburg, and on his return two years later was chosen United States Senator for Pennsylvania. Distinguished as a leader of the Democratic party, he supported the upholders of slavery, and opposed attempts to bring the subject under discussion. In 1845 he became Secretary of State under President Polk, and during his term of office negotiated a settlement of the North-western Boundary dispute with Great Britain. He advocated the annexation of Texas, and supported the policy of the President in relation to Mexico. After a retirement of some years he resumed public duties in 1853 as minister to Great Britain, a post which he held for three years. During that period he originated the Ostend Conference of American Ministers in Europe respecting the proposed purchase of Cuba by the United States. In November 1856 he was elected President, and after a troublous term of four years, during which the schism of North and South was rapidly developing itself, he was succeeded by President Lincoln. Died at Wheatland, in Pennsylvania, 1st June 1868.

BURGOYNE, Sir JOHN FOX, Bart., Field-Marshal and Constable of the Tower, was born in 1732. He was the son of the Hon. John Burgoyne, who had command of the British forces in America in 1777, and who was taken prisoner by the Americans during an expedition against the insurgents in Canada. He was educated at Eton, whence he passed to the Royal Military Academy at Woolwich. After pursuing the usual course of study, he entered the army in 1798 as lieutenant in the Royal Engineers. In 1800 he served in the expedition to the Mediterranean, under Sir R. Abercromby, and took part in the blockade and capture of Valletta. He attained the rank of Captain in 1805, and in the following year was employed in Sicily, and served at the capture of Alexandria and the siege of Rosetta. In 1808 he served under Sir John Moore in the Peninsula, shared the retreat from Coruña, and was one of the party assisting at the burial of his chief. He was actively engaged under Sir Arthur Wellesley in all the campaigns of the Peninsular War: took part in every siege and fought in almost every battle. He was at the passage of the Douro, distinguished himself at the assault of Ciudad Rodrigo, at the two sieges of Badajoz, at the siege and battle of Salamanca, was wounded at the siege of Burgos, had his

horse shot under him at Vittoria, and was again wounded at the assault of San Sebastian. Soon after the close of the war he was appointed Commanding Engineer of the expedition to New Orleans, under Sir Edward Pakenham. He had been promoted major, and then lieutenant-colonel in 1812. He was not present at Waterloo, but he joined the army of occupation at Paris in July 1815, and remained there till 1818, when the occupation came to an end. Promoted colonel in 1830, he was the same year appointed Chairman of the Board of Public Works in Ireland, a post which he held for thirteen or fourteen years, and in which he rendered valuable services to the country. In 1837 he was created K.C.B., and in 1838 he became major-general. In 1845 he was appointed Inspector-General of Fortifications in England, in which capacity he addressed a memorable letter to the Duke of Wellington on the state of our coast defences. On the outbreak of the famine in Ireland in 1847, Sir John was charged with the organisation of the commission for the relief of distress in that country, a task to which he applied himself with unwearied devotion. In 1849 he was head of the Metropolitan Commission of Sewers, and so valued were his services that he was called to take some part in most of the public undertakings of the period. He attained the rank of lieutenant-general in 1851, and was promoted K.G.C. in the following year. When the war with Russia became imminent, Sir John Burgoyne was sent to Constantinople to report on measures necessary for the defence of the Turkish empire, and on the real state of things being made known by him, the expedition to the Crimea was resolved on, and he was appointed Lieutenant-General on the Staff of the army in the East. He directed the landing at Eupatoria, suggested the flank movement to the south side of Sebastopol, pointed out from the first that the Malakhoff was the key of the position, and had the conduct of the siege operations till March 1855, when he was recalled. The honorary degree of D.C.L. had in his absence been conferred on him by the University of Oxford. He was soon afterwards advanced to the rank of General, created a baronet, elected F.R.S., created Grand Cross of the Legion of Honour, and Knight of the Order of the Medjidie. After the death of Lord Combermere he was appointed, in April 1865, Constable of the Tower. On New Year's Day 1868 he received the baton of field-marshal. The loss of his only son, a promising young officer in the Royal Navy, who was drowned in H.M.S. *Captain* in 1870, brought on a severe attack of illness, from a recurrence of which he died in London, 7th October 1871. Sir John married in 1821, had a family of seven daughters and one son, but in consequence of the death of the latter without issue,

the title is extinct. His "Life and Correspondence, with Extracts from his Journals" (1872), were edited by Lieutenant-Colonel the Hon. George Wrottesley.

BURLINGAME, ANSON, American diplomatist, was born in New York state in 1822. He attained the dignity of Senator of Massachusetts about 1850, and was sent in 1851 ambassador to the court of Peking. He was there the constant friend of Sir Frederick Bruce, the representative of Great Britain, and co-operated with him in endeavouring to promote more satisfactory relations between the Chinese government and the European and American states. He attained a very influential position at Peking, and on the termination of his embassy he undertook an official mission from the Chinese court to America and the European courts, the object of which was to procure fresh treaties with those courts. Attended by a numerous suite, and with the rank of a mandarin of the first class, he went first, at the close of 1867, to the United States, thence in the following year to England, and afterwards to France, Holland, Denmark, Sweden, Prussia, and in February 1870 to Russia. His mission was successful, one part of his task alone, the negotiation of a treaty with the Czar, being left incomplete, for he was seized with illness and died within a fortnight after his arrival at St Petersburg, on the 23d February 1870.

BURNET, JOHN, an eminent engraver and writer on art, was born at Edinburgh in 1784. He was a pupil of Robert Scott of that city, and attended the Trustees' Academy, then under the direction of John Graham. There he was a fellow-student with Wilkie. He came to London about 1806, and after being for some time engaged on plates for book illustration, he attracted attention and admiration by his print after the "Jew's Harp," the first of Wilkie's pictures to be engraved. He soon after executed the "Blind Fiddler," which established his reputation. Subsequently Burnet engraved Wilkie's "Reading of the Will," "Chelsea Pensioners," his most elaborate work, "The Rabbit on the Wall," "Letter of Introduction," &c. In 1813 he studied for some months in the Louvre. Later in life he engraved his own designs; among others, "Greenwich Pensioners," "The Draught Players," and "The Young Bird." As a writer on art, Burnet was chiefly known by his "Practical Treatise on Painting," published in 1822-27, and which has passed

through five editions. He was also author of an "Essay on the Education of the Eye," "Practical Essays on Various Branches of the Fine Arts," "Rembrandt and his Works," "Life and Works of J. M. W. Turner," "The Progress of a Painter," an "Autobiography," &c. Died in London, 29th April 1868.

BUTLER, WILLIAM ARCHER, Professor of Moral Philosophy in the University of Dublin, was born at Annerville, near Clonmel, probably in 1814. He was brought up a Roman Catholic, but in early life became a Protestant; was educated at Clonmel School, and at Trinity College, Dublin, and soon distinguished himself by his poetical and philosophical tastes. He joined the College Historical Society, and in 1837 was appointed first Professor of Moral Philosophy in the University of Dublin. He was the same year presented to the prebend of Clondehorka, in the diocese of Raphoe, and gave himself up with earnest devotion to the humble duties of a parish minister. In 1842 he was promoted to the rectory of Raymoghly, in the same diocese. During the horrors of the famine and pestilence in 1846-47 he laid aside all higher pursuits, and toiled nobly among his poor as a relieving-officer. One of the very few noticeable incidents of his life is a visit, in 1844, to the Lake district, where he became acquainted with Wordsworth, Sir W. R. Hamilton, and Archdeacon Hare. The works of Butler, forming five volumes, consist of his "Letters on Romanism in reply to Mr Newman's Essay on 'Development,'" "Sermons, Doctrinal and Practical," two series, with a memoir by the Rev. T. Woodward, M.A.; and "Lectures on the History of Ancient Philosophy," 2 vols. Died, July 5, 1848.

BUXTON, CHARLES, political and miscellaneous writer, was born in 1823. He was the third son of Sir Thomas Fowell Buxton, studied at Trinity College, Cambridge, and took his degree of B.A. in 1843. He entered Parliament in 1857 as member for Newport, Isle of Wight, sat for Maidstone from 1859 till 1865, and for East Surrey from the latter year till his death. He was an energetic adherent of the Liberal party. As a writer, Mr C. Buxton was known by his "Life of Sir Fowell Buxton," "Ideas of the Day on Policy," each of which works passed through several editions; a dissertation on "National Education in Ireland," and contributions to the "Cambridge Essays" and "North British Review." Died in Scotland, 10th August 1871.

C.

CAMPBELL, JOHN MACLEOD, a distinguished Scottish theologian, was born about 1801. He was educated at Glasgow University, entered the Kirk, and in 1825 settled as parish minister at Row, Dumbartonshire. Within five years suspicions of "unsoundness" were whispered against him, which grew into a charge of heresy; and after successive appearances before the Presbytery during the years 1830 and 1831, he was condemned and expelled from the Church. The sentence of the Presbytery was confirmed by the Synod of Glasgow and Ayr. After a time he settled in Glasgow, where he continued to teach a group of willing listeners, and at the same time to embody his views in books. In 1862 the University of Glasgow conferred on him the degree of D.D. His most important work is entitled—"On the Nature of the Atonement." It was published in 1856, and soon attracted the attention of the thoughtful by its original and profound thought, its speculative and logical power, and the tenderness of its Christian sympathy. His other works are—"Christ the Bread of Life" (1851), and "Thoughts on Revelation" (1862). His last days were spent in the retired scene of his early labours, and he died at Roseneath, 27th February 1872.

CAPEFIGUE, JEAN BAPTISTE HONORÉ RAYMOND, French publicist and historical writer, was born at Marseilles in 1802. He settled in Paris in 1821, and began to study law, but soon devoted himself to journalism and literature. Under the Martignac ministry he was employed to edit the "Messager des Chambres." M. Guizot gave him free access to important diplomatic documents and state archives; and after the revolution of 1848 he was one of the most determined opponents of the Republic. His large participation in the secret service money was exposed by the "Revue Rétrospectif." M. Capefigue wrote an immense number of books, of which very few have any solid worth. Perhaps the best are—"Vie de saint Vincent de Paule," "Histoire Philologique des Juifs depuis la décadence des Machabées jusqu'à nos Jours," crowned by the Academy of Inscriptions; "Histoire de Philippe-Auguste," crowned by the Institute, and said to be the only one of his works that bears marks of serious study; and "Histoire de la Restauration," 10 vols. In his later years he wrote "Lives of Several Distinguished Frenchmen." Died at Paris in December 1872.

CARAFÀ, MICHELE, an Italian musical composer, was born at Naples in 1785. He studied music at an early age under Piaggi and Fenaroli, but entered the army, attracted the attention of Murat, and was attached to his service. He fought

in several campaigns, accompanied Murat to Russia in 1812, and was made chevalier of the Legion of Honour. After the restoration of the Bourbons he returned to his early pursuit. Having made himself favourably known at Naples, Venice, Milan, and Vienna, he went to Paris in 1821, where in the following year he produced his most popular opera, "Le Solitaire." From that time his works rapidly succeeded each other, many of them too plainly imitative of Rossini, and catching much temporary applause. His most esteemed opera is "Masaniello," produced in 1828. He was a member of the Academy of Fine Arts, Professor at the *Conservatoire*, and Director of the Military Musical Gymnasium. He was promoted officer of the Legion of Honour in 1847. Died at Naples, 26th July 1872.

CARDIGAN, JAMES THOMAS BRUDENELL, Earl of, British general, was born at Hambledon, in Hampshire, in 1797. He studied at Christ Church, Oxford, and entered Parliament as member for Marlborough in 1818, retaining his seat for that borough eleven years. He entered the army in 1824, and was promoted lieutenant-colonel in 1832. The same year he was elected M.P. for North Northamptonshire, having previously sat for a short time for Powey, in Cornwall. In 1840 he wounded Captain Tuckett in a duel fought at Wimbledon, and was tried before the House of Lords. On slight technical grounds he received an acquittal. As major-general, he took command of the Light Cavalry Brigade in the Crimean War (1854), and especially distinguished himself by his personal bravery in the famous charge of the Light Brigade against the Russians at Balaclava, when, of the Six Hundred whom he led, half were left dead on the field. He was soon after nominated K.C.B. On his return to England, he was appointed Inspector-General of Cavalry, and in 1859 was promoted colonel. He resigned the inspectorship in 1860, and the following year was promoted lieutenant-general. Lord Cardigan was twice married, first in 1826, and again in 1858. Died at Deane Park, Northamptonshire, 28th March 1868, in consequence of a fall from his horse a few days before.

CARLETON, WILLIAM, Irish novelist, was the son of a small farmer, and was born at Clogher, county Tyrone, Ireland, in 1798. He was destined for the priesthood, but before 1830 he had abandoned that calling, and devoted himself to literature as a profession. Implicated in the movement of 1848, under O'Brien, he passed for a time to the United States, but afterwards returned to Dublin. The work which made him a wide reputation

was his "Traits and Stories of the Irish Peasantry," published in 1830. A second series appeared in 1832. These were followed by numerous works of a similar character, remarkable and valuable for their vivid and exact representation of Irish peasant life and character. Carleton was a contributor to various periodicals. His services as author were acknowledged by a Government pension of £200. Died at Dublin, 30th January 1869. A pension of £100 was conferred on his widow by the Queen.

CARPENTER, MARGARET S., portrait painter, was born at Salisbury in 1793. She was the daughter of Captain Geddes of that city, came to London in 1814, and the same year began to exhibit at the Royal Academy. Three years later she married Mr. W. H. Carpenter, who subsequently became known as the Keeper of Prints and Drawings in the British Museum. She continued to exhibit portraits and fancy subjects at the Royal Academy till 1866. In that year she was left a widow, and a pension of £100 per annum was conferred on her by the Queen. Several of her works are included in the Sheepshanks collection of the National Gallery. Died in London, 13th November 1872.

CARPENTER, WILLIAM HOOKHAM, F.S.A., Keeper of Prints and Drawings in the British Museum, was born in London in 1792. He was only son of James Carpenter, the publisher, who was closely connected with many painters and engravers, and dealt largely in works on art. He became a partner in his father's business, but afterwards applied himself to literature and the study of art. He prepared a new edition of Spence's "Anecdotes," and in 1844 published his "Pictorial Notices" of Vandyke and Rubens. In the following year he received his appointment at the British Museum, and the services which, for more than twenty years, he rendered in that post have earned him a European reputation. By means of his extensive knowledge and vigilant attention many important acquisitions have been secured for the Print Room, and the collection now forms the most complete existing illustration of the history of engraving. One of the latest purchases made by his advice was the original study for the "Garvagh Raphael." Mr Carpenter was a trustee of the National Portrait Gallery, and a member of the Academy of the Fine Arts, Amsterdam. He married in 1817 Margaret Geddes, daughter of Alexander Geddes, of Alderbury, who attained distinction as a portrait painter. Died at the British Museum, July 12, 1866.

CASS, LEWIS, an eminent American statesman and general, was born at Exeter in New Hampshire, U.S., in 1782. He studied for the law, and at the age of twenty was admitted to the bar. In 1806 he became a member of the legislature

of Ohio, and the next year was named Marshal of the State, a post which he filled till 1813. Meanwhile he had obtained a commission in the army, and while serving in the war with Great Britain, was one of the body of troops surrendered by General Hall to the English. Released soon after, he became general of brigade, and was appointed governor of the Indian territory. In 1820 he took part in the expedition of discovery in the north-western regions. The honorary degree of LL.D. was, in 1830, conferred on him by Hamilton College. In the following year he was appointed by President Jackson Secretary of War, in which capacity he prepared a report on the state of the military and naval defences. In 1836 he exchanged his post as Secretary of War for that of United States Minister to France, which he retained six years. Returning to America, he became a candidate for the Presidency in 1844, but was unsuccessful. He was soon after elected United States Senator for Michigan, and was several times re-elected. In 1852 he again contested the Presidency, and again failed. Five years later he was appointed Secretary of State, which office he resigned in December 1860. General Cass was a zealous member of the Democratic party; advocated slavery, protection, the annexation of territory, and war with Great Britain. The fruits of his observation during his residence at Paris appeared in his work entitled—"The King, Court, and Government of France." He married in 1806. Died at Detroit, in Michigan, 17th June 1866.

CASWALL, HENRY, miscellaneous writer, was born in Hampshire in 1810. At an early age he went to America, and in 1830 took his degree of B.A. at Kenyon College, Ohio. Four years later he graduated M.A. After some years employed in the duties of a pastor and professor of theology, he returned to England, and became vicar of Figheldean, in Wiltshire, and afterwards prebendary of Salisbury. Among his works are—"America and the American Church," "The City of the Mormons," "The Jerusalem Chamber," "Scotland and the Scottish Church," "The Western World Revisited," &c. Died in January 1871.

CATLIN, GEORGE, American traveller and painter, was born in Pennsylvania in 1795. Brought up to his father's profession—the law—he practised in Connecticut and Philadelphia; but in 1822, while in New York as a portrait painter, having become deeply interested in the Indian race, which was rapidly disappearing, he resolved to travel among them. He accompanied first Governor Clerke, then Superintendent of Indian Affairs, in a tour among various western tribes, and began the series of his Indian paintings. And next he accompanied an intelligent fur-trader up the Missouri, and, reaching the Yellowstone River, spent eight years

among the west, living intimately with the customs, and formed a collection, and portraits, which together with exhibited in between 1824 to Venezuela the Indian Catlin published North America Hunting Season Rocky Mountain (1814); "North in Europe" entitled, "The your Mouth 1840, and his Europe, but three daughters. **CATTER**, water-colour burgh, near He began his cal draughts of sixteen. among the Indian tribes of the north-west, living with them, and becoming intimately acquainted with their manners, customs, and modes of thought. He formed an interesting illustrative collection, and painted many scenes and portraits, which he brought to Europe, together with a party of Iowa Indians, and exhibited in London, Paris, and other cities between 1840 and 1848. In 1852 he went to Venezuela and spent some years among the Indian tribes of South America. Mr. Catlin published—"Illustrations of the Manners, Customs, and Conditions of the North American Indians" (1841); "The North American Hunting Portfolio of Hunting Scenes and Amusements of the Rocky Mountains and Prairies of America" (1844); "Notes of Travel and Residence in Europe" (1848); and a small volume entitled, "The Breath of Life; or, Shut your Mouth" (1864). He had married in 1840, and his wife accompanied him to Europe, but died suddenly at Paris, leaving three daughters. Died, in December 1872.

CATERMOLE, GEORGE, an English water-colour painter, was born at Dickleburgh, near Diss, in Norfolk, in 1800. He began his artistic life as a topographical draughtsman, furnishing, at the age of sixteen, drawings in illustration of Britton's "Cathedrals of England." He was admitted a member of the Society of Painters in Water Colours in 1833, and became a regular contributor to its exhibitions, withdrawing from membership in 1851. Among his subjects are scenes from English history, from Shakespeare's plays, and Scott's novels. He contributed the designs in illustration of his brother's "History of the Civil Wars," and numerous illustrations to the "Annals." In his later years he painted in oil. He was a member of the Academy of Amsterdam, and of the Belgian Society of Water-colour Painters. Died, 24th July 1868.

CAUSSIN DE PERCIVAL, AMAND PIERRE, an eminent French Orientalist, was born at Paris in 1795. In 1814 he was sent in an official capacity to Constantinople, and before his return to France in 1821 he spent a year among the Maronites of the Libanon, and filled the post of dragoman at Aleppo. On his arrival at Paris, he was appointed Professor of Arabic at the School of Living Oriental Languages. Three years later he was attached, as interpreter, to the Dépôt of War. In 1833 he became Professor of the Arabic Language and Literature at the Collège de France. His most important work is the "Essais sur l'histoire des Arabes avant l'Islamisme, pendant l'époque de Mahomet, et jusqu'à la réduction de toutes les tribus sous la loi musulmane" (1847). Among his other works are—"Précis historique de la Guerre des Turcs contre les Russes (1769-1774)," published in 1828; and a "Grammaire Arabe vulgaire," 1824, republished in 1832 and 1848. M. Caussin de Percival was a chevalier of

the Legion of Honour, and a member of the Academy of Inscriptions. Died, in March 1872.

CAUTLEY, Sir THOMAS PROBY, colonel in the Bengal Artillery, Projector of the Ganges Canal, was born at Loydon, in Suffolk, in 1802. After studying at Charterhouse School and at Addiscombe, he entered the Bengal Artillery in 1819. In the course of the two following years he served in Cude, where he reduced several forts, and in 1825-26 he took part in the siege of Bhurtpore. Soon after, he obtained employment in the Civil Service, as engineer on the Eastern Jumna Canal, and became subsequently the projector of the Ganges Canal, the construction of which was carried out under his direction, and completed in 1854. Returning to England the same year, he was created K.C.B., and on the transfer of the government of India to the Crown, in 1858, he was appointed a member of Her Majesty's Council for India. After holding this seat for ten years, he retired into private life. Colonel Cautley was an ardent student of geology and paleontology, and during his long residence in the Sewalk Hills, he formed a large collection of fossil mammalia, which he presented to the British Museum. He contributed many valuable memoirs to the "Proceedings" of the Asiatic Society of Bengal and the Geological Society of London, the latter Society awarding, in 1837, the Wollaston gold medal in duplicate to him and the late Hugh Falconer, long his associate in his researches. Died at Sydenham, 25th January 1871.

CHAMBERS, ROBERT, one of the heads of the well-known firm of publishers at Edinburgh, and an eminent historical and miscellaneous writer, was born at Peebles in 1802. He began business as a bookseller at the early age of fifteen, and after years of industry and energetic struggle, entered, in 1832, into partnership with his elder brother William, their successful "Edinburgh Journal" being started the same year. Robert had previously made himself known as an author, and he continued to devote much of his leisure time to literature and science. His interest in geology led him to travel in Switzerland, Sweden and Norway, Iceland and the Faroe Islands, and the fruits of his researches appeared in his "Ancient Sea Margins," published in 1848. He had a large share in the preparation of the well-known "Educational Course," "Information for the People," "Papers for the People," "Cyclopædia of English Literature," "Biographical Dictionary of Eminent Scotchmen," and "Chambers's Encyclopædia." His more important separate works are—"Traditions of Edinburgh," first published in 1823, and of which a new edition appeared in 1870; "Popular Rhymes of Scotland," "Picture of Scotland," "Histories of the Scottish Rebellions," "Domestic Annals of Scot-

land," an edition of Burns's works, the "Book of Days," and a volume of miscellaneous "Essays." He was a member of many scientific societies, and received, in 1863, the honorary degree of LL.D. from the University of St Andrews. Dr Chambers was one of those to whom was attributed the authorship of the book entitled "Vestiges of the Natural History of Creation." He was twice married, and lost his second wife in 1870. Died at St Andrews, 17th March 1871. Four days later, his younger brother, Mr DAVID CHAMBERS, the manager of the London house, died, from the shock, it is said, of his brother's death.

CHAMPOLLION-FIGEAC, JACQUES JOSEPH, a distinguished French archaeologist, was born at Figeac (Lot) in 1778. He was the elder brother of the celebrated Egyptologist, and was in early life Keeper of the Town Library of Grenoble, then Professor of Greek Literature at the Faculty of Letters, and Dean of the Faculty. His first studies were directed to local antiquities, on which he published several works. He then turned to ancient Egypt, limiting himself, however, to the study of Greek documents, and published in 1819 his "Annales des Lagides, ou Chronologie des Rois grecs d'Egypte," to which he afterwards added a Supplement. About 1828 he went to Paris, and was appointed Keeper of the Manuscripts relating to the history of France in the Royal Library. He took part in the reorganization of the Ecole des Chartes, and held a professorship there for twenty years. Among the fruits of his labours during that period are editions of various manuscripts previously unpublished:—"Histoire des Peuples anciens et modernes," "L'Egypte ancienne et moderne," for the "Univers Pittoresque;" "L'Ecriture démotique égyptienne," "Fourier et Napoléon," and many articles contributed to the "Dictionnaire de la Conversation" and the "Nouvelle Revue encyclopédique." Deprived, after the Revolution of February 1848, of his office as Librarian, he was in the following year appointed Librarian to Prince Louis Napoleon at Fontainebleau. He afterwards published a magnificently illustrated work on the palace of Fontainebleau, and a volume of "Documents paléographiques relatifs à l'Histoire des Beaux-Arts et des Belles-Lettres pendant le moyen âge." Chevalier of the Legion of Honour from 1828, he was promoted officer in 1866. Died at Fontainebleau, 9th May 1867.

CHESNEY, FRANCIS RAWDON, the distinguished explorer of the Euphrates, was a native of Ireland. He was born in 1789, entered the Royal Artillery at the age of fifteen, and attained the rank of captain in 1815. He married in 1821, but losing his wife soon after, he travelled a good deal both in Europe and Asia. In 1828 he was sent by the government to

assist the Turks in the defence of the Balkan passes, but he arrived too late, the Russians having already crossed the mountains. He was next sent to Egypt to examine and report on various desert routes to India, visited Syria and Palestine, reached the Euphrates at El Kayem, and from Anah descended the river on a raft to the Persian Gulf. In his official report on overland routes he denied the assertion of the French engineers as to the different levels of the Mediterranean and the Red Sea, and distinctly affirmed the feasibility of connecting them by a canal, a project realized forty years later in the Suez Canal. In 1835 Captain Chesney, with the rank of colonel for the occasion, took command of a government expedition for the survey of the route from the coast of Syria to the Euphrates, and by the great river to the Persian Gulf. He accomplished his task, beset as it was with difficulties and dangers, and explored the river through more than 1100 miles of its course. During this expedition he also explored the Tigris, surveyed Northern Syria and Northern Mesopotamia, and rendered other important services to science and his country. Like many other great discoverers, he missed the material compensations justly due for his labours and achievements. As a soldier he studied earnestly the theory of war, and strove to effect a reform in the artillery when reform was unpopular, and its advocacy dangerous. He became major in 1836, lieutenant-colonel in 1846, and colonel in 1851. His great work, the "Expedition for the Survey of the Rivers Euphrates and Tigris," appeared in 1850. His other works are—"Observations on the Past and Present State of Fire-arms;" "The Russo-Turkish Campaigns of 1828 and 1829," and a "Narrative of the Euphrates Expedition." Died in Ireland, 30th January 1872.

CHORLEY, HENRY FOTHERGILL, musical critic and miscellaneous writer, was born at Ashton-le-Willows, in Lancashire, in 1808. He was of a Quaker family, and from an early age showed a strong bent for music. In 1833 he settled in London, and the same year he became a regular writer on the staff of the "Athenæum." He filled the post of musical critic of that journal for thirty-five years, only retiring on account of failing health in 1868. His first literary work was his "Memorials of Mrs Hemans," published in 1836. He had made her acquaintance in 1827, and enjoyed her friendship till her death. In 1833 he published "Authors of England," which was followed three years later by his "Music and Manners in France and Germany," of which a new edition appeared in 1854, entitled "Modern German Criticism." His subsequent works are—"Modern German Music" (1854), and "Thirty Years of Musical Recollections" (1862). Mr Chorley furnished the

words for several novels, and Mitford. D. 1872.

CLARENCE, **FREDERICK**, statesman and Hon. George, completed his education, entered the army, and he was entrusted with a Commercial Commission two years later. He was plenipotentiary of his uncle's earldom, and England. Th. G.C.B. (civil). He became a ministry as Lord of the Treasury in 1841, and in the course of the addition, Chas. Lancaster. R. 1841, he remained when he was a Board of Trade. In the same year he was appointed plenipotentiary of his uncle's earldom, and in 1852, and in 1853, and in 1854, and in 1855, and in 1856, and in 1857, and in 1858, and in 1859, and in 1860, and in 1861, and in 1862, and in 1863, and in 1864, and in 1865, and in 1866, and in 1867, and in 1868, and in 1869, and in 1870, and in 1871, and in 1872, and in 1873, and in 1874, and in 1875, and in 1876, and in 1877, and in 1878, and in 1879, and in 1880, and in 1881, and in 1882, and in 1883, and in 1884, and in 1885, and in 1886, and in 1887, and in 1888, and in 1889, and in 1890, and in 1891, and in 1892, and in 1893, and in 1894, and in 1895, and in 1896, and in 1897, and in 1898, and in 1899, and in 1900, and in 1901, and in 1902, and in 1903, and in 1904, and in 1905, and in 1906, and in 1907, and in 1908, and in 1909, and in 1910, and in 1911, and in 1912, and in 1913, and in 1914, and in 1915, and in 1916, and in 1917, and in 1918, and in 1919, and in 1920, and in 1921, and in 1922, and in 1923, and in 1924, and in 1925, and in 1926, and in 1927, and in 1928, and in 1929, and in 1930, and in 1931, and in 1932, and in 1933, and in 1934, and in 1935, and in 1936, and in 1937, and in 1938, and in 1939, and in 1940, and in 1941, and in 1942, and in 1943, and in 1944, and in 1945, and in 1946, and in 1947, and in 1948, and in 1949, and in 1950, and in 1951, and in 1952, and in 1953, and in 1954, and in 1955, and in 1956, and in 1957, and in 1958, and in 1959, and in 1960, and in 1961, and in 1962, and in 1963, and in 1964, and in 1965, and in 1966, and in 1967, and in 1968, and in 1969, and in 1970, and in 1971, and in 1972, and in 1973, and in 1974, and in 1975, and in 1976, and in 1977, and in 1978, and in 1979, and in 1980, and in 1981, and in 1982, and in 1983, and in 1984, and in 1985, and in 1986, and in 1987, and in 1988, and in 1989, and in 1990, and in 1991, and in 1992, and in 1993, and in 1994, and in 1995, and in 1996, and in 1997, and in 1998, and in 1999, and in 2000, and in 2001, and in 2002, and in 2003, and in 2004, and in 2005, and in 2006, and in 2007, and in 2008, and in 2009, and in 2010, and in 2011, and in 2012, and in 2013, and in 2014, and in 2015, and in 2016, and in 2017, and in 2018, and in 2019, and in 2020, and in 2021, and in 2022, and in 2023, and in 2024, and in 2025, and in 2026, and in 2027, and in 2028, and in 2029, and in 2030, and in 2031, and in 2032, and in 2033, and in 2034, and in 2035, and in 2036, and in 2037, and in 2038, and in 2039, and in 2040, and in 2041, and in 2042, and in 2043, and in 2044, and in 2045, and in 2046, and in 2047, and in 2048, and in 2049, and in 2050, and in 2051, and in 2052, and in 2053, and in 2054, and in 2055, and in 2056, and in 2057, and in 2058, and in 2059, and in 2060, and in 2061, and in 2062, and in 2063, and in 2064, and in 2065, and in 2066, and in 2067, and in 2068, and in 2069, and in 2070, and in 2071, and in 2072, and in 2073, and in 2074, and in 2075, and in 2076, and in 2077, and in 2078, and in 2079, and in 2080, and in 2081, and in 2082, and in 2083, and in 2084, and in 2085, and in 2086, and in 2087, and in 2088, and in 2089, and in 2090, and in 2091, and in 2092, and in 2093, and in 2094, and in 2095, and in 2096, and in 2097, and in 2098, and in 2099, and in 2100, and in 2101, and in 2102, and in 2103, and in 2104, and in 2105, and in 2106, and in 2107, and in 2108, and in 2109, and in 2110, and in 2111, and in 2112, and in 2113, and in 2114, and in 2115, and in 2116, and in 2117, and in 2118, and in 2119, and in 2120, and in 2121, and in 2122, and in 2123, and in 2124, and in 2125, and in 2126, and in 2127, and in 2128, and in 2129, and in 2130, and in 2131, and in 2132, and in 2133, and in 2134, and in 2135, and in 2136, and in 2137, and in 2138, and in 2139, and in 2140, and in 2141, and in 2142, and in 2143, and in 2144, and in 2145, and in 2146, and in 2147, and in 2148, and in 2149, and in 2150, and in 2151, and in 2152, and in 2153, and in 2154, and in 2155, and in 2156, and in 2157, and in 2158, and in 2159, and in 2160, and in 2161, and in 2162, and in 2163, and in 2164, and in 2165, and in 2166, and in 2167, and in 2168, and in 2169, and in 2170, and in 2171, and in 2172, and in 2173, and in 2174, and in 2175, and in 2176, and in 2177, and in 2178, and in 2179, and in 2180, and in 2181, and in 2182, and in 2183, and in 2184, and in 2185, and in 2186, and in 2187, and in 2188, and in 2189, and in 2190, and in 2191, and in 2192, and in 2193, and in 2194, and in 2195, and in 2196, and in 2197, and in 2198, and in 2199, and in 2200, and in 2201, and in 2202, and in 2203, and in 2204, and in 2205, and in 2206, and in 2207, and in 2208, and in 2209, and in 2210, and in 2211, and in 2212, and in 2213, and in 2214, and in 2215, and in 2216, and in 2217, and in 2218, and in 2219, and in 2220, and in 2221, and in 2222, and in 2223, and in 2224, and in 2225, and in 2226, and in 2227, and in 2228, and in 2229, and in 2230, and in 2231, and in 2232, and in 2233, and in 2234, and in 2235, and in 2236, and in 2237, and in 2238, and in 2239, and in 2240, and in 2241, and in 2242, and in 2243, and in 2244, and in 2245, and in 2246, and in 2247, and in 2248, and in 2249, and in 2250, and in 2251, and in 2252, and in 2253, and in 2254, and in 2255, and in 2256, and in 2257, and in 2258, and in 2259, and in 2260, and in 2261, and in 2262, and in 2263, and in 2264, and in 2265, and in 2266, and in 2267, and in 2268, and in 2269, and in 2270, and in 2271, and in 2272, and in 2273, and in 2274, and in 2275, and in 2276, and in 2277, and in 2278, and in 2279, and in 2280, and in 2281, and in 2282, and in 2283, and in 2284, and in 2285, and in 2286, and in 2287, and in 2288, and in 2289, and in 2290, and in 2291, and in 2292, and in 2293, and in 2294, and in 2295, and in 2296, and in 2297, and in 2298, and in 2299, and in 2300, and in 2301, and in 2302, and in 2303, and in 2304, and in 2305, and in 2306, and in 2307, and in 2308, and in 2309, and in 2310, and in 2311, and in 2312, and in 2313, and in 2314, and in 2315, and in 2316, and in 2317, and in 2318, and in 2319, and in 2320, and in 2321, and in 2322, and in 2323, and in 2324, and in 2325, and in 2326, and in 2327, and in 2328, and in 2329, and in 2330, and in 2331, and in 2332, and in 2333, and in 2334, and in 2335, and in 2336, and in 2337, and in 2338, and in 2339, and in 2340, and in 2341, and in 2342, and in 2343, and in 2344, and in 2345, and in 2346, and in 2347, and in 2348, and in 2349, and in 2350, and in 2351, and in 2352, and in 2353, and in 2354, and in 2355, and in 2356, and in 2357, and in 2358, and in 2359, and in 2360, and in 2361, and in 2362, and in 2363, and in 2364, and in 2365, and in 2366, and in 2367, and in 2368, and in 2369, and in 2370, and in 2371, and in 2372, and in 2373, and in 2374, and in 2375, and in 2376, and in 2377, and in 2378, and in 2379, and in 2380, and in 2381, and in 2382, and in 2383, and in 2384, and in 2385, and in 2386, and in 2387, and in 2388, and in 2389, and in 2390, and in 2391, and in 2392, and in 2393, and in 2394, and in 2395, and in 2396, and in 2397, and in 2398, and in 2399, and in 2400, and in 2401, and in 2402, and in 2403, and in 2404, and in 2405, and in 2406, and in 2407, and in 2408, and in 2409, and in 2410, and in 2411, and in 2412, and in 2413, and in 2414, and in 2415, and in 2416, and in 2417, and in 2418, and in 2419, and in 2420, and in 2421, and in 2422, and in 2423, and in 2424, and in 2425, and in 2426, and in 2427, and in 2428, and in 2429, and in 2430, and in 2431, and in 2432, and in 2433, and in 2434, and in 2435, and in 2436, and in 2437, and in 2438, and in 2439, and in 2440, and in 2441, and in 2442, and in 2443, and in 2444, and in 2445, and in 2446, and in 2447, and in 2448, and in 2449, and in 2450, and in 2451, and in 2452, and in 2453, and in 2454, and in 2455, and in 2456, and in 2457, and in 2458, and in 2459, and in 2460, and in 2461, and in 2462, and in 2463, and in 2464, and in 2465, and in 2466, and in 2467, and in 2468, and in 2469, and in 2470, and in 2471, and in 2472, and in 2473, and in 2474, and in 2475, and in 2476, and in 2477, and in 2478, and in 2479, and in 2480, and in 2481, and in 2482, and in 2483, and in 2484, and in 2485, and in 2486, and in 2487, and in 2488, and in 2489, and in 2490, and in 2491, and in 2492, and in 2493, and in 2494, and in 2495, and in 2496, and in 2497, and in 2498, and in 2499, and in 2500, and in 2501, and in 2502, and in 2503, and in 2504, and in 2505, and in 2506, and in 2507, and in 2508, and in 2509, and in 2510, and in 2511, and in 2512, and in 2513, and in 2514, and in 2515, and in 2516, and in 2517, and in 2518, and in 2519, and in 2520, and in 2521, and in 2522, and in 2523, and in 2524, and in 2525, and in 2526, and in 2527, and in 2528, and in 2529, and in 2530, and in 2531, and in 2532, and in 2533, and in 2534, and in 2535, and in 2536, and in 2537, and in 2538, and in 2539, and in 2540, and in 2541, and in 2542, and in 2543, and in 2544, and in 2545, and in 2546, and in 2547, and in 2548, and in 2549, and in 2550, and in 2551, and in 2552, and in 2553, and in 2554, and in 2555, and in 2556, and in 2557, and in 2558, and in 2559, and in 2560, and in 2561, and in 2562, and in 2563, and in 2564, and in 2565, and in 2566, and in 2567, and in 2568, and in 2569, and in 2570, and in 2571, and in 2572, and in 2573, and in 2574, and in 2575, and in 2576, and in 2577, and in 2578, and in 2579, and in 2580, and in 2581, and in 2582, and in 2583, and in 2584, and in 2585, and in 2586, and in 2587, and in 2588, and in 2589, and in 2590, and in 2591, and in 2592, and in 2593, and in 2594, and in 2595, and in 2596, and in 2597, and in 2598, and in 2599, and in 2600, and in 2601, and in 2602, and in 2603, and in 2604, and in 2605, and in 2606, and in 2607, and in 2608, and in 2609, and in 2610, and in 2611, and in 2612, and in 2613, and in 2614, and in 2615, and in 2616, and in 2617, and in 2618, and in 2619, and in 2620, and in 2621, and in 2622, and in 2623, and in 2624, and in 2625, and in 2626, and in 2627, and in 2628, and in 2629, and in 2630, and in 2631, and in 2632, and in 2633, and in 2634, and in 2635, and in 2636, and in 2637, and in 2638, and in 2639, and in 2640, and in 2641, and in 2642, and in 2643, and in 2644, and in 2645, and in 2646, and in 2647, and in 2648, and in 2649, and in 2650, and in 2651, and in 2652, and in 2653, and in 2654, and in 2655, and in 2656, and in 2657, and in 2658, and in 2659, and in 2660, and in 2661, and in 2662, and in 2663, and in 2664, and in 2665, and in 2666, and in 2667, and in 2668, and in 2669, and in 2670, and in 2671, and in 2672, and in 2673, and in 2674, and in 2675, and in 2676, and in 2677, and in 2678, and in 2679, and in 2680, and in 2681, and in 2682, and in 2683, and in 2684, and in 2685, and in 2686, and in 2687, and in 2688, and in words for several operas, &c., wrote several novels, and edited the letters of Miss Mitford. Died in London, 15th February 1872.

CLARENDRON, GEORGE WILLIAM FREDERICK VILLIERS, fourth earl of, statesman and diplomatist, was born in London in 1800. He was eldest son of the Hon. George Villiers, and having completed his education at Cambridge University, entered the Civil Service. In 1831 he was entrusted with the negotiation of a Commercial Treaty with France, and two years later was appointed minister plenipotentiary at Madrid. On the death of his uncle in 1838 he succeeded to the earldom, and soon after returned to England. The same year he was created G.C.B. (civil). At the beginning of 1840 he became a member of the Melbourne ministry as Lord Privy Seal, and in the course of the same year was made, in addition, Chancellor of the Duchy of Lancaster. Retiring with his party in 1841, he remained out of office till 1846, when he was appointed President of the Board of Trade in the Russell administration. In the spring of the following year he was appointed Lord-Lieutenant of Ireland, a post which he held till February 1852, and in which he displayed great energy, prudence, and sagacity in the midst of unusual difficulties. Created K.G. in 1849, he returned to office with the Coalition ministry under Lord Aberdeen in 1853, as Secretary of State for Foreign Affairs, and he continued to fill the same office under the Palmerston ministry, which succeeded in 1855. He was joint-plenipotentiary with Lord Cowley on behalf of England at the Conference of Paris in 1856, and took part in the negotiation of peace with Russia. Retiring from the ministry early in 1858, he was Chancellor of the Duchy of Lancaster, and Secretary of State for Foreign Affairs in 1865. Three years later he was created with an important mission to Rome and the king of Italy. Lord Clarendon married in 1839 a sister of the earl of Verulam. Died in London, 27th June 1870.

CLARK, Sir JAMES, Bart., an eminent physician, was born in Banffshire, Scotland, in 1788. He was educated at King's College, Aberdeen, where he took the degree of M.A. Having chosen the medical profession, he went to study at Edinburgh University, afterwards served for six years as surgeon in the navy, and graduated M.D. at Edinburgh in 1817. He then went abroad, practised at Rome for some years, and travelled extensively in Italy, France, and Germany, carrying out the researches the fruits of which afterwards appeared in his published works. In 1824 he was appointed physician to Prince Leopold of Saxe-Coburg, and in 1826 he commenced practice in London. About the same time he was chosen a member of the Senate of the newly-

established University of London. He was a few years later elected F.R.S. and appointed physician to the Duchess of Kent and the Princess Victoria, and then to the Queen on her accession, and was created a baronet in 1838. He was several times a member of the Council of the Royal Society, and was chosen fellow of many foreign scientific societies. He was author of a valuable treatise "On the Sanative Influence of Climate" (1829), of which several editions have been since published, a "Treatise on Pulmonary Consumption and Scrofulous Diseases" (1835), a pamphlet on "Clinical Instruction," &c. Died at Bagshot Park, 29th June 1870.

CLAUDET, ANTOINE FRANÇOIS, French photographer, was born at Lyons in 1797. He distinguished himself by a series of discoveries and inventions in photography, tending to the perfecting of the process invented by Daguerre. The first of his discoveries was a method of accelerating the production of the image; another was a method of fixing it. He invented an instrument for ascertaining the right focus for portraiture (the *Focimeter*); another (the *Photographometer*) to measure the intensity of the photogenic rays; and a third named the *Stereonomoscope*. At the Great Exhibition of 1851 he received the Council Medal for his discoveries, and two years later was elected F.R.S. At the Paris Exhibition of 1855 he received a first-class medal, and at the London Exhibition of 1862 he was a member of the jury. M. Claudet invented a machine for cutting glass with a surface of any curvature, for which, in 1850, the Society of Arts awarded him a medal. Died, 27th December 1866.

CLEMENT, JEAN PIERRE, French historical scholar and economist, was born at Draguignan, in the Var, in 1809. He applied himself especially to the study of the financial administration of France. His first important work, crowned by the French Academy, was the "Histoire de la Vie et de l'Administration de Colbert," published in 1846. It was followed (and continued) by his "Gouvernement de Louis XIV" (1848). The same year he obtained the second Gobert prize of the Academy of Inscriptions. Among his other works are—"Jacques Cœur et Charles VII.," "Histoire du Système protecteur en France," "Portraits historiques," "Lettres, Instructions, et Mémoires de Colbert" (1863-68), published by order of Napoleon III., &c. Died, 1870.

COLLES, COWPER PHIPPS, Captain R.N., was born in Hampshire in 1819. He entered the navy at the age of eleven, and distinguished himself at the assault of Sebastopol and the attack on Kertch. In 1855 his name became generally known as the inventor of a plan for the construction of shot-proof rafts, with guns and mortars, on which the board appointed by the commander-in-chief reported favour-

ably. He was promoted captain in 1856, and was made a C.B. After some delay his invention of the "shield-ship" or "turret-ship" was approved by the authorities, and was first applied to the *Royal Sovereign*. Subsequently a six-gun turret-ship, the *Captain*, was built on his plan, which, after a preliminary trip and two voyages to Vigo, foundered at sea off Finisterre, on the 6th September 1870. Captain Coles himself was on board, and perished with other visitors, the officers, and nearly all the crew of 500 men.

CONINGTON, JOHN, Professor of Latin in the University of Oxford, was the son of a clergyman, and was born at Boston, in Lincolnshire, in 1825. He was educated at Rugby School, whence he passed to Oxford, as a demy of Magdalen College, in 1843, graduated B.A. in 1846, and was elected fellow of University College early in 1848. He had previously obtained the Hertford and Ireland scholarships; he carried off the Chancellor's Prize in 1847 and two following years; and in 1849 was elected Eidon scholar. In the same year he entered Lincoln's Inn, but withdrew without being called to the bar. While at Oxford he was an active member of the Union Society, of which he became successively Secretary, President, and Librarian. In 1854 he was called to the newly-founded chair of Latin at Oxford, which he occupied till his death. Professor Conington's great work is the translation of the "Æneid of Virgil" into English verse, which was published in 1866. It is written in octo-syllabic verse, and is not more remarkable for its scholarly accuracy than for its sweetness, tenderness, and vivacity, and the rare delicacy of touch, result and proof of as rare delicacy of sympathy with the original poet. This translation, esteemed one of the masterpieces of its kind, was preceded by an edition of the "Works of Virgil," with an English Commentary," in 2 vols., the first of which appeared in 1858, the second in 1863, and the third, in which he was assisted by Mr Nettleship, in 1870. The other works of Professor Conington are—translations in English verse of the "Agamemnon" and "Choephoroi" of Æschylus, an edition of Dr Maginn's "Homeric Ballads," and a translation in English verse of the "Odes and Carmen Seculare" of Horace. He also translated twelve books of the "Iliad" in Spenserian verse, to complete the task left unfinished by his friend Mr Worsley. During a residence in London in 1849-50, Mr Conington became a regular contributor to the "Morning Chronicle." His "Miscellaneous Writings," with a short memoir, have been published since his death. Died at Boston, 23d October 1869.

CONOLLY, JOHN, M.D., consulting physician to the Hanwell Lunatic Asylum, was born at Market Rasen, in Lincolnshire, in 1794. His mother's maiden name

was Tennyson, and she was of the same family as the Poet Laureate. He received his early education at the Grammar School of Hedon, where he spent seven years; obtained in 1812 a commission in a militia regiment, and served in Scotland and Ireland; married in 1816; and, after dreaming away a year in France, was awakened by the necessity of serious work for bread. He resolved to study medicine, and went with his wife and child to Edinburgh, where in 1821 he obtained his degree of M.D., his thesis being a "Dissertatio Inauguralis de Statu Mentis in Insania et Melancholia." After a short residence, successively, at Lewes and Oblohester, he settled at Stratford-on-Avon, where he was twice Mayor, enjoyed the friendship of Dr Parr, and gained much reputation by literary work. In 1828 he was appointed Professor of the Principles and Practice of Medicine at University College, London, and during his three years' residence in the metropolis was an active member of the Society for the Diffusion of Useful Knowledge. He was thus closely associated with Lord Brougham. He next removed to Warwick, thence to Birmingham, and in 1839 obtained the appointment of resident physician at Hanwell, which he held till 1843. His title to honourable remembrance rests upon the services he rendered both by his practical reform of the treatment of the insane and by his expositions of the theory and results of the new system. He adopted the principles first established by Pinel in France, and soon after introduced in the Quaker's Retreat, near York, and made what had been an obscure movement a world-famous success. His most important works are—"An Inquiry concerning the Indications of Insanity" (1830), "The Construction and Government of Lunatic Asylums" (1847), "The Treatment of the Insane without Mechanical Restraint" (1856), and "A Study of Hamlet" (1863). Dr Conolly was one of the founders of the British Medical Association, and of the Asylum for Idiots at Earlswood. He was joint-editor of the "British and Foreign Medical-Chirurgical Review," and contributed many articles to the "Cyclopaedia of Practical Medicine," to the "Lancet," and the "Medical Times and Gazette." The honorary degree of D.C.L. was conferred on him by the University of Oxford. Died at The Lawn, Hanwell, March 5, 1866. A general memoir, by Dr Henry Maudsley, appeared in the "Journal of Mental Science" for July 1866.

COGNQUEST, JOHN TRICKY, physician, was born at Chatham, where his father practised as a physician, in 1786. At the age of eighteen he became a member of the Royal College of Surgeons, and within a few months was appointed assistant-surgeon at the Military Medical Depot at Chatham. After serving a short time as assistant-surgeon of Royal

Marines, Brown studied a where he graduated following year London, and fessor of Obst tholomow's H with his profes active part in v anthropic move of his leisure ti preparation of Bible, which ap title of "The emendations," of "Outlines of and Abuse of Methors," which four editions. Military Medicine.
After serving a
urgeon of Royal

Marines, Brompton, he went to complete his studies at Edinburgh University, where he graduated M.D. in 1813. In the following year he commenced practice in London, and was soon appointed Professor of Obstetric Medicine at St Bartholomew's Hospital. In conjunction with his professional duties he took an active part in various religious and philanthropic movements. He devoted much of his leisure time for many years to the preparation of a revised version of the Bible, which appeared in 1841, under the title of "The Holy Bible, with 20,000 emendations." Dr Conquest was author of "Outlines of Midwifery," "The Use and Abuse of Money," and "Hints to Mothers," which rapidly passed through four editions. The celebrated essay by Dr Harris, entitled "Mammon," was written in response to the offer of a prize by Dr Conquest. He retired from practice about 1863, and died at Plumstead, in Kent, 24th October 1868.

COOKE, HENRY, an eminent Presbyterian divine and controversialist, was born in County Derry, Ireland, in 1788. He studied at Glasgow University, was licensed to preach, and in 1808 settled as parish minister of Dunean, in County Antrim. In 1817 he attended the medical classes of Trinity College, Dublin, and soon after removed to Killyleagh. There he carried on a controversy with a Unitarian minister, which raised his reputation as a theologian. In 1824 he was chosen Moderator of the Synod of Ulster, was engaged three years later in another controversy, in defence of orthodoxy against Arianism, his opponent being Henry Montgomery. In recognition of his part in the controversy, the degree of D.D. was conferred on him by Jefferson College, United States, in 1829. The same year he became minister of a congregation at Belfast, and this position he occupied till his death. He afterwards engaged in polemical discussions on Church and State with Dr Ritchie of Edinburgh, on Repeal of the Union with O'Connell, and on National Education in Ireland, to which he gave only a qualified support. In 1845 he accepted the post of Distributor of Royal Bounty, and two years later was appointed Professor of Sacred Rhetoric in the New College founded at Belfast by the General Assembly. He then resigned his income as a preacher, but continued to discharge the duties of the office till a few months before his death. The honorary degree of LL.D. was conferred on him by the University of Dublin. Some of his polemical discussions, sermons, and addresses were published. Died at Belfast, 13th December 1868. He was honoured with a public funeral, and a committee was formed to erect a memorial to him. A "Life of Dr Cooke," by J. L. Porter, was published in 1871.

COOPER, ABRAHAM, an eminent

English painter, was born in London in 1787. He was of humble origin, and had to pursue knowledge and art under great difficulties. The first picture which brought him into notice was the portrait of a horse, painted in 1809. From that time he was an industrious and successful worker. He began to exhibit at the Royal Academy and the British Institution in 1812. Four years later he obtained the premium of the British Institution for his finished sketch of the "Battle of Ligny." In 1817 he was elected A.R.A., and in 1820 R.A. Many of his early works were engraved for the "Sporting Magazine." He exhibited a very large number of pictures, and was at the time of his death the oldest Royal Academician. In 1866 he became a Retired Academician, and died at Greenwich, 24th December 1868.

COQUEREL, ATHANASE LAURENT CHARLES, a distinguished French Protestant theologian, was born at Paris in 1795. Brought up by his aunt, Miss Helen Williams, an English authoress, he afterwards studied theology at Montauban, and was ordained minister in 1816. Two years later he settled at Amsterdam, as minister of the French church there, a post which he held for twelve years. He returned to France in 1830, soon after entered the Consistory, and acquired a great reputation and extensive influence. His liberal mode of thought and teaching brought on him the attacks of the orthodox, but his popularity stood the test. After the Revolution of February 1848, he entered public life, and was elected deputy to the National, and afterwards to the Legislative Assembly. His political career ended with the *coup d'état* of 2d December 1851. M. Coquerel established successively three periodicals—"Le Protestant" (1831-33), "Le Libre Examen" (1834-36), and "Le Lien" (1841, &c.) His principal works are—"Biographie Sacrée," "Histoire sainte et Analyse de la Bible," "Réponse à la 'Vie de Jésus' de M. Strauss," "Orthodoxie Moderne," "Christianisme Expérimental," and "Christologie." Most of these have passed through several editions, and been translated into English, German, and Dutch. His collected sermons form eight vols. Died at Paris, 10th January 1868.

CORMENIN, LOUIS MARIE DE LA HAYE, Viscount de, a celebrated French publicist and jurist, was born at Paris in 1788. He was admitted advocate in 1808, and was named by the emperor, Napoleon I., Auditor of the Council of State in 1810. After the Restoration he became Master of Requests. Having devoted many years to the study of administrative law, he published in 1822 the work entitled "Questions de Droit administratif." This is highly esteemed as a profound investigation and exposition of its subject, and as the author's best work. A fifth edition appeared in 1840.

Elected to the Chamber of Deputies in 1828, he took his place in the Left Centre, and maintained a vigorous opposition to the measures of the government. He joined in the protest against the elevation of the Orleans dynasty to the throne, resigned his office in the Council of State, and retired from the Chamber. Soon after re-elected deputy, he took his seat with the extreme Left, and not being gifted as an orator, he carried on a vigorous war of pamphlets. His "Lettres sur la Liste Civile" passed through twenty-five editions in ten years. His "Pamphlets de Timon" were published in a collected form in 1845. After the Revolution of February 1848 he was elected for four departments, was named Vice-President of the Assembly, and President of the Commission on the Constitution. He was afterwards a member of the Provisional Council of State, and of the Council when regularly constituted. He also sat in the Council after the *coup d'état* of 2d December 1851. An imperial decree procured him admission to the Institute in 1855. Ten years later he was promoted commander of the Legion of Honour, of which he had been officer since 1821. Among his other writings are—"Etudes sur les Orateurs parlementaires," of which a fifteenth edition appeared in 1847; "Entretiens de Village," which passed through six editions in the first year (1846); and "Dialogues de Maître Pierre." Died, 6th May 1868.

CORNELIUS, PETER VON, one of the most distinguished painters of the age, was born at Düsseldorf in 1783 or 1787. His fondness for art showed itself at an early age, and was fostered by his father, who was Inspector of the Düsseldorf Picture Gallery. After studying in the academy of his native town, he gave much time to the study and reproduction of many of the works of Raphael. Before he was twenty years of age he decorated the church of Neuss with colossal figures in chiaroscuro. In 1810 he went to Frankfurt, and there undertook a series of designs for Goethe's "Faust," which were engraved. In the following year he went to Rome, where, in association with Overbeck, Schnorr, Schadow, and other young German artists, he originated a new school of painting. They revived the almost lost art of fresco-painting, and were soon commissioned to decorate the Casa Bartholdy and the Villa Massimi with frescoes. For the former Cornelius executed the pictures of "Joseph Interpreting Pharaoh's Dream," and "Joseph recognizing his Brethren." For the latter he designed, but did not paint, a series of pictures from Dante. While thus engaged, he was called by Ludwig, crown prince of Bavaria, to Munich, to decorate with frescoes the new Glyptothek, and was also named Director of the Academy of Düsseldorf. He re-organized that Academy, and then devoted ten years to

his immense task in the Glyptothek, which he completed in 1830. Meanwhile, he had exchanged the directorship at Düsseldorf for a similar post at Munich, and had commenced his famous frescoes in the Ludwigskirche. The largest of these, the "Last Judgment," surpassed in size the great work on the same theme by Michael Angelo. In the actual execution of these paintings the master was largely assisted by his pupils. Those in the Pinacothek were also painted by his pupils from his designs. In 1833 Cornelius visited Rome, and in 1839 Paris. In 1842 he was called to Berlin by Frederick William IV., who commissioned him to decorate the Campo Santo. During the progress of the work he visited Rome a third time. His designs for the Campo Santo were engraved by Thüier. In addition to the great works mentioned above, Cornelius prepared at Rome a series of designs in illustration of the "Nibelungen Lied;" at a later period, a series in illustration of Tasso's great poem. His remarkable cartoon of "The Four Horsemen of the Apocalypse" was engraved in 1848, and was exhibited in London at the International Exhibition. While all admit that Cornelius was an artist of extraordinary power and ability, of lofty aims and intense sincerity, of critical estimates of his works, of their artistic merits and value, and of the importance of the school which he founded, are very various and conflicting. Died, 7th March 1867. A valuable life of him, entitled "Cornelius der Meister der Deutschen Malerei," by Hermann Riegel, appeared soon after his death, and a second edition, with catalogues of his works, in 1870.

CORNEY, BOLTON, critic and miscellaneous writer, was born at Greenwich in 1784. He was long known as an accomplished and independent student and writer. He was author of "Illustrations to D'Israeli's Curiosities of Literature" (1838), edited Dairymple's "Essay on Landscape Gardening," Thomson's "Sons," Goldsmith's "Poetical Works," Locke's "Conduct of the Understanding," and for the Hakluyt Society, the "Voyage of Sir Henry Middleton to Bantam and the Maluco Islands in 1604." He wrote several brochures, which were only printed for private circulation: these were on the Bayeux tapestry—the "New Biographical Dictionary" (Rose's), the "British Museum," and Shakespeare's "Sonnets." He was a frequent contributor to the pages of "Notes and Queries" from its commencement by Mr Thoms, and was a member of the Royal Society of Literature, and one of the auditors of the Royal Literary Fund. Died at Barnes, near London, 31st August 1870.

COSTELLO, LOUISA STUART, historical and miscellaneous writer, was born in Ireland in 1793. She settled in London, and began to practise as a miniature painter about 1824. In the following

year she published entitled "So was followed Poetry of Fr these works painting and literary writings, sketches of "Pilgrimage and the Pyrene Rose Garden Emulient Eng Mary, duchess moir of Anne lived with her Dudley, till th 1846. She lost died at Boulogne

STUART, histori- writer, was born in settled in London as a miniature In the following

year she published a volume of verse, entitled "Songs of a Stranger," which was followed by "Specimens of the Early Poetry of France," and the success of these works induced her to relinquish painting and devote herself wholly to literary work. Among her numerous writings, consisting of poems, novels, sketches of travel, and histories, are—"Pilgrimage to the Auvergne," "Béarn and the Pyrenees," "Clara Fane," "The Rose Garden of Persia," "Lives of Eminent Englishwomen," "Memoir of Mary, duchess of Burgundy," and "Memoir of Anne of Brittany." Miss Costello lived with her mother and her brother, Dudley, till the death of the former in 1846. She lost her brother in 1865, and died at Boulogne, 22d April 1870.

COTTON, GEORGE EDWARD LYNCH, D.D., bishop of Calcutta, was born at Chester in 1813. His grandfather was Dr Cotten, dean of Chester, and his father was a captain in the 7th Fusiliers, who was killed in action at Nivelles, in the Peninsular War. He studied at Westminster School and Trinity College, Cambridge, graduated B.A. in 1836, and obtained a mastership in Rugby School, under Dr Arnold, into whose spirit and plans he heartily entered. He was soon after elected fellow of his college, but continued to work zealously at Rugby. In 1852 he was appointed Head Master of Marlborough College, and during his six years' tenure of that office contributed to raise the school to a high position. Dr Cotton was nominated in 1858 to the see of Calcutta on the death of Dr Dauliel Wilson; and by his piety, courtesy, catholicity of sentiment, and high accomplishments, obtained the esteem of men of all parties. In the autumn of 1866 he made a tour of visitation in Assam, and on his return journey was drowned at Kooshtea, on the Ganges, while stepping along the planks from the shore to his barge, on the 6th October. His body was carried away by the current, and no more seen.

COUSIN, VICTOR, a distinguished French philosopher, was born at Paris in 1792. He was educated at the Lycée Charlemagne, and the Ecole Normale, and obtained at the latter the post of Private Tutor for Greek Literature. The lectures first of Laromiguière, and afterwards of Royer-Collard, fascinated and influenced him, and in 1814 he was appointed *Maire de Conférences de Philosophie* at the Ecole Normale. In the following year he succeeded Royer-Collard as Professor of Philosophy at the Sorbonne. In 1817 he visited Germany. In 1821 he was deprived of his chair in consequence of the Government taking alarm at a passage in one of his lectures. Visiting Germany again in 1824 with his pupil, the Duke of Montebello, his free speech exposed him to the suspicions of the Prussian Government, and he was apprehended and

imprisoned for six months at Berlin. In 1827 he was reinstated in his chair at the Sorbonne, and soon after delivered his well-known lectures on the History of Philosophy. After the accession of Louis Philippe he was made a Councillor of State, and a member of the Council of Public Instruction. About the same time he was received at the French Academy, in succession to Fourier. In 1831 he was sent to Germany as commissioner to examine and report on the state of public education. In the following year he was admitted to the Academy of Sciences, and created a peer of France. From March to October 1840 he held the post of Minister of Public Instruction, and he seldom spoke in the Chamber except on the special subject of his office. After the Revolution of 1848 he withdrew from public life and lived in retirement. The first works of M. Cousin were translations of "Proclus" (1820-27), and of "Plato," in 13 vols. (1825-40), and an edition of the "Works of Descartes" (1826). His principal original works are—"Fragments philosophiques" (1826-28), "Aballard" (1830), "Cours de l'Histoire de la Philosophie" (1828-29), "Cours de la Philosophie" (1840-41), "Philosophie Scholastique" (1840), and biographies of "Jacqueline Pascal," the sister of the great moralist, "Marie de Longueville," and other eminent Frenchwomen, &c. He also edited the "Pensées" of Pascal, and the works of Maine de Biran, and was a contributor to the "Journal des Savants," and the "Archives Philosophiques." An eclectic in philosophy, Cousin taught the partial truth and the incompleteness of all systems, and hoped by universal inquiry and collation to be able to construct a system both true and complete. His teaching made a powerful impression, and contributed to spiritualize prevalent modes of thought. Died at Cannes, 15th January 1867.

CRAIK, GEORGE LILLIE, Professor of English Literature and History at Queen's College, Belfast, was born at Keunoway, in Fifeshire, in 1798. He was educated at the University of St Andrews, and after being engaged for a time, first as tutor, then as editor of a local paper, he settled in London in 1826, and began his career as author by profession. He was soon associated with Charles Knight in his popular literary undertakings, and contributed to the "Library of Entertaining Knowledge," "Penny Cyclopædia," "Penny Magazine," and the "Weekly Volucms." He had chosen a sphere of solid usefulness, and with patient courage held on his way, not growing rich, but reaping the better reward of honourable recognition. He removed to Belfast on being appointed in 1849 to the Professorship of English Literature, and his services as a teacher were highly appreciated. Among his works are—"The Pursuit of Knowledge under Difficulties," "History

of English Literature and the English Language," "Romance of the Peerage," "History of British Commerce," "Bacon and his Writings," "Spenser and his Poetry," &c. He also edited and contributed to the "Pictorial History of England." Among his personal friends he numbered Thomas Carlyle, Dr Chalmers, John Forster, Dr Neill Arnott, and other eminent men. He married in 1823, lost his wife in 1856, and left two daughters surviving. Died at Belfast, June 25, 1866, and was buried at Holywood.

CRANWORTH, ROBERT MONSEY ROLFE, Lord, Lord Chancellor of England, was born at Cranworth, in Norfolk, in 1790. He was the son of a clergyman, and was educated at Winchester School and Trinity College, Cambridge, where he graduated B.A. in 1812. He then entered Lincoln's Inn, and was called to the bar in 1816. He practised as a chancery barrister, and obtained the silk gown in 1832. About the same time he was elected M.P. for the borough of Penrhyn, representing the Liberal party. For a few weeks at the close of 1834 he held the office of Solicitor-General, to which he was re-appointed in May 1835. In November 1839 he was raised to the bench as a Baron of the Exchequer, was one of the Commissioners of the Great Seal June to July 1850, and in the following November was appointed third Vice-Chancellor. In December he was raised to the peerage by the title of Lord Cranworth: the only instance of such a dignity being conferred on a Vice-Chancellor. On the institution of the Lords Justices of Appeal in Chancery in 1851, he was one of the two selected for the office. Lord Cranworth received the Great Seal in December 1852, and held it till February 1858; again received it in July 1865, and finally retired from office in July 1867. Died in London, 26th July 1868. As he left no issue, the title became extinct.

CRAWFORD, JOHN, a distinguished orientalist, geographer, ethnologist, &c., was born at Ballinaley, in Islay, Scotland, in 1783. In his seventeenth year he entered the University of Edinburgh, where he studied medicine, and in 1803 went to India and served as assistant-surgeon in the Company's army in the North-west Provinces. In 1808 he was transferred to Penang, where he commenced his fruitful Malay researches. Three years later he accompanied Lord Minto on the expedition to Java, and remained there for six years as British representative. He returned to England in 1817, but was again sent to India four years later, and was charged with an important mission to Siam and Cochin-China. In 1823 he was made Governor of Singapore, a post which he held for three years. He was next appointed Commissioner in Pegu, and after the close of the Burmese War, envoy to the court of

Burmah. Through all changes of place and office his love of science showed itself in his habit of observation and research, and in the valuable collections of fossil remains which he formed and brought home. He finally left India in 1827. Taking earnest interest in political reforms, he attempted, but in vain, to get a seat in Parliament. The rest of his life was therefore spent in literary and scientific labours. In 1861 he was chosen President of the Ethnological Society, and though at an advanced age, he contributed numerous papers of great value to the "Journal" of the society. His principal works are—the "History of the Indian Archipelago" (1820), "Malay Grammar and Dictionary" (1852), and "Descriptive Dictionary of the Indian Islands and Adjacent Countries" (an enlargement of his first work) 1856. He was a frequent contributor to the "Examiner," and other newspapers and reviews. He was twice married, and left a son and two daughters surviving him. Died at South Kensington, 11th May 1868.

CRESWICK, THOMAS, an eminent English landscape painter, was born at Sheffield in 1811. He settled in London in 1828, and the same year exhibited for the first time at the Royal Academy. He was elected A.R.A. in 1842, and R.A. in 1851. He was a very prolific painter, and his pictures were almost always pleasing in subject and general favourites. It was his habit to paint in the open air, and direct from nature. Died at Bayswater, 23th December 1869.

CROSSE, ANDREW, electrician, was a native of Somersetshire, and was born in 1784. He entered Brasenose College, Oxford, in 1802, but left the University without taking a degree in 1805. Thenceforth he devoted his time to the study of electrical science, and to experiments for the discovery of new facts. He effected in 1807 the production of crystals of carbonate of lime by the agency of electricity; he predicted the application of the same force to instantaneous communication with all parts of the world; and in 1838 publicly explained his discoveries at the Bristol meeting of the British Association. Shortly after, considerable excitement was caused by the report of the production of *acari* in the solution with which he was experimenting. Died, 6th July 1858.

CROWE, EYRE EVANS, an English historian, journalist, and miscellaneous writer, was born about 1799. He was for some time principal editor of the "Daily News," having been previously engaged on the "Morning Chronicle" and the "Examiner." He was author of a "History of France," written for "Lardner's Cyclopædia," between 1830 and 1840, "Lives of Eminent Foreign Statesmen," for the same work, "The Greek and the Turk" (1853), "Reigns of Louis XVIII. and Charles X." (1854), and a new "History of France," which occupied him during the

last ten or twelve years of his life. He completed it in February 1858. CUNNINGHAM, and miscellaneous London in 1811. He was one of the best of the poets, the age of gold in the Audin wards became from the pulpit the rest of the first literary

DAHL, V. celebrated Russian painter, was a Scandinavian. He was a member of the "Cadets' Institute" and served for a time in the army. He afterwards returned to his native land, and ultimately settled in St. Petersburg, Russia. He was the author of a "Dictionary of the Russian Language," in 4 volumes. He died in 1817. He was a large painter, and his works were completed by an indisposition. He was the author of the songs and tales of Mr Dahl was one of those songs and tales of various other authors. He died in October 1872.

