# REPORT

OF THE

# ROYAL COMMISSION

ON

# THE RELATIONS OF CAPITAL AND LABOR IN CANADA.

## EVIDENCE—ONTARIO.

OTTAWA:

PRINTED FOR THE QUEEN'S PRINTER AND CONTROLLER OF STATIONERY.

A SENECA, SUPERINTENDENT OF PRINTING.

1889.

EVIDENCE  
TAKEN BEFORE THE  
ROYAL COMMISSION  
ON THE SUBJECT OF  
LABOR IN ITS RELATION TO CAPITAL  
IN CANADA.

---

TORONTO, 23rd November, 1887.

JOHN FALCONER called and sworn.

By the CHAIRMAN:—

Q.—What is our occupation? A.—I am a carpenter.

Q.—How long have you resided in Toronto? A.—Since sixteen years ago last May.

Q.—Have you always been in that occupation? A.—Always.

By Mr. FREED:—

Q.—What is the standard rate of wages paid to carpenters in this city to-day?  
A.—Twenty-two and a half to twenty-five cents an hour, with the exception of foremen who get 27  $\frac{1}{2}$  cents.

Q.—Have you any standard number of hours for a day's labor? A.—Yes; in the summer time we have nine hours. Of course, we cannot have that very well now, but according to the delay we have, we work eight or eight and a half, and some times nine hours just now in the fall of the year.

Q.—Is this for outdoor or indoor work? A.—Out and in too, as far as I know; it is in our shop at any rate.

Q.—What amount of lost time do carpenters experience on the average in the course of the year? A.—Well, in the position I am in, being what you would call a shop hand, barring bad health I am pretty well employed in the whole year. Outside men in all likelihood, taking it all through, weather, broken time, holidays and so on included, would average about one-sixth of their time. I do not think that they would average more than 45 hours work per week.

Q.—Have you any idea as to what proportion of the carpenters are outside men losing this time? A.—It is pretty hard to get at that. Perhaps one-third would be pretty near the mark for those who prepare for joiner work leaving two-thirds for outside work.

Q.—You think that two-thirds of all the carpenters in Toronto would lose one-sixth of their time and the rest would be fully employed? A.—I think so, taking the year right through.

Q.—Has the rate of wages been increasing of late years? Say within the fourteen or fifteen years that you have lived in Toronto has the rate increased or decreased, or has it not fluctuated at all? A.—Wages have increased certainly.

By the CHAIRMAN:—

Q.—Could you tell by your books what you have been paid during those years?  
A.—Yes, I could show by my books at home. Fifteen years ago, for instance, the wages were \$1.75 and \$2 per day.

Q.—How many hours' labor were there then per day? A.—Well, putting it by the hour we were receiving twenty cents per hour. We have since then got as low as fifteen cents according to the amount of work, demand and supply regulating it. Last year we have not seen it go much below 22  $\frac{1}{2}$  for good mechanics—22  $\frac{1}{2}$  to 25.

By Mr. FREED :—

Q.—What difficulty would there be for a man who lives in Toronto in getting work? Could he keep pretty steadily employed? A.—Speaking for myself I must say that I do. Perhaps I am a little more fortunate than the majority; I have been very fortunate in that way through my life; but really for men who are good mechanics, sober industrious men, I think they will find pretty steady work taking it all through if the weather will admit of their working outside.

Q.—Do many carpenters come to Toronto from outside seeking work? A.—Yes, there is no mistake about that—a great many.

Q.—Do more come than can find employment? A.—Sometimes. Taking the summer time I have found here as a rule that men are well employed in the summer, and that is the time they rush in. If they come in the winter they cannot expect to find work if the weather will not allow of work being done. But in summer I don't think that as a rule you will find them going idle if they wish to work—at least not many of them.

Q.—From what part do the newcomers come? A.—From all parts; the great majority come from England and Scotland.

Q.—Immigrants? A.—Yes, immigrants; the great majority come from these two countries, but we have likewise some from other countries outside.

Q.—Do they offer to work for lower wages than the scale here? A.—Well, I am not aware that they do. All I come in contact with never fight for low wages but try all they can to get high wages. That seems to be the general rule along. But there is a wide difference in men when they come because, no matter how competent a man may be in England or Scotland, he may be a first class mechanic there and yet so different is our work here that for some time after they come they are not able to compete with us who have been here fifteen or twenty years. That was my own case when I left Scotland to go to London, England. I thought I was all right, that I was a good mechanic, but I found I was far behind in England; I had almost to learn my trade there, and when I came to Toronto it was something the same. So when these men come here if they get a little less at first it is not long before they are able to command as good wages as the rest of us.

Q.—Do they mostly join the Carpenters' Unions when they come? A.—Well, no, they don't.

Q.—Do they find a difficulty in getting work if they don't join the Union? A.—Sometimes and at some shops they might.

Q.—Do the carpenters who belong to the Union consent to work with those who do not? A.—Well, I can hardly say; I have heard reports that some do not, but I never found any difficulty.

By the CHAIRMAN :—

Q.—Speak of what you know yourself as much as you can? A.—Well, I have never seen any difficulty about that. They all seem very friendly and very brotherly; I do not think there is any objection in that way.

By Mr. FREED :—

Q.—The carpenter who refuses to join the Union is not placed under any ban or disability? A.—Not in our shop anyhow. But in fact I would not work in a shop in which that was done and so wherever I have been I have never seen it. I am myself always prepared to work with free men and do the best I can for myself and my fellow men; and I would not work with any employer who was partial to one more than another.

Q.—Can you give us any idea of what the cost of living is compared with fifteen

or sixteen years ago when you came here? Does it cost more or less now to live equally well? A.—Taking it all through, with the exception of rent, I do not know that there is much difference.

Q.—Rent is dearer? A.—Yes. Of course I am a married man, with a large family, and, taking one thing with another, I consider that I can live as reasonably and as cheaply, barring rent, just now as perhaps I could twelve years ago.

Q.—Do you think you are better off by the increase of wages than you were twelve years ago? A.—Yes, I am; I am better off now at twenty-five cents an hour than I was then at twenty.

Q.—And the increase is to the good? A.—Certainly; I have now twenty-five cents an hour and a chance of even  $27\frac{1}{2}$  cents.

Q.—Perhaps you don't understand my question. Will the 20 cents an hour buy as much for you to-day as it would at that time? A.—I think it will.

Q.—Then the increase of wages is all to the good? A.—All to the good.

Q.—Do many mechanics with whom you are acquainted in Toronto own their own houses? A.—Oh yes, a good many.

Q.—Do you think they are largely in debt for their houses or have they mostly paid for them? A.—That I cannot say.

By the CHAIRMAN :—

Q.—As a general rule? A.—I could hardly say. There are some who have a hard struggle to meet their obligations and keep everything clear; some that perhaps have had bad health in their families, or one thing or another of that kind, but I know there are a great many who have their property clear; they may have had a great struggle to do so but they have done it.

By Mr. FREED :—

Q.—You are intimate with a good many mechanics; you visit their houses and know how they live? A.—Oh, yes.

Q.—Do you think that taking the ordinary comforts of life and the commoner luxuries, the mechanical class live in as good style, or in better or worse style than they did twelve or fifteen years ago? A.—They live in better style; I have no hesitation in saying that.

Q.—How are their houses furnished as compared with then? A.—Very well. I speak of those who are sober and careful men, and I have no hesitation in saying that they are far superior in every respect.

Q.—What is your opinion of the footing of a sober, steady, competent workman in dealing with his employer, in selling his labor? Does he stand on an equal footing with his employer in making a bargain for work and the wages he is to receive, or has the employer the advantage of him? A.—Well, I do not know; that is a question I have tried to solve for a long time; I can hardly give an answer to it. There is something there that I can hardly make out, but I think it is six and half a dozen between the employer and the employé. Of course I speak always for myself and I never had a bad employer in my life; I have always got on well with them and when I wanted my wages advanced and if they did not do it, I could pick up my tools and go somewhere else, so that I never go against my employer. But there are some employers in Toronto who are pretty great tyrants, but I happen to be fortunate in that way and I am sorry to say that the greatest tyrants we have are people who came from the ranks amongst ourselves.

Q.—But on the whole you think they get along remarkably well. A.—Very well indeed.

Q.—And have a friendly feeling one towards the other? A.—Yes. Now taking our last strike, I have been on every strike perhaps during my life, since the great lockout in London twenty-six or twenty-seven years ago until the last one, but though I am down upon them and though I knew so many of the men, no one ever molested me. I give that credit to the carpenters at any rate. That was at a time, too, when I might have expected it, working as I was when perhaps a good many were out; so that I cannot say that they interfered in that way.

Q.—How do carpenters' wages compare with the wages of other mechanics in Toronto? A.—Taking the building trade they are no doubt under the other trades.

Q.—But mason and bricklayers cannot get in so much time as carpenters can they? A.—No, not as a rule. I have found, I may say, that our own trade is considered the most disorganized trade in the various building trades; there seems to be always plenty of them about. That has been the case all through my life; we are always complaining and at the same time we are never getting better. There are always getting to be more in the field; I suppose they learn the trade because they like it; it is considered a genteeler trade than others and I have always come to the conclusion that we have to pay for our gentility. I am well satisfied myself, however.

By Mr. ARMSTRONG:—

Q.—Do you think you could get higher wages than you do if you were not organized—if you had no Union? A.—Well, I don't know. Take for instance, when I was in London thirteen years ago, when I went there the wages were five shillings a day, six pence an hour. It is now, I think, nine pence or nine and a half pence, which is an advance of something like fifty per cent. But take where I was born in Elgin, Scotland, wages have increased according to what I am told by men now with me from Elgin—wages have increased, without any societies or anything of the sort, two hundred per cent., and as that is the case I do not know whether they have been the means of keeping up wages or not. I would not like to say, because I know plenty of trades which, without them, have increased their wages fully as much or more.

Q.—In Toronto? A.—No. Take London, England; there is a great centre for Trades Unions; I belonged to them there myself. I was under the impression that they might be the means of keeping wages up, but then again, looking at other places at home where they have had no Union they have advanced journeymen's wages from ten shillings, which was the rate in my time, until now they get thirty shillings. In London we had five shillings a day, or thirty shillings a week, and perhaps now they don't get more than two pounds. There is an instance of the two places, and we have different trades the same way.

Q.—Have you any sick benefit or anything like an insurance fund in your Union? A.—I don't belong to any Carpenters' Union; I belong to an independent Union which has perhaps 250 or 300 members that do not believe in strikes. We are called the Independent Labor Union.

Q.—Do you work amicably with the men who do belong to the Union? A.—Yes. We want if possible all to come into line together and live in a brotherly way; that is our meaning.

Q.—Do you know if the Carpenters' Union has any sick benefit fund or an insurance fund of any kind? A.—I believe they have; they use to have, but of course I do not know now.

Q.—You spoke of being engaged in several strikes; how many were you engaged in? A.—Take the first one in London, England; I had fourteen months of it; that should have been enough to tame me, but I have been in every strike that has come in my way since.

Q.—Well, take Toronto? A.—I have been in three strikes, besides different agitations we have had that have not been strikes. Of late there is an agitation comes as sure as summer comes.

Q.—What has been the cause of these strikes? A.—Well I could hardly explain my own sentiments on them.

Q.—Have you struck for advances of wages? A.—Well, we struck for advances and likewise for shorter hours; both come together very often. In fact in the strikes I have been in in Toronto like many others I have hardly known what they were for.

Q.—When these strikes have taken place have they been voted by the whole of the men in session? A.—Not by the whole, because we never could get the whole or half of them together in the carpenters' trade.

Q.—Have they been the general sentiment of the carpenters? A.—Yes, I

suppose it was, although the carpenters have always been loth to turn out to public meetings or anything of that sort, so that I would say that perhaps the majority were never there. It is seldom you see a meeting in Toronto attended by one-half the carpenters.

Q.—And did those who did not turn out approve of the strike? A.—No, they are pretty well divided there. I believe that in Toronto there are two-thirds of them conscientiously against strikes. I know that some of my best friends, who are society men, are against them, although they may go out on strike.

Q.—If they are against strikes—a large number of them—from what influences are the strikes precipitated? A.—Well, I don't know. Of course, in the different Unions, the minority must always submit to the majority and if it is carried by the majority the rest have to feel satisfied; that is the only reason. I have had to do so myself often, when I was opposed to anything of the sort, but I went with them and stuck out with them because the majority were in favor of it. Still that was the reason I left the Unions, I am sorry to say; I thought it was just as well to keep away and see if we could not fight more harmoniously outside, although when I was in the Union I supported them and stuck to them and when the majority of them were for going out of course I went too.

Q.—Have strikes been successful or unsuccessful? A.—Well, I don't know; They have been successful and unsuccessful too. The last strike was very unsuccessful.

Q.—What was that for? A.—It was for an advance of wages—at least that was the principal thing. They were twelve weeks out on strike, and they commenced again on the same terms; in fact some went back on less wages instead of more.

Q.—Was any allowance received from any fund by the strikers? A.—I do not know as to that; I was not amongst them and don't know anything about their financial standing.

Q.—Was the last strike of which you spoke ordered by a large number of the men or were any special influences brought to bear upon the men? A.—Well, I don't know. I went to one meeting to hear what the results would be; I think it was in this hall and it was decided that they could come to no conclusion. Then at another meeting it seems that the majority arranged for the strike but I did not know anything about it until Saturday when I saw the men in the shop picking up their tools. I suppose they thought I would not go out; so they did not say anything to me, but I heard that there was to be a general lockout. I went to my employers and asked them if they were going to shut up the shop; I said "if you do I want my money and I will go somewhere else; I want no man to lock me out." Our association had arranged that we should not go on strike; we had arrangements made with the different employers for an advance of wages to men who are worthy of it at the first of next season after existing contracts were finished. However we kept on on the conclusion come to the previous night.

Q.—Are many apprentices employed in the carpenters' trade? A.—No, there are very few.

Q.—Do many boys desire to be apprenticed to it? A.—Well, no, I don't think so.

Q.—If a boy desires to be apprenticed is there any difficulty on his part in getting work? A.—No, not that I am aware of.

Q.—As many as choose can enter the business? A.—It used to be the case the boys came and served their time. It is different now from my boyhood when we were indentured five years as I was. But I have seen boys who were to serve four or five or three years but after being there two years they left their employers and went somewhere else without serving out their time. Of course the employer cannot compel them and the employers lose much in that way. Whether dispensing with indentures is a good system or not I do not know but I know that in my time we had to serve under indentures.

Q.—Do you think they learned their trade better in those days than those boys you mentioned who go from place to place? A.—I think so—far superior.

Q.—And the men who learnt their trade in those days and who were indentured

are better workmen than those not indentured? A.—Taking my own trade which, is made of different branches, they used to take it right through, whereas now it is more divided into different parts. Men who served their time as I did went right through it and were supposed to learn it.

Q.—When any strike has been ordered and when there has been any difference of opinion between the men and the employer has there ever been any attempt at arbitration? A.—Yes, there has. I believe there has.

Q.—And what has been the effect? A.—Well, I do not know that they ever came to anything. I think with regard to that, that the great difficulty is this: I have found fault myself, and I suppose others have on this question of wages. The different Trades Unions do not believe, many of them, in the grading system; they want to be paid alike. Now, if we are all equal in the sight of God, we are not in the sight of man; some men have more than others, and the weak mechanic has to go to the wall; in the time of prosperity, the good always have to pay for the bad, and when the hard times come, away go the bad ones and they are knocked about all over the country like shuttlecocks. I think it would be better if the Trades Unions would grade men according to ability, and then I think the masters and the men could settle all their difficulties in an amicable way.

Q.—Is it possible to do so, do you think; would the poor workman be content to be put in the lower scale? A.—Suppose that I give you an instance again. When I was in England twenty-five years ago—and no doubt the same thing exists now—I have seen very good men coming from Scotland to England. I belonged to the Amalgamated Society, and have seen excellent men getting six pence an hour wages, but they were not worth it, many of them, at the rate which was paid for contracts. We got them into our societies, and then they would say: "Let us work for one-half penny less an hour for six or twelve months, until we are accustomed to the trade." Our societies would not allow them to do so, but, I thought myself then that it was rather cruel, and the result was that they were knocked about and could not get a job. There is no doubt that to-day there are plenty of men who would prefer working for less until they became masters of their trade to a certain extent.

Q.—We have rather got away from the question of arbitration. Do you think that a court of arbitration, established by law and one whose decisions would be final, would be a good thing as between employers and men? A.—I do, Sir. Yes, I have thought that for many a day. There should be something in the way of impartial arbitrators, and let their decision be final. At present we are going on in such a way that we have difficulties almost every year.

Q.—Do the carpenters of Toronto receive cash for their wages? A.—Yes, sir.

Q.—There is no truck system? A.—Not that I am aware of. Wages have since I have come to this country always been paid in cash every fortnight.

Q.—They are paid promptly, then, as a rule? A.—Yes.

Q.—Do you think that weekly payments would be an improvement on fortnightly payments? A.—Well, I would just as soon have fortnightly payments myself.

Q.—Is it not a disadvantage to a struggling man to be paid once a fortnight only? A.—It might be; I do not know, I am sure, but I cannot see any disadvantage. It is no disadvantage to me; in fact I think it is an advantage.

Q.—On what day of the week are you generally paid? A.—Saturday.

By the CHAIRMAN :—

Q.—In the evening? A.—No, at dinner time; that is our way.

By Mr. FREED :—

Q.—Do you think that is as good a day as any? A.—No, I do not. I used to be paid on Thursdays when I worked for Mr. Gearing, and I prefer either Thursday or Friday.

Q.—Do you think that when the men are paid on Saturday they are apt to drink more than if paid on other days? A.—Oh, I don't know; it might be with some; some men drink largely after they get money.

Q.—Would it not be an advantage for the good wife to have the money on Saturday, so that she might get the Sunday's supplies? A.—Friday or Thursday night would be preferable for marketing; it gives a chance for the Saturday market.

Q.—Do you think it an advantage to have the drinking places closed on Saturday night? A.—I do; I go for that every time, although I am not a teetotaler. I go for closing them altogether if you like.

Q.—Do you think there is less or more drinking amongst working people now than there was twelve or fifteen years ago? A.—Well, I fancy, perhaps, there is about the same. Of course, our population has increased so much since then that it is larger on the whole, but in proportion to the population I suppose there is not much difference.

Q.—Is the shop you work in run by machinery? A.—No, sir.

By Mr. ARMSTRONG:—

Q.—What is your opinion of the present lien law; is it a benefit to the workmen? A.—I think it is, but I never had any occasion to avail myself of it. I have heard some say that it was no good. I know of a case where a man went down to the registry office and paid a dollar to get it registered, and a month or two afterwards he said it was no good; that it did not avoid difficulty, but whether that was the fault of the law or of the party who applied for it, I don't know. In another case where the employer went away and did not pay his men, two of them got liens on the building, and though they got their money it was only after five or six months, and I do not know if they got it all then. I could not say if the law is of much benefit or not.

By Mr. FREED:—

Q.—Do you know whether in consequence of the lien law a weak man financially would be enabled to get a contract? A.—Well, I do not know; I am not aware of it.

By Mr. ARMSTRONG:—

Q.—Were there interviews took place towards a settlement between the employers and the employees before the strike you speak of? A.—I think there were.

Q.—And after they had the strike they tried to arbitrate? A.—As I said previously the grading of wages is a difficulty. They want to fix a certain wage, and I suppose the employers would not agree to it, and such being the case they considered there was nothing to arbitrate upon. I believe it was said that if the carpenters would come to the grading system they could have settled the affair very nicely, but when you put all the men on the same scale that is where the difficulty exists.

Q.—In the carpenter's trade is a certain notice given before a raise of wages is asked? A.—I think there is six months, but being out of the society myself I cannot speak with certainty.

By Mr. FREED:—

Q.—Do you know the condition of the machinery in those carpenter shops in which there is machinery? Is it properly protected so as to avoid accidents? A.—Yes, all the shops I have been in. When I was in Gearing's, J. D. Smith's and Jacques and Hay's everything seemed to be secure.

Q.—But that shop was altogether furniture manufacture? A.—Yes.

By Mr. ARMSTRONG:—

Q.—Of course it is only within the past few years that the carpenters have commenced to organize. Has organized labor among them benefited them in any respect with regard to increase of wages or the shortening of hours of labor? A.—Well, in shortening the hours it may have. A good many of us outside wanted eight hours; we tried hard for that for a long time, and we think that we outside have been the means of getting the nine-hour arrangement.

Q.—We have in Toronto an English Society, an American Brotherhood and also an Independent Labor Union. What is its object chiefly—that is, the one you

belong to? A.—Chiefly to dispense with strikes; but if any member chooses to go on strike he can do so; he is free to go, but as a body we cannot go on strike. But an individual can be a member and still go on strike. We had two or three of our members who went out on strike, and we left them free to act for themselves.

Q.—You have not got a minimum rate of wages? A.—No. For instance, if we find that a member is worth a little more than he gets, we uphold him in asking for higher wages.

Q.—How do you uphold him? A.—Well, employers ask us what we think of them, and we conscientiously tell them, and if we see another party who wants a good man we recommend him, and he can go and get a fair price.

Q.—You would not call that a strike? A.—No.

Q.—It is just this, that if you do not get the wages you want you go somewhere else? A.—If we think a man is worth more than he is getting and the employer will not pay it, he can go somewhere else. There is no strike there. That is just as much as I would do personally myself. If I thought I should get better wages I would give my present employer a chance, and if he would not pay me I would give another man a chance to engage me.

By Mr. WALSH:—

Q.—I understand you have a grading rule? A.—Yes.

Q.—That is one of your standard rules? A.—Yes, we do not expect men who have not been long in the trade to receive the same wages as men who have been in it all their lives. We do not expect a careless man to receive the same pay as a man who is always trying to be master of his trade. Some men are always careless; the principal thing they think about is their pay.

Q.—How long have you been connected with that independent organization? A.—About a year or fifteen months.

Q.—How have you found it work? A.—Very well, indeed.

By Mr. HEAKES:—

Q.—How many members have you? A.—250 or 300, bricklayers, masons and carpenters. We do not have any particular meeting night except during an agitation, or at time of strikes, or anything of that kind. We had meetings last year twice a week. Otherwise we meet in the house of one or other of our members, and consult together.

Q.—Are there any benefits received from that organization? A.—No, not any particular advantages. We pay simply twenty-five cents in three months perhaps; after that just enough to keep us together. If there is any agitation in the trade we send a post card to each member, and that secures entrance to the hall of meeting.

Q.—But you really believe that organization of some nature, even of the nature of your own society, is necessary for the protection of the laboring man? A.—I do; most decidedly.

Q.—And the organization to which you belong you think is the best among them? A.—Well, of course, we are only forming now; we do not know what it will be for some time to come.

Q.—Do you think that those organizations which bind their members not to work at less than a certain wage have any effect or bearing upon yourselves in securing work for your men? A.—Well, I am not aware that they do.

Q.—They have never attempted to prevent your men from working? A.—No, they have not, as I said before.

By Mr. WALSH:—

Q.—What I want to understand is, are you more likely by that system to get work for your own people on account of these organizations, or on account of being under a system of organizations? A.—Quite likely.

Q.—So, in reality, though yours is not the same as their organization, you do benefit by their organization? A.—I do not know what their benefits are.

By Mr. FREED :—

Q.—Does the fact that they are well organized give you better wages or benefit you indirectly? A.—Well, I am not aware of it.

Q.—There is a great deal of machinery used now in carpenter work, is there not? A.—Too much, I think.

Q.—Has it had the effect of driving carpenters out of work? A.—Well, I do not know, but no doubt doing so much has kept inferior carpenters in the field. I believe if there was not so much machinery there would be better mechanics, better pay, and steadier employment.

Q.—Do unskilled workmen work at machines? A.—I am not aware that they do. I suppose that after a few months they soon get skilful enough to run any of the different machines.

By Mr. HEAKES :—

Q.—I suppose that manufactured articles in factories can be produced cheaper by machinery than by hand, for instance, doors, sashes and blinds? A.—Well, I say that I can make them as cheap. In Toronto I have gone to men, and told them that I would take all the sashes and windows that they had, and have told them when they said that I could not do it, to go to the lowest shop in Toronto, and that I would do it cheaper. When wages were \$1.60 a day I got \$1.75 a day for such work.

Q.—Has the use of machinery lowered your wages? A.—Well, it may have; I think it would employ more in the winter time, that is, shop hands.

Q.—Has it lessened the price per hour? A.—I do not think that machinery has lowered wages, but, I say that if there were no machine shops at all we could get as much work without them.

Q.—The question is this, does the mechanic earn as much as he did before the introduction of machinery? A.—There is no doubt he earns more, but whether that is the cause I do not know.

By Mr. WALSH :—

Q.—With regard to your taking a contract for doors and windows and work of that kind, you are well aware that you might be a very good carpenter yourself at these things; you are aware that there are some men who can put up and finish doors and sashes, when there are other men who would be considered good carpenters in going through a house, but who would not be able to make the same wages as you would on a particular kind of work? A.—That is so.

Q.—Though they might be equal to you in other kinds of work in going through a house? A.—Yes.

Q.—Now, these men you do not class as the men you would put in at the lower rate of wages than that at which you work just because you are aware that a man accustomed to make sashes can make them like pop work, while another man who is a good carpenter at putting up and finishing would take double the time to make a sash that the other man would. A.—Yes, certainly.

Q.—Take for instance, stair building. It was almost a trade of itself in the old country; very few men that were general carpenters could handle that class of work at all. Many men in the association might be good carpenters, and be able to go through a house fully, and yet not strike out the lines required in winding stairs or anything of that kind. What we want to get at is the custom of the trade as regards good men in every branch of house work? A.—That is what I speak of, the average man all through. I do not take a man who can do only a certain part.

Q.—Comparing your labor in getting out stair work; taking labor in competition with machinery while a good man may do certain work almost as fast as machinery, yet do you think, taking all through, taking the twists of the stairs or anything of that kind, do you think that you could compare with machinery? A.—I do not believe I can, but I believe those acquainted with it could do it as well. Before machinery came in I have seen the work as well done as it is now.

Q.—Yes, and better, I grant you that; but can you do it as quickly? A.—Certainly not.

Q.—Or for the same price? A.—No, I could not; I am only speaking of certain people who do nothing else; it is like a trade by itself.

By Mr. FREED :—

Q.—Is carpenter work, house fitting, stair fitting, &c., more elaborate than it used to be? A.—Yes, it is in Toronto.

Q.—Does the use of machinery encourage this elaborateness of work? A.—It is quite likely.

Q.—You think that if machinery has taken some work from the men it has on the other hand created work? A.—We are all right in the summer time. The question is what is best to employ the great majority through the winter, and if we had less machinery and more manual labor there would be a better chance in that way. A great many more would have a chance, and, besides, there would be better mechanics, whereas the machines do so much work that the men get careless as to certain parts of their work.

By Mr. ARMSTRONG :—

Q.—But in the absence of that condition of things do you not think that the shortness of the hours of labor would give more work? It is almost impossible, you know, to stop the onward march of machinery. A.—The shortening of the hours of labor I look on like this: Take the summer months here. There is always a certain amount of work to be done in Toronto, and men are more employed, but the trouble is that there are so many holidays, and so much wet weather. I would not find fault with shortening the hours of labor; I am an eight-hour man, but I never find fault with a man who works ten hours. When the work gets slacker, make the hours six or seven; make whatever may be necessary to take up the labor whenever the men are beginning to get idle.

By Mr. HEAKES :—

Q.—Do you know the percentage of idle men in your trade in Toronto? A.—I believe it would be as much as one-half any way.

Q.—Do you not keep a record in your Union? A.—I think there must be one-half of them at any rate.

Q.—You would be surprised to learn that three per cent. was the outside last winter? A.—Do you mean idle men?

Q.—Yes? A.—What do you mean by winter?

Q.—I mean that three per cent. would be the average, taking it from the 15th of November to the 1st of April? A.—Our firm employ perhaps on an average, twenty to thirty men, and I know they are about as honorable a firm of employers as there is in the city. I have seen them keep on work at a disadvantage to keep the men employed, and I know that there is an average of ten per cent. unemployed in the winter. Perhaps a good day may come now and then, but that is not steady work; perhaps a day or a couple of days in the week or something like that.

Q.—Yes, at your shop, but do not they get work elsewhere? A.—They cannot get it at the shops, because we work in our shop in as cold weather as any one else.

Q.—Do you think that one-half the men in your trade in Toronto are idle in the winter? A.—I do. Unless it is weather like this that is the case; I am speaking of the weather which is very severe. You cannot get men to shingle when the thermometer is ten degrees below zero, and the last two or three years have been the worst I have seen in Toronto; the winters have been very long and severe.

By Mr. FREED :—

Q.—Do you know any employing carpenters in Toronto who give any proportion of their profits, over and above wages, to their workmen? A.—No, I do not.

Q.—Have you given any thought to that matter? A.—I have often thought it would be a very good thing if we could co-operate together in that way, and I do not see why it should not be done. I am afraid though, that when the end of the year showed a balance of profit it would be all right, but if there were a loss then it would

be all wrong, and I fancy a good many would like to know before they commenced how the employer was going to come out, so that I am afraid we could not get it to work very well.

Q.—Are any contracts required of you when you go to work for an employer, or do you simply say that you will go to work at a certain rate of wages? A.—I never asked, except when I came to Toronto, what the general rate of wages was, but at my pay day if I thought I was worth as much as another man, and did not get it, I could go somewhere else.

Q.—I asked you if your employer has ever required any contract from you. A.—No.

Q.—Do you know of any such thing being done in your trade? A.—No.

By Mr. WALSH:—

Q.—Are there two or three rates of wages for carpenters at the present time in Toronto? A.—Yes.

By Mr. HEAKES:—

Q.—How many rates are recognized by your society? A.—I suppose there are two.

Q.—Have you any knowledge of a document signed by the employers of Toronto fixing those rates? A.—Only by hearsay. Of course, I have not belonged to the Union long.

Q.—Did you ever hear that agreement read at a public meeting in Toronto? A.—I think I have; it was supposed to be one at any rate.

Q.—How was that agreement arrived at? A.—I do not know. I forget.

Q.—Was it by arbitration or conciliation? A.—I pretty well forget that, but I believe there are two or three sides to that question.

Q.—Did the employers meet the men in any way? A.—I do not think they did. If I understand the matter aright they sent word to the men that they had nothing to arbitrate about. The principal grievance was about the grading, and the employers said: "If you want to make the men all alike, and we want to grade them there is nothing to arbitrate about."

Q.—I am speaking now of July, 1886, when an arrangement was arrived at between the master carpenters and the association—the Journeymen Carpenter's Association. Do you remember the agreement being signed? A.—I do not.

Q.—Do you remember the meetings held in the Temperance Hall? A.—Yes.

Q.—Well, did the employers meet their men on that occasion? A.—I do not think they did. But I cannot say anything about these writings.

Q.—You were present when that agreement was brought about? A.—Yes, I attended all their meetings as I do now.

Q.—You do not think the employers met their men? A.—I do not think they did then, but they gave reasons; I think a deputation went to them. The employers wrote us asking us to meet them. The employers, of course, did not go to the meeting, but there was correspondence or private interviews.

Q.—Then there have been efforts made in Toronto to settle disputes by conciliation? A.—Yes.

Q.—And have those efforts ever succeeded? A.—No.

Q.—At least you have no knowledge of their succeeding? A.—No, they never seemed to come together and settle anything.

Q.—How was the nine-hour movement settled? Was it by a strike? A.—No. I remember I went down and spoke for myself, and then others came. I said I wanted the nine-hour system, and then our bosses said they did not mind.

Q.—Was there any agreement drawn between the master carpenters and the journeymen about that nine-hour movement? A.—Not that I am aware of.

Q.—Because you were not present at the time, is that it? A.—I did not say but that there might be. I did not attend meetings with regard to the nine-hour movement, but some of the amalgamated brotherhood were not for going into the

shop, and they spoke about it, and I went in for myself, and my employers said they did not care if it was eight hours, if they did not have to pay for it.

Q.—You think conciliation in Toronto has been a failure? A.—I do.

Q.—Is there any convict labor in Toronto in your trade? A.—They speak about the Central Prison, but I am not aware as to that. I have heard of the existence of different trades in the Central Prison, but whether it amounts to much I do not know. I am not aware of having seen anything out of the place come through my hands.

By Mr. FREED :—

Q.—Has there ever been any co-operative industry among the carpenters? Have the workmen amongst the carpenters ever co-operated to do work on their own account? A.—No, they have talked about it, but I do not think it ever came to anything.

By Mr. HEAKES :—

Q.—What are the sanitary arrangements in connection with the different shops and factories that you have worked in? A.—Very good; nothing to complain of. I speak, of course of Jacques and Hay's, and Gearing's, J. D. Smith's, where I have been; they seem to be all right. Jacques and Hay's was the best I ever saw; the closets there had hose by which the water could be put on so as to cleanse them right out.

By the CHAIRMAN :—

Q.—You think that everything necessary was done as far as they were concerned? A.—Yes.

By Mr. HEAKES :—

Q.—What is the condition of the workmen's dwellings? A.—Those I am acquainted with live comfortable enough; of course, some of them may have a pretty hard time through misfortunes or things of that kind.

By Mr. ARMSTRONG :—

Q.—You believe that the apprentice system has a tendency towards making good workmen? A.—Yes, I believe that indenturing a boy with a good employer is a good thing; I believe in serving on time, and I think it was really a mistake doing away with the indenturing system, because boys can now go away after serving a year or two to another place, perhaps because they get a little more a week. This is really an injustice to an employer, and even to other fellow workmen; and these boys are a class who a year or two afterwards will be agitating perhaps, and get a whole gang to go out on strike.

By Mr. WALSH :—

Q.—Do you think that as a general rule the workmen with whom you have been associated are anxious about doing their work well for their employers? A.—Yes, I do.

Q.—Have you ever been connected with any employing firm where there was any system of fining the men for any breach of duty? A.—No, never.

Q.—Such as neglect of hours? A.—No, not in Toronto.

Q.—Have you known of it in any other place than Toronto? A.—Yes, I heard of one shop at London, and two at Aberdeen, Scotland. In going into a shop there were regulations hung up which you had to abide by, but, of course, it was optional whether you went to work or not.

By Mr. FREED :—

Q.—Do many men with whom you are acquainted save money? A.—Yes.

Q.—How do they invest that money? A.—In the Post Office Savings Bank; a good many do that.

By the CHAIRMAN:—

Q.—And not in dwelling-houses? A.—I speak of some single men who have saved a good bit of money in the Post Office Savings Bank, and in the course of time have done what a great many others ought to do, take wives and settle down to pay taxes. It is a great evil amongst carpenters that they do not marry early enough, and if two-thirds of the carpenters of Toronto were married men to-day they would have something to think of besides wealth, and that would do more to end disputes and strikes than anything else.

Q.—You say they put their savings in the Post Office Savings Banks. Is that any advantage? A.—I do not know as to that.

By the CHAIRMAN:—

Q.—They get a greater rate of interest I suppose; do they not get four per cent.?

By Mr. FREED:—

Q.—Or is it that they have better security? A.—Yes, I suppose there is; I think it is better than one or two of the banks of Toronto were proved to be last week. A good many carpenters are strangers when they come here. I know two or three, who came here the last year or two from Scotland and others from London; they had a little money with them which they wanted to invest, and they asked me the best bank to put it in, and I told them that there was one bank I thought was sure enough, and that was the Post Office Savings Bank, at any rate until they got acquainted with the country, and then they would know better how to invest their money.

Q.—Have you any co-operative building societies in Toronto? A.—No, I do not think so.

---

W. A. DOUGLAS, Toronto, called and sworn.

By the CHAIRMAN:—

Q.—What is your occupation? A.—I am assistant manager of a Loan Company. I have prepared what I wish to say in written form, and if you have no objections I would prefer giving my evidence in that way. I may say that I come here as a representative of the Anti-Proverty Society.

(The witness then read the following paper).

To the Labor Commission from the Anti-Proverty Society.

In addressing you on the Labor problem we shall take the liberty of calling your attention to some facts respecting your present methods of distributing the products of labor.

Let two men settle on different sections of land. Years pass by, the one section continues to be a farm while the other has become the centre of a populous city. The farmer ends a lifetime of toil with a property valued from \$3,000 to \$5,000; the land owner has a property that may be worth a thousand times that sum. The service of toil rendered by the farmer has been vastly in excess of that of the land owner; but the reward of the latter has been enormously larger than that of the former. It would not be difficult to multiply examples to prove that reward is not merely not in proportion to production but that it is inversely so. That part of society which produces the most must be contented with the smallest share of the product.

In discussing this subject it is necessary to point out that there are two kinds of values marked by clear lines of distinction.

The laborer plants some seed, say that of the cotton plant. He tends the growing plant, picks the wool, spins, weaves, and at last furnishes a finished garment. This is the production of one kind of value.

The characteristics of this form of value are:

1st. Toil needed in its production.

2nd. The production of a commodity that did not exist in that form before,—an addition to the wealth of the world.

3rd. The disappearance of this commodity when consumed or worn out.

4th. Toil again needed for its renewal.

And this must go on forever—toil producing, wealth produced, wealth consumed, toil again necessary to maintain the needed supply.

The other kind of value shows its characteristics most prominently in the case of land, and these characteristics manifest themselves very markedly in the growth of a city or town. When the population is small the value of the land is low; as population increases, values advance, and so long as population remains round that spot, the values continue. Note the wide distinction between this kind of value and the values of labor-produced commodities.

1st. Does it require toil for its production? No.

2nd. Does it indicate an increase of wealth? Does it appear with the production of some new commodity that had no existence in that form before? No.

3rd. Does the value disappear with consumption? Does it wear out? No.

4th. Is toil necessary for the maintenance or restoration of this value? No.

Four characteristics can be affirmed of the value of food, clothing, machinery, &c.; namely, toil, increased wealth, transient duration, and toil for restoration. None of these characteristics can be affirmed of that value which comes to land from the crowding of population.

When a number of toilers bring to market garments valued at a thousand dollars, they bring the clearest evidence that they have rendered the wealth of the world more abundant by the amount of that commodity.

When a man obtains an acre of land at a value of one dollar or fifty dollars, and through the crowding of population that acre becomes worth a thousand dollars or it may be a hundred thousand dollars, can that man show that he has made any addition to the wealth of the world? Not by any means, but the very reverse.

As population increases, land becomes more scarce, the people are poorer in land.

The toil-produced values are a sign of increased wealth; the increased values of land caused by increase of population are a sign of diminution of wealth, an evidence that land has become more scarce.

Hitherto our laws have almost if not altogether ignored the difference between these two kinds of values. The effects of this oversight in our laws may be now pointed out.

When land has been patented, not merely did the patentee obtain security for the possession of his own improvements; but he became almost absolute owner of all the value that might accrue to that land from any source. He was thus possessed of the power to appropriate not merely the value produced by himself, but the value that accrued from the improvements of others, or from the increased demand caused by increase of population.

Mark, therefore, what has taken place at every spot where population has centred.

As land values increase without toil for their production, and as the so-called owner of the land is allowed to appropriate this value without limit, therefore, these so-called owners may become wealthy without toil.

As the land value increases without the production of any new commodity, without any increase of acreage, so the land owner may become wealthy without producing any wealth; he may take and not make; he becomes rich, but does not enrich in return.

As land values increase with increased scarcity of land, with increased impoverishment of this commodity, the land owner becomes rich in consequence of the impoverishment of the rest of the community.

As land values continue for all time so long as population remains round that centre, and as these values require no toil for their maintenance or renewal, the land owner who secures a town site, obtains the power of living without toil, and he is empowered by our laws to pass this power on to his heirs and assigns forever.

The practical effect of our land laws is to place almost absolute power over the

land with all its possibilities in the hands of one part of the community, with the power of excluding the other portion; and we find the result on this continent precisely the same as in the old world: poorly paid toil at one end and superfluous wealth with no toil at the other.

We can no more dispense with toil than we can walk on thin air. By giving the absolute possession of land, by allowing the owners to appropriate all the value, we thus permit one portion of the community to appropriate a value that they did not produce, and a value which permits them to live without toil; consequently, all the toil needed for the maintenance of society and the maintenance of government, must be performed by the rest of the community.

As the increase of value of a lot of land caused by increase of population is not an increase of commodities and consequently not an increase of wealth, what is the meaning of the increased wealth of the land owner? He has no more land, he produces nothing more, perhaps less—whence, then, comes his increased wealth? There is only one source; namely, the product of other people's toil. His increased income means the diminished income of the toiler. Some of the ground rentals in Toronto in the last fifty years have increased twenty-five fold. The land owner has done nothing to the increase of this value, but labor, whether of the brain or hand, must surrender to him twenty-five times the amount it had to surrender formerly. When the shoemaker offers to the tailor shoes in exchange for clothes, there is an exchange whereby each is mutually enriched. When population increases, and land becomes relatively more scarce the exchange between the landowners and the occupants is not one of mutual enrichment; but enrichment of the one by the impoverishment of the other.

The immense effect this method of land tenure has on the rate of wages, we may observe by noting the product of the poorest land occupied. In the back townships of the province there are certain occupied lands so barren that they yield no rent. The product is so scant that with very hard toil the occupant can obtain little if any more than sufficient to maintain a very meagre subsistence. In the more favored districts where the soil is more fertile rent appears varying on agricultural lands from one to five dollars per acre. In the neighborhood of Toronto market gardens rent as high as \$20 per acre. In the best part of the city rentals vary from \$25,000 to \$40,000 per acre. The variation of annual land value is from nothing in the poorest land to \$40,000 per acre in the best.

Let the laborer on the poorest farm traverse from the poorest land to the best, will he be any better off? As a rule, no.

The productiveness of his labor will vary enormously. On the poorest land it is small, on the best it may be enormous, but the laborer enjoys not the benefit of the increase.

By our present land tenure the land owner appropriates all the advantages of location, and the laborer can obtain no more than he could obtain by tilling the free, no-rent, barren lands.

But the margin of cultivation is determined by population. Our population is comparatively sparse, but it is increasing rapidly. From about five million on this continent at the beginning of this century population has increased to about seventy million. Every twenty-five years population doubles.

In another generation with the population increased to 150 million, must it not be inevitable that cultivation will be crowded back to poorer land? With such crowding back must not wages inevitably fall; for they cannot be maintained any higher than the product of the poorest land cultivated, any more than water can be kept above its level.

We feel no hesitation in urging upon your notice these facts as being incomparably the most important factors in determining the condition of the laborer.

When population was sparse and unoccupied land still abundant, the power of the land owners to appropriate the product of the toiler was comparatively small—ground rentals were low. With every increase of population his power increases— toil must surrender more. With every increase of population, whether native or by

immigration, the obligation of the toiler grows. It is a growing debt, an increasing obligation, which no amount of industry, no amount of thrift can possibly discharge; an everlasting mortgage which dooms one part of society to everlasting toil and everlasting poverty—can any inventive genius devise mechanism skilful enough, organize labor wisely enough, exercise industry enough, co-operate with wisdom enough, to get rid of this crushing, never-ending obligation? There is but one remedy.

All these facts point to but one conclusion, namely, the appropriation of the ground rentals for public purposes—a simple land tax and the abolition of all other taxes.

To produce a garment requires the combined labor of a host of producers—from the cotton planter, to the saleswoman in the store. Justice and our laws insist that the value of this garment belongs to every one who has aided in its production, transportation or exchange.

To give a value of half a million dollars to an acre of land in the centre of Toronto requires the combined presence of one hundred thousand people; does not justice and should not our laws equally insist that this land value should belong to these who cause the value?

Let this value be appropriated as at present, and the permanent degradation of the toiler is inevitable. We simply ask that the values caused by the community shall be appropriated by the community for common purposes, and that the individual should be allowed to retain all that he produces except that portion that he would have to surrender for his advantage of location.

By the CHAIRMAN :—

Q.—Of how many members is your society composed? A.—Well, we started just a few months ago and I think we have between forty and fifty members.

Q.—Have you any branches? A.—There are branches but we have not yet put ourselves in communication with them; it is a comparatively new movement, and I cannot tell to what extent it has gone.

By Mr. FREED :—

Q.—Is your society independent or is it connected with a central society? A.—We are independent, receiving no charter or anything else of that kind; in fact we make it very independent by admitting everybody who comes along and pays the fees.

By the CHAIRMAN :—

Q.—You propose that the land should be taxed to pay all the expenses? A.—Yes.

Q.—Municipal and general? A.—Yes.

Q.—Provincial and Dominion? A.—Yes. I should perhaps be a little more general. In specifying the values which accrue to land there are other commodities such as mines, water-powers and perhaps some others—natural commodities, with which the Creator has endowed the globe and which, being given by the Creator, belong to the whole community and should not be appropriated by any one class. Land, however, is the principal one, though there are a few other commodities in the same category.

Q.—You would tax the value of the land but not the improvements? A.—Yes.

Q.—What is the original value of an acre of land in Toronto? A.—My wife's grand father sold land for about four dollars an acre sixty or seventy years ago.

Q.—And before that time it was worthless? A.—Yes.

Q.—And you would put the tax at four dollars an acre on all the land? A.—Yes. on that particular piece of land at that time say four or five per cent., or whatever rate might be necessary to pay the tax.

Q.—What would be the revenue from Toronto? A.—I have not made an estimate of that.

Q.—Have you any statistics to show what the expenses of municipal, provincial or Dominion Government would be? A.—No.

Q.—Then really you don't know what amount on the land per acre would be required for Toronto to pay its share? A.—I don't know whether it should be put three or four or five per cent.; I have made no estimate of that kind.

Q.—What are the taxes now upon real property in Toronto? A.—It borders close on two per cent.; nominally it is about one and a-half per cent., but if you add the local improvement tax it amounts to about two per cent.

By Mr. FREED:—

Q.—Including the school tax? A.—Yes.

By the CHAIRMAN:—

Q.—Take for instance the Queen's Hotel; there is a vacant lot on each side of it; you would tax the vacant lots the same as the occupied? A.—Yes.

Q.—And you would tax the laborer's dwellings the same as the Queen's Hotel? A.—I would tax the two lots in precisely the same way.

By Mr. CLARK:—

Q.—And how would you tax land in the country? A.—Simply on its value— independent of improvements.

By the CHAIRMAN:—

Q.—Does not the society as its principles are set forth by Henry George really amount to a confiscation of land property? A.—Not at all.

Q.—I think that is what he proposes? A.—No, you are mistaken, quite mistaken.

Q.—I think his idea comes to confiscation? A.—No, it is simply a question of what is property.

By Mr. WALSH:—

Q.—Taking another view of labor—the fisherman is a laborer to a greater extent? A.—Yes.

Q.—Well, what would be done in his case? A.—Well, he has got to have a place to land and dry his fish; they all pay rent somewhere.

Q.—But he must take the fish before drying them? A.—Yes, certainly, but still he must have a place to land them.

By the CHAIRMAN:—

Q.—Supposing I bought a property a year ago and pay for it; is it to be taken away from me for the benefit of the community? A.—Not at all.

Q.—Take the Queen's Hotel? A.—At present you have to pay so much to the Government every year for the privilege of living in the place, so instead of charging you on the hotel we would place the tax on the land and leave the hotel free.

Q.—You do not go further than that? A.—No.

Q.—That is a very modified form of Henry George's view? A.—Well, I do not care what Henry George says, that is my view.

Q.—When you talk about poverty, &c., how many original owners are there here in Toronto, or their representatives? A.—I could not give you any idea.

Q.—You speak generally of those who have benefited from the toil of others? A.—I know of a few where the land has been in the family for a great many years, but only a few.

Q.—Now what is the proportion of vacant lots held by the people who are not rich, and those who are rich, as we might say? A.—I could not say; the bulk of the land around Toronto for the last few years has been grabbed by land speculators.

Q.—Was there not a boom a few years ago in which there were many who lost money? A.—Yes.

Q.—And should they not be recompensed? A.—No, not at all; we would put it such a way that there would be no losing or gaining.

Q.—But we are talking of the man who has bought property subject to the laws. I have been following the elections in New York, and at one of the meetings Mr.

George was interrupted by one man who said the grandfather of my neighbor left him United States bonds, and he claims to have a right and interest in that property, and Mr. George said certainly. The man went on to say my grandfather left me a farm and I think I have a right to it. Henry George said no, because your grandfather never had a title to it? A.—That is not the answer I would give.

Q.—Well, I do not want to argue with you at all, I only wish to know the facts? A.—Well, if you were to ask me I would say the improvements on your farm should undoubtedly be yours against the world, but the value on your farm so far as it has been given by society should be taken by society for taxation. The improvements should belong to the individual, but so far as society gives value to the land so far should that value be taxed. So far as the Anti-Poverty Society has declared itself that is the one point upon which we are all agreed.

Q.—If you make the tax equal, if for instance you were to tax the property at the Queen's Hotel of which I spoke, in the way you propose, putting the tax on the whole property at the same price, would you increase the tax on the land? A.—I could not tell without finding out what his taxes are now.

Q.—That is the whole point I think—that is whether under your system the proprietor would not have to make it up by increased rents? A.—I did not understand your question. You mean that if we increased his tax he would increase the charges on his customers?

Q.—Yes? A.—As a rule he would not; as a rule the man who owns the land would have to pay the taxes. Take the land we are now on; it was valued at four hundred dollars a foot, not long ago; if the city doubled the tax the owner could not get over four hundred dollars for it and he would not charge more rental.

Q.—Why? A.—The reason is that the tendency everywhere is for every man to push up the value to its highest limit; he takes all he can get for it and if the Government steps in and takes a portion that would not enable him to increase the price. Further there is a large amount of land held by a lot of speculators who prevent the rest of society from getting at this land until the purchasers submit to their charges. Put on a ground rental in the form of a tax and they would have to drop it.

Q.—If you go that far that would be decided by statistics, but if you put on merely a confiscatory rent it is a question whether the speculators would not go on and keep the property and increase the value? A.—Well, in many cases where they tried to get a revenue—

Q.—But they pay taxes? A.—Yes, but not the taxes they should pay.

Q.—That, however, is a matter for the Council? A.—They don't pay the taxes we propose they should.

Q.—There is the difficulty; we want to know what taxes you propose and that you cannot tell us? A.—Well, take the land outside of Toronto held for speculative purposes; it is now taxed at a nominal value. I know of one piece of land the sale of which was refused a few days ago at \$450,000, but it has not been taxed at anything like three per cent. on that, for our law does not say that the owner should pay full rental value. What we propose is that he should pay the full rental value to the city or the municipality.

Q.—You mean not only that this should apply to cities, but throughout the whole country? A.—Yes.

Q.—But it comes to the same thing; if it is not confiscated then the value of the property increases? A.—My point—the one we want to bring forward—is the important effect this would have on the labor question.

Q.—What we want to know, and I have said more than I intended on the question, the important point to me at least is to know what, according to your information, the amount of rent would be; supposing your proposition should be carried into effect on the 1st of January, 1888, what would be the effect in the value of land? A.—It would diminish the value of land.

Q.—Then the important point to ascertain would be what the taxes would be on the property in Toronto, on the 1st of January, 1888, and what he pays now. A.—I could not answer that question.

Q.—That seems to be the whole question.

By Mr. WALSH :—

Q.—Take the case of two farmers whose farms lie alongside of each other; the owner of one is an industrious man who improves his property to a very great extent. Well, after ten years that farm is worth perhaps four times as much as the other, though they were of equal value when they started out. How would you manage in a case of that kind? A.—I would tax both the same.

Q.—But the farm owned by the man who improved his land would be much more valuable than the other? A.—Yes, and the improvements would be his and should be free from taxes.

Q.—Then, for his thrift and industry you would make him pay just the same as the other man? A.—No.

Q.—But his farm is worth more? A.—Certainly; you should not put a tax on his industry and thrift.

By the CHAIRMAN :—

Q.—But you are doing that; you are taxing the man who has worked hard to improve his farm and making him pay the same taxes as the man who has perhaps been drunk half the time? A.—Perhaps I do not understand the question. If one man is taxed on four thousand dollars I would tax the other on four thousand dollars.

By Mr. WALSH :—

Q.—Supposing that these farms were both composed of wild land at first, in ten years one increased four fold and the other is worth not much more perhaps than the day it was bought, for the want of work? A.—Then I would tax that precisely the same.

By the CHAIRMAN :—

Q.—And therefore you would tax the industry of the man who worked? A.—No.

By Mr. WALSH :—

Q.—If that farm were to be sold to-morrow it would be worth four times as much as the other? A.—Yes.

Q.—That would not be according to your own theory? A.—If the one man pays forty dollars taxes I would make the other pay the same.

Q.—Supposing that one man's farm is worth only forty dollars while the other man's by his industry in improving his farm runs up its value to one thousand dollars he is taxed more on the thousand than the other man? A.—I would not tax him more, I would tax him the same.

By Mr. HEAKES :—

Q.—Supposing there is a lot of land in the city on which is a \$50,000 building; you would exempt that building from taxation while on another lot on which is a small cottage you would exempt the cottage and tax the land the same as the other lot? A.—Yes.

Q.—At the same rate? A.—No; according to the value of the land not at the rate per foot; on King street land sells at \$2,000 a foot frontage.

Q.—But you would tax it at the same rate? A.—Certainly at same rate, a percentage on the value.

Q.—How then would you benefit the workingman if you tax him the same as the other? A.—At present the workingman or the working portion of the community pay all the taxes. As I explained in my paper, our present method of distributing wealth throws the whole toil of maintaining society on one portion of the community.

Q.—Yes, but if you take the value off the building which is worth \$50,000 and put it on the land the workingman has to pay his share of what has been taken off the other? A.—Yes, but as I explained, some people now don't pay any taxes at all.

By the CHAIRMAN:—

Q.—That may be the fault of the law? A.—Taking it as a question of economies or a question of ethics it is going to benefit the workingman in this way; at present the laborers, the toilers, have to pay to the holders of property in this city an enormous sum every year for the privilege of occupying Toronto. The toilers, whether manual or mental, must also provide every thing necessary for the public service, that is they pay all the taxes. This makes two funds that must now be provided by the toilers. By taking the first fund for taxes the toilers are relieved from one burden. That is one benefit. Then by putting the taxes wholly on the land we would make it unprofitable and hence prevent people holding land idle. They would use it for the benefit of society either by setting laborers to work or they would have to let some else do the same thing. This taxing of vacant land to its full rental value has several effects: 1st. Prevents men getting rich without producing riches. 2nd. Makes land more accessible so that every one could secure a site for a home. 3rd. Causes a demand for labor, by preventing people holding land in idleness. 4th. It would stop that process that now splits society asunder, carrying one part to luxurious idleness, by the form of appropriating increasing land values, and carrying another part to endless toil with poverty, by subjecting them to contribute these endless values.

Q.—But if you don't want to confiscate their property you must pay for it? A.—I want to point out the meaning of confiscation. At present the toilers of Toronto have to surrender every year thousands and thousands of dollars to a number of men for values which they never created; this I regard as a confiscation which we wish to put an end to.

Q.—Supposing I bought a property yesterday shall I not receive the rent tomorrow? A.—What you bought was really the power of taxing those workmen.

Q.—At any rate I would lose my money? A.—Yes, you would. At present the workingman of this world have to pay for the privilege of occupying the world.

By Mr. HEAKES:—

Q.—All of us do? A.—Oh, no; numbers of people don't. At present our law gives possession of the earth to one portion of society almost absolutely.

By the CHAIRMAN—

Q.—Are you a land owner? A.—Yes.

Q.—Can any one prevent you from being a land owner? A.—I am not objecting to the land owner, but I am objecting to a man taking the value of land as given to it by the community. I am objecting to the law allowing him to do so. Here is a lot of land in this city for the occupation of which one party has to pay one hundred dollars; another has to pay nine thousand for the privilege of occupying it; another seven thousand dollars; another ten thousand and so on. Now that comes off the toiler.

Q.—How did they acquire it; perhaps by hard and honest toil? A.—I was pointing out how it affected the laborer. The laborer every year has to surrender that amount.

Q.—How will you prevent it? A.—Instead of the laborer surrendering it every year it will go to the city or the state for taxes and the laborer will reap the benefit.

Q.—And the man who bought it has to have it confiscated? A.—You can call it confiscation, but I call it the stoppage of confiscation.

By Mr. HEAKES:—

Q.—You strike off so much for improvements, say you take five per cent. on the \$50,000, that would amount to \$2,500 which you would take off the rich man and still you would tax him the same on the value of the land. Now you must have a certain amount of revenue for carrying on the government and you derive that now from improvements and from the value of the land together so that you must distribute the amount which you now derive from the improvements—you must place that on the value of the land? A.—Yes.

Q.—Then my improvements being less than those of the man who has the \$50,000 house you would distribute it on my land as well as his. How would that benefit me? A.—The chances are that you are a workingman, working for your living. Now the other man need not have done any work, or his heirs after him for the next ten thousand years.

Q.—That does not answer my question. You create a fictitious value on my property and I have to pay my proportion of the taxes you take off him? A.—The chances are we would diminish your taxes.

Q.—The chances are you would not. You must have a revenue just the same and you take the taxes off the improvement and put them on the land? A.—At present the toilers are compelled to benefit a number of people who do nothing in return.

By the CHAIRMAN:—

Q.—How many men of those you call toilers will shortly be proprietors themselves? Is not the wheel of fortune, particularly in this country, going to make the rich men poor or the sons of rich men poor and *vice versa*? A.—We are passing through a transition period in the history of Canada, but it will not be long—perhaps forty or fifty or a hundred years—when the whole continent will be private property, absolutely in the possession of one portion of the community.

By Mr. FREED:—

Q.—Had not we better stick to facts and leave prophecy alone? A.—I say that in a few years the whole of this continent will be private property and is not that a fact? Judging by the past we can practically adopt that as being a fact. Now, under the present system of land tenure the toiler is compelled every year to surrender a large portion of that which he produces.

By the CHAIRMAN:—

Q.—But that is where we differ? A.—Well, am I right as to the facts? Is it not true that men are allowed to appropriate values which they never created?

Q.—You go on the principle that every land owner, every man who has got property, is never going to toil or do work of any kind. Now what is the proportion of people in Toronto who do not work themselves or whose children do not work for them? A.—I can show you number of men who take from this city an enormous amount of wealth each year and do not give a copper in return.

Q.—Then it all comes to this: it comes to confiscation, or, calling it by another word, you conveying my property? A.—That gentleman (Mr. Heakes) asked me a question which I was honestly anxious to answer and that is how to benefit the laborer. It would benefit him in this way, that at present the laboring man is compelled to surrender every year a large portion of his product to a number of people who do nothing in return and they are in power to do that in all time to come. Now, we propose that this surrender shall cease, so that instead of compelling the laborers to pay all the taxes we relieve them by putting the taxes on the land.

Q.—You propose that those who have shall give to those who have not? A.—I am confining myself to one particular kind of value.

Q.—But you know when you begin with one you do not stop there? A.—Yes, I stop there.

Q.—You may do so but your successors will go a good deal further? A.—Yes; but when I ask for justice we have a right to it and we shall not go beyond it.

Q.—You may hold certain views and not go further than you are to-day, but your successors will. Take the case of a picture which may have been bought for a song; it may turn out to be a rare picture; I may happen to be the fortunate owner of a picture which I bought for a few dollars but which I may be able to sell for many thousands? A.—Then you are entitled to all you got no matter what it cost.

Q.—But if I bought property in Toronto and it increased in value, what then? A.—The community gives the value to this property and you should not be entitled to an increase which the community gives.

By Mr. FREED:—

Q.—You told us that the laborer surrenders to the land owner twenty-five times as much as at some former period. You told us again that the permanent degradation of the toiler is inevitable? A.—Yes.

Q.—Now as the rental of land has increased in Toronto, has the condition of the laborer become worse? A.—I cannot answer that question, there are so many factors in it.

Q.—If your premises are correct it inevitably follows that the condition of the laborer will become worse year by year as the rental of land increases? A.—It may become worse, it may remain stationary or it may possibly advance, for this reason: with increased population there is the possibility of largely increased production. Now of that largely increased production a very large portion will have to go to the land owner, so that whether the laborer will have less or will have the same or a little more I am not prepared to say.

Q.—If the laborer is so oppressed by enormous land taxes in Toronto why does he not go to some smaller place, some village for instance, in which the land is less taxed? A.—Because he cannot have the advantages which he has here in Toronto in the way of exchange.

Q.—Then the laborer gets in advantages something corresponding to the increased taxes which he pays on the land? A.—Toronto is a better place for exchanges; he can afford to pay more here and he surrenders more.

Q.—He takes with one hand and gives it out with the other? A.—I do not exactly understand you.

Q.—How do the rates of wages run in Toronto as compared with smaller places where the land tax is less heavy? A.—About the same.

Q.—You think that in Oshawa, Dundas, Ayr and Galt wages are about the same as here? A.—Laborers can do as well there and if not they can come to Toronto.

Q.—Are wages as high in these places as in Toronto? A.—I cannot tell you as to the nominal wages, whether they are the same or not.

Q.—I want to ask you again the question put by Mr. Heakes. A wealthy man owns a lot and builds a large house upon it, and a poor man owns one upon which he builds a small house. If lots lie side by side and are equal in size you would tax them equally? A.—Yes.

Q.—The wealthy man would be relieved of the taxes he now pays on his improvements? A.—Yes.

Q.—Would the taxes throughout the city be larger or smaller than those now collected? A.—I do not understand your meaning.

Q.—Would the taxation imposed be greater or less than the taxation now imposed on the whole real estate in the city? A.—I cannot tell whether it would be more or less; it would depend a good deal on circumstances.

Q.—But if the same amount were to be raised the taxes on the poor man's land would be greater than he now pays on his land and house? A.—Not necessarily.

Q.—Would the taxes added to the land be greater or less than the taxes now collected from the improvements but which are to be removed from the improvements? The taxes would be removed from all buildings? A.—Yes.

Q.—Now would that tax which is removed be replaced by the same amount placed upon the land? A.—Not necessarily.

Q.—Where would you get the amount which is removed? A.—In some cases the taxes would be largely increased.

Q.—Where would you get the amount which you would lose by relieving the buildings? A.—In some cases the taxes would be largely increased.

Q.—Where would you get the amount which you would relieve the buildings from? A.—From the land.

Q.—And the taxes on the land would be greater than they are now? A.—Certainly.

Q.—And the taxes on the poor man's land would be much greater than now?  
A.—Yes, on his land, but the laboring portion of the community now pay all the taxes.

Q.—Would you collect the Customs duties and Internal Revenue taxes and so on?

A.—Speaking personally, not for the society, I think we should abolish all such taxes excepting those that it may be considered wise to retain for what we might call suppressive purposes; possibly we ought to keep a tax on liquor, and personally I would be in favor of that, in the form of licenses and so on. So far as taxes were retained for moral purposes, personally I should be in favor of them.

Q.—But all the rest on the land? A.—Yes.

Q.—How do you look upon tariffs with regard to other countries? A.—I object *in toto* to tariffs.

Q.—Now, with regard to the question of intelligence of mankind; don't you think there are a great many degrees of intelligence in men generally speaking? A.—Undoubtedly.

Q.—One higher than another? A.—Very largely so.

Q.—And the use of this superior intelligence by one man places him in a higher position with regard to what we call getting on in the world than another man who has not so much? A.—Yes.

Q.—Now, taking this matter of speculation either in lands or stocks or anything else, don't you think that a man of intelligence, and thrift, and energy, and all that should be the sole owner of whatever he should make by the exercise of those qualities in making a bargain of any kind, even in land? A.—No; I would not allow bargains in land.

Q.—Then you attack no other speculation except that in land. Take stocks or bonds by which one man aggrandizes himself more than another; is not that the same as speculation in land? A.—No; it is essentially different. We must have the earth for occupation, and if you speculate on that you speculate on the opportunity of robbing another man, but in stocks you can buy or not, just as you please.

Q.—Well, I really cannot see that there is much difference in the transaction. We know that in some places you could get land years ago at low prices while to-day it is very high. The land at that time was up for competition; it was open to any man to buy, and do you mean to tell me that if a man bought at that time in fair competition, not taking advantage of another man and his land either by increase of population or other circumstances, by the fact of a church or some public building was erected alongside of it—if other men were willing to give this man a good price for it, should that man lose the value which had accrued upon this land up to that time? A.—Yes.

Q.—What are your reasons? A.—Simply this: that the thousand men who were the means of putting that value on the land should claim a portion of that value. It takes say 100,000 people to make the value of that land, so the value should belong to them instead of to the individual.

By the CHAIRMAN:—

Q.—Are you for or against private occupation? A.—I would not interfere with private occupation at all; I would not interfere with the present system in that way.

By Mr. HEAKES:—

Q.—Would you exempt all kinds of wealth from taxation except land? A.—Yes, with the exceptions I have named. If it is wise to put a tax on whiskey I do not object.

Q.—It would be a *per capita* tax on the population? A.—No.

Q.—Where then would you get it from? From the article manufactured? A.—Put it on whatever you think best to suppress it, either by internal revenue or license.

Q.—Would you exempt all classes of wealth except land? A.—Exactly.

By Mr. FREED:—

Q.—If private ownership is retained, would the proprietors hold it as an investment and calculate to make interest on their money? A.—No, they would not.

Q.—And what incentive would they have to own land? A.—The occupation of it, the same as they have now.

Q.—Would they be inclined to improve the land under those circumstances? A.—Certainly; they would have to make a profit and they would get the profit only out of the improvements.

By the CHAIRMAN:—

Q.—Suppose you applied this system to Ontario and not elsewhere, how would it affect the farmer here compared with say those of the United States or the other Provinces? A.—It would place the farmers here in a better position.

Q.—By increasing the rent? A.—I would not increase the rent.

Q.—By increasing the taxes? A.—No; I would not increase the taxes.

Q.—And still you would make the land pay all the taxes? A.—Yes.

Q.—And you would not increase the taxes? A.—No.

Q.—How would the farmers' tax then compare with what it is now? A.—If you can tell now what the farmer pays in taxes we could arrive at it by statistics, but now you cannot.

Q.—We can tell pretty well? A.—We know the local taxes and if you tell me what he pays by the tariff then I could tell.

Q.—Each pays a different share? A.—You could find out the average.

By Mr. FREED:—

Q.—What is the amount of revenue derived by taxes from the people by the Dominion Government? A.—Customs a few years ago were about twenty-three million; I don't know what they are now.

Q.—And internal revenue? A.—I don't know.

Q.—Suppose we call the two \$25,000,000. What is the amount derived from the people by the Ontario Government? A.—I cannot answer that question.

Q.—The amount of money now levied upon the property of the country is in the form of municipal taxes only? A.—That is all.

Q.—That would remain as large as it is now? A.—Probably as large or larger.

Q.—Then in addition there would be the Dominion tax of say \$25,000,000. A.—Yes; but you would have to make an addition if you want to find out what they pay now. You must take not merely the revenue collected by the Dominion Government but the revenue collected by manufacturers on protected articles.

Q.—At all events you would raise all taxes on land, municipal, provincial and Dominion? A.—Yes.

Q.—Then the taxes on land would be much higher than at present? A.—The taxes on certain land, as far as land is concerned, would be higher, but when you take the double tax on land and improvements I believe many farmers would pay vastly less than they are now paying.

Q.—The improvements would be relieved from taxes but the aggregate of money collected would be greater than at present? A.—Not necessarily; in many cases it would be less.

Q.—How do you make that out? A.—I cannot give you any definite figures any more than this.

By the CHAIRMAN:—

Q.—Poor men would pay more? A.—They would pay vastly less, in being free from paying to the manufacturers.

Q.—To whom would they pay that? A.—They would keep it in their own pockets.

Q.—And what would the manufacturers do? A.—They would work for it like any other honest men.

Q.—Are they not honest men? A.—Personally they are just as honest as others, but the tariff gives them a dishonest advantage. The tariff is dishonest.

Q.—And does not the farmer get any benefit from others by being near say a large manufactory? A.—No, he does not.

By Mr. FREED:—

Q.—The amount raised from the land would be the present tax for municipal purposes *plus* the revenue for the Dominion Government? A.—Yes.

Q.—And instead of its being raised on land and improvements it would be raised on land alone? A.—Yes.

Q.—And the poor man with a small dwelling would pay on his land as much in proportion to the amount per acre as the rich man would pay on his land with his large house upon it? A.—Yes.

RICHARD T. LANCEFIELD, Toronto, called and sworn.

By the CHAIRMAN:—

Q.—What is your occupation? A.—I am manager of the publication department of *Grip*. The few remarks I have to make refer particularly to the inconsistencies of the present assessment laws, and I think it is one of the planks of the platform of our society that if the assessment could be equalized to a much greater extent than it is now, the laboring men would be vastly benefited.

Q.—Well, we want facts? A.—I am going to try to give you facts which will support that statement. Now, the instructions given to the assessors are that they are to assess all real estate at its actual cash value, as it would be appraised in payment of a just debt from a solvent debtor, and at the rate or price which they believe, after due examination, the same would sell for at a *bona fide* sale. Another point I would strongly urge upon this Commission is the advisability of endeavoring in some way to have the assessment rolls made public, because I think the laboring men would be vastly benefited thereby.

Q.—But, would not that be interfering with the provincial right—with the autonomy of the provinces? A.—But I think the Commission might make a recommendation upon it, if facts were adduced in support of these statements. On a certain street in this city,—and I will mention its name—that is St. George street, on the east side of the street, land is assessed at \$50 a foot, but you cannot buy that land to-day for \$900 or \$1,000 a foot.

By Mr. HEAKES:—

Q.—That would only show that the assessors have not followed their instructions. A.—It would show you one reason for taking the assessment off buildings and putting it on the full rental value of the land, and it shows how that would help the workingman.

By the CHAIRMAN:—

Q.—That would be a very good question to ask in a mayoralty contest? A.—But it bears on the laboring men. If land was assessed at the full rental value there would be a vastly increased assessment on the land, and, in fact, the taxes would be less instead of more.

By Mr. WALSH:—

Q.—This man that you speak of would not pay \$50 a foot? A.—He would have to pay \$900 or \$1,000 a foot.

By Mr. ARMSTRONG:—

Q.—The law calls for that now, but the officers do not do their duty? A.—I was talking to a gentleman in the Assessment Department this very day. I said, "Here is a man wants \$100 a foot for the lot for which he is only assessed at \$50 a foot." He replied, "That man may think it worth \$100, but the assessor knows it is not." I said that the lot next it was sold for \$90 last week, and he said that there must be something wrong. I said when I was in business the assessor would come in and say: "I suppose you have a stock of about six thousand dollars?" and I would say, "I suppose I have not; I suppose I have a stock of about four thousand

dollars." His reply would be: "Well, I will put it down at six thousand and you can appeal against it." They assessed personal property up to the last cent.

By the CHAIRMAN:—

Q.—I think we should avoid going into municipal affairs. Do you say that we should suggest to the Government at Ottawa, that the assessors of Toronto are not doing their duty? A.—I think it would be a very good idea; it would waken them up. The assessor tells me that if a man gets one thousand dollars salary, he gets four hundred dollars off, but, if he gets ten hundred and twenty dollars he will not get a cent off; he will pay taxes on the full amount. I think there is something wrong, and if the taxes were all levied on land values the assessment on land values would be vastly increased, and if you had to raise say twenty-five thousand dollars on an assessment of fifteen millions, and if you raised that assessment to thirty millions by equally assessing the land, why the taxes would be so much less, and workingmen would have to pay so much less, and would thereby be benefited. Some of the papers in this city publish a list of real estate transactions, and one of them publishes the assessed value, and the price realized from the sale. Here are a few instances of figures which have been published. One lot is assessed for \$7,727 and it sold for \$10,000.

Q.—There is another question involved in that. Perhaps all the property may not be assessed to its full value. I know of some cases in Lower Canada where it is assessed at one-half its value, and if I said that property is assessed at \$1,000 and it sold for \$2,000 there would be nothing wrong because all the property is assessed for half its value, and that is quite understood? A.—That may be so, but it should not be.

Q.—But it comes to the same thing if it is done honestly all round? A.—But it is not, and that is what we complain of. In this city certain classes are exempt from taxation, and the rules for the guidance of the assessors state that every year the assessor shall assess the exempted property at what it should pay taxes on. Now, on looking through the assessment rolls I find on College street that a beautiful building called Knox College occupies about three and one-half acres, and that in 1887 it was valued at five thousand dollars. For 1888 it is valued at five thousand dollars, but wonderful to relate the land all around it has been increased from twenty to twenty-five dollars a foot, according to the assessor's figures.

By Mr. FREED:—

Q.—Does that pay taxes? A.—No, but there is \$15,000 on the bare land that Knox College is on. All over the city there are blocks of equal or greater value escaping taxation. Now suppose that all this was taxed, and taxed up to the full selling value, look at the enormous revenue it would bring in and the extent to which the laboring man would be benefited.

By the CHAIRMAN:—

Q.—The question of whether laboring men would be benefited by taxing religious and charitable institutions, hospitals, &c., is another question. A.—There is another peculiarity about the present system of assessment. Most of the assessors have adopted the habit of taxing land on the corners five or ten dollars higher than on the street, because they say it is worth a little more. But all assessors do not seem to be guided by the same rule, and on some streets the assessment is made \$50 a foot right along, without allowance for anything extra at the corners. You say that land with a fine house upon it is worth more than one which has not?

Q.—Practically it is? A.—That is the general idea, undoubtedly, that land which has a fine house upon it is made valuable by the house being there. In going over the assessment roll I find a fact which is very gratifying to me, because it is a strong argument in favor of the point I was contending for, and that is that the land is the same whether there is a magnificent house upon it or not. There is one assessor agrees with me on that point. On St. George street, on the corner of Harbord, there

is a vacant lot which has been valued by the assessor for 1888 for \$70 a foot. Next to the vacant lot there is another with a magnificent house upon it. That lot is also valued at \$70 a foot. Now, Harbord street intersects St. George and the next house to Harbord street—the corner house—is valued at \$70 a foot. Next to that is some land with a house upon it, and it is valued at \$60 a foot. It is not a corner lot, but he values the house on the other side at \$70 and *per contra* that land should be worth as much, and is worth as much on the market to-day. There is an instance where vacant land is actually valued as much as that upon which the house has been built.

By Mr. FREED :—

Q.—That is to say the land is valued as much in one case as the other with the land and house together? A.—Yes.

Q.—The vacant lot is assessed as much as the next lot and the house upon it? A.—Yes. This land is valued at \$70, and if I wanted to buy it I would find it difficult perhaps to buy it at \$120 a foot.

By Mr. HEAKES :—

Q.—You said that instructions were given to the assessors to assess land at its actual cash value? A.—Yes.

Q.—Then the law is right. The instructions are that the land shall be assessed up to its full value? A.—Those are the instructions.

Q.—The only thing at fault is that the officials are not carrying out the law. If the law is right and gives proper instructions and the men do not follow the instructions they are at fault, and not the law.

By Mr. FREED :—

Q.—How would you correct this evil? A.—That is a question which we are going to settle in this country somehow.

Q.—What is your plan?—I suppose one plan would be to endeavor to get officials who would carry out the law.

Q.—Therefore, you do not require a change in the law, but a change in the officials? A.—There is such gross violation of the law that it is certainly very strange that the people of this country cannot get the laws carried out. There must be something radically wrong, and what we ask is, "Is the thing which is wrong to be allowed to continue?" This principle of assessing land at a figure far below its actual worth is a bad one, and it engenders a spirit like this, one man saying to his neighbor: "You do not find fault with me, and I will not find fault with you."

Q.—You are rather pointing out what you consider to be an evil than pointing out what you consider to be a remedy for that evil. Is that the object? A.—Of course, if all taxes were put on land they would be, but, I was simply pointing out the inconsistency of a man paying taxes on \$1,200 and not on \$1,000.

Q.—But that is part of your scheme? A.—Yes.

Q.—At present, salaries above \$1,000 pay taxes in full? A.—Yes, I am told so.

Q.—And salaries between \$700 and \$1,000 are taxed too? A.—They exempt \$400, I believe.

Q.—And salaries below \$700? A. I suppose those are exempted ones.

Q.—By this change would you benefit the poor man? A.—Yes, we would, because under the change all land would pay a larger share of taxes, and that would benefit the poor man. As an illustration of that where all land would pay a greater share of taxes I would adduce this instance: On Huron street there is one lot of land valued at \$25 a foot, and it is not on a corner either. Right across the road on a corner there is a lot valued at \$18 a foot. Now, if both were valued on the same principle, the corner lot would be valued at a higher rate, because corner lots are more valuable, and this one should pay nearer \$36 than \$18.

Q.—Do you know what proportion of real estate taxes is levied on land and what proportion on buildings throughout this city? A.—No, I do not.

Q.—What is the total of the real estate taxes in Toronto? A.—It is about \$86,000,000.

Q.—What proportion of that is made up of lands and what proportion of improvements. A.—I cannot say; but all these results should be published so that we could get the information.

Q.—But you do not know? A.—No.

Q.—Can you get that information? A.—Yes, very readily.

Q.—I think it would be worth while to place it before us, if it were given in an official way? A.—I may say that on Queen street West, near Bathurst, land is worth \$275 a foot. I do not think that is above the mark, for it is selling at about that figure. It is valuable business property, but it is assessed for \$200, and you can see how much more taxes all this would bring in.

By Mr. ARMSTRONG:—

Q.—Was there not some mention in the press about a property on King street, which it was said was undervalued? A.—Yes; right at the corner of Yonge. It is assessed I think at \$1,200, and the owner has refused \$2,000 for it. Another lot is assessed for only \$950, and the owner has absolutely refused \$1,750 a foot for it.

Q.—Perhaps it was because he did not want to part with it? A.—No, that was not the reason. With regard to the question of a rich man with a mansion on his lot, and a poor man with his shanty right beside it, it was asked if you would tax them the same—

By Mr. HEAKES:—

Q.—The question that was raised was: “If you destroy the revenue you derive from improvements from what source will you derive it?” A.—There is just where we are going to get it; by taxing the vacant land as if it had a house upon it.

Q.—You take the tax off this house valued at \$50,000 and spread it over the rest of the land, and I have to pay for it? A.—I claim that you will have to pay less.

By Mr. ARMSTRONG:—

Q.—Is the land inhabited by the working classes taxed to its full value? A.—It would be taxed at the same rate as land in its vicinity.

By the CHAIRMAN:—

Q.—Your views on that question are the same as those of Mr. Douglas? A.—Yes.

By Mr. ARMSTRONG:—

Q.—Do you know anything about the management of *Grip* Office? A.—Yes.

Q.—Is there a system of fining men in that office? A.—That does not come within our department.

Q.—Was there ever such a system in *Grip* Office? A.—There was, but not in my time; it was three years ago. I could not state anything about that.

TORONTO, 24th November 1887.

\* \* \* Toronto, called and sworn.

By the CHAIRMAN:—

Q.—What is your occupation? A.—I am a steam fitter.

Q.—How long have you resided in Toronto? A.—About three years.

Q.—Where did you reside before that? A.—In Peterborough.

By Mr. FREED:—

Q.—During the three years that you have lived in Toronto, has there been any change in the rates of wages? A.—Well, the rate of wages rose when there was a reduction in the number of hours. The rate per hour rose when the hours were reduced from ten to nine.

Q.—Was there any strike when this increase took place? A.—There was a strike of the plumbers, and they got an increase and we got it at the same time. They are separate trades, but we work for the same employer.

Q.—Where there conferences between the employers and the employed? A.—

Yes.

Q.—In these conferences was the discussion friendly or otherwise? A.—As far as I heard from reports they where friendly.

Q.—Were you not present? A.—No; I was not a member of the deputation that waited on the employers.

Q.—The conferences were between the Labor Unions and the employers? A.—Yes; delegates from the Labor Unions, as well as from the Employers' Union, were present.

Q.—The employers have a union or organization also? A.—Yes; but I suppose they would scarcely care to have it called a Union.

Q.—Was there anything in the nature of an arbitration? A.—No, it was left to no outside party; they came to an agreement between themselves.

Q.—Is your work done in what might be called factories? A.—No. There is, I should judge, two-thirds of our work done outside, and about one-third in the shops.

Q.—Is there much machinery in the shops? A.—No; it requires little machinery except machines for threading pipe.

Q.—What are the sanitary arrangements of the shops? A.—Satisfactory, as far as I have known.

Q.—No objection on account of dust, or cold, or heat, or ill ventilation? A.—I have heard of none.

Q.—No large number of men working together? A.—No.

Q.—What are the rates of wages now paid? A.—They run from about twenty cents to thirty-three cents an hour.

Q.—Do you have a half holiday on Saturday? A.—During five months of the year.

By the CHAIRMAN:—

Q.—Your work continues all the year? A.—No; for about three months it is very precarious employment.

By Mr. FREED:—

Q.—Are there many apprentices taken in your trade? A.—Yes.

Q.—Is there any limit imposed on the employers by the employés as to the number of apprentices they shall employ? A.—No.

Q.—What, within your knowledge, is the proportion of apprentices to journeymen? A.—About two apprentices to one journeymen.

Q.—Do the apprentices continue in one shop until they learn the trade, or do they go from shop to shop? A.—The majority finish their time.

Q.—Is there any indenturing system amongst them? A.—No; I do not think so. Generally indentures are signed after the apprentices become valuable, sometimes after two years or after three years. I know one who signed who had been doing journeyman work for a year before he signed.

Q.—And if he refused to sign what would happen? A.—He would be dismissed. I have understood that there is an arrangement between the employers not to employ apprentices from another shop.

Q.—Do you know this or is it hearsay? A.—I could not say positively, only I know that when apprentices have left a description has been telephoned from one shop to another. I was not at the telephone and could not swear positively, but to the best of my knowledge and belief it occurred; at all events the apprentices were refused at other shops.

Q.—That is, to some extent they were blacklisted by the employers? A.—Yes.

Q.—When they sign indentures do they work for lower wages? A.—I do not know the arrangements with the apprentices regarding wages.

Q.—Of what advantage are indentures to employers? A.—Really I do not know that they are any.

Q.—You do not know, then, why they are so anxious to indenture them? A.—There are very few indentured, and it is generally after having served three years and become valuable that they are indentured.

Q.—Is there any difficulty in getting employment in your trade? A.—Yes, for about three months in the year. Many men are idle then.

Q.—What is the idle season? A.—It commences about Christmas or New Year's, and lasts about three months. I should say January, February and March.

Q.—During the rest of the year is there any difficulty? A.—No. The majority of the workmen get employment, and it is rather rare for good men to be out of employment. In this busy season a good many men come in and work at the trade, and leave again, or go at something else; if a man is handy he can go out and do little odd jobs pertaining to the trade.

Q.—Do you think there are many idle plumbers during the busy season in Toronto? A.—No; I do not think there are any.

Q.—Do you know of foreign workmen coming in in any considerable numbers? A.—No; occasionally there are plumbers who come from the old country, but very few.

Q.—Do you know of any co-operative work being done by mechanics amongst themselves? A.—No.

Q.—Do you know of any profit sharing by the employers among the employed? A.—No, and I see no prospect of it.

Q.—Are any very small boys employed? A.—No; I do not know of any; they have to be big enough to carry the tools.

By the CHAIRMAN:—

Q.—About what age are the youngest, do you think? A.—I should judge about sixteen.

By Mr. FREED:—

Q.—What is the rule as to payment of wages; are they paid weekly, monthly, or how? A.—They are paid bi-weekly.

Q.—Every two weeks? A.—Yes.

Q.—On what day? A.—Most shops on Friday; I think all pay on Friday, but I am not positive.

Q.—Is it your opinion that bi-weekly payments are frequent enough, or should they be weekly. A.—As a matter of opinion I think that weekly payments would suit the majority of men best. Of course, that is merely a matter of opinion; as far as I am concerned myself it would make very little difference.

Q.—Is Friday as good a day for paying off hands as any other? A.—I think so.

Q.—What are your objections to Saturday as a pay-day? A.—I never had any experience in being paid on Saturday, but I should think the objection would be that most of the stores would be closed. That is the only one which occurs to me.

Q.—If the men were paid on Saturday would there be more drunkenness than if they were paid on other days? A.—I do not think it would make any difference; of course, I am only theorizing on that.

By Mr. WALSH:—

Q.—Might there not be another objection; do not the working people do their marketing on Saturday morning? A.—Yes; I should think that would be an objection with regard to dealing on the market.

Q.—Friday would be more advantageous? A.—Yes; I should think it would.

By Mr. FREED:—

Q.—Has any change within your knowledge taken place in the purchasing power

of money within the three years you have been in Toronto? Will a dollar go as far as, or farther than it did three years ago? A.—Well, from what I have observed, I do not think it will go as far with regard to rents or purchasing land.

Q.—How about food and clothing? A.—I have noticed no alteration in prices within the three years, but rents have increased to my own knowledge, and the price of land has increased.

Q.—Is it within your knowledge that the Labor Unions secure better wages, the advantages of shorter hours, &c., to the workmen than if there were no Labor Unions? A.—Yes, they do. It has been my experience with them. We organized a union before we got the reduction, and it would have been necessary to have a union in order to be able to treat or have conferences, so as to be unanimous in our opinion with regard to what we require.

Q.—Do you think the average workman can work nine hours a day—substantial continuous work—without impairing his health or strength? Is nine hours a day too much to work in your trade? A.—That is a question upon which it would be very hard to give an opinion, especially by one like myself. I think that that length of time devoted to hard work would certainly shorten a man's days, but, of course, that question would be more properly put to one who has collected statistics in that regard.

Q.—Is your labor fatiguing? A.—Yes.

Q.—If you work nine hours you go home pretty tired at night? A.—Yes, it is all pretty heavy work. I may say that, speaking from a mechanical point of view, our trade is not affected by foreign competition, only from effects of other trades in driving apprentices into ours, and making the competition amongst us. That is the only way in which our trade comes in competition with foreign labor. Practically there are no steamfitters coming here from other countries. In the United States trade is better, and in the old country it has not been reduced to a trade the same as it has here, except, I may say, that during the busy season men who are classed as handy men are doing the work.

By Mr. ARMSTRONG:—

Q.—The old country mechanic is both plumber and steamfitter, and coming here generally prefers the plumbing? A.—Yes. There are few plumbers coming here who can get a job except in the busy season. There are some, but during the past two years those who have come are not good mechanics; the good mechanics stay at home.

Q.—There was a time when plumbers and steam fitters were organized together? A.—That was before I came here; they were not organized when I came.

Q.—Do you find that it has been a benefit to the steamfitters to be organized? A.—Yes.

Q.—And on account of your having organized the employers organized? A.—They did previously to us; they organized before I came here.

By Mr. FREED:—

Q. You had no strikes in which you were engaged during the three years you have been in the city? A.—No.

Q.—Do union men in your trade work in the same shops with non-union men? A.—Yes.

Q. Is a non-union man placed at any disadvantage by the union men? A.—No; he is not, or but very little. It is outside work almost entirely and there is very little association amongst the men; they do not see each other except sometimes in the morning when they go to a shop to do business or get material, &c. Thus it would be almost impossible for either to be placed at a disadvantage.

By Mr. HEAKES:—

Q.—You don't attempt to prevent a non-union man getting work? A.—No.

By Mr. FREED :—

Q.—Have you any benefit society? A.—There is a sick benefit in the Knights of Labour Society.

Q.—We will consider that again. Are any fines imposed on employes for negligence, carelessness or for any other reason? A.—Well at a meeting of the bosses' union they passed a law imposing some fines but I never heard of its being enforced.

By the CHAIRMAN :—

Q.—It has not been done to your knowledge at all events? A.—No; I will not say it has.

By Mr. FREED :—

Q.—Have you any Sunday labor? A.—Very seldom; there is occasionally.

Q.—In case of emergency? A.—Yes; it is not customary when it can be avoided.

Q.—Does convict labor interfere with you at all? A.—No,—well, in saying no, the only convict labor that could in any way interfere with us is the labor done in the Central Prison and such institutions as that.

By the CHAIRMAN :—

Q.—That is work required for themselves? A.—Yes.

By Mr. FREED :—

Q.—They don't do outside work? A.—No.

Q.—Have you any knowledge of how your fellow workmen and yourself invest your savings? A.—No. As a rule there is very little to invest and I think those who have saved generally prefer the banks or the Post Office Savings Bank.

Q.—Do many of them build houses? A.—Not that I have known since I have been here. I think most of my acquaintances in the trade are living in rented houses.

Q.—You think that rents have increased within the last two years? A.—Yes.

Q.—To what extent? A.—Well, I could not form an estimate; it has varied in different parts of the city.

Q.—What would be about the average rental that you or your fellow workman earning ordinary wages would pay? A.—I should estimate it at \$12 or \$14 a month.

Q.—If you were looking for a house would you fix a limit beyond which you think you could not afford to go? A.—Certainly.

Q.—About what would you fix it at? A.—For myself I could not say, not being a married man.

By Mr. HEAKES :—

Q.—Are members of Trades Unions as far as you know opposed to the interest of employers? A.—No; I don't think so.

Q.—Do you think that organization amongst the workingmen tends to better feeling with the employers? A.—Well, with regard to the feeling, that is a matter which depends on the state of their minds.

Q.—Speaking generally of the feeling existing between employers and men, do you think organization helps it? A.—I have not known that these feelings were at all strained with the workmen, but I think as a matter of opinion that employers would prefer that workmen had no organization; I don't know that they would entertain more kindly feelings personally towards the men, but—

Q.—I mean from the effects of organization have the relations between employers and men been any worse than before? A.—Their relations in what regard?

Q.—I wish to know whether organization injures workmen at all with their employers? A.—No; I think with regard to the relations to their employers, organization is to the benefit of the workingmen.

Q.—It is claimed by some people that workmen's organizations antagonize the interest of employers and I want to know if it has in your trade? A.—No; I think not.

Q.—Has it not rather tended to draw the men and their employers together? Do they not generally get a better understanding of what the men want and what the employers want? A.—Yes; of course they can interchange opinions better and get a better understanding with regard to each other's ideas.

Q.—What is the general practice in your trade in the settlement of any dispute? A.—I have never had any except one and it was settled by a conference between the delegates from the employers and from the men.

Q.—Conciliation—that is meeting together and discussing it in that way? A.—Yes.

Q.—Is it the practice for employers to engage boys and then discharge them? A.—Yes.

Q.—They engage them as helpers? A.—Yes.

Q.—And they take a great many more boys than they require as apprentices? A.—They take on more in the busy than they can profitably employ during the slack season.

Q.—There are more boys engaged in the trade than there are apprentices? A.—I don't know whether you call them apprentices or not; they are learning the trade but they are discharged in the slack season.

Q.—Can you give an estimate of the proportion of the boys taken on to learn the trade? A.—I could not, because I have not been in the city five years, which is the time they are supposed to serve.

Q.—You are of opinion that organization is a benefit all around. A.—Yes.

By Mr. WALSH :—

Q.—What wages do boys get as a general rule when they go on first? A.—Two dollars a week.

By Mr. FREED :—

Q.—That is at the beginning? A.—Yes, for the first year.

Q.—Are their wages raised as the time goes on? A.—Yes, they are supposed to be raised a dollar a week every year until they serve their five years.

Q.—You are speaking now of apprentices? A.—Yes.

Q.—You say that boys are generally in three years and more before they are indentured? A.—Yes, the majority are never indentured; it is a rare thing for anyone to sign indentures.

Q.—And what would they develop into afterwards? A.—Journeyman.

Q.—Without being indentured? A.—Yes, after serving five years.

Q.—From the first date of their going in? A.—Yes.

Q.—What length of time are they indentured for after they become indentured? A.—In those instances I have known they have been indentured for the balance of their five years. If they had served three years and signed, indentures would be for the balance of the time, but indentures are rare.

Q.—What advantage is there in being indentured as compared with the other course? A.—I don't know of any advantage to the apprentice.

Q.—Does it give the boys any better status before the community or the employers? A.—No, I have never known anyone to be asked for papers or a certificate, or anything of that kind.

By Mr. ARMSTRONG :—

Q.—Does your Union prefer a system of indentures? A.—A majority of them do.

Q.—As a body you do? A.—Yes; but there are others who do not favor it. They have never pronounced in that way in any conference; they have never sent a deputation asking for it.

Q.—And the men are more in favor of the indenturing system than the employers? A.—No; I don't know what the employers think in that regard. I suppose if the employers pressed the matter they could have every apprentice indentured; but I think they generally wait until they see if it is to their advantage.

Q.—Do indentured apprentices get special instructions that other boys do not get? A.—No.

By the CHAIRMAN :—

Q.—Indenturing is never for more than five years? A.—I have never known it to be more.

By Mr. WALSH :—

Q.—Don't you think it would be a better system for the trade if boys were indentured when going into work, instead of their going in first and only those who make themselves particularly serviceable being indentured? A.—Yes.

Q.—Don't you think it would be better for the trade and perhaps better for the boy if that boy were indentured at the beginning? A.—Well, that as a system only might require one answer, and as a system to be carried into effect it might require another. If by being indentured a boy would be secured proper instruction in his trade, and not sent out as an apprentice helping another boy, then it would be best; but if there was no one to see that the boy received proper instructions, one who is not apt to take his own part or who is not naturally impudent might be imposed on and might be kept for five years without learning the trade; he might be turned out a poor mechanic without having the option of going where he could get better instructions.

By Mr. HEAKES :—

Q.—Don't you think that many boys go into the business, who if indentured at the time of going at the work would be complete failures—would not be able to stand the work? Is it not better to try them before they are indentured? A.—I have never known a boy leave the trade from being unable to understand it.

By Mr. WALSH :—

Q.—Do you think or do you not that it would be more likely that a boy would pay more attention to his business, be more apt to apply himself more particularly to learning the trade if he were indentured when he went in and got the run of the place? A.—I think that depends more on the boy than on the system; I don't think the indenturing system would have any effect.

Q.—Do you think there is a necessity in your trade for the employment of the number of boys in it at the present time? A.—I can see none.

Q.—You don't see any necessity for that number of boys? A.—No. In other cities where there is much more steamfitting done the number of apprentices is limited.

Q.—And I think you said that some boys after 3 or 4 years were able to do journeymen's work? A.—Yes; but they don't receive journeymen's pay.

Q.—But can they do journeymen's work? A.—Yes; very frequently. I have seen boys who have been three or four years at the trade entrusted with almost any kind of work.

Q.—You don't consider that there is a necessity for the employment of so many boys in shops at your trade? A.—No; I don't.

By Mr. FREED :—

Q.—There is no effort made on the part of your union to restrict the number of boys? A.—No.

By Mr. WALSH :—

Q.—Do you think that the number of boys employed has any effect in shutting out legitimate workmen who have learned the trade? Would more men be employed if there were not so many boys? A.—I think there would.

Q.—So that in that case it shuts out a thorough mechanic? A.—Yes.

By the CHAIRMAN:—

Q.—On the other hand do you think it would be safe to allow boys to be idle until they were 18 years old? A.—No, I don't think that would be safe; I am not in favor of that at all; they must be employed somewhere and they may as well crowd into our trade as any other.

By Mr. ARMSTRONG:—

Q.—You say that before a boy serves five years he has in many cases to serve as a journeyman. Do they generally get a journeyman's wages? A.—As a rule they don't, but some of them do.

Q.—And even a boy who is not five years in the business is sent out to do journeyman's work? A.—Yes; frequently.

By the CHAIRMAN:—

Q.—What is the board generally paid by unmarried workingmen? A.—\$3.50 to \$4.00 a week.

Q.—Supposing these apprentices were not living with any of their own family, is there any boarding house or place where these boys can get board and what price would they generally pay? A.—I know there are lots of cheap boarding houses where a boy could live.

Q.—I suppose most of the boys are with their parents? A.—Most of them are, but there are a few strangers.

By Mr. WALSH:—

Q.—Do you know anything about the lien laws? A.—No, I do not; I have never heard of any wage difficulties of that kind in our trade.

By the CHAIRMAN:—

Q.—That is with regard to the seizure of wages by creditors—garnishment? A.—No; I have never known of such an instance.

By Mr. FREED:—

Q.—How far from the centre of Toronto do mechanics generally live? Do they have to go to any great distance to get reasonable rent? A.—There is one place in the centre where rents are low but it is a locality where mechanics who wish to pass as respectable people do not care to live. Out to the suburbs I should judge it is about three miles from the centre—around Parkdale and the North-East and the North-West.

Q.—What are the facilities for getting there? A.—The street cars.

Q.—And the fare is how much? A.—Five cents.

Q.—Do you know what the price of land is in that particular neighborhood of which you spoke? A.—It runs from \$8 to \$12 a foot, but a great deal of the land is held on conditions of sale; for instance, that a valuable house must be built upon it, say about \$3,000. A great deal of the land is held *en bloc* and will not be sold except on condition that a house should be built worth at least \$3,000 and in some places \$5,000, and of course that is beyond the reach of any workingman.

Q.—That applies to some localities only? A.—Yes.

Q.—There are places in which workmen or others can get land for \$8 to \$10 a foot without restriction? A.—Yes, I think there are, but it is far away from the centre where it would not be possible for a workingman to go home to his dinner. It requires about an hour or three quarters of an hour to catch the street car so that he can come to his shop with punctuality.

Q.—What additional facts could you volunteer respecting rents? A.—Well, that they are steadily rising and at the present rate of increase the price of land increases faster than the workman can save and that makes it impossible for him to obtain a house; also that the restrictions which many sellers impose, compelling the purchasers

to erect valuable buildings, have the effect of keeping workmen from building themselves. I would not object however to these restrictions unless they were imposed to increase the value of the remainder of the land.

By the CHAIRMAN:—

Q.—That could only apply to certain people, because others would not be able to sell at all? A.—The majority appear to hang on to the land.

By Mr. FREED:—

Q.—Do rents increase more rapidly than the rates of wages? A.—Yes, I say that without hesitation.

Q.—Now your wages have increased practically by ten per cent. within three years because the hours of labor have been reduced? A.—There is a ten per cent. increase in the receipts in that way, but the buying power of money has not increased; in the aggregate wages have not increased.

Q.—What is the rate per hour you get now? A.—From 20 to 28 cents; the majority run about 25 cents.

Q.—The average rate per hour would be increased about how much? A.—About 3 cents. per hour.

Q.—That would be 27 cents a day? A.—Yes; but it would be misleading to say that workmen's wages have increased 27 cents or in that proportion, because there are less hours of labor and the aggregate receipts are decreased.

Q.—If you throw off an hour's work a day that is your own lookout? A.—Yes; but we are all supposed to throw it off and the shop closes.

Q.—That is at your own request? A.—Yes; when the change was made it was made at our request.

Q.—By how much would the rent of an average workingman's house be increased in the last three years? Have you any special knowledge as to rents? A.—No, except what I have been told by those with whom I have boarded. I have never rented a house myself. The main fact I can give is that a man cannot own his own building, and the prospects and tendencies are against his ever getting in such a position that he can own it. I gather that from the facts that have come under my own observation for three years.

The Commission reassembled at 2 p.m. in the offices of the Post Office Inspector, Post Office Building, Toronto.

STEWART J. DUNLOP called and sworn.

By the CHAIRMAN:—

Q.—You live in the city of Toronto? A.—Yes.

Q.—How long have you resided here? A.—Since a year ago the 9th of May.

Q.—And before that where did you live? A.—I resided upwards of a year here; I left Toronto for Montreal in 1882 and I have been there and in Peterborough since; I have also been in other places for a short time.

By Mr. WALSH:—

Q.—What is your trade? A.—I am a printer; I am not working at the trade just now, but my business is connected with printers, and of course I still continue to call myself a printer.

By Mr. FREED:—

Q.—Are you a member of a Trades Union? A.—Yes, sir.

Q.—What rates of wages is paid on the morning papers in Toronto? A.—Thirty cents per thousand ems.

Q.—And on the evening newspapers? A.—Twenty-eight cents. I cannot answer so well for the management and arrangements about newspapers as I can for book and job offices.

- Q.—What in the rate in book offices? A.—Thirty-three and a third cents.
- Q.—And on weekly newspapers? A.—Twenty-eight cents. That is the same as on the evening papers, but there are disadvantages on the weekly newspapers. They have not the same opportunity of setting advertisements as they have on daily papers coming out in the evening.
- Q.—I put my next question in a general form—not in the form in which a printer would put it; a compositor in setting advertisements can set more type and earn more money than he can at ordinary reading matter? A.—Yes; I might say as near as I can judge, taking the advertisements all round, about one-half more at least and I think that would be coming inside of the mark.
- Q.—And on the weekly newspapers the advertisements are set by men who work by time and not by piece? A.—Many of the weekly newspapers in this city are printed in large establishments where there is book, job and newspaper work in one room and they can easily fill the time of the men on job work setting advertisements for their weekly papers.
- Q.—What are the weekly wages of men—ordinary job compositors, &c., who work by time? A.—\$11 a week for 54 hours a week and 25 cents an hour for over time.
- Q.—How long has that scale been in force? A.—That scale came in force during my absence in Montreal; I think it is at least three or four years in existence.
- Q.—Were the wages before that time higher or lower? A.—Lower than at present.
- Q.—How far back does your first experience of Toronto go? A.—To 1880 or 1881.
- Q.—Are there many idle printers in Toronto? A.—A considerable number.
- Q.—Is that evil a chronic or an occasional evil? A.—Well, it is occasional. Of course I can only give an opinion as to the cause, and I picked that up, too, from hearsay. It is supposed to be caused by the strikes which took place in the building trade during the summer. There was very little floating money among the working classes caused by so many men being idle and that affected merchants and all others who have dealings with the printers and there was far less job printing and advertising on that account.
- Q.—Do many printers come into Toronto from the country? A.—Quite a large number.
- Q.—Is the influx steady or otherwise? A.—It varies a good deal.
- Q.—What kind of men are they who come in? Young men just out of their time? A.—Some come as improvers and some are out of their time. Others are men who have worked in cities before.
- Q.—Have you any knowledge of the country press at all? A.—I have some experience.
- Q.—What is the class of persons mostly employed in country newspaper offices? A.—Generally boys.
- Q.—When they finish their time what do they do? A.—They drift away; practically speaking they go and come like the swallows; some go to the cities, some to the United States, and some perhaps that have not been successful in getting a proper knowledge of the business go into something else.
- Q.—Do the proprietors of the country papers as a rule—when a boy has finished his time and wants journeyman's wages—continue to give him employment or discharge him and get another boy? A.—Usually if they can strike a smart bargain with him, and get him to work for low wages, they re-employ him.
- Q.—And if they do not strike that bargain? A.—Perhaps if they have friends who will maintain them at all they try to better their circumstances, and they may move away perhaps.
- Q.—Are the presses and other machinery used in printing offices dangerous to employes? A.—Somewhat so to inexperienced hands.
- Q.—Is it possible to guard the persons who work them against accidents any more than at present? A.—The great majority of accidents are caused by careless-

ness, or curiosity on the part of young fellows around the machines, in the absence of those who are in charge of them.

By Mr. GIBSON:—

Q.—Is there any way in which you could suggest that those machines could be better protected than they are now? A.—I have thought of that, but of course I have never matured any plan. It requires a careful man and a good mechanic to be around machinery; every sensible mechanic knows that it requires a perfect mechanic to have charge of these machines and guard them in his eye at all times.

By Mr. McLEAN:—

Q.—Have you any personal knowledge of machinery? A.—I have a better knowledge of small presses than cylinder presses.

Q.—Did you ever have anything to do with rotary presses? A.—No, that is out of the line of the usual printer's work; it is special in itself.

Q.—Well is there anything dangerous to a boy in feeding a press—any danger of his getting hurt? A.—Yes, he is liable to get his hands hurt, perhaps by some one speaking to him, or otherwise diverting his attention, or an unforeseen accident may take place on a press—something may slip out of place. A job may not have been properly made ready to put on the press through not having competent hands working in the office, and through the movement of the press something may be shaken out of place, and thus an accident may take place unknown to the boy who is feeding the press.

Q.—Have you ever known of any accident happening in feeding a press? A.—I have.

Q.—What was the cause? A.—I remember one in particular in which a boy was feeding a cylinder press in the office where I was working. I spoke to him and he looked around, and in sliding down the sheet upon the press the gripper caught his fingers. Another boy in Montreal put his foot on the gear and his foot was taken off.

Q.—Could that gear be protected? A.—Yes; in the case of the boy in Montreal there should have been a board along the press to prevent the foot going through. Of course he was a very young boy—far too young to be working on the press.

Q.—If that gearing had been properly protected the boy would not have had his foot hurt? A.—No.

By Mr. GIBSON:—

Q.—How old was the boy? A.—About 13.

Q.—You consider that too young an age for the work he was at? A.—Yes; of course I refer to the school law which says that boys from 5 to 16 should attend school for at least 6 months in the year; that law however has been ignored by parents.

By Mr. FREED:—

Q.—In what province is that law enforced? A.—In this province.

Q.—Have improvements been made in printing presses within your time? A.—A great deal of improvement.

Q.—To secure faster and cheaper printing? A.—Yes.

Q.—Has the tendency of these improvements been to throw printers out of work—pressmen or other printers? A.—As regards the quantity of work to the proportion of hands employed it has somewhat, but as education has progressed there is more printing being done and therefore I do not think it has caused a reduction in the number of printers.

Q.—Has the tendency of the cylinder press been to create printing which could not have been done without it? A.—Of course as the business attains more perfection people get more work done on the press than has been previously done by other means.

By Mr. McLEAN:—

Q.—How long were you in the printing business? A.—24 years the 4th of this month.

Q.—There has been a great deal of improvement in printing presses? A.—A good deal!

Q.—When you first went to the printing how many men did it take to run a big newspaper like the *Mail* and work it off on the press? A.—Well, I could not tell you.

By the CHAIRMAN:—

Q.—Were there papers like the *Mail* and *Globe* in those days? A.—I would have to take a slate and pencil to figure out the number.

By Mr. McLEAN:—

Q.—How long would it take to run off an ordinary weekly paper on a handpress? A.—Of course there were cylinder presses at that time, but I daresay it might take two weeks; that of course is only a guess.

Q.—How long would it take to run off 2,000 on a cylinder press? A.—Some of them could print 1,500 an hour.

Q.—How many men would it take to print 1,500 papers an hour on a cylinder press at that time? A.—Well it was supposed that they should be able to print at that time, including stoppages, at least 750 sheets an hour.

Q.—How much help was required around the press? A.—A man and a boy.

By Mr. FREED:—

Q.—Of what presses are you speaking? A.—The ordinary cylinder press.

By Mr. McLEAN:—

Q.—Nowadays how long does it take to print 700 on the newspaper presses in use now? A.—Well we could do double that work now.

By Mr. FREED:—

Q.—That is on cylinder presses? A.—Yes.

Q.—Take the first-class papers, like the *Globe* and *Mail*, how many do they print an hour? A.—I have been told that the *Mail* press, a Scott rotary, has been timed to something like 19,000 an hour.

Q.—One side of the sheet or both? A.—That press prints both sides.

Q.—And it does something more, does it not? A.—It folds.

Q.—The 1,500 of which you spoke in connection with the cylinder press were printed on one side only? A.—Yes.

Q.—How many papers, printing one side at a time, would one man and a boy print on a hand press? A.—Well, I have done myself 200 an hour, but of course there are stoppages and the work was a little more imperfect in those days than it is now. We did not always have a good press or a good roller boy.

Q.—Taking the ordinary country paper how many would you consider a man should do on a hand press in a day? A.—Well, suppose he gets ready, that will take one half an hour in the morning, and suppose he works to six o'clock, I should think he would be able to do an average of perhaps 220 an hour all day.

Q.—Then if we had been confined to the hand press how would such papers as the *Globe* and *Mail* get out their issues? A.—They would be obliged to have a greater number of presses and employ more pressmen, feeders, and possibly more steam power.

Q.—They would not work a hand press by steam power would they? A.—No, I overlooked that, but provided they did it with the old-fashioned cylinder press they would.

Q.—Do you think it would have been possible to print such newspapers at all with the hand press? A.—Well, it would be rather foolish to think of it, I fancy.

Q.—Do you know anything about any garnishment of wages among printers in Toronto? A.—I have not heard of any instances.

Q.—Do you know of any sharing of profits in the printing trade in Toronto—the employers giving the men any share of profit over and above their wages? A.—I cannot think of any just now.

Q.—Are any printers in Toronto compelled to sign ironclad contracts before entering an office? A.—I have not heard of any, but there are some offices I have not been able to reach in my rounds.

Q.—Do you know of any printers in Toronto who are blacklisted and cannot get employment in any office? A.—I do not know of any.

Q.—Do you know of any boycotting of offices by the printers? A.—Well there are offices where union men will not go to look for employment, and I don't believe they purchase the newspapers printed in these offices.

Q.—Will union men work with non-union men in the same office? A.—Under certain circumstances they will.

Q.—What are those circumstances? A.—If an office has been ratted they go to the president of the union and get a permit to work there temporarily.

Q.—Under ordinary circumstances union printers will not work with non-union printers? A.—There are, I think, what are called mixed offices, and when it is not known by the proprietor, or the hands rather in the office, if they find they can get a superior workman and there is a case vacant, they will put a union man on.

Q.—Are these offices in which non-union printers would not be permitted to work? A.—Yes.

Q.—Who would object to their working? A.—It would be by direction of the union.

Q.—And if employers were to put a non-union man on, what would be the result? A.—Well, it is altogether likely he would be interviewed by the executive committee of the union and some arrangements made to have the objectionable man either admitted to the union or expelled from the office.

Q.—And if the employer should insist in employing a non-union man notwithstanding the union, what would be the result? A.—Well, it is possible the hands in the office would appeal to the union to act in the matter.

Q.—In case it should proceed to extremities, would the men permit him to work or would they carry the protest further? A.—I think they would carry the protest further.

Q.—In what shape? A.—It depends on the action of the union. If they saw that he was a bad character, a man who had injured his fellow workmen in other places or had a bad record, it is altogether likely they might declare a strike.

Q.—And if he were a good man with nothing objectionable against him, notwithstanding his refusal to join the union, he might continue to work there. A.—He might in exceptional cases.

Q.—Are any young boys employed in printing offices? A.—Quite a large number.

Q.—Within your personal knowledge what would be the youngest boys employed in this country? A.—I daresay, as low as from 10 to 12, judging from some I have seen working as message boys.

Q.—And how young working at the trade? A.—Some of them may be 13 or 14.

Q.—Do these work continuously or only part of the year? A.—Part of the time each day they have chores to do, and they may be called from the case to go out on messages.

Q.—But they are employed in and about the office continuously from the time they are engaged? A.—Yes.

Q.—Are any women or girls employed in the printing business? A.—Quite a number.

Q.—In what capacity? A.—As compositors.

Q.—And as press feeders? A.—Yes, as press feeders too.

Q.—Do female compositors work by the day or week, or by the piece? A.—They work, I believe, by the piece.

Q.—If they do the same class of work as male compositors are they paid the same rate? A.—Well, not usually.

Q.—Is it your experience that they do their work as well as male compositors?  
A.—No, it is not.

Q.—In what respect are they inferior? A.—Almost invariably they do their work in a very inferior manner. I daresay there may be several reasons for it and that it is partly on account of their getting such small pay—smaller pay than the men are getting.

Q.—Do these female compositors begin in the same manner that boys do and work up to the position of what we would call journey work in the same manner?  
A.—No; they are put on case immediately, and are given copy and told to proceed.

Q.—And if they continue at case four or five years do you think they become as expert compositors as boys would in the same time? A.—Some do, but there are fewer swift ones in proportion to the number among female compositors than there are among male compositors.

Q.—Do employing printers prefer female labor at the lower wages to journeymen at the higher wages? A.—Some do.

Q.—Then there is an advantage to the employer in getting females at the lower wages? A.—There must be in some cases, but, of course, those who do first-class work and are competing for first-class work scarcely employ female labor at all except for feeding presses.

Q.—What is the difference between the wages paid to men and the wages paid to women as compositors? A.—From \$4 to \$6 a week difference.

Q.—How much per thousand difference? A.—Beginners get per thousand, I suppose, about 15 cents.

Q.—And those women who work four or five years and have become expert might get about how much? A.—About 20 cents a thousand, and I have known of instances where they got more.

Q.—How are printers paid—in money, or do they take any truck? A.—No, they take no truck in Toronto; they are all paid in cash.

Q.—How frequently are they paid as a rule? A.—Once a week and in some cases when a man goes into an office he does not get the first week's pay at all—there is always a week held in hand.

Q.—On what day of the week are they generally paid? A.—Some are paid on Monday, some are paid on Tuesday, some on Wednesday, some on Friday and some on Saturday.

Q.—What day of the week do you consider to be the best pay day? A.—Friday is the best day of the week.

Q.—For what reason? A.—Because the workman takes his money home on Friday night, and his wife can go out to make her purchase early in the day on Saturday, and as for the balance of the day if they have in contemplation enjoying a Saturday half holiday she can go out with her husband and family.

Q.—Is there much drinking among printers? A.—Not more so than in other trades.

Q.—Would there be more drinking or less if they were paid on Saturday instead of some other day? A.—It is possible. There might be more if they were paid a day or so before Saturday.

Q.—Do you consider the closing of bar-rooms on Saturday night an advantage in that respect or otherwise? A.—It would be a great advantage if the law was strictly observed.

Q.—Is it within your knowledge that the law is not strictly observed? A.—I cannot say positively in my own experience.

Q.—Are any boys indentured to printers, or do they make verbal contracts? A.—They make verbal contracts.

Q.—If a boy shows himself industrious and proves himself to be a good workman when he gets out of his time is he continued or is he turned off for some other boy? A.—If he turns out to be a good workman or a good boy it is of advantage to the employer to retain him.

Q.—If he is an average mechanic? A.—Yes.

Q.—Would there be any advantage in returning to the old apprentice system and having a system of indenture? A.—A very great advantage.

Q.—What would be that advantage? A.—The indenturing of apprentices for five years—after ascertaining that they were suitable to learning the trade.

Q.—Would the advantage be to the boy himself, to the employer, or to the trade generally? A.—To all three.

Q.—Would the boy get a general knowledge of his trade do you think? A.—Yes.

Q.—What are the hours of labor in your trade by men who work on time. A.—Fifty-four hours a week, or nine hours a day.

Q.—Is setting type fatiguing work, or light work? A.—Well, it is more arduous for some than others.

Q.—After a man works nine hours in a day will he be very much fatigued, or will he be pretty fresh? A.—He will be somewhat fatigued if he does not have an opportunity of sitting down at intervals. In some places they will not allow a stool to be used at all.

Q.—Do you think nine hours too long for a man to work without detriment to his health? A.—I could not fix an average; nine hours might be enough for some men; other men of iron constitution might be able to stand fifteen or sixteen hours. I have done that myself.

Q.—When men work by the piece do they stipulate for any number of hours? A.—There is a disadvantage between piece hands and time hands in that respect. If a piece hand has to come back at night he gets no more pay per thousand than during the day, whereas, a time hand gets twenty-five cents an hour for work overtime.

