The copy filmed here has been reproduced thanks to the generosity of:

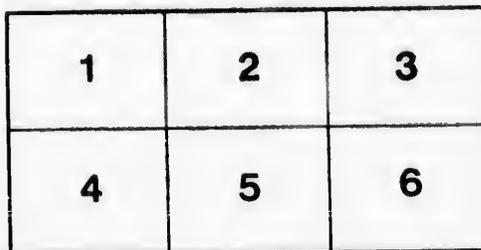

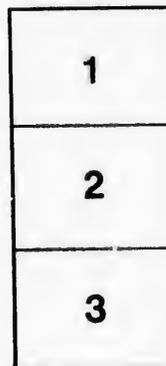

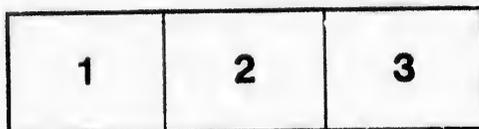

Metropolitan Toronto Library
Canadian History Department

The images appearing here are the best quality possible considering the condition and legibility of the original copy and in keeping with the filming contract specifications.

Original copies in printed paper covers are filmed beginning with the front cover and ending on the last page with a printed or illustrated impression, or the back cover when appropriate. All other original copies are filmed beginning on the first page with a printed or illustrated impression, and ending on the last page with a printed or illustrated impression.

The last recorded frame on each microfiche shall contain the symbol \rightarrow (meaning "CONTINUED"), or the symbol ∇ (meaning "END"), whichever applies.

Maps, plates, charts, etc., may be filmed at different reduction ratios. Those too large to be entirely included in one exposure are filmed beginning in the upper left hand corner, left to right and top to bottom, as many frames as required. The following diagrams illustrate the method:

L'exemplaire filmé fut reproduit grâce à la générosité de:

Metropolitan Toronto Library
Canadian History Department

Les images suivantes ont été reproduites avec le plus grand soin, compte tenu de la condition et de la netteté de l'exemplaire filmé, et en conformité avec les conditions du contrat de filmage.

Les exemplaires originaux dont la couverture en papier est imprimée sont filmés en commençant par le premier plat et en terminant soit par la dernière page qui comporte une empreinte d'impression ou d'illustration, soit par le second plat, selon le cas. Tous les autres exemplaires originaux sont filmés en commençant par la première page qui comporte une empreinte d'impression ou d'illustration et en terminant par la dernière page qui comporte une telle empreinte.

Un des symboles suivants apparaîtra sur la dernière image de chaque microfiche, selon le cas: le symbole \rightarrow signifie "A SUIVRE", le symbole ∇ signifie "FIN".

Les cartes, planches, tableaux, etc., peuvent être filmés à des taux de réduction différents. Lorsque le document est trop grand pour être reproduit en un seul cliché, il est filmé à partir de l'angle supérieur gauche, de gauche à droite, et de haut en bas, en prenant le nombre d'images nécessaire. Les diagrammes suivants illustrent la méthode.

REMARKS:—

Claims for general average contribution can only properly exist when the vessel, her stores or appurtenances,—or the cargo, or some portion of them, has (in some pressing emergency) been selected and deliberately sacrificed with a view to the preservation of the whole adventure: or—when, under similar circumstances, an expense has been voluntarily incurred for the mutual benefit of Ship, Freight, and Cargo.

In all such cases, it is evidently the interest of all the co-adventurers, and their underwriters, that all such claims should be *honourably* and *promptly discharged*,—each contributing in the proportion of their respective interests,—so that in future emergencies there may, on these grounds, be no reluctance in making the sacrifices, or incurring the liabilities which the preservation of their property may require.

An incorrectly adjusted general average Statement is, for these reasons, *an unmitigated evil*. It destroys that confidence which is necessary to harmonious action between the shipper and his underwriter, and indeed between all the parties interested: and it is fatal to that prompt dealing which is the soul of all commercial transactions.

In the case of the Propeller *St. Lawrence*, the vessel met with a casualty, became disabled, let go an anchor, and was finally brought up by running into the mud at Messina Point, where she was held by a warp from the shore, and by the anchor in the stream, until she was rescued by the steaming *America*, and moved *in safety to the dock at Cornwall*, and there (it is contended) the claim for general average contribution should have ceased.