DAHLGREN, a Swedish naval officer, in 1800, was born in Sweden. He entered the United States Navy, and became lieutenant in 1807. He was employed in the United States Navy, and conducted several expeditions, which resulted in the discovery of a new naval armament, the "Muzzle-loading" gun, which was adopted by the United States Navy. He was the author of several other inventions, and was promoted to the rank of Commodore. He died in 1860.

DAHLMANN, a distinguished Prussian politician, was born in 1805. He completed his studies at the universities of Göttingen and of Leipzig at Dresden.

all changes of place science showed itself in collection and research, and brought to light the most interesting political rest in political rest but in vain, to get a rest in political rest. The rest of his life in literary and scientific he was chosen Pre-logical Society, and age, he contributed great value to the society. His principal story of the Indian "Malay Grammar" (1862), and "Descriptive Indian Islands and" (an enlargement of He was a frequent "Examiner," and other news. He was twice son and two daughters d at South Kensington.

THOMAS, an eminent painter, was born in London. He settled in London in 1842, and exhibited for the Royal Academy. He was in 1842, and R.A. in 1843. He was a very prolific painter, and most always pleasing to the eye. He was in the open air, and died at Bayswater.

EVANS, an English electrician, was a chemist, and was born in Brasenose College, Oxford. He was at the University while in 1805. He was engaged in the study of electricity, and effected in the production of crystals of carbonate of electricity; he was the first to give a practical application of the same in telegraphic communication in the world; and in 1830 he discovered at the Royal Society, and in the British Association, considerable excitement in the report of the production of electricity with which he was engaged.

DIED, 6th July 1858. EVANS, an English electrician, was a chemist, and was born in Brasenose College, Oxford. He was at the University while in 1805. He was engaged in the study of electricity, and effected in the production of crystals of carbonate of electricity; he was the first to give a practical application of the same in telegraphic communication in the world; and in 1830 he discovered at the Royal Society, and in the British Association, considerable excitement in the report of the production of electricity with which he was engaged.

last ten or twelve years of his life, and was completed in 1868. Died in London, 25th February 1868.

CUNNINGHAM, PETER, antiquary and miscellaneous writer, was born in London in 1816. He was the eldest son of the poet, Allan Cunningham, and at the age of eighteen obtained a situation in the Audit Office, in which he afterwards became a chief clerk. He retired from the public service in 1860, and spent the rest of his life in the country. His first literary work was the "Life of

Drummond of Hawthornden," published in 1833. One of his most valuable and best known works is the carefully-compiled "Handbook of London" (1849). Among his other productions are editions of the "Songs of Scotland," Campbell's "Specimens of the British Poets," the "Works of Oliver Goldsmith," the "Johnson's "Lives of the Poets," and wrote a "Life of Inigo Jones" for the Shakespeare Society, "Modern London," and "The Story of Nell Gwynne." Died at St Alban's, 18th May 1869.

D.

DAHL, VLADIMIR IVANOVICH, a celebrated Russian scholar and lexicographer, was born in 1802. He was of Scandinavian origin, studied at the Naval Cadets' Institution at St Petersburg, and served for a time both in the fleet and the army. He afterwards studied medicine, and ultimately entered the Civil Service of Russia. His great literary work is a "Dictionary of the Living Russian Tongue," in 4 vols. Its preparation occupied a large part of his lifetime, and it was completed in 1856. It is admitted to be an indispensable aid to the study of the songs and tales of the Russian people. Mr Dahl was an ardent lover and collector of those songs and tales. He was author of various other works. Died at Moscow, October 1872.

DAHLGREN, JOHN A., American naval officer, inventor of the Dahlgren gun, was born in Pennsylvania. He entered the United States navy in 1826, and became lieutenant in 1837. After 1847 he was employed on ordnance duty, and conducted a series of experiments which resulted in important improvements in naval armament. He invented the heavy shell gun, named after him, and adopted by the naval authorities. Among his other inventions are bronze howitzers for boats, and light iron field-carriages to make them available on land. He was promoted commander in 1855. He published several works on guns and armaments. Died at Washington, 12th July 1860.

DAHLMANN, FRIEDRICH CHRISTOPH, a distinguished German historian and politician, was born at Wismar in 1795. He completed his education at the universities of Copenhagen and Halle, and fought at Dresden in 1809, and in the

following year graduated Ph.D. at Wittenberg. In 1812 he was named Professor Extraordinary of History at Kiel, and three years later became Secretary to the Standing Committee of Prelates and Nobles of Schleswig-Holstein. He opposed the Danish policy respecting the Duchies, and his advancement at Kiel being thereby hindered, he accepted in 1829 the Professorship of Political Science at Göttingen. He took a prominent part there as a Liberal politician, resisting both reaction and revolution, and on the accession of Ernest August to the throne of Hanover in 1837, he was banished for his spirited protest against the suspension of the Constitution. After visiting Leipsic and Jena, he settled at Bonn as Professor of History. He was a member of the Assemblies held at Frankfurt in 1846, and at Lübeck in 1847, and of the National Assembly at Frankfurt in 1848. He was an earnest advocate of constitutional government, and of the union of the German states under the headship of Prussia. All attempts to carry out the scheme having failed, Dahlgren retired from public life in 1852. His most important works are—"Quellenkunde der Deutschen Geschichte" (1830), "Geschichte Dänemarks," "Geschichte der Englischen Revolution," and "Geschichte der Französischen Revolution." Died, 5th December 1860.

DALE, THOMAS, dean of Rochester, divine and poet, was born in London in 1797. He was educated at Christ's Hospital and Corpus Christi College, Cambridge, which he entered in 1817. After taking his degree of B.A., he was ordained priest in 1823, and had successively various appointments as curate and lecturer. In 1828 he was called to the

Chair of English Language and Literature at the newly founded University of London, which he held only two years. In 1835 he was presented to the vicarage of St Bride's, Fleet Street; was appointed Professor of the English Language and Literature at King's College, London, in 1836, a post which he resigned in 1839; became a canon of St Paul's in 1843; and three years later was presented to the vicarage of St Pancras, which he resigned in 1857. Three months before his death he was promoted to the deanery of Rochester. In his college days, Mr Dale published several volumes of verse, of which a collected edition appeared in 1836. His other works are—a translation of Sophocles, several volumes of sermons, partly preached before the University of Cambridge, and an edition of Cowper's works. Died at Rochester, 14th May 1870.

DALLAS, GEORGE MIFFLIN, American statesman and diplomatist, was born at Philadelphia in 1792. After graduating at Princeton College, he studied law, and was admitted to the bar of Philadelphia in 1813. Four years later he was named Deputy Attorney General for his native county, and in 1829 was United States Attorney for the same district. Elected United States Senator in 1831, he retired, after two years, and resumed practice at the bar. In 1844 he was elected Vice-President of the United States, under President Polk. This office he held till 1849. In 1856 he accepted the post of Minister to the Court of St James's, which he held till 1860. He died at Philadelphia, 31st December 1864. His "Letters from London" were published in 1869.

DALLING AND BULWER, HENRY LYTTON EARLE BULWER, Lord, diplomatist and miscellaneous writer, was born in 1804. He was the son of General William Bulwer, and the elder brother of Lord Lytton. He received his early education at Harrow School, studied afterwards at Cambridge University, and served, for a short time only, in the army, as an officer in the Horse Guards. At the age of twenty-three he entered on the diplomatic career, and obtained an appointment on the embassy at Berlin. Attached successively to the embassies at Vienna, the Hague, Brussels, and Paris, he filled, in 1835, the post of Secretary of Legation at Brussels, and the same post afterwards at Constantinople and at Paris. Sent in 1843 to Madrid, he remained there five years as envoy extraordinary, and minister plenipotentiary, and was dismissed by Narvaez, on account of his opposition to the measures of the Spanish Government. In 1849 he was appointed minister plenipotentiary to the United States, in which capacity he distinguished himself by negotiating the Clayton-Bulwer Treaty, and in 1852, envoy extraordinary to the Grand Duke of Tuscany. Three years afterwards he

took part in the arrangements for the settlement of the Danubian Principalities. In 1857 he was appointed ambassador to the Porte, after the retirement of Lord Stratford de Redcliffe. This post he held till 1866. He had entered Parliament as member for Wilton as early as 1830, and the next year for Coventry, and from 1833 to 1837 for the borough of Marylebone. Lord Dalling has earned considerable distinction by his literary works. His earliest publication, a volume of poems, appeared in 1822, and was followed in 1826 by "An Autumn in Greece." More important are his "France: Social, Literary, Political," published in 1834; his "Monarchy of the Middle Classes," in 1836; "Historical Characters" (biographies of Cobbett, Canning, Mackintosh, and Talleyrand), in 1867; and the "Life of Lord Palmerston," of which the first two volumes appeared in 1870. Feeble in health, but of a singularly sweet temper, he was a general favourite in society, and an excellent talker, retaining his vivacity to the last. In 1851 he was created K.C.B., and in 1871 was raised to the peerage by the title of Lord Dalling and Bulwer. He married, in 1848, the youngest daughter of the first Earl Cowley. Died at Naples, 23rd May 1872. By his death without issue the title is extinct.

D'ALTON, JOHN, Irish topographical historian, antiquary, and genealogist, was a descendant of an ancient family of Westmeath, and was born in 1792. After taking his degree of B.A. at Trinity College, Dublin, he entered the Middle Temple, London, and in 1813 was called to the Irish bar. In the following year he made his first appearance as an author in a metrical tale entitled "Dermid; or, Erin in the Days of Borohme." In 1833 he published his essay on the "Ancient History, Religion, and Arts of Ireland," for which the Conyngham Gold Medal of the Royal Irish Academy was awarded him. He was one of the principal contributors to the "Irish Penny Magazine" from its commencement in 1833. In 1838 he was elected corresponding member of the Society of Antiquaries of Scotland. Among his works, in addition to those already named, are—"Memoirs of the Archbishops of Dublin," "History of the County of Dublin," "Annals of Boyle," &c. He married in 1818, and at the time of his death was in receipt of a small pension. Died at Dublin, 20th January 1867.

DAUBENY, CHARLES GILES BRIDLE, Professor of Botany and Rural Economy, Oxford University, was born at Stratton, in Gloucestershire, in 1795. He was the son of a clergyman; was educated at Winchester School and Magdalen College, Oxford, where he took his degree of B.A. in 1814; gained the Chancellor's Prize in the following year; and became afterwards fellow of his college. Having taken his degree as Doctor of Medicine

he practised as a retired from the 1818 he had m regions in Au years after F time appointed at Oxford, whi In 1834 he accep fessorship of B wards attached Economy. This death. Dr Da terest in the Bri one of its vice-meeting in 1847, ham in 1856. Botanic Garden the Royal Irish ciate of the Bavar &c. His works Active and Exti duction to the At on Roman Agr Climate," "Final of Plants," and "alism." Died at 1867.

DAWISON, F tragedian, was b He was of a po Lycoum of his n age to earn his o bent to the theatr to study and sel 1837 made his fir stage at Warsaw with his knowled ments at Wilna age to become a Gerr Berlin, Dresden, M first appearance o at Lemberg in 18 later he obtained a burg, whence he p Imperial Theatre a removed to Dresde eleven years, and extensive course c original in his art, l the parts of Hamle beth, Othello, Shylo allenstein, Mephi 1872. **DAY, GEORGE I** was born at Tenb other's side he was of Sir Matthew Ha England. He studie and afterwards at Cambridge, graduat the same year he w Edinburgh Univ here the associate Wilson, and other 40 he took his degr Chicago, became licen College of Physicians 1848. In the foll degree of M.D. a appointed Chandos Pr St Andrews. A ser

he practised as physician in Oxford, but retired from the profession in 1834. In 1818 he had made a visit to the volcanic regions in Auvergne, was elected four years after F.R.S., and at the same time appointed Professor of Chemistry at Oxford, which chair he held till 1855. In 1834 he accepted, in addition, the Professorship of Botany, to which was afterwards attached the Professorship of Rural Economy. This post he occupied till his death. Dr Daubeny took an active interest in the British Association, and was one of its vice-presidents at the Oxford meeting in 1847, and President at Cheltenham in 1856. He was Curator of the Botanic Garden at Oxford, member of the Royal Irish Academy, foreign associate of the Bavarian Academy of Sciences, &c. His works are—"A Description of Active and Extinct Volcanoes," "Introduction to the Atomic Theory," "Lectures on Roman Agriculture," "Lectures on Climate," "Final Causes of the Sexuality of Plants," and "Christianity and Rationalism." Died at Oxford, 13th December 1867.

DAWSON, BOGUMIL, a celebrated tragedian, was born at Warsaw in 1818. He was of a poor family, and left the Lyceum of his native town at an early age to earn his own living. With a strong bent to the theatre, he devoted his leisure to study and self-improvement, and in 1837 made his first appearance on the stage at Warsaw. His ambition grew with his knowledge, and after engagements at Wilna and Lemberg, he resolved to become a German actor, and visited Berlin, Dresden, Munich, and Paris. His first appearance on a German stage was at Lemberg in 1841. About five years later he obtained an engagement at Hamburg, whence he passed, in 1849, to the Imperial Theatre at Vienna. In 1853 he removed to Dresden, where he remained eleven years, and then entered on an extensive course of travel. Distinctly original in his art, he played with success the parts of Hamlet, Richard III., Macbeth, Othello, Shylock, Philip II., Albatross, Wallenstein, Mephistopheles, &c. Died, 1872.

DAY, GEORGE EDWARD, physician, was born at Tenby in 1815. By the mother's side he was a lineal descendant of Sir Matthew Hale, Chief Justice of England. He studied at Trinity College, and afterwards at Pembroke College, Cambridge, graduating B.A. in 1837. In the same year he went to study medicine at Edinburgh University, and became there the associate of Goodrich, Forbes, Wilson, and other celebrated men. In 1840 he took his degree of M.A. at Cambridge, became licentiate of the Royal College of Physicians in 1842, and fellow in 1848. In the following year he took his degree of M.D. at Giessen, and was appointed Chandos Professor of Medicine at St Andrews. A serious accident broke

up his health in 1857, and he was compelled to resign his chair in 1863. Notwithstanding the painfully helpless state to which he was reduced, he continued to write indefatigably on medical subjects. His principal works are—"On Diseases of Advanced Life," "Chemistry in its Relations to Physiology and Medicine," translations of Vogel's "Pathological Anatomy," Lehmann's "Physiological Chemistry," and Rokitsansky's "Manual of Pathological Anatomy," &c. He also wrote most of the medical articles for "Chambers's Encyclopedia," and contributed to the "Medico-Chirurgical Review," the "Lancet," and the "Medical Times and Gazette." Dr Day was elected F.R.S. in 1850; and he was one of the founders of the Cavendish, Pathological, and Sydenham Societies. Died at Torquay, 31st January 1872.

DECAMPS, ALEXANDRE GABRIEL, a celebrated French painter, was born at Paris in 1803. At first a pupil of M. de Pujol, he broke away from mere rules of the school and applied himself to the study of nature. In 1824 he visited Switzerland, and a year or two later went to the East, where he found material for many original and powerful pictures. He had a special fondness for painting animals, and among his animal subjects the most remarkable are his monkeys. He often displayed considerable humour. Decamps painted some historical subjects and many landscapes, and his works have fetched very high prices. He was created chevalier of the Legion of Honour in 1839, and was promoted officer in 1851. In 1848 he was elected member of the Chamber of Deputies, and the same year became President of the National Society of Artists. Died at Fontainebleau, 22d August 1860. After his death his "Passage du Gué" was bought for the Museum of the Louvre.

DEMIDOFF, ANATOLI, count of San Donato, an eminent Russian traveller and writer, was one of the two sons of Count Nicholas Demidoff, and was born at Florence about 1810. He spent his youth in France and Italy, and was at one time attached to the Russian embassy at Vienna. In 1837 he undertook, at his own expense and in company with several accomplished men, a journey in Southern Russia and the Crimea, Hungary, and the Danubian Principalities. An account of the journey was published in French in 1839, in 4 vols., accompanied by a splendid illustrative "Album du Voyage." In 1841 he married at Florence the Princess Matilde de Montfort, daughter of Jerome Bonaparte, and engaged that the children of the marriage should be brought up Roman Catholics. In consequence of this the Emperor Nicholas dismissed him from his post of chaplain, and forbade his return to St Petersburg. He soon regained the favour of the emperor. In 1845 a separation from his wife took place by

mutual consent. He lived for the most part in Italy, but died at Paris, 29th April 1870.

DE MORGAN, AUGUSTUS, the distinguished mathematician, was born in the island of Madura, near Java, in June 1806. He was the son of an officer in the Indian army, and by the mother's side was great-grandson of the mathematician James Dodson, known as author of the "Anti-Logarithmic Canon." Sent to England to be educated, he entered Trinity College, Cambridge, and graduated B.A., as fourth wrangler, in 1827. In the following year he was called to the chair of Mathematics at London University (now University College), which he resigned in 1831, but resumed five years later, and held till 1866. He then resigned in consequence of his disapproval of the rejection by the Council of a candidate, Mr James Martineau, for the chair of Logic and Philosophy, on no other ground than his religious opinions. Throughout his life the principal life assurance offices availed themselves of his scientific services as consulting actuary. Professor de Morgan was remarkably gifted and successful as a teacher, immensely laborious as a student and writer, and in all respects singularly conscientious, just, and generous. He was a fellow of the Astronomical Society, and for many years a member of its council, and one of its honorary secretaries. His separate works are very numerous, and he was a constant contributor to the literature of learned societies and to periodicals. His principal works are—"Elements of Arithmetic" (1830), valuable as a textbook of principles and explanations, not of mere rules; "Elements of Algebra;" "Elements of Trigonometry;" "Essay on Probabilities;" "Differential and Integral Calculus;" "Formal Logic;" "Arithmetical Books," a volume containing notices of a large number of works, from the invention of printing to the present day; "Book of Almanacs," and the "Budget of Paradoxes." He became a contributor to the "Athenæum" in 1840, and during the latter years of his life his humorous papers on the originators of paradoxes in science appeared in that journal. For the "Penny (now "English") Cyclopædia" he wrote almost all the articles on mathematics, astronomy, and biography of men of science. He was a regular contributor to Knight's "Companion to the Almanac" from its establishment in 1828, and to the various publications of the Useful Knowledge Society. He married about 1828. Died in London, 18th March 1871.

DENISON, EDWARD, philanthropist, was the son of Edmund Denison, bishop of Salisbury, and was born in that city in 1840. He was educated at Eton and at Oxford, and afterwards, in consequence of ill-health, went abroad and spent several years in travelling. Returning in 1866, he applied himself to the study of

law, and was called to the bar at Lincoln's Inn. Earnestly bent at the same time on the study of the problem of pauperism and the right method of relieving it, he took lodgings in the "East End" of London, and there spent about a year as Agent of the Society for Relief of Distress. He also built and endowed a schoolhouse, and taught and lectured in it to working men. In 1868 he was elected M.P. for Newark, and hoped in Parliament more effectually to promote the purpose he had at heart. But again failing health compelled his retirement. In October 1869 he embarked for Australia, reached Melbourne early in January 1870, and died there on the 28th of the same month. A volume of his "Letters and other Writings," edited by Sir Baldwin Leighton, Bart., was published in 1872.

DERBY, EDWARD GEOFFREY SMITH STANLEY, fourteenth earl of, Prime Minister of England, was born at the family seat of Knowsley Park, in Lancashire, in 1799. His father, at that time heir-apparent to the earldom, bore the courtesy title of Lord Stanley. The subject of this memoir was educated at Eton and at Christ's Church, Oxford, where he distinguished himself by his classical attainments. But he left the university without taking a degree. In 1820 he entered Parliament as member for the borough of Stockbridge, in Hampshire, since disfranchised. His first speech, made till 1824, gave promise of that remarkable oratorical power which distinguished him through life. It is noteworthy that he opposed strenuously the Liverpool and Manchester Railway Bill in 1826, and characterised the scheme as "a mad and extravagant speculation." The same year he was elected M.P. for Preston. In the spring of 1827 Mr Stanley began his official career as Under-Secretary of State for the Colonies in the Canning administration, but resigned after the death of Canning. On the accession of Lord Grey to power in 1831, he was appointed Chief Secretary for Ireland. Losing his seat for Preston, he was elected for Windsor, for which borough he sat till 1832. During that exciting period he was one of the most energetic promoters of parliamentary reform. In his Irish administration he became very unpopular, pleasing neither the lord-lieutenant, Lord Anglesey, nor the Irish people. His imperious and unconciliatory manners procured him the designation of "Scorpion Stanley," and his secluded way of life that of the "old gentleman from England." He zealously promoted the material prosperity of the country, and especially promoted the establishment of the Irish Board of Works and the Shannon Navigation Scheme. He had many sharp contests with O'Connell in the House of Commons. In 1835 he was elected member for North Lancashire, for which he sat so long as he remained

in the Lower House. In the following year he was promoted to the office of Secretary of State for the Colonies, and his name is intimately associated with the emancipation of the slaves in our West Indian colonies. On his father's succession to the earldom in 1834, he acquired the courtesy title of Lord Stanley. In that year, differing from Earl Grey on the proposed reduction of the Irish Church Establishment, he retired from office in company with the Duke of Richmond, Lord Ripon, and Sir James Graham, and thenceforth his place in politics was with the Conservatives. He returned to his post of Colonial Secretary in 1841, under the ministry of Sir Robert Peel, and retained it four years, retiring as a Protectionist on the adoption of Free-Trade principles by Sir Robert Peel. In 1844 he was called to the Upper House, where his services were needed by his party, by the title of Baron Stanley of Bickerstaffe.

He succeeded his father as Earl of Derby in June 1851, and on the resignation of Lord John Russell, in February 1852, he became First Lord of the Treasury. But his administration lasted only ten months. He again became Prime Minister on the fall of the Palmerston Ministry in February 1853. Defeated on a question of parliamentary reform in June 1859, he dissolved Parliament, and a vote of want of confidence being passed by the new House, he resigned. Recalled to office for the third time in June 1866, ill-health compelled him to retire in February 1868. To the last he gave resolute opposition to the measures connected with the disestablishment of the Irish Church. Lord Derby was elected to succeed the Duke of Wellington in 1852 as Chancellor of the University of Oxford. He was also a Trustee of the British Museum, Governor of the Charterhouse, &c. He made himself a name in literature by his translation of the "Iliad" in blank verse, which appeared in 1864, was received with much critical commendation, and rapidly passed through six editions. He took a noble part in the support and promotion of measures for the welfare and improvement of the working classes, and especially distinguished himself, as Chairman of the Relief Committee, during the cotton famine in Lancashire, not only by sympathy and liberality, but by zealous personal service. Lord Derby married in 1825 the daughter of the first Lord Skeinmersdale. He died at Knowsley, 23d October 1869.

DESCHAMPS, EMILE, a celebrated French poet and miscellaneous writer, was born at Bourges in 1791. He is especially remembered as a leader in the famous "Romantic Movement," for the promotion of which he started and edited the review entitled "La Muse Française." He was a writer of versatile ability, but although he wrote much, little of his work is of permanent worth. His articles

in the "Muse Française" were published separately in 1826. Among his other works are—"Etudes Françaises et Françaises" (1828), "Retour à Paris," two comedies, the words for several operas, and translations of "Romeo and Juliet" and "Macbeth." In his last years he was totally blind. Died at Versailles, 30th April 1871.

DEVRIENT, GUSTAV EMIL, a distinguished German actor, was born at Berlin in 1803. He was the youngest of three brothers, sons of the actor Ludwig Devrient, and attained higher distinction than either of them. He first appeared on the stage at Brunswick in 1821, passed thence to Bremen and Leipsic, and married at Leipsic Dorothea Böhlér, a popular actress. After visiting Leipsic, Magdeburg, and Hamburg, he attached himself to the Court Theatre at Dresden in 1831. In 1842 a separation took place between him and his wife, and the latter married again. Died, 1872.

DICKENS, CHARLES, one of the most popular of English novelists, was born at Portsmouth in 1812. His father, who had a situation in the Navy Pay-Office, removed soon after to Chatham, and in 1821 to London. The son, after a childhood passed in hardships and privations, was placed in a lawyer's office; but, attracted by the charms of literature, he began to write and to report for newspapers. His reputation as a novelist and humourist began with the publication of the "Sketches by Boz" in 1836, and was greatly increased by the appearance in the following year of the famous "Pickwick Papers." These were followed by the long series of tales, the titles of which are household words wherever the English language is spoken. In 1841 he visited America, and Italy three years later. On the establishment of the "Daily News" he was appointed chief editor. In 1856 he originated "Household Words." In the same year he took up his residence at Gad's Hill, near Rochester, which was his home till his death. In 1859 he started and edited the well-known periodical "All the Year Round," to which he was also a constant contributor. He visited America a second time in 1867. During his later years he gave public readings of his own works, which, however, his health compelled him to discontinue in March 1870. He was a man as deeply beloved by his personal friends as he was admired by his readers, genial and generous to a rare degree, and remarkable for his business-like punctuality, his sagacity, and integrity. He took a warm interest in the social and philanthropic movements of the day, and both in his books and in his public speeches eloquently exposed and denounced many wrongs and shames. Of his very numerous works it may suffice to name here, in addition to those already mentioned, and in the order of their publication—"Oliver Twist," "Nicholas

Nickleby," "Master Humphrey's Clock," "American Notes" (which brought on him some violent attacks), "Martin Chuzzlewit," "Dombey and Son," "David Copperfield" (confessedly his own favourite of all his works), "Hard Times," "Great Expectations," and "Our Mutual Friend." The first in the series of his short Christmas stories appeared in 1843. His "Child's History of England" appeared in "Household Words" and was separately published in 1852-53. At the time of his death he was engaged in writing "Edwin Drood," which now remains a fragment. He was married about 1837. Died at Gad's Hill, 9th June 1870.

DILKE, CHARLES WENTWORTH, editor of the "Athenæum," was born in 1786. In early life he obtained a situation in the Navy Pay-Office, and became during the same period a contributor to periodical literature. Retiring on a pension on the consolidation of public offices, he became proprietor of the "Athenæum," which up to that time had not been successful. Mr Dilke, by a reduction in its price, and by able and energetic management, gradually made it not only a popular and influential journal, but a commercial success. He continued to edit it till 1846, when he gave up his post to Mr T. K. Hervoy, and soon after undertook the editorship of the "Daily News." Mr Dilke edited in 1814 a collection of "Old English Plays," and occasionally contributed papers to the "Athenæum." Among these are some on the "Junius" problem. Died, near Farnham, 10th August 1864.

DJEMIL PASHA, Turkish statesman and diplomatist, was the son of Redschid Pasha, and was born at Constantinople in 1827. He completed his education in London and Paris, and at Paris he commenced his diplomatic career as secretary of embassy, under his father, about 1846. Two years later he was made secretary to the Sultan. In 1854 he was sent ambassador to Paris and to Turin, and was in 1856 joint-plenipotentiary with A'ali Pasha at the Conference of Paris. He was soon after made a member of the Grand Council of the Tanzimat, Grand Chancellor of the Imperial Divan, and interim Minister for Foreign Affairs. Again sent to Paris in 1862, then to Madrid, he was soon after raised to the dignity of Vizier and Muchir, with the title of Pasha. He took part as plenipotentiary at the International Telegraphic Conference, and on his return to Constantinople became a member of the Grand Council of Justice, and next of the Grand Council of the Treasury. He was a third time ambassador to Paris in 1866, and took part in 1869 in the conferences held there on the disputes between Turkey and Greece. In 1872 he was called to the Ministry of Foreign Affairs. Died suddenly in Galicia, 23d September 1872.

DOYI E, JOHN, the distinguished

political caricaturist, long well known as "H. B.," was a native of Ireland, and was born in 1797. In early life he studied art in Dublin, and showed special skill in portraiture and in drawing horses. He began to publish his lithographic sketches in 1829, and continued them at intervals for about twelve years. In quality and execution they steadily improved, the earliest being careless and rough, the latest almost perfect specimens of their class. Among the more celebrated are named those of Sir Robert Peel, Mr Disraeli, the Emperor Nicholas of Russia, the Duke of Wellington, &c. One of his most successful satirical pieces was "Old England," a portrait of the Tower in the background, framed and glazed. Mr Doyle's likenesses were vividly true; markedly characteristic rather than caricatures. His sketches were always refined, never lapsing into vulgarity; and they were always received with intense interest. When his *incognito* failed him, "H. B." discontinued his political satires. Died in London, 2d January 1863.—His son, Mr Richard Doyle, was known for years by his contributions to "Punch," especially "Pips, his Diary," and "Brown, Jones, and Robinson."

DRAYTON, HENRI, American actor and singer, was born at Philadelphia in 1822. He completed his musical studies at the Paris *Conservatoire*, appeared at Antwerp, at the Italian Opera, played in London, and in 1859 went to the United States. He revisited England two years later. In 1869 he joined the Richings' English Opera Company. Died at New York, 30th July 1872.

DREYSE, JOHANN NICHOLAS VON, inventor of the Needle-Gun, was the son of a locksmith, and was born at Sömmmerda, near Erfurt, in 1787. In 1809 he went to Paris, where he was for five years employed under Pauly, and watched the construction of his experimental gun. Under the great chemist, Berthollet, Dreyse studied the preparation of explosive compounds. He afterwards settled at Sömmmerda as engineer and ironfounder, and established a factory for percussion caps, for the improvement of which he obtained a patent. In 1827 he offered to the Prussian government his first needle-gun, which was rejected. A second was proposed in 1833, and Dreyse soon after became known to the Crown Prince, who took great interest in his designs. In 1836 he produced the gun which afterwards became so famous, and which was at once adopted. Dreyse lived to see the successful use of his invention in the campaign of Sasowa. He died at his native town, 9th December 1867.

DUBAN, JACQUES FÉLIX, an eminent French architect, was born at Paris in 1797. He was a pupil of Debret, and at the same time studied at the School of Fine Arts, where he won the grand prize

for an architectural drawing. He spent the next five years studying the works of the great architects of the 17th and 18th centuries. He undertook the decoration of the Salon after Châteauneuf de Brillon was appointed architect of the Louvre, which he held during that period of the Gallery &c., with all the honours. In 1854 he was appointed architect of the Legion of Honour, and promoted officer in 1868. He received the Legion of Honour for a series of years at Paris in 1868.

DUFF-GORDON, JAMES, a Scotch painter and miniaturist, was the only child of John Austin, a translator and publisher in 1820, and of Alexander Duff-Gordon, a consequence of his residence in Egypt, the wife of her first husband, an important work of Rankin's "H. B. Bach's" "Criminals of France." "The Frenchman" "Russian Campaign" was author of "and" "Letters from a Frenchman" attracted much life-like description. July 1869.

DUMAS, ALEXANDRE, a French novelist, was born at Villers-Cotterêts, the Aisne, in 1800. He was general, and his education became a success in the seventeenth year in conjunction with his father. Paris about 1820. He obtained a situation in the service of the Ministry of War, held for eight years, continued to write, his piece being produced, marked success when his prose "La Cour" was published. François. It was the romantic series of long series of author cleverly times, made no fiction, but a verily squandered the two most "Les Trois Mousquetaires" Comte de Montmorency, and the

well-known as of Ireland, and his life he studied and special skill in drawing horses. His graphic sketches are in at intervals in quality and improved, the and rough, the simens of their celebrated are bert Peel, Mr. Nicholas of Russia, &c. One of his pieces was "Old Francis Burrell, or in the back- of Mr Doyle's true; markedly an caricatures, a refused, never and they were tenses interest. died him, "H. B." satires. Died 1868.—His son, known for years tunch," especially "Brown, Jones,

FELIX, an eminent born at Paris in of Debret, and at a at the School of on the grand prin-

for an architectural design in 1823. The next five years he spent in Italy, seriously studying the remains of classical art and the works of the Renaissance. In 1831 he undertook the completion of the *Palace des Beaux-Arts*, and in 1845 the restoration of the *Château de Blois*. He was soon after engaged in restoring the *Château de Dampierre*. In 1848 he was appointed architect to the *Louvre*, a post which he held for six years, and during that period completed the exterior façade, the *Gallery of Apollo*, the *Salon Carré*, &c., with all the interior decorative works. In 1854 he was received at the *Institute*, and the same year was appointed *Inspector-General of Civil Buildings*. Chevalier of the *Legion of Honour* in 1836, he was promoted officer in 1851, and commander in 1863. He obtained a grand medal of honour at the *Paris Exhibition of 1855* for a series of drawings and designs. Died at Paris in September 1871.

DUFF-GORDON, LUCIE, Lady, translator and miscellaneous writer, was the only child of the distinguished jurist, John Austin, and his wife, well known as a translator and novelist. She was born in 1820, and married at an early age Sir Alexander Duff-Gordon, Baronet. In consequence of failing health she went to reside in Egypt, where she spent the last years of her life. Among her more important works are the translations of Ranke's "History of Prussia," Fencbach's "Criminal Trials" (abridged), "The French in Algiers," and Molke's "Russian Campaigns of 1828-29." She was author of "Letters from the Cape," and "Letters from Egypt," which attracted much attention by their vivid, life-like descriptions. Died at Cairo, 13th July 1869.

DUMAS, ALEXANDRE, the celebrated French novelist and dramatist, was born at Villers-Cotterets, in the department of the Aisne, in 1803. He was the son of a general, and after receiving a scanty education became clerk to a notary. In his seventeenth year he began to write plays in conjunction with a friend, went to Paris about 1823 to seek his fortune, and became a situation as clerk in the service of the Duke of Orleans, which he held for eight years. He read much, and continued to write for the stage, his first piece being produced in 1825. His first marked success as a dramatist was in 1829, when his prose tragedy of "Henri III. et la Cour" was brought out at the *Théâtre Français*. It was also the first triumph of the romantic school over the classic. A long series of plays followed, and the author cleverly catching the spirit of the times, made not only an immense reputation, but a vast fortune, which he recklessly squandered. In 1844 he published the two most celebrated of his novels, "Les Trois Mousquetaires," and "Le Comte de Monte-Cristo," forming twenty volumes, and the same year he was made

chevalier of the *Legion of Honour*. The almost incredible number of volumes professedly his work is explained by the fact that he employed a band of assistants who did the subordinate part of his tales. As many as five "feuilletons" could be produced in that way at one time. In 1852 Dumas began to publish his own "Mémoires," which extend to more than thirty volumes. He accompanied Garibaldi in the expedition of Naples in 1860. Died at Puy, near Dieppe, 5th December 1870. His remains were interred at Villers-Cotterets in April 1872.

DUKAND, Sir HENRY MARION, Lieutenant-Governor of the Punjab, was born in 1812, and after studying at Addiscombe, entered the army in 1828, and went to India as second lieutenant in the Bengal Engineers. One of his fellow-passengers was Alexander Duff, the missionary. Until 1838 Durand was chiefly employed in the north-west provinces, and during that period showed so much ability, and acquired so large a knowledge of the tenures, capacities, and condition of his field of labour, that he was appointed Secretary to the *Agra Board of Revenue*. In 1839 he served under Sir John Keane in the *Afghan War*, and at the siege of *Ghuznee* distinguished himself as head of the party charged with blowing up the *Cabul gate*. It is stated that the proposal was his, and it is certain that he fired the train. Disapproving the measures adopted for the ensuing winter, he gave up his appointment, and soon after came to England. At the beginning of 1842 he accepted the post of aide-de-camp to the new governor-general, Lord Ellenborough, and accompanied him to India. He was then appointed also his private secretary. In 1843 he attained the rank of captain, and the same year married. Before the close of the year he took part in the short campaign of *Gwalior*, and in 1844 was appointed Commissioner of the *Tenasserim provinces*, in which post his resolute hatred of corruption brought on him a storm of official wrath. After a visit of two years to England, he returned to India in 1848, and at once took part in the second *Sikh War*. He distinguished himself at the great battles of *Chillianwallah* and *Goojerat*, and was raised to the rank of brevet-major, and received the medal and clasps. The same year (1849) he was appointed *Political Agent* at the court of *Scindia*, at *Gwalior*. He was afterwards *Agent* at *Bhopal*, and in 1853 was promoted to the *Presidency* at *Nagporc*. At the close of that year he again came to England, attained his rank of lieutenant-colonel in 1854, and returned to India in 1857. Shortly before the great mutiny (*Sepoy War*) broke out, he was appointed *Acting Political Agent* at the court of *Holkar*, at *Indore*. He escaped with his wife and a party of Europeans when the mutiny broke out at *Indore*, and reached

Rambay, but soon after set out with a small force to the rescue of Mhow. In October he took part in the attack on Dhar, and in November in the operations at Neemuch and Mandhore. From the latter place he accompanied the column to intercept Tantia Topce, and thus saved Southern India. On the transfer of the government of India to the crown, Durand was sent to England to confer with the authorities about the reconstruction of the Indian army. He was created C.B., and nominated a member of the Council for India, on which he sat three years. Having lost his wife during the mutiny, he married again while in England. Under Lord Canning he accepted (1861) the Foreign Secretaryship, and returned to India for the last time. In 1865 he was promoted to the office of Military Member of the Governor-General's Council. In 1867 he was promoted major-general, and was created K.C. of the Star of India. On the retirement of Sir Darnley Macleod in 1870 from the post of Lieutenant-Governor of the Punjab, Sir Henry Durand was named his successor. At the end of the same year he set out on a tour through the Punjab, and when, entering Tonk, about thirty-five miles west of the Indus, he was

accidentally killed by a fall from his elephant, 1st January 1871. So highly esteemed he was, and so beloved, that his loss was felt throughout India to be a national calamity.

DYCE, ALEXANDER, editor of "Shakespeare," was born at Edinburgh in 1798. He was the son of a general officer in the E. I. Company's service, and was educated at the High School of his native city, and at Exeter College, Oxford, where he graduated B.A. in 1819. He afterwards entered the church, but after a short time he chose a literary career, and settled in London in 1827. Throughout his long and laborious life Mr Dyce chiefly devoted himself to the study and illustration of our elder dramatists. Besides his great work, the complete edition of Shakespeare's works, which appeared between the years 1830 and 1868, he edited the works of Pele, Greene, Webster, Marlowe, Beaumont and Fletcher, &c. He contributed memoirs of several of the poets for the Aldine edition, and published the works of Bentley the critic. His last work was an edition of Ford, the dramatist. Mr Dyce was one of the founders of the Percy Society. Died, 15th May 1869.

E.

EASTLAKE, Sir CHARLES LOOK, P.R.A., was born at Plymouth in 1793. In his earliest art studies he was aided by Haydon, who was a friend of his father. After going through the usual course of studies at Plympton Grammar School, he was sent to the Charterhouse; then studied at home, and in 1808 came to London. He soon became a student at the Royal Academy under Fuseli, enjoying at the same time the assistance of Haydon. Through the friendly influence of Mr J. Harnum, a great patron of artists, he was sent to Paris to copy some of the pictures in the Louvre; but the return of Napoleon from Elba in March 1815, compelled him to quit Paris. He then settled in his native town as a portrait painter. A visit to Italy and Greece occupied several years, and though he returned to England about 1820, he soon set out again, and spent a long time at Rome, whence he sent several pictures for exhibition. His "Islands repelling the Thebans," exhibited in 1827, procured his election as A.R.A. In the following year one of his most popular works was exhibited—"Pilgrims arriving in sight of Rome." Of this picture he painted many replicas. Returning to England the same

year (1828), he was chosen R.A. in 1830; was appointed Secretary to the Commission on the Fine Arts in 1841; librarian to the Royal Academy in the following year, a post which he resigned in 1844; was Keeper of the National Gallery from 1843 to 1847; and in 1850 was elected President of the Royal Academy and knighted. On the revision of the Constitution of the National Gallery in 1855, Sir Charles received the appointment of Director, in which capacity he made many valuable additions to the Gallery. The same year he exhibited his last picture, "Bontrice." His most celebrated work is the picture of "Christ weeping over Jerusalem," exhibited in 1841, a replica of which is part of the Vernon collection in the National Gallery; which also possesses his "Haidée" and "Escape of the Carrara Family." Among his other works are—"Christ blessing little children," "Hagar and Ishmael," "Byron's Dream," and some very gracefully painted female heads. His reputation as a learned and critic stood higher than his fame as a painter; and besides rendering valuable services in his various official capacities, he made some important contributions to the literature of art. He was author of

"Penny Cyclopædia" and "Quarterly Re-
view," translated Goethe's "Farbenlehre"
("Theory of Colour"), and annotated the
English translation of Kugler's "Hand-
book of Painting." His essays on art
have been published in a collected form.
Sir Charles was a Fellow of the Royal
Society, D.C.L. Oxford, a knight of the
Legion of Honour, a trustee of the
National Portrait Gallery, &c. His con-
scientious discharge of his public duties,
his high-bred delicacy and freedom from
pretence, secured him general esteem.
He married late in life, but left no chil-
dren. Died at Pisa, December 24, 1865.
His remains, after a temporary rest in
the English cemetery at Florence, were
brought to England, and finally interred
at Kensal Green, January 18, 1866.

ELLENBOROUGH, EDWARD LAW,
first earl of, Governor-General of India,
was born in 1790. He was the eldest son
of Lord Ellenborough, Chief Justice of
England, and grandson of Edmund Law,
bishop of Carlisle. He was educated at
Eton and St John's College, Cam-
bridge, and took his degree of M.A. in
1809. He entered Parliament in 1814 as
member for the borough of St Michael's
(since disfranchised), for which he sat till
his father's death at the close of 1818,
when he took his seat in the Upper
House as second Baron Ellenborough.
In 1828 he was appointed Lord Privy
Seal in the Wellington administration,
and later in the same year President of
the Board of Control. He retired with
his party on the formation of the Grey
ministry in 1830, and returned to his
former post under the Peel adminis-
tration in 1834. In a few months he was
again out of office, and on the return of
Sir Robert Peel to power in 1841, resumed
for the third time the Presidency of the
Board of Control. But he was almost
immediately appointed to succeed Lord
Auckland as Governor General of India,
and arrived at Calcutta in February 1842.
It was in the midst of a grave crisis that
he assumed the government. The dis-
asters of the Afghan War had damaged
our prestige in India, and a general sense
of humiliation and want of confidence
prevailed. Lord Ellenborough's energy
and determination were rapidly felt
throughout the country; the "Secre-
tariat" system was abolished, and the
British forces, under Generals Pollok and
Nott, advanced simultaneously on Cabul,
and re-conquered the Afghan territory.
On the 1st October a proclamation was
issued for the withdrawal of the British
troops, and in November a high-flown pro-
clamation about the capture of the gates of
Somnauth. The tone of these proclama-
tions gave rise to much debate in Parlia-
ment, and a vote of censure was proposed.
But their author was defended by Sir E.
Peel, and received the thanks of both

Houses for his services in Afghanistan.
The annexation of Scinde and the con-
quest of Gwalior took place in 1843; and
was recalled by the directors of the East
India Company. The Government re-
monstrated in vain; and on his return he
was created Earl of Ellenborough and
Viscount Southam. Late in the following
year he was appointed First Lord of the
Admiralty, a post which he held but a
few months. On the formation of the
Derby administration in 1858 he again
became President of the Board of Control.
But having in a secret despatch to Lord
Canning severely censured his policy in
Onde, he was compelled, in order to avert
a defeat of the ministry, to resign in a
few months. Although he did not again
take office, he continued to speak on
Indian affairs with his usual force and
effect in the House. The Earl of Ellen-
borough was twice married, first in 1813
to a daughter of the first Marquis of Lon-
donderry, and after her death to a daughter
of Admiral Dilghy. The second marriage
was dissolved by Act of Parliament. As
the Earl's only child died in infancy, the
marion became extinct at his death.
Died at Southam Delabese, in Gloucester-
shire, 22d December, 1871.

ELLIOT, HUGH, a distinguished British
diplomatist, Governor of Madras, was
born in 1752. At ten years of age he was
presented with a commission in the army,
which, however, was not ratified. He
studied two years in a military school at
Paris, then at Edinburgh University, and
in 1768 entered Christ's Church College,
Oxford. In 1772 he visited Vienna, and
was allowed to bear the courtesy title of
"Captain." From Vienna he went to
Warsaw, and distinguished himself in a
short campaign with the Russian army,
which fired him with military ambition.
In 1774 he was sent as plenipotentiary to
the court of Bavaria, and three years later
to Berlin. The relations between Great
Britain and Prussia were then uneasy,
and Elliot's sharp satirical way was not
delightful to the great Frederick. He
was therefore recalled in 1782, and sent
to Copenhagen. There he indirectly as-
sisted in the court revolution, which took
place in 1784—the overthrow of the Queen
Dowager in favour of the Prince Royal.
In the war between Sweden and Russia,
he contributed to the maintenance of
the neutrality of Denmark. Recalled in
1790, he was charged with a mission to
Paris the following year, and in 1792 was
sent to the court of Dresden, where he
remained ten years. In 1803 he was am-
bassador to Naples, a post which he filled
through a period of great difficulty with
great good sense and success. He after-
wards held the government of the Lee-
ward Islands for five years, and was
promoted thence, in 1814, to the govern-
ship of Madras. On his voyage home in
1820 he stayed a short time at St Helena.

but firmly refused to visit the captive emperor, Napoleon I. Hugh Elliot was twice married, first in 1779; divorced his wife in 1783; and married a beautiful girl of humble birth during his mission in Saxony. Died in London, 2d December 1830.

ELLIOTSON, JOHN, one of the greatest English physicians of his day, was born in London in 1786. He was educated at Jesus College, Cambridge, and passed thence to the University of Edinburgh, where he graduated M.D. He next studied in London, at Guy's and St Thomas's Hospitals, and became, in 1817, assistant physician at the latter, and five years later, physician. During his connection with the hospital he was indefatigable, both in the wards and in the lecture room. Impressed with the need of reform in medicine, and convinced that the way to it was through improved therapeutics, he studied especially the action of various remedies, and made valuable discoveries as to the use of quinine, of crocote and carbonate of iron, prussic acid, &c. He gave a fresh impetus to the practice of clinical teaching, and was one of the first, if not the first, to adopt the practice of amputation, in which he attained singular skill. Professional success was long in coming, but from 1829, when notes of his clinical lectures began to appear in the "Lancet," it grew rapidly. He had long been F.R.C.P. In 1829 he was Lumleian Lecturer, and two years later he resigned his chair at St Thomas's, and accepted the professorship of Medicine at the New University of London. In 1834 he also gave up his appointment as physician at St Thomas's, and was elected physician to University College Hospital, and Professor of Clinical Medicine. For years Dr Elliotson was one of the foremost physicians of the day, as teacher, clinical lecturer, and consulting practitioner. But having avowed his belief in mesmerism, and begun to make experiments of it as a remedial agent in the hospital, alarm was excited, and exaggerated rumours got into circulation, and he was requested by the authorities to discontinue the practice in the hospital. Bent on the pursuit of truth, fearless of consequences, and persuaded that fresh discovery of truth awaited him in the new field he had entered, he at once resigned all his appointments. This was in 1838. From that time he only once appeared in an official capacity as medical teacher; being nominated Harveian Orator in 1846. He continued his researches on mesmerism, and practised it; advocated phrenology, and was President of the Phrenological Society. He established and edited the "Zoist," an organ of mesmerism. He never accepted as true the pretensions of the so-called Spiritualists. As early as 1817 he published a translation of Blumenbach's "Physiology," with valuable notes.

In 1835 appeared the first volume of his own work on "Human Physiology," which was completed in 1840. His Lumleian Lectures were published in 1830, and his lectures on the "Principles and Practice of Medicine," in 1839. To the spirit of his motto, "Truth," he resolutely and persistently adhered, discarding authority and custom so far as they interfered with the free advance of truth. This appeared in small things as well as in great. As early as 1826 he discarded the knee-breeches and silk stockings, then the orthodox dress of an M.D.; and he was one of the first to wear the beard. "The breath of slander," says the "Lancet," "never ventured to attack his private character." In 1865 he became an inmate of the family of Dr E. S. Symes, one of his earliest pupils and most devoted friends, and there, passing peacefully through the stages of decline, died 29th July 1868. His remains were interred in Kensal Green Cemetery.

ELLIS, Sir HENRY, Principal Librarian of the British Museum, was born in London in 1777. He was educated at Merchant Taylor's School and St John's College, Oxford, where he graduated B.A. about 1799. He was chosen fellow of his college, but vacated his fellowship by marriage in 1805. After filling for a time the office of assistant librarian at the Bodleian, he removed to London to fill a similar office in the British Museum. In 1806 he was appointed Keeper of the Department of Printed Books, and in 1812 Keeper of the Manuscripts. Two years later he became Secretary to the Trustees, and held that post until his election as Principal Librarian in 1827. He was a fellow, and afterwards Secretary to the Society of Antiquaries; was elected F.R.S. in 1811; became a member of the Council of the Camden Society; and Vice-President of the Royal Literary Fund. In 1832 he was created by William IV. a Knight of Hanover. The principal works of Sir Henry Ellis are an edition of "Brand's Popular Antiquities," a learned "Introduction to Domesday Book," prepared for the Commissioners of Public Records, and published in 1816; two series of "Original Letters Illustrative of English History" (1824-27); and an edition of Dugdale's "Monasticon." He published several volumes on the Elgin and Townley Marbles, and contributed many papers to the "Archæologian." In 1854 he lost his wife, and two years after retired from the librarianship. Died in London, 15th January 1859.

ELLIS, WILLIAM, missionary to the Sandwich and South Sea Islands, was born in London in 1795. As an agent of the London Missionary Society, he sailed for the South Sea Islands in January 1816, accompanied by his wife, their marriage having taken place in the preceding November. Their labours were carried on in the islands of Eimeo, Rai-

ten, Huahine, settled in Hawaii, failure of Mrs Ellis in America in the turned to England. Ellis was afterwards business of the wife in 1835, he wife being Miss self known by a female education, a remarkably in missionary labor "Polynesian Iter author of a "P "Summer and V "History of the Society," "Memo wife, &c. Died shire, 3th June 1

ENCKE, JOH astronomer, was 1791. Educated u he served in the v and at the conclu was appointed As tory of Seeberg, u was called to Be Secretary to the A

ton, Hualine, &c., till 1823, when they settled in Hawaii. In consequence of the fallure of Mrs Ellis's health they visited America in the spring of 1825, and returned to England the same year. Mr Ellis was afterwards engaged in the home business of the Society. Having lost his wife in 1835, he married again, his second wife being Miss Stiekney, who made herself known by several popular works on female education, &c. Mr Ellis published a remarkably interesting account of his missionary labours in a work entitled "Polynesian Researches." He was also author of a "History of Madagascar," "Summer and Winter in the Pyrenees," "History of the London Missionary Society," "Mémoir of Mrs Ellis," his first wife, &c. Died at Hoddesdon, Hertfordshire, 9th June 1872.

EMERSON-TENNENT, Sir JAMES, Bart., Lieutenant-Governor of Ceylon, an eminent statesman and historical and miscellaneous writer, was born at Belfast in 1804. His family name was Emerson, but soon after his marriage in 1831 he assumed the additional name of Tennent, which was that of his wife's family. He was educated at Trinity College, Dublin, studied afterwards for the law, and was called to the English bar at Lincoln's Inn in 1831. He had already entered upon a literary career, and he did not practise his profession. In 1832 he entered Parliament as member for his native town, for which he sat many years. In 1841 he was appointed Secretary to the India Board, and four years later went to Ceylon as Colonial Secretary and Lieutenant-Governor. He was at the same time knighted by the Queen. After his return to England he was elected M.P. for Lisburn, and was appointed in 1852 Secretary to the Poor Law Board, a post which after a few months he exchanged for that of Joint-Secretary to the Board of Trade. This post he continued to hold till 1867, and on his retirement he was created a baronet. His earlier literary works were— "an account of his travels in Greece," "Letters from the Ægean," and a "History of Modern Greece." These procured him a knight commandership of the Order of our Saviour from the king of Greece. His most important works are—"Christianity in Ceylon," published in 1850, and his later "Ceylon, an Account of the Island." He was also author of works on "Belgium," "Copyright of Design," and "Wine, its Use and Taxation." Died suddenly, in London, 5th March 1869.

ENCKE, JOHANN FRANZ, German astronomer, was born at Hamburg in 1791. Educated under Gauss at Göttingen, he served in the war of Liberation (1813), and at the conclusion of peace in 1815 he was appointed Assistant in the Observatory of Seeberg, near Gotha. In 1825 he was called to Berlin to fill the posts of Secretary to the Academy of Sciences and

Director of the Observatory. His most important service to astronomy was the discovery of the comets of short periods. The comet known by his name was observed by Pons in November 1818, and its period being found by Encke to be about three years and a quarter, it was identified with that which was observed in 1786, 1795, and 1805. From the peculiar acceleration of its movement Encke was led to the hypothesis of the existence of a cosmical ether. He was editor of the Berlin "Astronomisches Jahrbuch" from 1830. Died, 2d September 1855.

EÖTVÖS, JOSEPH, Baron, a distinguished Hungarian statesman and political and miscellaneous writer, was born at Buda in 1813. His father held office under the government, and his mother was a German lady. He was first taught the German language, but being taunted while a boy with his ignorance of Hungarian, he set himself to master it. He completed his education at the University of Pesth in 1831, and obtained a situation in the County Administration. He was afterwards employed in the Hungarian Chancery at Vienna. During the same period he had also begun to make himself known in literature. In 1836 he visited England, France, and Germany, and soon after began his career as parliamentary orator, and a leader of the opposition in the Upper House of the diet. He also wrote various pamphlets on questions of political and social reform. He took part in the diet of Presburg, after the Revolution of 1848, and was a member of the first Hungarian administration as Minister of Public Instruction. In consequence, however, of the violent scenes which followed, and the outbreak of civil war, he soon resigned and went to Munich, where he remained three years. He continued his literary labours. On the restoration of the Hungarian constitution in 1866, he again accepted the post of Minister of Public Instruction, which he held till his death. In 1841 Baron Eötvös was elected honorary member of the Hungarian Academy, of which he was named Vice-President in 1855, and President in 1866. He was chosen President of the Kisfaludy Literary Society in 1847. He rendered important service to his countrymen by his zealous endeavours to promote a higher culture among them. His principal works are—"The Carthusian" (1841), a novel which first established his reputation as a writer; "The Village Notary" (1845), a national tale, intended to depict the faults of the county administration, and which was translated into German and English; "Hungary in 1514," a tale of the Peasants' Insurrection; and an important treatise on "The Influence on the State of the Prevailing Ideas of the Nineteenth Century," published in 1851-54. In his early life, Baron Eötvös, in conjunction with the historian Szalay, originated a review, the "Budapesti

Szemle," in imitation of the English quarterlies, and was joint-editor of the "Pesti Hirlop," an influential paper. Collections of his speeches in the diet and his discourses at the Hungarian Academy have been published. Died, 2d January 1871.

ERBEN, KAREL JAROMIR, a distinguished Bohemian poet and archaeologist, was born at Miletin, in Bohemia, in 1811. From an early age he began to devote himself to the study of the literature of his country, and to investigate its sources, and the fruits of his researches appeared in numerous works. One of the most important is his "Regesta Diplomatica neonon Epistolaria Bohemica et Moravia." He published a large collection of national ballads entitled "The Nosegaj," a collection of Slavonic tales, an edition of the Czech works of John Hus, &c. In 1841 he obtained the appointment of Archivist of Prague. Died, December 1870.

EVANS, SIR DE LACY, a distinguished general, was born in Ireland in 1787. At the age of twenty he entered the British army, and after several years' service in India he served with the Light Dragoons in the Peninsular War, and was present at some of the greatest actions. At the battle of Toulouse he had a horse shot under him. In 1814 he served as lieutenant-colonel in the American War, and was present at the taking of Washington, and at the attacks on Baltimore and New Orleans. In 1815 he served as assistant quartermaster-general at Quatre Bras and at Waterloo; took part in the capture of Paris, and remained in France with the army of occupation. He entered Parliament in 1831 as member for the borough of Rye, but lost his seat the next year. Elected for Westminster in 1833, he retained his seat till 1841, and was again elected for the same borough in 1847. Meanwhile, he took command in 1835 of the British Legion raised as an auxiliary force for the Queen of Spain against the Carlists. He greatly distinguished himself in many engagements with the insurgents: in October 1836 defeated them and captured San Sebastian; and in May 1837 stormed Irun. He was soon after created K.B., and decorated with the cross of St Ferdinand and St Charles of Spain. In 1853 he was promoted colonel. The Crimean War opened the path to fresh services and honour. In 1854 Sir de Lacy was appointed to the command of the second division of the army in the East, with the rank of lieutenant-general. He fought with distinction at the Alma and at Inkermann; received the Grand Cross of the Bath and the thanks of both houses of Parliament. He was also promoted G.O.B., was made D.C.I. of Oxford University, and named Grand Officer of the Legion of Honour. Died in London, 9th January 1870.

EVERETT, EDWARD, an eminent American scholar, statesman, and orator, was born at Dorchester, Massachusetts, in 1794. Educated at Harvard University, he held there for a short time the post of classical tutor, and in 1814, adopting his father's profession, became minister of a Unitarian congregation at Boston. But in the following year he was chosen Elliot Professor of Greek in his own university, and in order to recruit his health, and also more fully to fit himself for that post, he visited Europe, and studied two years at Göttingen. After travelling in Greece and Italy, and visiting England, where he made the acquaintance of Scott, Mackintosh, and Romilly, he returned to America, and entered on the duties of the professorship. At the same time he was appointed editor of the "North American Review," which office he held four years. The first of the elaborate "Orations," for which he became so popular, was delivered in 1824. Elected to Congress in 1825, he remained a member for ten years, and was also during that period an influential member of the Committee on Foreign Affairs. He was a supporter of the Whig (Conservative) party, advocated protection, and opposed the anti-slavery agitation. Mr Everett held the office of Governor of Massachusetts from 1835 till 1839, was named minister at the court of St James's in 1840, and spent four years in England. After his return home he was appointed President of Harvard University, but after a short time resigned. In 1852 he became Secretary of State to President Fillmore, and on his retirement the next year was appointed senator for Massachusetts. He was an unsuccessful candidate for the Vice-Presidency in 1860. Mr Everett has left no important literary work, his reputation resting chiefly on his speeches. One of these, delivered in 1856, on the character and services of Washington, he is said to have repeated about a hundred times, for the benefit of the Mount Vernon fund. "His rhetoric," says a writer in the "Gentleman's Magazine," "although highly finished, was cold and formal, and he made a much slighter impression as a public speaker than many far less able and eloquent men." He resembled Lord Macaulay in his tenacity of memory, and his profuse and skilful use of historical illustrations. His speeches appeared in a collected edition, and he wrote a "Life of Washington" for the "Encyclopedia Britannica," and a memoir of his political master, Daniel Webster, for an edition of his works. The University of Oxford conferred on him the degree of D.C.L.; Cambridge and Dublin also recognised his scholarship; and he was an honorary fellow of the Society of Antiquaries, and a corresponding member of the Institute of France. Died at Boston, U.S., 15th January 1865. He left two sons and a daughter surviving him. His wife died in 1855.

FAIRHOLT, F.S.A., a distinguished antiquary, and born in London a Prussian who England. The children, and the infancy, found his artist's illustrations of Charles time (1835) more than the list. Among those who Chatto's "Treatise Hawkins's "Silv S. C. Hail's "Wright's "Arch same author's "C and "Wandering and Lord Londe's Graphica," &c. He named the letter tume in England Shakespeare Illus a "Dictionary of tory of Tobacco," entitled "Up the He edited the Lilly, and several poems and songs "Art Journal" for years, and from office of draught Archæological Ass bequeathed his book Society of Antiqu Costume to the Br Shakespearean col upon-Avon. He April 1866.

F.

FAIRHOLT, FREDERICK WILLIAM, F.S.A., a distinguished draughtsman, antiquary, and miscellaneous writer, was born in London in 1814. His father was a Prussian who had been long settled in England. The son, youngest of sixteen children, and the only one who survived infancy, found his first employment as an artist in illustrating the various publications of Charles Knight; and from that time (1835) the story of his life is little more than the list of his numerous works. Among those which he illustrated are—Chatto's "Treatise on Wood Engraving," Hawkins's "Silver Coinage of England," S. C. Hall's "Mansions of England," Wright's "Archæological Album," the same author's "Celt, Roman, and Saxon," and "Wanderings of an Antiquary," and Lord Londesborough's "Miscellanea Graphica," &c. Of his literary works may be named the learned "History of Costume in England" (1846), "The House of Shakespeare Illustrated and Described," a "Dictionary of Terms in Art," a "History of Tobacco," and a book of travel, entitled "Up the Nile and back again." He edited the dramatic works of John Lilly, and several volumes of old English poems and songs, contributed to the "Art Journal" for more than twenty years, and from 1845 to 1852 held the office of draughtsman to the British Archæological Association. Mr Fairholt bequeathed his books on Pageants to the Society of Antiquaries; his works on Costume to the British Museum; and his Shakespearian collection to Stratford-upon-Avon. He died at Brompton, 3d April 1866.

FANE, JULIAN, poet and diplomatist, was born at Florence in 1827. He was the son of Lord and Lady Burghersh, and at the early age of seventeen was attached to his father's mission at Berlin. In 1847 he entered Trinity College, Cambridge, left the University in 1850, and the next year was attached to the British embassy at Vienna. In 1856 he accompanied Lord Clarendon on a special mission to Paris, where he remained till the close of the Congress and the signature of the treaty of peace. He then went as Secretary of embassy to St Petersburg, and acted in the same capacity afterwards at Vienna and at Paris. On his return to England in 1866 he married Lady Adine Cowper, who died in 1868. And within two years he too died, in London, 18th April 1870. He was a brilliant and accomplished man, and spent his life amidst the most distinguished society of Europe. A volume of his poems appeared in 1852. In 1870 was published a memoir of his life by Robert Lytton, with some additional poems.

FANTI, MANFREDO, Italian general, was born at Carpi, in Modena, about 1806 or 1810. At the age of eighteen he entered the military Academy at Modena, and as officer of engineers served against the Austrians in 1831. He fought at Rimini, and being soon after captured, was sent to the Tyrol. Liberated the next year, he served a year or two in the army of France, then in the Spanish army, distinguishing himself in the Carlist War. On the outbreak of the Revolution in Italy in 1848 he returned home, and was at once appointed major-general of the insurgent army in Lombardy, and member of the Committee of Defence. In August of that year General Fanti saved the life of the king, Charles Albert, against the threatening violence of the populace, and for this service he was named major-general in the Sardinian army. After the campaign of 1849 he lived in retirement till 1855, when he was called to serve in the Crimean War as brigadier-general. He assisted during the next few years in the re-organization of the army, and was elected about 1856 Deputy to the Sardinian Parliament. He served with distinction, as general of division, in the war against Austria in 1859, especially contributing to the victory of Magenta. In October of that year he was chosen commander of the united forces of central Italy, and resigned his command in the Sardinian army. In 1860 he was called to the post of Minister of Marine and of the Army, and was made a senator, but after some months resigned office in order to prepare and conduct with General Cialdini the expedition to the Romagna. He took Perugia, and a few days later captured the Papal army under General Lamoricière at Castelfidardo. He retired in the following year, and died at Florence, 5th April 1865.

FARADAY, MICHAEL, the great chemist and natural philosopher, was born in the parish of Newington, London, in 1791. He was the son of a blacksmith, a Yorkshireman who had settled in London; and after receiving a merely rudimentary education at a common day-school, he was apprenticed at the age of thirteen to a bookseller and bookbinder. His natural passion for science showed itself during his apprenticeship in the devotion of his leisure moments to study, and of his pocket-money to the purchase of books and apparatus for experiments. Among the books which he delighted in at that time were the treatise on electricity reprinted from the "Encyclopædia Britannica," and Mrs Marcet's "Conversations on Chemistry." In the early months of 1812, through the kindness of a member

1863 he was raised to the rank of Vice-Admiral, and in the following summer he again ascended the Mississippi, passed Fort Hudson, occupied by the Confederates, and took part with General Grant in a renewed attack on Vicksburg, which capitulated early in July. In August 1864 he engaged the Confederate fleet at Mobile, defeated it, and took the town. In 1867 he was charged with the command of the European squadron, with which he visited the principal seaports of France, Russia, Sweden, Denmark, England, and Spain. His reputation everywhere was of the most flattering kind. Died at Portsmouth, New Hampshire, U.S., 13th August 1870.

FÉTIS, FRANÇOIS JOSEPH, French musical composer, and historical and biographical writer, was born at Mons in 1784. He studied under Boieldieu, Fradher, and Rey, at the *Conservatoire*, Paris, and in 1813 settled as organist and professor of singing at Douai. Five years later he returned to Paris. In 1833 he became director of the *Conservatoire*, Brussels, a post which he held till his death, and in 1855 he was admitted a member of the Academy of Belgium. As musical executor of Meyerbeer, he superintended the production in 1864 of his "Africaine." The same year he was made Officer of the Legion of Honour, and promoted Grand Officer in 1869. Among his works on the theory of music are, "Traité du Contre-point et de la Fugue," "Science de l'Organiste," and "Traité Complet de la Théorie et de la Pratique de l'Harmonie." In 1827 he founded the "Revue Musicale," which he edited till 1835. His most important work is the "Biographie des Musiciens," &c., in three volumes (1835-44). He left unpublished his "Philosophie Générale de la Musique." Died at Brussels, 27th March 1871.

FEUERBACH, LUDWIG ANDREAS, a German philosopher, was born at Landsbut, in Bavaria, in 1804. He was one of the sons of the celebrated jurist, Paul Johann Anselm von Feuerbach. He studied theology at Heidelberg University under Paulus and Daub, the latter being an ardent Hegelian. Catching Daub's enthusiasm, he went to Berlin to study under Hegel himself, and he soon renounced theology and resolved to devote himself to philosophy alone. At Erlangen he qualified as *Privat-docent*, but after a short time left off teaching and confined himself to writing. In 1830 he published anonymously his "Gedanken über Tod und Unsterblichkeit," in which he expressly denies the doctrine of Immortality. His principal works are—a "History of Modern Philosophy from Bacon to Spinoza" (1833), "Exposition, Development, and Criticism of the Philosophy of Leibnitz" (1837), "Pierre Bayle," "The Essence of Christianity" (1841), "Elements of the Philosophy of the Future" (1843), and "The Essence of Religion"

(1845). He contributed papers to the "Deutsche Jahrbücher" and to "Wigand's Vierteljahrschrift." A collected edition of his works was published between 1846 and 1857. Died at Hanau, near Frankfort, 13th September 1872.

FIELD, EDWIN WILKINS, an eminent English law reformer, was born at Leam, near Warwick, in 1804. Admitted to practice in 1826, he began the long course of his labours as law reformer in 1840, by the publication of "Observations on Defects in the Offices, Practice, and System of Costs of the Equity Courts." This was soon followed by "Chancery Reform," and to the suggestions contained in these pamphlets many of the useful changes afterwards carried out were in a great degree owing. About the same time Mr Field urged the necessity for the concentration of the courts of justice, not yet effected. He took a leading part in promoting the passing of the Dissenters' Chapel Bill; was an active assistant in the establishment of the Flaxman Gallery at University College, London; and promoted the establishment of University Hall, London; devoted much time to the preparation and promotion of the Artists' Copyright Bill; and during the three years preceding his death, gave his constant aid in the establishment of the Slade School of Art. Mr Field was an enthusiastic lover of art, a warm friend of artists, and an accomplished artist himself. Among his writings, besides those above named, are—"Recent and Future Law Reforms," "Observations on Limited Liability Partnerships," &c. He also contributed to the "Westminster Review," the "Legal Observer," and other periodical works. He was twice married. A great lover of the Thames, and an excellent swimmer, he was nevertheless drowned by the upsetting of a boat on that river, 30th July 1871. His remains were interred in Highgate Cemetery, in a grave next to that of his friend H. Crabb Robinson.