Q.—I think your answer, unintentionally, perhaps, has been somewhat misleading. A man who habitually works at night on a morning paper gets more than a man who habitually works by day? A.—Yes; I allude to men who are working on day situations.

Q.—Have there been any strikes in the printing business within your experience in Toronto? A.—No, I was absent from Toronto when the last strike took place.

Q.—You cannot speak of that strike from personal knowledge? A.—No.

Q.—Have there been any differences that have been settled after strikes between the employers and the employed? A.—Well, I do not know that there have been any differences that have occurred.

Q.—Are any means provided for arbitration between employers and employed? A.—Well, we have in the union an executive committee and a guardian committee and where it is necessary for either of these to step in, in a case of any difference between the parties, every one is called upon according to his province.

Q.—Is this for the purpose of securing what might be considered the rights of workmen, or for the purpose of trying conciliation? A.—For both; for the purpose of getting a fair settlement if possible.

Q.—What power or authority orders a strike in the printing business? A.—Only by the authority of the hands in a body.

Q.—Of the Toronto union? A.—Yes.

Q.—If the men consider themselves dissatisfied what is their first step? Suppose an employer refuses their individual request what do they do? A.—Well, of course, the employer is conversant with our situation and by-laws, and if he does anything which conflicts with what is laid down he knows that he is liable to get into a conflict with us.

Q.—And then do you report to the union? A.—Yes.

Q.—And what steps would the union take? A.—It depends on the circumstances of the case.

Q.—Would they send a committee to wait on the employer? A.—Yes.

Q.—And suppose he proceeded to extremities would a strike be ordered by open union, or could it be ordered by the officials of the union? A.—I think it would not be legal unless it was ordered by the union.

Q.—By open vote? A.—Yes.

By Mr. ARMSTRONG :—

Q.—Would it be an ordinary vote? A.—It would be a meeting called for the purpose of discussing the difficulties.

Q.—Would it be an ordinary majority vote? A.—As far as I can recollect I think it requires more than a majority vote.

Q.—According to the constitution? A.—I have not consulted the constitution or by-laws recently.

By Mr. FREED :—

Q.—Do you think printers would get as high wages or as liberal hours, if there were no union, as they get now? A.—I do not believe they would get nearly as good wages. It is the object, if I may use the word, of the agitation of a large body of men that they should get higher wages and more liberal hours.

Q.—You think organization is necessary to the protection of the printers' interests? A.—Yes; I found that in every case without organization they have obtained no increase of pay.

Q.—That is within your own experience? A.—No body of men have obtained an increase except by organization.

Q.—No increase of pay has ever been received except by men who were organized? A.—Yes, not to my recollection has there been anything else.

Q.—Are there any printing offices established by co-operation amongst the printers? A.—No, there are none here in Toronto.

Q.—Are the printers ever fined for dereliction of duty, mistakes or accident? Are they fined by the employers? A.—I do not know of any rules of that description in any office where I have been permitted to work.

Q.—Is there much Sunday work in the printing business? A.—On the morning papers I believe they work on the Sunday night.

Q.—Do they get extra pay for Sunday night work? A.—No.

Q.—Is the rate to either the men working by the piece or by the week, larger in consequence of the working on Sunday than it would be if they did not work on Sunday? Is it considered in fixing the scales of wages? A.—Of course there are some men who make \$13 to \$16 a week, working on the morning papers, but so far as money goes that is more wages than a man would receive who works fifty-four hours in the day time.

Q.—Would it be possible to get out a Monday paper without Sunday work? A.—I hardly think so; I believe the telegrams come in on Sunday.

Q.—Could not they get to work at twelve o'clock on Sunday night and get the paper out? A.—I could not say about the arrangement of the daily papers.

Q.—Do printers ever come to Toronto from other countries to any extent? A.—There have been a few—I dare say I have met about half a dozen.

Q.—Do they interfere with the workmen here by throwing them out of work or reducing the wages? A.—Some of them belonged to the Typographical Society in the old country, and they brought their cards with them and deposited them here.

Q.—Do they take away the situations of men who are already here? A.—Well, it tends that way, for we have more than we have employment for.

Q.—Do you think that many printers save money? A.—Well, I have heard of some. Of course, I did not ask whether they were dealing in real estate, but I think it indicates that they have saved money when some of them have bought their own houses, and have their own homes.

Q.—They have no difficulty in getting lots on which to build? A.—They have generally to go to the suburbs.

Q.—How far? A.—I should judge about two miles from here.

Q.—What would be the value of property there for vacant lots? A.—I could not say; some of them make very good bargains.

Q.—You do not know as to that? A.—No.

Q.—If a printer is a saving mechanic, and does not meet with misfortune, is it

within his means, do you think, to acquire his own home? A.—With very strict economy he might in the course of a few years do that with constant employment.

Q.—Do you know of some who do? A.—Yes, some who have been fortunate enough to have permanent employment for a number of years have almost now got their homes paid for.

By Mr. ARMSTRONG:—

Q.—Do you know of any employers who refuse to employ printers because they belong to Trades Unions? A.—I do.

Q.—Who are the parties who generally object to non-union men in the union offices? are they former union men, or young men from the country? A.—They are former union men.

Q.—Who have been expelled for some violation of the rules? A.—For misdemeanor of some kind, or other injury to fellow workmen.

Q.—To the best of your knowledge do men coming from distances object to coming into the union on conscientious scruples? A.—They find it convenient to join; if they happen to come into an office which is a union office they say that they find that there may be objections raised against them if they do not join. As these are favorably disposed towards the union, and if there are some who have not had proper instructions, of course their cases are investigated, and proper inquiries are made about them, if they do not show any indentures; and in some cases young men come into the city very highly recommended, yet who are not capable of setting up type from telegraph matter.

Q.—In those job offices where the majority of hands are boys, do they come into competition with men who employ journeymen who are paid the standard rate of wages? A.—They do very much.

Q.—Do you know if any women are competent to take the places of journeymen? Does the union object to their admission as members? A.—No, in fact I believe we have one female member now in the union.

Q.—She receives the same rate of wages as men? A.—Yes, she received it for some time before being admitted.

Q.—In competing for publishing work the employer who employs say five boys to one man can compete for work much lower than one who employs principally all men with one or two boys? A.—Most decidedly.

Q.—They find it then a hardship? A.—Yes.

Q.—Are the bosses of Toronto in favor of the apprentice system? A.—Most of them I have spoken to I believe are.

Q.—You know that the organizations have been endeavoring for sometime past to get employers to pursue that system of indenturing boys? A.—I do.

Q.—The men as a body are in favor of it? A.—They are.

Q.—You were not here last winter? A.—No, I was in Montreal.

Q.—Did the men ever receive more per thousand than now, that is 30 cents? A.—Yes, if I recollect right they received  $33\frac{1}{2}$  cents on the morning papers when I lived in Toronto in 1881.

Q.—In the union shops is the work given out fairly—more fairly than in non-union shops, where the best hands and the ordinary hands are working together? A.—Very much.

Q.—The "fat" matter is distributed to the best hands as well as to the weak hands? A.—Yes, equally divided; whatever may be first on the hook is given to the first man calling for it.

Q.—Did you ever know the employers not to employ union men because they were union men? A.—My recollection is a little vague on that point, but I know that there are at least one or two offices in this city which will not knowingly employ union men.

Q.—As a general thing have you ever known men who said they would not belong to the union because they were in non-union offices, or when they were out of those offices were anxious to come into the organization? A.—That is almost universally the case.

Q.—That is a matter of expediency as regards non-union men? A.—Yes.

Q.—Do you know that it is a law of your local body, or any national law, that all difficulties must be settled by arbitration if possible, or that the resources of civilization, as it were, must be exercised? A.—I am not certain on that point, but, it is my feeling myself, and I think it is the feeling of the very great majority in our trade that we would like to settle everything without having to clash.

Q.—Are you aware that it is the law of your organization that a strike vote is to be carried by a three-quarter vote, and that each man voting must be in good standing for at least six months? A.—I believe that is so.

By Mr. FREED:—

Q.—Do you know that it is so? A.—I have not looked at the laws or the by-laws and the constitution of our subordinate union for quite a little time, but I am not opposed to that idea.

Q.—What are the sanitary conditions of the printing offices in Toronto? A.—Some of them are wretchedly bad, and one in particular I was in to-day in which I held my nose till I got out.

Q.—Improper ventilation? A.—Yes, and for want of keeping it properly clean.

Q.—Were the water closets in bad order? A.—I do not know exactly the locality of the water closets, but I smelled a very bad smell when I was in the place.

Q.—Is this general or exceptional? A.—It is exceptional.

Q.—Where men and women are employed in the same office have they separate water closets? A.—I believe they have, but I am not certain.

Q.—Do printers generally prefer to work by the piece or to work by the week? A.—Well, of course, there are some who prefer working by the piece on plain book or newspaper work. Of course they can make more money by the piece, but job compositors are obliged to set on time.

Q.—But if it was plain composition the printers would rather work by the piece than by the week? A.—Yes.

By Mr. HEAKES:—

Q.—In the settlement of disputes between the employers and the employed do you favor arbitration? A.—I do.

Q.—What would be the best means of appointing a court of arbitration for that purpose? A.—Well, I dare say the ordinary one which is followed in the case of strikes in other trades.

Q.—What is that? A.—Each party appoints a representative, and these two parties appoint a third.

Q.—Do you think that is the best mode? A.—Well, of course, I have never had any experience in it, but I think that could be suitable.

By the CHAIRMAN:—

Q.—Have you ever thought of enforced arbitration? A.—No, I have not.

By Mr. HEAKES:—

Q.—You think it would be better all around if arbitration was the rule? A.—Yes.

By Mr. CARSON:—

Q.—In the case of boys going in as apprentices, do you find that they are up to the standard in education? A.—They are far below it.

By the CHAIRMAN:—

Q.—In Ontario? A.—Yes; in this city.

By Mr. CARSON:—

Q.—Have you any suggestion to make with regard to it? A.—The only thing is to make a severe penalty upon the parents who are responsible for these children being taken from school at too early a day.

By the CHAIRMAN :—

Q.—A boy of sixteen years, say? A.—Well, he is not too young to learn a trade.

Q.—Do you think that some of the boys of sixteen are not competent to begin? A.—Many of them are not, because they have not been attending school to any extent. In one office I spoke to a boy; one of his comrades told me that he was no use, because he could not write; he was working in the office.

Q.—I understood you to say that the printer's hours were nine hours a day or fifty-four hours a week. You say that the basis of settlement arrived at with regard to those hours was by the way of a mutual understanding among the men themselves?

A.—It was arranged between the employers and the men—that is, between the employers and the union.

Q.—It was a settlement arrived at between the union and the employers? A.—Yes.

By Mr. ARMSTRONG :—

Q.—Do employers or managers inquire about the education of apprentices when entering an office for the first time, as a usual thing? A.—No, they do not.

Q.—When there is a question about union or non-union men being employed, is it the proprietor, or the foreman, or manager who generally settles the matter? Generally does the proprietor have any say in the matter? A.—No, it is the foreman.

By Mr. WALSH :—

Q.—With regard to the education of these boys, is it the fault of the system of education, or is it the fault of the boys themselves? A.—I think it is the fault of the parents in not compelling those boys to attend a regular day school.

Q.—You have heard of the advantages of education in this country? A.—We have great advantages; I think as great as, if not greater than, any possessed by any other country.

Q.—So that it must be the fault of the boy, or his parents or guardians? A.—Yes.

By Mr. CARSON :—

Q.—Are you aware that there is a law compelling persons to send their children to school up to a certain age? A.—I believe that there is a law to that effect.

Q.—Knowing that to be the law, the fault is commonly the fault of the parents? A.—Yes, I believe that the parents are responsible. Some years ago when I left the Woodstock school, the examiners went to the factories and compelled the employers to dismiss all their boys under school age.

By Mr. WALSH :—

Q.—Do you think it is right for foremen or employers, no matter what the trade may be, to employ a boy that is idle, and who has not been able to read and write when he undertook to learn the trade? A.—I think it is a positive wrong. A boy cannot understand anything mechanically to that extent that a boy can who is educated, and our business as it is advancing requires better education now-a-days than it did in former years.

Q.—Is it possible for a boy to become useful in the printing trade any more than a heaver of wood and a drawer of water unless he knows how to read and write?—A. Well, with very great difficulty he might, but the chances are against him.

By Mr. CARSON :—

Q.—As a general question, what remedy would you offer for the state of things you speak of? A.—Well, in Montreal they had what was called the school police.

Q.—In Ontario they are commonly called truant officers? A.—I do not know whether we have them here, but I have seen them in Montreal in uniform.

By Mr. HELBRONNER :—

Q.—When was that? A.—When I was residing there last, between 1882 and 1886.

There were items respecting them in the newspapers, and I have seen policemen go hunting after these boys myself, and people with whom I am intimate have seen them.

Q.—I do not think there is a law of such a kind in Quebec? A.—That may be; but there was an officer who was paid by the school commissioners of the city. There was a recognized official under direction of the school board who had charge over the absentees that were reported to him, and he had nothing else to do but to interview parents and find out the causes of absence of those boys from school.

By the CHAIRMAN :—

Q.—Some of these persons are very poor? A.—True; I have heard parents say that they could not send their children to school because they could not buy boots for them.

By Mr. GIBSON :—

It is the rule in the schools that the children must be sent well clothed, and if they do not come to school well clothed they are liable to be sent home; there are no ragged schools in Quebec.

By Mr. CARSON :—

Q.—I understood you to say first it did not matter how perfect a woman became in the work she never got the amount of wages that a man did? A.—I gave one exception, the only one I knew of.

Q.—And she belonged to the union? A.—Yes.

Q.—How is it that that is so? Is it the opinion that they deserve to get more pay? A.—I could not tell you that.

By the SECRETARY :—

Q.—Does that apply to city or country offices or both? A.—To all offices.

Q.—What is the usual piecework price in country offices where work is done by piece? A.—It varies very much. In some offices it is fifteen cents a thousand, in others seventeen, and in some twenty, twenty-one, twenty-two, twenty-three and twenty-five.

Q.—In those offices where those figures prevail, is it customary to pay females the same as males? A.—They usually pay them smaller wages.

Q.—Do they pay them the same when both are working by the piece? A.—No.

Q.—Do you know instances of that kind? A.—Not that I recollect of.

By Mr. HEAKES :—

Q.—Do the printers' organizations demand equal pay for male and female labor? A.—It demands the same scale for all that are members.

Q.—Equal pay for equal work? A.—Yes.

Q.—It is not opposed to female labor getting equal pay? A.—No, if they are members of the union.

Q.—Do you remember the *Welland Telegraph*? A.—Yes.

Q.—Don't you remember that two females were setting type there by the piece? A.—Yes.

Q.—Don't you remember that they were then paid the same price as the male compositors? A.—I do not recollect now.

Q.—There were two females there, and you cannot recollect whether they were paid the same price or a different price? A.—I cannot positively remember now; I could not tell now what wages were paid in that office except to myself.

By Mr. FREED :—

Q.—Are there any obstacles thrown in the way of women joining a typographical union? A.—No; on the contrary we encourage them as much as we can.

Q.—Have there been many applications for membership? A.—No.

Q.—Do you think that that fact arises from the fact that few women are com-

petent, or that they do not want to join the union? A.—Well, I do not think that they do not want to join the union, but because they do not remain so long at the business as men.

Q.—If they get less wages than men, and if as members of the union they get the same wages, would it not be a manifest advantage to them to belong to the union? A.—Yes, of course; but they would have to show that they were competent to do the work properly.

Q.—Do you think that there are many who are competent to do the work properly? A.—In a great many cases they are inferior; they do not take the trouble.

By the CHAIRMAN :—

Q.—What is the age at which they begin generally? A.—I have seen some as young as fourteen.

Q.—And when they get married they leave? A.—Yes.

Q.—That is one reason why they would not join the union I suppose? A.—Yes.

By Mr. FREED :—

Q.—Is it a fact that as a rule women who do go to work at the printing business consider it a temporary occupation; consider their business in life to get married and become the head of families, while the men consider it their life occupation? A.—Certainly, it is a life occupation to the men.

Q.—How is it with the woman? A.—Well, it is only a temporary occupation; it helps her to get her clothing, and perhaps she is obliged to pay for her board.

Q.—It is simply a make-shift with her? A.—Yes. Others are in better circumstances and do not have to pay anything for board.

By Mr. ARMSTRONG :—

Q.—Do employers look upon it in that light? Do not they think they will get cheaper labor than by employing men? A.—Certainly, I think they do.

Q.—You know circumstances to that effect? A.—Yes.

Q.—Do you know of cases in this city where a young lady would be called competent to pass as an ordinary journeyman, but because she was under age she would not be indentured for a number of years so as to get her labor cheap under the scale? A.—I cannot say.

Q.—Do you know any cases in Toronto where there are ladies employed in the printing business where they are pretty smart, and when they were found out to be so the employers wanted to indenture them, and keep them longer at the business at lower wages? A.—It is not in my knowledge.

Q.—Is there a benefit society in connection with your union? A.—There is; in regard to death-benefits there is a levy on all members of the union to cover expenses of burial.

By the CHAIRMAN :—

Q.—And medical attendance? A.—Well, it amounts to one hundred dollars, and of course it is not often that the expenses of the funeral will amount to that much.

By Mr. ARMSTRONG :—

Q.—There is a sick benefit besides? A.—Yes; there is a benefit in which each member is entitled to \$25 from that fund. The amount which makes up that fund is made up from instalments twice a year; July and January, fifty cents from each member each instalment.

Q.—Do they devote their money to any other purpose? A.—Yes, there is an insurance branch connected with the International Union, and this branch has a great many members in all subordinate unions, all over the continent.

By the CHAIRMAN :—

Q.—What is the insurance for? A.—It is intended, as long as that branch lasts, to pay \$5,000 benefit at death.

By Mr. ARMSTRONG :—

Q.—Outside of the insurance regarding the sickness and death levies do you think that the monthly dues are too much, or is it a good idea besides from the benefits accruing from being union men? A.—I do not think the dues are excessive.

By Mr. FREED :—

Q.—If a man is sick he is only entitled to \$25 benefit in one year? A.—Yes, of course, we have a very large membership.

Q.—If a man receives no sick benefit for a series of years and then is sick in the tenth year he will only get \$25 in that year? A.—If he has been an exceptional man, in good standing, in an exceptional case they may give him more.

By Mr. ARMSTRONG :—

Q.—Do you mean to imply that he is entitled to \$25 by law? A.—Yes.

Q.—If it is required afterwards do you know of his getting more by special vote of the union? A.—Not while I have been residing in Toronto.

By Mr. WALSH :—

Q.—Looking at the matter of organization from your point of view do you consider that organizations of that kind are equally good for the employers as well as the workmen? A.—I believe they are.

Q.—Do you believe it is calculated to make men more honest, more interested in the employers' welfare, than if you had no union behind you? A.—Yes, because if we had no organization we would be cutting one another's throats, cutting each other out of situations.

Q.—Do you think that work is done more regularly than it would be under the former system? A.—Yes.

Q.—Do you think the men feel themselves, when they are in an organization of that kind, that it secures them better wages? From your experience do you think the men are of that disposition, that they feel more bound to forward the work of their employers than otherwise? A.—Yes, of course, they have to do the utmost to earn their wages; they are getting good pay and they feel that they must work pretty hard. Men will work harder for twelve dollars a week than if they only got ten.

Q.—Then as a general result of those organizations you consider that they are beneficial to the employer and to the workman? A.—I find it so in our trade.

By Mr. CARSON :—

Q.—Have you ever found instances in your union in which the heads of the concern endeavored to get inferior men's wages raised to the wages of the members of the union? A.—We cannot raise any man's wages.

Q.—I say using their influence? A.—No.

Q.—Supposing a man is getting two dollars a day, and another man is getting one dollar and a half a day; you know that some men are worth a great deal more than others; have you ever known where the two dollars a day man would use his influence to get his companion's wages raised? A.—If a man was worth the union scale he is requested to become a member, and in that way he benefits by receiving the wages prescribed in that scale.

Q.—Your union then has a scale of wages, and they would virtually dictate to the proprietor or employer? A.—Not exactly; if an employer thinks that his labor is not worth more than a dollar and a-half a day he can dismiss him.

Q.—Have you a scale for various grades? A.—I think in the first part of my evidence I stated that for fifty-four hours a week it was \$11 on time work.

By Mr. ARMSTRONG :—

Q.—That is the minimum scale? A.—Yes.

Q.—There are men who receive more than that on account of their ability? A.—Yes, I am acquainted with a few men who are getting more than the minimum rate.

By Mr. FREED :—

Q.—Is there any tendency on the part of the employers to weed out slow and loose-going printers? A.—Of course, when they get a large contract, and when the contract is finished they are obliged to reduce the number of men in employ, though as a rule they keep on their best men.

Q.—Then if these men work below the scale they are considered “rats”? A.—Yes.

Q.—Although they may not be really worth the minimum rate of wages prescribed by the scale? A.—Yes, if they are not worth the scale, of course they do not get it.

By Mr. HEAKES :—

Q.—Did not the employers agree with the men by conference what the scale should be? A.—Usually when a man comes into a union office he asks for work, and they are pretty well acquainted with us, and know that \$11 a week is what we will expect to get.

Q.—Yes, and that scale has been fixed by mutual agreement between the union and the employers? A.—Of course, it is laid down in our scale, and if they say they will not accept it they interview us, and if no remarks are made we take it for granted that they accept it.

Q.—The scale is never altered without being submitted to the employers? A.—Of course, we discuss that in the union first and then change the scale.

By Mr. CARSON :—

Q.—Is it your opinion, generally speaking, that the cost of production has been increased by labor combinations? A.—I hardly think so; I can say with some confidence that they have not increased the cost of production.

By Mr. FREED :—

Q.—Do you think that the publisher of a paper who pays 30 cents a thousand can get out his paper as cheaply as one who only pays 25 cents? A.—A man who pays 30 cents can command the best workmen; he has the choice or refusal of the best men, and therefore he gets the best men that can be obtained; whereas the men who employ those who offer at lower prices are apt to get a poor quality of labor.

By Mr. ARMSTRONG :—

Q.—Do you consider that the reputation of a book and job employer depends on the ability of his mechanics to keep up his reputation as a printer? A.—Certainly; I find that to be my experience around Toronto.

Q.—In your experience in Toronto you have known employers of men to have difficulty; previous to this difficulty perhaps the office was a non-union office and when the difficulty was over the office became a union office; have you known such employers to be well pleased with a union staff—much better pleased than with their former staff? A.—I do not remember any particular case.

Q.—In offices in Toronto have you had any experience of that kind? A.—Yes, I believe they have given satisfaction.

Q.—They were better satisfied with the state of affairs as a union office than when it was a non-union office? A.—Yes.

By Mr. FREED :—

Q.—Is that your experience or is it hearsay? A.—Well from enquiry.—

By Mr. ARMSTRONG :—

Q.—Did you ever hear that matter discussed by the union? A.—Well, I can not say that I heard it discussed, but I have heard conversations about it in different offices.

By the CHAIRMAN :—

Q.—Do you know of any particular case? A.—No, but I believe it to be the feeling which existed.

By Mr. FREED:—

Q.—Has any employer or foreman told you so? A.—Well, I cannot say there has; there may have been, because I am in conversation with a great many firms and with a good many employers as well as employés every day in the week.

Q.—And do you derive these impressions from employers or from men? A.—Generally my conversations have been with foremen and workmen; I give it about as far as my oath will permit me. I should judge that some of the foremen would perhaps give another opinion; of course, we may have our opinion as workmen and the employer has perhaps an opinion of his own, and the foreman has also an opinion and it may be that he would slightly vary from the opinion of both.

The Commission then adjourned until Friday, 25th November, at 10 o'clock, a.m.

TORONTO, 25th November, 1887.

JOHN CALLOW called and sworn.

By the CHAIRMAN:—

Q.—What is your business? A.—I am a carpenter in Seaton Village, Toronto.

Q.—How long have you been here? A.—Eight years, since 1879.

By Mr. HEAKES:—

Q.—Are you connected with organized labor in this city? A.—Yes; I have gone in for it recently. When in the old country I belonged to a union. I could not, however, get admission here at first; I had to wait for some time, and I only got introduced into the brotherhood four or five weeks ago.

Q.—The brotherhood of carpenters? A.—Yes. I belonged to the general union in England before I came here.

Q.—Do you know whether the principles of the Trades Unions are opposed to capital? A.—I never knew that the principles of Trades Unionism were opposed to capital; I considered them both to run in the same channel.

Q.—Do you consider that organization among workingmen is a benefit to them? A.—I do, when rightly administered.

Q.—Do you think organization amongst workingmen is an injury to employers? A.—I do not, but that it is a very great benefit. The shop where I worked in England always had the working rules posted up, and allowed society meetings to be held in the shop. That was at the shop of Alderman Neill, of Manchester. In 1877 and 1878 there unfortunately happened to be a strike, and some time afterwards I left the country.

Q.—Does organization among workingmen have a tendency to cause strikes? A.—I never knew it, so far as my experience has gone. Of course, there are some fire-eaters among workingmen as there are among other classes, but my experience has been what I have said.

Q.—I am speaking of the organization of workingmen as a body? A.—I never knew it to be detrimental or injurious in any way.

Q.—You think that organized labor is a benefit alike to employer and employé? A.—I do, when justly administered.

Q.—Have you any knowledge of instances where disputes were settled by a conference between employers and employé? A.—I have known several disputes settled by what are called deputations or delegations of employers and men meeting together. A number of men were selected from each party and they were appointed to transact the business.

Q.—Do you know that cases of that kind have occurred in Toronto since you have been here? A.—I have not had a very great knowledge of the society since I have been here.

Q.—Since you have been in Toronto how do you find wages as compared with wages in the old country? A.—The wages in the old country when I was there were eight and a-half pence, or seventeen cents per hour.

By the CHAIRMAN:—

Q.—Where? A.—In the city of Manchester.

By Mr. HEAKES:—

Q.—Do you know what they are there now? A.—I do not. I do not know what the rates have been since I left. I left in 1879, after the great strike which lasted twelve months.

Q.—Do you think the wages in this country as good as the wages there? A.—I do not want to speak in depreciation of Canada, but I do not think they are so good here. Money has a much greater purchasing power in the old country than it has here.

Q.—A man can live for less there than here? A.—Yes. A man can get a good substantial brick cottage for six shillings per week, one having four or five rooms.

Q.—Is there anything in connection with your society such as a black list? A.—I could not speak as to that.

Q.—You have not heard of anything of the kind? A.—I do not go by anything I hear, but by what I know by my own experience.

Q.—Does your society prohibit union men from working with non-union men? A.—I cannot speak of that.

Q.—You have never known it to be done? A.—I have not examined the rules sufficiently—I do not know of it.

Q.—Does machinery much interfere with your trade? A.—That I cannot speak of. I have not made that a study. It has been very largely introduced into it, and it takes away a deal of labor.

Q.—Has it reduced the wages of the men at all? A.—I would not like to say whether it does or does not, but it dispenses with a great deal of labor.

Q.—What is the usual pay-day in your trade—is it weekly or fortnightly? A.—Every two weeks, sometimes Friday and sometimes Saturday.

Q.—No settled time? A.—It is here in Canada I am talking of.

Q.—It is here I want to know about. When do you usually get paid? A.—Sometimes on Friday, sometimes on Saturday. There is no day I have ever experienced except those two.

Q.—Would you prefer a weekly to a fortnightly payment? A.—If I could have my way I would have the pay weekly—every Friday night.

Q.—What difference would it make? A.—It would give the wife a chance to go round on Saturday and lay in provisions for the week following, and buy in the day time instead of having to take the refuse, anything that is left at night when everybody else has been supplied. Perhaps, too, she would purchase with a little more economy and get as good an article.

Q.—You think then if the men were paid every week there would be no necessity for a pass book? A.—I think it would do away with it a great deal.

Q.—It would introduce the cash system? A.—It would have a great tendency to do away with pass books, as only those who are paid monthly or fortnightly require pass books.

Q.—If the laboring man was paid once a week it would be a benefit to him in that way, and would enable him to save money? A.—I think benefit would result to the workingman. He can go to the savings bank in the old country on the Saturday, and his wife has a chance of going out and buying for the week. Thus the wheels of economy run smoothly, and the Government savings banks are always open for the reception of these savings. From my judgment and experience a man can actually save more hard cash in gold in England than he can either in Canada or the United States out of his wages. I know I have done it.

Q.—Do you know what the average earnings of carpenters are in this country—

say in Toronto? A.—From what I can learn I would place them at 23 cents an hour, sometimes 20 cents.

Q.—You do not know the average in the year? A.—I do not. I never was so lucky as to get a year's work or anything like it. The eight years I have been in Toronto I have never had the privilege of working through a winter. I am off now. I never start to do much again until April. That is about the way of it.

Q.—Is it because you cannot get work? A.—I cannot get it.

Q.—With respect to the settlement of disputes, do you favor arbitration? A.—I would favor Government interference. The Government build asylums and work-houses for people who cannot assist themselves and they make the rest of the people pay the taxes, and therefore they ought to protect workingmen. I am not wishing to speak too strongly in behalf of workingmen, but so far as I can judge he is in this country the victim every time.

Q.—You would believe in the Government compelling the settlement of dispute? A.—Yes, and that they should protect those classes that cannot protect themselves.

By the CHAIRMAN:—

Q.—You are in favor of arbitration? A.—Of Government interference under whatever name it is called. They make us pay taxes, and we are entitled to their protection; but we do not get it.

Q.—What is the effect on a trade when men have been on strike at any time? A.—I do not know that it has any further effect than delaying the work and rather disturbing that branch of society.

Q.—Do you know any good results to ever come from strikes? A.—I do not think there are any—not really tangible good results.

Q.—Nothing lasting? A.—There is nothing lasting in it. A strike only compels employers to do a little more justly to the men, but it passes away like a morning cloud. And after a time they return to their evil doings and the wages of the men come down again.

Q.—Does organization tend to increase wages? A.—It may do so, but it is the shortening of hours that would increase wages in my judgment, because there is a preponderance of population, and the population increases so rapidly that there must be a reduction in the hours of labor or some other means found to employ the surplus population.

Q.—What I want to get at is this; would the wages be as good if there were no organization amongst the men? A.—I think that would largely depend on the surplus labor in the country. I do not think that organization would affect it altogether; it might have a slight effect, but the surplus population is what I think would affect it. It is supply and demand all the way through; when the supply is greater than the demand wages come down; when supply is less than the demand wages go up. To answer your question more directly I would say that organization might slightly affect it, but I do not think it does altogether.

Q.—What are your hours of labor? A.—I have been working nine hours lately all the week round.

Q.—Nine hours on Saturday? A.—Yes, because all the rest did it. I got discharged at one or two places because I would not do so. Mr. McCord's foreman discharged me at a job on Col. Sweeney's house because I would not work on Saturday afternoon.

Q.—What is the rule? A.—Nine hours a day and five hours on Saturday; but they compel you to break that rule, and if you will not you are discharged. I was discharged.

Q.—Employers compel you to break it? A.—Yes, through their foreman.

Q.—If you do not violate the rule you are discharged? A.—I was discharged. Robert Wilson is the man who was foreman at Col. Sweeney's job on Bloor street.

Q.—Do employers try to make the men break their agreement? A.—It is done through the foreman. It was the foreman who did it to me. Let me exonerate the employer; Mr. McCord had no intercourse with me but through his foreman.

Q.—There is an agreement between the employing carpenter and the journey-men's association which fixes nine hours a day? A.—Yes.

Q.—And the half day on Saturday? A.—Yes.

Q.—Was anyone discharged beside yourself? A.—No, because all the rest worked. I was the only one who objected to work. The foreman tried me three or four Saturdays and when he found I would not work I was discharged.

Q.—Do you know how the agreement between the employers and the journey-men carpenters was arrived at? A.—It would take too long to give my notion of it.

Q.—Do you know? A.—There were communications the year before and the men who were sent as a deputation made a bungle of it, and the trouble arose because the matter was not properly managed by the men who were sent as a deputation the summer previous. This I say caused all the trouble the past summer—it was because they did not do their duty.

Q.—Was an agreement signed? A.—No, not this time, but the terms were to be signed if the men would agree to them, and they would not.

Q.—The men would not agree to it?—A.—No, not from what I could learn.

Q.—How do you make out there is an agreement if one never was signed? A.—There is not a *bona fide* agreement, only what we are working on with the trade. There is no agreement, because the men would not agree to what the masters wanted. If I said there was an agreement I was in error.

Q.—Do you know what the men objected to in the proposed agreement? A.—They objected to the words "qualified workmen" so far as I can understand it. The men wanted 22½ cents to be the minimum and the masters wished to insert that it should be paid to qualified workmen only; and the men would not have that because the agreement of the year before had nothing of that in it, and the masters introduced it as a bone of contention and consequently the men would not agree to it.

Q.—The employers wanted to put in the agreement that they would pay to qualified workmen a certain rate? A.—22½ cents was the minimum.

Q.—And the men would not have it? A.—Yes.

Q.—And that was the cause of the contention? A.—Yes.

Q.—Do you think men not qualified for the work of the trade ought to be paid the wages?—A.—That is rather an imaginary question.

Q.—Do you think that a man who cannot work at the trade properly should be paid those wages? A.—He has no business there. I might as well go and be a blacksmith.

Q.—How would that injure the trade if qualified men only got the wages? What injury would it do to the men if those wages were only paid to men described as qualified workmen? A.—Because all men who have served seven years at the trade are in a degree qualified. They may not all be equally qualified mentally but so far as practice goes they are qualified to work at certain branches.

Q.—Have all the men in your trade served seven years? A.—Yes, in the old country. Here I do not think some of them have worked more than three months.

Q.—And they do not become qualified in three months? A.—No.

Q.—Was not that what the employers wished to distinguish? A.—I do not know. I took it in a different light altogether—that they did not want to pay the wages and they put that in the agreement to have something to stand on.

Q.—What is the practice in your trade about apprentices; how long must they have served in this country? A.—I can hardly tell you how long they do serve, I think three or five years, three years. In England they are indentured for seven years; I have the indenture of my son who served that time at the business.

Q.—Do you know how many apprentices are employed in a shop in proportion to the number of men? A.—Not in Canada; but speaking of home I think it is one to five or six men.

Q.—Is there no rate in this country? A.—Not that I am aware of.

By the CHAIRMAN :

Q.—What age do the boys go if they are indentured for seven years? A.—They

go at fourteen and get out of their time at twenty-one. I may add that it is better both for the employer, the lad and his parents and also for society generally that he should serve for seven years and be properly indentured.

By Mr. McLEAN :—

Q.—How long have you to serve here before you can join the organization?  
A.—I do not know. I do not think you can join here until you are a journeyman, but I am not prepared to give an answer because I have not studied the matter.

Q.—How long has an apprentice to serve at the trade here before he can become a journeyman? A.—I think about five years in Canada.

By Mr. CARSON :—

Q.—On what ground do you contend that machinery lessens the amount of labor employed in your business? A.—It dispenses with so many men. Take a mortising machine. Such a machine run by steam power will mortise as much I suppose as fifty men in a day, or probably a hundred men. If this is the case it dispenses with the labor of so many men. At all events that is the view I take of it.

Q.—You are speaking from the workingman's point of view? A.—Yes.

By the CHAIRMAN :—

Q.—What would be the result if you abolished machinery? A.—I could not tell what the effect would be. When I was a boy there was no machinery.

By Mr. CARSON :—

Q.—Suppose machinery were abolished in Toronto, what would be the consequence in the carpentering business? A.—It would increase the number of men required to work on the rough materials.

Q.—Do you think there would be as much business done in house building and mechanical work generally? A.—It might lessen that somewhat, because probably the cost of production might be a little more.

By the CHAIRMAN :—

Q.—Would it not be a great deal more? A.—That is only a matter of speculation.

By Mr. CARSON :—

Q.—I understood you to say that the shortening of the hours would necessarily increase the wages? A.—Yes; for as a consequence it would employ the surplus population, and when that was employed and there were not men to be got wages would go up.

Q.—When you work nine hours a day are you paid by the day or by the hour?  
A.—By the hour.

Q.—Then you are only paid for nine hours? A.—For nine hours.

Q.—Would you not prefer to work ten hours? A.—No, excuse me—I would rather work eight hours.

Q.—Do you think you would be better off? A.—I do think so.

By Mr. McLEAN :—

Q.—What benefit would you receive? A.—Several things I could do which I have not an opportunity to do now, and for which I have to pay out of the money I earn. I could economize if I had spare hours from work. That is if I was employed only eight hours I would have that spare time to attend to my own interests at home. I proposed to put up a little cottage, but I found it up-hill work. I have, however, succeeded.

By Mr. CARSON :—

Q.—Do you consider that your family and yourself would be in as good a position if you worked five hours as if you worked eight hours? A.—If the remuneration was in accordance.

By the CHAIRMAN :—

Q.—At the present rate per hour? A.—That would hardly be analogous—at twenty cents per hour for five hours, it would not pay; but the wages would go up correspondingly.

Q.—How do you compare your statement when you refer to the higher purchasing power of wages in England when you advocate shorter hours and increased pay. A.—We had shorter hours in the old country, in Manchester, than we have here or will have for some years to come; we worked forty-seven and a half hours several months in the winter and in the summer I think fifty-two hours. That was the Manchester rule. We had the rule pasted up in the shop. I had a book of rules when I belonged to the general union; I gave it to Thos. Moore and have never got it returned. If I had, I could have produced the evidence from the book. I think we worked fifty-two hours in summer and forty-seven and a half during the months in winter; the wages were eight and a half pence per hour and the purchasing power of money is greater in England. How that is I cannot explain, but I know it is a fact.

Q.—Suppose you had a contract for building a mechanic's house could you build that house as cheaply if you worked five hours a day and received forty cents an hour as you could if you worked ten hours a day and received thirty cents per hour. Would it not be better for the owner and yourself and the community at large to work eight hours and get twenty-five cents an hour or would it on the other hand be better for you to work ten hours and receive twenty-five cents an hour? A.—No, I cannot answer that question, but I would not want to go down to five hours. I think that is begging the question. I think eight hours was my remark, but to go to five hours would be going to an extreme point.

By Mr. HEAKES :—

Q.—You were in England when the nine-hour movement was established? A.—Yes.

Q.—Did wages fall or rise? A.—They came up.

Q.—You were here when the nine hours was established? A.—Yes.

Q.—Then the tendency of shorter hours is to increase the wages? A.—When I came here in 1879 I worked for John Hamblin, at one dollar and thirty cents a day for ten hours work. I was just fresh out from England; I was a younger man by seven or eight years than I am now, and I suppose I was a better man then than I am now.

By Mr. CARSON :—

Q.—Would the shortening of hours give young men more spare time to run out to saloons and spend money than when you were employed? A.—Some had a habit of going to saloons, but I did not go there. I may be what you may call a peculiar person, in other words a crank. But I desire to respect and honor the Sabbath and consequently I want Saturday afternoon to prepare the wood and do the chores round the house to be ready for Sabbath. All men do not do that, but I may be allowed that privilege. That is why I want Saturday afternoon; it is that this work may not encroach on the Sabbath.

By Mr. GIBSON :—

Q.—You have stated that a man can run a machine capable of doing the work of sixty men? A.—I suppose so. I take it for granted that a mortising machine run by steam power would do the work of fifty or a hundred men; and therefore of necessity it must dispense with the labor of that number of men.

Q.—I was under the impression that machinery increased the labor demand? A.—It may in some kinds of business; but it has a tendency in my view of the subject to decrease labor. That is from what I have seen.

Q.—You do not think more men are required from hands being required to run the engine, attend to the boiler and machinery? A.—I have looked at all those points

Q.—And in your opinion such a machine does away with forty-nine men out of the fifty? A.—I have looked at that point, and I will endeavor to answer all questions fairly.

By Mr. FREED:—

Q.—You said some time ago that you had recently joined the union in Toronto? A.—Only about four or five weeks ago.

Q.—Was it because you did not agree to join the union? A.—No, it was because I could not get in. There is no branch of the general union to which I belonged when in England; there was only what is called the Amalgamated Carpenters', and I was too old to join. Consequently I was left out. In 1882, the Brotherhood was established, and I was admitted to that four, five or six weeks ago; I cannot tell the exact day.

Q.—Is it to your advantage to belong to the union? A.—I consider it an advantage, because it brings me more among the men at the meetings and makes me better known.

Q.—Can you get work more easily? A.—I think so. I consider it has a tendency to rub away the rough edges and bring me into work; besides, there is the sick and the death benefit, which I think a great deal of.

Q.—Do you get better wages as a member of the union? A.—I think I do; I am recognized as a member and get better wages.

Q.—We will take your own trade: do carpenters in England live as comfortably as carpenters in Canada, taking into consideration their houses, their food and their clothes? A.—To speak individually and from my own experience in Canada, I may say that I have been able to live comfortably here, but I am a sober man. I never cross the door of a saloon from one year's end to another; I am practically a total abstainer, and a prohibitionist at that.

Q.—Take the other carpenters with whom you were acquainted in England and compare their position with that of those of your acquaintance in Toronto: do you think they live as comfortably there as here? A.—Those of my class, respectable men, in England live quite as respectably as they do here—the abolition teetotal class I am referring to; I do not take the other class.

Q.—Are men more sober in Canada? A.—Yes, a great deal more sober; I give Canada the palm for sobriety.

Q.—What articles are cheaper in England than in Canada? A.—House rent, coal; bread is as cheap or nearly so; butchers' meat is not as cheap, groceries are cheaper; you will get good workingmen's sugar from two pence to two pence half-penny a pound.

Q.—Is not the workingman entitled to as good sugar as any other man? A.—It would be good brown granulated sugar, such as sells here for six, seven, or eight cents; you would get it there for four cents—two pence or two pence halfpenny a pound. You could get coal for six shillings or eight shillings a ton where I came from, ten shillings a superior quality.

Q.—What is it worth in London? A.—I am told about twenty shillings a ton but I have not resided there.

Q.—You have told us that you could not get work during the full year nor anything like it? A.—No.

Q.—About how many months in the year do you think you work? A.—I have worked very few months this year, because I have been doing for myself; but on the whole, I think, looking at the question carefully and summing it up, I do not think I have made an average of six months in the year since I have been in Canada.

Q.—Are other carpenters as badly off as you are? A.—I do not consider I am badly off.

Q.—D. they work a longer time than you do? A.—There are several I know who do not.

Q.—Take the average of them? A.—I do not suppose that the average carpenters of Toronto to-day average much above seven or eight months all the year round—

that is striking an average. There are a few who have friends or are connected with churches who probably make full time; but, taking a man like myself, with no friends, his chances are very slim.

Q.—Excuse me for asking the next question. Are you as active as most carpenters? A.—For my time of life I am much more so. I am nearly sixty.

Q.—Are you considered a fair average workman? A.—Yes, both at the bench and on buildings. I am perhaps just a little slow, but, on the whole, for substantial work, I can hold my own with anyone. But it must be remembered that work at home has to be solidly and well done.

Q.—You were talking about strikes, and you thought that strikes did little or no good. Now is it not a fact that, although an individual strike may prove a failure, yet in consequence of the strike wages are kept higher than they would have been without a strike? A.—Could you give me that in another way so that I may grasp the idea more correctly.

Q.—Let me put it this way: Do you suppose carpenters' wages are higher because of the effect of strikes? A.—I do not know. I will tell you what I think about it. In my experience in eight cases out of ten the employers infringe on the men's rights and privileges. That is my experience during the last seven or eight years.

Q.—If the workmen were not united, were not in unions, would not the employers infringe on their rights more? A.—I think they would, for they are a grasping lot. I am not speaking in any way improperly as to employers, but taking them as a rule they are a very grasping set of men.

By the CHAIRMAN:—

Q.—Are not all people grasping? A.—There are some exceptions.

Q.—Is not everybody grasping? A.—I cannot say they are; no, I find some gentlemen very liberal in giving.

By Mr. FREED:—

Q.—What qualifications are required of a man who joins the carpenters' union? A.—That he be a competent workman.

Q.—How do they determine that? A.—There are men who have worked with the applicant, and those men have to recommend them for initiation. If they do not know from their own experience that he is a good workman they would not recommend him. I had to get two men to vouch for me, although I have worked here seven years and am well known in the city. They are very particular.

Q.—You consider that all the men belonging to the union are qualified workmen? A.—I could hardly say that; that is putting a leading question into my mouth. But as a rule I might say that seven-eighths of them are qualified workmen.

Q.—Why then did the union object to that clause requiring employers to pay twenty-two and a half cents per hour to qualified workmen only? A.—Because they wanted the wages to be higher, and they did not want that to be a ground for restricting the rate from going up. They wanted things to be elastic, so the men could get advanced wages and not continue to be kept down. Employers would keep all the men down at that grade; I find they go as far in that direction as they can.

Q.—Did the men require the employers to pay twenty-two and a half cents per hour to men not qualified? A.—No; the society does not require that.

Q.—Then what is the object of the qualification clause? A.—Because the employers drew it up and introduced it into the agreement. It was an innovation and had no right to be there, and when the agreement was made the year before there was nothing of that kind in it. When, however, a new agreement was proposed it was introduced, and that was the cause of the late strike.

Q.—If the men work shorter hours than you do, do you think they should get higher wages? A.—We simply demanded what was right. Supply and demand will always regulate the wages. When men are difficult to be had wages will go up.

Q.—Will that increase the cost of production? A.—I do not know that it will very seriously; it might affect it a little.

Q.—Do you think that men working at high wages can produce as cheaply as men working at low wages? A.—I do not take in your question rightly, and I do not want to commit myself.

Q.—If you are working at thirty cents per hour can you turn out work cheaper than if you were receiving twenty cents per hour? A.—The goods would be a little dearer of course.

Q.—The cost of the work would be higher? A.—The cost of the work would be a little more, but the quality would be fully equal to it. The cost would be more, but the cost of other articles is more for workmen here. The cost of living is considerably in advance of what it was when I came here first.

Q.—You want the carpenters to share the benefit? A.—I want all workmen to come up in the social scale.

A.—Would not the cost of living increase? A.—Yes.

By Mr. HEAKES :—

Q.—Do you think that a man paid thirty cents per hour will do more work with the aid of machinery than a man who was paid fifteen cents per hour some years ago? A.—Yes.

By Mr. FREED :—

Q.—Let us go back a little. If unqualified workmen got into a union and were employed in a shop could not the employer discharge them and keep only qualified workmen? A.—It is in this way: they would keep the men who offered to labor the cheapest. That is the best answer I can give.

Q.—Will the union permit the cheap man to continue at work? A.—I do not think the union can always help it.

Q.—Are the men who are thoroughly skilled workmen employed more than those who are unskilled? A.—It depends on the wages. There might be a skilled workman who would work for fifteen cents and he would get the preference over a man who might be better skilled, but who wanted \$1.75 a day.

Q.—Does the union permit men to work for fifteen cents an hour? A.—I do not know that it does; I cannot speak about that. But I presume there are some working at that rate, if it were known.

Q.—I understood you to say that twenty-two and a-half cents was the minimum? A.—It is supposed to be, but there are a great many not getting that or anything like it. It is, however, supposed to be the minimum.

By Mr. CARSON :—

Q.—That is the minimum wages of the union? A.—Yes.

By Mr. FREED :—

Q.—Is the machinery properly guarded against accident? A.—Not that I have seen; I have worked in factories where it was not guarded. I do not want to depreciate Canada; but I say the machinery ought to be guarded and it is not guarded.

Q.—Not guarded as well as it might be? A.—No, not as well as it ought to be.

Q.—Have you known accidents from machinery? A.—Yes, but I do not know that they were from the machinery not being properly guarded, but rather from the carelessness of the men.

Q.—Are boys and unskilled persons put to work at such machinery? A.—There are boys employed.

Q.—Small boys? A.—Boys of fifteen or sixteen, or in that neighborhood.

Q.—Have any of those boys within your knowledge been hurt? A.—Not to my knowledge, not here in Toronto. I have known it to happen in other places, but I will confine myself to Toronto.

Q.—Do you know of any sharing of profits by employers among their workmen in addition to their wages? A.—Not in Toronto.

Q.—Have you known of that in England? A.—I do not think I have.

Q.—It is not within your experience? A.—Not within my experience; but I

belonged to co-operative stores and benefited very materially from them; that is not in Toronto; I have not been connected with any of them here.

Q.—Tell the Commission about co-operative stores in England? A.—The shares were one pound shares, about five dollars, and we paid one shilling for entrance fee, and we let the dividends roll up so that our one pound share became ten or fifteen shares through the consumption of goods in the house. I purchased my goods at the store, and the dividends that resulted from those purchases were placed to my account and were allowed to roll up.

Q.—And those added to your capital? A.—Yes, to my principal as a shareholder, and I had fifteen pounds in a short time.

Q.—Did you pay for your goods the same prices as were charged at other stores? A.—As a rule, they were pretty nearly the same prices; perhaps, articles here and there were slightly dearer, but it was quite insignificant. I got a dividend every quarter.

Q.—A dividend in money or in additional capital? A.—A dividend that increased my shares; I let it go to my shares. I got two shillings or two and three pence every quarter.

Q.—But you did not draw the dividends? A.—No, I let them go to my account. I had fifteen pounds in a very short time. Those co-operative stores are a very great benefit, if they are honestly conducted and properly worked. But it is very much, as they say in the United States, each for himself and the devil take the hindmost. It is a very wrong principle to work on.

Q.—Do you not require men who understand business to conduct those stores? A.—They must be what we call financiers.

Q.—You would not take a carpenter to run a grocery? A.—No, I have however known several men leave the carpentering business and go into stores.

Q.—Is there no co-operative store in Toronto? A.—I am not connected with any.

By the CHAIRMAN:—

Q.—Are there any? A.—Yes, there is one on Yonge street and there is said to be one on Queen street near Spadina Avenue; but I do not know anything connected with them.

By Mr. FREED:—

Q.—Have rents increased since your time in Toronto? A.—I think so very decidedly. They have gone up like a balloon.

Q.—How much? A.—I could not say, because I have not been renting a house for three or four years; I have one of my own. I know they have gone up from what people tell me, two or three dollars a month.

Q.—Has your house increased in value? A.—That I cannot tell, because it has not been assessed yet. I am out on the common at Seaton village.

Q.—How far is that from the centre of Toronto? A.—Two and a half or three miles.

Q.—How do you come in to your work? A.—When I come into the city to work I have to take the street car and I can drop off where I want.

Q.—How long does it take you to come in? A.—About half an hour.

Q.—What is land worth per foot frontage where you are? A.—When I bought I paid six dollars per foot frontage. I cannot tell you what it is worth now, but I suppose it is worth more. I bought in 1885.

Q.—What is the size of your lot? A.—Fifty by a hundred and twenty-five feet.

Q.—Do many carpenters, within your knowledge, own their own houses? A.—There are about three near where I am, but one is a boss. I suppose there are something like a dozen up around there, and out of that dozen there are three, two journeymen and one a boss who own the houses they live in. I am the fourth. I can give you the names if necessary.

Q.—Do many other workingmen own their houses in that neighborhood? A.—Yes, there are a good many workmen in other branches who do, but I do not know about them.

Q.—Are workmen acquiring houses in that part of the city? A.—They have done so during the last three or four years. They are acquiring houses over in Dovercourt Village; there is quite a sprinkling of small houses there; I presume workmen own the houses, but I am not prepared to say whether it is so or not. They are houses suitable for workmen, houses with two or three rooms, little cottages. Whether a company built them on speculation or not I cannot say, but a great many workmen obtain their houses through loan societies. Those societies however often step in and squeeze the fat out of the men, but they do not squeeze me, because when I had money I have gone on with my house; when I have not I have stopped it until I earned more.

Q.—Do you know of any co-operative building society in Toronto? A.—I do not.

By Mr. ARMSTRONG :—

Q.—Does the introduction of machinery into your business increase boys' labor and do away with the labor of skilled mechanics? A.—It increases boys' labor and does away with men's labor.

By Mr. CARSON :—

Q.—In what way? A.—Because a boy can tend a machine that will do many men's work, and his wages would not average one-third of what a man would get.

Q.—Can a boy attend an engine? A.—I know places where a boy does attend to an engine.

Q.—How many machines in an establishment could a boy attend? A.—He could attend one, probably two.

Q.—How many machines altogether could a boy run in a sash and blind factory? A.—He can attend to one machine, probably two.

Q.—Do you speak as a practical man? A.—Yes.

Q.—How do you arrive at that conclusion? A.—Because the job requires but little teaching. The machinery does the work. To make a blind for instance there is not much to be done, and the boy can easily do it with the machine. I have worked in such factories; I do not want to give any of the names, although it does not matter much to me.

Q.—Can a boy take care of the machine? A.—Yes; of course, he cannot repair them.

Q.—He cannot repair an adjusting machine when out of order? A.—I would not like to say that, but a mechanic is round for that purpose.

Q.—Can he change the knives? A.—Yes.

Q.—Boys then must be pretty smart round here? A.—I do not mean a boy seven, eight or ten years, but boys sixteen or eighteen.

Q.—What wages would a boy capable of doing that work earn? A.—Perhaps a dollar a day.

Q.—Could a boy run a stationary engine? A.—I know a boy who does run a stationary engine. I can give the name of the firm where he is employed.

By Mr. ARMSTRONG :—

Q.—Your society as a body is I believe in favor of the apprentices being indentured? A.—I could not exactly speak of that, but it is my individual preference. I know employers used to have them indentured, and I know that the great majority of the union carpenters are in favor of it.

Q.—The bosses as a body are not in favor of it? A.—No, they want to skin labor every time.

Q.—In your opinion the fact of boys not being indentured is the fault of the employers? A.—Yes.

Q.—So far as your knowledge goes, the indenture system makes a first class carpenter? A.—Yes, it is the way to turn out first class men. The present state of things leaves the bosses to do what they like, to make the most money out of the men, and certainly the bosses' profits have not been reduced.

Q.—You are under the impression that the present system has a tendency to

create botch carpenters? A.—There can be no doubt about it. Apprentices should be made to serve five or seven years.

Q.—You have had some experience in co-operative stores? A.—Yes.

Q.—Do you consider that the secret of their success is to commence on a cash basis and compel the customers to pay cash for everything they get? A.—Yes, I know of nothing like cash payments.

Q.—If you were permitted to purchase goods and had an account which would stand against your stock, could a co-operative institution be carried on successfully on such basis? A.—No.

Q.—The principle of success is the payment of cash for what you get? A.—We always paid in cash, and allowed the dividend to roll up and make shares.

Q.—You think that co-operative stores conducted on the cash basis must succeed? A.—Yes, such has been my own experience, I have not offered an opinion on this question but what I can get up and defend. It is my experience I have given all the way through. I believe the people, the laboring classes, are not protected as they should be by the Government. The Government should protect us, but we are not protected. They make us pay taxes and yet do not furnish us with protection. I believe in supporting the Government of the country in which I live, but it is the duty of the Government to see that the people are protected. They will hang a man for committing a capital offence, and therefore they should protect men when they are weak and liable to go to the wall from their oppressors. I earnestly submit these few ideas to the Commission for their better thought and deliberation so that they may be able to get things into shape.

\* \* \* Machinist.

WITNESS:—I do not wish my name to be published.

By Mr. FREED:—

Q.—Why do you not wish your name published? A.—There is no use leaving myself open to the condemnation of my employers. Of course, I want to protect myself as much as possible, having a living to make.

By Mr. WALSH:—

I do not think it is the wish of the Commission that any one should place himself at a disadvantage.

WITNESS:—I think it is the feeling of the workingmen; they rather object to give evidence and see their names mentioned in the papers.

By Mr. ARMSTRONG:—

Q.—You are a machinist by trade? A.—Yes.

Q.—How long have you been at the business? A.—Thirty-two years.

Q.—How long have you worked in Canada? A.—Fourteen years.

Q.—In Toronto all the time? A.—I have travelled through the country from Halifax to Georgian Bay. At the latter place I was employed by a company to look after machinery and boilers.

Q.—Is your trade organized in Toronto? A.—Partly. I might say there is an organization to which I belonged for many years, the Amalgamated Society of Engineers. The head office is in London, England. There are only, I think, about sixty members here representing boiler makers, machinists, etc.

Q.—Do you find it to your advantage to belong to your trade organization? A.—So far as Canada is concerned it is of no benefit, more than as trying to elevate our circumstances. It is more of a benefit society than anything else.

Q.—Were you ever connected with a co-operative establishment? A.—No, not in this country.

Q.—Has your trade had any strikes? A.—No strikes since I came to the city, but there have been strikes before that, of course.

Q.—Is your trade one at which men can work all the year round? A.—Where I am working at the present time, it is. It is not a contract shop, but in such shops a great deal depends upon the demand.

Q.—The popularity of the firm? A.—Yes, getting work.

Q.—In your society are there any rules providing for arbitration when difficulties arise? A.—Yes, for arbitration before a strike occurs. Of course, our rules are guided by the rules made for the old country society; we are merely a branch, and the parent society is in the old country.

Q.—Taking the past five years and comparing it with the previous five years: is the purchasing power of money as great now as it was then? A.—No, I do not think so. Wages are no better to-day in our line of business than they were fourteen years ago.

Q.—I am referring to the purchasing power of a dollar. Does it go as far now as it did five years ago? A.—So far as victuals are concerned there is not much difference; but if you take house rents and so on they are dearer.

Q.—What is the percentage of increase? A.—I have only changed my house once. The first house I was in I paid no rent; I had house and water with so much wages. I have only been in one house since, and my rent has not been increased.

Q.—How long have you been in that house? A.—I guess about five years.

Q.—How are the sanitary arrangements of establishments in your trade in the city? A.—They are good enough in the shop in which I am working at the present time.

Q.—What are the average wages? A.—We have machinists working in Toronto to my knowledge for as low as \$1.50 a day; a first-class man gets \$2.25.

By Mr. CARSON:—

Q.—What number of hours do you work? A.—Sixty hours per week.

By Mr. ARMSTRONG:—

Q.—Is there a recognized scale of wages in your trade? A.—No, a man can work for what he likes.

Q.—Are the wages in your trade higher in Toronto than in the old country? A.—When I lived there we worked nine hours a day or fifty-four hours per week at the place I left; fifty-one hours per week constitutes a week's work. Taking it by the hour I was as well off at home as here. We had as much per hour as here.

By Mr. HEAKES:—

Q.—Would the purchasing power of money in England be greater than in Canada? A.—We could live cheaper at home than here.

Q.—Money goes further there than here? A.—Yes, a great deal further. House rents are nothing there as compared with here, and coal was very cheap there.

By Mr. GIBSON:—

Q.—Did you have a good house for less money than you can get one here? A.—At home there are more tenements; you are not isolated as you are here. The working classes, especially in Toronto, like to live more on the cottage system, while at home there will be perhaps ten or twenty tenants in one building in flats.

Q.—Do you get more accommodation for less money? A.—A workingman at home has generally a kitchen and two rooms. I would sooner live the way we do here than the way they do there; at the same time houses give more comfort there.

Q.—Take the house in which you live now: would you obtain the same accommodation and the same number of rooms in the old country for the same money?

A.—You would get a better house for the same money.

Q.—Then it is better in the Old Country than here? A.—Yes so far as rent is concerned.

By Mr. CARSON:—

Q.—Will you explain in what way it is that one dollar was better five years ago than it is now; is everything so dear? A.—I refer more to house rent.

Q.—You find living cheaper now than it was five years ago? A.—No.

Q.—Is it dearer? A.—No, I do not think there is much difference.

Q.—Is it about the same as it was ten or twelve years ago? A.—Yes, only I think butchers' meat is dearer than it was five years ago.

By Mr. GIBSON :—

Q.—In working over time, what are the wages in the Old Country and here? A.—In the Old Country we got one hour and a half for every one hour, from five o'clock to eight. If we worked till ten o'clock we were allowed half an hour for tea, which was not deducted from us, and we were allowed one penny beer money for every hour after eight o'clock. So from eight o'clock to six o'clock in the morning we got ten pence of beer money. So one night's work at home counts seventeen and a half hours, besides the beer money.

By Mr. BARTON :—

Q.—You do not get any beer money here? A.—No, you hardly get time to take a drop of beer.

By Mr. GIBSON :—

Q.—Then for working all night you get double wages? A.—About double wages.

Q.—And for less time than that you get fifty per cent more? A.—Yes.

Q.—In Toronto how is it? A.—In Toronto so far as we are concerned it is this way: for from six to eight we get a time and a half, and after that a time and a half up to six o'clock in the morning, but we are not allowed half an hour for tea. We are supposed to continue at work from one o'clock dinner time to six o'clock in the morning.

Q.—In the old country you get one hundred per cent and in this country fifty per cent for over time? A.—In the Old Country overtime counted from five o'clock to six in the morning. The nine hours system being in force we had one hour more.

By Mr. FREED :—

Q.—Then it is the same in England as here with the addition of the beer money? A.—I do not say it is the general rule throughout Great Britain, but it was in the district from which I came.

Q.—Where was that? A.—From Dundee.

Q.—Has your society any connection with the locomotive engineers? A.—No, not at all.

Q.—You say the accommodation and the condition of those tenement houses are not so good as the accommodation and condition of the house you live in Toronto? A.—You are more isolated here.

Q.—You have more room? A.—Yes, but of course you pay more for it.

Q.—If you had the same accommodation in the Old Country, the same amount of room you have here, how would it be? Why do they prefer to live in tenement houses? A.—I do not think they can get better houses.

Q.—What rate of wages did you receive in Dundee? A.—Thirty-six shillings per week.

Q.—Of fifty-one hours? A.—Yes. There was some who received twenty-eight shillings, thirty and thirty-two.

Q.—What would be about the average? A.—About twenty-eight shillings.

By the CHAIRMAN :—

Q.—Have wages risen? A.—Yes, they rose after the nine hour system was introduced. When I first went to the trade as a journeyman the wages were from eighteen shillings to twenty-one shillings a week.

Q.—What caused the rise of wages? A.—They have been continuously rising.

By Mr. FREED :—

Q.—The average rate would be thirteen cents per hour? A.—I never calculated it. I did not work by the hour but by the week there.

Q.—What are the average wages in your trade in Toronto? A.—About one dollar and eighty-five cents per day.

Q.—That is a day of ten hours? A.—Ten hours.

Q.—Is much machinery used in your trade? A.—Yes.

Q.—Is it carefully protected against accident?—A.—It is as well protected here as I have seen it at home, and the Factory Act was carried out with the utmost rigour.

Q.—Do you know of any sharing of profits over and above the wages paid to the men? A.—No.

Q.—Are you required to enter into any contract on going to work? A.—No. In some branches of the business I believe there is what is called piece work.

Q.—Are you required to enter into any agreement not to belong to the Union? A.—No.

Q.—Do you know of any blacklisting on the part of employers against objectionable men? A.—I never heard of it.

How many boys go to work at your business? A.—There is no limit with regard to them; of course there is no rule to prevent them; the employers can put on as many apprentices as they like, and there is no objection.

Q.—Do they take work from the journeymen? A.—The foreman gives them the work.

Q.—Are any journeyman thrown out of employment in consequence of boys going to work? A.—No.

Q.—Are many men in your line of business out of work in Toronto, so far as you know?—A.—Not that I am acquainted with.

Q.—Do many new men come into Toronto seeking work? A.—This last spring a good many came from the Old Country.

Q.—Are they good workmen? A.—They are average workmen. I am speaking only of those whom I came across myself.

Q.—Are the conditions of work different in Canada from the Old Country; have they to learn much after they arrive? A.—No, I do not think they learn anything in Canada. They are good enough in my business at home. A good many mechanics come to Canada with the idea that this being a new country anything will do.

Q.—As a rule how frequently are you paid in your business? A.—We are paid once a month. Take a stranger who comes into the shop on the first of the month, say December. It will be from the 14th to the 22nd of January before he can get any money. It is one of the things we have to complain about so far as the railways are concerned.

By Mr. HEAKES :—

Q.—How much will he receive at the end of the six weeks? A.—His month's pay for December; that is from fourteen to twenty-two days' pay belonging to him would still remain in the hands of the company. The men are paid from the 1st to the 30th or 31st.

Q.—Suppose a man went to work in the last week of December, when would he get any money? A.—From the fourteenth to the twenty-second January; that would depend on what railway he worked with.

Q.—He would have to work one month almost before he got the preceding month's pay? A.—Yes.

By Mr. CARSON :—

Q.—Does that apply as a general rule? A.—Yes, to the great railway companies. Others pay weekly and fortnightly.

Q.—You mean shops belonging to railway companies? A.—Yes, they pay once a month.

By Mr. ARMSTRONG :—

Q.—If there was a branch of your trade thoroughly organized, would it benefit the men in any respect? A.—It would greatly benefit them; it would benefit our con-

dition greatly, I think. You may recollect perhaps that a few months ago the trade organized to try and advance the condition of the members, but it collapsed for the time being. We met again last month.

By Mr. FREED :—

Q.—Does convict labor interfere with your work? A.—Not in Canada so far as I know. I do not think any machinists are employed in the penitentiary. When the car shops at the Central Prison were running they interfered a little with us; that was some years ago.

Q.—Several years ago? A.—1873 or 1874.

Q.—Do many of the men of your acquaintance save money? A.—There have been mechanics in Toronto who have saved money, but that was thirty years ago. I do not know any mechanics with large families who have saved any money since I came here. I know I have not.

Q.—Do you know of any who own their own houses? A.—I know two or three, who were here about thirty years ago, and have not had incumbrances or families.

By Mr. GIBSON :—

Q.—Do you think your chance of saving money would be better if you were paid twice a month? A.—Yes; I think working men would be from seven to ten per cent better off than at present with monthly wages. I know that from practical experience

By Mr. McLEAN :—

Q.—What do you think is the best day on which to pay, if the men were to be paid weekly? A.—As far as regards Toronto, I think Friday would be the best day, because it would give the wives a chance to go to market on Saturday.

By Mr. HEAKES :—

Q.—They would save money by having the cash with which to go to market on Saturday? A.—It would keep them out of the credit system, which is so injurious to workingmen. At the present time if a man is a little extravagant with his pay when he gets it, it is a long time before he gets relief.

By Mr. ARMSTRONG :—

Q.—Does immigration affect your trade? A.—There are always immigrants arriving, but many of them stop only two or three months; they are birds of passage and remove somewhere else.

By Mr. CARSON :—

Q.—Do you find the mechanics in this country able to compete in speed and workmanship with foreign labor? A.—I think the mechanics in Canada are as good as any mechanics I ever came across; I think they are able to take their own part anywhere.

Q.—In case of strikes: have you any particular ideas as to how disputes might be arranged so as to prevent strikes taking place? A.—I think a system of arbitration would be better.

Q.—Arbitration by whom? A.—By some independent parties.

By the CHAIRMAN :—

Q.—Or by a court for that purpose? A.—By disinterested parties. I think that would be a fair thing. I do not think that employers and employed could have a better plan than arbitration by disinterested parties.

By Mr. HEAKES :—

Q.—Would you prefer enforced arbitration rather than none? A.—Yes.

Q.—Do you think if the Government were to appoint a Court of Arbitration it would meet the requirements of the case? A.—I think it would be better than the present state of things, because I do not believe in strikes, neither do I believe in lock-outs.

Q.—Strikes as a rule do not produce much benefit? A.—I never saw any use in them except the nine-hours strike in Newcastle. It did good in regard to getting the nine hours but it did harm otherwise.

By Mr. CARSON :—

Q.—As a general rule, who come out worst, workingmen or employers? A.—I think employers are always better prepared for strikes than are workingmen. The workingmen also are the greatest sufferers.

By the CHAIRMAN :—

Q.—Do you think workmen ought not to strike unless they are sure of success? A.—They should not strike unless they see they will get their money back, because they are not prepared to strike.

By Mr. GIBSON :—

Q.—You say there is no limit to the employment of boys in your business? A.—There is no rule for a certain number of boys to so many journeymen. Employers can put on all the boys they like, and if they like they can endeavour to work their shops with nothing but boys.

Q.—Do they take care to instruct the boys, or have they to pick up knowledge where they can get it? A.—They take care to instruct the boys, of course. If they have any intelligence the foreman or even the men will see that they get justice.

By Mr. CARSON :—

Q.—At what age are boys generally taken into your trade? A.—They are generally from sixteen to eighteen.

Q.—When they are taken in are they, so far as you know, up to the average in education? A.—They seem to be pretty intelligent. I am only speaking of what I know.

Q.—They can read and write? A.—There might be some who can neither read nor write for all I know, but the boys I come across seem to be pretty intelligent.

By Mr. GIBSON :—

Q.—As general thing does the foreman take pain to teach those boys? A.—They are generally put under the guidance of a leading hand who has charge of the work—of the machine that is being built. He has boys under him.

Q.—In some shops are not boys taught one particular branch and become very good at the work in a very short time; in this way do they not become skilled workmen at one branch and find it difficult on leaving the shop to get another situation, in fact are no use? Have you not seen men who were good workmen at one particular branch be, outside of that branch, no better than ordinary laborers? A.—That is a system which prevails where a shop is run upon a certain class of machinery, which pays the employer better than any other way. Even a journeyman going into such a shop will be at the same job all the time for he gets perfect at that kind of work and it pays the employer better to have him kept at it.

By Mr. McLEAN :—

Q.—That is your experience? A.—Yes.

By Mr. GIBSON :—

Q.—It was boys I was talking about. If they train the boys in that way will it be of much advantage? A.—No; but I do not think they can do so much here in that way as in the old Country, except in an agricultural shop. If you take a contract shop where engines and general machinery are built there is abundant variety; but in an agricultural machine factory the same work is done continuously and it pays the employer to keep the boys at one class of work, but as a result they grow up to be of no use at any other work.

By Mr. McLEAN :—

Q.—Do you think if boys were indentured they would become better mechanics

than if not indentured? A.—I think not, because when they are indentured they suppose they cannot be discharged.

By Mr. ARMSTRONG:—

Q.—Is that the only reason? A.—Yes, the only reason. They get careless.

Q.—Are they indentured in the Old Country to your trade? A.—In some cases they are; in others there are verbal agreements.

By Mr. McLEAN:—

Q.—Were you indentured when you went to learn the trade? A.—Yes.

Q.—You get, I think, a little more than the average pay? A.—I have got a little more where I am working at the present time, but if I were going to a strange shop I guess I would be brought to the same rate as the rest of them.

Q.—Did you get more than the average pay in the Old Country? A.—Yes; but I had a better position at that time.

By Mr. HEAKES:—

Q.—Have you any protection for your wages in your business—anything that will secure the payment of your wages in case of the failure of the employer? A.—There is the lien law; that is the only thing the workingman has to protect him.

By Mr. WALSH:—

Q.—Do you know any disability under which you are laboring as a mechanic? Do you know of anything that would better your condition? A.—Yes, more money would.

Q.—You must understand that in this country as well as the Old Country a man must earn his money before he gets it. An honest man would not ask for too much? A.—I consider our trade is underpaid, because it requires a great amount of skill in the different branches.

Q.—Do you know anything by which your condition could be bettered? A.—No, I cannot say that I do.

Q.—Then you do not consider you are laboring under any disability here with respect to the prosecution of your trade, that is considering the customs of the country and the general wages given? A.—The only thing that would benefit our trade would be for an organization to try and better our condition financially. I think we are underpaid for the skill required in our trade as compared with what other grades are paid for like skill. There is more skill required in our trade than in the building business, and yet we are not so well paid.

By Mr. HEAKES:—

Q.—You work longer hours? A.—Yes.

By Mr. CARSON:—

Q.—Your employment is all the year round? A.—In contract shops I cannot say so.

Q.—Generally speaking, it is so with machinists? A.—Of course we have not the weather to contend with as has the building trade.

By Mr. McLEAN:—

Q.—You spoke of the association to which you belonged and said that it was a benefit? A.—I said it was more a benefit society here than anything else.

Q.—Is there not a benefit society attached to the railway? A.—There is what is called a sick benefit society.

Q.—Is that all? A.—Yes. The railway has a sick benefit society and the Grand Trunk has an insurance society with it. There is also an accident society, but it is just the same as insuring in any office.

By Mr. FREED:—

Q.—In case of accident in your shop do your employers give you anything? A.—No. All you can get is so much per week from the sick society.

Q.—Also a benefit from the Amalgamated Society? A.—Only for those who are members of the Amalgamated Society.

By Mr. GIBSON:—

Q.—Then the only remedy is to pay you weekly or fortnightly instead of monthly? A.—That would be a great advantage.

Q.—The other matter is regulated by supply and demand? A.—Yes, our rates of wages.

By Mr. CARSON:—

Q.—Would you consider it advisable to reduce the hours of labor, at the same time of course lessening the pay? A.—I would go in for short hours all the time. I believe shortening the hours of labor increases the pay.

By the CHAIRMAN:—

Q.—Would you go for shorter hours and less pay? A.—Yes.

By Mr. CARSON:—

Q.—You would be prepared to do that from the start? A.—Yes, for a time it would be a loss to the men, but extra men would be required and there would be more work to do for each. Instead of nine men being required in a certain shop ten would be needed, and employment would thus be given to an additional man. The law of demand would bring up the wages and the men would get more money.

By the CHAIRMAN:—

Q.—Some witnesses have said that mechanics can do as much in nine hours as in ten; what is your opinion? A.—I don't think so.

Q.—You do not believe that a man can do as much in nine hours as in ten? A.—No.

By Mr. HEAKES:—

Q.—Do you not perform as much work in nine hours with the aid of machinery as you formerly did in ten? A.—A great deal more.

Q.—Should not the men have benefited from the machinery as well as the employers? A.—They should. Machinery has however been more serviceable to the employers than to the men.

Q.—Suppose a man was receiving twenty-five per cent more wages with machinery than he was when there was no machinery would it cost more to produce an article? A.—It would not.

Q.—So if your hours were shortened and the wages increased it would not make any difference in the cost of production? A.—Not if the men got as much for their contracts.

By Mr. McLEAN:—

Q.—Do you know anything about the Factory Act in force in Ontario? A.—I have read it.

Q.—Do you think it is a good Act? A.—I do not think it goes far enough.

Q.—Please state why? A.—It is about eighteen months since I read it and I cannot enter into details. I have seen the Factory Act of the Old Country, and there were provisions which I thought might have been introduced into the Act here, such as those respecting the employment of women and children. I am not certain, but I think it is not as stringent here as at home.

Q.—Does the Factory Act of the Old Country say anything as to how long a child shall attend school until he has attained a certain age? A.—I do not know anything about the New Factory Act. The one in existence when I lived there provided that no child should go to work under thirteen years—that was to work full hours. There were children employed, half-timers, in factories. Those half-timers worked five hours and the employer was compelled to send them to school for education the other half of the day. Boys under eighteen were not allowed to work any longer than the legalized hours.

By Mr. CARSON :—

Q.—Was an employer liable to be punished if he employed children under thirteen at full time? A.—Every child had to pass the doctor. A medical man paid by the Government came to the works once a month, and the children taken on during the month had to pass his examination. He questioned them as to their age, their father's name and so on. If he was satisfied he let them go on with their work, and that covered the responsibility of the employer.

Q.—But it was necessary for an employer to have a doctor's certificate before he could take on a child to work? A.—No.

By Mr. McLEAN :—

Q.—The Ontario Act provides that no child shall go to work under twelve years of age? A.—I think that is too young.

Q.—You do not think that is a proper age? A.—That is a question for a medical man.

By Mr. CARSON :—

Q.—Speaking as a father what do you say? A.—I think fifteen years is young enough. During the two years from thirteen to fifteen children take in more education than at other times.

Q.—You would not want to take children from school earlier? A.—No.

By Mr. McLEAN :—

Q.—At what age would you send a girl? A.—I think that is young enough. A great deal depends upon the nature of the employment to which you send her.

By Mr. WALSH :—

Q.—And a great deal depends upon the constitution of the girl? A.—Of course

TORONTO, November 26th, 1887.

ARCHIBALD BLUE, called and sworn :—

By the CHAIRMAN :—

Q.—What position do you occupy? A.—I am Assistant Commissioner of Agriculture of the Province of Ontario and secretary of the Bureau of Industry.

By Mr. FREED :—

Q.—Can you state what are the laws of the Province of Ontario regarding sanitary arrangements in factories and workshops; can you give the Commission a general outline of such laws? A.—I could not undertake to give such an outline.

Q.—That matter does not come within your department? A.—No it comes more particularly within the province of Dr Bryce, secretary of the Board of Health.

Q.—Nor do you know anything I suppose personally about the laws respecting the protection of machinery in Toronto? A.—I only know it generally from reading the statutes. I could not undertake to give any summary of the statutes regarding it.

Q.—Have you any special knowledge respecting the lien laws in Ontario? A.—No, I have no special knowledge.

Q.—Or as respects the garnisheeing of wages? A.—No.

Q.—Is it within your knowledge that there has been any sharing of profits by manufacturers or employers of labor among their employes over and above the wages given? A.—Two or three cases I think have been reported to me; it is not general.

Q.—Some cases you know of? A.—Yes, I cannot recall the particulars of them now; but I remember two or three cases were reported to me.

Q.—Were the employes given a percentage or were they simply given a gratuity at the end of the year? A.—I understood it to be a percentage of the net profits of the business at the end of the year.

Q.—Have you any knowledge whether the manufacturers were satisfied that

they secured better service from their workmen? A.—Yes, I remember one of the manufacturers informing me that it gave very good satisfaction to him. He thought they had got better services from their employees under that system than ever before.

Q.—That is very gratifying; he would be encouraged to continue the plan? A.—Yes.

Q.—Have you any facts in connection with that matter which you can furnish the Commission further than you have already given—any facts that would be of general interest or advantage? A.—I think I have no definite facts; none I could state from memory. I may have a record of some in my office.

Q.—Are they stated in any of your reports? A.—I am not sure. If so, they are in the report of this year.

Q.—Will you please take this copy of your report and point them out? A.—I do not find any reference just now, but I will look the matter up and if I come across any information on the point I will furnish it.

Q.—You have had a good deal of experience during a number of years in collecting labor statistics in Ontario? A.—Since 1883.

Q.—Is the tendency of the rates of wages to rise, or fall, or remain stationary, do you think? A.—I could answer that more accurately if I looked at my report. My recollection is that there is not much difference.

Q.—Suppose the question is confined at present to men engaged in manufacturing, leaving the agricultural laborers out of the question for the time being? A.—You will find the figures at page 26 of the report. Blacksmith: average wages in 1884, \$428.32; 1885, \$418.42; 1886, \$432.08. Carpenter: 1884, \$409.34; 1885, \$424.01; 1886, \$406.72. Machinist: 1884, \$417.22; 1885, \$452.97; 1886, \$463.72. Moulders: 1884, \$434.92; 1885, \$473.51; 1886, \$493.91. Painters: 1884, \$399.36; 1885, \$410.31; 1886, \$381.22. The average of the five trades in 1884 was \$416.89; 1885, \$436.03; 1886, \$434.70. We could go into the details of the various trades by taking the reports of the several years. I give these as the principal trades of the country.

Q.—And the number of reports was such as to justify you in considering this a fair average. A.—Yes, we got larger returns from those trades than from the others. We obtained I consider a sufficient number in nearly all the trades to make up a fair average; not from the whole province, but the principal centres of industries.

Q.—What is your method of obtaining the returns? A.—We employ in the several towns mentioned men who have been recommended to us as being well qualified to collect such information as is required—men who possess the confidence of the working class. In most cases they were recommended by the trade and labor organizations. We found it would be difficult, if not impossible, to secure the information we wanted from working men by employing persons who were not themselves working men.

Q.—And your reports come invariably from working men, not from employers? A.—No; a large number of the reports come from employers; you will see that only from about 2,600 to 2,800 reports came from workmen themselves. In this report they are all from workmen; but there is another report which is compiled from returns we collect from employers of labor for two weeks of the year.

Q.—Two selected weeks? A.—Yes, two selected weeks; the last week of April and the last week of October. At table 3, page 87 you will find a comparative table for four years.

Q.—That table on page 87 is compiled from returns made by employers? A.—No, by employers and employés; it is an average table compiled from those. From the employers we get the information by sending out one of the clerks of the Bureau who personally canvasses them, and he obtains the wages of each of their employés for the week from the pay sheet.

Q.—Does the table on page 26, through which you have gone, give the actual wages earned or does it give the average wages which would be earned in the case of a man who worked on every legal day? A.—No, the actual wages earned as the amounts were given to us. I could give you copies of the schedules we use, if they would be of any use.

Q.—Have you made any investigation looking to a study of the proportion of the value created by labor, which goes to labor and which goes to capital? A.—I have, but from inadequate data—from the data of the census chiefly. Of course it is easy to ascertain the proportion going to labor; it is difficult to ascertain the net profit going to the Manufacturer.

Q.—If your investigations have only been a study upon the census returns, I suppose they are equally available to us? A.—Yes. There is a paper on the subject in my report.

Q.—Is it within your knowledge from the investigations you have made in the course of your occupation that manufacturers have grown quickly or enormously wealthy? A.—It would be difficult to answer that question from my investigations. I have known manufacturers to have grown, perhaps not quickly wealthy, but comparatively enormously wealthy in this country within the lifetime of a man.

Q.—Do you think that is the rule or the exception with manufacturers? A.—I am afraid I could not answer the question.

Q.—Have you any data which would enable you to say whether the proportion of manufacturers who fail utterly is greater than those who grow greatly wealthy? A.—No, I have not.

Q.—Have you any data which would enable you to form an opinion as to whether the profit received from manufacturing is greatly in excess of the interest on the money invested taking the whole field. A.—My impression is that it is greater; but I only base that opinion on the data of the census. That is assuming ordinary economy in living on the part of the manufacturer and ordinary economy in management.

Q.—As to the actual results to manufacturers who invest money in manufacturing, allowing for absolute loss—deducting that on the one hand and the wealth accruing to the successful man on the other—do you think they do earn more than ordinary interest on the money invested? A.—I think so; they ought to do so at all events. I believe there are manufacturers whose cost of living can scarcely be less than five thousand dollars a year, comparing their cost of living with my own cost of living, which is very moderate.

Q.—On the other hand there are some who fail altogether? A.—A few not many fail; some of them are able to retire on a large competence. I believe I have read somewhere of one who was able to retire and purchase a large estate in the old country.

Q.—Where the manufacturers make considerable money, large fortunes, is it the result of ordinary prudence, business ability and attention to business, or is it the result of extraordinary ability? A.—Well, it is hard to draw the line between ordinary and extraordinary abilities. There are men who have been very successful as manufacturers whom I would not regard as possessed of extraordinary abilities outside of their particular line, and perhaps I would be better able to form an opinion of them out of their line of business rather than in it. Speaking of their mental capacity; I may say that I have known manufacturers very successful, who possessed as I thought only ordinary mental capacity; still they might have possessed extraordinary capacity for their own work.

Q.—Do you know of any case in which employers require their workmen to sign an ironclad contract? A.—I do not know of any such case.

Q.—For example, a contract binding them not to belong to a labor union? A.—I have heard of such cases, but I cannot speak definitely in regard to them.

Q.—Do you know of any case in which employers have black lists of objectionable men whom they will not employ? A.—No, I do not.

Q.—In Ontario are men quite free so far as the law is concerned to belong to labor organization? A.—I think they are; I think there is nothing in the law against them.

Q.—There is no law making labor union a conspiracy? A.—No, I think not.

Q.—Is there any Masters and Servants Act in Ontario which places working

people at a disadvantage in the selling of their labor? A.—Not that I know of. We have a summary of all the laws affecting labor in this Province embodied in my report.

Q.—What is the law in Ontario respecting child labor; at what age are children permitted to work in factories? A.—I cannot speak as to that; I know the Factory Act provides as to that matter.

Q.—You cannot at the moment say what the age is? A.—I find it at page 62 of my report, which says that a boy under twelve years or a girl under fourteen cannot be employed in a factory. But by the amendment made last session such children may be employed in July, August and September preparing fruit in canning factories, provided it is done in a room separate from the canning or cooking.

Q.—May a boy be employed all the year round in a factory after he is twelve years of age? A.—Yes, I think so.

Q.—Are many children, say under fifteen, between twelve and fifteen, employed in factories? A.—Not in very large numbers.

Q.—In what factories would they be engaged? A.—I think in cotton factories chiefly. I have heard of children being employed in cotton factories of such age. In fact a case was reported to me two or three years ago of a child eight years of age being employed in a cotton factory, and earning ninety-two dollars in the course of a year.

Q.—But the employment of that boy was illegal? A.—It would be now; it was not then. It was not reported to me as a subject for complaint, but rather in a boastful way.

Q.—Are these young children employed in cotton factories engaged at close, continuous labor, or are they at light work? A.—I cannot say positively as to that, but I think some of them are employed constantly, that is the full working hours of a day. I can only speak as to this matter from what I have been informed; I have no personal knowledge in regard to it.

Q.—Do you know of many girls of tender age being engaged in sewing? A.—No, not to my personal knowledge. There are many girls employed in what are called the sweat shops.

Q.—These sweat shops, I believe, are shops where tailoring work is done? A.—Yes, where they make ready-made clothing for the wholesale establishments.

Q.—Have you investigated that matter at all or are you speaking from general information? A.—I have not investigated it myself; it was investigated by one of my collectors.

Q.—Can you furnish the Commission with any further information on that matter after your return to your office? A.—I am not sure. I will furnish the Commission with copies of my report.

Q.—Then it is in some of your reports? A.—It may have been in my report for 1884; if so, it is out of print. I have only a single copy. It is however in the Journals of the House I can give you the name of the collector—D. A. Gibson of Hamilton.

Q.—Do you know whether any young girls are employed in working sewing machines? A.—No, I do not.

Q.—Have you made any investigation as to the hours of labor, the difficulties of the employment and so on of shop girls, female clerks, in stores? A.—I undertook to make a special enquiry into that subject last year. I employed a young lady to do the work, supposing she could get the information better than anyone else. She was at work I think two or three days and then gave it up in despair. She found there was very great reluctance on the part of the girls and female clerks to give that information, that they feared their employers.

Q.—Information so collected is confidential? A.—Yes, it is confidential to us; but although we gave them every assurance that it would be confidential there were many who refused to give it at all fearing it might leak out in some way.

Q.—Do you think there is substantial grounds for fear on their part that they would suffer for it if they tell the whole truth? A.—I suppose they speak from experience; I do not know.

By the CHAIRMAN :—

Q.—Then there is the dread of being thought badly of by their fellow employes?  
A.—Yes. It was more particularly in the shops in the retail trade. There are a considerable number of female clerks employed in the retail shops of the city. I have heard privately complaints on the part of some of them.

Q.—Is your knowledge such that your testimony on the point would be really valuable? A.—I should not like to offer it. I may say that the hours employed are pretty long.

By Mr. FREED :—

Q.—About what are the hours in dry goods shops? A.—I cannot say positively.

Q.—Have you any knowledge as to whether the girls are permitted to sit during the day or must they keep standing? A.—They are on their feet most of the time. I have heard complaints on the part of some of them that if they are one minute or two or three minutes late they are docked from their pay perhaps a day or perhaps half a day.

Q.—At certain times, of course the clerks are rather poorly in health; do you think they have any favor shown them at such times? A.—I think not, but I have not made particular enquiry. Complaints have been made with respect to the ventilation of the work shops.

Q.—Have you any knowledge respecting the employers' liability in case of accident to their employes through defective protection of machinery? A.—No, I have no particular knowledge on that subject.

Q.—What is the law of Ontario as to liability in case of accidents to employes from machinery. A.—You will find a reference to the law on page 62 of my report: "Dangerous parts of machinery and dangerous places shall be securely guarded; machinery will not be cleaned while in motion; if the inspector so directs, all hatches, hoists and elevators shall be made with catches, so as to be safe from accident." Then, again, there is the Workmen's Compensation Act of Ontario, 1886.

Q.—Have you any knowledge as to whether machinery generally is sufficiently protected, or if there is neglect in that respect? A.—There are cases of negligence; but generally it is stated that the machinery is protected, and that when accidents occur they are usually the result of carelessness on the part of the employes themselves. It is said that in many cases green hands are taken to run the machines—young men from the country who are fairly intelligent and clever and who with a little experience know how to run a machine, especially in agricultural implement work. Accidents sometimes happen to those men.

Q.—Are very young boys frequently put to run machines? A.—I would not say frequently; they are sometimes.

Q.—And other persons who lack the necessary knowledge of machines to avoid accident? A.—Yes, as I am informed.

Q.—Are the accidents of the nature of which you have spoken very frequent?  
A.—No.

Q.—Are the working people through Ontario, so far as you know, generally paid in cash or partly in truck? A.—Generally in cash.

Q.—Does the truck system prevail at all? A.—To a very small extent.

Q.—Is it considered a disadvantage to a workman to get his pay in kind or in truck? A.—Yes.

Q.—What is the law in Ontario as to persons engaged abroad to work in this Province? A.—At page 61 of my report I find the following: "This Act (the Ontario Act of 1886) declares that contracts made with workmen in foreign countries for work to be done in Ontario shall be null and void as against the workmen brought into the country. Such contracts therefore may be enforced by the workmen against the employers, but not by the employers against the workmen."

Q.—Do you possess any general information extending over the Province in regard to the rents paid by working people? A.—Yes, we have information on that subject. It is contained in the tables of my report, page 24.

Q.—I see it is there stated that the year's rental in 1885 was \$74.41; 1886, \$71.52. From how many returns was that table prepared? A.—I cannot state just now, but my impression is that it was prepared from nearly 1,000. I may say that for 1886 we had the returns from a larger number of small towns than in 1885, which may possibly account for the lower rate of rents.

Q.—The rent being lower in small towns than in large towns? A.—Yes.

Q.—Not that there is any reduction in the rate of rent in any particular town? A.—No.

Q.—In Toronto, what is the tendency of rents? A.—I could tell you that by comparing successive years. I do not think there is much change in the average rate of rent in Toronto.

Q.—Are you in a position to say about what proportion of an average workingman's wages goes for rent? A.—About one-fifth. You will find in another table the average earnings. There is a summary on page 23; the details will be found at Table 4 on page 92; that, however, gives the earnings and cost of living only, not the details of rent and fuel.

Q.—Do many working people throughout Ontario own the houses in which they live? A.—Not a very large number. I think I have given in my report the proportion. Following the table on page 24 you will observe it says: "The table also gives a classification of workers who made returns, showing that 340 are owners of the dwellings they occupy, 1,130 are tenants, and 1,014 are boarders.

Q.—Then one-third of those who keep house own their houses? A.—Yes. The statement you will notice refers to facts not contained in the tables but which we work out from detailed returns. We have not in any instance published the statistics in detail, but largely in abstract form.

Q.—A great deal of the information, in fact almost all the information may be confidential? A.—Yes, it is all confidential as regards the individual.

Q.—What are the usual periods of payment of wages throughout Ontario? A.—Generally once a week, in a number of cases once in two weeks, and in a few cases once a month.

Q.—What is the most advantageous period for the workmen to get paid? A.—There is a general consensus of opinion amongst them that once a week is the best time.

Q.—If paid less frequently the workman is it a disadvantage? A.—Yes.

Q.—Is it a particular class or particular classes of employers who pay less frequently than once a week? A.—The cotton works pay generally, I believe, once a month.

Q.—Do all of them? A.—I cannot say as to all of them.

Q.—If a workingman is paid less frequently than once a week, is there a tendency to obtain supplies on credit? A.—Yes.

Q.—And if he buys his household supplies on credit, does he pay more for them than he would do if he paid cash? It is rational to suppose that he would.

Q.—Have you any special knowledge respecting the apprentice system in Ontario? A.—No.

Q.—You do not know to what extent boys are apprenticed or are employed at trades without being apprenticed? A.—No, I cannot speak definitely.

Q.—You have no statistics in regard to that matter? A.—No. I tried to get that information but I could not; it was very difficult to collect.

Q.—What would be the average hours of labor in mechanical trades? A.—It will be found on page 23 and 24.

Q.—Read the summary if you please? A.—In 1884, 59.10 hours. 1885, 58.85. 1886, 58.13.

Q.—Is that reduction in the hours of labor an actual reduction, or is it caused by any difference in the returns? A.—I think it is actual reduction. Many of the reports gave fewer hours of labor last year, owing to the adoption of a short hour system in a number of the trades.

Q.—There is a tendency towards shorter hours? A.—In some of the trades; in fact, some of the trades have adopted the shorter hours.

Q.—Do you know whether the employers of labor favor short hours or long hours? A.—Some favor short hours; the majority favor long hours.

Q.—Where an employer has a factory and machinery and steam power going would his expenses be reduced in proportion as the hours of labor were reduced? A.—Well, that would depend on whether his machinery is working the whole year or not. If his factory is idle for any portion of the time, owing to a surplus of the products, it would be an advantage I should think to work the shorter hours, so that the machinery might be kept in operation the whole year. Machinery deteriorates by lying idle.

Q.—It would be better to work the same number of hours stretching over a greater number of days than to work the same number of hours condensed into fewer days? A.—Yes. It would be better to work nine hours a day extending over the whole year than ten hours a day extending over a proportionate number of days.

Q.—Where a factory is worked the whole year the shorter the hours of labor the greater the comparative expense of running the machinery and factory? A.—Yes; of course that is true within limits. If you employ men very many hours they are apt to become weary and careless and accidents are liable to occur.

Q.—If a man is physically over-worked his productive ability is decreased? A.—Yes.

Q.—Have you ever made any study which would lead you to form an opinion as to the number of hours at which a workman could do his most effective work? A.—No, I cannot say that I have. I have observed this matter in regard to my own clerks. We have short hours, but the work is hard and wearing, and I find that late in the afternoon they are much more liable to commit errors than they are earlier in the day when they are fresh.

Q.—They will do less work when they become fatigued and also poorer work? A.—Yes, and they are much more liable to commit errors.

By the CHAIRMAN :—

Q.—I suppose that refers to your clerks employed on statistics? A.—Yes.

By Mr. FREED :—

Q.—The same rules would govern all work requiring skill and attention? A.—Yes, all work that is a strain on the mind.

Q.—Of course as machinery is introduced productive power is increased? A.—Yes.

Q.—Are you able to form any opinion as to the percentage of increase in the productive power of labor within the last five or ten years in consequence of the introduction of machinery? A.—No. We can reach a conclusion more or less definite from the census of 1871, and of 1881. I think I have worked that out in one of the papers in my report.

Q.—That will be a very complicated calculation? A.—Yes, and one in which I would not put much confidence.

Q.—It cannot be more than approximate? A.—Certainly. At page 46 in my report you will find the following:—"The average rate of wages appears to have increased in the decade about five and one-third per cent, being \$13.15 per annum for each employé; while in efficiency of labor, as shown by comparison of the net products per hand, there was an apparent decrease of a little more than the half of one per cent., or \$3.23 per hand. But in reality what appears to be a decrease in the net product of labor was due to the high cost of raw materials relative to the value of the manufactured article—the increase in one case being at the rate of 40 per cent., and in the other of only 37.73 per cent. Had the value of the product increased at the same rate as the cost of the raw material the net product per hand would have been \$586.92 instead of \$564.96, and the difference between those figures may be taken as indicating approximately the increased efficiency of implements, processes and skilled labor during the decade."

Q.—Was that increased cost of the raw product an actual one or an increase relative to the selling price? A.—It appears to have been an actual increase.

Q.—Take cotton; is the price of a pound of cotton greater than it was ten years ago? A.—It is not now. I took all the industries. Of course there are some in which the cost of the raw product is less and some in which it is greater. That is a calculation of the aggregate of all the industries.

Q.—Has the selling price of manufactured goods been increased or decreased, or remained stationary? A.—I cannot say as to that.

Q.—Take the actual cost of labor, including all the items of cost within the means of the average laboring man, will one dollar go as far as it did five or ten years ago? In other words, what is the purchasing power of money to-day compared with its purchasing power a few years ago? A.—I have not enquired into that subject.

Q.—You are not in a position to answer that question? A.—Not off-hand, at all events. I could answer it by going into the calculation, I suppose.

Q.—You have made no study or obtained special information as to that? A.—No.

Q.—Have you made any study as to the rates of wages in Canada as compared with Great Britain? A.—The only study I have made has been in regard to a comparison between our rate and the quotations given in a Massachusetts report.

Q.—Have you tabulated the result? A.—No; I have simply made the comparison.

Q.—Are you able to tell us what is the difference of wages in Ontario and in Massachusetts? A.—The wages are lower here than in Massachusetts.

Q.—That is, taking all the trade through and all the Province through and comparing it with the whole State of Massachusetts? A.—Yes.

Q.—Does that arise from an actual difference, or from the difference in the manufactures carried on? A.—I think it is an actual difference in the same manufactures. I think the rate of wages here is a little lower than in Massachusetts; the cost of living here is lower also.

Q.—Can you put those differences in percentages? A.—I can do it, but not off-hand.

Q.—Would it be such as you would commit yourself to? A.—It would be easy enough to make the comparison.

Q.—Have you done so? A.—No. You have the Massachusetts report here, I see.

Q.—What systems, if any, are common in Ontario respecting the settlement of disputes between employers and employes? A.—There is a provision in the Statute for arbitration, but it has been very rarely acted on.

Q.—Is that because the law is imperfect or because the settlements are more easy outside of the law? A.—I am not sure it is either. When employers and employes quarrel, it seems to be very difficult to get them together at all.

Q.—When they differ respecting rates of wages, do you think there is more hard feeling and difference of opinion than there is between a man engaged in selling a piece of property to another, or anything of that sort? A.—There is rarely any feeling between men engaged in the purchase and sale of a piece of property. There is almost always a feeling, and sometimes a very intense feeling, between employes and employer in the event of a dispute.

Q.—The man who sells you his labor does not entertain the same feeling as a man does who sells a piece of property to another? A.—Not in the case of a strike or lock-out.

Q.—There is generally intense feeling? A.—There is sometimes intense feeling.

By Mr. HEAKES:—

Q.—Would the Ontario Statute cover the point of wages in a dispute? A.—I think it would.

Q.—Does it not expressly exclude it? A.—I cannot speak positively.

Q.—Is not that where the Act is weak? A.—There have been complaints with regard to that. At page 60 of the report it says: "The Trades Arbitration Act in

“ the Revised Statutes of 1877 has never been extensively acted upon, but it might be found a very useful Act to masters and workmen by enabling them to avoid the expense and delay of the ordinary courts. It provides a machinery by which a number of masters and workmen may form themselves into a Board of Arbitration to decide any questions as to their contracts on which they may from time to time disagree.” There is a reference also to this matter in the report made by Mr O'Donoghue.

By the CHAIRMAN :—

Q.—There is no enforced arbitration? A.—No, it is voluntary.

By Mr. FREED :—

Q.—Are arbitrations between employers and employed frequent when differences of opinion occur? A.—Not frequent; there have been cases of arbitration.

Q.—Are any means provided for what we will call conciliation as distinct from arbitration in the settlement of disputes? A.—No, I think not.

Q.—Are strikes frequent in Ontario? A.—No, they are not frequent, relatively to other countries.

Q.—How many strikes have you known in Toronto within your residence in this city? A.—There have been a number of strikes every year.

Q.—What were some of the most considerable of them? A.—The strike of the street railway employés was one.

Q.—How long did it last? A.—It continued several weeks. It was the most intense of all the strikes.

Q.—What was the cause of that strike? A.—It was stated to be because the Street Railway Company would not allow their employés to become united with any of the labor organizations.

Q.—If a man joined a labor union the company dismissed him? A.—Yes, that was stated to be the case. The railway company themselves declined to give us the information.

Q.—Do you know what hours of labor were required from the drivers and conductors? A.—Twelve hours I think; some worked longer.

Q.—Twelve hours of actual work? A.—Yes.

Q.—Did the men demand shorter hours? A.—I do not remember.

Q.—Do you know what rates of wages were paid the men? A.—I think I have set out the wages in the table. The conductors were paid about nine dollars a week and drivers, I think, about seven dollars. I am speaking from memory.

Q.—Do you think the strike was precipitated by the demand for shorter hours, or by the demand for increased wages, or by the demand of the men to be allowed to form a union.

Q.—I understood at the time it was entirely owing to the demand of the men to join the Knights of Labor—in fact they had joined the Knights of Labor.

Q.—Were any dismissed for joining? A.—I believe so.

Q.—Do you know it? A.—No. I only know it from the reports made at the time. I think there is a reference to that strike in my report. You will find it at page 37. “ About 280 men at the Massey works were on strike for about a week when all returned to work on a satisfactory basis arrived at by arbitration. The other strike, that on the Street Railway, will be memorable on account of its effect upon passenger traffic, and the fears entertained at times of rioting and bloodshed. Fortunately the crowds witnessing the scenes attending this great strike did so in safety. The employés of the company were forbidden to join the Knights of Labor and any Labor Association, and some 275 conductors and drivers struck. The company supplied their places with new men, many of whom were brought into the city from outside points, and the strikers were defeated.” That is based upon information we obtained from the collectors in the city. We had five men employed in the city and they were asked to report on all those subjects. We solicited the same information from the company, but they declined to give us any information.

Q.—Was the strike a success or otherwise? A.—It was not successful for the strikers.

Q.—Has there been any shortening of the hours or increase of wages? A.—Not to my knowledge; but we are collecting the statistics of the city now.

Q.—Do you know if the men employed on the Street Railway are now permitted to belong to a labor union? A.—I do not know.

Q.—Have you any suggestions to make as to any improvements which could be made in the law for securing arbitration between employers and employés? A.—I am not sure that we could do any better than has been done in other countries.

Q.—Have you made any study of arbitration in other countries? A.—Not a special study, not such a study as would enable me to speak with confidence, not a study except in a general way.

Q.—Take France for example? A.—It is compulsory there, I believe.

Q.—Are the arbitrators government appointees? A.—They are, I understand.

Q.—Do their decisions, so far as you know, give satisfaction? A.—Yes, I am told they do. There is no cessation of work when a dispute arises. It goes on, and the Court enquires into the matter and gives its decision, and it is binding on both parties.

Q.—Is that decision arrived at by one judge or arbitrator, or by several? A.—My impression is that there is a Board of three persons.

Q.—They are appointed by the government? A.—Yes. There is a somewhat similar law in Massachusetts.

Q.—Do you think such a Board would be more satisfactory in Ontario than arbitrators chosen by parties to the dispute? A.—It might perhaps not be more satisfactory to the people themselves, but it would obviate any delay. It frequently happens that a good deal of time is wasted in choosing arbitrators.

By the CHAIRMAN:—

Q.—In Massachusetts one arbitrator is appointed by the employer, one by the employed, and they agree upon a third; but if they do not agree upon a third and he is not appointed within thirty days, then he is appointed by the Governor and holds office for a year? A.—Yes. In France their institutions are different from ours and are a little more arbitrary we think, and from that point of view the adoption of their system here might not be popular. Our people like to better themselves and have a very considerable say in the government of themselves.

By Mr. FREED:—

Q.—They are willing to make sacrifices for self-government? A.—Yes.

Q.—Even to the extent of being out on strike? A.—Yes, I think so.

Q.—Have you ever noticed the effect of labor organizations upon the condition of the working classes? A.—Yes, in a general way.

Q.—Do labor organizations improve the material condition of the working people? A.—Working people themselves claim that they have.

Q.—In what respects? A.—They say that they have given them shorter hours of labor and higher wages; but there are so many circumstances governing those things that it is difficult to give credit to any organization for having effected it.

Q.—Is the workman more independent in the selling of his labor or has he any additional advantages in selling his labor in consequence of labor organizations? A.—I think he is more independent, because he is protected by all those of his own class who are in the organization.

Q.—Do you think that in selling his labor the average working man of Ontario stands upon an equality with the purchaser of his labor? A.—No, I do not think he does.

Q.—Is he placed at a disadvantage? A.—He is, in this way; that there is on the whole a superabundance of labor in the country. I reached that conclusion from a study of the average number of days workingmen are employed. The average number from all the returns is only some 270 days in the year. If the men were employed full time it would indicate that there was a full demand for labor.

Q.—On the other hand, is there much overtime work? A.—No. There is some overtime work in certain of the trades at certain seasons of the year; but many of the men earn extras outside of their occupation.

Q.—Would it be possible to establish absolute equality between supply and demand in labor? A.—It might be possible, but it would be very difficult, I think.

Q.—Practically would it be possible? A.—No, I do not think it would be practically possible, that is continuously.

Q.—If there is a tendency for labor to flow into Ontario in excess of the demand, is that caused by special exertions on the part of any agency or by the attractions to working men of life in Ontario, high wages, cheap living or other advantages? A.—We get quite an accession to the population of the country by immigration, but I fear that immigration very often displaces our own men.

Q.—Is that within your knowledge? A.—Within my knowledge in this way; It is shown by a study of the municipal enumeration of the people.

Q.—If there is an excess of labor, does not that tend to lower wages? A.—Certainly it will do so; if not to lower wages it will tend to cause laborers to find another market for their labor.

By Mr. HEAKES:—

Q.—In your report you give the average earnings in the carpenters' trade at \$395 for the past year; is that the average or the outside for 263 days' work. That would be, that in 43 weeks and five and a-half days a man earns \$395. Now, would that not be the outside they could earn? A.—It is the average compiled from all the returns.

Q.—Suppose a carpenter works full time, allowing for winter and holidays, he cannot work more than 263 days? A.—Why not?

Q.—Because time will not permit him? A.—Are there no men who work longer?

Q.—Is that not the outside that a man will earn in 263 days? A.—It is the average compiled from all the returns and for all the time.

Q.—Do you find any difficulty in getting returns from working men? A.—Yes, I do, sometimes a good deal of difficulty.

Q.—Can you say why you have difficulty in obtaining them? A.—There are several reasons given by working men themselves; sometimes they earn so little they are afraid to state the amount; sometimes they earn so much they fear competition; sometimes they say we are inquisitorial and it is none of our business; sometimes it is owing to political hostility.

Q.—These are the principal reasons? A.—Yes.

Q.—They do not refuse because they do not care to have their names known? A.—I suppose some refuse on that account, although we give them every assurance we possibly can that the information is given in confidence and that we hold it in confidence.

Q.—Why are the two weeks selected—the weeks that have been mentioned—on which to obtain returns from employers; are they the best average weeks in the year? A.—No; they were so selected because they were supposed to be fair average weeks for all the trades. They are not fair for some of the trades.

Q.—Do all the trades send in returns for the same week? A.—Yes.

Q.—Then it might be fair for one trade and not for another?—A.—There are some trades, not many, in which those selected weeks are not the fairest.

Q.—Could you not have liberty to change the date? A.—I am adopting that system this year.

By Mr. ARMSTRONG:—

Q.—Does immigration affect the home market, and if so to what extent in your opinion? A.—I could not tell you except by going into a pretty full analysis of the census enumeration of the people—the census enumeration as taken by the assessors from year to year—and I have not the data at hand to go into that, but you may

study it out for yourself, taking our tables showing the growth of population as from 1872 to 1886. These are given in the several successive reports; I think in the reports of 1884 and 1886. Also take along with that the number of immigrants who are stated by our immigrant department to have settled in the country each year, and make the usual calculations of the growth of population by natural increment.

Q.—In a former portion of your evidence you state that the labor statistics in labor centres were obtained by agents selected from organized labor? A.—They are selected from men who have the confidence of the working classes, who are so reported to work. We have not a personal knowledge of the men.

Q.—Do the labor organizations select them? A.—Generally they are chosen by labor organizations where there are labor organizations.

Q.—Has that been the system in Toronto during the past year or two? A.—Yes they were so recommended to me.

Q.—By the labor organizations themselves? A.—I understood so.

Q.—By open vote in the Union? A.—I do not know how the selection was made. I appointed men connected with labor organizations to recommend men for the work.

Q.—Where they recommended by open vote? A.—I cannot say as to that.

Q.—To the best of your knowledge they have been? A.—I cannot say even as to that. I spoke to leading men in the labor organization. What we aim at always is to get men whom the workingmen themselves will trust, and those we find to be workingmen themselves. We could not send out a clerk from the office unless he was known to have the confidence of the workingmen and be able to get the information from them. We should not select a dry goods clerk and expect him to succeed in collecting the information.

Q.—About the selection by the labor organization; do I understand that the department sends an official letter to be read by the presiding officer and the men required are selected openly? A.—No.

Q.—They are selected by representatives of the bureau? A.—No, they are not selected by representatives of the bureau. We usually have recommendations made to us by working people.

Q.—By the body? A.—Yes. I am not sure that that is the practice invariably followed, but we select the best that are reported to us, and I may say we select them, too, without knowing what are their politics.

Q.—Is the information given to you as coming from the body? A.—That is what we understand to be the sentiment of the body.

Mr ARMSTRONG.—I have been a member of a labor organization in Toronto for twenty years and I never heard of it.

By the CHAIRMAN :—

Q.—Do you propose to prevent immigration; if so, how would you prevent it? A.—I do not think anyone proposes to do so.

Q.—How would you put a stop to it? A.—We might adopt such a system as was in operation many years ago and impose a capitation tax on immigrants, if such were thought to be desirable; or we might schedule them and impose a duty on each of fifty dollars or \$100 or even \$1,000.

Q.—Do you think we could prevent other British subjects from coming here? A.—I think so.

By Mr. CARSON :—

Do you think such a step would be in the National interest? A.—No.

By Mr. FREED :—

Q.—Do you know whether a large body of such immigrants is to be found in the resident population of Canada? A.—They are supposed to be, but I can not say positively.

Q.—Who supposes that? A.—The immigrant agents report so frequently.

Q.—Have you any statistics as to the number of mechanics among the immigrants for a number of years past? A.—No, I have not compiled the statistics. There are some statistics of that sort in the report of the immigration department.

Q.—Of the Ontario Government? A.—I think so, and of the Dominion Government.

Q.—That does not come within your province? A.—No.

Q.—Have you any knowledge of combinations among manufacturers for the purpose of advancing prices to purchasers? A.—I have not made special enquiry as to that; I only know it in a general way, that such combinations have been formed. For example, the stove-makers, I am told, made such a combination several years ago, and have continued it. The makers of self-binders made such a combination a few years ago, but it failed.

Q.—Have you any knowledge of co-operative production? A.—I made enquiry as to that two or three years in succession, but it has scarcely been undertaken in this Province as yet.

Q.—Have you any knowledge of co-operative distribution, co-operative stores? A.—Yes; there are two stores I think in this city—I think the principal ones in the Province.

Q.—Are they successful? A.—Fairly so, but to a very moderate extent; they have been in existence for several years.

Q.—Do you know if the object of those stores is to furnish goods at lower prices than they could be obtained at other stores? A.—Partly to furnish goods at lower prices, and partly for the investment; I think mainly to furnish goods at lower prices.

Q.—The main idea is not to furnish an investment for workingmen's savings? A.—No, I think not; it is that to some extent.

Q.—Do you know whether it does secure lower prices? A.—I do not.

Q.—Have you any practical knowledge of the benefit societies among workingmen? A.—I know such societies exist.

Q.—You have not made a special study of their working? A.—No.

Q.—A little while ago, I think you told the Commission that you had no special information regarding the lien laws, and the garnisheeing of wages; have you any knowledge respecting the execution of judgments? A.—No, I have not.

Q.—I have been requested to ask this question; when an employer does not pay his employes, or when an employer fails, how long will it be before the employe will receive the amount due him over the \$25 which is secured to him by law?

The CHAIRMAN.—The law secures three months' wages.

By Mr. FREED:—

Q.—Three months' wages, then, constitute a preferential claim? A.—I believe so.

Q.—Over three months' wages becomes an ordinary claim on the estate, the same as the claim of any other creditor? A.—It is so stated in section 7, page 64, of my report.

Q.—You spoke a while ago about female clerks and others being fined; do you know if the fining system is extensive among employers of labor? A.—I do not know it as the fining system, but as the withholding of a portion of their wages. I understand that to be the common system.

Q.—Among what class? A.—In the dry goods stores.

Q.—Do you know anything about the clothing business, and as to how the work people are treated? A.—No.

Q.—You do not know whether they are fined or not? A.—I think among them the practice generally prevailing is that of taking the work home, and doing it in their families.

Q.—When they bring that work back and it is inspected, do you know anything in relation to that? A.—I only know from what I have heard. There is a great deal of complaint among work people on that score—that their work is very closely

examined, and if there are any defects in it they are cut down in their allowance. But it would be well perhaps, if you were to call a few of this city, and in Hamilton, who are engaged in that business.

Q.—Is Sunday labor extensively carried on in Ontario? A.—No, I think not to any extent whatever outside of the railways.

Q.—Is railway traffic as extensive on Sunday as on other days of the week? A.—No there is no freight business and very little passenger traffic.

Q.—Are there any laws regulating the railways in the matter of Sunday traffic? A.—I believe there is a Dominion law and there is the common law. Our through lines of railway carry forward freight that left before Sunday, that is before twelve o'clock on Saturday night.

Q.—That is in case of live stock and so on when it might be necessary? A.—Yes.

By the CHAIRMAN:—

Q.—As to your street cars? A.—They do not run at all.

Q.—In any part of Ontario? A.—Not to my knowledge. I don't think they are allowed to run.

By Mr. FREED:—

Q.—Do you know of industrial schools being established in Ontario? A.—There are very few. There is one established at Mimico; it is an industrial school for boys and is in a sense a house of correction and restraint. In regard to technical schools, we have the school of Technology and the Agricultural College, and in connection with the Normal School there is instruction given to a certain extent in drawing and designing.

Q.—Are mechanical branches taught in the school of Technology? A.—I think not.

Q.—Do you know of any other school in which mechanical knowledge is taught? A.—No.

Q.—What reformatory school is that of which you have spoken? A.—It is a school established by the city in the village of Mimico to which boys who, perhaps, have been guilty of misdemeanor and have no guardians or parents are sent.

Q.—It is to some extent a penitentiary institute? A.—Only to a slight extent; the boys are educated there.

Q.—Do the boys seek admission to it? A.—No.

Q.—They are sent there? A.—They usually go up before the police magistrate and he sends them there; there is no public trial.

Q.—They are not absolute criminals? A.—No.

Q.—Waifs and strays? A.—Yes. I think parents very seldom bring them before the magistrate with a view to having them sent there.

Q.—But a boy would not be sent there who had a home? A.—No, very rarely.

Q.—Have you any knowledge respecting the Reformatory at Penetanguishene? A.—No.

Q.—Have you any knowledge of the Mercer Reformatory? A.—No, I have visited it a few times. It is altogether for women and young girls.

Q.—Are they actual criminals? A.—Yes. The girls are not so much so; they are put there largely for purposes of protection.

Q.—They are abandoned women and so on? A.—Yes.

Q.—They must have done something to bring them within the law? A.—Yes. The Mercer Reformatory is largely a Central prison for female convicts. Such convicts are sent there from different parts of the province, when under sentence, for several months' confinement.