Differing therefore with Mr. Hamilton on the principles of the adjustment which the owners or charterers of the vessel had employed him to make, and failing in all endeavours to obtain a reference (with consent) to some professional average adjuster of established reputation, whose decision might have a beneficial influence on future local adjustments: THE BRITISH AMERICAN ASSURANCE COMPANY had no alternative but to *reimburse their customers* the several sums they had paid under Mr. Hamilton's adjustment, and to refer all the papers connected therewith to Archibald Campbell, Esq., the Average Stater of Quebec, whose extensive practice entitles him to be considered an authority on the theory and practice of Marine Adjustments, as relates to the law and practice in Great Britain and the Province of Canada.

In order to show that the objections raised against the Adjustment were not without sufficient reasons, the objectional Adjustment, the Correspondence, and the corrected Adjustment by Mr. Campbell, are published, and the final results of each statement are placed in *juxta position*.

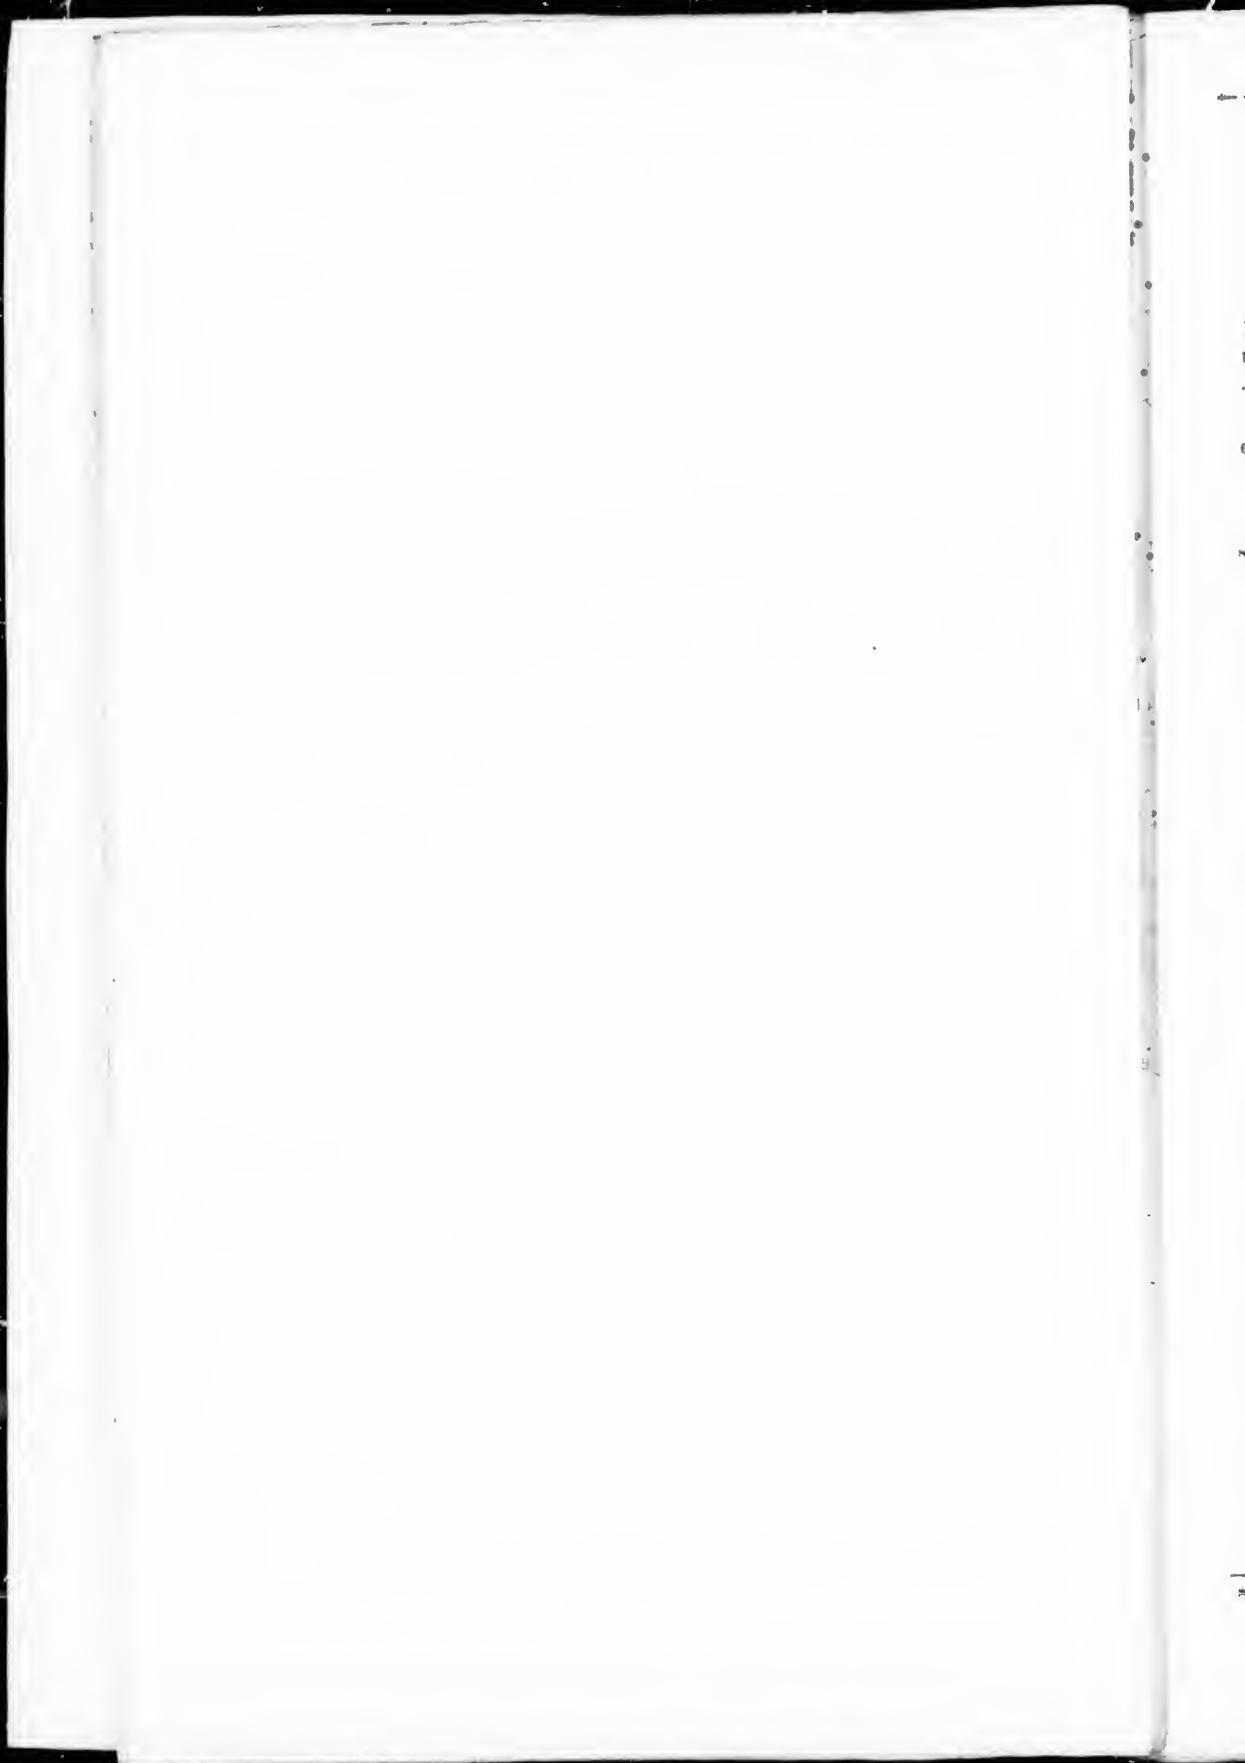

All of which is respectfully submitted.

W. M. STEWARD,

Manager, Marine Department,

British American Assurance Co.

TORONTO, NOVEMBER, 1878.