FLIEDNER, THEODOR, German philanthropist, restorer of the Protestant Order of Deaconesses, was born at Eppstein, in Prussia, in 1800. He studied theology at the Universities of Giessen and Göttingen, and at the Seminary of Herborn. In 1822 he settled as pastor of a small Protestant congregation at Kaiserswerth. To collect funds in aid of the church, the school, and the poor, he visited England and Holland, and was well received. The activity of the numerous religious and benevolent societies in England fostered the desire in him to promote a like activity in Germany. In 1826 he founded the first German society for the improvement of prison discipline at Ditteldorf. He made a second and a third visit to England and Holland, and in 1833 opened in his own house a refuge for liberated female prisoners. Three years later he established the first infant school in Germany, to which was afterwards

added a training school for the teachers. The great work of his life, however, was the re-origination in the Protestant Church of the old Order of Deaconesses. In May 1846 the Rheno-Westphalian Order was founded, and in the following October the first Deaconesses' Institute was opened, with very limited means, at Kaiserswerth. Thence were subsequently sent out numerous sisters to attend on the sick, the poor, on children, prisoners, and "unfortunate" women, not only in Germany, but all over Europe and in America. To the carrying out and extension of this system in all directions Pastor Fliedner devoted his life. He conducted the parties of the sisters to America, to Jerusalem, and to other parts of the East in 1849-51, and revisited the East in 1856-57. His last seven years were years of great suffering from illness. Died at Kaiserswerth, 4th October 1864.

FOGGO, GEORGE, an English painter, was born about 1793. With his brother James, he received his art education at Paris, and the two frequently worked together on the same picture. James began to exhibit at the Royal Academy in 1816, and George three years later. Among their more noteworthy works were—"Christ at the Pool of Bethesda" (1824), the "Entombment" (1826), forming the St altar-piece in the French Church in St Martin's-le-Grand, London, and cartoons at the Exhibitions in Westminster Hall in 1840-43. James died in 1860, aged 71. George continued to exhibit at various institutions till 1864. He was a zealous social reformer, and laboured for years in association with Joseph Hume and other reformers. He was an energetic member of the Public Monuments Committee; the public owe to him the opening of Hampton Court on the Sunday, and its daily gratuitous opening, the securing ground round Primrose Hill as an open space for recreation, and increased facilities of access to other public collections. He was also a member of the Council of the Society for Promoting Practical Design, and taught gratuitously in their school in Leicester Square in 1837 and 1838. He took part in 1868 in the Conference on Technical Education at the Society of Arts. The Hall of Commerce, in Threadneedle Street, was built from the designs of the brothers Foggo. George was author of a "Catalogue of Pictures in the National Gallery, with Critical Notes," published in 1869. Died in London, 26th September 1869.

FORBES, JAMES DAVID, Principal of the United Colleges of St Salvador and St Leonard, at St Andrews, was born near Edinburgh in 1809. He was the youngest son of Sir William Forbes, Bart., of Pitligo, the friend of Sir Walter Scott, and was educated at the University of Edinburgh. In 1833 he was appointed Professor of Natural Philosophy, and held that Chair till 1860. Compelled then to resign

by ill health, he was appointed Principal of St Andrews. He won high rank as an original investigator by his researches on heat, and his important discoveries on the polarization of heat. He was widely known as an Alpine explorer, and as author of a theory of glaciers, to the observation and study of which he had zealously devoted himself. Among his writings are—"Travels in the Alps of Savoy," "Norway and its Glaciers," and "Papers on the Theory of Glaciers." He wrote for the "Encyclopædia Britannica" the "Dissertation on the Progress of Mathematical and Physical Science," and contributed more than a hundred memoirs to the "Transactions" of the Royal Societies of London and Edinburgh, receiving from the former the Rumford and Royal Medals, and from the latter the Keith Medal three times. He was a corresponding member of the Institute of France, a Fellow of the Royal and Geological Societies of London, and received the honorary degree of D.C.L. from the University of Oxford. He married in 1843. Died at Clifton, 31st December 1868.

FORCADE, EUGÈNE, French journalist and littérateur, was born at Marseilles in 1820. At the age of twenty he went to Paris, where, three years afterwards, he began to contribute to the "Revue Indépendante," and became one of the staff of the "Revue des Deux Mondes," to which he thenceforth regularly contributed. He originated in 1845 the "Revue Nouvelle," which was discontinued after about two years; and in 1851 commenced the "Messager de l'Assemblée." For an article in it announcing the *coup d'état* of 2d December of that year, the paper was suppressed, and the writer imprisoned. In 1856 he undertook the editorship of the "Semaine Financière." Attacked with insanity, he was compelled to lay down his pen in 1858. M. Forcade was author of "Études Historiques" (1853), and "Histoire des Causes de la Guerre d'Orient" (1854). Died 6th November 1869.

FORCHHAMMER, JOHANN GEORGE, an eminent Danish chemist and geologist, was born at Husum, in Schleswig, in 1794. He completed his studies at the University of Kiel, and became secretary and assistant to Oersted. After making several scientific tours at the expense of the State, he was appointed in 1823 Reader in Mineralogy at the University of Copenhagen. Two years later he was received at the Academy of Sciences, of which he became secretary on the death of Oersted in 1851. In the preceding year he became titular Professor of Mineralogy at the university. He was author of works on the Geognostic Condition of Denmark, the Nature of the Soil of Scandinavia, Chemistry of Simple Bodies, &c.; and was a correspondent of the Geological Society of London and other foreign societies. Died at Copenhagen, in the spring of 1866.

FOREY, ELI FRÉDÉRIC, Marshal of France, was born at Paris in 1804. He was educated at the Military School of Saint Cyr, and took part in the campaigns in Algeria between 1835 and 1844, returning to France with the rank of colonel. Promoted general in 1848, he took a conspicuous part in executing the *coup d'état* of 2d December 1851, and for this service was named commander of the Legion of Honour. He afterwards rendered valuable service as Inspector-General of Infantry. In the war with Austria in 1859, General Forey was the first to encounter the enemy, and defeated them at Montebello. The same year he was promoted Grand Cross of the Legion of Honour and created a senator. In 1862 he was charged with the conduct of the expedition to Mexico, and was also appointed minister plenipotentiary, thus uniting in his own hands all powers, both civil and military. He issued a decree sequestrating the property of all Mexicans who refused to side with the French. The success of the expedition was decided by the capture of Puebla in May 1863, and in the following July Forey was created Marshal of France. After establishing a provisional government, he gave up the command to General Bazaine, and returned to France. In 1867 he had the command of the camp of Châlons. Died at Paris, 21st June 1872.

FORRESTER, ALFRED HENRY, an English humourist, designer, and miscellaneous writer, whose *nom de plume* was "Alfred Crowquill," was born in London about 1806. He practised as a notary in the Royal Exchange, a profession which his family had followed for a hundred and fifty years. At the age of sixteen he began to write light papers for the periodicals, and soon became the illustrator of his own works. He was one of the associates of Theodore Hook in the production of the "Humourist," and afterwards joined the staff of "Bentley's Miscellany." He also contributed to "Punch," the "Illustrated London News," &c. He retired from business in 1839. Among his works are—"The Wanderings of a Pen and Pencil," illustrated, "Comic English Grammar," "Comic Arithmetic," "Phantasmagoria of Fun," "Picture Fables," &c. Died in London, 26th May 1870.

FOUCAULT, JEAN BERNARD LEON, French natural philosopher, was born at Paris in 1819. He devoted much attention to the daguerreotype from the time of its invention, studied optics and various problems of light, and invented several optical instruments. For the Board of Longitudes he made a series of experiments on mechanics and on luminous vibrations. And his name became widely known by his application of a pendulum freely oscillating in space to the demonstration of the rotation of the globe. We owe to him the invention of the *gyroscope*,

another application of the pendulum. His scientific discoveries and inventions procured him the Copley medal of the Royal Society, admission to the Legion of Honour, and the appointment of Natural Philosopher to the Observatory of Paris. In 1865 he was received at the Academy of Sciences. For many years he was scientific editor of the "Journal des Débats." Died, 13th February 1868.

FOULD, ACHILLE, French statesman, was the son of a Jewish banker, and was born at Paris in 1800. Educated at the Lycée Charlemagne, he afterwards studied the fine arts, and travelled in Italy and the East. Having gained much experience as a banker, he entered on political life in 1842, when he was elected to the Chamber of Deputies. As a speaker he confined himself to matters of finance, and on those he soon became an authority. After the Revolution of February 1848 he was chosen member of the Constituent Assembly, and in July 1849 member of the Legislative body. A few months later he was appointed Minister of Finance by the Prince President, a post which he held for two years. Re-appointed after the *coup d'état*, he resigned in a few weeks in consequence of the confiscation of the estates of the Orleans family. He was at the same time made a senator, and shortly after returned to office as Minister of State and of the house of the emperor. He was about the same time made commander of the Legion of Honour. In November 1861 he was, again appointed Minister of Finance, and finally retired in January 1867. Died at Tarbes, 5th October 1867, and was buried at Paris with much ceremony.

FOWKE, FRANCIS (Captain FOWKE, R.E.), eminent as an architect and engineer, was born in 1823. Having displayed much skill as a military architect in Bermuda, where he served several years, he was charged with the building of the Raglan Barrack at Devonport, which is acknowledged to be a model of its class. Various official appointments followed. In 1853 he was named Inspector of the Science and Art Department; was employed in erecting several of the new galleries at South Kensington; prepared the design for the Industrial Museum of Scotland, completed since his death, and opened in May 1866; designed in 1860 the new buildings for the South Kensington Museum, and soon after, the Dublin National Gallery and the International Exhibition Building (1862). His original design for the last named was, however, greatly altered. Captain Fowke died suddenly at South Kensington, December 4, 1865.

FRERE, JOHN HOOKHAM, diplomatist, humourist, translator of "Aristophanes," was born in London in 1769. He was educated at Eton and Caius College, Cambridge, graduating B.A. in 1792, and M.A. in 1795. At Eton began his life.

long friendship with Canning, and he was with Canning one of the contributors to the "Microcosm," a college periodical published during part of the years 1786-87. He became fellow of his college, and gained several prizes for classical compositions in prose and verse. On leaving the University he entered the Foreign Office, and in 1796 was elected M.P. for the borough of West Looe, in Cornwall, for which he sat six years. In 1797-8 he joined with Canning and others in the publication of the "Anti-Jacobin," which was intended to support the existing order of things against the attacks of the Republican party. In 1799 Frere was appointed Under Secretary of State for Foreign Affairs, and in the following year he was sent as Envoy Extraordinary to Portugal. Transferred to Spain in 1802, he remained there as minister nearly two years, and on his return home was

made a Privy Councillor. In October 1808 he was again sent to Madrid as Minister Plenipotentiary to Ferdinand VII., but some blame being cast on him for the failure of the first Peninsular campaign, he was recalled in 1809. Sensible of the injustice done him, he thenceforward renounced public life. In 1816 he married the beautiful Dowager Countess of Erroll; went to reside in Malta in 1821; lost his wife ten years afterwards; and died in Malta, 7th January 1846. In 1817 and 1818 Mr Frere published, under the pseudonym of "Whistlecraft," a humorous poem entitled "Monks and Giants," intended to form part of a larger work on the legends of King Arthur and the Round Table. His "Translations from Aristophanes," esteemed masterpieces of their kind, appeared in 1840, and his "Theoguis Restitutus" in 1842.

G.

GAUTIER, THÉOPHILE, French poet, art critic, and miscellaneous writer, was born at Tarbes in 1811. Educated at the Collège Charlemagne, he first made some attempts in painting, but soon renounced that art in favour of poetry. He became an enthusiastic ally of the leaders of the Romantic School. In conjunction with his college friend, Gérard de Nerval, he edited for a time "La France Littéraire," to which he had previously contributed a series of articles on the poets of the time of Louis XIII., republished under the title of "Les Grotesques" (1844). For twenty years he was on the staff of "La Presse," contributing at the same time to the "Revue des Deux Mondes," and other journals. In 1856 he passed to the "Moniteur," and in 1869 to the "Journal Officiel," as director of the literary feuilleton. M. Gautier travelled extensively in Spain, in Italy, and the East, and published accounts of his wanderings. In 1858 he was promoted officer of the Legion of Honour, received a pension in 1863, and five years later was appointed Librarian to the Princess Mathilde. Among his separate works are his first "Poésies," published in 1830, "Albertus" (1832), "La Comédie de la Mort" (1838), several novels, plays, and vaudevilles, "Tra los Montes," "Zigzags," "Constantinople," "Voyage en Russie," and in conjunction with Richébourg, "Trésors d'Art de la Russie." In 1869 he was an unsuccessful candidate for a seat in the French Academy. Died at Paris, 22d October 1872.

GAVARNI, whose real name was **SULPICE PAUL CHEVALIER**, the cele-

brated French caricaturist, was born at Paris in 1801. After following for some years the occupation of a working engineer, he became a student at a School of Design, and about 1835 began his artistic career by preparing designs of costumes for the theatres and for the journals of fashion. He established the periodical entitled "Les Gens du Monde," and the series of pleasant satirical lithographs of certain classes of Parisian society which first appeared in it made his reputation and his fortune. He continued the series in the "Charivari," the success of which was in great part due to his talents. Graver themes engaged his pencil at a later period. From the "Lerettes," "Actrices," "Fashionables," "Artistes," "Bals Masqués," &c., he passed on to the "Enfants Terribles," "Parents Terribles," "Politique des Femmes," "Rêves," "Maris Vengés," and the like. In all his designs, and in the "legends" attached to them, he displayed rare accuracy of observation, philosophic insight to human nature, and genuine wit. In 1849 Gavarni visited England, and the spectacle of the destitution and squalor of the lowest classes of the poor of London is said to have had a permanent saddening influence upon his serious and sensitive nature. For some time after the subjects of his pencil were the wretched frequenters of London gin-shops, the thieves, the street boys, the Irish, and the dwellers in St Giles's and Whitechapel. Gavarni designed illustrations for Eugène Sue's "Wandering Jew," Balzac's Works, and other popular books. In his latter years he gave a good deal of attention to

aërostation. He was admitted to the Legion of Honour in 1852. Died at Auteuil, November 23, 1865. His pseudonym originated in a mistake of the compiler of the "Catalogue of the Salon," who inserted, as the artist's name, "Gavarnie," the name of the place where he then lived.

GERARD, CECILE JULES BASILE, French military officer and traveller, known as "The Lion Hunter," was born at Pignans, in the Department of the Var, in 1817. He served as a volunteer in Algeria in 1841, and soon after his arrival distinguished himself by killing the lion of the Archiona, which had long been the terror of the country. In the subsequent years of his residence in Algeria, he killed twenty-five full-grown lions, besides leopards and other animals, and was designated by the Arabs "the terrible Frank." Visiting France in 1847, he was made chevalier of the Legion of Honour. He finally returned to France in 1852, and two years later published a narrative of his exploits under the title of "Le Tueur de Lions." In 1862 he was charged with the formation of a society for the protection of reconnaissances in the desert south of the French territory. In 1863 he was sent by the Royal Geographical Society of London to Western Africa, to explore the interior. He made several unsuccessful attempts, and was at last drowned in crossing the Jong River, in September 1864.

GERHARD, EDOUARD, one of the most distinguished archaeologists of his time, was born at Posen in 1795. He studied at Breslau and Berlin, and having graduated at Breslau, accepted a professorship at Posen. This he had soon to resign in consequence of an affection of the eyes. In 1819 he visited Italy, and again in 1822. Remaining at Rome fifteen years, he became a collaborateur in Platner's great work, the "Description of the City of Rome," and undertook to prepare an elaborate bibliography of writers on the topography of Rome, which, however, was not completed. In order to establish a better system of communication among archaeologists, he projected the "Istituto di Corrispondenza Archeologica," of which the King of Prussia became in 1828 the patron. Gerhard was Director of the Society till 1837. On his return to Prussia in that year he was appointed Archaeologist to the Royal Museum of Berlin, and Professor at the University, and was received member of the Academy of Sciences. His works are very numerous. Among the collections of engravings from the antique are—"Antike Bildwerke" (1827-44), "Auserlesene griech. Vasenbilder" (1839-59), "Etruskische Spiegel" (1839-65), &c. Among his descriptive works—"Neaples antike Bildwerke" (1828), "Berlins antike Bildwerke" (1834-36-55), "Rapporto intorno i vasi Volcenti" (1831), &c. A

selection from his contributions to the journals and proceedings of learned societies appeared in 1833, under the title of "Etudes Hyperboréo-Romaines." He wrote also a very large number of monographs on separate works of ancient art. Died, 12th May 1867.

GERSTAECKER, FRIEDRICH, German traveller, novelist, and miscellaneous writer, was born at Hamburg in 1816. The son of a celebrated singer, he accompanied his father on his various professional tours, and acquiring a restless habit, he resolved to emigrate. In 1837 he went to America, and spent six years in travelling through the states of the Union, and hunting in the wilds of the far west. He returned to Germany in 1843, published various works, and in 1849 again set out on still more extensive travels in South America, California, and Australia. After his return in 1852 he settled at Leipsic. He set out again in 1860 for a second tour in South America, and two years later he accompanied the Duke of Gotha to Egypt and Abyssinia. His works consist of narratives of his travels, and tales embodying in a vivid and graphic manner his observations of life and of man in the various lands he visited. Among the former are—"Strife und Jagdzügen durch die Vereinigten Staaten Nordamerikas" (1841), "Die Regulatoren in Arkansas" (1846), "Die Flusspiraten des Mississippi" (1848), "Reisen" (1853-54). Among the tales are—"Die beiden Sträflinge," "Im Busch," "Tahiti," "Die Colonie," and "Gold." He published also many collections of shorter tales—"Aus zwei Welten," "Hell und Dunkel," "Inselwelt," "Unter Palmen und Buchen," &c. Most of his tales have been translated into English and Dutch, and some of them into French. Died at Brunswick, June 1872.

GERVINUS, GEORG GOTTFRIED, a distinguished German historian and politician, was born at Darmstadt in 1805. Destined for a commercial life, he resolved to devote himself to the pursuit of science, and in 1824 attended lectures at Giessen. The following year he went to the University of Heidelberg, where he was led by the influence of Schlosser to turn to historical studies. After spending two years as teacher at Frankfurt, he returned to Heidelberg to take his degree. In 1831 he visited Italy. The publication soon after of his "Historische Schriften," procured him in 1835 an appointment as Professor Extraordinary at Heidelberg. In the following year he was called to the chair of History and Literature at Göttingen. Having signed, in conjunction with Dahlmann and others, the protest against the suspension of the Constitution by the new king of Hanover, he was deprived in December 1837 of his chair. He made a second visit to Italy, and in 1844 accepted an honorary professorship at Heidelberg. Three years later he

founded, in conjunction with Mathy and others, the "Deutsche Zeitung," the organ of constitutionalism and liberal progress, which for a time exercised a powerful influence. Gervinus was elected Deputy to the Diet in 1848 by the Hanse Towns, and was also a member of the National Assembly. But the triumph of the reactionary party drove him from political life, and left him free to devote himself to his higher studies. The most important works of this great scholar are — "Geschichte der Deutschen Dichtung" (1835-42), "Grundzüge der Historik" (1837), "Ueber den Goethe'schen Briefwechsel," "Mission der Deutschkatholiken," "Shakespeare," an elaborate study and exposition, in 4 vols. (1849-50), and "Geschichte des 19ten Jahrhunderts seit den Wiener Vorträgen" (1855-65). Died, 28th March 1871.

GIBSON, JOHN, R.A., the distinguished sculptor, was born at Conway, in North Wales, about 1790. His father, a gardener, removed a few years later to Liverpool, purposing to emigrate to America, but this project was abandoned. The boy showed remarkable skill in drawing, and used to study the pictures at the print-shops, and then make copies of them. Apprenticed first to a carpenter, and then to a firm of wood-carvers, his talent was soon recognized; he was introduced to William Roscoe, and through the generosity of a group of friends, was sent to study at Rome. He arrived there in 1817, and at once became a pupil of Canova, to whom he had an introduction from Flaxman. His first important work was the group of "Mars and Cupid," for which the Duke of Devonshire gave him a commission in 1821. Soon after, he executed for Sir George Beaumont the group of "Psyche and the Zephyrs." After Canova's death, Gibson studied for a time under Thorwaldsen. His life thenceforth was spent at Rome, in faithful labour in his chosen vocation, and in the enjoyment of steadily growing reputation and success as an artist, and the highest esteem and affection as a man. He paid short occasional visits to England, was chosen R.A. in 1833, and R.A. three years later. He was honoured with many commissions from the Queen; and when the Prince of Wales visited Rome in 1857, Gibson was a frequent guest at his table. He was a member of the Legion of Honour, and of many art societies; and a statue was erected to him at Munich by command of King Ludwig. Among his numerous works are statues of the Queen in Buckingham Palace and in the Palace of Westminster; of Huskisson at Liverpool and at Lloyd's Rooms, London; of Sir R. Peel in Westminster Abbey, and of George Stephenson; a group of "Hylas and the Nymphs" in the National Gallery; the "Tinted Venus," one of the attractions of the International Exhibition of 1862; and a great number of

classical and mythological subjects. There are casts of some of his best groups in the Crystal Palace. Gibson was an imitator of the antique, and the critical estimates of his genius and productions vary according to the school the critic belongs to. That he excelled in the style he adopted, and was a highly-cultivated and accomplished artist, is generally acknowledged. He died at Rome, January 27, 1866, and was buried in the English Protestant grave-yard; his funeral being attended by many artists, the members of the various embassies, and a large number both of English and foreign residents and visitors.

GIDDINGS, JOSHUA REED, American statesman, and political and miscellaneous writer, was born at Athens, in Pennsylvania, in 1795. His family removed in 1805 to Ohio. He was brought up to the profession of the law, and was admitted to the bar in 1820. Chosen member of the State Legislature in 1826, he declined re-election, and pursued the practice of the law till 1830, when he was elected a member of Congress. He at once took part zealously with the anti-slavery advocates. For a series of vigorous resolutions which he moved on the "Creole" slave case in 1842, he was formally censured by Congress, and immediately vacated his seat. He was, however, re-elected and sent back to Congress in a few weeks, and remained a member till 1861. In that year he was appointed Consul-General for Canada, which office he filled till his death. His writings consist of a series of political essays, published under the assumed name of "Pacifcus" (1843), a narrative of the sufferings of the negroes and other races of Florida, under the title of "The Exiles of Florida" (1858), a volume of his "Speeches," and a "History of the Rebellion" (1864). Died at Montreal, in Canada, 27th May 1864.

GLENELG, CHARLES GRANT, Lord, British statesman, was born in Bengal in 1773. He was the son of the Right Hon. Charles Grant, a director of the East India Company, and the brother of Sir Robert Grant, Governor-General of Bombay. He studied at Magdalene College, Cambridge, where he became the warm friend of Henry Martyn, the missionary; was called to the bar at Lincoln's Inn in 1807, and the same year entered Parliament as member for the Montrose group of burghs. He was at first attached to the Tory party, and supported Lord Castlereagh; took office as a Lord of the Treasury under Lord Liverpool in 1813, and was appointed successively Chief Secretary for Ireland (1819), Vice-President of the Board of Trade (1823), and President of the same board and Treasurer of the Navy under Canning's administration (1827). He quitted the latter posts at the beginning of the following year; was President of the Board of Control under Earl Grey (1830), and Secretary of State for the Colonies under Lord Mel-

bourne from policy at the Caffirs, and hani's police reputation, tion of office peerage to Cannes, um

GOLDSTON, the greatest was born at at the univ studied hist Von Bohlen Schlegel and Burnout. V materials for philosophy, the epic poe copied man scripts. Es Berlin, he w university, a matter of "Cosmos." willingly left 1849, and ca pose of furth study, and Wilson in pr Sanskrit-Eng resolved to be the Chair of lege, London Notwithstan and his imm work, he ha

bourne from 1834 to 1839. His imprudent policy at the Cape led to a war with the Kaffirs, and his sanction of Lord Durham's policy in Canada destroyed his reputation, and necessitated his resignation of office. His elevation to the peerage took place in 1835. Died at Cannes, unmarried, April 23, 1866.

GODWIN, BENJAMIN, an eminent Nonconformist divine, was born at Bath in 1785. He began to preach in 1805, became pastor of the Baptist congregation at Chilpping-Sodbury, in Gloucestershire, in 1808; removed afterwards to Dartmouth, and then to Great Missenden, in Buckinghamshire, and in 1822 was appointed Classical and Mathematical Tutor at Horton (now Rawdon) College, a post which he held for twelve years. He soon after became pastor of a small congregation there. He took an energetic part in the Anti-Slavery and Reform movements, and in the Roman Catholic and Atheistic Controversies; promoted the establishment of the Bradford Mechanics' Institute, and of the "Bradford Observer," and took a zealous part in reconciling and reuniting the separate branches of the Baptist Mission in India. From 1838 to 1846 he was pastor of the Baptist Church at Oxford, whence he returned to Bradford. Among his published works are—"Lectures on Colonial Slavery" (1830); "Lectures on the Atheistic Controversy," originally delivered at Bradford in 1834, re-delivered there in 1853, and republished the same year; and "Examination of Dr Pusey's Sermon on the Eucharist" (1843). Dr Godwin married in 1806, and died at the village of Rawdon, near Leeds, where he had spent the last sixteen years of his life, on the 20th February 1871.

GOLDSTÜCKER, THEODOR, one of the greatest Sanskrit scholars of his time, was born at Königsberg in 1821. Educated at the university of that city, he first studied history there under Professor Von Bohlen, afterwards at Bonn under Schlegel and Lassen, and at Paris under Burnouf. While at Paris he collected materials for a great work on Indian philosophy, and for a new edition of the epic poem, the "Mahābhārata," and copied many important Vedic manuscripts. Establishing himself next at Berlin, he was engaged as a tutor at the university, and assisted Humboldt in the matter of Hindu philosophy, in the "Cosmos." As a Liberal in politics, he willingly left Berlin after the reaction of 1849, and came to England for the purpose of further prosecuting his favourite study, and also of assisting Professor Wilson in preparing a new edition of his Sanskrit-English Dictionary. He soon resolved to settle here, and in 1852 accepted the Chair of Sanskrit at University College, London, which he held till his death. Notwithstanding his profound learning and his immense industry and capacity for work, he has left few published works

behind. So high was his ideal, so modest his estimate of his own attainments, so severe his conscientiousness, so complete his indifference to literary reputation, that he could hardly ever be induced to give the fruits of his labour to the world. His greatest undertaking, the Sanskrit Dictionary, assumed such vast proportions that its completion in any lifetime became impossible. Six parts only, leaving the first letter unfinished, appeared between 1856 and 1863. His other works are—a German translation of the "Eradodha Chandrodaya" (1842), "Panini, and his Place in Sanskrit Literature" (1861), an important essay on the "Mahābhārata" (1868), and a lecture "On the Deficiencies in the Present Administration of Hindu Law" (1871). Professor Goldstücker contributed to the "Westminster Review," the "Reader," the "Athenaeum," the "English Cyclopaedia," and Chambers's "Encyclopaedia." For the last-named work he wrote all the articles on Hindu philosophy and mythology. During the last two years of his life he superintended the production, for the Indian Government, of a photo-lithographic edition of the "Mahābhāshya," a commentary on Panini. In 1866 he originated the Sanskrit Text Society. He was an active member of the Philological Society, and was chosen president in 1871. Died in London, 6th March 1872.

GOLTZ, BOGUMIL, a distinguished humourist and moralist, was born at Warsaw in 1801. He was of a German family. Brought up to an agricultural life, his passion for knowledge led him, in 1822, to study at the University of Breslau. In the following year he married and settled near Thorn. Unprosperous for some years, he at length, about 1830, devoted himself to his studies and literary work. He removed to Thorn in 1847. In that year appeared his first work, the "Buch der Kindheit," which was followed immediately by "Deutsche Entartung in der lichtfreundlichen und modernen Lebensart." In 1850 appeared "Das Menschendasein in seinen weltweiten Zügen und Zeichen;" in 1852, "Ein Jugendleben: biographisches Idyl aus Westpreussen." Among his other works, all marked by great originality and power of thought, are—"Der Mensch und die Leute" (1858), "Die Deutschen," "Feigenblätter," "Zur Charakteristik und Naturgeschichte der Frauen," "Die Bildung und die Gebildeten," &c. Died about November 1870.

GOODALL, EDWARD, an eminent engraver, was born at Leeds in 1795. He is especially distinguished for his plates after Turner, and his happy rendering of small landscapes. He was employed in the illustration of many books, especially Rogers's "Italy" and his "Poems." Among his larger plates are Turner's "Cologne," "Tivoli," "Caligula's Bridge," and "Richmond Hill;" and of his numer-

ous other works may be named several plates in Turner's "England and Wales," "Dunbar Castle," "Florence," &c. He was the father of the distinguished painter, Mr Frederick Goodall, R.A. Died in London, 11th April 1870.

GOODSIR, JOHN, a distinguished Scottish anatomist, was born in Fifeshire in 1814. His father and grandfather, both of the same name, were also of the medical profession. At the age of thirteen he was sent to the University of St Andrews, and three years later began to study medicine at Edinburgh. He numbered among his student friends the afterwards distinguished Professor Forbes, and was with him among the numerous pupils of Robert Knox. Licentiate of the College of Surgeons, Edinburgh, he practised for a time in the country, and in 1841 settled in the capital as Curator of the Museum of the College of Surgeons. Two years later he took a similar post at the University Museum, and after holding for a time the post of Demonstrator of Anatomy, he was called in 1846 to the professorship of that science. He set himself, and very successfully, to raise the standard of anatomical teaching in the university, continuing at the same time to devote any spare time to original scientific work. By his incessant labours he overstrained his bodily powers and mental energies, and in 1853 was compelled to take a year's holidays, which he spent in a visit to France and Germany. The rest of his life was one courageous struggle against ill health, and before Christmas 1866 he had finally to retire. Three months later he died at Edinburgh, 6th March 1867. A collection of his valuable "Anatomical Memoirs," edited by his successor in the chair of anatomy, Dr Turner, with a memoir by Dr Lonsdale, appeared in 1868.

GORTCHAKOFF, PRINCE PETER DMITRIYICH, Russian general and statesman, was born at Moscow in 1789. He was a brother of Prince Michael Gortchakoff, and was descended from an ancient noble family. Entering the artillery of the Imperial Guard in 1807, he soon saw active service, being engaged in Finland in 1809, and in the Turkish war of 1810. After assisting for a short time in the editorship of the "Military Journal" of St Petersburg, he took part in the great French war of 1812-14. He was chosen to carry to the Czar Alexander the report of the passage of the Beresina, and afterwards accompanied Wittgenstein in the campaigns which ended with the capture of Paris. He next joined the army of the Caucasus, where he took a distinguished part in the suppression of the formidable revolt of 1820, and for his services was promoted Major-General, and appointed Governor of Imeritia. This post he held for five years, before the close of which period he had vigorously suppressed the Abkhasian revolt. In

1826 he was appointed Quarter-Master General, and called to take part in the Turkish war, in which he especially distinguished himself at the attack on Shumla, and in the advance on Adrianople in 1829. Prince Gortchakoff was appointed in 1836 Governor-General of Western Siberia, a post which he held for fifteen years. Under his able and beneficent administration the resources of the country were largely developed, the hardships of the recruiting system alleviated, and facilities for colonization increased. About 1851 he resigned and retired to Moscow and private life. The Crimean war recalled him to action, and he took part as leader of the Vladimir Regiment at the battle of the Alma. In 1855 he quitted the army, and was made a member of the Imperial Council. Two years later, on the fiftieth anniversary of his entering the army, he was named Commander of the Vladimir Regiment. He spent the last five years of his life at Moscow, and died there in April 1868.

GOUGH, HUGH, Viscount, British field-marshal, was born at Woodstown, in County Limerick, Ireland, in 1779. He entered the army in 1794, and in the following year was engaged in active service at the Cape of Good Hope, whence he passed to the West Indies. He served at the attack on Porto Rico, at the capture of Surinam, and in the brigand war in St Lucia. Having attained his majority, he joined in 1809 the army under Wellington in the Peninsula, and took a brilliant part in the operations against Soult at Oporto. At Talavera he was severely wounded, and had a horse shot under him. For his conduct on that occasion he was promoted lieutenant-colonel, his commission being antedated from the day of Wellington's despatch recommending it. He was thus "the first officer who ever received brevet rank for services performed in the field at the head of a regiment." At Barossa his regiment captured a French eagle; at the defence of Tarifa he was again wounded, and at Vittoria his regiment captured the baton of Marshal Jourdan. He was severely wounded at Nivelle, and received soon after the gold cross, and was made a knight of the Spanish Order of St Charles. After the conclusion of peace he held for a time command in Ireland, and in 1830 attained the rank of major-general. Sent out in 1837 to take command of a division of the Indian army, he was called in March 1841 to the post of Commander-in-Chief of the British Forces in China. He led the attack on Canton, sailed up the Yang-tse-Kiang, captured or destroyed many towns and fortresses, including Amoy, Chusan, Shanghai, &c., repeatedly routed Chinese armies, and was prepared to storm Nankin, when a treaty of peace was concluded there in August 1842. For his services he was created a baronet and G.C.B., and received the thanks of both

Houses of Sir Hugh mander-in India, and conducted Maharras great victo and the fo the Sikh w Hardinge, him. Houses of Parliament. In August 1843 Sir Hugh Gough was appointed Commander-in-Chief of the British Forces in India, and in the following December he conducted the campaign against the Maharrats, and terminated it by the great victory of Maharajpore. In 1845 and the following year he was engaged in the Sikh war, the Governor-General, Lord Hardinge, volunteering to serve under him. In three memorable battles, closely following each other, at Moodkee, Ferozeshah, and Sohraon, the Sikhs were defeated, and peace was dictated at La'hore. For his services in that war he was raised to the peerage, as Baron Gough, and again received the thanks of Parliament. The war having broken out afresh in 1848, Lord Gough once more took the field against them, and displayed the dash and decision of a younger soldier. He fought and defeated them at Ramnugger, Chillianwallah, and Guzerat, their power being completely broken in the last battle. Lord Gough, on his return home, was created a viscount, was awarded a pension of £2000 a year by the Government, and an equal pension by the East India Company, and a third time received the thanks of Parliament. He did not again undertake active service. In 1854 he became Colonel of the Horse Guards, and two years later was sent to the Crimea to invest Marshal Pelissier and other officers, French and British, with the insignia of the Bath. He was subsequently made Knight of St Patrick, a Privy Councillor, and a Knight Grand Commander of the Star of India; and in 1862 received the bâton of Field-Marshal. Lord Gough married in 1807, and, losing his wife a few years before his death, married again. He left a family by each wife. Died, 2d March 1869.

GRAHAM, THOMAS, a distinguished chemist, Master of the Mint, was born at Glasgow in 1805. He was educated at the High School and at the University of his native town, where he graduated M.A., and then continued his studies for two years at Edinburgh University. In 1829 he was appointed lecturer on chemistry at the Mechanics' Institution, Glasgow, and in the following year was called to the chair of Chemistry at the Andersonian University, a post which he filled for seven years. It was during this period that he made important experiments on the diffusion of gases, and discovered the law of diffusion, for which the Keith prize of the Royal Society of Edinburgh was awarded to him. In 1836 he was elected F.R.S. In 1837 he removed to London, on being appointed Professor of Chemistry at the University (now University College). He was one of the founders, and was chosen first president, of the Chemical Society, in 1840. The same year he received the gold medal of the Royal Society for his researches and discoveries on the character of phosphoric

acid and the constitution of salts. In 1846 he was chosen first President of the Cavendish Society. He was a member of the Royal Commission of that year on the Ventilation of the Houses of Parliament, and of the Commission of 1847 on the Casting of Guns. He again received the Gold Medal of the Royal Society in 1850, and delivered the Bakerian Lectures the same year, and again in 1854. In these lectures he announced his discovery of *Osmosis* (the diffusive force of liquids). Professor Graham was a corresponding member of the French Institute, and a foreign member of the Academies of Sciences of Berlin, Munich, Turin, and Washington. In 1853 the honorary degree of D.C.L. was conferred on him by the University of Oxford. His masterly work, the "Elements of Chemistry," appeared in 1842. It was translated into German, and a second edition was afterwards published. Died in London, 16th September 1869.

GLATIOLET, LOUIS PIERRE, French physiologist and comparative anatomist, was born at Sainte-Foy, in the Gironde, in 1815. The son of a medical practitioner, he was brought up to his father's profession, and took his degree of M.D. in 1845. Having obtained an appointment in the Natural History Museum of Paris, he became assistant naturalist for comparative anatomy. For six years he lectured on that science in place of M. de Blainville, and afterwards at the Collège de France, on the natural history of organized bodies, in place of M. Duvvernoy. In 1862 he undertook the course of anatomy, comparative physiology, and geology at the Sorbonne, and in the following year was nominated professor. He was a member of various scientific bodies, and a chevalier of the Legion of Honour. Died, 16th February 1865.

GRATRY, AUGUST JOSEPH ALPHONSE, French Catholic theologian, was born at Lille in 1805. After studying at the Polytechnic School, he entered the Church, and was named in 1841 Director of the Collège Stanislas. Five years later he was appointed Almoner to the Chief Normal School. In 1852 he left that post in order to take part with Abbé Petitot in reorganizing the "Oratorians of the Immaculate Conception." Chosen Vicar-General of the Bishop of Orleans, M. Dupanloup, in 1861, he was appointed two years later Professor of Evangelical Morals at the Sorbonne. Having been publicly censured by the Superior of the Oratorians in 1869, for his adherence with Father Hyacinthe to liberal principles, he appears to have withdrawn from the order. Father Gratre was author of a course of philosophy which appeared in 1855-57, in three parts, entitled—"De la Connaissance de Dieu," "Logique," "De la Connaissance de l'Âme." Amongst his other writings are—"La Philosophie du Credo" (1861), "Jésus-Christ, réponse à

M. Renan" (1864). "Le Morale et la Loi de l'Histoire" (1868), &c. M. Graty was a chevalier of the Legion of Honour and a member of the French Academy. Died at Montreux, in Switzerland, 6th February 1872.

GRAY, DAVID, a young Scottish poet, was born on the banks of the Luggie, not far from Glasgow, in 1838. His parents were poor handloom-weavers. He was educated at the parish school of Kirkin-tilloch, displayed a precocious intelligence, and was intended for the ministry of the Free Church. After studying at Glasgow University, he renounced theology, and indulged in writing verses, some of which appeared in the "Glasgow Citizen." Bent on a literary life, and possessed with a strange confidence in himself as a born poet, he sought aid of various men of letters towards getting his poem published; and in May 1860 he came to London, about the same time with his friend Robert Buchanan. Among those who showed him kindness and gave him wise counsel were Mr Sydney Dobell and Mr Monckton Milnes (Lord Houghton). Illness soon compelled him to return home. It was hopeless consumption; and after much suffering, especially from the disappointment of his high hopes, he died in his father's house, 3d December 1861. One specimen page of his poem in print had reached him the day before. He was buried in the Auld Isle burying-ground, near Merkland, his favourite place of resort. The few productions of his fine genius appeared under the title of "The Luggie and other Poems," in 1862, with a memoir by his friend Hedderwick, and a notice by R. M. Milnes, M.P. In 1865 a granite monument was erected over his grave by public subscription, the inscription being written by Lord Houghton. The father of the young poet soon followed him to the tomb.

GRAY, GEORGE ROBERT, a distinguished naturalist, assistant keeper of the Zoological Department of the British Museum, was born at Chelsea in 1808. He was a son of Mr S. F. Gray, and a brother of Dr John Edward Gray of the British Museum. He first entered the Natural History Department of the museum in 1831, and was employed in the preparation of several of the catalogues of the natural history collections. He became Assistant Keeper of the Zoological Department three years before his death. He was author of several works on Entomology, but his most important work is the "Genera of Birds," in 3 vols., published between 1844-49. He was a Fellow of the Royal Society. Died in London, 5th May 1872.

GRAY, ROBERT, bishop of Capetown, was born at Bishop Wearmouth, in the county of Durham, in 1809. He was a son of the Bishop of Bristol, and was educated at Eton, and University College, Oxford, where he took his degrees of B.A.

in 1831, and M.A. three years later. About the same time he took holy orders, and after holding a perpetual curacy and a vicarage, he was made honorary canon of Durham, and in 1847 promoted to the new Bishopric of Capetown. His name was chiefly known in connection with the grave dispute between him and Dr Colenso, Bishop of Natal. He assumed, as metropolitan, to depose Dr Colenso as a heretic, and a long tedious course of litigation followed. The result was that his act was declared to be illegal. He then undertook, in January 1869, to consecrate another bishop at Capetown, "for the clergy of the diocese of Natal," disregarding the protest made by a large number of persons at the time as invalid. Dr Gray published several of his Charges, journals of his visitations, and pamphlets on the dispute about the See of Natal. Died at Capetown, 1st September 1872.

GREELEY, HORACE, founder and editor of the "New York Tribune," was born at Amherst, in the state of New Hampshire, U.S., in 1811. He was the son of a small farmer, worked for five years in the fields, and at the age of fourteen was apprenticed to a printer at Putney, in Vermont. In 1832 he went to New York, obtained soon after a partnership in a printing-house, and started a weekly journal, to which he was chief literary contributor. He became a convert to the doctrines of Socialism as taught by Fourier, and eager to propagate them, established in 1841 the "New York Tribune," of which he was editor till his death. The early extravagance of his views was to some extent corrected by time and experience, and the paper became a powerful organ of the Republican party. In opposition, however, to a large section of that party, Mr Greeley kept up an almost fanatical opposition to free trade. He became a member of Congress in 1848, but was not re-elected. He was long foremost in the ranks of the Abolitionists of Slavery; contributed powerfully to the election of Mr Lincoln to the Presidency; supported the cause of the Union in the war with the South, and at its close opposed severity to the vanquished. The cry for universal suffrage and amnesty originated with him. He visited England in 1851, and was one of the jurymen of the Great Exhibition. In his later years his opinions drew him nearer to the Democratic party. In 1872 he was nominated a candidate for the Presidency of the United States by the Convention of Liberal Republicans at Cincinnati, in opposition to President Grant, and the nomination was accepted by the Democratic Convention at Baltimore. He engaged in the long and bitter contest with heart and soul, but in vain. At the elections in November President Grant was re-elected by an immense majority. sorrow for the loss of his wife, who died about the same time, he fell ill, and died at New York, 20th November 1872. Mr Greeley was author of several works, among which are—"Glances at Europe," a "History of the Struggle for Slavery Extension or Restriction in the United States," "The American Conflict," "Travels in California and Texas," and "Recollections of a Busy Life."

GRESWELL, EDWARD, an eminent English chronologist, was born at Denton, in the parish of Manchester, in 1797. His father, W. P. Greswell, perpetual curate of Denton, was known as author of "Annals of Parisian Typography," and other works. After studying at Manchester Grammar School, he became in 1815 scholar of Brasenose College, Oxford, but soon after was elected to the Lancashire scholarship at Corpus Christi College. In 1818 he graduated B.A. as first-class both in classics and mathematics, took his degree of M.A. and was appointed College Tutor in 1823, and in the following year became fellow of his college. He resigned his tutorship in 1833, and devoted the rest of his life to literary labour, the fruits of which were given to the world in a series of important works on chronology. They are entitled—"Fasti Temporis Catholici" (1852), "Origines Kalendarie Italice," in 4 vols. (1854), "Origines Kalendarie Hellenice," in 6 vols. (1862), and "Prolegomina ad Harmoniam Evangelicam" (1840). He also published "Dissertations on the Principles and Arrangement of a Harmony of the Gospels," "The Three Witnesses and the Threefold Cord," a reply to Dr Colenso's criticism of the Pentateuch, and Greek metrical versions of Milton's "Comus" and "Samson Agonistes." At the time of his death Mr Greswell was Vice-President of his college. Died at Oxford, 29th June 1869.

GRILLPARZER, FRANZ, a celebrated German poet and dramatist, was born at Vienna in 1791. He was the son of an advocate, and was educated for the profession of the law. After completing his studies he was engaged for a year or two as private tutor, and in 1813 obtained an appointment in the public service. Passing through various offices he rose to be Director of Archives to the Imperial Chamber in 1833, Court Councillor in 1836, and Imperial Councillor for life in 1861. His life passed quietly, hardly broken by any incidents more memorable than occasional travel in Italy, Germany, Turkey, and Greece. He first made himself a name as poet in 1816, by the publication of his tragedy, "Die Ahnfrau." It was followed by "Sappho" (1819), "Das Goldene Vliess" (1822), "Des Meeres und der Liebe Wellen" (1840), and the historical tragedy, "König Ottokars Gluck und Ende" (1852). Besides these, he published "Ein treuer Diener seines Herrn;" a comedy, entitled "Wehe dem der lügt;" a dramatic tale, "Der Traum,

ein Leben;" a novel, "Der Spielmann;" and a poem, entitled "Radetzky" (1848). Grillparzer was never married. Early in life he found a warm friend in Councillor Fröhlich, and became almost one of his household. Fröhlich had three daughters, and after the death of him and his wife, the poet lived with the orphans, giving up the hope once cherished of marriage with one of them, but for the rest of his life calling the second sister, Kathi, his "liebe Braut." He left to her his literary remains and other property. Died at Vienna, 20th January 1872. At his funeral, which was conducted with great ceremony, an oration was delivered by Heinrich Laube.

GRISI, GIULLA, a celebrated operatic singer, was a native of Milan. The date of her birth is variously stated as 1808, 1810, 1812, and even later still. She was one of a family of singers, and made her first appearance on the stage at Bologna, where Rossini heard her and predicted great things of her. She soon passed to Florence, and thence to the "Scala" of Milan. In 1839 she first appeared at the Opera, Paris, and shone unrivalled in "Semiramide," "Anna Bolena," "Don Giovanni," and "I Puritani." She appeared at the King's Theatre, London, in 1834, and during the next twenty years spent the winters at Paris, and the summers in London. In 1854 she visited America, resuming her place in London on her return. The failure of her powers compelled her, though with infinite reluctance, to quit the stage in 1866. Her singular beauty of feature, sweet yet penetrating voice, unflinching vivacity and energy, gave her irresistible power to charm, and secured to her a long career of almost uninterrupted triumph. Died at Berlin, 25th November 1869. Her remains were interred in the cemetery of Père la Chaise, at Paris.

GROTE, GEORGE, the historian of Greece, philosopher and politician, was born at Clayhill, near Beckenham, in Kent, in 1794. He was educated at the Charterhouse School, and in his fifteenth year entered the banking house of Prescott, Grote, & Co., of which his grandfather was one of the founders. Devoting his leisure hours to his classical studies, and in association with James Mill to the science of political economy, he conceived at an early age the project of re-writing the history of Greece, in a spirit which should harmonize with modern criticism, and with the fulness of information made possible by the immense advances of the Germans in the study and knowledge of ancient times. Mitford's work had been completed in 1818, and five years later Mr Grote began to collect materials for his own. For some years, however, the earnest interest which he took in politics, especially in the agitation for reform in Parliament, interrupted his prosecution of his chosen task. In 1821 he published a "Statement of the Question of Parlia-

mentary Reform," and in 1832 another pamphlet on the "Essentials of Parliamentary Reform." Elected M.P. for the City of London in 1832, he sat in Parliament for nine years, during which period he took the lead in advocacy of the ballot in parliamentary elections, discussed the currency, &c. Retiring from public life in 1841, he resumed his labours as historian. The first two volumes of his great work, the "History of Greece," appeared in 1846; the twelfth volume completing it, and bringing the story down to the death of Alexander the Great, was published in 1856. Its thoroughness of scholarship, its critical acumen, its comprehensive views, practical knowledge of men and affairs, and its remarkable independence of thought, won for it hearty recognition as a masterpiece not only of English but of European historical literature. It has been translated into German and French. In 1865 Grote gave to the world an important contribution to philosophy in his elaborate work entitled "Plato and the other Companions of Socrates." At the time of his death he was engaged on a similar study of Aristotle and his school, which has been since edited by Dr Bain. Mr Grote was one of the earliest contributors to the "Westminster Review," and in his later years wrote frequently for the "Quarterly." He took a warm interest in the London University from its establishment, was a member of its senate, and from 1860 Vice-Chancellor. Two years before his death he was chosen President of University College. A corresponding member of the French Institute from 1848, he was named Foreign Associate in 1861. He was also a trustee of the British Museum. He married in 1820. Died in London, 18th June 1871, and was buried in Westminster Abbey.

GROTE, JOHN, philosopher, was born at Beckenham, in Kent, in 1813. He was a younger brother of the historian of Greece. He completed his education at Trinity College, Cambridge, where he took his degrees of B.A. in 1835, and M.A. in 1838. Elected soon after Fellow of his college, he held the fellowship till his death. He was presented to the vicarage of Trumpington in 1847, and was called to the chair of Moral Philosophy at Cambridge in 1855. Learned, modest, unambitious, and not robust in body, he spent his life in seclusion, his great powers really known to but a few. He published in 1865 a masterly review of modern philosophical theories, entitled "Exploratio Philosophica." After his death appeared his "Examination of the Utilitarian Philosophy" (1870). He also wrote an "Examination of some Portions of Dr Lushington's Judgment." Died at Trumpington, 21st August 1866.

GRUNDTVIG, NIKOLAI FREDERIK

SEVERIN, a distinguished Danish theologian, poet, historian, and politician, was born at Udby, in Zealand, in 1783. He was the son of a pastor there, and after studying at the Gymnasium of Aarhus, passed to the University of Copenhagen, where he completed his theological course in 1803. After being engaged some years as a teacher, he began to preach in 1810, and by his first sermon so much offended the clergy that his name was erased from the list of theological candidates. He then assisted his father for two years, and from 1813 to 1815 preached frequently at Copenhagen, winning golden opinions of the people, and more and more irritating the clergy. He had already become known as an author by his "Nordens Mythologie," his epic-dramatic poem entitled "Optrin af Kampelivets Undergang i Nord," "Rooskilde Blim," &c., and translations of Saxo and Snorro. Appointed preacher at Præstøe in 1821, he was called thence by the king in the following year to be second preacher at the Church of the Saviour at Copenhagen. In 1825 he published a "Protest of the Church against Professor Clausen," a leading Rationalist, and was thereby involved in a lawsuit, and had to resign his post in 1826. He was not permitted to hold meetings with his followers till 1832. Re-appointed preacher at Copenhagen, at the Vartou Hospital, in 1839, he began to take an eager part in politics. In 1848 he was a member of the Diet, and afterwards of the Volksting, and vigorously opposed the German claims on the Duchies. He prevented the establishment of a Supreme Council for the State Church, and procured the abolition of the law respecting the compulsory baptism of infants. Subsequently he desired to promote a reconciliation with the Germans, and published in 1861 his "Versöhnung mit Deutschland." Among his works, in addition to those already named, are—"Kort begreb af Verdenskrønike" (1812), "Haandbog i Verdenshistorien" (1833-43), "Sangvark til den danske Kirke," and "Nordiske Smaadigte." In 1825, in conjunction with Professor Rudelbach, he founded the "Theologisk Maanedskrift," and later originated the "Danske Kirketidende," the chief organ of his party. Two collections of his sermons have been published. Grundtvig was at first the champion of primitive Lutheranism against the prevalent Rationalism, but later he departed from Lutheranism, proclaimed a new basis of dogmatic belief, and became the founder of a sect which has grown into considerable importance in the Scandinavian countries. He rendered immense service to his country by his unwearied endeavours to promote and improve popular education. Died, in August or September 1872.

HALLECK, HENRY WAGER, American general, was born near Utica, New York State, in 1819. He was educated at Union College, whence he passed to the Military Academy at West Point. Having graduated there in 1839, he took the rank of second lieutenant of engineers, and was assistant professor of engineers from July 1839 to June 1840. Raised to the rank of first lieutenant in 1845, he served soon after in California and in Mexico, took part in framing the constitution of California, and was promoted captain of engineers in 1853. He soon after withdrew from the army, and practised the law at San Francisco till the summer of 1861, when he re-entered the service, and distinguished himself on the side of the North in the war of secession. In November of that year he was charged with the Department of the West, and promoted Major-General. He maintained rigorous discipline among his troops, and treated with unrelenting severity the negroes, all rebels, and all who succoured them. In March 1862 he was placed at the head of the Department of the Mississippi; besieged and took Corinth, occupied Chattanooga, and in July was appointed Commander-in-Chief. Two months later he was called to the post of Secretary of State for War, which he held till March 1864. General Halleck was author of a work entitled "Elements of Military Art and Science." Died at Louisville, in Kentucky, 9th January 1872.

HAMPDEN, RENN DICKSON, bishop of Hereford, was born in Barbadoes about 1792. After studying at Codrington College in his native island, he came to England and entered Oriel College, Oxford, in 1810. He took his degree of B.A. in 1813, obtaining a first class both in the classical and mathematical schools. In 1814 he was elected Fellow of Oriel, and was there the contemporary of Whately and Arnold, Keble, Newman, and Pusey. He became tutor of his college soon after, and was examiner in the schools in 1829-30, and again in 1831-32. In 1832 Hampden was Bampton Lecturer, and delivered a course on "The Scholastic Philosophy considered in its Relation to Christian Theology." These lectures raised a storm against him. They were denounced as heretical, and it was rumoured that the lecturer had been assisted by Mr Blanco White. In 1833 he was nevertheless appointed Principal of St Mary's Hall, and in the following year Professor of Moral Philosophy. On the death of Dr Burton Mr Hampden was called to the Regius Professorship of Divinity, notwithstanding the opposition both of High and Low Church parties, and in spite of a vote

of censure passed on him by the University Convocation on account of his Bampton Lectures. In 1842 he was a member of the Theological Examination Board. In 1847 he was elected bishop of Hereford. A vigorous opposition was raised to this appointment, even the bishops joining in a written expression of disapproval. Bishop Hampden was a profound thinker, a great scholar, an enthusiastic student. But he was not a practical man, and little was heard of him after his elevation to the Episcopate. He lost his wife in 1865, and died in London, 23d April 1868. He published, besides the Bampton Lectures, "Lectures Introductory to the Study of Moral Philosophy," and a work on the "Fathers of Greek Philosophy."

HANNAH, JOHN, Wesleyan Methodist divine, twice President of the Conference, was born at Lincoln in 1792. He entered the ministry in 1814, and continued to labour on the circuit for twenty years. In 1834 he was appointed Divinity Tutor of the new Theological Institution at Hoxton, whence he removed in 1842 on being called to the like post at the Northern Branch of the Institution at Didsbury, near Manchester. The duties of that office he continued to discharge till his death. He was on several occasions Secretary to the Conference, and in 1842 was chosen President. He was elected President a second time in 1851. In early manhood he was sent as joint-representative of the British Conference to the Conference of the Methodist Episcopal Church in America. He visited America again in 1856 in the same capacity. Died at Didsbury, 29th December 1867.

HANNAY, JAMES, Scottish novelist and miscellaneous writer, was born at Dumfries in 1827. At thirteen he entered the navy as a volunteer, but after five years' service quitted it, and soon after, settling in London, applied himself to literature as a profession. In 1857 he was an unsuccessful candidate for the Dumfries burghs, and three years later, on being appointed editor of the "Courant," removed to Edinburgh. He resigned the editorship in 1864, and accepted in 1868 the appointment of British Consul at Barcelona. His first novel was "Singleton Fontenoy," which appeared in 1850. A second, entitled "Eustace Conyers," followed in 1857. In the meantime he had published "Sketches in Ultramarine," and lectured in London on "Satire and Satirists." He contributed many brilliant and charming articles to the "Quarterly Review," a collection of which was published separately in 1861. His other works

are a "Course of English Literature," "Three Hundred Years of a Norman House," "Characters and Criticisms," and "Studies on Thackeray." Died suddenly, at Barcelona, 9th January 1873.

HARDWICK, PHILIP, an eminent architect, was born in London in 1792. He was the son of an architect, and after studying in his father's office, he became a student at the Royal Academy in 1808. His first public appointment, that of architect to Bethlehem and Bridewell Hospitals, was obtained in 1816. He held it for twenty years. In 1818 he set out on a tour in France and Italy. He was a few years later appointed architect to the St Katherine's Dock Company, in 1827 to St Bartholomew's Hospital, and in 1829 to the Goldsmiths' Company, for whom he designed and erected their new hall, opened in 1835. He was elected A.R.A. in 1839, and R.A. in 1841. He had been F.R.S. from 1828. Mr Hardwick was one of the founders of the Royal Institute of British Architects, received their gold medal, and held the office of Vice-President. Among his works are the gateway to Euston Station of the London and North-Western Railway, and the New Hall and Library of Lincoln's Inn. In 1868 he became an honorary retired Academician, and died at Wimbledon, near London, 28th December 1870.

HÄRING, WILHELM, one of the most distinguished German novelists, was born at Breslau in 1797. He served as a volunteer in the French campaign of 1814, and at the sieges of the fortresses of the Ardennes, and afterwards studied law at Berlin and Breslau. After some years of official life he retired and devoted himself entirely to literature. He visited Italy in 1847, witnessed the agitations at Florence, Rome, and Naples in 1848, and the same year returned to Berlin. In 1852 he took up his abode at Arnstadt, in Thuringia. He published his first novel, "Walladmor," about 1825, under the name of "Walter Scott," and thus gave rise to much puzzled speculation. It was translated into English and several other languages. Under the same name appeared "Schloss Avalon" in 1827. Meanwhile, the author had contributed some tales to periodicals, under the pseudonym of "Wilibald Alexis," and by this he was long known. These tales were published in a collected edition in 1830-31, and were followed by another collection in 1836. Among his subsequent novels are—"Das Haus Dusterweg," "Zwölf Nächte," "Cabanis," "Der Roland von Berlin," "Der falsche Waldemar," "Isegrimm," &c. Häring was also author of several books of travel: "Herbstreise durch Skandinavien," "Wanderungen im Süden," "Wiener Bilder," &c. In conjunction with Hitzig he edited many volumes of a series of criminal "Causes Célèbres," under the title of "Der neue Pitaval." Died, December 1871.

HARRIS, SIR WILLIAM SNOW, F.R.S., the accomplished electrician, inventor of a new method of constructing lightning conductors, was born at Plymouth in 1792. He was educated at the Grammar School of his native town and at the University of Edinburgh, and entered upon the medical profession; but he gave up practice after a few years for the sake of devoting himself entirely to science. He made in 1820 his important discovery of the method of conducting lightning discharges by means of broad copper plates, with which all metallic masses in the ship or the building are brought into connection. Admitted F.R.S. in 1831, he received, four years later, the Copley medal. His method of conduction was not adopted in the navy till 1843, and its value is shown by the fact that damage by lightning has since been unknown in Her Majesty's ships. For his scientific services he received a pension of £300 in 1841, and was knighted in 1847. He was appointed in 1860 scientific referee of the Government on all matters connected with electricity, and in that capacity superintended the fitting of his conductors to the royal palaces, the houses of parliament, powder magazines, and other public buildings. Sir W. S. Harris was also the inventor of an improved mariner's compass, and of a method of lightning conductors for iron ships. He was author of various treatises on electricity, thunderstorms, and electro-magnetism, and at the time of his death was engaged on the preparation of a new work on "Electricity in Theory and Practice." Died, January 1867.

HARNESSE, WILLIAM, Church of England divine and miscellaneous writer, was born in Hampshire in 1790. He studied at Christ's College, Cambridge, and graduated B.A. in 1813. He soon after took holy orders, was Boyle Lecturer in 1822, and three years later was appointed minister of Regent Square Chapel, St Pancras, where he officiated for twenty years. In 1848 he was presented to the vicarage of All Saints, Knightsbridge, and was subsequently made Prebendary of St Paul's, and was appointed Clerical Registrar to the Privy Council. He was the friend and associate of Byron, Moore, Southey, Wordsworth, Joanna Baillie, Miss Mitford, the Kembles, and other eminent persons; was a great lover of the theatre; wrote plays, articles in periodicals on the church, the poor, &c. In 1825 he published an edition of "Shakespeare." His last literary labour was the Memoir of his friend, Miss Mitford (1870), prepared in conjunction with Mr L'Estrange. Died at Battle, 11th November 1869. A "Literary Life" of him, published by Mr L'Estrange, appeared in 1871.

HARTMANN, MORITZ, German poet, politician, and miscellaneous writer, was born in Bohemia in 1821. He was educated at the Universities of Prague and

Vienna, a land, and a tutor at intimate 1844 he was published, entitled, by its ard excited m the suspic To escape France, re to Vienna year. Vienna, and after a visit to Italy, Switzerland, and South Germany, became private tutor at Vienna. He was there the intimate friend of Nicholas Lenau. In 1844 he went to Leipsic, and soon after published his first volume of poems, entitled "Kelch und Schwert," which by its ardent sympathy with liberal ideas excited much attention, and drew on him the suspicion of the Austrian government. To escape danger he went to Belgium and France, returning to Leipsic in 1847, and to Vienna about the close of the same year. Proceedings were commenced against him, but he escaped, and soon after the revolution broke out. At Prague he was the head of the German party, and was elected Deputy to the National Assembly at Frankfort, in which he was an active member of the Left. With Blum and others he succeeded in pacifying the people during the days of September 1848. The next month he was sent with Blum to Vienna, to take part in the insurrection, and he served to the last under General Bem. After the capture of Vienna he escaped to Frankfort, and there published his satirical poem, the "Reimchronik des Pfaffen Mauritius," which had immense popularity. In May 1849 he went to Stuttgart, and after the dissolution of the remains of the parliament, left Germany, wandering in Switzerland, England, Ireland, Scotland, and France. In 1854 he went to the Crimea, as correspondent during the war of the "Cologne Gazette." After further wanderings he settled in 1860 at Geneva, and gave lectures on German literature and history at the Academy. In 1863 he went to Stuttgart. Among his numerous writings are—"Der Krieg um der Wald," "Adam und Eva," "Schatten," "Tagebuch aus der Provence und Languedoc," "Erzählungen eines Unsteten," "Novellen," &c. Died at Vienna, 18th May 1872.

HARVEY, WILLIAM, an eminent engraver and designer, was born at Newcastle in 1796. He was apprenticed at the age of fourteen to his distinguished fellow-townsmen, the wood-engraver, Thomas Bewick, whom he largely assisted in his edition of "Æsop's Fables;" and after seven years' service came to London in 1817, and pursued his art-studies under Haydon. His cut from Haydon's "Death of Dentatus" was executed in 1821, and is one of the largest and most admirable wood-engravings ever produced. In 1824 Harvey abandoned engraving, and thenceforth applied himself wholly to book illustration. He was an indefatigable and conscientious worker, and displayed in his very numerous designs not only accurate observation of animal forms and life, but also a very fertile imagination. One of his most important undertakings was the illustration of Lane's translation of the "Arabian Nights." Died at Richmond, where he had long lived, January 13, 1866.

HAY, DAVID RAMSAY, writer on decorative art, was born at Edinburgh in 1798. He learnt the business of house-painting, which he carried on throughout his life, but in conjunction with it seriously pursued the study of decorative art, and especially investigated the science of colour, the principle of beauty in form, the science of proportion, &c. His published works are very numerous. Among them are—"The Laws of Harmonious Colouring" (1828), his first work, which passed through six editions, "Natural Principles and Analogy of the Harmony of Form" (1842), "Proportion," "Nomenclature of Colours" (1846), "Geometric Beauty of the Human Figure Defined" (1851), "Harmonic Law of Nature applied to Architectural Design" (1855), &c. In his earlier years Mr Hay was employed by Scott in the decoration of Abbotsford, and at a later time he designed and executed the decorations of the hall of the Society of Arts, London. Died at Edinburgh, 10th September 1866.

HAYTER, Sir GEORGE, Principal Painter in Ordinary to Queen Victoria, was born in London in 1792. As early as 1815 he was named miniature painter to the Princess Charlotte. He studied during the following three years at Rome, and was admitted to the Academy of St Luke. In 1826 he again visited Italy, and also France, returning in 1831. He was appointed Historical Painter to the Queen in 1837, and four years later, Principal Painter in Ordinary. His works consist chiefly of portraits, and a few historical pieces. Died in London, 18th January 1871.

HEAD, Sir EDMUND WALKER, Baronet, Governor-General of Canada, writer on art, was born near Maidstone in Kent, in 1805. He studied at Oriol College, Oxford, took his degree of B.A., as first-class in classics, in 1827, and was chosen Fellow of Merton College. He took his Master's degree in 1830, and was afterwards University Examiner. On the death of his father he succeeded to the baronetcy, and in 1841 he was nominated a Poor Law Commissioner. He held the office of Lieutenant-Governor of New Brunswick from 1847 to 1854, and was advanced in the latter year to be Governor-General of Canada, which post he filled seven years. As a writer on art, Sir E. Head made himself known by a learned and serviceable "Handbook of the Spanish and French Schools of Painting," published in 1848. He also edited the English translation of Kugler's "Handbook," and contributed the article on "Painting" to the "Penny Cyclopædia." Sir Edward was a Privy Councillor and K.C.B. Died, 28th January 1868.

HENGSTENBERG, ERNST WILHELM, an eminent German theologian, long one of the leaders of the Orthodox Protestant party, was born at Tröndenberg, in Westphalia, in 1802. After studying under his

father, who was a pastor there, he went in 1819 to the University of Bonn, devoting himself at first to philosophy and Oriental languages. In 1823 he removed to Basel, and the influences under which he came in that city drew him to theology and to the theological party to which he adhered through life. In the following year he was appointed *Privat-Dozent* of Theology at Berlin, in 1826 Professor Extraordinary, and two years later Ordinary Professor of Theology, in association with Schleiermacher, Neander, and Marheineke. He took his degree of D.D. in 1829. As editor of the "Evangelische Kirchenzeitung" from its commencement in 1827, Dr Hengstenberg exerted a powerful influence on the theological discussion, and on affairs of Church and State. He took his stand on the strict Lutheran dogmas, resisted Rationalism in its mildest forms, sanctioned the persecution of dissidents, and desired the deposition from their chairs of several distinguished Rationalist professors. His influence, however, had considerably declined before his death. The principal works of Dr Hengstenberg, most of them well known in England, are—the "Christologie des Alten Testaments," published in 1829-35, "Beiträge zur Einleitung ins Alte Testament" (1831-39), "Commentar über die Psalmen" (1842-45), "Erläuterungen über die wichtigsten und schwierigsten Abschnitte des Pentateuch" (1842), and works on the "Apocalypse" and the "Gospel of St John," &c. Died, May 1869.

HERSCHEL, Sir JOHN FREDERICK WILLIAM, Bart., the distinguished astronomer, was the only son of Sir William Herschel, and was born at Slough, near Windsor, in 1792. He was educated at Eton and St John's College, Cambridge, where he took his degree of B.A., and was Senior Wrangler in 1813. Deeply interested in the scientific facts and speculations in the midst of which he had grown up, he began his own astronomical researches as early as 1816, and in conjunction with his friend Sir James South, applied himself to the observation of double stars. Their joint memoir, which related to 380 stars, was presented to the Royal Society in 1824, and received first the prize of the French Academy, and afterwards the gold medal of the Royal Astronomical Society. After the death of his father, whose precious collection of instruments then became his own, he spent eight years in laborious researches on the double stars, the result of which appeared in a series of six reports in the memoirs of the Astronomical Society, presented between 1825 and 1832. In 1833 he communicated to the Royal Society a catalogue of nebulae and star-clusters, the fruit of the examination of 2000 of those bodies. The same year he matured a plan he had long cherished of visiting the Cape for the purpose of making a similar survey of the southern hemi-

sphere, and with the same instruments as he had already used for the northern. He reached the Cape in January 1834, and soon commenced his labours, which lasted four years. His observations were of the most varied and comprehensive character, and furnished new and valuable results, not only for astronomy but for meteorology. He returned to England in 1839, and nine years later appeared the magnificent work embodying those results. Honours of all kinds were conferred on him. He had been made a knight of the Hanoverian Order, had received the gold medal of the E. A. S. a second time, and had been created a baronet; he now received the honorary degree of D.C.L. from Oxford University, and was chosen President of the R.A.S. At the close of 1850 he was appointed Master of the Mint, an office which he filled about five years. Sir John Herschel's contributions to the literature of science are numerous and valuable. The principal are—the treatises "On Physical Astronomy," "On Light," and "On Sound," in the "Encyclopædia Metropolitana;" the well-known "Treatise on Astronomy" in Lartner's Cabinet Library (1832), which was enlarged and re-named "Outlines of Astronomy," and has been translated into various languages, including Russian, Arabic, and Chinese; the philosophic "Preliminary Discourse on the Study of Natural Philosophy," also in the Cabinet Library (1831); a "Manual of Scientific Inquiry" (1849), prepared especially for the use of the Navy; a volume of "Essays," reprinted from the "Quarterly Review," &c. (1857); a treatise on "Physical Geography," "Familiar Letters on Scientific Subjects" (1866), and a translation of the "Iliad" in hexameter verse (1867). His memoirs contributed to the Philosophical Transactions, and to the proceedings of other scientific societies, are very numerous, and embrace a large variety of subjects. The processes in photography were subjects of his careful study and of several important papers. Sir John Herschel married in 1829. Died at Collingwood, near Hawkhurst, 11th May 1871, and was buried in Westminster Abbey.