Q.—Are they taught anything there? A.—Yes.

Q.—What are they taught? A.—As to their being taught, I do not know that I can say they are taught; but all who have a trade are employed at their trade. There is a great deal of sewing work done and also laundry work.

By Mr. McLEAN:—

Q.—Is the laundry work done for citizens? A.—Yes. They send out waggons to collect parcels for the laundry.

Q.—Do you consider that is against the interest of any particular class in the city? A.—I suppose it is against the interest of some class; but I am not sure that it is.

By Mr. ARMSTRONG:—

Q.—Is the work done at cheaper rates? A.—No, I think not. Most of us experience a difficulty in getting that kind of work done.

By Mr. McLEAN:—

Q.—Do they do other kinds of work besides laundry work? A.—They sew.

Q.—What kind of sewing? A.—I do not know.

By Mr. CARSON:—

Q.—During the time you were collecting information with respect to the preparation of your report, did it ever come to your knowledge that workmen declined to furnish you with information from fear of coercion on the part of employers or those over them? A.—I heard of such cases.

Q.—It was not the prevailing feeling? A.—No.

Q.—With respect to the hours of labor, what have you to say? A.—I think there was only one case, a very particular case, that was reported to me; it was that of a manufacturer of boots and shoes, a large manufacturer.

Q.—With respect to the hours of labor of which you have spoken; in the case of a manufacturer who found that his business would permit him to run his factory the year round, do you not consider it would be to his interest and to the interest of his workmen to run the standard time of ten hours per day? A.—I suppose that is largely an economic question. If the men can work ten hours a day without injury to themselves in any way, I do not think the masters could object to it.

By Mr. McLEAN:—

Q.—Do you think working ten hours a day would be beneficial to the working man or otherwise? A.—If the firm should assure them of work extending over the whole year I think it would be to their advantage. It would be better for men to work, say 300 days a year at eight hours a day, than to work 240 days at ten hours a day.

By Mr. CARSON:—

Q.—Do you think so? A.—Why should it not be so? There a certain amount paid for wages, what economists call the wages fund. You cannot go beyond that. If you paid the whole of that out in 240 days the workmen have it. If you extend it over 300 days the workmen have it in that time; in the first case they are idle sixty days, and it is with workingmen as with every other class, if they have money, they will spend it more freely than when they have a very limited supply.

By the CHAIRMAN:—

Q.—The laws of labor here must to a certain extent be affected by the laws of labor in England and the United States? A.—Yes.

By Mr. McLEAN:—

Q.—Do you not ascertain from your enquiries that the working classes as a general rule throughout the country would rather have eight hours a day than ten hours? A.—They would rather have the shorter hours if that system would assure them more regular work.

Q.—Would it not have a tendency to assure them more regularity of work? A.—Certainly.

By the CHAIRMAN:—

Q.—If ten hours of labor remains the day's work in other Provinces, how would that affect Ontario? A.—I do not think it would affect us here; it might do so.

Q.—If men were working ten hours in Montreal could not the manufactured articles they produce be sold here? A.—Yes.

By Mr. CARSON :—

Q.—Are you aware as to the hours that workmen engaged in lumbering industries have to work? Do you know that they work from daylight to dark; that they go out usually one hour before day light if they have to go a long distance, that they go sufficiently early to be at the scene of their work when it is sufficiently light to work, and they usually work until night closes in? A.—Yes.

Q.—How about farmers around Toronto at harvesting time? A.—There are many farmers who work only ten hours a day, but the majority work longer hours according as the work is pressing on them and as the weather favors them. If it is favorable weather they work as long hours as possible.

By Mr. ARMSTRONG :—

Q.—Have high wages and short hours tended to the improvement of the working classes as compared with long hours and low wages? A.—I do not think I should do more than give an opinion on that point. I think there is a very great improvement in the condition of our people in this Province. The forty years of our public school training has done a great deal for the people of this country. The drinking habit has largely disappeared.

Q.—Do you not think short hours would have had the opposite effect of increasing drinking habits? A.—Certainly; there are some employers who report to me in a contrary sense, but the great majority of the working men themselves say that short hours have not the tendency to increase the drinking habit and that the system has not had such an effect where it has been introduced.

By Mr. FREED :—

Q.—Do you think that a man who is very much fatigued is more inclined to go in for a drink than is a man who leaves his work without being so much fatigued? A.—The tired man is more apt to go in for a drink.

Q.—That has been your observation? A.—Yes. I may say that although I am not a drinking man myself, if ever I have been tempted to take a drink it was when I was very tired.

By the CHAIRMAN :—

Q.—Have you any idea of the total number of those who practically abstain from drink? A.—In my eight years' residence in this city I have seen very few drunken men, and very few drunken men of the working classes.

By Mr. FREED :—

Q.—Drunkennes is decreasing? A.—It has decreased very much.

Q.—Have you any knowledge of the condition of the homes of the working people? A.—I have some knowledge. I have visited some of their homes and I have had reports as to others. It is a subject on which working men themselves are very delicate.

Q.—Are their sanitary conditions good, bad or indifferent? A.—They are fairly good in this city, especially in the upper portions. They are worse in the lower part near the Bay.

Q.—Are water closets, for example, universal? A.—Yes, I think so.

Q.—Are they so in the city? A.—In the city they are. In a great many cases the water closets are in the house; but among the working classes generally I think the water closets are outside.

Q.—Do you mean the old fashioned privies? A.—The old fashioned privy still exists in Toronto, but it is fast disappearing.

Q.—Where they are in the house do you think they are sufficiently ventilated? A.—No, they are not. There has been a great deal of improvement in that matter within the past few years, but the improvement has taken place chiefly among people

of the better class. There is a very great complaint that plumbers do not do honest work. I can give you an instance of it. A gentleman told me that he purchased a house about five or six years ago. He noticed sewer gas in it, and he brought in a plumber. The whole plumbing was investigated and finally a partition was torn down to obtain access to the ventilating pipe and it was found to be filled with mortar, so that what was supposed to be a ventilating pipe was no ventilating pipe at all, for it was choked up.

Q.—Are workingmen's houses sufficiently roomy? A.—No, I am afraid they are not.

Q.—You think they are crowded? A.—They are crowded and stuffy.

Q.—Have you made any special investigation in regard to that matter? A.—I have tried to make an investigation, but I could not obtain sufficient answers.

Q.—Does your reply cover the Province, or Toronto only? A.—It refers more particularly to Toronto, but it is generally true of the Province, and it is perhaps more true of the smaller towns than it is of Toronto. In many of the smaller towns the old privy system prevails, and in the spring of the year the floods simply sweep the matter out of the vault over the lot.

Q.—You think the average home of the Canadian workingman is too small for proper sanitary conditions? A.—I think on the whole it is.

Q.—What will be the number of rooms in an average workingman's house in Toronto? A.—I do not know as to that.

Q.—Nor the cubic contents of such a house? A.—No.

Q.—Do you know any improvement that could be made in the law respecting houses—of course it would not apply to any one class—with a view to secure better sanitary conditions? A.—Yes, I think so. There ought to be a rigid inspection of plumbing.

Q.—That is the weak point? A.—I think so. As to giving a working man more rooms in his house or a larger house, that depends on how much he is able to earn.

Q.—Has not the sanitary Act been passed by the Ontario legislature within a year or two? A.—Yes.

Q.—Is that a pretty efficient Act? A.—I think it is doing very good work; there have been very great improvements under it.

Q.—Do you know anything about building societies among working men? A.—No.

Q.—By which workingmen are assisted to obtain their houses? Of course, there are building societies controlled by capitalists.

Q.—Not by workingmen themselves? A.—Not by workingmen themselves.

By the CHAIRMAN:—

Q.—Have you any co-operative building societies? A.—No.

By Mr. FREED:—

Q.—Have you given any attention to the sanitary arrangements of factories? A.—I have made enquiries, and have received reports on the subject.

Q.—Do you think they are good, bad or indifferent? A.—They are generally good. There are complaints that the ventilation is not good in some places, and that the water closets are not kept very clean; that where men and women are employed there are no separate water closets for them. But these are exceptional cases. It is also complained that there are no wash-rooms in many of the factories.

Q.—Is there much over-crowding of factories? A.—Not generally.

Q.—Have employes in factories generally sufficient air space? A.—Yes, I think so.

Q.—Can you briefly give the Commission an idea of the scope of the enquiries undertaken and the labor performed by your bureau? A.—Perhaps I can do that best by referring the Commission to the report. The schedules will inform the Commission as to the scope of the statistics collected.

Q.—You do not go over the field every year? A.—We go over nearly the same

field every year. The enquiry as to the condition of labor and so on varies to some extent from year to year, but we follow generally the questions set out on pages 31 and 32 of the report.

Q.—Do you think the result of your investigations and labors has been to benefit the working people of Ontario? A.—I think so.

Q.—That it spreads information among them? A.—Yes.

Q.—Does it enable them to take care of their own interest more effectually? A.—I think so. In one way it leads them to keep accounts; I think the general tendency is to make them more economical.

Q.—Does it enable the Government to legislate far more intelligently? A.—Yes, I think so.

Q.—It places information in the hands of the Government which enables them to care for the whole people? A.—Yes, and also the legislature.

Q.—The reports inform them as to the condition of the working people. A.—Yes.

Q.—Have you any suggestions to offer respecting the operations of your bureau? A.—I do not know that I have any special suggestions to offer. There is a provision in the Statute creating the Bureau of Industries that the Bureau may co-operate with the Dominion Government on any of the lines on which we work in regard to agriculture and the different interests.

Q.—You want co-operation on the part of the Dominion Government? A.—Certainly. I think if we co-operate we could cover the whole field much more successfully than we can hope to do without going to very great expense.

Q.—Do you know if other Provinces have established Labor Bureaus similar to that of Ontario? A.—No, I believe no Province has.

Q.—Even if all the Provinces were to establish Labor Bureaus, would there still be a field of labor left to the Dominion Government? I think so.

Q.—Does convict labor in Ontario interfere to any extent with free working people? A.—I suppose it does to some extent. I think that is inevitable.

Q.—Is there any other institution in Ontario in which convicts or prisoners are employed in mechanical work? A.—I do not know that there is any Provincial institution except that at the Penitentiary.

Q.—Do you know how it is at Kingston? A.—I believe the prisoners are employed at mechanical work there.

Q.—Do you know how it is at Penetanguishene? A.—The boys are trained to trades there.

Q.—Have you any information respecting the savings of the working classes in Ontario? A.—No, except inferentially. We cannot obtain returns from the Savings societies as to the class to which the men who make deposits belong. The report shows the average savings and the aggregate savings of the men in respect of whom we have collected statistics.

Q.—Perhaps you will give the Commission the information requested on that point? A.—You will find it on pages 27, 28, 29, 30 and 31.

Q.—Can you add anything to what we will get from the study of those facts? A.—No, I think not.

Q.—Do you think the savings of the working people in Ontario are increasing or decreasing from year to year? A.—There is very little difference.

Q.—Do you think the average condition of comfort in which Ontario working people live is growing better or worse? A.—I think there is a slight advance, but I have not sufficient information to speak positively on the subject. I think there is a slight improvement in the average condition of the working people. It may be better one year and worse another. The conditions are always changing, and for that reason I think it is of the first importance that we should have statistics for every year.

By Mr. McLEAN:—

Q.—Do you know whether there are many working men who have savings in the Post office Bank? A.—It is impossible to get that information.

Q.—Are there many complaints about convict Labor? A.—No.

Q.—As opposed to the best interest of the working classes? A.—No there is very little complaint in this country; there is very little complaint that reaches us.

Q.—In the questions sent out have you one in regard to convict labor? A.—I am not sure whether I have or not. My impression is that the question has not been asked. It has not been such a conspicuous subject of complaint here as to render it necessary to make enquiries in regard to it.

Q.—What do the contractors who employ convict labor pay? A.—I do not know. There is a contract which expires this year, and I believe it will not be renewed.

Q.—In regard to Sunday work; have you knowledge of the printing business? A.—Yes.

Q.—Do you think that Sunday night work in a printing office should be abolished? A.—Yes, if you do any with Monday morning newspapers.

Q.—And without doing away with Monday morning papers? A.—Yes, you could, if the people would be content to take news twenty four hours or thirty six hours old.

By the CHAIRMAN:—

Q.—That is for the men to cease work at twelve o'clock on Saturday night and commence after twelve on Sunday night? A.—Yes.

By Mr. McLEAN:—

Q.—Do you think it would be feasible to get out Monday morning papers without working on Sunday? A.—I do not think so.

By Mr. WALSH:—

Q.—You spoke of the returns and said you did not consider them to be entirely correct as they depended on the census returns? A.—No, I do not think I said that.

Q.—You said something very near to it, so far as I heard. You said you could not be particular because your information was from the census returns? A.—That was in reply to a question asked by Mr. Freed as to what proportion of the product of labor goes to labor and what proportion goes to the employer.

Q.—The reason I draw attention to the matter is because I want to know to what census returns you had reference? A.—To the census returns of the Dominion. I went through the census returns of the United States for 1870 and 1880 for the same purpose. I think it is extremely advisable that the scope of the schedules should be extended.

Q.—The reason I ask particularly was because I had something to do with the census? A.—If I might be allowed to make a suggestion with respect to the census it would be that our census should be taken the same as that of the United States which would enable a more satisfactory comparison to be made between our industries and those of the United States in the same year. Take for instance our agricultural enumeration. We may have a good harvest in our census year or a very poor one while that of the preceding year may be a very good or a very poor one. If you compare a poor harvest year with us with a good harvest year in the United States it very much injures the reputation of our country. We have suffered in that respect in past years. We suffered very much from a comparison of our census in 1871 with the United States census of 1870, for 1870 was a good harvest with them and 1871 was a poor harvest with us.

By Mr. CLARKE:—

Q.—Referring to your answer to a question in regard to laboring men engaged in Lumbering; did it refer to the men engaged in the manufacture of lumber or those who go to the stump? A.—To those who go to the stump. The men who work in the mill work the regular hours, twenty-four hours with two shifts of men.

TORONTO, November 28th 1887.

JAMES BAIN, jr., called and sworn.

By the CHAIRMAN:—

Q.—What position do you hold? A.—I am librarian of the Toronto Free Library.

Q.—When was that established? A.—In 1883.

Q.—Is it supported by voluntary contributions or in what manner? A.—It is supported by city rates, by rents and by fees and fines—the fee which we charge for the printed ticket, to the extent of five cents, and the fines which are imposed for delay in returning books. Those two items amount to about \$900 a year. The amount of our grant from the city is fixed at a maximum of half a mill on the dollar, but we have not drawn more than a quarter of a mill, which realised last year \$18,000. The total amount of our income for 1886 was \$22,821.59.

Q.—All classes have access to the library and attend there and get out books? A.—All classes. We have now about 20,000 readers on our list.

Q.—What proportion of that number are mechanics or laborers? A.—It is a difficult matter to say exactly how many mechanics are represented in that number. A rough estimate I made this morning of those registered as mechanics shows 2,600; but in addition to those, a great many wives of mechanics, when mechanics have not time to attend to the library, take out books, so you may safely put it down at 5,000, as the number of mechanics and mechanics' wives who regularly receive books from the library.

Q.—I suppose your library is well supplied with books for mechanics? A.—We aim at getting in the library everything of value. I noticed this morning that we have 1,500 volumes directly bearing on the manufacturing arts. In addition to this we keep all the workingmen's newspapers and those specially applied to manufactures and inventions. In quoting this number of books I have merely reference to our circulating library, to books loaned for home reading. We have in addition to that number a library of sixteen thousand books exclusively works of reference, books of reference of all kinds which are only used in the reading room. In that department we aim to keep all the works we can pick up on the manufacturing arts. We have also in addition a patent library, a library consisting of specifications of patents taken out in Great Britain and Canada during the last two centuries. These are open for reference to mechanics at all times.

Q.—Can you tell the Commission anything about industrial schools? A.—I have no information except that obtained from my general reading on the subject. I have said however all along that some link was wanting between working men and what should be the workingmen's university, the public library, and it has been a problem for me for the last three years how to make that connection. I commenced two years ago in December calling upon the heads of large factories, those engaging a large number of hands, to obtain permission to invite the men down to the library in the evenings; and I had during two winters from twenty to fifty mechanics present during the evening. I made it a rule as far as possible to get the mechanics of one special class, the mechanics engaged in one special manufacture together, and I provided, as far as I could, comfortable accommodation for them, had the room nicely lighted and laid before them all the books we could gather together on the subject of their own special work, many books which they could not otherwise see. I also tried to induce the men to take the numbers and names of those books so as to be able to refer to them continuously. So far as the attendance is concerned it was always satisfactory to me. I found the men when they did come gladly availed themselves of the opportunity and were always very hearty and warm in their thanks for what they considered my kindness in the matter. I approached one or two of the unions with the purpose of endeavoring to induce them to take up the work, to try to work with the Public Library; but I am sorry to say I failed with them, as only one accepted my proposition, and that was the Painters' Union. They considered the matter and provided a certain number of men from the shops to go to the Library in

the evening. I should have very much liked to have had all the unions take up the work and arrange, as a matter not only of pleasure but of duty, to attend at the library and spend evenings there in the work I suggested. The stationary engineers held two meetings at the end of last winter, and at the last meeting, after a discussion on some books which were laid before them, a paper was read by one of their number and illustrated by the books we had there.

Q.—Have you any knowledge of the industrial schools, practical knowledge or otherwise? A.—I have not; I cannot speak from actual experience. The only school I know of is the Library school.

Q.—Do you have any school for mechanical drawing in connection with the Library? A.—We are not allowed by our charter to provide schools of any kind. The school instruction to which I have referred is that of trying to make the Library itself a great school.

By Mr. HEAKES :—

Q.—Has the number of readers materially increased since the Library was organized as a free one? A.—The number is increasing every day. We started with nothing and we have now twenty thousand readers.

Q.—Do you know about what number of those were members of the old mechanics' institute? A.—The old mechanics' institute did not comprise many more than 300.

By the CHAIRMAN :—

Q.—Has that disappeared? A.—Yes, it has gone entirely out of existence.

By Mr. WALSH :—

Q.—Do mechanics as a general rule seem to take advantage of the opportunity to study mechanical works in your library, in other words, is their reading more particularly confined to them rather than to other kinds of works? A.—That is a very difficult question to answer. So many books are given out during the day which I have no knowledge, through my assistants, that I can only guess at the result; but from the condition of the books on the shelves, those referring to the Arts, I am satisfied they are very extensively read, because a great many are very much worn. During last year, we circulated in round numbers 5,000 volumes on the arts; those were for home reading, in addition to those used in the Library.

Q.—When you speak of the arts do you mean the schools of design for drawing, or is it practical mechanical instruction? A.—Practical mechanical instruction, books on plumbing, gas-fitting, boiler making etc.

Q.—Have you any knowledge of the state of the mechanical trades in this city? A.—No.

Q.—Do you think there is any improvement in the working classes in regard to their intelligence as a result of the establishment of the Free Library? A.—That is also a very difficult question to answer, but I think there is. I know some men who have wonderfully improved through the knowledge they have gained from the Public Library.

Q.—Do you know if any special trade has taken more interest in those works than the other trades? A.—Yes, some have done so more than others. For instance, the painters naturally take a deeper interest; I know a number of painters regularly go there for the purpose of working up designs and obtaining knowledge of the higher harmony of colors.

Q.—Then again, take the building trade. Do you know of men connected with that trade going to the library to improve themselves in any particular with respect to carrying on the building work? A.—The stone masons, I think, do so to a certain extent. They apply for books on mechanical drawing and I know some have used our books very freely. The carpenters have done so to a certain extent but not very much. We have two or three very scarce books on stair building which carpenters come regularly to consult.

Q.—Do you think that the taste for such reading has increased since the establishment of the Library? A.—Without a doubt. The mere fact of our great circulation shows that. We have doubled our circulation in three years. Last year it reached a total of 300,000 volumes, taken for home reading.

By Mr. ARMSTRONG :—

Q.—Do you find the reading room occupied to any extent by mechanics on Saturday afternoon? A.—A great many mechanics are there on Saturday afternoon, and mechanics out of work attend on other days during work hours.

Q.—From your observation do you think that if mechanics had shorter hours of labor they would take advantage of the increased opportunity to frequent the library and reading room? A.—It is not a question to which I have given any consideration.

Q.—Of course there are many mechanics who do not work on Saturday afternoon; you say that on Saturday afternoon the reading room is full of them. Is it not evident that if all mechanics had the Saturday afternoon free the attendance would be increased? A.—I can only say, in reply, this; that I have had from a large number of mechanics this answer when I have asked them to come to the Library and consult books; telling them that if they would come in the evenings I would go over books with them and endeavor to obtain for them what they wanted. They have said “we do not get away till six o'clock and it is half past seven before we have got our supper and the Library closes at half past eight, and so there is no time.”

Dr. WM. OLDRIGHT, called and sworn.

By the CHAIRMAN :—

Q.—What is your occupation? A.—I am a physician; I have practised in Toronto twenty years, and have resided here twenty-eight years.

Q.—Do you occupy any public position? A.—I am professor of hygiene at the Provincial University (the University of Toronto). I was formerly chairman of the Provincial Board of Health here. I came here in response to a circular forwarded to me by the secretary, and I desire to make a few remarks with respect to the sanitary condition of the work-shops. Of course it is too large a subject to take up at length, but there are two or three points which I should like to bring before the Commission. One is with respect to the ventilation of work-shops at night. When I have visited printing offices at night, I have found the ventilation very bad, and I believe that it is greatly the result of a lack of means of consuming the foul gas, which I think might be obviated. Every gas light consumes nearly as much air as two men would do, and there is no provision generally speaking for the ventilation of these gas lights, whereas they might be made a means of ventilating the building, and be a benefit rather than an injury. If over each gas light there was placed a funnel that would act as a reflector, and throw the light down, and if from that funnel a small tube was placed up towards the ceiling, and all these tubes centered in one large tube of four or five inches, carried through to the roof, the ventilation of the offices might be greatly improved. Of course in some offices they have introduced the electric light, but in others the old plan still exists, and this method could be applied to other shops as well as printing offices. I mention printing offices as the light has to be greater in such shops, and as printers are notably liable to be affected with disease of the lungs. The condition of the offices and work-shops thus lighted would be very much improved, and it would obviate the necessity of throwing open the windows as the men are forced to do on account of the heat and foul air.

Q.—What about the electric light? A.—The electric light is a great improvement as it does away with the amount of gas, but I do not think if the gas lights were arranged in the way I have indicated the electric light would be any improvement in a sanitary point of view. Then another point is with respect to the dust of factories, which might be largely carried off. I recently visited Pullman near

Chicago and was very much impressed by the excellent condition of the atmosphere of the car work-shops. There is a ventilator of that kind placed over all the machines at which a great deal of fine dust is made. Those ventilators connect with large flues made of some light metal, and those flues again are connected with fans in the engine house, and exhaust fans which draw all the sawdust from the shops to a bin above the furnace, where it is burnt; so that when you pass through the car shops the atmosphere is very good, and I was struck with the lack of dust. I see here in the circular a reference to tenement houses and workmen's dwellings. One of the difficulties we formerly had to contend with in Toronto and elsewhere was with respect to the supply of drinking water. Of course the members of the Commission are aware that at the present time there prevails a great deal of zymotic disease, diphtheria and so on. The Ontario Board of Health had a clause inserted in the Public Health Act, declaring it to be the duty of the owner of every house in the municipality to provide the occupant of the same with a sufficient supply of drinking water, and in case the occupant is not satisfied as to the wholesomeness or sufficiency of such supply he may apply to the Board of Health Department as to the same, and if the supply be satisfactory and wholesome the expense incurred in arriving at such determination shall be paid by such occupant and if the supply be not sufficient and wholesome they shall be paid by the owner, and in either case the charges shall be recoverable in the same manner as municipal taxes. Another clause compels the closing of every well found in the city. These are only a part of the by-laws of the Act, and they may be suppressed by any town and other laws substituted. The reason I mention this matter before the Commission is, that it seems to me, and I respectfully submit it for the consideration of the Commission, it would be a good topic for inquiry throughout the various towns to ascertain whether that clause is being respected and carried out. That by-law was introduced in connection with the Public Health Act, and it is in force until repealed by the municipality. The difficulty we find in Toronto as medical practitioners is, that if we speak to a family about their well water, they say they will speak to the landlord; and when they do so, he will say that if they do not like the house they can leave it. Accordingly the next family coming into the house will be in the same predicament. The by-law works no hardship; if the water is good and the occupant has needlessly complained, he will have to pay the cost of the examination; if not, the owner will have to pay, the Board of Health adjudging between the two. With respect to the condition of workmen's dwellings I find the bedrooms are often disproportionately small.

Q.—How is it in regard to the condition of the water-closets? A.—The plan of making pits in the ground and allowing the contents to drain into the soil is a very bad one. The soil becomes saturated with filth and the wells become foul. The health officers are everywhere doing their best to do away with this condition of things, but I respectfully submit again that from the workmen themselves a great deal of information which would help sanitarians very much could be elicited.

Q.—Unless wells are a certain distance from closets there is percolation through the soil? A.—It will go through for a very long distance, that depending on the nature of the soil. Take a case which everybody can learn about that has occurred in Toronto. In Wellesley Street they had a row of privies some distance from the school. The school is now being extended and men have been engaged digging on the site. An old well still exists there and from it the privies were distant about forty five feet. When the men commenced work on the site for the new extension they found the whole soil impregnated with filth from the privies; and how much further it has extended no one can tell. The well is at one edge of the site and the privies at the other. That is only an illustration of the distance at which a well may become fouled.

By Mr. CLARK:—

Q.—How do you propose to remedy that? A.—Either by the dry earth system or by latreens or water closets. I observe in your circular that one of the subjects is employers' liability. Medical men have found at times a good deal of trouble

arising on that score when we have been called in to attend boys who have been injured. The responsibility in connection with attendance on such boys has not been borne at all times by employers, as it should be. There are a few very creditable exceptions—a great many—perhaps the exceptions are the other way now. At one time it was very difficult to get employers to do as they should do in those cases, but they now act very much more generously towards their employes than they used to do. There is one firm, Messrs. Christie & Co., who always make it a point to see that boys injured in their establishment have everything they want, and in that establishment everything is provided for the comfort of the boys. In mentioning that instance I do not mean to be invidious; there are other employers who do so. Still there are some who are very mean in this respect still.

By Mr. WALSH:—

Q.—Do you know anything about the employment of child labor in the City?  
A.—I do not know very much about it. A great many boys are employed, and many of the accidents that take place in machine shops, in box factories, carpenter shops and planing mills, occur to boys.

By the CHAIRMAN:—

Q.—To boys who do not know enough about machinery? A.—Boys are not careful enough.

By Mr. WALSH:—

Q.—Are those accidents due to the negligence of the boys or the exposed state of the machinery? A.—I am not in a position to say, not having inspected the machinery. I think however that in some cases they arise from the machinery not being properly guarded. Boys are naturally more careless than men. I think boys are employed to do a great deal more work about machinery than they should be; that work should be done by persons who are older and more careful.

Q.—With respect to female labor in factories and business establishments, what have you to say? Do they get proper treatment there; are they under any disability or is there anything to prevent them remaining in health? A.—I think in stores there is a great deal of trouble in that way. They are not working under the Factory Act, and young women are obliged to stand from morning to night when there is really no necessity. They should be allowed to sit down. There are times when they could sit down if they were allowed; but it is thought not business-like. A great deal of trouble to the abdominal organs arises in this way; they are made sick by it.

By Mr. ARMSTRONG:—

Q.—Do you find separate conveniences for both sexes supplied in the factories and workshops under the Factory Act? A.—I do not know.

Q.—The matter has never come under your notice? A.—No, I have not been called upon to examine it.

Q.—Do you know the average time a lady clerk works in the stores? A.—I think generally they go about eight o'clock in the morning and some of the stores do not close until nine o'clock at night. Other stores close at six o'clock. They have a short time for meals.

By the CHAIRMAN:—

Q.—They have to be on their feet thirteen hours a day? A.—Sometimes; hardly that as a rule, because they have a little time for meals; about twelve hours I should say.

By Mr. HEAKES:—

Q.—How long can an average female remain standing on her feet without injury?  
A.—I think they ought to have an opportunity to sit down from time to time, because I have always found, and it is the experience of most persons, that it is harder to stand on the feet behind a counter than if you are able to walk about and change your position a little.

Q.—Would you consider the hours from eight o'clock in the morning till eight or nine at night too long, if they were allowed to sit down? A.—That does not give sufficient opportunity for out door exercise.

Q.—What would you consider a proper day's work if they were allowed to sit down occasionally? A.—I think all the stores ought to close at six o'clock, except perhaps one night in the week, for the convenience of the working people.

Q.—Do you know if many children are employed in those stores? A.—Of course there are some employed as "Cash," but now cash is being carried a good deal by machinery. I cannot say as to the proportions between this and other cities.

By the CHAIRMAN:—

Q.—That system applies more to large cities? A.—I am speaking of Toronto

By Mr. CARSON:—

Q.—Do you think the children of the poorer classes are neglected as regards education? A.—No, I think we compare very favorably with other countries in that respect.

Q.—As regards sobriety? A.—I think we compare very well in that regard

By Mr. WALSH:—

Q.—Do you know any cases of disease that have come under your knowledge that you would attribute to long standing by lady clerks? A.—Yes.

Q.—That you can really attribute to that cause? A.—Yes.

By Mr. HEAKES:—

Q.—Among whom do you find cases of illness from standing on the feet? A.—I do among young girls; also from their not being able to get out and take outdoor exercise in the sunlight.

Q.—Do you find the health of workingmen compares favorably with the health of other classes? A.—Yes, but with shop girls it is not so.

By Mr. WALSH:—

Q.—Do you think, then, ten hours, allowing for meals in the ordinary way, is too long a day's work for a working man? A.—I do not think that would injure him. You are asking me now as to his physical condition.

Q.—Provided he is a healthy man and not over worked and has an hour for dinner do you consider ten hours too long? A.—I do not. At the same time I think that as we have only to go through this world once every one should have an opportunity for improvement and recreation throughout the week. I think for a man to have to work every day and all day and never have an afternoon to himself is a hardship, and there is no necessity for it.

Q.—You are in favor of the Saturday half holiday? A.—Yes.

By Mr. McLEAN:—

Q.—What age should children have reached before being allowed to go to work in factories? A.—A great deal would depend on the kind of work and the educational advantages you wanted to give the child.

Q.—Taking all into consideration, the educational advantages which the child should have before going to work and considering the general run of factories, boot and shoe factories, cotton factories, broom factories, and all such industries, what is your opinion? A.—Taking into consideration the necessity of the people to earn a livelihood, I think fourteen or fifteen would be a good average age.

Q.—For boys and girls? A.—Yes.

By Mr. GIBSON:—

Q.—Do you think workingmen would benefit equally working nine hours and six hours on Saturday or by working ten hours with Saturday afternoon a holiday? I think about ten hours a day with Saturday afternoon a holiday would be a fair time

By Mr. FREED :—

Q.—As regards the plumbing of houses what have you to say? A.—I suppose I could point out dozens of cases in this city where I know of diphtheria having been caused by a direct communication from the drain to the interior of the house and also from there being no trap to intercept the sewer gas; instances are numerous where from defective plumbing sewer gas goes into the house. A great many of those houses are built to rent and hitherto we have not had any inspection of them; but an inspector of plumbing has been appointed and we hope a similar course will be adopted in other places so as to have inspection made compulsory.

By Mr. ARMSTRONG :—

Q.—Are the plumbers practical men? A.—The trouble is not with the plumbers so much as with the persons who want to have the work done as cheaply as possible and who are putting up houses as cheaply as possible.

By Mr. FREED :—

Q.—If there is simply an ordinary water trap in a drain pipe will not the sewer gas force its way through into the house? A.—It may do so.

Q.—Are the methods of ventilation provided in the Ontario Law of 1884 satisfactory in the case of the ventilation of drain pipes? A.—Yes.

Q.—Are measures being taken to see that at present and hereafter the law will be carried out? A.—They are in Toronto and in some other places, but in a great many cases they are not.

Q.—Do you think the average working man's dwelling is too small? A.—Yes.

Q.—Is it so small as to be a danger or menace to the health of the occupants? A.—Yes.

Q.—What are considered the lowest cubic contents of a house for each inmate consistent with health? A.—You mean adopted by authorities in sanitary matters?

Q.—Yes. A.—From six hundred to one thousand cubic feet in each room occupied. It would, however, require that the cubic contents of the house should be greater than that figure, because at one time the family will be in the bed rooms and at another time in their sitting rooms; so I should think there should be double that capacity for the house.

Q.—So there should be from 1200 to 3,000 cubic feet to each occupant of the house? A.—To each individual in the house.

Q.—You think that space is not secured to the average working man? A.—I think not.

Q.—Do you know how that is outside of Toronto? A.—I think generally it is not secured, taking the accommodations all over the country. With that cubic space there should be proper means of ventilation, for changing the air a certain number of times in a given period. This should be done from three to four times per hour.

Q.—Do you think with the ordinary house as ordinarily constructed and maintained that special ventilation should be provided, or would the ordinary openings of the doors, crevices of the windows and so on, provide sufficient air? A.—I think there should be special ventilation, and with a little attention that could easily be secured. In rooms heated by a stove we lose a great deal of the benefit of the stove for lack of provision being made to carry a galvanized iron pipe into the house from outside, as we do in our furnaces. An iron pipe should be arranged to open underneath the stove and thus bring fresh air to the stove, and there should be a connection with the chimney to carry off the foul air.

By Mr. HEAKES :—

Q.—A pipe would be placed under the floor, which would be brought in from the outside? A.—Yes.

By Mr. FREED :—

Q.—Is it within your knowledge that poor people in order to economise fuel close up their houses unnecessarily tightly? Is that a result of their poverty—an

effort to economise fuel at the expense of breathing foul air? A.—Not always from poverty, because I have heard school trustees blame school teachers for opening the windows and keeping on a fire. I have heard one declare that he did not see the necessity for keeping on a fire, and at the same time have the windows open.

Q.—Are the school houses properly ventilated? A.—No; they have not a sufficient cubic air space. They are, however, being improved very much in that respect but in some of them the air space is not half what it should be.

Q.—The rate-payers do not want to spend the money to build new schools? A.—No.

By Mr. HEAKES :—

Q.—I noticed in one church that I need not specify, that there were no air boxes from outside, but the air was drawn up through the floor and the same air therefore passed through the furnace and came up through the register. Do you consider that a safe method of heating? A.—No; that is done in some houses also.

Q.—I know it is done in one church in this city? A.—In some houses there is a plan by which air is brought from outside, and then there is a register close to the front door, and it draws the cold air away from the door. To that there can be no objection.

By Mr. FREED :—

Q.—Is this lack of proper ventilation due to the ignorance of the people as to what constitutes proper sanitary conditions? Yes, I think that is one of the great difficulties; but the people are improving in that respect.

Q.—Have you ever thought of any means of educating the people in that respect so as to lead them to take better care of their own health? A.—I think it would be well if lecturers were employed to give a special course under the authority of some governing body. The Provincial Board of Health has tried to do a little in that way; they have had several conventions in different parts of the Province and these have awakened a considerable amount of interest.

Q.—Are proper measures taken in Toronto to prevent unwholesome food being sold? A.—We have an inspector of meat, and an effort has been made lately by the Provincial Board of Health for inspection of other articles of food. I do not think there is any special inspection of fresh fruit and vegetables; I am not sure, I would not like to answer positively.

Q.—What measures are taken to bring before the proper authorities offenders in this regard? A.—I do not know of any other inspections beyond what I have mentioned. Under the Dominion Act there is a Dominion Analyst and any person who takes a sample of food to him can have it analyzed.

By Mr. WALSH :—

Q.—Is there a Dominion Analyst in Toronto? A.—Yes, Professor Ellis of the University.

By Mr. FREED :—

Q.—Are the people in Toronto supplied with lake water or are there wells in the city? A.—There are still some wells.

Q.—Do you regard the well water as wholesome? A.—No, except in the new parts of the city. Away up in the north-west of the city there is a district that has not yet been inhabited and for a time the water from the wells there might be wholesome; but, eventually, they will become foul in any case from surface contamination and if the people are allowed to dig privy pits it will very rapidly become foul.

Q.—Privy pits are still permitted in some parts of the city? A.—I think they are still being made. I do not know whether they are permitted or not permitted, or whether they are made in spite of the authorities. With respect to the privy pits in different parts of the city, I think that when the wells become very foul they may be closed. I know the health officer has power to order them to be closed, but the work in that respect is very slowly done.

Q.—Is sewer construction being as rapidly pushed forward as population settles in the new districts? A.—There has been a large amount of sewerage constructed lately.

Q.—Of course, you cannot have water closets without sewers? A.—No.

Q.—Is the water supply of the city reasonably pure lake water? A.—I believe so.

Q.—It is taken from beyond the Island? A.—I believe so; there have been suspicions at times as to the purity of the water, but I think the analyst generally shows it to be good drinking water.

Q.—What is the theory as to the current in the Bay—is the course of the sewage to the east or the west? A.—Both ways.

Q.—Then would it not flow round the Island, and get to the place from which the city's supply of water is drawn? A.—Do you mean by there being a western current to-day, and an eastern current to-morrow? I think it would be so broken up by the time it arrives back again that there would be no danger. A year ago there was a talk of emptying the whole of the sewage east of the Gap, and if it had been emptied there in its undiluted form, I think sometimes an eastern current would have driven it towards the place of the city's supply. It was on that ground that the Provincial Board disapproved of the scheme, merely owing to the place at which it was proposed to empty the sewage, and they thought it should be a good deal further east.

Q.—Is it your opinion that the average lake water, supposing it not to be contaminated by sewage, is as wholesome as the average water that could be derived from stream? A.—I think we could not have more wholesome water than undiluted Lake Ontario water; I believe the results of analysis show it to be one of the purest waters in the world. In regard to the gas supply, I may say that there is a great difference in the character of gas. We have had a great many deaths through poisoning here since the introduction of water gas, which contains a very much greater proportion of carbon monoxide. I have, I suppose, attended as many as three or four fatal cases of gas poisoning, and probably two or three times that number who have recovered. But you cannot be sure after they have reached a certain point that they will recover, the same as you would be confident if they had been poisoned by the old form of coal gas, or any other form of asphyxiates. They may linger a day or two and then die.

Q.—The gas itself is more poisonous? A.—Yes, there is a larger amount of carbon monoxide, and that destroys the red blood corpuscles.

Q.—Is there not more danger in breathing it? A.—I do not know that there is much difference in that respect.

Q.—Is the smell as readily perceptible? A.—I think so. Efforts have been made to either do away with the water gas, or have an automatic cut off gas burner introduced.

Q.—Does water gas poison the air of the room more rapidly than the ordinary coal gas? A.—I do not think that it does. I think the combustion is just as complete. I wish churches and public buildings came under the purview of this Commission. Some plan of ventilating from the gas burners would tend a great deal to the ventilation of the churches, and the comfort of those who attend. I think all persons have noticed that towards the end of the sermon the atmosphere of the building becomes very hot and foul.

By Mr. CLARKE:—

Q.—Is there nothing of the kind here now? A.—I think so. The atmosphere of the Methodist Church at the corner of Sherbourne and Gerard is very much purer than formerly; that is the church that has recently been re-built. Every gas burner appears to open into the ceiling, and that plan might be adopted in other buildings.

By Mr. WALSH:—

Q.—There is a depression felt by the listeners after a long sermon, a feeling of heaviness which is almost uncontrollable; does this kind of gas produce that con-

dition? A.—I think the condition of the atmosphere has a great deal to do with it I do not think, however, that water gas has any more effect in that way than the other, but it is the consumption of the gas, and the breathing of the people that makes the air impure. If the gas lights were themselves made use of for ventilating purposes it would improve affairs very much.

PHILLIPS THOMPSON, Journalist, of Toronto, called and sworn.

By the CHAIRMAN :—

Q.—What statement have you to make to the Commission? A.—I may say that I have resided in Toronto for twenty years. The point that struck me in connection with the holding of this Labor Commission was, that it would be incomplete if some notice were not taken of the remarkable increase of rents that has taken place in all the large centres. It has been noticeable to anyone who has had occasion to rent a house or a store that the rent has gone up in proportion as the population has become centralized here and the value of property has increased. Speaking for myself I may say that when I first went into housekeeping fourteen or fifteen years ago I could get a house that suited me, a small comfortable house in a nice locality, within reasonable distance of my business, say half or three quarters of a mile, for fourteen dollars a month. To get such a house now I have to pay eighteen or nineteen dollars and go twice or three times as far out. That is the tendency of the increase of the city, and it bears with considerable hardship upon a good many of those who have only fixed incomes or salaries. Whatever advances may be made in the way of increase of wages by combination or strikes, these are offset and more than offset by the constant tendency to increased value for the land and consequent advances of rent. I can give an instance. I had not thought particularly of looking up any special instances, but one occurred to me. A relative of my own a few years ago rented a business place on Yonge street to do a small business in the dressmaking way. At the time she rented the small shop with a house in the rear the rent was fourteen dollars a month. In a few years it was advanced to sixteen dollars, shortly afterwards to eighteen dollars; then she left, and the present occupant pays twenty dollars for the same place without any material improvement. All of those increases took place within a period of three years. That is merely one instance of the tendency of increase in rents to bear down heavily upon those whose income or salary is not increased to any considerable extent by labor movements.

By Mr. WALSH :—

Q.—With respect to a house such as you speak of; is there increased trade at the present time to warrant anything equal to the rise in rent of which you speak? A.—I think not. I do not know, but I think the general experience is that trade remains about the same. The population has increased, but with increased population comes increased competition in the different classes, not only among the laboring class proper, but among tradesmen in a small way and even in a large way. The only real gainers by the increase of the size of the city are the men who hold land for speculation or for rental. For instance, suppose a man owns a house and lot which at that time was worth \$2,000. With the increase of population the value advances. It is worth perhaps three or four times the figures at which he purchased it but as a house it is no more valuable to him than before. He can sell it for more but if he desires to remain in the same city and pursue his regular business he has to rent another place, so he has no advantages otherwise than as a landowner; he is not advantaged in any other capacity.

By Mr. ARMSTRONG :—

Q.—Is there any practical remedy for this grievance about house rent? A.—As far as I can see, and I have given the question some little thought, there should be an appropriation of the land value or a considerable proportion of the land value either

by the Government or the State, it does not so much matter which. That would have a tendency to bring the vacant lots into occupation; no man could afford to hold property on speculation, for he must pay either the yearly value or something approaching it to the Government or the State. He would be driven to sell and others to purchase, and everyone who wanted a home would have an opportunity of getting one. It would give a great impetus to trade and labor in every department.

By Mr. FREED:—

Q.—Would houses be built under that plan in advance of the requirements of the people? A.—No; but at the present time there are not sufficient houses for the requirements of the people except at rents which are really too high.

Q.—If rents are too high, so as to give enormous dividends to the builders of those houses, will not capital flow in to earn some of those enormous dividends? A.—I do not think they give enormous dividends to builders, but rather large gains to speculators, to those who hold property for speculation.

Q.—You said you thought that the increase of wages received by working people was largely, if not wholly, offset by the increase in rent? A.—That is my impression.

Q.—What period would that remark cover? A.—I fancy since the city began to grow with something like the rapidity it is growing at present. If a city stagnates and people do not come in you do not see the tendency; it is only in case of a steady increase.

Q.—What percentage of increase would you say the average mechanic has received, say within ten years, on his wages? A.—It is a very difficult question to answer; I could hardly say as to that. There was a witness before the Commission the other day who testified to an increase of two and a half cents an hour, and another, according to my recollection, gave five cents per hour for the carpentering trade.

Q.—If a man receives an advance of two and a half cents per hour, how much would that be in a day of nine hours? A.—Twenty-two and a half cents per day.

Q.—And if he works two hundred and fifty days in the year, how much would that make? A.—Fifty-six dollars and twenty-five cents, I think.

Q.—What would be the average rent which a workingman pays for his house? A.—I could not say. I have not made any preparation and have no statistics at my command to show that.

Q.—Would the average mechanic in Toronto pay ten dollars per month for his house? A.—It would be something like that I fancy.

Q.—That would be one hundred and twenty dollars a year. Would the mechanic have been able ten years ago to obtain a similar home for six dollars a month? A.—I am not prepared to answer that question.

Q.—Is it not true that when you said the increase of wages was offset by the increase of house rent, you had not made any actual study of the matter? A.—I think it is true in regard to some departments. I do not think in journalism there has been any such increase, or in the printing business.

Q.—Was it a matter of opinion with you when you gave that answer, or was it a conclusion based on the collection of facts? A.—It has been my impression from my personal experience. I think so far as journalism is concerned there has been no material change in ten years. There has been no change for the better in Toronto. It must be remembered that while there may have been increases in trades well organized, there are many other departments of labor not organized, and in those there has been little or no advance.

Q.—We were speaking more particularly of mechanics and workingmen? A.—It is perhaps a mistake to narrow the acceptation of the word workingmen to those who labor with their hands. It should be extended so as to cover every form of useful work, those who labor by the brain as well as those who labor physically. Take my department, journalism: surely a man who gathers intelligence or writes

editorials is as truly a laborer as the man who sets the type. One gets a salary and the other wages, but I do not see much difference; I never found one dollar of salary to go further than one dollar of wages.

Q.—We like to be specific and know what words mean and in what sense we use them. A.—True.

Q.—Do these buildings cost more than they formerly cost, irrespective of the land? A.—I do not know; I do not suppose they do.

Q.—You do not know. A.—I do not know.

Q.—You think that people who build houses and own them do not receive excessive interest on the money they have invested? A.—If you look at the matter of interest, I think they receive excessive interest. To me it is merely justifying one form of monopoly by another.

Q.—If it was a fact that owners of property for renting were receiving excessive interest would you not think other capitalists would come in and share those profits? A.—I should think so; and as a matter of fact they are doing so in Toronto. There has been a great rush in the direction of property speculation.

Q.—If a portion of the real value in the land were taken from the present owners would you propose that they would be compensated for the loss? A.—If there is any compensation to be made it should go to those who have been suffering from landlordism for a long time.

Q.—If a man bought a property yesterday and that property should be depreciated to any extent by a change in the law to-day, do you think he should bear the loss? A.—I think it would be a case of hardship; but such is inevitable in all social reform. It was a case of hardship when the slaveholder was deprived of his slaves.

By the CHAIRMAN :—

Q.—Do you know what he got for them? A.—I know that in connection with liberating slaves in the British West Indies there was compensation made. There was however no compensation to American slaveholders. But at the same time I look at it this way; it was far better that emancipation was received even without compensation, than that slavery should be continued.

By Mr. FREED :—

Q.—To what extent would you carry this nationalization of the land? A.—My idea is that it will come gradually. I do not think it will come so suddenly as to cause any particular hardship to individuals.

Q.—To what extent would you have the confiscation of land carried—to the total value of the land? A.—My theory is, that the Government or the community, it does not much matter which, should be the recognized owners of the land, or at least should have the right of appropriating the yearly value of the land. At the same time I do not think it will come all at once, but gradually, by shifting the burdens of taxation from those objects on which it is at present and placing them on the land, putting a little on at a time, and by degrees shifting the whole burden of taxation to the land, and as it is seen that public objects can be accomplished and a large fund obtained for many objects now otherwise unobtainable, the process will be carried a little further.

Q.—It will be like the man who cut off the dog's tail an inch a day? A.—That is about it.

By the CHAIRMAN :—

Q.—Have you sufficient confidence in the Government to give them the management of all the property in the Dominion? A.—Virtually the Government of to-day has at present the right of taxation.

Q.—Suppose your plan were carried out, have you such confidence in the Government as to believe that everything would be carried out honestly and without corruption? A.—I think when public opinion becomes sufficiently enlightened to make this reform it will also be sufficiently enlightened to prevent such Government corruption as might prevent its working.

By Mr. FREED :—

Q.—Eventually you would have the Government appropriate the whole value in the land? A.—The yearly value in the land without the improvements; the improvements would be free.

Q.—Do you think settlers would improve land under such a tenancy as that? A.—I have seen in Ireland tenants carrying seaweed from the coast to land for which they pay exceedingly high rentals, and which they are ready to rent on almost any terms. I do not see anything to prevent settlers improving land which pays the annual value as a tax to the Government, so long as they were occupied.

By the CHAIRMAN :—

Q.—For how long would it be rented? A.—There would be no necessity for renting it or for any change in the present proprietorship. The Government would say: such and such is your tax, and so long as you continue to pay it you will be undisturbed in your possession.

Q.—Do you agree with what Henry George says at page 392 of his volume: "For this simple device of placing all taxes on the value of land would be in effect putting up the land at auction to whoever would pay the highest rent to the State."

Do you believe that? A.—I do not exactly pin my faith to all Henry George says.

Q.—Do you believe that? He says it would be in effect putting up the land at auction to whomsoever would pay the highest rent to the State? A.—No, I think that is an overstatement. I think there is perhaps a measure of truth in it. I do not think any man should be dispossessed because another man was willing to pay a higher value, so long as the occupier was willing to pay what the State had fixed.

By Mr. FREED :—

Q.—Would you leave the nominal title to the land in the hands of the occupant? A.—Yes.

Q.—And you would have him taxed to the amount of the yearly value of the land? A.—The yearly value or something approaching to it.

Q.—Do you think there is any value in land which has not been created by labor? A.—Yes; under the present system there certainly is. For instance: supposing this lot at the corner of Church street had been for some reason or other left in a state of absolute wildness, that not a tree had been cut down, but that it was in the condition of a forest. It would now be just about as valuable as any other vacant lot, even if no labor had been done on it; the growth of the city would have given it the same value for occupation as any of the surrounding land.

Q.—About when was the City of Toronto cleared? A.—The clearing was done, I fancy, a hundred years ago.

Q.—This land would have been taxed for municipal purposes? A.—It would have been.

Q.—The owner would pay for sidewalks? A.—He ought to have done so.

Q.—For street paving, sewerage, fire protection, interest on the city debt and so on? A.—Yes.

Q.—The land would have been taxed for a hundred years? A.—Yes.

Q.—If that land had laid idle the owner would not have received any return. Would not the taxes, the interest and other disbursements in connection with it for one hundred years have now amounted to its selling price? A.—That would require an accountant to determine.

Q.—Now, if the yearly value of all the land were taken do you think that would supply sufficient money for Municipal, Provincial and Dominion expenditure, the ordinary expenditures? A.—I should think it would.

Q.—Have you made any calculation? A.—I have not made any calculation.

Q.—Would you have taxation imposed on improvements? A.—No.

Q.—Only upon the land? A.—Only upon the land. If other taxation were

necessary it should be made up by a tax on incomes. That would not interfere with the principle of land nationalization, if it were absolutely necessary to supplement the land tax.

Q.—How would the value of the land be found? A.—I will answer that question by asking another: How is the value of the land being found at the present time?

Q.—By being periodically put in the market for sale and it being sold to the highest bidder? A.—In many assessments the value of the land is separated from the value of the improvements.

Q.—Take it in the city: would land as land have any commercial value? A.—Under the present system it has a commercial value.

Q.—Under your system, if the whole yearly value was taken from it, would it have any commercial or exchangeable value? A.—I think that would require to be demonstrated by experiment. It might have a commercial value; yes, I think it would.

Q.—In what would the commercial value of the land consist? A.—Well, the improvements would have a commercial value.

Q.—We are talking about the land. In the case of a man holding property from which he could get no income and no benefit, would another man be willing to give him something for that which is practically valueless? A.—Suppose a man wished to go out of business and had buildings erected for business purposes, the other man in order to get the buildings would have to occupy the land.

Q.—Suppose you do not combine the improvements and the land? A.—Property speaking the land would have no commercial value.

Q.—Then if it had no commercial or exchangeable value how could its value be found for assessable purposes? A.—I hardly see how it could. Its value under the present system can be ascertained easily enough.

Q.—But under your system? A.—I have not thought that out.

Q.—We will now take wild land. Do people rush into Muskoka or other wild districts of Ontario to take up the land of which they will become absolute owners? A.—They do not rush into Muskoka just as they do into some other sections, because the land is not so good.

Q.—Take the Northwest: are they going in there in vast numbers? A.—Not in as large numbers as was expected at one time.

Q.—What is the leading motive that induces people to go into a new country and suffer the hardships and privations of pioneer life? A.—In order to build up homes for themselves.

Q.—In order to reap the benefit that will come from an increase in the value of the land? A.—Some may be actuated by that motive; others by what they can get from the land rather than the land itself.

Q.—If they had no hope of ownership in the land do you think they would go into new districts? A.—So far as new districts are concerned I think the tendency under land nationalization would be to benefit the settler. Under the present system monopolies can control large areas and consequently settlement is scattered. Under an equitable system of land taxation, under which the occupiers of the land would be secure so long as the taxes were paid, settlement would be closer and there would not be those vacant areas.

Q.—There would be the same proportionate rate of taxation placed on the farms? A.—There would be a land tax on every one who took up land.

Q.—So that anyone taking up land and bringing it under tillage would have to pay an annual tax for the ownership of the land? A.—A small tax, inasmuch as that land being at the extreme end of settlement would not be so valuable as land in more central positions.

Q.—Could not the speculator afford to pay it as well as the actual settler? A.—No, because the one who brings land under production could better afford to hold on than the man who was putting the land to no good purpose.

Q.—Do settlers on wild lands have as a rule much money to spare, or do they make special profits out of the land during early years? A.—They do not.

Q.—Then, if they had to pay a tax in addition it would be an additional burden upon them? A.—Not so, because a good many of the present taxes would be removed.

Q.—What taxes on settlers would be removed? A.—The very onerous tax on settlers in the Northwest—the tax on agricultural implements and other machinery.

Q.—What is the tax on his implements? A.—I do not know the figures.

Q.—Do you know whether agricultural implements are higher in Canada than in the United States? A.—No, I do not.

Q.—If the price of agricultural implements is not higher in Canada than in the United States, what is the tax which the Canadian farmer pays on agricultural implements? A.—They might not be higher in Canada than in the United States, and owing to their having to import them a long distance they might have to pay for them more than if they got them just over the border.

Q.—Is it a fact that just over the border implements are cheaper to farmers than they are on our side of the border to Canadian farmers? A.—I do not know. As regards this argument of settling the North-West, it must be borne in mind that the land available for settlement in the United States is limited. In the nature of things just so soon as all the land there is taken up we will have a rush of immigration into our territory, almost as a matter of necessity, because the people being unable to obtain land there will naturally look to our side of the border.

Q.—Is it not a fact that you have theorized upon this question rather than inquired into the facts? A.—I have inquired into a good many of the facts, but I am not able to carry many statistics on the point. I could answer many questions if I had time to look the subject up.

Q.—In regard to agricultural implements you stated something as a fact, although you now seem merely to have assumed it to be so. Do you know as a matter of fact whether agricultural implements are higher in Dakota than in Manitoba? A.—I have seen it stated that settlers are under a great disadvantage from having to import what they want from Eastern Canada, rather than get it from nearer points in the United States.

Q.—But you do not know whether agricultural implements are cheaper in Dakota than in Manitoba? A.—I don't know personally.

THOMAS BOWICK, Toronto, called and sworn :—

By Mr. ARMSTRONG :—

Q.—You are an employing blacksmith by trade? A.—Yes, a horse-shoer.

Q.—An employer of labor? A.—Yes.

Q.—How long have you been in Toronto? A.—Seven years.

Q.—How long have you been an employer of labor? A.—Twelve years, I should say.

Q.—Do you use any foreign material in your trade at present? A.—Yes, I do, some shoe iron is imported iron—English iron.

Q.—Did you ever use shoes that were imported? A.—I did.

Q.—Do you use them now? A.—Well they are imported from Montreal.

Q.—No, I mean foreign ones? A.—No, none but Montreal ones.

Q.—What was the rate you paid for foreign shoes? A.—I paid as high as \$5.50 and \$6.00 a hundred pounds.

Q.—Do you get these shoes in Canada? A.—I get them in the city, and they are brought in from Montreal.

Q.—What do they cost you here? A.—\$3.70.

By Mr. FREED :—

Q.—Your price was how much? A.—\$4.75 to \$6.00 would be the average price.

By Mr. ARMSTRONG :—

Q.—Was the Montreal article as good at the price as the foreign article? A.—It was better.

Q.—Does the fact of the material being cheap tend to raise the wages of the men?—A.—Yes, it stands to reason that if a material is cheaper I can afford to give more to the men; in fact I have had to pay more wages than before.

Q.—Do you know if any of your men belong to labor organizations? A.—I do not know positively but they say they do; they all, as far as I can understand, belong to them.

Q.—Do you find it cause any trouble among the men who belong to them? A. No.

Q.—Do your men feel it a benefit to themselves? A.—They seem to think so and it is a benefit to me because they keep straighter when they belong to a society of some kind.

Q.—You think because they are combined in an organization of that kind their habits tend to be more steady? A.—At the time they told me they joined this organization, they demanded more pay and certainly I have to give them more. I know they were worth it at the time and then I had got the pick of my men; at the rate of wages the best men are cheaper.

Q.—And do you find it a benefit or a drawback to have the picked men at a high rate of wages? A.—It is no drawback; it is a benefit.

Q.—Is there any grading in your trade? A.—I believe there is, but I give all the one price and pick my men.

By the CHAIRMAN :—

Q.—They are all equally good? A.—Yes, they are all equally good; the man who is not worth the pay he is getting now, is worth nothing—he is no use in the shop. He has got to be a good man or else he is no use.

By Mr. ARMSTRONG :—

Q. Do you know the rate of wages in your trade as compared with the wages in the same branch of industry in Great Britain or the United States? A.—Well, I do not know for a general fact but I had those working with me who came right out from the old country.

Q.—Are they better off here comparing their state of living, than they are in the United States or Great Britain at the same wages? A.—As far as England is concerned I know of two or three who told me they are far better off here; in fact one of them is in business now on Alice street.

Q.—As an employer of labor do you believe in your trade settling trade disputes by arbitration? A.—I do; I believe it is the proper way.

Q.—Do you think it is beneficial? A.—I do.

Q.—Do you know anything about the various systems of arbitration? A.—I do not.

Q.—You never had to resort to arbitration with your men? A.—I was called upon to settle little disputes; you may call it arbitration on a small scale.

By the CHAIRMAN :—

Q.—You settled the dispute amicably? A.—I was the third party called in to settle between two others.

By Mr. ARMSTRONG :—

Q.—How are blacksmiths usually paid—weekly or monthly? A.—Weekly.

Q.—The men prefer it that way? A.—Yes, it has been the habit all along.

Q.—Did you ever hear of them preferring one particular day of the week to be paid upon? A.—No; the custom is to pay them on Saturday afternoon.

Q.—Of course you have no time labor in your business? A.—No.

Q.—Are the men satisfied with the present mode of paying them? A.—Yes, I pay them on Saturday afternoons and they are satisfied.

By Mr. CARSON :—

Q.—Do many of your men own the houses they live in? A.—No, I don't think any of them do.

Q.—Are they married men or young men? A.—One is married and the others are young men.

Q.—Have you anything you could recommend which would be to the interests of the working classes in your particular line of business? A.—I don't think that I have.

By Mr. HEAKES:—

Q.—Do you believe that arbitration is the best plan of settling disputes? A.—Yes, I think so, both between nations and individuals.

Q.—Do you prefer enforced arbitration to strikes? A.—Undoubtedly, I would prefer arbitration to a strike any time.

By Mr. FREED:—

Q.—Would you prefer arbitration by an arbitrator appointed by the Government or arbitration by means of each party choosing an arbitrator and these two selecting a third? A.—I prefer disinterested people—each picking his own and the third appointed by the Government or the authorities.

Q.—Have you many apprentices in your trade? A.—I have none.

Q.—How is it with others in the same line? A.—I don't find that many apprentices are taken on; they generally come from country shops.

Q.—Is there any law of the union forbidding you to take them or limiting the number? A.—Not that I know of; no one has broached the subject to me.

Q.—If you have no apprentices, it is simply because you don't desire to employ them? A.—In fact, in our business we have no place for them.

Q.—You stated that you used to use English iron for shoes and that now you get shoes from Montreal. Of what iron are the Montreal shoes made? A.—I could not say.

Q.—Imported or Canadian? A.—I could not say.

Q.—Have you ever used Nova Scotia iron—Londonderry iron? A.—That is, probably, what we call Lower Port iron—yes, I have.

Q.—What is its quality as compared with English iron? A.—It compares favorably.

Q.—Have you ever used any iron imported from the United States? How does Canadian iron compare with that? A.—Well there are two kinds of iron: there is the Hamilton iron and the Three Rivers iron, which used to come in at one time; and then there is the Lower Port iron, from somewhere in the Lower Provinces.

Q.—That would be the Londonderry iron? A.—It is a good iron.

Q.—Are these as good as any imported iron you ever had? A.—I would say they are just about as good.

Q.—Were the horse shoes which were imported machine made or hand made? A.—Machine made.

Q.—And those from Montreal? A.—Machine made.

Q.—And what is the quality of the Montreal shoes as compared with the imported? A.—They are better; they are what are called the Rhode Island pattern; they are manufactured by the Montreal rolling company and another firm manufactures one which is not quite so neat.

Q.—Then as a matter of fact comparing the Canadian shoes with the imported ones which you used to get you get a better article and a cheaper article? A.—We get a cheaper article and I believe it is as good, if not better.

Q.—What rate of increase has there been in the rate of wages you have paid; how much have they increased? A.—That is since May; I had to give two dollars a week to two men and one to another.

Q.—How long have you been in business here? A.—Six years past.

Q.—Have wages increased in that time besides the increase this year? A.—They have been almost stationary up to this year when the horse shoers formed a Union.

Q.—You think the raise of wages was due largely to the formation of the Union? A.—Yes, I believe so.

Q.—And you say that since the increase you have selected your men, discharged the poor men and kept the good ones? I discharged one but it was not altogether

on account of the wages. I picked the Union men out and the steady men, I believe all belonged to the Union.

Q.—In case a poor man, in consequence of not being so fast or so careful as other men, is discharged, what other employment can he find? A.—He could find employment in the city at his own trade if he wished to be graded.

Q.—Does the scale of wages permit the grading of men according to merit? A.—Of course I do not know the workings of the Union, but I understand so.

Q.—You do not know whether a man if he is a slow or poor workman is permitted to work below the scale? A.—I think he is; I believe he is allowed to get what he is worth.

Q.—Suppose a difficulty arose between yourself and your men, would you rather settle it amicably and without arbitration—would you rather deal with your own men alone or with the Union, to which they belong? A.—I would be satisfied anyway, but I would rather they would appoint a man from the Union, I to appoint another, and these two to appoint a third.

Q.—If it was simply a matter of negotiation would you prefer to sit down and talk to your own men or have the men come from the Union? A.—If I settled with my own men perhaps they might break the engagement, but if they referred it to others it would perhaps be a more solid arrangement, one which would be binding.

Q.—You think if it was settled by the Union or by arbitration it would be in the nature of an agreement? A.—Yes, it would be understood that they could not get out of it; an employer has no chance against his men, for if three or four of them say they agree to something the others can break out of it, but with an arbitration they cannot do that. They can prove that the party said so and so and that I agreed to the same thing.

Q.—Do you find that your men in selling their labor and making an agreement with you stand on an equality with you or have you the advantage over them as an employer? A.—None in the least.

Q.—You and the men with whom you are making a bargain stand in perfect equality so far as the selling of the labor on his part and the purchase of it by you? A.—Yes, in fact they are all taken for the boss but me. We are on equal terms.

Q.—During the time you have been in Toronto do you think the cost of living has increased? A.—It has a little, rent has for one thing, and I think provisions generally are a little bit higher.

Q.—Bread? A.—Yes, and all provisions necessary for the house, I think.

Q.—Sugar? A.—Well I cannot talk much about sugar for it is sold at cost to catch custom. But bread and other stuff has increased.

Q.—How about clothing? A.—I think it is about the same?

Q.—And boots and shoes? A.—About the same, I think.

Q.—Do your men ever work on Sunday? A.—No.

Q.—Are you acquainted with the condition of the houses in which your workmen live? A.—One man is a householder, the others board.

Q.—Are these houses pretty comfortable? A.—As far as I know they are.

Q.—Large enough to give them reasonable room and air space in their houses? A.—I believe so. I visited them only once and I did not take particular notice of the sanitary conditions.

Q.—Do you know of any co-operative societies in the trade? A.—I do not know that there are any. I believe there is a benefit of some kind attached to it.

Q.—Do you know of any mechanics in your trade who have joined together to do blacksmithing work co-operatively? A.—No, I do not.

Q.—Is large capital required to go into such a business as you carry on? A.—Not a great deal.

Q.—A few men could unite their little means if they chose and start such a business? A.—Yes, they would want a little means to start it.

Q.—But not beyond the means that mechanics could easily acquire? A.—If they bought a house and looked after it it would take quite a while to make up enough to carry on the business.

Q.—Do you know if any of your men save money, or do they spend it as they get it? A.—I could not say.

By Mr. McLEAN:—

Q.—Has the use of machinery in your trade lowered wages? A.—No it has not.

Q.—What is the average day's pay of a blacksmith? A.—\$1.75, I think is the regular pay as far as I know.

Q.—Do you know anything about the Factory Act which is in force in Canada? A.—I do not.

Q.—If you had a child and were going to send him at his trade what age do you think he should attain before sending him? A.—About eighteen.

Q.—And girls? A.—I would not have them in the factory at all.

Q.—Suppose you could not help yourself? A.—Eighteen or twenty years of age, at any rate.

Q.—Have you any opposition from foreign contract labor? A.—What do you mean by that?

Q.—Work which is done in the United States and sent over here. A.—Canadian work you mean done in the United States?

Q.—Yes. A.—I would oppose it certainly.

Q.—Has any been done? A.—I do not know.

Does prison labor in any way interfere with your business? A.—Not that I know of at present. At one time I believe there were shoes made in the prisons—

in Kingston penitentiary—but there are none at present.

Q.—Would that have a bad effect on your trade? A.—Undoubtedly it would.

Q.—Would you rather have Union men work for you than non Union men? A.—It would make no difference if they were good workmen.

Q.—There are not any better than Union men are there? A.—None better than Union men; mine are Union men and I would not want three better men in the shop, but I believe another man would be as good as they are whether he was a Union man or not.

By Mr. WALSH:—

Q.—Was there not a time when there used to be apprentices in your trade? A.—Yes, and I believe there are at present.

Q.—To what do you attribute the necessity of doing away with them for the most part, now that they are not so much used? A.—I was talking of the city; they are not used here, because young men will get work in a country shop and learn a certain part of their trade and then come into the city and go under instruction to finish.

I have had to take them that way myself.

Q.—Don't you think that the introduction of the method of making these shoes and nails as they are made at present is a great means of doing away with the labor of junior hands or apprentices? A.—I don't know that it would be.

Q.—Was not there a time when you had all the pointing of nails to do and small matters of that kind which could be done by young fellows? A.—Yes, but the young fellows could not do it; it required a good mechanic to point a nail.

Q.—I recollect a time when apprentices were frequently used in your business and that kind is a means of doing away with apprentices? A.—I don't think it is altogether. At that time when we had to point nails we got about three and sixpence a set and at the present time we get \$1.50 and \$1.75 for the same work and the nails are handed in to us all ready.

Q.—I merely wanted to know if that was the reason for doing away with apprentices—that there was no necessity for them at the present time because your nails come ready to hand? A.—Of course when I served my time there were four apprentices in the shop where I was. The introduction of machine goods undoubtedly is the cause of doing with one man less in a shop.

JOHN H. LUMSDEN, called and sworn :—

By the CHAIRMAN :—

Q.—What is your business? A.—I am a printer.

Q.—Do you live in Toronto? A.—Yes.

By Mr. ARMSTRONG :—

Q.—How long have you worked as a journeyman in the printing business?  
A.—I have worked as a journeyman twenty odd years.

Q.—Have you been all those years a journeyman? A.—Part of the time a journeyman and part of the time an employer of labor.

Q.—Did you ever act in the capacity of foreman? A.—Yes, on several occasions.

Q.—And as manager? A.—Yes.

Q.—Are you a member of the typographical Union in this city? A.—Yes.

Q.—How long have you been so? A.—Every since I was a journeyman.

Q.—What are the laws of the Union to which you belong in regard to strikes?  
What kind of a vote will cause a strike? A.—It takes a three-fourths vote, a vote of the members, and those have to be six months in good standing before they can vote on the question. That is the rule to the best of my recollection—I would not be positive.

Q.—Have you held any position in the Union? A.—At the present time I am vice president; I have been president.

Q.—Is there any rule governing the employing of apprentices? A.—In what respect?

Q.—In regard to the number of apprentices to be employed? A.—Yes. There are so many apprentices allowed to so many men.

Q.—Do you know the ratio? A.—I am not well up in it just now. It has been changed I think; I am not positive what it is.

Q.—Is the number more or less than formerly? A.—That I could not speak definitely about.

Q.—Are the apprentices indentured? A.—Not that I know of.

Q.—Is it the desire of the Union to have apprentices indentured? A.—The Union has on several occasions tried to bring the matter before the master printer with a view to having them indentured.

Q.—What is the reason the masters did not like to have, or did not choose to have, apprentices indentured; what in your opinion as a practical man is the reason why the employers of labor in the printing business do not desire to indenture apprentices? A.—I could never understand the reason.

Q.—Have you not formed your own opinion on the matter, from a printer's point of view and from your own experience? A.—What I say every day is this: that after a boy has been one or two years at the business an adjoining printing office endeavors to get him by giving him a trifle more wages.

Q.—Are there any objections in the Union to taking in as members female compositors? A.—No. They come in on equal terms with the men.

Q.—Does the Union see that they receive equal wages with the men? A.—Yes.

A.—They always try to have arbitration before they resort to other measures.

Q.—Is that optional with them or is it compulsory, as a law? A.—I think, I mistake not, our governing body declares it to be a law.

Q.—To resort to arbitration? A.—Yes.

Q.—With respect to printers in the book and job offices—the day hands as well as term them—what hours do they work? A.—Fifty-four hours constitute a week's work with them.

Q.—That is, they are enjoying the shortening of the hours of work? A.—Yes.

Q.—How long have they had this privilege? A.—The agitation was first started here in 1872.

Q.—It has passed into history by this time, but it will be remembered that there was a long strike at that time. Now, did the Union at that time resort to arbitration or consultation or interview the employers? A.—They tried to interview them.

Q.—What progress was made at those interviews to the best of your knowledge? A.—They were not satisfactory to the members of the Union.

Q.—Were the majority of the bosses willing for those interviews to take place? A.—It was rather the reverse.

Q.—Of course a strike ensued? A.—Yes.

Q.—And the result was what? A.—It resulted in the ten hours being attained.

Q.—Are the men principally paid weekly, or fortnightly, or monthly? I think, with one or two exceptions in the whole city, they are paid weekly; there may be one or two exceptions, and in those cases the men are paid fortnightly—not more than fortnightly however.

Q.—To the best of your opinion, would you prefer weekly payments? A.—By all means.

Q.—Have the men a choice as regards being paid on any certain day in the week so far as their convenience is concerned? A.—Several have expressed their opinion in favor of different days, and a good many with whom I have talked are most favorable to Friday evening.

Q.—Did you ever hear them give any reasons why they prefer Friday evening? A.—It is because it would give their wives or anyone who has to do the shopping a better opportunity to do so on Saturday morning.

Q.—How long has the Printers' Union in this city been in existence as a union, to the best of your knowledge? A.—Since 1844.

Q.—How many strikes during all that time have actually taken place? A.—I do not think the number amounts to more than seven or eight, if that many.

Q.—Have you any knowledge of the book and job business? A.—Latterly I have not been very much acquainted with it; I have been out of that line of business for some years.

Q.—In what capacity did you serve? A.—I have been foreman of a job printing office in my time.

Q.—Has there been more printing done, do you think, in proportion to the size of the city, within the past five or ten years than formerly? A.—A great deal more.

Q.—Is it on account of the increase in the number of reading people? A.—Yes, that has something to do with it.

Q.—Do you know any other reason? A.—I suppose it is largely on account of the rapid growth of the city. That, no doubt, has something to do with it.

Q.—Have the book and job offices increased in volume, so far as business goes, on account of the supply of work? A.—Yes.

Q.—And have they brought the printing art down finer? A.—Yes, it is a great deal better to-day than it was formerly.

Q.—Is it more artistic? A.—Yes.

Q.—That is, that establishments are built up for specialties in the trade? A.—Yes.

Q.—Why is that done? A.—It is only in unison with what has occurred in every other trade. The departments of trade are being divided; different branches of work are being run in different offices. One office makes a specialty of one line, the same as is done in other branches of business, as we see almost every day.

Q.—For example, a book and job office goes into the line of illuminated bills? A.—Yes.

Q.—And they do so because they now have a demand for that kind of work? A.—Yes.

Q.—Whereas, before those offices were built up for that purpose, I presume there was scarcely any illuminated work done in the city? A.—Very little was done.

Q.—Did any come into the city? A.—Yes, lots came in.

Q.—From a foreign market? A.—Yes.

Q.—Do you know anything about this matter (for I know it is done in some establishments in the city), whether a certain class of printing is done in box factories? A.—I know that in some such factories they employ say one printer who does certain work in printing, which printed matter is afterwards placed on cases and biseuit boxes and such like.

Q.—A printer is employed for that particular work? A.—Generally one printer is set to prepare the type and put it on the press.

By the CHAIRMAN :—

Q.—Is that for their own work? A.—No, for outside work.

By Mr. ARMSTRONG :—

Q.—Who are generally employed in making those boxes? A.—Females.

Q.—Young women? A.—Yes, ranging from nine to twenty years.

Q.—Are they employed by the week or by piece work? A.—Some by the week's work and some by piece work; the majority I think are on piece work.

Q.—Take an ordinary fast hand, what would such a young lady earn? A.—Perhaps from three dollars up to four and a half or even five I have occasionally heard of.

Q.—That is on piece work? A.—Yes. That is for making the boxes and pasting the printed material on the outside of them.

Q.—We will take five dollars as the average? A.—It would be a very high average, I think.

Q.—How many hours a day do those young woman work in order to earn five dollars? A.—Five days in the week from eight o'clock to six, and they quit perhaps on Saturday afternoon. That is nine hours a day for five days and they are off Saturday afternoons.

Q.—Did you ever know it as a fact that when a young woman who makes a large bill, say five dollars, there was a tendency shown on the part of the employer to reduce the price per box or per dozen? A.—I have heard it said that the girls did not want to make more, for the employers might cut them down on their piece work. Some I have heard say so.

Q.—How are the sanitary arrangements of those factories, to the best of your knowledge? A.—In one or two I have been in they are anything but good.

Q.—There are separate conveniences for both sexes? A.—Separate in a sense that they are alongside of one another.

By Mr. McLEAN :—

Q.—During your experience as a practical man has it come to your knowledge that printers have become possessed of the houses in which they live? A.—Not very largely.

Q.—On the other hand, have the employers of labor become wealthy? A.—I should certainly say so.

Q.—Could you give the Commission any information as to the parties who have become wealthy say during the last few years.

Mr. ARMSTRONG—You need not mention the name.

WITNESS—I would rather not answer the question if I have to name any person. As an outsider and one judging the affairs of the world when I see the employers living in better houses I must certainly come to the conclusion that they are prospering; but we do not always know what the inner circle of the financial arrangements is.

Q.—But you have come to the conclusion that they have made money? A.—Yes.

Q.—Do you think that if apprentices were indentured to the trade they would make better mechanics? A.—By all means, decidedly.

Q.—Please state why you think so? A.—Because the amount of migration going on from office to office does not tend to make good mechanics. That is why I say so.

Q.—Have stereotyped plates any effect on your trade? A.—We have not felt much of it here.

Q.—Do you know if they have had any effect? A.—Not to my personal knowledge.

Q.—Would you prefer nine hours for a day's work? A.—I say we are better off since we have got nine hours. It has been established with us since 1872.

Q.—You spoke a few moments ago about posters coming in from other markets? A.—They are not coming in so largely now as they did some years ago.

Q.—From what market did they come in? A.—From the American market principally.

Q.—You refer specially to the large show bills? A.—Exactly.

By Mr. HEAKES:—

Q.—Did you ever know a case where a printer who was supposed to have served his time had to go and serve longer? A.—I never saw a case.

Q.—Have you ever heard of such a case? A.—I have heard of cases where it was necessary to go and do so, in order to qualify for newspaper work.

Q.—Would that be from the hands not having been properly trained or would it be due to the boy's own idleness? A.—A good deal of it would be due to the boy not having been properly trained; in some cases no doubt it would be due to the boy's idleness; but I think in more cases it would be due to the other cause.

Q.—Is there any rule in the Union with respect to efficiency before men are admitted as members? A.—No; it is largely judged from the member or members who propose the men.

Q.—You admit all persons who are journeymen? A.—Yes, after they have shown satisfactory proofs that they have served the number of years.

By Mr. McLEAN:—

Q.—You say that printers work nine hours a day at the present time? A.—Yes, in offices governed by or under the control of the Union. I do not say that all offices have nine hours, but many offices not under the control of the Union have acceded to the nine hours since the Union obtained it; or perhaps not the full nine hours, but the men do not work, then, full Saturday.

Q.—They work fifty-four hours a week? A.—In printing offices where Union men work the hours are fifty-four per week. If they work in non-union offices they are supposed to get paid for the extra time over fifty-four hours.

Q.—Would the printers prefer to have the hours in that way or to have regularly nine hours a day? A.—They would rather have the half day on Saturday.

Q.—Is a man better off by having a half day on Saturday? A.—I think the majority of the printers are.

Q.—As a class are they pretty steady and industrious? A.—They are much better than they were some years ago.

By Mr. HEAKES:—

Q.—Are printers in any of the offices required to sign any document before going to work? A.—Not that I know of.

By Mr. FREED:—

Q.—Why do you restrict the number of apprentices? A.—So as to give the mechanics a chance to get some work.

Q.—It is in the interest of the journeyman? A.—Yes.

Q.—Then this has a tendency to compel employers to give work to journeymen at journeymen's wages which could be done by boys at lower wages? A.—If you judge the class of work.

Q.—As a matter of fact do employers desire to employ more apprentices or boys than the rules of the Union permit them to employ? A.—I do not know of any such place.

Q.—If they were not disposed to employ a greater number of boys, would the Union have this rule on its book? A.—It is for self protection to themselves that it is put on the book.

Q.—Do you know if Union men have remonstrated with employers with respect to the number of apprentices employed, or saying that too many were employed? A.—In our trade, or do you refer to trades generally?

Q.—In your trade? A.—I have not heard of anything of that kind lately.

Q.—Have you heard of boys trying to get into printing offices and not being able to find employment in consequence of that rule? A.—I have heard of but one case. The office is always satisfied with the number of apprentices to which it is entitled, and I have never heard it objected to in any way.

Q.—Have you heard any complaint that boys were unable to find employment in the printing business? A.—No, I do not know that I have.

Q.—Are you familiar with morning newspaper work? A.—Yes.

Q.—About what would be considered the fair average week's bill for a morning newspaper hand of average ability? A.—From fifteen to sixteen dollars.

Q.—In order to earn that would he work every night in the week? A.—Six nights in the week. It would depend greatly on whether it was the busy time or not; sometimes there is more work in the office than at other times, and when there is more work the news is set in smaller type and there are consequently larger bills. The smaller the type the larger the bill.

Q.—I am not asking for large bills, but for the average bill of an average compositor? A.—I think fifteen dollars would be about the fair thing.

Q.—What are the wages paid for day work, that is where men are employed by the week at the union scale of fifty-four hours? A.—Eleven dollars.

Q.—You spoke a while ago about posters coming in; you said that some time ago such printed matter came in and now it does not? A.—I said it did not in such large quantities, because the offices in the city have gone more largely into that class of work.

Q.—Formerly they could not do the work? A.—It was done here, but it was not done to the extent it is being done now.

Q.—You do not know whether the customs duty has anything to do with it? A.—I could not answer that question.

By Mr. ARMSTRONG:—

Q.—Did you ever know of an employer of printers who objected to take a man because he belonged to a printers' union? A.—Yes.

By Mr. FRED:—

Q.—Will a union printer work in the same office with a non-union printer? A.—Some do, but very few in this city.

Q.—Would a non-union printer be permitted to work on one of the morning papers in this city? A.—No.

Q.—The men would object to his being employed there? A.—Yes.

Q.—Would the rules of the union justify a strike if the employer persisted in employing a non-union printer? A.—If it was gone about in a proper manner and laid before the union, it would.

By Mr. HEAKES:—

Q.—Is there any agreement between the employers connected with the news papers, and the union as to who shall be employed? A.—No.

By Mr. CARSON:—

Q.—Upon what ground does the union man object to work with a non-union man? A.—As a rule the non-union man is not particular whether he gets the same of wages the Union man gets or not.

By Mr. ARMSTRONG:—

Q.—Of course there is a difference between a non-union man and a man who

was formerly a Union man, and who violated the rules of the Union? A.—There is a difference, and the Union treats the men in that respect differently. There are lots of men who come into this city who do not know there is such a thing as a Union until it is explained to them what it is.

Q.—Do you find them willing to join? A.—In the majority of cases they feel inclined to join.

By Mr. FREED:—

Q.—If a union man violates the rules of the Union and is expelled, what means are necessary in order to reinstate him? A.—His case can be re-opened.

Q.—If it is re-opened and he has no excuse to offer, but he desires to return to the union, is he permitted to re-join?—In some case he may be taken in again without any fine being imposed, and in other cases they may put on a fine.

Q.—What would be the amount? A.—It varies, and often when he is reinstated it is refunded.

Q.—What is the lowest fine you know of? A.—I do not know the particular amount. There is no settled sum for a fine, either high or low.

Q.—What sums do you know of having been imposed? A.—I have known as low as five dollars.

Q.—And as high as what? A.—A hundred dollars.

Q.—That would be in a flagrant case? A.—In a very bad case, in a very extreme case.

Q.—Do you know any case where men who sought re-admission to the union were refused? A.—I know of no case myself.

By Mr. McLEAN:—

Q.—What age do you think apprentices ought to be before they go to a trade? A.—I do not think they should go before sixteen years.

Q.—Are the women employed in your trade provided with stools on which to sit? A.—I never worked in an office where there was female labor.

By Mr. FREED:—

Q.—How many female compositors belong to the Union? A.—I do not know; I do not think more than two.

Q.—How many female compositors do you think there are in the city? A.—I do not know; not a great many; I could not say anything as to the number. I do not think, visiting the different offices, there are a great many.

By the CHAIRMAN:—

Q.—Do you think a boy should be in charge of his father till he is sixteen? A.—I am speaking of a printing office; I think a boy should not go till he is sixteen and finish at twenty-one.

Q.—Then he should be in charge of his father till he is sixteen? A.—Yes, exactly.

By Mr. HEAKES:—

Q.—You think that in order to make a good printer he should have a good education? A.—Yes, he should have a very good education.

By Mr. CARSON:—

Q.—Do you find the education of boys generally neglected in your business? A.—No, I cannot say it is. A very good test of a boy in our business is as to the way he can read manuscript when he first goes there.

By Mr. FREED:—

Q.—Are there not many parents who need the wages children would earn before they reach sixteen?—I could not say.

Q.—Do you think the average mechanic in Toronto who has an ordinarily large family growing up can afford to maintain his children and keep them at school until they reach sixteen years? A.—I think so. I was raised by an ordinary mechanic, who had a large family, till I was sixteen; and I was twenty-one before I finished my time.

W. J. McFARLANE, carriage maker, Toronto, called and sworn.

By Mr. ARMSTRONG :—

Q.—How long have you been in Toronto? A.—Six years.

Q.—Have you been in business all that time as a journeyman? A.—Yes.

Q.—Has the rate of wages in your trade increased or decreased during the last five years? A.—They have decreased from the time I came.

Q.—What is the reason? A.—Because there is so much machinery work; we have to compete with factory work.

Q.—Have you to compete with foreign manufactured goods in any shape? A.—Yes, with the American side.

Q.—That is with certain parts of a carriage? A.—In fact, with the whole of it in some goods; in others, with certain parts.

Q.—Just state in your own way how this is? A.—They manufacture the carriages and send them over here and they sell them cheaper than our bosses can manufacture them and sell them owing to our not having the machinery. That is one reason; and therefore to keep the work here I have to take less wages.

Q.—Are the carriage makers of Toronto an organized labor body? A.—Some of them are.

Q.—Do union and non-union men work in the same shops? A.—No.

Q.—What are the hours of labor? A.—Fifty-four hours per week; some shops in the city make it 60 hours.

Q.—Have they a standard rate? A.—Yes, to take nothing less than \$1.50 per day.

Q.—Are they paid weekly or how? A.—Weekly and fortnightly.

Q.—Do the men prefer that way? A.—Yes, they say they are quite willing to accept that.

Q.—Are they paid generally in cash or in truck? A.—There is no truck.

Q.—Have you many apprentices at the trade? A.—Not at wood work; there are at blacksmithing.

Q.—I presume carriage blacksmithing, and not other blacksmithing? A.—Yes, it is different from horse shoeing. Apprentices are kept filing up and putting on the irons in carriage making.

By Mr. FREED :—

Q.—Are the irons imported partially manufactured? A.—Some of them, like joints and so on, are.

By Mr. ARMSTRONG :—

Q.—Could these be made in Canada with encouragement? A.—Yes.

By the CHAIRMAN :—

Q. They are imported from the United States? A.—Yes, some from the United States; and some come from Gananoque.

By Mr. ARMSTRONG :—

Q.—Is the cost of living greater at the present time than it was some years ago? A.—Yes.

Q.—Is it more so in comparison with the rate of wages? A.—I think it is.

Q.—How are rents? A.—Dearer.

Q.—How much? A.—About four dollars dearer than they were six years ago.

Q.—In the same sized house? A.—Yes, they have been increased in the last years to the extent of four dollars.

Q.—Does the organized body of carriage makers believe in arbitration or have they any rules covering strikes?—A.—When they cannot settle quietly with the employers they would sooner have arbitration than go on strike.

Q.—Do the men know it to be a benefit to be organized? A.—Oh! yes.

Q.—I presume the principal reason is the increase in wages? A.—Yes.

Q.—But there are other local or social benefits arising? A.—Yes, it makes the men more sociable among themselves.

By Mr. McLEAN:—

Q.—What kind of arbitration do the men in your business prefer—a board appointed by the government, or that each side should call in a party and let them choose a third? A.—Let each side choose a party and the government appoint one man.

By Mr. HEAKES:—

Q.—In the event of the employers and the men not coming together in that shape do you consider that government interference would be justifiable? A.—I think it would.

By Mr. McLEAN:—

Q.—What effect has organised labor on the working classes in your trade? A.—I think it benefits them.

Q.—In what way. A.—In different ways; it brings the men sociably together so that one man will not take a job away from another.

Q.—What are the hours of labor? A.—Fifty-five hours a week; in some shops sixty. We work only fifty-five.

Q.—That is you quit at five o'clock on Saturdays? A.—We quit at twelve on Saturdays.

By Mr. CARSON:—

Q.—You mentioned that you had to contend largely against the American imported goods and the reasons you gave were that the Canadian manufactories did not have the proper machinery. Have you ever seen the carriage works at Gananoque? A.—Yes.

Q.—Have you been through American shops? A.—Yes I have worked in American shops where it was all machinery.

Q.—Were you in the establishment at Guelph? A.—Yes I was through it; I did not work in it.

Q.—Do not Canadian establishments turn out equally as good work as American? A.—They could but they could not turn it out as cheap.

Q.—Do they not? A.—I don't think so.

Q.—Have you not known cases where our Canadian manufacturers have taken the prizes over the same style of goods exhibited by Americans? A.—I have.

Q.—How do you account for that? A.—Partiality was shown; I think they preferred giving it to Canadians rather than to Americans.

Q.—For what reasons? A.—I think it was to encourage home industry.

Q.—What reasons can you give for our Canadian manufacturers not adopting the same system as the Americans? A.—They cannot. In the first place you have to import the stuff and bring it here to manufacture—that is first class stuff; we do not grow it in Canada.

By Mr. FREED:—

Q.—What woods are generally used? A.—Hickory.

Q.—Don't we grow that here? A.—We grow shell bark hickory, which is not so tough or as good as that which grows in the New England States.

Q.—What kind do they use there? A.—The white hickory.

By Mr. McLEAN:—

Q.—Are there many apprentices in your trade? A.—Not many in the wood working; they generally keep one in the shop.

Q.—What is about the age at which they are apprenticed? A.—We do not take any less than eighteen.

Q.—Do you take them any younger than that to the blacksmith's shop? A.—Yes, from sixteen.

A—8½

Q.—What age do you consider an apprentice should be before he goes into the trade? A.—I think he should be sixteen before he is fit for our trade, because it is heavy work.

Q.—Is the wood that comes from the United States used for all parts of the carriage or only for the hubs? A.—It is used for the shafts and spokes but the hubs they can get here as good. The gear, spokes, rims, and shafts come from the United States.

By Mr. CARSON:—

Q.—Does the establishment at Guelph manufacture a great many? A.—Yes after importing the raw material.

By Mr. FREED:—

Q.—You spoke of white hickory; what is it? A.—It is second growth.

Q.—Shell bark hickory of second growth? A.—No, we don't get shell bark hickory of second growth.

By the CHAIRMAN:—

Q.—Shell bark hickory is a Canadian hickory? A.—Yes, a kind of britch hickory.

By Mr. FREED:—

Q.—If a shell bark hickory is cut down what grows in its place? A.—I don't suppose there is anything but sprouts.

Q.—What do you call second growth hickory? A.—That which grows from the roots of old trees, but that which sprouts out from the cuts of shell bark hickory is no second growth hickory.

Q.—What wood is mainly used in the bodies of carriages? A.—Ash, white wood and bass wood.

Q.—All of Canadian growth? A.—Yes.

Q.—Is any of the iron work in carriages imported? A.—Very little is imported from the American side; it comes from Montreal.

Q.—Is the iron for carriages which is made in Canada as good as that which is imported? A.—I should judge it is.

Q.—What about the leather work. Is that imported? A.—Yes, that is all imported.

Q.—In what state of manufacture? A.—It comes here all ready, that is the leather top stuff—the glazed leather.

Q.—Made into tops? A.—No, it comes here in rolls; it is manufactured in the hide.

Q.—You think the only reason why Canadians cannot manufacture the wood work as cheaply as the imported article is that we have not the wood in Canada? A.—Yes, we have not the wood in the first place and then there is so much machinery there that they can manufacture it cheaper than we can.

Q.—Is it because our market is not large enough to warrant the production on a very large scale? A.—That is one thing.

Q.—What are the wages in the carriage trade in Canada as compared with the United States? A.—I think pretty nearly the same in some parts of the business.

Q.—Are Canadian workman as skilful as those of the United States? A.—I think they are.

Q.—And as expeditious? A.—That I would not say.

Q.—How much have wages been reduced in the six years you have been living in Toronto? A.—They have been reduced twenty-five cents a day.

Q.—Has the factory system grown more extensive in those six years? A.—It has.

Q.—And that has had a tendency to injure the mechanic? A.—It has. I know the factory in Gananoque was not going six years ago. Armstrong, of Guelph, has been going twelve or fourteen years but not on so large a scale as at present.

By Mr. McLEAN:—

Q.—Does convict labor interfere in any way with your trade? A.—No.

By Mr. ARMSTRONG:—

Q.—Does immigration? A.—Yes, it does.

Q.—Do you find the immigrants as good workmen as the Canadians? A. Well, he is not used to the work as well as the Canadian.

Q.—Does it take him long to get into it? A.—Sometimes a year and sometimes a year and a half, accordingly as he is a smart or a slow hand.

Q.—When he comes first does he work at as high wages as Canadians? A.—They generally take cheap wages to get instructions.

Q.—And generally engage themselves as being under instructions? A.—They engage as journeymen only; they want to get into Canadian ways of work.

By Mr. McLEAN:—

Q.—What nationality interferes most with your trade? A.—Scotch and Irish.

By Mr. FREED:—

Q.—How many immigrants who have already been mechanics in your trade have you known to come to Toronto? A.—Seven or eight.

Q.—In how many years? A.—In the last four years.

By the CHAIRMAN:—

Q.—What would the others do with them? Do they interfere with them in any way? A.—I would send them back again.

Q.—Those that came here first you did not send back? A.—No.

By Mr. FREED:—

Q.—Are you a Canadian? A.—Yes.

By the CHAIRMAN:—

Q.—Do you think that as a Canadian, born of English, Irish or Scotch parents you should send those persons back? A.—I could not tell you; they get naturalized after a number of years.

By Mr. GIBSON:—

Q.—Has the rise of rents of which you spoke been gradual or spasmodic? Have they been high, then fallen and then risen again? A.—No, they were at a stand for a long time but they have risen very much the last two years.

Q.—You don't know of property decreasing in value and then going up again? A.—No, not that I know of in this city.

By Mr. HEAKES:—

Q.—A house worth nine dollars a month four years ago would be worth thirteen now? Yes.

By Mr. McLEAN:—

Q.—How are the sanitary conditions of the carriage factories of this city as a general thing? A.—They are not very good.

By Mr. WALSH:—

Q.—In almost every particular in regard to the building of carriages we are equal in Canada to the United States unless in the production of the wood in which they are made? A.—Yes, we can make a better carriage than they can over there.

Q.—What is the difference supposed to be in price? Take the same kind of article here and in the United States and what is the difference in price? A.—About twenty five dollars.

Q.—Now what will be the value of a carriage in which there would be that difference? A.—What kind of a carriage do you mean?

Q.—Take any line of carriages? A.—You must mention a special line of carriage before I could tell. Do you mean the common buggy?

Q.—What did you mean by saying that there would be \$25 difference? A.—I mean in a common buggy.

Q.—Do you think there would be \$25 difference in the wood alone—because in all other respects, the production of the iron and fittings and all that goes to make up a common buggy you think we are equal? You think there would be \$25 difference in the wood alone? A.—No.

Q.—What would cause a difference of \$25? A.—It would be caused in the labor and in the way we put the stuff on the market. The labor would make up the difference, taking the different branches of labor, wood-workers, painters, blacksmiths and trimmers.

Q.—Have we not got them in Canada? A.—Yes, but the difference is they make theirs so much cheaper and quicker that they sell them for \$25 less than we can.

Q.—What would be the value of this common buggy you spoke of? A.—You could buy it for \$75, that is the American buggy, which, if we made it ourselves and had no competition with them, would cost \$100.

Q.—Now, do you think that \$25 difference would be in the article produced here? A.—It would be better put together.

Q.—Would it be equal to the difference of \$25? A.—Yes, it would.

Q.—Because \$25 on a \$75 buggy would be 33 1-3 per cent., and that is a very big difference. Would it be that much better? A.—Yes it would.

Q.—So, in reality, if we could afford to pay the difference, we would not be losers by buying the Canadian buggy? A.—No, you would be benefited.

Q.—Your buggy would last longer in proportion to the amount paid for it than the American buggy? A.—Yes, it would; put an American buggy on the roads in Canada and drive it at the same rate as the Canadian buggy, and for the same time and you will find it will give out sooner.

Q.—What do you pay for a pair of American shafts all ready for use? A.—\$2.

Q.—And rims? A.—\$2.75, \$3, or \$3.75, according to quality.

Q.—I suppose about \$7.50 would cover the whole wood-work of a buggy, such as you speak of as being imported from the United States? A.—Oh, no; where is your duty?

Q.—Well, I am only speaking about the intrinsic value of the wood; I understand about the duty.

By Mr. GIBSON:—

Q.—Could you give us the approximate prices for the different articles of wood work, such as spokes, hubs, etc.; such as you could buy them for in a carriage supply shop? A.—The wood work, work and all of a single buggy would cost you \$30.

By Mr. HEAKES:—

Q.—That would be the buggy completed? A.—The wood work of the buggy completed.

Q.—How much would a man receive as wages out of that? A.—Do you mean making it by the day or by the piece?

Q.—How much do you ordinarily earn making a buggy of that kind? A.—That would be about \$11 or \$12.

Q.—And the difference between \$30 and the selling price of \$100 would show what it cost the manufacturer for finishing and his profits in addition? A.—Yes, have the blacksmithing and finishing besides that.

Q.—How much would the blacksmithing cost? A.—\$35 to \$40.

Q.—That would not leave much for painting and trimming? A.—No, it would not; the blacksmith gets most of it. You must understand that the manufacturer make a difference in buying the iron themselves, but I am giving the price it would be if you went to a blacksmith shop to get it ironed.

By Mr. WALSH:—

Q.—In Canada are you able to get out all this iron work as well as they do in the United States? A.—Yes.

- Q.—And as quickly too? A.—Yes.
- Q.—And the wood-work too? A.—Well, if we had the machinery we could put it out quicker.
- Q.—In all these things you find our workmen just as expert as in the United States? A.—Yes, a Canadian will command better wages any time in the United States than an American will.
- Q.—Then the special things are the wood work and the small fittings of different kinds? A.—Yes. A buggy manufactured here in Canada would be better to the buyer by \$25 than one brought from the United States.
- Q.—We would be better off by buying our own even at the advanced price? A.—Yes.
- Q.—Where are axles mostly made? A.—Mostly in Gananoque.

TORONTO, November 29th, 1887.

RICHARD DENNIS, called and sworn.

By the CHAIRMAN:—

Q.—What is your occupation? A.—Builder and contractor in the City of Toronto.

By Mr. FREED:—

Q.—Do you employ men in all branches of the building trade? A.—In one sense I do, but my principal work is carpentering.

Q.—Do you take contracts in which you do all branches of work? A.—Some-times, but not often.

Q.—What wages do you pay in the carpentering trade? A.—The minimum rate is  $23\frac{1}{2}$  cents per hour, sometimes we pay as high as  $27\frac{1}{2}$  cts.

Q.—Do you pay men according to ability? A.—Just so.

Q.—Is the matter arranged by a scale of prices? A.—In my own case where there is a minimum rate I do not endeavor to go below it. If there is a price that is said to be the minimum price in the trade I do not on any account try to get men to work for less.

Q.—But if you think the men were worth more than  $22\frac{1}{2}$  cts., would you be willing to give an additional sum? A.—Just so.

Q.—The scale fixed does not classify the men at all? A.—No. I believe in classifying men. I think it is the most serious thing in connection with our trade, that men should be supposed to receive the same money for the same time.

Q.—Would it be possible to rate the men? A.—I think so; I have never found any difficulty.

Q.—Would it be possible before a man is employed that you, for example, should know what his worth would be, and classify him into a certain grade? A.—I do not think that could be done because I think the results would prove different with different bosses. If you will allow me to explain, what I mean is this. For instance; an employer might engage a man, and put him to work at which he would prove to be a very good hand for that employer, and he would readily pay him  $22\frac{1}{2}$  cents an hour. The man might, however, go a few blocks distant to another employer, who could not give him that amount of wages, because the man would not be worth it to him, because he was employed at a different class of work, and one at which the master could not make the man's work profitable.

Q.—If you have a man who is not considered worth  $22\frac{1}{2}$  cts., per hour what do you do with him? A.—I simply discharge him.

Q.—Would it be possible, or easy if possible, for that man to get work elsewhere at his trade? A.—I cannot see that it is not easy for him to get work elsewhere.

Q.—Would some other employer be willing to take a man who could not earn his wages with you? A.—I do not think a good competent contractor would be guided in any sense by my opinion.

Q.—Do slow and inferior workmen get work as readily at any wages as quick and competent ones? A.—I should certainly think not.

Q.—Would it be an advantage to such men if they were permitted to work at just such wages as they and their employer could agree upon? A.—Most decidedly; it is eminently proper that it should be so. I feel so in the matter.

Q.—Do you think the Unions are an advantage to competent workmen? A.—I do not, because I have found in my thirty one years experience in Toronto that competent workmen will always get employment. Even in hard times I have always found competent workmen to be employed. I have many in my own shop, who have worked for me seventeen years, summer and winter, and have never had another boss.

Q.—Do you think the rates of wages would be as high if there was no union among the men? A.—Pretty much so, because they can only look at it in one light—it is only an opinion, and I do not know that it is worth very much here—it is that it is simply a matter of supply and demand. Some thirty years ago I sent to the lower provinces to bring up men, and I got them for \$2.00 a day. I paid their fare here and took them home again.

Q.—That was an exceptional case, however? A.—Just so, but we were very busy in Toronto, and men were scarce.

By MR. HEAKES:—

Q.—It was after the Russian war? A.—Yes.

Q.—Did you give as high wages at that time as \$3.00 a day? A.—I never heard of that rate. About two years after that it is a well known fact that trade was bad, and carpenters worked for 87½ cents or \$1.00 a day on our University.

By MR. FREED:—

Q.—If a man stood alone in selling his labor would he be as independent as he is now as member of the Union, with the power of the Union at his back? A.—I think so, because I have some men who never were in the Union, and probably never will be in the Union, but they always commanded the best wages. I might say that personally I have no objection to the Union; it is all right enough. The only thing it feel about it is that while some men may if they choose combine with a view of obtaining better wages and other advantages, other men who are independent should not be interfered with in any way.

Q.—You believe in personal independence? A.—Yes certainly to the fullest extent.

Q.—There was a strike in the building trade in Toronto recently? A.—Yes, this spring.

Q.—What caused that strike? A.—The matter is past, and I do not care to be very dogmatic about it. But, if we would be very honest about it we might say that the men wanted everything and left nothing for the bosses. They wanted nine or ten things granted to them at one time, and they said that if the bosses did not grant the whole they would not be allowed to do business. It was simply such a demand that if the bosses granted it they would have to give up business.

Q.—What were the principal demands made by the men? A.—One was that the men should be paid wherever they were working.

Q.—I do not understand your answer? A.—They claimed that the wages should be brought to them wherever they were at work.

Q.—They would not be compelled to go to your office or shop? A.—Just so. And another demand was that all men who called themselves carpenters should be paid alike. That is not practicable in our trade; it is easy enough in some trades. I can see that it is easy in some trades, but it is not practicable in a business like carpentering.

Q.—They did not demand that you should be compelled to retain incompetent workmen? A.—It was not laid down in that way, because I claim that I always employ first-class workmen. They are not only good workmen, but they are gentleman in every sense of the word.

Q.—Did they claim that you should not have exclusive charge as to whom you should employ and not employ? A.—I do not think that it was put in that way.

Q.—How long were the men out on strike? A.—I think ten or eleven weeks.

Q.—Were any attempts made before the strike, or during the term of the strike, at conciliation or arbitration? A.—The men after a while got tired, and some wanted to do anything to get back to work again.

Q.—Were any efforts at arbitration made before the strike by either side? A.—I do not think there were before the strike. If my memory is correct an offer to arbitrate was not made, because it was a very sudden strike; I never expected anything of the kind.

Q.—How long did negotiations go on between the employers and employed before the strike began? A.—For a long time there was correspondence, which is all to be obtained from the men and the masters. The masters felt that the wages and everything else should continue this year the same as last year, and that there should be no change. There was nothing in the circumstances of the trade of the city to warrant any rise or any change, and the masters wanted the terms for 1887 to continue the same as 1886.

Q.—Did the question of hours come into this strike at all? A.—I do not think so, because it was only about a year ago, if I remember rightly, that the men demanded nine hours, and it was, in my opinion conceded to the men in a splendid way. There was no strike on that account. It was simply understood that the men should work nine hours: the men wanted it, and they had it conceded to them.

Q.—When the men at last returned to work did they get their demands, or was the strike a failure? A.—The strike was a failure; they came back exactly as they went out.

Q.—You treated them when they came back as before? A.—In what way?

Q.—You gave them the same wages? A.—Those who had worked for me before received exactly the same wages when they returned; that was the understanding when they returned.

Q.—It was this understanding? A.—Yes.

Q.—The employers have a Union; they are organized? A.—They have an Association. I suppose the majority are in it, but a great many are not in it.

Q.—Do you consider the organization a benefit to the employers? A.—I do not know. For years I had nothing to do with it; I can conduct my business as well without it as with it. I did not attend the meetings, and I do not care much about them.

Q.—Then you do not think Union is of any great advantage, either to employers or employed? A.—I do not. I do not see it is any good.

Q.—If the employers had not been united in resisting the demands of their workmen would they have been able to hold out as they did? A.—They could not go to work very well, because the trouble stopped all the building trade.

Q.—Would they not have conceded the demands of their men if they had not been united amongst themselves? A.—Here and there was a case where men got all they wanted, for you must understand that although there was a strike, there was a very large amount of work being done all the same.

Q.—The strike was not universal? A.—No. There were lots of men at work. I had scores of men working.

Q.—Have you any knowledge of the number of men out on strike? A.—It is variously estimated; I have no means of estimating it. Some people calculated the number at 1,200 or 1,600 carpenters in Toronto.

Q.—Not all out on strike? A.—No.

Q.—Have you any means of judging how many were on strike? A.—All I can tell you is what the papers said, and, unfortunately, what the papers said, or at least two of them, is not correct. Errors, of course, will get into the best newspapers. The papers said that 600 or 700 attended at the meetings. I do not know what the number was.

Q.—Did that strike affect the bricklayers? A.—It did not affect them so very badly at first, but no doubt it affected them afterwards. It is affecting them today and it will all this winter.

Q.—If the carpenters were not at work the bricklayers could not proceed very far? A.—No, and after a time they had to stop.

Q.—Did it affect the painters, plasterers and other men engaged in the building trade? A.—Most of the departments kept along pretty well, considering the strike lasted eleven weeks, but, as I said, it will naturally affect them later.

Q.—Did it affect the brick-makers? A.—I do not think it had much effect on them; I do not think any brick yards stopped on account of the strike.

Q.—Have you any knowledge of any other strike in the building trade in Toronto? A.—Yes, they have frequently occurred during the last twenty or thirty years.

Q.—What has been mainly the cause of the strikes? A.—Out of my own line I have not paid any great attention to the matter.

Q.—Has it been a demand for higher wages? A.—Yes, and shorter hours.

Q.—Have the employers ever tried to reduce wages? A.—Wages have been reduced without trying very much, because it was inevitable. Years ago carpenters got \$1.60 a day, but I would rather be paying \$2.50 than \$1.50 or \$1.75.

Q.—It does not affect your profits? A.—No; I would rather pay the higher wages.

Q.—Have you any idea of the number of employing carpenters in Toronto? A.—I have not; there is a great number. Some employ one or two men; others three or four.

Q.—There is a considerable number of builders or carpenters who employ a large number of men, is there not? A.—Yes, a great many.

Q.—Have any of them been in business as long as you have been? A.—I do not know anybody except Mr. Wagner. He was in business when I came here in 1856; and also J. B. Smith, then with Smith & Burke. I do not remember any others.

Q.—Have any of these employing carpenters, who have been in business for a considerable number of years, made what you would call large fortunes? A.—Certainly not; that is out of the question.

Q.—Have they become moderately wealthy? A.—I do not know anybody who has become moderately wealthy out of the building business.

Q.—Take an employing carpenter, with good business ability and a reasonable amount of capital, push and energy, do you think he can make inordinate profits out of the business? A.—I do not think it is possible. The competition is so keen at these times I do not think he can possibly make anything like inordinate or large profits.

Q.—If a man is not a pushing business man, or if he has not good business ability can he succeed at all as an employing carpenter? A.—I do not think it is possible because when we had bad times a few years ago only three or four stood on their feet right through the whole of it. They all went down like nine pins.

Q.—Among the journeymen carpenters do you know personally if many of them save money? A.—I have a number who have acquired property. They are frugal and industrious, and I think they have benefited largely out of the nine hour movement; that is to say they had more hours to spare to apply to purposes of their own benefit by building for themselves good homes and nice snug properties. Some men in my employ one, two, three, four, have houses, and not much mortgage on them either.

Q.—Do you think it is within the power of the average carpenter, who has ordinary prudence and an average family to maintain, to save money enough to purchase his house? A.—I do not see anything to hinder a man, who would only get as a rule \$2 a day, doing that, if he has only pluck and makes use of all his spare time to build a home.

Q.—What is your opinion of the style in which journeymen carpenters live compared with the style in which they lived when you first came to Toronto? A.—

I think they are better off, vastly better. There are men among them, as I have said, who own their own homes. That is much more common to day than it was twenty years ago.

Q.—Do they live in better houses? A.—Yes.

Q.—Are their houses better furnished? A.—I can hardly say; I do not know that. I think they are better.

Q.—Do you visit the houses of many of your journeymen? A.—If any one is sick I go around and see him. I often have to call on them if I want to communicate with them.

Q.—Do you find their houses poorly furnished as a whole, or well furnished? A.—None of the houses of the men in my employ are what we would call poorly furnished; they are comfortably furnished.

Q.—Are there carpets on the floors? A.—Yes.

Q.—Pianos? A.—I doubt that. A piano is not a necessity, although they are good things to have around.

Q.—What is your idea of the cost of living as compared with the cost of living twenty five years ago in Toronto? A.—I think twenty five years ago many things were very cheap which, thirty years ago, were exceedingly dear, but, there has been so much competition of recent years as to result greatly to the advantage of workmen.

Q.—How about provisions; do you think they are as cheap as twenty or twenty five years ago? A.—It is not fair to take an exceptional time like the Crimean War. I think things are now reasonable on the whole.

Q.—Take bread stuffs and vegetables. A.—I think things are pretty much the same all over, freight has got down so fine.

Q.—How is meat? A.—I cannot say. Meat must be reasonably cheap now.

Q.—It is not as cheap it was fifteen or twenty years ago is it? A.—I have to plead ignorance to that; it is a question I am not prepared to answer.

Q.—How is house rent? A.—House rent in Toronto is certainly dearer. There is a tendency for house rent to be higher.

Q.—Is that a universal tendency, and does it simply drive the comparatively poor man further back into the suburbs of the city? A.—I think a great many men are getting bigger wages than they did a few years ago, because they pay more for their house rent, and they will have as good a house although the rent is dearer; I know some cases in which the men are living in the same houses as they did years ago, and they are paying higher rents for them.

Q.—If a man could afford to pay, say \$10.00 or \$12.00 per month is he compelled to pay more now, and is he forced to go further into the outskirts? A.—Yes, because in all the central parts there are lots of cases in which the poorer classes of houses are being torn down to make room for better ones, and the result is that the workingman has to walk further to his work.

Q.—Can he get just as good a house for the same rent as formerly, if he goes further back? A.—Yes, you will find that to be the case. There are houses on Major Street, from which it will take a good half hour to walk, renting at \$16.00 per month and if these same houses were on McCaul Street they would rent for \$25.00 a month.

Q.—Can you give the Commission any information as to the scale of rents in any given locality, say for eight or ten years? Can you fix on any particular street, and tell us how much the rents have risen within ten years? A.—I have a lot of houses on Markham Street. Although the street has improved, is block paved, and opens to Queen Street I only get the same rent as I did ten years ago. I do not know how the matter applies to other people.

Q.—Who has paid for the improvements? A.—I have. Perhaps the property would now sell for more, but I do not charge any more rent now than I did ten years ago.

Q.—That will be an exceptional case? A.—It may or may not; I cannot tell how it is with other people.

Q.—Do you think that a person who owns a rented house gets excessive interest

on his money? A.—No, indeed no. The better the house a man builds the worse it pays.

Q.—Do you consider that a grievance? A.—Yes, it is very clear. For instance, I have cottages that pay very well on the outlay: Then I have a better class of houses and the interest they return is less, and when you get up to the first rate houses it is very poor. You can get better interest on almost everything else than on good houses.

Q.—Then, in proportion, the houses occupied by the working men pay more than those of the well to do citizens? A.—They certainly do, for a cheap house, a workingman's house, will pay better.

Q.—Do you use much machinery in your business? A.—I have almost all necessary wood-working machinery.

Q.—To what extent has machinery replaced manual labor? A.—I do not see any difference between now and thirty years ago in that respect. Carpenters are in just as good demand now as formerly; that is to say that I can employ men all the year round much better now than twenty five years ago, because it was customary then to stop work a considerable time in winter. If any employer will make an effort now he can keep some good men all the time.

Q.—If all the machinery were taken out how many more hands would you employ? A.—It would require a fine calculation to tell.

Q.—A considerable number? A.—Certainly, I cannot imagine how many it would take to dress lumber, make flooring and sashes, and so on, as against the machinery we have in operation.

Q.—Of course, the work turned out by machinery is cheaper than the work turned out by hand? A.—Certainly.

Q.—Has the effect of this cheapening caused more work to be done than would be done if there was not this machinery? A.—Certainly.

Q.—Is the carpentering work more elaborate than it used to be? A.—Yes, there is more ornamentation. In fact, on houses it is now carried to an excess; all the trimmings and everything about it are more elaborate than they formerly were.

Q.—So, if machinery has taken labor from the workmen it has created more labor for the workmen? A.—Certainly.

Q.—Are any carpenters required to sign any agreement not to belong to a union or anything of that sort? A.—I have never heard of such a thing. I should as soon think of cutting a man's throat as asking him to sign anything of the kind.

Q.—Is your machinery reasonably well protected? A.—It is; so much so that the other day when the inspector came around he was delighted with it, and he made only one little suggestion, which he thought would be an improvement, and I will carry it out at once.

Q.—Have you had any accidents in connection with machinery? A.—I have never had any accident, except a trifling one due to simple carelessness. I have had no accident worth mentioning; nothing serious.

Q.—What is your liability in case of accident? A.—I never could understand that properly; I do not know what it is. It seems there is an employer's liability Act, but, I do not know how far it would affect me.

Q.—How frequently do you pay your men? A.—Every two weeks at Saturday noon; that is up to the Friday night previous.

Q.—You pay them on Saturday up to the previous evening? A.—Yes.

Q.—Do you think that is sufficiently frequent? A.—I do; It is the way I used to be paid; I do not see that it is not satisfactory.

Q.—Have your men ever asked to be paid more frequently? A.—I never supposed they wished it.

Q.—Did it ever occur to you that it would be better for the men if they were paid more frequently? A.—I do not think it would help them one bit, or that my men wish it. If I thought it would do any good I would do it, although it would be considerable trouble to myself.

Q.—How much trouble—just the making up of a pay list every week? A.—Not only that, it is a matter of financing.

Q.—If the men were paid weekly would they not be able to pay cash for everything they got, more completely than they do now? A.—I do not see how it could make any difference. If a man is prudent, and lives within his income he will have his two weeks' income all the same.

Q.—Is there not a temptation when men receive large sums of money at a time to spend more freely than they would if they received small sums at more frequent periods? A.—I do not think that would affect the majority of the men—men as intelligent as those I employ.

Q.—Do you think many of your men go on the credit system? A.—I do not think any of them do. I do not think any of them are in debt or in difficulty. I am speaking strictly within my own men.