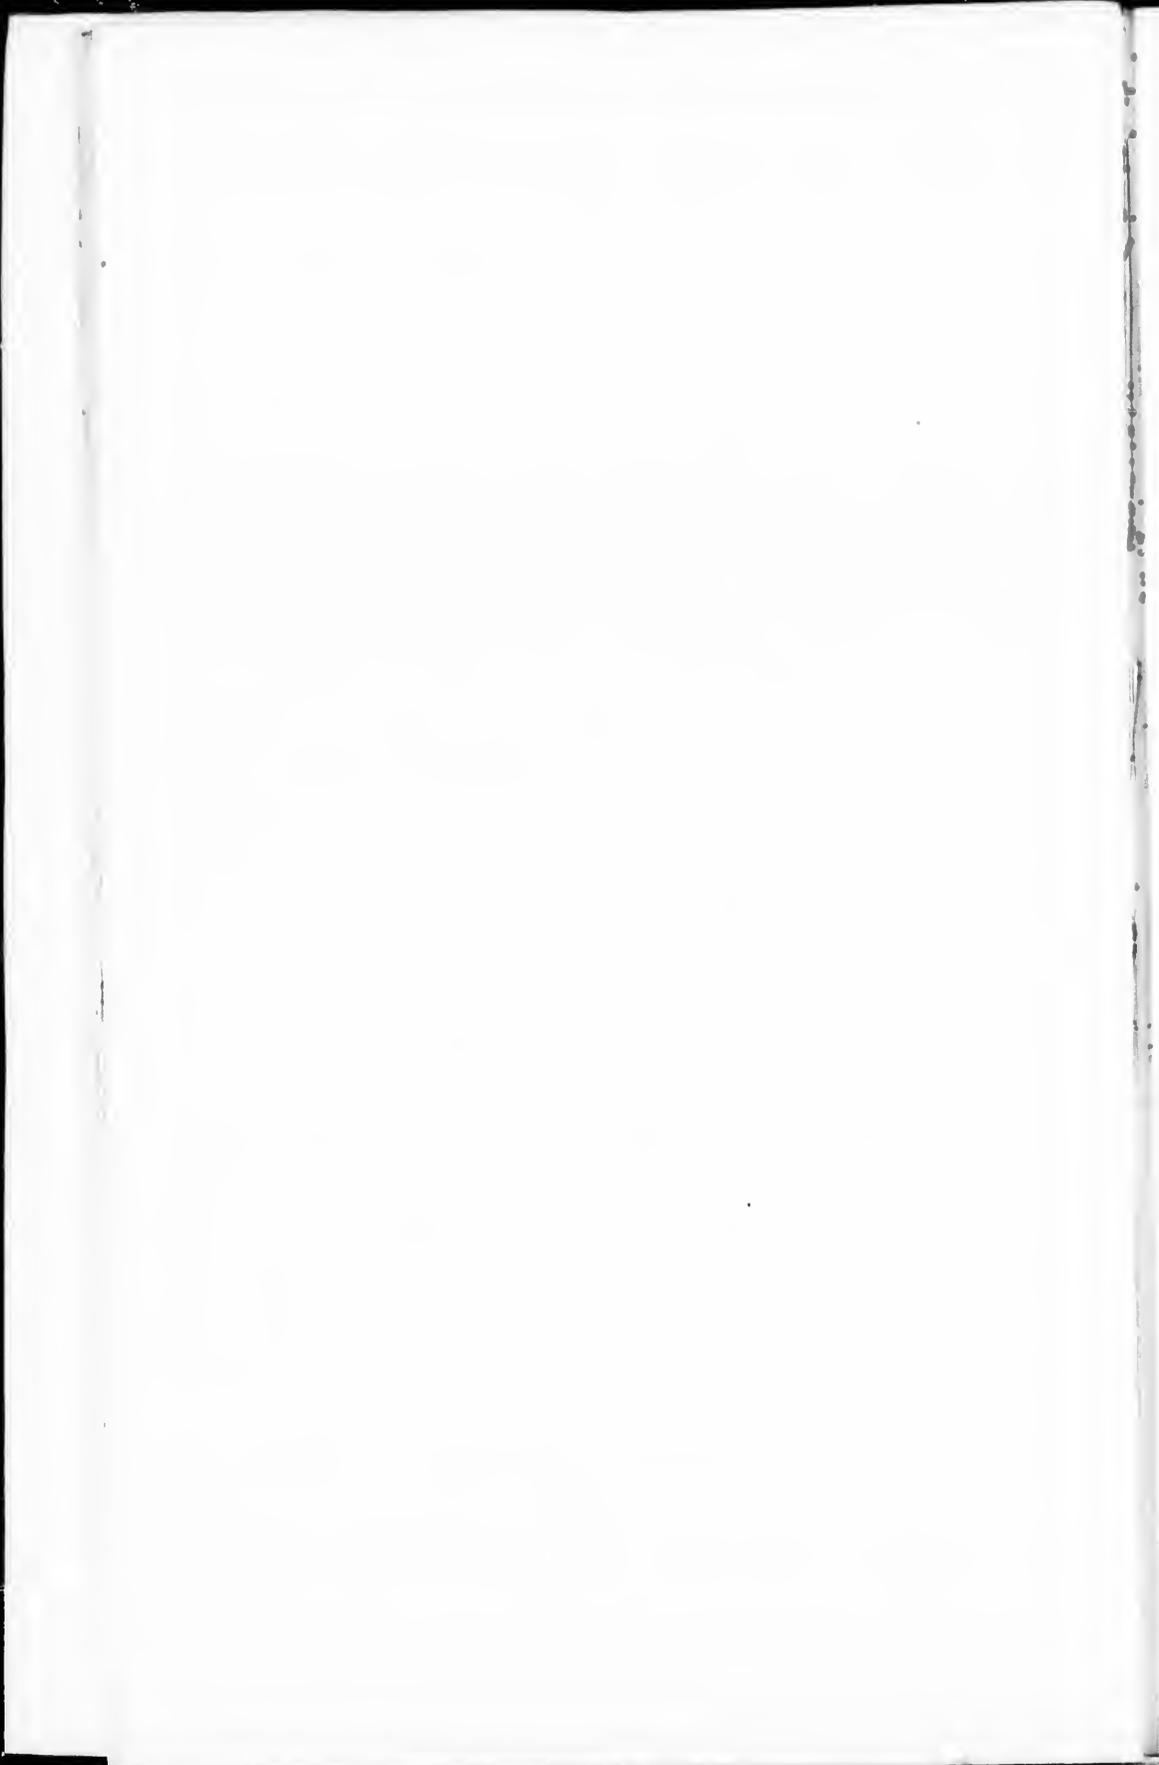

General Average Statement

AS ADJUSTED BY R. H. HAMILTON, ESQ., OF MONTREAL, AND CORRECTED
BY ARCHIBALD CAMPBELL, ESQ., OF QUÉBEC.

The Propeller *St. Lawrence*, descending the Long Sault Rapids, in the month of May, 1858, met with a disaster, carrying away her rudder, splitting her keel and stem post, and ultimately took the ground near Messina Point, from whence she was taken by the Steam Tug *America*, and towed to the dock at the foot of the canal at Cornwall, and there left in safety.

The following is an abridged copy of the *General Average Statement*, but containing all essential particulars, as made up and adjusted at Montreal, on that occasion.

Amount of General Average to be contributed \$1021 95

This adjustment was considered unsatisfactory; certain charges which should have been borne by Ship, Freight, or Owners being improperly introduced into the General Average. The statement, protest, and papers connected therewith were therefore sent to Archibald Cambell, Esqr., for his investigation and report, and if necessary to draw up a correct and reliable adjustment.

The following is the reply:—

GENERAL AVERAGE STATEMENT CONTINUED.

QUEBEC, 15TH OCTOBER, 1858.

WM. STEWARD, ESQ. MANAGER, MARINE DEPARTMENT.

British American Assurance Co., Toronto.

Dear Sir,

Having examined all the papers laid before me connected with the General Average of the Propeller St. Lawrence, I have made an apportionment according to the custom in England and Canada, which you will please find enclosed together with the other papers.