HERTSLET, LEWIS, Librarian in the Foreign Office, was born in 1787. He obtained the appointment of sub-librarian in the Foreign Office, London, in 1801, and was promoted to be Librarian and Keeper of the Papers in 1810. This post he held for fifty-six years, retiring on a pension in November 1857. His name is widely known as the compiler of "Hertslet's Treaties," a collection of treaties between Great Britain and foreign powers, and also of a work entitled "British and Foreign State Papers." He died at Westminster, 16th March 1870.

University of Copenhagen to study it, but he disliked and forsook it for literature and poetry. In 1832 he renounced Judaism and became a Protestant, and the same year his name became known as the author of a satirical poem which he had published anonymously two years before. In 1833, the travelling pension for young men of letters being awarded him, he visited the principal countries of continental Europe. His principal works are—"Lustspil," "Letters of a Ghost," "Svend Dyrings Haus," "King René's Daughter," and "Lyrical Poems." Died at Copenhagen, 25th February 1870.

HERVEY, THOMAS KIBBLE, poet and miscellaneous writer, was born probably at Paisley in 1799, and was taken with the family to Manchester in 1803. He began to study for the bar, but abandoned the law, and entered Cambridge University about 1818. He left without taking a degree, and about 1824 settled in London and entered on a literary life. His first essay in authorship was a poem entitled "Australia," written in competition for the University Prize. In 1832 he commenced a poetical work entitled "Illustrations of Modern Sculpture," which was left unfinished. He edited "Friendship's Offering" for 1826, the "Book of Christmas" (1837), and "England's Helicon in the 19th Century" (1841). In 1846 he was appointed editor of the "Athenæum," a post which he held eight years. He had been a contributor to that journal for twenty years. He was a contributor to several of the annuals, and during the last years of his life to the "Art Journal." He married in 1843 Eleonora Louisa Montague, also well known as a poetess and tale writer. Mr Hervey died in London, 17th February 1859. A collected edition of his poems, with a memoir by his widow, was published at Boston, U.S., in 1866.

HERZEN, ALEXANDER, a celebrated Russian political and miscellaneous writer, and long the chief of the Russian revolutionary party, was born at Moscow, just before the French entry into that city in 1812. He studied at Moscow University, where he obtained a high degree. In 1834 he was arrested and soon afterwards banished to Viatka, whence he was permitted to return in 1837. He was expelled from Russia in 1842, visited Italy, joined the "Reds" at Paris in 1848, took refuge at Geneva, and soon after came to England, where he remained the greater part of his life. In 1851 he set up in London a Russian printing-press for the publication of such works as were prohibited in Russia. He was a fertile writer, and under the Emperor Nicholas the publications of his revolutionary press passed into Russia in very large numbers. Among Herzen's writings are—"Dilettantism in Science" (1842), "Letters on the Study of Nature" (1845-46), "Who's to Blame?" "Development of Revolutionary

Ideas in Russia" (1851), "Memoirs of the Empress Catherine," "My Exile" (1855), and "Russia and the Revolution" (1860-61). M. Herzen was editor of the magazine named "The Bell" (Kolokol). For several years he lived near Geneva. Died at Paris, 21st January 1870.

HESS, HEINRICH HERMANN JOSEPH, Baron von, Austrian field-marshal, was born at Vienna in 1788. He entered the army in 1805, and was soon after placed on the staff of the quarter-master-general, and employed in trigonometrical operations. He distinguished himself at the battles of Aspern and Wagram in 1809, and was promoted to be captain-lieutenant in the regiment of the Archduke Charles. He resumed his scientific labours till 1813, when he was again in active service. After the peace of Paris in 1814 he was charged with a special mission to Piedmont. In the campaign of 1815 he served with the rank of major under Prince Schwarzenberg. He was next employed as second military commissioner in Piedmont in repressing the political agitation in Upper Italy. He was promoted lieutenant-colonel in 1822, and colonel in 1829. In 1831, as chief of the staff of the quarter-master-general, he accompanied Radetzky to Italy, and rendered services of the highest value in the tactical training and exercise of the troops. He was raised to the rank of major-general and brigadier of the troops in 1834. In 1840 and 1841 he was sent to the South German and Prussian courts to discuss matters relating to the organisation of the forces of the *Bund*. Promoted lieutenant-field-marshal in 1842, he remained attached to the army of Italy, and during the campaigns of 1848-49 contributed powerfully by his strategic plans to the final success of the Austrians. He was rewarded with the Grand Crosses of Leopold and Maria Theresa, was named a Privy Councillor, and in 1850 placed at the head of the general staff of the emperor. In the following years he was sent on military missions to Warsaw, St Petersburg, and Berlin. He negotiated the convention with Prussia during the Crimean War in 1854. After the battle of Magenta he was appointed to supersede General Giulay, and he arranged with the Emperor Joseph the plan of Solferino. He was soon after created field-marshal, and in 1861 was called to the Upper House of the Reichsrath. In the following year he was appointed Chancellor of the Order of Leopold. Died at Vienna, 13th April 1870.

HESS, PETER, a distinguished German painter, was born at Düsseldorf in 1792. He was the eldest son of the engineer, Karl Hess, and at a very early age began to practise his father's art. In 1806 he began to study painting at Munich, applying himself chiefly to genre-painting. For the sake of his art he accompanied the German army in the campaigns of 1813 to

1815, sketching scenes on the spot, and obtaining subjects for some of his best works. He travelled a few years later in Austria, Switzerland, and Italy. In 1833 he accompanied the young King Otho to Greece, in order to commemorate by pictures the incidents of his arrival, &c. In 1839 he was called to St Petersburg and employed by the emperor to paint a series of battle pieces of the campaign of 1812. Among his principal works are mentioned—"The Battle of Arcis-sur-Aube," "The Surprise of a French Village by the Cossacks," "The Defence of the Bridge of Kinzig, near Hanau," "A Combat in the Defile of Bodenbühls, in the Tyrol," "The Battle of Leipsic," &c. Hess was Court Painter to the king of Bavaria, and a member of the Royal Academies of Berlin, Munich, Vienna, and St Petersburg. He founded, in conjunction with Quaglio, the Art Union of Munich. Died at Munich, 4th April, 1871.

HESSE, NICOLAS AUGUSTE, French painter, was born at Paris in 1795. He was one of a family of artists, and studied first under his brother. He was next a pupil of Baron Gros, then entered the *École des Beaux-Arts*, and won the grand prize in 1818. After his return from the usual course of study in Italy he devoted himself almost entirely to historical and religious subjects, especially for the decoration of churches. He also painted the principal hall of the Hôtel de Ville, Paris. Many distinguished pupils were trained in his atelier. In 1863 he was received at the Academy of Fine Arts, as successor to Delacroix. Died, 14th June 1869.

HILDRETH, RICHARD, a distinguished American historian, publicist, and miscellaneous writer, was born at Deerfield, Massachusetts, in 1807. He was the eldest son of a Unitarian minister, was educated at Harvard College, and then applied himself to the study of law. He began at the same time his literary labours as a contributor to magazines, and became in 1832 editor of the Boston "Atlas." The story of his life thenceforth is little more than an account of his writings. His tale entitled "Archy Moore," published in 1837, was written during a visit he made to the southern states for the sake of his health, and was the forerunner of "Uncle Tom," and other anti-slavery novels. It was republished, under the title of "The White Slave," in 1852. In 1840 appeared Hildreth's translation of Dumont's edition of Bentham's "Theory of Legislation," and about the same time his "History of Banks," followed successively by "Despotism in America," "Theory of Morals," "Theory of Politics," the last two intended to form parts of a series on the "Science of Man," which, however, was not continued; and in 1849-52, his most important work, the "History of the United States," in 6 vols. 8vo. It embodies the results of seven years' patient

and honest labour, and is esteemed for its philosophical impartiality and judicial sobriety. Hildreth did much other literary work as journalist and editor of various cyclopedias. His last separate work was "Japan as it was and as it is" (1857). Died, July 1865.

HINCKS, EDWARD, an eminent philologist, was born at Cork in 1792. He was the son of D. T. Hincks, LL.D., then minister of a Presbyterian congregation, and afterwards Professor of Hebrew and other Oriental languages in the Belfast Academical Institution. He completed his education at Trinity College, Dublin, took orders in the Church of England, and was appointed rector, first of Ardara, and afterwards, in 1825, of Killeleagh, County Down. He is specially distinguished for his persevering labours in the fields of Egyptian and Assyrian learning, and as one of the scholars to whom we owe the deciphering of the cuneiform inscriptions of Persepolis, Nineveh, &c. He contributed many papers to the Royal Irish Academy, the British Association, and the Asiatic Society, and wrote occasionally for the "Journal of Sacred Literature" and the "Athenaeum." Independent in thought and liberal in sentiment, he was a bold advocate for reform in the Irish Church, and his views on this matter and on education hindered his promotion. Died at Killeleagh, December 3, 1866.

HINDS, SAMUEL, bishop of Norwich, theological and miscellaneous writer, was born in the island of Barbados in 1793. He completed his education at Queen's College, Oxford, where he graduated B.A. in 1815. In 1818 he obtained the Chancellor's Prize for the Latin essay, and took his degree of M.A. The following year he was ordained priest, went as missionary to Barbados, and was appointed Principal of Codrington College in that island. Having returned to England, he was named in 1827 Vice-Principal of St Alban Hall, Oxford, Presented to the vicarage of Yardley, in Hertfordshire, in 1834, he held it nine years, and in 1843 became Chaplain to Archbishop Whately, and Rector and Prebendary of Oastleknock, Dublin Cathedral. Three years later he was appointed Chaplain to the Lord-Lieutenant of Ireland, the Earl of Bessborough, continuing in the same office under the Earl of Clarendon. In 1848 he was promoted to the Deanery of Carlisle, and in the following year to the See of Norwich. He resigned his bishopric in 1858. The principal works of Bishop Hinds are—"The History of the Rise and Early Progress of Christianity," which has passed through several editions; "An Inquiry into the Proofs, Nature, and Extent of Inspiration," and into the Authority of Scripture" (1831); "Scripture and the Authorised Version" (1846), and "A Free Discussion of Religious Topics," published in 1858.

Died at Notting Hill, London, 7th February 1872.

HITCHCOCK, EDWARD, American geologist, was born at Deerfield, Massachusetts, in 1793. After holding for three years the office of pastor to a congregational church at Conway, he was called to the chair of Chemistry and Natural History at Amherst College, a post which he held for twenty years. In 1830 he was appointed State Geologist, and undertook a survey of the geology, &c., of the state of Massachusetts. He published successively three reports on that subject, completing and crowning his labours by his "Final Report," in 2 vols. 4to (1841), which became a standard work. He was honoured with the degree of LL.D. by Harvard University, and later with that of D.D. by Middlebury College. In 1845 he was chosen President of Amherst College, and at the same time held the chair of Natural Theology and Agricul- ture. In 1850 he was nominated State Agricultural Commissioner, and was sent to visit and report on the principal Agricultural Schools of Europe. Dr Hitchcock was author of "Elementary Geology," "Outlines of the Geology of the Globe," and "The Religion of Geology," besides many papers contributed to scientific journals. Died at Amherst, 27th February 1864.

HITTORF, JACQUES IGNACE, a distinguished French architect, was born at Cologne in 1793. After some professional training in his native city, he went to Paris in 1810, and at the School of Architecture studied under Perier. He was also a pupil of M. Bélanger, on whose death in 1818 he was appointed architect to the king. Continuing his studies he visited England, Germany, Italy, and Sicily. He spent about a year in Sicily, exploring ancient remains with his pupil Zanth and Professor Stier of Berlin, and collecting materials for several works of great value. His greatest work as architect is the church of St Vincent de Paul, at Paris, built between 1824 and 1844. It was commenced in conjunction with M. Lepère. Among his other buildings are—the Panorama Rotonda, the Cirque de l'Impératrice, Cirque-Napoleon, and (in conjunction with other artists), the Hôtel du Louvre. He revisited Italy in 1855. M. Hittorf published in 1860 an annotated translation of the "Unedited Antiquities of Attica," a work prepared by the English Society of Dilettanti. In conjunction with M. Zanth he published "Architecture Moderne de la Sicile," and "Architecture Antique de la Sicile," both profusely illustrated. In 1851 appeared his "Architecture Polycrôme chez les Grecs." He contributed many articles to the "Encyclopédie des Gens du Monde," and memoirs to many artistic societies. He was a member of the Institute and of the Academies of Berlin, Munich, Vienna, &c., and received the royal medal of the

R.I.B.A., of which he was corresponding member. Died, 1872.

HOEVEN, JAN VANDER, an eminent Dutch zoologist, was born at Rotterdam in 1801. He studied at the University of Leyden, where he took the degrees of Ph.D. in 1822, and M.D. in 1824. After practising at Rotterdam, he was called in 1826 to Leyden as Professor Extraordinary, and there became in 1835 Ordinary Professor of Zoology. He was a member of the Academy of Amsterdam, and member or correspondent of many scientific societies of Europe. In 1858 he was appointed Director of the Natural History Museum of Leyden. His most important work is his "Handbook of Zoology," first published in 1827-33, and recast in 1846, &c. It has been translated into English and German. Among his other works are—"Recherches sur l'Histoire Naturelle et l'Anatomie des Limules," written in French; "Studies on the Negro Race;" "Scientific Discourses and Dissertations;" "Philosophia Zoologica," &c. For twelve years (1834-45) he was joint-editor with De Vriese of the Dutch "Review of Natural History and Physiology." Died at Leyden, 11th March 1863.

HOLLAND, JAMES, an English water-colour painter, was born at Burslem, in Staffordshire, in 1800. After some years' practice as a flower-painter on pottery he came to London in 1819, and gradually extended the range of his subjects, studying landscape and architecture. He first exhibited at the Royal Academy in 1824, but was never elected a member. In 1830 he visited France, and six years later Italy. He began to contribute, as associate exhibitor, to the Society of Painters in Water-Colours in 1835, but was not chosen a member till 1858. He was for some years a member of the Society of British Artists. His services were much in request as an illustrator of the "Annuals," and he made many visits to the Continent for the purpose of making drawings for them. Among his more noteworthy pictures are—"A View of London from Blackheath" (1833), "Interior of the Cathedral of Milan," "Greenwich Hospital," which he painted frequently, "Lisbon," &c. Died 12th February 1870.

HUBER, VICTOR AIME, a distinguished German historical, political, and miscellaneous writer, was born at Stuttgart in 1800. He received his early education at the Fellenberg Institute, at Hofwyl, and afterwards studied medicine at the Universities of Würzburg and Göttingen. In 1821 he went to Paris, and in the following two years travelled in Spain, Portugal, and Great Britain. Renouncing the medical profession, he thenceforth devoted himself to literature, for some years writing for the "Allgemeine Zeitung" and other journals. He led an unsettled life, travelled in France, taught in a gymnasium at Bremen, was Professor of the History of Literature

and Modern History at Rostock, was for seven years Professor at Marburg, and afterwards, about the same time, at Berlin. In 1851 he retired to Wernigerode, in the Harz Mountains. In politics he latterly took the Conservative side, but at the same time advocated the wildest schemes of social change. Among German scholars he stood especially distinguished by his thorough acquaintance with Spanish and English literature. Among his works are—"Die Geschichte der Cid," "Chronica del Cid," "Skizzen aus Spanien," "Die neuromanische Poësie in Frankreich," "Die Englische Universitäten" (1839-40), a work translated into English by Mr Frank Newman; and "Reisebriefe aus Belgien, Frankreich, und England." He wrote many pamphlets on political and social questions, was one of the most active collaborateurs of the "Neue Preussische Zeitung," and was the founder and editor of "Janus: Jahrbücher deutscher Gesinnung, Bildung und That" (1845-48). Died at Wernigerode, 26th July 1869.

HUDSON, GEORGE, once notorious as the "Railway King," was born at York in 1801. He was one of the earliest speculators in railways, and was appointed in 1837 Chairman of the York and North Midland line. He made a huge fortune by successful ventures in the next few years, and in 1845 was elected M.P. for Sunderland. To such a length did the paroxysm of popular admiration run that it was proposed to erect a statue to the hero of the share-market, and a very large sum was subscribed. But about 1848-49 his throne was shaken, his audacious frauds were exposed, and the money in hand for the statue was returned to the subscribers. In 1859 he lost his seat

in Parliament. He had been Deputy-Lieutenant for Durham, and thrice Lord Mayor of York. Reduced to very narrow circumstances, he was relieved by an annuity presented to him by his friends. Died in London, 14th December 1871.

HUET, FRANÇOIS, French philosopher, was born at Villecu in 1814. He was appointed in 1834 Deputy Professor of History at the Collège Rollin, Paris, and in the following year was called to the Chair of Philosophy at Ghent. This post he held till 1850. He made himself known by his attempts to reform philosophy and the Church, and to bring about a harmony of reason and revelation. His principal works are—"Éléments de Philosophie pure et appliquée" (1848), "Le Cartésianisme," "Le Règne social du Christianisme," published in 1853, and placed in the Papal "Index," and "Essais sur la Réforme catholique," written in conjunction with M. Bords-Demoulin. In his last years M. Huet was engaged at Paris as tutor to the young prince of Servia, whom he conducted to Belgrade on his accession to the throne. Died at Paris, 1st July 1869.

HUET, PAUL, French landscape painter, was born at Paris in 1804. He became a pupil of Paul Guérin and Baron Gros, and at the same time a student at the Ecole des Beaux-Arts. He first exhibited at the *Salon* in 1827, and from that time seldom failed to appear. He was one of the most distinguished leaders of the romantic school. His pieces are very numerous, and include many in water-colours, and some etchings and chalk drawings. He was admitted to the Legion of Honour in 1841. Died at Paris, 9th January 1869.

I.

INGRES, JEAN DOMINIQUE AUGUSTE, one of the most distinguished French painters of his age, was born at Montauban in 1781. His father intended to bring him up as a musician, but his own strong bent to the painter's art, first stimulated, it is said, by a copy of one of Raphael's works in the Museum of Toulouse, decided his course. After receiving instructions from the landscape painter Briant, he became a pupil of David at Paris, and studied with him for four years. In 1799 he won the second, and in 1802 the first, prize of the Academy. He went to Rome about 1804, and, in consequence of the unfavourable reception of some of his works in Paris, resolved not to return. In 1813 he married; and after the evacuation of Rome by the French he was reduced to

great straits, and depended for a time on the sale of his pencil sketches. He was at the same time engaged in the production of some of his best works. He spent some time subsequently at Florence, was engaged in 1827 in painting his "Apotheosis of Homer," in the Louvre, and six years later succeeded Horace Vernet as Director of the French Academy at Rome. He settled at Paris about 1842, and there spent the rest of his life. Ingres was the most eminent painter, in his day, of the French classical school; but while retaining a profound veneration for the great artistic qualities of his master, David, he modified his teaching, and worked in an independent spirit, ascending, as David did not, to the Greek sources. He produced a large number of important works,

and the prince in a separate tion of 1855; ceived, like his one of the great the internatio celebrated wo VII. officiating "Virgil reading and Octavia," "Death of Louis XIII., dyomene," "J tion of Char Napoleon I.," the "Nafade Source," He Napoleon as a

He was twice m

and the principal of these were exhibited in a separate *salon* at the Great Exhibition of 1855; on which occasion he received, like his rival, Eugène Delacroix, one of the grand medals of honour from the International Jury. Among the most celebrated works of Ingres are—"Pius VII. officiating in a Chapel at Rome," "Virgil reading the *Æneid* to Augustus and Octavia," "Francesca da Rimini," "Death of Leonardo da Vinci," "Vow of Louis XIII.," "Birth of Venus Anadyomene," "Joan of Arc at the Coronation of Charles VII.," "Apotheosis of Napoleon I.," in the *Hôtel de Ville*, and the "Nalade," better known as "La Source." He also painted the portraits of Napoleon as First Consul and Emperor,

and of many royal and noble persons. Ingres was named successively knight, commander, and grand officer of the Legion of Honour; was admitted to the Institute in 1825, and long held the Professorship of Painting in the *École des Beaux-Arts*, of which he was the most powerful support. In 1862 he was created a Senator and named a member of the Imperial Council of Public Instruction. The latest work of this distinguished painter is a superb drawing, a new "Apotheosis of Homer," executed in 1866, for a description of which see M. Vinet's article in the "Fine Arts Quarterly Review," January 1867. M. Ingres died at Paris, on the same day with M. V. Cousin, 14th January 1867.

J.

JACKSON, Sir GEORGE, an English diplomatist, was born in 1785. He was the youngest son of Dr Thomas Jackson, Canon Residentiary of St Paul's, and commenced his long career of diplomatic service in 1801, as unpaid attaché to the special mission to Paris, which was entrusted to his brother, Mr Francis Jackson. In the following year he accompanied his brother in the same capacity to Berlin, pursuing his own studies at the same time. He left Berlin in May 1806, was sent there again on a special mission later in the year, brought to England the treaty concluded with Prussia, and in July 1807 was appointed Secretary of Legation and *Chargé d'Affaires* at Berlin. In consequence of the Peace of Tilsit, he was recalled; witnessed on his way home the bombardment of Copenhagen, and brought the account of its capitulation. In 1808 he was named Secretary of Legation to the Spanish Junta, and was the next year appointed to the like post at Washington; but the interruption of diplomatic relations prevented his going. In 1813 he accompanied Sir Charles Stewart as Secretary of Legation to Germany, and was at the head-quarters of the allies during the campaigns of that and the following year. After entering Paris with the allies, he was sent to Berlin, where he remained till 1816, when he was appointed Secretary of Embassy at St Petersburg. In 1822 he went to Madrid, and in 1823 to Washington, where he was occupied four years as a Commissioner under the Treaty of Ghent. He was subsequently employed on various commissions for the suppression of the slave trade at Sierra Leone, Rio Janeiro, Surinam, and Loanda. In 1832 he was made K.C.H. He retired in 1859. Sir George was twice married, and he left his second

wife surviving him. Died at Boulogne, 2d May 1861. His "Diaries and Letters," from 1801 to 1809, were published by Lady Jackson, in 2 vols., in 1872.

JAFFE, PHILIPP, a distinguished German historical scholar, was born of a Jewish family, near Posen, in 1819. Educated for the medical profession, he early left it for literature, and influenced by the teaching and example of Ranke, he devoted himself to historical studies, and especially to researches into the history of the middle ages. For about nine years he was one of the chief collaborators of Pertz, in the publication of the "Monumenta Germaniæ." In 1862 he was appointed Professor Extraordinary at the University of Berlin. His earliest works are the "History of the Empire under Lothaire the Saxon," and the "History of the Empire under Conrad III." But his most valuable works are the "Regesta Pontificum Romanorum," and the "Fontes Rerum Germanicarum," both immense collections of the indispensable materials of history. The "Regesta" contains 11,000 papal bulls, letters, decrees, &c., chronologically arranged and carefully annotated. The "Fontes" is a similar collection. Professor Jaffe, on the death of his father, had renounced Judaism and become a Lutheran. Overtasked by his arduous and persistent toil, he at last killed himself in April 1870.

JANET-LANGE, ANGE LOUIS, French historical painter and draughtsman, was born at Paris in 1818. He became a pupil of Collin, of Ingres, and Horace Vernet, and imitated in many of his works the style of the latter. He became very popular as designer and book-illustrator, and executed lithographs of some of his own paintings. Among his works are mentioned—"Christ on the Mount of

Olives," "Abdication of Fontainebleau," "The Good Shepherd," "Nero Disputing the Prize of the Chariot-race," "The Emperor at Solferino," &c. Died, December 1872.

JELF, RICHARD WILLIAM, theologian, Principal of King's College, London, was born about 1798. He graduated B.A. at Oxford in 1826, became fellow and tutor of Oriel College, took his M.D. degree in 1823, and the following year was ordained Priest. In 1826 he was appointed private tutor to Prince George of Cumberland, an office which he held for thirteen years. Meanwhile, he was made Canon of Christ Church, and in 1844 he was appointed Bampton Lecturer. The same year he was chosen Principal of King's College. He took a leading part in the controversy with Mr Maurice, which led to the retirement of the latter from his chair at the College. Besides his Bampton lectures on the "Means of Grace," he published some sermons and several pamphlets. Died at Oxford, 19th September 1871.

JERDAN, WILLIAM, editor of the "Literary Gazette," was born at Kelso, in Scotland, in 1782. He received his education in a parish school, and obtained a clerkship in London. Not succeeding, he returned to Edinburgh, but after leading a restless, idle life, attempting and failing in various lines of activity, he again came to London in 1805, and began to write for the newspapers. For many years he was editor of the "Sun." In 1817 he became a contributor to the newly-established "Literary Gazette," the first periodical of its class, and in July of that year he was appointed its editor. That post he filled till 1850, having in the meantime become proprietor as well as editor. He published in 1852-53 his "Autobiography," and afterwards a volume entitled "Men I have Known." A pension was awarded him under the ministry of Lord Aberdeen. On occasion of the murder of Mr Percival by Bellingham, in 1812, the assassin was seized and detained by Mr Jerdan. Died at Bushey Heath, near London, 11th July 1869.

JESSE, EDWARD, an English naturalist and miscellaneous writer, was the son of a clergyman, and was born near Halifax, in Yorkshire, about 1780. He was early appointed Private Secretary to Lord Dartmouth, and filled afterwards various official positions till within a few years of his death. Among his numerous writings are—"Anecdotes of Dogs," and "Glennings in Natural History." He published editions, with notes, of White's "Natural History of Selborne," and Walton's "Angler." Died at Brighton, 29th March 1868.

JOHNSTON, ALEXANDER KEITH, the eminent geographer, was born at Kirriehill, near Edinburgh, in 1804. He first studied medicine, then learnt the art of engraving, and finally resolved to devote himself to the science of geography.

He mastered the principal European languages, and studied the best modern works on his chosen science. As early as 1830 he had constructed and published some improved maps of the north of Scotland, and about the same time became partner with his brother William as engraver and printer. In 1842 he visited Germany, and the following year appeared his first great work, the fruit of years of labour, the "National Atlas," in folio. This procured him great reputation; he was elected F.R.G.S., and was appointed Geographer Royal for Scotland. His next work, suggested by Humboldt and encouraged by Ritter, was the "Physical Atlas," in folio, published in 1848. It was received as one of the grandest monuments of the scientific genius of our age. Its author was elected honorary member of the Geographical Societies of Berlin and Paris, fellow of the Geological Society of London, and of the Royal Society of Edinburgh, &c. He soon after constructed a physical globe of the earth, the first made, for which he received the medal of the Great Exhibition in 1851. In the following year he published a chart of the distribution of health and disease. His other works are a copious "Dictionary of Geography" (1850), and a series of admirable school atlases of physical, general, and classical geography, and of astronomy. A new edition of the folio "Physical Atlas" was published in 1856, and in 1861 appeared his magnificent "Royal Atlas of Modern Geography." The honorary degree of LL.D. was conferred on Mr Johnston by the University of Edinburgh in 1865. Died at Ben Rhydding, in Yorkshire, 9th July 1871.

JOMINI, HENRI, Baron, French general and military historian, was born in the Pays de Vaud in 1779. Brought up to a mercantile life, he joined the Swiss militia in 1795, and became afterwards lieutenant-colonel; but after the French conquest of Switzerland in 1799 he went to Paris. Resuming the pursuits of business, but applying his leisure to the military studies he had commenced in his earlier years, he made the acquaintance of General (afterwards Marshal) Ney, and on the appearance of the first portion of his work on military tactics, he was named in 1804 aide-de-camp to that general. He attended him in the great campaigns of the next five years, and distinguished himself in action no less than in deliberation. He stormed and carried the heights of Michelsberg, contributed to the capture of the Austrian army under Mack, and rescued Ney from serious peril at Jena. He had meanwhile been raised to the rank of colonel, and was after Jena created a Baron by the Emperor Napoleon I. In 1808 he accompanied Marshal Ney to the Peninsula, but through some evil suggestions made by jealous rivals, Napoleon was induced to suspend him in 1809. Pur-

posing then to be demanded, he refused, and rank of brigadier after nominating an empire, and the gulphed him campaign, re and was nam afterwards battle of Baun with distinct peded him Russian army general. JUAREZ, Republic of of the Indian in Mexico; s

posing then to enter the service of Russia, he demanded his discharge; but this was refused, and he was at once raised to the rank of brigadier-general. He was soon after nominated historiographer of the empire, and was charged to write the history of the Grand Army. He distinguished himself greatly in the Russian campaign, rescued Ney a second time, and was named Governor of Wilna, and afterwards of Smolensko. After the battle of Bautzen in 1813, where he fought with distinction, the Emperor again suspended him. He then entered the Russian army with the rank of lieutenant-general. Tried in his absence for desertion, he was sentenced by court-martial to be shot. In 1815 he accompanied the Emperor Alexander to Paris, and received the cross of St Louis from Louis XVIII. He exerted himself to the utmost to save Ney from execution; was present at the Congresses of Aix-la-Chapelle and Verona; and in 1825 was appointed aide-de-camp to the Emperor Nicholas. During his long residence in Russia he effected many important military reforms. In 1827 he settled at Brussels. The works of General Jomini are—"Traité des Grandes Opérations Militaires," "Vie Politique et Militaire de Napoléon," "Précis de l'Art de Guerre," and "Histoire Critique et Militaire des Campagnes de la Révolution de 1792 à 1801," the last published between 1819-24. Died at Passy, 24th March 1869.

JONES, ERNEST, Chartist leader, poet, and miscellaneous writer, was the son of an officer in the army, and was born at Berlin in 1819. He received his education in Germany, then entered the Middle Temple, and was called to the bar in 1844. In the following year he joined the Chartists, and was soon recognized as their leading man. He gave up his practice at the bar, and declined any payment for his services to the Chartist cause. In 1848, during the agitation about the proposed gathering of Chartists on Kennington Common, Mr Jones was arrested for seditious speaking at Manchester, and was sentenced to two years' solitary confinement. He was several times an unsuccessful candidate at parliamentary elections. In his latter years he had resumed his practice as a barrister, and conducted the defence of the three Fenians, tried for the murder of Police-Sergeant Brett at Manchester. As a writer he made himself known by several volumes of poems—"Wood-Spirit," "The Battle Day," "Songs of Democracy," &c. He also originated and edited several political periodicals, especially the "People's Paper," which was the organ of the Chartists for eight years. Died at Manchester, 26th January 1869.

JUAREZ, BENITO, President of the Republic of Mexico, was born of parents of the Indian race, in the State of Oaxaca, in Mexico, about 1807 or 1809. By his

ability and energy he rose above the barriers and obstacles of his position, studied law, and became an advocate and deputy to Congress. In 1848 he was appointed Governor of his native State, having previously held various civil offices. During the four years of his governorship he promoted liberal measures and effected some important reforms. Exiled by Santa Anna, he returned with Alvarez, was elected to the new congress in 1856, and in the following year was made President of the Supreme Court of Justice, a position which secured to him, in the case of vacancy, the interim presidency of the republic. On the fall of President Comoufort, and the establishment of Zuloaga in his place, Juarez revolted and set up a provisional government at Vera Cruz. A civil war began, which was carried on first against Zuloaga and then against Miramon. In the course of it Juarez obtained recognition of himself as president from the United States, and after four years of warfare he finally defeated Miramon, entered Mexico, and was proclaimed president for four years. He was recognized by Great Britain and France. But compelled by the disordered state of the finances to decree a suspension of payment for two years of the indemnities due to those States, a joint intervention was arranged between Spain, Great Britain, and France to redress the grievances of their subjects. The first portion of the expedition landed in December 1861. The allies occupied Vera Cruz. Negotiations took place at Soledad and Orizaba early in 1862, in consequence of which the British and Spanish forces withdrew. The French, however, remained, the purpose of Napoleon III. being to set up by force a foreign government, with the young Archduke Maximilian of Austria at its head. The war continued, Juarez was aided by a loan from Washington, fresh troops were sent from France, Puebla fell, then Mexico and San Luis de Potosi, and Juarez fixed his seat of government at Monterey. In the summer of 1864 the empire was set up, and in 1865 the term of office of Juarez expired. The extinction of the republic was proclaimed by Maximilian, and all Juarists taken in arms were sentenced to death. Juarez refused to resign till the invaders were expelled, and continued to fight. At length Napoleon, pressed by the American government, withdrew his army, and the young emperor was left to stand or fall alone. Betrayed into the hands of the Juarists, he was shot at Queretaro, and Juarez re-occupied Mexico and Vera Cruz. In October 1867 he was re-elected President of the Republic, and some years of quiet followed. Juarez died, 18th July 1872.

graduated B.A. in 1836, and M.A. five years later. He had studied geology under Professor Hodgwick. After making a survey of Newfoundland, he was appointed naturalist to an exploring expedition, and sailed in January 1842 for Australia, the north coast of which he surveyed. After his return to England he was employed on the Geological Survey of Great Britain, and in 1850 was named Director of the Geological Survey of Ireland. Three years later he was

appointed F.R.S., and in 1854 was appointed Professor of Geology at the Royal College of Science. He was author of a well-known "Students' Manual of Geology" and other works. He also wrote the article "Geology" for the "Encyclopaedia Britannica" (8th edition), and contributed numerous papers to the Proceedings of the Geological Society of London, of which he was a member, to the British Association, the Royal Irish Academy, &c. Died at Dublin, 29th July 1869.

K.

KEAN, CHARLES, a celebrated actor, was the second son of the great tragedian, Edmund Kean, and was born at Waterford, in Ireland, in 1811. After obtaining some reputation in provincial theatres, he made his first appearance at Drury Lane Theatre in 1827. It was, however, some time before he became a recognized favourite. In 1830, and again in 1839, he visited America. In 1842 he married Ellen Tree, a popular actress, and from that time they commonly played the principal parts together. After a third visit to America, accompanied by his wife, he became lessee of the Princess's Theatre, where he distinguished himself by the revival of Shakespeare's Historical Plays, with costly scenery and brilliant effects. For some time he was Director of the Royal Theatricals at Windsor. Between 1863 and 1868 he made a tour round the world with a company of players. Died in London, 22d January 1869.

KEBLE, JOHN, M.A., Vicar of Hursley, Hants, and author of "The Christian Year," was born at Fairford, Gloucestershire, 25th April 1792. He studied at first under his father, John Keble, who was for fifty-two years vicar of Cole St Aldwyn's. He then entered Corpus Christi College, Oxford, where, at the age of eighteen, he graduated B.A., obtaining with ease first-class honours both in classics and mathematics. He was soon after chosen fellow of Oriel College, and graduated M.A. in 1813. Among his contemporaries at Oriel were Dr Arnold, Bishop Copleston, Archbishop Whately, and Bishop Hampden. He became one of the tutors of Oriel, was Public Examiner in 1814-16, and in 1816 was ordained priest. Again appointed Public Examiner in 1821, he retired soon after to his father's living at Fairford, receiving there a few pupils, and frequently visiting Oxford. Among the friendships he gained during this period was that of Sir William Heathcote. He held successively several country curacies, con-

tinuing, however, to reside at Fairford, except for a short interval, till 1835. "The Christian Year" appeared anonymously in 1827, was received with enthusiasm by the Oxford world, and was not long in winning a high and permanent place in the larger "world elsewhere." In its form, and to a large extent in its spirit too, peculiarly a book for members of the Church of England, it was nevertheless soon welcomed for its high religious worth, and its beautiful poetic utterances of truth and wisdom, adapted to the wants and sorrows and aspirations of all devout human hearts, by men of all churches and sects. It thus became one of the most widely circulated and most powerful religious books of the age, passing through ninety-two editions, many of them unusually large, during the author's lifetime. In 1831 Keble succeeded Milman as Professor of Poetry at Oxford, and filled the chair for ten years. The same year he published an "Address to the Electors of the United Kingdom," in opposition to the Reform Bill, then under discussion; and in 1832, the Bill having become law, he was one of the four members of the university who originated the great Oxford (Tractarian) movement, the consequences of which have been so vast and far-reaching. He was author of several of the "Tracts for the Times," the first of which appeared in 1833. In July of that year he preached the memorable assize sermon at Oxford, which, says the "Times," "was the epoch, if not the turning point, of Keble's life. It explains not only why he joined the Oxford movement, and became one of the mighty men in its foremost rank; but also, and still more, the special part he has taken in it." In 1835 took place the death of his father, his own marriage, and his presentation, by Sir W. Heathcote, to the vicarage of Hursley, which he held till his death. Out of the large profits of the sale of "The Christian Year" Keble rebuilt the parish church of Hursley. He was author of the "Lyra Innocentium,"

(1846), and John Froude, and other notices." His works published in Poetica Vi Ma a new and val work of Hook everybody about by his goodne inour, and his Died at Bour His funeral to 6th, and was a of distinguish sity. (1840, and joint-author with Newman, Froude, and others, of the "Lyra Apotolica." His lectures, at Oxford, were published in 1844, under the title of "De Poetice VI Medica;" and we owe to him a new and valuable edition of the great work of Hooker. Keble won the heart of everybody about him, says the "Times," by his goodness, his wit, his gentle humour, and his freedom from affectation. Died at Bournemouth, 29th March 1866. His funeral took place at Hursley, April 6th, and was attended by a large number of distinguished members of the university. His wife died, 11th May following, aged 68, and was buried by his side. A subscription was soon after set on foot for the purpose of founding the Keble Memorial College at Oxford.

KEIGHTLEY, THOMAS, historical and miscellaneous writer, was born at Dublin in 1789. He completed his education at Trinity College, and renouncing the profession of the law, for which he was destined, came to England in 1824, and commenced his long industrious career in literature as assistant to Crofton Croker in the production of his work on "The Fairy Legends of the South of Ireland." His name was most widely known by his carefully compiled School Histories of Greece, Rome, and England, which passed through many editions, and long held their ground as the best books of their class. Among his other works are—"Fairy Mythology," "Mythology of Greece and Italy," "Outlines of History," prepared for Lardner's Cabinet Encyclopedia, "The Crusaders," &c. We owe to Mr Keightley also, as classical scholar, editions of the "Bucolics and Georgics" of Virgil, the "Satires and Epistles" of Horace, the "Fasti" of Ovid, and the works of Sallust. He translated from the Dutch Koestveld's tale of "The Manse of Mastland," edited the Eizevir edition of Shakespeare's Plays, and wrote "The Shakespeare Expositor." Died at Erith, in Kent, 4th November 1872.

KLOTZ, REINHOLD, German philologist, was born at Stolberg, in Saxony, in 1807. He studied at the University of Leipzig, took his degree in 1831, and in the following year was named Professor Extraordinary of Philology. Three years later he was appointed Director of the Philological Seminary. After the death of Hermann, in 1849, he was called to the chair of Philology. Among his valuable contributions to the knowledge of Greek literature are his editions of Lucian's "Gallus," of the complete works of Clement of Alexandria, of the "Phoenissæ" and "Medea" of Euripides, and of the "Liber de Græcæ lingua Particulis" of Devarius. In Latin literature his studies were especially directed to Cicero, whose "Quæstiones Tullianæ," "Cato Major," "Lælius," and "Orations" he edited, with notes and illustrations. He also revised the text of the works of Cicero

for Teubner's collection, published critical editions of Terentius and Cæcilius, a "Handbuch der Lat. Literaturgeschichte," and "Handwörterbuch der Lat. Sprache," the two last unfinished. Klotz was joint editor of the "Jahrbücher für Philologie und Pädagogik" from 1832 to 1866. Died at Leipzig, 16th August 1870.

KNIGHT-BRUCE, JAMES LEWIS, Lord-Justice of the Court of Appeal in Chancery, was born at Barnstaple, of an old Shropshire family, in 1791. His father's name was Knight, and to that he added by licence, in 1837, that of his mother, Bruce. After studying at Exeter College, Oxford, he entered Lincoln's Inn, and was called to the bar in 1817. He acquired a very large practice in the Court of Chancery, and was made a silk-gownsmen in 1823. Two years later he entered Parliament as member for the borough of Bishop's Castle, afterwards disfranchised. He was selected as one of the two Vice-Chancellors appointed to assist the Lord Chancellor in 1841, was at the same time knighted, and soon after made a Privy Councillor. So extraordinary was his capacity for work, that in the summer of 1850 he undertook the business of the three courts during the illness of the other Vice-Chancellors, and special acknowledgment of his service was made by the whole bar. On the institution of the Court of Appeal in Chancery in 1851, Sir James was appointed Senior Lord-Justice, which office he filled till within a fortnight of his death. He resigned in October 1866, and died on the 7th November following. His judgments were learned and weighty, and not seldom brightened by touches of refined humour.

KOCK, CHARLES PAUL DE, French novelist and dramatist, was born at Passy, near Paris, in 1794. He was the son of a Dutch banker who had settled in Paris, and had been put to death at the close of 1793 by the revolutionary tribunal. Brought up by his mother, imperfectly educated, and sent to learn the business of banking, he wrote at the age of seventeen his first novel, and lost his place. He wrote afterwards a good many plays of the melodramatic kind, and these not being very successful, he returned to novel-writing. Gifted with remarkable powers of observation, light-hearted, and quick with the pen, he produced an immense number of tales, the list of which occupies four columns of a French biographical dictionary. He depicted generally scenes and persons of low life, with singular force and tenderness, vivid reality, unreserve, and offensive indecency. His writings, with all their plain speaking, are not, however, of such corrupting and immoral tendency as the French novels of more recent times. Several collected editions have been published; one in 39 vols., a second in 26 vols., and a third extending to 56 vols. Died at Paris, August 1871.

KONEWKA, PAUL, an artist remarkable for his skill and power in *alhouette* designs, was a Pole by birth. At an early age showing a propensity for cutting out figures with scissors, he was allowed to become a student of art, first under the German sculptor Drake, at Berlin, and afterwards under the painter A. Menzel. His first published designs were illustrations of the popular songs of Germany. His chief works are the "Blätter zu Goethe's 'Faust,'" published in 1866, and the illustrations to Shakespeare's "Midsummer Night's Dream" in 1868. These unique works are characterized by marvellous accuracy of drawing, subtlety of fancy, and power of expression. They have been reproduced in England. Konewka always carried about with him black paper and scissors, and would rapidly cut likenesses of whatever caught his fancy. He left many studies behind him.

Died in his thirty-first year, at Berlin, 10th May 1871.

KRUMMAOHER, FRIEDRICH WILHELM, German theologian, was the son of Friedrich Adolf Krummacker, and was born at Duisburg in 1796. As a preacher he was especially known for his vigorous Lutheran orthodoxy, and his vehement denunciations of rationalism and its teachers. In 1843 he went to New York as minister of the Reformed Communion, but soon returned to Elberfeld. In 1847 he was called to Berlin, and six years later was appointed Court Preacher at Potsdam. He was esteemed one of the most eloquent preachers of his day. The works by which he is widely known are—"Elias der Thüßbiter," which has passed through many editions in German, English, and other languages, and "Eliäsa." He published also several collections of sermons. Died at Potsdam, 10th December 1868.

L.

LAMARTINE, ALPHONSE, a distinguished French poet, politician, historian, and miscellaneous writer, was born at Macon in 1792. He was the son of a cavalry officer in the royal service, and his family name was DU PRAT. He assumed the name of Lamartine about 1820, on receiving a large fortune left to him by an uncle. He received his education in the Jesuits' College at Belly, visited Italy in 1811-13, and in 1817 settled at Paris. Between the first and second Restoration of the Bourbons he served in the army, and then commenced his literary career as a journalist. He revisited Italy in 1818. Two years later he laid the foundation of his reputation as a poet by the publication of his "Méditations Poétiques," which was received with extraordinary admiration. It procured him an appointment by the government as attaché to the embassy at Florence. For a short time he was secretary of embassy in London, and while here married a wealthy English lady. He returned to Florence in 1824 as secretary of embassy, and was afterwards chargé d'affaires, but his diplomatic career ended just before the fall of Charles X. While at Florence he fought a duel with Colonel Pepe, afterwards widely known as a distinguished Italian patriot, and was wounded. With the Revolution of 1830 his period of political activity began. Failing to secure election to the Chamber of Deputies, he set out in the spring of 1832 with his wife on a tour in the East. He travelled in a style of extraordinary magnificence, reached Jerusalem, and being elected Deputy in his absence, returned to France in November

1833. At Beyrout a heavy blow fell on him in the death of his daughter. He held no office under Louis Philippe, but taking up a position between extreme parties, he became prominent as one of the "Social party," and at last, in 1845, joined the Liberal opposition. At the same time he was working at his celebrated "Histoire des Girondins," which appeared in 1847, and is said to have powerfully contributed to bring about the Revolution of February 1848. In the first weeks of the Revolution Lamartine was the foremost man. His eloquence proved decisive at more than one critical moment, and rose to the highest point of sublimity when, in front of the Hôtel de Ville, he stood at the risk of his life and courageously resisted the demand of the insurgent multitude for the red flag in place of the tricolour. But it was a height he could not long keep. As a member of the Provisional Government he held the portfolio of Foreign Affairs, and a few days after the Revolution published a remarkable "Manifeste à l'Europe." Before the end of the year he made his views further known in his "Trois Mois au Pouvoir." But his day as political leader was past, and instead of the sentiment of the poet had come the sword of the soldier. In 1849 he was an unsuccessful candidate for the Presidency of the Republic, and after the *coup d'état* he hardly appeared in public life. The rest of his life was dedicated to literary labours, and embittered by a sharp struggle with circumstances. In addition to the works already named, Lamartine published—"Nouvelles Méditations" (1823). "Dernier Chant du

Pèlerinage d'Éliäsa"
"Harmonies"
(1830). "Souvenir
en Orient" (1831).

Pélerinage d'Harold (1825), "Eptres," "Harmonies poétiques et religieuses" (1830), "Souvenirs, &c., pendant un Voyage en Orient" (1835), "Vues, Discours, et Articles sur la question d'Orient" (1840), "Raphael," an autobiographical work, "Histoire de la Révolution de 1848," &c., &c. In 1863 he lost his wife. Died, 28th February 1869.

LANE, RICHARD J., a distinguished lithographer and engraver, was born in 1800. His father was Theophilus Lane, a Prebendary of Hereford; his mother, whose maiden name was Sophia Gardiner, was a niece of the painter Gainsborough, a woman of remarkable character and ability. His brother, Edward Lane, is the well-known Orientalist. Richard Lane chose the profession of line engraver, and was in 1816 articled to Charles Heath. But in the course of a few years he was induced to apply himself to the newly introduced art of lithography. In this he attained a skill and mastery almost unrivalled, and as early as 1827 he was elected A.R.A. Ten years later he was nominated lithographer to the Queen, and soon after to Prince Albert. He practised lithography for about thirty years, and produced more than a thousand works. Among them are admirable reproductions of Sir T. Lawrence's portraits and portrait-sketches, of drawings by Gainsborough, and of pictures by Leslie and Landseer. He also executed many charming pencil portraits, some of which belong to the royal family. After the decline of the popularity of lithography, Mr Lane resumed his early pursuit of engraving on copper, and became superintendent of an etching class at the South Kensington Museum. He was an accomplished musician, and a skilful modeller in clay. Died in London, 21st November 1872.

LAUDER, ROBERT SCOTT, Scottish painter, was born at Silvernills, near Edinburgh, in 1803. His early fondness for art, fostered by association with David Roberts, seven years older than himself, was raised to enthusiasm by an exhibition of paintings in Sir H. Raeburn's gallery about 1817, and by the aid of Sir Walter Scott he was admitted a student in the Trustees' Gallery at Edinburgh. After several years of study he came to London, and on his return to Edinburgh in 1826 was chosen Associate of the Scottish Academy, then newly founded. He continued his studies, and in 1833 went to Italy, where he worked for five years. He then spent some years in London, and in 1849 settled at Edinburgh. Among his best works are mentioned—"The Bride of Lammermoor," "Trial of Effie Deans," "The Glee Maiden," "Claverhouse ordering Morton to be shot," "Christ teaching Humility," and "Christ Walking on the Waters." The last two were exhibited in Westminster Hall in 1847. Died at Edinburgh, 21st April 1869.

LAWRENCE, Sir WILLIAM, Bart., an eminent English surgeon, was born at Cirencester in 1783. He became a pupil of John Abernethy, through whose influence he was appointed, in his twentieth year, Demonstrator of Anatomy at St Bartholomew's Hospital, London. Admitted M.R.C.S. in 1805, he had already commenced the quarrel with his master which lasted so many years, coloured his lectures and his writings, and became a scandal in the profession. In 1813 he was chosen F.R.S., and two years later was named Professor of Anatomy and Surgery, Royal College of Surgeons. While he held that chair he delivered the series of "Lectures on Physiology, Zoology, and the Natural History of Man," which, on their publication in 1819, roused a storm of angry disapprobation. The pulpit denounced their gross materialism, their flippancy, and indecency; and the press their radicalism. A second edition appeared in 1822, and a third in 1823. Lawrence was in vain urged by his friends to suppress the work. But having consented not to publish a fourth edition for a considerable time, a friend bought up the whole remainder of the third, and stowed it away in a cellar. It is stated that it still remained in concealment at the time of the lecturer's death. The same year in which the lectures were published, Lawrence resigned his chair at the hospital, and in 1824 was appointed principal surgeon. He delivered the Hunterian Oration in 1834, and again in 1846. In 1840 he was a member of the Court of Examiners, and was elected Pres. R.O.S. in 1846 and 1855. Three years before his death he was elected correspondent of the French Institute, and within a few months of his death was created a baronet and named a member of the Council of Medical Education. Among his works are—an "Introduction to Comparative Anatomy and Physiology," a translation of Blumenbach's "Manual of Comparative Anatomy," "Treatise on Venereal Diseases of the Eye," "Lectures on Surgery" (1863), &c. Lawrence was, in his early manhood, a zealous promoter of medical reform, and contributed some powerful papers to the "Lancet" on the corrupt appointments in London hospitals, &c. He also wrote the articles on Anatomy and Surgery in "Rees's Cyclopaedia." Notwithstanding his early unpopularity, he obtained a lucrative practice, was recognized as a leader in his profession, and after the decline of his passionate radicalism, became a safe and courtly old man. He was a member of several foreign scientific bodies; married in 1828; and died in London, 5th July 1867.

LEE, ROBERT, a distinguished Presbyterian theologian, was born at Tweedmouth, in the county of Durham, in 1804. Of humble origin and studious turn, he early applied himself to self-culture, and in 1824 entered the University of St

Andrews. After studying there eight years he obtained a licence to preach, and in 1836 became parish minister of Campsie. In 1843 he removed to Edinburgh on being appointed to the Old Greyfriars' Church. He soon after took the degree of D.D. at St Andrews, and in 1847 was called to the chair of Biblical Criticism and Antiquities at the University of Edinburgh, a post which he held till his death. In 1852 he was a member of the General Assembly. The name of Dr Lee was widely known in connection with the conflict which he maintained during the last ten years of his life respecting the use of liturgies and organs in public worship, attitudes in prayer, &c. His first attempts at reform in the church services were made in 1857, and they led to his being cited before the Presbytery in February 1859. The question was brought by appeal before the General Assembly, and Lee was acquitted. He continued the usages he had introduced, became Vice-President of the Church Service Society in 1865, ventured on the celebration of a marriage in church at the close of that year, and in 1867 was condemned first by the Presbytery and afterwards by the Synod. He then published an important "Letter to Members of the General Assembly." A few days after he fell ill, seized with paralysis, and his work was ended. Dr Lee published "The Family and its Duties," "Reform of the Church," and "Clerical Profession." He lost his only son in 1862. Died at Torquay, 14th March 1868. His "Life and Remains," by R. H. Story, appeared in 1869.

LEE, ROBERT EDMUND, a distinguished American general, was born in Virginia in 1808. He was a son of Henry Lee, the general celebrated for the part he played in the great "American War," and was educated for the army at West Point Academy. Leaving West Point as lieutenant of engineers in 1829, he made a visit to Europe, and afterwards applied himself to official duties. In 1835 he accompanied, as astronomer, the expedition charged to ascertain the boundary of Michigan and Ohio. Promoted captain in 1838, he was for some years member of the corps of engineers at West Point. In the Mexican War of 1846-47 he was named chief of the staff of General Wool. Distinguishing himself at several battles, he was successively promoted major, lieutenant-colonel, and colonel. He was severely wounded at the battle of Chapultepec. In 1852 he was appointed Superintendent of the Academy at West Point. During the Crimean War he was sent, with his colleague Maclellan, to watch the operations of the siege of Sebastopol, and on his return was appointed to the command of a regiment of cavalry. When the War of Secession broke out, Colonel Lee resigned his appointments, and accepted a command in the Confederate Army, which was being organized in his

native State. He was also named Military Governor of Richmond. From June 1862 he directed the operations in the defence of Richmond, defeated the Federals at Galne's Mill, with Jackson pursued the army of the Potomac, routed the army of General Pope after four days' fighting on the Rappahannock, and again defeated him at Manassas. In September he invaded Maryland and Pennsylvania, but was defeated by Maclellan at Hagerstown, at Sharpsburg, and at Antietam. Maryland was thus cleared of the Confederate forces, and Lee retired beyond the Rappahannock. In December he won the victory of Fredericksburg over General Burnside, and there strongly entrenched himself. At the beginning of May he was unsuccessfully attacked by General Hooker at Chancellorsville, where General Jackson was mortally wounded. In June he again made preparations to invade the Federal territory, but he was defeated by General Meade at Gettysburg, in the first days of July. From August 1863 to May 1864 General Lee was engaged in conducting the operations on the Rappahannock. The advance of General Grant made it necessary for him to concentrate his army for the defence of Richmond. Several bloody battles were fought in May, and Lee was hemmed in more and more closely. Named Commander-in-Chief of the forces of the South, he held his ground till April 1865, when he was finally defeated by Grant at Petersburg and Richmond, and on the 9th capitulated and gave up his sword. He soon after made his submission to the Federal Government. In the following October he was appointed President of Washington College, at Lexington, in Virginia, and there he died, 13th October 1870.

LEMON, MARK, editor of "Punch," dramatist, and song-writer, was born in London in 1809. His early tastes were for the stage, and his earliest attempts at composition were dramatic. In the course of his life he wrote sixty pieces for the stage, many short essays and stories, and a hundred songs. At the age of thirty-two, on the establishment of "Punch," he was appointed joint-editor, and soon after became sole editor, an office which he filled with remarkable success and satisfaction to all till his death. He was also literary editor and contributor to the "Illustrated London News." Some of his miscellaneous pieces, contributed to the "Illuminated Magazine," were published under the title of "Prose and Verse." An accomplished actor as well as writer, he joined, in later life, the amateur troupe under Mr. C. Dickens, and in public readings from "Henry IV," gave a clever impersonation of "Falstaff." Died at Crawley, in Sussex, 23d May 1870.

1802. He was the son of the poet, orator, and philologist, David Jacob van Lennep, and adopted the profession of the law, which he practised throughout his life. He was a devoted student of the English language and literature, frequently visited England, and in many of his poems and prose works adopted the style and manner of Sir Walter Scott. He first made himself known as a poet by his "Legends of the Fatherland," which appeared in 1830. His works are too numerous to mention. Among them are—a series of novels entitled "Our Forefathers," "History of the North Netherlands," related for children, "The Rose of Dekama," "The Adopted Son," translations from Shakespeare, Byron, and other English poets, and numerous plays. He edited the works of the Dutch poet Vondel. An edition of his own dramatic works was published in 1852-55, and an edition of his poetical works in 1859. Died, 25th August 1868.

LEOPOLD II., last Grand Duke of Tuscany, was the second son of the Grand Duke Ferdinand III. expelled by the French in 1799, and was born at Florence in 1797. He was educated at Wurzburg, returned to Florence in 1814, and three years later married the Princess Marie Anne, daughter of Maximilian of Saxony. He succeeded his father in June 1824, and in his system of administration followed the example of Grand Duke Leopold I. Having lost his wife, he married in 1833 the Princess Antoinette of Naples. At the commencement of the reform movements in Italy in 1847 Leopold was one of the first to yield to the demand of the time. He granted a constitution to the duchy, and in 1848 took part in the war against the Austrians. But the democratic party grew more powerful, and in February 1849 the Grand Duke fled from his dominions. He took refuge at Naples, and in July was restored by Austrian intervention. Thenceforth his government was reactionary, and clerical influences predominated. At the outbreak of the war for independence in 1859 he again fled from Florence, and the duchy was occupied by Sardinian troops. In July of that year he abdicated in favour of his son Ferdinand, and soon after saw Tuscany annexed to the kingdom of Italy. Leopold II. testified his love for literature by the publication in 1825 of a magnificent edition of the works of Lorenzo de Medici. He died 27th February 1871.

LEROUX, PIERRE, French philosopher and political economist, was born at Paris in 1798. Beginning life as a reader in a printing office, he took part at the age of twenty-six with Chevardière and Dubois in the establishment of a liberal newspaper, "Le Globe," of which he soon became the chief editor. A few years later he became a convert to the social principles of Saint-Simon, but in consequence of a serious difference of view between him and Père Enfantin, he left

"Le Globe." He afterwards edited or contributed to the unsuccessful "Revue Encyclopédique," and to the "Revue des deux Mondes," and in 1841 started a new journal, the "Revue Indépendante." He settled in 1845 as a printer at Boussac, where he organized a Socialist Association, and at the Revolution of February 1848 he was chosen *Maire* of that town. The same year he co-operated with Reynaud in the "Encyclopédie," which, however, did not succeed. M. Leroux was a member of the Constituent Assembly of June 1848, and of the Legislative Assembly of 1849, but his political influence was small, and after the *coup d'état* he left France, not returning to Paris till after the granting of an amnesty in August 1869. His most celebrated work is that entitled "De l'Humanité, de son Principe et de son Avenir," which appeared in 1839. Among his other writings are a translation of "Werther," "D'une Religion nationale," "De la Ploutocratie," "Du Christianisme," &c. Died at Paris in April 1871.

LEVER, CHARLES JAMES, novelist, was born at Dublin in 1806. Destined for the medical profession, he studied at Trinity College, where he graduated B.A. in 1827, and B.M. in 1831. He afterwards studied at the University of Göttingen, and having taken his physician's degree, returned to Ireland and commenced practice. Soon after the establishment of the "Dublin University Magazine," he became a contributor to its pages, and in 1837 appeared the first chapters of the tale which made him a name as a novelist, "The Confessions of Harry Lorrequer." During the course of its publication he accepted the post of physician to the British embassy at Brussels, which he held for three years, returning home in 1842. In the preceding year his second work, "Charles O'Malley," had appeared, and this was followed by a long series of others too numerous to name. Lever was for about three years (1842-45) editor of the magazine in which his first novels appeared. From 1845 he lived abroad, filling various official posts at Florence, at Spezzia, and at Trieste, and only visiting his native land occasionally. Lever's novels have seldom any unity of purpose or coherent plot, but abound in good stories of Irish life and manners, told with boisterous fun and overflowing animal spirits. He adopted a different style and class of subjects in his later works. He was the author of some capital songs. Died at Trieste, 1st June 1872.

LEYS, HENDRIK, one of the most distinguished Belgian painters, was born at Antwerp in 1815. He was intended for the church, but at the age of fifteen began to study painting under his brother-in-law, Brackelaer. In 1833 he exhibited his first work at the *Salon* of Antwerp, and to complete his artistic education

travelled in France and Holland. He found a generous patron in M. Couteau, for whom he executed a large number of his works. In 1840 he was made chevalier of the Order of Leopold, of which he was subsequently promoted officer and commander. Three of his works exhibited at Paris in 1855 obtained grand medals of honour, and on his return home his countrymen gave him a splendid fête. He again exhibited at Paris in 1867, and the same year was made officer of the Legion of Honour. He was a member of the Royal Academy of Belgium, and was created Baron by Leopold I. Some of his works have been exhibited in London. Baror. Libri was an archaeologist in art. He selected his subjects chiefly from the history of the Netherlands and the middle ages, the outward aspects of which, in dress, manners, architecture, &c., he had profoundly studied. He was also a learned colourist. At the time of his death he was engaged in the decoration of the Hôtel de Ville of Antwerp with a series of mural paintings, illustrative of the history of the Netherlands. Died at Antwerp, 26th August 1869. He was honoured with a public funeral.

LIBRI-CARRACCI, GUGLIELMO BRUTUS IGIUS TIMOLEON, Count, a distinguished Italian mathematician, was the son of an Italian refugee, the Count Libri-Bagnano, and was born at Florence in 1803. Devoted from an early age to scientific studies, he was appointed in 1823 Professor of Mathematical Physics at the University of Pisa. At the same period he made himself known by valuable memoirs contributed to the proceedings of various academies. Implicated in the political movements in Italy in 1831, he fled to France, where he obtained the friendship of Arago, letters of naturalization, and a seat in the Academy of Sciences. He became afterwards an adherent of the "Doctrinaire" party, and was named Professor of Analysis at the Sorbonne. He was at that time censured as a timeserver, and accused of ingratitude and base attacks on his former friends. Soon after, he accepted the appointment of Inspector-General of Public Instruction and of Public Libraries. He was also made chevalier of the Legion of Honour, and appointed editor of the "Journal des Savants." He formed an immense collection of books and manuscripts, the larger part of them being Italian, and many of great rarity, and offered the whole for sale to the French Government, on condition of their being kept together and bearing his name. The offer was declined, and the library was afterwards broken up and dispersed in successive sales in England. In the later years of the reign of Louis Philippe, suspicions were spread, and a report secretly prepared and presented to M. Guizot, then head of the ministry, that M. Libri had been guilty of pillaging the libraries

which he had visited as inspector. The Revolution of February 1848 interrupted the proceedings in the matter, but warned of attacks intended, he fled from France and settled in London. Meanwhile the charge was investigated by the courts, and M. Libri was condemned, deprived of his public appointments, and sentenced to ten years of confinement. The sentence gave rise to much and long-continued controversy, Libri himself indignantly and repeatedly repudiating the charge. In 1869, while the Newton-Pascal forgeries were causing much discussion, some of the French journalists pretended to detect the hand of the veteran Libri in the fraud. The great work of this eminent man is the "Histoire des Sciences mathématiques en Italie," published in 4 vols. in 1838-41. He contributed many articles to the "Journal des Savants," the "Revue des deux Mondes," and the "Journal des Débats." Libri married for his first wife a Frenchwoman, and, after her death, a young English lady. Died at Fiesole, near Florence, 23th September 1869.

LIEBER, FRANZ, an eminent publicist, was born at Berlin in 1800. He began to study medicine, but in 1815 enrolled himself as volunteer and served in the campaign against Napoleon I. He fought at Ligny and at Waterloo, and was severely wounded at the siege of Namur. After his return to Berlin he was arrested in 1819 as a demagogue, and was imprisoned for four months. On his release he went to study at Jena, and there graduated. His political liberalism exposing him to frequent annoyances and hindering his advancement, he went from Halle to Dresden, thence to Marseilles, and in the autumn of 1821 to Greece, to share in the war of independence. After enduring great hardships he went to Italy, and was received as an inmate of the household of Niebuhr, then Prussian ambassador at Rome. Returning to Germany with Niebuhr in 1823, he was again imprisoned, and in 1825 fled to England. In 1827 he went to America, delivered lectures on politics and history in the great towns, founded a swimming school at Boston, and edited the "Encyclopedia Americana" (1829-33). In 1835 he was appointed Professor of History and Political Economy at Columbia College, South Carolina, a post which he held till 1858, when he removed to New York. He soon after accepted a similar post at Columbia College in that city. Lieber was author of many works highly esteemed on political and social topics. Among the principal are—"A Manual of Political Ethics" (1838), which became a text-book at Harvard College, "Laws of Property" (1842), and "Civil Liberty and Self-government" (1853). He also published "Reminiscences of Niebuhr," "Anglican and Gallican Liberty," "Legal and Political Hermeneutics," an address on "In-

dividualism
munism," &

LIGUORI, ST ALFONSO MARIA DE, a celebrated Catholic theologian, founder of the Order of Redemptorists or Liguorians, was born at Marianella, near Naples, in 1696. Of a noble family, and early distinguished by his piety and fondness for study, he was brought up to the law, but after several years of practice he renounced it, and entered the priesthood in 1726. His labours lay chiefly among the poor, untaught, and vicious classes, both in Naples and the country districts. Impressed with the need of a class of men who should devote themselves especially to such work, he founded in 1732, at Villa Scala, the congregation known as the Order of the Holy Redeemer (Redemptorists). After much opposition he obtained for it the approval of Pope Benedict XIV, and it spread rapidly over Italy. From 1811 it extended into other countries. In 1762 Liguori was raised to the see of Santa-Agata de Goti, which he held for thirteen years, when, disabled by ill health and physical infirmities, he was permitted by Pope Pius VI. to resign. He returned to the principal house of his order at Nocera do Pagani, and there spent his last days. He was author of a large number of theological works, moral, dogmatic, and ascetic. Among them are—"Theologia Moralis," "Institutio Catechistica," and "Homo Apostolicus instructus in sua Vocatione." The French version of his works is in 3 vols. Died at Nocera, 1st August 1787. He was beatified in 1816, canonized in 1839, and in April 1871 the title of Doctor of the Church was conferred on him by Pius IX.

LONSDALE, WILLIAM LOWTHER, second earl of, statesman, was born at Uffington, in Lincolnshire, in 1787. He studied and graduated M.A. at Trinity College, Cambridge, and on attaining his majority in 1808 entered Parliament as member for Cockermonth. In 1813 he was returned for Westmoreland. Associated with the Tory party, he became a lord of the Admiralty in 1810, and a lord of the Treasury three years later. Under the Wellington administration he was appointed First Commissioner of Woods and Forests, and had a seat in the Privy Council. Sir Robert Peel made him Vice-President of the Board of Trade in 1834, and Postmaster-General in 1841. He was at the same time raised to the peerage as Baron Lowther. He succeeded his father in 1844, and in 1852 was appointed President of the Council in the Derby Ministry. Lord Lonsdale was a fellow of the Royal Society. Died, unmarried, in London, 4th March 1872.

LOVER, SAMUEL, an Irish novelist, song writer, &c., was born at Dublin in 1797. He first studied the art of painting, and practised it for many years. In

1823 he was chosen a member of the Royal Hibernian Academy of Arts. His portrait of Paganini, exhibited at the Royal Academy, attracted much attention. But he soon after gave up painting and applied himself to literature. Among his works are a volume of songs, which became very popular, "Legends and Stories of Ireland," "Rory O'More," "Handy Andy," and "Metrical Tales." He made a successful hit in his entertainment, called "Irish Evenings," both in England and America. During his last years he received a government pension. Died, 6th July 1868.

LÖWE, LUDWIG, a distinguished German tragic and comic actor, was born at Hilteln in 1795. He was one of a family of great theatrical artists. He made his first appearance at Prague in 1811, passed ten years later to Cassel, and in 1826 to the Court Theatre at Vienna. He subsequently acted the post of manager. Among his greatest parts were "Hamlet" and "Macbeth." He was favourably known also as a lyric poet. Died at Vienna, in March 1871.