Q.—Do you think Saturday the best pay day? A.—I think Saturday is a good time all round, for employers and employed; Saturday noon.

Q.—If the men were paid on Friday would not their wives have a better opportunity of purchasing in the market on Saturday morning? A.—I do not think so, because the supplies are so distributed over Toronto, and there is so much shopping done on Saturday afternoon that you can buy things as cheap on Queen or Yonge Streets on Saturday afternoon or evening as you can in the morning.

Q.—Do not the wives of the working people go to St. Lawrence market, or do they buy at second hand? A.—I do not think many go to the market. There is no need of it, because there are such splendid markets and stores all over the city.

Q.—Do many buy at the farmer's waggon? A.—There is not much of that done. Are not vegetables cheaper at the farmers' waggons than at the green grocer farmers' supplies are bought up by store-keepers generally, and are resold.

Q.—Is that custom disadvantageous to the working people and the comparatively poor; could they not get the supplies cheaper direct from the farmer? A.—I do not think the farmer would have patience to peddle them out by the bag or half bag, or in smaller quantities.

Q.—Was there ever a by-law in Toronto against what is called forestalling; that is, buying from the farmers before a certain hour? A.—I think there was an attempt to carry that out, but I fancy it fell through. You can stop a man on the street, and if the man will sell you can buy, and that is often done.

Q.—That is under the Ontario Law? A.—Yes. The farmer has to pay the market fees all the same as if he were on the market.

Q.—Are not the best articles in the market bought up during Saturday forenoon? A.—Of course, the market is in the morning, and everything is pretty well cleared out later on.

Q.—Have not those who have to do their market in the afternoon to suffer a disadvantage compared with those who go in the morning? A.—Yes, if they want to buy from the farmers in the market.

Q.—How about shops? A.—It will apply to shops also. The market is closed about noon.

Q.—Then, it will apply to shops also as well as to the market, for the best articles are bought up on Saturday morning? A.—I do not think so; because we have such fine supplies that you can buy everything on Saturday night as good and as choice as at almost any part of the day.

Q.—Your men are always paid in cash? A.—Always.

Q.—Have you known of any carpenters coming in under contracts made with them abroad? A.—I have never heard of a case of that kind.

Q.—I thought you told me that on one occasion you went down to the Lower Provinces? A.—Yes, you would not call Montreal abroad.

Q.—Certainly not. Then you do not know of men being brought from foreign countries under such contracts? A.—I never heard of such a case.

Q.—Do many emigrants come in who are carpenters? A.—Most of my men

are English or Scotch or Irish: men who learned their trade in the old country.

Q.—Do new men come in in any large numbers? A.—I do not see anything of them; if they come they pass through Toronto and do not come to me.

Q.—Is there in ordinary times a surplus of carpenters in Toronto? A.—I think the most of the year for years past the carpenters have been well employed, and for several years past almost every carpenter could be employed all the year round. He will be able to work for at least two hundred days in the year.

Q.—A good deal of carpenter's work stops in the winter? A.—It is stopped. Supposing men are working on a roof, and it is so cold they cannot remain there, they have to wait two or three days until the weather moderates. They do not stop for any other reason.

Q.—Does the outside carpentering work go on all the winter through? A.—Yes. I rebuilt the sugar refinery two years ago right through the month of January.

Q.—You do not wish the Commission to understand that as many carpenters are employed in the winter months as in the summer? A.—For the last two winters there have been scarcely any men asking for work. I do not understand the way it has been put, that carpenters should only get \$350.00 or \$400.00 a year, because I have men who have worked 300 days, and got 22½ cts. an hour, or \$2.05 a day.

Q.—Do you work as long hours in winter as in summer? A.—You have to shorten up from now till the middle of January. At the middle of January we pull out longer. So soon as we can see during nine hours we work nine hours.

Q.—Can you tell the Commission how the wages of the carpenters in Toronto compare with those in the cities of the United States—such cities as Buffalo, Rochester or Detroit? A.—From statements shown to me the wages paid here compared very favorably last spring with the wages in a number of cities in the United States.

Q.—Cities as large as Toronto? A.—Bigger; Buffalo. There were seven or eight cities compared with Toronto, and the showing for Toronto was first-rate. I could not mention the cities from memory; but on the other side it was claimed that seven other cities might be selected where bigger wages were paid; and that again was met by the fact that everything might be dearer there, and the men consequently no better off.

Q.—There is a tendency to pay higher wages in large cities than in small places? A.—I think so. I presume that the wages of carpenters in country places are less than in Toronto.

Q.—Have you any knowledge as to how the wages in Canada compare with the wages in Great Britain? A.—I think the advantage is altogether in favor of Canada, because I have made three trips to the Old Country during the last few years, and I found among my old fellow apprentices, and people who were learning my trade, that they certainly are not in a position to compare with carpenters in Toronto. They would do anything if they could square up there, and have a chance in Toronto.

Q.—Can you give us figures as to the prices paid there? A.—I cannot state positively, and they only apply to the provinces anyway.

Q.—You cannot speak as to the wages in other places in Canada than Toronto or Ontario from your personal knowledge? A.—No, but I understand that the wages in Toronto are quite as good as in any place in Canada, and better than in most places.

Q.—Do you know of any co-operation amongst carpenters to carry on business? A.—I never heard of any.

Q.—How many apprentices do you employ in proportion to the number of men? A.—I have no apprentices; I cannot handle such a thing.

Q.—You do not want them? A.—No.

Q.—Would you consider a training school in which a boy would learn the carpentering trade or the elements of it would be an advantage? A.—Indeed, it would; that is what is badly wanted here. Perhaps you will allow me to explain. The trouble with apprentices here is on the one hand that they are no use, and on the other because they will not stay; they go away to better themselves after they learn

a little of the trade, and it is too much the system in shops to keep the boy at one thing. Some of them have been kept at one job for two or three years, and they are then useless at anything else. That system is all wrong; boys do not have a chance of learning the trade properly, the same as they do in the old country.

Q.—So, you think that if a boy were indentured he would not be so ready to leave you? A.—I have had to destroy their indentures with the consent of the parents of the indentured apprentices. One thing I think is very necessary, and that is that good Canadian boys should have a chance to learn the trade properly in all its branches, not according to the present practice of keeping a boy for two or three years at the same machine, and when he leaves it he may tramp all over the city, and not be able to get work at a similar machine, by which means he is thrown on his beam's end, and does not know what to do.

Q.—Do you think that the abuse of the apprentice system is due to the fact that boys will go away in spite of their indentures? A.—I do not know how it may affect other people. I have had a few cases. After a boy has been kept at a machine for a few years he becomes restive and you cannot help him. I think it is very important to properly train up apprentices to the business.

Q.—Does contract labor interfere with you at all? A.—No.

By Mr. HEAKES:—

Q.—You said at the commencement of your examination that there was a minimum rate of wages in Toronto. How in that rate fixed? A.—By agreement between the men and the bosses.

Q.—Did the men and the employers meet together, or was there a deputation? A.—It was through a deputation.

Q.—And they were successful that year in obtaining their desires? A.—Yes, evidently so. I think that was the time when the nine hours system was inaugurated.

Q.—In that agreement in which they fixed the minimum rate of wages, did it not also state that there was a higher rate to be paid to men? A.—Of course, it was implied that there might be a higher rate.

Q.—Did it not distinctly say so. If the men were getting 22½ cents an hour, and they had to get 25 cents for the future, or if they were getting 25 cents and had to get 27 cents, a higher rate was implied? A.—There was an advance all along the line of 2½ cents.

By the CHAIRMAN:—

Q.—Do you think settlements should be arrived at without a strike? A.—Certainly; there ought to be no such thing as a strike.

By Mr. HEAKES:—

Q.—You think the attempt made that year was successful? A.—It was so successful that everything was quietly settled; trade was not interrupted, and there was no division of any kind.

Q.—You are still working under that agreement? A.—No. I pay nobody under 23½ cents; there are, of course, young men who are improvers; young men who are so unfortunate as to have been employed at one machine, and who want to get a chance to be mechanics, and they are perfectly willing to work for \$1.75 or \$2 a day. There are some, like that, but they do not set themselves up as being first class mechanics, and they would not claim what is termed the minimum rate of wages.

Q.—That agreement was brought about by representatives of the unions and the master carpenters' association, I believe, was it not? A.—I do not know that the representatives were all unionists; they may or may not have been.

Q.—But, they were representatives of the trade? A.—Of the carpenters.

Q.—That agreement could hardly have been brought about except by concerted action? A.—Of course, not.

Q.—In that sense the union worked a benefit all round? A.—Yes, they obtained what they wanted in that case, undoubtedly.

Q.—You are a member of the master builders association? A.—I am on the roll.

Q.—Do you find it a benefit? A.—I cannot say that it ever benefits me.

Q.—Is it not a benefit to be together? A.—I cannot say that it is, for the simple reason that the masters are not on a par with each other. If they were all men who employed on an average seventy five men, like myself, it would be all right, but the trouble is that there are men who never employ more than one or two hands, and they have more to say than the men who have thousands at stake.

Q.—I suppose there is no coercion on employers who do not choose to belong to the association? A.—No, it is purely voluntary, because a great many employers do not belong to it.

Q.—I think you said that the last strike in Toronto was due to the fact that the men wanted to get everything there was in the business; can you state to us what their demands were? A.—I could not go into the particulars, because there were a number of demands of which you are probably better aware than I am—nine or ten demands which the men wanted the employers to sign. If I had thought that it would have been of any assistance to you I would have obtained a copy of their demands.

Q.—Will you send a copy to the Commission? A.—I will do so with pleasure

[The following note was subsequently handed in with accompanying document:—

Herewith find copy of draft agreement, carpenters to employers, last January 7th, which I promised to hand the Commission.

The main objection was, that the unskilled carpenter was to be at once raised to the value of the best joiner. This was refused, as it would be putting a premium on incompetence, and the employers must continue to be the valuers of their own commodity.

Yours faithfully,

RICHARD DENNIS.

TORONTO, January 22nd, 1887.

DRAFT AGREEMENT submitted to *Master Carpenters' Association by Journeymen Carpenters, &c., for acceptance.*

AGREEMENT between the Master Carpenters' and Woodworkers' Association of Toronto, and the Journeymen Carpenters', Joiners' and Woodworking Machinists' Association of Toronto:

1. The Master Carpenters' and Woodworkers' Association do hereby agree with the Journeymen Carpenters', Joiners' and Woodworking Machinists' Association, to advance the minimum rate of wages from 22½ cents per hour to 25 cents per hour from the 1st day of May next.

2. That it shall be imperative on the part of all employers of labor in connection with the Carpenters, Joiners and Woodworking Machinists, that none but Trades Unionists be employed.

3. That nine hours constitute a day's work, commencing at 7 a.m. and leaving off at 5 p.m. for the five days of the week, and on Saturday from 7 a.m. until 12 noon.

4. Overtime to be paid for at the following rates:—From 5 p.m. until 8 p.m., 10 cents per hour extra time worked; after 8 p.m., until next morning, 12 cents per hour extra; overtime on Saturday to commence at 12 noon, at the rate of 10 cents per hour extra, until 5 p.m.; after 5 p.m. until 6 a.m. Monday morning, double time. Systematic overtime to be discountenanced.

5. That all men be paid on the jobs, or allowed time to walk to the shop for same.

6. That in the event of a Carpenter or Joiner being discharged he shall receive one hour's time for the purpose of grinding and putting his tools in order.

7. That in the event of any change in this Agreement being desired by

either party, three months' notice to that effect must be given on or before the 31st day of January, in any year, and such change not to take effect before the 1st day of May next ensuing.

8. The foregoing rules and regulations to apply to the Toronto district, said district to include the city of Toronto, Parkdale, Seaton village and Rosedale].

Q.—I am particularly anxious to show that in the event of a dispute between capital and labor such a dispute might be settled without a strike, and I would like to show that there was some effort made to settle the dispute before the strike took place. You know that the men made certain demands, and the employers' association had a meeting with them and it was not satisfactory. That was before the strike, and after the strike the demands were changed. Would you favor some form for the settlement of disputes rather than these continuous strikes? A.—I would go in for anything that would satisfy both sides. Strikes are very bad. I never know any good come from strikes.

Q.—You think some effort should be made to provide means for settling those disputes? A.—I wish there were some means that would be acceptable to all concerned. It is a very difficult matter. I hope it will come out in the long run, but it is impossible, when you speak of arbitration for a tailor to arbitrate for carpenters. When I say that it is not said in an offensive way with regard to the tailor, and I could never see that Mr. Howland as Mayor of the city did any good in the way of arbitration, because he was out of his sphere.

Q.—You think arbitration would be a benefit? A.—Yes; I think it would be preferable to strikes.

Q.—You said something about men wanting to be paid at their job as one of the causes of the strike. If a man is working for you at the East End, would you allow him his time on Saturday afternoon for walking to your shop at the West End to be paid? A.—He would be allowed it. I always make it a rule to pay the men on the work, as far as possible. If a number of men are employed on a building, I never think of compelling them to come to the office for their pay, but we take it to them, on the other hand, if I had men employed at the Don, and others at the Subway, because at Rosedale, it would be too much to ask me to send their wages to them, and others at Rosedale, they would have to verge towards the office; and, for that reason it is right that they should come to the office and get their money. In all cases the money is ready in envelopes, and it is rapidly handed out.

Q.—As a rule, in Toronto, are men who have to walk long distances to the shop allowed time for going for their pay? A.—I have never had any difficulty on that score.

Q.—Is it a rule that the employers in the city make that allowance? A.—I do not know.

Q.—One can easily see that the men might lose the better part of their holiday on Saturday? A.—Yes. However, that was only one thing that occurred to me in regard to the demands of the men. There are several matters much more important than that.

Q.—Did it ever occur to you, speaking of pay day on Saturday, that it would be more beneficial to the men if they were paid on Friday? A.—It did not, but, if it would benefit the men, I would pay on Friday night.

Q.—Do you not think that if workmen were paid on Friday night, the men would have an opportunity of spending the afternoon in pleasure with their families, or in going over to the Island? A.—If a man is paid, as in my case, at twelve o'clock it does not hinder him going to the Island or to Mimico in the afternoon.

Q.—Yours is an exceptional case, and, even if the time of pay is twelve o'clock, are not some of the men so far distant that it will be two o'clock before they receive their money? Now, would it not be more beneficial for the men to have the whole Saturday afternoon from twelve o'clock to themselves? A.—I do not think it is right for any master (I do not know any that do) to dilly-dally over paying their

men. In my shop for twenty years past all the envelopes have been ready at twenty minutes past eleven. When the bell strikes we are in the shop, and all the paying is done in a minute or two.

Q.—Would you favor some system of paying the men which would enable them to get the most benefit from their holiday? A.—Any proper, decent employer should make an effort to do that; he ought to take pride in doing it. In fact, if men would only do as they would like to be done by, it would be all right. That is the way I have done.

Q.—In regard to apprentices you say that boys are kept to do the same thing two or three years, and that a boy is turned out a one-handed mechanic. If employers had been more industrious to teach boys the trade they would not have kept them two or three years at one branch? A.—No. The matter ought to be put in the indenture, and instead of a boy being kept at one machine he should have a chance of improving himself, and using his thinking powers, and not learn to act like a machine.

Q.—Then if a boy was anxious to learn a trade, and the employer was bound to teach him the trade, he should be indentured? A.—Yes.

Q.—You favor the indenture system in every trade? A.—Yes. I think it is a real necessary to Canada at the present time. In fact, boys have no show in Toronto. I do not know how it is in Guelph or elsewhere. A boy has a very poor chance to learn to be a skilled mechanic. He may work for years, and know no more about stair building or laying out work than any man out on the street.

By Mr. FREED:—

Q.—Is it usual for a boy to get into a shop to learn the trade in Toronto? A.—I do not think it is, because I have had to refuse my own friends. In two cases two people in this city, who went to school with me, and who are my own personal friends begged me by letter, or otherwise, to give their boys a chance to learn the trade.

Q.—Are boys growing up ignorant of a trade who would be glad to learn the trade if they were given a chance? A.—I think many boys would like to learn the carpentering trade if they thought that by working at it for a number of years they would become skilled mechanics.

Q.—Do you know whether that extends to other trades? A.—I do not.

By Mr. McLEAN:—

Q.—Does convict labor interfere with your trade? A.—Not in the least; it is not applied in Toronto to carpentering.

By Mr. WALSH:—

Q.—From your knowledge of the building trade, and from your large experience is it possible, either in the interest of society, or in the interest of the employer to carry on any successful business now without machinery? A.—I do not think so, though I never had any love for machinery, but was simply driven into using it. In order to get along at all I was driven to put in machinery.

Q.—At the present day everything is advancing, and railroads are improvements on old stage coaches, and so I suppose machinery is considered an improvement on the old way of doing work? A.—It is so, undoubtedly.

Q.—Do you think it is possible in the interest of either the employers, or in the interests of society to do away with the use of machinery in carrying on building work? A.—I do not think it is feasible. I do not think it is possible. All the rough work that has been done by the jack plane is now done by machinery. They used to say when railways were first introduced they would do away with horses, but there are horses to-day, and there are more required than ever before.

Q.—Do you think that machinery has been advantageous with respect to the progress of such cities as Toronto, and other cities that have grown very rapidly? Could the same amount of work be done, and would it have been possible to progress with

the same speed as has been made, except for the use of machinery? A.—It could not have been done without machinery, unless you had an unlimited supply of cheap or gratuitous labor such as they have in the east, with respect to the indenture of boys.

Q.—You have said that, in your opinion, you would consider it better that all boys going into a trade should be indentured. Heretofore as you are aware, seven years was the time. As time has progressed, and machinery has been introduced, the trade has changed to a certain extent. Now, in your opinion, would it be necessary for boys to be indentured for as long a time as formerly? A.—I think they should be indentured for four or five years.

Q.—How long is it necessary for a boy to work at a trade before he turns out a good man; I mean the average of apprentices? For a fairly intelligent boy how long ought it to be necessary for him to be indentured? A.—As nearly as I can answer I think five years will do. When I was a boy in England the earlier part of the seven years was in slavish work that is not done now. The boy at the present time has an advantage, and can get to work, and acquire skill in the early part of his apprenticeship, and advance more quickly than it was possible for him to do some years ago. Five years would be as good, I think, as a term of apprenticeship for boys now as seven years was formerly.

Q.—Would it be possible to have boys become very useful in the meantime? A.—Yes.

Q.—What was the principal difficulty with regard to apprentices; was it the interference of their parents? A.—There was one case where a boy was of good family—his parents were splendid people, but the boy was restless, and nothing would keep him right. He went to the bad altogether, but, strange to say, he has now turned out a first-rate citizen.

Q.—Is it the inclination of boys, after they have acquired a little skill during one or two years' service, to go away on their own account? A.—I have known of such cases; for boys can get to Buffalo and Detroit for very little, and many of them can earn better wages there than in Toronto. That was the difficulty some years ago to my knowledge.

Q.—You think five years would be the average for an intelligent boy to be indentured? A.—It is long enough. That is time enough for him to turn out a good mechanic.

Q.—Then, you are clearly of the opinion that according to the requirements of society, and of the building trade, and workmen themselves as such, that the use of machinery is needful? A.—Certainly.

By Mr. CARSON:—

Q.—Is not a great deal of work done now without machinery? A.—Yes; a great deal.

By Mr. CLARKE:—

Q.—Please give the Commission your idea in regard to arbitration between employers and employed? A.—I think the most practical way is for the men to find two or three of their number, those in whom they have confidence, and for the builders to find a similar number of men, who ought to know what is right and fair, and then this deputation should meet and consider the matter. The results arrived at should be reduced to writing, so that no misunderstanding could arise afterwards, and that should settle the matter.

Q.—Do you favor that plan in preference to a Government board of arbitration? A.—I think it would be nicer than to have direct interference by the Government.

Q.—Do you think it would be an easy matter to have that plan carried out which you suggest? A.—The difficulty is to get both sides to look at the matter in that light. The Government system works very well in France, but I do not think it is applicable to the people of Canada. Disputes are considered and decided without work being stopped, and I believe for a number of years strikes have been unknown there.

By Mr. ARMSTRONG :—

Q.—If ordinary arbitration would not settle the difficulty would it not be better to refer the case to a Government board, who could, if necessary, step in and settle the matter in a compulsory manner? A.—If the plan I have suggested would not work I believe the other would be entirely better than a strike, because a strike is bad in every way.

Q.—The community is injured, and commerce is damaged? A.—Yes; we have seen that, and we will see it through this present winter.

Q.—Do the master builders belong to the building division of the Board of Trade? A.—I know some of them are members of the Board of Trade.

Q.—Not all? A.—Oh, no; I think very few.

Q.—You remember some few years ago the carpenters' difficulty. After that was ended, did you hear of a black list in connection with the master builders' association—of course you may not have seen it? A.—There was a list which I believe was called a black list; I do not know how it got that name. If I remember well it was due to the exasperation of the union masters as to certain men.

Q.—That so and so was no good? A.—Very much like that.

Q.—You have knowledge of that matter in connection with your association? A.—There was a thing of the kind. For instance, I wrote what I thought of my own men, of certain individuals, just as I believed them to be; but, it did not affect the men. It could not affect the men in any way, that is, anything I said to my own men.

By Mr. FREED :—

Q.—Were any men listed, on account of their being unionists, or taking any action with regard to the strike? A.—No; I think not. I do not care whether a man belongs to a union or not, or what he is, so long as he is a skilled, good and respectable citizen.

Q.—Do you think any man has been blacklisted, in connection with taking a prominent part in the case? A.—No man was ever the worse so far as I am concerned.

Q.—How as to the others? A.—I do not know of any. I think when a strike is over, all is forgotten.

By Mr. ARMSTRONG :—

Q.—You shake hands all around? A.—Yes.

JOHN SMITH, Merchant Tailor, Toronto, called and sworn.

By Mr. HEAKES :—

Q.—I understand you take an interest in workmen's benevolent societies? A.—For quite a number of years I have taken a very great interest in them.

Q.—Have you had much experience in them? A.—Yes; I might say I have had a great deal of experience in them, more than most people.

Q.—The Commission is anxious to know how the funds of the society are invested, where they are invested? A.—As a rule, the constitutions state how the funds of the society are invested, where they are invested? In fact, the constitution of the different societies to which I belong all state how this shall be done. Of course, it is a matter of opinion sometimes as to whether those funds are properly invested or not.

Q.—Are the societies as a rule incorporated? A.—Yes, I believe the parent societies of the three societies to which I belong are incorporated.

Q.—Are all the branches incorporated? A.—Of course, a certain time is given to the different branches of the society to become incorporated. I have known some cases in which the time limit was passed, and through the time limit being exceeded many wrong things have crept in, evils which were never intended to be permitted under the rules of the parent society. This occurred simply from the incorporation of the branch not being carried out according to law.

Q.—Do you mean that from the fact of those branches not being incorporated funds are used for any other purpose than the Act of incorporation permits and requires? A.—It is difficult to tell what the Act of incorporation requires. I draw a line between the registration of the society as an incorporated society and the requirements of the Benevolent Societies' Act.

Q.—I suppose the Act of incorporation will be in accordance with the requirements of the Benevolent Societies' Act? A.—I do not think that the Benevolent Societies' Act is full enough in stating and determining how the funds of the different societies shall be invested. As I understand the Friendly Societies' Act, it does not really state distinctly and clearly how and by what means the funds up to a certain limit are placed in the Receiver-General's office. When they exceed a certain amount the Receiver General is not compelled to take them; in that case they are supposed to be placed, and sometimes are placed, in some other Government securities. In other instances I have known, the funds were not at all well placed; cases where although members had contributed to the funds for the purpose of obtaining benefits subsequently, and who supposed that in the event of their death there would be a certain amount of funds in the lodge to pay a benefit to their families and an allowance—*I say I have known cases where for want of incorporation of the three years afterwards. That is not a satisfactory way to conduct benevolent societies, and so long as the laws relating to them are in such a condition as they are at present there is no method of compelling the societies or the branches to put their money in Government investments, and people who use their influence to regulate such societies are always on the blacklist and to a certain extent are not wanted there because they tend to disturb the harmony of the lodge.*

Q.—Have you ever known any case where a member of those societies after paying in for two or three years has been unable to obtain any benefit from them? A.—No; I cannot say that. So far as my experience of benevolent societies goes I never heard of such a case to my knowledge so far as regards the societies with which I am connected. I believe that to a certain extent they have always been able to pay what was justly required of them.

Q.—When you speak of funds being diverted from their proper use, I suppose the proper use is to provide benefits for member and indemnities payable in case of death. Have the funds been used for purposes outside of benevolent objects? A.—Yes; that is what I complain of in regard to the Government Act relating to benevolent societies. It does not distinctly state, except in certain particulars, that the funds shall be invested in a certain way and that they shall only be used for benevolent purposes; but the actual experience of the lodges is that they are sometimes (I do not say often, because I know of only one particular instance) diverted from the proper use to which they should have been placed.

Q.—In the matter of the officers of those friendly societies, for instance the secretary and treasurer—is it the custom to take bonds from them in any sums? A.—The constitution always provides that this shall be done. Before you pass on I desire to refer the Commission to clause 2, which reads: "The general benefit fund of the subordinate lodges shall not be used for any purposes other than those expressly set forth in the constitution and the legitimate working expenses of the lodges."

Therefore if you find that funds originally intended for benevolent and insurance purposes have been diverted from the original purpose of the lodge, and that a lodge has undertaken certain responsibilities without the full sanction of the members having been obtained, such for instance as hiring a room, furnishing it, all by way of speculation, we cannot fail to come to the conclusion that such doings should not be permitted in any society under the incorporation of the Government in the interest of the workingmen and of the societies themselves. The accumulated funds of benevolent societies should be invested in chartered banks or Government securities where they would be available in case of emergency.

Q.—Do you know of cases where lodges have been crippled through speculation in this sort of property? A.—I could not say for a fact at the present time; but I know of certain lodges that have done this, and when I endeavoured to bring the matter before the Grand Lodge and spoke to the presiding officer about it, I was not thanked but was advised to leave the matter alone. I told that officer that it was disgraceful that such a state of things should be allowed to prevail, and that such a lodge working under the charter should be expelled.

By the CHAIRMAN :—

Q.—Will not the Act apply? A.—There is great trouble to set the machinery going, and to do so you must take much greater interest in the Society than does the ordinary member, and on more than one occasion I have injured myself in trying to benefit the Society to which I belong.

By MR. HEAKES :—

Q.—As regards the matter of security to be given by officers are they compelled to give bonds and security? A.—According to the constitution they are compelled to do so, but it is not compulsory in practice. There is no method to bring them to time. For six months of last year I was presiding officer of a benevolent society. I did my best to get the treasurer in bonds for a certain amount, according to the society, for which he was required to give bonds, but during those six months I failed to accomplish it, and although other six months have elapsed, I am sure he has not yet given the necessary bonds—at least he had not a month ago—yet he was handling funds which amount in the aggregate to say two dollars per head for three months, or between \$200 and \$250 every quarter, a nice little sum. Instances have been known outside of this society, to which I can refer you, where those not under bonds have walked away with the society's funds.

Q.—Do you speak of the incorporated society or incorporated branches of the society? A.—I am talking now of incorporated branches and the incorporated society.

Q.—You cannot compel the officers to give bonds? A.—I do not think you can. I have read the Act carefully, and there is no compulsion.

By the CHAIRMAN :—

Q.—That is where the society itself does not do so? A.—Yes. The constitution requires it, but in order to get this done a man must work hard and would not fail to make himself obnoxious to the officers and members.

By MR. HEAKES :—

Q.—What would you suggest as a remedy? A.—I would suggest that the Act of Incorporation governing all benevolent societies be put in force either by the Ontario Government or by the Federal Government.

By the CHAIRMAN :—

Q.—How? Suppose you have a law that is everything to be desired, and if those for whom it is intended will not put it in force, what action can be taken? A.—If there was a Government officer appointed whose special duty it was to look after benevolent societies, I think that would go a long way towards remedying the evil.

Q.—An inspector? A.—Yes, an inspector.

By MR. HEAKES :—

Q.—Do the societies publish an annual statement; are they compelled to publish an annual statement of their condition? A.—Under the Ontario Act there is no compulsion. There is no statement of funds published except by the Ancient Order of Foresters. Although they are supposed to be governed by the rules of the High Court of England, still they have rights and prerogatives which give them the privilege of making their own general laws, provided they are not contrary to the

fundamental principles of the Ancient Order in England. So there is nothing at the back of them. Most societies print an annual statement, but having been auditor on several occasions at the annual or half-yearly audit, it is not to my mind worth a row of chips. You take a lodge with 110 or 115 members and undertake, at the regular times, to make an audit of the society's books, you will find that most of the members who are assisting you have so little interest in the work that they endeavor to get through it in an hour or an hour and a half. The first time I was engaged on the audit I surprised those associated with me by wanting to go through the books and accounts in a systematic manner. I wanted to take the minute book, the receipts for cash as registered in the minute book, the cash book and to balance the cash off against the minute book, and show that the total amount paid balanced the amount in the minute book. Then I wanted to go through the lodge book and the names of those on the roll. The other members of the committee said it would take too much trouble and they would never get through the work that night. I however stuck to it and got a correct audit. But the next night I left them and would have nothing more to do with it. So the annual or half-yearly statements of those societies do not contain a fair representation of the work of the societies.

Q.—Are members ever induced to join by misrepresentation? A.—They are sometimes.

Q.—Do they find after they have become members that the condition of the society is altogether different from what it was represented to be? A.—I suppose that is something which requires an explanation. The society to which I refer at present is the Order of Foresters. Some time ago (I thought I was a pretty old man, but I was taken in with the rest of them, but I did not lose anything else than the entrance fee), there was a little book issued as a means of inducing persons to join that society. It states that there are funds invested with the Government. A gentleman came round and urged us to form a Court. We got eighteen or twenty members on the list, and he gave every member to understand that he would be insured for a thousand dollars. The Court was opened and the members were given to understand that in the event of any one of them not being accepted by the medical officer, the fee of five dollars, less doctor's expenses, would be refunded. The members were satisfied with this understanding, and indeed they joined with the distinct understanding that if they did not pass the medical board each would be entitled to a rebate of the five dollars, less the medical expenses. It was not however until after the branch was opened, until after we made due and proper enquiry from the Supreme Court of the Independent Order of Foresters that the members were given to understand that they had got to work for their five dollars' rebate; that it was not to be refunded to them although it was specifically stated that it would be refunded. They were given to understand that they had to pay for their charter. I have here a list of members who each and everyone was under the same impression as myself that in the event of any of them not passing the medical board he would be allowed a rebate of five dollars. It was not however until six weeks or two months afterwards that they were given to understand they would have to work for new members and put money into the lodge before any of them would get the five dollars out. I was one of the lucky ones to pass the doctor. I think it right and proper that whenever an opportunity arises the public should be made aware of these facts.

Q.—Were any of those who joined the lodge first rejected by the doctor? A.—Yes; out of about nineteen members who were initiated that night only seven or eight passed the doctor.

Q.—Did they get their five dollars refunded? A.—They never did and never will.

Q.—Do you find the charges made and the funds accumulated by benevolent societies in excess of those required for benevolent purposes? A.—That the funds of benevolent societies are really in excess of the needs of the societies is proved by experience as these documents will show. The Foresters' record for 1886 will show that in the old country there is a surplus of over fifteen millions which can never be used for benevolent purposes and according to the constitutions of the different

societies it can never be used for any other purpose; so it is simply piled up by the members who will never receive the benefit of it. Another instance is furnished in the returns of the society in Toronto, which show that the benefits are really not in proportion to the amount of money paid in. That is however for the societies to determine. What I claim is this, that by the society's own returns the amount is needlessly large. Take Court Campbellton of the Ancient Order of Foresters. With a membership of 128 they have got \$2,192.94 in the bank.

Q.—Do you think that would be an excessive sum in case of general sickness among the members? A.—I think it would be because the experience of all societies is that such a large amount is not required. Take Court Hope of the Ancient Order of Foresters, with a membership of 352 it had \$8,069.22 in the bank. The history of that Court in particular shows while it has not made any great progress for a number of years, still it has not gone back. After a certain sum has accumulated in the bank to the credit of a benevolent society, say five years' actual payments, that is in a lodge with a hundred members and an annual payment of two dollars, when every man has ten dollars to the credit of the society in the bank, the interest on that amount should go to decrease the member's payments in his lifetime, instead of helping to pile up a large sum that no one will be able to gather in.

Q.—You think the members do not get the benefit of what they put in? A.—Yes; that is my opinion, because the history of the society shows it.

By the CHAIRMAN :—

Q.—You think the members should divide up the funds? A.—They cannot divide up the funds.

Q.—Can they not alter the constitution? A.—It is claimed that this course is authorized by the constitution.

Q.—How do you desire interference to be had with benevolent societies? If the members are of one opinion would you have people outside interfere with them? A.—Benevolent institutions are among working people and there is not one man out of a hundred who can go and express his views at the meeting. In the Ancient Order of Foresters there are not more than five or six members who have the capacity to express their views; and if they have, they have not the strength of mind or will to make their opinions public.

Q.—Do you wish it to be said to the members of those societies: You do not know how to conduct your business and we will conduct it for you? What Governmental interference or what remedy do you propose, admitting the truth of the grievances? A.—One remedy I suggest, is this, that as most benevolent societies are either national, religious, or in some other way restricted in their character, it would be a good thing if the Federal or Ontario Government would institute and control a government society for benevolent purposes, taking the records of existing societies as a guide and insuring workmen or, indeed, anyone, in good sound health, for a sum of one hundred dollars or more. This system which has worked so well with all its disadvantages, would, under new direction, be a source of revenue to the Government and give the citizens renewed interest in the welfare of their country; the more so, as statistics show that in a well-conducted society, after some years, the accumulated funds amount to, in some instances, sixteen dollars *per capita*. The record of Court Hope I may say, for four years is from ten dollars to twelve dollars *per capita*.

By Mr. HEAKES :—

Q.—You think the Government should interfere so as to control those societies in the same way as they supervise insurance companies? A.—They should have a controlling influence. This is done in the old country. Every law relating to benevolent societies is placed before the Government, and before it has the stamp or seal of law it must be approved by the Government. The Government inspector decides whether it is in the interests of the country and people or not. I suppose there is no better example of the working of the laws regulating benevolent societies than that of the Ancient Order of Foresters of England.

Q.—Is there any limit to the liability of those societies? A.—Their liability, of course, ceases, with payment of money.

Q.—Is it the case that risks are taken by the insurance societies, these benevolent societies, and after a certain time the risk is increased? A.—Yes. I would like to say that I believe that is one evil of benevolent institutions. An institution like a friendly society, originally intended to insure the workingman for a small amount, should not be able to take larger risks than one hundred dollars or two hundred dollars; and if a risk is taken for a small sum when the man is in good health and the society subsequently undertakes a larger risk, I think it ought to be distinctly and clearly understood in the same way as are insurances for one hundred or two hundred dollars.

Q.—You think the power of the societies in this regard ought to be limited? A.—I think it should be.

By Mr. CARSON:—

Q.—With all those disadvantages you speak of, is not the Foresters Society as cheap a system of insurance as you know of? A.—It is safe enough.

Q.—Is it not as cheap? A.—I do not think it is; it is not quite so cheap, as the Sons of England who are ahead of it. A comparison drawn between payments for sums over \$100 as between the Independent Order of Foresters, the Sons of England and the Ancient Order of Foresters show the following rates: sixty-seven, eighty-seven and ninety-six cents per thousand. There is a bone of contention among them with respect to the rates, one charging less than another; so there must be something wrong somewhere.

By Mr. HEAKES:—

Q.—Does not one pay a larger benefit than another? A.—How do you mean?

Q.—If a society charges at the rate of sixty cents and another charges eighty cents, would not the society charging eighty cents pay a larger benefit? A.—No, that is their advertised scheme. The societies pay the same amount, but some charge less for it.

Q.—Do you think there is danger in some cases of charging too little to enable them to meet their liabilities? A.—There is that possibility. That is the reason why I would put a limit to the accumulation of funds, that where sums have accumulated to the credit of a lodge equal to five years' payments for each member, the interest on that sum ought to go into the pockets of the members so as to lessen their subscription.

By Mr. FREED:—

Q.—How are the funds worked? A.—The way the Foresters do is this: they pay \$1 a year out of the funds for every member into the High Court, and that insures an amount during sickness and in the event of death. \$100 is paid out of the High Court in the event of death and \$50 in the event of a wife's death. In other societies it is different. If they are not sufficiently strong to make the payments in consequence of the misappropriation of money or from defalcations of officers, the members cannot do anything; they may, as they say, "Whistle o'er the lave o't."

By Mr. HEAKES:—

Q.—Have you heard of members being defrauded of their benefits? A.—No, I cannot say that I have. I think the benevolent societies are conducted, so far as I know, upon a pretty good financial basis.

By the CHAIRMAN:—

Q.—There has been no special strain on them of late years, I think? A.—No, they have had an extraordinary time of good health. But, I think all benevolent societies should, when making their annual report, publish in some way or other, a statement prepared by some qualified individual in order to assure the public and the members themselves that everything is fair and square. I do not think the Government exercises sufficient jurisdiction over benevolent societies.

Q.—Has the Government any control over them whatever? Did they not refuse three or four years ago to come under the head of Government insurance societies? A.—That is where I draw the line between benevolent societies by the way of weekly payments and benevolent societies as I understand them by mutual companies.

Q.—Did they not refuse to be made parties to that Act passed by the Federal Government four or five years ago? A.—I think the Ontario Act gives them the privilege of increasing the amount of benefit or insurance up to \$1,000. So they are well within the limit.

Q.—What I mean is this: if they are not now under Government supervision, is it not because they did not want it? A.—It is, I suppose, because they did not want it.

By Mr. WALSH:—

Q.—I suppose what you contend is, that whether the societies like it or not the Government should take control? A.—I think it would be in the interests of the benevolent societies if the Government exercised jurisdiction over them somewhat in the same way as the Government of Great Britain does over Friendly Societies there; that the constitution of each society should be registered, and that no amendment should be legal unless it was authorized by the Government. I claim moreover, that no amendment to a constitution should be made legal unless the proposed amendment had been in the hands of members at least three months before the general meeting. I have seen in the history of societies resolutions passed at a general meeting, and which were not to take effect for three months, acted on right away. I have seen cases in the history of benevolent societies where the whole constitution was changed without any notice at all. In the Ancient Order of Foresters of Canada resolutions have been passed and have gone into effect in a manner that was not in accordance with the Friendly Societies Act of the Old Country. Every amendment should have been in the hands of the different Courts so that each member would have been aware of what was proposed at the general meeting.

Q.—If the societies are incorporated must they not submit a copy of their by-laws and constitution to the Government before they get their Act? A.—I think not. All they have got to do is to obtain from a judge or registrar a certificate that he believes to the best of his knowledge the by-laws are in conformity with the law of the land. It is not so with the Friendly Societies Act in the old country. If a by-law is proposed it must be sent in the first instance to the Government registrar and approved. You may have some idea of what notice is given when I tell you that the notices are published in such a paper (the *Ancient Forester*). When that is the sort of intimation given for amendments to the constitution it is time the Government stepped in and exercised supervision over benevolent societies.

By Mr. ARMSTRONG:—

Q.—Has the Government ever been asked to step in? A.—I do not think the Government have been asked; I should like to ask them.

Q.—You remember that several months ago a deputation went to Ottawa on the insurance question, and at that time the Government recognized the right of the benevolent societies to have their rights protected? A.—I think they were very short-sighted if at that time they did not inform the Government of these grievances. I beg to hand in to the Commission a statement of the suggestions I offer:

**WORKINGMEN'S CO-OPERATIVE BENEFIT SOCIETIES (HANDLED IN BY JOHN SMITH.)**

I have had considerable experience in connection with Sons of England; Ancient Order of Foresters; and Independent Order of Foresters, which rank among the Benefit Societies. It should be the duty of the Government:—

1. To define how the accumulated funds of the Benevolent Societies should be invested, *i.e.*, in a chartered Bank or Government Securities, not in speculative buildings.

2. To see that each branch is properly incorporated: and if not incorporated within a reasonable time it should cease to work as a branch of the parent society under a legal penalty.

3. By Act of Parliament to state that the funds raised for benevolent purposes should be kept intact for the purposes of paying sick or funeral expenses and working of the Society.

4. The Secretary and Treasurer should be under bonds (which too often is neglected.)

5. Each branch and parent society should be compelled to furnish the Government with a copy of its annual audit, under seal of the lodge, signed by the Officer presiding and the Secretary, showing the membership, state of funds and how invested.

6. The Societies' Laws relating to charges against members should be so changed as to give the accused the privilege of a direct appeal to common law or give him the privilege of a trial by members of another court or lodge.

7. That where it is made to appear that individuals have been induced to join in opening a new branch of an order by certain facts being withheld from them, the incorporated society should return the fees paid by such parties; as such fees would not have been paid had they been in possession of certain knowledge.

8. Where the accumulated funds of a branch are equal to a five years' payment *per capita* of the members, the interest of accumulated funds should be used to decrease the payments of the subscribers on a truly mutual basis by way of a bonus towards the next payment due; for, as benevolent societies exist at present, the subscriptions are too large, and no matter how wealthy the society may be, it has become so at the expense of the hard-working men who support it.

9. No society should have the power to prevent its members making a will in favor of whom they please, as is done under the A.O.F. rules, which declare the will must be made in favor of a next of kin, or blood relation. Individuals are unaware of this until they join, which might leave the bestowal of benefits to the arbitrary action of an executive, if they see fit to exercise it.

10. That all amendments to benevolent societies' constitutions should be registered in a legal manner, and every copy of laws given to members should plainly state within the covers of the book, the Act or Acts under which they are incorporated and the government. rules relating to it, and no amendments should be permitted at a general meeting of the order unless printed copies of such amendments have been in the hands of the members of branches three months previous to such annual meeting.

11. That where benevolent societies start with benefit clauses appropriating say \$100 benefit, special legislation should be had to permit them to insure upon the mutual plan; and it should be distinctly legislated so that they should testify that the success or failure of the new plan does not alter or interfere with the original benefits or standing of the order for which they were first incorporated; or in event of a monthly stated sum being exacted, it should be the duty of the Government to see that the increase of risks in the larger amounts does not increase the liability of risks for those who are only insured for the smaller amount.

12. It would be better to limit the liability of the societies to say \$100 and require them to issue policies for larger amounts upon terms as may be agreed upon if mutual; or if the fees be monthly the Act should empower an inspector to refuse permission to the society to act until the Government can be satisfied as to the stability of the institution and its ability to pay, for which the Government should exact a guarantee as with regular line companies, for there is no comparison between the three societies as to scale of prices; the Government issuing the policies or stamping them, which in itself would be a recommendation to prospective insurers. A small fee could be charged which might be sufficient to enable the Government to repay the cost of supervision.

13. That to insure the proper working of the societies a system of fines should be inflicted under the Act and a qualified Government officer should take cognisance of all insurance work of such societies and to whom any communication from a member should be privileged.

14. That for the better understanding of the objects of Benevolent Societies by

the public, no law should be incorporated or registered which in intent should preclude a member making known the wants of the order either in the public press or public meeting, when such appears to a member to be for the good of the order and does not seek to give away any of the secret work or the private business of the society.

15. That as most benevolent societies are either national, religious or in some other way restrictive in their character, it would be a good thing if the Federal or Ontario Government would institute and control a Government society for benevolent purposes; taking the records of existing societies as a guide; and insuring working-men or indeed anyone in good sound health for a sum of \$100.00 or more. This system which has worked so well, with all its disadvantages, would, under a new direction, be a source of revenue to the Government and give the citizens renewed interest in the welfare of their country; the more so as statistics show that in a well-conducted society after some years the accumulated funds amount to in some instances \$16.00 *per capita*.

This would seem the more reasonable when it is borne in mind that no further disposition of funds of Benevolent Societies can be made except to apply them for such purposes; experience showing they will never be required in such a large way for such purposes.

16. That where a member may be guilty of infraction for some law or by-law, that though he may be suspended from intercourse with his lodge, no act of his ought to deprive his family of the benefits his money had previously bought.

ROBERT LEE, Carpenter, Toronto, called and sworn.

By Mr. HEAKES:—

Q.—How long have you been in Toronto? A.—About fifteen and a half years.

Q.—Have you worked at the business all the time? A.—Yes.

Q.—Are you a journeyman? A.—Yes.

Q.—What is the general condition of the carpenter business at the present time?

A.—As far as I know I think it is a little slack.

Q.—What are the rates of wages which are paid in Toronto just now? A.—The rates in our shop are 27½ cents and 25 cents; there may be some less, but I am not aware of it.

Q.—Have you taken any interest in trades unions at any time? A.—Yes; I have; but not much just now.

Q.—Do you find that combinations among workmen help them in any way? A.—Well, I could not say; I think they do, perhaps.

Q.—In what direction? A.—Very likely in the shortening of the hours of labor.

Q.—Do they tend to increase wages or to keep them up? A.—They may tend to keep them up for a while, but I do not know that they can put them up very much.

Q.—Is there any rule that you know of which prohibits a Union man from working with non-Union men? A.—No; I do not.

Q.—You have never known the Union to interfere with non-Union men? A.—No; I have not.

Q.—What is the general effect of strikes on the trade? A.—The immediate effects are sometimes bad, but I do not know about the general effect.

Q.—Do they produce any permanent improvement in the trade when they are successful? A.—I have never known any to be successful altogether, that I have been connected with.

Q.—Have you ever paid any attention to the question of arbitration? A.—A little.

Q.—Can you suggest any means for settling disputes by arbitration? A.—Well, I could not suggest any particular means except arbitration in the general sense.

By the CHAIRMAN :—

Q.—Arbitration, as you understand it, is each party choosing a friend and these two choosing an umpire? A.—Yes.

By Mr. HEAKES :—

Q.—If a court of arbitration was formed, do you think it would meet the requirements? A.—That is to make it compulsory?

Q.—Yes. A.—Well, I believe it has worked well in some places, but I do not know.

Q.—How do you think the men generally regard arbitration of that kind? A.—I think they would agree to it.

Q.—Is it not a fact that the men have frequently demanded arbitration? A.—I think they have lately asked for it here in Toronto.

Q.—Have the employers ever met them in that spirit. A.—I am not aware of it.

Q.—Have you ever known of any black-listing in Toronto by employers? A.—What do you mean by black-listing?

THE CHAIRMAN—The employer sending round to other employers and telling them of those who should not be employed.

A.—I have seen such a thing.

By Mr. HEAKES :—

Q.—Do you think such a thing is in existence to-day? A.—I do not think so.

Q.—You work a good deal amongst machinery? A.—Well, I work in the way of getting out stuff for machinery.

Q.—Do these machines have a tendency to do away with the labor of men in the trade—I mean, generally speaking, have they decreased the amount of work that carpenters have to do? A.—Of course they do work a great deal quicker, but there is a great deal more work done on account of machinery than there would be otherwise.

Q.—Have they in any sense decreased the amount of wages? A.—No; I don't think it.

Q.—Are there any boys employed about these machines? A.—There may be at the saws sometimes—pulling away and carrying from the saws, but not working them.

Q.—Have you any rule in the trade as to apprentices? A.—No; we have not that I know of.

Q.—Do you think it would be better or not that apprentices should be indentured for a term of years? A.—I think it would have a tendency to make better workmen.

Q.—Under the present system of taking apprentices, do boys have a fair opportunity of learning the trade? A.—Some of them.

Q.—And some don't? A.—A great deal depends on the boy and his aptitude.

Q.—You think from your experience that boys get a fair opportunity? A.—I think a good many do; I would not say all.

Q.—A good many good mechanics are turned out? A.—Yes.

Q.—It would be preferable, however, to have a regular apprentice system? A.—Yes; some system—perhaps not the old system.

Q.—How frequently are you paid? A.—Once in two weeks.

Q.—Would the men prefer weekly pay? A.—I have never heard them complain.

Q.—Would it make any material difference, do you think, if the men were paid on Friday or Saturday? A.—I think Friday is the best; we are paid on Friday evening.

By Mr. WALSH :—

Q.—What class of work is done in the shop you belong to? A.—House work.

Q.—Do they take contracts in the building trades on their own account? A.—Sometimes.

Q.—Do you employ a large number of men? A.—Yes; in the usual seasons there are a good many.

Q.—In your bench work I suppose? A.—I could not say how many; the shop is pretty well filled.

Q.—Have you any different grades of men in your shop? A.—I don't know that exactly.

Q.—Have you any different grades of wages for men? A.—I mentioned two rates that I know of.

Q.—What is the difference in the wages which are paid? A.— $27\frac{1}{2}$  cents and 25 cents.

Q.—What is the reason for the difference in wages? A.—Of course the best men take the most difficult work.

Q.—As a general rule, do you think there is that difference between the men getting  $27\frac{1}{2}$  cents and those getting 25? A.—Yes; I think there is.

Q.—How many boys are there to a man in your establishment? Do you think there is an unusual number of boys? A.—No; I do not.

Q.—The boys there are all required? A.—Yes.

Q.—And you don't know of any apprentice system? A.—No; I do not.

Q.—But you think it would be better if they were apprenticed? A.—I think it would probably be better if there was some system.

Q.—Why do you think that? A.—I think it would produce better workmen, for one thing.

Q.—Do you think it would give the boys some idea of their own responsibility, more than if they were left to go and come any way they liked? A.—I think it would.

Q.—It would incline to make them better? A.—I think so.

Q.—You would be in favor of an apprentice system? A.—Yes.

Q.—Are these boys treated well in the establishment? A.—Oh, yes.

Q.—Are the sanitary conditions of your establishment good? Are they healthy? A.—Yes; very good.

Q.—I suppose your hours of working are the ordinary hours. A.—Nine hours generally; only eight just now.

Q.—You don't see anything to complain of, then, in the establishment you work in? A.—No; I do not.

Q.—From your knowledge do you know of any disability that the working men in your line particularly, or in any line, labor under at the present time? Is their condition better now than it has been? A.—Yes.

Q.—Could you give any reason why their position is better now than it has been heretofore? A.—I don't know that I can exactly.

Q.—Is it the progress of the country or the increase of work? A.—No doubt it is the progress of the country and of the times; that has a great deal to do with it.

Q.—What is your notion with regard to the employment of machinery in relation to your work? Do you think it is a necessity at the present time, according to the advanced state of society, the increase of work etc.? A.—I think it is.

Q.—Do you think that the machinery introduced into shops now where general work is done a benefit to the working men or otherwise? A.—There is generally more work, I think, to do, and it can be produced cheaper.

Q.—You are aware from your experience likely that there was some very heavy work devolving on men heretofore? A.—Yes.

Q.—Such a thing as preparing a great deal of this work by hand-grooving a one and a half inch floor for instance? I suppose you know that that kind of thing prevails here? A.—I don't know of it in Toronto, but it has prevailed in other parts.

By the CHAIRMAN :—

Q.—And must have prevailed in Toronto? A.—Certainly I should think so.

By Mr. WALSH :—

Q.—Is that done away with now? A.—Yes.

Q.—Don't you think that the doing away of this heavy work is an advantage to the mechanic? A.—I think so.

Q.—His work is more of a nature which does not require so much physical strength as formerly? A.—Yes.

Q.—And that is a benefit to him in that respect? A.—Yes.

Q.—Is the condition of the workmen at the present time, in your trade or in any trade you know about, taken as a whole, better than it has been, say within the last ten years? A.—Well, I don't know that there is very much difference between now and that time; wages are a little better.

Q.—Consequently their condition is better? A.—Other things may be dearer too.

Q.—Take the cost of living; is it any more than it was ten years ago? A.—I could not speak very positively about that.

Q.—Are the men as a general rule more comfortable now; are their dwellings more comfortable? A.—I think they are tending to be better all the time.

Q.—Have you any knowledge of men who have houses of their own? A.—Yes.

Q.—Many of them? A.—A few—not very many.

Q.—Have they these houses in their own right or are they under mortgage? A.—I don't know as to that.

Q.—Have you any idea of men who have savings in the bank or elsewhere? A.—Yes; I know of some.

Q.—How does that question of savings apply to the generality of the men? A.—I am afraid the generality have not very much.

Q.—It is only in special cases you think that they have savings? A.—Yes; I think so.

Q.—Are the men as a general rule improved in their moral and intellectual condition now, compared with what they were before? A.—Yes, I think so.

Q.—Can you give any reason why that is so? A.—I think the general intelligence of the community at large is much improved.

Q.—And your educational system here has a good deal to do with it? A.—Yes.

By the CHAIRMAN :—

Q.—And temperance? A.—Yes; temperance, too.

Q.—But that is not universal? A.—No.

By Mr. WALSH :—

Q.—Do you think many of your people take advantage of the Free Library for their information? A.—I believe there are a good many.

Q.—So that on the whole you think the status of the workmen at the present time, morally, intellectually, and otherwise is better than it was ten years ago? A.—Well, I would not be prepared to say just for the ten years, but it is better than it has been, going back a little further than ten years.

Q.—What age are the boys who are generally engaged in your establishment? A.—I think the average age is about fourteen or fifteen; there may be one or two younger; I have known some younger.

Q.—Do you know of any boy who is engaged who is physically unable to perform his duties? A.—No, I do not.

By Mr. ARMSTRONG :—

Q.—Do you think, to the best of your knowledge, that the shortening of the hours of labor has a tendency to make men more intelligent? A.—I think so.

Q.—Can a boy on account of the large amount of machinery in your trade learn the carpentering trade as thoroughly as if there were no machinery? A.—It all depends on the chance he gets.

Q.—Where machinery is employed he generally learns one branch? A.—Very often.

Q.—And sometimes he is put from one to the other, but that is not the general rule? A.—Yes; sometimes.

Q.—At what age should a boy go to the carpentering, which is rather a heavy

trade? A.—He should not begin before fourteen, and I think fifteen or sixteen would be better.

Q.—Do you know in your trade many who take advantage of the Public Library on Saturday afternoons? A.—Well, I don't know.

Q.—The wages of carpenters are generally paid in cash? A.—Yes.

Q.—No truck system? A.—No.

By Mr. FREED:—

Q.—You said upon one occasion the journeymen offered to arbitrate with the employers in a dispute; when was that? A.—It was last summer.

Q.—Did they make a formal offer to arbitrate? A.—I suppose they did.

Q.—Sent a deputation to the employers to say that they were willing? A.—I understood so.

Q.—And the employers refused? A.—I think so.

Q.—You are not sure? A.—Not quite sure.

Q.—What was the cause of the blacklisting of men by employers? A.—I do not know.

Q.—You don't know whether it was because of any action they took in making themselves prominent in the labor movement or whether they were poor workmen? A.—I think it is stated sometimes after their names—"poor workman."

Q.—Do you think any boy in Toronto who would desire to learn the trade can find an opportunity? A.—I think so, if he is anxious.

Q.—You think an opening can be found? A.—Yes.

Q.—Do you think technical schools would be good for the working people in Ontario—schools in which they would learn branches of the trade or mechanical employment? A.—I could not say.

Q.—If fair, average mechanics in Toronto fail to save money, is it because they cannot earn more than is absolutely necessary for comfortable subsistence, or is it because they spend money imprudently? A.—I don't think very much can be saved if they want to keep themselves a little respectable, and give themselves fair play.

Q.—Some men save money? A.—Yes.

Q.—Why cannot others if they choose? A.—I cannot say as to that.

THOMAS PICKETT, Iron Moulder, Toronto, called and sworn.

By Mr. HEAKES:—

Q.—Have you been long in Toronto. A.—Thirty years.

Q.—What is the general condition of the moulding shops in Toronto as far as sanitary arrangements are concerned? A.—Those I have worked in have been very good.

Q.—Well ventilated? A.—Yes, with the exception of the present shop we are in outside of the smoke it is a very good shop. We are troubled somewhat with smoke which might perhaps be avoided to some extent, but I think it is the intention of the firm to make it pleasant for the men.

Q.—What is the general rate of wages in your trade by the day? A.—We get 22½ cents an hour.

Q.—How many hours a day do you work? A.—Ten, at present, and we work five and a half days in the summer.

Q.—Have you piece work? A.—Yes; they do more work than the day hands.

Q.—Do you think piece work is any benefit to the men in your trade? A.—No, I do not.

Q.—Has it a tendency to lower wages? A.—Yes.

Q.—And piece hands have to work harder for less money? A.—Yes.

Q.—Has the Union as a body ever made any representations to employers with regard to piece work? A.—Not to my knowledge.

Q.—Have they ever taken any step to have piece work done away with? A.—Not to my knowledge; they might have, but I could not say.

Q.—In settling disputes between employers and men do the employers meet the men and arbitrate? A.—No; they are not in the habit of doing that, although the workmen would prefer it.

Q.—You would prefer arbitration to the present mode? A.—Most decidedly.

Q.—Have the employers within your time refused to arbitrate questions? A.—Yes, they have in several instances.

Q.—Have there been any strikes in your trade in the last eight or nine years? A.—No, sir; I cannot go back that far in regard to the Union, for I have worked in Lower Canada where there are no Unions as a general thing, but speaking of the three years I have been here there have been only two troubles in the city. In one of those we were shut out and in the other we had to go on strike to get what we claimed was right; we got it through the strike and not through arbitration. There was a kind of go-between from outsiders to settle the thing, but it was the actual strike that brought the men and the firms together.

Q.—What effect has a strike on the trade generally? A.—A bad one.

Q.—I suppose you would not resort to a strike unless it was impossible to settle by other means? A.—I don't believe any fair-minded workman would, and as a Union I don't think we would. I have never seen any feeling to any extent which would prefer a strike to arbitration.

Q.—Is it the last resort? A.—Yes.

Q.—And always forced on you by the employers refusing arbitration? A.—Yes.

Q.—In your opinion, would compulsory arbitration be better than the present system? A.—Yes; I believe it would.

Q.—Would it generally meet the requirements of the men? A.—A think so, and speaking for myself, it would suit me.

Q.—You would be willing to submit to arbitration? A.—Yes; I would.

Q.—Are there many apprentices taken on in your business? A.—Well, there is an understanding between the employers of Union shops and the Union that there should be one to eight men and we consider that is very fair.

Q.—At what age generally, are these boys set to work? A.—From about sixteen to seventeen.

Q.—At what age do you consider a boy should go into your business? A.—I think they should not begin before sixteen or seventeen and then it would depend a good deal upon the constitution of the boy. Our work is laborious and some boys at fifteen would be stronger than others at seventeen. I have seen boys go to the trade who were not physically strong enough to follow it.

Q.—Are there some boys whom you consider too young at your business? A.—No; not to my knowledge; I think we are very careful about that. I think our union is careful and we would advise them not to go if we thought they were physically unfit.

Q.—Do you know, in case of accidents in shops, if the employers have any liability in the matter? A.—I don't know that they ever were liable for any accident. I have worked at the business twenty-seven years and I must say, that I have seen very few accidents result in our trade from carelessness. Of course it is a risky business and most of the accidents are from carrying iron and they are sometimes from our own negligence and sometimes from things we could not avoid. Sometimes I have known them to arise from the liability of the firm, but mostly they are from the causes I have spoken of.

Q.—Have you worked in the United States? A.—Yes.

Q.—How do wages compare in Canada and the United States? A.—I have always made bigger wages there.

By the CHAIRMAN:—

Q.—What part of the United States? A.—I have worked in Massachusetts, Maine, New Hampshire and Vermont—the eastern States.

By Mr. HEAKES:—

Q.—Could you live cheaper there, than in Canada, while you were earning larger wages? A.—No; I think not; I was a single man at the time.

Q.—Can you give us an idea of the difference in the purchasing power of money there and here? A.—Part of the time I was there, the purchasing power of money was not so good; that was during the American civil war.

Q.—Say during the last fifteen years? A.—I think in some portions of the States it is better to-day than it is here.

Q.—A man can live cheaper? A.—Yes; comparing their wages with ours.

Q.—You could not tell us whether the condition of workingmen in Toronto has been bettered during the last eight or nine years? A.—I cannot go back that far.

Q.—Have house rents had a tendency to go up? A.—Yes.

Q.—Have they increased much? A.—Yes; I should think they had increased to high.

Q.—Have you any benefit fund in connection with your union? A.—We have a sick benefit and a death benefit.

Q.—And members generally have the benefit of these funds? A.—Yes; in all cases where they are entitled to it.

By Mr. FREED:—

Q.—How long since you worked in the United States? A.—I worked there in 1863 and 1867; I think between 1863 and 1867.

Q.—Before the resumption of specie payment? A.—Yes.

Q.—If you reduced greenbacks to gold values, would wages be higher than in Canada? A.—I think so.

Q.—Did you work there by the piece or by the hour? A.—By the piece.

Q.—Did you work harder than you would here by the piece? A.—No, sir.

A.—If you worked there by the piece and here by the piece, how much higher would you scale there than here for the like work? A.—Of course at that time wages were higher than since, but I should think from ten to fifteen per cent.

Q.—But there was the money difference? A.—There would be more than that difference in the United States money brought into Canadian money.

Q.—So that actually in gold your wages would be lower—They would be lower if converted into gold? A.—No, sir.

Q.—What was the premium on gold in 1867? A.—I cannot remember but I think it was somewhere about ninety cents on the dollar, but of course it is a long time ago. It was not a great ways from par—that is my opinion.

Q.—How long does a boy serve before becoming a journeyman? A.—He is supposed to serve four years.

Q.—Your Union allows one boy to eight journeymen? A.—Yes one, and the firm one, besides.

Q.—Then 32 years' life of a journeyman would be passed away before a boy would take his place? A.—Yes, but I don't think the life of a moulder at the trade would average 32.

Q.—Then as a matter of fact you don't allow enough apprentices to take the places of the journeymen? A.—Yes; I think there are; I think that would allow enough.

Q.—If one boy comes in for 32 years of a journeyman's life and you say a journeyman's life at the business is not 32 years, how can the boys replace the journeymen as they pass out? A.—Of course you must understand, there are a great many moulders, or boys, who learn the trade outside in the country towns who come into the city and they do not even have to serve time at all.

Q.—And you have to try and balance between the city and country as well as you can so as not to have your trade overstocked? A.—Yes, and protect ourselves.

Q.—Do many moulders come from foreign countries? A.—Yes; quite a number.

Q.—What countries? A.—Mostly England and Scotland and a good many from the United States.

Q.—Then their condition in the United States cannot be much better than Canada or they would not come? A.—Well there is a certain amount of trade travelling backward and forward—roving kind of young men.

By Mr. ARMSTRONG:—

Q.—Do you find organizations to be a benefit in your trade? A.—Yes.

Q.—In what directions? A.—It is beneficial in this way, that I think the men get fairer rates of wages than they would, and I think the employers receive a fair return for the wages they have to pay.

Q.—Have the rules of your Union a tendency to make men steady and moral in their habits? A.—If they follow its teachings they have.

By Mr. McLEAN:—

Q.—What benefit do you derive from the Union outside of organized labor? A.—We receive four dollars a week sick benefit, and \$300 at death is given to the widow and children.

By Mr. FREED:—

Q.—Has any attempt been made to secure nine hours as a day's work at your trade? A.—Not in Toronto.

Q.—You desire it? A.—Yes; I think it would be a benefit to lessen the hours of labor.

Q.—If you were working by the piece would you rather work nine or ten hours? A.—I would rather work nine hours.

Q.—The rate of wages being the same? A.—Yes.

Q.—You have observed men in other trades who have shorter hours? A.—Yes, sir.

Q.—Have you any doubt that men in your trade could put the saved hour to good use? A.—I think the largest portion of them would.

Q.—Do you think they would try to improve their minds and have reasonable and proper recreation? A.—I think a fair percentage would.

Q.—You think it would not increase drunkenness? A.—Well, amongst a certain class, of course, the more time there is, the more is the tendency to drink.

Q.—Your opinion is, on the whole, that the working man is able to use his spare time to good advantage? A.—Yes.

By Mr. McLEAN:—

Q.—Does convict labor interfere with your trade? A.—Not much now; I do not believe there is any in Canada.

By the CHAIRMAN:—

Q.—We have been told that there was a contract here at the Central Prison, that it has expired and that it would not be renewed. Does it interfere at all? A.—Yes; I believe it is injurious to honest labor.

Q.—But if there were none? A.—If there were none, I think it would be beneficial.

By Mr. GIBSON:—

Q.—Don't you think that it is right that prisons should be made self-supporting? A.—Yes; I do.

Q.—You would not object to any but surplus labor? A.—I think there are things which the Government could put them to, which would not come in contact with honest labor.

Q.—You do not object to convicts being employed? A.—No.

By Mr. FREED:—

Q.—Do you think they could be employed usefully in manufacturing goods which could be exported to foreign markets? A.—No, I do not think so; I think we have enough outside workmen, honest and good citizens, to furnish that market.

JOSEPH HUNT, Moulder, Toronto, called and sworn.

By the CHAIRMAN:—

Q.—Is there anything in the evidence of the preceding witness from which you differ; or do you corroborate it in everything, and if not, to what do you object?

A.—I object to the wages.

By Mr. HEAKES:—

Q.—Will you tell us please what is the condition of the moulders in this city regards the rates of wages? A.—Well our condition is better than it has been heretofore.

Q.—Have wages increased perceptibly in your trade in the last ten years? A.—Yes.

Q.—Can you give us any reason for that increase? A.—Well as the population and growth of the city have increased the wages have increased.

Q.—It has made a demand for your work? A.—Yes.

Q.—Has the combination amongst the men had any effect in that direction? A.—Yes; I think so.

Q.—You think the combination amongst the men has a tendency to keep wages up? A.—Yes.

Q.—What is the general condition of the shops to your knowledge? A.—Some of those I have been working in are not fit for a horse to stop in.

Q.—You don't work in the same shop as the last witness? A.—No.

Q.—Do you find them badly ventilated? A.—Yes; and bad for the winter weather.

Q.—From the cold and wet? A.—Yes; cold and wet.

Q.—The shops are not sufficiently protected against draughts? A.—No.

Q.—Do you know that many men, from this state of the shops, are made ill? A.—Yes.

Q.—Is it a frequent occurrence? A.—Yes; we had two this week who have been laid up for three weeks.

Q.—Do men working in shops such as you describe have serious illnesses frequently? A.—Yes.

Q.—Do you know that death often occurs from such a cause? A.—Well there have been two boys, apprentices, who have died from the effects of cold, and one man.

Q.—Has that been recently? A.—Inside of three years.

Q.—Has the Union ever taken any steps to have these shops improved? A.—Well the Union has not, but the men have in the shops they work in.

Q.—They have made representations to their employers? A.—Yes.

Q.—Have the employers shown any disposition to meet the men? A.—They have given us an answer that they would do it as soon as possible; but they have never made any improvements in the last three years and the shop is now open this winter for the next cold weather.

Q.—Have you any knowledge as to whether it costs a man more to live in Toronto now than it did four or five or six or seven years ago? A.—Yes.

Q.—In what articles has living increased? A.—Dry-goods, eatables, and house rent.

Q.—In what proportion has house rent gone up; how much more a month? A.—Some have gone up five dollars. I used to get a nice, comfortable house such as a workingman would need for five or six dollars, but now I have to pay ten dollars.

Q.—Do you think that wages have increased in proportion to the cost of living? A.—No, they have not.

Q.—Then I suppose the men in your business are to-day worse off than they were five years ago? A.—Pretty near.

Q.—Does machinery come into any great use in moulding shops? A.—No, except cranes; the men have to work cranes.

Q.—They are a convenience to you? A.—Yes; we could not do without them.

Q.—Do you find any difference in the shops in the city in the number of apprentices employed? A.—No difference.

- Q.—The rule is generally carried out? A.—Yes.
- Q.—And the hours of labor are the same? A.—Yes; ten hours a day.
- Q.—What is the usual pay day with you? A.—Every two weeks
- Q.—What day? A.—Saturday
- Q.—Do you consider Saturday the best day? A.—The bosses keep back three days' pay.
- Q.—Do you consider Saturday the best day in the week to pay? A.—No.
- Q.—What day would you prefer? A.—Friday.
- Q.—Why would that be a benefit? A.—Because we can spend our money on Saturday; our wives can go and buy things on Saturday morning which they cannot buy on Saturday night.
- Q.—Going on the market on Saturday morning the wife can do better than she can later on in the day after two or three o'clock? A.—Certainly.
- Q.—And it would benefit the workman by his getting a better class of goods? A.—Yes; and cheaper goods, at the market.
- Q.—Have you worked in the United States? A.—Yes.
- Q.—How do the wages compare with those in Canada? A.—When I was there they were better than they were in Canada.
- Q.—Can a man live as cheaply? A.—Well I dont know; of course I did not take my family over; house rent was dear, but everything else was cheap.
- Q.—Are there any tenement houses in Toronto that you know of? A.—Yes.
- Q.—What is the condition of them? A.—Very poor.
- Q.—As a rule do workmen live in them? A.—They have to do it when they cannot get better.
- Q.—Is it a difficult thing at present to get a good house within reasonable distance of work at a fair rent? A.—Yes.
- Q.—Men have to go long distances? A.—Yes.
- Q.—Do you know anything of building societies? A.—I think they are good.
- Q.—Do you know of any society amongst workmen where a man may pay his money in and have his house built for him? A.—I do.
- Q.—Do you know if many men have taken advantage of it? A.—Lots of men have taken advantage of it this year.
- Q.—Has it been long in operation? A.—No.
- By the CHAIRMAN:—
- Q.—What is it called?—A.—I forget the name.
- By Mr. HEAKES:—
- Q.—It is what would be called a co-operative building society? A.—Yes, I think its name is the Co-operative Society.
- Q.—Do you know if many men have commenced to build houses through its operation? A.—Well, not many as yet.
- Q.—How long has it been in existence? A.—It was only started about this time last year.
- Q.—But some men have taken advantage of it? A.—Yes.
- By Mr. FREED:—
- Q.—What part of the United States did you live in? A.—Cleveland and Akron.
- Q.—How long since? A.—Six years ago.
- Q.—Do you think you are benefiting yourself by coming back to Canada? A.—I did in one way because my family was here.
- Q.—You said that articles of dry goods are dearer now than they were at some former time; what former time was that? A.—Seven or eight years ago.
- Q.—What articles of dry goods are dearer? A.—As far as I know children's wear and my own clothes were cheaper then than now.
- Q.—Are cottons dearer now than they were seven or eight years ago? A.—Yes.
- Q.—On what do you base that answer, your own personal experience? A.—Yes.

Q.—Would you be surprised to learn that you can buy three yards of cotton of equal quality for less money than you could buy two yards seven or eight years ago? A.—I might think so and so might you if we went to buy the goods, but women are different from men.

Q.—You say that articles of food are dearer; what articles are dearer—bread stuffs? A.—Yes, bread and vegetables.

Q.—How much do you pay for a four-pound loaf in Toronto? A.—I could not tell you whether we buy a four pound loaf or not as I do not buy the bread. For a large loaf I think my wife pays twelve cents.

Q.—And seven or eight years ago what would you pay? A.—Eight and nine cents.

Q.—What did you pay for a yard of good white shirting? A.—I cannot tell you.

Q.—And what would you pay for a yard of bleached shirting seven or eight years ago? A.—I could not tell you.

Q.—Are boots and shoes dearer or cheaper than they were seven or eight years ago? A.—A little dearer.

Q.—How much would you pay for a good pair of working boots now? A.—For those made by hand you would pay seven or eight dollars.

Q.—And how much for a pair seven or eight years ago? A.—Made by hand you would get a good pair for \$4.50 or \$5.

Q.—Equal to the ones you now pay \$7 or \$8 for? A.—Yes; because the cost of leather has gone up and wages have gone up.

By Mr. GIBSON:—

Q.—Do you think you get a fair share of the results of your labor? The former witness led me to understand that he got a fair share and the master got a fair share of the product; do you think the same? A.—Yes.

Q.—The master does not get an excessive profit on your labor? A.—No; I do not think so.

Q.—Fair to all parties? A.—Yes.

By Mr. KIRWIN:—

Q.—Who is it makes the wages in your trade—is it the Union? A.—No.

Q.—Would you be in favor of arbitration in preference to strikes in disputes between employers and men? A.—Yes.

Q.—What form of arbitration would you be in favor of? A.—I would be in favor of a committee of each.

Q.—One of each and an outsider or three of each and three outsiders? A.—Two of each and an outsider I think would be a suitable arbitration.

Q.—Would you be in favor of the government having a board of arbitrators, or one arbitrator, in case your own arbitration could not settle the dispute? A.—Yes.

By Mr. FREED:—

Q.—Do you think the government arbitrator would have sufficient knowledge of your trade to be able to judge justly between you and the employers? A.—Yes.

Q.—You think a man would be sufficiently skilled in your trade? A.—Well, a man who was not skilled should not be in the position.

Q.—And of course a government arbitrator could not be skilled in all trades? A.—No.

JOHN THOMAS DODWELL, called and sworn.

By Mr. ARMSTRONG:—

Q.—How long have you lived in Toronto? A.—Five years.

Q.—Have you been working as a journeyman all that time? A.—Yes; working at agricultural implement moulding.

Q.—What are the wages made in your trade? A.—Three dollars a day in the city and \$1.50 and \$1.60 outside the city, not over \$2.00 in many places outside the city.

Q.—Have you any scale of wages in the city? A.—No; not in the agricultural line.

Q.—Do you have much trouble in keeping up the rate of wages in your branch of industry? A.—Yes. Moulders come in from country shops, where they are turned out as you would turn articles out of a machine; and some also come from the Old Country here, as agents represent that there is employment for them.

Q.—In what way are they induced to come from the Old Country? A.—By articles in the newspapers and by agents stating that employers cannot get sufficient help here, and that induces them to come.

Q.—Do you find it hard to maintain wages in view of the keen competition between the different firms? A.—Yes; we do here in the city from outside competition of firms using cheap labor that is not organized.

Q.—Are the different branches of the moulding trade all organized in one body or are they separate? A.—They all come under the one executive head.

Q.—Then all have benefit from the organization? A.—Yes.

Q.—Would it be beneficial to your organization if it were incorporated? A.—Yes.

Q.—What benefit would accrue from it? A.—We would derive several benefits: we would have a legal standing and have power to collect dues from members, and also have more control over them.

Q.—Is there as much work, taking into consideration the development of the country, as there was eight or ten years ago? A.—There is by the increase from the use of machines; but outside of that I do not think there are so many working days in the year.

Q.—Have you to contend much against manufactured articles coming in from abroad? A.—No; not a great deal under the high tariff.

Q.—The laws of your body, you say, govern the whole three branches? A.—Yes.

By Mr. FREED:—

Q.—Agricultural implements were formerly imported from the United States pretty largely? A.—Not to my knowledge, not to a very great extent.

Q.—How far back does your experience go? A.—About fifteen or sixteen years.

Q.—Were not agricultural implements imported from the United States pretty largely fifteen or sixteen years ago? A.—No; not to my knowledge.

DAVID BLACK, called and sworn.

By Mr. ARMSTRONG:—

Q.—What is your occupation? A.—I am a stove plate moulder in Toronto.

Q.—Does your branch of the moulding trade believe in arbitration? A.—Not in compulsory arbitration.

Q.—Will you state to the Commission the nature of the arbitration that would be most likely to suit your trade? A.—I think it would be some board agreed upon by the men and the employers without outside interference.

Q.—Appointed both by employers and employés? A.—Agreed upon by both parties.

Q.—What is the condition of the shops where stove plate moulding is done? A.—Where plate moulding is done the condition is very good generally; the condition of other shops is however not all that can be desired. In some cases they are very poorly ventilated. You will understand that in casting at night gas and smoke come

off which are very injurious and have a very irritating effect on the lungs; and if a man after working a couple of hours goes outside, he is very apt to catch cold.

Q.—Do you think your wages constitute a fair share of the profits? A.—I do not.

Q.—For what reason? A.—For this reason: in former years a moulder did not have to do so much work as at present. Besides, the purchasing power of money is not so great now as it was formerly, and wages have not increased proportionately with outside expenditures.

Q.—Taking the necessaries of life, in what goods are the prices higher than they were some years ago? A.—Rent especially is higher.

Q.—In what proportion has rent increased? A.—A fair proportion to estimate would be twenty-five per cent. Nowadays it is very hard for a workingman to get a house to suit him. The class of houses built in Toronto have too high rents for workingmen.

Q.—On that account workingmen have to go further from the city to get suitable houses; they have to go into the outskirts? A.—Yes.

Q.—Do you believe in the piece system in your trade? A.—I do not; I think it is very harmful to the men. It is better of course for the bosses; they can get more work for less money.

Q.—It creates a rushing tendency? A.—It creates a rushing tendency on the part of the men and consequently a cutting down of prices.

Q.—What is the proportionate ratio of apprentices to men in your shop; or have you any rule laid down in that regard? A.—One to every eight men and one for the shop. But it must be remembered that our ranks are supplemented by immigration, especially from Great Britain, to such an extent that there is no dearth of moulders. A moulder's life is not so long but that the supply is easily maintained.

Q.—Do moulders save much in the year over all expenses,—that is moulders of ordinarily steady habits? A.—In regard to stove plate moulders I would say, no. For this reason: the stoveplate business is being centralized in one large firm whereas formerly there were several small firms. They have a large shop and consequently do in eight months what formerly took twelve months and, therefore, moulders have out of the year only eight or nine months' work.

Q.—That is, this large establishment squeezes the small establishments in the city? A.—It does.

Q.—Has the trade been tending that way for some time? A.—It has.

Q.—I suppose you cannot give any definite reason? A.—It seems to be the general rule in everything.

By Mr. FREED:—

Q.—Does the large concern squeeze the small ones because it is able to sell stoves for less money than the small ones can afford to sell them at? A.—No, I will not say that; but the cost of them will be less.

Q.—Cannot the small firms still continue in business and make money? A.—I have no doubt they could.

Q.—Why then do you think they have quit business? A.—I could hardly account for it, but it is a fact nevertheless.

Q.—Have the prices of stoves advanced? A.—They have.

Q.—Does a stove cost more or less to manufacture now than formerly? A.—I should say about the same.

Q.—What is the price of iron as compared with former years? A.—I am not very well versed in the prices of former years; but I think there is not a great difference.

Q.—Where does the iron come from that is used in the manufacture of stoves? A.—Some from the United States; some from England.

Q.—Does not most of it come from Scotland? A.—I mean from Great Britain.

Q.—Do you think much iron comes from the United States into Canada for the stove business? A.—A good deal.

Q.—From what part of the United States? A.—That I could not tell.  
 Q.—I suppose you have not much knowledge of the business outside of your branch? A.—I have not.

Q.—Do many men of your acquaintance, moulders, save money? A.—They do not; what they save in the first half of the year they lose in the second half.

Q.—It is the custom I believe about holiday time to stop work and enter upon stock-taking? A.—Yes.

Q.—How long does that generally last? A.—It varies. Sometimes they shut down from Christmas to April; others again for not so long.

Q.—Do you think in the stove business men earn wages more than eight or nine months in the year? A.—I do not.

By Mr. CARSON :—

Q.—You spoke of rent: are you a married man? A.—I am not.

Q.—Then on what authority do you speak? A.—On the experience of my parents.

Q.—You also spoke about stoves being dearer now than sometime ago: are you aware that iron is dearer now than it was twelve or fifteen months ago? A.—The combination would have failed in its object if it were not—that is the iron ring.

Q.—Have you knowledge of an iron ring? A.—I have from what the papers give me; I do not know whether that information is reliable or not.

By Mr. FREED :—

Q.—Where is that iron ring situated? A.—It works in the market.

Q.—In what market? A.—I could not say. I guess it governs all the markets—Canada and the United States.

Q.—And the old country? A.—No.

Q.—If there is no iron ring in the old country and if the iron is imported from the old country, how does that affect the price of iron? A.—It is the superior quality that is generally brought from the old country, and it therefore would have a higher value.

Q.—Superior to what? A.—Superior to the American iron.

Q.—What is the price of a ton of pig iron in Glasgow? A.—I could not say.

Q.—What is the price of a ton of pig iron in New-York or Philadelphia? A.—I do not know.

Q.—Would you be surprised to learn that pig iron in Philadelphia is fifty per cent dearer than in Glasgow? A.—No, I would not, not in Glasgow itself. I would be surprised to learn that American iron was dearer than Glasgow iron in America.

THOMAS PICKETT, re-called :—

I am not much acquainted with American iron, although I know it comes into our trade in certain lines; but Scotch iron I know something about, as I ran a shop a number of years, and was in a position to know. Of course, I do not know the price of late years any more than from having occasionally seen the quotations. From my experience of Scotch iron, I think it is as good for the work produced in this country. There is a class of iron made in Lower Canada, Three Rivers iron, and for car-work, perhaps it is better than any other class of iron made, and I know something about it. Some of the American iron is very good; but there is a certain class that is very poor; if you take the Gartsherrie iron, it is of as good a quality as any we get in this country. We do not get much American iron. The prices of iron run from \$16 to \$32 a ton.

By Mr. FREED :—

Q.—Is that laid down in Toronto? A.—No; but laid down for the Montreal market from which the shops in the country towns obtain it. I am now speaking of the Province of Quebec.

By Mr. CARSON :—

Q.—What dates do those quotations cover? A.—From 1870 up to eight or nine years ago. Of course, in one or two of those years iron was high, running up to \$40 a ton.

By Mr. FREED :—

Q.—That was in 1880? A.—Yes; but it only remained one season at that price. The general run was from \$18 to \$20, or \$21 or \$22.

Q.—What would Eglinton iron be worth now? A.—We considered Eglinton inferior iron to Gartsherrie and Summerlee.

Q.—Take Cambree? A.—There is not much difference. Eglinton is cheaper than Gartsherrie, Summerlee, and the one I have just named.

Q.—What would Eglinton be worth,—say at Glasgow? A.—I think it would be worth \$14 or \$15 at Montreal, that is wholesale. I believe iron is as low within a year or two as in any time within my knowledge.

Q.—Would \$10 at Glasgow be low? A.—It seems to me it ought to bring that price there.

Q.—Would \$5 cover the freight to Toronto? A.—Yes; I think so. I am not well versed in regard to freights from the old country, but a great deal of iron comes out as ballast.

Q.—In the shape of kentledge or pig iron, that is to say cast blocks for ballast? A.—Yes; as pig iron.

Q.—Does much of that come to Toronto? A.—I could not say.

Q.—What would anthracite iron made in Pennsylvania be worth? A.—I could not tell the American price. We never deal in American iron at all. I think we have as good native iron in this country as anywhere.

By M. CARSON :—

Q.—Are you aware that contractors within the last year have been obliged to throw up contracts owing to the increase in the price of iron in our markets? A.—No; I am not aware of it.

By Mr. FREED :—

Q.—Are you aware that Scotch iron is imported in large quantities into the United States? A.—Certain brands are, I believe.

Q.—What is the duty on iron into the United States? A.—I do not know.

Q.—Pig iron? A.—It is pretty high. It must be 40 or 50 per cent. I should think. The Americans have got to have it.

Q.—If it goes into the United States and pays a high duty it is because it is cheap in Scotland? A.—It is produced cheaply; and not only so, but it is a quality of iron we have got to have. In regard to the cost of living, to which reference has been made and the difference in wages to-day and some years ago, I may say that I can go back fifteen or twenty years. I can go back twenty five or twenty seven years ago as regards the prices paid in the trade and I can quote the prices then paid. Wages are not any more than they were in those days, and comparing the prices of articles to be purchased they are not nearly so good as then. I am not speaking more in regard to the rural districts, for I have worked in towns where we had the advantage of buying from the farmer and directly from the producers more than we have here. But I know from my own case in Toronto that a man, with a family, as I have, of six or seven, whatever economy he may use, cannot bring up his family respectably and live in a respectable way, and make both ends meet at the wages paid in our trade today. I know it for a fact. I have been here three years and I cannot rub one cent against another, and I conclude that I have not lost one day a month through my own neglect. I heard the question asked of a witness, how long it would take him to build a house. It would take me a thousand years to build a house in Toronto, if I continued to live in a respectable way such as a working man is expected to live and bring up his family. A question was asked in regard to children going to work. I have four boys. I mean to give them a fair education.

but the little one of my boys has been able to clothe himself. I merely mention these facts to show that there must be thousands of working men worse off than I am.

By Mr. GIBSON :—

Q.—What would be the remedy? A.—Many things might be done. In the first place, there is speculation in land. I believe speculation in land should be stopped. The higher you raise the price of land the more a man will have to pay for it. If I have to pay a thousand dollars for a lot with fifteen feet frontage the tenant will ultimately pay the price; if the price is only a few dollars the rent will be correspondingly reduced. I live in a house for which I have to pay a rental of \$12 a month. That is more than a workingman ought to pay in this city. That is more than a workingman can pay in this city. If I want to live in a cheaper house, where must I go? I should have to go into some back street. I believe the contractors here are building a class of houses not suitable for working men. Most of our houses are comfortable, I know my house is comfortable, but there is too much room for a man in my station; there are six rooms in my house. I could get along with less, with four; but the houses are constructed in such a way that if we want a house with four rooms we have to go into a back street and the cottages are not built so comfortably as the houses at a little higher rent. An improvement in building would be to erect double tenements as in Montreal. In that way the builders will be able to charge less rent because it would be a double house with two entrances and yet it would occupy only the same frontage as a single house. There might be four rooms upstairs and four down. Supposing in the case of my house there were four rooms upstairs and four down with two entrances, the owner might be able to claim eight dollars a month from each tenant; but by compelling a man to pay twelve dollars for one it is too much strain to impose on the man's income. In that way double tenements instead of single houses would be a benefit to workingmen, from my point of view.

Q.—You mean that the cost of land is so high that the owners are obliged to charge high rent in order to pay interest on the money invested? A.—Yes; and the tenant has got to pay it. One of the great causes of high rent is over-speculation in land, for it is nothing but speculation.

By Mr. WALSH :—

Q.—Do you think those double tenements would be as healthy for your family? A.—Yes; I believe so, for in Montreal where there are double tenements the people seem to be as healthy as here.

By the CHAIRMAN :—

Q.—And larger profits accrue to the men who build them? A.—Yes; and the tenant gets his rent cheaper.

Q.—Then it benefits both landlord and tenant? A.—Yes; and I may say that the upper tenement is as a rule preferred there.

By Mr. CARSON :—

Q.—Do you mean that the rooms of each tenement would be on the same flat? A.—Yes; you would have to arrange it so in that case.

By Mr. FREED :—

Q.—What water rate do you pay on your house in Toronto? A.—I do not pay the water rates; the landlord pays them, and I think they amount to ten dollars a year with fifty per cent off. I never was assessed for water rates, for when I have hired a house it has been on the agreement that the landlord shall pay those rates.

By Mr. KIRWIN :—

Q.—But you pay them indirectly? A.—Yes.

By Mr. GIBSON :—

Q.—I understand you to say that the rentals have increased in greater proportion than your wages? A.—Yes. In speaking of the price of provisions I am not able

to go a great way back in Toronto, but I can give my own experience. *Some* articles have advanced and some have dropped, but taken as a whole the increase of wages has not corresponded with the advance in the price of goods. I do not believe five per cent of our trade or of any mechanical trade can save a dollar in Toronto. When I say that, I mean the building trade, the mechanical trades, and the iron trades. There may be some exception throughout the city, such as printers who have constant work the year round. No doubt there is a certain percentage who have work the year round.

JOHN PIERCE, called and sworn :—

By Mr. ARMSTRONG :—

Q. What is your occupation? A.—I am a machine moulder and have lived in Toronto for the last eighteen months.

Q.—Have you made any study of the Factory Act that is now in existence? A.—No; I have not. I have read it once; I just got the loan of a copy and had to hand it back, so I had no chance to study it.

Q.—You have heard the evidence of the previous witness; have you anything to add or any suggestion to offer to the Commission in connection with the machine moulding trade? A.—With respect to the hours of labor, I think the eight hour movement should be carried in order to secure the half holiday, which would be a benefit to all workmen.

Q.—Considering a man physically do you consider that if a man works steadily for a month he can put in as much work in nine hours as in ten? A.—I think he could do so. I think so because after a certain time his strength is exhausted at the rate he is compelled to work at the present day, that is speaking for my own trade.

Q.—I suppose that if a man works long hours he therefore becomes fatigued and is more liable to take a glass going home? A.—I have often seen that occur, for it helps a man along on his way home.

Q.—You think then that long hours have a bad tendency, and tend to increase unsteady habits? A.—I do.

By Mr. CARSON :—

Q.—From the remark just made do you wish the Commission to understand that the Moulders Union is a less temperate body of men than other Unions in the city. A.—No; I do not think they are less temperate.

Q.—Do you find the education of the poorer children, that is of children of the working classes, is being neglected in any way by the parents? A.—That is something I could not answer; I have no knowledge in regard to it.

Q.—Speaking from general knowledge? A.—Speaking from my own little experience I think the facilities for their education are better.

By Mr. WALSH :—

Q.—Do you entirely agree with the statements made by the former witness? A.—Yes.

Q.—With respects to the cost of living, the prices paid for labor and so on? A.—Yes, I do.

Q.—Are the necessaries of life, in your experience, dearer? Are you a married man? A.—Yes.

Q.—Is the price of living higher or lower than five, six or ten years ago?— A.—Some things are about the same, but others are less I think. I think there is a reduction in clothing.

Q.—Boots and shoes? A.—They are higher; that is hand made boots.

Q.—I suppose there is very little hand made work done now? A.—Not so much as formerly.

Q.—Have you any knowledge of the iron ring spoken of; where does it exist and what are its effects? A.—No; the only idea of any ring I have is the coal ring; that is the only ring I know of. I could not say whether there is an iron ring or not.

Q.—Do you know what the price of iron is at the present time? A.—Yes.

Q.—What is the price? A.—It runs from \$18.00 to \$21.50.

Q.—Which iron is \$21.50? A.—A 1 American.

Q.—What is \$18.00? A.—I think it is a poor class of American iron that is sold for \$18.00; I forget its name.

Q.—Which do you use the most of? A.—For stove plating, A 1 American.

Q.—Is that the high priced iron? A.—Yes.

Q.—Do you use any Scotch iron? A.—Not very much at the present time.

Q.—Do you know the price of Scotch iron? A.—I do not.

Q.—Do you know whether it is higher or lower than American? A.—I could not say.

Q.—Would you be surprised to find that there is a big difference in the price?

A.—I would not be very much surprised. One is not so good an article as the other; that is where the difference comes in.

By Mr. CARSON:—

Q.—Have you in your business ever used, are you using now what is called waste shell from the English market? A.—I have seen quite a little of that used; about three years ago I saw some used. I believe it is brought from Nova Scotia, from the lower ports.

Q.—I refer to the English article? A.—I have seen some here this last season. I do not know whether it was from England; I judge it was.

Q.—Has there been more used previously? A.—I could not tell.

By Mr. FREED:—

Q.—As a matter of fact do you know what quantity of iron is used? A.—No; it is something I do not study, except when it comes into the ladle.

Q.—The iron used from the United States. What is that? A.—It is classed as A-1 charcoal iron.

Q.—You do not use much charcoal iron in stove-making, I believe? A.—It is the chief trade in which it is used.

Q.—From what part of the United States does it come? A.—I could not tell.

Q.—Do you use any Nova Scotian iron? A.—I have seen a little used in agricultural machinery.

Q.—It is a very high quality of iron, I believe? A.—Some of it is. I have also seen plenty of it sent back.

Q.—Your work is very hard work? A.—Very hard.

Q.—When you quit your work, especially after casting, I suppose you are generally in a very high perspiration? A.—Yes.

Q.—After you have worked ten hours at your trade you have done as much as you are able to do? A.—About as much as I want to do for that day; sometimes, very often, as much as I would like to do for two days.

Q.—When you go outside in this high state of perspiration there is, of course, a tendency to catch cold? A.—Yes; it has that tendency.

Q.—And I suppose, as a result, there is a temptation to men who are not very strong to drop in and take a horn? A.—I do not; I can say for myself that that is something I do not care for; I do not take it at all. I can either take it or leave it alone.

Q.—If the men work shorter hours the temptation to drink would be less? A.—Yes; because the men would feel more refreshed and there would be a chance to be better educated.

Q.—Do you think the hard work does it, because it breaks the men down physically? A.—It does.

Q.—That would be lessened if the hours were shorter? A.—I think it would be.

Q.—You would think that ten hours' work at your trade is such a strain that a man cannot perform it without sooner or later breaking down in health? A.—I do. I think ten hours are really too long for a man to work when he has to work as hard as a moulder has, and a great many men in different trades have to work harder.

By Mr. KIRWIN:—

Q.—At present you are receiving \$13.50 a week? A.—\$13.40.

Q.—Have you sufficient confidence in yourself to say that you would be able to save up money enough to build yourself a decent dwelling house—not too expensive a house, but one that would suit a mechanic in the near future, say in fifteen years when you would be able to enjoy it? A.—Do you mean if I was in steady employment?

Q.—On \$13.40 a week? A.—It depends on whether we get twelve months, or six months work.

Q.—I am supposing that you work steadily right along? A.—In my own case I have no doubt I could, simply because there are only two of us to keep.

Q.—How many moulders in this city own their own houses? A.—Very few in my knowledge.

Q.—You think you could save up the money? A.—In fifteen years I think I could, if I had steady employment at that rate of wages, that is supposing the price of necessaries did not go up. I would not have confidence to begin just now in the present condition of affairs. That is why many workmen have not homes, because the uncertainties of trade are such that they do not have a chance to commence such undertakings.

By Mr. GIBSON:—

Q.—You are not employed the year round, I understand. Do you think shorter hours would increase the length of time at which you would be employed during the year? A.—I do.

Q.—If you had the eight hour system how much longer do you think you would be employed? A.—If we had the eight hour system it would increase the employment one to every ten.

Q.—It would give employment to eleven where there are ten now employed, that is, if they were working the same period? A.—Yes.

Q.—Without employing any extra number of hands would that as regards time give you an additional number of hours sufficient to make up twelve months' work in the year? A.—It would hardly be sufficient, because there is always one-third of our trade walking round looking for work.

Q.—You mean that there is always an overplus of labor? A.—Yes, it has been so ever since the panic of 1873. According to our Union statistics there is always one-third more men than the demand.

Q.—Have you any theory as to how that state of things could be relieved? A.—The only theory I have is that a reduction of the hours of labor and the abolition of piece work would overcome it.

Q.—You think that would be a remedy? A.—Yes. Where there are two men at present employed on piece work three men would be required if they were working day work.

Q.—Could not the Union bring sufficient influence to bear to make some arrangement by which piece work would be abolished? A.—We could make some arrangement no, doubt, if we were in the majority. That however is a difficult matter for the selfishness of the men will not allow it to be done. You cannot instil into the minds of a great many of our members to-day that day's work is of benefit to them, it is the money to which they look. So long as they can get dollars and cents they do not care as to the amount of work they do.

Q.—In your trade is as fine work turned out under the piece work system as day work? A.—No.

Q.—Then the piece work system in the moulding trade, as in other trades produces work not so good as day's work? A.—Piece work in our trade may be equal as regards a few small articles, but it is not as a general rule equal to day's work. Piece work has generally less by ten per cent. than day's work.

Q.—So the consumer does not get as good work from piece as if the products were turned out by day's work? A.—He does not get as good work because he pays less for piece work.

Q.—Consequently the consumer gets his profits for less sums? A.—He gets as good work for his money and he pays less for it.

Q.—He cannot get as good work for his money? A.—He does not as a general rule get as good work for the money as if it were turned out by day's work.

Q.—Then it would be in the general public interest to support you in your endeavors to have piece work abolished? A.—Just so.

Q.—Because the consumer would get better work for his money? A.—Better value for his money.

Toronto, Wednesday, November 30th.

W. H. HOWLAND, Toronto, called and sworn.

By Mr. FREED:—

Q.—You are Mayor of Toronto? A.—Yes.

Q.—This is your second term in the mayor's chair? A.—Yes.

Q.—You have been a resident of Toronto for a great many years? A.—32 or 33 years.

Q.—As mayor, you come in contact with the poor of Toronto to a great extent? A.—Not only as mayor, but for the last eleven years I have been working among them as a matter of love, and I have a very considerable knowledge of their ways, their difficulties and circumstances.

Q.—Are there large numbers of people in Toronto requiring assistance? A.—They require assistance from only two causes as a general rule, excepting extreme cases of misfortune, or cases where widows are left with large families. The first cause is, of course, drinking, and the second cause is the sending out to this country of people who are unsuited to make a living here—the sending out of great numbers of people who have got the poor-house taint, and who never will work or do any good anywhere.

Q.—By whom are these people sent out? A.—They are sent out in various ways. Up to the last two or three years our government machinery was very largely used for the purposes of relieving the poor-houses—not with their consent, but their machinery was perverted from its original intention and used in that way. Then, colonies have been sent, out from time to time, with the kind intention of helping people in different districts. For instance there was a colony of a poor class sent out from some of the towns in Ireland some years ago; they are nearly all to be traced here at the present time, and to a large extent they have remained a charge on the people of this country.

Q.—Would you rather give us a narrative respecting these people, or have us ask questions? A.—Just according to your judgment.

Q.—Then perhaps you had better give us a narrative? A.—As a visitor of the House of Industry, I kept coming across a class of people from a certain place in Ireland; they were thoroughly unsuited for this country; they had been under the poor-house system very largely; they were demoralized, and all the spring was taken out of them for honest or faithful work. In the same way there has been progressing for sometime an immigration from England from the different poor-house Unions. You can trace them in particular streets; you come across a family at one time, sent out by certain poor-houses, or given means to come out. I have met several cases of that kind. For instance in East London they are now sending out

families, and you cannot help being sorry for them, because they sent out people with large families—eight or nine children, and sometimes more. It makes you feel that the children might have a chance, but the parents are unsuitable; having no courage, or pluck, or hope, they drop at once into the old habit of depending on chance work or assistance. They had been so much in the habit of getting help from others that they do not think of being able to help themselves; in fact they are a helpless immigration. In a great many cases they are chosen with some judgment as far as personal habits are concerned; many of those East London people that I have met with are not dissipated people, but they are corrupted with the poor-house character.

Q.—They don't know how to help themselves? A.—They have not got any spirit; they are absolutely helpless.

Q.—Admitting this to be an evil can you suggest anything? A.—I think we should adopt the American principle, which would prevent them being sent. I think we should stop helpless people who are going to suffer—stop them at the border. In this country the climate produces more suffering than in the old country, and I don't think it is fair to send out to us people, known to be paupers, and that we cannot make men of. I should be sorry to limit a class of immigration of which there was any chance or hope—such as young men, or those children that Dr. Barnardo and others are training. It is very wonderful how such as these fit themselves to the country and become a good population.

Q.—Is that remark made from your own observation? A.—It is from my observation and from the evidence in the books of the agencies. And, mind you, many are sent out by the poor-law Union who have nobody to look after them, and I think that that is a very poor and wicked way of sending them out. They are sent out; somebody agrees to find them a place; they are put into a place, but if they are not well placed they drift back to the street. Some of them do well, but it is a wickedness and a hardship to send them out in this way. But when they take the children and train them a year or more in England and get them into regular habits, clothe them properly and bring them out and put them in the hands of their own agents who place them in carefully selected farm houses where they are visited regularly by the agent, and in case of the child not being suited he can be taken back to the home and then sent out again, and even in cases of extreme unsuitability can be sent back to the old country—it seems to me that that immigration is a valuable immigration.

Q.—That is the immigration of which I have been afraid and I am much pleased to hear a better account of it than I feared we would get from you? A.—I might suggest to the Commission that they should make enquiry of these agents. There are a number of these institutions in London, such as Dr. Barnardo's and others, and there is one old philanthropic institution which has been sending out people for twelve or thirteen years, although nobody hears anything about it. Their reports from Canada are almost always favorable; and I think there is also a Scotch one, besides the one at Belleville. As to the Scotch homes I forget the name of the gentleman who manages them; you don't often hear his name, but he manages them very carefully and brings out hundreds and places them with farmers. There is a Roman Catholic system which is very well managed and has its head quarters in Hamilton. I have not come across, in working amongst the children in Toronto, but one boy so far in connection with any work that we have had here that was on the street; that is of boys who came through these agencies. I come across those who are sent out by the poor-law Unions; they have some agent to find the first place and then that is the end of it, and I believe there are some places in which children have been really turned out on the street. I cannot prove it, but I have strong suspicions of it.

Q.—Are not the agents of these homes interested in sending favorable reports? A.—Well, get the books; they cannot cook the books. I think I know every boy in the city who is not in very good shape; they come to me, or I see them somewhere.

Q.—Do you believe in the law of heredity? A.—I am not entirely a believer in

it, though, of course I believe it affects them physically. But my experience with children is that if they are taken at the right time they can be saved from crime. That is the way you can get them. Of course there are exceptions to everything, but I am speaking of the general principle, and my experience with children has been exceedingly favorable, when they are taken and handled in anything like a careful, kindly and intelligent way. I do not believe it is necessary that any child should be a criminal as a child; and if you get a child up to seventeen or eighteen in a good line the chances are strongly in favor of his getting on.

Q.—You think that, setting aside the higher law of humanity and putting it on the narrow ground of the good of the country, this immigration of the boys of whom we are now speaking is good? A.—I do. I tell you another thing about these children: it is the general estimation that they are children taken altogether out of bad homes, but that is not the case. In a country densely populated like the Old Country there is an immense class of people who, from age, poverty or the death of the bread-winner, are very poor and miserable, but who are perfectly respectable, and the children are right down at that point that they become part of the miserable poorhouse class unless they are dealt with. Now, a large proportion of the children taken charge of in these homes are of this class, and I think many of them are the finest children I ever saw in my life—children who have come out in that way. You find that the majority of these children are very much liked in the homes they come to in this country; I know that the people get very fond of them. I forgot to mention Miss McPherson's Home at Stratford.

Q.—And Miss Rye's? A.—Miss Rye's, I think, is for girls; but I think Miss MacPherson's is for boys. If you have a session at Belleville and Stratford, go right into the places where they have been working a long time and summon the farmers in the neighborhood; I think it would be a good thing. I have not done that myself; I have only met particular cases; but that is my judgment, as far as I have had opportunities of learning.

Q.—Have you anything further to add on that point? A.—There is another class. It often happens in the Old Country when a man is getting a little past work, when he begins to be a little bit of a charge, though he may never have been on the poor list; but he is not quite so able to make his living—people of this class are helped out to this country by private funds. This class are more helpless still. I do not say that we have any right absolutely to exclude anybody that can make a living, but, at the same time, this is a hard country for helpless people for physical and other reasons, and they should not come here; it is more cruel to bring them here than to leave them.

Q.—You think it is not right to load us with the paupers of other countries? A.—Yes; and, besides, in this country they are far more helpless and suffer more than at home, because of our climate.

Q.—It is an injury to the people and a wrong to us? A.—Certainly; the economic feature of it does not require discussion, I think.

Q.—Now, as to the class known as news-boys in Toronto, are they mostly immigrant boys or native boys? A.—Well, you could get that information better from the newsboys' institution. My opinion is, that they are neglected children, some of them the children of widows trying to earn a little; but the majority are neglected children, and it is ruinous to a boy to become a newsboy, in nine hundred and ninety-nine cases out of a thousand. When I was in Chicago the other day, I saw many of these boys; they all knew me. There are several runaways among them, and they earned me to see their parents here. I found them respectable working people good mechanic. They told me that their boys were all right until they began to ask me to see their parents here. I found them respectable working people though a well newspapers on the street at eleven and twelve o'clock at night, but then they got demoralized. I met a number of those boys and they were all alike in that respect. My judgment is, that if we were really paternal in our management of children, they would not be allowed to be on the streets at late hours at night doing any business of that kind.

Q.—Would you advise a law by which the police would be permitted to drive these boys home after a certain hour? A.—It does not require police; the school system could be so simply extended to do it all that the wonder is that it is not done. In Glasgow the school system is a paternal one. The chairman of the school board goes into these districts and has the parents and children come before him and he enquires into their mode of living, and so on, and if any cause prevents them from going to school he gets it removed some way. The system, as I said, is paternal, but the authorities take a great deal of trouble. I have, with some trouble, persuaded our Police Commission that the great bulk of our petty crime has been committed by boys just in this way. I persisted in bringing it before the board until they consented to allow a suitable policeman to be put on duty for thirty days, to go about in plain clothes and try to break up these gangs of boys who assemble on the streets.

Q.—You are *ex-officio* a police commissioner? A.—Yes. The result has been that we have broken up twenty of these gangs, ranging from five to twenty-five. They were systematically organised as a general thing, the head of the gang being a boy who was convicted once or twice before the Police Court. They were systematic gangs, organised for all kinds of mischief, and in a great many cases they indulged in petty stealing. He has succeeded in breaking them up, and it has made an immense difference already. In some cases the parents were got to send the boys to school or to work, and now the Commission has made an order that this shall be done regularly once a month or as often as necessary. I am satisfied that in every city a large portion of the petty crime is done by these boys, and you would be surprised at the perfect organization they have amongst themselves for the purpose of discussing and planning how to carry out their mischief. At first there were one or two things that struck me very strongly. One of them was the way in which every window in a vacant house would be broken, and I found that it was one of their plans to assemble together by a pre-concerted arrangement, armed with stones, and with one volley they would break every window in the house, and then they were off like a shot. There is no such thing as a boy being really criminal at heart until he gets to be about thirteen or fourteen; it is all surface depravity up to that time; and I don't believe in the necessity of allowing boys to go to the devil at all if they are properly managed; I think it's a sheer waste, the result of bad government and bad management.

Q.—What proportion of the boys in Toronto do you think are absolutely homeless? A.—I don't know that you could say that of any boy. There is a certain number who are regular residents of the Newsboys' Lodgings. There was a boy in my office yesterday, an incurably bad boy you might say, because we have not got the machinery to cure such cases just now. He is between thirteen and fourteen; he moves about from place to place; he has been helped several times to work, but he will not stay at work. He should have been taken care of and dealt with before being allowed to drift down into criminal life. That boy may be called homeless, but it is by his own determination.

Q.—Boys cannot be sent to the Penetanguishene Reformatory, unless they are actually convicted of crime? A.—No.

Q.—Do you think that a reformatory for boys not convicted of crime would be a good institution? A.—Do you know the principle of our industrial school?

Q.—Well, perhaps, it would be as well for you to state it, so that we may get it on the record? A.—I have been convinced all the way through that it is a wrong principle to treat boys as criminal under any circumstances, that there is no necessity for it, and that a child should be treated as a child, and on an altogether different system from the one we pursue. Now, our industrial school is modelled on the English system, and the particular point about it is this—that there is nothing in the world about it that has the prison taint. If, we have ourselves a boy who is unmanageable we send him to the strictest boarding-school that we can find, the one having the best manager. That is what we do for our own boys, because we have the means to pay a couple of hundred dollars a year for it. But the workingman cannot do that; he has no play ground near his house, and when the mother is busy in the

house, and the father is at his work, the boy is on the street, subject to bad influences until he gets unmanageable. The parents cannot manage him; they have not the time nor the opportunity to get him really under control. Now, to say that that boy becomes a criminal, and is to be treated as a criminal, because he commits an offence against the law—to send him to a place with the criminal taint—under such circumstances is simply an outrage. The principle of the industrial school is nothing more nor less than a compulsory boarding-school, attached to our school system, for boys who are unmanageable; and if the parents cannot pay the expense the municipality pays it. If they can pay, they do so, so that they are not under any obligations to the municipality. Now, that institution has got no cells and no bars over its windows; it has not even a high fence around it—the fence is one, which when I was a boy I could have jumped over with a running jump. There is nothing in the world about it which would prevent a boy from escaping, if he tried. Of course, they do escape sometimes—we have had four cases. Of course, if they went as far as Japan we would get them back. One got as far as Sarnia, and another as far as Point Edward; a third was found in the city, but we got them all back. One of them came back from his mother's home. They are not put in cells, they have no criminal treatment; they are treated as you would treat boys in school. If it is necessary to give them the strap, they get it, though there is but little of that. At first when a boy is taken before the Police Court, instead of being brought up in the open Court he is taken to the judge's room. The judge talks with him, and has a talk with the parent; he looks into the case, finds out from the parents what the fault is, and what they think about it, and if he thinks it is wise to do so he simply writes an order to the school, and they take the boy, and keep him for five years, if necessary. There is one boy that we have already restored to his parents. He had simply got uncontrollable, and lost his head and judgment, and when he had been there for three months the home feeling was restored. The parents were living in rather a bad neighborhood, they moved to a better neighborhood, and the boy was taken back to them, and now he is as good a boy as any. He would have been ruined if he had been sent to a jail or handled in that way. Therefore, I say it is an outrage to treat boys as criminal, when you can answer every purpose in that way.

Q.—It does answer the purposes? A.—Yes; I wish you could go out to Mimico and see it. At present we do not teach them with any intention of teaching them trades. My theory is that we have too many in the different trades in the city now, but there is any amount of land in this country and we take the boys and teach the great majority of them, who are physically suitable, so that they may be useful to farmers. They are taught so that they can do anything about a farm, the handling of horses, sowing, planting, the use of implements, simple carpentering work, mending harness, so that when we give the boy out to a farmer he finds him posted in the very things he wants. There will not be any trouble in placing them and eventually they will be holding land of their own and we will have good citizens manufactured out of so-called bad boys. You would be surprised at the work these boys are able to do under the carpenter's instructions; they are so quick and clever that they require less teaching than you have any idea of. Our theory is that in the common schools we have no education which is worth anything which does not educate a boy perfectly. We should train him to use his mind, his hand and his eye together and when you thoroughly train him to do that, when he is turned out, he are turning out of the public schools. They are taken away from school at twelve or thirteen when they have just education enough to fit them to be shop men or book keepers or something of that kind. By our system we are raising a miserable class of this kind of whom we have a superabundance already, a class whose wages are very low. There are married men who are working as book keepers and in other occupations of that kind, who have large families who get perhaps seven dollars a week and some even four or five dollars a week. They are educated to a point which just makes them unfit to go into manual occupations and they go into callings where they have almost to starve for the rest of their lives.

Q.—Is that not due to a false idea of gentility rather than to defective education?

A.—Yes; but the proper thing is to teach every boy at school a manual training, and don't mean to teach him a trade but to teach him to use his mind, his eye, and his hand together. Most of the boys when they come out of school have fingers so clumsy that they are good for nothing. I was at the manual training school at (Chicago), it is rather more of an aristocratic institution; the boys who come out of it become foremen and managers of work, but it has been very successful. They are now starting an ordinary high school in that way but they do not go far enough. They teach some of the boys in this way; they take an ordinary class and begin with, say, a block of pine wood; they are asked about it, its nature, where it grows, the purposes to which it can be applied, and so on. Then they are taught to draw mortises on a blackboard, after which they go to a bench and are taught to do the work themselves and you would be surprised at the results which are attained. This is on the principle of complete training but it is not trade training, because I am convinced that you have to go back to the old system of manual training, the old guild system, to some extent, not only to get men to learn their trade properly but to give them a better opinion of labor and to remove silly objections to manual training. I might illustrate that from our own experience. I was not inclined to be a very quiet boy when I was young, and when I was at Upper Canada College I took a fancy for printing and I was not long before I had a good stock of everything connected with printing, and I used to put in all my spare time working at it and knowing the number of boys of my time who went to the dogs I am certain that made a great difference to me. I believe it was of enormous value to me, and I think that interesting boys in these things will have the best practical effect in keeping their minds off the things which will injure them—to say nothing of the more material benefits they will receive.

Q.—I will ask you to refer back for a moment. You spoke of these gangs of boys; were they made up to any extent of the newsboys? A.—No; I don't think so. To give you an idea of how these boys get hold of the training of the common school I will mention the case of one little fellow of about thirteen. He had been up many times before the police magistrate who however looked upon it as ridiculous to bring him up—he was very small for his age and he used to turn him off. That boy was a perfect little thief. I have often seen him with a string of school boys at his heels watching around the fruit stores and teaching these schoolboys to steal. We bring before the police court in Toronto about a thousand girls and boys every year and these children are in touch with the children of our public schools. Now it is all wrong. It is marvellous how these boys follow a leader; they go through a regular process of electing a leader.

Q.—There are natural leaders of boys, just as there are of men? A.—Yes; and they generally lead them through some gratification or through some bold leadership in mischief.

Q.—This school at Mimico might be called a primary technical school? A.—That would not be a bad term for it.

Would you carry the technical education of the ordinary schools further than that? A.—No; I would not. My theory is—and I think it will eventually work into practice—that we have to go back to the guild system in order to determine the education of apprentices. If you are to have first class workmen you must have a definite system of apprenticeship and carry it out.

Q.—Are not the conditions of production so changed that these old conditions of apprenticeship are no longer useful? A.—No; I don't think so. I don't think there ever was a better system than the old craft system by which you determine the exactly an apprentice system so that men could not be considered workmen until they have gone through a certain training. I will not go into the particulars but I am satisfied that it has got to be done. The main difficulty now between workmen and employers is that boys are engaged as workmen and take the place of skilled labor the result being that it is unjust to skilled labor and does not give a fairer price for dearer labor.

Q.—Would there be economy in employing skilled and therefore

rather than employing unskilled and therefore cheaper workmen? A.—I think the best is always the cheapest; that has always been my experience. It is always cheap to employ a thoroughly skilled man; he looks to the consequences, and even if he is only to make a hole in a wall he looks further to see if it will lead to other damage.

Q.—You would not employ a bricklayer to carry a hod? A.—No. It would not be wise to do so.

Q.—Then in any craft you would not require a skilled laborer to do unskilled work? A.—No; certainly not; it would be a waste of time and good material.

Q.—If there was any kind of a law forbidding an employer to put unskilled workmen at rough work you would say that would be a hardship on the employer? A.—If I were to answer that you would probably get me into some technical position in which I would not be very strong.

Q.—No; I confine myself to general principles? A.—Well, the general principle is that work is of a kind either requiring skilled labor or not. The case of a bricklayer carrying a hod is a clear one. It does not require a bricklayer to carry a hod, and in anything connected with carpenters' work if there are rougher portions to be done by apprentices, those apprentices should be called on to do it, but they should do it under a system which trains them to be skilled men. The result is simple in its effects; you will always have men going through, but you will have skilled work-guilds. You will always have enough labor under a proper system, within scope of the put at more valuable work.

Q.—Referring again to technical schools, do you think that technical education should properly be taught in the common schools? A.—You understand just how far I carried that idea just now. You cannot educate boys to be fit for tradesmen's or workmen's positions in the common schools. But this manual training I speak of would be simply part of his education; he would be receiving that training which would make him a perfect man. That training would be common, perhaps, of twenty different occupations; it would be necessary to fit the boy for any one of them. Just as we are giving in our common schools a certain intellectual and moral training, we should give the pupil also a certain manual training, which will make him more facile, take away his objections to manual labor, and give him an interest in it. In the Old Country, I believe they are pursuing a capital plan with regard to apprentices, and the result is that they are getting capital workmen.

