### MUNIGIPAL DEPARTMENT.

The value of water meters in small cities where the supply has to be pumped is shown very clearly in the annual report for 1893 of City Engineer C. A. Ballon, of Danville, Va. In 1891 there was pumped 509,000,000 gallons, in round figures, and 1,152 tons of coal was burned. No meters were used then. Last year but 215,200,000 gallons was pumped and only 553 tons of coal was burned, a reduction due to metering all but four of the services. The rates charged were low, only to cents for 1,000 gallons for domestic and five cents for business purposes. The individual bills for domestic use were from 60 to 75 per cent, less than formerly. One of the greatest benefits secured by the use of

meters has been due to the ability of the department to supply only clear water to the city. This is secured, not by pumping muddy water into the reservoir and letting it settle, but by stopping the pumps when the river water is muddy and drawing the supply entirely from the reservoir, which holds a quantity now sufficient for 12 days, owing to the diminished consumption brought about by meters.

Municipal Officers, Contractors and others are requested to mention the CONTRACT RECORD when corresponding with advertisers.

PIICOS OI BUILDING MAIGHAIS.

CONDITION OF THE MARKET.

With the country trade the demand for builders supplies is keeping up fairly well, but there has been no marked improvement in the city trade. General hardware is moving freely, the demand being mostly for shelf goods. A moderate jobbling improvement is reported in lead pipe and galvanized iron. Iron pipe is quiet and prices remain unchanged. The arrivals of cement in Montreal for last week were 2,300 harrels of Belgian. The total receipts at that port for the season up to date are 36,730 batrels of English and 15,025 Belgian, as against %,800 and 15,075 barrels last year. Business in that hne is very limited. The price of glass is unsatisfactory, and cutting is being practiced. We quote \$1.20 to \$1.25 for first break.