LUDWIG (Louis) I., KARL AUGUST, king of Bavaria, was the son of his predecessor, Maximilian Joseph I., and was born at Strasburg in 1786. He was educated at the Universities of Landshut and Göttingen, visited Italy in 1804-5, and served in the French campaigns of 1806-7-3. In 1809 he married the Princess Teresa of Hildburghausen. He early showed a strong taste for the fine arts, and while Crown Prince he lived chiefly in retirement, taking little interest in political affairs. He accompanied the allied sovereigns to London in 1814, and succeeded his father on the throne in 1825. After his accession he set himself to carry out his cherished design of making his capital one of the most magnificent seats of the fine arts and of learning. The transfer of the University of Landshut to Munich, the invitations to scholars and artists to that city, and the re-organization of the Academy of Fine Arts, were the earlier steps towards the fulfilment of his purpose. Among the noble buildings erected in the city were the Glyptothek, the Pinacothek, the Odeon, the Royal Palace, several churches, &c. The Walhalla, near Ratisbon, was founded by him, and was completed in 1842. Under his patronage many great works in sculpture, in painting, especially fresco and encaustic, and painting on glass were executed, and the influence of the School of Artists which arose under his patronage was widely felt. Among its chief names are those of Cornelius, Kaulbach, Schnorr von Karolsfeld, Klenze, Schwantaler, &c. As a king, his absolutist tendencies, and the support which through the greater part of his reign he gave to the Ultramontane party, at length made him very unpopular. The final blow was given to his reputation by the ridicule to which he exposed him-

self in 1847-48 by his passion for the notorious courtesan Lola Montez. On his determination to create her a countess, disturbances broke out in Munich. In March 1848 a revolutionary movement began, the arsenal was seized by the people, and reform was demanded. Promises were given, the obnoxious favourite was dismissed, but before the end of the month Ludwig abdicated in favour of his son, Maximilian Joseph II. From that time he lived in retirement. He lost his wife in 1854. Died at Nice, 29th February 1868. Ludwig I. was author of a volume of poems published in the early part of his reign.

LUSHINGTON, STEPHEN, a distinguished English politician, Judge of the Consistory, and afterwards Judge of the Court of Admiralty, was born in 1782. He was the second son of Sir Stephen Lushington, Baronet, Chairman of the East India Company, and was educated at Eton, and All Souls' College, Oxford, which he entered in 1799. After taking his degree of B.A., he was elected fellow of his college; and having graduated M.A. and D.C.L., was called to the bar at the Inner Temple in 1806. Two years later he was admitted a member of the College of Advocates. In 1807 he entered Parliament as member for Great Yarmouth, and afterwards sat for Tregony, Ilchester, and other boroughs, till 1831, holding a very high place among the supporters of all Liberal measures. His maiden speech was an earnest denunciation of the slave trade. He advocated the recognition of the South American Republics; was employed with Brougham and Denman on the defence of Queen Caroline; strenuously supported Parliamentary reform, reform of the Court of Chancery, and the removal of Jewish disabilities. In 1828 he was appointed Judge of the Consistory Court, and was promoted ten years later to be Judge in the Court of Admiralty. Meanwhile he had been elected a member of the first reformed Parliament for the Tower Hamlets, for which he sat till 1841. He then lost his seat by the passing of an Act disqualifying the Judge of the Admiralty from sitting in the Lower House. This measure was carried by a distinctly party vote of his political opponents in order to exclude him. He then retired finally from political life. But he continued to sit as Judge till 1867, distinguishing himself by a long series of learned, luminous, and important judgments both in the Admiralty and the Ecclesiastical Courts. Memorable among these are the judgments pronounced on various knotty ecclesiastical questions relating to doctrine, discipline, and ritual, which came before the Court of Delegates and the Judicial Committee of the Privy Council. At the age of eighty-five, he retired from the Bench, passing his last years in a quiet retirement, alive to the past to all that was passing around him,

and rich in all that could be desired to accompany old age. Within a few weeks of his death he had undertaken the journey to Oxford in order to vote for Dean Stanley at the election of select preachers for the university. Among his philanthropic deeds was the establishment near his country seat of a Home for Convalescents, which is under the management of his daughter. Dr Lushington was for many years one of the trustees of Guy's Hospital. On the occasion of the quarrel between Lord Byron and his wife, the counsel of Dr Lushington was sought by Lady Byron and her family, and it was in consequence of his letter, written in 1830, that the permanent separation of the pair was resolved on. Dr Lushington died at his seat, Ockham Park, in Surrey, 20th January 1873.

LYNCH, THOMAS TOKE, theologian, poet, and miscellaneous writer, was born at Dunmow, in Essex, in 1818. In 1849 he married, and the same year was chosen minister of a small Nonconformist congregation in London, and this office he filled till his death. His first literary work was "Memorials of Theophilus Trinal," consisting of short essays, poems, and sketches, strung together on a thread of fictitious biography, full of truth and beauty, and sparkling with wit. This volume was followed by "Essays on some of the Forms of Literature," and "Lectures to Young Men," both published in 1853. Three years later appeared a volume of hymns and sacred poems, entitled "The Rivulet," remarkable for originality, spiritual insight, fervour, and sincerity. A new edition of "The Rivulet," with additional hymns, was published in 1870. Several volumes of Mr Lynch's sermons and lectures were published at intervals, under the titles of "Three Months' Ministry," "The Mornington Lecture," "Sermons for my Curates," "Among Transgressors" (a remarkable discussion of the purport of the death of Christ), "Church and State," "Letters to the Scattered," &c. Although sometimes lacking the charm of artistic form, his discourses are rich in the highest qualities of books, truth clearly seen and truthfully spoken; earnestness of the prophet, sight and sentiment of the poet, and the healthy sportfulness of the humourist. Revered and intensely beloved by a small circle of friends, Mr Lynch laboured on for years comparatively unknown to the larger world. His life had long been a struggle, painful in the extreme, but heroically maintained, with the malady of which he at last died. He was a passionate lover of music, and after his death appeared a small volume of "Tunes to Hymns in the Rivulet," composed by himself, many of which deserve a place among the best productions of their class. Died in London, 9th May 1871.

EDWARD GEORGE EARLE

LYTTON BULWER, Lord, the distin-
guished novelist, dramatist, and states-
man, was born in 1805. He was the
son of General William Earle Bulwer,
of Wood Dalling, Norfolk, by his
wife the heiress of Richard W. Lytton,
of Knebworth, in Hampshire. Care-
fully educated under the direction of
his mother, he went afterwards to com-
plete his studies at Trinity Hall, Cam-
bridge, where he graduated B.A. in 1826.
He had before that time made his appear-
ance as an author, having printed an
Oriental tale at the age of fifteen, a poem
on "Sculpture" in 1825, and a collection
of poems, "Weeds and Wild Flowers," in
1826. In the following year appeared
"Falkland," the first in the long series of
his novels, which was published anonym-
ously, and was afterwards suppressed.
The same year (1827) he published a tale
in verse, in the manner of Lord Byron.
But his first triumph as a novelist was
won in 1828, the date of the publication
of "Pelham, or the Adventures of a
Gentleman." In quick succession fol-
lowed "The Disowned," "Devereux," and
"Paul Clifford," the hero of the last being
a highwayman, whose character is changed
and elevated by the influence of love. The
success of this tale led to the production
of many similar ones by other authors.
In 1831 Mr Bulwer entered the House of
Commons as member for the borough of
St Ives, and took a zealous part in the
agitation for parliamentary reform. The
same year he published a satirical poem en-
titled "The Siamese Twins," and his pow-
erful tale, founded on facts, of "Eugene
Aram." About the same time he was
appointed editor of the "New Monthly
Magazine," which post he held till August
1833. He contributed to the magazine a
series of papers—literary, political, and
metaphysical—most of which were pub-
lished in a collected form under the title
of "The Student." In 1832 Bulwer was
returned to Parliament as member for
Lincoln, for which place he sat for nine
years, and during that period was an ad-
herent of the Radical party. His pen,
however, was not idle. A tour in Italy
furnished him with much picturesque
material for his great stories of the "Last
Days of Pompeii," which appeared in
1834, and "Rienzi," which almost im-
mediately followed. A political brochure
entitled "The Crisis" (1835), attained con-
siderable popularity, and secured him in
1838 a baronetcy from Lord Melbourne,
then First Lord of the Treasury. In 1836
Bulwer made his first attempt as a
dramatist, in his "Duchess de la Vallière,"
which did not succeed. He then returned
to novel-writing, and published "Ernest
Maitravers," and soon after "Alice, or
the Mysteries." In 1838 came his first
dramatic success, in "The Lady of Lyons,"
which was produced at Covent Garden
Theatre by Macready. "Richelieu" fol-
lowed in 1839, and "Money," a comedy,

in 1840; the latter was produced at the
Haymarket. Two years later, several
other novels having in the meantime
appeared, Sir Edward Bulwer gave to the
world his noble and beautiful philoso-
pheme "Zanoni," the story of which is of
the days of the first French Revolution.
"The Last of the Barons," an elaborate
study of English mediæval life and man-
ners, appeared in 1843. "Lucretia," pub-
lished four years later, was the subject of
severe censure on the score of immorality.
In 1848 appeared "Harold, Last of the
Saxon Kings." In the following year Sir
Edward Bulwer-Lytton (the addition to
his name had been assumed by royal
licence on his mother's death in 1844, when
he succeeded to the Knebworth estates)
entered upon a new field of fiction, in
"The Caxtons," a story of contemporary
life, which first appeared in "Blackwood's
Magazine," and was warmly welcomed.
A sequel entitled "My Novel, or Varieties
of English Life," was published in
1853, and was welcomed as heartily. In
the meantime the author re-entered
Parliament, having been returned for
Hertfordshire in 1852, no longer as a
Liberal, but as a Conservative and Pro-
tectionist. He retained his seat till 1866,
the time of his elevation to the peerage
by the title of Lord Lytton. In May
1858 he was appointed Secretary of State
for the Colonies, and served in that ca-
pacity till June 1859. His term of office is
made memorable by the erection of British
Columbia into a distinct colony, and by
the abolition of the monopoly of the
Hudson's Bay Company. He was elected
Lord Rector of Glasgow University in
1856. In addition to the novels already
named must be mentioned "The Pilgrims
of the Rhine," "Night and Morning,"
"What will he Do with It?" and "A
Strange Story." At the time of his death
he had just completed the revision of the
proof-sheets of another novel entitled
"Kenelm Chillingley." His most im-
portant political works are the "New
Timon," a satirical work containing bril-
liantly executed portraits of living states-
men and other men of note, published
anonymously in 1846; "King Arthur,"
also anonymous, in 1848; a series of
successful translations from the "Poems
and Ballads of Schiller;" and a volume
of Greek legends under the title of "The
Lost Tales of Miletus," in 1866. This
enumeration of Lord Lytton's works is
still incomplete, but includes the most
important of the forty or fifty which we
owe to him. Since his death it is known
that he was the author of the remarkable
book entitled "The Coming Race," pub-
lished anonymously a year or two pre-
viously. The Guild of Literature and
Art was established by Lord Lytton
in conjunction with Dickens and other
men of letters and art, and Lord Lytton
wrote a play entitled "Not so Bad as we
Seem," which was privately acted for the

[MAC]

A New Universal Biography.

[MAC]

benefit of the guild. He also gave a piece of land at Stovenage, on which some homes for decayed authors and artists were built. The honorary degree of D.C.L. was conferred on Lord Lytton by the University of Oxford in 1852. He married, in 1827, Rosina, daughter of Francis Wheeler, of Lizard Consell, County Limerick, a lady afterwards known as authoress of several novels. Of their two children, one is the Hon. Robert Lytton,

post and diplomatist, who succeeds his father in the peerage, and the other a daughter who died early. Lord Lytton died at Torquay, 18th January 1872. His remains were interred in Westminster Abbey, and an eloquent discourse on the occasion of his death, and of that of Dr Lushington, was delivered in the Abbey by Professor Jowett, Master of Balliol College, Oxford, on Sunday 2d February.

M.

MACDOWELL, PATRICK, an eminent sculptor, was a native of Belfast. Born in 1799, his boyhood was spent in various occupations, until at last, in the house of a French sculptor in London, his genius discovered itself, and was diligently cultivated. He began to exhibit at the Royal Academy about 1822, having at that time many commissions for portrait busts. His design for the monument to Major Cartwright was chosen, but another was afterwards adopted in its place. He devoted some portion of his time to ideal subjects, and his first group was a pair of lovers from Moore's "Loves of the Angels." In 1841 he visited Italy, and the same year was elected A.R.A. He became R.A. in 1845. Among his best works are the well-known "Girl going to bathe," "Prayer," "Early Sorrow," "Virginius," "Eve," "Psyche," "The Day-Dream," "Psyche abandoned by Cupid," statues of Lord Exmouth for Greenwich Hospital, of Mr Pitt and the Earl of Chatham for Westminster Palace, and the group of "Europe" for the Albert Memorial in Hyde Park. Mr Macdowell became a retired academician early in December 1870, and died in London on the 9th of the same month.

MACLEOD, NORMAN, theologian and miscellaneous writer, was born at Campbelltown in Argyleshire, on the 31 November 1812. His father, Norman Macleod, was a distinguished minister of the Scottish Kirk, and the greatest Gaelic scholar of his day. His grandfather, also Norman Macleod, was minister of the parish of Morven in Argyleshire. The subject of this notice was educated at the universities of Glasgow and Edinburgh, and afterwards travelled in Germany, making some stay at Weimar. In 1832 he was appointed minister of the parish of Dalkeith in 1843, and eight years later was called to the Barony parish of Glasgow, of which he remained minister till his death. The degree of D.D. was conferred on him in 1853. Dr Macleod visited Canada and the

United States in 1850, and Palestine in 1864; and in 1867 he was sent to India to investigate the state and prospects of the Christian missions there. He was a dean of the Chapel Royal, and one of Her Majesty's Chaplains for Scotland. In 1869 he was Moderator of the General Assembly. His literary works are very numerous. For ten years (1850 to 1860) he was editor of the "Edinburgh Christian Magazine," to which he contributed many papers. From 1860 till his death he was editor of "Good Words," to which he was also a constant contributor. Of his separate works the best known are "The Earnest Student," a memoir of his friend John Mackintosh, "The Home School," "Eastward," "Peeps at the Far East," "The Old Lieutenant and his Son," "The Starling," and "Reminiscences of a Highland Parish." Died at Glasgow, 16th June 1872. He left a widow and eight children.

MACLISE, DANIEL, a distinguished painter, was born at Cork, in Ireland, in 1811. He first studied drawing at the Cork Academy of Art, practised for a time portrait-drawing in pencil, and in 1828 came to London and entered as student at the Royal Academy. After a brilliant course he won the gold medal for historical composition, which carries with it the travelling studentship. Of the latter he did not avail himself. He began to exhibit at the academy in 1829, visited Paris in the following year, was elected A.R.A. in 1835, and R.A. in 1840. He subsequently visited Italy and Germany. In 1866 the presidency of the Royal Academy was offered to him, but he declined it. Among the most remarkable of his numerous oil-paintings are "All-Hallow Eve," "Mokanna Unveiling" (1833), "Captain Rock," "Vow of the Ladies and the Peacock," "Bohemian Gipsies," "Banquet Scene in Macbeth," "Play in Hamlet," "Caxton in his Printing Office," "Strongbow and Eva," &c. His greatest works, however, are the two large frescoes (glass-paintings) in the Royal Gallery of the Palace at Westminster, the

[MAG]

"Death of Nelson" and "Wellington at Waterloo." These were undertaken at the desire of the Government to devote him to the nation, he gave up his profession. He visited Greece with the practice which he received. The two pictures were painted in 1865. In the life, MacLise's "Alfred Crocer's Magazine" characterizes the literary time. [S] on these points 1871. A notice titled "The quest," appeared towards publication in London, 1870.

MAGNUS, German painter, born in 1799. Distinguished medical professor at the Berlin Academy. In his twenty vote himself came a pupil exhibited in Rome, which mind and his mind was committed to the Arts, of which professor. Magnificent presenting himself as well as to form portraits are Lind (Madame Ross), the son, the German Schwerin, & published a lighting of tures and a member. Academy. 1872.

MAGNUS, distinguished chemist, was born at degree as a university. He made himself chemical in appointed Physics and Ordinary Professor. He permitted men Sciences in the Royal Society. Labours of a large volume.

"Death of Nelson," and the "Meeting of Wellington and Bûcher after Waterloo." These were undertaken in 1867, by special desire of the Prince Consort, and in order to devote himself entirely to their execution, he gave up all other commissions. He visited Germany to acquaint himself with the practice of water-glass painting, which he recommended and adopted. The two pictures were both completed by 1865. In the earlier years of his artist life, Maclise (under the pseudonym of "Alfred Croquis") contributed to "Fraser's Magazine" a very remarkable series of "character-portraits," including many of the literary and scientific celebrities of the time. [See Mr D. G. Rossetti's article on these portraits, "Academy," 15th April 1871.] A noble series of drawings, entitled "The Story of the Norman Conquest," appeared in 1867, and was afterwards published by the Art Union of London. Died in London, 25th April 1870.

MAGNUS, EDWARD, a distinguished German painter, was born at Berlin in 1799. Destined by his father for the medical profession, he applied himself instead to the study of architecture at the Berlin Academy, attending at the same time the lectures of Hegel on philosophy. In his twenty-third year he began to devote himself exclusively to painting, became a pupil of Schlessinger, and first exhibited in 1826. A visit to Paris was followed by a residence of three years at Rome, which left a deep impression on his mind and his work. In 1831 he was admitted to the Berlin Academy of Fine Arts, of which, in 1844, he became a professor. Magnus was latterly chiefly distinguished for his admirable portraits, presenting in vivid truthfulness the inner as well as the outer man, character as well as form. Among his most successful portraits are mentioned those of Jenny Lind (Madame Lind-Goldschmidt), Countess Rossi, the Queen of Prussia, Mendelssohn, the Grand-Duchess of Mecklenburg-Schwerin, &c. In 1864 Professor Magnus published a work on the arrangement and lighting of places for the display of pictures and sculpture. In 1866 he became a member of the Senate of the Berlin Academy. Died at Berlin, in August 1872.

MAGNUS, HEINRICH GUSTAV, a distinguished German chemist and physicist, was born at Berlin in 1802. He took his degree as Doctor of Philosophy at the university in 1827, having before that time made himself known by several important chemical investigations. In 1831 he was appointed Professor Extraordinary of Physics and Technology, and became Ordinary Professor in 1845. He was admitted member of the Berlin Academy of Sciences in 1840, and foreign member of the Royal Society of London in 1863. The labours of Professor Magnus extended to a large variety of subjects. Chemistry

chiefly attracted him in his earlier years, physics afterwards, and during the last ten years of his life he was engaged in studying the polarization and absorption of heat by various media. The fruits of his investigations appear in the numerous memoirs which he contributed to Poggen-dorf's "Annalen," and the journals of the Berlin Academy. Many of his papers were translated for the "Philosophical Transactions." Died at Berlin, 4th April 1870.

MAGUIRE, JOHN FRANCIS, politician and miscellaneous writer, was born at Cork in 1815. He was educated at Trinity College, Dublin, studied for the profession of the law, and was called to the Irish bar in 1843. He threw himself ardently into the movement of the national party in Ireland, then under the leadership of O'Connell, offered himself twice (1847 and 1851) unsuccessfully as a candidate for election to the Imperial Parliament, and was at last returned, in 1852, for the borough of Dungarvan. He originated in 1841 the Cork "Examiner," of which he continued to be proprietor and editor till his death. His energetic management and vigorous writing soon gave the "Examiner" a character and influence almost unique among provincial journals. Mr Maguire was an active member of the Tenant Right League, and an advocate of Home Rule for Ireland. Re-elected for Dungarvan in 1857, he sat for that borough till 1865, when he was elected for his native city. Mr Maguire was well known as an active promoter of the establishment of manufactures in Ireland, of the temperance movement under Father Mathew, of the National Exhibition at Cork, and of the introduction of the flax manufacture. As member of various local boards, and of the Town Council, and as chief magistrate of Cork, an office which he several times filled, he contributed powerfully to the suppression of street beggary, the better regulation of workhouses, and the repression of open vice. By his courageous intervention on occasion of the riots at Cork in 1863, he effected the dispersal of the mob, and saved the city the worst extremes of civil strife. He visited Rome in 1856, and was received with marked sympathy by the Pope. The visit and the reception were repeated in 1858. He was again at Rome during the sitting of the Council of the Vatican in 1870. A few years before he had spent some months in the United States and Canada. Mr Maguire was an enthusiastic Catholic and Irishman, but he did not sympathise with those who advocated change by physical force. An indefatigable worker in many fields at once, his end appears to have been hastened by overwork. His principal literary works are—"The Industrial Movement in Ireland" (1852), "Rome and Its Ruler" (1857), of which a third edition appeared under the new title of

"The Pontificate of Pius IX." in 1870. "Father Mathew, a Biography" (1863), which passed through several editions, "The Irish in America" (1868), and a novel entitled "The Next Generation" (1871). Died at Dublin, 1st November 1872.

MAITLAND, SAMUEL ROFFEY, a learned theological and historical writer, was born at London in 1792. Belonging to a Presbyterian family, he entered Trinity College, Cambridge, but took no degree; and adopting the law as his profession, was called to the bar in 1816. He married about the same time. After a year's practice at the bar he retired and gave himself up to study, and in 1821 took holy orders. Two years later he was appointed perpetual curate of a new church at Gloucester, a post which he held about seven years. In 1833 he settled in London, having accepted the Librarianship of Lambeth Palace. This office he retained till the death of Archbishop Howley in 1848, when he finally settled at Gloucester. He had shortly before received the degree of D.D. Dr Maitland's writings are very numerous; the most important are—"The Dark Ages," a series of essays illustrating mediæval, religious, and literary history, and forming a protest against exaggerated notions of the "darkness;" "Facts and Documents illustrative of the History, &c., of the Albigenses and Waldenses;" "Essays on Subjects connected with the Reformation in England." "Erwin, or Miscellaneous Essays on Subjects connected with the Nature, History, and Destiny of Man," and "Eight Essays on various Subjects." Dr Maitland was an accomplished bibliographer, and was a fellow of the Royal and Antiquarian Societies. Died, after a long period of failing health, at Gloucester, January 19, 1866.

MALAN, ABRAHAM HENRI CÉSAR, Swiss theologian and miscellaneous writer, was born at Geneva in 1781. He was educated at the academy of his native town, and after a brief experience of mercantile life at Marseilles, returned to Geneva to study theology. In 1810 he was ordained minister by the Presbytery, the "Vénérable Compagnie" of Geneva. He so much distinguished himself in the pulpit that he was appointed preacher in the cathedral. He was also named Regent at the Academy. But in the course of a few years, during which he had aimed at infusing fresh life into the dead forms around him, the Presbytery became hostile to him, and demanded that he should cease preaching such doctrines as they disapproved. As he could not yield, he was deprived in 1818 of his offices, both in the Church and the Academy. He soon after built a church on his own ground, and named it "Chapel of the Testimony." There he continued to preach more than forty years, retiring, on account of illness,

in November 1863. The degree of D.D. was conferred on him by the University of Glasgow in 1826. Dr Malan was the first to establish a Sunday-school in Switzerland: he organized a Religious Tract Society, conducted a Theological School for the training of young ministers, and wrote a large number of works. He was an accomplished linguist, a skillful painter and lithographer, and sufficiently practised in sculpture to assist on some occasions Thorwaldsen, who was his intimate friend. He wrote both the words and the music of the collection entitled "Les Chants de Sion," first published in 1826. Died at Geneva, 8th May 1864.

MALTITZ, APOLLONIUS, Baron von, German diplomatist, poet, and dramatist, was born in 1795. He was a younger brother of Baron Franz Friedrich von Maltitz, also known as a poet. Entering early on a diplomatic career, he was for some time Russian Chargé d'Affaires at Rio Janeiro, and afterwards at the court of Weimar. He retired from official life in 1865. His first work, "Poetische Versuche," appeared in 1817. Nine years later he published a humorous tale entitled "Geständnisse eines Rappen mit Anmerkungen seines Kutschers." These were followed by a play, "Der Dichter und der Uebersetzer," "Gedichte," "Dramatische Einfälle," and several other volumes of verse. Among his later works are the plays of "Virginia," "Anna Boleyn," "Spartacus," &c., besides a "Selbstbiographie," and a metrical tale entitled "Die Wundereur der Hölle." Died at Weimar, 2d March 1870.

MANSIEL, HENRY LONGUEVILLE, dean of St Paul's, a distinguished philosopher and theologian, was born at Cosgrove, in Northamptonshire, of which parish his father was rector, in 1820. He was educated at Merchant Taylor's School, and at St John's College, Oxford, which he entered in 1839, and of which he became fellow three years later. He graduated B.A. in 1843, taking a first class both in classics and mathematics, and was appointed tutor in his college. In 1845 he took holy orders, and in 1855 he was appointed Reader in Moral and Metaphysical Philosophy at Magdalen College, the readership becoming in 1859 the Waynflete Professorship. Appointed Bampton Lecturer in 1858, he delivered the course of lectures on the limits of religious thought, which made him very widely known, and on which, chiefly, his reputation as a philosophic thinker rests: It gave rise to much animated controversy, in which Professor Maurice, Mr Goldwin Smith, Mr J. S. Mill, and others took part. In 1867 Mr Mansiel succeeded Dr Stanley in the chair of Ecclesiastical History, and as Canon of Christ Church. In the following year, on the death of Dean Milman, he was appointed Dean of St Paul's. In politics, Dean Mansiel was a Tory of the most unbending sort. His

principal works are—an edition of Aldrich's "Logic," with a valuable introduction and notes (1849), "Prolegomena Logica" (1841), a popular work on Kant's philosophy (1856), the treatise on "Metaphysics" in the "Encyclopaedia Britannica" (1857), the Bampton Lectures named above, and the "Philosophy of the Conditioned" (1866). Dean Mansel was joint-editor with Veitch of an edition of Hamilton's Lectures on Metaphysics and Logic. As a philosopher, he was a follower of Hamilton. Died suddenly in London, 30th July 1871.

MAROCCHETTI, CARLO, Baron, Italian sculptor, was born at Turin in 1805 or 1809. After studying at Rome, he settled at Paris in 1827. The first important work which gave him a reputation was his equestrian figure of "Emanuel Philibert," set up in Turin in 1838. It was rewarded by Charles Albert, king of Sardinia, with a patent of nobility, and procured for him a long course of success under royal patronage. He was naturalised in France in 1841, and was employed on various commissions for the Orleans family, especially an equestrian statue of the Duke of Orleans, executed in 1844. About the same time he executed an equestrian statue of Wellington for the city of Glasgow. On the outbreak of the French Revolution in 1848, Baron Marochetti came to London and settled there, obtaining a large share of court favour and aristocratic patronage. His large model of "Richard Cour-de-Lion," first seen at the great Exhibition of 1851, became a popular favourite. In 1861 he was chosen A.R.A., and five years later R.A. Among his other works may be mentioned his "Sappho," "Bust of Prince Albert," "Bust of Queen Victoria," "Cupid and Greyhound," the statue of "Wellington" at Strathfieldsaye, the "Scutari" monument, the "Inkermann" in St Paul's Cathedral, &c. Tho Baron was made chevalier of the Legion of Honour in 1839, and grand officer of St Maurice and Lazarus in 1861. Died at Paris, 28th December 1867.

MARRIOTT, WHARTON BOOTH, Assistant-Master of Eton College, was born in 1825. He entered Trinity College, Oxford, in 1844, graduated B.A., and was afterwards chosen fellow of Exeter College. In 1850 he was ordained priest, and appointed to the post in Eton College, which he held to the time of his death. He made himself known by a learned work on church vestments—"Vestiarium Anglicanum" (1867). Died at Eton College, in December 1871.

MARTIUS, KARL FRIEDRICH PHILIPP VON, a distinguished German botanist and traveller, was born at Erlangen in 1794. He was educated at the gymnasium and the university of that town, and graduated M.D. At an early age his love of botany showed itself in the production of a work on the flowerless plants found near Er-

langen. In 1817 he was sent with Spix on an expedition for the scientific exploration of Brazil, which occupied them three years. Von Martius formed a large collection of plants, and gave to the world the rich fruits of his observations and discoveries in several elaborate works. After his return to Bavaria, he received the appointment of Professor of Botany, and Director of the Botanic Garden at Munich. His works are "Reise nach Brazillen," 3 vols. (1824), "Genera et Species Palmarum," "Nova Genera et Species Plantarum," "Historia Naturalis Palmarum," "Flora Braziliensis," and "Conspectus Regni Vegetabilis." Von Martius attained the highest rank both as traveller and as descriptive and systematic botanist. He was elected F.R.S. and F.L.S., London, and was a member of many Continental scientific societies. He was also for many years Secretary of the Bavarian Royal Academy of Sciences. Died at Munich, 13th December 1868.

MASON, GEORGE, a distinguished English landscape-painter, was born in Staffordshire about 1818. He first studied for the medical profession, but his strong passion for art had its way. In 1844 he went to Italy, studying and practising his art in various places, and at last taking up his residence at Rome. He returned to England in 1858, having exhibited at the Royal Academy for the first time in the previous year. Mr Mason was entirely self-taught as an artist, never having studied under any master, and there have been very few among English landscapists so original, poetic, and refined. His first exhibited picture was "Ploughing in the Campagna." This was followed by "In the Salt Marshes—Campagna de Roma" (1859); "Mist on the Moors," the first of that remarkable class of pictures which have made him his special reputation, was exhibited in 1862; and after that time, in addition to many small works, he produced several pictures of larger size, among which especially noteworthy are the "Evening Hymn" (1868), "Girls Daucing" (1869), and "Harvest Moon" (1872). The last was left unfinished in consequence of the painter's illness. Mr Mason was elected A.R.A. in 1868. Died in London, 22d October 1872. An exhibition of his principal works was held at the rooms of the Burlington Fine Arts Club, London, in January and February 1873.

MATTEUCCI, CARLO, a distinguished Italian statesman, mathematician, and natural philosopher, was born at Forlì, in the Romagna, in 1811. He studied first at Bologna, where he took a doctor's degree in mathematics, then at Paris, at the Ecole Polytechnique, the Sorbonne, and the Collège de France. Returning to Italy in 1831, he was soon after appointed Professor at the University of Bologna, and there commenced the series of experimental researches which made his name

famous. He applied himself chiefly to the study of electro-physiology. In 1837 he was called to the chair of Physics at Ravenna, and three years later to the same chair at Pisa. In 1844 he received the prize of the Paris Institute for Experimental Physiology, and was named a corresponding member. At the same time the Copley Medal of the Royal Society of London was awarded him. Matteucci took a warm interest in the political movement in Italy in 1847. In the following year he was named senator of Tuscany, and as commissary accompanied the Tuscan forces into Lombardy. After the return of the Grand Duke in 1849, he resumed his post at Pisa. In 1850 he was one of the three Tuscan deputies sent to Napoleon III. by the provisional government. On the establishment of the kingdom of Italy, he was created a senator, and named Inspector-General of Telegraphs in Italy. He had introduced telegraph lines into Tuscany in 1846. In 1862 he was appointed Minister of Public Instruction, and as such contributed powerfully to the liberal reorganization of schools. He was a commander of the Legion of Honour, and grand cordon of Sts. Maurice and Lazare. The results of his scientific labours appeared in his works, entitled "Lezioni di Fisica," which passed through four editions, "Lezioni sul Fenomeno Fisico-chimico del Corpi Viveuti," "Manuale di Telegrafia Elettrica," "Cours special sur l'Induction," &c. Died, 25th June 1868.

MAURICE, JOHN FREDERICK DENISON, an eminent Church of England divine, and a distinguished theological and philosophical writer, was born at Normanston, near Lowestoft, in Suffolk, in 1805. He was the son of a Unitarian minister. At the age of eighteen he entered Trinity College, Cambridge, where he became the friend of John Sterling, and with him studied under Julius Hare. In 1826 he removed to Trinity Hall, and in the following year took a degree (first-class) in the Law School. Unable, as a conscientious Dissenter, to qualify himself for a degree by "subscription" to the Articles, he left the University, declining at the same time a fellowship which was offered him. He settled in London, applied himself to literary pursuits, and with Sterling wrote for the "Athenæum," then recently established. His views as to subscription having undergone some modification, he entered Exeter College, Oxford, and graduated B.A. in 1831, and M.A. in 1835. In the latter year he was ordained a priest, and was soon after appointed Chaplain to Guy's Hospital, a post which he held for ten years. In 1840 he became Professor of Modern History and English Literature at King's College, London, and six years later Professor of Ecclesiastical History. He held the office of Chaplain and Reader at Lincoln's Inn from 1846 till 1860. On the publication of

his "Theological Essays" in 1853, suspicions arose about his orthodoxy, especially in reference to the doctrines of the "Atonement" and "Eternal Punishment." Dr Jell, then Principal of King's College, brought the matter before the Council, and so vehement was the feeling against Mr Maurice that he felt it necessary to resign his chair. In the following year he founded in London the Working Men's College, of which he became Principal, and to the conduct of which he devoted for some years much of his time and energy. Resigning his chaplaincy at Lincoln's Inn, he was appointed in 1860 Perpetual Curate of St Peter's, Vere Street, where he continued to preach till 1868, when he was called to the chair of Moral Philosophy at Cambridge. The honorary degree of M.A. was soon after conferred on him by the University. Mr Maurice was one of the chief representatives of the views and aims of the party known as "Broad Church." He took a prominent part in the origination of the "Christian Socialist" movement, and zealously advocated the cause of the higher education of women. The charm of his character, so simple yet so rich, so truthful yet so fervent, so sweet and so severe, was irresistible, and his personal influence was immense. As religious teacher, he was, says the "Spectator" (6th April 1872), "the man recognized by almost all who knew him as combining most clearly spiritual principles which disowned all compromise with scepticism, and intellectual principles which disowned all compromise with bigotry or superstition." Mr Maurice's writings are very numerous. Among the most important are the "Kingdom of Christ," published in 1838, "Religions of the World" (1847), "History of Moral and Metaphysical Philosophy" (between 1850 and 1860), "Patriarchs and Lawgivers of the Old Testament" (1851), "Prophets and Kings of the Old Testament" (1853), "Doctrine of Sacrifice" (1854), "Lectures on the Ecclesiastical History of 1st and 2d Centuries" (1854), "The Conscience" (1863), and "Social Morality" (1869). Died in London, 1st April 1872.

MAXIMILIAN (Ferdinand Maximilian Joseph), archduke of Austria and emperor of Mexico, was born at Vienna in 1832. He was the son of the Archduke Francis Charles Joseph, and the younger brother of the Emperor Francis Joseph. Remarkable for his studious habits and abstinence from the gaudies of the capital, he received his education at Vienna, and in 1846 entered the navy, with which he visited the coasts of the Mediterranean, and in 1852 Madeira. He continued his studies, especially making himself master of naval science. In 1854 he was made rear-admiral, and was placed at the head of the small Austrian navy, which under his control was both increased and improved. In the summer

in 1853, supphodoxy, especially ones of the "Atou-ment." (Ferdinand Maxi- duke of Austria and was born at Vienna son of the Archduke ph, and the younger eror Francis Joseph, studious habits and the gaieties of the l his education at 6 entered the navy, ed the coasts of the in 1852 Madeira. He s, especially making val science. In 1854 -admiral, and was of the small Austrian his control was both ved. In the summer

of 1855 he visited Greece, Syria, and the Red Sea, and in the following year France, seeing Paris, Cherbourg, Havre, and Calais. On this occasion he spent a fortnight with the Emperor Napoleon III. at St Cloud, and on his return journey he became acquainted at Brussels with the Princess Charlotte, daughter of Leopold I. of Belgium. Early in 1857 Maximilian was appointed Viceroy of Lombardy and Venice, in which office he soon won the good opinion and admiration of Italians. In July of that year he married the Princess Charlotte, then at the age of seventeen. Recalled from Italy in the autumn of 1859, he resumed his post and duties as head of the navy, living with his wife at their castle of Miramar, on the Adriatic. In the winter of 1859 they visited Madeira, and thence made a voyage to Brazil. His studious and happy retirement was interrupted in 1863 by the project of Napoleon III., who had placed himself in an embarrassing position in Mexico, to establish foreign rule there—an empire with Maximilian as emperor. In October of that year a deputation from Mexico arrived at Miramar, and in pursuance of the resolution of an Assembly of Notables, clergy and nobles, offered him the crown. Personally averse to the scheme, he consulted his friends, and at length agreed to accept the offer if it were sanctioned by the will of the nation, and by the emperor his brother. In the disturbed state of Mexico the taking of a *plébiscite* was impracticable; the votes were therefore obtained only from the districts occupied by the French. On the second visit of the deputation in the spring of 1864, when they reported a large majority of votes in favour of the archduke, he finally accepted the crown, resigned his reversionary claim to the imperial crown of Austria, paid farewell visits to Windsor, Paris, and Brussels, obtained the benediction of the Pope on his undertaking, and sailed for Mexico. He landed at Vera Cruz at the close of May, entered the city of Mexico in June, and at once assumed the government. He devoted himself zealously to the re-organization of the government, but from the first was embarrassed by the state of the finances. His proposal of a conference with Juarez, President of the Republic, was rejected, and the clerical party became hostile when he refused to restore to them their confiscated properties. He issued several proclamations against the armed adherents of the Liberal cause, and even decreed, in October 1865, that on the capture of such persons they should be shot within twenty-four hours after trial by court-martial. In 1866, in pursuance of a convention between France and the United States, the latter power steadily supporting Juarez, and resolved not to allow foreign rule to establish itself in Mexico, the French troops were gradually withdrawn. The young emperor,

thus abandoned by Napoleon, whose instrument he had been, struggled bravely but vainly to hold his ground against the rising Liberal and Republican forces. The young Empress undertook a voyage to Europe in the summer of 1866, to obtain help of Napoleon, and utterly failing, she fell ill and lost her reason. In June 1867 the end came. Maximilian concentrated his forces at Queretaro, which was at once invested by the Juarists, and by the treachery of General Lopez, one of his staff, he was betrayed, found guilty of treason, and on the 19th June shot. Great Britain and the United States had earnestly but in vain remonstrated against this execution. The remains of the Emperor, after months of delay, were given up to the Austrian admiral, conveyed to Europe, and buried with great ceremony at Vienna, on the 18th January 1868.

MAYER, KARL FRIEDRICH HARTMANN, one of the minor German poets, was born at Neckarbischofshelm in 1786. He received his early education at Stuttgart, studied law at the University of Tübingen, where he acquired the friendship of Uhland, J. Kermer, and Schwab, and in 1807 was admitted advocate. After filling various official posts for nearly half a century, he retired, continuing to reside at Tübingen. In 1833 appeared a collection of his "Lieder," which still then had lain scattered in newspapers and periodicals. A second edition was published in 1840, and a third, the title being changed to "Gedichte," in 1864. He also published "Lennau's Briefe an einen Freund," and a "Selbstbiographie." Died at Tübingen, 25th February 1870.

MAYO, RICHARD SOUTHWELL BOURKE, earl of, Governor General of India, was born at Dublin in 1822. He was educated at Trinity College, where he graduated B.A. in 1844, M.A. in 1851, and LL.D. in 1852. He entered Parliament in 1847 as Conservative member for the county Kildare. Two years after, on the succession of his father to the earldom, he took the courtesy title of Lord Naas, by which he was known for eighteen years. He made his maiden speech in the House of Commons in February 1849, in support of the continued suspension of the Habeas Corpus Act in Ireland. In the spring of 1852, under the first Derby administration, Lord Naas was appointed Chief Secretary for Ireland, without a seat in the Cabinet. He was then returned M.P. for Coleraine. During his tenure of office he vigorously opposed the bill introduced by Sharman Crawford respecting Tenant-right in Ireland. In December of the same year he quitted office with the ministry. In 1857 he was returned for Cockermonth, for which borough he continued to sit till he succeeded to the earldom. In the second Derby administration, 1853, Lord Naas again took office as Chief Secretary for Ireland, without a seat

in the Cabinet, quitting office in the following year. He returned to that post a third time in 1866, then as a member of the Cabinet. In August 1867 he succeeded his father as earl of Mayo. During his third tenure of office he made a speech which became memorable by its results, on the subject of University Education in Ireland, in which he disclosed the scheme of the Government for endowing a Catholic university. So general was the disapprobation of the scheme that it was abandoned. In November 1868 the earl was appointed Viceroy of India, and in his energetic and conscientious discharge of the duties of that office he justified the eulogy and prediction uttered respecting him by Mr Disraeli. Soon after his arrival in India he had an important interview at Umballa with Shere Ali, ameer of Afghanistan. In January 1872 he visited the Camp of Exercise at Delhi, received the king of Siam at Calcutta, and before the end of that month sailed from Calcutta on a tour of observation to British Burmah, the Andaman Islands, and Orissa. At Port Blair, a convict settlement in the Andamans, he was assassinated by Shere Ali, a convict, on the 8th February 1872. His remains were afterwards brought to Ireland, and were honoured with a State funeral at Dublin on the 25th April. Lord Mayo married in 1848 a daughter of Lord Leconfield, by whom he had four sons and two daughters.

MAZZINI, GIUSEPPE, the great Italian patriot, for forty years the apostle and martyr of Italian unity and independence, was born at Genoa on the 28th June 1805 or 1806. He was the only son of his father, a medical man, and Professor at the University of Genoa, who designed him for his own profession, and gave him a good education, which was completed at the university. The ruling passion of his life, early aroused by the proofs which surrounded him of the political degradation of his country under the absolute governments of home or foreign sovereigns, was fostered by his study of Dante, and raised to the highest pitch by association with many like-minded young men; and almost from the outset he maintained that the only hope of Italy lay in organized insurrection. He joined the secret society of the "Carbonari," but soon dissatisfied, projected a new association which should be of a higher character. He was suspected and arrested by the Sardinian Government in 1831, and expelled from Italy. He settled at Marseilles, and it was there that he originated the famous association of "Young Italy" (*La Giovine Italia*), whose motto was "God and the People," and whose aim was a free and united Italy. A vast conspiracy was formed, but it was discovered before the projected rising could take place, and Mazzini was banished from Marseilles. In 1833 he appeared in Switzerland, pre-

pared another insurrection, and sent a small force into Piedmont. The attempt failed. Another, made early in 1834, also failed, through the treachery of the general in command. Mazzini had already been sentenced to death by the Sardinian courts, and after three years' seclusion in Switzerland, he was expelled, and came to London. He formed a revolutionary committee, conducted a journal entitled "Apostolato Popolare," and kept a school. He also contributed to several English and French journals. In 1844 immense indignation was excited by the discovery that Mazzini's letters had been opened in the post-office by order of the Home Secretary (Sir James Graham), and that information derived from them had been furnished to the Austrian Government, who in consequence of it arrested and executed the brothers Bandiera. The professions of a liberal policy put forth by Pius IX. at his accession induced Mazzini to write to him, and drew the Italian Liberals for a time to his side. On the outbreak of the revolution at Paris in 1848, Mazzini hastened thither, and the movement spreading to Italy, he soon appeared at Genoa, then at Milan. But by the victory of Custozza, and the capture of Milan, Kadetzky secured the continuance of Austrian dominion in Lombardy. Mazzini in August 1848 joined the volunteers under Garibaldi. Retiring soon after to Lugano, he issued thence a manifesto declaring that the war of the kings was over, and that of the people must begin. After the proclamation of the Republic at Rome in February 1849, he went there—for the first time in his life—was chosen a member of the Assembly, and one of the Triumvirate. He was the acknowledged chief of the Republic, and seconded by the courage and devotion of Garibaldi, supported with enthusiasm by his colleagues and the people, he conducted the heroic defence of the city against the French army under General Oudinot from April to July. He refused to join in the capitulation, and again came to London, where he afterwards chiefly lived. In 1850 the Mazzinian loan was raised, and renewed attempts at insurrection were made in 1853 and 1857, but without success. In 1866 the sentence of death recorded against him was revoked by the Italian Government. In 1870 he recommenced a secret agitation in Italy, travelling there in disguise, but he was discovered at Palermo, and imprisoned for two months at Gaeta. In 1871 he started a newspaper to be called "The Rome of the People," and to be published at Rome. In January 1872 he left England in very feeble health, and went to Geneva. Died at Pisa on Sunday, 10th March 1872. A uniform edition of his miscellaneous writings was published in 12 vols. between 1864 and 1870.

MERCADANTE, SAVERIO, a celebrated Italian musical composer, was born

in the province of Naples, and was a pupil of the College of Music distinguished himself as a violinist. He was born in 1818, and three years' reputation by his reputation at Milan. He was appointed Chapellmaster of the Court in 1840, and in 1840 Director of the Conservatory at Naples. He was blind. In 1856 he was appointed Associate of the Accademia di San Carlo. The cadence was a great operatic and chamber best works are at Paris in 1830, some esteemed at Milan in 1830, "La Vestale," &c. December 1870.

MÉRIMEE, HENRI, French historical and miscellaneous writer, was born at Paris in 1803. He was a man of the law, he was a great literature, and a great attention to pieces, entitled "Le Roman de la Vierge," and so on. He became a comrade of Louis Philippe in 1830. General of History decided taste for travel, in the south of France, Auvergne, and time to time the results of his researches, tribute to the "Revue des Deux Mondes" and for that journal were written. In 1830 the French Academy elected him a senator in 1853.

He arose about 1810 in his defence, and a prosecution, in prison. In the manner of the promoted grand principal works of Guizot, "professed poems (1827), "IX," his longest once his remarkable and his learning "Mosaïque," a "Histoire de Castille" (1848), "ques" (1843), and (1854). He also on art and architecture "Moniteur," the "Revue Contemporaine" periodicals. Died 1870.

MERLE D'AU, a distinguished church historian, was born in 1794. His family

in the province of Bari in 1797. He became a pupil of Zingarelli at the Royal College of Music at Naples, and at first distinguished himself as a flute-player and violinist. He composed his first opera in 1818, and three years later obtained great reputation by his "Elisa e Claudio," produced at Milan. In 1833 he was appointed Chapelmaster of the Cathedral of Novara, and in 1840 Director of the *Conservatorium* at Naples. He had recently become blind. In 1856 he was chosen Foreign Associate of the French Institute. Mercadante was a prolific composer both of operatic and church music. Among his best works are—"I Briganti," produced at Paris in 1836, "Il Giuramento," by some esteemed his masterpiece, produced at Milan in 1837, "Due illustri Rivali," "La Vestale," &c. Died at Naples, 17th December 1870.

MÉRIMÉE, PROSPER, a distinguished French historian, novelist, and miscellaneous writer, one of the leaders of the "Crusade Romantique," was born at Paris in 1803. Educated for the profession of the law, he early abandoned it for literature, and as early as 1825 attracted great attention by his volume of dramatic pieces, entitled "Théâtre de Clara Gazul." He became a contributor to the "Revue de Paris," and soon after the accession of Louis Philippe he was named Inspector-General of Historical Monuments. With decided taste for archaeological studies, he travelled, in discharge of his new duties, in the south and west of France, in Auvergne and Corsica, publishing from time to time the more valuable fruits of his researches. In 1833 he began to contribute to the "Revue des Deux Mondes," and for that journal his subsequent tales were written. In 1844 he was received at the French Academy, and was made a senator in 1853. In the controversy which arose about M. Libri, M. Merimée wrote in his defence, and suffered in consequence a prosecution, with fine and a short imprisonment. In 1860 he was named commander of the Legion of Honour, and promoted grand officer in 1866. The principal works of M. Merimée are—"La Guzla," professedly translations of Illyrian poems (1827), "Chronique de Charles IX.," his longest work, and displaying at once his remarkable skill as a novelist and his learning as archaeologist (1839), "Mosaïque," a collection of tales (1839), "Histoire de Don Pédre I., roi de Castille" (1848), "Monuments Historiques" (1843), and "Les faux Démétrius" (1854). He also contributed many essays on art and archaeology, &c., to the "Moniteur," the "Athénæum Français," "Revue Contemporaine," and other periodicals. Died at Cannes, 2d October 1870.

MERLE D'AUBIGNÉ, JEAN HENRI, a distinguished Swiss theologian and church historian, was born at Geneva in 1794. His family name was "Merle ;"

"D'Aubigné," the maiden name of his paternal grandmother, being added by courtesy, according to a Swiss usage. Studying first at his native city, he next went to the University of Berlin, and there attended Neander's courses of church history. Having completed his theological studies, he became pastor first at Hamburg, afterwards at Brussels, where he was President of the Consistory of the French and German Protestant Church for seven or eight years, and in 1830 settled at Geneva. He was appointed Professor of Church History at the Theological College of the Evangelical Society of Geneva. The work on which his reputation as a writer chiefly rests is his "Histoire de la Réformation au XVI^e Siècle," which appeared in 5 vols. between 1835 and 1853. It has been several times reprinted in France, and has had a very large circulation in England. It is the work of a scholar, and is written in a lively and picturesque style, but is at the same time distinctly the work of a zealous partisan. In 1862 appeared the first volume of his "Histoire de la Réformation en Europe, au Temps de Calvin," which was still in progress at the time of the author's death. This work also has been translated into English. Among Dr Merle d'Aubigné's other works are—"Le Protecteur" (1848), "Germany, England, and Scotland" (1848), "Trois Siècles de Luttes en Ecosse," &c. This distinguished theologian made several visits to England, where his views found general sympathy. Died at Geneva, 19th October 1872.

MIGUEL, DOM MARIA EVARIST (of Braganza), king of Portugal, was born at Lisbon in 1802. He was the third son of John VI. and Charlotte, sister of Ferdinand VII. of Spain, and therefore nephew of the Pretender Don Carlos. Taken with his family to Brazil in 1808, his education was so grossly neglected that on his return to Portugal at the age of seventeen it is said that he could neither read nor write. He rebelled three times against his father, on the third occasion driving him from Lisbon and imprisoning his chief minister. Twice pardoned, he was at last (1824) banished the kingdom with his mother. On the death of his father in 1826, he assumed the title of king, disregarding the title of his elder brother Dom Pedro, emperor of Brazil. He, however, accepted the offer made by the latter of the title of Regent, on condition of his marrying Doña Maria, Dom Pedro's daughter, to whom the sovereignty was given up. He arrived at Lisbon in February 1828, soon after dissolved the Chambers, then convoked the Cortes, and got himself proclaimed king. He refused to keep his promise to marry Doña Maria, and prohibited her landing. His tyranny and excesses produced widespread disaffection, which broke out in civil war. In 1831 the fleet of Dom Miguel was captured in the Tagus by the

French, who supported Doña Maria. His brother, Dom Pedro, at last left Brazil to conduct the war against him. Aided by English volunteers under Captain (afterwards Admiral) Napier, Dom Pedro took or destroyed the Miguelite fleet off Cape St Vincent in July 1833, and about the same time General Villador entered Lisbon. In a few weeks Dom Miguel retired to Evora, where in May 1834 he capitulated, and agreed to quit the country. He lived some time at Rome, then at Vienna, and died at Brombach, in the duchy of Baden, 14th November 1866. He was the last of the male line of Braganza.

MILLER, WILLIAM ALLEN, Professor of Chemistry, King's College, London, was born at Ipswich in 1817. He was educated for the medical profession, and studied at King's College, London, where he soon became assistant and friend to Professor Daniell. In 1840 he went to Germany, and studied for a short time under Liebig at Giessen. The same year he was appointed Demonstrator of Chemistry at King's College. Having for several years assisted Professor Daniell as lecturer and experimenter, he was, on the death of the latter in 1845, appointed to the chair of Chemistry. He was subsequently named joint-commissioner with Graham and Hofmann to examine and report on the water-supply of London. He was also appointed Assayer to the Mint, Treasurer to the Royal Society, President of the Chemical Society, and a member of the Senate of London University. His principal work is the "Elements of Chemistry," published in 3 vols. (1855-57), which has passed through several editions. He contributed some valuable papers on chemical subjects to the "Philosophical Transactions," to the British Association, &c. Died at Liverpool, 30th September 1870.

MILMAN, HENRY HART, dean of St Paul's, a distinguished theologian, historian, and poet, was born in London in 1791. He was the youngest son of Sir Francis Milman, Baronet, physician to George III., and President of the College of Physicians. He was educated at Dr Burney's school at Greenwich and at Eton College, passing thence to Brasenose College, Oxford, where he graduated B.A. in 1813. In the preceding year he had obtained the Newdigate Prize for his English poem, the "Apollo Belvedere." He thrice carried off the Chancellor's Prize. In 1815 he was chosen fellow of his college, and in the following year took his degree of M.A., and was ordained deacon and priest. He was then appointed Vicar of St Mary's, Reading, where he remained nearly twenty years. In 1821 he was elected Professor of Poetry at Oxford University; was Bampton Lecturer in 1827; and was preferred to be Rector of St Margaret's, Westminster, in 1835, becoming at the same

time Canon of Westminster. In 1849 he was promoted to the deanery of St Paul's, and the same year took his degree of D.D. His literary works are numerous and important. The first published was "Fazio, a Tragedy" (1815), which, without his consent, was performed first at the Bath Theatre, and then at Covent Garden. The discovery that their vicar had written a stage-play created some scandal among his parishioners. In 1818 appeared "Samor, Lord of the Bright City," a religious epic founded on a passage of the legendary history of Britain. The reputation of the author was greatly raised by his dramatic poem "The Fall of Jerusalem" (1820). This was followed by three other dramatic poems, "The Martyr of Antioch" (1821), "Belshazzar," and "Anne Boleyn." A translation from the Sanscrit of the "Nala and Damayanti" appeared in the collected edition of his poems in 1840. The first of Dean Milman's historical works was the "History of the Jews," published in 1829. Its freedom of investigation and discussion exposed the author to much obloquy: he was charged with cavil, irreverence, scepticism, and speculation, and a bitter controversy ensued. A new edition of the work, partly re-written, appeared a short time before his death. In 1840 he gave to the world his "History of Christianity from the Birth of Christ to the Abolition of Paganism in the Roman Empire;" and in 1854-55 his greatest work, the "History of Latin Christianity, including that of the Popes." It is brought down to the close of the pontificate of Nicholas V. His other works are a splendidly-illustrated edition of the works of Horace, with a life of the poet and critical observations, and an annotated edition of Gibbon's great work, since republished with additional notes by Dr William Smith. Dean Milman also contributed to the "Quarterly Review." As liberal in principle as he was ripe in learning, he advocated the abolition of subscription to the Articles, and proposed subscription to the Liturgy instead. Died at Sunninghill, near Reading, 24th September 1868.

MIRAMION, MARIE DE BEAUCHAMPAIGNAIS DE, a distinguished French philanthropist, was born at Paris in 1629. She was the daughter of M. Jacques Bonneau de Rubelle, a Councillor of State, and in earliest childhood was remarkable for seriousness, which was deepened into a morbid depression by the loss of her mother before she was nine years old. She began to inflict bodily suffering on herself in imitation of the saints she read of, and to visit, nurse, and instruct the sick and dying. Taken into the midst of the gay society of Paris at fifteen, her beauty, intelligence, and enormous wealth attracted to her a crowd of suitors, and at sixteen she married M. de Miramion. After six months' happiness she was left a widow, and firmly rejected the numerous offers of marriage after-

wards made to her. Bussy de Rabutin de Sevigné, and suitors, waylaid her horsemen and carriage. She did not escape Bussy being punished through intervention. She ascetic life, and of charity. She very carefully, and then gave entirely to the poor. She established, founding hospitals for women, more than a reformatory, a disinfecting her personal services, her money, and the higher ranks. Died at Paris, 24th of Madame de Miramion has been translated by Lady F. Miramion.

MIRAMON, MARIANO, President of a general, he entered a military academy at a young age, joined the army, and was distinguished in several campaigns. Under Zurburton he defeated the named Governor, summing soon after the affairs, he overcame President (financial difficulties in the house of France made a fraudulent French bankers bonds), and signed These measures the joint Mexico Britain, France, war was continued Juarez in Vera Cruz, raise the siege, Yalupalcam, shut. Finally defeated Miguelito in Mexico to Spain. While received by Napoleon of Spain, and us mote interventional turned thither a expedition, but land. He afterwards of Maximilian, Marshal, and so ambassador to Berlin returned to Mexico young emperor, of the defence of Mexico captured, and shot his master and G. 1867.

wards made to her. In 1648 the profligate Bussy de Rabutin, a cousin of Madame de Sevigné, and one of the disappointed suitors, waylaid her with a band of armed horsemen and carried her off to his château. She did not yield, and made her escape, Bussy being prosecuted, but escaping punishment through the Prince de Condé's intervention. She then began to lead an ascetic life, and to spend herself in works of charity. She educated her daughter very carefully, saw her happily married, and then gave herself and her wealth entirely to the service and good of others. She established an orphan home, a foundling hospital, a refuge for fallen women, more than a hundred schools, a reformatory, a dispensary, &c. She gave her personal services as courageously as her money, and enlisted many others of the higher ranks in the same noble work. Died at Paris, 24th March 1696. A "Life of Madame de Miramon," by A. Bonneau, has been translated into English and edited by Lady Herbert.

MIRAMON, MIGUEL, Mexican general and president of the Republic of Mexico, was born at Mexico about 1830. The son of a general, he entered at sixteen the military academy at Chapultepec, and early joined the army. In 1856 he revolted, but unsuccessfully, against President Comonfort. Under Zuloaga he was appointed commander of the army, and attacked and defeated the Juarists. He was then named Governor of Guadalajara. Assuming soon after the chief management of affairs, he overthrew Zuloaga and became President (January 1859). Pressed by financial difficulties, he seized the funds in the house of the British ambassador, made a fraudulent contract with the French bankers Jecker & Co. ("Jecker bonds"), and signed a treaty with Spain. These measures proved the occasion of the joint Mexican expedition of Great Britain, France, and Spain. The civil war was continued: Miramon besieged Juarez in Vera Cruz, but was obliged to raise the siege, and being defeated at Yalupalam, shut himself up in Mexico. Finally defeated by Juarez at San Miguelito in December 1860, he escaped to Spain. While in Europe, he was received by Napoleon III. and by the Queen of Spain, and used his influence to promote intervention in Mexico. He returned thither at the time of the joint expedition, but was not permitted to land. He afterwards entered the service of Maximilian, who named him Grand Marshal, and soon after sent him ambassador to Berlin. In 1866 he again returned to Mexico, faithfully served the young emperor, commanded the army at the defence of Queretaro, was wounded, captured, and shot at the same time with his master and General Mejia, 19th June 1867.

MONTALEMBERT, CHARLES FORBES DE TRYON, count of, a distin-

guished theologian, politician, and historian, was born in London in 1810. He was the son of a colonel in the English army, who married a Scotch lady, and was afterwards created a peer of France and sent ambassador to Stockholm. The son completed his education at the University of Paris, and first brought himself into notice in 1831 by a powerful speech in the Chamber of Peers, which he had just entered on his father's death, in favour of the establishment of free schools for Roman Catholic instruction. He was one of the disciples of Lamennais, and had taken part with Lacordaire in 1830 in originating the journal entitled "L'Avenir." When Pope Gregory XVI. condemned the alliance of Ultramontanism and Democracy advocated by Lamennais in the "Avenir," Montalembert submitted. For some years he devoted himself almost exclusively to literature, and made a great reputation by his biographical and other works. He visited England in 1839, and in the following year travelled in the East. In 1843 he again took a prominent part in political discussion, and as orator of the Ultramontane party, distinguished himself by many powerful and enthusiastic speeches. In one of his greatest efforts, the speech of 1847 on the *Sonderbund*, which he defended, he predicted the outbreak of revolutions in the following year. He was a member of the National Assembly of 1848, and of the Legislative Assembly of 1849. He visited Rome in the latter year, was received at the French Academy in 1852, and two years later retired from public life. The principal works of Count Montalembert are—"La Vie de Sainte Elisabeth de Hongrie," published in 1835-36, "Du Vandalisme et du Catholicisme dans l'Art" (1839), "L'Avenir Politique de l'Angleterre" (1855), "Les Moines d'Occident" (1860), and "L'Eglise libre dans l'Etat libre" (1863). Among his shorter works are an essay on Catholic interests in the 19th century, and a letter to the Cambridge Camden Society on the relation of the Reformed Church of England to the Catholic Church of the middle ages. He was a contributor to "Le Correspondant." Count Montalembert married in 1836, and by his marriage connected himself with the Belgian family of Mérode. Died at Paris, 13th March 1870.

MORSE, SAMUEL FINLEY BREESE, inventor of the "Recording Electric Telegraph," was born at Charlestown in Massachusetts in 1791. He was educated at Yale College, and in 1811 he came to England to study painting at the Royal Academy. He remained here two years, and at the close of his studies exhibited a large picture, entitled "The Dying Hercules," and gained a prize for a sculpture model. Returning to America in 1813, he practised as a portrait-painter, settled at New York in 1822, and painted a portrait

of General Lafayette, then visiting the States. He was again in England from 1829 till 1832. During the return voyage, in the course of discussions with a fellow-passenger on the passage of the electric current through a conducting wire, the possibility of using it as a means of communication by a system of signs occurred to him. It is stated that he devised his method during the voyage. He carried out experiments to test his theory, and in 1835 had completed a model of his "recording electric telegraph." His patent was perfected in 1840, and four years later he saw his plan in operation on a line of forty miles between Washington and Baltimore. His system was gradually adopted in all parts of the Union. Its great advantages are simplicity and consequent speed of communication. The recording by chemical action which he first adopted was afterwards given up in favour of that by electro-magnetic action. The inventor held the chair of Natural History at Yale College, and the office of Electrician of the Atlantic Telegraph Company. In connection with the project of an Atlantic cable he visited England in 1856, and took part in some experiments to test its practicability. The decisive experiment was conducted by him in conjunction with C. T. Bright, C.E., and Dr Whitehurst, on the night of the 2d October of that year, and he soon after returned to his retired home at Poughkeepsie, in New York State. Died, 2d April 1872.

MOSCHELES, IGNAZ, a celebrated musical composer and pianist, was born at Prague in 1794. He commenced his musical studies at the conservatory of that city, under the director Dionysius Weber. At the age of eleven he had attained extraordinary skill as a pianist. In 1808 he went to Vienna, and by the advice of Haydn and Beethoven, studied under Albrechtsberger, and he soon became one of the greatest pianoforte-players in Europe. After visiting the principal towns of Germany, France, and Holland, he came in 1820 to England. The favourable reception given him induced him to settle in London, and in 1825 he was appointed Professor of Music at the Academy. He added to his reputation by many classical compositions, and by his successful labours as a teacher. In 1846 he conducted with Mendelssohn the musical festival at Birmingham, and the same year accepted a professorship in the Leipzig Conservatory. Among the pupils of Moscheles were Mendelssohn and Thalberg. Died in March 1870.

MOSTELEY, HENRY, canon of Bristol, a distinguished mathematician, was born about 1802. He completed his education at St John's College, Cambridge, where he graduated B.A., and was seventh wrangler in 1826. Two years later he was ordained priest. In 1831 he was appointed Professor of Natural Philosophy and As-

tronomy at King's College, London, a post which he held fourteen years. He took a warm interest in the cause of popular education, and was one of the first Inspectors of Schools appointed by the Government. He took his degree of M.A. in 1835, was made Canon of Bristol Cathedral in 1853, and appointed Chaplain in Ordinary to the Queen in 1855. His scientific attainments procured him election as F.R.S., as member of the Council of Military Education, Corresponding Member of the French Institute, and President of the Society of Naval Architects. His principal works are—"Lectures on Astronomy," originally delivered at King's College, and "Mechanical Principles of Engineering and Architecture," a work very highly esteemed, which was reprinted in America, and used as a textbook at the Military Academy at West Point, and also translated into German. He was a constant contributor throughout his long life to various scientific journals, wrote the article on "Definite Integrals" in the "Encyclopædia Metropolitana," devoted much time to the study and illustration of the problem of glacier movement, and published some valuable formulae for the calculation of the dynamical stabilities of ships. His genuine love of children contributed to his success as a teacher and promoter of education. He long held the vicarage of Olveston, and died there, 20th January 1872.

MUNRO, ALEXANDER, sculptor, was a native of Sutherlandshire, and was born about 1827. He came to London under the patronage of the Duke of Sutherland. His most important monumental work is the colossal statue of Watt at Birmingham. He executed many portrait busts, and was especially successful in the faces of women and the treatment of children. He died at Cannes, where he had resided for some years, 10th January 1871.

MURKINSON, SIR RODERICK IMPEY, Bart., a distinguished geologist, Director-General of the Geological Survey of the United Kingdom, was born at Tarradale, in Ross-shire, on the 19th February 1792. After studying for two years at the Military School at Marlow, he entered the army and served in the Peninsular war in 1808 and 1809. After the close of the war he left the army, and began to apply himself to scientific studies, especially geology. In 1825 he was elected a fellow of the Geological Society, and in the following year a fellow of the Royal Society. In company with Professor Sedgwick he visited the Highlands in 1827, thus commencing a systematic examination of the older sedimentary deposits in Great Britain, to which he devoted years of labour and study, the grand result of which was the establishment of the "Silurian System," and the classification of its organic remains. With Professor Sedgwick he made two visits of exploration to the Rhenish Provinces, and in

company with M. Keyserling he explored the coast of Russia. On Nicholas, he returned to France, and in 1841 he visited Verneuil in 1841. In the course of the survey of the coast he travelled through Poland, and the fruit of his observations in Eastern Europe was the publication of the "Description of the Fishes of the Baltic," which he visited Sweden in 1842. He fell fast upon him the Geological and the Royal Society was made knight was knighthood he presided the same the British Association the Copley Medal in 1849, and the the Royal Society

NAPOLÉON

Napoleon Bonaparte, French, was born in 1769. He was the son of Napoleon Bonaparte, a general, and his wife Hortense de Beauharnais, the Empress Josephine. He was baptized in 1800, and was named after his mother. He was educated by his mother, and was the age of seven when his father died. He was the uncle, the emperor, and the deputies at the time of the Mal. After Hortense retired to Switzerland, he studied for some time at the University of Augsburg, and then at the Military College at Turin by Louis Philippe, and soon after entered the Church (1800). He was the brother of the revolution, and took an active part in the movement of the insurrection of Arenenburg, and the canton of Thurgau, of the duke of Orleans. Napoleon II., he was the son of Napoleon I. under the name of Louis Bonaparte, 1804 regulating that time his throne. He was the re-establishment of the Napoleonic dynasty in 1815. His first wife was Joséphine. "Réveries Politiques" was the germ of his political philosophy. In the

company with M. de Verneuil and Count Keyserling he explored in 1840 the geology of Russia. On the invitation of the Czar Nicholas, he returned to Russia with De Verneuil in 1841, to direct a geological survey of the country. In the following year he travelled extensively in Germany, Poland, and the Carpathian Mountains, and the fruit of these laborious examinations in Eastern Europe was the establishment of the "Permian System." In 1844 he visited Sweden and Norway. Honours fell fast upon him. He was President of the Geological and Geographical Societies, was made knight of two Russian orders, was knighted by Queen Victoria in 1846, presided the same year at the meeting of the British Association at York, received the Copley Medal of the Royal Society in 1849, and the Brisbane gold medal of the Royal Society of Scotland in 1859,

and received the honorary degrees of M.A. from the Universities of Oxford and Dublin, and of D.C.L. from Cambridge. In 1855 he was appointed Director-General of the Geological Survey, and Director of the School of Practical Science. From 1862 he was annually re-elected President of the Geological Society, and was afterwards created K.C.B. and Bart. His works are—"The Silurian System," published in 1839; "Geology of Russia and the Ural Mountains," in 1845; "Siluria," his best-known work, in 1854; and a "Geological Atlas of Europe," in 1856. Besides these separate works, he contributed a large number of valuable memoirs to the transactions of various scientific societies. Sir Roderick married in 1815, and lost his wife in 1869. Died in London, 22d October 1871. His title became extinct by his death.

N.