Q.—You would combine primary technical education with ordinary public school education? A.—Yes, I would; I think our public schools are terribly imperfect at present. They are turning out bookkeepers and shopmen; training men into labor of that kind where they are not needed, and are not productive to themselves or the community. They are destroying good workmen by destroying an interest in the very things they should take an interest in.

Q.—You think the common school education should take into account, more than it now does, the actual lives of the people in the way of educating them for the actual battle of life? A.—Yes; I think so. I would make no exception; I would make every boy go through this manual training.

Q.—Familiar with the use of tools? A.—I would have his mind, his eye, and his hand trained together:—made a perfect man, who can apply himself either physically or mentally. Of course in some countries, Austria for instance, everybody has to acquire a trade; I believe the Emperor of Austria is a tinsmith, for instance, and I see no reason why we should not have that system here.

Q.—Have you a pretty general knowledge of the homes of the poorer people of Toronto? A.—Yes.

Q.—You have visited them? A.—Yes.

Q.—Do you think they are as good as could be expected for people in their circumstances, or is there room for improvement in that respect? A.—Do you mean in the character of the houses?

Q.—Yes, the character of the houses first? A.—Well, there is very little system

about the character of the houses; in any new place they build according to the fancy or idea of the builder, and many of them are built by the men themselves. What we know now of sanitary necessities was hardly known at all when many of them were built.

Q.—Are they large enough? Do they give the people sufficient air space? A.—I don't think the old ones do. I think the houses now being built, such as the row of cottages you see in the newer districts of the city, are better; they are being built with high basements, good first floors and in some cases rooms above. There is comfortable accommodation accompanied with good drainage and generally a piece of land behind them. I think there is another thing in which our Government should be more paternal. For instance, in St. John's ward you will find houses built in front and then others are built in at the back end, the result being that there is no space or air room and they are very unwholesome. Many of these rear buildings are taken advantage of for bad purposes, especially when they fall into the hands of landlords, as they are very profitable. Of course originally the additions were made when poor people managed to run up a little cottage and draw some revenue from them, but now they are largely falling into the hands of people who own a number of houses and the system is wrong in every way. It is also wrong to put two or three families into these small houses of two or three stories, for instance. I think the whole question of artisans' dwellings should be as much under Government inspection as factories and I think there should be prompter methods of dealing with cases where people are being crowded together to their injury and, in many cases, their positive destruction. It has taken us nearly a year to get rid of one lodging house of bad reputation and one in which hundreds of children have been ruined.

By the CHAIRMAN:—

Q.—Have these places different entrances? A.—This was an old and a large house, originally a sort of mansion house with one entrance.

By Mr. FREED:—

Q.—How many rooms would one family have in these houses? A.—In some cases only one. I think that is the case, but, of course, I have not been enquiring particularly, but have mentioned these things as they came into my mind. I have heard of many cases where decent people were in two small rooms—decent people, but they were being injured physically by being in such close quarters. I think that artisans' dwellings require rigid inspection for their protection. I do not say that we should have buildings which would increase the rents too much, as they are now so large under present wages, but I think the inspection should be such that all such dangerous and unsuitable places, the number of houses on one lot, and all that sort of thing, should be covered by Government supervision. You never can depend on any machinery for things of that kind.

Q.—Would it be possible to educate the people themselves as to the care of their homes and the securing of better sanitary conditions? A.—I think so, but you don't know how helpless they are. Houses just now are scarce and a man is given very short time to complain. I have never had a complaint since I have been in the city and yet I know hundreds of houses that should be complained of. Here, say, in a house at a rental of six dollars a month; it is not suitable but the tenants cannot afford to pay more and if they complain they either get the rent advanced or they are turned out. They are not in a position to complain.

Q.—The people are afraid of their landlords? A.—Well, they are not in a position to complain; they will tell them that if they don't want it they had better go.

Q.—How could a landlord turn them out? A.—Well, they are only monthly tenants.

By Mr. McLEAN:—

Q.—Do I understand you to say that the landlords boycott their tenants? A.—I would not say that, but very naturally a case of that kind would get about.

By the CHAIRMAN:—

Q.—It is the law of supply and demand? A.—If a troublesome tenant comes

me and complained and I went to the sanitary office and there was a row I tell you that tenant would have a hard time. I have very often taken the responsibility myself and I have told the inspector to say that I have sent him or otherwise there would be trouble, if they thought a complaint had been sent in. Of course when a person complains of the house next to him it makes it comparatively easy, but it would be an injury to the tenant if it were done in such a way that he would be suspected of complaining.

By Mr. FREED :—

Q.—What advance has there been in the rate of rent in last few years? A.—I cannot give you that though I could ascertain very easily. A real estate agent could give you the figures from year to year.

Q.—Have you any knowledge of the position occupied in shops by shop girls? A.—Yes.

Q.—Are they over worked or badly treated? A.—I think they do more than you or I could do. I know I could not stand in these shops from eight o'clock in the morning until closing hour as they do.

Q.—Are they required to stand? A.—Yes.

Q.—Are no seats provided. A.—I know of none, but they may be provided. I am perfectly certain that you or I would break down under it, and they do break down; sometimes they drop down behind the counters.

Q.—Is that within your knowledge? A.—Yes.

Q.—If they sit down at their work are they fined? A.—I could not say.

Q.—Do you know what pay they get? A.—Yes, they get from one dollar a week upwards; there are some as low as one dollar when they come in.

Q.—And after they get experience? A.—After experience they get up to good wages—from three to six dollars would be the average, according to their skill. Of course there is a much larger supply than demand but the whole question of female labor is one which should also be under government supervision as a helpless class.

They are a helpless class. For instance to give you an idea of the effect, or what I consider to be the effect of the present system of competition for work. I am only giving this from general information gathered in various ways; I do not mention it as happening in any particular shop or implying that it is the case with any particular person here. A sewing woman is taking shirts to make, for example, and getting so much for them. She goes into the establishment and says, "I want you to give me some work." She is told that they have plenty of workers and that they must keep their own people going; however after some conversation she asks what price they will give and they arrange to send her a lot at such a price—a lower price than they have been paying. It is human nature and business nature for that to be done and it is undoubtedly done and the result is that when the regular worker comes in she has to take that price or she will not get the work. Now these are cases which happen and I think there should be a limit to the prices at which work should be given out to helpless people. I have seen things of that kind which would make your blood boil. Look at the east end of London where it is carried on to such an extent, where there have been so many visitations, where the prices are so much reduced, and see what awful misery there is. The same thing will work out here unless there is government protection for helpless classes.

Q.—Would you have the Government fix the price? A.—Yes; I would have them fix a price below which no one would venture to give out the work to helpless classes. Men can take care of themselves, but a woman looking for bread for her children cannot do it; girls cannot do it; they have no friends and they have just to submit and take what they get. There is no question about the necessity for protection of that kind. You may say that the work would not be done and they may say that it can be brought in from a foreign country. I was in the City of St. John and I saw a beautiful mantle with something which I think was a kind of fur around the collar and cuffs, and they told me they could sell them at one dollar apiece. They

were made in the East End of London, and of course the women who made them made a portion of their living at something else. I would not allow a dollar's worth of such goods to come into the country; I would put a prohibitory duty on them.

Q.—Do you believe that the under payment of these women draws them into prostitution? A.—I have only got to answer this—that a good woman will die first but there are a great many unfortunate girls, who are young and careless and like pleasure and who have not had a good training, who are under the influence of temptation, with possibly starvation, in spite of the best work they can do. It is only too possible; I do not see how it can be avoided with the temptation it offers for an easy living. We have been dealing with this question of prostitution in this city differently from the way in which it has been dealt with anywhere else, by breaking up of these houses. I may say that I always send an officer before, telling them that if they will take up decent work, or if they will go to any home, we will get homes for them, but that they must stop that kind of life. There has never been a case of breaking up a house of the kind without a notice of that sort. Of course many have accepted the offer and we have sent them home or helped them and a great deal of good is done; but many have gone away from the city, feeling that under such a system they would go away sometime anyway. But it is rooted laziness which is the great difficulty with those who are really prostitutes. Their laziness becomes a matter of education and training; they have led a lazy life for such a time that they become unfitted for industry. Take a girl when she first begins and there may be some hope for her; she might overcome the tendency to laziness, but with those tendencies to laziness and idleness, of course it is almost a certainty that she will drift into such courses.

Q.—Do shop girls and sewing girls generally live with their parents, or are they alone? A.—Many of them come from the country or from other places and as far as I meet them, I have a wonderful respect for them. It is wonderful how they fight a hard battle and get on, and how honestly and decently they live. I have known hundreds of them and it is wonderful what a superior class they are and how faithfully they do endure and work on. I know that the percentage in this city that feel every year cannot be very large; I do not think it is very large because we would feel it in the recruiting of the regular class. We find the same women to a large extent coming under our notice, and coming into the court. We had a case actually within our knowledge where a girl of thirteen was brought up and sent to the Mercer Institution; she got along there very nicely, but when she got out, she went home to her mother who actually sold her again. Of course in such homes as that, children must be bad, and there is where we get a large recruiting ground for that class.

Q.—Have you any knowledge to what extent working men own their houses in Toronto? A.—I think that up to the last few years, to a very considerable extent and I think it you reach the foundation, as to the people who own buildings in Toronto they have nearly all been working men originally. The great majority of the buildings here have been built from wealth right from the hand.

Q.—Is the ability on the part of the mechanic to own a house less than it formerly was? A.—Certainly; property has increased in value so much and they have to go further away, though of course the street car system has stretched out. I was surprised to find in our new addition to the city, about four miles away, so many mechanics going out to and from their work, at a place where they have a mile and a half to walk to the street cars.

Q.—It is a question of distance and not of actual increase in the value of property? A.—It is a question of increase in value anywhere within reasonable reach. We used to have a dense population all through these streets here in this part of the city but now you will notice, these old houses are being pulled down and fine warehouses and other buildings are going up; it is the old question of a crowded population. But take a man who has been living here anywhere south of Queen street, and fine working men used to do, and when you get property assessed at \$100 a foot it walks into his wages, though of course he can sell it.

Q.—And car fares, of course, cost a considerable sum? A.—Yes quite an item

One of the things I hope for when we get our street car system into our own hands is to get it down and remove that difficulty to some extent. In four years we have the right of becoming the owners of the car system. I think we should continue to own the road bed and lease the right to run upon it at a certain rate of fare which should be much lower than it is. The rate is now four and five cents, but I think by using other motive power than horses and so on we can bring it down to at least one half of that.

JAMES BOYLE, Iron Founder, Toronto, called and sworn :—

By Mr. FREED :—

Q.—How many men do you employ? A.—About two.

Q.—Do you make any particular class of castings? A.—All kinds, just jobbing work.

Q.—Do you know very much about wages paid to moulders? A.—I think I should do. I have been a journeyman for forty years in this country and the old country.

Q.—How long did you work as a journeyman in Toronto? A.—About eight years.

Q.—Did you receive the ordinary wages that were going while you were a journeyman, or did you do better than that? A.—No, I just received the Union wages.

Q.—Do you think that a journeyman can save money out of his wages? A.—Yes. It all depends on the circumstances in which he is situated. What one man would think necessities another would think were not, and he would save the money. I suppose this enquiry is as to the rates of wages and the working man's condition. The reason they join the Union is to better their condition, but there are very few men who say they are paid enough for the work they do.

Q.—Did you know any of your fellow workmen who saved money? A.—There are many in every class who out of a dollar a day would save money.

Q.—Did you know whether those men who save money deprive themselves of the absolute necessities of life or many comforts? A.—Since I have had what I consider the necessary comforts of life I have saved the most money. That is a matter varying with different people's opinions.

Q.—Difference of opinion as to what constitutes the necessities of life? A.—Yes. What you would consider necessities of life, I would not; and that money I would save, if I was so inclined.

Q.—Did you save the money with which you entered into business or did you get it in other ways? A.—So far as that is concerned I am not particular who knows. In every new country the trouble is that men go into business on too small capital and have either to beat their creditors or grind it out of the men. That is what I know to be the fact; but what money I got I certainly worked for.

Q.—Do you know of any reason why other moulders, as industrious and energetic as you were and having the same prudence, could not have been as successful as you were? A.—If another man had done everything I did and we had the same number in family, he would be the same as I am.

Q.—Have you an ordinary family to maintain? A.—I do not understand your way of arguing. If a man did everything I did, if he had the same income and the same outlay, he must be in the same position. You mean I suppose that if you both got the wages and he did as he liked with his money and I did the same, I might have a hundred dollars ahead and he might not?

Q.—What I mean is this; had you any extraordinary advantages? A.—I had the Union wages, for I could take nothing less according to the rules of all Unions. You may obtain as much more as possible but you cannot take less than \$2.40 a day or whatever the sum might be. Some men might consider themselves worth more, but a line has to be drawn between the man and the boss, and it is agreed that he is worth at least so much.

Q.—Taking one year and another, about how many days' work in the year can a moulder get in Toronto? A.—At stove plate moulding (I never worked at that, it is too hard for any human being to work at) a man could not possibly work more than four days a week in summer, because the work would be all out of him by Thursday if he did the quantity of work he is supposed to do.

Q.—Are you taking about week's work? A.—No, about piece work. For day's work in a good shop, where the workman has a good deal of skill, it is the same as all other classes of work.

Q.—Do you know of any moulders who have saved money? A.—I know a good lot who have not. We do not know everybody's business; I could not attempt to say, because I am sure I could not tell. Some people think I am well off, but I know my own business best, and if I were I would not work to-day. I might go into a shop where there were twenty men and the one I thought had not a dollar might be the one best off.

Q.—Do you know many moulders who have bought houses for them selves? A.—I know many have bought houses, but I think somebody else belongs to them.

Q.—Do you think ten hours for a moulder is too long? A.—I have thought that ever since I started to work and all arguments have never turned me from my opinion.

Q.—Are the sanitary conditions of the foundries in Toronto good, bad or indifferent? A.—There are very few moulders who think anything about it; they think about it just as much as I think of being President of the United States. He does not care what the sanitary conditions of the shops are; he goes out for a change and to get out of a little work—I have done it myself. Perhaps the sanitary conditions are not quite what they should be, but the men do not think so much about that as getting shorter hours and more money. They can put up with the former. In my opinion, there is much ground for complaint (in the matter as regards the buildings. It is harder for the stove plate-moulders because there is extreme heat and dust, and the shops, even the new ones, are not built high enough to carry these away.) A man who comes out of the foundry in summer is more dead than alive; in fact, he does not look like a man and does not feel like one; I could not work a horse in that way.

Q.—Are castings taken out of the sand the same night? A.—That is small castings, because there is a certain amount of steam in the sand, and if they do not cool quickly they would rust by the next morning. That is where the advantages is in the old country; the men have not to work so hard.

Q.—Do other persons there take the castings out of the sand? A.—Yes; laborers do it, that is, in the big shops. I was put to work in a foundry when I was nine years old and have worked in rolling mills and foundries ever since. So I have done my share; in fact, I have done enough for two or three men. I was President of the Union in the old country, I was twice on the executive of the iron moulders union, and I have seen the working of the system in this country, and I made up my mind that I would come before the Commission and give them my opinions. Like most Englishmen I like to have a finger in the pie, and I consider myself nothing else than a journeyman now. I have argued a good deal with different persons, sometimes I think to the injury of myself, with respect to strikes. For instance persons have argued with me that all men in a trade should not be paid alike, that there should not be a uniform rate of wages. My style of argument is this, it may be wrong, but it suits me. If you take two men, carpenters for instance and put them both to work, you do not agree what you will pay them, and both are strangers to you. You put them both to a rough job, sawing wood, or butchering wood as they call it here. Perhaps the worst man tries to do the most work. If he does not, he will not be kept on if there is a good job. The best mechanic does not hurry up to that extent, but does what he considers a fair day's work for a fair day's pay. At the end of the week, on Saturday perhaps, when they come to be paid the worst man gets paid first, and he is asked what wages he got, and he perhaps replies 26 cents or 27 cents per hour. The foreman has watched the two men and observed

the quantity of work each has produced. The man who goes in second, who is considered by the foreman the worst hand, is paid  $22\frac{1}{2}$  cents per hour. He asks the man whether he has not made a mistake in his rate of pay. The employer replies no, that the other man has done more work than he did. The better mechanic therefore takes away his tools. Presently they get employment in another shop, and are put on a first class job. The man who was paid  $22\frac{1}{2}$  cents there gets 26 and 27 cents, and the other is not wanted because he is not fit for the job. Now, how are you going to draw the line if you are not going to have a uniform rate of wages. The one mechanic who is five times a better mechanic than the other was in the instance I have mentioned, paid less wages simply because he was not put at the right kind of work; he was put at work which anybody can turn out after six weeks' practice. The same thing applies in all other trades. If the boss is allowed to judge as to the rate of wages to be paid, he does so selfishly; that is natural and human. If you do not draw the line, how are you going to get on? That is why I take such an interest in these matters, and that is the way I argued with men during the strike this past summer.

By Mr. HEAKES:—

Q.—You believe there should be a certain rate struck, no more, no less but as much more as they like to give the mechanics? A.—No less, but as much more as they like to give the mechanics. The employer has this advantage over the employes. If a man does not suit, he can always discharge him in a moment. You cannot blame an employer for discharging a man who does not suit him.

By Mr. Armstrong:—

Q.—How long have you been working in Toronto at the foundry business?  
A.—Eight years next June.

Q.—You say you were president of the Moulders' Union in the old country?  
A.—Yes.

Q.—For how many years? A.—We were elected every six months. I was on the executive for two terms of six months in London. I was president of the East London branch.

Q.—You have been a union man in the old country for some years? A.—Yes.

Q.—Did you find it beneficial to belong to organized labor? A.—Yes; what would we do in London except for that.

Q.—What other benefits did you derive outside of that, connected with organization? A.—We got sick benefit, accident and superannuation and funeral money.

Q.—Does organized labor have a tendency to keep men steady in habits and morals? A.—I do not know that it does to any extent, because I have worked in a shop where every man was a Union man and we did not allow others to come in, and yet, excepting myself and another, every one has been drunk every chance he could get. So I cannot say that makes a great deal of difference. That lies with the men themselves, and every man thinks he has a right to do what he likes with his money.

Q.—Was there an apprentice system in connection with the trade in the old country; did you recognize an apprentice system? A.—In the large shops there were apprentices, and also in some of the ordinary shops. The shops were allowed one boy to every three men; that was the proportion at the Union shop.

Q.—Do you believe that the indenturing of an apprentice has a tendency to make him a more competent journeyman? A.—When he is bound as an apprentice he does not very often run away; that binds him. Moreover, if he runs away, he has to put up with the consequences when he comes back, if the employer chooses to push the case. I have run away many a time, but I was not apprenticed.

Q.—Do you not think that a boy is more controlled by his employer when indentured for a certain time and that he is more likely to make a good workman?  
A.—I heard what was said about it to-night, and I thought it was a lot of bosh, because it was something like a man getting married; he does not know what's going

to be the result. How many elopements you see occurring. Take a boy who is apprenticed. The boss for a long time does not know the apprentice. At my last shop he did not know me (and I had worked for him a long time) let alone the apprentices. That is the difference between the old country and here. They serve seven years in England and in most trades here they serve four years, and naturally the men when they are out of their time are better men at their trade there than they are here, because four years in my opinion is not long enough. I have always advocated a longer time. It may be long enough for the boy and his father; but as regards the mechanic I do not think in that time he knows enough of the trade, to be a machine moulder at all events.

Q.—Do you believe in the principle of arbitration in the settlement of labor disputes instead of strikes? A.—Certainly I do. I believe in that system worked in this way; they should be very particular who the third party is. If you were going to arbitrate you should have a certain number of men from the shops to represent the workmen, and a certain number of employers, and then a disinterested party.

Q.—Provided both parties could not come together, do you think the Government should appoint an arbitration board to step in and arbitrate either from a voluntary or from a compulsory stand point? A.—I do not think they should in either way; I do not think the Government should interfere with it, for two or three reasons. I would sooner have a man as arbitrator who understood the working of the business, even if he had left it, than a man who did not understand it. I do not think he should have to depend on what he hears from other; he should know the run of the business on which he is told to arbitrate. I do not think you can show me men in the employ of the Government who know all the different trades, and so I suppose we would have our taxes raised ten times more than they are, for so many men would have to be employed, they would have to be plumbers, printers, carpenters and God knows how many more. However by arbitration we might come to some conclusion, for working men are a class of men easily led.

Q.—As an old Trades Unionist in England, did you ever hear of the manner in which Mr. Rupert Kettle settled arbitrations? A.—No; I never heard of it.

Q.—At what time do you think men should be paid? A.—A week is long enough for me. If there is any interest to be had the men should have the benefit of it, especially in Toronto where there are so many bankruptcies and assignments.

Q.—During the seventeen years you have been here has the condition of matters been improved? A.—Yes, I am certain it has.

Q.—Have the wages risen? A.—Yes.

Q.—Has the cost of living increased proportionately? A.—House rent has gone up; in fact, I do not know where the mechanic is shortly going to live unless all live together.

Q.—Considering the cost of different articles and of living and the wages received is a man better off today than he was ten years ago? A.—I am myself, because I have no children to keep; but I cannot answer for other men. I daresay as a rule they are better off; I think so in Toronto. The only thing in my opinion that has gone up in Toronto is house rent; but I do not take much notice of domestic affairs so long as I get three meals a day.

Q.—Is there much manufactured moulding coming into Toronto at the present time from foreign countries? A.—There is unfortunately a lot which comes in because they have cheaper labor in country places.

Q.—I mean that comes in from foreign countries? A.—I do not know. Some comes into England from Germany and Belgium but I never heard of any coming into Canada.

Q.—You have been working as a journeyman seventeen years? A.—No; I do not know what to call myself now. I am not exactly a journeyman and I cannot call myself a boss.

Q.—Have you been a boss for eight years and been in the country seventeen years? A.—Yes.

Q.—I presume you were working as a journeyman previous to the eight years you have been a boss? A.—Yes.

Q.—Have as many manufactured articles come in during the last ten years as formerly? A.—I could not tell whether any came in; I never saw or heard of any.

Q.—In your opinion at what age should an apprentice go to the moulding business, which is a heavy trade? A.—I should think an apprentice should not be less than sixteen years. A boy is not set before that time, and it is heavy work, especially in stove plate or agricultural work. We have an advantage in London over Canada. The rules of our society are very strict in providing that the men shall not work one hour piece work, so that a boy there is not expected to work to the extent he has to do here. In this country when a boy goes into a shop where nearly all the men are working piece work he becomes anxious to work piece work too; and thus when he becomes a man he is played out, he has lost his vitality and someone else must take his place. It is bad enough for men, but when you put a boy at piece work he works too hard, for he does not know the consequences, and when he reaches forty years of age he has gone up.

Q.—You think that both as regards boys and men piece work is injurious? A. I always thought so; I never would work at piece work. I have had to work at it, but I have shifted when I got the chance.

Q.—Do you know if convict labor affects your trade? A.—I was over the Central prison when they built cars there.

By the CHAIRMAN:—

Q.—Do they do it now? A.—Decidedly not, although they make brooms.

By Mr. ARMSTRONG:—

Q.—Were you ever connected with any co-operative establishment? A.—Yes; I was one of the committee of a co-operative store when I left England.

Q.—What is the basis of success on which they work? A.—The first one I joined smashed up. We did not have the rules strict enough. But for the next one we altered them, and had it managed properly. We gave non-union members one third of the profits, and we had metallic checks from one half penny up to one pound, and these were given according to the amount of the purchase. When they got one pound's worth of checks they changed them for one pound, and they were handed in every three months. We took stock every three months and divided up every six months; we paid five per cent on the paid up capital and gave dividends on the purchases. I consider it was one of the best things we ever had; it was very handy for me with my family.

Q.—When the checks got up to one pound did you get them changed for cash, or was the amount added to your share? A.—It was in cash up to one half of the shares the person had. A man was not supposed to go over a certain amount; the shopkeeper was answerable for all over that.

Q.—Was the institution a success on that basis? A.—Yes; it was first class. I was one of the committee of managers for two years; I was on it at the time I left, and I have had letters from them since and they say they are going on in a first class way.

Q.—Will you tell us the basis on which the establishment was conducted that was not a success? A.—We allowed the shop keeper to have too much scope, but after our experience we got a little wiser. We found out this would not do, and in the second case the shopkeeper was supposed to pay for what he got himself. Previous to that there was no check on him, and at that time we had no metallic checks. These checks were kept in a box, and if you were a member of the concern and went there and bought two shillings worth of articles the shopkeeper would have to enter that in a book and give you a check, and if you were a non member he would give you the same.

THOMAS BECKETT, called and sworn.

By Mr. FRED :—

Q.—Are you a master carriage builder in Toronto? A.—No.

Q.—You are a journeyman? A.—Yes.

Q.—Into what classes are the men who make carriages divided? A.—In the first place, there are four divisions of the carriage business: the wood-worker, blacksmith, painter and trimmer.

Q.—The men who work at one branch do not work at another? A.—No; the wood-work is divided into three parts. The blacksmithing: I do not know that that can be said to be divided, but the men who work at it are the blacksmith, his helper, and finisher. In the paint shop, there may be a painter or a painter, colorer, finisher and striper, but in the shops in Canada they do not employ all these separate men because their business is not sufficiently extensive to allow them to do so.

Q.—The painter, for instance, will be able to do other parts allied to his business? A.—Yes.

Q.—And the wood-worker the same? A.—No; not quite so.

Q.—What men would there be? A.—There is generally a wheel-builder, a body-builder, and, I believe, in some of the shops they keep one or two of the men according as the demand may require, to do the heavy work.

Q.—Such as waggons? A.—No; heavy work is supposed to be carriages of heavier dimensions and larger accommodation than buggies, such as Broughams, rockaways, coupes, or landaus. That is called heavy work.

Q.—About what wages do the men get? A.—They range from \$1.25 to \$2.25 a day of ten hours.

Q.—Do some work as low as \$1.25 a day? A.—Yes.

Q.—Are they skilled workmen? A.—They have served an apprenticeship. We generally find they come from shops in the country.

Q.—Have you a Union? A.—We have a kind of a little organization in Toronto; that is about all I know of in Canada.

Q.—Is the scale of wages fixed by the Union? A.—No.

Q.—Then what the men receive is obtained by an understanding between the men and their employers? A.—Yes; it is just according to a man's ability.

Q.—How do the wages of those men compare with the wages of men in other trades? A.—They are away below; they are below any other trade in Canada.

Q.—What reason can you assign for that? A.—Competition.

Q.—Too many men in the trade? A.—Too many small shops, and also the chance of importing from other countries.

By the CHAIRMAN :—

Q.—From what other countries do you mean? A.—I mean from the United States, from England, Germany and France. I would not say they make a business of bringing in carriages from those further countries of which I have spoken, but men of means moving here bring their carriages with them, whereas, if they would come here and leave their carriages behind them, they would spend the money in this country and help our mechanics. Canada is a newer country than the United States, and, consequently, many of our people think that better carriages are manufactured in some of the large cities of the States than in Canada. Consequently, they go there and pay more money for a carriage and bring it here, thus taking the money out of the country.

Q.—Do you think the carriage they would get under those circumstances would be better than the one they could obtain in Canada? A.—There has been a time in my recollection when the American carriage was better. It might not be more durable, but it would be better finished, of better and later style and more suited to the taste of the man who bought it.

Q.—How is it now? A.—I think we can fully compete with them.

Q.—Can we compete with them in prices? A.—Not with their factories, that is such as Cunninghams of Rochester, the Cincinnati Carriage Company or the company out in Wisconsin. We can compete with Brewster of New York or Thomas of Boston, but we cannot compete with the Rochester factory.

Q.—How do wages in Toronto compare with wages in Rochester? A.—I can hardly answer that question. I have never worked in Rochester.

Q.—Have you worked on the other side? A.—Yes.

Q.—Where? A.—In Cleveland, Ohio, and in Detroit, and in some other places not worth naming.

Q.—How do wages in Cleveland compare with those in Toronto? A.—They would offer me 75 cents a day more than they would here.

Q.—Would you be better off there with that money? A.—Yes, I think I would. I went there a perfect stranger and they offered me that to fill the place advertised; they were willing to offer that for a man who was capable of doing the job. Here they would offer me \$2.00 a day for the same work.

Q.—Still you came back to Toronto? A.—I did; I did not leave there to come to Toronto. I never had my family in Cleveland. After I was there a short time, I was taken sick and had to come home. My family were in Michigan. I had to give up the job. There are only one or two such jobs in the United States or in Canada outside of New York. There might be perhaps two in New Haven and two in Boston. Such a job as I am speaking of I was looking for, at that time. I had, as I have said, to give up the job. The doctor told me I would not be fit to work within three or four months, and the boss said he could not wait more than that number of weeks, and I did not go back.

Q.—How are the blacksmiths paid? A.—Their wages run about the same; that is, the men who iron heavy work are paid about the same as the wood workers who build it.

Q.—Do any of them work as low as \$1.25 a day? A.—Yes.

Q.—They work ten hours a day? A.—They are supposed to work ten hours a day, for the money you spoke of. If they work less they are reduced in proportion.

Q.—Do painters get about the same? A.—The head painter gets about the same as the head body builder. If there is any difference, he receives a little less.

Q.—Have wages increased or decreased within the past few years in Toronto? A.—I do not think they have risen; they have decreased, if anything. In eleven years they have gone down in some of the branches.

Q.—What is the cause of that reduction? A.—I really do not know; I would attribute a little of it to this; those shops in which wages have been lowered were formerly paying a little more than some of the other shops, I think they had to come down, and paid less wages because they could not otherwise compete. However, I was not working in any of the shops where the wages were lowered, but I was working in the city at the time.

Q.—Are carriage shops in Toronto as well furnished with machinery as the shops in the United States? A.—The carriage shops in Toronto are not furnished with machinery, neither are any of the shops on the other side. Machinery is only used in factories. We have one factory in Toronto. The men there say that the work is not done as well as on the other side.

Q.—What parts of the carriage are made in factories? A.—The body, wheels, and gear. They are generally called body shops, and the one which builds bodies and gears here is called the Canada Carriage Co.

Q.—Where does the wood work for the carriages mostly come from, is it made here? A.—Here of course.

Q.—Are hubs, spokes and so on, imported from the United States? A.—Yes, all the better class.

Q.—How does the wood work made in Canada compare with the imported article? A.—It compares favorably with it except as regards the quality of timber, the durability of the timber.

Q.—What is the difference? A.—They have a better timber there.

Q.—What makes it better? A.—I could not say. I do not know what makes good lumber, except the nature of the soil on which it grows.

Q.—Do you consider that if you had a strong Union you would be able to obtain better wages than you receive? A.—If our Union was not an international one, I do not think it would be any benefit to us. There is not enough of our business carried in the country; it is split up in such a shape; we have been trying to do something, but we could not succeed.

Q.—Could the employers afford to give you better wages, considering the competition? A.—Since the National Policy has been in force, I think they could.

Q.—That enables them to give higher wages than they could before afford to give? A.—There is a considerably better business done since then. I do not see why they cannot give better wages, because if I leave here and go to Rochester or New-York or Boston, or any other city in the United States and do the same class of work as here, I can get more money, and I cannot see any reason why they cannot give more money here.

Q.—Are the prices for finished goods higher here than in the United States; in Canada are buggies a higher price than in the States? A.—No. The highest price we ask for a buggy in Canada, a top buggy for two passengers, is \$250, and that is the very best got up in the Dominion, and in New York you cannot get one out of Brewsters' shop for less than \$400.

Q.—Are not Brewsters very high priced men? A.—Yes.

Q.—Go to New Haven and take the price? A.—They do not build as good a class of work. It is more of a manufacturing city and they manufacture for any place. If a Canadian dealer gives an order they will fill it. There was a time when New Haven work stood very high in reputation but it has gone down wonderfully.

Q.—Take Cleveland, would a buggy be sold for a higher price in Cleveland than in Toronto? A.—Yes. You can go even closer than that town, just across the river dividing Canada and Michigan. At Detroit you can sell a buggy for \$300, which you cannot sell here for \$200.

Q.—So if the men in the United States get a higher price it is because the proprietors get better prices for their carriages? A.—I do not altogether attribute it to that. I have known carriages to be sold there for no more. Rents are higher and property is higher and it costs more to live there.

Q.—In what city? A.—In Detroit; everything is higher there.

Q.—Are rents higher in Detroit than in Toronto? A.—Yes.

Q.—By how much do you think? A.—I think I could get as good a house in Toronto for \$18, as I could there for \$25.

Q.—What other items of living expenses are lower in Toronto than in Detroit? A.—We can get some of our food for less money, butter, sometimes eggs, but every thing else is about the same.

Q.—How is clothing? A.—I can clothe myself as cheaply there or a little cheaper than here, unless I go to a merchant tailor and order goods to be made and then I will pay one and a half times what I would here—I would pay a great deal more.

Q.—What are the sanitary conditions of carriage shops in Toronto? A.—I think they are very good. I have no fault to find in regard to any shop I have worked in in Canada.

Q.—How frequently are the men paid? A.—Once a week.

Q.—What day is pay day? A.—Saturday.

Q.—Is that the best day? A.—It suits me best. There is one shop in Toronto which pays once every two weeks and that on Saturday.

Q.—Do you have many apprentices at the business? A.—No; not many.

Q.—Does it attract many boys? A.—Not as many now as it used to do. They have begun to find out that it is a poor business; their parents are not advising them to go into it.

Q.—Does it take much capital to establish a business? A.—Yes, it does now.

Q.—Did you not speak of small shops being in existence? A.—Yes; a great many.

Q.—Do they require much capital? A.—No.

Q.—Who establish those small shops mostly? A.—Men who are not able to obtain work in large ones, those who cannot keep a job. Men get jobs in a large shop, and they cannot keep them, and they then start a little business. They go out with a wheelbarrow and bring in a job; they make a little profit out of that, and they gradually get a little bigger.

Q.—And then these men who are not as successful as journeymen become successful as manufacturers? A.—I do not say that is so in all cases. That is about the starting point of a small shop. The man I am to-day working for, is, I consider, a good mechanic, and he started from being a journeyman; he got a little ahead, and started in partnership with his brother. They are doing a good business, and are men pretty well fixed.

Q.—Did he start business with money earned as a journeyman? A.—Yes; I think so, I never knew of anything else that he raised money from. He might have married a little, but it would not be much.

JOHN McLAREN, called and sworn.

By Mr. ARMSTRONG:—

Q.—How long have you been working in the gilding business as a journeyman in Toronto? A.—A little over three months this time. I was here two years ago for five or six months.

Q.—Is the gilding business as prosperous in Toronto as it was five or ten years ago? A.—Wages are not as high for journeymen. I presume employers are making as much money.

Q.—Is the same volume of work done according to our increased population? A.—More.

Q.—Are there women employed at your trade? A.—No; not in gilding.

Q.—At portions of the gilding trade? A.—Not in the mechanical part of it.

Q.—What is the reason that wages are not so high as they were some years ago? A.—Within the last five years there has been a revolution in the business, and there is now a different class of work done. Some years ago there was nothing but gold and silver work. German metal has come in during the last five years and it does not require so much skill. More boys have gone into the work, and the manufacturers here have to compete now with the American market, especially in Chicago, where a number of Bohemians, Poles, Bulgarians, Hungarians and all the other artisans, are employed.

Q.—There are more boys working at the trade now on account of the German process? A.—Yes; it does not require so much skill.

Q.—What are the wages of an average workingman at gold gilding? A.—They will reach about \$10 in this city.

Q.—Is there any piece work? A.—Not in this city, not in the gold gilding; in the metal gilding and silver gilding it is almost all piece work.

Q.—They are paid so much per foot, I presume? A.—So much per thousand feet. There are boys working there who should not be in the shop; there are boys running around the shop, and some of them will not be over thirteen or fourteen years.

Q.—But those are looked upon as apprentices? A.—There are no apprentices in the business.

By the CHAIRMAN:—

Q.—Is it heavy work? A.—No; it is light work.

By Mr. ARMSTRONG:—

Q.—In what branch of the business do the women work? A.—In ornamenting mouldings. They tried women in one shop at plush work, but they disposed of them.

Q.—How long in Toronto, has a boy to serve at the business to become a journeyman? A.—In the gilding business it was four years, but I do not know of any apprentices now.

Q.—It is just according to the aptitude of the boy? A.—They go around taking up what they can, but do not become thorough mechanics.

Q.—Are the men paid weekly, fortnightly or monthly? A.—Mostly weekly; one shop pays fortnightly.

Q.—Have you ever heard that the men prefer one day for pay day more than another? A.—No; they generally pay on Saturday. For my own part I would sooner be paid on Friday, but I think the majority would rather be paid on Saturday. I never heard any expression of opinion in regard to it.

Q.—Is there no co-operative moulding factory in the city? A.—No; none in the United States, either, I think. I have worked there for the last six years.

Q.—Do any mouldings come in from any foreign country? A.—Quite a lot from Chicago. A large firm in this city does not manufacture anything, but imports everything. One large shop deals almost exclusively in American goods. I know one large retailer who has quit taking goods from manufacturing establishments in this city and imports everything from the other side.

Q.—Are they gold or silver mountings that come from Chicago? A.—They are metal mouldings and ornamental mouldings without any gilding on them. The Chicago manufacturers are able to compete on account of the cheap labor there. I received yesterday a letter from a friend in the trade there, and he said they had two men, Swedes, in the shop who could not speak a word of English. They enter the shop and take what they can get; of course they are not so expert at first.

Q.—Comparing the moulding trade in Chicago and Toronto are the wages lower in Chicago. A.—Yes.

Q.—On account of the foreign labor there? A.—Yes; mostly Germans.

Q.—Has the trade here ever experienced any labor troubles in the shape of strikes? A.—They had one here some time ago. The men were working day's work and received \$1.25 and struck for \$1.50. The men were put on piece work and they worked so hard as to work themselves out of work.

Q.—Was the settlement arrived at by arbitration or mutual agreement. A.—There was a mutual agreement as regards day's work and when the men went on piece work the employers guaranteed that they would make equal to regular day's work. They made a little more money but they worked themselves out of work.

By the CHAIRMAN:—

Q.—Have you worked with Germans. A.—Yes; with lots of them in Chicago.

Q.—How is it that they can work at cheaper rates? A.—They live cheaper. Some of them when they come out first live in a way I would not like to live. They huddle up in tenements and I suppose they live on cheaper food, but I do not know that.

Q.—A man might be able to live more economically and might be able to eat food which you might not eat? A.—They live cheaper; they live in tenement houses and in a way I would not live.

By Mr. ARMSTRONG:—

Q.—Can you live in Chicago as cheaply and comfortably as in Toronto on the same wages? A.—No; not by a good deal.

Q.—And save more money? A.—On the same wages as I was getting, \$2.00 a day, I could save money. A single man can board here at \$3.50 a week, and that would cost him \$4.50 or \$5 in Chicago; and then he may have to pay street car fares which he has not to do here. His rent is more there than here by a good deal.

Q.—Is there night work? A.—There is no night work unless there is a rush at the Christmas holidays.

Q.—How are the sanitary arrangements of the shops? A.—Very good in this city.

Q.—Is the ventilation good? No; I do not think it is. It is good, but I do not think it is as good as it should be.

Q.—What process causes bad ventilation, is there a drying room? A.—In regard to the present shop I am in, I think that if there were ventilators in the top of the building to carry off the foul air they would be a benefit; sometimes it is too warm and sometimes it is too cold.

Q.—The moulders as a rule are paid in cash? A.—Yes; in this city.

Q.—Do you know any truck system here? A.—No; I do not know of any.

By Mr. ARMSTRONG:—

Q.—As regards house rent, what would be the difference in rent for a house in which you would live in Toronto and a similar house in Chicago? A.—It would depend on the locality.

Q.—Take a similar locality in each city? A.—If I had one hour for dinner I could live in a small cottage in Toronto for which I would pay \$10 a month, and I could not get a house in Chicago at the same distance; if I got a house within two or three miles it would cost twice as much. But they have flats there, in which a man can live very comfortably and which can be obtained at a little less money than a cottage here.

Q.—So that taking all things into consideration, wages, cost of living, and comparing those with the cost of living and wages here, a journeyman would be better off in Toronto than he would in Chicago? A.—No; I would not say that; I could get a better class of work there, for which there is no demand here.

Q.—For the same class of work? A.—Yes; at the present time.

Q.—You would be better off here? A.—I would be as well off.

By the CHAIRMAN:—

Q.—Do you say you can get a better class of work in Chicago? A.—Yes; because there is not the demand for first class work here.

By Mr. HEAKES:—

Q.—Is yours considered a healthy business? A.—No; none of the healthiest; it is about like painting.

Q.—Is it injurious for young people to work at it; would it injure the health of boys under fourteen or fifteen? A.—No more than any other inside business unless they were working a great deal on bronze. I do not know whether the German metal would affect them or not, as I do not know its composition.

---

FREDERICK NICHOLS, Secretary of the Canadian Manufacturers' Association, called and sworn.

By Mr. FREED:—

Q.—Have you considerable knowledge of the manufacturing industries of Canada? A.—I have had good opportunities for picking up knowledge regarding them.

Q.—You have travelled in different parts of the country in visiting manufacturing industries? A.—Yes.

Q.—How long have you resided in Toronto? A.—About seven years.

Q.—Do you know whether as a rule manufactured goods are imported more largely from the United States or from other foreign countries now, than they were some years ago? A.—No, I think not; I think the reverse is the case.

Q.—What facts lead you to that conclusion? One very strong evidence to substantiate my conclusion is the fact that so many American firms are establishing branch factories over here. I can instance a good many. They find that, owing to

the high protection we now enjoy, it is more profitable to start a branch here than continue to try and ship from their works on the other side.

Q.—Will you mention a few of such cases that occur to you? A.—One witness just now was talking about the carriage industry. There is the Carrollton Carriage Co., of New York State, which has just made arrangements to start a very large factory at Brantford, the company having been given a bonus of \$20,000 by the city. There is another large factory, which is really a branch of the American concern which was established two or three years ago in Gananoque. It was originally a Canadian firm, but the concern was taken over and enlarged, and now it is in a very large way of business indeed. In Toronto there are many instances. I might mention one of the most recent, the American Rattan Co. on Niagara street.

Q.—Have you any knowledge of the Meridan Britannia Works Co? A.—Yes; that was started as a branch of the Meridan Britannia Works of Meridan, Conn.

Q.—Where is the branch? A.—In Hamilton. In Hamilton also there is the Canada Screw Company, which was originally started under the auspices of the American Screw Company of Providence, Rhode Island. There is hardly a town in this Province of any importance but has a branch of an American concern that has been started in it.

Q.—Referring to the carriage question; have you any knowledge of factories making gears for carriages, and do you know whether they have prospered or not of late years? A.—So far as my information goes, the carriage industry is radically different from what it used to be. Some years ago carriages were made in what were called carriage shops; that is, the whole of a carriage would be made in one shop. Now it is the reverse and they are made under the factory system, and often when a shop makes a carriage they purchase the carriage box from a factory. There are special factories now; one makes a specialty of manufacturing carriage bodies, another of carriage tops; another makes the wheels, and so on. So that in many places the makers can buy the principal parts of the carriage and put them together. Iron them and paint them. I might say that in Canada the carriage manufacturer formerly suffered very much from the importation of cheap American carriages, the product of prison labor in the United States. The axle work was all made at Jackson, Mich. at the prison there; but since the prohibition of the importation of the product of prison labor, if a carriage were imported here and only the axle were the product of prison labor, it would be seized.

Q.—We have had witnesses before us who have asked to have their names suppressed, because they feared their employers would resent their coming before us. Do you think there is any coercion of their men by employers of labor? A.—I have no hesitation in saying that I think quite the contrary. There may be isolated instances, but I do not know of any manufacturing employer, and I know a great many, who would coerce his employes for testifying before a Commission of the kind. They are just as anxious for light to be thrown on this question as the laboring men are.

By Mr. McLEAN :—

Q.—Do you think that any employer would inform you if he did coerce his men? A.—I can answer that question by stating another instance. You know probably that the Manufacturers' Association has been blamed and criticized in the press as fighting the passage of the Factory Act. Those who know anything about it are aware that there was not one word of truth in it; the Manufacturers' Association never fought the Factory Act. When the Act came before both the Ontario and Dominion Governments—and the Dominion Government can corroborate what I say—no effort was made in any shape by the Manufacturers' Association to prevent its passage. What the Association did do was to endeavor, when the Act became law, to see that impartial men were appointed as Inspectors.

Q.—That is not answering my question. My question was this; if those bosses did use coercion would they be likely to tell you? A.—I noticed an item in the newspapers, probably a week ago, that an employe was afraid to give his name to

the Commission when appearing as a witness, and I asked two or three manufacturers I happened to meet whether they had any objection to their men testifying before the Commission, and in each case I was told they had no objection whatever, that they were willing for any of their employes to testify. I am sure if there is any branch of industry respecting which the Commission may desire the employes to give evidence, the manufacturers are quite willing to let their employes come.

By Mr. FREED :—

Q.—Does the workman stand on an equality with the employer of labor in the commercial transaction of selling that labor? A.—That is according to circumstances. I think the law of supply and demand is just as applicable to labor as it is to the purchase of commodities. If, for instance, there is a scarcity of men, as there is sometimes, employes have certain advantages; if there is an over-plus of workmen the employer has the advantage. I was told on visiting a large foundry in Galt last week, one of the largest in the country, that they could not get men; that they were willing to pay high wages if they could obtain the right class of men. They had advertised but had failed to get them. That is a case where the workingman has an advantage.

Q.—That is the exception rather than the rule? A.—I think it largely depends on the season. At certain seasons of the year there is a scarcity of work; at other times there is an abundance.

Q.—Are there not branches of trade in which the overplus of labor is chronic? A.—It may be so.

By Mr. HEAKES :—

Q.—You have had no practical experience in that line yourself? A.—No; I have heard a good deal about it. In the cities it is more likely to be the case, especially, in a city like Toronto.

By Mr. FREED :—

Q.—Do you know anything about the Ontario Employers' Liability Act? A.—I know it is in operation at present.

Q.—Is it a satisfactory Act to employes? If a man is injured by machinery or anything of that sort does his remedy lie at his hand? A.—According to the letter of the Act it does. Of course the Act has only been in operation a short time, but even now there are a number of cases brought under the Act. The employers evidently think it is a step in the direction of affording employes increased protection, because they are insuring their men at their own expense in many cases. There are special companies now.

Q.—Are there Employers' Liability Acts in other Provinces than Ontario? A.—I think not. Employes in every Province can bring actions for damages under the common law, providing employer's negligence can be proved. In case of contributory negligence they can bring actions under the provisions of this Act.

By Mr. HEAKES :—

Q.—You spoke of many of the employers insuring their men at their own expense; do you mean at the employes' expense, or at the expense of the men? A.—At the employers' expense.

Q.—Would such an employer exact an agreement from his men that they should have no claim against him? A.—Certainly not, as I understand it. It is this way: I am an employer of labor, and I insure my men, say a hundred of them, with the company at so much per head. You are an employe and you meet with an accident. You think you have a case under the Act. If I think you have not, I decide to contest it, or to lay it before the company in which your life is insured. If the company think they have a chance to successfully contest the case, that the complaint is not a fair one, they would take my place and contest it in the courts.

Q.—The employers are protecting themselves against their own negligence? A.—No. Allow me to say you assume that in every case there must be contributory

negligence on the part of the employer. There have been cases, one not long ago in Guelph, in which employes thought they had cases against employers, but when the evidence came to be sifted before a judge, the party has been non-suited, and the judge has stated that the negligence, if any, was on the part of the employe.

The CHAIRMAN:—Take the case of railway accidents. In law the company is blamable.

By Mr. FREED:—

Q.—In this insurance the employer simply insures his own risk? A.—Yes; that is supposing it is found after the accident that there has been contributory negligence.

By Mr. HEAKES:—

Q.—Where would be the necessity of the employer securing himself by insurance if in the first place he complied with the factory law and had his machinery properly protected? A.—I answered that question by stating a case where an employe was non-suited by the judge. Employers have to protect themselves against litigation. An employe may think he has a case, and yet the employers may be in the right all the time. In the Guelph instance the employe had not a case, but he brought a suit against his employer.

Q.—The employer would gain nothing if he had had that man insured from the fact that the employe was non-suited? A.—Yes.

By the CHAIRMAN:—

Q.—Take the case of a piece of machinery that turned out defective? A.—That is a case which in nearly every instance would have to go to the court, unless the company agree to pay the damage. Often workmen say a piece of machinery was not sound, and the employer says it was in perfect order. All those cases go to the court, and that is the necessity of insurance. It is a difficult matter for any person to determine, other than a judge after hearing the evidence, who is to blame in a matter of this kind.

By Mr. FREED:—

Q.—In the case of railway companies, they are excepted from the Employers' Liability Act? A.—That Act, so far as my memory serves me, has been in force for about two years; the railway companies, the Grand Trunk for instance, were exempted from its operation. The Grand Trunk was exempted from the operation of the Act for one year, because the company had at that time and have now a system of benefit insurance amongst their own employes. At the last session of the legislature they applied for a further extension of that period of exemption. There was a special committee appointed to take evidence in the matter, and after evidence had been taken there was still another adjournment, and the matter will come up to understand, at the forthcoming session of the Ontario Legislature.

By the CHAIRMAN:—

Q.—That is in connection with the extension of time? A.—They are enjoying that extension now.

By Mr. McLEAN:—

Q.—It is, I understand, to allow the railway companies to answer certain questions sent out by that committee? A.—Yes; by the Railway Committee of the Legislature. They met last session, and took the evidence of the employes and of the railway people, and after that evidence was in the period was further extended, possibly, as you say, to enable them to take other evidence. I am not saying either for or against; I am simply answering the question as to whether the law would be operative as against the railway company.

By Mr. FREED:—

Q.—Do you know whether there is a great deal of friction at ordinary times between employers and employed in Ontario? A.—I do not think there is as

unnecessary amount—well, I do not mean an unnecessary—I mean an unusual amount other than there is in the United States; there is in fact a great deal less.

Q.—Except in times of excitement the relations between them are friendly and pleasant? A.—I think so in most instances.

Q.—When demands are made is there generally feeling, or do they simply disagree as two men would disagree, about a piece of property for instance, without feeling? A.—That is a question of rather too intimate a nature for a third party to answer.

Q.—Do you know whether attempts are frequently made at conciliation between employers and employed? A.—I think so. I think that manufacturers go sometimes further than they think they are justified to forward conciliation, probably in some instances. Of course it is a foolish thing for any factory to shut down for any length of time, because competition is keen and if they get out of the run of trade and cannot fill orders they will likely go to competing firms and once one man gets another's custom he is likely to hold it.

By Mr. HEAKES:—

Q.—Kindly give us an instance of that kind—where a manufacturer has gone further than he ought to go in the way of conciliation? A.—I could not do that; that is a question of privilege.

Q.—Well it is facts we want to get; it is only a matter of opinion unless we have facts? A.—I may say that in hearing those matters discussed the manufacturers have told me that at different times. I have heard, for instance, that there was trouble in their factory and have asked them how they got along and they have told me to that effect; I don't know that I can remember specific instances.

Q.—You cannot give us a case in point then? A.—No.

By Mr. FREED:—

Q.—Don't the men make strong efforts towards conciliation? A.—That I could not say.

Q.—Do you know of many cases of arbitration between employers and employed? A.—No, I do not know of many; there have been cases in some instances that I know of—not cases that I specifically remember—but it is within my memory in which arbitrations have even been successful.

Q.—Do you think the present system of arbitration is the best that can be devised? A.—You mean the voluntary system?

Q.—Yes. A.—I don't know but what it is as good as any other plan; I am not altogether in favor of Government arbitration.

Q.—What is the time within which arbitration may be secured between employers and employed under the Ontario Act? A.—I am not sure.

Q.—If there is long delay—? A.—Pardon me; I do not think there have been many cases of arbitration under the Ontario Act. When I was referring to arbitration I referred to voluntary arbitration, the employer and employe agreeing on the arbitrators. Although there is an Ontario Act I think you will find that it has very rarely been called into force.

Q.—Would you consider voluntary arbitration as better than enforced arbitration? A.—I am not prepared to say; I have not given the matter sufficient study.

Q.—Have you made a study of the French system of arbitration? A.—No, sir. I think, however, that with regard to all these questions of labor and capital the Dominion should be Dominion legislation, or if it is not within the purview of the Dominion Government steps should be taken or arrangements made to have similar Acts become operative in each Province at the same time.

Q.—Do you think the Dominion Government has power to make such legislation? A.—That is a question I do not pretend to be familiar with. Now we have a Factory Act which I consider is a very valuable addition to the statutory enactments of the Province, but they also have a Factory Act in the Province of Quebec, and as far as my information goes it is not operative.

By the CHAIRMAN :—

Q.—The Quebec Act is almost a copy of the Ontario Act, is it not? A.—Yes; but it is not operative. Now, in textile manufactures, such as the woollen and cotton industries, there is a great deal of child labor usually employed. Well, in the Ontario mills, say the Cornwall mills for instance, under the provisions of this Act they are not able to employ that labor. It is illegal for them to do so. But just across the river, a few miles further down there is another large competing cotton mill at Valleyfield, Quebec, and, of course, the Ontario manufacturers are at a disadvantage to that extent because they can employ child labor there.

By Mr. FREED :—

Q.—You are aware that property and civil rights are confided to the care of the Provinces under the British North America Act? A.—Yes.

Q.—And would not this legislation come under that clause of that Act? A.—That is rather a wide question for me to consider. That matter came up at the time the Factory Act was before the Dominion Government and it has not been decided, but the right of the Dominion Government, as I understand, was waived in favor of the Province.

By the CHAIRMAN :—

Q.—As a matter of fact it has been stated publicly, and in Parliament, that the Government of Ontario wanted to know if the Government of the Dominion had any objection to the constitutionality of the Ontario Act? A.—What I wish to emphasize is the fact that if the Employers' Liability Act and the Factory Act were made Dominion measures they should become operative in each of the Provinces at the same time.

Q.—You mean that similar Acts should be passed by them? A.—Yes. That I think, is something which might have engaged the attention of the Inter-Provincial Conference.

By Mr. HEAKES :—

Q.—Why has the Ontario Arbitration Act not been a success? A.—I do not wish to hazard an opinion on that.

Q.—Have you any knowledge of the contents of the Act? A.—Yes, I have read it, but I have not studied it.

Q.—Is there anything in the Act which would prevent workmen from taking advantage of its provisions? A.—Not that I remember.

Q.—I have a clause here—clause twenty-eight of the Ontario Act, which reads as follows:—"Nothing in this Act contained shall authorize the said Board to establish a rate of wages or the price of labor for workshops which workmen shall in future be paid." Do you think that is one reason why the Act has never been operative? A.—Probably it is. According to that clause the arbitrators are divested of their power.

Mr. HEAKES.—The power we need to settle labor disputes is taken away from them.

By Mr. FREED :—

Q.—Have you studied much the condition of the laboring population of Toronto, say? A.—I have not made a study of the laboring population but I have a superficial knowledge of it; that is to say I suppose I have visited in the course of several years back nearly every manufacturing establishment in every manufacturing centre in Canada from Halifax to Sarnia. When I go to a factory I do not go merely to the office but I go through completely; in many instances I chat with the men and I think that in Western Ontario they are far better off than in the Eastern section.

Do they get better wages? A.—I think they do in some instances. If you ask me whether they get better wages here than in other parts of the Dominion I would say that they do in many lines. Some firms have moved from this Province to Quebec in order to get cheap labor. I know of one boot and shoe firm in Hamilton who have moved to Montreal on account of the cheapness of French labor.

Q.—Do you know what rates of wages are paid in this line in Hamilton and in Montreal? A.—No; I could not say.

Q.—Do you know whether there has been any improvement in the condition of the mechanical classes, or the reverse, say within ten years? A.—Yes, sir. I have collected a great deal of information on that question. Wages rose from, say, 1878 to 1882 and 1883 with a pretty steady rise, but I don't think they are much higher now than they were then. I think about 1882 the maximum was about reached; in some lines there has been an increase since then, but not much of a general increase all round.

Q.—Do you think that working people have received any great advantage from getting more continuous work than they used to have? A.—I think so, undoubtedly.

Q.—Do you think that the production in the factories, say, has been increased in greater proportion than the number of hands employed? A.—That is a question about which I have my own ideas, but I would not care to state them specifically in evidence. If you would allow me to make a suggestion here I would say that there is involved in this question, as in many others, the necessity of a Dominion Bureau of Statistics. No person can answer authoritatively such a question; they can only go by general ideas or superficial information, in the absence of proper statistics. One person can speak for one particular trade but not generally; and every day the need of a permanent Bureau of Statistics for the Dominion is becoming more felt. We have no information, no data, upon which we can write or compile evidence on these questions since the last Dominion census.

Q.—You have nothing to add with reference to a Statistical Bureau, to which you have referred? A.—Nothing, except that it should cover a pretty wide ground—something similar to the American Statistical Bureau. I think, for instance, if we had a Statistical Bureau there would not have been so much over-production in some trades, for example the cotton trade, in which there was such depression and so many operatives thrown out of work. The cause, I think, was more from ignorance of the consumptive requirements of the country than anything else, and I don't think a mistake would have been made if we had had such information as they have in the United States, because the men who put money in these enterprises are thinking men, men who are accustomed to study out the prospects before investing capital in an enterprise.

Q.—Have not the cotton manufacturers an organization amongst themselves? A.—Yes.

Q.—And don't they keep pretty good track of stocks on hand &c.? A.—They do now, but that was a system born of that very necessity, and after they had lost a great deal of money. If they had had that information, or that organization, there would not have been over-production, and depression, and so many operatives thrown out of work. In fact they did themselves to a certain extent what the Government ought to have done for the country at large.

By Mr. HEAKES:—

Q.—You speak of a general advance of wages since 1878. Was there not a general decrease of wages from 1873 to 1878? A.—There was a decrease in many lines.

Q.—And were not wages in 1872 and 1873 about the same figure as they are to-day? A.—No, sir.

Q.—You are sure? A.—I am not speaking authoritatively; I am speaking according to the statistics I have in my possession. It is a question in which I am interested, and I did again what I think the Government should do in the interest of both labor and capital; I sent out several thousands of circulars all over the country, at different times, for the purpose of getting some information other than we could get from the census reports.

Q.—Of course if you have not the information you cannot answer the question, but wages ruled much the same in those years they do now as, in my own business at least? A.—The trouble is that you can speak for your own business but not for

others, and even if you could speak for other businesses you cannot speak for manufacturing centres of this Province, to say nothing of the other Provinces, and this again shows the necessity of a Government Statistical system. We have for instance a very admirable system in this Province, but it is only a Provincial affair at best. You have to take the mean average in discussing labor and wages, and in a country we have to cite the mean average of the whole country, and not of one isolated Province.

By Mr. FREED :—

Q.—Is not there another matter almost of more importance than the rate of wages, and that is the continuity of labor? A.—I think very much more so.

Q.—And you think the working people are more steadily employed now than they were 8 or 10 years ago? A.—From my own personal information—and I think I have had exceptional facilities for gaining information—I think the chances for steady employment are very much better now than they were some years ago.

Q.—Do you think there are many unemployed mechanics in Toronto? A.—That is a question I would not care about answering.

Q.—The information at your command does not enable you to answer it? A.—No; but instead of answering it I may say that within the last month I have been pretty much over the whole Province, and I find that the manufacturers have all the hands employed that they had capacity for. They are very busy, and the reports coming into me now are that the season has been busier, and that more employment has been given to men than in any previous season.

By Mr. HEAKES :—

Q.—How then do you account for the present stringency of the money market? A.—There can be a stringency in the money market without going into the question of capital and labor at all; there can be an artificial stringency created.

Q.—By the locking up of money? A.—For instance, the banks may find that they can get a higher rate of interest across the line than in Canada and if they get say one per cent, more they would send a large amount of money there and that would create a stringency here.

By the CHAIRMAN :—

Q.—And I suppose if war was declared to morrow between France and Germany the rate of interest would go up? A.—I think it would.

By Mr. HEAKES :—

Q.—But if business was so active and good wages paid should not money be plentiful? Do you think that if the Government controlled every banking system of the country that these artificial stringencies would still take place? A.—I think in many cases they would and more so. At present we are under different conditions to those that, as far as my information goes, prevail in the United States. In certain seasons it requires in this country a banking system with an expansive circulation, that is at the time that the crops are moved. Supposing that the banks under the present Banking Act are able to increase their circulation to a certain number of millions of dollars, the crops can be moved without taking the money for manufacturing interests, without calling in their loans to manufacturing and other enterprises. When they need a large amount of money to move the crops they are able to increase the circulation and when the crop is moved the money is returned to their vaults; the expansive character of their circulation has enabled that operation to be carried on without any financial stringency being experienced. It is rather different in the United States because they have a very much wider range of seasons and temperature so that after the crops are moved in the Southern States the money is returned and can go into use to move it in the northern portions of the country.

Q.—What I wanted to know was if we had the Government controlling the currency and banking of the country would not a financial stringency be impossible? Could not the Government always issue sufficient money to meet requirements?

A.—That is a question of paper money and I do not want to go into that broad question; I do not think it is necessary. I do not think it would be in the interests of the country if the Government were to take away from the banks the power of issuing notes. According to what you say the Government are perfectly at liberty to do that just now; they can issue ones and twos and fours.

Q.—But the Government could not prevent the banks from locking up fifteen or twenty millions of dollars and practically raising the interest? A.—Do you want to know if I am or am not in favor of the Government taking away the currency issuing power of the banks?

Q.—No, what I want to know is this—if the Government had control of the banking system of the country would it be possible to create artificial stringencies like the present when there is plenty of work going on and good wages and yet money has gone up two per cent? A.—I am not aware of any Government controlling the banking system of a country.

Q.—That is hardly an answer to the question. Would it be possible to create an artificial stringency if the Government had control of the banking system instead of private banks? A.—That is a question upon which you can expect no man to give a decided answer. It is a system which has never been tried by any Government under the sun, and it would be impossible without experience to give a decided answer. I do not think that the business of the country could be carried on in that way; I think there would be a dead lock in a short time. I do not think it is possible for a Government to carry on a banking system; they might issue notes as they do in the United States, but as to discounting and all that, I do not think that is for a Government to do.

Q.—Don't you think that the banking system has a closer relation to labor than most people have given thought to yet? A.—I do not think it is all practicable for a Government to take hold of the banking system of a country.

By Mr. ARMSTRONG:—

Q.—From your close intimacy with the manufacturers of the country do you think from your personal ideas and observation that they are in favor of arbitration and conciliation in settling labor troubles? A.—I think they are—from the experience I have had, and from information.

Q.—All over the province? A.—Yes; and from the meetings of the Association and from their conferences I may say that their tone has always been conciliatory.

Q.—Do you know how many labor troubles there have been in Toronto during the past year? A.—No sir; I know there have been a good many.

Q.—Do you know any case where the employers offered arbitration or conciliation—do you know one such case? A.—You ask me about labor troubles. Of course there have been labor troubles; there was a strike among the bricklayers and the carpenters but that is a question about which I do not know anything pro or con. I was referring to troubles in factories and not to labor troubles generally.

Q.—Well there have been troubles in factories? A.—I don't think there have been many in Toronto factories this year.

Q.—I may say that the reason I put this question is that many of these manufacturers and many of the employers in the building trade belong to the industrial branch of the Board of Trade, so I thought that you being connected with the Manufacturers' Association would be posted on that question? A.—No, sir. I may say that the industrial branch of the Board of Trade is in no way affiliated with the Manufacturers' Association.

Q.—You said that the manufacturers are agreeable to the Factory Act? A.—I said when the Factory Act came up for discussion in the Association.—

Q.—The Ontario Factory Act? A.—Both. First of all it came up for discussion when the Factory Act was brought before the Dominion House, before it came before the Ontario Legislature, and in no case was there opposition to the Factory Act as a whole.

Q.—Were you Secretary of the Association at the time the Factory commission of the Federal Government presented their report upon which the bill was founded?  
A.—No, sir.

Q.—It was Mr. Kelly, was it? A.—Yes.

Q.—Did the manufacturers send a deputation from Toronto to have certain clauses of the Act altered to suit their views? Are you aware of that? A.—No, I am not.

Q.—If it was the case, would you know? A.—Yes; it would appear in the minutes.

Q.—And if it was in the minutes you would know of it? A.—Yes.

By Mr. FREED:—

Q.—Can you give us any information respecting the difference between manufacturers' prices and the retail prices in any lines of manufactured goods? A.—I could not speak specifically. The manufacturers in very few instances sell directly to the retailers.

Q.—Do you know, for example, what it costs to make an average sewing machine?  
A.—I think I do.

Q.—A plain sewing machine for the table? A.—Yes.

Q.—Can you give us about the figures? A.—I understand you wish to get at the first cost of the sewing machine when it reaches the consumer and the cost when it leaves the factory?

Q.—Yes? A.—Well, in a line such as that there is a wide margin of difference which is accounted for in different ways. There is first the method in which it is to be put on the market. I might say that what is fully as important, to the success of a manufacturing enterprise, is economy of distribution as compared with economy of production; it is even more important. Now the economy of production has been studied so much and so long that production has been brought down more within the limits of a science, but the economy of distribution is only just commencing to be studied, and I think there is yet room for a good deal of improvement. Of course, we are a young manufacturing country and by way of illustration I might talk of the country as being one industry. Well, when a man starts a new industry he does not think so much of putting the goods on the market as he does about the most economical way of producing them as compared with his competitor. That is the first point to which he has to devote all his attention, and when he has got that successfully accomplished then he is able to turn his time and attention to studying the economy of distribution. Our country is to some extent in the same way as a new industry. We have gone into manufacturing much more largely within the last ten years than we did before and a great many new industries, industries which were new to this country at least, have been engaged in within the last 10 years. Well, in engaging in a new industry the first thing is to produce the goods at as low a price as the American or English competitors are offering them for. Then, if they can economize in the production it is so much gain.

Q.—If there is a very wide margin between the cost price to the manufacturer and the retail price of some articles isn't there a very narrow margin in others, for instance cotton? A.—There is where the economy of distribution comes in. In cottons there is a very narrow margin because the manufacturer sells directly to the wholesale trade and the wholesale trade to the retailer, and so it is simply a matter of selling in large quantities and the profit is less. With sewing machines it is different because in selling them there is not only the competition but the canvassing. A man may go around 4 or 5 days working hard 10 hours a day and sell only 2 or 3 sewing machines a week and that has to be taken into consideration. The cost of putting those goods on the market is largely the time of the men employed in putting them on the market. In country places a man has to take a horse and buggy and perhaps drive for miles to the houses and then perhaps find that every house has got a machine.

Q.—Do you think the margin of profit is greater on domestic goods or on imported goods? A.—I think the margin of profit is larger on such imported goods as can be imported with profit.

Q.—If goods are manufactured in the country instead of being imported do you think it brings the manufacturer nearer to the consumer than the original importer was to the consumer? A.—I think so.

Q.—There is less money goes to the middle man? A.—Yes. There is in most instances. For instances if I import goods there is a double number of middle men; the American or English manufacturer will sell to the English exporting house, and they will have to send their traveller here; they sell to the wholesale trade.

Q.—Have you any knowledge of the number of commercial travellers in Canada? A.—I have no figures as to the exact number, but the number is very large indeed and their expenses very heavy.

Q.—Would you say that there are between 5 and 6 thousand commercial travellers employed in Canada? A.—I should think there was fully that.

Q.—What do you think would be their average salary? A.—I don't feel competent to answer that question but I should think there would probably be an average of \$1,000; of course I do not speak authoritatively.

Q.—What would you estimate the travelling expenses or allowances to be for each? A.—They vary very much according to the class of goods. For instance take a dry goods traveller, he will probably have 12 or 15 trunks and his excess baggage may come to \$1 or \$2 a day. Another man may travel for a manufacturing house and have all his samples in a little grip sack but I should think the average cannot be less than \$5 a day.

Q.—They are not out all the time? A.—Most of the time.  
Do you think that \$1,000 each per annum would be an extravagant sum?  
A.—No.

Q.—Do you think it would be extravagant to say that each one of these men in salary and expenses costs \$2,000 a year? A.—No; I think not; that would be very moderate for those who keep them out all the time. But in certain manufacturing industries the traveller may be one of the firm and make only two trips a year. But the dry goods houses, the wholesale hardware and grocery houses and so on, keep their travellers out nearly all the time and some of their men get salaries more than double the amount I named. The expenses of some of them cannot be much less than about \$7 a day.

Q.—Then if the calculation of \$1,000 for salary and \$1,000 for expenses be a fair average, and within the mark, and if there are 5,000 commercial travellers we find the expenditure on this head amounts to \$10,000,000 a year in Canada? A.—I don't think it would average that for the whole 5,000. For instance, take the Commercial Travellers Association which has its office in this city, and which has a very large membership. But many of these members cannot properly be counted commercial travellers. For instance I suppose I am eligible for membership the same as Mr. Hugh Blain, Mr. Darling and others who are the heads of firms and who so long as they are engaged in business are eligible for membership. There are a good many employers who figure in the membership of the Association.

Q.—You think the estimate then would not be a fair average? A.—Not of what we might call professional travellers, those who are on the road the whole time. For instance, I am not a commercial traveller, but I am on the road.

By the CHAIRMAN:—

Q.—How many do you think there are? A.—I am not conversant enough with the subject to hazard an estimation but I should think there are 2 or 3 thousand. Many commercial travellers are getting over \$2,000 salary. With a traveller it is not exactly his ability but it is his connection as well which gives him value. He generally carries a connection with him; he has gone over the road, say, for a number of years; he is on friendly terms with his customers and if they want to buy goods they wait till he comes and that gives him value to the house that employs him, his intimate connection with the clientage of the house.

By Mr. KIRWAN:—

Q.—How many hours of labor do you consider is a fair day's work for a man

working at heavy work, such as moulders, bricklayers and carpenters' work? A.—That is a difficult thing for me to say.

Q.—I would like to have it from your standpoint? A.—It is difficult for me to answer, because I had not sufficient practical information to enable me to judge of the amount of fatigue incurred by men in a given occupation.

Q.—Well in your own business? A.—Well, in my business I work an average of sixteen hours a day.

Q.—Commencing at what time in the morning, if it is not an impertinent question? A.—Not at all. I generally start at my office at 8 or 8.30, and five nights out of six I work until eleven o'clock at night, and some times to three or four in the morning.

Q.—Of course, if you were working as a moulder or heavy work of that kind you could not work sixteen hours? A.—No; I am not physically capable of that, but I don't know that physical labor is always the hardest.

Q.—How many hours do you consider is a fair day's work? A.—That would largely depend on circumstances. I would not consider, for instance, that a painter had to work as hard as a blacksmith.

Q.—Well I am speaking of blacksmiths and moulders, and people who do the hardest kind of work? A.—I should think from nine to ten hours.

Q.—Suppose they work from six in the morning until six at night, with two hours off, how long do you suppose a man could stand that strain? A.—I told you at the beginning that I am not acquainted with the amount of strain a man would have to stand, and that I could not answer intelligently, unless I had some idea.

Q.—Your opinion is that nine hours would be a fair day's work? A.—Well, I could not say, because I am not in a position, and I do not want to give an answer to a question that I cannot answer intelligently.

Q.—Do you consider that fortnightly or weekly payments are best for working-men? A.—I think it is better that they should be paid weekly; I should like to see them all paid weekly.

Q.—What day of the week do you think would be proper? A.—If you like I will give my personal convictions? I think Friday would be the best day, because it would give them more opportunities to devote their earnings to their families than they are apt to do if they get paid on Saturday.

Q.—Now with regard to profit sharing—do you think it would be beneficial to the employer, or an inducement to the employe to work on this profit sharing plan. I am not talking of railroads or banks, or other corporations, but only of a concern where one man employs a number of men? A.—That is really a very interesting question, but one that I do not know that I am in a position to give an intelligent answer to, and for this reason, because in older manufacturing countries they have tried it, sometimes with success and sometimes without. There have been notable instances of its success, and there have been instances of its failure, and I do not know whether we have arrived at such a pitch of perfection that it would be possible to adopt that system.

Q.—You don't know that it has been tried in this country? A.—Well, it has not been tried; there has been no regular system of profit sharing; but I have known firms who have had an exceptionally good year, or term of years, give a bonus to employes, but of course, that is not a regular system. I have known men act with equal generosity towards their employers. I know of a case where a mill was burnt down, and there was such good feeling among the employes that, knowing that the firm had suffered serious loss, each man offered a week's work free of payment to re-building the mill.

TORONTO, December 1st, 1887.

THOMAS GALBRAITH, SWORN.

By Mr. FREED :—

Q.—You are market reporter employed on one of the city journals I believe ?  
A.—Yes.

Q.—Which journal? A.—The "Globe."

Q.—How long have you been employed in that capacity? A.—Nearly eight years.

Q.—Have you provided yourself with memoranda so that you will be able to furnish the Commission with information as to the market prices during a series of years? A.—Yes, for the past ten years; that is, four years in that period of ten years, that is, 1872, 1877, 1882, and 1887. The memoranda are as follows :—

By MR. FREED:—

Q.—Referring to the prices of hops in 1882, 90 cents to \$1.00: I suppose there was a failure of the crop in that year? A.—Yes.

Q.—Is the comparison one which would be fair? A.—The prices ranged from 50 cents to \$1.20.; the whole crop was sold at those prices.

Q.—Referring to potatoes: do you know if the price of potatoes is higher this year in consequence of the comparative failure of the crop than in immediately preceding years? A.—Yes; that is one cause. There is a large crop in Manitoba. A great many Manitoban potatoes are coming in here, but they do not reduce our price much. Our potatoes are smaller than theirs but are a fine quality and better eating; Ontario potatoes are selling much higher than Manitoban potatoes.

Q.—Is it a fact that immediately after the Manitoban potatoes came in the prices of Ontario potatoes began to drop? A.—No. The market depends upon the Nova Scotian and Lower Province potatoes—upon the crop there. Prices here are ruled to a great extent by the Lower Provinces, where they grow large quantities of potatoes.

Q.—Do you think in ordinary years potatoes come here from the Lower Provinces? A.—Yes. They however ship nearly half their crop, or more, to the United States; Boston is the chief market for them.

Q.—In ordinary years does not Ontario produce sufficient potatoes for the consumption of its people? A.—Yes.

Q.—Then how do the prices of Lower Province potatoes affect prices here? A.—I do not think they do except when they have a surplus. If we have a large surplus their prices will not have much effect; but in case we do not have an overplus and they have a large crop down there, it will be different. It very often follows that when we have a small crop they have a large one, and that tends to keep prices moderate.

Q.—Do you know any year in which Ontario has not produced sufficient potatoes for home consumption. A.—I think 1882 or 1883, perhaps 1883 or 1884 when potatoes went up to \$1.50 a bag here.

Q.—Are you aware of any change within the last few years in the class of sheep raised in Canada? A.—I believe our farmers now have a little better class of sheep and grow better wool.

Q.—Has there not been a change, Leicester sheep being abandoned to some extent and Southdown and other fine wool sheep taking their place? A.—Yes.

Q.—Is this due to the fact that there has been a change in the character of the woolen goods produced? A.—Yes.

Q.—So that coarse long staple wool is not so valuable now as it was formerly? A.—The demand is governed to some extent by the styles of woolen fabrics worn. Most of our fleece wool goes to the Eastern States, and from the character of fabrics made it was formerly more valuable than it is now. In 1872 prices were high, for our wools were well-adapted to the kind of goods then in demand.

Q.—Are you aware of any difference in the character of the sheep raised in Canada and in the United States? A.—No, I am not.

Q.—Are merinos raised to any extent in Canada? A.—No.

Q.—Are they in the United States to your knowledge? A.—They may be on the Pacific coast.

Q.—With respect to the quotations for coffee, is not the quotation of 12 cents to 13 cents very remarkable? A.—The prices in 1882 and at the present time are both remarkable.

Q.—The price is remarkably high now? A.—Yes.

Q.—Have you heard of a "ring" in coffee to corner the market? A.—Yes.

Q.—Do you think that has made the price abnormally high? A.—Yes.

Q.—Do you go into the market a good deal when people are buying their supplies? A.—I do not get my prices altogether from the farmers; not on all articles.

Q.—I am there about half an hour a day.

Q.—Are you able to tell the Commission whether mechanics' wives, we will not say the exceedingly poor people, but the average working people of Toronto, are compelled to buy inferior cuts of meat, or to buy food inferior to that which people in better circumstances buy? A.—As a rule I do not think they are.

Q.—Do you think they go and buy good food and are able to pay for it? A.—Yes.

Q.—There are of course poor people in Toronto who have to take what they can get? A.—Yes.

Q.—Do you think there is a large number of such people? A.—No; I think not.

Q.—If a dealer finds himself with inferior vegetables or meat or poultry on his hands that is not unwholesome, does he find difficulty in selling it, or are there people ready to snatch at anything below market price? A.—Inferior articles are hard to sell in the market. There have always been a great many complaints about unwholesome produce coming in.

Q.—You have a food inspector in Toronto? A.—Yes.

Q.—If he finds food unwholesome and unfit for use he condemns it? A.—Yes.

Q.—It is confiscated and the seller is punished? A.—Yes.

Q.—Is there reasonably good precaution taken to secure good wholesome food for the people? A.—Yes.

JOHN GALT, Civil and Mechanical Engineer, Toronto, called and sworn.

By MR. FREED:—

Q.—I understand that you have had some experience with the industrial or technical education of young people? A.—Yes; I have had a good deal, especially in the old country.

Q.—Will you kindly make a statement of your experience, or such part of it as you think will be of use to the public? A.—I may say I have taken considerable interest in the subject, since I came to this country, because I find there is great necessity for it. There is now in this country nothing coming in between common school education and University education. The most important part of education of a practical kind is obtained after a boy leaves school and enters a distinct trade, calling or profession. There are no facilities of any consequence whereby a working-man can become conversant with that instruction necessary to fit him to be a good workman, well up in the practice and theory of his business. There are really no facilities of that kind now. In the old country there is what is called the science and art department.

Q.—Is that connected with the public schools? A.—No; it has its head quarters at South Kensington, and it is controlled by the imperial parliament. There is a large vote of money granted annually by parliament for that purpose. Schools are formed all over the country, local committees are formed and the subjects taught are both art and science subjects.

Q.—Who pays for those schools? A.—That is done in this way; there is a nominal fee paid by each student. The examination papers are prepared at the end of each session, and are sent to London and examined there. Upon those examinations what are called payments on results are obtained. A great many subjects are taught, and every student who gets a first class is entitled to what is termed a Queen's prize and certificate, showing that he has passed first in that subject; but in each subject there are three stages, elementary, advanced and honor. The teacher claims for every first class a grant equal to ten dollars. That is what the teachers gets; the student gets the prize and certificate. For every second class, each of whom gets a certificate, the teacher claims five dollars. I have put the amount in dollars, but they are two pounds sterling and one pound respectively. Those grants are and have been considered sufficient for very many years, and the result of this system is that all over the country there are competent teachers employed in teaching a variety of subjects closely bearing on all the different trades, businesses and professions. In addition, these classes are largely attended by workingmen, artisans of different trades. Then to encourage still higher education, there are scholarships established. Those scholarships entitle the gainers of them, the best students of each school, to attend special lectures in London, the amount of money furnished by them giving to the students those facilities. Those scholarships I say put students in the way of passing through still higher studies. Some of them enable the students to attend the University and pursue their studies to a very high extent indeed—in fact they graduate.

Q.—At the ordinary Universities of the country? A.—Yes. So there is a connecting link between school and University education, and this is brought directly in contact with the working classes.

Q.—Will you briefly describe the course of study in those schools? A.—Take the science and art department. There are taught freehand and model drawing, perspective, geometry, mechanical drawing, building construction, machine designing, acoustics, light and heat, steam and the steam engine, metallurgy, botany, and a great many other subjects that I cannot enumerate; it is, in fact, a complete curriculum.

Q.—Do they acquire an actual knowledge of the use of tools? A.—The workingmen who take advantage of those evening classes are practically engaged in the different trades; they are, therefore, getting the best possible education; but what they lack is theory. Therefore, the combining of their practice with the theory they can get in the evening classes makes them first-class workmen as well as

students, and those who show special ability can prosecute their studies very much further. I will give an example. When I was in charge of one of the larger schools of the kind in Glasgow, which was under the direction of the School Board and under the supervision of the Science and Art Department in London, there was a little boy, I think somewhere about twelve or fourteen years, unusually young, who attended my school. I saw at once his great ability in the mechanical and geometrical line. I asked him what he did. He said he was an office boy up town. I then asked him if he would not like to change his business, as I thought he was at his wrong calling. He said he would like to do so very well, but he did not think he could get away from his present place for a year or two. I called on his parents, and I found they had been considering the advisability of making some change. I got him taken on with a mechanical firm as an apprentice, working at the regular workshops and also in the drawing office part of his time. He attended the school regularly and showed extraordinary ability, so much so that he took honors in the most advanced stage of the different subjects relating to engineering. He won a scholarship which entitled him to go to London. He obtained a Wickworth scholarship, the value of which at that time was 200 or 300 pounds a year, and that enabled him to pursue a very high course of study in the University. He went to Manchester and passed through the University, and he is now, I believe, one of the chief assistant professors in the Guilds of London School, one of the best of the kind in England and one which has been established only about five years. That boy furnished no extraordinary case; there are hundreds of similar boys in this country and also workmen, who, for lack of an education of this description, have no opening for their ambition and aspiration. No doubt, there is a crying necessity for some such education between the common school education and that of the University, and this can best be secured by evening classes. That kind of education for workingmen is given during the winter evenings. The classes run from October to May, and the examinations come on in May.

Q.—Could any of those classes be attached to the public schools so as to be made part of the public school education? A.—Some of the subjects, such as geometry and plain mathematics, form part of the regular study now; but you want to teach mathematics and drawing connected with the men's trade. You do not want simply to lecture on those subjects, but you want to sit down with the students and help them to overcome the difficulties they meet, to explain the difficulties with the aid of a blackboard and to go into the subjects most thoroughly and bring up the students gradually.

Q.—Teaching the students in fact by object lesson? A.—Yes; so I do not think the public school education is adapted to meet that want. It is a special one and special means will have to be adopted to meet it. That has been the experience of Germany and the old country, and in the United States they have taken special means to accomplish that end, and something will be required here very soon. There can be no doubt that if Canadian workmen desire to hold their own, they must have such privileges within their reach.

Q.—Do you know whether it has been found in Great Britain that the superior technical education of continental workmen has placed British workmen at a disadvantage? A.—I think England has not kept pace as she should have done, with the advance made in that direction. The science and art department was forced upon the Government after the first great exhibition of Paris. They adopted it then as the best means available, and they have kept to it without making very much change. They have got to change, as the circumstances have changed. They are going rather slowly, but there is an agitation on foot to change the system.

Q.—Have you visited any of the continental schools? A.—No; but I have met many students who have been through them. I know the whole system followed, and also that adopted by many schools in the United States, such as the Boston school of technology. You see that university training is confined to those whose parents are well off, those who are able to send their boys to obtain the education necessary to fit them for a profession. But it is different with workingmen.

Q.—That is a classical education; what is called the Humanities in Scotland?  
 A.—Yes. Very few can attend the University. A boy has to earn his bread and butter, and there should be suitable education provided on winter evenings to enable him to combine theory with practice at his trade.

Q.—Have you any information as to the school of Technology in Toronto? A.—Very little.

Q.—What want does it fill? A.—I think so far as it goes it fills a want, but it does not go far enough. I know in a great many universities they are introducing practical work by means of workshops. You cannot however make that shop work take the place of apprentice work or of boys going to learn a trade; but it is thought that if they get theory combined with that amount of practical training students will have a pretty good idea of practical work and be more competent. It can never however take the place of apprenticeship or of the thorough work of a workman, no more than the work in evening classes can make a thoroughly theoretical man of a workman, but at the same time it places him in a superior position in carrying on his trade.

Q.—How are the teachers for those evening classes in Great Britain trained?  
 A.—They have to hold a certificate before they are allowed to teach; most of them have passed first in the advanced subjects.

Q.—They must have a practical as well as a theoretical knowledge? A.—Yes. I do not think they would be very desirable teachers unless they were practical men. Many of them are draughtsmen or managing men of different firms; they are well up in the business from that fact, both practically and theoretically, and they make the very best teachers. As a rule they get the fees and all the government grants; all the expense is the rent of rooms, gas and expenses of advertising.

Q.—The government allowance you think is sufficient to compensate teachers, in addition to the fees paid by pupils? A.—It seems so, because there are a great many schools and there is very little complaint on that score. They seem to be balanced rightly.

Q.—Is a sufficient number of practical men found to conduct the school?  
 A.—Yes; there seems to be no difficulty whatever. There might be such a difficulty here for a little while. There was difficulty in England at first when the classes were started in 1882, but as the students passed in the higher branches they became teachers and the want was supplied. I am very much impressed with the great necessity of something being done in that direction for the working classes, something to bridge over the wide gulf between the common school education and university education. It would benefit the universities as well.

Q.—This education would not be in any sense that of teaching the different trades to the pupils? A.—No. It is more in the direction of giving a theoretical education in the evening to practical men. They would go to those classes right from the trade at which they had been working all day.

Q.—Would they obtain knowledge that would enable them to more successfully prosecute their trade, just as the ordinary school education fits them for the ordinary requirements of life? A.—Yes.

Q.—Have you any knowledge of the industrial school in the suburbs of Toronto to which waifs and strays are sent? A.—No; I think that is only a recent affair, and it is connected with a different subject entirely. I think that so far as it goes it is a very laudable enterprise.

Q.—Do you know anything about the education given to boys sent to Penetanguishene reformatory? A.—No; I do not; I have simply referred to the subject wherein technical education has a bearing on the labor of the working classes; that is the subject chiefly on which I wish to speak.

By Mr. HEAKES:—

Q.—With respect to the School of Practical Science in Toronto; can you furnish any suggestion as to the means by which that can be made of practical benefit to working men? A.—I think if it was large enough and fully equipped, not only in

one department but in every department necessary, if it was temporarily located—and you must bring matters down to a practical bearing—to suit working men and if it is brought within easy reach of working men, and if the instruction was not too much of the nature of sermons or lectures, you might be able to attract them. If, in addition, the Government supported the institution thoroughly by paying teachers' fees and giving grants, much might be done. I believe so far as Toronto is concerned that the establishment of a technical college of science and arts, fully equipped in every department, suitable during the day for art work and higher professional work such as is conducted now in the University, and also suitable in the evening for classes of working men, would be a great benefit.

Q.—Do you think the present course of study in the Toronto school would have to be considerably changed before it could be adapted to that sort of teaching?

A.—Yes; as it now stands it is hardly suitable for the great bulk of the working classes.

Q.—It is practically out of reach, and is not in the right direction? A.—It is not altogether suitable for that instruction.

LOUIS P. KRIBS, journalist, Toronto, called and sworn.

By Mr. FREED:—

Q.—I believe you desire to speak to the Commission on the subject of industrial education? Please proceed with your statement. A.—My knowledge of the subject is theoretical; it is not practical. I suppose I was desired to come here in consequence of certain articles I have been writing on the subject. As a workman myself, and the son of a carpenter, I believe I have some idea of the practical needs of the country in this matter. The trouble was only partially referred to by Mr. Galt, who is very capable of speaking in a practical way respecting Canadian workmen. You have to go further than he suggested. The system of apprenticeship by which a young man is taught his trade has been outgrown in this country—it has disappeared; and while that has disappeared, or been outgrown, we have nothing to take its place. There is no system for teaching a young man his trade and thoroughly training him in a mechanical calling, and making him a first-class artisan, except as he goes into a shop and starts to work as a boy. Some trades are different in regard to the manner in which boys learn the trade; in some trades he will learn the business very fairly, but in others he will be kept at certain branches. For instance, in the boot and shoe trade he may be able to make uppers or soles, but he will not be a thorough workman; and the Canadian workman to-day is not taught that technical knowledge to make a man a first-class artisan, because he has no place to acquire it and nobody to teach it. In the city it is even worse than in the country. In the country boys run round and get acquainted with tools, and they know how to use their hands; but in Toronto we are turning out of the public schools thousands of boys to whom it is almost impossible to teach a trade within a reasonable time, because they have no idea of how to use their hands. One of the best manufacturers in wood and iron tells me that if a boy has gone through the Kindergarten, where he is taught how to use his hands, he will be able to pay wages to that boy, while a boy from the public schools will take two years to find out he has a pair of hands. That is where I find fault with our public school education to a certain extent. In the public schools we cannot teach all that is required in a technical education so far as tools are concerned and the materials to be used, and it is therefore necessary to establish night schools; I know one or two places in this country where such night schools are established; Galt is one place, and there they teach young men freehand and mechanical drawing and applied mechanics. But I know also, within a few miles of that very town, where night schools have been in operation a long time, that a leading foreman carpenter in working on a building did not know the common principles of the strain that wood can bear, for a scaffold accident occurred by which one man was killed and

many injured. I know a case where an accident occurred by which a machine fell on a man's leg, and yet it was being managed by a practical mechanic from Toronto, born and bred here, who was supposed to know all about the business, but he did not know the first principles connected with the strain on materials. These are matters that impress one with the necessity of having a system of technical education. The night schools are good enough, but the public school system turns out boys without the least knowledge of the capacity of metals, iron, rope, wood, and other materials to bear strain, and the very elementary matters connected with technical education. There is where I find fault with our public school system. The fact of the matter is that to my mind the public school unfits a boy for learning a trade. He is actually less able to do so, he is in a worse condition to learn a mechanical trade if he remains in a public school till he is fifteen, than if he goes to work at ten. That is my experience of the public schools. To go to the High School and the University fits him for nothing in the way of earning a living as an artisan. This is, of course, mere theory, and I think that technical education will not only have to be by evening classes but also by means of regular schools. The little town of Zurich, in Switzerland, has a polytechnic school. This was established in 1854. It has a magnificent building, containing laboratories, libraries, industrial museum, collection of apparatus and objects of scientific and artistic interest. It makes provision for more than two hundred distinct courses of lectures, given by sixty different professors, to say nothing of teachers, curators of museums, etc. In the most successful factories of Switzerland, Southern Germany and France are found managers, foremen and leading workmen from this institution.

By MR. FREED :—

Q.—They draw pupils from all parts of the country? A.—Yes; largely so, of course. It is established at a most central point. Then, take the technical high school at Munich, founded in 1868. The buildings cost \$775,000, and the total cost nearly \$2,000,000. Its annual expense is \$100,000.

Q.—Was not the King crazy when he built it? A.—No.

Q.—Is that institution not for all Bavaria? A.—It is for Munich alone. The Government grant is very small. Instruction has special reference to the higher industrial education of the industrial classes. There are forty-five distinct courses of lectures, by thirteen professors, in the department of engineering alone. Engineering is a department with its own professors. A person can enter and study engineering from the lowest to the highest grade, and can come out with a diploma that will give him occupation anywhere. That, however, is only one of the thirteen departments. Again, there is a weaving school at Chemnitz, Saxony. It is the central school, but all through that district, which is largely devoted to weaving, there are different schools, fourteen or fifteen.

Q.—Do they teach weaving in all textures? A.—It is particularly silk weaving, also flax and perhaps cotton, but I am not sure. Workmen go there from all over. Owners of mills and weaving establishments send their apprentices who show special skill, and they pay for their education. When those apprentices return they know the art of weaving in all its branches, and are practical and thorough workmen. Weaving has been taught in this school for thirty years. School of similar character have been established at Glauchau, Meerane, Lössnitz, Oederan, Milverda, Hamichen, Frankenberg and other towns. The Martin school was established at Lyons, France, fifty years ago. It is the bequest of Mayor Martin, who went out to India and acquired a great fortune, and on his return took measures for the establishment of schools. It is endowed with a large fund. The buildings, &c., cost \$200,000. It contains forty masters and ten assistants. Of late years it has been teaching workmen silk weaving. Lyons was the centre of this industry, but some years ago it began to fail in consequence of competition in other parts of the continent, and superior fabrics were being woven elsewhere. It will be the same as regards the iron industry of Canada if measures in the same direction are not adopted. There is also a professional school at Rouen, where instructions, of very much the

same character is given. They found that they had to go in for practical education or they would entirely have lost the silk weaving industry. In the great iron and steel industry of Westphalia a number of schools are established, the largest being at Bochun. There the employers require all their apprentices and boys under eighteen years to attend the evening classes. It is part of the law, and a boy cannot learn the trade without attending there. It is just as much the law to attend those schools as it is in Canada to attend the public schools. In England there is the Technological College at Bradford, which was opened by the Prince of Wales, in 1882. The cost of buildings and apparatus was \$200,000, and the institution is not yet fully completed. It is entirely the work of the citizens; there is no government grant to carry it on. Then there is the city and guilds of London institute, of which Mr. Galt spoke. The guilds are establishing technical schools all over London. The principal one is at South Kensington and is similar to the polytechnic schools of Germany, Switzerland, Italy and the Ecole Centrale of Paris. Russia has two great Imperial technical institutes, one at St. Petersburg and the other at Moscow, maintained by the State—and Russia is looked upon in Canada as a country of barbarians. Sir William Armstrong has a technical school at Elswick. The London and North-Western Railway Company have similar schools at Crewe. Nine thousand men are employed by the company, together with six hundred apprentices, and the young journeymen attend the evening classes. Messrs. Mather & Platt, large iron manufacturers at Manchester have their own institution. At Crefeld in Prussia, a town of 80,000 people, there is a technical school for the silk industry alone. They take silk and weave it in a fabric at that school, which is supported by the town. It was found to be such a necessity that the town itself voted the money and has since carried on the institution. There are also schools at Mülhausen, (Germany,) Verviers, (Belgium,) Roubaix, (France,) and there is also a training school for marine engineers at Amsterdam. In England there is Kingsbury College and the Young Men's Polytechnic Institute, and the Birbeck Institute, all in London; the Manchester Training School; School of Science and Arts, Oldham; Yorkshire College, Leeds; University College and People's College, Nottingham; College of Science and Arts, Allan Glens' Institution, Anderson's College, Glasgow; Science and Art Museum, Edinburgh; Science School, Crewe. I am giving these cases to show the great advance that has taken place in the instructions of workmen in England. Mr. Galt has spoken about the establishment of the Science and Art Department. The Imperial Government sent commissioners to the great Paris Exhibition in 1868 to find out how workmen were getting along, and they found that the Schools of Industry, such as I have mentioned, that had been established throughout the continent, in Germany, Switzerland, Austria and France, had taught artisans to work so much better than English workmen, that England was being undersold and run out of the market. The Commissioners on their return made that report. I may here say that the Commission should obtain a copy of that report which is to be found in the library at Ottawa; I think it was made in 1869 or 1870 by the Imperial Commissioners to the Imperial Parliament, and is a most valuable work. Another commission was appointed later, and two reports were made; they might have been the reports of the same commission. They reported that the education of the workmen of the continent was causing continental fabrics to supersede English manufactures all over the world. Americans have, within the last few years, taken up this question of trade education. Girard College was among the first to teach the art of handling tools. We hear a good deal about Yankee notions, but the Swiss workman undersells the American at his own door because he has received an industrial education. The Americans are however establishing Technical Schools all over. Here are some of them; Steven's Institute, Hoboken, N.J.; Massachusetts Institute of Technology, Boston, Mass.; Free Institute, Worcester, Mass.; Columbia College, Columbia, N.Y.

Q.—What does Columbia College teach? A.—They do not teach practically with tools, but they teach the science of a mechanical training.

Q.—Do you know anything about the school of Mines? A.—I think the school of Mines is the department of Columbia College to which reference is made. There

are also Columbia Union, New York; Manual Training School, Philadelphia; Spring Garden Institute, Philadelphia; Manual Training School, Chicago; Maryland Institute, Baltimore; Manual Training School, Baltimore; Rose Polytechnic Institute, Terre Haute, Indiana; Mechanics Institute, (cost of building \$300,000,) Eastern Pennsylvania; Miller's Manual Labor School, (endowment a million dollars,) Balesville Va.; Workingman's School, New York; Worcester Co. (Mass.) Free Institute of Industrial Science; Manual Training School, St. Louis; Girard College, Philadelphia; Rensselaer Polytechnic Institute, New York; Purdue University, Lafayette, Indiana; University of California, School of Mechanical Art. A few words with respect to the Cooper Union. A matter has come under my observation which illustrates the absolute necessity of these schools. As you are aware, most of our wall papers are printed in New England, where they have very large factories. The wall paper manufacturers, who have an association desired to obtain new designs, and offered a series of prizes. Now one of the objects for which Peter Cooper established Cooper Union was to find out what trades girls could follow with advantage. One of the ideas was that in designing girls would be successful, and that while it would not interfere with man's labor it would be the means of giving women employment. They have a department there for teaching designing, and the students are put through a regular course and come out with a diploma. As I have said the wall paper manufacturers offered a series of prizes for the best new designs in a considerable number of branches and every prize was taken by girls out of Cooper Union.

Q.—They are taught in classes? A.—Yes; but they were taught the practical work of designing and they carried off all the prizes, which to my mind is a strong argument in favor of woman's work.

Q.—They are simply classes maintained out of the rents of stores and offices in the building, and endowed by Mr. Cooper? A.—I think there may be some special sources of income. I am informed that there are four thousand pupils taught in the different classes at Cooper Union.

Q.—Do you know anything about the education given at John Hopkins University? A.—Only in reading up the subject. My own impression is that this commission or a committee of this commission should visit half a dozen of those American schools before concluding its labors. The Baltimore and Ohio railway have taken a deep interest in this matter, and on finding that their workmen at St. Clair and other works were not turning out a satisfactory product, they deputed Dr. Barnard to examine the subject. He, with two other commissioners, visited all those schools, or most of those I have mentioned, in the old Country and also the schools in the United States and made a report which came out in the early part of this year and which contains valuable information. I think this Commission should obtain half a dozen copies of that report. The result of the Commission's labors was that the Baltimore and Ohio Railway Co., established two schools of their own and are teaching their own apprentices to be thorough workmen. The only point I had to make is this; to my mind in dealing with this question the kindergarten system furnishes the proper foundation for industrial education. If we had the kindergarten system established throughout Canada, that system which teaches the child to work with his brain, hand and eye at the same time, a great advance will be made. Seven years of age I think is the limit at which children are allowed at the kindergarten. By that system he is taught, I say, to work with the hand, eye, and brain, but on going into the public school he is taught to work simply with his brain, or with his hand and eye to a very small extent. My idea is that the kindergarten system should be first used as a means of education; then the public school, which should ground the child in the elementary knowledge he requires, changing the public school curriculum so far as children of the working people are concerned so that they can be taught with a view to their becoming mechanics and artisans; and then they should go from that school at the age of twelve or fourteen to a school such as those I have mentioned, a school which should be authorized by the State, which should teach, not only the science of mechanics, but the actual use of tools as well, as is done at Girard College and other institutions; and the result would be that we would turn

out mechanics who would be thoroughly grounded in their trades, and a class of men who would be superior to those produced under the old system. In Canada we are hedging round our industries with all the protection we can give them; we are trying to make Canada a country in which the workingmen will obtain a good living, and only last session there was adopted a tariff to protect our iron industries, and we must obtain industrial schools and teach them thoroughly how to handle tools and work at their trades.

By Mr. HEAKES:—

Q.—Do you think that if the Public School Board were to set apart one or two schools for this purpose, and parents had the option of sending their children to their schools, that boys, after they had passed through the four elementary branches of education, would attend them? A.—Yes. We are bringing up a nation of shopkeepers. To teach a man to earn a living by the use of his hands is the proper way in this country. If a young man wants to enter a profession later on, to become a lawyer or a doctor, let him pay for his education at those special schools. The Canadian people, in order to earn their livelihood, must work with their hands, and I think the whole Public School system should run in that channel, that if a young man wishes to become a professional man he must pay for his education at a special school.

By Mr. FREED:—

Q.—Do you think the kindergarten system can be carried into the Public Schools? A.—Yes.

Q.—You think that practical education should accompany the ordinary teaching? A.—I have no doubt about it.

Q.—Do you think that a pupil by working part of his time at those special branches and carrying on the ordinary branches as now taught in the Public Schools, would learn nearly as much of the ordinary branches and at the same time would be acquiring the other knowledge in addition? A.—I think he would acquire all of the ordinary branches that would ever be of practical benefit, and at the same time he would acquire a knowledge of those special branches.

Q.—Do you not think there is too much already taught in the ordinary branches? A.—There is too much taught that is never of any use. They teach a boy subjects which no doubt tend to expand his knowledge, but they are of no use to him. He is bound to forget that knowledge because he never can apply it to anything.

Q.—With respect to mechanics becoming specialists instead of learning a trade thoroughly; can a specialist do more work at his specialty than a man would do if he was an all-round mechanic? A.—That is a difficult question. The foreman at the shop may not be the quickest workman at some particular branch, but he is often the best all-round man and the most valuable.

Q.—But he directs the work? A.—A man who did nothing but make soles or heels would become very rapid at that particular branch, but practically useless at anything else. While he might be worth a certain amount of money at that work, he was no use either to himself or his employer at anything else.

Q.—Are you a printer? A.—No; I am not a practical printer.

Q.—If a man serves his term at a country office, where he learns job, press, newspaper and composition, is he as rapid a compositor as the man who never does anything but set type? A.—He is not when he comes into the city office; but I can guarantee that after he has been two years at the case he will have got all the speed he could have got if he had never been anything else, and he would be a more valuable man in the printing office, because he would be a good all-round man. He could set advertisements with some style; while the man who had done composition all his life would set up an advertisement at that would scare the chickens out of their roost. We in Canada have workingmen as intelligent as any in North America or in the world, as well educated and as handy with tools and everything else, but if you do not give them some place where they can learn science and theory as well as

be taught the trade, you are going to turn out inferior workmen. This is a necessity, and while we are endeavoring to build up Canada as a manufacturing country, if you do not give the workmen a chance to learn their trades as well as the workmen of the continent and the United States, there is no possibility of building up this Dominion into a manufacturing country.

Q.—Is there not another very serious disadvantage from the lack of such industrial education in the circumstance that when special skilled labor has been required it has had to be brought from abroad? A.—In my own business—as I say my father is a carpenter—I have known cases in point. I remember one instance in connection with the building of a church. It had an arched round roof and we had to employ workmen from England to do the work for we could not get them in Canada. We obtained one in Canada, but he had drifted out from England, and we had, I say, to import the men to do the work. There is no reason why Canadians should not have done it if they had been properly instructed. I maintain that carpenters should not only be able to handle the plan in store but be able to work from working plans and build anything in wood. If they were properly taught they would be able to do this, and if we had industrial and trade schools we would have more first-class workmen.

By Mr. HEAKES :—

Q.—Do you know how many different designs are taught in the kindergarten school? A.—They hardly teach them designs.

Q.—Has not the teacher to furnish a book and a certain number of designs before he or she is allowed to teach, and are not those designs taught to the children? A.—I do not know. This is done no doubt in order to obtain evidence of the capacity of the teacher for a position in the school more than for anything else.

By Mr. ARMSTRONG :—

Q.—You are no doubt somewhat acquainted with the system in our public schools? A.—Yes.

Q.—Keeping in view the greatest good of the greatest number, do you not think it would be better for the parents sending their children to the common schools that the books should be free, that a portion of the government revenue now diverted for university and higher education should go to educate the children more thoroughly, and do you not think that in some families with the husband earning moderate wages at the trade, children are liable to be taken away from school on account of the cost in that direction? A.—I have peculiar ideas perhaps on that subject. I hold that everything used in the school should be free to the pupil. I do not mean books alone but everything used, and that all those articles should be subject to general taxation.

By Mr. FREED :—

Q.—In Hamilton we paid a small fee and the books were supplied? A.—We have not that system in Toronto. Not only should books and everything be supplied and subject to general taxation, but every child should be compelled to attend school. With respect to the industrial school at Mimico, the city should look after that institution by a proper system, something like that of an industrial school, and children whose parents are too poor to look after them should be cared for. All through the city there are little waifs of the street, hundreds of them, running round, growing up to be criminals, that should be taken in hand by the city. If their parents cannot support them, they should be sent to a school and taught a trade, and then they would become respectable citizens. It is almost impossible at present to see how these waifs and strays should grow up anything else than criminal; they grow up to be dangerous members of society, but it is not the fault of the children themselves. They have no better chance; we do not look after them. They sleep in doorways night after night. I have scores and scores of times taken two or three little waifs down into the engine room of the newspaper office where I was employed, against the orders of the office, and provided them with some place to sleep, on a pile of

sacks, or some other spot where at least they would not be frozen. They sleep night after night in doorways and we stumble over them; for newspaper men find out these little people. There is of course the Newsboys' Home which looks after a certain number of them, but four times as many are out of it as are in it. They grow up in destitution and viciousness. The industrial school at Mimico is altogether a different place from a school established to furnish industrial education.

CHARLES R. RUNDLE, Contractor and Builder, Toronto, called and sworn.

By Mr. HEAKES:—

Q.—What is your business? A.—I learned the trade of a wall mason, but I have been engaged more particularly in the plastering business.

Q.—How long have you been in Toronto? A.—Seventeen years.

Q.—Are you in business as an employer? A.—Yes.

Q.—How long have you been an employer? A.—Fourteen years.

Q.—Did you work as a journeyman in this country during the three years before you commenced business as an employer here? A.—Yes.

Q.—Can you tell us if the condition of mechanics in your trade has improved during the past fourteen years? A.—Yes; I think on the whole it has.

Q.—Have the men been paid better wages? A.—The wages are higher now than they were. I worked when I came here for \$2 a day; there were a number working for \$1.50 and \$1.75 for twelve hours.

Q.—What wages would they get to-day? A.—Plasterers get 30½ cents per hour.

Q.—What number of hours do they work now? A.—Nine hours.

Q.—And you think, taking into consideration hours of labor and the rates of wages, they have improved their condition? A.—Yes.

Q.—Can you give us any reason why this improvement has taken place, and can you state any matters that have tended to the improvement? A.—The general impression of all employers, I think, as well as the employes is that nine hours a day are sufficient; that is so far as our trade is concerned. Of course the times have improved. Taking men's wages all over the country they have risen. When I started in business first I paid \$2.50 per day; that was before there was any labor organization at all.

Q.—Was that ten years ago? A.—That was about twelve years ago. Then the wages dropped a little down to twenty cents per hour. They have been gradually on the increase here for the last four or five years. The demands of the Union no doubt have brought about that state of things.

Q.—That is partly so; and in the case of plasterers they are very scarce? A.—There is scarcely any time of the year when you can get a sufficient supply.

Q.—You say that twelve years ago you were paying \$2.50 for twelve hours a day, and you are paying now \$2.75 for nine hours; is that the case? A.—Yes.

Q.—Do you think the combinations among the men have been a benefit to them all around? A.—I don't know; perhaps they have on the whole.

Q.—Do you think the shortening of the hours of labor has demoralized the men at all? A.—No; so far as my experience has gone. When a man stays away from work we speak to him once or twice, and of the sixty men I employ I have no more than one or two who take an occasional spree—they just stay away from their work. I don't know what they do after the hours of labor, but judging from their appearance they do not dissipate.

Q.—Your trade involves pretty hard work? A.—Yes; it is hard work.

Q.—Would you consider nine hours a day quite sufficient for a man to work at your trade? A.—Yes; I am no advocate of long hours.

Q.—Do you take many apprentices? A.—I have three; that is the limit I am allowed.

Q.—You are limited to that number by the Union? A.—Yes.

Q.—In carrying out an agreement with the members of the Union what is the usual method on which you proceed? A.—We draw up documents generally and have them signed by representatives of each association.

Q.—You meet and discuss the different matters? A.—Yes.

Q.—Do you think that is a good method? A.—I think it is defective as arranged, inasmuch as the fact is that the members representing each Association are as a rule the worst men to come to an agreement. I find them to be generally hot headed on both sides, and they will not wait, and they are not willing to come to an agreement for a considerable time. Perhaps neither side will give way until the men have been on strike for a month or so, which I think is a mistake.

Q.—How would you propose to improve that arrangement? A.—I have thought whether the matter could not be referred to a judge to take evidence and pass it under review, evidence as regards the state of trade, the wages paid, and of such things, and lay the matter before some other party, so that a decision might be arrived at a few months previous to the time when it is necessary for contractors to put in tenders, in order to give the contractors a chance to raise their prices if necessary. With regard to contractors in this country, especially in this city, the system is not like what it is in the old country where there are men employing a large number of hands and possessing a large amount of capital. Here men engaged in the building trade, that is employers, really only act in the shape of foremen; you cannot call it much else. They arrange the work, get the money from the architect or proprietor every few weeks and hand it over to the men. It is not like where a man has a large amount of capital invested. Here it takes the builder all his time, I know it from personal knowledge, to pay every two weeks. It is not a matter of capital and labor or of large firms, but it is a question of builders acting in the capacity of foremen; and the builder simply assumes the position of an employer and either stands or falls by his own ability or push. That is the position so far as the building trade is concerned.

Q.—Do you think some disinterested persons would be able to settle those disputes more rapidly than the persons who are interested in the disputes? A.—I think so. For instance if journeymen thought they required a raise of wages they should give at least four or five months' notice of their intention to apply for a raise. On the other hand if the employers wished to reduce the rate of wages, they should be compelled to do the same thing, and in all cases the matter should be fixed three months ahead. For instance, in regard to the men who have been working for me all summer, I never thought I would have to give the advance, and I could swear positively that I have not received enough to pay the rate since the strike. There was a misunderstanding in that respect. I understood that if the men did not make an application for a raise by the first of January such would not have to be granted until next year. They took the agreement in another light. There was a misunderstanding as to the date of the agreement, and the expiration of the agreement—there was three months of a difference. The men struck in the summer at a time when we could not well allow the work to stand, which I think was very unfair. We submitted the agreement to several architects and they all claimed that the employers were on the right side, and the men had no right to the raise, according to their own agreement; but on the other hand the men submitted the agreement to the Attorney General of this Province, and he interpreted it the other way. It is thus clear that if there had been some person to interpret the agreement, and we had received a fair amount of notice we would have been able to prepare ourselves; for it does not matter so much to the contractors or the foremen what wages we pay, provided we have fair notice and can make our own prices.

Q.—Have you ever known the men to violate the agreement arrived at between the two Associations? A.—So far as my experience goes I have always found the men very honorable in carrying out the construction they put upon the agreement. We have never had any difficulty in regard to that; when an arrangement was once agreed upon it has been carried out.

Q.—Do you know whether in case an agreement was broken you would have power to enforce it? A.—I don't know.

Q.—Does the Ontario Act cover the ground you desire to have covered in regard to the matter of arbitration? A.—I just glanced over it some time ago, but I am not sure whether it covers the case or not.

Q.—What question most frequently causes a strike? A.—Sometimes the matter of apprenticeship will cause a strike. The master is employing a certain number of men, and has one, two or three apprentices. I will state a case. There was an employer who had the privilege of having two apprentices. One of them was no good, he could not do anything; went to the bad. The other boy went to Chicago. The employer claimed that at all events he was entitled to one apprentice. The men claimed that he was not entitled to any more apprentices. He showed that it was impossible to bring a boy back from the United States. The men, however struck because he took on an apprentice.

Q.—To take the place of the boy who was on the other side of the line? A.—Yes. Our last agreement was a more satisfactory one. There cannot be a strike unless the different committees give the proper notice, but before that they could strike at any time. Now they cannot strike until all other means have been exhausted.

By the CHAIRMAN :—

Q.—Do I understand you to say that having sixty men you are only entitled to three apprentices? A.—That is in the plastering trade of which I am speaking.

Q.—How many plasterers do you employ? A.—Twelve.

Q.—And you are entitled to three apprentices? A.—Yes.

By Mr. HEAKES :—

Q.—Do you know the 28th clause of the Ontario Act; is there anything in it that requires amendment? A.—There is no reference to the fixing of wages. I think they should be fixed in the spring; before the spring work comes on, so that the employer may have a chance to make his arrangements. Of course, in large contracts the men who make them must run the risk, but I think we should know at the beginning of the year what the prices are that we will have to pay. Most building contracts come out in February and March when the architects have prepared the work. In that way builders would get a better chance if the wages were fixed early in the year rather than leave it till the summer, with the possibility of having a strike.

Q.—Then I understand your position to be that you would favor compulsory arbitration, and that arbitrators should fix the rates of wages and the hours of labor? A.—Yes; I would be in favor of that; there should be some board to take evidence on each side.

By Mr. ARMSTRONG :—

Q.—You said that all the architects, to whom you showed the document, referred to by you, said the employers were right? A.—Yes.

Q.—Did any leading architect in the city say the men were right? A.—Not that I am aware of.

Q.—Are the master builders organized? A.—They are kind of organized; they do not meet, but there was such an organization.

Q.—In case of labor troubles do they come together in a body? A.—Yes; that is all.

Q.—Is there a written understanding between the men of the union and your organization that a certain time is given before a raise in wages takes place? A.—There is.

Q.—What was the cause of the last difficulty in Toronto? A.—It was in regard to the interpretation of that agreement. The representative of the men told me that he showed the agreement to Mr. Mowat, and he supported that view, but that representative himself admitted to me that the verbal agreement made was that the matter

should be discussed on the first of January, not on the first of March. But it was of the interpretation of the agreement, and not on the language of it that the men struck.

Q.—Were the bosses willing to submit the whole difficulty to arbitration? A.—I do not know. I did not hear anything of it at first. The committees on each are, as a rule, not fit men to meet, because they generally get pretty warm on the subject, each looking at it from his own standpoint, and after exchanging a few hot words they separate, and it is difficult to get them together again.

Q.—You cannot say, I suppose, that the employés were willing to submit the matter to disinterested parties? A.—Yes.

Q.—There was a strike at all events? A.—Yes, because some of the employés were not willing to arbitrate, while the majority were willing. What they claimed was that if all these matters had been brought up before the strike occurred they would have been perfectly willing to arbitrate, but the employers claimed that after there was a strike it was not right for the architects to step in and settle the matter.

Q.—In case the two sides could not possibly agree, would you think it right and prudent that a Government board of arbitrators should interfere and settle the difficulty? A.—I do not know whether it would be best done by the Government or by the aid of judges; I think, however, a judge with a commission appointed by the Government might do so.

By The CHAIRMAN :—

Q.—That is a judge with two assessors, one for each side? A.—Yes, that would be a good way of settling it.

By Mr. ARMSTRONG :—

Q.—Are there two schedules of wages with you? A.—I pay one man 33½ cents an hour for looking after matters; the general rate of wages is 30½ cents an hour.

