DENTISTRY. A. A. HOES, MACDONALD, HERRITT & BARRISTERS.

LEGAL. A. A. HOES, MACDONALD, HERRITT & BARRISTERS.

BLOWN INTO ETERNITY. Twelve Persons in a Baltimore Corn Mill Killed by an Explosion.

Baltimore, April 13.—An explosion occurred in the corn mill of A. H. Shiley & Co., at Tremont and Pratt streets, this afternoon. Twelve persons were killed.

The floor above and the floor adjoining were occupied by Miller & Coleman as a bean idle for some time for repairs.

When the explosion occurred, a portion of the wall between the two buildings on King street, and throwing down the wall of the building adjoining.

Edward Kelley, employe in the mill, standing at a work table, was struck by bricks and killed. C. W. Gates, workman, was severely hurt.

THE LEGAL MEETING. What America Has Sent to Ireland in Her Distress.

Washington, April 13.—At the National land league convention this afternoon, Father Walsh, treasurer of the league, reported the receipts and disbursements since the formation of the league.

The report was frequently interrupted with applause. Secretary Flaherty of Boston read a full statement of the number of branch leagues of each state, and the amount contributed by each state.

The committee on resolutions reported elaborate resolutions of sympathy, and pledging everlasting devotion to the cause of the Irish people.

DEMOLISHING DARWIN. Dr. Sullivan in a Game of Leap Frog with an Ape.

Rev. Dr. Sullivan, rector of St. George's church, Montreal, lectured at Shaftsbury hall last night on "A Game of Leap Frog." He chose to play Darwin's theory.

Darwin in this theory, by a process of leaping from one assumption to another, purposed to prove that man is not a created being, but descended from the ape, and in doing this he does not treat of facts, for it did so there would be no room for leaping to further his arrival.

The speaker frequently interrupted with applause. Secretary Flaherty of Boston read a full statement of the number of branch leagues of each state, and the amount contributed by each state.

ALMOST FATAL FIRE. A Fireman Badly Burned—Deaths as to His Recovery.

Shortly after 6 o'clock yesterday morning an alarm of fire was sounded from box 82. In response to the call, street hook and ladder, and Yonge, Berkeley, College and Wilton avenue arrived quickly on the spot.

The fire in Joselin's planing mill, No. 168 Bloor street, Mr. Joselin had started a fire in the furnace and then commenced to sweep up some loose shavings. Some of these became ignited, and the fire spread to the shaving box and then to the whole building.

A person was detached to the alarm box about 600 yards distant, but before the alarm was given it was plain the building could not be saved.

The fire in Joselin's planing mill, No. 168 Bloor street, Mr. Joselin had started a fire in the furnace and then commenced to sweep up some loose shavings. Some of these became ignited, and the fire spread to the shaving box and then to the whole building.

FRIDAY MORNING, APRIL 14, 1922.

CAPTAIN EADS' REPORT.

With regard to Captain Eads' report on the Toronto harbor a very mistaken view may easily gain currency. It may be said, in fact it has been said, that Captain Eads has told us nothing more than good Canadian engineering authorities had told us long ago. But this is not probably true, because we can hardly imagine a man of his reputation undertaking a new local problem without throwing some new light on it, more or less.

The settlement of technical questions of engineering is something for professional men, with this proviso added, that statesmen and capitalists have at least to decide as to what shall be done. Scientific advice may be had, however; without it, however, governments nor companies commit themselves to large expenditure. It therefore seems proper that with regard to the Toronto harbor the opinion of a high authority should be obtained. To say that Captain Eads' report only confirms much that we knew before is an evasion of the real issue. Admit that he only confirms, and gives us nothing more, is not his confirmation something of value?

The objection is made that the report is too verbose, too long, and that there is too much of it. There may be two ways of looking at this. As something to be read by the general public, Captain Eads' report may be described as profoundly uninteresting. But it may be that for scientific men who have to study details, and decide upon them, he has not written a line too much. Doing justice to the whole case, Captain Eads had to state it very fully. It is not for us to say that he has settled the case; we go no farther than saying that he has given a very full and inclusive statement of the circumstances thereto belonging.