NAPOLEON III. (*Charles Louis Napoleon Bonaparte*), emperor of the French, was born at Paris, 20th April 1808. He was the youngest son of Louis Napoleon Bonaparte, one of the brothers of Napoleon I., and king of Holland, by his wife Hortense Eugénie, a daughter of the Empress Josephine by her first husband. Baptized at Fontainebleau in November 1810, he was brought up and educated by his mother, who was separated from her husband and lived at Paris. At the age of seven he was presented by his uncle, the emperor, to the soldiers and deputies at the assembly on the Champ de Mai. After the fall of the Empire Hortense retired with her sons to Arenenburg, in Switzerland. Louis Napoleon studied for some years at the Gymnasium of Augsburg, and afterwards at the military college at Thun. Refused permission, by Louis Philippe, to return to France, and soon after expelled from the States of the Church (1830), he joined with his brother the revolutionary party in Italy, and took an active part with the Carbonari in the movement of 1831. On the suppression of the insurrection he returned to Arenenburg, and was naturalized in the canton of Thurgau. In 1832, on the death of the duke of Reichstadt, since called Napoleon II., he became heir to Napoleon I. under an imperial decree of 1804 regulating the succession. From that time his thought was directed to the re-establishment of the Empire and the Napoleonic dynasty. He published in 1833 his first literary work, entitled "Réveries Politiques," in which appears the germ of his later "Idées Napoléoniennes." In the following year he obtained

the rank of colonel of artillery in the canton of Berne. His first attempt to carry out his project and realize his dream was made in 1836. At the close of October in that year, encouraged by promises of co-operation and support by Colonel Vaudry and other officers, he endeavoured to get possession of the citadel of Strasburg. But he was immediately arrested, and a few days later was sentenced to banishment from France, and sent to America. In the following year the illness of his mother drew him back to Europe, and he was present at her death, which took place at Arenenburg. Compelled to quit Switzerland in 1838 in consequence of the menacing attitude of Louis Philippe, he came to England, where he quietly lived for two years. In August 1840, with a few attendants and a tame eagle, he sailed for Boulogne, where he attempted to excite an insurrection, but after a few shots had been fired was again arrested. Tried before the Chamber of Peers, and defended by M. Berryer, he was found guilty of treason and sentenced to perpetual imprisonment in a fortress. He was sent to the fortress of Ham, whence by the aid of his medical attendant, Dr Conneau, he escaped in May 1846, and again took refuge in England. It was during this second residence in London that he was enrolled as a special constable on occasion of the threatened Chartist demonstration (April 1848). Two months later he was elected deputy to the National Assembly of France, and after some debate was permitted to take his seat. In September he was again elected, this time by six departments, and in the following De-

ember was appointed President of the French Republic for a term of four years, and formally took the oath to maintain the Constitution. The first year of his presidency was made memorable by the expedition to Rome. Rigorously repressing the "Reds," winning popular favour by visits to the departments, and maintaining a long conflict with the Legislature, he went on towards the accomplishment of his purpose. In January 1851 he ventured to dismiss General Changarnier from the command of the National Guards and the army of Paris. Later in the year he denounced the Assembly as resisting all reforms, and on the pretext of a conspiracy against him collected large bodies of troops in Paris. The inevitable crisis came in December. On the 2d took place the too-famous *coup d'état*: a decree of the prince president dissolved the Assembly, declared Paris in a state of siege, established universal suffrage, and proposed a ten years' presidency and a second chamber. In the night some of the most influential political and military leaders were arrested, M. Thiers among them, and fearful slaughter was perpetrated in the streets of Paris. About 180 deputies who met for conference under the presidency of M. Berryer were also arrested, and under a decree issued some days afterwards, large numbers of persons were transported, without trial, to Cayenne and other penal settlements. On the 20th and 21st of the month Prince Louis Napoleon was chosen by more than seven million votes (the *plébiscite*), according to official returns. President of the Republic for ten years. In January 1852 he published a new constitution, had the National Guard reorganized, and restored the titles of nobility. After processes of crafty preparation, he procured from the Senate in November a vote in favour of re-establishing the Empire, and the same month, by a second *plébiscite*, was chosen hereditary Emperor of the French. He formally accepted the title, as Napoleon III., in December. The Empire was immediately recognized by the English Government. In January 1853 the emperor married Eugénie Marie de Montijo, the ceremony taking place in the Cathedral of Notre Dame, Paris. The story of his eighteen years' reign cannot be told as part of this brief biographical notice. A mere mention of some of the leading particulars must suffice. In 1854 the emperor was the ally of England and Turkey in the Crimean War; in 1855, with the empress, he visited Queen Victoria, and was in turn visited by the queen and the prince consort; in 1856 the Prince Imperial was born; in January 1858 an attempt was made to assassinate the emperor by Orsini; in 1859 took place the Franco-Italian campaign against Austria, in which Napoleon III. took part personally, and which, after several victories, suddenly came to an end with the Treaty

of Villafranca. In return for his part in this war he demanded and acquired for France the territories of Savoy and Nice. In 1861 came the disastrous Mexican expedition. [See MAXIMILIAN, emperor of Mexico.] Two years later the emperor proposed the assembling of a congress on the affairs of Europe, but the project was rejected by England. A similar proposal in 1865 met with the same fate. In the spring of 1865 he visited Algeria, and in the following August held a review of the French and English fleets at Cherbourg. At the close of the Seven Weeks' War between Prussia and Austria, Napoleon III. acted as intermediary for the cessation of Venetia to Italy. He at the same period claimed for Prussia, by way of compensation for her aggrandizement, territory on the Saar, which was of course refused. In July 1870 he declared war on Prussia, then head of the powerful North German Confederation. He joined the army at Metz, where he issued a flattering proclamation; led an attack on Saarbrück, the young prince being also present, on the 2d August; and exactly a month later, after the battle of Sedan, capitulated with the whole army of Marshal MacMahon to the king of Prussia. He was then sent to the palace of Wilhelmshöhe, and on the 4th September a revolution took place at Paris, and his deposition was proclaimed. This was confirmed in March 1871 by the National Assembly at Bordeaux. At the conclusion of the Peace of Versailles the ex-emperor was liberated, and came to England, taking up his residence at Camden Place, Chislehurst, in Sussex. There, after enduring great suffering from organic disease, and submitting to repeated surgical operations, he died on the 9th January 1873. After lying in state on the 14th, his remains were interred at Chislehurst on the 15th, the funeral being attended by a very large number of Frenchmen. In addition to the works already named, Napoleon III. was author of "Fragments Historiques," "Extinction de Paupérisme," and "Histoire de Jules César."

NAKVAEZ, DON RAMON MARIA, Marshal of Spain and statesman, was born at Loja, in Andalusia, in 1800. He entered the army at the age of fifteen, became an officer in 1820, and the same year fought under Mina in Catalonia. On the entrance of the French into Spain in 1823 he retired to Loja, where he lived retired and studious for nine years. Having re-entered the army, he served with distinction in the civil war (Carlist) of 1834-36, and was promoted brigadier-general. He established his reputation as a soldier by the rout of the Carlist leader, General Gomez, near Aroca, in November 1836. Two years after, by measures of unrelenting severity, he suppressed brigandage in La Mancha, in 1840 he was named Captain-General of Old Castile, and general-in-chief of the army

of reserve, but, offended with Espartero, he soon resigned. Having taken part the same year in an abortive revolt against Espartero, he fled to France, and in conjunction with the ex-queen Maria Christina, carried on intrigues for the overthrow of his rival. On the fall of the latter in July 1843, Narvaez returned, deprived Espartero of his titles, got himself appointed Lieutenant-General of the Kingdom, and the infanta Isabella II. declared of age. In 1844 he was created Duke of Valencia, and made President of the Council. He had by this time forgotten his early liberalism, and entered on a purely reactionary course. Petty revolts were sharply suppressed, but his own friends were alienated by his tyrannical proceedings, and in February 1846 his ministry was dissolved. He was sent ambassador to France, but returned to power the next year. The rest of his life is a series of re-appointments and dismissals or resignations, his latest acceptance of the Presidency of the Council taking place in July 1866. Died at Madrid, 23d April 1868.

NEUMANN, KARL FRIEDRICH, an eminent German orientalist and historian, was born at Reichmannsdorf, near Bamberg, in 1798. He was of a poor Jewish family, and was intended for a mercantile life, but his passion for learning led him to choose another path. He studied first at the University of Heidelberg, then at Munich, where he joined the Evangelical Communion, and finally at Göttingen. After teaching for a short time in the Gymnasium at Spire, and next for several years privately at Munich, he went to Venice to study Armenian, and thence to Paris, where he applied himself to Chinese. In 1829 he visited London, and in the following year went to China, to perfect himself in the language and to purchase a collection of Chinese books. After his return in 1831 he was appointed Professor of Oriental Languages and Literature at Munich University, and Keeper of his Chinese Library, which he transferred to the state. He took an active part on the popular side in the movements of 1847-48, and was deprived of his chair in 1852. He afterwards settled at Berlin. His studies were chiefly directed to the history and geography of Armenia, Upper and Eastern Asia, China, and India. Among his works are—an account of the "Pilgrimages of Buddhist Priests from China to India," "Memoirs of David, an Armenian Philosopher," "Asiatische Studien," "Lehrsaal des Mittelreichs," "Geschichte des Chinesischen Reichs," "Geschichte des Englischen Reichs in Asien," &c. Died at Berlin, 30th March 1870.

NIEL, ADOLPHE, Marshal of France, was born at Muret (Upper Garonne) in 1802. He studied at the Ecole Polytechnique, entered the army in 1823, and attained the rank of captain in 1831. In the following year he went to Algeria,

served with distinction at the capture of Constantine, and was rapidly promoted. Returning to France in 1849, he was attached as chief of the staff of engineers to the expedition to Rome, and for his services on that occasion was raised to the rank of general of brigade. After his return he entered the ministry of war as director of engineers, and was promoted in 1853 to be general of division. On the outbreak of the Russian war General Niel took part in the Baltic expedition, and as commander of engineers directed the siege of Bomarsund. The capture of that place procured him the title of aide-de-camp to Napoleon III., and the rank of grand officer of the Legion of Honour. Early in 1855 he was charged with a mission to the Crimea, for the purpose of inspecting and reporting on the situation of the French army and the operations of the siege of Sebastopol. Three months later he assumed, as commander-in-chief of engineers, the direction of the siege operations, and after the assault and capture of the Malakhoff was made grand cross of the Legion of Honour. Two years afterwards he was created senator. He took a distinguished part in the Austro-Italian war of 1859, and was then created marshal of France. Called in January 1867 to the office of Minister of War, he held it till July 1869. Marshal Niel published an account of the "Siege of Sebastopol." Died at Paris, 13th August 1890.

NIEPCE DE SAINT-VICTOR, the distinguished inventor of photography on glass, was born at Saint-Cyr, near Châlons-sur-Saône, in 1805. He was educated at the school of Saumur, and entered the army. While still a lieutenant, his attention was accidentally drawn to the study of colours, and then of chemistry. At the same time his uncle, M. Nicéphore Niépce, was engaged in the researches which led to the invention of photography, and after his uncle's death he resolved to apply himself to the same researches, and complete the task left unfinished. In April 1845 he settled at Paris, and in October 1847 announced his important discovery of photography on glass. During the revolution of February 1848 his laboratory and its contents, in the barracks of the Municipal Guard, were destroyed. He continued courageously his labours, announced successive improvements in his processes, was promoted captain in November 1849, and admitted to the Legion of Honour in December. M. Niépce was also the discoverer of a process for producing coloured photographic images, which he named "heliochrome," but he did not succeed in fixing the colours. His third discovery, "heliography," the process of producing photographic engravings on steel plates, was first announced in 1853. In 1854 his scientific services were recognized by the Emperor Napoleon III., who named him Commandant of the Louvre. The vari-

ous memoirs of M. Niépe on his discoveries were published in a collected edition in 1855, under the title of "Recherches Photographiques." His "Traité Pratique de Gravure sur Acier et sur Verre" appeared in 1856. Modest and disinterested to a rare degree, he refused to patent his inventions. Died at Paris in April 1870.

NOEL, The Hon. and Rev. BAPTIST WRIOTHESLEY, an eminent Church of England, afterwards a Nonconformist, divine, was born in 1798. He was a younger son of Sir Gerard Noel-Noel of Exton Park, Rutlandshire, and was educated at Trinity College, Cambridge, where in due course he graduated B.A. and M.A. Having taken holy orders, he became a zealous adherent of the Evangelical party in the Church, and was for many years minister of St. John's Chapel, Bedford Row, London. His name was made widely known by his vigorous pamphlet against the Corn Laws, written during the agitation for their repeal. He was soon after appointed Chaplain to the Queen. In 1848 he withdrew from the Church of England, and published his reasons for doing so in a work entitled "Essay on the Union of Church and State." He then joined the Baptists, and soon after succeeded Mr. J. H. Evans as minister of John Street Chapel. Eloquent and impressive as a preacher, an earnest advocate of all philanthropic movements, and especially the warm friend of City Missions, he continued to discharge the pastoral duties till his seventieth year, when he retired. He was a voluminous writer, but many of his publications were of merely passing interest, and many were sermons. More noteworthy are his "Essay on the Duty of Englishmen to the Hindoos," "Essay on American Freedom and Slavery," "Notes of a Tour through Switzerland," and "Notes of a Tour through Ireland." Mr Noel died at Stanmore, Middlesex, 19th January 1873.

NORMAN, JOHN PAXTON, Acting Chief-Justice of Bengal, was born in 1819. After studying at the Grammar School, Exeter, he entered Exeter College, Oxford, and took his degree of B.A. in 1841. He then studied law at the Temple, and after some years of practice as a special pleader, he was called to the bar in 1852. In May 1861 he was appointed one of the Judges of the High Court of Bengal, and in 1864 he filled the office of Chief-Justice during the absence of Sir Barnes Peacock. In 1871 he acted again in the same capacity for Sir R. Couch, and was on the point of becoming his successor. Mr Justice Norman was author of a valuable treatise on the "Law and Practice relating to Letters-Patent for Inventions," and was for several years joint-editor with Mr Hurlstone of the "Exchequer Reports." He married in 1854, but had no children. As he was entering the High Court of Calcutta on the 20th September 1871, he was attacked

and mortally wounded, and died soon after midnight. The murderer was captured, tried, and on the 4th November following was executed at Calcutta, and his body burnt.

NORRIS, EDWIN, a distinguished English Assyriologist, was born in 1795. In early life he was for several years engaged as a private tutor abroad. He then obtained a clerkship in the India House, and afterwards served for many years as interpreter to the Foreign Office. He held the post of Secretary to the Asiatic Society more than twenty-five years, and at the time of his death was Honorary Librarian to the same Society. At an early age he applied himself to the study of several obscure languages; and afterwards of the Celtic dialects; and the fruits of his researches appeared in various memoirs contributed to learned societies, in grammars of the Fulah and Bornu languages, Tahitian translations of parts of the Bible, &c. In 1845 he undertook the difficult task of deciphering and preparing for publication the faint impressions taken by Mr Masson from the rock inscription of King Asoka, near Kapur di Gihl. In the following year he was charged with the duty of seeing through the press Sir H. Rawlinson's Memoir and copy of the great Behistun cuneiform inscription. He subsequently wrote a memoir on the Scythic version of the same inscription. He assisted Sir H. Rawlinson in the publication of the first two volumes of cuneiform inscriptions, which appeared between 1861 and 1866. But his great work is the "Assyrian Dictionary," the first attempted, of which the third volume was completed and published a few months before his death. Among the results of Mr Norris's Celtic studies was an edition and translation of the "Cornish Drama," in 2 vols., 1859. Mr Norris was Ph.D. of the University of Bonn, and a foreign member of the German Oriental Society. Died in London, 10th December 1872.

NORTHBROOK, FRANCIS THOMAS HILL BARING, first Lord, an English statesman, was born in 1796. He was the eldest son of Sir Thomas Baring, Bart., M.P., and grandson of Francis Baring, the founder of the house of Baring Brothers. He was educated at Winchester and Christchurch, Oxford, graduated M.A., and was called to the bar in 1823. Entering Parliament three years later as member for Portsmouth, he continued to represent the same borough to the close of 1865, steadily adhering to the Whig party. In Earl Grey's administration (1830) he was appointed a Lord of the Treasury, and under Lord Melbourne he held the post of Joint-Secretary of the Treasury. In 1839 he was appointed Chancellor of the Exchequer, a post which he held till September 1841; was named First Lord of the Admiralty in 1849; retired from official life in 1857; and was raised to the peerage as Baron

Northbrook, of 1865. He was 1825 to the young George Grey, and to Lady Arabella

O.

O'DONNELL, LEOPOLD, count of
Lucena and duke of Tetuan, Spanish
general and statesman, was born at Santa
Cruz, Tenerife, in 1809. He was a de-
scendant of one branch of the famous
Irish O'Donnells which had settled in
Spain, and his father was Joseph Henry,
count of Abibal, lieutenant-general in
the Spanish army. The genius for war
which showed itself in his earliest years
led to his being appointed sub-lieutenant
in his eleventh year. He served with
great distinction under Ferdinand VII.
against the Carlists, and in 1832 was pro-
moted colonel. His prowess at the com-
bat at Unza procured him the rank of
brigadier-general. In 1839 he was named
commander-in-chief of the central army,
and his first achievement was the rout
of Cabrera and the relief of Lucena, be-
sieged by the Carlists. He was then pro-
moted lieutenant-general, and later was
ennobled by the title of Count of Lucena.
In 1840 he resigned his command and took
the side of the queen-mother Christina,
promoted the insurrection of 1841 in her
favour, and had to retire to France. On
the fall of Espartero in 1843, O'Donnell
returned, and his rank and honours being
restored, he was appointed captain-general
at the Havannah. This post he held about
five years, and during that period he was
created senator. After his return he took
his seat in the House of Nobles, and had
a prominent part in all the wretched in-
trigues of the court. For several years
he was director-general of infantry, and
being deprived by Narvaez, then first
minister, joined the opposition. In 1854,
implicated in a conspiracy against the
court, he was proscribed, and soon after
headed a revolutionary movement at
Madrid, which failing, he was deprived of
his offices and titles. Soon after he joined
Espartero, who was called in July 1854 to
be head of a new ministry, and became
Minister of War and Marshal. In August
he was appointed captain-general of the
armies. About two years later he in-
trigued against Espartero, procured his
dismissal from office, and got himself
made President of the Council. He then
dissolved the Cortes, suppressed the
National Guard, and proclaimed martial
law. Dismissed in October 1856, he was
re-appointed in June 1858, and held with
the Presidency of the Council the Minis-
tries of War and the Colonies. In 1859
he conducted the expedition to Morocco,
took Tetuan, and having brought the

campaign to a successful close early in
1860, was rewarded with the title of Duke
of Tetuan. Quitting office in 1863, he
resumed it in June 1865, and finally re-
tired in July 1866. Died at Biarritz,
5th November 1867. His remains were
brought to Madrid and buried in the Royal
Chapel.

OMER PASHA, Grand Vizier of the
Ottoman Empire, and a distinguished
general, was born in Croatia in 1801 or
1806. After receiving his education at
the Mathematical School of Thurm, in
Transylvania, he first entered the
Austrian army, and after some years'
service quitted it, and became a private
tutor in the province of Bosnia. About
1830 he professed himself a Mohammedan,
and took the name by which he has since
been known. He afterwards entered the
Turkish army, in which his abilities and
acquirements promoted his gradual ad-
vancement. He took part in the war
against Mehemet Ali in 1839-40 for the
recovery of Syria from the Egyptians.
Created Bey two years later, and made
military commander of the Lebanon, he
soon after suppressed an insurrection in
Albania, and another in Kurdistan. For
his services on the former occasion he
was raised to the rank of Pasha. From
1848 to 1850 he had command of the army
of occupation in Wallachia, and during
that period he reduced to submission the
bays and feudatories of Bosnia, who re-
sisted the reforms introduced by the
Tanzimat. At the close of 1852 he was
charged with the suppression of the revolt
in Montenegro, but the continuance of
the struggle was averted by the interven-
tion of Austria. In June 1853 he was
named Generalissimo of the Turkish
army, and appointed to command against
the Russians. He made Shumla his
head-quarters, assembled a large force
there, and strengthened the fortifications.
Early in November he defeated the
Russians at Oltenitza, and repulsed them
in a series of attacks made during the
following days. He secured the strong
position of Calafat, and at length drove
the Russians from Little Wallachia. In
August 1854 he was sent to Bucharest as
Commissioner Extraordinary from the
Sultan. In January 1855 he landed with
the Turco-Egyptian army at Eupatoria,
in the Crimea, and after repulsing an
assault by the Russians, joined the allied
army before Sebastopol. Dissensions
arose about his proposal to march to

...s, the *Marengo* and *Bells Poule*. In
...11 he captured the privateer *La Cupidon*,
... and in the following year quitted the
... *Amason*. In the *Warspite*, to which he
... was appointed in 1827, he served in the
... Mediterranean, and maintained the
... blockade on the coast of Greece. As rear-
... admiral (1830) he held the chief command
... on the Lisbon station from May 1831 till
... July 1834, and was then created K.C.B.,
... and made a lord of the admiralty. In
... May 1841 he was appointed naval com-
... mander-in-chief in the East Indies, and
... visited an island of the Santa Cruz
... group, he was murdered (20th) by the
... natives, probably in revenge for the
... atrocities of the kidnappers. His body
... was stripped, then wrapped in a tapa
... cloth, a palm branch laid over the wounds,
... and laid in a canoe, which was towed
... from the shore and cast adrift. Recov-
... ered by his friends, it was the next day
... buried at sea.

...PEABODY, GEORGE, a distinguished
... American philanthropist, was born at
... Danvers, in Massachusetts, in 1795. He
... was descended from an English Puritan
... family, was brought up to commercial
... life, and by his own energy and ability
... became head of a large and thriving
... dry-goods business. In 1827 he settled
... in England, and afterwards established
... himself in London as merchant and
... money-broker. In 1835 he was appointed
... joint-commissioner to negotiate a loan
... for the State of Maryland, and for his
... services refused to accept any compensa-
... tion. In 1848 the thanks of the State
... Legislature were specially voted to him.
... Among the numerous acts of munificence
... by which he distinguished himself, were
... the foundation of the Peabody Institute
... at his native place, assistance to the
... Arctic Expedition under Dr Kane in search
... of Sir John Franklin, the establishment
... of the Literary and Scientific Institute at
... Baltimore, the endowment of the Museum
... and Professorship of Archeology at Har-
... vard College, and his gift of half-a-million
... of money in four instalments (1862-69),
... to be vested in trustees for the benefit of
... the poor of London. He received an au-
... tograph letter from the Queen in acknow-
... ledgment of his gift, but firmly refused all
... personal honours offered to him. Died
... in London, 4th November 1869. A bronze
... statue of Mr Peabody, the work of Mr
... Story, had been erected near the Royal
... Exchange a few months before his death.

...PEACOCK, THOMAS LOVE, novelist
... and miscellaneous writer, was born at
... Weymouth in 1785. He was educated in
... a school at Englefield Green, made his
... first appearance as a poet in 1810, became
... the friend of Shelley, and in 1813 obtained
... an appointment in the India House. After
... publishing several poems he turned to
... prose fiction, and gave to the world suc-
... cessively "Headlong Hall" (1816), "Me-
... lincourt," "Nightmare Abbey," "The
... Misfortunes of Elphin," "Maid Marian,"
... "Crotchet Castle," and "Gryll Grange."

...PARRY, JOSHUA, dissenting minister
... and political satirist, was born in Wales
... in 1719. He received his education at
... Haverfordwest and Moorfield's Academy,
... London, then entered the ministry, and
... settled in 1742 as pastor of a congregation
... of dissenters at Cirencester. He married
... in 1752, and on the death of his father-in-
... law in the following year became pos-
... sessed of a large landed estate. He
... enjoyed the intimate friendship of Baron
... (afterwards Earl) Bathurst, whose seat
... was at Oakley Park, Cirencester. There
... he frequently met among the friends of
... Lord Bathurst some of the distinguished
... men of the day. Among his satirical
... pieces are a "Satire on King George II.,"
... and "Character of a Jacobite." Died at
... Cirencester, in 1776. A volume contain-
... ing some of his essays and letters, with a
... memoir by his grandson, Charles Henry
... Parry, edited by Sir J. E. Kardley-Wilmot,
... appeared in 1872.

...PATTESON, JOHN COLERIDGE,
... bishop of Melanesia, was born at Ottery-
... St-Mary, in Devonshire, in 1827. He was
... the son of Sir John Patteson, a Judge of
... the Court of Queen's Bench, and a
... nephew of Sir John T. Coleridge. He
... was educated at Eton and Balliol Col-
... lege, Oxford, was chosen fellow of Merton
... College, and after taking holy orders be-
... came curate of Alphington, near Ottery-
... St-Mary, in 1853. In the following year
... he devoted himself to missionary work,
... for which his remarkable aptitude in
... learning languages was one valuable
... qualification, and accompanied Bishop
... Selwyn to New Zealand. In 1856 he ac-
... companied the bishop on a voyage among
... the Melanesian Islands to find scholars
... for the Industrial College established in
... New Zealand. While engaged in teach-

... ing them he was studying and systemat-
... izing the confused local dialects, and
... making translations of parts of the Bible
... and the Prayer-Book. In 1861 he was
... consecrated Missionary Bishop of Melan-
... esia, and he spent the remaining ten years
... of his life in the heroic discharge of the
... like duties. With constant energy he
... protested against the growing practice of
... kidnapping the natives of the islands for
... the colonists of Queensland and Fiji.
... While cruising as usual in September 1871,
... and visiting an island of the Santa Cruz
... group, he was murdered (20th) by the
... natives, probably in revenge for the
... atrocities of the kidnappers. His body
... was stripped, then wrapped in a tapa
... cloth, a palm branch laid over the wounds,
... and laid in a canoe, which was towed
... from the shore and cast adrift. Recov-
... ered by his friends, it was the next day
... buried at sea.

Peacock enjoyed the friendship of Bentham, Mill, and Grote, and was literary executor of Shelley; in which capacity he published a defence of Shelley's first wife, Helen Westbrook. In 1856 he retired from his office of Examiner of Indian Correspondence, which he had filled for twenty years, and died at Lower Halliford, January 23, 1866. "Rated as a satirist," says the Athenæum (February 10, 1866), "who shot Folly as it flew, and could exhibit the philosophies and paradoxes of the time with an epigrammatic keenness, and with a genial recognition of all that is best, highest, and most liberal, he demands no common praise." His only son, Edward Gryffyth Peacock, formerly of the India Office, died in London, Jan. 1867.

PENNETHORNE, Sir JAMES, an English architect, was born at Worcester in 1801. Coming to London in 1820 he studied his profession under his uncle, John Nash, and the elder Pugin, then travelled on the Continent, spent some time at Rome, and was chosen Honorary Member of the Academy of St. Luke. After being engaged for some years in Mr. Nash's office, he was employed in 1832 by the Commissioners of Woods, and in 1840 was appointed joint Architect and Surveyor to the Commissioners. The same year he was elected F.R.S.E.A. He had especially directed his attention to plans for street improvement in London, and had superintended the carrying out of several of these. In 1843 he became sole Architect to the Commissioners. Among the works on which he was engaged were the formation of Victoria and Battersea Parks, the Museum of Economic Geology, the General Record Office, the new west wing of Somerset House, the south wing of Buckingham Palace, and the new University of London, his last and most important work. In 1865 the Royal Gold Medal for Architecture was awarded to him, and in 1870 he retired from office and was knighted. Died at Wimbledon, near London, 1st September 1871.

PERCIVAL, JAMES GATES, American poet and geologist, born in Connecticut in 1795. He was educated at Yale College, and from an early age displayed a strong propensity to verse-making; but he applied himself to the study of medicine, graduated M.D. in 1820, and settled at Charleston. Four years later he became Professor of Chemistry at West Point, but did not long remain there. His next appointment was at Boston. He continued to write much and study laboriously, especially geology and other physical sciences; and in 1835 he was appointed, with Professor Shepard, to make a survey of the mineralogy and geology of Connecticut. His elaborate "Report" on that subject appeared in 1842. As State Geologist of Wisconsin, to which post he was appointed in 1854, he entered upon a similar survey of that state. Percival's poems have been very popular in America, and have been

highly praised by some of the most eminent of his countrymen. His first volume appeared in 1820; "Clilo," a miscellany of prose and verse, in 1822-27; and his translation of Malte-Brun's Geography in 1843. Percival assisted Webster in the preparation of his great dictionary, for which task his extensive linguistic requirements well fitted him. Simple, retiring, and somewhat eccentric in his habits, he did not court popularity, but was content with nature, science, and song. Died, 1856. His "Life and Letters" by Julius H. Ward, appeared in 1868.

PERSIGNY, JEAN GILBERT VICTOR FIALIN, duke of, French statesman, was born at St Germain L'Espinaise in 1780. At the age of eighteen he entered the army, but after some years of service he was dismissed for insubordination, and first temporarily, and in 1833 definitively. He went to Paris to seek his fortune in 1831, and soon after, dropping his family name, assumed the title of Viscount of Persigny. Having become a Bonapartist, he started a review entitled "L'Océan Français," of which the first number was also the last. It procured him the friendly notice of the ex-king Jerome, and an introduction to Louis Napoleon, then living in Switzerland. To his service, as the representative of the "Idée Napoléonienne," he thenceforth attached himself. It was Persigny who instigated and planned the abortive attempt at Strasbourg in 1836, for which he was arrested. He made his escape, and after some wanderings in the Black Forest reached England, where he published an apologetic account of the enterprise. In 1840 he was again the associate of Louis Napoleon in the similar attempt at Boulogne, and being tried before the Court of Peers was sentenced to twenty years' imprisonment. The rigour of the confinement was after a time relaxed, and it became merely nominal. On the fall of the Orleans dynasty, in February 1848, he hastened to Paris, and with his usual energy rallied the Bonapartists, organised them, visited the departments, and thus prepared for the electoral contest of December. After the election of the Prince Louis Napoleon as President of the French Republic, Persigny was named his aide-de-camp. In 1849 he was admitted to the Legion of Honour, and was elected member of the Legislative Assembly. He took part in the coup d'état of December 1851, and in the following month was appointed Minister of the Interior. In this capacity he signed the decree of confiscation of the property of the Orleans family, and directed the elections to the Legislative Body. He was created senator in December 1852, and resigned his portfolio in April 1853. About a year later he was sent ambassador to London, a post which he held till January 1858, and again from 1859 till November 1860. He was the

appointed Minister of the Interior, and soon after published a remarkable treatise on the comparative freedom of the press in France and England. After the elections of 1863, when Paris returned all the opposition candidates, M. de Persigny retired from office, and in September was created Duke. Though he did not again hold office he continued to take part occasionally in political affairs and discussions. M. de Persigny had married in 1852 the only daughter of the Prince of the Moskowa, on which occasion he was created Count. In 1857 he was promoted Grand Cross of the Legion of Honour. Died at Nice, 12th January 1872.

PETIT, JOHN LOUIS, architectural draughtsman, etcher, and antiquary, was born at Ashton-under-Line, in Lancashire, 1801. He studied at Eton and Trinity College, Cambridge, where he graduated B.A. in 1823, and M.A. in 1826. He early showed a special taste and skill in drawing, and after sketching much in England, especially old churches, he made a tour in France, Germany, and Italy, the valuable fruits of which appeared in a work entitled "Remarks on Church Architecture," published in 1841. He assisted in founding the British Archaeological Institute in 1844, and became a regular contributor to its Journal. He was an accomplished artist, and left a large number of drawings from nature, all finished on the spot, and many etchings. His most important work is the "Architectural Studies in France" (1854). He was also author of "An Account of Tewkesbury Church," and a "Lecture on Architectural Principles and Prejudices." Mr Petit was a fellow of the R.I.B.A., a member of the Archeological Institute, and of other learned societies. Died at Lichfield, 24 December 1868.

PETRIE, GEORGE, LL.D., the Irish antiquary, was born at Dublin in 1790. Brought up to his father's profession, that of a painter, he gave himself up almost wholly to antiquarian pursuits, and obtained several prizes for his various essays on the antiquities of Ireland. He took a prominent part in the discussion of the vexed question of the "Round Towers," the origin of which he zealously maintained to be Christian. He was author of "The Ecclesiastical Architecture of Ireland anterior to the Anglo-Norman Invasion," a prize essay on the "Round Towers of Ireland," another on its military antiquities, &c. Dr Petrie became a member and President of the Royal Ulsterian Academy, Vice-President of the Royal Irish Academy, and director of the historical and antiquarian sections of the Ordnance Survey of Ireland. His collection of Irish antiquities was of considerable value. He was in the enjoyment of a pension of £300 per annum. Died at Dublin, 18th January 1866.

PHILLIP, JOHN, R.A., one of the

most distinguished British painters of his time, was born at Aberdeen in 1817. He served his apprenticeship to a house-painter in that city, but at the same time began to practise portrait-painting, and gave promise of his future eminence. In 1837, by the generous aid of Lord Panmure, to whom his case was recommended by Major Pryse Gordon, he became a student at the Royal Academy, London, and exhibited his first historical picture in 1840, "Tasso in disguise relating his Persecutions to his Sister." He then returned to Aberdeen, and during the following ten years produced a number of pictures illustrating the peasant-life and the religious observances of Scotland. The fruits of his patient studies appeared in his "Presbyterian Catching" (1847), "Baptism in Scotland," and the "Free Kirk." For the sake of health he made his first visit to Spain, in the winter of 1851-52, studying particularly the works of Velazquez and Murillo. The fruit of this and subsequent visits to the Peninsula appeared in a series of remarkable pictures of Spanish subjects, among which may be named—"The Gipsies at Seville," "La Perla de Triana," "Gipsy Water Carrier of Seville," "Spanish Contrabandistas," "La Gloria: a Spanish Wake" (1864), "Early Career of Murillo" (1865), and "A Chat round the Braser" (1866). Phillip was elected A.R.A. in 1857, and R.A. in 1859. Among his other noteworthy works are his copy of a portion of "Las Menifas," the masterpiece of Velazquez, "The Marriage of the Princess Royal" (1860), "The House of Commons" (1863), and his brilliant humorous picture called "A Huff" (1859). Phillip's health, never robust, was for a time re-established by his stay in the south, but gave way again after his settlement in London, and he died, by paralysis, February 27, 1867. His two unfinished pictures of a "Spanish Lottery" were exhibited in London the same year.

PHILLPOTTS, HENRY, bishop of Exeter, was a native of Gloucester. He was the son of a hotel-keeper, and was born in 1777. He entered Corpus Christi College, Oxford, in 1791, graduating B.A. in 1795, and was soon after elected fellow of Magdalen College. He was ordained priest in 1801, and the same year vacated his fellowship by marriage. In 1806 he was appointed Chaplain to the bishop of Durham, and three years later became prebendary of Durham. He took his degree of D.D. in 1821, was nominated Dean of Chester in 1828, and promoted to the See of Exeter in 1830. Dr Phillpotts especially distinguished himself as a polemical divine, and he was the recognized chief of the high church party. As a peer in Parliament he was the vigorous opponent of all liberal measures—the Reform Bill, Irish Church Temporalities Bill, the Ecclesiastical Commission, &c.

In 1849 he refused to institute Mr Gorham to a living on the ground of his heretical views on baptism. His decision, on final appeal to the Privy Council, being set aside, he addressed a letter to the archbishop of Canterbury as a party to the decision, and hold out a threat of excommunication. In 1851 he violated the law by convoking a synod at Exeter. Among the more noteworthy of the controversies in which he was engaged, in addition to those above mentioned, are those with Dr Lingard, and with Mr Charles Butler on his "Book of the Roman Catholic Church." In 1827 he published a letter to Mr Canning on the Roman Catholic claims. Died at Bishopstoke, 13th September 1869. His valuable library was bequeathed to the County of Cornwall, on condition that a fit building should be erected for it within three years at Truro.

PIERCE, FRANKLIN, President of the United States, was born at Hillsborough, New Hampshire, in 1804. He completed his education at Bowdoin College, where he was a contemporary of Nathaniel Hawthorne. Having taken his degree of B.A., he studied the law, and was called to the bar in 1827. Two years later he was elected member of the State Legislature, of which he was for two years Speaker. Elected to Congress in 1833 he opposed all anti-slavery measures, and in 1837 was chosen senator of the United States. He resigned, however, in 1842, and returned to the practice of his profession at Concord. He served as colonel and brigadier-general in the Mexican war (1847), and again resumed his legal practice. In 1850 he was chosen President of the New Hampshire Convention for the revision of the State constitution. In 1852 he was a candidate for the presidency, and was elected by an immense majority. His rival was General Winfield Scott. Among the principal affairs of his presidency were the boundary dispute with Mexico; a fisheries dispute with Great Britain; the organization of Kansas and Nebraska as slave territories, in violation of the Missouri Compromise; the Ostend Conference respecting Cuba; a reciprocity treaty with Great Britain; the bombardment of Greytown, in Nicaragua, &c. Mr Pierce was not re-elected, and after the expiration of his term of office he travelled in Europe. In 1863 he was made a judge. Died, 8th October 1869. A memoir of President Pierce was written in 1852 by his friend Hawthorne, whom he appointed United States consul at Liverpool.

POERIO, CARLO, Italian patriot and statesman, was born at Naples in 1803. He was of a distinguished family, and his father was an advocate, who several times suffered banishment on political grounds. The son studied law, won distinction as an advocate, and was frequently engaged in the defence of political prisoners. In 1828 he was imprisoned as an accomplice in the conspiracy of Avellino, and was

only liberated in 1836. Again imprisoned in 1847, he was released in January 1849 and soon after organized an important demonstration. The revolutionary movements of that year opened the way for him to honours and office, and he was named Minister of Public Instruction. After the reaction of 1849 he remained a member of the opposition in the parliament: was arrested on a false charge, and sentenced to fine and imprisonment in irons for twenty-four years. Subjected with many of his political comrades to the harshest usage, and dragged from dungeon to dungeon, he was broken down in health that his death was anticipated. A visit of Mr Gladstone to Naples in 1850, and his personal observation of the cruelties perpetrated in the political prisons, led to a public exposure by means of his letter to the earl of Aberdeen published in the following year. In 1859 Poerio, with other prisoners, was shipped for South America; but he mastered the crew, and Poerio reached London, and thence Turin. In 1860 he was elected deputy to the parliament of the new kingdom of Italy, and was named Vice-President. Died at Florence, 23rd April 1867.

POIRSON, AUGUSTE SIMON JEAN CHRYSOSTÔME, French historian, was born at Paris in 1795. He completed his education at the Ecole Normale, and there became the friend of Augustin Thierry. After being for a short time Reader, the Assistant-Professor of Rhetoric at the College of Henry IV., he was appointed in 1818 to the chair of History. In the following year appeared his first work, "Tableau Chronologique de l'Histoire Ancienne." In 1833 he was named Master of the College of St Louis, and four years later was transferred to the same post in the Collège Charlemagne, which under his direction took the highest rank among the colleges of Paris. He retired in 1853. Meanwhile he had held several honourable offices in connection with public education, and was admitted to the Legion of Honour. His most important work is the "Histoire de Henry IV.," which appeared in 2 vols. in 1857, and for which the Academy awarded him a Gobert Prize. Among his other works are "Histoire Romaine" (1824-26), and several useful "Précis" of history ancient and modern. He also contributed articles to the "Revue Française," "Revue des Deux Mondes," &c. Died in July 1871.

POLLOCK, SIR FREDERICK, Chief Baron of the Court of Exchequer, was born in London in 1783. He was son of a saddler, and after studying at St Paul's School, entered Trinity College, Cambridge, in '02. About the same time having obtained the profession of the law, he entered the Middle Temple. After a brilliant course as an Undergraduate, he took his degree of B.A. in 1806, "going out" as Senior Wrangler and first Smith

Prizeman. In chosen fellow-cowards took his he was called to a reputation for knowledge, and for work. After twenty years in Northern Circuit Counsel, his success increasing. In 1833 as member for borough he sat only on his election. In December 1834, in a motion, he accepted of a General, and was knighted. He held for a few months he was raised to the Court of Exchequer, sworn a member. "He exhibited," highest qualities of patience, clearness of points of law, and a firmness of which in July 1866 he the same time created years he took a geography, and became an amateur photographer. He was twice married in 1835, and had six wives. Died at 23d August 1870.

POLLOCK, SIR MARSHAL, Constable born in London in 1780, of Sir David Pollock, Bombay, and of Chief-Baron of the being sons of a League of sixteen he in East India Company Artillery. In army under General at the battle and siege of Bhurtpore in 1805. In 1815 he in the Nepaulese major in 1819, and command of the emmah. For his services he was created Colonel, and rank of colonel in a disastrous war in chosen to command the Indus, and after a great and massacre in the Khoord Ca across the Punjab, the Khyber Pass, relieved General Saibad by Akber Khan in September, after success the Afghans in elsewhere, he succeeded in junction with General entered Cabul. For the safety of the H

Prizeman. In the following year he was chosen fellow of his college, and afterwards took his degree of M.A. In 1807 he was called to the bar, rapidly obtaining a reputation for great and accurate legal knowledge, and extraordinary capacity for work. After a successful practice of twenty years in London and on the Northern Circuit, he was made a King's Counsel, his success continuing and increasing. In 1831 he entered Parliament as member for Huntingdon, for which borough he sat for thirteen years, retiring only on his elevation to the bench. In December 1834, under the Peel administration, he accepted the office of Attorney-General, and was at the same time knighted. He held office, however, only for a few months. Re-appointed in 1841, he was raised to the bench as Chief-Justice of the Court of Exchequer in 1844, and was sworn a member of the Privy Council. "He exhibited," says the "Times," "the highest qualities of a judge, firmness, patience, clearness in his explanation of points of law, and a lucidity in his summings-up which was beyond all praise." In July 1866 he retired, and was at the same time created a baronet. In his later years he took great interest in photography, and became one of the best amateur photographers of the day. He was twice married, first in 1813, and again in 1835, and had a large family by each of his wives. Died at Hatton, in Middlesex, 23d August 1870.

POLLOCK, Sir GEORGE, British Field-Marshal, Constable of the Tower, was born in London in 1786. He was brother of Sir David Pollock, Chief-Justice of Bombay, and of Sir Frederick Pollock, Chief-Justice of the Exchequer, the three being sons of a London saddler. At the age of sixteen he entered the service of the East India Company, and joined the Bengal Artillery. In 1804-5 he served in the army under General Lake, and was present at the battle and siege of Deeg, and the siege of Bhurtpore. He became captain in 1805. In 1815 he served as a volunteer in the Nepaulesse campaign: he became major in 1819, and two years later took command of the expedition sent to Burmah. For his services on that occasion he was created C.B. He attained the rank of colonel in 1829. During the disastrous war in Afghanistan he was chosen to command the armies west of the Indus, and after the memorable retreat and massacre of the British forces in the Khoord Cabul Pass, he marched across the Punjab, forced his way through the Khyber Pass, and in April 1842 relieved General Sale, besieged in Jellalabad by Akber Khan. In the following September, after several times defeating the Afghans in the Jugdulluk Pass and elsewhere, he succeeded in effecting a junction with General Nott, and with him entered Cabul. He took measures for the safety of the English prisoners, who,

under the escort of Sir Richmond Shakespear, entered his camp on the 21st September. The war was thus virtually ended, and on the 1st October Lord Ellenborough proclaimed the withdrawal of the army beyond the Sutlej. For these memorable achievements he was presented with a sword by the Governor-General of India, was promoted a G.C.B., and received the thanks of both Houses of Parliament. Various other marks of public appreciation were conferred on him. In 1843 he was appointed British Envoy at the Court of Oude, and the next year became a member of the Supreme Council of India. A pension of £1000 per annum was awarded him by the Company, of which he was afterwards nominated a director by the Crown. In 1859 he attained the rank of full general; was afterwards created Grand Commander of the Star of India; was promoted to the rank of field-marshal in 1870; made Constable of the Tower of London in 1871; and created Baronet in 1872. Sir George Pollock was twice married, first in 1810, and again in 1852. Died at Walmer, 6th October 1872. His "Life and Correspondence," edited by C. R. Low, appeared early in 1873.

PONCELET, JEAN VICTOR, French general and mathematician, was born at Metz in 1788. After studying at the Ecole Polytechnique and the Ecole d'Application of Metz, he entered the army in 1812 as lieutenant of engineers. Taken prisoner in the Russian campaign, he returned to France in 1814, and was appointed Professor of Mechanics at the Ecole d'Application, a post which he held for fifteen years. During this period his researches and valuable memoirs on geometrical science, the latter contributed to the "Annales de Mathématiques," placed him in the highest rank among mathematicians. In 1834 he was received at the Paris Academy of Sciences. About the same time he became Professor of Mechanics at the Sorbonne, afterwards at the Collège de France. He was promoted colonel in 1845, general of brigade and commander of the Ecole Polytechnique in 1848, and at the same time was elected deputy to the Constituent Assembly. He was President of the Scientific Commission for the great Exhibition in London. Commander of the Legion of Honour from 1850, he was promoted grand officer in 1853. Besides memoirs contributed to the Academy of Sciences, &c., M. Poncelet was author of "Traité des Propriétés projectives des Figures" (1822), "Mémoire sur les Roues hydrauliques" (1826), crowned by the Academy in 1825, "Cours de Mécanique appliquée aux Machines" (1826), &c. Died in December 1867.

PONSARD, FRANÇOIS, French dramatist, was born at Vienna in 1812. He began at an early age to write plays, made himself known in 1837 by a translation of Byron's "Manfred," and having settled

at Paris, got his classical drama "Lucrèce" produced at the Odéon Theatre in 1843. It was followed by "Agnès de Méranie," "Charlotte Corday," "L'Honneur et l'Argent," "La Bourse," &c. In 1855 Ponsard was received at the French Academy. He was also a commander of the Legion of Honour and Librarian at the Elysée. Died at Passy, 7th July 1867.

PONSON, PIERRE ALEXIS DE, known under the title of the *Vicomte de Ponson du Terrail*, French novelist, was born near Grenoble in 1829. In his twentieth year he went to Paris, and soon after commenced his literary career as a writer of *feuilletons* for the daily and weekly journals. The fertility of his pen was "prodigious," and the mere titles of his tales would fill a column of the "Biographical Treasury." One of the most noted, chiefly for its voluminousness, is the "Exploits de Rocamboles," carried on in the "Resurrection," and the "Dernier Mot de Rocamboles." He had sometimes in hand at the same time five or six serial tales, and to assist his memory as to the positions of the various characters of each, he used sets of representative puppets. Died in January 1871.

POTTER, CIPRIANI, a distinguished musical composer and pianist, Principal of the Royal Academy of Music, was born in London in 1792. One of a musical family, he showed at a very early age the fondness and faculty for music which had distinguished his father and his two grandfathers. He learnt pianoforte playing first of his father and then of Joseph Woelfl, and was taught the theory of music by Attwood, Callcott, and Crotch. As early as the age of fourteen he composed symphonies and chamber-music. In 1807, and several following years, he travelled on the Continent, continuing his musical studies in Germany and Italy, and making the acquaintance of Beethoven at Vienna. He was one of the first to recognize and adequately estimate the genius of Beethoven, and probably contributed more than any other man to the wider knowledge and appreciation of his works in England. In 1823, on the foundation of the Royal Academy of Music, Mr Potter was chosen one of the professors, and nine years later he succeeded Dr Crotch as Principal of the Institution. This office he filled till 1859. He was an active member of the Philharmonic Society, and was present at one of its concerts only a few months before his death. As a teacher he was remarkably successful, and was idolized by his pupils, among whom were Sir Sterndale Bennett, Messrs G. and W. Macfarren, B. Richards, &c. Among his compositions are several symphonies, an overture to "Cymbeline," overture to "Antony and Cleopatra," &c. Died in London, 26th September, 1871.

POUCHET, FÉLIX ARCHIMÈDE, French naturalist and physiologist, was

born at Rouen in 1800. Brought up to the medical profession, he completed his studies at Paris, and graduated M.D. in 1827. In the following year he was appointed Director of the newly-founded Natural History Museum of Rouen, which under his management rose into considerable importance. He was at the same time named Professor of Zoology. In 1838 he accepted the professorship of Natural History at the Rouen School of Medicine. Admitted some years later to the Legion of Honour, he was also a correspondent of the Academy of Sciences, and a member of many scientific societies, both French and foreign. M. Pouchet is most widely known as the zealous upholder of the doctrine of *Heterogenesis* (Spontaneous Generation), on which subject he found a distinguished opponent in M. Pasteur. The rival series of experiments conducted by these eminent investigators have excited intense interest. In 1859 M. Pouchet published his "Hétérogénéité," and the same year, in reply to the objections of Pasteur, "Nouvelles Expériences sur les Animaux pseudo-ressuscitants." These were followed by "Corps organisés recueillis dans l'Air par les Flocons de Neige," &c. Among his other works are—"Histoire Naturelle de la Famille des Solanées" (1829); "Histoire Naturelle du Règne Animal;" "Théorie positive de l'Ovulation spontanée et de la Fécondation des Mammifères et de l'Espèce Humaine" (1847), a work which gained him the prize of experimental physiology at the Academy of Sciences; "Histoire des Sciences naturelles au Moyen Age" (1853), &c. Died at Paris, 6th December 1872.

PRÉVOST-PARADOL, LUCIEN ANATOLE, French political and miscellaneous writer, was born at Paris in 1829. He was educated at the Collège Bourbon and the Ecole Normale, quitting the latter in 1851, and gaining the same year the prize for eloquence at the French Academy. After holding for a year the chair of French Literature at the Faculty of Aix, he joined, at the close of 1856, the staff of the "Journal des Débats," and was afterwards on the staff of the "Courier du Dimanche." His articles in the latter paper were offensive to the Imperial Government, and for one of them, in August 1866, it was suppressed. He had already suffered fine and imprisonment in 1860 for his book entitled "Anciens Paris." M. Prévost-Paradol was twice an unsuccessful candidate for election to the Corps Législatif, first in 1863, and a second time in 1869. He was received at the French Academy in 1865. In the summer of 1870 he was sent ambassador to the United States, and soon after his arrival committed suicide at Washington, 19th July 1870. His principal writings are—"Revue de l'Histoire universelle," "Du Rôle de la Famille dans l'Éducation," "Essais de Politique et de la Littérature," "Anciens Paris," and "France Nouvelle."

PRIM, JUAN JOSÉ, count de Council of Regency of a colonel in the Spanish army, was born at Reus in 1800. At the age of nineteen he distinguished himself in a battle, and soon distinguished himself as commander of the regular army of Catalonia. Before the outbreak of the Carlist war he was promoted to the rank of lieutenant-colonel. In 1845 he was elected Deputy of the Cortes, and took a leading part in the management of the active and energetic policy which he rendered to the Government. In 1846 he obtained the rank of brigadier-general, and in 1847 he was appointed Minister of War. In 1848 he was elected to the Cortes, and was re-elected in 1850. In 1851 he was appointed Minister of War, and was re-elected in 1852. In 1853 he was elected to the Cortes, and was re-elected in 1854. In 1855 he was elected to the Cortes, and was re-elected in 1856. In 1857 he was elected to the Cortes, and was re-elected in 1858. In 1859 he was elected to the Cortes, and was re-elected in 1860. In 1861 he was elected to the Cortes, and was re-elected in 1862. In 1863 he was elected to the Cortes, and was re-elected in 1864. In 1865 he was elected to the Cortes, and was re-elected in 1866. In 1867 he was elected to the Cortes, and was re-elected in 1868. In 1869 he was elected to the Cortes, and was re-elected in 1870. In 1871 he was elected to the Cortes, and was re-elected in 1872. In 1873 he was elected to the Cortes, and was re-elected in 1874. In 1875 he was elected to the Cortes, and was re-elected in 1876. In 1877 he was elected to the Cortes, and was re-elected in 1878. In 1879 he was elected to the Cortes, and was re-elected in 1880. In 1881 he was elected to the Cortes, and was re-elected in 1882. In 1883 he was elected to the Cortes, and was re-elected in 1884. In 1885 he was elected to the Cortes, and was re-elected in 1886. In 1887 he was elected to the Cortes, and was re-elected in 1888. In 1889 he was elected to the Cortes, and was re-elected in 1890. In 1891 he was elected to the Cortes, and was re-elected in 1892. In 1893 he was elected to the Cortes, and was re-elected in 1894. In 1895 he was elected to the Cortes, and was re-elected in 1896. In 1897 he was elected to the Cortes, and was re-elected in 1898. In 1899 he was elected to the Cortes, and was re-elected in 1900.

PRIM, JUAN, marquis de los Castillejos, count de Reuss, President of the Council of Regency of Spain, was the son of a colonel in the Spanish army, and was born at Reuss, in Catalonia, in 1814. At the age of nineteen he entered the army, and soon distinguished himself in the war of succession which broke out in 1833, first as commander of a free corps, and then in the regular army. He fought against the Carlists. Before he was twenty-two he was promoted captain, and three years later colonel. After the close of the civil war he entered political life, and in 1843 was elected Deputy to the Cortes. He took a leading part in the formation and management of political clubs, and for the active and intelligent services which he rendered to the successive ruling parties he obtained promotion and advancement. In the same year in which he entered the Cortes he was made brigadier-general, and created Count of Reuss. In 1844 he was implicated in a conspiracy against Narvaez, then first minister, and was convicted, but his sentence was revoked by the queen a few months later. About 1846 he was appointed Captain-General and Governor of Porto Rico, and during his tenure of office he took a leading part in suppressing an insurrection of the negroes at Santa Cruz, and in rescuing the Danes. Blamed by the Spanish Government for withdrawing the troops from Porto Rico, he was recalled in 1848, and tried for dereliction of duty. Early in 1853 Prim engaged in a conspiracy against Bravo Murillo, and was banished. He soon returned, and in 1854 was sent as Spanish military commissioner to the camp of the Allies in the Crimean war. In Jan. 1856 he attained the rank of lieutenant-general. On his return from the Crimea, in that year, he married a Mexican lady at Paris. He was admitted to the Senate two years later, and made a remarkable speech there on Mexican affairs. He served with great distinction in the war with Morocco, which broke out in 1859, his crowning achievement being the victory over the Moors at Castillejos, which ended the war, and for which he was created Marquis de los Castillejos and Grandee of Spain of the first class. At the close of 1861 General Prim was sent to Mexico as commander of the Spanish contingent in the joint expedition of England, France, and Spain, and was at the same time appointed minister plenipotentiary. The purpose of the expedition being accomplished, he withdrew with the English contingent, the French remaining to subjugate the country and set up a foreign ruler. In August 1864 he was banished to Oviedo, but was recalled to Madrid in June 1865. He soon allied himself with Espartero and the "Progressistas," and left his seat in the Senate vacant. In January 1866 he put himself at the head of an abortive military revolt, and after its failure came to

England. He took a leading part in the insurrection of September 1868, which drove Queen Isabella from the throne, and was named Minister of War in the Provisional Government. He was in the following summer head of the ministry under the regency of Serrano. The monarchical form of government being adopted, Prim offered the crown successively to the duke of Genoa, to Prince Leopold of Hohenzollern, and finally the duke of Aosta. The acceptance by the second, afterwards withdrawn, became the occasion of the Franco-German war. The duke of Aosta (Amadeo, son of Victor Emmanuel) having accepted the offer, Prim formally proposed him to the Cortes in November 1870. The prince soon sailed for Spain, but before he reached Madrid, Prim was dead. He was shot by assassins at Madrid on the night of 28th December, and died on the 30th. The young king entered the city on the 1st January. Prim was the recognized chief of the advanced Liberal party, ambitious and versatile in a high degree. But during the unusually long interregnum, Spain owed her tranquillity chiefly to his firmness, tact, and administrative ability.

PRYME, GEORGE, Professor of Political Economy at the University of Cambridge, was born in 1781. He entered Trinity College, Cambridge, in 1799, graduated B.A. in 1803, and was elected fellow of his college in 1805. He was then studying for the law, and in the following year was called to the bar at Lincoln's Inn. About the same time he took his Master's degree. A London residence not suiting his health, he settled at Cambridge, where in 1816 he began to lecture on political economy, a course of instruction undertaken as a labour of love, and so continued till 1863. In 1828 the title of Professor was conferred on him, but no stipend. After two unsuccessful candidatures, Mr Pryme was elected M.P. for the borough of Cambridge in 1832, and sat in Parliament as a Liberal for ten years, taking part in all the Liberal measures. In 1863 he retired from his public duties as professor, having by persevering efforts procured the establishment of a chair of Political Economy at Cambridge, with a stipend for the professor. His "Introductory Lecture and Syllabus to a Course on the Principles of Political Economy," was published in 1823. Since his death he has appeared his "Autobiographic Recollections," edited by his daughter. He had married in 1813. Died at Cambridge, 2d December 1868.

PYNE, JAMES B., an English landscape-painter, was born at Bristol in 1800. He was trained for the law, but soon gave up the profession for the study of art. In 1835 he settled in London, and about four years later became a member of the Society of British Artists, of which he was afterwards Vice-President. He twice visited Italy, spending three years there

and the same continued in conjunction with Hausen, (1840-53), "Geschichte des Pflugs," &c. In 1863 he celebrated the jubilee of his doctorate. Died at Heidelberg, 29th March 1870.

RAYMOND, HENRY JARVIS, American journalist, founder and editor of the "New York Times," was born in New York State in 1820. He was the son of a small farmer, and in his boyhood was employed in farm-labour. He afterwards studied at Vermont University, took his degree in 1840, and then studied law for a short time. In 1841 he became sub-editor of the "New York Tribune," two years later passed to the staff of the "New York Courier," and in 1851 established and became editor of the "New York Times." He was elected in 1849 a member of the State Legislature of New York, and the following year was Speaker. In 1854 he was elected Lieutenant-Governor of the State, which office he held for three years. He took an active part in the organization of the Republican party, supported Mr Lincoln in his candidature for the Presidency, and warmly advocated the war against the Southern States on their secession from the Union. Died, 18th June 1869.

READ, THOMAS BUCHANAN, American poet and painter, was born in Pennsylvania in 1822. Fond of the fine arts, he first studied sculpture, then turned to painting, and in 1841 began to practise portrait-painting at New York. He soon removed to Boston, and later to Philadelphia, visited Europe in 1850, and again in 1853. His first poems were published in 1847; these were followed by "Lays and Ballads," "A New Pastoral," "Rural Poems," "A Summer Story," &c. He also wrote "The Female Poets of America," and "The Pilgrims of the Great St Bernard," a prose tale. Died at New York, 11th May 1872.

READE, JOHN EDMUND, an English poet, was born at Broadwell, in Gloucestershire. In 1830 he published anonymously a dramatic poem entitled "Cain, the Wanderer," which attracted attention. In 1838 appeared "Italy," which was followed by two dramatic poems, "Life's Episode," "Revelations of Life," "Man in Paradise" (intended as a prelude to his first work), "Youth" (a series of lyrics), and "Laureate Wreath." Several collected editions of Mr Reade's poems have been published, the latest in 1865. Died at Budleigh-Salterton, in Devonshire, 17th September 1870.

REGNAULT, ALEXANDRE GEORGES HENRI, French painter, was born in 1847. He was a son of the director of the Sèvres manufactory, and became a later pupil in art of Lamothe and later of Cabanel. He obtained the grand prize of the Academy in 1866, and went to Rome. In 1868 he visited Spain, and thence went to Tangier; but in consequence of the Franco-German war returned to Paris in

1870, and served during the siege as a National Guard. He was killed in the great sortie against the Germans of the 19th January 1871. His body was found on the 22d, but the face was so mutilated by the shot which struck him that it could scarcely be identified as his. The few works which he has left have attracted much attention by their originality, force, brilliancy, and technical skill. His equestrian "Portrait of General Prim" was exhibited in 1869; "Execution at the Alhambra," "Salome," and "Judith," in 1870. Regnault began early to draw with the left hand, and retained the habit through life. A memoir of his life and works by H. Cazalis appeared in 1872.

RITTER, HEINRICH, German philosopher, was born at Zerbst in 1791. He went to the University of Halle in 1811, afterwards removed to Göttingen, served as a volunteer in the war of Liberation, and completed his theological studies at Berlin. He ultimately applied himself exclusively to philosophy and the history of philosophy. Having taken his doctor's degree at Berlin in 1817, he was appointed in 1824 Professor Extraordinary. He removed to Kiel in 1833, and four years later settled at Göttingen. After making himself known by special works on the doctrine of Empedocles, the Ionian school, the Megaric school, and the philosophy of Pythagoras, he published his great work, the "Geschichte der Philosophie," in 12 vols., between 1829 and 1853. In the second edition, commenced in 1836, the history is brought down to the time of Kant. Among his other works are—"Versuch zur Verständigung über die neueste deutsche Philosophie seit Kant" (1853). "Die christliche Philosophie," "Vorlesungen zur Einleitung in die Logik," "Abriss der philosophischen Logik," "Ueber die Erkenntnis Gottes in der Welt," "Kleine philosophische Schriften," "System der Logik und der Metaphysik," "Encyclopädie der philosophischen Wissenschaften," "Unsterblichkeit," &c. Ritter was not an adherent of any school in philosophy. His aim throughout was to exhibit and illustrate the process of the origin or growth of successive systems by a faithful history of them all. Died at Göttingen, 3d February 1869.

ROBERTSON, JOSEPH, LL.D., Scottish antiquary and political journalist, was born at Aberdeen in 1811. The only son of a merchant, he was educated under Dr Bisset and at Marischal College, and studied for the law, which, however, he did not practise. As political writer he was editor successively of the "Aberdeen Constitutional," "Glasgow Constitutional," and "Edinburgh Evening Courant." He was one of the founders of the Spalding Club, for which, as well as for the Maitland and Bannatyne Clubs, he edited many works; among which are the "Diary of General Patrick Gordon," "Collections for the History of the Shires

(1834), "Treatise on Physiology and Phrenology" (1838), and the treatises on "Electricity" and "Magnetism" in the "Library of Useful Knowledge." He contributed scientific articles to the "Encyclopædia Britannica" and the "Cyclopædia of Practical Medicine," and many papers to the Transactions of the Royal and Medico-Chirurgical Societies, &c. His name is perhaps most widely known as author of the "Thesaurus of English Words and Phrases," first published in 1832. Dr Roget was a fellow of the Royal Astronomical, the Geological, Zoological, and Entomological Societies. Died at Malvern, 13th February 1869.

ROSCOE, THOMAS, translator and miscellaneous writer, was born at Liverpool in 1791. He was one of the sons of the distinguished historian, William Roscoe, and began at an early age to apply himself to literature. His principal works as translator are the "Memoirs of Benvenuto Cellini," from the Italian, published in 1823; Sismondi's "History of the Literature of the South of Europe" (1823); and Lanzi's "History of Painting in Italy" (1823). He wrote "Memoirs of Scipio de Ricci," "Life and Writings of Cervantes," "Life and Campaigns of Wellington," &c.; edited the "Novelist's Library" (1831-32), and was a contributor to periodical literature. Died in London, 24th September 1871.

ROSE, HENRY JOHN, archdeacon of Bedford, theological and miscellaneous writer, was born at Uckfield, in Sussex, in 1800. At the age of seventeen he entered Peterhouse, Cambridge, but removed to St John's College, and took his degree of B.A. in 1821. Soon after elected fellow of his college, he resided there about seventeen years, devoting himself chiefly to classical and biblical studies. He was also a zealous politician, and wrote frequently on the Conservative side. Having taken holy orders, he was for a short time incumbent of St Edward's Church at Cambridge. In 1833 he was appointed Hulsean Lecturer, and about three years later he came to London to assist his brother, Hugh James Rose, in his parochial and literary labours. He married in 1837, and was presented to a college living, the rectory of Houghton Conquest, in Bedfordshire, where he continued to labour for thirty-four years. In 1866 he was appointed Archdeacon of Bedford. Among his works are the Hulsean Lectures on "The Law of Moses viewed in Connection with the History and Character of the Jews," the translation of Neander's "History of the Christian Religion and Church during the first Three Centuries," a Reply to Dr Rowland Williams's essay in "Essays and Reviews," and part of the "Ecclesiastical History" for the "Encyclopædia Metropolitana." Mr Rose also largely assisted his brother in his edition of Parkhurst's "Greek Lexicon of the New Testament," and in the first portion

of his "Biographical Dictionary." He also edited for some years the encyclopædia above named and the "British Magazine," edited the private papers of Berkeley for the collected edition of his works, and contributed to the "Quarterly," "English," and "Contemporary" Reviews. He undertook the Commentary on the Book of Daniel for the "Speakers' Commentary," and was one of the revisers of the authorised version of the Old Testament. Died, 31st January 1873.

ROSSE, WILLIAM PARSONS, third earl of, astronomer, was born at York in 1800. He bore at first the title of Lord Oxmantown. He was educated at Magdalen College, Oxford, where he took his degree of B.A., as first-class in mathematics, in 1822. In the preceding year he had entered Parliament as member for King's County, and held his seat for thirteen years. In 1841 he succeeded his father as earl of Rosse, and was elected four years later a representative peer for Ireland. As early as 1825 he had begun to construct reflecting telescopes, and his achievement in the same field. After many years of research and experiment, the monster telescope, of six feet aperture, constructed at his own expense and under his own superintendence, was completed in 1848. It was erected in front of his seat, Birr Castle, near Parsonstown, and the results were such as to justify the highest anticipations. It was found to have far more power to penetrate space than any previously-existing instrument; and among the earliest results of its use was the resolution of several nebula which had resisted all previous attempts. A new impulse was given not only to the construction of similar instruments, but to the class of observations for which they are fitted. Lord Rosse was chosen F.R.S. in 1824, was President of the British Association in 1843, and President of the Royal Society from 1849 to 1854; was afterwards member of the Imperial Academy of Sciences of the Legion of Honour, and member of the Legion of Honour. In 1865 he was chosen Chancellor of the University of Dublin. He married in 1836. Died at his seat, 31st October 1867.

ROSSEL, LOUIS NATHANIEL, French colonel, and afterwards Communist leader, was born at St Brieuc, in Brittany, in 1844. He entered the army, and had attained the rank of colonel before the outbreak of the Communist insurrection at Paris in March 1871. Enthusiastically siding with the Commune, he resigned his commission in the army, and went to Paris to take part as citizen only in the insurrection. At the end of April he was named Minister of War by the Commune; was captured by the police of the victorious government on the 7th June; and was tried with other insurgents before the courts-martial at Versailles in November. Dis-

tinguished for ability, energy, and honesty, he was warmly beloved, and earnest endeavours were made to save his life, but in vain. He spent his last days in prison in study, writing and conversation on the most sacred themes, and completed his work on the art of war, which was published after his death. He was shot at Satory on the 28th November 1871, and met his end with unaffected, calm courage. In 1872 appeared his "Posthumous Papers," some of which, detailing his prison experiences, reflections, and feelings, are of singular interest. The book was translated into English.

ROSSETTI, GABRIELE, Italian poet and historical critic, was born at Vasto, in the Abruzzi, in 1783. He commenced his literary career by writing several cantatas for the theatre of San Carlo at Naples. In 1813 he obtained the appointment of Keeper of the Museo Borbonico of Naples. Welcoming with enthusiasm the promise of constitutional government in 1820, he composed a patriotic hymn, commencing, "Sai pur bella cogli' astri sul crine," which became at once a favourite with his countrymen, and has remained widely popular. But the triumph of absolutism compelled him to leave Italy in 1821, and after residing for a time in Malta, he arrived in England in 1824. For some years he gave lessons in Italian, and in 1830 was appointed Professor of the Italian Language at King's College, London. This post he held for fifteen years, and in consequence of his sight becoming much impaired in 1845, was compelled to resign. Rossetti's best known prose work is the "Comento Analitico" on the great poem of Dante, which appeared in 1826-27. His other prose works are—"Dello spirito antipatico che produce la Riforma," "Roma nella metà del secolo 19," "I Misteri dell' Amore platonico alle età di mezzo," "La Beatrice di Dante," &c. His poetical works are—"Il Salterio," "I Veggenti in Solitudine," "L'Arpa evangelica," and a copious volume of miscellaneous poems. Gabriele Rossetti married in 1826 the daughter of Gaetano Polidori, a literary Tuscan resident in London, and became the father of the distinguished poet and painter, D. G. ROSSETTI; the art-critic, W. M. ROSSETTI; the poetess, CHRISTINA ROSSETTI, and MARA F. ROSSETTI, authoress of "A Shadow of Dante." Died in London, 16th April 1854. Rossetti died in exile, but his reputation in his own country, as a patriot and as a writer, is firmly established. A memorial tablet has lately been decreed to him in Florence, and his statue is now (1873) in progress for the Piazza Gabriele Rossetti of his native town of Vasto.