The first part contains, in the form of extracts from the Protests, the chief grounds on which the General Average is founded. The disbursements are obtained from the Statement of Mr. Hamilton, and in one instance I was obliged to refer to your memorandum for an explanation, namely: in order to divide the towage account. The towage until the vessel reached a port of safety being General Average, and the remainder of the amount which was incurred to bring her to her destination being chargeable against the Freight. Cornwall appears to have been a port of safety; and not having the towage account before me, the proportion stated by you is entered as the towage from Messina Point to Cornwall.

There appeared to be *no grounds whatever* for charging the anchor, or the carriage to the chain, &c., to the General Average. The Protest only mentions that the anchor was "thrown out or cast, and a warp made fast to the shore to keep the vessel steady." It does not appear that this was done with the intention of sacrificing any part of the property. The anchor, warp, &c., were only applied to their legitimate uses, and neglect on the part of the master to make use of such means, when in his power, would have been a gross dereliction of duty.

The extra fuel used for pumping, and all extra expenses incurred for pumping are charged to General Average; but the fuel said to be consumed "to keep up steam on the canals," seems (if I understand the expression rightly) to have been used to assist in the working of the vessel, and for the purpose of enabling her to complete her voyage, it is therefore chargeable against Freight or Owners.

On referring to the statement, you will observe that I have adjusted it in the most *liberal* manner consistent with the established custom, and where a doubt existed, the item has been charged to the General Average.

In conclusion, I would beg leave to express my entire approval of the course adopted by your Company in objecting to settle claims on an adjustment which might have formed a dangerous precedent for the future.

I remain, dear Sir,

Yours truly,

ALEXANDER CAMPBELL,

Her Majesty's Surveyor.

Statement of General Average.

PER PROPELLER ST. LAWRENCE, J. MOWATT, MASTER, FROM TORONTO TO MONTREAL, WITH A CARGO OF FLOUR AND OTHER GOODS.

The vessel left the port of Toronto on the twentieth of May, 1858, with two thousand two hundred and fifty barrels of Flour, four hogs-heads of Brandy, and twelve hundred and six bags of Hoops on board. At ten o'clock the same night reached the port of Oshtwa, and took in a further quantity of cargo, namely: three hundred barrels of Flour and nine barrels of Pork, and left that port at two o'clock on the morning of the twenty-first of May. She continued her voyage in safety until she arrived at the head of the rapids of the Long Sault, in the River St. Lawrence, at about the hour of half-past eight o'clock on the morning of the twenty-second instant, and whilst descending that rapid being then in the

GENERAL AVERAGE STATEMENT CONTINUED.

"proper channel, she struck with violence, in consequence of which the rudder was carried away, and the vessel otherwise injured, and being thereby disabled, she was guided by steam to or near Messina Point, *our anchor was thrown out or cast, the vessel also made fast to the shore by a horse, to keep her steady, and another anchor kept in readiness lest it should be required.* On sounding the pumps it was found that there were about three feet of water in the hold; the pumps were immediately manned, and kept working continuously, night and day, until the present time. That in order to secure the cargo and keep the vessel afloat, as many men were employed from the shore as were necessary, in addition to the crew.

The charterers of the steamer at Montreal were communicated with, and Mr. A. Davidson, Salvage Agent, rendered all needful assistance.

"The said John Mowatt, with a view of preventing, if possible, the water making on them thrust into the leak two blankets, two rugs, and a quantity of rags, which assisted very materially, the pumps in the meantime kept constantly going. When the anchor was cast as above mentioned, the bottom being a flat rock, and the current in that place being very strong, the anchor dragged for about a mile, when the said Propeller grounded, and the anchor caught simultaneously. When they remained until the tug-steamer called the *America* came alongside for the purpose of towing them down to the foot of the Cornwall canal; as she was eased off by the said tug, the shank of the anchor broke by reason of the strength of the current, and part of it was lost. That they reached the foot of the Cornwall canal at or about ten of the clock on the morning of Wednesday, when the captain sent immediately ashore to procure seven or eight extra hands to pump."

The pumps were kept perpetually going. They lay there all night, and in the morning proceeded on their voyage in tow of the steamer *Charlevoix*. On the twenty-eighth they arrived at the said port of Montreal, the vessel being towed on the river by steamers and through the canals by horses.