His recommendations as to what is to be done stand on quite another footing. There he may be right, or he may be wrong. But it can hardly be said that he has made up his opinion in ignorance of the facts. We must give Captain Eads credit for mastering the facts and stating them. If it turns out that he has merely advised what Canadian engineers did long ago, that is still something; it is something to have good confirmations.

But, again, in the prospective expenditure for Toronto harbor, is there anything for the country in general and the city in particular to be alarmed about? No; much we should say. We have to deal with the outflow into the lake of two little streams, the Don and the Humber. Neither of them touches the dimensions of the Mississippi. The thing that we have to do on a smaller scale. How far laws which govern the movements of large rivers can apply to creeks, is a question. Some people may say that the rule which holds good for an inch is good for a mile, and that the Don throws itself out a good deal as the Mississippi does, only not so very much, let us say. It has not the magnitude of the Mississippi, but within its little bounds, it may act a good deal as the Mississippi does. That is, if it were not for lake winds and currents, which have to be considered. But it is a comparatively small affair that we have to deal with. We do not magnify it or get it up to Mississippi dimensions because we have asked Captain Eads' advice. We can manage the Don and the Humber, and the lake currents, too, with a little good counsel. It seems to be as well, however, to get the advice beforehand.

A decision of a very practical character is now before the government at Ottawa and the citizens of Toronto. The government may recommend a certain expenditure, provided the city pay part of it. As regards the former, the decision is already made; the work will be done, on certain conditions fulfilled by the city. It really rests with the city to decide. The expenditure proposed is large, though not so large as was talked about; what advice should be taken? Let us suggest a hint.

It is not Captain Eads' report, standing by itself, that we have to deal with. He contributes his statements of facts and opinions, which are afterwards to be pronounced upon by our best Dominion authorities. Scientifically the latter may go right, or they may go wrong, but they decide on the best information obtainable. Perhaps the engineering authorities of the public works department may adopt Captain Eads' advice, or they may not. One thing there is—very elaborate statements on high scientific authority have been obtained. If what Captain Eads' report recommends be merely what Canadian engineers advised long ago, this, we say, so much the more reason for carrying this advice into practice now. Take Eads' report for confirmation and go on.

The common sense view to take of Captain Eads' report is this: It supplements the opinion of our own scientific authorities with one of very high authority from the United States. It seems as if the government had now all they want in the way of scientific information. But we must protest against the idea that this further information was unnecessary. This information is a good thing to have before we begin pitching money into the bay. Suppose the report were nothing more than a means of bringing up, in carefully stated and scientific form the whole Toronto harbor question. An eminent foreign authority gives certain recommendations. But he also lays down an elaborate statement of facts upon which he invites us to make the decision for ourselves. This is the secret of Captain Eads' "verbosity," so called; he might in a few paragraphs have said what should be done, without adding much more. But he was not desirous, he had to state reasons upon which others were to decide. Will it do to read his report in this light?

THE BY-LAW DEFEATED.

The by-law to raise \$160,000, principally for waterworks purposes, was overwhelmingly defeated yesterday by the ratepayers.

THE RECOVERY OF ST. JAMES.

We hear of good authority that Bishop Sweetman intends to respect the wishes of a united congregation and appoint Mr. Rainey to the rectory of St. James. In choosing such a course the bishop will be acting wisely; he will more than ever strengthen himself by the loyalty of the congregation; and there will be no shock given to that well-known principle, best expressed in the words "the right to manage one's own affairs." Forty years the congregation of St. James has been a remarkably harmonious and certainly very good reason ought to be given for any act that would be likely to weaken the unity that has hitherto prevailed.

As usual, the Globe supported the \$160,000 by-law and it was defeated. The Irish Canadian has been denouncing everything Scotch; now that the islanders of Skye have begun to beat the preachers of Lord Macdonald and the burg convention to favor home rule the I. C. applauds them and calls them brothers.

The Montreal Star is the leading evening paper of Canada. On Wednesday of this week it was eight pages in size and filled with good matter.

The history of street-sweeping machines in Boston is interesting. They met with intense, no less than absurd, opposition at first, and along during their first years. This extended not only in city hall and among the workmen of the department, but among various officials. Nevertheless they were continued in the out-of-the-way streets, and at length boomed into success.