ROSSINI, GIOACCHINO, one of the most distinguished musical composers of his age, was born at Pesaro, near Bologna, in 1792. His father was an obscure musician, and his mother an actress and singer, and a very beautiful woman. After some

training as a chorister in a Bologna church, he became a pupil of Father Mattei at the Lyceum of that city. But he did not long continue his studies there, and thenceforth perseveringly educated himself. He produced several operas now forgotten, but as early as 1813 made himself a sudden and a solid reputation by the production, at Venice, of his first masterpiece, "Tancredi." It was received with astonishment and boundless enthusiasm, and was within a few years a favourite of the world. Two years later the composer was appointed director of the great theatre of San Carlo at Naples, a post which he held for eight years. In 1816 he brought out at Rome his second masterpiece, "Il Barbiere di Siviglia," which had a success perhaps unparalleled. In 1821 he married Mdle. Colbran, a celebrated tragedian and singer, and two years later he left Italy. He first visited Paris, came to London in 1824, in pursuance of an engagement at the Italian Opera, which, however, was not satisfactory to him, and was suddenly broken off. The next year he was named director of the Italian Opera, Paris, (and this post he held till the Revolution of July (1830). His negligent administration was nearly ruinous to the theatre. After a long period of inaction, he produced, in 1829, a third masterpiece, the "Guillaume Tell," which, however, did not make so great an impression as the former two. He then deliberately laid down his pen. Having lost his appointments in Paris, he returned to Italy in 1836, and took up his permanent residence at Bologna. In 1855, however, he again settled at Paris, and there spent in retirement the rest of his life. Rossini's works are very numerous, and were chiefly composed before his first removal from his native country. The more noteworthy among them, in addition to those already mentioned, are the "Inganno Infelice" (1812), "Otello" (1816), "Gazza Ladra" (1817), "Mosè in Egitto" (1818), "Semiramide" (1823), the last composed before he left Italy, and one of the finest of his operas; "La Donna del Lago," "Siège de Corinthe" (a reproduction of his "Maometto Secondo"), and "Zelmira" (which was produced on his visit to London). To these must be added a "Stabat Mater," composed in 1842, and a "Messe Solennelle," composed in 1863, but not produced till after the master's death. It was first heard at Paris in 1869. Rossini was married a second time, to Madame Pelissier, who survived him. Died at Paris, 13th November 1868. His remains were interred in the cemetery of Père la Chaise, after a solemn celebration in the church of La Trinité.

ROTHE, RICHARD, one of the most distinguished German theologians of his age, was born at Posen in 1799. After studying at Stettin and Breslau he went in 1817 to the University of Heidelberg, where he studied theology under Daub,

Removing to Berlin, he distinguished himself chiefly by his preaching, and for two years acted as a preacher, he then returned to the Prussian five years' residence in his native town, where he became Professor at Wittenberg, which he became then Ephorus. He was called to a similar position at Halle, where he remained until he was next appointed Professor of Theology and University Preacher at Heidelberg. He returned to Heidelberg of Theology and Philosophy to the Council. Rother, a theologian of the school of Schleiermacher, in his own time, assembled, says a writer in the "Edinburgh Review," a complete and dialectic speculation, and his theosophic tenets embraced both systems of theology; and though he was himself a supernaturalist, he was not without modifications of the Evangelical system, which should bring down to the scientific great work is the "Theologia," published in 3 vols., in 1801, in 2 editions, re-cast, and with his other works arranged in 1803, "Die Anfänge der Kirche" (1837), and "Dissertationen," &c. 1808, 2th August 1867.

ROUGE, EMMANUEL, distinguished French philosopher, born at Paris in 1811, was a student of logic and Arabic, and afterwards turned himself to the hieroglyphic system, which he began to be known as "Rouge" in 1848, when he reviewed Bunsen's work on "Universal History." He was appointed Keeper of the Archives of the Louvre, and in 1850, Minister of State by Napoleon III, and in the following year he was elected to the Institute. On the 26th of August 1860, he was elected to the chair of Archaeology in France, which he held until his death. He sent to Egypt for the papyrus which he brought home many years ago. Among his more important works are a translation of the D'Orbigny papyrus, "Recherches sur les monuments des Six premières dynasties," "Chrestomathie," of which only a few volumes appeared in 1867-68; memoirs to the Institute, and papers in the "Revue Archéologique." A

[ROU]

Removing to Berlin in 1819, he attached himself chiefly to Neander. After spending two years at the Wittenberg Seminary for preachers, he went to Rome as preacher to the Prussian embassy, and during his five years' residence there he enjoyed the intimate friendship of Bunsen. In the autumn of 1823 he accepted the post of Professor at Wittenberg Seminary, of which he became Second Director, and then Ephorus. After nine years he was called to a similar post at Heidelberg, where he remained till 1849. He was next appointed Professor and Evangelical University Preacher at Bonn. He returned to Heidelberg in 1854 as Professor of Theology and member of the Church Council. Rother ranks among the greatest theologians of the present age. Combining in himself the rarest qualities, he resembled, says a writer in the "Conversations-Lexikon," Schleiermacher in fervid piety and dialectical acumen, Hegel in his speculative method, and the Mystics in his theosophic tendencies. His lectures embraced both systematic and historical theology; and though he professed himself a supernaturalist, it was with important modifications. He aimed at a reform of the Evangelical Church and Theology, which should bring them into harmony with the scientific culture of the age. His great work is the "Theologische Ethik," 3 vols., published in 1845-48. A second edition, re-cast, appeared in 1867. Among his other works are—"Zur Dogmatik" (1853), "Die Anfänge der christlichen Kirche" (1837), and many separate essays, dissertations, &c. Died at Heidelberg, 20th August 1867.

ROUGÉ, EMMANUEL DE, VISCOUNT, a distinguished French Egyptologist, was born at Paris in 1811. Preferring philology to politics, he first studied Hebrew and Arabic, and afterwards applied himself to the hieroglyphics of Egypt. He began to be known as an Egyptologist in 1846, when he reviewed the first volume of Bunsen's work on "Egypt's Place in Universal History." In 1849 he was appointed Keeper of the Egyptian Collections of the Louvre, was created a Councillor of State by Napoleon III. in 1852, and in the following year was admitted to the Institute. On the death of M. Le normant in 1860, he was called to the chair of Archaeology in the Collège de France, which he held for many years. Sent to Egypt for the purpose of learned research in 1863, he discovered and brought home many valuable inscriptions. Among his more noteworthy writings are a translation of a large part of the D'Origny papyrus, "Tale of the Two Brothers," "Recherches sur les Monuments des Six premières Dynasties," published in 1866; "Chrestomathie Egyptienne," of which only two fasciculi appeared in 1867-68; memoirs contributed to the Institute, and papers in the "Revue Archéologique." At the fall of the

[RUC]

Second Empire he ceased to be Councillor of State. De Rougé was a member of the Legion of Honour from 1862. Died at Paris in January 1873. His son, M. himself in the same field of research.

ROUSSEAU, THEODORE, one of the most distinguished landscape-painters of his age, was born at Paris in 1812. Showing at an early age an eager love of nature and a passion for drawing, he became a pupil first of Rémond, and afterwards of Lethière, whose studio he left in 1831. During the period of his studies under the latter he had made many excursions into the country, and produced numerous sketches and studies from nature. He had also worked in the Louvre, copying works of Claude Lorraine, Van de Velde, and Karel Dujardin. He began to exhibit at the Salon in 1831, but *tailgniers*, was rejected by the jury, and in 1835 his large picture, "Allée de Châleu," was excluded from the exhibition for many years. Rousseau was an adherent of the new Romantic School, and his judges were Classics in Art. Re-appearing at the Salon in 1849, his reputation rapidly rose, and he soon took rank among the first landscapists of Europe. In 1852 he was admitted to the Legion of Honour, and in 1867 was promoted officer. He has treated a wide variety of scenes and effects in nature, preferring, however, almost invariably the grave and the austere, and depicting that which is permanent rather than that which is merely transitory. Died at Barbison, 22d December 1867.

RÜCKERT, LEOPOLD IMMANUEL, German theologian and biblical critic, was born at Grosshennersdorf, near Herrnhut, in 1797. At the age of seventeen he entered the University of Leipzig, where he applied himself to theological and philological studies. He afterwards took deacon's orders and officiated for six years in his native village, during which period his earliest writings appeared. In 1825 he was appointed Sub-Rector at the Gymnasium of Zittau, and was promoted to be Rector in 1840. Having established his reputation as a theologian, he was called in 1842 to the chair of Theology at Jena, where he was subsequently made a member of the Council of the Church. He held an intermediate position between pure rationalism and orthodoxy, his theological system bearing the marks of the combined influences of Kant, Fichte, Schleiermacher, and the Moravian Brethren. Among his works are—Commentaries on the Epistles to the Romans, the Corinthians (i. and ii.), the Galatians, and the Ephesians; "Theologie," a full exposition of his own system; "Das Abendmahl," "Ein Buchlein von der Kirche," and "Der Nationalismus." He also published many smaller works, dissertations, sermons, &c. Died, April 1871.

S.

SAINTE-BEUVE, CHARLES AUGUSTIN, the distinguished French critic, historian, and poet, was born at Roulogne-sur-Mer in December 1804. His father died in the preceding October. His mother was descended from an English family, and made him at an early age acquainted with English literature. At fourteen he went to Paris to complete his education at the Collège Charlemagne. He then applied himself to the study of medicine, and obtained an appointment in the Hospital Saint-Louis. His literary tastes and longings soon drew him away from his profession, and he began to contribute to the "Globe." His articles in that journal, historical, philosophical, and critical, procured him the friendship of the philosopher Jouffroy. His entire devotion to literature was determined by the "Odes and Ballads" of Victor Hugo, which had an immense influence on him. He threw himself heartily into the Romantic movement, and joined the staff of the "Cénacle," on which he was associated with Alfred de Musset, the two Deschamps, &c. As early as 1823 he published his "Tableau historique et critique de la Poésie Française et du Théâtre Français au 16^{me} Siècle," a work which he afterwards enlarged. In the following year appeared a volume of his poems under the title of "Poésies de Joseph Delorme," which won the praise of Béranger, but not much popularity. It was soon followed by another series of poems, "Les Consolations," which are esteemed his best. At the Revolution of July (1830) the "Cénacle" was discontinued, and its staff dispersed, Sainte-Beuve for a short time felt the attraction of Saint-Simonism, and contributed to the "Globe," then edited by Pierre Leroux. But he soon left it and began to write for the "Revue des Deux Mondes," and soon after for the "National." Under the influence of a temporary enthusiasm for Lamennais and mysticism, he produced his singular work entitled "Volupté," a curious study of moral pathology. In 1840 he was appointed by M. Thiers Keeper of the Mazarine Library, and in 1845 he was received at the French Academy. In 1850 he commenced in the Monday numbers of the "Constitutionnel" the famous papers known as the "Causeries du Lundi," in which the originality of his genius as a critic and the fascination of his style especially display themselves. The characteristic feature of these papers is the happy union of biographical incident with keen critical analysis. In their collected form the "Causeries" fill more than twenty volumes. After the *coup d'état* of 2d December 1851, Sainte-

Bouve was called to the chair of Latin Poetry at the Collège de France; but so hostile was the attitude of the students, in consequence of his political conversion to Imperialism, that he could not continue his course of lectures. In 1857 he accepted a similar post at the Ecole Normale, and held it till 1861. In 1865 he was created senator by Napoleon III. In addition to the works already named, Sainte-Beuve was author of a volume of poems entitled "Pensées d'Août," a voluminous "Histoire du Port-Royal," commenced in 1840 and completed twenty years later; "Portraits Littéraires;" "Portraits Contemporains;" besides numerous prefaces, introductions, and biographical notices, &c. Died at Paris, 13th October 1869. By his own desire his burial took place without any religious ceremony. It was attended by a large number of friends and admirers, among whom were some of the most distinguished persons of the day.

SAMSON, JOSEPH ISIDORE, a celebrated French actor and dramatist, was born at St Denis in 1793. At an early age he began to play at a Paris theatre, entered the Conservatoire in 1812, obtained the prize of comedy, and having married in 1814, went with his wife, also an actress, to play in the provinces. In 1819 he settled at Paris, and after several engagements at other theatres, joined the Comédie Française in 1832. He had then been for several years Professor Extraordinary at the Conservatoire, where in 1838 he was made titular Professor. Among the eminent actors who attended his course were Mile. Rachel and the two Brohans. M. Samson distinguished himself in most of the comedies of Molière, Beaumarchais, and Marivaux, especially displaying his genius in the character of the marquis in "Les Étourdés," and of the same in the "Fils de l'Égypte." He was also author of several plays in prose and verse. In 1840 appeared the first part of his splendidly got up and copiously illustrated "Art Théâtral." In April 1863 he retired from the stage, and was admitted to the Legion of Honour in the following year. Died at March 1871.

SARIS, MICHAEL, a distinguished Norwegian zoologist, was born at Bergen in 1805. He had a strong bent to the study of science, but was sent to study theology at the University of Christiania. After taking holy orders, he pursued his retired sea-board parish researches in science he most loved, and in 1854 was named Professor Extraordinary of Zoology at his *alma mater*. He visited the Arctic Regions, the Lofoden Islands, and the Mediterranean. He studied mu-

the distribution of animal life in the sea-depths, the evolution and metamorphoses of some of the lower forms of animal life, &c. Not long before his death he announced the discovery of a erinoid living in the Northern Sea, belonging to a group supposed to be extinct. His great work is the "Fauna Littoralis Norvegiæ," the publication of which he commenced in 1846. Died, 22d October 1869.

SAVAGE, MARMION W., novelist and humorist, was author of several remarkable works, the first of which, entitled "The Falcon Family, or Young Ireland," was published anonymously in 1845. It was followed in 1847 by "The Bachelor of the Albany," and in 1849 by "My Uncle the Curate," both anonymous. His name was first attached to his fourth novel, "Reuben Medlicott, or the Coming Man," published in 1852. His last work, "The Woman of Business," appeared in 1870. A slight tale, entitled "Clover Cottage," written by Mr Savage, formed the basis of a comedietta, "Nine Points of the Law," produced by Mr Tom Taylor in 1869. Mr Savage was for several years editor of the "Examiner." Died at Torquay, 1st May 1872.

SAVIGNY, FRIEDRICH CARL VON, a very distinguished German jurist, was born at Frankfort-on-the-Main in 1779. Left an orphan at thirteen, he was taken in charge by a friend, and after receiving private instruction and attending courses of lectures on Roman Law, was sent to the University of Göttingen, and afterwards to Marburg, graduating LL.D. at the latter in 1800. During the next four years he lectured as *privat-docent* at the same university. He next spent some time in travelling in Germany, Italy, and France, visiting the great libraries and collecting materials for future use in his chosen field. In 1808 he accepted the chair of Law at Landshut, but removed after two years to the new University of Berlin, and was at the same time received at the Academy of Sciences. A few years later he was named Privy Councillor of State, then member of the Council of State, and in 1842 Privy Minister of State. In 1848 he withdrew from public life.

The principal works of Professor Savigny are—"Das Recht des Besitzes" (1803), of which an English translation by Sir Ernie Perry passed through numerous editions; "Geschichte des Römischen Rechts im Mittelalter," in 6 vols. (1815-33); and his greatest work, the "System des heutigen Römischen Rechts," the publication of which was commenced in 1840, and being continued at intervals, had extended to 10 vols. in 1851. A collection of his minor writings was published in 1850, under the title of "Ver-mischte Schriften." Savigny married in 1804 a daughter of the banker Brentano, at Frankfort. Died at Berlin, 25th October 1851.

SCARLETT, Sir JAMES YORKE, Brit-

ish general, was one of the sons of Lord Abinger, Chief Baron of the Court of Exchequer, and was born in 1799. He entered the army in his nineteenth year, and in 1837 he was returned to Parliament as Conservative member for Guildford, and retained his seat till 1841. He was promoted colonel in 1851, and major-general three years later; and on the outbreak of the Crimean war was made commander of a brigade of cavalry. In 1855 he was promoted to the command of a cavalry division. For his services in the Crimea he was created K.C.B., and commander of the Legion of Honour. Lieutenant-general in 1862, he afterwards held for five years the command of the forces at Aldershot, and was created G.O.B. in 1869. He married in 1835, but had no children. Died at Burnley, 6th December 1871.

SCHAFARIK, PAUL JOSEPH, an eminent Slavonic scholar, was born in North Hungary in 1795. Intended for the Church, he studied first in several towns of Hungary, and completed his education at Jena. After being engaged as teacher or professor at the Grammar-School of Neusatz, in South Hungary, he settled in 1835 at Prague, and devoted himself especially to the study of Slavonic languages and literature, which formed the subjects of all his works. In 1837 he was named Consor Royal by the Austrian Government, and held that post till after the suppression of the revolutionary movements of 1848. In 1841 he was appointed Assistant-Librarian to the University of Prague, and filled the post of Chief Librarian from 1848 to 1860. His principal work is the "Geschichte der Slawischen Sprache und Literatur nach allen Mundarten," first published in 1826; a reprint of which, without alteration, but with the addition of some notes from the author's copy, was published by his son in 1869. Among his other works are—"Slavonic Antiquities," "Slavonic Ethnography," and "Origines" of Slavonic literature. Died at Prague, 27th January 1861.

SCHAMYL (*Ben Mohammed Schamyl Effendi*), the Prophet-Warrior of the Caucasus, was born of an obscure Tartar family in Daghestan in 1797. Distinguished from boyhood by seriousness and fondness for study, he was also proud, resolute, and independent. In religion he adopted the doctrine of the Kasi-Mollah, then supreme chief of the Caucasian tribes; and this doctrine, a revival of *Sufism*, became the bond of union of all the scattered tribes of Daghestan. He commenced his career as soldier in 1824, when he took part in the "holy war" proclaimed against the Russians. Up to that time he had lived as a *Murid* (Religious). On the advance of the Russians under General Rosen, Schamyl, with the Kasi-Mollah, retired to the fortress of Himry, at the storming of which, in Octo-

ber 1831, he was severely wounded. His reputation for sanctity was greatly raised by his escape from death on that occasion; and on the death, in 1834, of Hamsad Bey, who had succeeded Kasi-Mollah, he was elected head of the sect (*Imam*). He then set himself to organize, by the aid of religious enthusiasm, the various tribes into a kind of military theocracy. The opposition of a rival, and the consequent schism of the people, came to an end after his defeat of the Russians under General Ivelitsch in 1837. Two years later he renewed the war, and for twenty years maintained it with marvellous ability, audacity, and success. Often with small bands of men he held in check powerful armies, drew the enemy into ambuscades, and compelled them to disastrous retreats, and taxed in succession the courage and resources of the Russian generals sent against him. Among the more important episodes in this war were the siege and storming of the fortress of Akulgo by General Grabbe in 1839, when Schamyl escaped to Dargo; the rout of the Russians at Dargo in 1842; Schamyl's conquest of the country of the Avars in the following year; the capture of Dargo by General Woronzow in 1845; the capture of the new Russian fortress of Gerghebil in 1846, and its defence by Schamyl in 1847; the siege and capture of Akulgo by the Russians in 1849, when the wife and son of the Prophet-Oh were taken prisoners; the Russian victory at Aul Ismail in 1850, and the storming of Weden by the Russians in April 1859. Schamyl's power was now broken, and in the following September he surrendered to General Baratinski at Ghunib, and was sent prisoner to St Petersburg. He soon after took up his abode at Kaluga, and there, in 1866, took the oath of fidelity to the Czar. Died in April 1871.

SCHLEICHER, AUGUST, a distinguished German philologist, was born at Meiningen in 1821. He studied theology and Oriental languages at the Universities of Leipsic and Tübingen; and then removing to Bonn, applied himself especially to classical philology, with Sanscrit and Arabic. Having taken his degree of doctor in philosophy at Bonn, he was appointed in 1850 Professor Extraordinary of Philology at Prague University. There he studied the Slavonic tongues, and at the expense of the Academy of Vienna visited Lithuania in order to acquaint himself on the spot with the Lithuanian language. In 1857 he removed to Jena as Honorary Professor of the Science of Language and old German Philology. His principal works are—"Sprachvergleichende Untersuchungen" (1843), "Die Sprachen Europas," "Handbuch der litanischen Sprache," "Die deutsche Sprache," "Compendium der vergleichenden Grammatik der Indo-Germanischen Sprachen," "Morphologie der Sprache," and "Die Dar-

winsche Theorie." He published in 1858, in conjunction with Kuhn, the "Beiträge für vergleichende Sprachforschung," and contributed many papers to the Academy of St Petersburg, and to other learned societies. Died, 14th October 1869.

SCHOOLCRAFT, HENRY ROWE, American traveller and ethnologist, was born in 1793. He was a native of Albany, New York State, and was educated at Union College. In 1817 and 1818 he made a geological exploration of Missouri and neighbouring districts, and was soon after appointed geologist to the exploring expedition sent in 1820 to the sources of the Mississippi. Two years later he became agent for Indian affairs in the North-Western Provinces, and availed himself of the opportunity thus afforded of obtaining acquaintance with the Indian tribes, their language, ethnology, and antiquities. In his researches he was aided by his wife, whose mother was an Indian. He attended several conferences with the Indians, and while member of the Territorial Legislature introduced various laws for the benefit of their tribes. In 1832 he conducted an expedition to the Upper Mississippi, and succeeded in reaching its source in Itasca Lake. Four years later he was made commissioner to negotiate the purchase by the United States of a large tract of country from the Indians. In 1842 he visited Europe, where his scientific researches secured him a warm reception. In 1845 he was directed to take a census and collect statistical information about the Six Nations; and in the following year a still more elaborate investigation was intrusted to him by Congress. Mr Schoolcraft's works are numerous. Among the more valuable are—"Expedition to Itasca Lake" (1834), "Ethnographic Researches" (1839), "Notes on the Iroquois" (1846), and "Historical and Statistical Information respecting the Indian Tribes of the United States" (1851-60). Mr Schoolcraft was the founder of the Michigan Historical Society, and of the Algic Society of Detroit, and one of the founders of the Ethnological Society of New York. He was a member of principal literary and scientific societies of America, of the Geographical Societies of London and Copenhagen, of the Ethnological Society of Paris, and of the Society of Northern Antiquaries, Copenhagen. His researches on the Algonquin language procured him the medal of the French Institute. He was also honoured with the degree of LL.D. by the University of Geneva. He was twice married. Died at Washington, December 1864.

SCHWIND, MORITZ VON, German painter, was born at Vienna in 1801. After receiving instruction in his art from Ludwig Schnorr, he went in 1823 to Munich to study under Cornelius, in whose numerous and important undertakings soon became an assistant. One of

first works which tion was a painting poem entitled "fairte." In 1839 rube, where he de and the hall of the States. In 1847 he sor of the Munich He afterwards und coration of the W occupied him many nated a large num addition to his num at Munich, 9th Febr

SCOTT, WINSTON, Chief of the United son of a Scottish Ja near Petersburg, in was brought up to the bar, but soon tered the army. He s in the war with the and was taken pri exchanged. He ca defeated General B 1814, and was sever battle of Niagara. I rope, and studied i Paris. In 1832 and General Scott was em ing the revolt of the was appointed comm 1841. His greatest dist from his brilliant con Mexico in 1846-47. I won several victories made himself master c chided an advantageo Scott was twice a cand idency of the United s successful. At the com War of Secession, in 18 to protect Columbia ag the South. He resigne soon after the battle of conduct of the war p hands. Died at West York, 23rd May 1866.

SEDGWICK, ADAM, Professor of Geology in Cambridge, was born a shire, about 1786. He s College, Cambridge, gra 1806, and was elected fel ling year. He was seni time of his death. In dained deacon, and prie year, on the death of P he was appointed to the founded at Cambridge by ward, and this chair he f fifty years. About the selected F.R.S. Of the fo Philosophical Society at 1819, Professor Sedgwick the secretaries, and conti mos active members. of the Geological S edon, and held the offic 1829 and 1830. His stu was chiefly directed to th

first works which established his reputation was a painting in oil after Goethe's poem entitled "Ritter Kurt's Brautruhe, where he decorated the Hall of Art States. In 1847 he was appointed Professor of the Munich Academy of Fine Arts. He afterwards undertook the interior decoration of the Wartburg, a task which occupied him many years. Schwind executed a large number of works in oil in addition to his numerous frescoes. Died at Munich, 9th February 1871.

SCOTT, WINFIELD, Commander-in-Chief of the United States army, was the son of a Scottish Jacobite, and was born near Petersburg, in Virginia, in 1786. He was brought up to the law, and was called to the bar, but soon abandoned it and entered the army. He served with distinction in the war with the English in 1812-14, and was taken prisoner, but was soon exchanged. He captured Fort George, defeated General Riall at Chippawa in 1814, and was severely wounded at the battle of Niagara. Later, he visited Europe, and studied military science at Paris. In 1832 and the following years General Scott was employed in suppressing the revolts of the Indian tribes. He was appointed commander-in-chief in 1841. His greatest distinction was derived from his brilliant conduct of the war with Mexico in 1846-47. He took Vera Cruz, won several victories over Santa Anna, made himself master of Mexico, and concluded an advantageous peace. General Scott was twice a candidate for the Presidency of the United States, but was unsuccessful. At the commencement of the War of Secession, in 1860, he was charged to protect Columbia against the forces of the South. He resigned his command soon after the battle of Bull Run, and the conduct of the war passed into other hands. Died at West Point, near New York, 29th May 1866.

SEDGWICK, ADAM, Woodwardian Professor of Geology in the University of Cambridge, was born at Dent, in Yorkshire, about 1786. He studied at Trinity College, Cambridge, graduating B.A. in 1808, and was elected fellow in the following year. He was senior fellow at the time of his death. In 1817 he was ordained deacon, and priest in 1818. In this year, on the death of Professor Hallstone, he was appointed to the chair of Geology founded at Cambridge by Dr John Woodward, and this chair he filled more than fifty years. About the same time he was elected F.R.S. On the foundation of the Philosophical Society at Cambridge in 1819, Professor Sedgwick became one of its secretaries, and continued one of its most active members. He was also a fellow of the Geological Society of London, and held the office of President in 1829 and 1830. His studies in geology were chiefly directed to the metamorphic

and crystalline rocks, his ripest conclusions with respect to their classification being set forth in the elaborate "Synopsis" which he prefixed to Professor McCoy's catalogue of "British Palaeozoic Fossils." Professor Sedgwick contributed powerfully by his influence to the introduction of the study of the Physical Sciences at Cambridge. Under his care the collections at the Cambridge Museum of Geology have been largely augmented, partly by the gift of his own valuable series, both of organic and inorganic specimens. On the appearance of the anonymous "Vestiges of the Natural History of Creation" in 1845, a powerful critique on the work was published in the "Edinburgh Review," which was generally attributed to him. His famous "Discourse on the Studies of the University of Cambridge," was the substance of a sermon preached in Trinity College Chapel, which in successive editions grew into a bulky volume, of which the introductory dissertation forms more than half. In it he combats the utilitarian theory in morals, treats of the bearings of physical science on revealed religion, and discusses most of the important questions of science and natural theology which have attracted attention during the present century. This discourse called forth a reply from Mr John Stuart Mill in the "Westminster Review." The British Association found in Professor Sedgwick one of its warmest supporters, and he spoke frequently at its annual meetings. He contributed numerous scientific memoirs to the "Transactions" of the Cambridge Philosophical Society, to the "Transactions" and "Quarterly Journal" of the Geological Society, the "Annals of Philosophy," the "Philosophical Magazine," and the "Edinburgh New Philosophical Journal." On the election of Prince Albert to the chancellorship of the university, Professor Sedgwick became his secretary. In 1834 he was made a prebendary of Norwich Cathedral. He received the Copley medal of the Royal Society in 1863. Died at Cambridge, 27th January 1873.

SEDGWICK, CATHERINE MARIA, American novelist and miscellaneous writer, was born at Stockbridge, Massachusetts, in 1780. She was a daughter of the eminent judge, Theodore Sedgwick, after whose death in 1813 she undertook the task of a governess, and employed her leisure in literary work. Her earliest publication, "A New England Tale," appeared in 1822, and was followed in succession by "Redwood," "Hope Leslie," "Clarence," and "The Linwoods." She next wrote a series of didactic works for the young. About 1840 she visited Europe, recording her observations and impressions in "Letters from a broad to Kindred at Home." In 1857 she published another novel, entitled "Married or Single." She was a constant contributor

Examiner in 1820, he held that office four years, and was one of the Select Preachers from 1823 till 1830. After holding successively several benefices, he was presented to the rectory of St George's, Bloomsbury, London, in 1834; was for several years Deputy-Clerk of the Closet to the Queen; was appointed Bishop of Sodor and Man in 1842, and four years later Bishop of St Asaph. His principal writings are—"Parochialia: Papers for St George's, Bloomsbury," and "Sketch of the History of the Church of England." He resigned his see in 1870, and died at Gresford, in North Wales, 13th April 1872.

SIMPSON, Sir JAMES YOUNG, Bart., a distinguished Scottish physician, was born at Bathgate, in Linlithgowshire, in 1811. He studied medicine at the University of Edinburgh, where he graduated M.D., and in 1840 was appointed Professor of Midwifery, a post which he held till his death. He soon after applied himself to the study of anæsthetic agents, and in 1847 his great discovery of the properties of *chloroform* was made public. This substance came rapidly into general use. Sir J. Simpson was chosen President of the Royal College of Physicians of Edinburgh in 1849; four years later he was elected a foreign associate of the French Academy of Medicine, and in 1856 the Montyon Prize of the French Academy of Sciences was awarded to him. In 1866 he was created a baronet, and about the same time received the honorary degree of D.C.L. from Oxford University. He not only made many contributions to the literature of his profession, but won a solid reputation as an archaeologist. His "Archæological Essays" were published in 1872. Died at Edinburgh, 6th May 1870.

SINCLAIR, CATHERINE, Scottish novelist and miscellaneous writer, was the daughter of Sir John Sinclair, Baronet, and was born at Edinburgh in 1800. She received a careful home education, and about 1835, the time of her father's death, she made herself known as a writer by two works, entitled "Modern Accomplishments," and "Modern Society." Encouraged by their favourable reception, she continued to write, and produced a large number of works, nearly forty volumes in all. Among these are—"Hill and Valley," "Scotland and the Scotch," "Shetland and the Shetlanders," "Beatrice," and a capital book for children, entitled "Holiday House." Miss Sinclair was also distinguished as an active and generous promoter of many charitable institutions and social reforms. She died at Kensington, London, 6th August 1864.

SKEY, FREDERIC CARPENTER, an eminent English anatomist and surgeon, was born about 1800. He completed his general education at Edinburgh University, and in 1816 became a pupil of John Abernethy, then surgeon to St Bartholo-

mew's Hospital. After his admission as M.R.C.S. in 1822, he continued to assist Abernethy, and in 1826 was appointed Demonstrator of Anatomy at St Bartholemew's. On the death of Abernethy he took part in founding the Aldersgate Street School of Medicine, where he taught for ten years, and which became one of the largest schools in London. He was appointed Consulting-Surgeon to the Charterhouse, and this office he filled till his death. He declined the offer of the double post of Surgeon and Professor at King's College, London, because it was coupled with the condition of resignation in three years. In 1843 he became honorary fellow of the Royal College of Surgeons, and in 1848 member of the Council. Hunterian Orator in 1850, he was two years later appointed Professor of Human Anatomy and Surgery, and soon after became a member of the Court of Examiners. In 1863 he obtained the highest honour the college could confer on him in the appointment to the Presidency. Mr Skey was chairman of the committee for the prevention of contagious diseases in the army and navy, and for his services in promoting and preparing the now famous Acts he was created C.B. His principal works are—"On the Treatment of Chronic Ulcers by Opium," "Venereal Diseases," and "Operative Surgery," the latter a standard work for students, and lectures on "Hysteria." His paper on "Muscular Fibre" procured him election as F.R.S. Died in London, 15th August 1872.

SMART, BENJAMIN HUMPHREY, English grammarian and lexicographer, was born about 1787. In 1815 he settled in London as a teacher of elocution. He wrote a large number of works, among which may be named—"Beginnings of a New School of Metaphysics: Outlines of Sematology," commenced in 1831, completed in 1839; a new and very useful edition of Walker's "Pronouncing Dictionary" (1846); "Manual of Logic;" "Thought and Language," and "Introduction to Grammar." Died, 24th February 1872.

SMART, Sir GEORGE, an eminent English musician, and the first English conductor of note, was the son of a music-seller in London, and was born in 1776. Making the best of a poor training, he rose to be composer and organist to the Chapel Royal, St James's, and as such directed the music at the coronation of William IV. and Queen Adelaide and her Majesty Queen Victoria. In 1813 he took part in founding the Philharmonic Society. While musical director at Covent Garden Theatre, he engaged Weber to compose "Oberon" for that house, and received the composer as his guest. Weber died in Sir George's house in June 1826. Sir George was engaged as conductor of the principal musical festivals, and was the first to introduce in England Mendels-

sohn's oratorio "St Paul," performed at Liverpool in 1836, and Rossini's "Stabat." Throughout his long life he was distinguished for integrity and kindness. Among his numerous pupils were Madame Sontag and Jenny Lind, whom he taught oratorio music. He was knighted at Dublin in 1811 by the duke of Richmond, then Lord-Lieutenant of Ireland. Died in London, February 23, 1867, aged 91.

SMEDLEY, FRANCIS EDWARD, novelist, was the son of Francis Smedley, high bailiff of Westminster, and was born at Marlow in 1819. From his infancy he was a hopeless cripple, suffering from natural malformation to such an extent that he could neither walk nor ride nor take any active exercise, nor even sit at a desk or hold a pen without special aids. Yet his stories have the charm of powerful and vivid delineation of outdoor life, and all manly exercises and pursuits. He was author of "Frank Fairleigh" (1850), "Lewis Arundel" (1852), "Harry Coverdale's Courtship" (1854), "The Fortunes of the Colville Family," and "Gathered Leaves." The last appeared after his death. In conjunction with Mr E. Yates he wrote "Mirth and Metre." Died in London, 1st May 1864.

SMIRKE, Sir ROBERT, R.A., an eminent English architect, was the eldest son of Robert Smirke, R.A., and was born in 1780. He commenced his art-studies under the direction of his father, and after completing the usual professional course, visited Greece, Italy, and Germany. Soon after his return he was intrusted with the erection of Covent Garden Theatre (1809), one of the earliest examples of the Doric order of architecture in London. It was burnt down in 1856. Among the other works of Sir Robert the most important are—the Mint, the General Post Office (1823-29), and the British Museum, which occupied him twenty-four years (1823-47). He built King's College, London; Millbank Penitentiary, and the Carlton Club, and was employed to direct the restoration of York Minster after the fire of 1829. He was chosen R.A. in 1813, knighted in 1831, and died, April 18, 1867.—His brother, Mr SYDNEY SMIRKE, is a distinguished architect, and succeeded Sir Robert as architect of the British Museum. The new reading-room of the Museum is his most important work.

SMITH, ALEXANDER, a Scottish poet and miscellaneous writer, was born in 1830. He was the son of a pattern designer at Kilmarnock, and for a time followed the same business. While engaged as designer to a lace manufactory at Glasgow, he began to contribute to the "Critic," and in 1853 published his first volume, entitled "A Life Drama." In the following year he was appointed to the post of Secretary to the University of Edinburgh, which he held till his death. His other poetical works are—"Sonnets

on the (Crimean) War," written in conjunction with Mr Sydney Dobell; "City Poems," and "Edwin of Deira;" and his prose writings are—"Dreamthorp," "A Summer in Skye," and "Alfred Hagar's Household," the last of which first appeared in "Good Words." Mr Smith edited the works of Burns, and was a frequent contributor to periodical literature. Died near Edinburgh, January 5, 1867. He left a wife and young family.

SMITH, Sir ANDREW, Scottish physician, Director-General of the Army Medical Department, was born in Roxburghshire in 1797. He studied medicine at the University of Edinburgh, and having entered the army as assistant-surgeon in 1815, served in various parts of the world, rose rapidly, and was at the Cape from 1821 till 1838. He was next appointed principal medical officer at Fort Pitt, Chatham, whence he was called to London as assistant to Sir James MacGrigor, then Director-General of the Army Medical Department. In 1851 he succeeded to that post, and filled it for seven years. Grave charges of failure in his official duties during the Crimean war were brought against him, but he succeeded in vindicating himself before the Sebastopol and other committees. On his retirement from office he was created K.C.B. Sir Andrew made many valuable contributions to scientific literature, his principal work being "Illustrations of the Zoology of South Africa," containing the fruits of his observations and studies during his long residence at the Cape. It was owing to his advice that the district of Natal was erected into a colony. Died at Brompton, London, 11th August 1872.

SMITH, TOULMIN, an eminent English antiquary and legal writer, was born at Birmingham in 1816. Literary taste and talent showed themselves in him at an early age. Having married in 1837, he made a visit of several years to the United States, and after his return applied himself to the study of the law. Called to the bar at Lincoln's Inn in 1849, he continued his literary and legal studies with enthusiasm, the fruits appearing in a long series of works. By his professional acquaintance with English history and legislation, he became an authority on points of constitutional law; and he had constant intercourse and correspondence with eminent public men, not only of his own country, but of America, France, and Germany. He devoted much time and labour to the history of his native town, and to several branches of physical science, and formed collections of specimens in geology, mineralogy, and natural history. His principal works are—"The Discovery of America," by the Newmen in the 10th Century," published at Boston, U.S., in 1859, during his stay in America. This work procured his election as member of the Society of North

Antiquaries and its relations between the constitutional History of Great Britain (1849), "Sonnets illegal" (1855), which first appeared in "Good Words." Mr Smith edited the works of Burns, and was a frequent contributor to periodical literature. Died near Edinburgh, January 5, 1867. He left a wife and young family.

SMITH, Sir ANDREW, Scottish physician, Director-General of the Army Medical Department, was born in Roxburghshire in 1797. He studied medicine at the University of Edinburgh, and having entered the army as assistant-surgeon in 1815, served in various parts of the world, rose rapidly, and was at the Cape from 1821 till 1838. He was next appointed principal medical officer at Fort Pitt, Chatham, whence he was called to London as assistant to Sir James MacGrigor, then Director-General of the Army Medical Department. In 1851 he succeeded to that post, and filled it for seven years. Grave charges of failure in his official duties during the Crimean war were brought against him, but he succeeded in vindicating himself before the Sebastopol and other committees. On his retirement from office he was created K.C.B. Sir Andrew made many valuable contributions to scientific literature, his principal work being "Illustrations of the Zoology of South Africa," containing the fruits of his observations and studies during his long residence at the Cape. It was owing to his advice that the district of Natal was erected into a colony. Died at Brompton, London, 11th August 1872.

SMITH, JOHN, a Scottish physician, was born in 1816. He was the son of a private school in the age of fourteen he was appointed surgeon at Newcastle, where he adopted the vegetable diet, and was an extreme views of school, but was obliged to relinquish both on account of cholera when he attended the Killingworth Colliery. He came to London in 1849, and was appointed to the Hunterian School in Mill Street. He was elected to the Westminster Hospital M.R.C.S. in May 1851, and was himself in London with the Westminster Hospital, and became a visitor of the Hospital. In November 1851 he received the degree of M.B., and that of M.D., at the University of Edinburgh. In the following year he was appointed tutor in forensic medicine at the Glasgow School of Medicine, and continued to post till 1849, when he was elected to the office of a practitioner in law as a practitioner in law, and was elected into his peculiar jurisdiction of the action of Anaseth

Antiquaries at Copenhagen. "Parallels between the Constitution and Constitutional History of England and Hungary" (1849), "Government by Commissions illegal" (1849), "Law of Nuisances" (1855), which has passed through four editions; "The Parish," perhaps his most valuable work, not only as a treatise on matters of law and custom, but as a storehouse of curious and out-of-the-way learning. It appeared in 1854, and reached a second edition in 1857. And "English Guilds," which was not quite complete at the time of his death, but was afterwards edited by his daughter. Died at Launcing, in Sussex, 28th April 1869.

SMITH, WILLIAM HENRY, moralist and miscellaneous writer, was born about 1809. He entered the Middle Temple, London, and was called to the bar in 1838, but soon abandoned the profession and retired to the country. His first literary work was the short "Discourse on Ethics" (1839), which was well received. In the following year he published "Remarks on Law Reform." His other works are—a volume of "Poems and Dramas," one of the latter of which, "Aethelwold," was adapted and produced by Macready at Drury Lane Theatre; "Thorndale, or the Conflict of Opinion" (1857); and "Gravenhurst" (1862). Mr Smith was also a contributor to "Blackwood's Magazine" and to the "Contemporary Review," his essays on "Knowing and Feeling," written for the latter, being left unfinished at his death. Died at Brighton early in April 1872.

SNOW, JOHN, an eminent London physician, was born at York in 1813. He was the son of a farmer, was educated at a private school in his native city, and at the age of fourteen was apprenticed to a surgeon at Newcastle. At seventeen he adopted the vegetarian system and the extreme views of the total-abstinence school, but was compelled practically to relinquish both. His first observations on cholera were made in 1831-32, when he attended the sufferers at the Killingworth Colliery. After several successive engagements as assistant, he came to London in 1836, and entered the Hunterian School of Medicine in Windmill Street. He studied afterwards at the Westminster Hospital, and was admitted M.R.C.S. in May 1838. He established himself in London, connected himself with the Westminster Medical Society, and became a visitor of Charing Cross Hospital. In November 1843 he took the degree of M.B., and in December 1844 that of M.D., at the London University. In the following year he was chosen lecturer on forensic medicine at the Aldersgate School of Medicine, and held that post till 1849, when the school was dissolved. Slowly and bravely winning his way as a practitioner, Dr Snow was led into his peculiar field of research, the action of Anesthetics, by the report from

America (1846) of the successful use of sulphuric ether in painful operations, and in the following year he published his first work on that subject. Ether being soon after superseded by Dr Simpson's discovery of chloroform, Dr Snow at once applied himself to the study of the new agent, and of narcotics in general. The results of his experiments appeared in a series of papers in the "Medical Gazette." At the same time he was engaged in the study of the cause and propagation of cholera, and expounded his view in a pamphlet entitled "The Mode of Communication of Cholera" (1849). With untiring zeal he laboured, especially during the outbreak of the disease in 1854, at the verification of his theory. Dr Snow has the merit of being the first to point out the connection between the drinking of impure water and the breaking out of cholera. In the remarkable case of the mortality in Broad Street, Golden Square, he at once advised the removal of the handle of the Broad Street pump; and the plague ceased. Dr Snow was named President of the Medical Society of London in 1855. He was also a member of various other societies, and took especial interest in the proceedings of the Epidemiological Society. He continued to make experiments on various volatile agents, in the hope of discovering a new anæsthetic, more safe for general use than chloroform, and paid much attention to the subject of local anæsthesia. He had nearly completed his most important work "On Chloroform and other Anæsthetics," when death suddenly overtook him, 16th June 1858. His last-named work was edited, with a memoir of his life, by Dr B. W. Richardson.

SOMERVILLE, MARY, a distinguished mathematician and natural philosopher, was born at Jedburgh, in Scotland, in 1770. She was the daughter of Vice-Admiral Sir William George Fairfax, who commanded the *Venerable* at the battle of Camperdown. Studious and fond of mathematics in her childhood, she was educated at a school at Musselburgh, near Edinburgh. At Edinburgh, in 1811, she received a medal for her solution of some mathematical problem. She took her place among original investigators of nature by a memoir presented to the Royal Society in 1826, on the magnetising power of the more refrangible solar rays. Five or six years later appeared her first important work, entitled "The Mechanism of the Heavens." It was commenced at the suggestion of Lord Brougham, as a popular *résumé* of Laplace's "Mécanique Céleste," to be published by the Useful Knowledge Society, but outgrowing its proposed limits, appeared as an independent work. In 1734 Mrs Somerville made herself more widely known by her "Connexion of the Physical Sciences," almost the first attempt to present an elaborate view of the

various physical phenomena of the universe in their correlation to each other. The design of the work was identical with that of Humboldt's famous "Kosmos." It has passed through nine or ten editions. In the year following its publication the authoress was elected an honorary member of the Royal Astronomical Society. Her next work was the treatise on "Physical Geography," published in 1848. How ardently she continued her intellectual pursuits to extreme old age was shown by the publication in her ninetieth year of a work on "Molecular and Microscopic Science" (1869). In it she traverses the whole wide field of modern scientific inquiry, and notes the most recent discoveries. And in the last year of her life she applied herself to the study of Hamilton's work on *Quaternions*. In 1842 the Royal Society honoured Mrs Somerville by placing in their library her bust, executed for them by Chantrey. In 1869 the Victoria Medal of the Royal Geographical Society was awarded to her. Mrs Somerville was married in early life to Captain Greig, a young naval officer; and after his death she was married to her cousin, Dr Somerville. By her first marriage she had one son, who died before her, and three daughters by her second. Two daughters survived her. The family left England about 1839 or 1840 and settled in Italy. Mrs Somerville died at Naples on the 29th November 1872.

SOUTH, Sir JAMES, an eminent English astronomer, was born in London in 1785. He was the son of a druggist, and was brought up to the medical profession. He practised for some years as a surgeon, and then gave himself up entirely to scientific studies. He was, in 1820, one of the founders of the Royal Astronomical Society, and in the following year was elected F.R.S. At the same time he engaged with Mr (afterwards Sir John) Herschel in researches and observations on the double stars, which occupied them three years. In 1826 he received the Copley Medal of the Royal Society for a new series of researches in the same field. In 1830 he was knighted by William IV., and at the same time a pension of £300 was assigned him for the advancement of his favourite science. Sir James had taken an active part in the revision and extension of the Nautical Almanac. In 1829 he was chosen President of the Astronomical Society. He contributed scientific papers to that society, to the "Annals of Philosophy," and the "Quarterly Journal of Science." He was a member of the Imperial Academy of Sciences of St Petersburg, and of the Royal Society of Sciences at Brussels. Died at Kensington, 19th October 1867.

SPALDING, MARTIN JOHN, archbishop of Baltimore, Primate of the Roman Catholic Church in the United States, was born in Kentucky in 1810. At the age of twenty he went to Rome, and

entered the Urban College of the Propaganda, and having obtained his degree of D.D. in 1834, returned to Kentucky. In 1848 he was named coadjutor to the bishop of Louisville, on whose death soon after he succeeded him in that see. He was promoted to be Archbishop of Baltimore and Primate in 1863, and in the following year was installed by Papal brief. He presided at the second Plenary Council at Baltimore in 1866, and took part in the assembly of prelates at Rome in June 1867. In the Council of the Vatican he was one of the supporters of the new dogma of Infallibility. Archbishop Spalding was author of "Sketches of Early Catholic Missions in Kentucky," "Life and Times of Bishop Flaget," and a "History of the Protestant Reformation." Died at Baltimore, 8th February 1872.

SPARKS, JARED, President of Harvard University, a distinguished historian and biographer, was born at Willington, Connecticut, about 1794. He was apprenticed to a carpenter, but from love of learning became a schoolmaster, and by friendly help obtained a scholarship first at the Philips Exeter Academy, and then at Harvard. In 1817 he was appointed tutor in mathematics and natural philosophy, continuing his studies in theology at the same time. Ordained pastor of a Unitarian church at Baltimore in 1819, he took a prominent part in the controversies of the time, and wrote several theological works. He retired from the ministry in 1823, and settling at Boston, devoted himself thenceforth to literature. He became proprietor and sole editor of the "North American Review;" but his principal task for some years was the preparation of his "Life and Writings of Washington." He visited England and France for the purpose of historical research, and the work appeared in successive volumes between 1834 and 1837. During the same period he prepared and published the "Diplomatic Correspondence of the American Revolution," in 12 vols. 8vo. Among his other works are the "Correspondence of the American Revolution being Letters of Eminent Men to George Washington," "Life of Governor Morris, an edition of Franklin's works, and the "Library of American Biography," in two series, 1834-48. Mr Sparks was appointed in 1839 M'Lean Professor of Ancient and Modern History at Harvard, and in 1849 President of that Institution. Died, March 15, 1866.

STANFIELD, CLARKSON, R.A., a distinguished English landscape-painter, was born at Sunderland in 1793. His father was an Irishman, who made several sea-voyages in his early life, and became afterwards known as an author, and was an intimate friend of Thomas Clarkson, the anti-slavery advocate, after whom the son was named. The latter was also a sailor in his youth, and at one time was serving in the same ship with Douglas Jerrold. In con-

sequence of a sea-fall from the navy about 1810, shown extraordinary painting, and ships, sea-scenery, engagement at the Theatre, worked afterwards (now "Victorian") with Drury Lane. De Louthierboim. In 1820 Academy, and British Institution that he gave up the same year he members of the and exhibited a his first import of Fort Row A.R.A. in 1832, very numerous some of the best, exhibited in 1836, "The Victory to "Wreck of a 1814; "Siege of Abandoned," 1837. Stanfield of Venice for a six of Bowood, the of Sutherland after for the summer Buckingham Palace many designs for published a set drawings of view Rhine, and the Gallery possesses tant works of s artist died at 1867, and was buried in a Catholic graveyard very.

STANLEY, E Lord Stanley of Alderley Park in at Eton and Cl where he took his He entered Parlia for Hindon, in W disfranchisement returned for North was Under-Secret Colonies, and for s following year Under-Department. He of Patronage Secret from 1835 till 1841. He was made Pay Forces, but three with the ministry. same time. Re-elected in 1846, he was made Foreign Affairs in tration. In 1848 perage as Lord Ed later succeeded his

quence of a severe injury to his feet from a fall from the masthead, he quitted the navy about 1818, and having already shown extraordinary skill in drawing and painting, and produced many sketches of ships, sea-scenes, &c., he accepted an engagement as scene-painter at the Royal Theatre, near Wellclose Square. He worked afterwards in the Coburg Theatre (now "Victoria"), Lambeth, in conjunction with David Roberts; and later, at Drury Lane. He adopted the manner of De Loutherbourg, and easily surpassed him. In 1820 he first exhibited at the Academy, and two years later at the British Institution. It was not till 1827 that he gave up scene-painting, and the same year he became one of the first members of the Society of British Artists, and exhibited at the British Institution his first important picture, "Wreckers off Fort Rouge." He was elected A.R.A. in 1832, and R.A. in 1835. Of his very numerous works we may name, as some of the best, the "Mount St Michael," exhibited in 1830; the "Battle of Trafalgar," 1836; "Castle of Ischia," 1841; "The Victory towed into Gibraltar," 1853; "Wreck of a Dutch East Indiaman," 1844; "Siege of Sebastian," 1855; "The Abandoned," 1856; and "Port na Spaña," 1857. Stanfield painted a series of views of Venice for the marquis of Lansdowne at Bowood, a similar series for the duke of Sutherland at Trentham, and a fresco for the summer-house in the gardens of Buckingham Palace. He executed also many designs for book illustrations, and published a set of lithographs from his drawings of views on the Moselle, the Rhine, and the Meuse. The National Gallery possesses four of the less important works of Stanfield. This popular artist died at Hampstead, 18th May 1867, and was buried in the Roman Catholic graveyard at Kensal Green Cemetery.

STANLEY, EDWARD JOHN, second Lord Stanley of Alderley, was born at Alderley Park in 1802. He was educated at Eton and Christ Church, Oxford, where he took his degree of B.A. in 1823. He entered Parliament in 1831 as member for Hindon, in Wiltshire, and after the disfranchisement of that borough was returned for North Cheshire. In 1833 he was Under-Secretary of State for the Colonies, and for some months in the following year Under-Secretary for the Home Department. He filled the difficult post of Patronage Secretary to the Treasury from 1835 till 1841. In June of that year he was made Paymaster-General of the Forces, but three months later retired with the ministry. He lost his seat at the same time. Re-elected for North Cheshire in 1846, he was made Under-Secretary for Foreign Affairs in the Russell administration. In 1848 he was raised to the peerage as Lord Eddisbury, and two years later succeeded his father as Lord Stanley

of Alderley. He twice held the conjoint offices of Paymaster of the Forces and Vice-President of the Board of Trade, and in January 1855 became President of that Board. This post he held till 1858. In September 1860 he was appointed Postmaster-General, with a seat in the Cabinet. Resigning in 1866, he declined to join the Gladstone ministry in December 1868, on account of failing health. Lord Stanley married in 1826 the eldest daughter of Viscount Dillon, by whom he had a large family. Died in London, 16th June 1869.

STANTON, EDWIN, American statesman, was born in Ohio about 1815. He was the son of a physician, and was brought up to the profession of the law. In 1847 he went to reside at Pittsburg, and there became acquainted with Abraham Lincoln, afterwards president. In the winter of 1857-58 he was employed by President Buchanan in some important negotiations with the Mexican Government, and from that time he commenced practice as an advocate at Washington. In 1860 he was appointed Attorney-General under President Lincoln, and in January 1862 he was called to the post of Minister of War. He discharged the duties of that office with remarkable energy, infusing fresh vigour into all branches of the military administration. An unfortunate rivalry and jealousy existed between Mr Stanton and General Sherman. He continued in office under President Johnson, with whom, however, he quarrelled in 1866. Steadily opposing the policy of the president, Mr Stanton was dismissed in August 1867, and his portfolio given to General Grant. Re-instated by the Senate in January 1868, an attempt was made by the president to oust him by force. The president was impeached and tried, but received a formal acquittal in the following May. Mr Stanton then retired. Died at Washington, 23d December 1869.

STEVENS, THADDEUS, American statesman, was born in Vermont, U.S., in 1793. The child of poor parents, and himself feeble in health, he nevertheless made good use of such opportunities as were given him for study and self-improvement, and went to complete his education at Dartmouth College. Having taken his degree of B.A. in 1814, he studied the law, was called to the bar, and practised with success in Pennsylvania. He began to take an active part in politics about 1823, and five years later was elected by the Whig party to the State Legislature. In 1836, as a member of the State Convention, he took part in framing the Constitution, but did not sign it because negro suffrage was not conceded. During the political agitations which followed, Mr Stevens was the leader of one of the two rival legislatures, which ultimately coalesced. Removing to Lancaster in 1842, he continued to practise at the bar

until 1848, when he was elected member of Congress. There he took a prominent part against slavery, opposing the repeal of the Missouri Compromise, the Fugitive Slave Law, and the Kansas-Nebraska Bill. Re-elected in 1859, he remained in Congress till his death. He was chairman of many important committees, and a member of the Baltimore Convention of 1864. He supported the war against the seceding states, and urged the most rigorous measures against them. In 1867 the honorary degree of LL.D. was conferred on him by Vermont University. Died at Washington, 11th August 1868.

STIFFER, ADALBERT, a distinguished German novelist, was born at Oberplau, in Bohemia, in 1806. He was educated at the Gymnasium of Kremsmünster and the University of Vienna. In his early manhood he studied and attained some reputation in the art of landscape-painting. After the publication of his first tales, which at once became popular, he was appointed tutor to the son of Prince Metternich. In 1849, on being nominated a Councillor of Public Instruction for Upper Austria, he removed to Linz, where he spent the rest of his life. His collected tales form 8 vols., of which six are entitled "Studien," and two "Bunte Steine." His other novels are—"Der Nachsommer" and "Witiko." Died at Linz, 28th January 1868.

STOCKMARE, Baron CHRISTIAN FRIEDRICH VON, Private Secretary to Leopold I., king of the Belgians, and the confidential adviser of Queen Victoria, was born at Coburg in 1787. He received his education at the gymnasium of his native town, and at the Universities of Würzburg, Erlangen, and Jena, where he especially applied himself to the study of medicine. In 1810 he returned to Coburg, where during the next five years, with short interruptions, he practised his profession, enjoying the intimate friendship of the poet Friedrich Rückert, with whom he became acquainted at Würzburg. In 1812 he organized a military hospital at Coburg, of which he was head physician till the close of the following year. In 1814 he accompanied the Saxon Ducal Regiment, as chief physician, to the Rhine, and soon after became one of the physicians to the hospital at Worms. During this period he first made the acquaintance of Stein. In 1816 he accepted the appointment of Physician in Ordinary to Prince Leopold of Coburg, whom he joined in England on his marriage with the Princess Charlotte. He exchanged, after the death of the princess, the post of Physician for those of Secretary, Keeper of the Privy Purse, and Comptroller of the Household, which he continued to fill till 1831. Stockmar had a powerful influence on the course of the negotiations and the decisions of Leopold in reference to the offers of the crowns

first of Greece, then of Belgium, and on the arrangements for the settlement of the new kingdom. His official relation to Leopold I. came to an end in 1834, but he continued to be his confidential adviser. In 1836 he was sent to England as the adviser of the Princess Victoria, who in the following year succeeded to the throne. In 1838 and 1839 Baron Stockmar, by desire of the young queen, accompanied Prince Albert on a journey to Italy; and in January 1840 he came to England again, where, as the familiar and trusted friend of the queen and the prince, he rendered them assistance of the highest value, and exerted a powerful influence on the course of political affairs. "Stockmar had two political ideals," says the editor of his Memoirs: "first, to see Germany united under Prussia; secondly, to help, to establish a unity of purpose between Germany and England." He took the deepest interest in the events of 1849 in Germany, and saw the failure of his hopes without yielding to despondency. About 1850 he entered into relations with the prince of Prussia and his wife, and promoted zealously the marriage of the Princess Royal of England with Prince Frederick William. His last visit to England took place in 1856-57, and he then retired to his home at Coburg. In 1857 he visited Potsdam and Berlin, and with that visit terminated his political life. In near succession the great sorrows fell on him of the deaths of his daughter, wife of Professor Hettner of Dresden, of the Princess Consort of England, and of the king of the Belgians; and on the 9th July 1863 he died at Coburg. In 1821 he received a patent of Saxon nobility, and ten years later created a Baron in Bavaria, and in 1840 was made an Austrian Baron. He married in 1821, and established home at Coburg, but during the thirty-six years following did not spend more than half the year with his family. He had a family of two sons and a daughter. "The Memoirs of Baron Stockmar," by his son, Baron E. von Stockmar, have been translated into English, and were edited by Professor Max Müller in 1872.

STORY, ROBERT, minister of Rosneath in Dumbartonshire, was born at Yetholton near Kelso, in 1790. He was educated at the University of Edinburgh, which he entered in November 1805, and during the last three years of his stay there (1807-10) was tutor to the son of the Hon. Dr. Hume. In 1815 he entered the Scotch Church, and in December of that year appointed assistant to Dr Drummond, minister of Rosneath, on whose death, about four years later, he became minister of that parish. He had received ordination in 1818. Mr Story was intimate friend of John M'Leod Campbell, minister of Row, and resolutely opposed his prosecution for heresy. He was for a long time closely connected

Drummond, Irving, then becoming a minister during a visit to "Prophetic Certainty." He wrote an interesting life of Isabella Campbell, of his congregationalist tendencies of her sister, the "gift of tongues" of the Kirk in 1841, and joined the Seceders at Rosneath, 22d November. A memoir of his life, by his son, was published in 1871.

STRANGFORD

SMYTHE, Viscount, an English diplomatist, was born at Coburg, his father was then a resident there. He was educated at Merton College, Oxford, and in 1827 was appointed British Embassy attaché at Constantinople. He received the appointment of Secretary, and in 1831 was promoted to the title on the death of the Duke. He soon after received the Viscount Strangford, and his requirements as an ambassador were very high order and he was a man of very high order and his studies embraced the sciences of Slavonic, and Celtic languages. Alone in his full and matured mind with the "Eastern" political world, and with an ardent votary and an ardent votary and he held a distinguished position as one of the chiefs of the Geographical Society, was President of the Society, and contributed to the "Pall Mall Gazette" and "Penny Review;" wrote several political portions of his "Eastern Shore" and some valuable notes on the study of the

literary remains of the country. A memorial of his life was published in 1871. Strangford was the youngest daughter of Francis Beaufort, who was born in London, 9th January 1731, and died in London from his Writings after his death.

STUART, JAMES I., a Scotch general, was born in Edinburgh, and received his military education at the Point Academy, and took part in the battle of Culloden in 1746. He then entered the army, and became in rapid succession a lieutenant. In 1757 he was wounded in an engagement with the Cheyenne Indians, and was promoted to the rank of captain in 1760. In 1776, after the secession of the British from the service of Virginia, he resigned his appointment, and returned to the service of Virginia, in which capacity he was present at the first battle of Bull Run in 1861. He made a dash for the Federal force not far from

Drummond, Irving, and others who were then becoming notorious; and in 1827, during a visit to England; and in 1827, "Prophetic Conference," attended the He wrote an interesting "Memoir of Isabella Campbell," who was a member of his congregation, and opposed the pretensions of her sister, Mary Campbell, to the "gift of tongues." At the Disruption of the Kirk in 1843 half his congregation joined the Seceders and left him. Died at Rosneath, 22d November 1859. A memoir of his life, by his son, R. H. Story, was published in 1862.

STRANGFORD, PERCY WILLIAM SMYTHE, Viscount, diplomatist, philologist, was born at St Petersburg, where his father was then ambassador, in 1825. He was educated at Harrow School and Merton College, Oxford, and at the age of twenty was appointed Attaché to the British Embassy at Constantinople. In 1857 he received the appointment of Oriental Secretary, and in the same year succeeded to the title on the death of his brother. He soon after returned to England. Viscount Strangford's learning and acquirements as an Orientalist were of a very high order and of immense extent. His studies embraced also the Teutonic, Slavonic, and Celtic languages. He stood alone in his full and minute acquaintance with the "Eastern Questions" of the political world, and was at the same time an ardent votary and promoter of science. He held a distinguished place among the chiefs of the Geographical Society, and was President of the Asiatic Society. He contributed to the "Quarterly Review," the "Pail Mall Gazette," and the "Saturday Review;" wrote the ethnographical and political portions of Lady Strangford's "Eastern Shores of the Adriatic," some valuable notes for Mr Matthew Waddy on "The Celtic Language," literary remains form a very valuable memorial of the ripe thought and knowledge of their author. Strangford married in 1862 the youngest daughter of Admiral Sir Francis Beaufort, who survived him. Died in London, 9th January 1869. A "Selection from his Writings" was published after his death.

STUART, JAMES E. B., American general, was born in Virginia in 1835. He received his military education at West Point Academy, and took his degree there in 1854. He then entered the army and became in rapid succession second and first lieutenant. In 1857 he was severely wounded in an engagement with the Cheyenne Indians, and was promoted captain in 1860. In the following year, after the secession of the Southern States, he resigned his appointments and entered the service of Virginia as a colonel of cavalry, in which capacity he served at the first battle of Bull Run. In September 1861 he made a dashing attack on a Federal force not far from Richmond, and

was promoted brigadier-general, and shortly after major-general. In June 1862 he led a powerful body of cavalry within the lines of General Maclellan's army near Richmond, and in August following made a night attack on the headquarters of General Pope and captured his papers and private correspondence. His most famous exploit was the raid across the Potomac in October of the same year, when he traversed Maryland, captured the town of Chambersburg, and effected a safe retreat. After the great battle of Gettysburg in July 1863, General Stuart protected the retreat of the Confederates. Mortally wounded in the fight at Ashland, 11th June 1864, he was carried to Richmond, and there died the next day.

SYME, JAMES, the distinguished Scottish surgeon, one of the greatest teachers and operators of his time, was born at Edinburgh in 1799. He received his education at the High School and the University of that city, and began to study anatomy in 1817 under Dr Barclay, becoming soon after a pupil of Mr Liston, to whom he was distantly related. He became M.R.C.S., London, in 1821, and the same year was appointed house-surgeon to the Royal Infirmary, Edinburgh. Two years later he was chosen F.R.C.S., Edinburgh, and soon after began lecturing on anatomy and surgery. Unable to procure election as a surgeon to the Royal Infirmary, in consequence of his quarrel with Liston, who was then on the staff of that institution, he took Minto House and made it a hospital, and there lectured for four years. In 1833 he obtained the appointment of Professor of Clinical Surgery in Edinburgh University, a post which he held, one short interval excepted, till 1869. The interval was in 1847-48, when he accepted the offer of the chair of Clinical Surgery in University College, London, but resigned it and resumed his post at Edinburgh. Mr Syme was for some years Surgeon in Ordinary to the Queen in Scotland. He received from the University of Oxford the honorary degree of D.C.L., and from the Universities of Bonn and Dublin the degree of M.D. He was also an honorary fellow of the R.C.S. of London and Dublin. Among the important improvements in surgical practice introduced by him are excision of a diseased joint instead of amputation of the limb, amputation of the foot at the ankle-joint, the revival of the old operation for aneurism, and his demonstration of the formation of bone from the periosteum. His principal works are—"A Treatise on the Excision of Diseased Joints" (1831); "Principles of Surgery" (1832), which has passed through many editions, diminishing in bulk while increasing in value; "Diseases of the Rectum" (1833); "Contributions to the Pathology and Practice of Surgery" (1847); "Treatise on Stricture of the Urethra,"

a long series of mythological figures from his chisel. In 1842 he was made a knight of St Michael by the King of Bavaria. In 1844 he was received an associate of the French Academy of Fine Arts. He was also member of several other academies of art, of the Institute of France, &c. For some time he held the office of Professor of Sculpture at the Academy of St Luke at Rome. The works of Tenerani are very numerous, and are found in almost every country in Europe. They include, besides the class already mentioned, many sacred subjects, and a large number of statues and monuments. Died at Rome, 14th December 1869.

TEXIER, CHARLES FÉLIX MARIE, French traveller and archaeologist, was born at Versailles in 1802. He entered the School of Fine Arts in 1823, and ten years later was sent by the government to explore the ancient remains of art, &c., in Asia Minor. On this mission he was engaged for ten years, making four distinct journeys, and visiting districts up to that time almost unknown. In 1837 he was admitted to the Legion of Honour, and in 1855 to the Academy of Inscriptions. The fruits of his researches were given to the world in the following works—“Description de l’Arménie” (1842-45), 2 vols. in folio; and “Description de l’Asie Mineure” (1839, &c.), 4 vols. in folio. He also wrote the volume on Asia Minor in the series of the “Univers Pittoresque,” “Eldesse et ses Monuments,” and numerous separate papers and memoirs on art, archaeology, &c. Died at Paris, 1st July 1871.

THALBERG, SIGISMUND, a celebrated musical composer and pianist, was born at Geneva in 1812. He studied at Vienna under Sechter and Hummel, and began early to compose. He introduced a new method and new effects in his compositions and performances, and has had many imitators. He visited the principal countries of the world, and obtained a great reputation. In his later life he became a wine-grower. Among his best-known compositions are the fantasias—“Home, Sweet Home,” “Moses,” “Don Giovanni,” “The Huguenots,” &c. Died at Naples, 27th April 1871.

THOMAS, GEORGE HENRY, American general, was born in Virginia in 1816. At the age of twenty he entered the Military Academy at West Point, and in 1840 passed into the artillery as sub-lieutenant. Promoted lieutenant the following year, he took part with distinction in the Mexican war of 1846-47, and became successively captain and major. In 1850 he was appointed to a professorship at West Point, was recalled to active service in 1855, and employed in Texas against the Indians. He had attained the rank of colonel when the War of Secession broke out, and being appointed brigadier-general of volunteers in August 1861, was some months later sent into

Kentucky, where in January 1862 he defeated Zollikofer at Somerset. Thomas was then named brigadier-general in the regular army, and in April became major-general of volunteers. He took part in the siege of Corinth, especially distinguished himself at the siege of Murfreesborough, and in September 1863 at the battle of Chattanooga, where he saved the Federal army from destruction. He was then intrusted with the office of general-in-chief of the army of Ohio, in place of General Rosencranz. He again distinguished himself under General Grant in the campaign of 1865, defeating General Hood, and compelling the Confederates to raise the siege of Nashville. In June of that year he was promoted major-general in the regular army. Died at San Francisco, 28th March 1870.

THOMAS, GEORGE HOUSMAN, painter and book-illustrator, was born in London in 1824. At an early age he was apprenticed to a wood-engraver, and after learning the art began to practise as an illustrator of books. He next spent two years at New York, and then, in order to complete his education as an artist, visited Italy. He was at Rome during the French siege in 1849, and furnished sketches of its scenes and incidents to the “London Illustrated News,” on which paper he was afterwards regularly employed. From 1854 he became a favourite artist with the queen and the royal family, and executed many paintings and sketches by their special desire. He exhibited paintings both in oil and in water-colour at the Royal Academy, and continued with success his illustrations for books. In the early summer of 1868 he went to Boulogne for the benefit of his health, and died there, 21st July of that year.

THOMAS, JOHN WESLEY, Wesleyan preacher, poet, and translator of Dante, was born at Exeter in 1798. He was the son of a preacher, and entered the ministry in 1822. A man of remarkable ability, a good linguist, a painter, and of considerable literary attainments, he published several volumes of poems, a work on the history and obligation of the Christian Sabbath, &c.; and was a frequent contributor to the “Methodist Magazine.” His claim to remembrance rests on his translation of Dante, of which the “Inferno” appeared in 1859, the “Purgatorio” in 1862, and the “Paradiso” in 1866. He was engaged in preparing a second edition at the time of his death. In August 1871 he was appointed to the Dumfries circuit, where he hoped to complete his fiftieth year of ministry, and there he died on the 7th February 1872.