Q.—You believe in paying a man according to his ability? A.—No; we do not do that, only in regard to the foreman.

Q.—Are many of your men Canadians by birth? A.—Yes; some of our best plasterers are Canadians; men brought up in our own shops.

Q.—Some inferior hands also? A.—Yes; and they come in from the country. That is one of the difficulties, and I think in that matter our own workmen are cutting their own throats. Toronto and Hamilton are the only places where a man can learn plastering in a proper manner; for he cannot learn it in the country. Take these two cities, and the trade organization limits the number of apprentices, and the result is that while some of our best men go to the United States, we have to draw from the country where there is no chance of properly learning the trade. From the country we get poor bricklayers and poor plasterers. I have some inferior men in my employ, but I cannot do better.

Q.—Are the apprentices indentured? A.—Generally.

Q.—In regard to the building trade, is bricklaying, from your standpoint, a more scientific part of the trade than is plastering? A.—No.

Q.—Is it more fatiguing? A.—I do not think especially so.

Q.—It is not dangerous to the health and constitution of a man? A.—No, for they say plasterers never die. It is a very healthy trade, and I have worked at it for a number of years.

Q.—Then it is an advantage in that respect to belong to the plastering trade? A.—The men breathe the air that has passed over the damp mortar, and they get healthy and strong.

Q.—Why, if bricklaying is not more scientific and is not more fatiguing are bricklayers paid more than plasterers? A.—There is this disadvantage with bricklayers; they do not get in so much time, for plasterers are employed almost all the year round. The plasterers work inside, and in bad days have stoves. Their wages on the whole show more money than the bricklayers, although the latter get higher wages.

Q.—Is that one of the many reasons? A.—Yes.

By Mr. FREED :—

Q.—Is not the work of a bricklayer when exposed to the heat of the sun very fatiguing? A.—Yes.

A. M. WICKENS, Stationary Engineer, Toronto, called and sworn.

By Mr. FREED:—

Q.—How long have you been employed in the capacity of a stationary engineer in Toronto? A.—I have been in Toronto two and a half years in that capacity; I have been coming in and out of Toronto for the last twelve years setting up machinery and have been connected with stationary engineers during that time.

Q.—Is there an organization among the stationary engineers? A.—Yes; we have what we call the stationary engineer's Association.

Q.—Perhaps you will give us an idea of the laws governing the use of stationary engines? A.—That is one of the reasons we formed into an Association; we had no laws at that time in Ontario or Canada.

Q.—Are there not laws for their inspection? There are no inspection laws and that is one of the weak points of the Factory Act. You can go into a factory and see that the belts are properly covered up and so on, but there is no compulsory inspection of boilers or engines.

Q.—What are the qualifications required by law for engineers? A.—There are none at all for stationary engineers; an employer can go on the street and put a man in the engine room provided he thinks he can do the work.

Q.—Does the failure to inspect boilers and steam machinery lead to accidents? A.—Undoubtedly it does.

Q.—There should be a law you think requiring inspection and demanding of owners that steam machinery should be kept in good repair? A.—Yes, sir; either that or a law fixing the status or the amount of knowledge a man should have before being put in charge of an engine.

Q.—That however is a separate matter is it not, from the question of inspection? A.—Not necessarily so.

By the CHAIRMAN:—

Q.—Supposing there were both? A.—That would be better.

Q.—If we had no law requiring proper inspection of steam machinery by a government official would the requirement of a proper qualification on the part of engineers cover the whole matter? A.—It would help it greatly but it would not cover it entirely; it would make a great difference.

Q.—Would not an engineer be afraid sometimes to report that his machinery was in bad condition? A.—I think not; if he had a licence by law he would not be afraid to make a report; I think it would put him on his feet in that particular matter.

Q.—Have you any other suggestions to make on this subject? A.—Yes; the engineering people of this country want a technical school very badly. If we want high class engineers we have to send to England, Scotland or the United States. Young Canadians go to the United States to the technical schools of that country, and the result is that they stay there, getting the best situations in the country. I was looking a short time ago at a list of the Boston Technical School, and I found twenty-seven Canadians who had passed through that school and had remained there getting exceptionally high salaries for works on the large railways on the other side and other work of that kind. If these men get a high school education here in Canada, when they go so far they have to go to a technical school somewhere and they go to the United States and stay there as, our schools do not teach the subject at all.

Q.—A diploma from one of these schools is a good certificate of efficiency? A.—One of the best in the world.

Q.—Then we not only lose our young men but we have to send abroad for persons to fill like positions at home? A.—Yes. Of course, a school of that kind would not only serve the purposes of mechanical, or stationary, engineers but of machinists and all that class of constructing mechanics; they would go to a school of that kind. I may state that the stationary engineers' association are advocating some such system very strongly with the present government of Ontario, trying to get them to do something or make some kind of a movement in this matter.

Q.—Could the primary part of a technical education of this class be given in connection with the ordinary schools? A.—Yes, sir.

Q.—And then if they wished to become engineers they would have to take special branches in a special technical school for that purpose? A.—Yes.

Q.—If a large number of well educated engineers were in Canada, would they take persons under their training to give them practical instructions? A.—I think so.

Q.—Do you know of young men taking lessons in that way who will grow up into engineers? A.—We have young men who are so anxious to do it that they are paying old engineers for private lessons and this is done without any proper apparatus to help the teachers, such as would be found in a properly equipped school; our associations are practical schools of instruction and that is all they really are. The older men are instructors of the younger with a view to make them more proficient in their business; that is one of the principal objects of the association.

Q.—You should have model engines which could be taken apart so as to explain all the inner parts of the engine and so on? A.—Yes; in those schools they have all those things got up in skeleton shape and when they go far enough along, for instance, in Stephens, they have complete shops in which the young men can go right through and learn the whole business as pattern makers, machinists, engineers and so on, and become, say, first class bridge engineers or mechanical engineers of any kind, and they are then in a position to occupy some place in the world afterward.

Q.—Is not there a danger that so much scientific learning will make a man a little too big for his business as a stationary engineer? A.—No, I don't think so; I think the man who knows the least is the poorest engineer, the poorest for himself and for his employer. I may say that the prices now being paid are very bad.

Q.—What wages are paid? A.—They are running all the way from \$8.00 a week to \$20.00 dollars, but I think the average would be about \$10.50 for this part of Ontario.

Q.—Those are very low wages for such an important position? Yes; and these men have longer hours to put in than any other men about the establishment. In every case he has to be there before the others so as to get ready, and he has to be there after the others have gone to see everything secure for the night.

Q.—Have you any further suggestions to make? A.—Well, I don't think I have. There is nothing will help us any more than these things I have mentioned. I may say that when I first started the association here the employers rather looked down upon it, but as soon as they found out what our principles were, and how we were working, they withdrew their antipathy to the association. We showed them that we had their interest at heart as well as our own, and any of those that understand the association have a good feeling towards us. Some of them, however, think we are some kind of a trades union, just because we are banded together, but there are few of that class.

Q.—Is not there danger that if you had strict laws governing this matter they would work hardly upon those having small engines and working occasionally? A.—I think it is possible to make equitable laws for these people.

Q.—Would you give permission to use an engine under a certain power? A.—Yes; I think the law should give a special permit for them; if a man understands how to do a thing, he understands enough to tell how to do it.

Q.—How about agricultural engines? A.—I think if there is anywhere in the world that they want legislation to save life and limb it is in the case of agricultural engines. There have been more people killed in Canada by explosions of threshing engines from incompetency alone than almost any other way; and if they cannot thresh grain without killing so many people I think they had better thresh it with a flail.

By Mr. HEAKES:—

Q.—In your business do you find second-hand boilers frequently put in? A.—Very often indeed.

Q.—Are they always in good condition? A.—Not always.

Q.—Is not that one of the evils you have to complain of? A.—It is a necessary evil—one which follows with a business where machinery or any other article is sold second-hand. After a boiler has given almost its whole service to the firm they can afford to throw it away, but a poor man comes along and buys it; he has the worst end of the bargain; the engine is liable to explosion, and it has a short life under any circumstances. A good inspection law would remedy that to a great extent.

Q.—In the case of stationary engines, are they required to have a governor valve to the boiler? A.—Not here, but in cities like Montreal, Buffalo and Detroit where they have city inspection it is required. Montreal is the only Canadian city where they oblige them to put on a lock valve; the matter is in charge of their city inspector.

Q.—There is a governing valve in use on vessels? A.—Certainly; all men running on vessels carrying a certain number of passengers must have a government license; the boiler, engines and hulls have to be inspected by the government inspector.

Q.—Do you know anything about the inspection of vessels? A.—Not in this country. I have had a good deal to do with inspection of boilers for insurance purposes.

By Mr. FREED:—

Q.—How many business concerns insure with a steam boiler insurance company? A.—I could not tell you that.

Q.—A large proportion of them? A.—No; only a small proportion; only the larger establishments.

Q.—Is the inspection ordered by the company pretty thorough? A.—Reasonably so.

Q.—Are explosions of insured boilers as frequent as of non-insured? A.—No, sir. I cannot tell what the statistics of Canada are but the statistics of the United States show the proportion to be as one to seventy-two; seventy-two non-insured boilers explode where one insured boiler explodes.

By the CHAIRMAN:—

Q.—Do you know anything about the rate of insurance? A.—In Canada it is about one and a quarter per cent. but they will not write less than so much insurance. They visit each boiler three times a year and they cannot do that unless the premium is \$25 or more, so they will not usually take a risk of less than \$2,000. The cost of the business is largely in travelling expenses for inspection.

By Mr. HEAKES:—

Q.—What are some of the chief causes of explosion? A.—There is only one cause for a boiler exploding to my mind and that is carelessness or ignorance on the part of the attendant.

By the CHAIRMAN:—

Q.—Explosions sometimes take place on steamboats, the engineers of which you say are licensed? A.—Yes; even a licensed man can be careless. I have spent thirty-two years among engines and boilers and the longer I live the more thoroughly I feel convinced that the attendants are accountable in these cases.

By Mr. FREED:—

Q.—There is a good deal of theorizing on that point, is there not? A.—Not so much now as formerly. There used to be a theory about an unknown gas and all that sort of thing, but latterly that has been all blown to the winds.

By Mr. HEAKES:—

Q.—Is a boiler which is incrustated or fouled inside more liable to explode than a clean one? A.—Yes.

By Mr. FREED:—

Q.—Are these boiler purgers good articles? A.—Some of them are better and some worse. Engineers as a rule use some purger.

Q.—Are there not some purgers which will eat the iron themselves? A.—I believe there are, but I think the time has gone past when those will sell. Engineers who use purgers are beginning to learn enough not to buy any that destroy the iron. The purger business is older than it was; there was a great deal of trouble about it at first.

By Mr. HEAKES:—

Q.—What is that process which is technically called foaming? A.—It is when the water won't show its proper level and begins to churn up and down.

Q.—Can that be controlled? A.—Yes, usually; it can always be stopped by an engineer who knows his business.

Q.—It would be no source of danger to a man if he understood his business? A.—Any man who has common sense can avoid the danger if he will.

---

WILLIAM SUTTON, Stationary Engineer, Toronto, called and sworn.

By the CHAIRMAN:—

Q.—You corroborate what the last witness has said and entertain the same opinions as he has expressed? A.—Yes.

By Mr. FREED:—

Q.—Have you any statements to make in addition to those we have already heard? A.—No; I don't think I have any further than this, that some steps should be taken for the protection of the stationary engineers—those that really are stationary engineers—against people purchasing boilers and engines and placing them in the hands of boys or incompetent men. I believe we have in Toronto somewhere about seventy or seventy-five boilers that are placed right beneath our sidewalks, and these are very apt, I am sorry to say, to fall into the hands of men who are not competent to take proper charge and, of course, their lives and ours and the lives of our friends and families—the lives of all passers by in fact—are in danger at any and every moment. This is a matter which should be taken into consideration by the authorities and the Government.

Q.—You think there should be a thorough system of supervision over boilers and engines? A.—I heard of a man who was in charge of one of these boilers; he did not notice its condition when lighting the fire and finally he got it almost red hot. A plumber went in and observed that he had no water in the boiler but instead of taking out the fire he was going to turn the water right into the boiler. If he had done this he would have blown the boiler out and killed himself and others and destroyed a lot of property. If the man had been competent to take charge of the boiler he would not have done so, of course.

---

CHARLES W. BARTON, Harness Maker, Toronto, called and sworn.

By Mr. HEAKES:—

Q.—How long have you been in the city? A.—Three years last March.

Q.—What branch of the trade do you work at? A.—I work at making the harness.

Q.—Is that distinct from collar making? A.—Yes; distinct altogether.

Q.—What is the condition of the harness trade in this city; what wages do they get? A.—We have a book drawn up between the employers and the employés; it was drawn up five years ago and we are supposed to abide by that book. It calls for first class men to get twelve dollars, second class men to get \$10.50 and third class men \$9 a week.

By Mr. FREED :—

Q.—How many hours? A.—Ten hours every day, excepting Saturday. Of course when the book was drawn up it was supposed to be ten hours every day, but I don't think there is a man in Toronto to-day who is getting \$12 a week. There are only about three or four second class men who are getting \$10.50 and there are men in the city working below nine dollars and down as low as six dollars a week. I have heard of some at \$5.50, men who went through their time and are supposed to have learned their trade.

Q.—Have you any organization amongst the harness makers? A.—We have had up to the present time. It is not generally known but we have not anything now which is worth anything. We had an assembly of the Knights of Labor; we were the third assembly of the Knights of Labor in the city.

Q.—At the time the book was drawn up they were organized in Toronto? A.—They were as a union, the Harness Makers Protective Association.

Q.—It was under the management of the union that this association was made? A.—Yes.

Q.—What in your opinion has caused this decrease in wages? A.—I don't think the rate of wages was ever paid. The bosses got together and they said to the men: Now look here; we have a lot of old men around who are not able to earn nine dollars a week, we will put another provision in here and will employ them at whatever they are worth. Of course under that they crept out and other men are being employed down to six dollars and there is no regular scale at all.

Q.—Do you think that grading wages has a tendency to lower wages? A.—Yes; I think so. If a man wants big wages and can do the work he will get good wages and will get employment during the busy season, though when the season is over they will keep the cheap hands on and pay off the well paid men.

Q.—And a well paid man if he wishes to have work must come down to the prices of the others? A.—That is the reason, I think. Another reason is that the bosses have no organization amongst themselves so that if a young man starts in business and goes on and makes cheaper goods than the others, they are working one against another, one selling at a certain price and another at a lower price, and of course it comes out of the pockets of the employes.

By Mr. HEAKES :—

Q.—Are the harness makers better paid in this country than in England? A.—Of course they are getting a little more money but I don't think they can do as well on the money they get here as they can in the old country on the money they get there.

Q.—The purchasing power of the money is greater there? A.—Yes; rent is cheaper. In some of the small towns there where you get a decent wage you get a nice little house for three and six pence or four shillings a week and everything else is cheap.

Q.—Have you any suggestion you wish to make to us in reference to trade matters? A.—I hardly know what anybody could do to better trade; it seems to me to be in an awkward state just now.

By the CHAIRMAN :—

Q.—I would like to know how your harness compares with that which is made in Montreal? A.—The bosses say it is altogether better.

Q.—Do you know what wages are paid in Montreal? A.—I do not.

By Mr. FREED :—

Q.—You think if the employers had a Union by which they could keep up the prices the men would reap the benefit in larger wages? A.—I think they would, because there are quite a number of bosses in this city who are apparently really square men and are willing to help the men along, but I don't think they can afford to pay more wages; of course some might pay more wages. For instance, I know when I

came to this country there was a boss in this city advertising for men and I answered the advertisement, not knowing the country. We were paid a dollar a set for making these long tugs and I thought that was the regular price. We went to work and had to work very hard to get in a set in a day's work; and after doing that for some weeks he said: Now, I will put you on week's work; that shows you can just earn a dollar a day. When I came to get the piece book of the Union I found they were worth \$1.65, and yet he was only paying a dollar.

By the CHAIRMAN:—

Q.—Others were paying \$1.65? A.—Yes; he had two or three of us working on the same wage.

Q.—It does not require a large sum to open a store in the city? A.—Yes; it does; sometimes you have to give harness on credit. Of course some of the whole-sale men will back them up, but I don't think it would be possible for any journeyman harness-maker to save sufficient out of his wages to start in business.

Q.—Are the shops generally pretty comfortable? A.—Some are, and some are not. Some of them have not got very good light and others not very good ventilation.

By Mr. GIBSON:—

Q.—Are there many men thrown idle in a slack time? A.—Of course there is a great number, but as a general rule the shops don't discharge their men. They may discharge one or two and put them on short time and then of course the whole of them have to suffer, of course in the winter time just when they need more money; that brings wages down considerably. I have known some shops for three months in the winter when the men are on three-quarters time, receiving 18½ cents on full time and then in winter it would be brought down by 25 per cent. I think that is about the rule with all trades in winter. I have known men in winter to work half time for four months; I know one such case.

Q.—Do you think the trade is overstocked with workmen—the supply greater than the demand? A.—Yes.

By the CHAIRMAN:—

Q.—In summer time you have work enough? A.—Yes. Some of the employers are obliged to buy stock in summer because they have not got it made up, whereas, if they were to launch out a bit and make up their goods they would be able to keep the men going all the time.

By Mr. HEAKES:—

Q.—Would not shorter hours help you? A.—I think they would. Of course last year in many shops we had two hours taken off on Saturday night; we tried to get half-a-day, but as the men were divided we got only two hours in some of the shops and some of those who signed the agreement have gone back on it.

By Mr. GIBSON:—

Q.—If the men combined properly and stated the case plainly to the bosses, do you think any arrangement could be made, so that the bosses could shorten time and so that you could be put on full time? A.—I believe that could be managed; but the trouble is, you can't get at the bosses as a whole, because they have no union. Each one has to go to his own individual boss. He will say that there is another man who is paying such a wage or keeping his men to such a time, and that he cannot afford to do it if the other would not.

Q.—If the harness makers were properly organized and stated this in an intelligent manner to the bosses, don't you think that some arrangement could be made between them? The employers could do as well, only they would have to increase the prices of harness? The bosses are selling too low, owing to competition? A.—Yes. On the other hand, we have a harness factory which claims to sell harness about ten dollars cheaper than other harness makers, and they have to cut the men down still lower.

Q.—Then, there is really no way of relieving the difficulties that you can see?  
 A.—No. I would like very much to see some way; I know that the men, as a rule, are very dissatisfied.

Q.—Have you ever thought of co-operation? A.—Some of them have thought of it and talked about it, but they never came to any conclusion. I think the men were in a position last summer—if anything could have been done—to have bettered themselves, if they had been handled. But they were all one against the other, and for that reason they could not do anything. Of course they had the teamsters and other men with horses; they were all united; they were in the different unions, and they might have helped them to carry any point they wanted. If they had started a co-operative store, they might have shut up a good many stores unless they gave reasonable pay.

By Mr. FREED:—

Q.—Do you think that the old Union among the harness makers secured their interest better than this Assembly of the Knights of Labor? A.—They may have been the best at one time; but I think if we had been of the Knights of Labor we could have got more than we got as a Union. My own idea is, that the best thing we could do now is to start a Union again.

By Mr. ARMSTRONG:—

Q.—Are there not some foreign establishments in the harness trade? A.—Well, there is a Buffalo firm called the Canada Harness Co.—the one I spoke of before.

Q.—Do they pay the same wages as the men on Yonge street? A.—No; not by far; they work on a different style.

By the CHAIRMAN:—

Q.—And what is the result? A.—I can hardly tell you. The men are working there for almost nothing.

By Mr. ARMSTRONG—

Q.—Is their harness as good? A.—No; it is not. Of course the men cannot make it; they get only about half what we get. They all work by piece work. The firm employs a contractor who contracts to make so many dozen sets for a certain wage; then he hires a fitter and finisher who fits and finishes the work with the contractor and then they employ either a lot of boys or young fellows who can just stop the men who are out of work. They are obliged to do that or starve. They pay next to nothing and if they work very hard and manage to knock out a dollar a day they do very well—in fact they can hardly do that.

Q.—Do they get their material from the other side? A.—I don't think they get much from the other side; of course there are different statements going about but I cannot say.

Q.—Was the Ontario harness company on King street originally an American firm? A.—Yes; it was; it is a branch of a Buffalo firm; they were here once before under the name of Anderson.

Q.—Do they depend in a great measure on improvers—these young men between apprentices and journeymen? A.—Well they get a boy at first and teach him to stitch and get other young men in from the country who have served two or three years and cannot get work in other shops, so they go there. They are continually changing their men but they can get enough to keep going. They will advertise for instance for twelve men; everybody knows that they cannot employ that number, but if all that number come there are always so many spare men in the city.

Q.—Have you any apprentice system? A.—No; we have not.

WALTER S. APPLETON, harness maker, Toronto, called and sworn.

By the CHAIRMAN:—

Q.—Have you anything more to say than has been stated by the other witness?  
A.—I think an indenture law would be a benefit to the trade because there are so many incompetent workmen in the trade. They serve one or two years in the country and then come to the city and pass themselves off as journeymen. I think shorter hours would be a benefit to the trade if they would keep the men more employed during the year.

By Mr. HEAKES:—

Q.—Do you think a Government law compelling indentured apprenticeship would be a good thing for your business? A.—Yes, I do.

Q.—Would compulsory indenturing be the best? A.—Under the present state of the trade and there being no organization of the trade I think it would be better.

Q.—Have you any further suggestion to give us in addition to what has been said? A.—I think if there could be a licensing of the livery stable people so as to restrict them a bit it would be better—something which would induce more private carriages to be kept and that would extend trade.

Q.—I think what you want is thorough organization amongst yourselves? A.—I think that is the main cause of the trouble. Legislation would not do us much good without local organization; indenturing laws would help us and local organization would do the rest. I have heard my boss tell me that labor is let out from the industrial school by contract to a Montreal firm at fifteen cents a day, and that comes in competition.

The CHAIRMAN:—

I understand that after the existing contracts have expired they will not be renewed.

By Mr. FREED:—

Q.—There has been no harness making in the Central prison? A.—No; I believe not.

Q.—You are speaking now of Montreal? A.—Yes. This harness comes from Montreal here and is sold lower in Toronto than the local harness on account of the cheap labor. I think I might say that the average wage is not \$12 or \$10.50 or \$9—it is nearer \$8. I lost time last year thus reducing my wages below \$8—short time in winter was the cause.

OWEN MEAD, Toronto, called and sworn:—

By the CHAIRMAN:—

Q.—Do you occupy any office in a benefit society? A.—Yes, I am permanent secretary of the Metropolitan Lodge of the Manchester Unity of Odd fellows; Lodge 6534.

By Mr. HEAKES:—

Q.—Tell us how the funds in your society are invested? A.—Do you want me to speak of the English Society or those we have here?

The CHAIRMAN:—Better confine yourself to those about which you can speak personally.

By Mr. HEAKES:—

Q.—Are all the branches of your society incorporated? A.—No; they are not incorporated.

Q.—Is the parent society incorporated? A.—Yes; in England.

Q.—Are the funds of your society used for any other purpose than that which is stated in the by-laws? A.—No; in fact we don't do anything of the sort. I would

like to speak about our incorporation. We are situated in this way; that our district is the Montreal district and of course belongs to the Province of Quebec. Well, we cannot incorporate here because the whole of our district funds have to go to Montreal and therefore we are fixed in that position. But on the 16th of this month we intend opening a new Toronto district; we have just got the papers out from England and then we will have a Toronto district of the Order and we will be able to incorporate as a district, and then incorporate each lodge under the local laws.

Q.—Do your treasurers give bonds for security of the money entrusted to them?  
A.—No; we have nothing of that kind at present; our surplus money is invested in the banks.

Q.—Do you publish an annual statement? A.—Yes.

Q.—Are people ever induced to join your society by misrepresentations? A.—No; not in the slightest. We would not dare to do that under our general laws.

Q.—They don't find after they have got in, a different state of things from what they were given to understand? A.—No; we have to make a return to England every year.

Q.—Do your members get the benefit of the surplus funds over and above what is required for benefits? A.—We have an arrangement for that, but we are too young yet here to be able to do it, but we shall do so after being established five years. We have a quinquennial return to make and whatever the surplus is, beyond providing for the order is paid back to the members according to the amount paid and received from them.

Q.—Have you any insurance benefit? A.—Yes; for children, and an extra one for members.

Q.—Can a member of your order will to any person other than the person named in his certificate the amount of his insurance? A.—He is compelled, when he first comes in, to say to whom his money shall go, but he can revoke that at any time by filling up another form.

Q.—Supposing that a person was insured in your society, and the benefits were to go to his wife, and that his wife should die; supposing that he should be taken sick himself before another form was made out, could he will that money to another person? A.—I think our law provides that it shall go to his children.

Q.—Could he leave it to anybody else? A.—Yes; he could if he had time.  
Q.—Supposing he should die before he had time to make out one of the old forms could he will that money to any person other than the person named in the certificate? A.—I don't know any reason why he should not; we have all manner of forms for that particular purpose, and our laws state distinctly that the money should go to the wife or sister or children or mother. That is according to the law; we are bound by the law of England as we are incorporated there and we cannot go out of the general law. We may have our by-law or district law but we are compelled to go by the general laws of England.

Q.—It is not possible for a person to be defrauded out of that money? A.—No.

Q.—It is not possible to use the funds for any other purpose such as speculation in property? A.—No; they are very particular about that; we cannot even spend it in getting up a supper and we must not touch the sick or funeral fund under any circumstances.

By the CHAIRMAN:—

Q.—Who has the right to spend the money? A.—It is by the vote of the lodge.

Q.—The money is in the hands of the treasurer? A.—It is invested by the trustees; the treasurer holds only a small amount.

Q.—How many trustees? A.—Three; and it can only removed from the bank by a resolution passed in the lodge and the bank must get notice through me that such is the case before they can allow the money to go.

By Mr. HEAKES:—

Q.—Would not it be better to limit the liabilities of these societies in some way?  
A.—Ours is pretty well limited by the laws of England, because we don't dare to allow a member to insure over £200.

Q.—Does the law of England apply in Canada? A.—Yes; because we are bound by the general law. I will tell you another thing, if a member is insured for sick pay and it is over his average wages we could not pay him without the permission of the Grand Master and the Board of Directors. At present we are paying two dollars a week for the first year and two dollars a week for the remainder of the sickness, but in the new law it will be four dollars for the first six months, three dollars for the second, and two dollars as long as the sickness lasts: \$80 on the death of the husband and \$40 on the death of the wife. Then there is children's insurance costing them about 40 or 45 cents a year. A child can be insured after it is three months old and the amount rises from 30 shillings to eight pounds; after that they get no more until they belong to the Society. If a man dies the widow can insure the money she would have received supposing that her husband had lived. Then there is an extra insurance insuring six dollars a week instead of four. Those were all new laws coming into force this year.

Q.—Do you think these benefit societies should be under government superintendence? A.—Yes I do; they are in England and that is what we want to do here. In fact our people in Montreal called on Mr. White to try if he could not get a special Act covering our own body but he advised us to wait a year or two because he thought there would be a Dominion Act covering all these things. That was two years ago. Of course we are very anxious that there should be not an Ontario Act but a Dominion Act.

Q.—A Dominion incorporation Act? A.—Yes.

Q.—But that is not exactly what I asked? A.—Well then, Dominion inspection.

Q.—General supervision of your business to see that the funds were properly secured and the business properly carried on? A.—I think it would be very advisable.

By the CHAIRMAN :—

Q.—Auditing your accounts and so on? A.—Yes; it is done in England and we have to make returns to the registrar. We have over 500,000 members and over six millions of pounds sterling capital?

Q.—Where is that money invested? A.—In various ways, in public securities a good deal of it is in mortgages in England.

By Mr. HEAKES :

Can that money be used? A.—For nothing but for the purpose for which it is subscribed.

Q.—What was it subscribed for? A.—Ours is to provide for payments in sickness and payments on the death of husband, wife or children.

By the CHAIRMAN :—

Q.—It is purely a benefit society? A.—Purely a benefit and benevolent society.

By Mr. GIBSON :—

Q.—Don't you think the amount taken from insurers is too heavy, that too much is paid for insurance? A.—No; I don't. We pay only fifteen cents a week and out of that we allow them a free doctor for attendance.

By Mr. FREED :—

Q.—Do you give charity in addition to the benefits to which a member is entitled? A.—We even give relief. Supposing a person came over here in distress and he came to us we would allow him out of the relief fund; we pay three cents every quarter for that purpose.

Q.—Not out of the regular fund, the general fund? A.—No; we cannot pay that for any purpose whatever. If we did, before we could make our return we would have to make it up by excursions or soirées, &c.

Q.—If the local fund were not sufficient cannot you get a fund from England? A.—We first go to the district and if they cannot make it up we go to the Unity at Manchester.

Q.—You spoke as if the Order was of recent introduction; was it not here thirty years ago? A.—It was, in the form of what we call the Canadian Order of Oddfellows, but when I came out here first I wanted to see the old Order established with a direct connection with England. We tried to do so for a long time and five years ago we formed this Metropolitan lodge; we have two more here in Toronto now and we purpose forming this new district.

By Mr. GIBSON :—

Q.—In case a candidate for admission does not pass inspection to the doctor is the money he has paid returned? A.—Yes. If a candidate comes and pays us a dollar and does not pass the doctor he is given his dollar back.

JOHN GALBRAITH, Professor of Engineering, Toronto, called and sworn.

By Mr. FREED :—

Q.—I believe you wish to address the Commission respecting technical education? A.—I do not wish it; I have been sent for, and I am prepared to tell you anything I can on the subject. I have not really put my thoughts into such a shape as to tell you systematically anything.

Q.—Have you heard the testimony of Mr. Galt? A.—No; I have seen no testimony whatever.

Q.—You were not present when Mr. Galt or Mr. Kribs gave evidence? A.—No.

Q.—Could you put your views respecting technical education into narrative form without waiting for questions? A.—That is just the trouble. I could speak perhaps, with respect to some portions of the subject. I do not think it is likely that what would apply to one portion of technical education would apply to another; I do not think you can make many generalities.

Q.—To what extent have you been connected with technical education? A.—Only in the teaching of engineering.

Q.—At what engineering school? A.—At the School of Practical Science in Toronto. It is not, however, what is ordinarily known as technical education; that is why, perhaps, a misapprehension might arise.

Q.—What class of engineering is it? A.—Civil engineering, principally. It is giving an education to a professional man; what I understand technical education to mean generally is the education of an artisan, a workman. If that is the meaning of it, I have had practically very little experience, although I have done a little of that kind of work, but very little. The work I have in teaching engineering compares to the work of a medical professor in teaching medicines, and it is not, I think, ordinarily understood by technical education; at least, not in the sense that technical education would include the education of a doctor or a lawyer, or a professional man, as well as a mechanic. If you take it in that sense, of course, I am familiar with part of that work.

Q.—How many pupils have you in your school? A.—Sixty, at present.

Q.—And these are all studying what? A.—Most of them civil engineering.

Q.—So that it is not at all a branch of popular education, but a special study? A.—Of higher education.

Q.—Of professional education? A.—Yes. At the same time the engineer is brought more into contact with the trades, that is with the engineering trades, than he has to be familiar with work of all kinds. He is something like an architect in that respect, and the bricklayer, the carpenter, the blacksmith, and the mechanic generally, and with all these trades. If he is not, he is not fit to be an engineer, so that, in that way engineers are perhaps, more interested in what is known as technical education than any other class.

Q.—Take steamfitters and plumbers, and men of that class, do you think they have sufficient theoretical knowledge of their business in addition to the practical

knowledge they possess to make them first-class workmen? A.—I think as a general rule they have not. I know they would be benefited by more education; I feel sure of it. These are the trades with which the engineer is brought in contact, and he can see to a certain extent the want of education in the workmen.

Q.—If a plumber had a better theoretical knowledge, for example, he would be more interested in securing proper ventilation by his work, and so on, would he not? A.—He ought to be able to know how to do his work. I suppose he does work according to his payment. If a builder is not willing to put in good plumbing it will not be put in by the plumber.

By the CHAIRMAN:—

Q.—Is there an inspector appointed for that work? A.—I believe so. There is no doubt a great deal of bungling in the trades due to ignorance, and, at the same time, there is a great deal of bad workmanship due to scheming, not to ignorance at all, but due to competition for contracts, to small prices paid for the work. I think that, perhaps, there is as much due to that cause as to the other cause. At the same time it is quite certain that every workman, no matter what trade he is in, would be benefited by having better opportunities for learning the theoretical side of his work; but still it is very difficult to see how to get up a practical plan of doing it. It is hard to do this in the ordinary public school where boys are taught, where they learn reading, writing, arithmetic, and history, which are easy to teach and require no apparatus, nothing except a teacher. If you are going to teach boys trades, such as blacksmithing, carpentering and work in a mechanic's shop you can easily see that the expense of doing that will be on a scale, if efficiency is to be secured, that will simply make it altogether impossible.

Q.—That would be to teach trades in every school? A.—Yes; and to make education free. I do not think it is at all possible to teach trades generally except as they are being taught now—that is to say by a boy going to learn a trade for himself; at the same time I think there are certain parts of theory connected with each trade that a man or boy should know more fully, and that knowledge he has no chance of acquiring as things are at present. Perhaps the best way to secure it would be by means of night schools. Boys or men working at trades cannot give up time in the day; it is utterly useless to think of it. But boys until they are thirteen or fourteen years old go to school, and then go to a trade, and they could learn the theoretical part at a night school. Let the people interested in the trade get together, and arrange for a certain amount of scientific instruction in every town. Let them fill out what has not been done in the schools for one thing, and let them teach more on the lines of their own work. I think the only kind of successful teaching in that way has been by men familiar with the trades taught; I do not think the ordinary school teacher can teach the theory necessary for blacksmithing, carpentering or anything else. I think a pupil is very apt to learn more from a man who is familiar with the trade, and yet who has studied it and is altogether a higher class of workman than the ordinary workman. If you could get a few such men in every town they would do more for workmen than any other class of people. It is a pity there are not more of them. In the engineering trade the difficulty is not very great, simply because the engineer has to learn something about the trades connected with his work, and he then makes a very good teacher. He can teach the workmen engaged in those trades the theoretical knowledge they want. I do not see how that can be done very well in other trades; it can be done in the engineering trade simply because in engineering there is a class of men who have the theory better than the workmen themselves. In many other trades there is not that class at all, and the difficulty lies there.

Q.—Could not the children while attending school be taught generally the use of ordinary tools, the natures of woods and the properties of metals, and so on? A.—I have very little confidence in anything of that kind. I do not think it would be worth a snap of the fingers.

Q.—Why? A.—Because there is nothing systematic in it. They are all separate and individual facts, and they would go through a boy's mind like a receipt

in a cook book. Once over, and a year afterwards, if he had not occasion to need the facts, all would be forgotten. Learning a few little facts of that kind does not constitute training. I think a boy would be far better trained for any trade if he were taught just the ordinary things in school, and taught them well; his mind would then be trained to some extent, because the work would have been done systematically. Take a boy of fourteen who learns a little carpentering and the use of tools; I can hardly imagine what could be taught but a little theoretical knowledge regarding different things; but when he has obtained that knowledge you have not educated him.

Q.—Would it not make him handy and versatile? A.—It would, if you gave him time enough. If you had a carpentering school and put a boy through it for three or four years, at the end of that time the boy would turn out a better carpenter than he would turn out in existing circumstances where he has simply to pick up his knowledge. But if you simply teach every boy who goes to school a little carpentering you are going to make the same mistake that is said to be made now; you are undertaking to teach boys a lot of stuff they are never going to use, and to force things upon them they do not want and will never want.

Q.—One witness, Mr. Kribs, said that boys with such technical knowledge had learned to be handy with their hands, and he mentioned that boys of the better class had for some years no idea that they had hands? A.—Perhaps he may be right; but still I cannot imagine myself, as a boy, going to work to learn carpentering when I had not the faintest idea of being a carpenter or of going into the trade afterwards. I do not imagine I could learn it any better then; I do not think it would do any good.

Q.—Suppose a boy from school has a theoretical knowledge of the steam engine, and so on, would he not be better prepared to become a mechanical engineer than one who has not such knowledge? A.—I do not think so. I do not think schools are fitted for teaching boys the steam engine. I think they need to learn something lower down than that in schools. The steam engine is a thing that cannot be properly taught until a boy has left school.

Q.—Are you aware that it has been taught in some classes? A.—I do not know how much it is taught. From my experience I have very little confidence in that kind of knowledge; I do not think there is any royal road to learning; the only way to learn anything is by hard work. The idea of taking a little of this and a little of that, whether it is wanted or not, is perfectly absurd, and a waste of energy and time. There is no more value in learning a trade that a boy is not going to follow than in learning a science or anything else that a person is not going to use. The only value it can have is an educational value, but if it is taught in that way it is simply worse than useless.

Q.—Your profession is that of engineering; do you think you are any the worse engineer because you have a knowledge of the classics and mathematics? A.—The classics are not necessary, but you cannot be an engineer without mathematics. I do not think I am much the worse for knowing classics. It is a question of teaching children that which will do them the most good. I think if a teacher has to teach all these subjects he is wasting his energies, and he is not doing any good. The attention of a teacher in an ordinary school should not be given to too many subjects, but to a certain number that should be taught systematically. If a boy is put through that course he is educated and he is fit to take up other subjects. Just as training in the classics is not given for the help it gives you in a profession, but for the training it gives you mentally. Surely a purely systematic education will do good, and that is the education you must give. If you can make the teaching of trades of educational value, and teach them systematically, then I say at once that education will do good; but I do not see how it can be done.

Q.—Do you know anything in regard to Mechanics' Institutes? A.—No.

Q.—Or as to their mode of teaching? A.—No. Although these things are very necessary it seems that the only places in this country where technical education, if you like to call it such—I do not know whether it is such or not—is taught is at the penitentiary and the Mercer Institute.

By Mr. FREED :—

Q.—What trades are taught at Penetanguishene? A.—If a man goes to the penitentiary he can be taught a trade systematically. There must be some experience in teaching trades, and, of course, they have learned something about teaching trades in those institutions.

By the CHAIRMAN :—

Q.—And that knowledge will be possessed by the wardens? A.—They are the only men who have devoted their time to the systematic teaching of a trade; there is no one else in the country who has had any experience. The masters in the different trades, as I understand it, do not teach their apprentices, or rather, perhaps they teach them something, and the boys have to look to themselves to pick up the trade.

By Mr. FREED :—

Q.—Are you acquainted with the history of technical education at places like Chemnitz or Zürich? A.—No; I cannot say that I am. I have not had time to study it. It has not been exactly in my line and I have not worked it up.

Q.—Are the schools like the Institute of Technology in the United States? A.—Yes; that is a school of the same class as ours, only a great deal better. That is not, however, for education simply in trades.

Q.—Have you seen the report recently issued? A.—These schools do not refer to the teaching of trades.

Q.—Not of trades but of technical knowledge, without absolutely teaching trades; the giving of a course in technical instruction? A.—The work at the Stevens Institute is very high class work; as high as the University work here. It is not a kind of work that could be taken up by a boy at the public school at all.

Q.—Have you made any study of the work done in evening classes in England? A.—I do not know. I have not had an opportunity of studying these matters, but I think the only successful way of doing the work to which you refer is in night schools. It is utterly impossible to do anything else, and then, as I have said, I think those night schools should be systematically conducted, and teachers of the day schools might, to a certain extent, be used in them. But I think if you get men like engineers or foremen in the different trades, who possess a good theoretical education in addition to their practical knowledge, (and such men might be picked up here and there to teach in night schools), a great deal of good would be done. I do not see any other way of doing it. If you do not do that, what is to be done? It is the only method to educate men and boys thoroughly in the trades. The only thing to be done besides that is to educate the boy in the ordinary branches before he leaves school, say at fourteen years, and you know how much a boy will take up before he reaches that age. At that time he is full of fun and nonsense, and has not come to his bearings, and he never settles down to work until he is eighteen, nineteen or twenty. I have little confidence in the knowledge he can get at the public school, except in reading, writing and arithmetic. Other instructions suggested might be good; I am not prepared to speak for I do not know; but I think he gets a more systematic training in reading, writing and arithmetic than he can hope to get at any trade, unless he has a very good teacher. The difficulty is to get the teachers. How can you get a teacher for more than one trade? If there is to be a master for each trade, and there are to be masters in the schools the boys might learn the trades, but what good are the trades going to do in a large school?

Q.—We are not taking up the teaching of trades, but technical knowledge? A.—The only way you can teach that is in connection with the trades, and, if a teacher has not a knowledge of the trade, he cannot teach the other.

By Mr. HEAKES :—

Q.—Are there not certain principles taught in your college which could be applied to mechanics? A.—That is what we do teach or profess to teach, the application of those principles to mechanics.

Q.—Why could not those principles be taught in elementary classes in the public schools to pupils, say, twelve or thirteen years old, or, say, up to fourteen?  
 A.—The first thing a boy has to learn before he takes up such a subject is arithmetic; then he has to learn geometry, and he ought to have a little algebra. If he learns these three branches by the time he is fourteen, enough to go on with, he is all right. But the trouble with most of the boys is, that they want to learn mechanics at once; they think they can learn mechanics without getting up these branches first. For two years I taught an evening class in connection with our work. I had a large class of carpenters one winter, I think about fifty to start with. The men were very enthusiastic. I gave two lectures a week. I began teaching the theory of their work. I knew enough of the practical part to work with them, and to keep right in the line of their work, and applied the theoretical knowledge as closely as possible. I found that, although they were anxious to learn, yet two-thirds of them had not sufficient education to start with. Some did not know how to handle vulgar fractions or decimals. I found I had to stop and teach part of that subject. Some of them had not a knowledge of the ordinary principles of geometry. Again I had to stop work and try to teach them a little geometry. Again, they did not know and could not understand a rule written shortly as an algebraic formula, and I had to write all such out at length, almost covering the blackboard. I found these average difficulties cropping up constantly, and the consequence was, I had to give a sort of average instruction, and I had to let the men who knew the least go altogether. About one third were sufficiently educated to go on with the course, and they followed it to the end of the term. Those who could not follow and found it difficult, gave up; so there was only a certain percentage, and not a very large percentage, who had preliminary education sufficient to enable them to understand the application of theory to their business.

By Mr. GIBSON:—

- Q.—Is not the fault in these things with public school teachers? A.—Perhaps.  
 Q.—Their lack of trained education unfits them to teach the children proper?  
 A.—That is the idea I am endeavoring to convey.  
 Q.—They do not practically apply their education to the intelligence of the child they are teaching? A.—Yes.  
 Q.—A teacher in school wants to teach geometry; he does not need to go far for examples by which he can put geometrical figures or principles into a child's head. He looks across the street at a building, and he can observe what angles they are. Would not a child know more about geometry by such practical methods than by theoretical teaching? A.—I quite agree with you. The trouble with all ordinary teachers in teaching subjects like that is that they are not familiar with the trades. If they were familiar they could apply the theory and teach it. An engineer can teach the theory to carpenters, blacksmiths and steamfitters in a better way perhaps than any other man, because he cannot be an engineer without having a fair knowledge of the trades. Take a school teacher who is not an engineer, although he had read up all about mechanics, yet when he commenced to address the workmen he would be all at sea, his examples would be all wrong, and he would make himself ridiculous.  
 Q.—So we are turning boys out of the public schools who know nothing?  
 A.—Yes.  
 Q.—But he can go to work and work out problems in arithmetic but cannot teach the knowledge? A.—That is the trouble with a good deal of our school teaching. Perhaps it is unavoidable. I will tell you one thing that makes it hard; it is easy to teach one, two, three or four pupils in that way, but to teach a large class is somewhat difficult. You have to address yourself to the average boy; you cannot take them individually. If you can teach persons singly you can do it much better than you can teach half a dozen together.  
 Q.—All we have to do is to carry out the Kindergarten system further than we are doing. Could not that system be extended to children fifteen years old?

A.—Educate the teachers in the trades to some extent, to the same extent as an architect or an engineer is educated in his trade, and he can teach the theory of those trades to some advantage. If he is not educated in the trade he cannot teach it at all, and a boy has to depend on his common sense. I think a great deal more could be taught if teachers had more practical knowledge. Perhaps the way to overcome the difficulty would be for our normal schools, where a great many of our teachers are educated, to have some trade-teaching done there, and then those men, who were so instructed, could go through the country and spread it. I do not know, however, where you are going to get the teachers. You have got to build them up. The education of a boy can be carried on to much more advantage by practical questions than by questions up in the clouds; it is not easy for a boy to go through gymnastics of figures which he cannot grasp. I have very little faith in what is called science teaching in the ordinary schools—that is to young boys. I do not think science teaching can be taught in such a way as to be of educational value. I do not think there is much use in telling a boy how to get specific gravities, and to calculate the height an arrow will rise if shot from a bow; although these things are simple acts the matter is a difficult one. There is no use in trying to make it easy. The boy does not really understand it, and when he does not understand it he is not being educated. You will make him a better man by teaching him simple things he can understand, rather than by teaching him all the science in the world if he does not comprehend it, and science, even in its simplest form, is difficult. It is beyond the mind of a boy. In engineering trades experiments are being made in regard to education. In the Boston Institute of Technology, which is an engineering school, they have a work shop. It is divided into several parts; one part is a carpenter's shop; another a pattern machine shop; another is a foundry; and another is a machine shop furnished with a few ordinary machines, a planing machine and so on. These are all trades a man must know to be an engineer. The course is a four years' course; the student takes lectures on the theory in one part, and he gains the practical knowledge in another. He is forced to put in out of the four years, three months in each shop. The pupils are under the management of a competent foreman. In the shops they merely learn the hand work; the idea is not to make a boy a workman. He is put through the blacksmiths', carpenters' and machine shops and the foundry, not at all with the idea of making him a workman—that cannot be done in three or six months or two years—but with the idea of giving him such knowledge of the handling of materials, and of the materials themselves, as will enable him to combine his theoretical knowledge with the practical, and in that way make him an engineer. It is utterly impossible for an engineer to be an expert carpenter, machinist and moulder, but to be an engineer he must be judge of the work of these trades. There is no opportunity of picking up that knowledge except by questioning the men and keeping his eyes open. That is the way he has to learn now. These shops are doing more in the way of educating engineers in their trades than has been done hitherto. Such institutions go that far, but as I have said they are not used for any other purpose. It strikes me they might be used for other purposes, if established to educate young men in trades who do not expect to be engineers, those who are willing to work ten hours a day in the shops, and thus they are learning the trade. Perhaps they might not work ten hours, but six or seven hours, and might attend certain lectures on the theory of their work in the other part of their institute. In that way an educated workman could be produced. His work would be principally practical work combined with a certain amount of theory, whereas an engineer's work is principally theory combined with a certain amount of shop work, which is a very small part of it. Both these objects might be secured in a school of that kind, but if such school were established—leaving out engineers altogether and speaking only of workmen—it would have to be established not only in Toronto, Hamilton and Montreal and the large cities; but smaller schools, thoroughly equipped, would have to be established all over the country. The boys who learn trades as a class are not those who can afford to leave home, and go to a large city to attain their education. It is only the wealthy class who can do that for their children. I see that there are a great many difficulties anyway, and I do not see how you can get over them.

TORONTO, Friday, 2nd December 1887.

WILLIAM HOUSTON, M. A., Librarian of the Ontario Legislative Assembly, called and sworn.

By Mr. FREED :—

Q.—You have prepared yourself to give us some special information, I believe?  
A.—Well, I don't know whether it would be right to call it information; it will be a mixture of facts and information perhaps.

Q.—What particular ground do you expect to cover? A.—Just what is now being done, as far as anything is being done, in industrial training under our educational system, with perhaps some suggestions as to how we could modify it.

Q.—Would you rather put it in narrative form? A.—If you wish I could make a statement and leave myself open to be interrupted by questions at any time.

Q.—Will you be good enough to begin your statement? A.—I may say that my remarks of course will apply to this province mainly. I am not acquainted with what is done in the other provinces, either in the way of general education or industrial training. In this Province we have not to consider the question, which is often raised in connection with industrial education, whether the State can do anything in relation to education or not, because we have a public system of education largely maintained by the State, under public law, and controlled by the State. Therefore we can start with the two questions: What kind of education the State should aim at giving; and whether it has succeeded in giving us that kind which is desirable for the people to have. The general aim of our educational system, as far as we have a theory for it at all, may be summed up by saying that it is intended to give a good physical, intellectual, aesthetic and moral education. It is not necessary but there can be no doubt that in the popular mind the intellectual element bulks up so largely that almost all our efforts are now directed to making the school system an intellectual training system, and the results are judged very largely by the opinion we arrive at as to whether the intellectual training is the right kind of training or not. What I mean is that the public are apt to overlook the fact, or not to ask the question whether there is a good physical education or moral education or is good intellectual education. That may be a right or a wrong state of public opinion; I myself think it would be better if we paid more attention to some other things as well as to intellectual education. I would like to make the preliminary remark that in advocating industrial training, as I have had occasion to do recently, I have always taken the ground that if industrial training involves any loss of intellectual training as compared with the ordinary public school education I would not advocate it. I do not think it would be desirable. I think the industrial class should have as good opportunities for intellectual culture as any other class and I think that any provision would be inadequate which does not take cognizance of that fact. The question arises, what is the general tendency of our present educational system of Ontario? After giving all the consideration I can to the matter for some time, I am forced to the conclusion that the tendency of our educational system—so much of it at all events as is of a public character—is towards professionalism and perhaps commercial life. I do not think it does very much at all—what it does do I shall try to indicate presently—towards inclining men or women to industrial pursuits. The reasons for that will perhaps be better brought out incidentally. Now, if that is the tendency I don't think it is the intention. I don't think it was the intention of the founder of our system that it should have that effect; I do not think it is the intention of those who have the control and responsibility that it should have that effect. Probably they would all deprecate that if they believed it. If that is the tendency it is certainly injurious to the best interests of the country that it should be so. The great productive classes of this country are undoubtedly the farmers or the artisans or mechanics, and if our educational system is not doing something to keep these classes recruited from the youth of the country then our industrial system,

and with it the whole material condition of the country, must suffer. I believe this very strongly from my intercourse with different classes that no pursuit or occupation will be recruited or will keep men in it very long that has not got some intellectual hold upon them. The mere fact that it furnishes a living—even a very good living—will not make it attractive to the average man or woman; there must be something in it to occupy his intellectual faculties and keep him intellectually interested; and I believe that the great secret of the dislike of young people to farm and artisan life and to household labor is very largely that it is a life of drudgery—not that it is hard work, but that it is uninteresting work. And if we could find some means of infusing intellectuality into the ordinary occupations of life I think they would be as attractive in the main as commercial pursuits and even professional callings. There is this to be said, too, that culture or intellectuality depends not so much on the choice of the subject which is to be taught to the boy or girl, as it depends on the method in which the subject is dealt with. If it were otherwise we should have very little hope for the future of the industrial classes. I believe the best kind of intellectual training, or just as good as any, can be had from manual operations properly taught—the hand and mind trained together.

Q.—To what extent did physical culture and mental culture go hand in hand in ancient Greece? A.—Well, of course, it would be impossible to go into detail, but there is no question about the truth of this—that the Greeks paid far more attention to physical culture than we do. Amongst the Greeks proper—of course the laboring class was a slave class—but the Greeks proper in Athens paid great attention to the body and to personal form.

Q.—Does not the average Canadian schoolboy in his sports acquire the physical training that takes the place of the training of the gymnasium in Greece? A.—That is true to some extent as to what we might call the exercise which is necessary to develop his body, but I would include in physical education more than that. First, I would include the giving him a knowledge of his own body, of its wonderful construction, of all those organs which, when they are in active operation in a healthy condition, we do not notice, but which we soon notice if they get out of order.

Q.—Is not physiology taught in our schools? A.—Very little is taught effectively. I do not think it is taught any better than it was forty years ago; I think what is taught is not effectively taught, because it is crammed up largely from books or notes given by the teacher, instead of being, as it should be, the result of incidental inspection, taking advantage of occasions which may present themselves. For instance, take the prevalence of bad air in a school room; that could be made an occasion for hygienic instruction, which should not be systematic but incidental.

Q.—Do you believe in carrying object lesson teaching to the utmost possible limit? A.—Yes; I think nearly all good and effective teaching would be incidental, and that is true of physical culture, even more than of ordinary school subjects. In connection with a remark I made a moment ago that excellence of culture depends more on the method of teaching than on the subjects taught, I should say that our mistake in the past in this province—and I think it is true of the United States and England—is that we have depended far too much on the selection of subjects, and too little on the selection of proper methods. That has been the grand educational blunder of modern times.

Q.—Have the teachers been properly educated for their work? A.—They have been educated under the same vicious defect. They have been simply perpetuating a bad system in which all that was thought necessary was to stuff the pupils with a lot of facts relating to certain subjects and depend on culture resulting, whereas nearly all culture which is worth anything comes from the method of teaching, and that has not been properly insisted on. I think we are making progress in the right direction in this province, but not as rapidly as I think we ought to do, if we once get a clear conception of this truth that I have been trying to bring out. I will illustrate in this way, by saying that I don't think that the ordinary facts of history or biography or grammar as ordinarily taught, or even the ordinary processes of mathematics, have a very vital connection with practical life, and if they have not they will just

enable a pupil to get a lot of unassimilated knowledge which is put to no practical purpose in life, just as the food we do not digest serves no good purpose in our physical economy.

Q.—Do you think that a youth who intends to enter upon a mechanical occupation should be only equipped for that occupation, and should not have any intellectual life outside of it? A.—No; I would not say that. I think every mechanic, every one who is devoted by others to an artisan's life, should have a general training as well, and a good deal of it.

Q.—That he should get all the intellectual power that he can independently of his mechanical occupation—that all men should do that? A.—Yes. At the same time I think one great idea to be always borne in mind is the old dictum of Aristotle: Teach a boy what he will have to practice when he becomes a man. That should never be lost sight of in his education, and if we teach him that in a proper way I maintain that good effects will result from it.

Q.—About what age does the ordinary boy—the son of a mechanic in moderate circumstances we will say—leave school? A.—I think in a city like Toronto we will probably get an average for the whole province, and I don't think it is above fourteen, and perhaps it is lower.

Q.—At the age of fourteen, taking the ordinary school course, what studies will he have pursued which were not only not necessary to him as an artisan, but which will not be followed up in his ordinary intellectual life outside of his calling?

A.—Unless he has been taking some special course in some part of the country where they have a flexible system, I should say that he has acquired a great deal of what is called "eram", which will be of no practical use to him, such as definitions in grammar, parsing, analysis and so on.

Q.—Will he have carried arithmetic beyond what will be useful to him? A.—Almost necessarily he will; that is he will have got beyond what will be practical or useful to him afterwards and will have acquired much which he will afterwards forget. He will certainly have done so in geography; he will have learned about many names of places which will not be of use to him.

Q.—You think that some things might be left out of the course and other things more useful if not more necessary put into it? A.—I would not exactly say that. I would not leave the subjects out, but they should be differently taught. Take geography for instance; I think the starting point in that should be the boy's own locality. He should be made familiar with conceptions of distances, climatology and so on, enlarging his ideas and conceptions as occasions present themselves so as to include the adjacent districts, and from that go on to the Province at large and the Dominion. I think that that should be all preliminary to his getting a knowledge of the minute geography of the world. Of course, the great facts of the universe must sooner or later come under his notice; he will be got to notice these, and his curiosity will be aroused. I am afraid however that geography as ordinarily taught is comparatively useless to anybody, the mere learning of names of places and so on.

Q.—Do you think that the boys' or girls' education might be continued, beyond the actual school, best with evening classes or during part of the day? A.—I think so in cities especially. In the rural districts it would not be so easy. Night schools would be inconvenient to many, owing to the distance they would have to travel, and it would only be those who had arrived at a considerable age who could do it. We have night schools in Toronto, but I think we might have them of a different class, and I will recur to that presently. It may be worth while here to describe the kind of institutions in Ontario which are called public educational institutions. First, there is the Kindergarten which is rather a principle or method than an institution, because there are many schools where Kindergarten principles or methods are practised, where they have no special department for that kind of work. Then there is the primary or ordinary public school, the secondary public school or high school and Collegiate Institute—and we have a special one in this city called Upper Canada College—and then we have the Provincial University. These are all

of the class of institutions I was speaking about when I said that the public institutions tend to professionalism, except the Kindergarten. It seems to me, as I think it does to anybody who will look into the matter with any intelligence, that the Kindergarten principle or method is almost perfection at the age at which the pupils attended. It is the best combination ever devised; I think almost the best conceivable combination of manual training with mental training.

Q.—Point out please one other feature of the Kindergarten and that is the confining the pupils to any study after they are tired? A.—One great object is to keep the pupils interested the whole time and that cannot be done by confining their attention too long to one thing. It cannot be done with older people, and children are very similar to ourselves. Rest comes from change of occupation to everybody, young and old, and not from ceasing to work. For instance I do not find my recreation in reading fiction, but in taking up hard intellectual work and I have often found other people who take their recreation in the same way. If we could manage to carry our Kindergarten arrangement forward and adapt it to meet the advancing age of the pupils in the public schools I think we would have a better public school system than we have now. How far up we should be able to carry it is the question. At all events at present our secondary schools as well as our public schools leading directly into the University do certainly draw children away into professionalism and commercial life, for there is not a scintilla of industrial training in the public schools which I can discern and I think there is nothing at all in the high schools but a little teaching of science which will be useful in industrial work.

By the CHAIRMAN:—

Q.—Is not that the case all over the world? A.—Yes; but my contention is that we have given that sort of thing an impetus instead of trying to check it. I don't think we have done so intentionally; it has been by a mistake.

By Mr. FREED:—

Q.—Will not boys be especially attracted to professional life by the promised rewards of professional life being greater than those of mechanical life? A.—Yes; some of the prizes are greater; there is more distinction and that is all the more reason I should say why we should try to counteract that tendency by some system which would take our minds away from that view and make other pursuits intellectual.

By the CHAIRMAN:—

Q.—The blanks in professional life are not thought of? A.—No; they are not. But I do not think there is so much importance to be attached to that as to the distaste we give boys and girls for industrial pursuits by the utter lack of intellectual interest in them and if could make them take an intellectual interest in those callings I think we would largely solve the problem. Take, for instance, a smart boy growing up on a farm, what has he to interest him? Ordinarily it is all a very dull routine to him. And yet the farm is one of the most wonderful places in the world for experiments. It is a great chemical laboratory, where there are all kinds of inorganic and organic objects, and I do not think there is any calling which demands a higher exercise of intellectual power than that of the successful farmer. Yet there are few of our farmers who give it any intellectual attention at all. They plough down clover for instance, just because their fathers did it before them and their boys are taught to follow the same rule without understanding the reason for it; they never inquire why they do these things.

By Mr. FREED:—

Q.—Have not the farmers of Ontario as a rule been a hardy pioneer class, less intellectual than we hope their sons will be? A.—Yes.

Q.—And has not this fact a good deal to do with the non-intellectuality of country life? A.—Yes. And then there is the isolation of the farm. The farmer has harder work than the man in the city to keep up associations with his neighbors and all these things impress me very strongly with the necessity of counteracting

what we can of the mischief. We cannot make him live close to his neighbors; he cannot live in a dorf like the Mennonites, or in a village, but if there is any element we can introduce into the farmer's or artisan's life which will tend to counteract this state of things, I think it would be a wise thing to do. Now, I have been speaking of those institutions which, with the exception of the Kindergarten, tend as I think to professionalism. I don't object to that altogether; professionalism is all right if we do not have too much of it. I think though that the professional classes are not promoters in the ordinary sense, and that the material welfare of the country depends more on the farmer and artisan than on the lawyers, the doctors and the clergy. There are three other classes of institutions to which I would like to call attention. The first is the blind institute and the analogous one for the education of the deaf and dumb, one at Belleville, and the other at Brantford, both maintained at the cost of the province at large, in which the training is largely industrial. We can omit consideration of these however as filling the bill, because they are for defective pupils and the amount of industrial training is limited by the capacity of the pupils to receive it. In Brantford the object is to teach the pupils to make a living, and to do that they are trained in piano tuning, music teaching, basket making, knitting, and I think plain sewing. I think that would about cover all the industrial teaching they have there. At Belleville there is a somewhat similar limitation but a greater variety of teaching as the pupils can see. Passing over these there are two other institutions, the Agricultural College at Guelph, which is a purely industrial training school, or at least belongs to that type, and the School of Practical Science in Toronto.

Q.—The book learning at Guelph is simply to assist agricultural operations? A.—No; it is to do what you indicated a little while ago—to give them some more culture outside of what intellectual training can be given them by the study of agricultural subjects; and I think that would be legitimate, to give them during the winter some kind of culture; English literature, for instance, would be well-adapted to that purpose. Then there must be some mathematical knowledge required for keeping accounts. I am not in a position to know whether the Agricultural College at Guelph is doing what we expected it to do and what it was intended to do. I have looked into the reports of the institution and I am satisfied that the theory of the institution is very sound; the theory of its curriculum, I think is very sound, as far as I can understand it. I know the institution costs the province a good deal of money and I simply express the hope that it is carrying its theory into practice in the best possible way. Of course, the farm itself serves a double purpose. It is an experimental farm and it is also a place where the students reduce to practice as far as they can the teachings of the lecture room.

Q.—Has that farm been established sufficiently long to demonstrate by actual results what its working has been? Have boys gone on to farms and have the results of their experience been reported? Have they graduated either from the college or from the experimental farm to the actual farm and become more successful farmers than others? A.—I could not say whether they have been more successful farmers but I think they do exercise a useful influence in their own locality. I know myself of some places where the graduates of the institution, intelligent young farmers, have exercised a very useful influence by becoming teachers by example, by conversation with their neighbors, and in many other ways; and that element is being extended and made still more useful by means of farmers' institutes, where the farmers discuss subjects among themselves. I noticed, if I am not mistaken, that Mr. Galbraith spoke yesterday of the comparative uselessness of industrial training in the public schools unless the teachers knew some industrial callings. I just saw in the brief reports in the newspapers something to that effect. If that was his view I would be disposed to differ from him a little. I think our public school system might be made more useful in the industrial direction without changing the programme in any way. I do not know whether his mind has been directed to this, but I will illustrate my meaning by an example. Suppose a teacher in a rural school section sees a farmer performing the act of ploughing down a field of clover. I

suppose most of the children in a rural school have seen that done over and over again but never thought to inquire why it was done. It looks like a foolish, almost an insane act; it is a waste of good cattle feed and what is going to be gained by it? Now, cannot a teacher serve a useful purpose by directing the attention of the boy who is to become a farmer and making him think of the nature of this operation, arousing his curiosity and getting him to ask questions about it? Perhaps he should not answer these questions, as it is better to have the pupil find out by asking his father or somebody else what it is done for. In this way an ingenious teacher could stir up a whole neighborhood so as to get them thinking about the causes of these different operations, why one kind of crop grows better on one soil than on another, what kind of manure is suitable for clay, gravelly soil, sandy soil and so on. The treasured experiences of generations are in the possession of the farmer and he puts them into practical use, very often without thinking why; and would it not serve a useful purpose if the boy is taught to inquire at an early age why these things are done? Perhaps, too, there would be a little self-consciousness aroused amongst the farmers themselves if they were asked by their boys why they do these things. I think a teacher with a very limited knowledge of agriculture might in this way become the means of a great agricultural awakening in a rural district; and in the town or village where mechanical operations become familiar to the children the same thing might be done. A very common thing which may be seen in front of a blacksmith's shop in the country almost any day is the putting of a tire on a wagon wheel. Every child is familiar with the process, but why is the tire heated before being put on and then cooled as quickly as possible afterwards? If these questions are asked of the child he will have to ask somebody else for the information, and he will find out one of the great principles of physics that heat expands an object and cold contracts it. Now from my knowledge of a child's mind gained in teaching I am satisfied that if the child learns that great fact out of the book he is as likely to say after a while that it is the cold that expands and the heat that contracts as he is to say the opposite.

Q.—Cold does expand a few objects? A.—Yes; water into ice.

Q.—And type metal? A.—Yes, and type metal. I give the illustrations to show that a teacher might, according to his locality, do a great deal in this direction and it would be done without any special provision for it in the school programme. I don't think the best way to secure good teaching would be to put it on the programme, because it would then become a subject of examination and perhaps of cramming. I think that in Toronto besides the Kindergarten and the public schools and the one secondary school belonging to the city and the Collegiate Institute, there might be established a secondary school of a different class, which should receive recognition in the way of Government aid the same as the Collegiate Institute—one in which manual training might be made an important feature. I suppose other cities could do the same thing, but as a matter of local enterprise I think it would be a good thing in this city. To the school there might be attached a workshop with certain kinds of machines selected for the purpose of illustrating certain principles. I do not think the aim of industrial education should be to make men skilled mechanics but to make them see the principles underlying mechanical operations rather than to perform the operations skillfully; we should not aim at that in a school any more than we should teach a boy at the agricultural college to draw a straight furrow with the plough. That is not the object. One other way in which our educational system could be improved in the way of industrial training would be to improve the School of Practical Science. That is the highest class institution of the industrial kind and it is the only one of that class that I know of in Canada. In looking over the reports of that institution for the purpose of this Commission I have been struck with one fact. Professor Galbraith of course belongs to that institution; I do not know what he said of the working of it, but I infer from the reports that the curriculum is not extensive enough, the accommodation is too limited and the staff is too limited. There are just two Professors in the school; Professor Galbraith and Professor Ellis, both thoroughly competent men and greatly overworked. It is

no fault of theirs or of the Education Department that the school is in its present condition. I do not know that it is the fault of the Legislature; I am not disposed to assign the blame anywhere, but it is in a wretchedly bad condition as far as industrial training is concerned. The training as far as it goes is good, but it only just goes far enough to show how much we really need it. Mr. Galbraith's department is engineering and he is a very competent mechanical as well as civil engineer; I think he teaches both, and cognate branches. Professor Ellis' department is applied chemistry and that is a tremendously large field for anyone to assume to occupy. In talking with some skilled mechanics in this city and with architects and others I have come to the conclusion that we should have not less than ten distinct departments in that school. One of these, and the fundamental one, ought to be industrial drawing, because there is not a single mechanical pursuit where that is not useful. Then the engineering should be divided into two different branches, civil and mechanical; it is very seldom that we can find one man who is competent to teach both these departments. Then there is a special kind of engineering which important form a third class and that is railroading. Railroading has become extremely important within the last fifty years, sociologically, politically and industrially, and there is no country which needs more instruction on that subject than Canada, as great as any railroad in the United States. The Baltimore and Ohio Railway some years ago found it absolutely necessary to establish industrial schools for the express purpose of training their own staff and while it would be almost too much perhaps to expect the Grand Trunk or the Canadian Pacific Railway to do that, I think the School of Practical Science should aim at giving special training in that direction. There are two branches of railroading which might be recognized; first, construction and maintenance of track, which is different from ordinary civil engineering; and secondly, rolling stock. Another department in such a school would be house construction, not mere architect's work, or the mere knowledge of the strength and utility of different kinds of materials, but instruction which would give men the capacity to draw at least a simple plan, and not merely a ground plan but a working plan. I think every man who has had such a training should be able to make a working plan and I am not saying this from mere speculation. Some time ago I had a talk with a working carpenter who called to see me about this very subject. After we were through conversing about some matters I wanted to ask him about, I asked him what that roll of paper was which he had in his hand and he said it was the plan of a building. The building was a somewhat elaborate one and I asked him if he had drawn the plan himself. He said he had, and as far as I could judge it was a well drawn plan, and though I questioned him very closely he seemed able to explain everything about it. As he was simply a working carpenter I asked him where he had got this facility in drawing, and if he had picked it up. No, he said, he had spent some months at South Kensington, and it was from him that I got this idea about house construction which is one of the departments they teach there. Then there should be a department devoted entirely to coloring. I have talked with some of the best painters in this city on the subject and also with Mr. John Taylor of the Morse Soap Company. Mr. Taylor some years ago thought of adding dye-stuffs to his business, as he was in the habit of selling soap to cloth manufacturers; but he found it necessary to import a man who know something about dyes, because he could not give instructions to those who bought from him. He had to import a chemist skilled in that kind of work but owing to some difference between them they separated and now Mr. Taylor's son takes charge of the chemistry of the dye department. In that department they have mineral, vegetable, and animal dyes from all parts of the world; they have a laboratory on the premises so that anyone buying dyes from him can get instructions how to use them. Now, there is just as much need for something of the kind in dealing with paints. Both painting and dyeing are subjects having certain underlying principles in common which ought to be in the possession of every intelligent workingman. As an illustration of intelligence in connection with paints I asked a merchant who dealt in paints if it would be safe

to buy mixed paints. He replied that he had them but that he would not advise me to buy them unless I was going to use them at once. He said they would not stay mixed and that I had better buy the ingredients myself. I questioned him and I found that he knew that certain substances like white lead were very heavy and would separate themselves, so that they had to be remixed by the person using the paint.

Q.—Is it not true that in most of these paints there is very little white lead?  
A.—Yes; I believe that is true. There are other branches of applied chemistry but I need not name them. There should be a department of textile fabric, as that industry is so important; this would include the whole process of converting wool into cloth; and now, when we are doing so much in the way of cotton, the process of converting cotton into cloth. I believe we have not any silk manufacture in this province.

Q.—Is there not one in Montreal? A.—I am not aware of it but there may be one. However that whole subject of textile fabric working ought to be dealt with in the School of Practical Science. By the way, I think it should not be called the School of Practical Science, as the name is misleading. I think we should go back to the old well-understood term of the School of Technology, that is a school where the trades and occupations are taught, not to make them occupations, but taught in the way of giving the pupils a practical understanding of the operations connected with various occupations. Then there should be a department of metallurgy for the working of metals. We have a great deal of that in Canada. Lastly there should be a department of mining in two branches—one mining engineering, and the other mineralogical.

Q.—A knowledge of minerals in the first place, and in the next place how to get them out of the earth? A.—Yes; every mining engineer is more or less of a civil engineer, but there are some features about shafting which are not found in the other branch.

Q.—Wouldn't you have a department of electrical science? A.—Yes; I think probably it would be better to have one; the reason I omitted it is because we have a very good physical department in the University that serves the purpose so far as Toronto is concerned. If, however, you had a School of Practical Science in Hamilton where you have not a University as well equipped in that department as ours, I think it would be necessary to have a department of electrical science. One objection of course would be the cost of such a school, and I wish to say a word about that. Of course, if we could demonstrate that it is going to be perhaps not exactly necessary, but highly expedient to have such an institution, the question of cost is a minor consideration. I want, however, to make a comparison. The cost of the Agricultural College and farm, as I said before, is very great. Omitting the receipts from fees at the college and from the sale of stock and other things at the farm the net cost of the college this year, judging by the sum voted by the Legislature last year, was \$19,815.

Q.—That is the net cost to the country? A.—Yes; and the net cost of the farm is \$14,196, making the total cost of the two institutions, and their supplementary institutions, \$34,011. So much for technical education for farmers, and the sum is not too large if the work is well done. But here is what is voted for the School of Practical Science where the mechanic must look for his technical education if he gets it at all—\$7,594, being about one-fifth of the sum voted for the technical education of the farmers. I do not think the Legislature is to blame. Legislatures only move when they are moved by public opinion, and one object I have had in discussing this matter in teachers' institutes, as I have taken occasion to do several times this summer, and in making my present statement, is to try and get public opinion aroused on this subject. I have no fear that the mechanics cannot assert themselves in the matter whenever they wish to do so. I have been too long and too close an observer of their movements in Toronto and too intimately acquainted with them not to know that. They have the necessary intelligence and organizing power and they have the voting power—two things of very great importance. It is said by some people that this would not be a proper use of public funds. As I said

moment ago, if it is not a necessary use of it is a highly expedient use of public money in my opinion, and for several reasons. In the first place, assuming that by this kind of industrial education we could accomplish the object we have in view, then I say it is necessary that that should be done, because, there is such a competition in industry all over the world that it is going to leave us behind if we do not put ourselves in a proper shape to compete with others. We will be industrially left behind, and that means that we will be commercially and financially left behind and that in almost every way we would suffer in competition. We have not such a country as would enable us to sit down with folded hands and think that production will go on without effort. We labor under some disadvantages industrially, and we must try to make up for them. In the next place, other nations, in spite of having greater advantages than we have, have gone largely into this work of giving technological education to their operatives—Germany to an enormous extent, France perhaps to a less extent, England to a less extent still, and the United States, considering their population, least of the four; but all of these have a large number of institutions devoted to this kind of work. The United States, I think, in another twenty years will stand in this respect, as in most other respects, ahead of the world, judging by the rate at which public opinion is now being aroused on the question. The third great reason, and perhaps the most urgent of all, is that there is deterioration—if I may judge from my own observation and from conversations with the industrial classes and others—there is, deterioration going on in the artisan class itself which we must do something to check. Now, I do not think that this is a reflection on the artisan class; it is simply the result of inevitable conditions. Influences are at work which will continue to aggravate this deterioration if we do not take some steps to stop these influences and counteract them by supplying influences of a different kind. What are these influences? The first is a historical one; it is the decay of the old guild spirit. The guilds which grew up in the different callings were not close corporations in the legal sense but they were close corporations in a very practical sense. It was extremely difficult to get into one of them and when a man did get in he had some reason to be proud of his position. Closely connected with that difficulty in getting into the guild was the long term of apprenticeship required, which made the workman a skilled workman and a more intelligent workman, assuming that the teaching during the apprenticeship was thoroughly good. We all know that for one reason or another the guild spirit has almost entirely disappeared from modern industry, and its place has been taken as far as it has been taken at all, by voluntary organization amongst the industrial classes themselves; and I think the most valuable feature of trades unionism is that it tends to some extent to supply the place of the old guild system. We all know that apprenticeship has become much shorter than it used to be; and another influence in the same direction is the invention of machinery and the division of labor. By means of machinery the division of labor becomes much more possible and can be carried to a greater extent while, on the other hand, by means of a division of labor the use of machinery can be extended.

Q.—Involving the factory system? A.—Yes; and instead of the term division of labor, as Adam Smith called it, we use the larger term organization of labor. One of the men who has done most as a writer on political economy to elucidate this subject is Mr. Walker, of the Boston College of Technology, which is probably one of the best of the kind in the world. His book on work and wages is, I think, one of the most valuable contributions to economic science that has ever been made. He has come to this conclusion—and he has given good reasons for it—that instead of expecting the artisan class to become more democratic, self-controlled and autonomous, we may expect them to become less and less so. The organization of labor which has been going on so rapidly during the past twenty-five years is going to go on the next twenty-five years with perhaps even greater rapidity, so that the great establishments will continue to swallow up the small ones, and thus the individual workman will count for less and less in the industrial scale, and the organization of labor for more and more. Labor will become aristocratic rather than democratic, he thinks.

The result is, that instead of having a whole product like a chair produced as at present, a man will spend his whole time in working a machine which makes the bottoms, or the legs or the backs. Instead of making the whole shoe, as the workmen used to do, he now spends his whole life driving pegs, for example, and doing nothing else. Of course he becomes extremely expert at driving pegs; but what is the effect upon him? The effect upon him is to narrow his intellectual and industrial horizon, and it is analogous to the effect produced upon a man accustomed to freedom by putting him in a cell and taking away from him the natural horizon. The result must inevitably be deteriorating. I suppose it is all for the best; I am not finding fault with it; it seems to be a necessity, and at any rate it is going on and we cannot control it. It is the life and enterprise and capital and competition amongst nations and amongst individuals. If the tendency is in that direction; if the productive power of the community is being made more effective by means of this organization of labor, and if the result is the deterioration of the artisan, then the community can afford to turn round and do something for the artisan by giving him opportunities which he has not got now of leading some kind of an intellectual life. It seems to me also that one of the tendencies of modern industry is towards such events as those we have been witnessing in the last few years in Chicago. Those misguided men who suffered the extreme penalty of the law the other day were not the natural products of American society, but were the products of a system which may be repeated over here bye-and-bye. It is hard to tell what the individual may do when he finds himself hedged in—cribbed and cabined and crushed by a great industrial juggernaut; it is hard to say whether he will not, like the worm, at last turn round and attempt to resent it. He may turn round and do it in a very foolish way, but I say the best preventive of all for these things would be industrial education; it would do what we can never do by any amount of preaching. It would add dignity to toil, ennobling it and making it intellectual, and making the artisan less amenable to the teaching of those who have adopted such ideas as those men in Chicago. And if the best means open to us to accomplish these ends is by industrial education, then, surely, the necessity—or the expediency, if not necessity—of establishing some kind of an industrial training system should be considered established.

By Mr. FREED:—

Q.—Don't you think that the gradual self-education of the people in this way has a tendency towards making the whole community better from generation to generation? Don't you think there is a general improvement of the whole country, intellectually? A.—I think, taking the community as a whole, there is, and I would like to believe that that is true of the artisan class, but I am not quite able to say that it is. I do not know whether all the artisans themselves are agreed upon it, and the conditions under which they have to compete for life are such—it is *saufve qui peut* with all; they are handicapped by the organization of industry on the one hand and by other conditions which are equally hard to avoid—that I do not think their condition has improved, at all events, as fast as it should.

Q.—To go back to the point which was touched on before, that is the ability of the teacher, don't you think that our system encourages the mere machine teacher to too great an extent in our public school system? A.—Well, in the sense I pointed out awhile ago, I think that is true. If you put a subject on the school programme, and then have examinations, and prepare the pupil for it, the tendency of the examination is to make the teaching a cram.

Q.—Have you studied the results of the teaching of such men, as for example the late Bishop Strachan, of Toronto? A.—No; I do not know very much about the bishop particularly.

Q.—Have you noticed that where there has been an exceptionally talented teacher he has turned out good men? A.—Yes; the most notable case of the kind is Dr. Arnold, of Rugby. Fault was found with him that he had made no valuable contributions to the science of pedagogy, but it was said that he had done what was far more important—shown himself to be a great educator, whose influence and success

was seen in such men as Matthew Arnold, Dean Stanley, Tom Hughes and a great number of leading public men in England. Speaking of the artisan class, I would not be understood as saying that their condition has not absolutely improved. I think they are absolutely better off than they were; relatively they are in some respects worse off, and I believe they are bound to be worse off, unless something can be done in the way of technical education. I do not think that Henry George, when he couples progress and poverty together as being almost inevitable concomitants, would refuse to say that the whole community is progressing in wealth. I think what he means is that with the growth of wealth under our present system comes inevitable poverty to certain classes, and I cite this simply as an illustration of what I want to get at. While the whole community is being improved by that progress, and while the workingmen share in it to some extent, yet relatively they are to some extent injured, and terribly injured by it, and I think there is where there is the necessity for industrial education.

By Mr. ARMSTRONG:—

Q.—Are you acquainted with the system of the publication of our public school books? A.—No; except in a cursory and superficial way.

Q.—Do you think a better system could be pursued than the system now pursued in Toronto, so that our books would be cheaper? A.—I fancy that an opinion on that point would have to be the result of a good deal of investigation and expert knowledge. I may say this, however, that systems of producing school books, assuming that it is necessary to have uniform text books, resolve themselves into two general classes—(1) leaving it to competition absolutely; and (2) for the department to secure the copyright and throw open the publication as much as possible to competition.

By Mr. FREED:—

Q.—Why should not they be published directly by the department, and the profits go into the public treasury, if there were any? A.—I think likely the chief difficulty there is to get the Legislature to consent to go into that business. There is a feeling that the less the Government has to do with the production of these things the better. I think that in Dr. Ryerson's time his system was much the same as it is now; but Mr. Crooks was gradually introducing a different system. His idea was, in the main, in the direction of allowing the copyrights to rest with the private owners, so that competition could be had between book and book. I see myself no choice between that system and the present one, other than the department holding the copyrights, and, under certain limitations, allowing a certain competition in the publication.

Q.—You believe books would be cheaper than under the present system, which is of course a monopoly? A.—Only for a term of years. It was the same with the old Readers in Dr. Ryerson's time; some firm has to be selected to bring them out, and if others share in the advantages of publication they recoup the original producers of the book. The only way to avoid that, I think, is for the Legislature to go into it after voting the money, just as the government in Ottawa now propose to do with the printing.

By Mr. CLARKE:—

Q.—Where is the copyright held? A.—Some of the copyrights are held by the department and some by the publishers. In some cases a Toronto firm holds the copyright for an English firm, as in the case of Mason's Grammar.

By Mr. ARMSTRONG:—

Q.—Does the Nelson Company, of Edinburgh, receive a royalty on any books published in Canada? A.—Not now, I think, except perhaps on some Readers. I may say that it is not exactly a royalty. I do not know in what shape the transaction stands with Copp, Clark & Co.; but it is generally understood that a certain sum was paid by Copp, Clark & Co. for the privilege of being Nelson's representative. All

over the United States this problem is just as difficult as it is in Canada, and there seems to be no satisfactory solution ever yet devised. While, I am not prepared to express any opinion as to the relative merits of these different systems in the way of cost, I am clear that it would be best for educational purposes, irrespective of cost, to adopt this plan; if I were Minister of Education and were not hampered by the consideration of cost—and perhaps in any case—I would adopt Mr. Crooks' theory, that is, to have several works on the list and let the local authorities choose between them, and then there would be competition between book and book and I think the best results would be secured. The copyright might remain with the publisher.

Q.—Would not there be a good deal of log rolling among the trustees?  
A.—Well, in that case, it would be better to have the log rolling there than some-where else, and I think on the whole the plan would be better than the one which is now followed.

Q.—The entire community elect the trustees, and they would have a certain say in the matter which they have not now? A.—Under the present law the boards of trustees are absolutely masters of the situation. The department does not prescribe but authorizes the text books and the boards of trustees must choose one or the other among those authorized. It is at their option, and there is more than one book on every subject.

Q.—What is the percentage of mechanics' sons, do you think, who go as high as a University education? A.—I could scarcely tell you that, but if you include farmers' and mechanics' sons, fully one-half of those going through the Provincial University come from the farming and mechanical class.

By Mr. HEAKES:—

Q.—Are not the greater number of them farmers' sons? A.—Yes; I think there are more of them than of mechanics' sons, but I could not say. In my own time a very large proportion of those who went through the University had been farmers' or mechanics' sons who had gone into teaching and found a way for themselves to the University.

Q.—Do you think the present system of education in the School of Practical Science is calculated to give a mechanic a good training? A.—No; I do not—not from any fault of the staff, but for the reasons I have already given. The staff is too limited, and there is no room for laboratories or workshops, or anything of that kind.

By Mr. ARMSTRONG:—

Q.—You mentioned about large industrial establishments swallowing up the small ones; do you think that concentration of capital has anything to do with it? A.—Of course; it is a moot point in political economy whether capitalists are responsible for this. I am inclined to take Walker's view, that management is where the concentration is. I mean that kind of management which not merely keeps the men at work but includes the taking cognizance of the markets, and so on—men of brains, energy and organizing power. A capitalist may have his capital or borrow it; it does not make much difference which, but I think it is an entire misnomer to call the present a struggle between capital and labor. It is a struggle between employer and employed, between men of energy and activity and power to organize labor and the individual who is the subject of organization. That is where the struggle comes in, and I think if we recognized that fully and clearly our industrial disputes would take a different form. For instance, you would never hear of an organized attack, like that of the Anarchists, to burn down a building for the purpose of destroying capital.

Q.—Still you would not classify the Anarchists in the same class as the Knights of Labor? A.—No; I mention this to show that it is misdirected hostility. Occasionally you must have heard of the capitalist and the laborer being set out against each other, whereas the capitalist as such has really nothing to do with it; the employer is simply the person connected with the laborer, but he may be a capitalist or he may not. The capitalist may lend his capital or he may work it himself; in the one case he combines the two functions of employer and capitalist; in the other he exercises only one of them.

HENRY LLOYD, called and sworn.

By Mr. HEAKES:—

Q.—What is your business? A.—Carpenter.

Q.—Have you been working long at your trade in Toronto? A.—Off and on for eleven years.

Q.—During those eleven years has the business of carpentering made progress in an upward direction—has it improved? A.—It has slightly improved, but not in proportion to the improvement in other trades in the building line.

Q.—Can you give us any cause for the improvement; what do you think has brought it about? A.—I certainly attribute it very largely, if not wholly, to the organization that has been continually taking place in the carpenters' ranks.

Q.—Then you think organization is a direct benefit to labor? A.—Yes; I do.

Q.—What are the wages of carpenters in Toronto to-day? A.—The wages, I presume, run all the way from twenty-two and a half cents to twenty seven cents; probably some are lower than twenty-two and a half cents.

Q.—Is there any agreement between journeymen carpenters and the employers, fixing the rate of wages? A.—Not at the present time.

Q.—There is no such agreement? A.—Not at the present time.

Q.—Have you had such an agreement during the last few years? A.—Yes.

Q.—Did that agreement expire, or was it broken by either of the parties to it? A.—The agreement was never lived up to—not as far as the employers were concerned. The men, I believe, and I think I am in a position to know, especially the organized labor concerned in the agreement with the bosses, lived up to it as far as it was possible to do so, and the agreement expired.

Q.—You are now speaking as a representative man? A.—I do not know that I am a representative man in any sense; I belong to a union.

Q.—Are you not a member of the Joint Committee, the Executive Committee?

A.—Yes.  
Q.—That committee represents the whole body? A.—Yes.

Q.—Did that Executive Committee of which you are a member make any effort to have that agreement renewed or amended? A.—Yes; they made every effort.

Q.—Will you tell the Commission in your own way what steps were taken when the agreement expired, and the reasons why the agreement was not renewed?

A.—So far as my memory serves me—I perfectly well remember—that the agreement called for three months' notice to be given if at any time a change should be necessary either on the part of the workmen or the bosses. That notice was to be given from 1st January till 1st May. In the neighborhood of the 1st of January the corresponding-secretary of the Executive or Joint Committee notified the bosses that the carpenters had grievances which they wanted adjusted, and they would like to hear from the masters on the subject, and asked when they could have a meeting. The bosses wrote back and told the men that they had no grievances and they did not think they could meet them. Our Executive took steps to inform them that they thought they had grievances and would like to be a party in the settlement of the wages question in the future in Toronto. That correspondence ran on from January till the following June. We offered them everything, even to arbitration. When we found we could no longer succeed in meeting the employers we offered them arbitration. They refused to arbitrate. The only thing then left to the men was to assert themselves and to strike, which they did.

Q.—You say there was a clause in the agreement requiring three months' notice on either side to change the wording of the agreement? A.—Yes.

Q.—And you gave that notice last January; had you a meeting with the employers? A.—One meeting.

Q.—And they refused to discuss the matter with you? A.—Any further.

Q.—Did you make any effort to settle the dispute by conciliation? A.—Every effort possible, I think.

Q.—Before the strike was ordered? A.—Yes.

Q.—Is it true that in your demands to the Master Carpenters' Association you wanted everything in the trade? A.—No; it is not. The carpenters of Toronto have always held that instead of having everything they have had nothing.

Q.—We had a copy of your communication to the Masters given to us. It was stated that your demands were such that if they were granted there would be nothing left for the employers. You say that is not true? A.—It is not true.

Q.—Tell the Commission what the changes were in the proposed agreement? A.—In the first place, the old agreement called for a minimum rate of twenty-two and a-half cents an hour. Our demands were, at the time we went out on strike, for a minimum rate of twenty-five cents an hour. That was one of the changes. (I might have brought a copy of the agreement with me, but I am positive, at all events, there was the change proposed from twenty-two and a-half cents to twenty-five cents an hour). If my memory serves me, I think another of the changes was in regard to this: Our agreement of the year before had a clause that was very obnoxious to carpenters—that was what we termed the qualifying clause. It specified that no one but a qualified workman could receive twenty-two and a-half cents an hour. We wanted a change in that regard.

Q.—Did it not rather say that all qualified workmen should receive that amount? A.—I think the clause read for qualified workmen only.

Q.—Was there any other change required? A.—Of course, we had been dealing with the bosses, and wanted an over-time clause inserted—time and a half, for instance, for each hour overtime and double time for Sundays. We were in favor of that, of course; and in the agreement of the year before we asked for fifty hours per week, and we were in favor of altogether doing away with overtime on Saturday afternoons, if possible.

Q.—Then you wanted a change in this way: the old agreement stated that the minimum rate should be twenty-two and a-half cents per hour for qualified workmen; you wanted the word qualified workman struck out; and you wanted the minimum rate increased from twenty-two and a-half cents to twenty-five cents? A.—For carpenters.

Q.—You say you could not get a meeting with the employers to discuss that matter? A.—We could not.

Q.—They refused to discuss the question with you? A.—Exactly.

Q.—Could you tell the Commission as to the feeling of your union in regard to arbitration? A.—I am rather inclined to think that as a body they would be in favor of arbitration.

Q.—They would rather have arbitration than the present state of affairs? A.—Yes. Personally, I am not in favor of it; I think as a body the union would favor it.

Q.—Does your union demand that employers should not employ non-union men? A.—I will explain that to the Commission. There was a clause to that effect, but it originated with the employers themselves. You will understand that there is a branch of the Master Carpenters' Association, known as the Woodworkers' Master Carpenters' Association. Those men held a meeting with a sub-committee of our Executive, and they suggested that the carpenters should boycott material coming from outside manufacturers into Toronto in competition with their goods. The men pointed out to them that it would be utterly useless to try to boycott goods coming from a distance, when they had not control over more than one-fourth or one-fifth of the carpenters of Toronto—in other words there were not more than that number organized; but if the Executive engaged to boycott those goods, they asked if the masters would engage to employ none but union men. Then, of course, we could handle those men, for out of the organizations we had no control over them. They agreed to do that.

Q.—They agreed to do that, and that was put into your memorandum to them: if they would employ union men, so that you could control all the men, you would refuse to use this material that came in from outside the city? A.—Yes. But I want to draw attention to this fact: we did not suppose that agreement was settled,

because when they went back to the Master Builders' Association, that association condemned them for taking this line of action. They were to meet our sub-committee again, but they failed to do so. We put that clause in, but it was to meet the wishes of the bosses, and as it failed to do so, we struck it out; for, as I have said, it was put in at their suggestion.

Q.—You afterwards struck that out? A.—Yes.

Q.—Does your union prohibit members of the union from working with non-union men? A.—No.

Q.—Have you many apprentices in your business? A.—I do not know of three regularly indentured apprentices to the carpenters' business in Toronto to-day.

Q.—Is it a difficult thing for a boy to become a good skilled mechanic in the carpentering business? A.—It is.

Q.—What I mean is this: is it a difficult matter for a boy to learn the business, in consequence of the present state of affairs in regard to apprenticeship? A.—It is impossible for a boy to learn the trade correctly in the present state of affairs.

Q.—Must he not be pretty smart to pick up sufficient knowledge to enable him to get along? A.—He must be very smart.

Q.—Have you ever expressed yourself in regard to the apprentice system, as to whether the indenture plan would be any benefit? A.—The committee have done so very often. They are certainly in favor of having every apprentice indentured.

Q.—At the present time boys are not indentured; you say you only know of three indentured? A.—I do not know of more than three.

Q.—Have you ever known of any co-operative building among the carpenters? A.—I do know of one such business.

Q.—Is it in operation in the city? A.—Yes; I believe it is.

Q.—Can you give the Commission any information regarding that sort of work? A.—I must admit that I am very poorly posted in that matter. It is an experiment in Toronto; although one of the members of the union to which I belong is one of the stockholders in it, I am not so well posted as to know how it works. All I know is, that from what I can gather and ascertain it is a failure.

Q.—Is it so because the men have not confidence in each other? A.—It strikes me that is about the case. Co-operation is a new thing in this country, and the men have not so far grappled with it. So far as I can understand, it has not been successful in any sense.

Q.—Have you ever seen the Ontario Arbitration Act? A.—I have read parts of it; I do not know that I have read it through.

Q.—Have the men in your trade ever taken advantage of it? A.—Not very largely.

Q.—Do you think there is anything in the Act to prevent a settlement of a dispute such as you had last summer. Really, I do not think there is.

Q.—Read the twenty-eighth clause of the Act as you find it there (handing witness paper), and give me your opinion. A.—I am of the opinion that possibly in connection with that clause there might be something done.

Q.—Do you think that would prevent you settling such a dispute as that you had last summer? A.—Yes.

Q.—Arbitration, to be effective, would have to cover that ground? A.—Yes.

Q.—What is the most frequent cause of dispute between employers and employed in the carpentering business? A.—The dispute seems to generally run in this way: it seems to be upon questions between employers and employed. They argue on the line that we are at all times asking the same wages for unskilled mechanics as we are for skilled mechanics, when the contrary is the fact. Our answer to that is, that we are only too happy to see carpenters become skilled; that we desire to associate ourselves with skilled men, and it is at all times the bosses that create those poor mechanics. Of course, the wage question enters largely into it. The reply they make is, that they are paying all the wages the work demands and that supply and demand always regulate the wages.

Q.—Is it the practice for an employer to have so many men earning a fixed rate of wages and so many men working with them at an inferior rate of wages? A.—Yes; that is frequently the case.

Q.—Have you ever known a case where a thoroughly skilled workman has been on one side of the bench and a man practically unskilled on the other side? A.—Yes; the bosses generally work it that way.

Q.—And have not the wages of the unskilled man a tendency to bring down the wages of the skilled mechanic? A.—Certainly; that is the arrangement.

Q.—Is not that one of the most frequent causes of dispute? A.—It is very often, indeed.

Q.—And is not the result, that the skilled man must take the same wages as the other man, or leave the shop? A.—Yes.

By the CHAIRMAN :—

Q.—Do you mean to say that the unskilled man would do as much work as the skilled man? A.—No; certainly not.

Q.—Do you think the man who is not able to do so much work as a good mechanic should be paid as much as the good mechanic? A.—No.

Q.—Do you think there should be a difference in the pay between men who are efficient mechanics and those who are not? A.—That is what we are fighting for.

Q.—That is what you want? A.—Yes.

Q.—You say that is not understood by the employers? A.—They do not want to understand it; that is the trouble.

By Mr. HEAKES :—

Q.—Have you ever given any consideration to the subject of industrial education? A.—I cannot say that I have; I have not had time to do so.

Q.—You could not give the Commission any idea with regard to the industrial education of boys before they go to a trade? A.—No.

By Mr. KERWIN :—

Q.—Do nine hours constitute your day's work? A.—Yes; they are our working hours.

Q.—Do you work many hours over-time? A.—Not very often—that is not organized labor.

Q.—Do you work on Sunday? A.—Very seldom; very little Sunday work is done in Toronto.

Q.—Of course, when work is done on Sunday, or after the regular hours, it is done at the request of your bosses? A.—At the request of our bosses.

By the CHAIRMAN :—

Q.—Is anything done on Sunday, except from great necessity? A.—No.

By Mr. KERWIN :—

Q.—It is only in case of actual necessity that you work over hours? A.—Not always.

Q.—When you wanted a time-and-a-half to be paid for over-time what answer did you get? A.—The bosses were never favorable to over-time.

Q.—They did not want to pay any over-time? A.—No.

By the CHAIRMAN :—

Q.—Do you mean they wanted to get over-time without paying you? A.—They wanted it for the same rate of wages as they paid for regular hours.

By Mr. KERWIN :—

Q.—When you work after nine hours or before the nine hours which constitute a day's work, you do so because your employer requires you to do so. A.—Certainly.

Q.—And yet he does not want to pay you anything extra? A.—He does not.

By the CHAIRMAN :—

Q.—Does he do that? A.—It is very seldom done.

Q.—Does he very seldom pay you more than the regular wages? A.—Yes.

By Mr. FREED :—

Q.—Do you know what rates of wages are received by men in other branches of the building trade? A.—Yes; I am pretty well conversant with the rates.

Q.—What is the rate paid to bricklayers? A.—Twenty-three and a-half cents per hour is the minimum. I know as high as fifty cents per hour was paid this summer.

Q.—Bricklayers cannot work as many days in the year as carpenters do? A.—I think they do. You see they are always on the buildings before carpenters. The carpenters are probably there a little longer, but there is a great deal of inside work for them to do, such as setting hearths, building in furnaces, arches, and so on. I am of the opinion that there is very little difference in the time made. I have known bricklayers to work outside when we could not work outside.

Q.—How many months in the year do you think bricklayers in Toronto can average? A.—I presume a bricklayer can average in this city ten months in the year.

Q.—What rate of wages do house painters get? A.—Their wages run from twenty cents to about twenty-two and a-half cents, as a rule.

Q.—They get in more time than the carpenters? A.—Yes.

Q.—The plasterers: what do they get? A.—They run from thirty cents to thirty-two and thirty-three cents: thirty and a-half cents is their minimum wage. They work steadier than carpenters, or bricklayers either.

Q.—Take a good carpenter, who knows the city pretty well, a man of fair average ability—what time could he make during the year? A.—I think the average would be possibly in the neighborhood of ten months.

By Mr. HEAKES :—

Q.—Does that make allowance for short hours in winter? A.—I am taking into consideration the fact that there is a certain period of shorter hours in winter, but I am not counting in holidays. I think that possibly he could work ten months in the year.

By Mr. FREED :—

Q.—With respect to the meeting that took place between journeymen and employers: I understand that to have been a meeting between committees of the Master Builders' Association and of the Carpenters Union? A.—It was a committee so far as the employés were concerned, but the Master Carpenters' Association as a body was at that meeting.

Q.—What was the line of discussion at that meeting? A.—It partook of a general character, in reference to this agreement and the alterations proposed. When we started out in January we asked by way of change the over-time clause, and that the obnoxious clause respecting qualified workmen should be struck out; we did not ask for a raise in the first place.

Q.—In the documents submitted to the Commission, I believe seven or eight demands were made? A.—There were several demands made. Among them was the one that the masters should employ none but union men. I have explained that that was the suggestion of the wood-working machine bosses. After we found that was obnoxious to the boss builders we struck it out at once.

Q.—Was it not in the final document you discussed? A.—No; it was not.

Q.—At that meeting did the employers ask for any modification of those demands? A.—I was not on the committee that waited on them. I had the facts, however, from the committee. They did not want to consider them, but they told the men plainly that the qualification clause must remain there.

Q.—Was that the only rock on which you split? A.—I believe that, in the first place, that was the chief difficulty.

Q.—The other matters would have been got over if you could have agreed as to that? A.—If the bosses had met us, in the first place, in a fair spirit, we could have got over that trouble nicely.

Q.—They met and discussed the matter with you? A.—Certainly.

Q.—Do you mean that their spirit was arbitrary and unreasonable? A.—Certainly; we considered it so.

Q.—In what way were they arbitrary? A.—We considered they were arbitrary when they would not allow us to have a say in the selling of our labor.

Q.—Were they not willing to grant you any portion of your demands? A.—Nothing was granted; they refused every demand.

Q.—Then it was useless for your committee to meet them? A.—Useless. In fact, we could not get a meeting with them for a long time.

Q.—Was not that one clause to which you have referred the principal subject of discussion at that meeting? A.—Yes; it was.

Q.—Were you not determined to precipitate matters so soon as you found that clause would not be removed by the Master Builders' Association? A.—We made other efforts. We offered to leave the matter to arbitration.

Q.—Did you send the masters a formal written offer to arbitrate? A.—Yes.

Q.—Coming from your Union? A.—Yes; and we gave them one month to consider it.

Q.—You spoke of unskilled carpenters who were put to work: what is your objection to an unskilled carpenter working in a carpenter's shop? A.—In the first place, those unskilled men are frequently stealing the bread and butter from a skilled man.

Q.—Has not the unskilled man as good a right to work as the skilled man? A.—We find no objection to the unskilled man working, but we claim that the unskilled man shall not be paid more than a certain rate of wages.

Q.—Do you demand that he shall be paid more than he is worth? A.—No.

Q.—Is he worth as much as a skilled man? A.—No; we do not say that he is.

Q.—Do you demand that he shall receive the same rate as a skilled man? A.—No.

Q.—How do you propose to fix the rate of wages to be paid to the unskilled man? A.—We propose to deal with it in this way: we propose there shall be a minimum as the rate of wages for a carpenter; we ask that it shall be twenty-five cents per hour. We say that that shall be the minimum rate for a man who is a carpenter. If he is not capable of earning twenty-five cents an hour, he is not capable of working at the carpentering trade.

Q.—But there is certain work which does not require the skill of a regularly trained carpenter; do you object to an unskilled man not receiving as high wages when so employed? A.—We do not object to his doing work, but we object to the way he receives.

Q.—You demand that unskilled shall be paid as high as skilled labor? A.—We do not.

Q.—Then I cannot understand you? A.—I will try and explain. What we propose is, that if a man carries a kit of tools and works at the carpentering trade, he should be worth twenty-five cents an hour. We find laborers in Toronto getting twenty cents per hour. This carpenter, no matter how unskilled he may be, certainly requires a little more brains and intelligence than does the man who carries the hod. If he puts up a fence it has to be done in a skilled manner; it has to be done properly, to be plumb and so forth; and then there is the question of tools for the carpenter, which the laborer has not to find. We therefore claim that the carpenter should be paid living wages, for an amount is spent to replace broken tools and for sharpening saws, and so on, and by regulating the wages of the poorer class of mechanics we are always sure that the wages for the good class of mechanics will regulate themselves.

Q.—Does all unskilled labor in Toronto receive twenty cents an hour? A.—In the building trade the plasterers' laborers have twenty cents an hour. The builders' laborers I know last summer received as high as twenty-one cents.

Q.—Is not the work of the hod carrier extremely arduous, dirty, hot and unpleasant? A.—Yes; I will admit that; but it is not any harder or dirtier than the work of the unskilled carpenter, who has to carry joists from morning to night.

Q.—Do those unskilled carpenters belong to the union? A.—Very few of them.

By the CHAIRMAN :—

Q.—How then do you define the difference between such a carpenter and a common laborer? A.—There is a great deal of difficulty in this connection in Toronto, for there are men who call themselves carpenters and work at the carpentering trade who are really unskilled. We are anxious to do away with that class of men.

Q.—At present there is nothing to mark the distinction; it is simply that a man calls himself a carpenter? A.—Yes; and he can work at the trade, and bosses will employ him.

By Mr. FREED :—

Q.—Are those men themselves anxious for the demand to be made that they shall receive twenty-five cents per hour, or would they rather make their own terms? A.—I always find those men very anxious to receive the highest pay going.

Q.—If twenty-five cents per hour was fixed as a minimum rate, would they continue to be employed? A.—I believe they would still be largely employed; but the difference would be in the winter time; when trade was slack the skilled man would receive the benefit, because he would be kept on in preference to the unskilled. As it is now, the competition runs this way: in winter we are placed in competition with a poor class of mechanics.

Q.—If the unskilled men should be employed to the same extent as now, how would the skilled man benefit by having them paid higher wages? A.—You will remember I said that I believed a certain number of those men would be employed: but eventually the bosses would see it was to their interest to employ the better class of mechanics steadily.

Q.—Then some of the unskilled men would be driven from their present employment and forced into other branches of trade? A.—Into their legitimate channel, that of laboring men.

Q.—If they are properly skilled at the carpentering trade, why should they not be permitted to work at it? A.—They are handy men. Men who have served their time as carpenters totally object to working with carpenters who have not served one hour, and who are entirely unskilled men.

By Mr. HEAKES :—

Q.—With respect to working with this unskilled labor: is it not the practice to hire an inferior carpenter and call him a handy man? A.—Very often.

Q.—That is to say, that through the competition of that unskilled class of labor the skilled mechanic is frequently forced to take a lower position and smaller pay? A.—Very often.

Q.—That is a grievance which the carpenters feel? A.—Exactly.

Q.—If such men were employed as laborers, would the carpenters object? A.—Certainly not.

By Mr. FREED :—

Q.—If they were hired as laborers, and put at the same work as at present, would the carpenters object? A.—They should not be allowed to be put at that work. If this were done the carpenters would undoubtedly object; if they were allowed to handle carpenters' tools we would object.

RICHARD SOUTHWELL, called and sworn.

By the CHAIRMAN :—

Q.—What is your occupation? A.—I am a carpenter in Toronto.

Q.—Do you corroborate the testimony of the last witness? A.—Yes; I corroborate what Mr. Lloyd has said. I think he has covered the ground very fully; if there is anything further required, and which has not been asked him, I shall be glad to give the information. We have done everything to arbitrate, and have failed.

By Mr. HEAKES:—

Q.—You have seen the Provincial Act pertaining to trade disputes? A.—No; I have not.

Q.—You have had some experience in trade matters? A.—Yes.

Q.—Do you know there is a law in existence in this country which states that upon the application of any employer to the chief of police, the police shall be sent to protect any property or buildings he may have on hand? A.—I did not know that until a few months ago, during our strike.

Q.—Is it so? A.—Yes.

Q.—Do they have to pay for that police protection? A.—I cannot say.

Q.—Do you know upon what grounds police protection is granted employers in case of a strike, and what evidence is required before it is granted? A.—I do not know what evidence is required or why police protection should be granted them, because they have applied for it in the most paltry cases, and a force of police has been sent to guard their property.

Q.—Was that done during the late trouble in Toronto? A.—Yes; frequently.

Q.—Had there been any disturbance? A.—No.

Q.—No riots? A.—No riots.

Q.—And no attempt to drive men off work? A.—No.

Q.—The employers asked for protection, and police were sent? A.—Yes.

Q.—Is labor handicapped by the laws of this Province? A.—We are, in that respect.

Q.—Have you had any experience in workingmen's co-operative stores? A.—Very little. I had a little, while in a co-operative store in the west end of the city.

Q.—Can you state whether they have been a success or not? A.—The one I was in was not a success.

By the CHAIRMAN:—

Q.—Has there been more than one? A.—There is one on Yonge street at the present time. Whether it is a success or not I could not say.

By Mr. FREED:—

Q.—Do you know what was the cause of the failure, or the comparative failure of the store with which you were connected? A.—I believe there was a lot of bad debts.

Q.—They gave credit where it should not have been given? A.—That was one of the causes; and another cause was the members not buying all their goods in the store, but purchasing them at other stores.

Q.—Was sufficient capital invested to conduct the business properly? A.—I think there was. I was not in it very long before the business collapsed.

Q.—Were you in it as a stockholder or as manager? A.—As a stockholder.

Q.—Was it a grocery store? A.—Yes.

Q.—Was a trained grocer in charge of it? A.—Yes.

Q.—He was a competent man? A.—Yes.

Q.—A man of good judgment? A.—Yes; I should think so.

Q.—He knew how to buy prudently, and so on? A.—Yes.

Q.—Then the principal cause of the failure was the giving of credit where it should not have been given? A.—Yes; and from members not dealing fully in their own store.

Q.—Did they give credit outside of the members? A.—I rather think they did, because I dealt with them before I became a member.

Q.—The articles sold were as good and as cheap as those to be had at other stores? A.—Yes.

JOHN S. BALLANTINE, Carpenter, Toronto, called and sworn.

By Mr. HEAKES:—

Q.—You have heard the evidence of the two previous witnesses (Messrs. Lloyd and Southwell)? Do you concur in it? A.—I do.

Q.—You agree with it in every part? A.—Some points might be extended a little, but in its general result I agree with it.

Q.—Can you give the Commission any information in addition to what we have received, anything that you think will be a benefit to the trade? A.—Part of the trouble suffered by carpenters has not, I think, much to do with the question of capital and labor. It seems to me that the formation of employers into a society is done with a view to keeping down all union whatever on the part of the men. In the last difficulty the carpenters had, the question of capital and labor was one of minor consideration; it seemed to be a question as to whether any union on the part of the men would be allowed. We claim equal rights with the employers; they had a union, and we claimed that we ought to have one for this reason—that unions have been a direct benefit in shortening the hours, and thereby raising our wages.

Q.—When hours were shortened in Toronto were the wages advanced? A.—Undoubtedly.

Q.—Did you find any tendency on the part of the men who had shorter hours to waste their time in dissipation? A.—No; I did not.

Q.—The habits of the men were steady? A.—Yes.

By Mr. FREED:—

Q.—Did the employers demand the dissolution of the carpenters' union? A.—In some cases they discharged men who belonged to it.

Q.—Because they belonged to it? A.—Yes.

Q.—But they offered to retain them if they left the union? A.—They would give them a chance, either to leave their employment or to leave the union.

Q.—Is that with your knowledge? A.—Yes.

Q.—You knew the employers and you knew the men? A.—Yes; I knew them.

Q.—It is not mere hearsay? A.—It is not mere hearsay, it is truth.

Q.—The strike was a failure, I believe? A.—Not altogether, although there was no final statement in regard to what we demanded; there is this fact, that it has been the means of increasing wages. They are higher to day than they were previous to the strike.

Q.—The men went back to work without their demands being definitely granted? A.—Without an agreement as to their demands.

Q.—Have employers since that time demanded a dissolution of the union? A.—Not as a body; I do not know.

Q.—Have many employers discharged men for belonging to the union? A.—That I cannot say, as to the exact number.

Q.—Do you know of more than one? A.—There are cases where the men were asked to work on Saturday afternoon, which the employers know is contrary to the rules of the union, and the principles of the union, and they have given their men the choice of either leaving their employment or breaking the laws of the union.

Q.—Did the employers' association ever pass a resolution that the men should leave the union or be discharged? A.—Not that I am aware of—not in deliberations.

Q.—Do you hold the association or a majority of the employers responsible for the action of a few of its members? A.—Undoubtedly. I think it is responsible; the whole is responsible for the few.

Q.—Do you know of any employer in Toronto who refuses to employ union men? A.—There were one or two at the time of the strike who positively refused to employ any but non-union men.

Q.—That was while the strike was in progress? A.—Yes; and immediately after it closed.

A.—16½

Q.—Do they still refuse? A.—I could not say. I think not.

Q.—Do you know any who now refuse to employ union men? A.—I do not.

By Mr. CLARKE :—

Q.—What prompted the men to ask for shorter hours? A.—The possibility of thereby increasing their wages.

A.—That may have been one reason—it certainly is. But we concluded that laborious work might be paid for at the same rate for nine hours as for ten hours, and not only that, but it would tend to equalize the labor market and to have those in the trade more generally employed.

Q.—Are there any other places in the Dominion where the nine hour system is in force? A.—Yes.

Q.—In Toronto? A.—I think the nine hour system prevails very generally throughout Ontario. One reason is, that it is a well-known fact that the shorter the hours the higher the wages. We find in the reports from other places where there are unions that this rule is correct. In the reports we have from all over the United States and from England, we find that mechanics working four or five hours less per week now receive higher wages. We believe that is one of the reasons for making the demand.

By Mr. HEAKES :—

Q.—Do you know what the wages are in the border towns of the United States; how do the wages in Toronto compare with those in Rochester, Buffalo and Detroit? A.—Higher wages are paid there than here.

Q.—Do you know anything about the general rates of wages in the United States? A.—They range from \$2.50 to \$3.00 per day.

Q.—Then they are generally higher than here? A.—Quotations are given in the monthly and quarterly reports we have from several American cities, and the wages are higher there than here.

Q.—What are the wages in Buffalo? A.—I think in the last report I saw the wages were a little less in Buffalo than in Rochester at that time; but usually they run about the same.

Q.—And what rate in Detroit? A.—Something about the same.

Q.—Do you think, taking things all round, that the carpenters in Toronto are not quite as well off as are those just across the lake? A.—They are not.

By Mr. FREED :—

Q.—Is this information given from general belief on your part, or from actual knowledge of those cities? Have you worked there? A.—I have received the reports of different Unions, and I am speaking from them. I worked in some of those places some years ago.

JAMES WRIGHT, Plasterer, Toronto, called and sworn.

By Mr. FREED :—

Q.—I understand you wish to tell us something about technical schools? A.—Yes; about technical schools and trade schools.

Q.—What experience have you had in such schools? A.—I have always had a desire to attend one of these schools, but unfortunately I have been unable to attend one of these schools since leaving England, in 1868.

Q.—Did you attend one there? A.—I attended one in Oldham, in Lancashire.

Q.—Will you tell us something about that school? A.—It was inaugurated to allow mechanics and others to obtain a technical knowledge of the different trades. I believe, however, that Mr. Cooper, founder of the Cooper's Institute, in New York,

inaugurated the system of trades education, so that each man was practically at work while he was getting a general knowledge of the trade, and instead of using books and mathematical appliances he used tools. I did not attend that class, owing to not being sufficiently long in New York at that time. I endeavored to establish a school of that description in this city last winter. It was so successful, so far as attendance was concerned, that I thought I would come before this Commission, and advise the Government to establish some school of that sort in Toronto and other towns in Canada. In regard to the United States, there is one firm employing 250 apprentices, which has established a technical school belonging to the works, and fifty teachers attend the school each evening. They worked at the trade, and proper apprentices were appointed to assist them with respect to the use of tools. The school I established in Toronto was one for plasterers, I being well known in the city, having lived here for fourteen years. Mr. Rundel, who was giving evidence here, was one of the first to whom I went about the matter, I having worked for him. I asked him to send his apprentices to me, and I would give instruction two nights a week for six weeks. I had to furnish the room, light, fire, material and tools, and my own time; I charged the apprentices \$5 each. I know that it was too heavy on young men here trying to learn the trade, and who were receiving probably \$2.50, \$3 or \$4 a week. Mr. Rundle, however said: "You commence the school, and I will send my two boys, and pay for them myself." I went to other boss plasterers, and they were all willing that I should commence the school for their advantage, but in regard to fees the boys must pay them. I had seventeen or eighteen boys who applied. The result of the whole thing was that the \$5 scared them away; but there was one boy who was so anxious to acquire knowledge that he said he would pay his fee in instalments. I said to him: "If you will come even alone I will go on with the school, even if it is only for your benefit." He came and paid me by instalments. Eventually I had only four apprentices who went through the whole term. I wrote to the journeymen's union in this city, advising them to come, or appoint a committee and watch the progress of the work during the evening. We were on actual work, and I have the work finished by the boys in my shop now. I did not even receive a response to my letter, and I felt a little hurt. Since that time some of the journeymen have asked me to establish a school again this winter. I thought, however, it was nonsensical on my part to go to work and establish such a school for only four or five boys, as I was out \$60 last time, and I could not afford it again. In my endeavor to establish a technical school I thought I would have had the support of the trade last winter. As the Commission were in the city I thought that probably we might stir the trade up on the question, and show the feasibility of establishing such a school for apprentices. I had to learn my trade, as others have had to learn it, from journeymen. One boy assured me he had been six months at the trade, and a piece of work that could be taught a boy in three hours so that he could do it perfectly, he had never been even shown. I showed him how to do it, and he applied himself so well that I have kept his work since. Even a boy who had but one month to serve had very little of the business, any more than what he had picked up. He had no technical knowledge; he did not know how to measure a yard of plaster; he had no idea of how much work had been done when he went home. It is generally understood that a man will do one hundred yards of work per day, but there are not half a dozen apprentices who know how much work has been done during the day. They have not the faintest idea of how to measure it. They do not seem to know that if a work is ten feet long and ten feet high there are one hundred square feet in it. Apprentices have had no opportunity of obtaining school education in most cases, because in our business they are taken from a rough, strong class, who have little education. They have not had even the ordinary education given in the public schools; they are generally picked up from those who are suffering from poverty, or they enter the trade simply because they expect to get higher wages when they get to be journeymen plasterers.