The machine, it is true, have greatly improved, are now exceedingly efficient, and are used in that city by scores; but they were also useful and economical from the beginning. They are now used all over that city and one man and a horse can readily do the work formerly performed by twenty-five men at least. The machine is now indispensable.

Let us have some of them in Toronto. Speaking of Boston also brings up the fact that apartment houses are rapidly on the increase in that city. They are occupied, of course, by families. The question is, is there as much real home comfort in them as in detached houses. We cannot answer the question; we only note the fact that these apartment houses multiply with significant rapidity in large cities.

It looks as if we might soon have a revival of the Greek drama in our day. If the universities are to continue the study of classics there is no doubt of the fact that one of the best ways to promote it is to revive the Hellenic stage.

The production of a Greek play might be an event in every year's history of such a university as Toronto. The way Antioch was put on compares favorably with that of Harvard's attempt in the same line. Toronto can hold her own with any other institution on the continent, and she has never made any fuss about it.

JAMES CHUTE AND THE CAT.

An Important Point Proven in the Interests of Women's Rights and the Honor of the Sex.

To the World: Being a strong advocate of women's rights, I hold the idea that woman, in a truly civilized country, should have all youth of both sexes separated the sexes as they mature, and still retaining the education of her own sex at all ages, and under all circumstances; and I think a Rural Pedagogy, in his letters to The World, fully expresses the importance of a separation between female scholars and the opposite sex; and I fully believe, if this idea were carried out, the general public would be more benefited by the general injury done the little girl, by the mothers of the nation, by employing male teachers in primary schools, and at higher salaries, and house the teacher, boys and girls all together established, sex, age or passion. Thus, if any should violate the common order, lay on the lash, etc., is a grievous injustice to humanity. True education may educate human passions, but it will never subdue them; and is a false doctrine to force upon youth, by the child, to be a witness, and others of like offenses. Guelph, April 12. R. B.

MODERN CONVENIENCES.

Mr. George E. Waring, Jr., of Washington, takes lance in re-against Dr. Frank H. Hamilton. Dr. Hamilton, it will be remembered, has lately attacked with some vigor what are known as the modern conveniences of life. Mr. Waring argues that Dr. Hamilton's plan of relegating all plumbing appliances to an out-house attached to every dwelling is impracticable. He at the same time maintains that while a vast deal of plumbing now is defective and destructive to human life, all plumbing may be made absolutely safe by means of simplicity, perfect workmanship, perfect material, perfect local ventilation and proper means for getting rid of the sewage.

THE PROPERTY OWNERS' ASSOCIATION.

The Property Owners' Association have scored another victory and the council of the city is now in a position to consider a bill for the purpose of being brought forward.

We do not suppose that the defeat of the bill will wipe out the intended improvements; but it will result in the plans being modified, the cost reduced, and the need of the proposed works more fully demonstrated.

The experience of General Sikes in his absence from home, when his house was shut up and the use of gas suspended, the meter refused to keep on measuring, with its usual fidelity the amount of gas he was supposed to burn. It made no difference to the meter that he did not burn any; the faithful guardian of the gas company's interests continued its laborious work of registering carbonated hydrogen that never passed through it, and the profound interpreter of the hieroglyphics on its dial made out an average bill which the company, with customary presence of mind presented.

General Sikes refused to pay it, because he did not owe it. The Manhattan company gave him his alternative of paying a bill he had not incurred, or of having his gas cut off. General Sikes did what has not been done before. He procured a temporary injunction restraining the company from cutting off his gas. Judge Lawrence has made the injunction permanent.

In other words, the summary proceedings of the gas monopolists to enforce collection of their bills are declared unlawful. If they have a claim they must collect it by appealing to the courts and obtaining judgment as any other creditor is compelled to do. It is manifestly inequitable that these monopolists should be given privileges denied to other parties.

As for meters, the popular belief that they are simply useful as deceptions is not a very grave question whether they are consulted at all. The size of a house is considered, the number of burners guessed at, a general estimate of what the consumer ought to pay a month is made, and on the absence of any other information, a bill that amount is sent in. This is the popular notion; whether it is absolutely correct we do not pretend to say, but it is notorious that experiments made in the large cities by individuals who intentionally reduce their consumption for a month in order to test the honesty of the company almost always prove that no reduction is made in the bill.