THOMPSON, THOMAS FERRONET, major-general, political and miscellaneous writer, was born at Hull in 1783. He studied at Queen’s College, Cambridge, and graduated B.A. in 1802. He entered the army, and as second lieu-

tenant served in 1807 in the attack on Buenos Ayres. In the following year he was promoted Lieutenant, and appointed Governor of Sierra Leone, a post which he held four years. In 1814 he served in the war with France, was present at Nivelles, Orthes, and Toulouse, and was raised to the rank of captain. He next went to India, and in 1819 was secretary and Arabic interpreter in the expedition to the Persian Gulf. Returning to England in 1821, he soon after became a contributor to the newly-established "Westminster Review," in which he wrote against "protection," discussed reform, the currency, &c. In 1835 he entered Parliament as member for Hull, and afterwards sat for Bradford. He attained the rank of major in 1825, that of lieutenant-colonel in 1829, and of major-general in 1854. He was author of a "Catechism on the Corn Laws" (1827), which passed through fifteen editions in the first four years after its publication; a "Catechism on the Currency," an "Enharmonic Theory of Music" (1829), which was republished under a new title in 1850; and a work entitled "Geometry without Axioms." A collected edition of his writings appeared in 1843. Died, 6th September 1869.

TICKNOR, GEORGE, American historian, was born at Boston, U.S., in 1791. Intended for the profession of the law, he was educated at Dartmouth College (now University), and took his degree of B.A. in 1807. He then pursued his professional studies, and was called to the bar in 1813, but soon abandoned the law and resolved to devote himself to literature. He then came to Europe, studied for two years at the University of Göttingen, and visited France, Italy, Spain, Portugal, and Great Britain. During this period he was diligently studying mediæval literature and the languages of modern Europe, and was chosen in his absence Professor of Modern Languages at Harvard University, a post which he held from 1819 till 1834. He then made a second visit to Europe, which extended over three years, with a view especially of perfecting his acquaintance with Spanish literature. The fruits of his prolonged and conscientious researches appeared in 1849, in his great work entitled "The History of Spanish Literature," which became at once the standard authority on its subject. It was soon translated into German and Spanish. In 1863 Mr Ticknor published a memoir of his friend Prescott. Died, 26th January 1871.

TODD, JAMES HENTHORN, an eminent Irish theologian and archaeologist, was born at Dublin in 1805. He was the son of a surgeon, and was educated at Trinity College, Dublin, where he graduated B.A. in 1825, and of which he was chosen a fellow six years later. He began to be known at an early age as a writer, took holy orders, was twice appointed

Donnellan Lecturer, and in 1849 became Regius Professor of Hebrew, Dublin University. In 1852 he was named Librarian to the University, and in 1864 Precentor of St Patrick's Cathedral. Among his original works are the two courses of Donnellan Lectures, the first "On the Prophecies relating to Antichrist in the writings of Daniel and St Paul" (1840), and the second on similar "Prophecies in the Apocalypse of St John" (1846), "Testimony of the Fathers to the Roman Dogma of Infallibility," and "Memoirs of St Patrick." Dr Todd edited, among other works, three treatises of Wickliffe, the "Book of Hymns of the Ancient Church of Ireland," a catalogue of "The Books of the Vaudois," and "The Wars of the Danes in Ireland," the last for the Master of the Rolls' series of chronicles. He also prepared a list of the graduates of Dublin University from the earliest times. He was the chief promoter of the Irish Archaeological Society, and held the office of President for five years. Died at Silveracre, near Rathfriland, 28th June 1869.

TOURGUÉNIEF, NIKOLAI IVANOVICH, Russian political and miscellaneous writer, was born in 1790. He completed his education at Göttingen, entered the civil service of the Russian empire, and after holding various posts was named a member of the Council of State. He left Russia for the sake of his health in 1829, and in consequence of being charged with complicity in the insurrection which broke out on the accession of the Czar Nicholas and being condemned to death, he did not return, but spent the rest of his life abroad, chiefly at Paris. During the German siege of Paris he took refuge in England. His most important work is entitled "La Russie et les Russes," a valuable exposition of the state and prospects of the empire, published in 1847. Died at Paris, 10th November 1871.

TOYNBEE, JOSEPH, F.R.S., F.R.C.S. a distinguished aural surgeon, was a descendant of a Lincolnshire family, and was born about 1816. He studied anatomy with intense interest, attended St George's and University College Hospitals, and was admitted M.R.C.S. in 1838. He was soon after elected one of the surgeons of the St James and St George's Dispensaries, and was one of the first fellows of the College of Surgeons. He ultimately devoted himself exclusively to the practice of aural surgery, which he had especially studied, and on which he wrote some important letters as early as 1845. He had an extensive practice, long before the appointment of Aural Surgeon and Lecturer on the Surgery of the Ear at St Mary's Hospital; was an accomplished microscopist, and just before his death was chosen President of the Quekett Club. He organized the system of local Natural History Museums, and took much interest in sanitary reforms. He had been

some time impressed with the idea of injecting or inhaling chloroform and prosecuting an experiment on himself, at his residence in London. His published works are chiefly devoted to his favourite subjects.

TRENDELENBURG, ADOLF, German philosopher, was born at Estlin, in North Germany, studied at the Universities of Berlin, and afterwards engaged as tutor at Breslau, where, as a result of his extraordinary proficiency in Philosophy, he became Ordinarius. He was received as member of the Academy of Sciences in 1817. In 1820 he was chosen its member of the Section of Pausian Philosophy. As a scholar and especially distinguished in the study of Aristotelian and Latin. In 1823 he published "Platonis Doctrina ex Aristotele," seven years later a "Categorien." His more important works are—"Elementa logicæ" (1837), "Logische Untersuchungen über das Naturrecht auf dem Grunde der Aristotelischen Kategorien," "Historische

UNGER, FRANZ, an eminent botanist and paleontologist, was born at Szeged, Hungary, about 1800. After a short time at the University of Vienna he went to Prague, and devoted himself to medicine and natural history. He completed his studies at Vienna, and took his degree of M.D. in 1825. He commenced practice at Vienna, and spent seven years in the Tyrol, where he accepted the chair of Botany, and the directorship of the Botanical Garden of the Polytechnic Institute. He was one of the first members of the Imperial Academy of Sciences, and was elected in 1847. Three years later he returned to Vienna to fill the vacant chair at the university. For the purpose of his geological research he visited Scandinavia, the Caucasus, Egypt, Syria, and other countries. Among his works are "Ueber die Pflanzenwelt," "Anatomie und Physiologie der Pflanzen," "Genera et Species Plantarum," "Iconographia botanica," "Versucht einer Pflanzenwelt," "Die U

some time impressed with the idea that singing in the ears might be relieved by injection or inhalation of the vapour of chloroform and prussic acid, and while prosecuting an experiment with this vapour on himself, was accidentally killed at his residence in London, July 8, 1866. His published works relate almost exclusively to his favourite subject.

TRENDELENBURG, FRIEDRICH ADOLF, German philosopher, was born at Butlin, in North Germany, in 1802. He studied at the Universities of Kiel, Lelpsie, and Berlin, and after being for seven years engaged as tutor at the last-named university, he was appointed in 1833 Professor Extraordinary of Philosophy. Four years later he became Ordinary Professor. He was received member of the Berlin Academy of Sciences in 1846, and the following year was chosen its Secretary. He was a member of the Second Chamber of the Prussian Parliament from 1849 to 1851. As a scholar and philosopher he was especially distinguished for his Platonic and Aristotelian studies, and his mastery of Latin. In 1826 he published a work entitled "Platonis de Ideis et Numeris Doctrina ex Aristotele illustrata," and seven years later a dissertation on the Categories. His most important works are—"Elementa logicæ Aristotelicæ" (1837), "Logische Untersuchungen" (1840), "Naturrecht auf dem Grunde der Ethik" (1850), "Historische Beiträge zur Philo-

sophie," in several volumes published at long intervals, and his "Kleine Schriften." Died at Berlin, 24th January 1873.

TUCKERMAN, HENRY THEODORE, American poet, art-critic, and miscellaneous writer, was born at Boston, Massachusetts, in 1813. At the age of twenty, and before he had completed his studies, he visited France and Italy, and in 1837-38 he made a second visit to Europe, chiefly spending the time in the countries on the Mediterranean. He settled at New York in 1845, and there continued to reside. The honorary degree of M.A. was conferred on him by Harvard College. In 1852 he visited England and France. He commenced his literary career in 1835 with the publication of "The Italian Sketch-Book," consisting of miscellaneous essays, tales, and sketches. Among the more noteworthy of his works are—"A Month in England;" "Artist Life," a series of sketches of American painters; "Characteristics of Literature illustrated by the Genius of Distinguished Men;" "Poems;" "Essays, Biographical and Critical;" "The Character and Portraits of Washington;" "Book of the Artists," &c. Mr. Tuckerman has also edited various books, and contributed articles to the "New American Cyclopædia," "The North American Review," "American Quarterly Review," "Putnam's Magazine," and many other periodicals. Died at New York, 17th December 1871.

U.

UNGER, FRANZ, an eminent Austrian botanist and paleontologist, was born in Styria about 1800. After studying law for a short time at the University of Gratz he went to Prague, and applied himself to medicine and natural science, and completed his studies at Vienna, where he took his degree of M.D. in 1827. He commenced practice at Vienna, then spent some years in the Tyrol, and in 1836 accepted the chair of Botany, with the directorship of the Botanical Garden, at the Polytechnic Institute of Gratz. He was one of the first members of the Imperial Academy of Sciences of Vienna, founded in 1847. Three years later he removed to Vienna to fill the chair of Botany at the university. For the purpose of geological research he visited in 1852 the Scandinavian countries, and subsequently Egypt, Syria, and other Eastern lands. Among his works are—"Botanische Briefe," "Anatomie und Physiologie der Pflanzen," "Genera et Species Plantarum fossilium," "Iconographia Plantarum fossilium," "Versucht einer Geschichte der Pflanzenwelt," "Die Urwelt in ihren

verschiedenen Bildungsperioden," besides numerous monographs and more popular treatises. Died 13th February 1870.

URQUIZA, DON JUSTE JOSÉ DE, Argentine general, governor of Entre-Ríos, was born in the province of Entre-Ríos, of a Gaucho family, in 1800. He became a soldier and an adherent of General Rosas, and in 1842 was named Governor of his native province. Under the orders of General Oribe he invaded Paraguay, and after various fortunes completely defeated General Ribera in 1845, at the battle of Indianueta. Five years later, provoked by the treachery of Dictator Rosas, he declared against him, formed an alliance with Brazil and Uruguay, and in October 1851 compelled Oribe to capitulate. With a powerful army, then called the Army of Independence, he passed the Parana, and won a decisive victory over Rosas at Santos-Lugares in February 1852. He then took possession of Buenos Ayres, named a Provisional President, and convoked a congress of governors to frame a constitution. He

retained the offices of General-in-Chief and Minister of Foreign Affairs, and was soon named by the congress Provisional Governor of the Republic. In consequence of a revolt at Buenos Ayres in 1852, he besieged the city, and then blockaded it, but was ultimately obliged to retire. About the same time he was chosen Director for six years of the thirteen other states of the Confederation by the Congress of Santa-Fé, and

without assuming the title of President really exercised the supreme power. In 1861 he was named General-in-Chief, and conducted the war against Buenos Ayres. Defeated by General Mitre in September, he concluded peace, and remained Governor of Entre-Rios. In 1868 he unsuccessfully contested the presidency, and two years later was assassinated—12th April 1870.

V.

VAILLANT, JEAN BAPTISTE PHILBERT, Marshal of France, statesman, was born at Dijon in 1790. He studied at the Ecole Polytechnique, passed thence to the School of Metz, and in 1809 entered the army as sub-lieutenant. He served in the later campaigns of the great war, especially distinguishing himself in the Russian campaign, and in 1813 was admitted to the Legion of Honour. Taken prisoner by the Allies a few weeks later, he remained in captivity till the conclusion of peace in 1814. In the following year he served at Ligny and at Waterloo. After the peace, devoting his time to the studies and pursuits of his profession, he became captain in 1816, and *chef de bataillon* in 1826. The expedition to Algiers in 1830 recalled him to active service. While directing the siege of Fort Emperor he had his leg broken, and was compelled to return home, when he was rewarded with promotion to the rank of lieutenant-colonel. In 1832 he took part in the siege of Antwerp, was promoted colonel and made officer of the Order of Leopold. Sent again to Algeria in 1834, he directed the construction of numerous forts and commanded in many engagements. On his return in 1838 he became *maréchal de camp*, and in the following year was appointed Commander of the Ecole Polytechnique. He attained the rank of lieutenant-general in 1845, became President of the Upper Committee on Fortifications, and in 1849 took part as second in command in the expedition to Rome. He had, however, in fact, the chief direction of the siege. Immediately after the *coup d'état* of 2d December 1851 he was created Marshal of France. The charge of Grand Marshal of the Palace was also conferred on him. Marshal Vaillant was Minister of War from March 1854 till April 1859. He next served in the campaign of Italy as major-general of the army of the Alps, and remained at Milan as commander of the army of occupation till May 1860. Appointed soon after Minister of the House of the Emperor, he carried out a re-organization of the School of Fine Arts, and various reforms in the

regulation of theatres, museums, &c. Marshal Vaillant was Grand Cross of the Legion of Honour, member of the Academy of Sciences, member, and several times President, of the Board of Longitudes. Died at Paris, 4th June 1872.

VAUGHAN, ROBERT, a distinguished Nonconformist divine, historical and miscellaneous writer, was born in Wales about 1795. After studying at Bristol College, he was for some years pastor of an Independent congregation at Worcester, whence he removed to hold a like post at Kensington. In 1830 he accepted the professorship of History at London University. On being appointed President of the Lancashire Independent College in 1842, he resigned his pastorate at Kensington and removed to Manchester, whither the college had just been transferred from Blackburn. He filled at the same time the chair of Theology. In 1844 he projected the "British Quarterly Review" as an organ of the more moderate section of Dissenters, and of this review he was editor from its establishment till 1860. Ill-health had compelled him to retire from his appointments as president and professor in 1857. He was afterwards for a short time pastor at Uxbridge, and spent the latter years of his life in London, removing to Torquay in 1867. Among his numerous works of Dr Vaughan are "The Life and Opinions of John Wycliffe" (1828), reconstructed and published in 1853; "Memorials of the Stuart Dynasty" (1831); "Protectorate of Oliver Cromwell" (1838); "History of England under the House of Stuart" written for the "Library of Useful Knowledge" (1840); "Congregationalism viewed in Relation to the State" (1842); "The Modern Pulpit"; "The Age of Great Cities," &c. He contributed many articles to the "British Quarterly Review," selection from which was published separately in 1849. Dr Vaughan died at Torquay, 15th June 1868.

VILLEMAIN, ABEL FRANÇOIS, Minister of France, a distinguished statesman, historian, was born at Paris in 1790, studied at the Lyceum, and before he

reached his twentieth Professor of Rhetoric and Poetics in the University of Metz. In 1818 he was appointed Professor of Modern History in the University, and afterwards Professor of Law for his liberal opinions of Charles X., he was appointed Professorship, and Master of Requests in 1820. In the revolution of July 1830 he distinguished himself by his high distinction during the reign of Louis Philippe, and was created a Peer of France. Minister of Public Instruction in 1831, he retired in 1834, and spent the remainder of his life was spent in his earliest literary

WADDINGTON, DAVID, Durham, ecclesiastical and miscellaneous writer. He was the eldest son of a merchant, vicar of Tuxford, and was educated at Trinity College, Hartford, Conn. He graduated B.A. in 1810, and held a college living in 1810 he was appointed and in the following year he became Durham University. He was an accomplished politician, a generous and a subscriber to many of the works of the "Ethiopia," "A Visit to the Present Condition of the Greek Church," "History of the Earliest Ages of the World," and "History of the Continent." Died at Durham, 20th July 1860.

WALEWSKI, ALEXANDER, Polish statesman and diplomatist, was born at Warsaw, Poland, by a Polish father, and was born at the age of nineteen to conduct negotiations in favour of the revolution of July 1831, he served in the French army, and against the Prussians, he received the military cross of Poland. He next devoted himself to politics, and in 1840 entered his diplomatic career as Envoy

reached his twentieth year was appointed Professor of Rhetoric in the Lycée Charlemagne. In 1816 he became Assistant Professor of Modern History in the university, and almost immediately afterwards Professor of Eloquence. Obnoxious for his liberal opinions to the government of Charles X., he was suspended from his professorship, and deprived of his office of Master of Requests. At the period of the revolution of July 1830, he was a member of the Chamber of Deputies, and gained high distinction as a political orator during the reign of Louis Philippe. He was created a Peer of France, and made Minister of Public Instruction in the administration of Guizot. From this post he retired in 1845, and the rest of his life was spent chiefly in retirement. His earliest literary productions were an

"Eloge de Montaigne" (1812), and a "Discours sur les Avantages et les Inconvénients de la Critique." His most important works are—"L'Histoire de Cromwell" (1819), and the "Cours de la Littérature Française" (1830-33). He published a French translation of the "Republic" of Cicero, edited the "Provincial Letters" of Pascal, and was author of "Souvenirs Contemporains d'Histoire et de Littérature," "Choix d'Etudes sur la Littérature Contemporaine," &c. Villemain was admitted to the Legion of Honour in 1820, and promoted to be grand officer in 1843; was received at the French Academy in 1821, and named perpetual Secretary in 1834. Died at Paris in April 1867. He is said to have been long engaged on a "History of Gregory VII."

W.

WADDINGTON, GEORGE, dean of Durham, ecclesiastical historian and miscellaneous writer, was born in 1793. He was the eldest son of George Waddington, vicar of Tuxford, in Nottinghamshire, and was educated at the Charterhouse and Trinity College, Cambridge. He graduated B.A. in 1815, was chosen fellow of his college, and for some years held a college living in Yorkshire. In 1840 he was appointed Dean of Durham, and in the following year Warden of Durham University. Dean Waddington was an accomplished scholar, a Liberal in politics, a generous benefactor to his cathedral and to the county hospital, and a subscriber to many London charities. His works are—"A Visit to Ethiopia," "A Visit to Greece," "The Present Condition and Prospects of the Greek Church," "History of the Church from the Earliest Ages to the Reformation," and "History of the Reformation on the Continent." Died, unmarried, at Durham, 20th July 1869.

WALEWSKI, ALEXANDER FLORIAN JOSEPH COLONNA, Count, French statesman and diplomatist, was the natural son of Napoleon I. by a Polish lady of rank, and was born at the Castle of Walewice, in Poland, in 1810. He early showed deep interest in the condition of his native land, and at the age of nineteen came to London to conduct negotiations with English statesmen in favour of Poland. After the revolution of July 1830, he was naturalized in France, served a short time in the French army, fought at Grochow against the Prussians, and gained the military cross of Poland. For some years he next devoted himself to literature and politics, and in 1840 entered on the diplomatic career as Envoy to Mehemet Ali.

In 1849 he went as Plenipotentiary to Florence, thence to Naples in the same capacity. In 1854 he was Ambassador to the Court of London. Recalled the next year, he became Minister of Foreign Affairs, a post which he held through all the complications arising out of the Crimean war. He presided at the Conference of Paris, and signed the treaty of peace of 1856. He was also created Senator in April 1855, and the next year Grand Cross of the Legion of Honour. In 1860 he became Minister of State, entered the Corps Législatif in 1865, and was soon appointed President. This office he filled till 1867. Count Walewski was one of the most confidential friends and advisers of Napoleon III. He was twice married, first to an English lady in 1830, and afterwards to a grand-daughter of Stanislaus Poniatowski. Died at Strasbourg, 26th September 1868.

WALKER-ARNOTT, GEORGE A., an eminent Scottish botanist, was born at Edinburgh in 1790. He was educated at the High School and the University of his native city, and graduated M.A. in 1818. He studied the law, without taking interest in it, and was admitted advocate in 1821; but he soon dropped the practice of his profession, and followed wholly the bent of his genius for physical science, and chiefly botany. He made extensive travels for the purpose of botanical research, spending much time in France and in Russia, and communicating the fruits of his studies and observations to various scientific societies. In 1837 the degree of LL.D. was conferred on him by King's College, Aberdeen. In 1845 he was called to the chair of Botany at the University of Glasgow, which he held till his death. Among his works are—"Prodro-

Tragödien mit Rücksicht auf den epischen Cyklus," "Epicche Cyklus," "Griechische Götterlehre," &c. In 1859 he celebrated the jubilee of his professorate. Died, 1869.

WELD, CHARLES ROBERT, miscellaneous writer, was born in 1818. He studied law at the Middle Temple, and was called to the bar in 1844. In the following year he obtained the appointment of Assistant Secretary to the Royal Society, a post which he held till 1861. In 1862 he was engaged as District Superintendent of the International Exhibition, and in 1867 as Assistant British Commissioner at the Paris Exhibition. Mr Weld was a friend of Sir John Franklin, and his principal assistant in his home work connected with his Arctic expeditions. His first and most important literary work is the "History of the Royal Society," published in 1847. His other publications consist of a series of "Vacation Tours," the first in Auvergne, Piedmont, and Savoy (1848), others in the United States, Brittany, Ireland, the Pyrenees, &c. Mr Weld spent his later years at Bath, and died there, 15th January 1869.

WESTMACOTT, RICHARD, an eminent sculptor and writer on art, was born in London in 1799. He was the eldest son of Sir Richard Westmacott, from whom he received his earliest instructions in sculpture. At the age of nineteen he became a student at the Royal Academy, and two years later (1820) he went to Italy, where he studied the remains of classical art for six years. He began to exhibit in 1827, and his works from that time continued to attract attention by their grace, simplicity, and purity. In 1838 he was elected A.R.A., became R.A. in 1849, and succeeded his father as Professor of Sculpture at the Academy in 1857. Among his best known works are—"Paolo and Francesca," a bas-relief in the collection of the Marquis of Lansdowne; "Bluebell" and "Butterfly," in the Earl of Ellesmere's collection; "Euphrosyne;" the monuments to Archbishop Howley in Canterbury Cathedral and to the Earl of Hardwicke at Wimpole; the Ashburton monument, with the figure of the "Angel watching;" "Prayer and Resignation;" "David," &c. He executed a large number of busts of eminent persons, and the pediment of the Royal Exchange, London, is his work. Mr Westmacott was author of a "Handbook of Sculpture," and wrote the articles on sculpture for the "Penny Cyclopædia" and the "Encyclopædia Metropolitana." He was also known as a lecturer on the history and principles of his art. He was a fellow of the Royal Society from 1837. Died in London, 19th April 1872.

WILLE, JOHANN GEORG, a celebrated German engraver, was born near Giessen, in Hesse, in 1715. After making some progress in drawing and engraving by his own unaided endeavours, he relinquished

the trade to which he was brought up, and in 1736 went to Paris, where he studied and practised under Dalié, and spent the rest of his life. Wille attained great distinction by the accurate and brilliant prints which he executed after portrait and figure pieces by Gerard Douw, Turburg, Micris, and other Dutch and Flemish painters. In 1761 he was received a member of the Paris Academy of Fine Arts, was in his old age created Chevalier of the Legion of Honour by Napoleon I., and died at Paris, 8th August 1806.

WILLES, Sir JAMES SHAW, Judge of the Court of Common Pleas, was born at Cork in 1814. He was educated at Trinity College, Dublin, and took his degree of B.A. there in 1836. Four years later he was called to the English bar at the Inner Temple, and practised on the Home Circuit. In 1850 he was appointed a member of the Commission on Common Law, in which capacity he rendered invaluable services, promoting the improvement of legal administration by the preparation and passing of the several Law Procedure Acts. At the unusually early age of forty-one he was raised to the bench as a Puisne Judge of the Common Pleas. He was esteemed one of the wisest and most learned of English lawyers, displaying in his decisions not only a rare but a wonderful power of dealing with complicated facts and evidence. His decisions on questions of mercantile and maritime law were especially lucid and convincing. He was one of the first judges to sit on election petitions under the new act, and he distinguished himself greatly by his complete and weighty judgments. After suffering from suppressed gout, with loss of memory and low spirits, he killed himself at his house, near Watford, Herts, on the 2d October 1872. He had married in 1856, and left his wife surviving him.

WILLIAMS, ROWLAND, a distinguished theologian, biblical critic, and poet, was born in Wales in 1817. His father, Rowland Williams, was rector of a parish in Flintshire, and canon of St Asaph. He was educated at Eton and King's College, Cambridge, took his degree of B.A. in 1840, and was chosen fellow of his college. After filling the post of Classical Tutor of King's College for eight years, he was appointed in 1850 Vice-Principal and Senior Tutor of St David's College, Lampeter. By his earnest discharge of duty, his integrity, and his wise administration, he greatly raised the character and status of the college. He remained at Lampeter twelve years, and during that period his name became widely known as an original thinker and biblical scholar. In 1854 he was chosen Select Preacher at Cambridge University, and in the following year published a volume of discourses entitled "Rational Godliness; after the Mind of Christ and the

Written Voices of His Church." In this work he announced the views on inspiration which led at a later period to his prosecution in the Court of Arches. A petition against the book was presented by some clergymen to the Bishop of St David's, who criticized it temperately in his charge of 1857, and a controversy began which lasted for many years. In 1856 Mr Williams published his "Hinduism and Christianity," which is considered his most important literary work. He took his degree of D.D. in 1857, resigned his college fellowship two years later, and was presented to the vicarage of Broadchalke, Wiltshire, to which place, however, he did not remove till 1862. Meanwhile he had contributed a review of the works of Baron von Bunsen to the volume entitled "Essays and Reviews" which appeared in 1860. For this review a prosecution was instituted against him by the Bishop of Salisbury, and being condemned by the Court of Arches, he was sentenced to a year's suspension. This sentence was reversed on appeal by the Judicial Committee of the Privy Council, and the prosecutors were condemned in costs. Dr Williams continued to labour in his parish of Broadchalke till his death. Besides the works already named, he published in 1866 the first volume of his "Hebrew Prophets," of which the second has appeared since his death; "Broadchalke Sermon-Essays" (1867); "Orestes and the Avengers;" "Lays from the Cimbric Lyre," his earliest work; and a dramatic work entitled "Owen Glendower," published soon after his death. In his religious philosophy Dr Williams was a disciple of Samuel Taylor Coleridge, whose works, especially the "Confessions" and the "Aids to Reflection," he had studied with deep sympathy in his youth. Dr Williams married about 1859. Died at Broadchalke, 18th January 1870. [See article in "Contemporary Review," April 1870.]

WILLIAMS, SARAH, a young English poetess, whose *nom de plume* was "Sadie," was born in London in 1837. She first became known by the publication of a little volume for children entitled "Rainbows in Springtide," which appeared in 1866. She then became a contributor to several periodicals, but health failed, and she died in London at Easter 1868. After her death appeared a volume entitled "Twilight Hours," containing a series of poems remarkable for originality, thoughtfulness, power, and pathos. A very brief memoir by E. H. Plumpton, M.A., accompanies the poems.

WILLIS, NATHANIEL PARKER, American poet and miscellaneous writer, was born at Portland, Maine, U.S., in 1807. He completed his education at Yale College, where he graduated B.A. in 1827. He at once commenced his literary career as editor of two periodicals. About 1831 he visited Europe, was attached to

the American embassy at Paris, and travelled in France and the south of Europe, and in Asia Minor. He then spent some time in England, and married here, returning home in 1837. He twice revisited England, travelled in the Southern States of the Union, and in the West Indies, and finally settled at Idlewild, on the Hudson river. His writings are numerous, but chiefly light and of ephemeral interest. Among them are—"Pencilings by the Way" (1836), a sketchy record of his first visit to England; "Inklings of Adventure," "Loiterings of Travel," "People I have met," "Hurrygraphs," "Poems," &c. He originated the "American Monthly Magazine," which was afterwards merged in the "New York Mirror," and at various times was joint-editor of "The Corsair," the "New York Mirror," and the "Home Journal." Mr Willis was twice married. Died at Idlewild, on the Hudson, 20th January 1867.—His sister, SARAH PAYSON WILLIS, who became the wife of James Parton, was a popular writer for the young, and was known under the assumed name of "Fanny Fern." She died at New York, at the age of sixty-one, in October 1872.

WILSON, GEORGE, chairman of the Anti-Corn Law League, was born at Hathersage, in Derbyshire, in 1808. Brought up in Manchester to a mercantile life, he early showed public spirit, energy, and ability, taking a useful part in various local matters, parliamentary elections, the promotion of mechanics' institutions, and the incorporation of Manchester. In January 1839 he became a member of the Council of the newly formed League, and in the following April he was elected chairman. This election was owing chiefly to the strong recommendation of Mr Cobden. For the following seven years his life was almost entirely spent in the service of the League, all the practical details of its business being under his control. On the triumph of Free Trade in 1846, Mr Wilson's services were acknowledged by a public testimonial of £10,000. He was afterwards President of the National Reform Union, and took an active part in electoral matters, and in the direction and management of railways and telegraphs. He married in 1838. Died suddenly in a railway train on his way to Liverpool, 23 December 1870.

WINDHAM, Sir CHARLES ASH, British general, was a member of an ancient Norfolk family, and was born that county in 1810. He entered the army in 1826, became captain in 1833, and by the usual steps reached the rank of colonel in 1854. He served in Canada 1837-39, and on the outbreak of the Crimean war was appointed quartermaster-general of the Fourth Division. At Inkermann, on the fall of Sir George Cathcart, he took the command of the forces through the remainder of the

battle. In July and in September distinguished himself in a column in the same month he general, and recaptures. In November of the following year he part in the Sepoy lieutenant-general 1865, and died in 1870.

WOOD, Captain, discoverer of the source of the Nile, born at Elie, Fifeshire, educated at Perth the Indian navy in 1835 the explosion of Wood on the Indus mand of the first on that river being He surveyed its course Hyderabad, and rebordering the river to obtain its periodical rise of its inundation, and He next joined a commercial mission to Borneo, by whose instructions the course of the Indus to Attock, examining on the physical geography From Cabul he crossed (Hindoo Koosh) to Kabul obtained of its rule mission to carry out his desire, he set out on 1 December 1837. In his journey he traversed the elevated Pamir sea, *Bam-i-Dunduk*, or *Roh*, which had been reached Marco Polo and the Benedict Goës. Wood covering early in 1838 sources of the Oxus in and for this achievement theographical Society awarded a medal. About the same time promoted captain. In 1841 he quitted the Indian service, and returned to England, then for some mercantile pursuits, and Australia. Pressed to government of Victoria seat in the Legislative Council, and retiring nature led to decline. He returned to England, and was appointed the next year the Oriental Inland Steam Company, which soon failed, accepted the post of Commodore of the Indus Steam Flotilla, which he left in 1841, and his death. Captain Wood, and left surviving Alexander Wood, major Bombay Army, and Colonel Wood, late Bombay Regiment, near London,

[WOO]

[WOO]

battle. In July 1855 he was created C.B., and in September following he greatly distinguished himself as leader of the column in the attack on the Redan. The same month he was promoted major-general, and received the medal and clasps. In November he became chief of the staff of the Eastern army. In the following year he received the decoration of the Legion of Honour. In 1857 he took part in the Sepoy war, was promoted lieutenant-general in 1863, and K.C.B. in 1865, and died in London, 7th February 1870.

WOOD, Captain JOHN, Indian navy, discoverer of the source of the Oxus, was born at Elie, Fifeshire, in 1811. He was educated at Perth Academy, and entered of 1835 the explorations of Lieutenant Wood on the Indus commenced, the command of the first steambot launched on that river being intrusted to him. He surveyed its course from the sea to Hyderabad, and remained in the country bordering the river nearly a year, to ascertain its periodical rise and fall, the spread of its inundation, and other phenomena. He next joined as assistant the commercial mission to Afghanistan under Burnes, by whose instructions he surveyed the course of the Indus from its mouth to Attock, examining and reporting also on the physical geography of the country. From Cabul he crossed the mountains (Hindoo Koosb) to Koondooz, and having obtained of its ruler, Murad Beg, permission to carry out his long-cherished desire, he set out to explore the Oxus in December 1837. In the course of his journey he traversed Badakhshan and the elevated Pamir steppe, locally called *Bam-i-Duniab*, or Roof of the World, which had been reached before only by Marco Polo and the Portuguese Jesuit Benedict Goës. Wood succeeded in discovering early in 1838 one of the chief sources of the Oxus in the Sirikol Lake, and for this achievement the Royal Geographical Society awarded him their gold medal. About the same time he was promoted captain. In 1841 Captain Wood quitted the Indian service, visited New Zealand, then for some years engaged in mercantile pursuits, and in 1852 went to Australia. Pressed to take part in the government of Victoria, and to accept a seat in the Legislative Council, his modest and retiring nature led him firmly to decline. He returned to Europe in 1857, was appointed the next year Manager of the Oriental Inland Steam Navigation Company, which soon failed, and in 1861 accepted the post of Commander of the Indus Steam Flotilla, which he held till his death. Captain Wood married in 1841, and left surviving him two sons, Alexander Wood, major, late of the Bombay Army, and Charles Malcolm Wood, late Bombay Police. Died at Highbury, near London, 13th November

1871. The narrative of his "Journey to the Source of the River Oxus" was published in 1842. A second edition, edited by his son, Captain Alexander Wood, with an "Essay on the Geography of the Valley of the Oxus" by Colonel Henry Yule, appeared in 1872.

WOODWARD, BERNARD BOLINGBROKE, Librarian to the Queen, historical and miscellaneous writer, was born at Norwich in 1816. He was a son of Samuel Woodward, well known as a geologist and antiquary, and received his education at a Norwich school. For a short time he was tutor in a private school, then clerk in a banking-house, and in 1834 became a student at the Theological College at Highbury. He took the degree of B.A. at London University in 1841, and two years later settled as minister of a Congregational Church at Wortwell, near Harleston, in Norfolk. He soon after began to apply himself to literary work, and enjoying the intimate friendship of John Childs, head of the printing-house at Bungay, assisted him in some of his larger undertakings. After some years he resigned his pastoral office, and in 1849 settled in London as professional man of letters. In 1857 he was chosen fellow of the Society of Antiquaries, and three years later, having made himself a reputation by various literary works, he was called to the post of Librarian in Ordinary to the Queen, becoming at the same time Keeper of the Prints and Drawings at Windsor Castle. The duties of that office he continued to discharge till his death. In 1863 Mr Woodward founded and undertook the editorship of the "Fino Arts Quarterly Review," in which he aimed at a high mark, and obtained the co-operation of many distinguished men. The Review, however, did not pay, and after several years it was discontinued. Mr Woodward's first literary undertaking was a new edition of "Barclay's Universal English Dictionary," published in 1848. To this work he contributed a large number of new articles, especially in the departments of biography and geography. His first original work was "A History of Wales" (1853), in which he carefully discriminates between legend and history, and presents a more authentic view of the history of the principality than had been given before. His other works are—"A History of America," which had been commenced by W. H. Bartlett; a "History of Hampshire," of which, however, he wrote only the portion relating to Winchester; a "Monograph of Windsor Castle;" "Specimens of the Drawings of Ten Masters;" and a translation of M. E. Régnis's work entitled "La Terre." At the outset of his career as author, Mr Woodward projected and commenced a dictionary of chronology and history on an original plan and on a large scale. For many years the work made slow progress, and in 1860 Mr Woodward associated with

Y.

YOUNG, CHARLES MAYNE, a celebrated English tragedian, was born in London in 1777. He was sent to Eton, but was afterwards transferred to Merchant Taylors' School. His first appearance on the stage was made at Liverpool in 1798, when he played the part of Norval. His start was fair, and in a year or two he was winning triumphs at Edinburgh. In the autumn of 1804 he met at Liverpool the beautiful and gifted young actress, Julia Anne Grimani; they played lovers' parts together, and became lovers in earnest. In March 1805 they were married, but after sixteen months of unusual brightness, the young wife, just

after the birth of a son, died. The husband survived fifty years, and loved the memory of her, as herself, intensely to the last. In July 1807, Mr Young first appeared in London, in the character of Hamlet, at the Haymarket Theatre. He played many characters with great distinction—among them, Iago, Macbeth, and Falstaff. One of his greatest achievements was his Cassius, at Covent Garden, in 1812. In 1822 he passed to Drury Lane, and ten years afterwards took leave of the stage, as Hamlet. Died at Brighton, 28th June 1856. A memoir by his son, Julian Charles Young, M.A., rector of Honington, was published in 1871.

Z.

ZEDNER, JOSEPH, a distinguished Hebraist, was born, of Jewish parents, at Glogau in 1804. He received his education at Posen, where he was one of the pupils of the learned Rabbi Akiba Eger. For some years he was teacher in the then newly-founded school at Strelitz, and during that period he wrote a treatise on the accent in the Hebrew language. About 1833 he went to Berlin, where he became soon after tutor in the family of the learned bookseller and antiquary, A. Asher. Eagerly availing himself of the opportunity this position offered him for extending his knowledge, he published in 1840, but without his name, a "Selection of Historical Pieces from Hebrew Authors, from the Second Century to the Present Time," which was the first attempt to make the prose literature of modern Hebrew accessible to wider circles of readers. About the same time he superintended the preparation of an edition of the "Travels of Benjamin of Tudela," published by Asher, and dedicated to Alexander von Humboldt. He was also the critical adviser for the English translation of that work. In July 1846, Zedner accepted an appointment as Assistant in the Department of

Printed Books in the British Museum. Two years later, a fresh field for the application of his special scholarship was opened by the acquisition by the Museum of the large and valuable Michael collection of Hebrew books. His task was that of cataloguing; and after long years of patient toil, the fruits of his labour appeared in 1867, in the "Catalogue of the Hebrew Books in the Library of the British Museum," forming a volume of nearly 900 pages, and which is esteemed the best book of its class. Zedner rendered much assistance also in the preparation of the Catalogue of Hebrew Books in the Bodleian. A man of fine intellect, a poet, a humorist, endowed with great social attractions, he yet lived a very retired life, known but to a few, but by the few greatly esteemed and beloved. A strict observer of the ordinances of his religion, it was his habit to make up for time lost to work on Saturdays (Sabbaths) by extra hours of application on other days. Ill-health at last compelled him to retire on a small pension in October 1869, and he returned to Berlin, where he died in the Jewish Hospital, 10th October 1871.

CATES AND WOODWARD'S ENCYCLOPÆDIA OF DATES.

Now ready, in ONE thick VOLUME of 1496 pages (nearly 3000 columns),
price 42s. cloth, or 50s. half-russia.,

ENCYCLOPÆDIA OF CHRONOLOGY,

HISTORICAL AND BIOGRAPHICAL.

Comprising the-**DATES** of all the Great Events of History,

INCLUDING

*Treaties, Alliances, Wars, Battles, &c.: Incidents in the lives of
Eminent Men and their Works, Scientific and Geographical
Discoveries, Mechanical Inventions,
and Social, Domestic, and Economical Improvements.*

By B. B. WOODWARD, B. A., late Librarian to the Queen,

AND

W. L. R. CATES, Editor of 'The Dictionary of General Biography.'

After testing it in various ways, and never failing to find what we wanted without difficulty and in a sufficiently complete form, we have come to the conclusion that the *Encyclopædia of Chronology* is the most perfect work of reference with which we are acquainted. Journalists have more occasion than almost any other class of men for the use of books of reference of this kind; and it is not after a small experience that we feel justified in giving an unqualified verdict in favour of this most elaborate and admirable volume, in preference to any other single work which has come under our notice. It combines all the best features of a Chronology, a Dictionary of Dates, and a Biographical Dictionary; whilst it has many special features of its own which necessarily enhance its value to all who are in the habit of using such works. There are nearly three thousand closely printed columns in the book, which contain more than thirty thousand distinct references, the latest coming down to so recent a date as May 1872. It is a noble monument of the industry, scholarship, and accuracy of its joint-authors.—LEEDS MERCURY.

As a book of reference for dates, there is, so far as we have seen, none extant equal to this *Encyclopædia of Chronology*. The work is historical and biographical, and it is not only remarkable for its comprehensiveness, but for its excellent arrangement, and for the compact way in which its facts are stated. Nothing appears to have been too small to have received attention. In fact, the work is thoroughly encyclopædic in character. Hitherto works of a similar kind have been confined to history or to biography, but this is not only a dictionary of dates, but a dictionary of biography into the bargain. It compresses into about 1500 pages everything that is worth much in the biographical dictionaries extant. Of course it has not their fulness; but for purposes of reference this is very rarely necessary. In cases where it is desirable, the names of the authorities for the statements made are given. This, however, is not often requisite. One instance of the manner in which the facts are given will shew better than any amount of description the way in which the book is compiled:—

“Combe, George, *phrenologist*, &c.—b. at Edinburgh, 21 Oct. 1788—Writer to the Signet, 1812-37—introduced to Spurzheim at Edinburgh, 1816—travels in America, 1838-40—d. Aug. 1858. *Essays on Phrenology*, &c., 1819—founder of *Edinburgh Phrenological Journal*, 1823—*Constitution of Man*, &c., 1828—*Notes on the United States*, &c., 1840—*Life and Correspondence of Dr Andrew Combe*, 1850.”

“It is not necessary to say more as to the merits of the work. It is a monument of painstaking and diligent recording, and of extensive historical and biographical knowledge.”—SCOTSMAN.

London: LONGMANS and CO., Paternoster Row.

LORD MACAULAY'S WORKS.

The following are kept on sale:—

HISTORY of ENGLAND, from the ACCESSION of JAMES the SECOND:—

Library Edition, 5 vols. 8vo, £4.

LATEST EDITION OF MR NORTON'S WORK ON
LONDON.

Lately published, in ONE VOLUME 8vo, price 14s.,

COMMENTARIES

ON THE

**HISTORY, CONSTITUTION, AND CHARTERED
FRANCHISES OF THE CITY OF LONDON.**

By **GEORGE NORTON,**

Formerly one of the Common Pleaders of the City of London. Third
Edition, revised throughout to the Present Time,
with a Copious INDEX.

BOOK I. *Historical Account of the Rise and Progress
of the City of London.*

BOOK II. *The Charters of London.*

"It cannot be doubted that the system of municipal government in the cities and boroughs of England—and more particularly that of the City of London—is of national concern. On that system, and on the franchises through which it is maintained, the self-government conceded by the English Constitution is in a very great degree founded. The personal interests and the social position of a large portion of the public are also intimately involved in these civic institutions, and in the authority which they exercise. The political power possessed by municipal corporations is a subject of still more important consideration.

"All these rights and privileges depend on charters or are derived from ancient customs. But the unlearned inquirer, desiring to obtain some knowledge of the nature of these charters, would feel compelled to acknowledge that their meaning has become for the most part unintelligible without the help of legal and antiquarian study. The work now submitted to the public is to explain, in as popular a manner as the subject will admit, these chartered and customary rights and liberties."
Condensed from PREFACE.

"Not merely is this a very useful book of reference upon all matters in which the special laws and customs of the City are concerned, but it is a book full of interest and instruction for the general reader, containing a vast quantity of curious information as to the manners and social lives of our ancestors."
LAW TIMES.

The PHILOSOPHY of NECESSITY; or, Natural Law as applicable to Mental, Moral, and Social Science. By CHARLES BRAY. 8vo. 9s.

WEBERWEG'S SYSTEM of LOGIC and HISTORY of LOGICAL DOCTRINES. Translated, with Notes and Appendices, by T. M. LINDSAY, M.A. F.R.S.E. 8vo. price 16s.

A BUDGET of PARADOXES. By AUGUSTUS DE MORGAN, F.R.A.S. and C.P.S. 8vo. 15s.

APPARITIONS; a Narrative of Facts. By the Rev. B. W. SAVILE, M.A. Author of 'The Truth of the Bible' &c. Crown 8vo. price 4s. 6d.

FRAGMENTARY PAPERS on SCIENCE and other Subjects. By the late Sir H. HOLLAND, Bart. Edited by his Son, the Rev. F. HOLLAND. 8vo. price 14s.

Astronomy, Meteorology, Popular Geography, &c.

BRINKLEY'S ASTRONOMY. Revised and partly re-written, with Additional Chapters, and an Appendix of Questions for Examination. By J. W. STUBBS, D.D. Fellow and Tutor of Trinity College, Dublin, and F. BRUNNOW, Ph.D. Astronomer Royal of Ireland. Crown 8vo. price 6s.

OUTLINES of ASTRONOMY. By Sir J. F. W. HERSCHEL, Bart. M.A. Latest Edition, with Plates and Diagrams. Square crown 8vo. 12s.

ESSAYS on ASTRONOMY, a Series of Papers on Planets and Meteors, the Sun and Sun-surrounding Space, Stars and Star-Cloudlets; with a Dissertation on the approaching Transit of Venus. By RICHARD A. PROCTOR, B.A. With 10 Plates and 24 Woodcuts. 8vo. 12s.

THE TRANSITS of VENUS; a Popular Account of Past and Coming Transits, from the first observed by Horrocks A.D. 1639 to the Transit of A.D. 2012. By R. A. PROCTOR, B.A. With 20 Plates (12 coloured) and 27 Woodcuts. Crown 8vo. 8s. 6d.

The UNIVERSE and the COMING TRANSITS: Presenting Researches into and New Views respecting the Constitution of the Heavens; together with an Investigation of the Conditions of the Coming Transits of Venus. By R. A. PROCTOR, B.A. With 22 Charts and 22 Woodcuts. 8vo. 16s.

The MOON; her Motions, Aspect, Scenery, and Physical Condition. By R. A. PROCTOR, B.A. With Plates, Charts, Woodcuts, and Three Lunar Photographs. Crown 8vo. 15s.

The SUN; RULER, LIGHT, FIRE, and LIFE of the PLANETARY SYSTEM. By R. A. PROCTOR, B.A. Second Edition, with 10 Plates (7 coloured) and 107 Figures on Wood. Crown 8vo. 14s.

OTHER WORLDS THAN OURS; the Plurality of Worlds Studied under the Light of Recent Scientific Researches. By R. A. PROCTOR, B.A. Third Edition, with 14 Illustrations. Crown 8vo. 10s. 6d.

The ORBS AROUND US; Familiar Essays on the Moon and Planets, Meteors and Comets, the Sun and Coloured Pairs of Stars. By R. A. PROCTOR, B.A. Second Edition, with Charts and 4 Diagrams. Crown 8vo. price 7s. 6d.

SATURN and its SYSTEM. By R. A. PROCTOR, B.A. 8vo. with 14 Plates, 14s.

A NEW STAR ATLAS, for the Library, the School, and the Observatory in Twelve Circular Maps (with Two Index Plates). Intended as a Companion to 'Webb's Celestial Objects for Common Telescopes.' With a Letterpress Introduction on the Study of the Stars, illustrated by 9 Diagrams. By R. A. PROCTOR, B.A. Crown 8vo. 5s.

SCHELLEN'S SPECTRUM ANALYSIS, in its application to Terrestrial Substances and the Physical Constitution of the Heavenly Bodies. Translated by JANE and C. LASSELL; edited, with Notes, by W. HUGGINS, LL.D. F.R.S. With 13 Plates (6 coloured) and 228 Woodcuts. 8vo. price 28s.

CELESTIAL OBJECTS for COMMON TELESCOPES. By the Rev. T. W. WEBB, M.A. F.R.A.S. Third Edition, revised and enlarged; with Maps, Plate, and Woodcuts. Crown 8vo. price 7s. 6d.

AIR and RAIN; the Beginnings of a Chemical Climatology. By ROBERT ANGUS SMITH, Ph.D. F.R.S. F.C.S. With 8 Illustrations. 8vo. 24s.

AIR and its RELATIONS to LIFE, 1774-1874. Being, with some Additions, a Course of Lectures delivered at the Royal Institution of Great Britain in the Summer of 1874. By WALTER NOEL HARTLEY, F.C.S. Demonstrator of Chemistry at King's College, London. 1 vol. small 8vo. with Illustrations. [Nearly ready.]

NAUTICAL SURVEYING, an INTRODUCTION to the PRACTICAL and THEORETICAL STUDY of. By J. K. LAUGHTON, M.A. Small 8vo. 6s.

MAGNETISM and DEVIATION of the COMPASS. For the Use of Students in Navigation and Science Schools. By J. MERRIFIELD, LL.D. 18mo. 1s. 6d.

DOVE'S LAW of STORMS, considered in connexion with the Ordinary Movements of the Atmosphere. Translated by R. H. SCOTT, M.A. 8vo. 10s. 6d.

KEITH JOHNSTON'S GENERAL DICTIONARY of GEOGRAPHY Descriptive, Physical, Statistical, and Historical; forming a complete Gazetteer of the World. New Edition, revised and corrected to the Present Date by the Author's Son, KEITH JOHNSTON, F.R.G.S. 1 vol. 8vo. [Nearly ready.]

The PUBLIC SCHOOLS ATLAS of MODERN GEOGRAPHY. With 31 Maps, exhibiting clearly the more important Physical Features of the Countries delineated, and Noting all the Chief Places of Historical, Commercial, or Social Interest. Edited, with an Introduction, by the Rev. G. BUTLER, M.A. Imp. 4to. price 3s. 6d. sewed, or 5s. cloth.

The PUBLIC SCHOOLS MANUAL of MODERN GEOGRAPHY. By the Rev. GEORGE BUTLER, M.A. Principal of Liverpool College; Editor of 'The Public Schools Atlas of Modern Geography.' [In preparation.]

The PUBLIC SCHOOLS ATLAS of ANCIENT GEOGRAPHY Edited with an Introduction on the Study of Ancient Geography, by the Rev. GEORGE BUTLER, M.A. Principal of Liverpool College. [In preparation.]

MAUNDER'S TREASURY of GEOGRAPHY, Physical, Historical, Descriptive, and Political. Edited by W. HUGHES, F.R.G.S. Revised Edition with 7 Maps and 16 Plates. Fep. 6s. cloth, or 10s. bound in calf.

Natural History and Popular Science.

TEXT-BOOKS of SCIENCE, MECHANICAL and PHYSICAL,
adapted for the use of Artisans and of Students in Public and Science Schools.
Edited by T. M. GOODEVE, M.A. and C. W. MERRIFIELD, F.R.S.

Edited by T. M. GOODEVE, M.A.

ANDERSON'S Strength of Materials, small 8vo. 2s. 6d.

BLOXAM'S Metals, 3s. 6d.

GOODEVE'S Elements of Mechanism, 3s. 6d.

GRIFPIN'S Principles of Mechanics, 3s. 6d.

JENKIN'S Electricity and Magnetism, 3s. 6d.

JENKIN'S Algebra and Trigonometry, 3s. 6d. Notes, 5s. 6d.

MAXWELL'S Theory of Heat, 3s. 6d.

MERRIFIELD'S Technical Arithmetic and Mensuration, 3s. 6d. Key, 3s. 6d.

MILLER'S Inorganic Chemistry, 3s. 6d.

SHELLEY'S Workshop Appliances, 3s. 6d.

WATSON'S Plane and Solid Geometry, 3s. 6d.

Edited by C. W. MERRIFIELD, F.R.S.

ARMSTRONG'S Organic Chemistry, 3s. 6d.

THORPE'S Quantitative Chemical Analysis, 4s. 6d.

THORPE & MUNN'S Qualitative Analysis, 3s. 6d.

ELEMENTARY TREATISE on PHYSICS, Experimental and Applied.
Translated and edited from GANOT'S *Éléments de Physique* by E. ATKINSON,
Ph.D. F.C.S. New Edition, revised and enlarged; with a Coloured Plate and
726 Woodcuts. Post 8vo. 15s.

**NATURAL PHILOSOPHY for GENERAL READERS and YOUNG
PERSONS;** being a Course of Physics divested of Mathematical Formulæ
expressed in the language of daily life. Translated from GANOT'S *Cours de
Physique* and by E. ATKINSON, Ph.D. F.C.S. Second Edition, with 2 Plates
and 429 Woodcuts. Crown 8vo. price 7s. 6d.

HELMHOLTZ'S POPULAR LECTURES on SCIENTIFIC SUBJECTS.
Translated by E. ATKINSON, Ph.D. F.C.S. Professor of Experimental Science,
Staff College. With an Introduction by Professor TYNDALL. 8vo. with nume-
rous Woodcuts, price 12s. 6d.

On the **SENSATIONS of TONE** as a Physiological Basis for the
Theory of Music. By HERMANN L. F. HELMHOLTZ, M.D. Professor of Physics
in the University of Berlin. Translated, with the Author's sanction, from the
Third German Edition, with Additional Notes and an Additional Appendix, by
ALEXANDER J. ELLIS, F.R.S. &c. 8vo. price 36s.

The **HISTORY of MODERN MUSIC,** a Course of Lectures delivered
at the Royal Institution of Great Britain. By JOHN HULLAH, Professor of
Vocal Music in Queen's College and Bedford College, and Organist of Charter-
house. New Edition, 1 vol. post 8vo. [In the press]

SOUND. By JOHN TYNDALL, LL.D. D.C.L. F.R.S. Third Edition,
including Recent Researches on Fog-Signalling; Portrait and Woodcuts.
Crown 8vo. 10s. 6d.

HEAT a MODE of MOTION. By JOHN TYNDALL, LL.D. D.C.L.
F.R.S. Fifth Edition. Plate and Woodcuts. Crown 8vo. 10s. 6d.

**CONTRIBUTIONS to MOLECULAR PHYSICS in the DOMAIN of
RADIANT HEAT.** By J. TYNDALL, LL.D. D.C.L. F.R.S. With 2 Plates and
31 Woodcuts. 8vo. 16s.

**IMAGE EVALUATION
TEST TARGET (MT-3)**

**Photographic
Sciences
Corporation**

23 WEST MAIN STREET
WEBSTER, N.Y. 14580

- RESEARCHES on DIAMAGNETISM and MAGNE-CRYSTALLINE ACTION**; including the Question of Diamagnetic Polarity. By J. TYNDALL, M.D. D.C.L. F.R.S. With 6 plates and many Woodcuts. 8vo. 14s.
- NOTES of a COURSE of SEVEN LECTURES on ELECTRICAL PHENOMENA and THEORIES**, delivered at the Royal Institution, A.D. 1876. By JOHN TYNDALL, LL.D., D.C.L., F.R.S. Crown 8vo. 1s. sewed; 1s. 6d. cloth.
- SIX LECTURES on LIGHT** delivered in America in 1872 and 1873. By JOHN TYNDALL, LL.D. D.C.L. F.R.S. Second Edition, with Portrait Plate, and 59 Diagrams. Crown 8vo. 7s. 6d.
- NOTES of a COURSE of NINE LECTURES on LIGHT** delivered at the Royal Institution, A.D. 1869. By JOHN TYNDALL, LL.D. D.C.L. F.R.S. Crown 8vo. price 1s. sewed, or 1s. 6d. cloth.
- ADDRESS** delivered before the British Association assembled at Belfast. By JOHN TYNDALL, F.R.S. President. 8th Thousand, with New Preface and the Manchester Address. 8vo. 4s. 6d.
- FRAGMENTS of SCIENCE.** By JOHN TYNDALL, LL.D. D.C.L. F.R.S. New Edition. *[In the press.]*
- LIGHT SCIENCE for LEISURE HOURS; a Series of Familiar Essays on Scientific Subjects, Natural Phenomena, &c.** By R. A. PROCTOR, B.A. First and Second Series. Crown 8vo. 7s. 6d. each.
- A TREATISE on MAGNETISM, General and Terrestrial.** By HUMPHREY LLOYD, D.D. D.C.L., Provost of Trinity College, Dublin. 8vo. 10s. 6d.
- ELEMENTARY TREATISE on the WAVE-THEORY of LIGHT** By HUMPHREY LLOYD, D.D. D.C.L., Provost of Trinity College, Dublin. Third Edition, revised and enlarged. 8vo. price 10s. 6d.
- THE CORRELATION of PHYSICAL FORCES.** By the Hon. Sir W. R. GROVE, M.A. F.R.S. one of the Judges of the Court of Common Pleas. Sixth Edition, with other Contributions to Science. 8vo. price 15s.
- An ELEMENTARY EXPOSITION of the DOCTRINE of ENERGY** By D. D. HEATH, formerly Fellow of Trinity College, Cambridge. Post 8vo. price 4s. 6d.
- The COMPARATIVE ANATOMY and PHYSIOLOGY of the VERTEBRATE ANIMALS.** By RICHARD OWEN, F.R.S. D.C.L. With 1,472 Woodcuts. 8 vols. 8vo. £3. 13s. 6d.
- PRINCIPLES of ANIMAL MECHANICS.** By the Rev. S. HAUGHTON, F.R.S. Fellow of Trin. Coll. Dubl. M.D. Dubl. and D.C.L. Oxon. Second Edition, with 111 Figures on Wood. 8vo. 21s.
- ROCKS CLASSIFIED and DESCRIBED.** By BERNHARD VON COTTEN, English Edition, by P. H. LAWRENCE; with English, German, and French Synonymes. Post 8vo. 14s.
- The ANCIENT STONE IMPLEMENTS, WEAPONS, and ORNAMENTS of GREAT BRITAIN.** By JOHN EVANS, F.R.S. F.S.A. With 2 Plates and 476 Woodcuts. 8vo. price 28s.
- The NATIVE RACES of the PACIFIC STATES of NORTH AMERICA** By HUBERT HOWE BANCROFT. Vol. I. Wild Tribes. their Manners and Customs, with 6 Maps. 8vo. 25s. Vol. II. Native Races of the Pacific. To be completed early in the year 1876, in Three more Volumes: Vol. III. Mythology and Languages of both Savage and Civilised Nations. Vol. IV. Antiquities and Architectural Remains. Vol. V. Aboriginal History and Migrations; Index to the Entire Work.

MAUNDER'S

Edition, the
new Article

- PRIMÆVAL WORLD of SWITZERLAND.** By Professor OSWALD HEER, of the University of Zurich. Translated by W. S. DALLAS, F.L.S., and edited by JAMES HEYWOOD, M.A., F.R.S. 2 vols. 8vo. with numerous illustrations. [In the press.]
- The ORIGIN of CIVILISATION and the PRIMITIVE CONDITION of MAN;** Mental and Social Condition of Savages. By Sir JOHN LUBBOCK, Bart. M.P. F.R.S. Third Edition, with 25 Woodcuts. 8vo. 18s.
- BIBLE ANIMALS;** being a Description of every Living Creature mentioned in the Scriptures, from the Ape to the Coral. By the Rev. J. G. WOOD, M.A. F.L.S. With about 100 Vignettes on Wood. 8vo. 21s.
- HOMES WITHOUT HANDS;** a Description of the Habitations of Animals, classed according to their Principle of Construction. By the Rev. J. G. WOOD, M.A. F.L.S. With about 140 Vignettes on Wood. 8vo. 14s.
- INSECTS AT HOME;** a Popular Account of British Insects, their Structure, Habits, and Transformations. By the Rev. J. G. WOOD, M.A. F.L.S. With upwards of 700 Illustrations. 8vo. price 21s.
- INSECTS ABROAD;** a Popular Account of Foreign Insects, their Structure, Habits, and Transformations. By J. G. WOOD, M.A. F.L.S. Printed and illustrated uniformly with 'Insects at Home.' 8vo. price 21s.
- STRANGE DWELLINGS;** a description of the Habitations of Animals, abridged from 'Homes without Hands.' By the Rev. J. G. WOOD, M.A. F.L.S. With about 60 Woodcut Illustrations. Crown 8vo. price 7s. 6d.
- OUT of DOORS;** a Selection of original Articles on Practical Natural History. By the Rev. J. G. WOOD, M.A. F.L.S. With Eleven Illustrations from Original Designs engraved on Wood by G. Pearson. Crown 8vo. price 7s. 6d.
- GAME PRESERVERS and BIRD PRESERVERS,** or 'Which are our Friends?' By GEORGE FRANCIS MORANT, late Captain 12th Royal Lancers & Major Cape Mounted Riflemen. Crown 8vo. price 5s.
- A FAMILIAR HISTORY of BIRDS.** By E. STANLEY, D.D. F.R.S. late Lord Bishop of Norwich. Seventh Edition, with Woodcuts. Fcp. 3s. 6d.
- The SEA and its LIVING WONDERS.** By Dr. GEORGE HARTWIG. Latest revised Edition. 8vo. with many Illustrations, 10s. 6d.
- The TROPICAL WORLD.** By Dr. GEORGE HARTWIG. With above 160 Illustrations. Latest revised Edition. 8vo. price 10s. 6d.
- The SUBTERRANEAN WORLD.** By Dr. GEORGE HARTWIG. With 8 Maps and about 80 Woodcuts, including 8 full size of page. 8vo. price 10s. 6d.
- The POLAR WORLD,** a Popular Description of Man and Nature in the Arctic and Antarctic Regions of the Globe. By Dr. GEORGE HARTWIG. With 8 Chromoxylographs, 3 Maps, and 85 Woodcuts. 8vo. 10s. 6d.
- THE AERIAL WORLD.** By Dr. GEORGE HARTWIG. With 8 Chromoxylographs and 60 Illustrations engraved on Wood. 8vo. price 21s.
- KIRBY and SPENCE'S INTRODUCTION to ENTOMOLOGY,** or Elements of the Natural History of Insects. 7th Edition. Crown 8vo. 5s.
- MAUNDER'S TREASURY of NATURAL HISTORY,** or Popular Dictionary of Birds, Beasts, Fishes, Reptiles, Insects, and Creeping Things. With above 900 Woodcuts. Fcp. 8vo. price 6s. cloth, or 10s. bound in calf.
- MAUNDER'S SCIENTIFIC and LITERARY TREASURY.** New Edition, thoroughly revised and in great part rewritten, with above 1,000 new Articles, by J. Y. JOHNSON. Fcp. 8vo. 6s. cloth, or 10s. calf.

HANDBOOK of HARDY TREES, SHRUBS, and HERBACEOUS PLANTS, containing Descriptions, Native Countries, &c. of a Selection of the Best Species in Cultivation; together with Cultural Details, Comparative Hardiness, Suitability for Particular Positions, &c. By W. B. HEMSLEY. Based on DECAISNE and NAUDIN'S *Manuel de l'Amateur des Jardins*, and including the 264 Original Woodcuts. Medium 8vo. 21s.

A GENERAL SYSTEM of BOTANY DESCRIPTIVE and ANALYTICAL.

I. Outlines of Organography, Anatomy, and Physiology; II. Descriptions and Illustrations of the Orders. By E. LE MAOUT, and J. DECAISNE, Members of the Institute of France. Translated by Mrs. HOOKER. The Orders arranged after the Method followed in the Universities and Schools of Great Britain, its Colonies, America, and India; with an Appendix on the Natural Method, and other Additions, by J. D. HOOKER, F.R.S., &c. Director of the Royal Botanical Gardens, Kew. With 5,500 Woodcuts. Imperial 8vo. price 52s. 6d.

The TREASURY of BOTANY, or Popular Dictionary of the Vegetable Kingdom; including a Glossary of Botanical Terms. Edited by J. LINDLEY, F.R.S. and T. MOORE, F.L.S. assisted by eminent Contributors. With 274 Woodcuts and 20 Steel Plates. Two Parts, fcp. 8vo. 12s. cloth, or 20s. calf.

The ELEMENTS of BOTANY for FAMILIES and SCHOOLS. Tenth Edition, revised by THOMAS MOORE, F.L.S. Fcp. 8vo. with 154 Woodcuts, 2s. 6d.

The ROSE AMATEUR'S GUIDE. By THOMAS RIVERS. Fourteenth Edition. Fcp. 8vo. 4s.

LOUDON'S ENCYCLOPÆDIA of PLANTS; comprising the Specific Character, Description, Culture, History, &c. of all the Plants found in Great Britain. With upwards of 12,000 Woodcuts. 8vo. 42s.

A DICTIONARY of SCIENCE, LITERATURE, and ART. Re-edited by W. T. BRANDE (the original Author), and GEORGE W. COX, M.A., assisted by contributors of eminent Scientific and Literary Acquirements. New Edition, revised. 3 vols. medium 8vo. 63s.

Chemistry and Physiology.

A DICTIONARY of CHEMISTRY and the Allied Branches of other Sciences. By HENRY WATTS, F.R.S. assisted by eminent Contributors. 6 vols. medium 8vo. price £8. 14s. 6d. SECOND SUPPLEMENT, price 42s.

ELEMENTS of CHEMISTRY, Theoretical and Practical. By W. ALLEN MILLER, M.D. late Prof. of Chemistry, King's Coll. London. New Edition. 3 vols. 8vo. £3. PART I. CHEMICAL PHYSICS, 15s. PART II. INORGANIC CHEMISTRY, 21s. PART III. ORGANIC CHEMISTRY, New Edition in the press.

SELECT METHODS in CHEMICAL ANALYSIS, chiefly INORGANIC. By WILLIAM CROOKES, F.R.S. With 22 Woodcuts. Crown 8vo. price 12s. 6d.

A PRACTICAL HANDBOOK of DYEING and CALICO PRINTING. By WILLIAM CROOKES, F.R.S. With 11 Page Plates, 49 Specimens of Dyed and Printed Fabrics, and 36 Woodcuts. 8vo. 42s.

OUTLINES of PHYSIOLOGY, Human and Comparative. By JOHN MARSHALL, F.R.C.S. Surgeon to the University College Hospital. 2 vols. crown 8vo. with 122 Woodcuts, 32s.

PHYSIOLOGICAL ANATOMY and PHYSIOLOGY of MAN. By the late R. B. TODD, M.D. F.R.S. and W. BOWMAN, F.R.S. of King's College. With numerous Illustrations. Vol. II. 8vo. 25s.

VOL. I. New Edition by Dr. LIONEL S. BEALE, F.R.S. in course of publication, with many Illustrations. PARTS I. and II. price 7s. 6d. each.

HEALTH in the HOUSE; a Series of Lectures on Elementary Physiology in its application to the Daily Wants of Man and Animals, delivered to the Wives and Children of Working Men in Leeds and Saltaire. By CATHERINE M. BUCKTON, Member of the Leeds School Board. Small 8vo. with Woodcuts, price 5s.

The Fine Arts, and Illustrated Editions.

A DICTIONARY of ARTISTS of the ENGLISH SCHOOL: Painters, Sculptors, Architects, Engravers, and Ornamentists; with Notices of their Lives and Works. By S. REDGRAVE. 8vo. 16s.

POEMS. By WILLIAM B. SCOTT. I. Ballads and Tales. II. Studies from Nature. III. Sonnets &c. Illustrated by 17 Etchings by W. B. SCOTT (the Author) and L. ALMA TADEMA. Crown 8vo. price 15s.

HALF-HOUR LECTURES on the HISTORY and PRACTICE of the FINE and ORNAMENTAL ARTS. By W. B. SCOTT, Assistant Inspector in Art, Department of Science and Art. Third Edition, with 50 Woodcuts. Crown 8vo. 8s. 6d.

The THREE CATHEDRALS DEDICATED to ST. PAUL, in LONDON; their History from the Foundation of the First Building in the Sixth Century to the Proposals for the Adornment of the Present Cathedral. By WILLIAM LONGMAN, F.A.S. With numerous Illustrations. Square crown 8vo. 21s.

IN FAIRYLAND; Pictures from the Elf-World. By RICHARD DOYLE. With a Poem by W. ALLINGHAM. With Sixteen Plates, containing Thirty-six Designs printed in Colours. Second Edition. Folio, price 15s.

The NEW TESTAMENT, illustrated with Wood Engravings after the Early Masters, chiefly of the Italian School. Crown 4to. 63s. cloth, gilt top; or £5 5s. elegantly bound in morocco.

SACRED and LEGENDARY ART. By MRS. JAMESON.

Legends of the Saints and Martyrs. New Edition, with 19 Etchings and 187 Woodcuts. 2 vols. square crown 8vo. 31s. 6d.

Legends of the Monastic Orders. New Edition, with 11 Etchings and 88 Woodcuts. 1 vol. square crown 8vo. 21s.

Legends of the Madonna. New Edition, with 27 Etchings and 165 Woodcuts. 1 vol. square crown 8vo. 21s.

The History of Our Lord, with that of his Types and Precursors. Completed by Lady EASTLAKE. Revised Edition, with 31 Etchings and 231 Woodcuts. 2 vols. square crown 8vo. 42s.

The Useful Arts, Manufactures, &c.