Q. Yours seems to have been a school of instruction in a particular trade rather

than a technical school, such as we have been hearing about? A.—I observed that the architects of this city have established a school for their business. It is held, I believe, at the Canadian Institute. Different architects lecture to the students or apprentices to the architectural business. It is merely a trade school for architects. Bricklayers, carpenters, stone masons and plasterers should certainly have technical schools as much as their children should be instructed in the public schools.

TORONTO, December 3rd, 1887.

JOHN DIXON, Carriage Builder, Toronto, called and sworn.

By Mr. FREED:—

Q.—Are you a journeyman, or employer? A.—An employer.

Q.—Have you been in business long? A.—About twenty-six years.

Q.—You ought to be pretty familiar with the carriage building business in Toronto? A.—I am. It is considered a pretty good trade, what with here and outside. Some hundreds of hands are employed altogether, and there are quite a number of shops.

Q.—How much of the materials for carriages is imported from abroad? A.—There is not a great deal of it imported. Most of it is manufactured here. That which is not, comes from the other side, such as spokes.

Q.—Are these in their natural state, or sawn? A.—They are in butts—short logs for making hubs.

Q.—Is it impossible to get the very best wood for carriage building in Canada? A.—We have not got the best wood here, such as hickory and elm.

Q.—What kind of elm do you use? A.—We use rock elm, but not much.

Q.—Is there not sufficient rock elm in Canada? A.—Not much; not sufficient for hubs.

Q.—What is the condition of Canadian hickory? A.—It is a little soft.

Q.—Cross-grained? A.—No; the better the timber the crosser the grain is.

Q.—A witness told us the other day there was not sufficient white wood hickory in Canada for the trade? A.—That is a mistake. As a general rule, carriage makers would as soon have colored as white wood. It is necessary that hickory should be second growth. I think that hickory is nearly all cut out in this district. There used to be a large amount of it at St. Catharines and Niagara. It is suffering the fate of the walnut and white woods.

Q.—With the exception of the importation of wood, the manufacture is mostly carried on in Canada? A.—Some few things we require are got from the other side—the States. There are numerous places where carriage building is carried on in Canada—perhaps fifty. There are some factories at St. Catharines, a very extensive factory at Hamilton, and at other towns.

Q.—So far as iron is concerned, do you get it here? A.—Yes, principally in Canada. We get some axles from the other side. These are special kinds—steel axles; none are manufactured here. There are very few iron axles used now. Steel ones have become so cheap that they are mostly used. I do not know where they get the steel from. They are manufactured in Guelph, Galt and other places. They could be manufactured here equally as well if we were to import Bessemer steel.

Q.—About filagree work in Canada—where does it come from? A.—Montreal and Oakville.

Q.—As a rule, do you buy your iron ready-made or rough? A.—We manufacture it ourselves.

Q.—Your principal work is fitting and finishing the woodwork and iron? A.—There are four sections—painting, trimming, woodwork and iron.

Q.—What rates of wages are prevalent in your trade? A.—The ordinary mechanic earns from \$9 to \$10 a week; first-class men \$12 to \$15 a week all the

year round, winter and summer. All higher class men are employed that can be got. There are some men employed on rough work at from \$5 upwards.

Q.—How about apprentices? A.—We do not have any apprentices. Boys learn the trade without indenturing. This is not the best system. I would rather have them indentured. We have had a written agreement with some of them, but it has never been properly carried out. If you take proceedings in the court against them sympathy always goes with the workman.

Q.—Would you consider the apprenticeship system, if it could be restored, to be good? A.—I think it would be very good.

Q.—Would boys be benefited by technical instruction? A.—I do not think many would avail themselves of it.

Q.—If they should? A.—It would be a good thing for them.

Q.—When boys come to work in your shops are they handy? A.—We do not take any "green" hands. There are plenty of country boys who know something of the business. They serve a couple or three years in the country and then come to the cities and hire for \$5 or \$6 a week. They agree to stay a few years. The only way we can keep them is to give them an extra good chance and increase their pay. We give them \$5 for the first year, \$6 for the second, and find then that somebody else will take them.

Q.—Do you give special instruction? A.—We do; it is for our advantage to do so. We give the youths special instruction as soon as we get them.

Q.—Have you any machinery in your business? A.—No; steam power, but little machinery.

Q.—These are not such machines as would be likely to cause accidents? A.—Not at all likely.

Q.—How often do you pay your hands? A.—Every Saturday, in cash and in full. We make no deductions whatever.

Q.—Have you ever been asked to adopt any other pay day? A.—I did make a change. Last summer I commenced to pay on Friday. The first Friday I had three hands off; the following week, nine off. I therefore changed the pay-day back to Saturday.

Q.—What took these men off? A.—Pleasure.

Q.—How many hours do men work? A.—Ten hours a day; sixty hours a week.

Q.—Do you consider it an advantage to your men to have a half holiday? A.—I do not see what benefit it would be.

Q.—Have any efforts been made to reduce the hours of labor? A.—Eleven years ago there was.

Q.—Do you think the men would be better off if they only worked nine hours a day? A.—It is not a laborious business.

Q.—Do not iron-workers work very hard? A.—I am an iron-worker myself; it is not heavy work; it is a very healthy business.

Q.—Are not the men pretty well fatigued when they quit work at night? A.—They take care not to fatigue themselves; they maintain their health fairly well.

Q.—Is there no indication that you have observed that they wear themselves out with hard work? A.—No; there is only one line of trade which I think to be injurious; that is carriage painting. This is on account of the paint and the carelessness of the men themselves. Some do not keep themselves fairly clean, nor are they clean about their work. They do not keep the shops as well ventilated as they should be in summer. I am speaking of my own shops. They are all pretty well ventilated in the city. Men who are accustomed to work in shops do not care much about ventilation. We make efforts to secure ventilation, but the men do not care for it. I very often go in and find an unpleasant smell and have the windows opened, but some of the young fellows close them again.

Q.—Do you employ female labor? A.—We do not employ any women. There is work they can do, but we do not employ them. They could do work in the cushion shop, and trimming.

Q.—Would it not be a great advantage to them to be so employed? A.—We could not employ many. Where there were thirty or forty hands you could not employ more than two or three women. They could not work unless experienced men showed them. There are branches that are not adapted to female labor at all. There are certain portions they could do as well as men, and other portions they could not do.

Q.—Do you keep your shops comfortably warm in winter? A.—I do.

Q.—So that if the men took the same care as you do, there need be no unsatisfactory conditions? A.—I take every care. There are water-closets in the shop, but I am afraid not very good. The Bay street sewer is 8 feet 6 inches below the surface of the street. This is not sufficiently good drainage for a cottage. It is just sufficient to take off the running water and that is all.

Q.—How about wages? A.—There are always good wages. Good workmen command good wages, but many of the good men are not very steady.

Q.—Do men in your trade leave Canada for the States? A.—Not many. A man who left me for the States has come back, and says he can do better here than in Detroit. He says he can live more economically. He got higher wages there, but lives more comfortably here. He had been working seven years for me, and left last summer. He is a very good workman.

Q.—Have you known any carriage makers in Toronto to acquire great wealth? A.—What do you consider great wealth?

Q.—Well-to-do? A.—All that I can say is, that the men are living well. They are living better than I was when I was working much harder than they are.

Q.—After you had begun business and were doing comfortably well you lived more economical than some of your workmen live now? A.—Yes; I see my workmen riding down to and from their work while I walk. Workingmen have more luxuries now than ever. I speak from personal observation of them and their families.

Q.—Do they dress in better style than ten or fifteen years ago? A.—One hundred per cent. better. Many men who are steady are doing well. I would like some of you gentlemen to visit my factory and ask them how they are doing.

Q.—Do they not get into difficulties through buying good clothes? A.—I cannot say they do.

By the CHAIRMAN:—

Q.—Have you had any garnishment in your shops? A.—We have not, but there was the case of a good workman who used to send money to his friends. His boarding woman came round and said he had not paid her for seven or eight weeks. I paid him every Saturday night.

By Mr. FREED:—

Q.—Do any workmen in your trade own houses? A.—Some of them do. Perhaps not one-fourth of them. I employ from 35 to 40 men. I have 35 working now. I keep on about the same number of hands the year round.

Q.—Do you make special efforts to keep your men on when you have not special orders on hand? A.—I do. There is no occasion for a man to lose an hour, whether business is good, bad or indifferent.

Q.—Do you know anything about house rent in Toronto? A.—I know what I have paid myself, and I know what working men can get a house for.

Q.—Are you speaking positively? A.—I merely speak from what I have heard of the present rents.

The CHAIRMAN:—We can get this direct from others.

By Mr. FREED:—

Q.—Do you know of any profit sharing by carriage-makers? A.—No, I do not.

Q.—Do you require any contract from your hands that they do not belong to any union? A.—I do not. I employ only skilled workmen. There are no union men in our business. I never interfere. They have never troubled me. I do not object to union men working for me.

Q.—Have you never been asked to employ any but union men? A.—Never. I have never taken action in the matter. A union was formed here some years ago. The president and vice-president worked for me. They made arrangements for a strike.

Q.—Will you tell us about this strike? A.—My brother's hands turned out, and remained out part of the day, and my foreman and all the other men had to quit work. That evening they had a meeting, and that disorganized all things. The men said they were perfectly satisfied, and did not know what they had left work for. This burst up the whole thing. They made no demand on us. I do not know what they were striking about.

Q.—Were they badly treated in your brother's shop? A.—No; they went back to work again the next day.

Q.—It was a very extraordinary strike? A.—It was. I made no enquiries about it.

Q.—Is there any "black-listing" in your business? A.—No; I have no lists of men who are objectionable on any account.

Q.—Do carriage builders from abroad—emigrants—come largely into Toronto? A.—Yes; we have them from all parts, but not very many of them. They come principally from the United States and the old country.

Q.—Those from the United States—do they remain here or go back? A.—Some remain and others do not. Men travel very much more than previously. They are continually moving around.

Q.—Is this to better their condition? A.—It may be, but some of them like a change.

Q.—You have told us that the rate of wages has not materially changed, but you think your men are better off? A.—I think you can live cheaper in Toronto to-day than ever. Things are cheap.

Q.—Are not rents higher? A.—You can get a good house reasonable if you go further out. You can get one from \$8.00 to \$10.00 a month within one mile or a mile and a-quarter of the centre of the city—say twenty-five minutes' walk.

Q.—That is nearly an hour off his work? A.—They do not trouble about that. Many get their meals in the city. They can do this for ten cents. My foreman only paid twelve cents for a meal, and said he never got a better one, the only drawback was that the room was too crowded.

Q.—Do you know how wages are in your business, as compared with Great Britain? A.—No; I cannot say.

Q.—Don't you think your men would be better off if they had a union? A.—I do not think they would. I think being master of his trade is decidedly better than the union. Let each man be paid according to his ability.

Q.—Have the master carriage-builders a union? A.—None whatever. We do not desire one. It has not been talked of.

Q.—Are there any co-operative carriage shops in Toronto? A.—There are none. There never have been any.

Q.—Would it require a good deal of capital? A.—It would depend on the extent of the business. A man with good character might be able to start with \$500.00.

Q.—If a few men were to combine they could start a very considerable shop? A.—It is a very difficult thing to get men to work together. There is always some dissatisfaction about the way the business is conducted. It takes years for a man to get the requisite business experience. He must have experience of four different branches, and that is what the journeyman hardly accomplishes. There are four separate and distinct branches of our trade—trimming, woodwork, blacksmith and painting. A workman in one department does not know about the others. A man to conduct his business right must have a knowledge of those four branches.

Q.—Does it require much knowledge to buy property in your trade? A.—Not very much, but it is said, "a thing well bought is half sold."

Q.—Does it require much knowledge and experience to best dispose of such property? A.—It requires tact. We depend more on a ready sale than on orders. We do not care so much about orders as regular cash sales.

Q.—Do you think that mechanics in Toronto have, so far as you have observed them, houses as comfortable as formerly? A.—I think they are much better, more sanitary, and fitted up with more modern conveniences.

Q.—But the men are crowded together further away from their shops. A.—That is so. I have always worked ten hours a day, and never suffered from it, or a long walk.

Q.—Do you fine your employes? A.—No, sir.

Q.—Have you any Sunday work? None. I do not think over-time pays.

Q.—Does convict labor interfere to any extent with your trade? A.—Not at all.

Q.—Do you think your men have saved much money? A.—Not to any extent.

They can save money if they try.

Q.—You would not care to live on the scale on which journeymen would live if save money. A.—No; I would not, for I have lived better for many years. I have lived as they do, but never lived yet but I could save money.

Q.—When you lived in that style, did you have the ordinary comforts of life? A.—I always tried, by not being too extravagant. I have a good many old hands. I do not often change hands.

By Mr. HEAKES :—

Q.—When a man does not do enough to fatigue himself he does quite enough to satisfy you? A.—Yes.

Q.—Have you given the question of shorter hours any study? A.—No; I have not.

Q.—You have no knowledge of the benefits shorter hours confer? A.—No. The only thing I think is, that it gives workmen time to knock around and spend their money.

Q.—How do you arrive at that conclusion? A.—I have not given the subject much study, but this is what I think. I know that when men have a holiday they generally make very poor use of it.

Q.—All men? A.—Many of them. I do not think the majority do.

Q.—Don't you think your men would be better workmen if they had more spare time? A.—They have plenty of time in the evening.

Q.—Should not mechanics have time to come into the city, visit the public library and other places of recreation? A.—I have had to go through it. I commenced as an apprentice, and worked as a journeyman. I think that ten hours a day is a reasonable day's work for any man, and certainly if they work shorter hours they should be paid less in proportion. I do not think that ten hours' work will hurt any man, unless it is at some bad and injurious business, such as stonecutting. We do not rush in and break their necks to work for you. We do not keep men longer than we want them. When slackness comes on we let bad workmen go. There is a good demand for good skilled workmen at all times, and we keep the good workmen.

Q.—You overpay one man and merely give another what he is worth. A.—This is only in the spring of the year, and it pays you to give a man ten dollars a week if he is only worth eight dollars, but it would not pay you to keep him all the year round.

Q.—If you gave a man one hour a day in pursuit of happiness, don't you think he would work with greater physical energy? A.—I do not think he would; I think he would just work the same way as before. It is natural for some men to be active and quick and others to be inactive and slow, and it would not matter how much you increase the latter's pay, he would be slow. The fast man would always be active, whatever his wages. It is his nature.

Q.—Are you aware that in some trades wages have been advanced, and at the same time hours have been reduced? A.—I do not know about it. We have very little piece-work. The man who makes wheels does not work piece-work in the winter. He earns more by working by day. A man working on piece does more work than on time.

Q.—You are a practical man yourself; do you not think that you could do a reasonable day's work in eight hours? A.—I know I could not do as much in eight as in ten.

Q.—Could not you do a fair day's work in eight hours? A.—I might have been able to do it.

Q.—Does a man who works piece-work put in ten hours a day? A.—He has to come at the same time as the day hands. On piece-work a man works on special things. Some weeks he would earn more than by day's work. I have had men working for me for five or six years.

By the CHAIRMAN :—

Q.—Do you know anything about the keeping open of retail shops here? A.—I do not know anything very particular. Some shops open at eight o'clock in the morning and keep open till ten o'clock at night.

Q.—Are other firms busy as well as yours? A.—Mr. Peterkin says he has as much work as he can do. He pays his men from \$1.75 to \$3.00 a day, and business is very good.

Q.—How long have you been in Toronto? A.—Fifteen years.

Q.—Can you tell us the proportion of immigrants in Toronto? A.—I cannot say what it is. We do not care much about the immigrants when they come here. In the papers in the summer season there are lots of advertisements for woodworkers, blacksmiths, trimmers and painters, for carriage shops.

By Mr. FREED :—

Q.—Is there any surplus labor in Toronto? A.—There is not. Skilled workmen are very scarce. I think we ought to have some better apprenticeship system. The boys do not get well taught, as it is. They do not stay long in one place.

Q.—Have boys an opportunity to get into shops? A.—O, yes. Apprentices would pay if they would stay their time. The first two years they are not much use. The third year they are more useful, and the employer can afford to give good wages. By the time his term is up he would be a good mechanic. We cannot depend on them staying, and therefore do not take them.

By Mr. ARMSTRONG :—

Q.—It is the fault of the employers that there are so few apprentices? A.—There has never been much consideration of it. The bosses would have no objection to apprentices, but the boys will not stay. By increasing the pay the boys would stay their time out. I have some working for me as journeymen. The present system works this way: I have a boy in my employ, and he goes to another employer and says: "Do you want a hand?" He says where he is working, and that he has been getting \$4.00 or \$5.00 a week. The man says: "I will hire this boy; he has been doing good work." He will give him \$7.00 a week, and he is glad to take him on. A boy in Toronto at a good shop would be better than a journeyman from the country. They would understand how we would want our work done, and are more active than countrymen are.

Q.—You said that a man can get a respectable house to live in within a mile and a-quarter, and cheap. Will you name the street? A.—I am not very familiar with the outskirts of the city, but I know there are plenty of respectable houses suitable for workingmen within a mile and a-half. Some of our men go as far. I do not think it would kill a man if he had to go two miles.

Q.—Don't you think a man should take his family to the Island occasionally? A.—I am sorry to say that they take too many holidays. You cannot always get them to work in fine weather. The men have more luxuries than the masters. I do not envy the men having a half day off, but it is the drinking I condemn. You go down to the ferry on a summer evening and see the number of people going over to the Island. I have this year seen workingmen going over by the hundreds. Ten years ago you would not have seen fifty.

By Mr. FREED :—

Q.—Don't you think a workingman has a right to as much relaxation as yourself? A.—Certainly I do. An employer would not object to a man going off occasionally. If he does he is very unreasonable.

By Mr. ARMSTRONG :—

Q.—Have you known bosses in Toronto who have refused this, and others who have deducted wages? A.—We certainly deduct the wages.

Q.—You say the men have their evenings, but a workingman has got very little time in the evenings for enjoyment at the Island? Don't you think you should consider this? A.—All men do not take into consideration giving the bosses a good day's work. In the majority of cases you must look after them or you will not get a good day's work out of them. You will be left if you don't. I do not say they are all "sharps," but the majority of them will not do an honorable day's work unless they are looked after. The man who looks best after his men is the best business man.

By Mr. GIBSON :—

Q.—Is not what you complain of the fault of their education? A.—I do not know. Certainly, they would be better for better education. I have got as good men as any in the city, but they will not work for me for the love of the thing.

Q.—Then you say that if a man had a better education he would work better? A.—Yes; he would.

To Mr. ARMSTRONG.

I pay a man according to what he is worth. A man is not in the city six months before all the trade knows all about him. They say: "Dixon has got a good body maker, or a tip-top blacksmith, or a good painter," and everybody is ready to hire him. There is a demand for good, skilled mechanics, and such a man need not be out of work.

By the CHAIRMAN :—

Q.—You are speaking of skilled men? A.—Yes; I think good, skilled workmen in almost any trade in the city are in demand, and that throughout the year. I have had work done by other firms and found them very busy. There are indications that trade is good. You cannot get work done for you immediately.

JOHN SCULLY, Toronto, called and sworn.

By Mr. FREED :—

Q.—What is your business? A.—I am a contractor's agent, and reside in Toronto. I supply laborers and mechanics for public works, such as railways and canals. When contractors require hands they apply to me and I procure them. I get a commission on the men I supply. Sometimes one hundred men apply for work and only five are hired. I look to the men themselves for my remuneration as a rule. Sometimes I get a commission from the contractors as well. I also do in contractors' plant. They put such things in my way. For nine or ten years I have hired men for the Canadian Pacific Railway. In 1879-80 I shipped men away to Port Arthur before the present syndicate took the railway in hand. The pay for laborers was \$2 to \$2.25 per day. Piece men made as much as \$4 to \$5 a day. Swedes generally work piece-work.

Q.—How much was deducted from their pay for their board? I believe \$1 a week, but some boarded themselves. Italian laborers state they wish to do this before they ship. They live much cheaper this way.

Q.—What were the lowest rates of wages paid by the Canadian Pacific Railway during construction in Ontario? A.—\$1.50 on the Ontario and Quebec division. It was reduced to \$1.25 when the line was getting finished and men were more plentiful.

Q.—Have you ever sent men out to contractors who failed to provide work for them? A.—I have sometimes had too many applications, and have engaged too many, and I have given them their money back. A firm of contractors wrote and said the men sent out would not work. Then there was the case of a blacksmith who was directed to the wrong place.

Q.—How do you procure these men? A.—I advertise for them. Sometimes contractors from the United States come here to get men.

Q.—Are there not plenty of men in Canada looking for work? A.—There are, at this time of the year. I do not have many applications in winter. In the summer there was plenty of work.

Q.—Do you get many Italians? A.—Quite a lot.

Q.—Where do you get these men from? A.—I write to the States for them. As a rule they pay their own fare. Sometimes I advance fares. The Canadian Pacific Railway carried men to the Pacific coast and charged nothing.

Q.—Have you supplied men for the Welland Canal? A.—I have. The pay was \$1.25 per day of ten hours, with an hour for dinner. That is the usual time.

Q.—It is hard work, is it not? A.—It is. Some of the men like it in preference to city work.

Q.—The "shanty" life is pretty rough? A.—Well, it is not as clean as it should be. Sometimes vermin get in. The railway companies sometimes keep the men in boarding cars. There would probably be twenty-five men in each car.

Q.—When the men are discharged do they get paid up pretty well? A.—As a rule they do, but sometimes there is difficulty in getting paid.

Q.—If the contractor fails, who is responsible to the men for their wages? A.—The sub-contractor, or the man doing the work.

Q.—Do men ever come back to you and complain that they have been badly treated? A.—O yes: sometimes they do.

Q.—What do they complain of? A.—About the shanties, cooking and boarding; most of the complaints were about the food being badly cooked, and not sufficient of it; also the bread not being properly made.

Q.—Do you supply men to manufacturers? A.—I have not supplied ten men to manufacturers. I have supplied men as stonecutters and bridge mechanics.

Q.—At what wages? A.—Stonecutters, \$3.25 to \$3.50 a day; rough carpenters and farmers for British Columbia, to build snowsheds, \$2.25 a day, with fare paid out and the men brought back to the point where they started.

By Mr. ARMSTRONG:—

Q.—In times of difficulty of contractors with their men, do you supply the places of the dissatisfied men? A.—I only once supplied some men for a certain work, when I did not know there was a strike. This was at Oswego, and the men were returned.

Q.—What are your charges? A.—I charge \$1.00. If a man does not get a situation I give the money back. I sometimes deduct 25 cents for my trouble; but, if they want the money, they get it.

Q.—Have you ever sent men out on speculation? A.—I have not. I assure myself that all is right beforehand. The men I sent to Port Arthur all got employment. This last year I have not sent men to British Columbia; the year before I did. I have been pestered with applications to send men there this year. I never had any trouble with the men on coming back. About three dollars is the average charge for board in the shanties. Lumbermen work long hours—as long as daylight lasts—from six o'clock in the morning till five or six at night. As a rule, their fare is advanced. Sometimes contractors only pay a portion of the fare.

Q.—Is it common for men to receive a free passage? A.—It is not customary, but there are exceptions. If the fare is advanced it is stopped from the wages. Sometimes the men change their names and the contractors lose the money. I have lost a lot of money by that myself.

Q.—Do you have a commission on railway tickets? A.—I used to have, but not now. No one gets a commission except the authorized agent of the company.

By the CHAIRMAN:—

Q.—What proportion of the people here are immigrants? Over one-half of the people in Toronto and vicinity are sons of people born in the British Isles.

Q.—Do you think the people of Ontario object to immigrants other than paupers? A.—I do not think they object at all. I can hardly place every workingman who applies to me. Some only come to ask questions.

Q.—To put an extreme case: suppose half-a-dozen paupers arrived here, do you think Christian people would raise a subscription and send them to British Columbia? A.—There has been a similar case here. There was trouble in Toronto some time ago by pauper people being sent here from Ireland. Some were sent to the United States and some were sent back to Ireland. Some charitable Irish people got up a subscription for them and had a soup-kitchen opened. They did not starve, but they had a pretty hard time. They were mostly not fit to work. They were mostly married people, with large families of small children. I have heard that some of them have done very well, and some have settled in this country. One is a foreman over some drainage here.

Q.—I suppose that in Toronto, like other places in Canada, a good many people are now well off who were little better than paupers when they came here? A.—That is so. A good many farmers here, well-to-do, have worked at fifty cents a day. Some were farm servants at ten dollars a month, and worked on the farm they now occupy. They saved money and bought out their masters.

By Mr. ARMSTRONG:—

Q.—And married their masters' daughters? A.—Yes; I hear the men talk of their affairs. I hire men for the farmers, sometimes.

Q.—You are not busy in winter? A.—I have not much work in this respect from now till the 1st of March. I get men plenty of work in summer.

By the CHAIRMAN:—

Q.—Do you not ask what a man's religion is? A.—I ask no questions, except their capacity for work.

CHARLES PEARSON, Real Estate Agent, Toronto, called and sworn.

By Mr. FREED:—

Q.—How long have you been in the real estate business. A.—About twenty years.

Q.—Have you been engaged in real estate transactions in all parts of Canada? A.—I have.

Q.—Has land very much advanced in value during the last twenty years? A.—It has.

Q.—And the city of Toronto has been extended in all directions? A.—It has.

Q.—Have you much knowledge of the class of houses occupied by working people? A.—Yes; very large.

Q.—Are many such houses rented through you? A.—They are.

Q.—And sold through you? A.—Yes. We are the largest estate dealers in the country.

Q.—Do workingmen pay much more rent now than ten years ago? A.—Yes; they do.

Q.—Can you make any estimate as to the the increase in the rents? A.—Yes. It is possible for a workingman to get a house at nearly the same rent as ten years ago. But to do that he has to go to the outskirts of the city, and this necessitates the expenditure of car fare.

Q.—So what he gains in rental goes in the mode of travel? A.—Very much so. There has been an increase of thirty to forty per cent. in house rent in the centres in which workingmen mostly live, during the past ten years. In these districts they are pretty much the same class of houses now as then. There may be a little difference in the fixing, but they are the same style and class of houses.

Q.—Do the houses for working people in the central localities rent pretty freely? A.—The working people as a class like to cluster in the centre of the city, so as to be as near as possible to their work. They put up very often with poorer houses to be nearer to their business.

Q.—Do many of them put up with small houses, and crowd together? A.—Yes; they are smaller houses, and poorer than they could get outside the city. They put up with inconvenience rather than go further away.

Q.—What would be the rent? A.—A mechanic pays from \$10.00 to \$15.00 a month for an ordinary house. Ten years ago the rent would be \$7.00 to \$10.00 a month for the same houses.

Q.—Are mechanics frequently forced in paying rent to go beyond the increase previously fixed in their own mind? A.—We do meet with instances of that kind.

Q.—Are they rare or frequent? A.—Not very frequent, but I think mechanics go beyond what they intended. Sometimes mechanics—two families—live in the same house, to be near together and to their work.

Q.—Take an average mechanic—how many rooms would he have in his house? A.—Seven or eight rooms, taking it all round. Mechanics, as a rule, have large families. The poorer he is, the larger family he has. If he cannot get real estate he can have a large family.

Q.—The unskilled laborer—what kind of a house has he? A.—One for which he pays \$6.00 or \$7.00 a month. It is very rare for a family to have but one room. We have the largest business in this respect, and I do not know of any house of one room. I know of some four or five-roomed houses with more than one family. I know some houses where the basement has one family, and another lives above. There is a row where there are two families to each house.

Q.—What is their sanitary condition? A.—They are pretty well drained. They are under the supervision of the city council, and a policeman goes round to inspect them. If not carefully looked after the condition of the older and poorer houses would be bad. They have the old drainage, and in a great many cases the old fashioned privy. The council are doing away with this. On the score of health it pays a man to put in a water-closet.

Q.—Is there a municipal law to insist upon them being cleaned? A.—Yes; but the cost is paid generally by the proprietor. The tenant ought to pay it. The man who creates the nuisance should be responsible. But the landlord generally puts sufficient on the rent to cover a cost like that.

Q.—Do you sell many houses to working people? A.—Yes; many pay \$100.00 in cash, sometime \$200.00, and pay the balance quarterly or monthly. The greater number pay quarterly.

Q.—Do many parties who make contracts find themselves unable to complete them, and therefore sell out? A.—Very few. We generally find that when a man is unable somebody is willing to take his place, and he is in that manner reimbursed. The working people keep up their payments pretty regularly. It is their first thought to get "the house paid for." Interest is paid on the whole amount, generally. The Government now have passed an Act under which the rate of interest must be on the sum remaining due.

Q.—Is the price of houses of the class we are speaking of increasing yearly? A.—It is.

Q.—Is the cost of building greater? A.—It is very much greater, both in the cost of labor and materials.

Q.—Can you fix some particular locality in which workingmen's houses have been in existence for a number of years and state pretty nearly the increase of value of such houses? A.—Yes; take St. John's ward. It is a centre for workingmen engaged in every business. It is a source of great profit for the landlords. The average price of a workingman's house there would be from \$1,000 to \$1,500.

Q.—What would such a house have sold for ten years ago? A.—From \$750.00 to \$800.00—about fifty per cent. higher now.

By Mr. FREED :—

Q.—A man who would have bought a house for \$1,000 ten years ago can get a house equal to it now by going farther out? A.—He can get a better house for the same money, with more modern conveniences, such as water-closets.

Q.—Do workmen as a rule have gas in their houses? A.—Gas is laid on when the house is built. It costs little putting in. Tenants often do not use it. It is put in in case they want to sell. There are no cooking ranges or bath rooms, and the plumbing work is as bad as it could be.

Q.—Death-traps? A.—Yes, death-traps. Some sort of check is required for this.

Q.—Are you familiar with the Act for the inspection of buildings and plumbing? A.—This is one of the grievances we complain of. Wages are cut down and men do not get sound work. It may be owing to the contract system. There is no reason why we should not pay more and get better work done. The difference of cost between a good job and a bad one is very little. Some houses to be put up for sale are skimmed over and the workmen bound down to a certain figure.

Q.—Are architects to blame in not requiring proper work? A.—A good deal of work does not come under the notice of the architect; it is left to the builder, and one man is sometimes trying to do two or three kinds of work. He is a builder, but thinks he can do plumbing and other things as well.

By the CHAIRMAN :—

Q.—You have an inspector? A.—I never see an inspector. A policeman looks round and sees the place is safe. There is a commissioner who grants permits for erection, but it is not his duty to go in and see the work done. A policeman is appointed to examine properties, but he knows nothing at all about plumbing work.

Q.—In business centres which would be the more valuable—the buildings or the land? A.—It would depend on the class of buildings and the site. Take, for example, the corner of King and Yonge streets. The owners will not sell the property. You could not buy it at any figure. The last sale on the north side was at \$1,300 a foot, but you could not buy it at all. The land about here (the post office) is worth \$2,000 a foot.

Q.—In good residential districts, where merchants and people of considerable means live, how much land do they generally occupy? A.—As a rule, fifty feet, but first class residences run much over that. The land would be worth perhaps \$75 a foot. The house would be worth more than the land. A mechanic would live on a twenty-five foot lot. This would be worth probably \$50 a foot. The house would be poor; perhaps not worth more than \$500.

Q.—Would you tell us your views about leasehold property? A.—There is no greater injustice to the community than public bodies holding leasehold property. They drift into old families, who will not sell. There are blocks in King street east belonging to the city of Toronto which interfere with the city's progress. That part of the city which improves least is often found to be land which is held by the corporation. People will not improve another man's land. If we do not stop it, we shall seriously suffer. Leases generally run twenty-one years and sometime are not renewable. The property is taken over, on the end of the lease, on valuation, but they do not take location into consideration. They give you the actual cost of the building, but it is depreciated in the course of years. The conditions are more binding, and the tenants have little security. The objection to leasehold property. Such bodies ought to be made to sell their property. There are whole blocks which are really not fit to live in.

Q.—How would you compel them to sell? A.—By Act of Parliament. The old properties received from the Crown ought to be sold, and then improvements would take place.

By Mr. ARMSTRONG :—

Q.—Are rents of leaseholds more strictly collected than ordinary rents? A.—They are. The hospital trustees are generally very liberal.

Q.—How long can a man defy his landlord? A.—I have seen it done for twelve or fifteen months. You cannot go into the house, and the tenant turns the key and is monarch. Legal proceedings must be taken. There is a law which is very unjust to working people. A man may erect a house on leasehold land and the tenant pay his rent regularly every month, but if the ground rent be not paid a man can come in and distrain the tenant's goods because the ground rent is not paid.

The CHAIRMAN:—That is a very iniquitous thing.

To Mr. ARMSTRONG:—

A.—I do not think the new law is much improvement. As a rule, we find honest people pay their rents, and if they do not, you had better get rid of them. We do not employ bailiffs very much. There are useful provisions in the new law. If you let rent run twelve months you cannot recover. If a landlord lets it run so long it is at his own risk.

By Mr. FREED:—

Q.—Have you any "black list" of people who do not pay their rent? A.—We have not. We carry them very much in our heads.

Q.—Have you any other suggestions to offer? A.—There is one thing it is very important the public should be protected against. I send for a stair-builder and the master sends a carpenter who knows nothing about stair-building. If trades unions issued some certificate for a man, to show what department of a trade he is, it would be better than the present system. I think the unions might remedy this complaint.

TORONTO, 24th January, 1888.

EDWARD HAWKINS, Engineer, Toronto, called and sworn.

By Mr. ARMSTRONG:—

Q.—How long have you worked at the business of an engineer? A.—I have worked for eighteen years in this city.

Q.—Did you pass an examination as such? A.—I have not passed an examination, but I would like to see an examination held. That is what I am in favor of.

Q.—What kind of an engine do you run? A.—It is an automatic engine.

Q.—A stationary engine? A.—Yes; a stationary, high-pressure engine.

Q.—Do you know much about the engines in the Toronto shops? A.—They are mostly all high-pressure; there are very few condensing engines, except those on the Esplanade.

Q.—How often are they inspected by the proper authorities? A.—They are never inspected at all, unless they are paid for it; we have no Government inspection.

Q.—Do you think there is any danger arising from want of inspection? A.—I do.

Q.—Do you ever have control of engines that you look upon as dangerous? A.—I have had lots of engines that were not fit to run.

Q.—Are there engines in Toronto that are run by incompetent hands? A.—Most of the engines in Toronto are run by incompetent hands; there are very few reliable men employed on engines.

Q.—You think, then, that is a drawback to practical engineers? A.—It certainly is.

Q.—And also a danger? A.—It is a danger to the public and every one concerned.

Q.—How long do you think a young man should serve to become a competent engineer? A.—He should serve at least seven years; that is the lowest term a man should serve, and he should be a good scholar and well up in figures in order to be a practical engineer. He should also be well versed in mechanics and geometry.

Q.—Did you serve your time in the old country? A.—I served my time in the old country and in the United States—part of the time in the old country.

Q.—Do you think that if there was an examination, so that an engineer would have a certificate of competency, it would have a tendency to elevate the business?

A.—We have a society formed with that object. We are agitating with the Government to take the engineers in hand, and to compel engineers to pass an examination and obtain a Government certificate. If a man is incapable of answering the usual questions in regard to the trade from which he obtains his livelihood he should be debarred from the trade altogether. That is what we are figuring on—having competent men to run the engines. Take, for instance, the place where I have been employed: there are three large steel boilers right under the sidewalk; when they have a man there who does not understand his business one of the boilers might explode and cause great destruction to life and property, for people might be passing over the sidewalk at the time. We are getting into a position in Toronto now that people walking on sidewalks do not know what is under them—whether the engines are being run by boys or girls. I have been in places where girls were running an engine. Only last week I was in a saw-mill at the west end where the engine was run by a boy. The boiler was fizzing in such a manner, and it looked to be so dangerous, that I walked out and got away. How it has run to the present time without accident I do not know. That is a common thing—that is occurring every day. I say this is a fact, and I can prove it, and I can take any member of the Commission around and show him that such is the case.

By Mr. HEAKES:—

Q.—How frequently should the inspection of an engine and boiler take place?

A.—I should think an inspector should go around every three months. A good, intelligent inspector should go around, say four times a year, and inspect the plant and see the engineers who are running it, and if there is any doubt as to the capacity of the engine the matter should be brought before the employer, and he should be fired out and a competent man taken in his place.

Q.—Where there is a fireman employed, who is responsible for the boiler and engine? A.—The engineer himself is responsible; they always look to the engineers in cases of that kind.

Q.—Is not dirt a common source of danger? A.—Yes; if they let the engines run too long.

Q.—How frequently should a boiler be cleaned? A.—If it is working hard, it should be cleaned at least once a month.

Q.—Do you know what is the common practice in this city? A.—The common practice with many of them is to clean out the boiler about once in six months—that is the practice with some men. A good engineer would never let a boiler run that long without cleaning.

Q.—If a man is not skilled as an engineer, would you consider him competent to take charge of a boiler? A.—I certainly would not.

Q.—Is it possible for a man who has been firing for a length of time to become so proficient in the management of a boiler and engine as to become competent to take charge? A.—He should not take charge unless he has gone through a regular apprenticeship. A man who fires does not understand the mechanical part of the business—he never can do so until he has had experience. I say, that a man, if he has been firing for some years, is not competent to take charge of an engine until he has had practical experience. After firing, he wants to go into an engine-room and become thorough in all the mechanical part of the work.

Q.—Do you know if it is the practice to take men who have been firing on boilers and place them in charge of engines? A.—That is done all the time. The trouble is, that now they take any body who knows enough to handle a shovel and knows how many pounds there are on the steam-gauge, and they consider he is an engineer. Of all the badly paid classes of men, the engineers are the worst paid and least appreciated, as I know myself, and I have been an engineer fifteen years. The people think no more of an engineer than they do of a dog.

By Mr. ARMSTRONG:—

Q.—What are the wages paid to an engineer? A.—From \$6 to \$10 a week. There are very few places that pay \$2 a day and offer proper wages and proper inducements to a man to become educated and train himself up to a proper scientific point. But it does not matter how learned you are or how well skilled you are, the people do not appreciate your services. Engineering, above all other things, is one which the Government should take hold of. We have an association formed among the trade to bring this matter before the Government, with a view to compel engineers to get certificates from a duly appointed board of examiners, and if men could not pass they should leave the business altogether and take up the pick and shovel, because human life is at stake. So far as wages are concerned, an employer can hire any one he likes for he is not compelled to have a certificated engineer. He will take a laborer in the streets, so long as he can shovel coal, and get him to blow off steam, and perhaps he does not understand anything about a boiler and engine. A man should know how many pounds pressure there is on the engine. That pressure is not the pressure that is on the whole boiler. He has to know the number of square inches there are in the boiler. If you will calculate that, the pressure is something enormous. These fools will fire in the coal, and all they know is that there are so many pounds on the steam-gauge. That is not the pressure on the boiler.

By Mr. HEAKES:—

Q.—Will a boiler always stand with safety the amount of the pressure with which it is tested?—No; you have got to go under that; that is the utmost pressure with which it is tested with cold water when it leaves the boilermaker.

Q.—Is there not a tendency to increase the pressure on a boiler at times? A.—There is a tendency, but it should never be allowed to be done; you have appliances on the boiler so as not to let it reach that point. The Lowmoor iron boiler is tested at 150 pounds. A steel boiler is tested at 175 pounds; that is the utmost limit, but you should go fifty pounds below the test. Cold water is much more severe at the same pressure as a test.

Q.—Is it possible for a boy on going to learn the trade to learn the theory as well as the practice in a shop? A.—He can learn the practice but he cannot learn the theory without study. He can get the practice part; there are lots of good practical men in the country, but he has to get the theoretical part of it, too.

Q.—Do you know of any institution where apprentices could go to learn the theoretical part of the trade? A.—No; we have not got that institution. The great need of this country is a practical school for engineers, where they could be educated and their children after them. In England an engineer has to go to a regular, practical school of science. Here we have not got such an institution, and it is a want greatly felt, and the Government should do something in regard to the matter. It would be a great benefit to the country if we had a school for engineers. As a workingman, and a poor man, I spent hundreds of dollars on my education; still I could not get in those colleges what we want to get for our trade. We want teachers who are practical and scientific men also. In England, I know, the engineers have to go to a regular school, where the teachers are employed and paid by the Government.

Q.—Do you know if there is any institution in Toronto where engineering is taught? A.—There is not at present. There are the higher branches taught in the Practical School of Science; but that institution does not meet the requirements of working engineers.

Q.—Can a boy learn the theory of his trade while he is attending school, or after he goes to be an apprentice? A.—He can learn the theory before he goes to the business, but he has to get the practical work afterwards.

Q.—Could a boy be taught, while attending the public school, sufficient of the theory of a trade to enable him to go to the practical part of the trade intelligently? A.—No; mechanics is a branch by itself; they could not teach that in the public schools.

Q.—They would need to have separate night schools established for that purpose? A.—A school for the purpose alone; a school of engineering.

JOHN HODGSON, Engineer, Toronto, called and sworn.

By Mr. ARMSTRONG:—

Q.—You are a practical engineer, I believe? A.—I am.

Q.—Have you heard the evidence of the last witness, Mr. Hawkins? A.—Yes.

Q.—Have you anything to add to that evidence? A.—No; I think he has made a very fair statement of the way the engineering trade is carried on—in Toronto, at least.

Q.—You have nothing to add to what the last witness has said? A.—No; only I would emphasize his desire that the Government should conduct examinations for engineers, and grant certificates. At the present time it does not seem to matter what kind of man is placed in charge of a boiler, so long as some one is in charge; but it is important that these men should be made to pass an examination and obtain a Government certificate.

By Mr. HEAKES:—

Q.—Do you know if engineers in charge of boilers in large buildings require to be as skilled as engineers in charge of engines and boilers? A.—If you had a small cartridge of dynamite in your pocket it would be just as dangerous to you as if you had a barrel of it.

Q.—Do you know if there are different grades of engineers required for stationary engines? A.—That is a question. Some plants are more expensive than others, and a man on a small plant of a 10-horse-power engine should not be expected to possess the same abilities as a man in charge of a 250-horse-power condensing engine.

Q.—You would not have the same standard for all the examinations. A.—No; but we would allow a man to work up to a higher standard.

Q.—Then you would have a few first-class and second-class certificates? A.—Yes.

ANDREW DELANEY, Cooper, Toronto, called and sworn.

By Mr. ARMSTRONG:—

Q.—You are a cooper, I understand? A.—Yes.

Q.—How long have you worked at the business? A.—I have worked at the business about eight years in Toronto.

Q.—In what state is the cooper business to-day? A.—It is in a very bad condition now. It has been so for the past three years and is still getting worse.

Q.—Are there many goods imported—is it importation that causes the trouble? A.—No.

Q.—What is the reason of the trouble? A.—The chief cause of the trouble of the falling off in our trade is the Scott Act.

Q.—That refers, however, to only one class of goods, I believe? A.—That is the only one class of goods manufactured here to any extent—beer barrels.

Q.—Is it all tight work? A.—Yes; there is very little of any other class of goods in our line manufactured in Toronto.

Q.—Have the coopers who were employed changed their occupation or have they left the country? A.—A number of them have left the country. In fact, in the shop where we work there are only seven men employed, where four years ago there were fifteen. The majority have left the city altogether.

Q.—Then the Scott Act does work? A.—It works to our injury, anyway.

By Mr. FREED:—

Q.—What remedy would you propose in order to prevent the depression in your trade? A.—I do not know of any remedy, except to do away with the Scott Act.

By Mr. ARMSTRONG:—

Q.—What are the wages paid to a good hand at tight work? A.—They cannot now make more than \$1.80 a day.

Q.—Do they work at piece-work? A.—By piece-work. The worst feature in connection with the decline in the trade is that we have not got work all the year round—we have not work for more than eight months.

By Mr. WALSH:—

Q.—Before there was a depression in your trade, what wages were received by a good cooper? A.—A man made from \$2 to \$2.25 a day.

Q.—And worked all the year round? A.—Yes.

By Mr. KERWIN:—

Q.—Have you any idea of the number of coopers in Toronto at the present time? A.—There are about seventy-five or eighty.

Q.—Before the Scott Act was carried into force how many were employed? A.—About 150. Of course, I judge that entirely from the shop in which I work.

By Mr. ARMSTRONG:—

Q.—Do they take many apprentices to the trade? A.—No; there have not been any apprentices in our shop since I started at the trade.

Q.—When times were good how long would it take an apprentice to learn his trade—how many years, do you think? A.—It would take him about three years.

Q.—Is that the standard, do you think? A.—That is the time they usually served.

By Mr. HEAKES:—

Q.—Previous to the introduction of the Scott Act, was there not a large falling off in the cooper business? A.—No.

Q.—I mean, falling off through the introduction of machinery? A.—No; machinery has not been introduced to any extent here; in fact, it cannot be introduced to any extent in beer-barrel making.

By Mr. WALSH:—

Q.—Do you make barrels for all the brewers in the city? A.—Not for all, but for some of the brewers; we used to do considerable work for outside brewers.

Q.—What I mean by the question is, whether all the barrels purchased by the brewers in this city are made in this city? A.—They are.

By Mr. FREED:—

Q.—Is it not true that ale is bottled a great deal more now than it used to be? A.—I do not know anything about that.

By the CHAIRMAN:—

Q.—Still you are positive that the Scott Act has had a great effect on your business? A.—It is the only cause I can give for it. Our business with the brewers has fallen off since the Scott Act came into force.

By Mr. ARMSTRONG:—

Q.—Have you ever worked on the other side of the line? A.—No; I have not.

Q.—You do not know the difference between the wages paid in Toronto to men employed in your branch of industry and those paid to similar men in the United States? A.—No; only what I have heard.

MICHAEL DONOVAN, Cooper, Toronto, called and sworn.

By Mr. ARMSTRONG:—

Q.—Have you heard the evidence of Mr. Delaney? A.—Yes.

Q.—Do you substantiate his statements? A.—Yes.

Q.—Have you anything to add? A.—No; I have nothing to add to them.

By the CHAIRMAN:—

Q.—Like that witness, do you believe the Scott Act is having an injurious effect

upon your business? A.—Yes; because the Scott Act is the means of closing saloons and the people use more whiskey now than they do beer—it can be more handily managed.

By Mr. ARMSTRONG:—

Q.—Does it not require barrels to hold whiskey? A.—Not so many barrels. A great deal of water will go with it.

HUGH BURKE, Box-maker, Toronto, called and sworn.

By Mr. ARMSTRONG:—

Q.—You are an employer of labor at the box-making business, I believe? A.—Yes; I am at present.

Q.—Where do you find the market for the boxes you manufacture? A.—In Toronto entirely.

Q.—How long does it take a young man to make himself efficient in box-making? A.—In Toronto the general system is to take a foreigner, for an employer gets him cheaper than the usual run of city hands, and if he can get him to run a planing machine for a couple of weeks he will do it.

Q.—Is it dangerous for these green hands to make boxes and use saws and other dangerous machinery? A.—Yes; but it is very seldom taken into account. If one man is injured they can get another man for the same wages as the first man and they do not have to pay anything for getting him run through.

Q.—Have you known accidents to happen to green hands in that way? A.—Yes; I have known a great many happen in my time.

Q.—In this city? A.—Yes; in this city.

Q.—Have you known the inspector to come around and visit these places? A.—Yes; Never to my knowledge.

Q.—Have you known many accidents to happen one year? A.—I have known shops where it was the general rule that an accident of some kind or other would happen every day.

Q.—In this city? A.—Yes.

By the CHAIRMAN:—

Q.—Do you know of any accidents having happened since the factory inspector was appointed? A.—I have not. I could not say whether the inspector has examined the factory or not.

Q.—Have you known any accident to happen since the inspector was appointed? A.—What time was he appointed?

By Mr. HEAKES:—

Q.—Last October? A.—I could not say.

By Mr. WALSH:—

Q.—By what machines do the accidents occur? A.—From all the machines, the cross-cut saw, the rip-saw, the planing machine, and from putting on belts while the machinery is going.

Q.—These are about the only machines you use in box-making, I believe? A.—The usual thing is for a man to have two or three fingers taken off by the rip-saw.

By Mr. ARMSTRONG:—

Q.—Is it a dangerous thing to put on belts while the machinery is going? A.—I should say so.

Q.—What is the proper course to pursue when a man wants to put on a belt? A.—The safest way is to stop the engine and then it is always sure. An experienced man can put on belts easily enough but an inexperienced man cannot. It requires practice to be able to put on belts properly without getting hurt.

Q.—The belts are put on while the machinery is going for the purpose of saving time, I suppose? A.—That is the general rule. I have known men who have been accustomed to it for years and yet get hurt; I know two men who got hurt putting on a belt.

By Mr. WALSH:—

Q.—That is a matter that the inspector could not take any cognizance of; but with regard to accidents, do not some of them occur from the men's clothing getting caught? A.—Yes.

By Mr. ARMSTRONG:—

Q.—Has box-making increased during the last few years in Toronto? A.—It has increased greatly.

Q.—Is there much competition in your business? A.—In our business competition has been pretty keen in Toronto lately.

Q.—What will be the weekly wages received by a good box-maker? A.—The wages five years ago were better than they are now in our business. The wages came down greatly two years ago, when the combination of the employers induced the men to join a labor organization. They were successful. The men joined in organized labor, and the employers—some of them—then sent around circulars stating that the men had been the cause of a rise in wages and they would have to raise the price of boxes. They did not require the men after that—after they got the prices the boxes raised they did not want those men any more. With that and improved machinery they have done away with the services of a great many box-makers, and a great many are out of employment at present.

Q.—Are the men organized? A.—Yes.

Q.—Is it to their benefit to be organized? A.—They think so.

Q.—The employers are also organized? A.—Yes; it is the employers I mean.

Q.—But the employes are also organized? A.—They were organized, but whether they are organized now or not I cannot say.

Q.—Has the trade experienced any labor difficulty? A.—Yes; it has experienced two or three labor difficulties; there was one pretty heavy strike last year and a lock-out.

Q.—Did the men endeavor to settle the matter? A.—Yes; they endeavored to settle it through arbitration, which so far as I know was refused. Offers to arbitrate were of no avail.

Q.—Will you tell the Commission the cause of the strike? A.—I believe it was something about throwing the men out who belonged to organized labor—that is, so far as I can learn. The men wanted to have an understanding about apprentices, and as an understanding could not be arrived at they struck.

By Mr. HEAKES:—

Q.—Do you know if any employer in the box-making business refused to employ men belonging to the trade organization? A.—That is a question which it would be pretty hard to answer. While a man may feel within himself that such is the case it would be pretty difficult to prove it. I believe there are some.

Q.—You stated that the employers induced the men to form a labor organization? A.—I was advised to join it myself and I would get a rise of wages; that was done by an employer at that time.

Q.—How long after the men had formed an organization was it before the employers commenced to discharge them? A.—About two months after the first man was discharged.

Q.—In the meantime, had the prices of boxes been raised? A.—Yes; the prices had been raised from 30 to 40 per cent.

Q.—Can you tell us the difference in the rate of wages at that time and at the present time, since the men were discharged? A.—Well, I believe the rate of wages formerly was 20 cents per hour for a first-class hand and 18 cents for a second-class hand; now the prices are from 12½ to 15 cents for hands.

Q.—Can you give us the percentage of the increase paid in the prices of the boxes? A.—The percentage of increase will run from 25 to 40.

Q.—Do you mean per cent.? A.—Yes. The increase in the wages was supposed to be 5 cents per hour. It might be that in some places they got only raised to the standard that one of the other factories had been paying, as one of the factories paid higher than the others. The men were all raised up to that rate, and the manufacturers all raised the prices of the boxes.

Q.—And the rate of wages is now much lower than it was then? A.—Yes.

Q.—And the manufacturers have an extra 25 per cent. profit on the boxes, and 25 per cent. on the labor in addition? A.—Yes; they have a profit on the labor.

Q.—A man who buys the boxes has to pay the increased percentages? A.—They say the price of lumber is raised—I do not know.

Q.—What class of lumber is used in box-making? A.—Common lumber, common stock.

Q.—Do you know the price of common stock lumber now? A.—It runs from \$10 to \$14 per thousand.

Q.—Can you tell us what the price was two years ago? A.—I believe it was about the same.

Q.—It was about about two years ago that this increase in the boxes took place? A.—I have seen invoices at that time at the same prices, as lumber can be bought for now. I have also seen invoices of four years ago with the same prices charged as it can be bought for now.

By Mr. FREED:—

Q.—How much do you pay your hands? A.—The full union rate of wages.

Q.—What is the full union rate? A.—Twenty cents per hour for box-makers.

By Mr. ARMSTRONG:—

Q.—You say that the bosses stated that the price of lumber has increased. Do you know as a fact, from your experience in buying your lumber, that the price has been raised? A.—It is not raised. In the circular issued to customers at the time of the combination they said that owing to the rise in wages and the general increase in the price of lumber, and to avoid a strike, they were obliged to increase the prices of the boxes.

By Mr. HEAKES:—

Q.—Have all the box-makers reduced the wages the same percentage? A.—I believe one factory has not reduced the wages.

Q.—How many box-factories are there in Toronto? A.—There are seven.

Q.—Is there any other factory besides your own that is paying the full union rate? A.—Yes; and probably more.

By Mr. ARMSTRONG:—

Q.—You are a member of the labor organization, I believe? A.—Yes.

The Commission resumed at 2 p.m.

WILLIAM COOPER, Jeweller, Toronto, called and sworn.

By Mr. ARMSTRONG:—

Q.—You are a working jeweller? A.—Yes.

Q.—How long have you worked at the business as a journeyman? A.—About eight years.

Q.—In Toronto? A.—Yes.

Q.—Into how many branches is the business divided? A.—Well, there are diamond-setters, mounters and ring-makers. Then there is a branch which comes in with mounters, but it is sometimes carried on separately—that is making medals, and things like that. They generally employ at that youths, whose time is just expiring.

Q.—What would be the wages of a first-class setter? A.—The wages of a setter working piece-work, I am told, are about \$18 a week.

Q.—What is the average in the other branches? A.—Taken on an average, they don't earn more than about \$10 all the year around.

Q.—How long would it take a young man to serve the trade and be turned out as a good journeyman? A.—It is a business that not every person is suited to. It is a business a man must have a taste for, and some will make good journeymen in five years, while others will be poor. What they generally serve is five years, and they generally give an apprentice after he is out of his time \$7 or \$8 a week.

Q.—Are they indentured? A.—Some are and some are not. One firm does, I believe, make a practice of having an agreement of that kind.

Q.—Do more men come from the old country? A.—There are more from England in the country to-day than there are Canadians.

Q.—Do employers in your trade in Toronto make it a point to bring men out from centres of trade in England to Canada? A.—There is one firm especially that does. I don't know the form exactly in which they bring them, but they guarantee them a situation, and I believe have a man in Birmingham in the jewellery business who gets them men on their writing to him. They pay the passage, and after the men come out they take off so much a week for their passage.

Q.—Can you tell us if this is on account of the incompetency of Canadian workmen? A.—Some manufacturers might think that it was incompetency, but I have been around to manufacturers who would not employ imported labor.

Q.—From your experience as a practical man, do you think a Canadian jeweller is as competent in all branches of the trade as any men that can be imported? A.—Taking them as general workmen, I think they are. Of the class imported the majority of them are just working on watches, but as a rule in Canada, when they find that a young fellow is competent they put him on different branches. As far as I know several who served their time under the same firm as myself are general workmen—that is, they can do anything which is brought to them.

Q.—Is it for the purpose of keeping down wages that those men are brought out in that way? A.—Well, I think the firm that brings them out brings them out for that purpose, as far as I can say. Before this firm started, wages in the jewellery line were a great deal higher than they are at the present time. A man, before they started out, could make \$15 or \$16 a week and have steady work all the year around, but now he cannot.

Q.—Have you known any jewellers who came out under agreement of any nature who, when they came out found they were misled? A.—Well, I have heard several remark that they were greatly disappointed when they came out here.

Q.—Have you heard them say people could make as much, in comparison to the cost of living, in England as they could in Canada? A.—Yes; they say people can do better there.

Q.—Are there any goods in your trade imported from the United States? A.—That I could not say, being a working jeweller, but I think there are, but not to such an extent as formerly.

Q.—Have there been any troubles in your trade of late—any strikes or anything of that kind? A.—There have never been any strikes in the jewellery business because they don't seem to hang together. If a man wants to get a raise and they refuse him they can always fill his place, and he has either to stay or else get out.

Q.—Do you think that your trade, considering the highly-skilled nature of it, is as well paid as other branches of industry? A.—No; I don't. It is a trade that, after a man works a few years at it, he is put off and a younger man put on.

By Mr. KERWIN:—

Q.—Is there a scarcity of workmen in your business in this city? A.—No.

Q.—Was there at the time those people were brought in? A.—I think not; I think they could have got all the labor they wanted then.

Q.—You don't think that was the object those people had in bringing in those workers? A.—Which object?

Q.—Owing to the scarcity of native labor? A.—No; I don't.

Q.—Brought over simply to reduce wages? A.—That is my present opinion.

By Mr. McLEAN:—

Q.—Is any work sent from Toronto to the United States to be done? A.—Not at the present time, that I am aware of. There used to be enamelling sent, but now they have enamellers.

Q.—Were those men brought from Birmingham capable of doing enamelling work? A.—Yes.

By Mr. HEAKES:—

Q.—How many of those men were induced to come in that way? A.—There are more men imported to-day working at the jewellery business in Toronto than there are Canadians.

Q.—Are those men brought from the old country what might be called specialists in any branch of manufacture? A.—Well, they work at different branches.

Q.—Are they men who do a class of work which has not hitherto been done in Canada? A.—No.

By Mr. FREED:—

Q.—Are you aware that persons with whom contracts are made in foreign countries are at liberty to break that engagement in Canada under law? A.—I could not say, but the firm which previously brought those men out have paid their passage and took so much a week.

By the CHAIRMAN:—

Q.—You have stated so. Do you know if there is law to prevent that? A.—I could not say. I do not know of it, if there is. I do not know what the agreement is, but it is made with the men.

By Mr. KERWIN:—

Q.—Have you any idea of the number of men employed in the business in this city? A.—No; I have not. I should think there are about 150 to 175, but I would not be certain.

Q.—Do you know if that kind of work is increasing. A.—No; it is falling off. It has been worse this present year than ever since I have been in the business. A good many are walking around to-day without employment.

By Mr. ARMSTRONG:—

Q.—Do you know of any definite grievances that the jewellers are laboring under in this city? A.—Well, I can only speak for myself, and that is, as I said before, if a man wants to try to better himself he has either to take what they give him or else go out. They can always fill his place.

TORONTO, 25th January, 1888.

HENRY THOMAS BENSON, Toronto, called and sworn.

By Mr. ARMSTRONG:—

Q.—You are a member of the Builders' Laborers' Union? A.—Yes.

Q.—Can you inform the Commission the average wages in the year a builder's laborer earns? A.—In the neighborhood of \$275 a year.

Q.—Is that over and above all expenses, such as housekeeping? A.—That is all we earn on an average. I don't do anything in the winter, hardly.

Q.—On an average, how many weeks in the winter are you idle? A.—Some

where about twelve weeks. Some are idle all the winter, but it would be an average of about twelve weeks.

Q.—What would be the average rent which one of your members pay? A.—Eight dollars. Some get them for \$6 and some \$10 and \$7, but I think the average would be \$8.

Q.—After deducting the house rent, cost of living and cost of fuel, how much do you think can a builder's laborer save at the end of the year, providing there is no sickness in the family. A.—Generally they are in debt every year.

Q.—You have got in your union a scale of prices—so much per hour? A.—It is the same uniform wages.

Q.—The laborers who are engaged on the corporation work, are they paid more or less than those who look upon themselves as builder's laborers? A.—By the day they are paid below us, but for work steadily they earn as much as, if not more than, we do.

Q.—How strong is your body? A.—At present 925 members are on the roll.

Q.—Is the scaffolding of buildings erected on the inside or outside of buildings? A.—In some cases it is inside; in some cases outside. Quite a bit of outside scaffolding is being erected in this city now.

Q.—Is there any danger arising from defective scaffolding? A.—Yes; there have been several accidents this summer.

Q.—Who is responsible for the erection of scaffolding? A.—There is generally a man who erects scaffolding, and he is himself crying out for better material and more ropes and poles, but cannot get them. I don't think there is a builder in Toronto has sufficient plant for his business; and in striking ledges it weakens scaffolding and there are not enough ropes, and life is in danger. Yesterday a man died from the fall of a derrick in the Canada Life building.

Q.—Was it defective scaffolding? A.—It was something wrong with the derrick.

Q.—What do you recommend—an inspector of scaffolding? A.—Yes; an inspector of scaffolding, to compel men to put up scaffolding firmer and stronger. It is all hurry and scurry until there is an accident.

By the CHAIRMAN:—

Q.—There is a law? A.—I have been here fifteen or sixteen years. I never knew there was such a law.

By Mr. HEAKES:—

Q.—Would an employers' liability Act, which would make proprietors liable for such accidents, be acceptable? A.—Yes.

Q.—Can you tell us anything about the working of the mechanics' lien law? A.—Yes; we find the law is very defective. Only lately I had a case in hand. There was a small contract for \$130; the contractor skipped out, and when we went to the lawyer we found we could only lien 10 per cent., which amounted to only \$13 that we could recover under the Act.

Q.—Have you known cases besides the one you have just mentioned where mechanics or laborers could not recover under the lien law? A.—Yes; we had a case with a man who had a machine shop in West Toronto. He was putting up a lot of houses, but when we came to put a lien on the place it would not pay the demands of the court, and when the place was put up at auction there was such a mortgage on it nobody would buy it, and the wages have not been paid.

Q.—The law, as it stands at present, will not protect the workingmen in their wages? A.—No.

By Mr. ARMSTRONG:—

Q.—Have you any knowledge of corporation work? A.—Not very much; just what I have seen. I have worked on some corporation work on contract.

Q.—Do you believe day's work, immediately superintended by an engineer, would be a benefit to the workmen of your branch? A.—Yes; and they would get better work. In competition they drive men; men would like to do an honest day's work for the corporation on account of the taxes, but they cannot. I was on one

work in North Toronto—a \$21,000 job—and just when it was put up it nearly all came down. If it had been day's work I believe it would have been done properly.

Q.—If such work was done by the day it would keep men busier in idle times, such as the winter season? A.—Yes; it would.

By Mr. KERWIN:—

Q.—What is the rate you receive now by the hour? A.—Eighteen and a-half cents.

Q.—Do you get paid every week? A.—No; once a fortnight.

Q.—How many hours a day do you work now? A.—I have worked something like forty hours since Christmas, but I have worked every day I could work.

Q.—How many hours constitute a day's work? A.—Nine.

Q.—Before you formed a union didn't you have greater difficulty in receiving wages due than you have at present? A.—Yes.

Q.—Is that the only benefit you have derived from organization? A.—No; before we organized we were getting 9 and 10 cents an hour, but since then our wages have gone up to 18 cents.

Q.—Do you have any sick or death benefits? A.—Yes; a death benefit of \$75. There are lots of members who, if it were not for the death benefit, would be an expense to the city and would be buried as paupers, so it is a benefit to the rate-payers. We bury where they would have to bury.

Q.—Are wages in Toronto as good as, or better than, in cities of smaller size? A.—A trifle.

Q.—You have had some difficulty lately with regard to strikes? A.—Yes.

Q.—How was the last strike settled? Did you ask to arbitrate, or anything of that sort? A.—I believe there was some talk of arbitration, but two years ago last June the union I am a member of went out and after being on strike six weeks the bosses were acceding and the men were pretty nearly acceding. They could not come together and we went to arbitration. There is a statute on the Ontario Statute-book by which the Board of Trade become arbitrators, but I am satisfied we got the worst of it. These arbitrators who arbitrated for us were employers of labor themselves.

By Mr. ARMSTRONG:—

Q.—Did the men stand by the result of the arbitration. A.—Yes; we promised to do so, and we stood by it loyally. It was a slight advance, but if it had been a decrease we would have stood by it. The union is in favor of an arbitration board similar to France, to prevent those strikes. It is only a last resort. We don't want to strike, but we don't earn enough to support us.

Q.—Do you know the principles of the French system? A.—Before employers can lower wages they have to submit reasons for lowering to a board of Government arbitrators, and when the men want an advance they have to send grievances and reasons to this board before they can go out.

Q.—It is composed of a judge and a representative of capital and one of labor? A.—Yes; I think so. I think it would be acceptable to our union to have a compulsory board of arbitration, because there is loss to the country when the men strike and loss to the workmen themselves. It is only a last resort. They never resort to it until they are forced.

Q.—Do you know there is a law for arbitration in Ontario? A.—Yes; our difficulties were arbitrated under that Act two years ago.

Q.—Is that Act satisfactory? A.—It was not in that case, and I think ours was the only case settled under it. The Board of Trade are arbitrators, and they are interested parties in the buildings.

Q.—Are not the builders of Toronto connected with the Board of Trade? A.—Yes; there is a builder's branch to the Board of Trade.

By Mr. ARMSTRONG:—

Q.—Do you think a bureau of labor statistics, formed for the benefit and information of the working classes, would be an advantage? A.—Yes; a Dominion bureau. We have the Ontario bureau. I believe a Dominion liability Bill would be better for us. We never know, when we have the Ontario Act, whether it is unconstitutional or not, but under a Dominion Act we would not have that fear before our eyes.

THOMAS WEBB, Laborer, Toronto, called and sworn.

By Mr. ARMSTRONG:—

Q.—You have heard the evidence of the last witness; do you approve of it?  
A.—I approve of it, and every word he has said is true.

Q.—Have you anything to add to what has been stated that would afford any information to the Commission? A.—The only thing I would like to add is in regard to the liability Act, and I would like to see an Act to compel contractors to leave more planks and scaffolds, so that if a man fell from the top they might help him a bit. In England the liability Act provides that the bosses must leave the first scaffold, and all the way up they must leave two planks on the scaffold. I can give an instance this fall where I was working beside the Queen's Hotel and a young man fell. He was working on a scaffold and he fell back and went through the well hole, and in that case if a few planks had been over it he would probably have saved himself to some extent. He will never have the use of his limbs again. If the Government would compel the bosses to leave two planks on a scaffold, as they are compelled to do under the English law, workmen would be more safe. I am sure every week this summer scaffolds in this city have broken down.

Q.—What is the difference in the wages paid to a builder's laborer in Canada and England? A.—In regard to the wages received by a builder's laborer in England, I must explain that I have been out here about nineteen years. I understand they get about  $8\frac{1}{2}$  pence an hour. Laborers receive  $5\frac{1}{2}$  pence to 6 pence per hour. In England there are what are called competent men for scaffold building, and they get nearly as much as bricklayers. They are not put to any other work. A boss in England knows that if anything happens to the scaffold claims will be made on him, and therefore they are all competent men who do scaffold building there.

Q.—Has your union paid out much money for hospital expenses during the past twelve months through defective scaffolding. A.—I believe the Builders' Laborers' Union granted a sum of money to the hospital—I think we gave it two grants. When an accident happens in this city the person is taken to the hospital and the hospital does not charge for them; whether the bill is sent to the corporation I do not know.

By Mr. McLEAN:—

Q.—If you refused to work on scaffolding that is not properly put up, I suppose the bosses would consider that as equal to your striking work? A.—Last fall there was one case of that kind of scaffolding on Church street. The boss was running the scaffolding 64 feet high and I did not think it was safe. I had to leave.

By Mr. HEAKES:—

Q.—Do you know whether planks were left on the scaffold immediately below the one the men were working on in the accident to which you have referred?  
A.—When this is done it breaks the fall if a man has the misfortune to fall. You can go around to any scaffold in this city and you will see the boss and the foremen order the men to strike the scaffold at four stories high. If the liability Act of England was in force in this country they would have to be put up more securely.

Q.—Do I understand you to say that the English Act compels the employers to leave a certain number of planks on a scaffold? A.—Yes; 4 feet of boards, on the outside, and beyond that the law says there shall be left two boards on every scaffold until the building is finished.

Q.—Do you know, as a fact, whether the liability Act of England has improved the condition of workingmen, so far as their safety is concerned? A.—In England the scaffolds are all put up by competent men.

Q.—Were you in England when the liability Act was brought into force?  
A.—Yes; I was in England at that time.

Q.—Did it in any way make the employers more careful in regard to the construction of scaffolds? A.—Of course it did. A builder at home, in England, has

a building plant—a man whom we call a builder in England has a plant worth thousands of pounds; but builders here have not got plants, and cannot put up scaffolds, as they should be put up, for want of the proper material.

By Mr. FREED:—

Q.—Do I understand you to say that the put-logs are removed from the lower scaffolds in Toronto? A.—Yes; sometimes three stories high they will strike and take two or three ledges up.

By Mr. HEAKES:—

Q.—If the planks were taken off the put-logs what benefit would the scaffold be? A.—It still would be a scaffold.

Q.—If there was no weight on the put-logs would it have the effect of steadying the scaffold? A.—Yes; they are to steady the scaffold.

By Mr. KERWIN:—

Q.—At the building, when you left work on account of bad scaffolding, were any men working there subsequently hurt? A.—Yes; the wall fell; there were three or four men hurt at that building.

By Mr. HEAKES:—

Q.—If there was a building inspector, would he not be able to look after the scaffolding connected with all buildings in Toronto? A.—If he was a practical man, and did his duty every day, it would keep him going all his time to look after scaffolds and see that workmen were better protected. During this summer, at nearly every meeting of our union, we have had reports that scaffolds have gone and men have been hurt and were in the hospital. I was down there last Friday and there were two men lying there; one man had been injured by something falling from the scaffold, and in the case of the other man some little gear had given away, causing injuries to him.

By Mr. HEAKES:—

Q.—You have heard what the last witness stated about the lien law: what is your experience in regard to it? A.—I have had no experience in regard to it, and there are others who will speak to you who have had experience.

Q.—When an employer fails or leaves the city without paying his men's wages, does your union take the men's cause up? A.—We generally put it into a lawyer's hands. I was working on Duke street school and the contractor failed; it was three or four weeks before we got our money; but the school board paid us. I blame them, because they should have taken good security, in order to see that the workmen's wages were paid; but the matter was left to the contractor, who had nothing, and if the school board had not paid us we would have had nothing.

Q.—Does your union furnish money to the men to enable them to put a lien on a building? A.—We generally employ a lawyer, and when a lien is put on it is put on by the union. As the lien law now is, it is no benefit to workmen. You might as well let the money go; you will save money by letting it go. There was a case in which the union put a lien on a property, but it turned out that the property was mortgaged, and when it was offered for sale no one would buy it, and our men lost their money, and so did the bricklayers also.

JOSEPH BISSELL, Builders' Laborer, Toronto, called and sworn.

By Mr. ARMSTRONG:—

Q.—Have you heard the evidence of the previous two witnesses, and have you anything to add that would be of importance to the Commission in regard to your trade? A.—I quite concur with what these witnesses have said, and I would like to add that the bosses here do not provide their men when they are working in the

winter time with any place to eat their meals; thus they are obliged to sit on the street on the frozen ground and eat their meals like dogs. This is a great detriment to a man working in the winter, for he is liable to catch cold, and he cannot afford to pay a doctor out of the money he earns.

By Mr. HEAKES:—

Q.—You think the employers should provide some shelter for their men? A.—Yes; so that they can warm their tea, and so forth.

Q.—Have the employers ever been asked to do so? A.—That I could not say, but the men are always grumbling about it, and I believe the employers have been asked, in some cases, to take that or some other measure, but they never will provide such things.

Q.—How much time is a man allowed for his dinner in winter? A.—Half an hour. You cannot get down frozen bread and butter in half an hour.

Q.—Is it impossible for you to go home in that time? A.—You cannot go home.

Q.—I suppose if a man will not put up with it he can leave? A.—Yes; he can quit.

By Mr. ARMSTRONG:—

Q.—Would it be more convenient to a workingman who has a family if he was paid weekly instead of fortnightly? A.—I think it would be a great benefit to him.

Q.—It would do away, to some extent, with the garnisheeing of wages, would it not? A.—Yes; a great deal. Then the bosses would not have such a pull on the men as they have now, by keeping two weeks' wages from every man, and they would not be able to skip out quite as easily.

By Mr. McLEAN:—

Q.—Do many bricklayers' laborers own the houses in which they live? A.—Not a great many of them, considering the number there is. There are some men who got houses when the land was very cheap—when it was almost given to them—in the heart of the city. These are the kind of men who own houses of their own. I have been here six years in January, but I am in debt every year, and am obliged to work in the summer to pay my debts off.

Q.—How long does it take a builders' laborer to become skilled, so that he can work around a building? A.—That all depends on his own energy.

Q.—Any laborer could not go to work on a building, I suppose? A.—Yes; he could work on a building. When I first tackled work on a building I had to go up to the third story from the street. That was in the old country; of course, it is different here.

By Mr. KERWIN:—

Q.—Have you anything further to say to the Commission? A.—No; nothing further than I quite agree with the two witnesses who have given evidence in connection with our trade, and especially I think it would be a great benefit to the men if the boss builders were compelled to leave two planks on the scaffolds, and so on. If there were more pulleys and ropes used, instead of so many nails, there would not be so many accidents.

By Mr. HEAKES:—

Q.—Do you not think that the use of nails on scaffolds should be prohibited altogether? A.—Yes; altogether. Here they have not enough tackling, and are obliged to untie ropes and tie them again to get the scaffolds up to any height.

By Mr. ARMSTRONG:—

Q.—Who puts up the scaffolding for carpenters, for example? A.—As a rule, they put it up themselves.

Q.—Could they put it up more skilfully than builders' laborers? A.—Builders' laborers could put it up just as well. In the old country they have competent men

who are used to this kind of business and erect scaffolds. If any defect in the pulley or in the put-logs is seen and the boss notified this must be remedied. Under the law here many a man gets injured who would not be injured if the law was as it is in England. These men employed in putting up scaffolds receive more remuneration than the rest of ordinary laborers, because they are skilled laborers; in fact, they get as much as mechanics. I have known men to get 10 pence per hour, at the Kensington Museum, at this work. There was a gang of men, and he was the foreman.

HENRY LLOYD, Carpenter, Toronto, re-called and sworn.

By Mr. HEAKES:—

Q.—I believe you stated when you were here before that you favored arbitration? A.—I might say when I was here before I was undecided as to my opinion of arbitration, but since then I have been making enquiries and reading up, and I may say I am decidedly in favor of it.

Q.—Can you give us some idea of how arbitration should be put in force? A.—Well, I might say that I have here an Act which was sent to me from the New York Bureau of Statistics; I have read it over with the Commissioner's report on the working of the Act last year, and I am entirely in favor of it. I think it is the best Act I have read, and if we had it here I think it would be the best thing for the Commissioners to recommend. There is what we call a local board and a State board. The local board, when a difficulty occurs, meets representatives of the two parties for arbitration, and inside of ten days either party can appeal to the State board, which is composed of three gentlemen. One of them has to be appointed by the party who polls the largest number of votes in the State at the last election; the second is the representative of the party who polls the second number of votes; and the third has to be the representative of labor. Those men are appointed for a term of three years, with a secretary, and they are always on duty, as it were, and of course it is not necessary that the local board should have anything to do with the dispute at issue. The parties, if they wish, can have it taken at once to the State board, and its decision is final; there is no appeal. They have a work in connection with the bureau of statistics and it give dates of the different strikes and other information as to troubles between employers and employés, and I think about 75 or 80 per cent. of the troubles were settled without the men going on strike at all. As soon as the State board heard there was any trouble they instructed the secretary to write to both parties, to see if they would agree to arbitration, and in a great many cases they agreed to do so without a strike at all.

By Mr. HEAKES:—

Q.—Have the decisions of this State board been generally carried out? A.—Generally they have been carried out, as a rule.

Q.—Do you know what percentage of labor troubles in the State of New York have come before this board? A.—I might say also the Commissioners state that between 70 and 80 per cent. of the troubles which have taken place have come before the board, and about 60 per cent. have been settled without dispute. The name of this gentlemen is F. F. Donovan.

By Mr. FREED:—

Q.—What is his position? A.—He is chairman of the State board, I believe.

By Mr. HEAKES:—

Q.—The local board has discretionary powers to mediate? A.—Yes.

Q.—Has the award of the local board ever been accepted as final? A.—It has very seldom been accepted.

Q.—How is that local board appointed? A.—As I understand, they don't attach much importance to the local board. When a dispute arises between the parties it

has been customary for the secretary of the State board to write to both parties, asking if they would have it settled by the local board or State board. When both parties decide to settle by arbitration the secretary of the State board goes to that place and brings them together, and then the employers appoint a representative and the employes appoint a representative, and the two of them appoint a third.

Q.—By mutual agreement? A.—Yes.

Q.—Who selects the third representative of the State board? A.—The Government, I presume.

Q.—Do you think such an Act as that would be generally acceptable in Canada? A.—I really think it would.

Q.—You have some knowledge of course, of the feelings of workmen in this city? A.—Yes; I believe they would highly delight in any arrangement which would do away with strikes.

Q.—What is your position? A.—I am a member of the executive board of the building trade.

Q.—Can you tell us anything with regard to the desire of the workmen for technical education? A.—Well, I believe as far as it is understood among the men they would be in favor of technical schools. They have very little knowledge, as far as I have been able to find out, any more than that which they get from old mechanics.

Q.—Are there no schools or classes in Toronto where young men can go to get this technical education? A.—At the present time I don't know of any outside of the Practical School of Science, which I believe does not now give practical lessons in science.

Q.—The present Practical School of Science does not meet the requirements? A.—No; it does not.

Q.—Have you ever thought how those schools could best be made available? A.—I have always thought that there should be a technical school for this Province, under the control of the Government of the Dominion, with, of course, competent instructors to impart the scientific part of education to the men in the evenings and in the day time, in the winter time, when they are not very busy.

Q.—Do you think it would be possible to attach any portion of that training to the public schools? A.—No; I do not.

Q.—Have you given the subject of the employment of prison labor any thought? A.—I have given it a little thought.

Q.—Would you give us your opinions on the best way of employing prisoners? A.—I have a decided opinion against them being employed at any trade whatever. As far as I know—for I have never made it a study—I have always had too much building to do—but I presume if they were coming in competition with my work I would object to it. I think, as a rule, that their work is inferior. If they were employed at all I would have them come in competition with the best work, and not in competition with ordinary work, but I am opposed to them doing skilled artisan work at all.

Q.—Should the Government utilize prisoners' labor or should it be let to other people? A.—Well, I would be opposed to letting it out, unless there were restrictions. I am opposed to it in any shape, but if it is a necessity I would have them restricted to doing nothing but first-class work and come in competition with first-class men outside of prisons, and I think the Government should employ them, if they are to be employed at all.

Q.—Supposing the Government employed those prisoners and the revenue derived from their labor was greater than the cost of keep how should the Government dispose of their surplus? A.—I would suggest that they could dispose of it by keeping a technical school here for other mechanics.

Q.—Do you think a system by which all surplus earnings of prisoners should be disposed of amongst their families would be a benefit? A.—Seriously speaking, I think that would be a very good idea.

Q.—Prisoners are unskilled laborers, generally? A.—I think the proportion would be small of skilled labor.

Q.—The proportion would be small? A.—Yes.

Q.—Then they should remain idle? A.—Just work them on the farm or on the streets.

Q.—You would require chains. Have you ever seen a chain-gang on the streets?

A.—No. You could employ a lot of them nicely on the straightening of the Don.

JOHN KANE, Carpenter, called and sworn.

By Mr. HEAKES :—

Q.—Do you know anything of the operation of the mechanics' lien law? A.—I cannot say I am very well acquainted with the law as it is, but I have had occasion to take notice of the operation of it, and it would seem to me to be a wrong Act, not a good measure, not worth the paper it is written on.

Q.—Be kind enough to tell us what has come to your notice in that connection? A.—Take it, for instance, in connection with the building business. The case I have reference to is a building which was unfinished by the contractor. It was taken from his hands by the architect, and liens were put on by workmen who were unpaid. When those liens came to be tried in the county court it was held by the judge that the proprietor of the property had to hold back 10 per cent. of the contract prices. The proprietor had paid out more than the building was worth up to the time it was taken out of his hands.

Q.—Then the contractor is not left with 10 per cent. of the contract price under that? A.—No; it would seem not. The judge said he did not believe, that the law required any man to pay more for his work than the work was worth.

Q.—At what period in the construction of buildings do men generally lose their wages? A.—Well, my experience of it has been when the lathing has been completed, and when the large bills had to be paid out for material.

Q.—Liens are more frequently on unfinished buildings than on finished buildings? A.—I think so.

Q.—Could you give us any suggestion which would be of benefit in improving the law? A.—If a lien law is to be of any benefit, if 10 per cent. is to be held back it should be 10 per cent. of the work as far as it has progressed.

Q.—In that case there would be always 10 per cent. on hand? A.—Yes.

Q.—Have you ever known another case where a lien has been put on, and the men have failed to recover? A.—I remember, some time ago, a case was tried by Vice-Chancellor Proudfoot, where a lien was put on a public school building, and the finding of the Vice-Chancellor was that a lien could not be put on the building because it belonged to a public corporation.

Q.—If the proprietor paid the whole money upon it, and did not retain 10 per cent., nothing would be left at all? A.—I think he held it was different in the case of a public corporation.

Q.—Generally speaking, is the lien law considered in an unsatisfactory state by mechanics? A.—Yes; and I think justly so.

Q.—Can you give us any opinion as to the best modes of employing prison labor? A.—That is a question which better men than myself have bothered themselves about. I think it is advisable to employ them, but not so that their labor can compete in the market with outside free labor at a lower figure.

Q.—What kind of labor would be least likely to come in competition? A.—I don't know but what it would be right and proper to employ convict labor on Government work of any kind, although in some cases it might be injurious to outside labor. That labor would be distributed into one section of country, although all sections of the country would be benefited by it, so I think their labor should be confined strictly to Government work. I believe, also, their labor might be useful in improving the surroundings of our different institutions, by making them a great deal more beautiful than they are at present, and this would instil a love for order in the minds of those people.

Q.—Do you know any cases where the Government have used prison labor outside of prisons? A.—I have seen it where the prisoners, with a ball and chain attached, cut down the grass around the Government grounds.

Q.—Should the Government be directly responsible for the work done by the convicts? Should they be the parties who should arrange the work for them? A.—Yes; I think so. I don't think it should be put in the hands of private parties, because a man who can employ them at lower prices than that of honest labor will be able to market at lower prices, and thus compete with outside men, and that results in lower wages.

Q.—You have heard what Mr. Lloyd said on the subject of arbitration? A.—I did.

Q.—Do you agree with what he said? A.—I don't know if I have any objection to what he stated. I am in favor of arbitration at all times.

Q.—Do you think working people would take advantage of a Government system of arbitration? A.—Yes; I think the feelings of the working people are not in favor of strikes, but in favor of a peaceable mode of adjusting questions in dispute.

Q.—Does that feeling prevail amongst trade unions? A.—Yes; I believe it does. The method of arbitration must be resorted to before strikes are recommended.

Q.—Isn't it a standing rule of the Federated Trades Union of America that arbitration shall be decided upon if practicable? A.—Yes; it is their desire that arbitration should be resorted to before any other method is adopted.

Q.—You think a law providing for arbitration would be generally acceptable to the working classes? A.—I think it would.

Q.—Do you know if there is a desire amongst the working classes for a bureau of labor statistics? A.—I cannot say I have been talking to many men on that subject, but I have been making enquiries in different parts of the United States where they have such bureaus, and they are in favor of them. I have been receiving reports from various States from their bureaus of labor statistics, and they give full information with regard to all kinds of labor, and I would like to see the same here.

Q.—You don't generally receive many statistics here of the rate of wages paid in various parts of the United States? A.—No; I cannot say I do. The general desire there was not to strike for wages at all, but to try to limit the hours of labor, because it was held that so long as there was an idle man in the country who could not get work the hours should be curtailed, in order to get that man work somewhere.

Q.—You cannot give us, comparatively, the difference between the rates of wages in your own business in Toronto and the United States? A.—No; I could not enter upon that.

Q.—Have you given the system of technical education any thought? A.—Yes; I have thought over the subject a good deal, and at one time in Toronto I took advantage of the course when the Government furnished the old school of technology.

Q.—Did you find the knowledge obtained there was of any practical benefit to you? A.—Yes; I did.

Q.—Do you think such a knowledge as you obtained was calculated to make a man more skillful? A.—Yes; I do.

Q.—How would that end be best reached—by night schools or day schools? A.—By day schools, I think. My own opinion is that there would be a great deal gained by trying to teach them the theoretical portion of a trade, and if they learned that before they began their trade it would be an immediate and direct benefit.

Q.—You don't think it would be practicable to teach it in the public schools? A.—No; I don't think so, yet there are some things which might be taught, and are taught now, but not the practical application of them.

JAMES WARDLAW, Machinist, Galt, called and sworn.

By Mr. FREED :—

Q.—How long did you work as a machinist in Galt? A.—About four and a half years.

Q.—Did you learn the trade? A.—Yes; and for six months after I was out of my time.

Q.—Are you a proper mechanical engineer? A.—Yes; I was at that time. Afterwards I worked with Goldie & McCullough, of Galt.

Q.—Have you worked at engineering at other places? A.—Yes; in Glasgow and in the East Indies.

Q.—In what part of the East Indies? A.—In the Deccan.

Q.—Are you able to tell us about the comparative wages in Canada and in Scotland? A.—When I was out of my time I worked in Galt at \$1.75 a day, and when I reached Glasgow I got 26 cents per hour.

Q.—Would that be a fair average of the wages in Glasgow? A.—It was considered so then. I was afterwards raised to 27 cents which was considered good average wages for a mechanic.

Q.—How did the hours compare as between there and here? A.—We worked sixty hours in Galt and fifty-two or fifty-seven in Glasgow, I am not sure which.

Q.—Was the class of work about the same? A.—In both cases the work was on engines; one was on marine engines and the other was on stationary engines.

Q.—Do you require the same skill? A.—Yes; the same skill.

Q.—I suppose the wages in India are much higher for engineers? A.—Yes; they make engagements before they go out there.

Q.—And the climate and other things have to be taken into account, I suppose? A.—Yes.

Q.—Do you think that a boy who comes to work at engineering direct from school is as well fitted to become a good engineer as if he had obtained some technical education while at school? A.—In some branches I think he would be better for it, but in others I do not think so. When I commenced my apprenticeship I had a pretty good knowledge, and I know it stood me in good stead afterwards.

Q.—Suppose a boy had some technical instruction in mechanical drawing, would it not be of some advantage to him in the trade? A.—Certainly it would be.

Q.—Would an elementary theoretical knowledge of mechanics be beneficial as well? A.—Yes; I think so; I took that in. Of course, we received that as we went along in Galt.

Q.—You received such instruction while at work at your trade? A.—Yes; they have classes every year in Galt, to enter which apprentices only pay a nominal fee, and you get your mechanical drawing, and so on, there.

Q.—Did you consider those of great benefit to you? A.—Yes; I also attended a science class in Glasgow, in a general way, which I found of great service.

Q.—With which are those science classes in Glasgow connected? A.—They are connected with the Government; they are maintained as separate classes and there is only a nominal fee charged to members.

Q.—Were you able to give good and satisfactory attention to this at night after you had performed your day's work? A.—Sometimes it was pretty hard work.

Q.—You felt fatigued at the end of a day's work? A.—Yes.

Q.—To such a degree as to divert your attention from your studies? A.—Yes. You are dirty after work, and you had to hurry in order to get through at any reasonable time at night.

Q.—Do you think, looking back at your history as an engineer, and without having any reference to your present studies, you would have been as successful as an engineer if you had not obtained that technical instruction? A.—I took rather an exceptional course. I took a university course before I went there, and I could have left out Latin and Greek. Taking a common school education, I have, I think, required it all.

By MR. HEAKES :—

Q.—You have had some experience in woollen mills, I understand? A.—Yes.

Q.—Will you please tell us how the woollen mills in Canada compare with the woollen mills in England? A.—I do not know anything about woollen mills in England, but I know about those in Scotland. Wages are considerably less for the same work in Scotland. The foremen in some of the mills get fully as well paid as they do here, but the common hands get less.

Q.—Can you give us any idea of the difference in the purchasing power of wages, say between Galt and Glasgow? A.—It cost me more to live in Glasgow than in Galt. I paid \$2.75 or \$3 per week for my board in Galt, but in Glasgow it cost me 17 shillings sterling per week.

By MR. FREED :—

Q.—Were the accommodations better in Glasgow than in Galt? A.—No; they are considerably poorer.

By MR. HEAKES :—

Q.—You would consider, then, that a mechanic, taking all things into consideration, would be just as well here as there? A.—Yes; I would say that he could make more money here and live better.

Q.—From your experience in both countries, do you consider working people in this country save as much as they do in the old country. A.—Yes; I think they do.

Q.—Take the two countries: what would be the proportion of men owning their own houses in Galt and the men owning their houses in Glasgow? A.—I never came across workmen in Glasgow who owned their own houses. They generally rent just two rooms—that is workmen. They live in flats—four families living in a flat, having two rooms each.

Q.—What proportion of men in Galt do you think own their own houses? A.—I really do not know at the present time. When I first went to the trade the majority of the mechanics had their houses; but I do not know if the number has increased much—I really do not know what the number is now.

Q.—Are the facilities for learning a trade as great in this country as in Scotland? A.—How do you mean?

Q.—Is as much attention paid to teaching boys their trade? A.—I do not know. When you go to learn a trade in other places it depends a good deal on the good will of the journeymen whether you learn it thoroughly or not.

Q.—Do you consider the present system of apprenticeship a satisfactory one; do you consider it is a system by which boys are likely to be well taught? A.—I do not know of any other; I am quite satisfied with it.

Q.—What system was there in operation in Galt? A.—I was bound with \$100 penalty to stay four years with my employer, and I gave security for that amount.

Q.—At what wages do apprentices begin—and how do they increase? A.—In the first year they receive 42 cents per day; in the second year 45 cents and the third year 55 cents, and I think 65 cents in the last year—I am not certain as to that amount.

Q.—Do you know how those rates compare with the rates paid to apprentices in the old country? A.—I really could not tell you that.

Q.—At what kind of a mill were you employed in India? A.—In a cotton mill.

Q.—What class of employes worked there? A.—We had Hindoos and Mohammedans, and different classes of workmen.

Q.—Were women employed there? A.—Yes; a great many women were employed. The foreman in the mill where I was employed was an Englishman.

Q.—Did they employ children? A.—Yes; a great many were employed.

Q.—What were the wages paid to operatives there? A.—The children were employed pretty young—they are rather cleverer than we have them here—they age more rapidly there. The children who were running frames were getting 2 rupees (\$1) a month. The women received from 2 to 6 rupees a month, the men

from 10 to 12 rupees a month. I may say that a rupee is hardly worth 2 shillings. Of course, the firemen and those working around the engine-room got up to 18 rupees per month.

Q.—Was that considered a good rate of wages in India? A.—Where I was working was outside of British territory.

Q.—Were they sufficient to support life? A.—At that time it just kept the people going. We found it was not expedient to give them more, because if they got more they would leave. They could not stand prosperity.

Q.—What could they earn at piece-work? A.—They received more; I do not know, however, what the wages were. They could not give over 15 rupees a month.

By Mr. FREED:—

Q.—How many looms would one weaver have in India? A.—It would depend on what work they were on—they would have two or four. Out there we had to take a great many hands green from the street and break them in, and as they got along they received more wages.

By Mr. HEAKES:—

Q.—Do you know of any places outside of Galt where those classes for technical education are held? A.—They were held in Glasgow at the science school—that is, classes for mechanical drawing. Of course, they have technical schools in Brantford and other towns.

Q.—I mean classes in connection with the mechanics' institute as they have in Galt? A.—No; I do not.

DAVID BLACK, Iron Moulder, Toronto, re-called.

By Mr. HEAKES:—

Q.—I understand you wish to make a statement to the Commission; it is in relation to a visit the last time we were here? A.—Yes; a deputation waited upon you one of the last days of your sittings and we came down on the Saturday following and you were gone. One of the deputation made a statement that the day hands' wages were \$2.25 a day; it should be \$2.40 a day. That is about all I wish to state.

Q.—You are empowered to come down here and make that statement? A.—Yes.

TORONTO, 26th January, 1888.

JAMES L. HUGHES, Public School Inspector, Toronto, called and sworn.

By Mr. HEAKES:—

Q.—At what age are the children taken into the schools in Toronto? A.—They are taken into the regular schools at five years and into the kindergarten classes at four, if they come that early.

Q.—Does the school law of Ontario state any age up to which children shall continue to attend school, and if they shall be compelled to attend? A.—The parents are responsible for sending their children to school between the ages of seven and twelve, but the children may attend till they are sixteen years of age by law; so we are responsible for providing accommodations for them up to that age.

Q.—Do you find a desire on the part of the parents to avoid that provision of the law? A.—We do not. We have had more pupils offer themselves than we have been able to provide accommodation for, so far. Even in the case of boys who do not wish to go to school themselves, the parents, with very few exceptions, seem anxious to have them go.

Q.—Do any of the children leave school before they reach the age at which the Ontario Act says they must attend? A.—I could not answer that question definitely

without looking up the statistics, but I can state that, of course, we have a very large percentage of pupils in the lower classes, which would indicate that they do not attend school as long as they should do. Last year, for instance, in the first book we had 8,761 pupils; in the second book, 4,746; in the third book, 3,788; in the fourth book, 2,209; in the fifth book, 809. When pupils reach the age of thirteen they leave the school in large numbers.

Q.—Would the average pupil attain to the fourth book before he reached the age of fourteen years? A.—Yes; they reach the fourth book at about thirteen.

Q.—Do those statistics cover all the public schools? A.—Yes; the public schools in Toronto.

By Mr. FREED:—

Q.—Not separate or private schools? A.—No.

By Mr. HEAKES:—

Q.—Have you sufficient accommodation in the public schools for all who wish to take advantage of them? A.—We have not.

Q.—Is not that a violation of the law? A.—That is partly owing to the celebrated 29th amendment introduced by Mr. Crooks, which gave control of the expenditure for buildings partly to the city council. They rejected our estimates one year, and we were not able to provide that accommodation. However, during the past thirteen years our school accommodation has increased from 67 rooms at that time to 318 at the present time; or rather, we shall have that number of rooms when those now under construction are completed.

Q.—Does that statement include the new schools for which contracts have been let, other than the alterations to old schools? A.—Yes; with the new schools the accommodation will reach 318 rooms.

Q.—Is sufficient care taken that the ventilation of the school-rooms is as perfect as it can be made? A.—Yes; I answer that question, without any hesitation, in the affirmative. During the past two years we have introduced into our schools a system of ventilation that is the only system which I believe to be perfect. I have seen the best schools in most of the cities of the United States, and which were heated by a system of direct or indirect radiation or whatever system is provided for the inlet and outlet of air, and I have not seen any that were satisfactory except the system we have now in our new schools.

Q.—Are there times when the school-rooms are over-crowded, in your estimation, through lack of accommodation? A.—Very likely; our experience in Toronto has been that we have not been able to keep up with the population. The boundaries of the city have been enlarged, the population has rapidly increased, and now all classes send their children to school; so that we have not been able to keep up as regards school accommodation, and although we are building forty-two rooms at the present time, they will not supply the immediate necessities when the buildings are completed.

Q.—In your judgment, how many pupils can a teacher do justice to in teaching? A.—In no class should a teacher have more than fifty pupils.

Q.—Are there many rooms in the schools in Toronto where a teacher has more than fifty? A.—There are at the present time not more than ten or twelve rooms in which there are less than fifty pupils to a teacher. We have nearly 3,000 pupils in our schools now more than the law allows us to have in the city of Toronto. In order to meet the difficulty, we have some of our classes conducted on the half-principle. When I say we have 3,000, I should add they are not at school all day—part are there in the forenoon and part in the afternoon.

Q.—Those will be the junior classes? A.—Yes; the junior classes.

Q.—Do you think that the public sufficiently understand the condition of affairs to be able to pass a judgment on the matter? A.—I do not want to appear as having want of confidence in the public, but I think they could not be expected to intelligently express opinions in reference to public school matters, without giving them

more study than they have given them. I find the public are always reasonable when matters are explained to them.

Q.—Do you find any difficulty among the pupils attending school for want of school books? A.—We do in some parts of the city. In regard to that question, I think we might make great improvements.

Q.—Is the cost of purchasing books very great, say for a family of five children? A.—The cost of school books is necessarily a heavy burden on a large number of the people of Toronto.

Q.—Do you think that if the books were supplied to the children either at cost price or free, many people would be benefited? A.—I am sure they would be, and I am thoroughly in sympathy with that plan. I know of no class that would not be benefited by that arrangement, except the retail book dealers, and they would naturally object. Otherwise, all parties would be benefited, and I see no reason why we should not give free books as well as give school accommodation free and school teaching free. Besides, we already supply pens, and penholders, and ink, and some other things. Wherever this plan has been tried, it has been found that the attendance of the children of the poorer people has been more regular, and, of course, the advantage to the general welfare of the city is manifest, because the school board could purchase books at wholesale prices, thus getting all the cash discounts and all the other advantages.

Q.—Do you think there is a tendency, when books are supplied free, towards pupils in the school becoming careless with them and destroying them? A.—I have not found that to be the case where I have seen the experiment tried, where the pupils were held responsible for good books carelessly or improperly handled by them.

Q.—You think, then, such a plan might be adopted with safety, so far as pupils are concerned? A.—I have no doubt it might be adopted with safety.

Q.—Have you ever given any thought in regard to the question of cost in regard to the matter? What increased cost to the general public would arise from supplying school books free? A.—To the public, as a whole, it would reduce the cost of maintenance.

Q.—The cost directly? A.—It would reduce the expenditure to the public as a whole. Tax-payers who have no children at school would suffer; but they might reasonably be expected to bear the additional burden on the general principle on which our school system is founded. I have not made up the statistics; if it would be any advantage to have such a statement, I will make it up afterwards.

Q.—What is the present tax for school purposes in Toronto? A.—I believe it was 2 mills on the dollar last year.

Q.—Would it be possible to graft on the public school system a system of technical education for young people? A.—Certainly. I have given considerable attention to that subject for some years, and I have recommended it in my report. Here is my report for last year, and I will supply you with copies of it; and in it you will find I gave several pages to recommendations with respect to manual training schools. I have visited several cities in the United States where they have manual training schools. I have not much faith in what are called in the United States manual training schools for the masses, because in a city as large as Chicago, of several hundred thousand people, they have simply one school, which is an advanced high school, attended by a comparatively small number of young men. I believe myself that the proper place for the training of the hand is, in the lower classes, in schools where all the children are attending, because at that time the hands of the children are in a condition to be moulded to almost any extent in dexterity, and, therefore, several years ago I recommended our school board to introduce the kindergarten system in Toronto, because the training of the children receive in the kindergarten has a very great influence indeed in the development of manual dexterity. I am not sure we would be able to introduce a system of teaching in the specific trades to advantage, nor would I personally recommend such to be done if we could do so. What I urge is manual or industrial training, such as the

training of the hand to make it expert, and the training of the head to make it clear and definite in controlling the hand, together with some slight training in the use of tools, which should be done without teaching any particular trade. I think that could be done efficiently, and done at a comparatively small cost. I may say that at the last meeting of our school board they unanimously adopted a resolution instructing me to prepare for them a report in reference to this matter, and I believe the board will, during the present year, take action in the matter.

Q.—For young boys who propose learning trades, do you think the instruction would be best given while attending school, or through night schools? A.—I think it ought to be done both ways, chiefly during the day. I have the statements of the masters in St. Louis and Chicago to support my assertion that the pupils who devote a portion of the day to manual work do not fall behind in their studies when compared with the pupils who do not devote any time to manual work.

Q.—What portion of what you would call technical education is now taught in the public schools, or is there any? A.—There is. For girls we have sewing; there is a programme of work as there is in regard to arithmetic or geometry, or any other subject. That we have had for some years. For all the classes we have industrial drawing.

Q.—Does that include mechanical drawing? A.—In the higher classes that would include mechanical drawing. In the lower classes we have kindergarten, and some three years before the English education department made needle work compulsory for boys as well as girls we had in Toronto been training our boys in most of our classes, at all events in the primary classes, to do needle work as well as girls, not from a utilitarian standpoint at all, but with the idea of developing manual dexterity, and training the eye and mind in what might be called executive work. Most of the systems of education fail in the executive department; they train the receptive faculties, not the constructive faculties, and it was with that view we tried several years ago that system. We also had in some of our classes, as they do in French schools, considerable whittling. The boys, by means of their jack-knives, make various articles, such as small chairs, ladders, bureaus, &c.

Q.—Do you think the kindergarten system could be so extended as to be made useful to children of older age than those who now study it? A.—Not the kindergarten system itself. No child who possesses all its faculties and is in usual health should be in the kindergarten proper after seven years of age; but the industrial principles of the kindergarten may easily be carried into classes above the kindergarten, and the underlying principles of the kindergarten may and should be carried higher than it.

Q.—Would the introduction of this industrial training you speak of necessarily discontinue any subjects included in the present curriculum in the schools? A.—I think not. We might give less attention to some studies, and if we had to do that I would recommend giving less attention to studies, such as geography, which might be taken up after the pupils leave school, so far as individuals might need to use it. When I speak of geography I mean geography and similar subjects not so directly educative in effect as instructive merely.

Q.—Do you think a course might be so arranged after pupils arrive at a certain age that it might be optional with them to take certain subjects along with industrial training? A.—It might be.

Q.—Could any portion of the present curriculum be left out without injuring the prospects of the children in any way, and industrial education substituted for these subjects omitted? A.—There is no subject now in our public school course that could be advantageously removed from it, I think. If it were necessary to make more time for industrial education I would take time from geography and from reading. It is not necessary that we should train our pupils to be elocutionists. In my opinion it would be sufficient to train them to read so as to extract knowledge from printed matter, and in geography we might also save time.

Q.—Have you ever given any thought to the subject of teaching instrumental

music in the public schools? A.—I have not given much attention to it—I cannot say I have given any thought to teaching instrumental music.

Q.—Is it done in the schools in the United States? A.—Not, I think, in any public schools I am acquainted with. I believe a piano to be necessary in the kindergarten, in order to lead the children in their games, and to aid in giving them a definite conception of rhythmical movement.

By Mr. FREED :—

Q.—What are the actual requirements of the Ontario Act as to the attendance of children at the public schools between the ages of seven and fourteen? A.—Speaking from memory (I have not looked at the last Act) I think it provides for school attendance during eighty days in each year.

Q.—There are no requirements of the Act outside those ages, I suppose? A.—No.

Q.—What percentage of the children of school age in Toronto have actually attended the schools at some time during the year? A.—We have not definite statistics as to the exact school population of the city.

Q.—Take the municipal census as a basis? A.—We had 20,213 pupils in attendance in our public schools last year.

Q.—Do you know what was the attendance at the separate and private schools in the city? A.—I do not.

Q.—Is not five years too early an age for a child to attend at a common school? A.—I think it is.

Q.—Do the junior pupils who attend only half time make as much progress, when doing so, as if they attended full time? A.—They do not make quite as much progress. They make a great deal more than half, but not quite as much as if they attended both forenoon and afternoon. In the kindergarten classes we only allow them to go half time, and they should not be allowed to go more than half time at that age.

Q.—Would it not be better to charge a small fee and supply books than to have your present system of compelling pupils to supply their own books? A.—I think it would be much better to supply the pupils with books by means of the board, whether the board collected the amount by taxation or obtained it as is done in Hamilton by a fee from the pupils, varying according to the age of the pupils and the classes attended. I would prefer either method to the one we adopt. Where the school authorities have supplied the books, either by fee or taxation, I do not know of any case where it has been given up.

Q.—Have you commercial classes in the Toronto common schools? A.—They are all commercial classes, in one sense.

Q.—Do you teach book-keeping? A.—Yes.

Q.—As a distinct branch from the high school? A.—Yes.

Q.—Could not a system akin to that be established when imparting technical instruction? A.—Certainly. I see no difficulty in imparting technical instruction in the public schools, if by technical instruction is not meant trades. If you mean simply the training of the head and hand, so as to make more expert workmen, I thoroughly believe in it, and this morning I prepared a brief summary of my reasons, which are as follows. I urge the necessity of industrial and manual training in public schools for the following reasons:—

1. Because children should deal chiefly with real things during the first year of school life. They have been learning very rapidly before they came to school, by handling the various real things. They should continue to do so for a time when they come to school. The school should make the work systematic and definite by supplying the child with the material best calculated to develop his intellectual as well as his industrial powers.

2. Because using real things is the most certain way of exercising the child's intellectual faculties. Our intellectual powers may be divided into those that gather knowledge, those that classify knowledge and those that use knowledge. Each department of intellectual power is best trained in early years by using real things.

3. Because it is the right of every one to receive such an education as will best fit him for the proper performance of his duties, in whatever sphere he may labor. The great majority of our pupils will have to earn the means of livelihood and culture for themselves and their families by using their hands. It is therefore of the utmost importance to give them a careful and definite training calculated to develop hand skill and power. Every man, whatever his position in life, will find it to his advantage to have such a training.

4. Because the system of apprenticing has been discontinued. It was not in harmony with modern tastes or custom, and as Adam Smith long ago showed, it was opposed to the principles of political economy. He said: "It interfered with the property which every man has in his own labor, encroached on the liberty of employer and employé, restrained competition, continued for an unnecessary length of time, and failed to allow the rewards of faithful labor to be enjoyed as they are earned." Undoubtedly, the best way to make up for a lack of training by apprenticeship is by means of a comprehensive system of industrial and manual training.

5. Because improving the mechanical skill of the industrial classes must add largely to the wealth and prosperity of a nation. It does so in two ways—by saving time, and by increasing the value of the articles produced.

6. Because the great increase in the use of delicate and intricate machinery in manufacturing demands a more thorough industrial and technical training on the part of those who are to use the machines.

7. Because the number and variety of artistic manufactures are constantly increasing, and consequently the workmen and workwomen specially need skillful fingers that can adapt themselves to any work they may be called upon to perform.

8. Because the wealthy classes are calling for a higher style of ornamental woodwork in their houses, and for more artistic furniture, in construction and design. Machine-made articles are turned out in large numbers and exactly similar in design. Those who can afford to do so are trying to get special articles of which no one can procure copies or reproductions. They have to pay higher prices for them, but they gladly do so. The demand for such work is rapidly increasing. Tradesmen and machinists of all classes are compelled to vary their workmanship continually. Those who best succeed in doing so earn the most money, and earn it most easily. All workmen would be aided in doing so by systematic manual training.

9. Because it will increase the prosperity of the working classes and will elevate their social position. If a workman can, by a higher degree of skill, produce a more valuable article than he could otherwise do from a certain amount of raw material, he increases his own value to his employer and will receive higher wages.

10. Because the moral effects of such training are good. Improving a working-man's position will make him more contented and happy. It will better the relationship between master and workman, and improve the character of the work done. Success will induce a workman to make greater efforts and will enable him to surround himself and his family at home with many of the things that lead to culture and refinement. This manual training has also a direct moral influence in moulding the characters of the children. They are naturally destructive in their tendencies, but the same instinct which leads them to be destructive will, if they are properly guided, make them take delight in work of a productive character. It is a most important part of a child's moral training to make him constructive instead of destructive, and making things under the guidance of a skillful teacher is the best means of accomplishing this desirable end.

11. Because working in schools will give pupils a greater respect for work. Many children are allowed to grow up with a contempt for work. They usually become, in some way, a burden to society. Gaol statistics show that three-fourths of the young men who fall into criminal courses are unable to work at any trade. The only way to make children realize that "all labor is noble and holy" is to train them all, rich and poor alike, to be able to work with their hands. This will not necessarily make them all mechanics.

By Mr. ARMSTRONG :—

Q.—Do you think any improvement could be made in the present system of public school books, so that parents could obtain the books at a cheaper rate than they do at present? A.—I do not think the present system of authorising the publication of school books to be the best system, for I believe that the publication of books should be freely open to all publishers. In my opinion, we would then have more competition; in fact, the only way we can get competition among publishers is by not having them all publish the same series of books, and in order that no difficulty might follow in the case of removal from one municipality to another, I would have the books supplied by the municipality or school district, instead of being purchased by the pupils themselves. To avoid unnecessary changes in the text books, I think a county or city board should be established, consisting of leading citizens qualified for the position and also leading teachers representing the teachers' association of the county, and this board should decide once in every three or four years what text books should be used. Text books rapidly fall behind the age, and it certainly cannot be the best system for procuring good text books to compel all to use the same series and to continue to do so for a number of years. If the publication of them were thrown open to all publishers, without the restriction at present prevailing, the books certainly ought to be cheaper.

Q.—Are there women teachers in Toronto holding as high grade certificates as male teachers? A.—Many of them have the highest possible certificates.

Q.—Do they teach as high a class in the different departments? A.—No; we have one lady teaching the highest fifth book class in one of our public schools.

Q.—A lady holding as high a certificate as a man does not receive as high a salary, I believe? A.—Not necessarily.

Q.—Have they not to undergo the same strict examination? A.—They have.

Q.—Do you know any reason why they should not receive as high a salary as a male holding the same certificate? A.—Our salaries are not paid either to male or female teachers in accordance with the class taught, but in Toronto we pay the teachers according to length of service on the staff. Some of our highest-paid teachers teach in the lowest classes. That is not so at present, but it will soon be the case, and we need as good teachers in the lower classes as in the higher. The masters are paid because they are principals of the school and their salaries are on an average larger than the ladies', on account of the responsibility connected with their position. They are not paid on account of the teaching they do, but on account of the general management and supervision they have to exercise.

By Mr. HEAKES :—

Q.—Are there any ladies in Toronto who have charge of schools? A.—There are; only schools of four rooms or less.

Q.—Do you consider the present curriculum of study at all injurious to the pupils—the pupils in advanced classes especially? A.—I do not think the curriculum of study is injurious. The injury to the health of the pupils has come largely, in my opinion, from long continued study in badly ventilated rooms, without taking sufficient exercise. It is only during the last two or three years that there have been good and thoroughly ventilated schools any where, so far as I know.

Q.—Does not the amount of work required of a pupil—say a pupil in the senior fourth book—require him to give time to study that ought to be devoted to exercise? A.—We do not allow any of our teachers to give more than one and a-half hours per night, and we insist on a record of the work assigned being kept by the teacher in the school for inspection at any time, and if night work of more than an hour and a-half is assigned in the highest class, and reported, the teacher is always checked for it and the matter set right.

Q.—How do you judge as to the amount a child can learn in an hour and a-half? Are there not some bright and some dull pupils in school? A.—The work given is such as would not occupy a child more than an hour and a-half. We have a great

many complaints from parents that we do not give enough work in the second and third classes.

By the CHAIRMAN :—

Q.—You have complaints to that effect more than that you give too much work ?  
 A.—We have very little complaints about giving too much work, but occasional complaints from those who think the children should have more work at home, but we are not influenced by those complaints. I do not think if a child works steadily at school for five and a-half hours he should have very much study at home. If it was not for the purpose of developing the power of study individually, which is a very important power, I would be quite willing to see a rule laid down that no home work should be assigned.

By Mr. ARMSTRONG :—

Q.—Does the school board or the teachers' association fix the rate of salary paid ?  
 A.—The public school board. The association has no influence in the matter. The ladies of this city appointed a deputation to wait on the school board on one or two occasions, but merely as a deputation to respectfully urge them to do certain things. They have no direct power in the matter.

Q.—Is it necessary to have special power to increase the rate of salaries ?  
 A.—The school board has the power to do that—power by the authority of the Legislature.

EDWARD TAYLOR, City Relieving Officer, Toronto, called and sworn.

By Mr. HEAKES :—

Q.—You are in the mayor's office ?  
 A.—Yes.

Q.—Is there any great extent of distress in Toronto at present ?  
 A.—Yes ; a great deal.

Q.—From what classes of people are applications for relief principally drawn ?  
 A.—Am I to understand your question as having reference to citizens, or persons coming to the knowledge of citizens ?

Q.—All classes ; for instance, do you find many permanent applications for relief—people coming annually ?  
 A.—Yes.

Q.—What proportion of those who might be called permanent applicants are there to those who are occasional ?  
 A.—I should think 70 per cent.

Q.—Can you give us an idea of the chief causes of the destitution—is it lack of work ?  
 A.—That is one cause, but I think the chief causes are idleness and drink. They are the two principal causes.

Q.—Do you ever meet with many cases of people who would be willing to work and only come to you as a last resort ?  
 A.—Yes ; I do.

Q.—Do you think that the amount of distress in Toronto is in excess of what a large city like Toronto ought to have ?  
 A.—I think it is.

Q.—At what season of the year do you have most applications ?  
 A.—In the month of February.

Q.—From what cause do you think there is more distress than there should be ?  
 A.—I think strikes in the summer have a great deal to do with it.

Q.—Have you many applications from people who you know were on strike last summer ?  
 A.—No ; not to my knowledge.

Q.—Can you give us any statistics as your reason for believing that strikes cause the distress ?  
 A.—No ; that is only an impression I have.

Q.—Is there in Toronto any place of relief supported by the corporation ?  
 A.—Not entirely.

Q.—What amount does the corporation of Toronto spend annually on charitable purposes ?  
 A.—I cannot tell you exactly ; there are so many charitable organizations, and the corporation makes grants to most of them. The House of Industry, I think, gets a grant of \$8,000 ; then there are the House of Providence, the Boys' Home, the Orphans' Home, and a great number of other charitable organizations.

Q.—Do you find among the applicants for relief many immigrants recently arrived? A.—Yes; a great many.

Q.—Have you any idea what percentage of the immigrants who come here are destitute? A.—I have not, but there is a considerable percentage.

Q.—What is the system pursued in Toronto in giving relief? A.—I inquire from those who apply to me as to their wants, and then I refer them to the charitable organization which would be able to meet those wants.

Q.—The combined charities? A.—The combined charities is not so much, I think, for dispensing relief as for seeing that each charity is not imposed upon. They meet together and compare notes, so that they may see that one person is not going the rounds of all the charities, and getting relief from each one of them.

Q.—About what would be the daily number of people seeking relief at the present times? A.—I suppose about twenty-five or thirty at the city hall.

Q.—Do you consider that a large number? A.—Yes.

Q.—Above the average? A.—Yes.