The numerous and flatteringly complimentary notices extended to Prince Bismarck on his sixty-eighth birthday by the foreign ambassadors at Berlin and other personages beyond the frontier of the Fatherland, show that the man of blood and iron is looked upon as the main factor in European affairs. Whatever may be said of Prince Bismarck, he is certainly not a man to be ridiculed. He is a diplomatist of consummate genius, and has exerted a more direct influence over the destinies of Europe than any other living statesman. He has created an empire, has introduced vast changes in the political map of the continent, and has rendered to the Fatherland illustrious services which will occupy the principal place in the most wonderful pages of Germany's history. His power for evil, like his power for good, has been irresistible. He has forced upon Europe a system of military rivalry, which has been the curse of the last twelve years. In the sphere of domestic politics his influence has been an almost unmitigated evil. He has arrested the development of constitutional government, and has shown an arrogant disdain for parliamentary control. Remembering both his virtues and his failings, it would hardly be an exaggeration to describe him as the foremost man in Europe. The chancellor is said to lament his destiny, and to feel that it is an evil one. It rests with him to alter it. Certainly, he cannot bring back the dead slain in the wars for which he is responsible, but he can do his best to lay the twin brands of hatred and jealousy which, under his inspiration, have set nations against nation and unsettled Europe. He might well begin with his own country. He has made Germany great; let him now try to make it happy.

THE GREAT GERMAN REMEDY FOR RHEUMATISM.

Nervous, Sciatica, Lumbago, Backache, Sprains of the Chest, Gout, Quinsy, Sore Throat, Swellings and Sprains, Burns and Scalds, General Bodily Pains, Tooth, Ear and Headache, Frosted Feet and Ears, and all other Rashes and Itches.

No Preparation on earth so cheap and so safe, sure, simple and cheap. It is so easily absorbed, that it reaches the seat of the disease in a few minutes, and every one suffering with Rheumatism, Sciatica, Lumbago, Gout, Quinsy, Sore Throat, Swellings and Sprains, Burns and Scalds, General Bodily Pains, Tooth, Ear and Headache, Frosted Feet and Ears, and all other Rashes and Itches, should at once procure a box of this Great German Remedy, and use it as directed. It is sold by all Druggists and Dealers in Medicines. A. VOGELER & CO., Baltimore, Md., U.S.A.

GOOD DEEDS.

During the past year the STRA LIFE INSURANCE COMPANY has paid to the families of the deceased members \$7,305,806. These payments were distributed as follows:

Table showing the distribution of life insurance payments by state, including amounts for Alabama, California, Canada, Connecticut, etc.

DEATH LOSSES AND ENDOWMENTS. Paid by the STRA LIFE INSURANCE COMPANY during the year 1921 to the families of the deceased members \$7,305,806.

Imperial Bank of Canada. A branch of this Bank has been opened in the Town of Brandon, Man. Trade and letters of credit issued, payable at Winnipeg, Fort St. James, Peace River, and other points in the Northwest. Collections made at all points in the Northwest.

IMPERIAL BANK OF CANADA. TENDERS WANTED. PILE DRIVING. WANTED TENDER. For furnishing and driving hard wood piles. Send offer to Box 146, HAMILTON POST OFFICE.

Messrs. Kennedy & Co., TAILORS. 91 KING STREET WEST. Have on hand a full assortment of FALL TWEED, Worsteds, Serges, etc., and are turning out the finest work at the lowest prices in the city.

KENNEDY & CO., PHOTOGRAPHING & FINE ARTS. 246 91 King St. West.

DIXON'S. The type operating room is crowded every day. He has a room fitted up for purpose for it, and has an operator to take charge of the work. Dixon attends to the photo room every day, and has the new process. Are too busy to change cases at the old process. 246 King Street West, Toronto.

J. B. COOK, THE PHOTOGRAPHER, Albert Hall, 101 and 103 YONGE STREET. Cabinets, \$3 per Dozen. Fabrics, \$5. Cards, \$1 per Dozen up. AMBROTYPES \$15 for Fifty Copies. 246.

TORONTO ARTIFICIAL LEG AND ARM CO., 151 BAY ST., TORONTO. Received the only medal and first prize for Artificial Legs and Arms in the Dominion of Canada for 1911. Send for Circular.