Q.—Are there many men amongst the applicants for relief? A.—They are principally men.

Q.—Do those men express a willingness to work? A.—Many of them say: "If you give me work I will not go to the charity."

Q.—Could not the corporation of Toronto profitably provide work for those men and avoid giving them relief? A.—I think it could.

Q.—Take last winter, did you notice that when men were employed by the day on the Don improvement there were fewer applications for relief? A.—Yes; there were.

Q.—Do you think that if people were provided with work they would rather do it? A.—I am quite sure a great number of them would.

Q.—We have no chronic paupers, as we might call them? A.—Yes; we have some, but many who apply would prefer working to taking charity.

Q.—You think they are unfortunate in their circumstances rather than idle? A.—Yes.

By Mr. ARMSTRONG :—

Q.—Did you ever ask any of those immigrants by what inducements they were led to come to this country? A.—Yes; frequently.

Q.—Can you mention some of those inducements? A.—They would say: "Constant employment, high wages and cheap living."

By Mr. FREED :—

Q.—Who made those representations to them? A.—I think principally the agents of the ship companies.

Q.—Are those immigrants of whom you speak mechanics or common laborers? A.—Principally common laborers.

Q.—Are any of the adults male immigrants incapable of work? A.—Frequently I find them so.

Q.—Among what nationalities? A.—I think principally Irish and English.

By the CHAIRMAN :—

Q.—What is the number of immigrants who came here last year? A.—I could not say.

By Mr. ARMSTRONG :—

Q.—Do any of the immigrants who apply belong to any trades? A.—Yes; at this season of the year it is a great mistake to bring them out. In winter and fall there is little chance to get work; very few have much money, and their resources are soon exhausted, and unless they get employment they are obliged to come for relief.

Q.—Do you know if these steamship agents receive a percentage for inducing parties to come out? A.—I do not know.

JOHN WALKER, Secretary-Treasurer of the Crompton Corset Company, Toronto, called and sworn.

By Mr. ARMSTRONG:—

- Q.—You represent the Crompton corset establishment. A.—Yes.
- Q.—How many hands do you employ on an average? A.—About 250 now; about 230 girls and 20 men.
- Q.—Must these men be skilled in their calling? A.—Yes; with the exception of one or two. There are one or two mere laborers, but the others are skilled mechanics.
- Q.—What would be the earnings of a skilled hand? A.—Well, in our cutting room a skilled man can earn \$15 a week, and in our ironing-room about the same.
- Q.—What would a man you call a laborer receive? A.—We pay the assistant in shipping, &c. \$10 a week, and another man we employ as assistant for nailing up cases, &c., gets \$1 per day.
- Q.—Do cutters work by the day or piece? A.—Only piece work.
- Q.—Is there much skill required on the part of the female laborers? A.—Yes; a stitcher may take six or eight months to become skilled; if she is smart and apt to learn she will be proficient in six months; others will never become proficient, and as a rule we ship those.
- Q.—How many girls have you? A.—Two hundred and twenty-five to two hundred and thirty.
- Q.—What is the lowest rate of wages you pay? A.—When we take on a little girl as help we pay her \$3.00 a week to commence with.
- Q.—What wages would a girl whom you considered competent and expert receive? A.—As stitcher she will average \$1 a day. Some make \$5, others \$8 per week, depending on the class of work they are at.
- Q.—Do they supply their own thread and needles? A.—No.
- Q.—What hours do they work? A.—From 1st October to 1st March we run from 8 to 12 and from 1 to 6, and from 8 to 12 on Saturdays, forty-nine hours a week. From 1st March to 1st October we run from 7:30 in the morning instead of 8.
- Q.—Do girls all work on piece-work? A.—Yes; with the exception of a few week hands.
- Q.—Take the women help all through, what would be the average earnings per week? A.—Well, now the average would not be quite so high, because I suppose 60 per cent. of them have only just been taken on to learn the business, but as soon as they become skilled their average wage in summer time would be about \$5 a week and \$4.50 in winter.
- Q.—Is there a competent hand to inspect the work when it is finished? A.—Yes; we have four inspectors of the work at different stages.
- Q.—If the work is not properly done is the operator fined or is there a deduction made? A.—We have what we call repairers, and the time they occupy in adjusting mistakes and bad work is charged to the operators doing the work at the rate of 10 or 11 cents an hour. Of course, we make allowances for girls commencing the business, but after they know how to do the work, and should do it properly, then we charge for mistakes according to the time occupied in rectifying them.
- Q.—When the foreman finds that a young girl is not qualified for the business, will she be discharged? A.—Yes; if we find she is occupying the place of a girl who should do better, we discharge her after a fair trial.
- Q.—Do you know what time they take to find this out? A.—Sometimes we find it out in half a day or half an hour, but we do not turn them off at once. Sometimes, if they are not suitable for one department they may be for another.
- Q.—Do they receive wages from the time they commence? A.—Yes; from the hour they commence.

By the CHAIRMAN:—

- Q.—Is it your interest to keep on girls after they commence? A.—After learning the trade we do not allow them to go.

Q.—Is it your interest to try to keep them? A.—Yes; we try to make the most of them, because we might get two or three who would not do any better.

Q.—You only judge as a matter of interest? A.—Yes.

By MR. HEAKES:—

Q.—Do girls in your employ have to pay for broken needles? A.—No.

Q.—Can you tell us how many weeks in the year your hands are employed?  
A.—We shut down a week at Christmas; you could safely say fifty weeks a year.

Q.—During all those fifty weeks, could they earn from \$5 to \$8 a week?  
A.—Yes; if they work full time and attend to business.

Q.—Constant employment is furnished? A.—Yes; constant employment for good hands.

Q.—At what age do you take girls to work? A.—I think the youngest girl we have now is fifteen.

Q.—Do they work in the same room with the men? A.—No; the men work only by themselves.

Q.—Separate conveniences? A.—Yes

Q.—Separate entrances to the convenience? A.—Yes; it is very private.

By MR. ARMSTRONG:—

Q.—Did your establishment ever remove to Berlin? A.—Yes.

Q.—Had you any labor trouble there? A.—Yes.

Q.—Would you please tell us the nature of the trouble? A.—I think it was late in December when we went to Berlin and we took up about twenty or twenty-five of our expert girls to act as teachers. After we got nicely running along, so that generally the girls from Berlin were making from \$2.50 to \$3.50 and \$4 a week, one afternoon, during Mr. Crompton's absence, they walked out in a body about 5 o'clock. I was telegraphed for to come up, and next morning I went up. They came there, and as far as I could find out they wanted to be paid exactly the same as our expert hands. I thought that was altogether unreasonable, and tried to induce them to come back to work; I told them no doubt Mr. Crompton would look into the matter, and if possible to give them an advance he would do so. They would not go to work, and did not go. They kept out. Mr. Crompton saw them, and found them so unreasonable he could not do anything with them. He said he would give them ten days to re-consider the matter, but at the end of ten days they did not apparently want to lower their terms in any way; so we merely went to work and loaded up our plant and took it back to Toronto, and took on fresh hands.

Q.—They earned from \$2.50 to \$4 a week? A.—Yes.

By MR. HEAKES:—

Q.—Did those girls work any piece-work in Berlin? A.—Entirely by piece-work.

Q.—Why were they not paid the same price for piece-work as is paid in Toronto?  
A.—We considered a girl earning \$4.50 in Berlin was as well off as one earning \$6 in Toronto.

Q.—They were not paid the same price as the Toronto girls you took up?  
A.—You cannot pay the same price for cheap work as you can for good work; you have to break your hands in on cheap work.

Q.—Did they not do as good a class of work as you required? A.—No; but they might have done so eventually. No doubt by this time the great majority would.

Q.—At the time of the strike were not these girls experts in the work they were doing? A.—Not by any means.

Q.—Is it usual to put a girl on piece-work when she is not an expert? A.—We put them on piece-work right at the start.

Q.—Is the factory still running in Berlin? A.—No.

Q.—It has not been running since the strike? A.—No; we closed the place, took away the plant and locked it up.

By the CHAIRMAN:—

Q.—That was a loss to you? A.—Yes; it was.

By Mr. HEAKES :—

Q.—You took your factory from Toronto to Berlin? A.—We moved partly, and our intention was to move there entirely.

Q.—Were facilities greater in Berlin than in Toronto? A.—Well, we thought we could get cheaper labor in Berlin.

Q.—And because the girls would not work more cheaply you came back to Toronto? A.—Yes; we would have made concessions if they had not been so unreasonable.

By Mr. ARMSTRONG :—

Q.—Do you know if those girls who got \$2.50 per week paid their board or lived with their parents? A.—I could not tell.

R. IRVING WALKER, Dry-goods Merchant, Toronto, called and sworn.

By Mr. HEAKES :—

Q.—What are the average earnings of a dry-goods clerk in Toronto? A.—I can tell you the average earnings of my own clerks, what they are willing to work for. My youngest boy gets \$2 a week—the boys are from twelve to fourteen years of age.

Q.—Are they regularly apprenticed to the business? A.—We have no apprentice system.

Q.—What would that boy's services be worth, say when he had been five years at the business? A.—Our rule is to advance them \$1 a week a year in the business until they reach \$6 per week.

Q.—A salesman who would be considered a first-class man: what would he get? A.—He would earn from \$500 to \$1,000 a year, according to what brains he had and his willingness to apply them. Some have brains, but they will not make use of them.

Q.—Do you pay them all on salary? A.—We pay both ways—salary and commission. The manager of a department gets a commission on the sales of the department, as well as his salary.

Q.—Does not the employment of female clerks come largely into competition with male clerks now? A.—I do not know whether the competition is with men and women or women and men.

Q.—There are more females now employed than there were formerly, I believe? A.—Yes; I think so, in Toronto.

Q.—Have you any idea as to what those girls are paid, as a class? A.—Our girls start as the boys do, and after a little while they get \$4 a week, and the women run up to \$800 a year. A girl who is wise enough not to get married can earn \$800 a year if she sticks to the business.

Q.—Those are exceptional cases, I suppose? A.—Yes; they have to be pretty brainy girls. I have one there whom I would not lose for \$800 a year.

Q.—I suppose she knows it? A.—Yes; she knows her value. Behind the counter \$500 a year is as much as an ordinary girl can earn. In order to get high wages they must be manager or superintendent of a department.

Q.—Are the services of female clerks considered to be of equal value with those of men? A.—They are, to a certain extent. A girl who will keep attentively working at the business and leave men alone is as valuable as a man is. There is, however, all the difference among them. Up to a certain extent they are more valuable, but when they get valuable they generally get married. That is the trouble with female labor in our business.

Q.—What hours are those females employed in a store? A.—They commence about half-past eight in the morning and leave work at about six or a quarter past in the evening.

Q.—Do all the dry goods stores in Toronto, on King and Yonge streets, close at

the same time. A.—No; on Yonge street the stores do not close until about 10 o'clock at night. On King street the hour of closing is 6, except towards the market where the stores are kept open later.

Q.—Are the young girls compelled to stand on their feet the whole time? A.—No; not in our store. They are allowed to sit down whenever they can without neglecting their business. If customers come in they must, of course, be attended to. They can rest during the time there are no customers in the store.

Q.—You employ a good many people manufacturing clothing, I believe? A.—Yes; we manufacture clothing, but not much on the premises; we manufacture it outside.

Q.—Are there many young girls employed in the manufacture of this clothing? A.—Yes; a good many.

Q.—Have you any idea of the average earnings of a girl at tailoring, for a week? A.—It depends on the class of work she can do. On some classes of work they will get three times the amount of money they will get on the same kind of labor on other work. It depends on how their work is to be finished and the class of people to whom it will be sold.

Q.—What will be the average earnings of a girl on what you would call third-class work? A.—That entirely depends on what she does. If she makes coats she will make twice as much as if she makes pants, for there is much more skill required to do the work. A girl on cheap work, pants and vests and ordinary work, would earn \$2, or \$3, or \$5 a week.

Q.—And on ordered work? A.—They will get more on that.

Q.—You do not take any apprentices to teach them their trade, I understand you to say? A.—No; our clothing is all cut on the premises. The prices that I give you are those we have been paying every week.

Q.—Do you employ young boys or young girls in the store as cash boys or cash girls? A.—We employ boys, and call them cash boys.

Q.—At what age do they generally go to work? A.—From twelve to fourteen, nothing under twelve.

Q.—Occasionally you have them younger than that? A.—We do not employ them younger if we know it.

Q.—What wages do those boys generally receive? A.—Two dollars a week.

Q.—Do they go to your store with a view to learning the business? A.—Some do and some do not.

Q.—Do you consider the present system of bringing up boys, whom you call apprentices, a satisfactory one to your business? A.—That is the only way we can do in regard to it. Boys in this country do about as they please. In the old country you can manage them better.

Q.—You mean that you cannot compel them to serve a regular apprenticeship? A.—No.

Q.—Do you find those boys when they go into your employ at twelve years to be fairly educated? A.—Not fairly educated.

Q.—Not sufficiently to make business men of them? A.—No; the rule is not to admit them to the business until they are fourteen. It is only in cases when the parents are very poor that we take them any younger; fourteen is the age we generally prefer to take them.

Q.—Have you reason to believe that the women employed in other establishments are not as well paid as those employed in your establishment? A.—I have heard such is the case, but I have no definite knowledge of it.

By Mr. FREED:—

Q.—When the boys come to your establishment between twelve and fourteen years do they get any schooling? A.—No; we only take them to carry parcels, and so on.

Q.—They have work continuously? A.—Yes; we recommend all to go to the night school, and some have gone. We do not bind ourselves to give them any education.

By Mr. HEAKES:—

Q.—From what you have seen of the working people, do you consider they earn sufficient to keep themselves comfortable all the year? A.—Our own employes, so far as I can see, are pretty comfortable. Of course, in our business we do mantles and millinery as well as clothing. A great many of our employes only work ten months in the year. A great many of the girls would rather have a month's holidays and spend it in fixing up their clothing, and so on; a great many go home and stay with their families. Our girls are generally all away about one month at this season. With ordinary care and industry they are able to keep along, and they can save enough in the busy season to go over the whole season very comfortably; but it entirely depends on the character of the hands as to how much they make, and some make half as much more as others, because they have more ability and apply themselves to the work.

TIMOTHY EATON, Dry-goods Merchant, Toronto, called and sworn.

By Mr. ARMSTRONG:—

Q.—You are a dry-goods merchant on Yonge street, I believe? A.—Yes.

Q.—You sell millinery? A.—Yes.

Q.—And boots and shoes? A.—Yes.

Q.—What are the wages you pay your male clerks—the highest? A.—The rate of wages runs in proportion as they are capable of taking different positions. If a boy begins at about fifteen years of age we start him at about \$3 a week. We have a lower grade, message boys; they are about twelve years old and they get less.

Q.—What wages do they receive? A.—Two dollars a week.

By the CHAIRMAN:—

Q.—Do the wages of your hands go on increasing? A.—They run from \$2 to \$20 a week, according to their positions in the house.

Q.—How do you increase them; is it by the year? A.—It is according to the positions they are able to fill.

Q.—What would be the increases they would receive—take a boy of sixteen or seventeen, what would he get? A.—It depends on the capacity of a boy and what he could do.

Q.—Take an average boy of seventeen, what would he get? A.—They are not paid so much by age as according to ability?

Q.—Take a boy of seventeen years, of average capacity? A.—If capable of taking charge of a department he would get a rise quickly.

Q.—What would be the average salary of a boy of seventeen years of age, of average ability? A.—It would run from \$4 to \$5 a week. When he got to know something he would rise as fast as he liked.

Q.—What is the highest salary? A.—An average salesman earns from \$10 to \$12 a week.

Q.—What age would he be? A.—A young man of twenty and upwards.

By Mr. ARMSTRONG:—

Q.—What salary would a saleswoman of ordinary ability, when competent behind the counter, receive? A.—Girls are more apt when young. They take hold more rapidly at first than boys. But boys in time exert themselves more and aim at being something and to rise higher. But with girls it is different, and the wages they receive depends entirely on how much they apply themselves to business.

Q.—What would you consider the wages of a first-class saleswoman behind the counter? A.—From \$6 to \$8 a week.

Q.—What is the rate of wages you give young girls when they first enter, and at what age do they enter? A.—That is a broad question. Some come in earlier

than others; some go in according to circumstances; others are forced in, and others do not come in until they are pretty well up in years.

Q.—Have you any girls in your employ under twelve years of age? A.—No; I do not think so.

Q.—What would be the rate of wages paid to them on entering your business first? A.—We have small girls for running messages between departments—they are generally cash or parcel girls, and get \$1.50 a week to start with. When they get accustomed to the departments they get an increase of wages.

Q.—How long does it take them to get accustomed to the departments? A.—I could not answer that; because some of the girls pick it up in a month and others will be longer.

Q.—What is the average time that young girls will remain at \$1.50 a week? A.—One dollar and fifty cents per week is merely nominal wages. They come in to show what is in them. If we can use them they are kept and advanced; if we cannot use them we let them go.

By the CHAIRMAN:—

Q.—They are there on trial? A.—Yes; that is about the way to put it.

By Mr. ARMSTRONG:—

Q.—What hours do those saleswomen work? A.—We open at 8 and close at 6. In July, August and September we open till 10. In July and August we generally close at 2 on Saturdays during the slack months. We have done that for two years, and found it very beneficial to health.

Q.—How long are the hands allowed for dinner? A.—One hour.

Q.—Suppose they are not back on time, are they fined? A.—Yes; unless a reasonable excuse can be offered.

Q.—Is fining the exception or the rule in your shop? A.—We only fine them about twice.

Q.—Suppose they are late the third time, what becomes of them? A.—They chastise them. If they can give a reasonable excuse it is all wiped out.

Q.—Suppose they are late: what is the time they must be late before they are fined. Will five minutes after the regular time be sufficient? A.—I think so; I am not exactly sure. I think they have five minutes grace.

Q.—Suppose a young woman was late fifteen minutes, what would she be fined? Would she be fined one hour or two hours' time? A.—I think the fine is 10 cents. I could not answer with certainty, because I am not in that department.

Q.—You think if she was late fifteen minutes she would be fined 10 cents? A.—I do not say that, but I say it to be something about that; but if it would be of any advantage to know I could tell you subsequently.

By Mr. HEAKES:—

Q.—You spoke about chastising those females: what time does this chastisement take place if they are late? A.—There is no distinction between females and males.

Q.—What time does it take? A.—One hour is the time given, and if they can offer a reasonable excuse for being late, it is accepted.

Q.—You fine them twice? A.—If I said chastise I did not mean to do so. They are simply cautioned, not chastised.

Q.—Are those girls taken into your shop with a view to teaching them the business? A.—That is the object.

Q.—How long will it take the smallest girl you have to learn the business? A.—It will take some twenty years—they will be always learning.

Q.—I mean to become a proficient and competent saleswoman, how long does it take? A.—Some girls will pick it up in three months if they are apt at their business.

Q.—Is there any difficulty for a woman who is a competent saleswoman to obtain employment in Toronto? A.—We have never found it.

Q.—Have you ever found the supply larger than the demand for shop girls? A.—Not if they are competent persons.

Q.—Do you have very many young people offering themselves as assistants, wishing to learn? A.—Sometimes there are more than others. That largely depends on circumstances. We very often have applications from persons whose home life is upset by accident or death of the father or support of the family.

Q.—Do you think there are a greater number of people applying for positions now as saleswomen than would be wanted by the demand? A.—I do not think so. We have a great deal of difficulty in getting the class of persons suitable to our business.

Q.—You say the average earnings of a saleswomen would be about \$6 a week? A.—The average would be about \$6 per week.

Q.—I suppose there are a great many who would earn less than that sum? A.—Yes; there are.

Q.—If a young girl enters to learn the business at \$1.50 a week, how long would she be before she would get a counter? A.—Sometimes they will get a counter in a month.

Q.—What will be the average time, do you think? A.—Sometimes they will never get a counter.

By the CHAIRMAN :—

Q.—You send them away? A.—There are various reasons. Sometimes they go where they can do better. They get into a place where they think they can do better, and they go away from us.

By Mr. HEAKES :—

Q.—Are the young women required to stand on their feet the whole time they are engaged in the store? A.—Yes.

Q.—Do you consider that a woman is capable of bearing the fatigue of ten hours a day? A.—We have two sets of departments. Some of the women are capable of standing during that time, and prefer it; some sit. We have a great many young girls in the office and work rooms who sit all day. Then there are the cashiers and clerks in the office.

Q.—The others are required to stand? A.—Yes.

By the CHAIRMAN :—

Q.—Could not those in the store be allowed to sit now and then, when idle? A.—Not very well. Anyone who requires to sit we remove to a place where she can sit if she desires to do so.

By Mr. HEAKES :—

Q.—How many hands do you employ? A.—We employ from 250 to 300 hands.

Q.—Have you a larger proportion of male than female help in your establishment? A.—I think they are about equally divided, as regards males and females.

Q.—Do you consider the services of the females behind the counter equally as valuable as the services of the males? A.—For certain classes of goods they are.

Q.—Are they paid equal salaries for equal work they do? A.—As nearly as we can arrange it.

By Mr. KERWIN :—

Q.—When an employé is fined 10 cents for being late, does the hand pay the money voluntarily, or do you take it from the wages at the end of the week? A.—We take it at the end of the week.

Q.—Are you aware of the amount of income derived from fines imposed on employés at the end of the week? A.—It does not amount to much. It requires fining more than twice to cause them to go away.

Q.—You say that about 250 are employed in your establishment? A.—Yes; sometimes 300.

By Mr. HEAKES :—

Q.—I suppose people are not fined unless they are repeatedly late? Take a person late once in six months: would you consider that a sufficient reason to fine

him or her? A.—No; if late once in two weeks we do not say anything about it. The object of the fining is to caution them.

Q.—There is no system of apprenticeship in the dry-goods business, I understand?  
A.—No; we have not any.

Q.—Do you think you get along as well with apprentices who are not indentured? A.—We do not find any application for apprentices as such.

Q.—Is it the rule that they serve six months in one store and then go to another?  
A.—They change about from one position to another as it suits themselves. We find the better class of persons do not change, that is, those who wish to get along.

By Mr. ARMSTRONG :—

Q.—Have you ever known establishments in Toronto where the lady clerks left the establishment in order to go into service, with a view to bettering their position? Did it ever happen in your establishment? A.—That is, to house service?

Q.—Yes? A.—I never knew it. We have had a great many applications from house servants for situations in our establishment.

By Mr. FREED :—

Q.—Have you separate conveniences for male and female clerks? A.—Yes.

Q.—Are they absolutely separate? A.—Yes.

By Mr. HEAKES :—

Q.—Are the people in your establishment permitted to take their meals on the premises? A.—We have a department for that purpose.

Q.—They need not go any distance for that purpose? A.—Any one who wishes can bring his provisions, and coffee, tea or milk is provided for them in a room up stairs.

By the CHAIRMAN :—

Q.—As an inducement to take their meals there with them? A.—There is a committee appointed from themselves and we furnish them with a room and a gas stove, and they buy their own tea and coffee and they make a nominal charge to pay themselves. We furnish them with the room. They have one room for their meals and another for a sitting room or reading room. They can spend one hour there, or they can take a walk outside, if they so desire, at the dinner hour.

By Mr. HEAKES :—

Q.—Have you many applications for young children to go to work? A.—Rarely, unless they are accompanied by their parents.

Q.—Not many of those come under your notice, I suppose? A.—No; I do not remember of any now.

By the CHAIRMAN :—

Q.—Is there a disposition to keep the children away from work as long as possible? A.—Yes; if circumstances will allow it. Their disposition is to have them attend school, and we always recommend the parents to keep them at school as long as possible. Sometimes we find a woman comes and makes application to have one of her children taken into our establishment on account of having a drunken husband, or some thing of the kind, or under some such circumstances.

EDWARD GURNEY, Toronto, called and sworn.

By Mr. HEAKES :—

Q.—You are in the foundry business? A.—Yes.

Q.—What class of foundry work do you do? A.—Stoves, and all kinds of heating and cooking goods.

Q.—How many men do you employ in your place of business? A.—In Hamilton and Toronto I should think in the neighborhood of 400.

Q.—Can you tell us what are the earnings of a moulder on stove-work per week? A.—I think the average rate on piece-work would be \$2.50 a day, and on day work the regular rate is fixed at \$2.40.

Q.—How constantly are the men engaged during the year? A.—Well, in our business they run from about 260 to 270 days; that is, unless there is a lock-out or strike, or an exceptionally bad year, or anything of that kind. I think, taking last year, a man working as steadily as he might would make about 270 days.

Q.—Then they make on an average about forty-five weeks in the year? A.—I have not any figures before me, but I anticipated that question might be asked, and I looked it up before I left.

Q.—Earning about \$14 or \$15 a week? A.—Yes.

Q.—It is not possible to spread the work over the whole year? A.—No; it would be quite impossible. At least a month has to be taken up in taking stock and in making repairs to machinery, and things of that kind. That takes a month under the best of circumstances. Then there are great changes in designs and patterns, and those goods have to have a certain amount of work done on them before they can be put in the sand or begun to be manufactured. Of late years the demand for our goods has been so great that we have run to the limit here in Toronto; in Hamilton we have not run quite so fully.

Q.—Have you ever calculated what the average earnings per day through the whole year of a moulder would be? A.—Yes; it was on that basis I gave you the figures already.

Q.—I mean spread out through the whole year? A.—I could not say. It would be easily figured.

Q.—Do you know that moulders calculate that under the present rate of wages and present system of employment they cannot earn more than \$1.40 per day throughout the whole year? A.—Well, I think those are exceptional cases and exceptional foundries. Some foundries do not run as fully as others. I do not think you have got the best—I think, perhaps, you have the worst—statement of the case as you represent it now. I could very easily, if the Commission desired, give you something specific on that. If I had known what questions would be asked I might have been more fully prepared, but anything I cannot answer now I will give you afterwards.

Q.—I would like to have the figures, if possible. We are aiming, not at individual figures, but the general conditions? A.—It is certainly to the interest of everybody that you should get at the facts. If you will delegate some one to come to my office I will give him those figures, or if you will put down any questions you want answered I will give you an answer in writing.

Q.—You think it is not possible to spread out the work and keep men employed the whole year? A.—No; I do not think so.

Q.—Do employers in the foundry business take into consideration how those men live the balance of the year? A.—Well, that depends a good deal on the disposition of the man. They are a good deal like you and me and the rest of us; most of us think chiefly of ourselves. I have heard men say they have run a foundry through the winter when they could not see where the output was to come from. I have known such cases, and I think they are more common than most working-men believe.

Q.—Do you think if more constant employment were given to the men there would be less irritation amongst them? A.—Well, I presume men fully employed would have less chance of grumbling; I think it almost goes without saying, but I do not think it is practicable to run a business such as ours continuously throughout the year. In meeting members of one of the trades employed in our business, they admitted themselves that our place here ran as fully as any one could expect. Now there are foundries in our line that have what is called only a fall business. Their business is in stoves and heating goods and it is impossible for them to run as fully as we do.

Q.—Have you ever considered the advisability of providing wash-rooms for moulders? A.—Yes; I did it once.

Q.—Did they take advantage of it? A.—No, sir.

Q.—If the men were to ask you to do it again, would you be willing to do so? A.—Well, I always feel like meeting them in a thing of that kind, but my experience was so disastrous that I lost faith in that sort of thing, and I registered a mighty oath I never would do any such foolishness as that again. When I built the present foundry I built a room (against the opinion of my father, who had more knowledge of such things than I), so that the men might have a place to wash in. I fitted it up with warm and cold water and everything of that kind. The men would not go there; they washed in the pots in the foundry, as they always had done, and as their fathers did before them. I got well laughed at, and by none more so than by the men.

Q.—Do you take many apprentices? A.—Well, in different departments we take more than in others. Our foundry is a union shop, so far as moulders are concerned, and I think they allow one apprentice for seven journeymen and one for the shop, and I think, as a rule, we keep pretty well up to that. In other departments journeymen are not so numerous, and we put in more apprentices than in the moulding-room.

Q.—Are those boys regularly indentured as apprentices? A.—Yes.

Q.—Do you consider the indenture system the best system? A.—There is no well defined law on the subject of indentures, or else the law is not well understood, as I have never been able yet to get an indenture drawn so but what some lawyer would say it was good for nothing. I think it is very desirable that apprentices should be indentured, and so bound to be held to the end of their term, and punished for leaving their employment—for this reason: if a man goes into a moulding room and works for a year he will learn to make one thing; he goes out without being a tradesman at all and hires out to make that one thing. The consequence is that first-class tradesmen are not turned out now, notably in the United States, where there are no such tradesmen as we used to receive from England fifteen or twenty years ago, who could do anything in their own line. We got a class of men from the old country who, aside from a little attrition, are better than those of the United States and this country. They are generally much better than those from the United States. Gurney moulding apprentices will get a position in the western States sooner almost than any other man, because we try to teach them for the four years and give them a large experience in their trade.

Q.—Do you think the deterioration of the workingman is due to the apprentice system? A.—I think they are not careful enough, and I think bosses and men have been mutually to blame for it. One trouble has been, where strikes have occurred a shopful of half-moulders has been created; the boss has insisted on their being kept on and they have been taken into the union, and so a lot of inferior workmen has resulted.

Q.—It is not to the interest of employers to keep those half-workmen about them? A.—Well, you have to take what is going.

Q.—You prefer to have skilled men? A.—Yes.

Q.—There are cases where employers have forced a union to take those men in? A.—You can put it whatever way you like. You would likely put it one way; I would likely put it the other.

Q.—In matters of dispute between moulders and employers, what is the best method of settling them? A.—I do not know.

Q.—Would it not be a good thing if an impartial board of arbitrators were appointed to arbitrate in matters of this kind? A.—If you could show how the parties could be bound.

Q.—You think the difficulty would not be so much in coming to an agreement as in compelling the parties to keep that agreement? Have you ever tried that plan with your men? A.—Never; but I have suggested it. Last year we had a difficulty, into which I drifted here in connection with the Hamilton concern; I proposed arbitration, but the men would not consent to it at all.

Q.—Do you know that many of the moulders in this city own their own houses?  
 A.—I do not think so; and right here, if it is admissible, I would remark that I think there are a certain number of workingmen who do not want to own their own houses.

Q.—Can you give us any reason for that? A.—I have done this—I have gone to a man, who is now working for me, and have suggested to him the desirability of his owning his own house. I have said: "You are getting \$2 a day and I propose to give you \$2.75 a day. I will give it to you in cash if you like, or if you will leave the 75 cents a day in my hands I will apply it towards the payment of a lot, and build a house, and I will keep on applying it until the house is paid for. I will build it as cheap as I can, and I can build it cheaper than you can. I will put the money into the house and I will give you my written guarantee that if you die your family shall have the house." I did that because when I was working on the floor of the shop this man was one of my chums. He was willing to take the 75 cents a day, but not to buy a house. That shows that there is this one difficulty which you cannot legislate out of the way. It looks to me that some men are so constituted that they prefer present advantages. I want to say, moreover, that this man had been working only as the shop ran—about 270 days in the year. I agreed that he should have 312 days employment at those wages, so there would be the difference between 270 days at \$2 a day and 312 at \$2 in his favor; he would have that for himself. I was to keep 75 cents a day for this specific purpose, but after taking the offer home and consulting his wife, he concluded he would rather have the present advantage of the money; and he has had it ever since. Now, if I had given him a house he would not have kept it.

Q.—Do you think that is a general feeling amongst workingmen? A.—Yes; for the simple reason that they have not got houses. I have men working for me who have had no better wages than those I refer to, who have not had as good wages, and whose families are as large as theirs, who have one, two, three, or four houses, and tenants for them all. There has been as much against them as against some of the others who have none.

Q.—Did they acquire that property out of their earnings as moulders? A.—Yes; out of their earnings, but not as moulders.

Q.—Would they be as constantly employed as moulders? A.—No.

Q.—Do you employ them as pattern-makers? A.—Yes; to some extent.

Q.—What would be the earnings of a pattern-maker? A.—From \$2.25 to \$2.75 a day.

Q.—Do they get any more constant employment than moulders? A.—Yes; I think they do. I may say, with reference to the remark I made a few minutes ago, if the man who was working for me had been willing to take the house, we would have had to arrange things with him so as to always keep him employed as you always can in a large establishment like ours; when you cannot employ him at his trade you can at something else, and this had its effect with the man I refer to. I have known two or three such instances where men have gathered considerable property about them out of wages which might have been earned by moulders.

By Mr. McLEAN:—

Q.—Have stove manufacturers an organization? A.—Yes.

Q.—Is it secret? Do they let the public in? A.—No.

Q.—Are there any fines in connection with it? A.—Yes.

Q.—Do they strike a rate of prices for stoves? A.—Yes.

Q.—And any body selling under that price is fined? A.—Yes.

By Mr. CLARKE:—

Q.—You have a branch establishment in Boston? A.—Yes.

Q.—How do wages compare in Boston with those in Toronto and Hamilton?  
 A.—I think, considering the work done, taking it by the day and rate of living, the wages paid here are higher.

By Mr. KERWIN:—

Q.—How long has your business been established here? A.—The business I am running here had its foundation about fifteen years ago. It was run first by Spencer, then by McGee, and I took hold of it twenty years ago.

By Mr. ARMSTRONG:—

Q.—Can you tell us the nature of the last difficulty you had with your employés? A.—They asked for an increase of wages in Hamilton. They came to me first here in Toronto, and asked for an increase. I had, from year to year, been making wages for the Province, and the Hamilton people protested that I should consult them, so I went to Hamilton and consulted them. We went into the question of figures, and found that the increase could not take place without a corresponding increase in the price of goods, and the market did not seem as if it would stand that. I came back and told the men here, and they withdrew from the arrangement. The men in Hamilton made the same demand, and struck, but I closed down here until the trouble was settled there.

Q.—When that was arranged and the men withdrew their demands in Toronto, to settle the strike in Hamilton you closed down in Toronto, without any fault of the men? A.—Yes; without any fault of the men.

Q.—How was it settled? A.—The men first asked for a 10 per cent. advance, and subsequently 5 per cent. was proposed to them. Finally, it was settled on the basis of 5 per cent. advance, the 5 per cent. to go on in February or March next.

Q.—It was settled amicably between the foreman and the men? A.—Yes; I think so. The feeling is as good as ever it was.

Q.—Was there any expectation that more steady employment would be given? A.—Yes; that was the expectation; and I think bosses were disposed to meet it as far as they could. You must remember that this thing is entirely outside of the control of these bosses in Hamilton. An employer of labor is making a certain line of goods; he makes it right through the season, and at the same time he knows he is never going to make another of that line—he knows that its day is done. Now, an American firm is making the patterns for those goods. We do not make patterns to any extent in the stove line. He has had the convenience of the American firm. He may be a party to the whole thing in manufacturing them, but he must at least wait until the goods are ready. From the time they pass out of the hands of the wood pattern-maker to the iron pattern-maker's hands here it is a question of weeks. A foundry cannot be started and run properly until a certain reasonable portion of outfit is ready; he must wait until it is ready before he can start. I talked that matter up with the Moulders' Union in Hamilton. They understand the whole situation, and know that the whole thing is completely beyond the control of the manufacturer.

Q.—What is the rate of wages in comparison with what it was ten years ago? A.—I think wages have considerably advanced since that time, but I could give you that as a matter of fact, if desired.

Q.—Is there anything in the nature of a combine between manufacturers of the United States and those of the Dominion? A.—Not to my knowledge; and I think I have as full knowledge of that as any one. With reference to the Association of Iron Founders in this country, I may say that that institution has been in existence twenty-five years, and the purpose of it is to enable iron founders to meet and talk over and determine questions of cost. The institution was founded by my father years ago, and has made prices for the Dominion for the last twenty-five years. There are a great many people in business who make failures simply because they do not understand these questions of cost. I will give you an example of that kind with regard to the question of power. A discussion arose at one of our meetings as to the cost of power, and different gentlemen stated their views and put forward figures about it. One gentleman objected to the item, and said: "We have to have an engine any way;" showing that a great many people do not consider questions of cost. Well, competition became very keen, and many years ago the idea was

conceived of getting people together so as to discuss these questions of cost. Having arrived at the cost price of goods, the association then takes the lowest rate of advance that any man in the room wants as the basis of prices; and, having reached that result, they put fines on, just as the Moulders' Union does.

By Mr. HEAKES:—

Q.—I suppose you consider yourselves a sort of trade union? A.—Yes; I do; and as perfectly legitimate.

By Mr. McLEAN:—

Q.—If a retail dealer in stoves buys stoves from any one who is not a member of your association, will your association sell stoves to him? A.—Certainly.

By Mr. KERWIN:—

Q.—Will you sell stoves to any body who you thought was wholesale? A.—Well, I can imagine such a state of affairs coming about.

Q.—For instance, would you sell stoves to Mr. Boyd and Mr. Butterworth? A.—Certainly.

Q.—Any one paying the price? A.—Yes. It sometimes happens that one man will have control of a line of goods in a town, in which case he would not sell to his competitors, but there is no agreement to prevent me doing so. Our goods are sold to any one. Nothing in the association causes us to refuse to sell our goods to any one.

By Mr. McLEAN:—

Q.—Have stove manufacturers and foundry men two separate organizations? A.—Yes.

Q.—The stove manufacturers have one and the foundry men have another? A.—I understand you to say stove manufacturer and stove seller.

Q.—No; manufacturer and foundry man? A.—In the association to which I refer they are all stove founders.

By Mr. CLARKE:—

Q.—Is the demand increasing all the time for nickel finished-goods? A.—I rather think it is.

By Mr. HEAKES:—

Q.—People are looking for higher class goods? A.—Yes; it would have been impossible twenty years ago to sell to rich people the stoves we are selling to-day to workingmen. Well, perhaps that is exaggerated, but thirty-five years ago the stoves we are selling to working people to-day would not have sold to people worth \$75,000 and \$150,000.

By Mr. CLARKE:—

Q.—Do you think the laboring classes are in a better condition to-day than they were thirty years ago? A.—Yes.

Q.—More luxurious? A.—Yes.

By Mr. ARMSTRONG:—

Q.—Do you think a dollar has as great purchasing power as it had then? A.—I think it has more. Of course, it is a matter of statistics, but so far as I have thought of it, I think a dollar is very much more powerful now.

Q.—There is not much importing of goods in your line of business? A.—No; not much.

Q.—Is that because of the increased demand for the home manufactured article? A.—Yes. I may say that since the American war there has not been any considerable quantity of American goods brought into this market. The American war gave us control of this market, and the tariffs we have had from time to time have been sufficient to keep us in control of the market for stoves, though there are other

lines of iron goods, such as steam-fittings, which depend almost entirely on the tariff. We could not hold plumbers' goods, for instance, against American competition.

By Mr. CLARKE:—

Q.—Is your coal all foreign? A.—Yes.

Q.—Why do you not use Nova Scotia coal? A.—I do not know a coal man who ever came to ask for prices.

Q.—They cannot compete? A.—I know nothing about it, except what I read in the newspapers.

Q.—Does that remark apply to iron? A.—We are using a large proportion of Canadian iron. It is better iron to start with, and being better and fully as cheap, a man can be patriotic at a low price.

Q.—Is that Londonderry iron? A.—Yes.

JOHN HEWITT, Rating Clerk in the City Waterworks, Toronto, called and sworn.

By Mr. HEAKES:—

Q.—You have paid considerable attention to matters affecting the workingmen of Toronto, I believe? A.—I have.

Q.—Looking back over your experience, how does the condition of the workingmen compare with their condition, say fifteen or twenty years ago? A.—If you take it on the basis of intellectual advancement, I believe there has been a marked improvement, but in regard to the material condition of the workingmen I cannot see any improvement; I think their material condition is rather more stringent than it was years gone by.

Q.—Can you give any reason how it occurs that while the workingmen have gone forward in their intellectual capacity their condition has not advanced materially? A.—I believe the reasons rest nearly altogether upon the economical laws that rule civilized society. We find one of the most notable features of the advance of civilization, especially in new countries, is to centralize and monopolize, and centralization and monopolization are always antagonistic to the interests of the working classes, and will continue to be so.

Q.—Could you point out what direction some of those causes have taken, and what their effects have been? A.—Of course, the great questions that affect labor may be taken on two basic conditions—wealth and monopoly in land. Of course, we have not felt this as severely here, as it has been felt in the old country; but there is one thing certain, and that is, that if the conditions that have produced monopolies in land in the old countries continue to exist here they are going to produce the same results. Then I consider the accumulating of money is altogether too great. Money is the great distributor, and I think that without going into any very deep reasoning we must come to the conclusion that the portion of the products of labor that goes to capital and land is altogether controlled by the power of money to accumulate, and I think in that one particular the work of legislation should be brought to bear in the interests of the working classes, because money is altogether a legal creation, its legal powers to represent measures and exchange values, and accumulate by interest. If you take the condition of things, even in the most favored Province of the Dominion—and I happen to have considered, when my time was less occupied than it is now, many of these questions that are now under the consideration of the Commission, and I gave some thought to this question particularly—it will be found that our material wealth in the Province of Ontario, after deducting expenses of living, has increased at the rate of less than 3 per cent. per annum. In order to produce that result the united efforts of capital and labor have been put forth, and yet it has been less than 3 per cent., and yet at that very time we were paying for one of the factors, a factor that did not do the work, 6, 7, 8, 10 or 12 per cent. The simple result was that labor had to live, and to give 3, 4, 5 or 6

per cent. of the portion that ought to have gone to labor to those that held the money. Consequently, you have centralization of wealth, and you cannot have it otherwise so long as that condition of things exists.

Q.—Taking into consideration the amount of money that is created by labor and the amount that is represented by capital and manufactures, do you think that the working people obtain a fair share of that creation? A.—No; I do not; and in a less degree the same remark may be applied to the manufactures in some cases.

Q.—I say, taking into consideration the amount of capital represented by manufactures and the amount represented by the earnings of the work people do you think the work people get their share of the profit? A.—No.

Q.—This is more apparent in some cases than in others, I suppose? A.—Yes.

Q.—Where do you consider the balance of this production goes? A.—It goes to those who hold the capital. There are certain financial centres; we have one here, and we are not sorry to have it here, so long as this condition of things exists. Toronto as a financial centre furnishes money for industries not only in the city but throughout the Province.

Q.—If the producer and consumer were drawn closer together, so that the consumer would receive a larger share of the benefit, would not a larger proportion be derived by the workingman's labor? A.—My opinion is this, and always has been, that the producer ought to have a share with the manufacturer in the production, and I contend it would be better for the manufacturer, and infinitely better for the producer, if this were the case. If you could unite their interests, so as to give the producer or the laborer a certain amount or proportion of the profits, it would be beneficial to all concerned.

Q.—Have you ever thought it possible to introduce into manufactories a scheme for the distribution of the profits, so as to obviate the middlemen? A.—I believe such a condition of things will come, and it has come in a small way in some places already. Of course, we have instances in the old country, and we have some instances in this country, where that condition of things has existed to the mutual advantage of all concerned.

Q.—Have you any knowledge of the difference between the cost of manufacture and the cost of distribution? A.—You can take it in any line of staple goods, and you will find it running from 25 to 33 per cent.

Q.—Do you know what the proportion of profits of capital and labor will be in the production, less the amount that goes to the trader? A.—No; I could not give you anything definite on that line. Of course, the capitalist, or so-called capitalist, who is a manufacturer, is very often a middleman, and on account of being a middleman is tightly squeezed between the man who controls the capital and the man who produces—he is bullied by the man who holds the money. Very often when we think a manufacturer is squeezing his employés very hardly, he is being squeezed harder by the man whose capital he is using.

Q.—Can the principle of co-operation be successful in manufacturing? A.—We are growing up that way. You want a plan of technical education for your people, and coupled with that a sterling morality, and if you arrive at that point I feel quite satisfied that co-operation will not only be practicable but that it will be the solution of a great many questions that now trouble the working classes.

Q.—Co-operation in manufactures would, to a large extent, remove the restlessness of the working classes, would it not? A.—It would altogether remove it if they controlled their own capital. It would give them an opportunity of participating fully in the product of their own labor.

Q.—You spoke just now of technical education; what kind of technical education do you think would be for the benefit of the mass of the people? A.—I have very defined views on that subject. I think it is the duty of the State to establish, as it has in a measure established, a common system of education for the people. The education ought to be thorough, not only in a literary sense but in a technical sense; we want the children of the State to grow up possessed not only of head knowledge but of hand knowledge, and they should obtain all the education they possibly can

obtain. But our present school system is turning out a class of men of very little use to society; their education has been neglected in other respects, either at home or at school.

Q.—At what period of life would you have technical education commence?  
A.—I think it ought to commence at ten or twelve years of age.

Q.—And carry it on until when? A.—Until the time to leave school arrives, and when a pupil reaches the age of seventeen or eighteen he should be at home so far as regards possessing the theory, and a certain amount of practical knowledge in general mechanics and general work.

Q.—What effect do you think this technical education would have on mechanics?  
A.—I think it would have a most beneficial effect.

Q.—You heard what the previous witness said just now about workmen deteriorating; do you think that is true in regard to mechanics at other trades as well as moulders? A.—Yes; I believe mechanics generally are deteriorating, and that all you can trace to the causes mentioned by the previous witness. You find that all businesses are growing into great monopolies. It pays monopolies to run their men in certain lines—for example, to keep a certain number of men on stove-plate moulding or on certain classes of work, and this system is pursued in other trades in a similar way. In fact, they run the men on particular lines of work. Take the boot trade, for instance: one man works on heels during all his life, and if he got out of employment he could only take a situation in that particular branch, and never at any thing else.

Q.—How would you counteract that evil that is growing in society? A.—It is a very difficult question to deal with, but it will be dealt with, and I feel satisfied that monopolies will become so oppressive in the not distant future that the masses will rise up and wipe them out.

Q.—How would you counteract the evil effects of the present system of skilled labor—how would you counteract the deterioration of skilled workmen? A.—Where a man is a skilled workman you cannot say he is deteriorated; it is only in consequence of the imperfect training they are getting in the large monopoly concerns that such is the case. In my business I could do anything from cutting down and getting out the timber to making it up. In that trade now we have men who can do only one particular line of work. If there was not an opening in that particular line, he would have to throw himself on the charity of the world, as he would not be much good at ordinary labor, and the result is that such men become dishonest. They perhaps, take to drink and wind up in the central prison.

Q.—Would a comprehensive system of apprenticeship to any extent counteract it? A.—I believe stringent legislation in regard to apprentices would have a very beneficial effect. You could compel employers to give those young people who trust their future to their hands a thorough training in all branches of the business, and I consider that would be most advantageous for the future of mechanics in this country.

Q.—You consider, then, that the comprehensive system of apprenticeship and technical education would remove, to a great extent, the present disability of our workmen? A.—What I mean to say is this: if a man goes and learns to be a moulder, it is in the interest of society to see that he becomes a moulder, and that he becomes a competent man in his trade in all lines that are included in the term moulding. The same remark applies to carpentering and other trades.

Q.—Do you know anything of the subject of convict labor? A.—Yes; I have taken quite an interest in that subject. Convict labor, I believe, should be employed as far as possible so as not to compete with any honest industry outside. I admit that you must find employment for your convicts in some lines. It would be an outrage upon the citizens at large to allow the convicts to be idle in prison, but care should be taken that their wares should not be thrown upon the market, except at the market prices.

Q.—Who should employ this prison labor? A.—I believe the State should employ it.

Q.—And be directly responsible for the effects? A.—Yes; I believe the State should employ the labor, and it should manufacture for the State the supplies necessary. If there is a surplus of products it ought to be disposed of with the least possible injury to competing industries in the same line outside. But I think if the State employed the prison labor at its disposal for the production of such articles as the State requires they would relieve the consumers very largely of all the products of the prisons of the country.

Q.—Do you think it is possible for the Government to manufacture by convict labor all the supplies needed in prisons, asylums and such institutions? A.—It is possible to produce those articles under the convict system, and I feel satisfied that with competent managers in the different branches those goods could be produced in the prisons.

Q.—Do you think that the experiment of producing everything needed in those institutions, such, for example, as clothing, boots and shoes, and everything of that kind, ought to be attempted by the Government, even at a loss? A.—Yes; because if the commonwealth had to make up the deficiency it would not be so large, and it would bear more gently on healthy competition outside. The central prison has killed the broom trade in this city, and those engaged in that particular business have to bear the whole brunt of it. That is a loss to that portion of the community, and it is the poorer classes of the community that have to bear the loss. It would be better, therefore, if the loss were made up by being spread over the whole body of the people.

By Mr. CARSON:—

Q.—Could not that labor be employed in making tents and tent-poles used by our militia? A.—Yes; that could be done.

Q.—Are you aware of the quantity of such goods imported for the militia last year? A.—No.

Q.—Would you be surprised that \$20,000 worth were imported last year? A.—That could be made in our prison even at a loss if necessary.

Q.—Could tents for which last year the Government spent \$180,000 be successfully manufactured in the prisons? A.—I have no doubt about it.

By Mr. ARMSTRONG:—

Q.—Have you noticed during the past fifteen years any improvement in the labor classes through the direct influence of organized labor? A.—Yes; I have always considered that organized labor, although any direct pecuniary advantage that may arise from it may be very problematical, has the effect of bringing the men into better relations with each other by means of the association.

Q.—Has it any tendency to improve the moral character of the men? A.—Yes; it has a good tendency on the moral character of the workmen; it has invariably a good tendency, so far as my experience has gone.

Q.—Do you think a man working long hours and employed on hard work has a greater temptation to use intoxicating liquor than a man who does not work such long hours? A.—Most decidedly so. I desire to say here, in addition to my first statement in regard to centralization and monopoly, that the question of short hours is an important question to-day. We are suffering to-day, not from any stringency, or from any want of anything in the line of protection. We are suffering right along the line, and have been since I have ever been connected with labor, on the surface, and the effect is that we have increased the facilities of production year by year, and I consider that the adoption of the eight-hour system would very largely remove the grievances that now exist in the ranks of labor. I am, moreover, further convinced that even with eight hours' labor we can produce a surplus, and that is one of the ways, I feel that labor can participate in some of the products it produces.

By Mr. HEAKES:—

Q.—Has not the introduction of machinery cheapened production to such an extent that the hours of labor might be profitably shortened? A.—Certainly, and

that the hours of labor might be shortened every time you simplify production. To illustrate this point let me give an example: Here is a line of business requiring a given amount of labor; some genius introduces a machine into that particular business that does the work of twenty men with ten men. There are those ten men in that business crowded out by that machine, and they have to go and glut the supply in some other trade, and yet they do not at all participate in the simplification of the production in their line, simply because the hours of labor continue the same while the amount of manual labor required to produce the same results has been diminished by one-half.

Q.—Then you think the working people have not derived the benefit from the introduction of machinery that they should have done? A.—I think they have not.

By Mr. ARMSTRONG:—

Q.—Do you think the purchasing power of a dollar to-day is as great as it was ten years ago? A.—I believe it is—even greater, in some lines. I think with the very abundant harvest we have had this year that provisions and other products are cheaper perhaps than they were ten years ago. But you might put the question in another way. Is the power of the working classes to purchase those necessities as great as it was ten years ago? I believe it is not. I believe the volume of employment given for the production of certain results has very greatly decreased in the manual labor line, and if you have an offer of cheap provisions for \$1, and you have not \$1 with which to buy them, it would be no advantage.

By Mr. HEAKES:—

Q.—Do you think employment was more constant for laboring men ten or fifteen years ago than it is now? A.—I do. If the same conditions continue for ten years more I think that employment is more constant now than it will be at that time.

By the CHAIRMAN:—

Q.—When did the price of labor increase? about what year? A.—I do not know that the prices of labor have increased.

Q.—Is it the same as it was twenty, thirty or forty years ago? A.—I do not know. In my particular line I can give you the particulars.

Q.—I am speaking generally? A.—I think there has been an increase in wages. Q.—Let us begin at the beginning of the century, 1800. What were the rates of wages then as compared with the rates now? A.—They were very much less. The simpler mode of living of the working classes needed very much less.

Q.—Where a man earns \$1 to-day, what would he have received at that time? A.—I do not know; I have not considered that. At that time the purchasing power of money was greater.

Q.—I am asking you, have you noticed in the beginning of the century, say 1800, what a man who is getting \$1 a day, would have then received? A.—I suppose not more than half of it, perhaps. But we would not wish to place working men to-day in the same position.

By Mr. HEAKES:—

Q.—How long ago is it since workingmen were permitted to join in trades unions? A.—Since 1872. We had arrests here in 1872.

Q.—Do you know when the conspiracy laws were repealed in Great Britain? A.—Prior to that.

Q.—How long ago; tell us within a few years? A.—May be two, or three, or four years. In 1872 we simply adopted the law then in existence in England.

Q.—What was the condition of workingmen under the old conspiracy laws? A.—They could not combine.

Q.—Suppose they united with a view to increasing their wages, what would be the effect under the conspiracy laws? A.—The effect would be as it here, that they would be arrested and taken down to prison.

Q.—Is it not a matter of fact that many men were placed in prison? A.—In that particular case to which I refer, we had a number in prison here.

Q.—Previous to the repeal of the conspiracy laws in Great Britain, is it not a matter of fact that many people were imprisoned for participating in trade movements? A.—Yes.

Q.—After the repeal of the conspiracy laws, did not workingmen obtain an increase in wages? A.—Yes; there has been a very steady increase since.

Q.—It was after their freedom was given them that they were able to get the increase of pay? A.—Yes.

Q.—Do you think the improvement in the condition of the working people goes much farther back than the repeal of the conspiracy laws in England? A.—I think all through this century, from its commencement, there has been a steady and constant improvement in the condition of the laboring masses, chiefly through persistency in organization, and the assertion of their inalienable right to meet together and consult their own interests.

Q.—Have you noticed that the improvement has been very marked since the repeal of those laws? A.—Yes. In this city organization was commenced at that time, and I was active in promoting the establishment of the first Trades Assembly here, and I believe the first that ever existed in Canada.

—  
 AUGUST EICHHORN, Merchant and Manufacturer of Cigars, Toronto, called and sworn.

By Mr. HEAKES:—

Q.—Are there many men employed in the manufacture of cigars in Toronto? A.—Quite a few.

Q.—What would be the average earnings of cigar-makers in Toronto? A.—About \$8 or \$9 a week.

Q.—Do they work by the piece or day? A.—Piece-work.

Q.—Their earnings depend on their proficiency? A.—Yes.

Q.—How much per thousand are they paid? A.—The lowest we pay is \$6.50.

Q.—Do you employ any females? A.—Yes.

Q.—Do you consider their work is equal to that of men? A.—We pay them the same wages.

Q.—The class of goods they manufacture is as good as that made by men? A.—Every bit.

Q.—Are there many females employed? A.—Not many here.

Q.—Do they work in the same room as the men? A.—Yes.

Q.—Do you take many apprentices to the trade? A.—I have none. I have not had any for the last two or three years.

Q.—Are there many girls or boys employed in the cigar factories? A.—There are always a certain number employed to do inferior work, such as stripping tobacco.

Q.—At what age are they taken in? A.—It is according to the statutes of the country. Now they are not let in under a certain age.

Q.—Do these children come with the view of learning the trade? A.—No; I do not think so.

Q.—Have they an opportunity of learning the trade? A.—It depends on themselves. If they are adapted to it, and behave as children should behave, very likely they are put on learning the trade if they wish.

Q.—What wages do those earn? A.—From \$1.50 to \$3.

Q.—Take a boy or girl, how long would it be from the time they commence this inferior work before they are able to earn higher wages? A.—They would have to pass an apprenticeship of four years during that time.

Q.—Suppose they begin at \$1.50, how long would it be before they earn \$3? A.—It depends on themselves.

Q.—Which class of labor do you prefer, male or female? A.—Well, I have not given that question any consideration. We find they are both equally good, and I do not think we have ever preferred one to the other, as long as they do their work properly.

Q.—Do you use the domestic tobacco for manufacturing cigars? A.—No.

A.—I have not a doubt of it. It all depends on the quality, on the seeds, and on the soil where it is raised.

Q.—You have never made experiments with that domestic tobacco? A.—There is simply none in the market.

Q.—Is it raised in any part of Ontario to any extent? A.—Yes, I think about Chatham and that neighborhood it is raised.

Q.—In the manufacture of cigars you have a good deal of waste? A.—Quite a quantity.

Q.—What becomes of it? A.—It is generally shipped to Europe.

Q.—Do you ship any to Quebec? A.—No.

Q.—Do you know if there are any cigars manufactured in Toronto in private houses? A.—None that I know of.

Q.—Are separate conveniences provided for your male and female operators? A.—Yes.

Q.—Can a woman make as many cigars in a day as a man? A.—Yes; every bit.

Q.—Where do you find your principal market? A.—We find the principal market in the cities at present. In Scott Act counties there is no market at all.

Q.—The Scott Act does not agree with cigar-making? A.—No; there is no market at all, or very little, in Scott Act counties.

Q.—Has the Scott Act had an appreciable effect on the cigar trade? A.—Yes; considerable. The consumption in those counties has been reduced more than two-thirds.

Q.—What class of cigars do you find are most saleable in cities? A.—The bulk of them are those which retail at 5 cents each.

Q.—How much a thousand can those be manufactured for? A.—From \$25 to \$33.

Q.—Do you find any large demand for the better quality of cigars? A.—Yes; it is just commencing now. It takes the old stock to be run out.

By Mr. KERWIN :—

Q.—Do you employ union men in your establishment? A.—Yes.

Q.—Have you ever employed non-union men? A.—I never put that question to my hands.

Q.—Do you not think union men are more reliable than non-union men? A.—No; I do not. I do not find any difference. I never ask that question when men come to me for work. If I have work I give it without asking whether they are union or not. If a man does his work properly it does not concern me whether it is a union or non-union man.

Q.—Have the cigars and boxes the blue label on them? A.—They have, I suppose. We have all union men in the shop.

By Mr. HEAKES :—

Q.—You have not had any difficulty? A.—No; not of late years.

Q.—You do not make any difference between union and non-union men? A.—No; it would not be fair. One man has to make a living as well as another, and if a non-union man comes in and they convince him it is better to join the union I have no objection.

By Mr. KERWIN :—

Q.—Is it not an advantage to have the blue label? A.—It is in the cities.

WILLIAM THURSTON, Boot and Shoe-upper Manufacturer, called and sworn.

By Mr. HEAKES:—

- Q.—Is your place of business in Toronto? A.—Yes.  
 Q.—Do you employ many hands? A.—Fourteen in all, with my sons.  
 Q.—You confine your business entirely to the manufacture of uppers? A.—Yes.  
 Q.—What wages will the men earn in that class of work? A.—I pay one of my cutters \$10.50 and another \$9 a week. I have at present only two besides my sons.  
 Q.—How many hours will they work in a week? A.—Their hours are nine and a-half hours a day, and on Saturdays, in winter, from 7:30 to 4, and in summer from 7 a.m. to 12.  
 Q.—This \$10.50 a week, is that the earnings of a man working until 12 o'clock on Saturday? A.—Yes; that is what I pay them. They work nine and a-half hours a day, and from 7:30 to 4 on Saturdays in winter.  
 Q.—Are there any women employed in your business? A.—Yes.  
 Q.—What wages can they earn? A.—Some of them from \$4 to \$7 a week ; sometimes more is earned by those who are on piece-work.  
 Q.—Do they work the same number of hours as the men? A.—No; they work from 8 to 6, and from 8 to 4 on Saturdays in winter, and 8 to 12 in the summer months.  
 Q.—Do they work in the same room? A.—No.  
 Q.—Separate rooms? A.—Well, it is all one room, but it is divided off. The men work at one end of the room and the women at the other.  
 Q.—Separate conveniences? A.—No, sir.  
 Q.—Do you not consider that using the same convenience has an immoral tendency? A.—No; not in my place, because we have a key, and no two could be there while the key is here. There could be only one there at a time.  
 Q.—Have you had any protests from people in your employ concerning these conveniences? A.—No.  
 Q.—Do you take any young children to work? A.—No.  
 Q.—Any apprentices? A.—No.  
 Q.—What is chiefly the occupation of the women? A.—Running the sewing machines.  
 Q.—Have you steam power? A.—No; I have a gas engine.

By Mr. ARMSTRONG:—

- Q.—Is \$4 to \$6 a week for young women operating sewing machines an average wage in other shops? A.—The lowest I pay is \$4, and sometimes the best hands, when we are busy, will earn as much as \$8. It is generally from \$4 to \$6.50; I do not think the average will be more than \$6.50.  
 Q.—Is there a regulation bill of prices among the shoemakers in Toronto?  
 A.—I do not know anything about the shoemakers. I am not a shoemaker, and only supply the trade with uppers.

P. FREYSING, Manufacturer and Importer of Corks, Toronto, called and sworn.

By Mr. HEAKES:—

- Q.—Where is your place of business? A.—On Queen street east, Toronto.  
 Q.—How many hands do you employ in the manufacture of corks? A.—In the whole establishment there are twenty-five men.  
 Q.—Do you manufacture all classes of corks? A.—Yes.  
 Q.—Do you manufacture anything else besides corks? A.—Yes; we manufacture life-preservers—that is about the only thing additional.  
 Q.—Do you employ men, boys or girls on your work? A.—Men, boys and girls.  
 Q.—At what age do you take boys and girls? A.—I never take them less than fourteen years, but I think I have one at thirteen. I always make it a point to ask the age of a boy or girl.

Q.—Do those boys or girls work machines? A.—Yes; partially.

Q.—What class of machines do they work on? A.—Those specially adapted to the business.

Q.—A machine for punching corks out? A.—Yes.

Q.—Do many of them get hurt in your shop? No; not very often.

Q.—Have accidents occurred to those children? A.—I have no children.

Q.—Do you consider a boy of thirteen a child? A.—I have only one; fourteen is our limit as to age. No accident has occurred, except cutting their fingers.

Q.—Have the accidents been such as to cut their fingers off? A.—Not yet.

Q.—What wages do those boys and girls earn? A.—There are no boys and girls who understand the business. If we take them on we have to teach them. When we take them on we give them \$3 a week. We very seldom give \$2.50. If we find them capable we keep them on, but we have a good deal of trouble in getting persons who are able to do the work. They work perhaps a year and then they get the notion to go away. We have some who have worked pretty steadily, however. As regards girls working on machines, I can take any girl of eleven or twelve and put her at the work, but I do not do so, but employ girls from eighteen up.

Q.—How long does it take a boy or a girl to become proficient at the work? A.—We use girls only for feeding machines; other girls are used on certain machines. Then I have men who have a little knowledge of the business and boys from sixteen to seventeen, who have learned their business and are working in my shop. If the boys are slow they will not stop in my shop very long.

Q.—What amount of money can a man earn? A.—Eleven dollars a week.

Q.—I suppose he has charge of the whole of the machines? A.—He has charge of his own machine.

Q.—Do the boys and girls look after their own machines? A.—My brother is superintendent of the establishment. The boys and girls are not capable of attending to their machines; it takes a practical man to do so.

Q.—How many factories are there in Toronto? A.—One.

Q.—Only your own establishment? A.—Yes.

Q.—Are there many in Ontario? A.—There are two small cork mills, one in Hamilton and one in St. Catharines, but they have not the same capacity as I have in my establishment. There is a factory in Montreal.

Q.—Is the business increasing or decreasing? A.—It does not increase.

Q.—Can you give us any reason why it does not increase? A.—I cannot. There are always some people who try to invent and substitute some article for corks. In one instance they succeeded so far as regards soda-water bottles, and they ruined my business entirely with soda-water manufacturers, at all events to the extent of 90 per cent. There is competition from the other side sometimes, and it is very keen at present.

Q.—Is there any duty on American corks? A.—Yes; but all our material is free.

Q.—Is the duty not sufficient to protect the Canadian manufacturer? A.—We are satisfied with it as it is.

Q.—You think you can compete successfully with the American manufacturers? A.—Yes; so long as business is done on a good business foundation, but if they come here and throw in surplus stock, which they sell for prices that will not pay for the cost of the goods, you cannot meet that competition. There are one or two large houses that have surplus stocks made up and which they get rid of here, and it does not take a great quantity of goods in our line of business to fill up the market. Some times you can buy corks for  $4\frac{1}{2}$  or 5 cents a gross, and you can fill up a great many places with \$1,000 worth. Still, we do our best to keep the trade here.

Q.—Is there much business done in the manufacture of life-preservers? A.—No; very little.

Q.—Do you manufacture the life-preservers, or do you supply them from makers? A.—We manufacture life-belts for the Government life-saving stations. We began to do so last year. We have furnished six or seven stations.

By the CHAIRMAN :—

Q.—Has the factory inspector been around at your place? A.—Yes; several times.

Q.—Was he satisfied with what he saw there? A.—In every respect he was satisfied.

By Mr. ARMSTRONG :—

Q.—Do you convert the cuttings of the cork into anything? A.—No; the refuse we burn.

Q.—Do you sell the cuttings? A.—We did once, but it was so much trouble it did not pay; we had to do so until we could build a large furnace in which to burn them.

Q.—How long has your establishment been in Toronto? A.—We came here in 1875, but we commenced to manufacture in 1880 or 1881.

By Mr. HEAKES :—

Q.—Have you separate closets for boys and girls? A.—We have closets for the girls, closets for the men and closets for the office.

By Mr. ARMSTRONG :—

Q.—Are the wages in your establishment paid weekly, fortnightly or monthly? A.—They are paid every week. The girls work on piece-work commencing at half-past eight and working till dark. Some work until 12 o'clock; the boys do not work so long. They receive \$7 per month for the work they do, but at first they are not worth anything.

GEORGE VALIANT, of Turner, Valiant & Co., Shoe Manufacturers, Toronto, called and sworn.

By Mr. ARMSTRONG :—

Q.—How long have you been engaged in the business of shoe manufacturer? A.—A little over five years.

Q.—Do you employ many men in your establishment? A.—We employ from thirty to forty, according to the season.

Q.—Do you employ many men? A.—Yes; the hands are about equally divided into males and females.

Q.—Have the operatives a bill? A.—There was talk of that at one time, but we fixed the difficulty more satisfactorily to the operatives in our own way.

Q.—Will you tell us the wages of a first-class operative on kid work? A.—It depends entirely on the ability of the operative. The wages will range for a good operative from \$5 to \$8 a week?

Q.—Do you employ many small girls? A.—There are a few, say two or three, who assist the operatives.

Q.—In what branch of the trade are the girls employed? A.—Running sewing machines altogether.

Q.—An operative does not do the pasting? A.—No; a paster is not quite an operator.

Q.—Do the girls do the pasting? A.—Yes; and the tacking.

Q.—What wages do they earn? A.—They will earn probably \$2 or \$3 a week.

Q.—Is there a uniform bill between the factory men in all the factories in Toronto? A.—I do not know. I know we are paying what is called the union bill of wages to the men.

Q.—Are there many boots coming up in stock from other Provinces? A.—Yes; a great many are brought from the Maritime Provinces, that is, goods of special lines.

Q.—The finer goods are manufactured here, west.

Q.—Are any goods imported from the other side of the line? A.—Yes; very often goods are imported.

Q.—What kind of goods? A.—A grade of shoes not made on this side, owing to the inability of the manufacturers to buy the stock and pay the duty and compete with the American manufacturers, because the material used is all of a superior grade and comes from the other side, and on it 25 per cent. duty is charged. Under these conditions we cannot compete with the American manufacturer of those shoes, because they have the advantage in wages, and of course, they have a larger market.

Q.—Is there any understanding between factory proprietors as regards prices?  
A.—In what respect?

Q.—As regards the rate of wages to be paid or the prices at which the goods shall be sold? A.—Do you mean a combination of manufacturers?

Q.—Yes. A.—There may be, but we do not know it.

Q.—Have you had any labor troubles in your establishment? A.—No; not lately—never, I think, on account of wages; we had some trouble once, and that was on a question of the arrangement of the bill of wages, not on the amount paid.

By Mr. McLEAN :—

Q.—What can a man running a sewing machine make? A.—We have not sufficient work on that machine to keep him employed. He works a machine and does other work.

Q.—Do you employ lasters? A.—Yes; the amount they earn depends on the ability of the lasters.

Q.—What do they make on an average? A.—A laster will earn from \$9 to \$10 a week.

Q.—In order to earn that sum, will they have to work ten hours a day? A.—He can spend ten hours a day in earning \$10 a week.

Q.—Do you mean ten hours in the factory? A.—They work in the factory, but they do not work ten hours a day, as a rule.

By Mr. HEAKES :—

Q.—What class of goods come free from Lower Canada? A.—Heavy and common goods.

Q.—Can you manufacture shoes here to compete with them? A.—No; wages are lower there.

Q.—It that the only cause? A.—No; they have a market there,

Q.—What is the difference, or can you tell us the difference in wages between Toronto and Montreal? A.—I could not give it.

Q.—You said just now the Americans had an advantage in wages in the manufacture of fine goods. Can you tell us the difference in wages in the case here; it depends altogether on the arrangements of the manufacturers with the men—that applies specially to a certain grade of work.

Q.—If the wages in Boston were the same as in Toronto, could you manufacture that class of fine goods successfully? A.—I would not like to answer that question definitely, because in my opinion we have not the same class of workmen here, as a rule, that they have there—not the skilled workmen they have on the other side.

Q.—Do you take apprentices in your shop? A.—No.

Q.—Is it necessary for a man to be a skilled workman to work at the boot and shoe trade. A.—Not by any means; no.

Q.—Shoemaking is taught in the factories? A.—No; not in our factory. It is not taught in the factory, as a rule.

Q.—Is factory work or the demand for factory-made boots and shoes on the increase? A.—Yes; I think it is.

Q.—What class of goods are made by hand now? A.—That which is known by custom work only. They are made to order.

Q.—Is there the same quantity of that work done now as there was ten or fifteen years ago? A.—No; I think not, owing to the introduction of a machine for making a shoe similar to a custom-made shoe.

ago? Q.—Are the factories turning out a better class of work than they did ten years ago? A.—Yes; I think they are, in Canada.

Q.—Has that anything to do with the decreased demand for custom work? A.—No; I think it is more owing to the machine I have just mentioned.

Q.—Do you provide in your factory separate conveniences for men and women? A.—Yes.

Q.—Do they work in separate rooms? A.—Yes.

By the CHAIRMAN :—

Q.—What do you think is the proportion of custom-made shoes sold now as compared with factory-made? A.—I do not know.

Q.—Have you any idea? A.—I have not any idea of the whole product.

By Mr. ARMSTRONG :—

Q.—Are there many machines in Canada on which royalties are paid? A.—We have a number of them.

Q.—Where do they come from? A.—They come from the United States.

Q.—Are there many machines on which the royalties have expired? A.—Not that I can call to mind.

Q.—What is the difference, if there is any, between the prices paid in factories in Toronto and prices paid in Hamilton for similar classes of work? A.—I think there is very little difference.

Q.—Which has the advantage, in your opinion? A.—I think Toronto has it.

JOSEPH FIRSTBROOK, Box Manufacturer, Toronto, called and sworn.

By Mr. HEAKES :—

Q.—Your factory is in Toronto? A.—Yes.

Q.—Do you employ many men? A.—We average between eighty and ninety.

Q.—Do you confine your business altogether to box-making? A.—No; we do some carpenter work and make some telegraph supplies.

Q.—Do you employ any boys? A.—Yes; some.

Q.—What work do boys principally have to do? A.—As a rule, they take away from saws, feed our nailing machines, and do such work as that.

Q.—How old would the boys be who take away from saws? A.—We have three boys between twelve and fourteen; the others are older.

Q.—Do boys between twelve and fourteen carry lumber from the saws? A.—No; they are working on nailing machines.

Q.—Does it require much skill to be proficient in box-making? A.—No; I do not think it does. We changed our staff last May, and I think a month afterwards we were doing our work as successfully as with the old staff, and since then I think we have done it more successfully and with fewer mistakes.

Q.—What wages do box-makers earn? A.—From 18 to 21 cents an hour. Some of our machine box-makers, unskilled men, get from 15 cents to 25 cents an hour.

Q.—Is there a uniform rate of wages among the box factories of Toronto? A.—I don't know about the others, but there is not in ours.

Q.—No understanding as to what manufacturers usually pay? A.—Not in our shop.

Q.—Have wages increased or decreased during the last twelve months? A.—They have decreased with us, that is, wages paid strictly to box-makers. The average of wages to our employés has not increased.

Q.—Was the decrease in wages the cause of the change in your staff? A.—No; I came from dinner one day at 1 o'clock, and I found that sixty or seventy men had left the shop without giving any reason or intimation of their action. That was the reason of the change of wages in our shop.

Y.—The hands you took on to replace those who left, you took on at lower wages?  
 A.—Some we did, and to some we paid higher wages.

Q.—The wages have not increased? A.—I think the average of wages is fully as high as it was a year before we changed our hands, although it is graded more conveniently.

Q.—The box-makers of Toronto are organized into an assembly of the Knights of Labor? A.—I have heard so.

Q.—Had that anything to do with you changing your hands? A.—Yes; I presume it had. I speak from what I hear.

Q.—Do you object to your hands belonging to a labor organization?—A. Not at all; I never have.

Q.—In what way did the formation of this assembly affect your business? A.—It did not affect our business.

Q.—In what way was it responsible for your changing the hands in your factory?  
 A.—About an hour after our men struck a deputation of three waited on us and said there was a non-union man working in our shop, and if we discharged that man they would come back.

Q.—Was that the only reason? A.—The only reason given to us.

Q.—Was any offer made to settle your dispute by arbitration? A.—No.

Q.—Both parties stood out? A.—I think twenty-four hours after the men went out we had their places filled.

Q.—You had no difficulty in obtaining help? A.—Not the slightest.

Q.—What wages do carpenters earn in Toronto? A.—I do not know much about carpenters. We pay 20 to 25 cents an hour to those we employ. If we took advantage of the labor strike, I suppose during the winter we could save from \$100 to \$200 a week.

Q.—Is the supply larger than the demand? A.—Yes; especially of unskilled men.

Q.—Do you find any difficulty in obtaining skilled men when you want them?  
 A.—Our business does not require specially skilled men.

Q.—What wages do machine hands earn in Toronto? A.—Our hands earn from 18 to 25 cents an hour.

Q.—Do they have constant employment? A.—We are working this month forty-four hours a week.

Q.—Is the factory open all the year? A.—Yes.

Q.—In manufacturing telegraph supplies, do you require specially skilled labor?  
 A.—Not to any great extent. Our machines are automatic as regards feeding.

Q.—Are they attended by men or boys? A.—Some by men and some by boys.

Q.—Have you found accidents occurring to boys working about machinery?  
 A.—No.

Q.—Have you had any serious accidents? A.—We have had only one which I can think of, in which a boy was unfortunately killed, though it might have happened anywhere.

Q.—Is the machinery properly protected? A.—I judge so. When the inspectors visited the factory they noticed one place—a hole of 16 or 18 inches where we pull lumber up. We had a piece of scantling down by the hole, and Brown said we should put a trap-door on. Our experience taught us that our plan was best, but we put on a trap-door. Besides this he suggested that we should board up a place where a belt came through, and we did so. These were the only things they found fault with.

Q.—Have you known many accidents to occur through putting on belts while machinery was in motion? A.—None with us.

Q.—Is it the practice to stop machinery or slow it off when putting on belts?  
 A.—It depends on the position of the belt. Of course, if it was a large belt we would slow down, but there are some small ones which slip on easily, and we do not always consider it necessary to shut down for those.

Q.—Whose duty is it to put on belts when machinery is running. Is it the duty of the men or of the boys? A.—It is the duty of the men, and the boys have so

business with it. They have strict instructions to keep away from the belts. All the accidents in our factory have been due either to carelessness or to parties interfering with machines who have no business to do so.

By Mr. KERWIN:—

Q.—When the factory inspector visited your place, did you go with him yourself?  
A.—I did.

Q.—Did he come to the office for you, and tell you who he was and state what was his business? A.—I think there were three of them. They came to the office and told us their business, and I went with them through the factory.

Q.—Were they careful in examining everything? A.—They examined so minutely that they noticed this belt that I speak of, which is in an out-of-the-way place, where we do not see it once a week.

Q.—Have box manufacturers in this city any organization? A.—We have no connection with any.

By Mr. HEAKES:—

Q.—Did not some of the employers request the men to organize? A.—If they did, we had nothing to do with it.

Q.—Did you ever hear that such was the case? A.—I do not think I have. When the organization was formed we were favorably impressed with the objects of the Knights of Labor, as set down in their constitution and by-laws, and while we did not directly, we did indirectly, encourage them to organize, because we certainly were sympathizers with organized labor, although we may not have that reputation now. Our experience of it in 1887 was not very favorable to that view. In fact, our experience was that organized labor was organized tyranny. It was in our case, at least.

Q.—Do the men differ in their opinion? A.—I presume they do, or they would not have organized, though many of them to-day have the opinion we have.

By Mr. ARMSTRONG:—

Q.—At the time the men organized, were their wages raised? A.—Yes; their wages were raised. They had the whole thing in their hands in 1887; they ran our business, and we had nothing to do with it.

Q.—Was there a raise all round? A.—Only among the box-makers and sawyers. They were determined to have fifty hours a week. I was one of the parties who met the deputation, and I proposed we should give all our men, including laborers, who were not in their assembly, nine hours a day, instead of fifty hours a week all round. That did not suit them at all; they must have fifty hours a week, and the laborers could do as they liked.

Q.—What was the percentage of the raise of wages? A.—I have not looked into that.

Q.—You have no idea what the percentage of increase was? A.—I think it was between 20 and 30 per cent.—that is, taking into account the reduction of the hours.

Q.—Were union men working piece-work? A.—Some of them were.

By Mr. HEAKES:—

Q.—Do you remember the reasons assigned by the manufacturers for requesting the men to organize? A.—No; I never heard that they did request them.

Q.—Did you hear that the reason assigned was that if the men were organized, there would be a scale of wages in every shop? A.—No; I did not. I have heard hints about it. There are several box-makers in Toronto, but box-making is only a small portion of their business, and to us, who employ a great many more box-makers than all others together, it is a matter of great importance.

By Mr. McLEAN:—

Q.—When the men were organized, did the price of boxes go up? A.—Yes; it went right up.

Q.—What did the manufacturers say was the cause of the increase? A.—The box-makers blamed the assembly of the Knights of Labor for shortened hours and raised wages, and for interfering with the running of their business. We had to be responsible to our families and creditors while they were running our business.

Q.—What reason did manufacturers give for raising the price of boxes? A.—That wages had increased.

Q.—Was anything said about the price of lumber? A.—The price of lumber went up 50 cents a thousand that year, but very little was said about that. It was owing to the advance of wages and the shortening of the hours that firms who had been dealing with us bought boxes from Montreal and other places. We could pay as high wages as anybody else on equal terms; but we cannot work fifty hours a week and compete with those who work sixty and pay less wages than we do.

By Mr. ARMSTRONG :—

Q.—A high rate of wages does not prevail at the present time? A.—I think our average throughout the shop is quite as high as in 1887, though our wages to box-sawyers and box-makers may not be quite so high.

Q.—At the time of this trouble in May last you say the men wanted the discharge of a non-union man? A.—A man who I understood had been a Knight of Labor, and not satisfied with the way they did business, I believe, had left that society.

Q.—Has your firm ever made a practice of reducing men who were prominent in labor organizations from good to low work? A.—Not knowingly. I asked at this time if the firm had made any difference between union and non-union men, and the reply was, no. I said to this man about whom the trouble was: "Have any of the firm ever said anything to you, either directly or indirectly, that they wanted you to help them to get the Knights of Labor out of the shop." He said: "No." I said: "Have you said anything to the Knights about getting them out of the shop." He said: "No, I am perfectly willing to go before those men and say I did not say any such thing." We let ourselves right down in that trouble. We did not even take the stand we could as men have taken, because we felt the men had been misled, and their feelings had led them away.

Q.—Was there a man brought in from the country and set to work at a saw who had a portion of his finger taken off? A.—There were two men; one of them was put on a dove-tailing machine and had been working on it for some time and appeared to know all about it; he took a stick to knock some dust off, which was entirely unnecessary, and the stick caught and drew in part of his hand.

Q.—He did not know any better? A.—Yes; he did know better. He was like a good many others. We had a man killed a few years ago who had been accustomed to machinery all his life, and he did a very foolish thing. We had a belt, and when we wished to take it off we stopped the engine and turned it back, and the belt slipped off. This man was a foreman, and I presume he thought he would save time and go down stairs and pull the belt off. The foreman upstairs heard the belt striking on the floor and came down, stopping it in the usual way. He was standing on the floor running the belt and saw this man lying on the floor dead. He had gone down to take off the belt and had acted very carelessly. As for accidents occurring to inexperienced men, we have all to learn, and ever since we have watched our men. During the last eight or nine months we have had fewer accidents, the work is done better and we have no trouble. The men are better off than they were in the places they came from and our business is in more satisfactory form. We have no Knights of Labor now. We had so much trouble with them that if I were guaranteed the same amount of trouble for the next two years I would close down the shutters and go and work for somebody else.

By Mr. HEAKES :—

Q.—Have you satisfactory work now? A.—Yes; 1887 was the best year we have had.

Q.—The accidents you have had have occurred through the carelessness of the men? A.—Most of them; though I do not think there is a wood-working shop in the city which has more than half the number of machines we have, and we have a large number of machines. Other places have had accidents, but we have not had one for months. Taking the average of last year, I do not think it was any greater than, if as great as, in former years.

By Mr. ARMSTRONG :—

Q.—Is not the proper way to stop the machinery when a belt is put on? A.—Under certain circumstances it is, but in others it is quite as safe to put the belt on while the machinery is running slowly.

Q.—Have you had any other fatal accidents than the one you have mentioned? A.—The only case of a man being killed was the one I speak of.

Q.—Have you the same number of hands now as before the strike? A.—I judge about the same. Our business is larger now than it was then.

Q.—Would it surprise you if one of your old hands should make affidavit that accidents take place about twice a month? A.—I should simply say the man was a liar. I can prove it. I should not be surprised if they should say accidents occur daily, or something of that sort. I have heard of some of our former employés

saying they occurred every day, and so on. I should be surprised to hear anybody tell me that we have an average of two accidents a month, or an accident in two months, and I think when you consider the fact that we have a great many more machines than any other wood-working establishment in Toronto, you must make

some allowance for that.

The Commission then adjourned until 10 a. m. the following day.

JAMES R. BROWN, Factory Inspector, Toronto, called and sworn.

By Mr. HEAKES :—

Q.—Have you completed the inspection of factories in Ontario? A.—Well, we have completed what may be termed a preliminary inspection. There are certain forms required in connection with the Act, and these forms have only been got up about the latter end of the month.

Q.—Has each inspector a separate district? A.—Yes.

Q.—What is your district? A.—The central district.

Q.—Has the inspection which has just closed been an inspection such as was contemplated by the Act? A.—I may state that our instructions were to visit the larger places, with the view of ascertaining how far they were complying with the requirements of the Act.

Q.—It has not been a close scrutiny of the places, has it? A.—Well, of course, I have endeavored, as much as possible, to ascertain if everything was in accordance with the Act, as far as practicable.

Q.—What was the general condition of the factories which you have been through yourself? A.—I may say that under the Act we take a note of the time worked by the females and children, and also with reference to closet accommodation, fire-escapes, fencing of belts and gearing, and hoists and elevators. These are the principal things.

Q.—Did you find in many places where women were employed that they were working longer than the Act contemplates? A.—Not in a great number of places.

Q.—What were the longest hours for which you found women employed? A.—Sixty-six hours a week.

Q.—Did you find any opposition to shortening the hours? A.—No; in each case where I found them working that time the employers stated that they were not aware the Act had been in force, and they were waiting for some formal intimation about the matter. Of course, they stated they would comply with the Act and reduce the hours of labor, so as not to exceed sixty hours.

Q.—Did you find many factories in which women were employed where they worked less than sixty hours a week? A.—Yes; in the majority of factories women do not work as long as men, with the exception of woollen mills.

Q.—And cotton mills? A.—Yes; though I have only one cotton mill in my district.

Q.—As to separate conveniences for men and women, how did you find that? A.—The Act requires that there shall be separate closets and separate approaches, and also that closets shall be private. I think in about 10 per cent. they did not come up to the requirements of the Act, either in the closets being used promiscuously by males and females, or in having no closets, or in having the same approaches.

Q.—Did you find in many shops, where separate conveniences were provided, that men and women had to pass through the same room to them? A.—In some cases the closets they had to go to were in the basement of the building, and in some cases on the one floor, the closets being at the end of the building, and used promiscuously in some cases. I think mostly, however, that they were outside of the room in which the employes worked.

Q.—Did you find many cases where men and women might be in sight of each other in going to the closets? A.—In some of the places in Toronto women could be seen going in, but there were dressing-rooms in connection with the closets, and they required to go in there at any time to dress and undress, and wash their hands, if necessary.

Q.—Where you found that the requirements of the Act in this respect were not carried out, did you find willingness on the part of employers to meet the provisions of the Act? A.—In the larger places I did. In smaller places they thought it was rather hard. They were informed that it was in contravention of the Act and must be remedied.

Q.—Did you find many places where men and women were working together in the same rooms? A.—Yes.

Q.—Is that in contravention of the Act. A.—No.

Q.—Did you notice in those places any large percentage of children? A.—Yes; in some of them—in the cotton mills and some woollen mills, in cigar factories and knitting works, and some others.

Q.—Were there many of those children below the age designated by the Act? A.—Well, I found about forty girls under fourteen. Girls are not allowed under fourteen nor boys under twelve. I found six boys altogether nine years of age, and some few ten or eleven, but employers stated that when the Act was passed they endeavored to meet its requirements, and had discharged quite a number of them before we visited their establishments.

Q.—Did you find, where young children were working, there were any exceptional circumstances? A.—You mean with reference to parents?

Q.—Yes? A.—Well, in some cases we found orphans, and some few were under age. These were the only exceptions. In each case, however, they were a few months under age, but that is one of the difficulties necessarily connected with the working of the Act.

Q.—Did you find a general willingness on the part of employers to comply with the Act? A.—Yes; I only knew personally of one who complained about it. He said he did not think Government should interfere at all, and he had one hand nine years of age. That was the only case I found where there was any dislike to carrying out the Act.

By Mr. KERWIN:—

Q.—Did he refuse to carry it out? A.—No; he did not, but he thought it was a hardship.

By Mr. HEAKES:—

Q.—Have you any knowledge, speaking generally, of the average earnings of those children? A.—No; that is a matter we are not supposed to inquire into.

Q.—What was the general condition of the machinery in those places you visited?  
 A.—Well, in planing mills I noticed that as a rule there was a great want of fencing in connection with belting. This was also the case in other wood-working shops. In many of these places, too, they have no fans to take away the shavings and dust from the machines. Some, of course, have them, but the great majority have not.

Q.—Did you find that shafting was properly protected? A.—Yes; in a great many places they have not those upright shafts.

Q.—And the gearing? A.—Well, in some places the gearing is not protected at all, but I noticed in machines lately constructed they are beginning to put covers on the gearing now.

Q.—Did you find well-holes or hoists generally protected in factories? A.—In many places they are protected simply by a bar, in others by a trap-door, and in some by sliding-doors. Some are automatic, and so on.

Q.—Which is the best protection? A.—I think the automatic sort is the best. In one of those places where they have simply doors there have been two accidents where they were used. There were youngsters looking down, and not noticing a hoist was coming down it caught them on the head. In one case it nearly resulted fatally.

Q.—Do you know if the expense of putting on automatic doors is very great?  
 A.—I do not think it should be, but there are some older places where there might be difficulty in putting in automatic doors, on account of the construction of the hoist; but where hoists have been built recently there is no difficulty, and people are now beginning to put them in.

Q.—What was the general sanitary condition of the factories? A.—At the time we made the inspection it was in the heat of the summer, and I may say that, with reference to the closets, in some cases we found them very filthy, especially those which were outside in pits. For those we recommended the use of disinfectants. Some were automatic we found clean. However, we often found them stuffed up, the employer stating that to be in consequence of shavings or something of that kind being thrown into them.

Q.—Did you find many buildings imperfectly ventilated? A.—Our visit was in summer, and all buildings were open, as far as could be. Of course, this cold weather you cannot tell, but if you ask as to that you are told there is no complaint. There are some places where ventilators are used, as in factories where acid is employed for the purpose of carrying off the fumes.

Q.—As regards drainage, did you inquire into that? A.—No; there was only one place where I had a complaint, and that was from the employer himself. A city drain backed up water on his place and caused a very offensive smell. He said he had reported the matter himself, but could not get anything done, and he stated that he would like if I could get anything done in the matter. Of course, all we had to do with were employers, who alone are held responsible under the Act.

Q.—In making an inspection, did you inquire from employes or employers for information? A.—In some cases I have asked employes, but have found difficulty in getting them to say anything; in many cases where there was no one present; and latterly I have not taken any notice of the men. However, in several cases I have had complaints sent to me with reference to matters.

Q.—Did any of the employes state why they did not wish to give information?  
 A.—Well, as I understood it, they did not want it known that they had said anything to me, I suppose for fear they should be discharged.

Q.—Generally speaking, and after going through the places you visited, do you think that the condition of shops is satisfactory? A.—Well, some of them are very satisfactory and others again are not—far from it.

Q.—In what proportion of those places did you find fire-escapes provided? A.—In very few. I think the whole number of fire-escapes, counting wooden ladders and all, is some twenty. The Act requires where hands are working above the second story a fire-escape to be provided, if there are no other exits. In some cases where girls

and others were working on the fourth story I found only one stair-way and no other exit. In cases of that kind I insisted upon having fire-escapes provided, but where there is more than one stair-way exit it is in the discretion of the inspector as to whether that may be considered sufficient.

Q.—Do you find willingness on the part of employers to provide fire-escapes?  
A.—Well, in going round on this preliminary inspection I have not found any who made any objection, so far.

Q.—Have you found any establishment in which men and women are employed where the outer door is kept locked? A.—No; I have not.

Q.—In factories and rooms where young children are employed, did you find them working with the doors locked? A.—No.

Q.—Did you find many places where working people were compelled to eat their meals in the same room in which they worked? A.—In some cases employers provided special rooms for that purpose. In two or three cases employers have told me that girls would not go into those rooms, but preferred taking their meals where they worked. These were sewing girls, and on asking the reason why they did not make use of the rooms, they seemed to think there was some sort of caste in the matter and, at any rate, would not go.

By Mr. HEAKES:—

Q.—In what proportion of a number of places inspected, where a number of people were employed, did you find those rooms provided? A.—Not in a great many; I do not think in more than fifteen or twenty altogether—that is to say, special rooms.

Q.—Does the Ontario Act state that a room should be provided? A.—If ordered.

Q.—Discretionary powers are invested in the inspector in that matter, too?  
A.—Yes.

Q.—Did you find many places that were unfit for people to work in? A.—I have seen some places where they did not seem to be what I would consider comfortable places to work in by any means, and in some moulding shops I have seen what I would consider a very unsatisfactory shelter for employes.

Q.—You mean open, drafty shops? A.—Yes; where you could see daylight through; they were not hot, by any means—what one would expect.

Q.—Do your duties charge you with the inspection of other shops and factories—such as tenement house shops? A.—There is a certain provision in the Act that in those dwelling houses where no machinery is in use we are required to get a certificate before we can go into it—even if it is a factory.

Q.—Do you, in carrying out your duties, examine those shops that are commonly known as sweat shops? A.—I should consider it my duty to inspect them if they came under the Act.

Q.—Have you found many of those sweat shops where large numbers of men and women were employed together? A.—Not many. I have been informed of one or two, but on going through I found I was powerless in the matter. They did not come under the Act.

Q.—Do you not consider that those sweat shops are more injurious than large factories? A.—Of course, that is a matter on which I can hardly give an opinion. It would be only hearsay evidence, at all events.

Q.—You have no knowledge of it? A.—Not any personal knowledge.

Q.—The Ontario Act does not cover that class of establishments? A.—No.

By Mr. ARMSTRONG:—

Q.—Is that not on account of the required number of hands not being employed there? A.—They have not the required number.

Q.—In your experience, is there room for a Federal Factory Act? A.—I do not know.

By the CHAIRMAN:—

Q.—Do you know the difference of the powers of the Local and Dominion Parliament on that question? A.—I do not.

By Mr. HEAKES :—

Q.—What Mr. Armstrong wants to know is, whether it would be a benefit if there was a uniform system of factory inspection for the whole Dominion? A.—I cannot give an opinion on that question.

By the CHAIRMAN :—

Q.—Do you think a uniform Act would be better? A.—Of course, so far as the Ontario Act is concerned it would not matter.

Q.—You are asked if it would be better to have a law that would apply throughout the whole Dominion? A.—I think it would be better to have factory laws in every country in the world.

Q.—Do you consider that the same law that prevails in Ontario should be applied to the other Provinces of the Dominion? A.—I suppose it would be better if they were all under a Factory Act; I believe there should be a factory Act in each Province.

By Mr. CARSON :—

Q.—How far west does your jurisdiction extend? A.—To the county of Peel.

By Mr. HEAKES :—

Q.—How far east does your jurisdiction extend? A.—To the county of Leeds.

By Mr. McLEAN :—

Q.—Do you notify any of the manufacturers before you visit them that you are going to inspect their premises? A.—For the first visit we always notify them and tell them who we are. We are supposed to do that the first time, and of course if they demand a production of our certificate we have to produce it.

By the CHAIRMAN :—

Q.—You think you have a right to go to the factory when you like? A.—Yes.

By Mr. McLEAN :—

Q.—Have any of the manufacturers sent any of the boys and girls home when they know the factory inspector was coming around? A.—In one case only we heard that report. It was stated to have been done in one case, where the firm had two boys under packing cases while we were going up stairs and they sent them down by the hoist.

By Mr. HEAKES :—

Q.—Have you found any general inclination on the part of the manufacturers to avoid an inspection of their premises? A.—No; I have not found anything of the kind. Of course, there may be other places where they have hidden their work hands, but I do not know them.

Q.—How many hands does the Factory Act require to be employed in any place before the inspector may visit it? A.—You may visit any place to ascertain the number, but the Act cannot be enforced where the number is under twenty people employed.

Q.—In such a case as was mentioned to-night you would not have power to interfere, because there were only fourteen hands employed? A.—No.

By Mr. FREED :—

Q.—Have you found a general desire on the part of the work people with whom you have come into contact for a Dominion Factory Act? A.—No.

Q.—Would you be likely to know if such a desire prevailed among work people? A.—I have heard one or two express themselves to that effect, nothing more; I never heard anything said in the shops about it.

Q.—Have you conversed sufficiently with work people to enable you to know if such a desire exists? A.—Yes; I think so. I have heard no expression from them which regard to it.

By Mr. CARSON :—

Q.—In case you give an order to have certain alterations made in a factory, and the proprietor neglected to do so, what would be the consequence? A.—The consequence would be that he would be prosecuted.

Q.—Have you been instructed to use persuasion rather than to prosecute?  
A.—I may say that—

The CHAIRMAN.—I do not know whether you have a right to ask what his instructions are from the Ontario Government.

By Mr. CARSON :—

Q.—It is presumed that the law will be enforced, and my object in asking the question is to see if provisions are made for this enforcement. The question is, what are your instructions?

The CHAIRMAN.—I do not object to your asking a question of that kind, but if the witness does not choose to answer it, of course that ends the matter.

Mr. HEAKES to WITNESS :—

Q.—On your appointment you were given to understand that that was the law, and that the law must be enforced? A.—Yes.

By Mr. HEAKES :—

Q.—The inspector has full power to enforce the law? A.—Yes; as I understand it.

By the CHAIRMAN :—

Q.—Do you consider that under the law you can take proceedings against any violator of the law, without referring the case to the Government? A.—I would not care, in the first instance, to do so.

By Mr. HEAKES :—

Q.—What was the general condition of the working people all through the country you visited? A.—With respect to what?

Q.—With regard to their comfort, and their means of living and existing? A.—I have not been into a great many of their houses, so that I am not prepared to give an answer to that question. Of course, we usually confine ourselves to the duties required of us, but so far as I found the people they are pretty much alike all over. I think in the lumbering places, so far as my observation goes, and from what I have seen, the people appeared to be more poorly dressed than any where else. They have log houses there. I refer to the districts where there are saw-mills, and so on. I do not know what the cause is.

A. W. WRIGHT, Journalist, Toronto, called and sworn.

By Mr. HEAKES :—

Q.—Have you paid some attention to labor matters? A.—Yes.

Q.—Can you tell us some of the principal objects of labor organization? A.—It depends somewhat on the kind of organization. Trades unions, of course, are organized for the purpose of bettering the condition of the members, in the way of wages, better hours and better terms of employment.

Q.—Do you know if they have succeeded in accomplishing these objects to any extent? A.—They have done.

Q.—Are there not other objects for which workingmen combine than the advancement of their wages? A.—Yes; the Knights of Labor are organized partly for that object, but principally to bring about legislative reforms—reforms in the laws and in the systems of society for the benefit of the working classes.

Q.—Can you tell us any subjects embraced in this enquiry in which workingmen are particularly interested? A.—I think they take a little interest in all of them.

Q.—Will you be kind enough to give us your opinions in regard to the various questions covered by the Commission? Take the lien law, for instance? A.—So far as my observation goes, I would say that the lien law, though well intended, has been, to a great extent, a failure; that dishonest people can get round the lien law and avoid it, and do so, is true.

Q.—Do you know in what direction the lien law should be amended to afford protection to those whom it was designed to protect? A.—I think the lien law should cover all the monies received for the building, or work done, whether it comes in the way of rent or interest on mortgage.

Q.—You mean, after the completion of the building? A.—Yes; after its completion. I mean to say that the proprietor, or nominal proprietor, should not be allowed to alienate the property in any way from the workmen and deprive them of their wages.

Q.—In the event of the contractor failing and the property being mortgaged, would you consider that the first lien on the property should be the wages? A.—I do.

Q.—Should mechanics' or laborers' wages have priority over the mortgage? A.—I think so.

Q.—Does the present law contemplate such a measure of protection? A.—I do not think it does; at all events, it does not work out that way.

Q.—Do you know any instances where the lien law has failed to protect those who have been employed on buildings? A.—Yes; there was a case the other day in town here, in the eastern part of the city, and in that case the men would have lost their wages altogether except for the power of their organization, which compelled a settlement outside of the law.

Q.—The law would have been powerless to protect the men? A.—Yes.

Q.—Have you given the subject of arbitration any study? A.—Yes; I have done so.

Q.—Will you give us your views on that question? A.—I think a board of arbitration, or some system of authorized arbitration, would be valuable to assist the employers and employes to come to an amicable settlement, but I cannot see how the decision of the board could be made binding.

Q.—Do you not think that in the event of the employers and employes taking advantage of the board of arbitration there would be sufficient moral influence between the parties to carry out an agreement arrived at? A.—I think where the labor organization is concerned, such as the Knights of Labor or any trades unions, the men in the organization who are not directly interested would be apt to compel the others to abide by the decision of the arbitrators, but I do not see what there would be to compel the employers to obey it, except they had some great regard for public opinion. It would be a great assistance, at all events.

Q.—Do you not think it would, to a very large extent, reduce the number of strikes that take place? A.—I think it would.

Q.—Even though it would fail in some cases? A.—Yes.

Q.—Are you sufficiently acquainted with the feelings of the workingmen to know whether such a provision would be acceptable to them? A.—I think it would be acceptable.

Q.—Would a bureau of labor statistics be generally acceptable to the working classes? A.—That is one of the demands made by all labor organizations.

Q.—What benefit would it confer on the working people? A.—It would keep them informed as to the condition of their trade in different parts of the country, and it would in many ways benefit them, by giving them information that they could not get otherwise.

Q.—Then, in your opinion it would be generally acceptable by the working classes of the Dominion? A.—It would be acceptable.

Q.—Have you any knowledge as to whether the present factory laws contain all the provisions working people would like to see embodied in them? A.—I have not looked at the Factory Act for some time, but I think there are some changes that

might be necessary in it. I think when it was passed at first it was generally considered on the whole a satisfactory measure, but I think the working classes are now pretty well satisfied that the Act, so far as Ontario is concerned, has not been thoroughly satisfactory.

Q.—Have you given the subject sufficient thought to be able to tell the Commission whether a general Act for the whole Dominion or a provincial Act would give the greater satisfaction to the working classes? A.—Yes; I think it is a general demand on the part of labor organizations that there should be a Dominion Act. The labor congress meeting in Hamilton passed a resolution in that direction unanimously.

Q.—If all the local Governments passed an Act containing the same provisions, would that meet the requirements of the working classes as well as the passage of a Dominion Act? A.—I think so, if the Acts did all contain the same provisions.

Q.—Have you any knowledge of the proportionate part obtained by capital and labor in industry? A.—I do not know that labor has any.

Q.—What proportion would you consider labor ought to have? A.—One hundred per cent.

Q.—Have you ever given the subject of profit-sharing any consideration? A.—Yes.

Q.—Do you think the principle of profit-sharing can be successfully introduced? A.—It has been successfully introduced in some places. It is a very much better system than the ordinary wage system—it is much fairer—and I think that the system of profit-sharing would be more successful than a system of co-operation. Theoretical co-operation would be a better system, but I do not think it could be carried out so successfully as a system of profit-sharing.

Q.—Can you give us any example where profit-sharing has been a success? A.—There have not been many in Canada; there are quite a number in the United States. It is not introduced to the same extent in Canada. I think the Ontario Canning Company has introduced the system to some extent.

Q.—On what basis do you consider profit-sharing can be successfully introduced? A.—I do not know that any basis could be laid down that would be equally fair in all cases. Every trial would have to be made on its own basis, and it would have to be carried out according to the circumstances.

Q.—If the system of profit-sharing were introduced, what effect would it have on the employes, both financially and as regards the interest they would take in the business? A.—I would say that financially it would better their condition, and naturally they would take a greater interest in a business in which they felt they had a personal interest. It would have the effect of giving the workingmen a larger share of the profits of their labor.

Q.—It would be less wearisome? A.—Yes; and I think we would have a better quality of goods turned out.

Q.—Do you think it would have a tendency in any degree to remove the irritation between employers and employes? A.—It certainly would have a tendency to do so.

Q.—Would there not be a danger in the other direction—that if profit-sharing were introduced, the employes would become suspicious of the returns made? A.—That would be guarded against very easily, I should say, by giving them a proper insight into the working of the business, or have that done through a proper committee. Some proprietors in the United States adopted a plan of fixing a percentage that they give to each man of his wages.

Q.—Do you think working people would be willing to reduce the wages when the business was not profitable? A.—I think in every case, if employers would take workingmen into their confidence and make a frank statement, the men would be willing to stand a reduction in bad times, if they felt satisfied they would get a corresponding increase when good times came round again.

Q.—They would be willing to share the fortunes of employers in all cases? A.—Yes.

Q.—About the apprenticeship system: do you know anything about the existing state of affairs? A.—The apprenticeship system in some trades seems to work pretty fairly; in the printing trade it works pretty fairly, and in some other trades it is not so satisfactory.

Q.—Can you tell us why it is not so satisfactory in some other trades as it is in the printing trade? A.—I think it is largely because there is not the proper attention given to teaching an apprentice his trade.

Q.—Do you think, then, that if employers were bound equally to teach an apprentice his trade as the apprentice is bound to remain and learn the trade, an improvement would be effected? A.—Yes; it would be.

Q.—Do you know sufficient of the feeling among workmen on this question to state whether they would generally accept a measure in regard to apprenticeship? A.—I think they generally would accept it. I am inclined, however, to think that if we are going to keep up the standard of workmanship we will have to have

schools of technology as well as a good apprenticeship system.

Q.—And would you propose to give young boys who are learning trades a technical education? A.—I think a plan which is adopted in Montreal by the Council of Arts and Sciences is a very good one. It is a plan of having night schools, where the theoretical part of the trade is taught.

Q.—Should this technical education for the benefit of mechanics and others be supported by the State? A.—I think so.

Q.—Would you make it apply, so far as common schools are concerned? A.—I would.

Q.—Do you think any portion of that technical education should be profitable during the common school course to a boy? A.—I think our kindergarten system shows that it can be. A boy or girl is never too young to learn something that would lead up to handiwork in time.

Q.—Do you know if there is any general desire among the working classes to obtain such technical education? A.—I think among those who have given much attention to it, that is among workmen, there is that desire.

Q.—What would be the effects of this technical education, in your opinion? A.—It would improve the quality of workmanship.

Q.—Do you think workmen, generally speaking, are as well off to-day as they were fifteen years ago? A.—I think they are just about as well off to-day as they were then.

Q.—Do you think they derive the percentage of benefit from cheapened productions of machinery that they should receive? A.—No; they do not, or else they would be much better off than they were fifteen years ago.

Q.—Can you give us any reasons why the material prosperity of the working classes has not increased in the same ratio as their intellectual improvement? A.—Because all the improvements in machinery, instead of tending to the advancement of workmen, are competitors with their labor, under our system.

Q.—Do you think the introduction of machinery, while it has cheapened production materially has increased in the same ratio the employment of workmen? A.—No; it has not.

Q.—You think there are more men displaced than work has been provided for by machinery? A.—I do not think that more men have been displaced, because there is a greater production now and more men are required to carry on that production; but the benefit which the workmen receive from the improved machinery is almost nil.

Q.—Do you know what increase, or if any increase, has taken place in wages since ten years? Take the wages ten years ago and the wages to-day, and state what advance has been made in that time? A.—In some trades and callings wages have increased, in others they have not increased to any appreciable degree. In some trades that have been well organized wages have gone up. In others that are not organized

wages have not increased as they should have increased; or where men are organized, but the organization has split up into many different heads, the wages have not increased.

Q.—Do you think that the tendency to centralize capital has anything to do with the material prosperity of the working classes? A.—It has to do with their want of prosperity.

Q.—Can you give us any idea as to what means should be adopted to obtain that percentage of advantage that working people should have from the introduction of improved machinery? A.—In order to make a reply to that a long statement would be necessary. There are numerous ways in which the condition of workingmen may be improved. For instance, if we change our land system, and our system of transportation, and other systems I might name. What I mean by changing our land system is changing it so that we would give workingmen free access to the sources of wealth, and it is desirable to give them free exchange. Under the present system they have to pay to procure wealth, and then they have to pay for exchanging it. Of course, all the demands are made indirectly.

Q.—Have you any idea of the proportion of material advancement that this country has made, in say ten years, so far as the mass of the people is concerned? A.—The aggregate increase of wealth is very great.

Q.—What is the aggregate increase of wealth for the whole population? A.—When the aggregate of wealth is great and the increase of population is not so great the average increase of wealth must be great, but it does not follow that the distribution must be equitable.

Q.—Do you know any means by which the Legislature should interfere in the distribution of wealth for the benefit of the masses of the people? A.—Only by the ways I have spoken of—by doing away with those systems of monopoly—I do not mean any ordinary systems of work, because monopoly has controlled practically the circulation of the country, and the railways have controlled the distribution of the products, and then our land system is a first tax on every man's labor.

Q.—Should not all means of public conveyance be controlled by the Federal authorities—the railways, telegraph lines, and so on? A.—I think the railways and telegraph lines should be controlled by the Federal authorities, and some other things might be controlled with advantage. Monopolies, such as gas works, should be controlled by the municipalities and operated in the interests of the community, as also should be street-car lines.

Q.—Do you think that the various authorities, municipal or general, would control public conveniences on much more advantageous terms than under the present system, so far as regards advantages accruing to the people are concerned? A.—All their earnings beyond the cost of running and operating should go to the people as a reduction of their taxes.

Q.—Have you given the employment of convict labor any thought? A.—I have.

Q.—Will you give us your opinion as to the best means of employing that labor? A.—I can give my opinion as to that, although it is not generally accepted. My idea, to start with, is that the convict is sent to prison not so much for punishment as for reparation, and he should be so employed that when he leaves the prison he would be able to earn his living without having to get back again to prison, and consequently he should be taught some useful employment. But, in addition, I believe that the product of his labor should not be allowed to go into competition with free labor in the market, and the only way in which that could be done would be by employing convicts to do work for the Government, such, for instance, as making boots and shoes and other articles required by the Government. If all those articles were made by convicts there would be a great advantage. The convicts should not have the benefit of machinery, and in this way the convict would be made a better workman. Useless labor by convicts has a tendency to make them worse than when they went into prison, and the contrary would undoubtedly hold true.

Q.—Taking into consideration the opposition there is against the employment of

convict labor, do you think it would be wise for the Government to employ them in any such direction, even at a loss to the community? A.—I think it would; I am not sure it would be popular.

Q.—Speaking of the feeling among workingmen, do you think such a system would be popular among them? A.—I do not think workingmen have their minds made up as to what is the best system of employing convict labor. They feel it keenly when such labor is brought into competition with them in the market; they feel that a wrong is done to them, but as a rule they have not thought out the proper course. I know there is a great difference of opinion among them as to what is the proper remedy.

Q.—All pretty generally agree, I suppose, that placing the products of convict labor on the market is an evil? A.—That is the point on which everyone is agreed.

Q.—Supposing the Government employed those convicts in the way you have indicated and they produced a surplus of the requirements for gaols, asylums, Mounted Police and Indians, what, in your opinion, would be the best means of distributing the surplus, or to what use could you put that? A.—If there was a surplus, though I do not see any reason why there should be a surplus, because I think the Government would be able to control the production and keep it within desirable limits, but if there was a surplus I think it would be better to give it to charitable institutions than allow it to go on the market, because if not sold at a price below the product of free labor it could not be sold at all.

Q.—Have you ever given the subject of distributing the earnings of convicts among their families any consideration? A.—I have not thought much about that question. There would be a fairness in it, I suppose.

Q.—Would such a course to any extent relieve the State from the support of those unfortunate people? A.—It would, to be sure.

Q.—Have you anything you can advance to the Commission that would be of benefit, in regard to the working classes? A.—I do not know that I have anything further.

By Mr. ARMSTRONG :—

Q.—In case of trouble with the Knights of Labor do you make it a point to resort to arbitration, with a view to the settlement of trade difficulties? A.—We always endeavor to do that.

Q.—Provided a body of men act hastily, and go out without authority, what does the law of the union say in regard to a case of that kind? A.—The rules on that matter are very distinct, and it is very generally the rule of the order—in fact, I may say it is the general rule of the order—that men cannot strike until they have tried every possible means to effect a fair settlement without a strike. The law of the union now is, that if an assembly strikes without authority it loses its charter.

Q.—Have you know the men to be ordered back to work? A.—Yes; in the case you had on to-night, they were ordered back to work.

Q.—Were they accepted in that case? A.—No.

Q.—Did the men ask for arbitration in that difficulty? A.—You mean the men in the establishment themselves? No; they struck without authority. That was before the law was passed that would have taken their charter from them.

Q.—Did they offer to go back to work and settle the matter by arbitration? A.—They were ordered to go back, and the offer was made to the firm to settle the matter by arbitration, and thus effect an amicable settlement. They would not agree on those terms. I was not myself one of the parties who waited on the firm; I only know what occurred.

Q.—The law of the union is more stringent now than it was formerly? A.—Yes.

JOSEPH FIRSTBROOK, Box Manufacturer, Toronto, again appeared before the Commission, and said he wished to make an explanation with regard to some statements which had been made in connection with the recent labor trouble in his factory.

By the CHAIRMAN :—

Q.—You say a statement had been made against you which is not correct?  
A.—Two or three statements have been made with reference to this case in which I am interested.

Q.—Please explain yourself? A.—It was stated that an offer was made to send the men back to work, but without an explanation of the circumstances. The offer was made at a time when we could not accept it. It was made some hours after we filled the places of those men.

By Mr. KERWIN :—

Q.—Did the offer come from the men themselves? A.—It did, some time after the strike. They said if we would then discharge the obnoxious men they would come back, and after we filled their places, some hours after, it was made by representatives of the Trades Assembly. I do not think it is fair that that statement should go to the public. It would lead the public to believe that we were opposed to organized labor. I think it is a question which should not be brought before this Commission at all. It is a question with which it has nothing to do.

By Mr. FREED :—

Q.—How long after the strike was it before you filled the places of the strikers?  
A.—I think twenty-four hours.

Q.—How long after the strike took place did the men offer to return to work?  
A.—About one hour. When I came from dinner I found the greater number had left, and about two o'clock a delegation of three waited on us and said if we would discharge a certain man they would return.

Q.—Did they not offer to return unconditionally? A.—Not at all; and through all this correspondence which I have here the point is made right along that we shall discharge this man.

Q.—A. W. Wright states that this is not true. The correspondence does not bear it out? A.—Well, I do not want anybody to take my word for it. It is here in black and white. Three months after the strike, I know that the statement was made by Mr. Wright that that condition was not attached, but after the strike had been made, in August. The strike was made in May, and that condition appears right along from that time. In fairness to the men, I desire to say that I am quite in sympathy with the objects of the Knights of Labor. I have no doubt that Mr. Wright acts in good faith in making his statement; the circumstances show that he does, but he has not seen all the papers, and has not as good an understanding of the case as I have.

TORONTO, 27th January, 1888.

JOHN DOTY, Manufacturer of Steam Engines and Machinery, Toronto, called and sworn.

By Mr. HEAKES :—

Q.—Is your place of business in Toronto? A.—Yes.

Q.—Do you do general machine work? A.—Yes.

Q.—Do you make all class of work, in the way of engines? A.—Not all classes.

Q.—Do you do mill work? A.—Yes; we do some mill work. We build steam engines, cast engines, boilers, and sometimes the machinery that goes with them.

Q.—Do you employ many hands in your establishment? A.—We employ something over 100.

Q.—What wages does a good machinist earn in Toronto? A.—A good hand earns \$2.25 a day; that is what I pay.

Q.—That is to a man who is thoroughly conversant with his business, I suppose? A.—Yes.

Q.—Do you have many men in your shop who may be called unskilled workmen? A.—Yes.

Q.—What wages does an unskilled workman earn in a machine shop? A.—From \$1.50 to \$2.50 a day.

Q.—It depends on the class of work he is put at, I suppose? A.—Yes; and on the experience of the man and his adaptability to the business. Of course, we have laborers whom we consider skilled, because they have worked so long at the trade. They, of course, obtain lower wages than the skilled mechanics.

Q.—What are the average hours during which the men work? A.—Fifty-seven hours per week. We work ten hours a day for five days in the week and work till 4 o'clock on Saturday at this time of the year. In summer we work till 12 o'clock on Saturday.

Q.—Does your work run all the year round? A.—Pretty nearly so. We are more busy just at this time of the year, usually, than any other time.

Q.—Do you find the demand for engines increasing? A.—It is increasing with us; whether it is all over or not I could not say.

Q.—Are there more of that class of engines being built in Canada now than formerly? A.—To answer that question would require a little consideration. There are some shops where they build that class entirely, but I think on the whole, however, that more are being built.

Q.—Is it a fact that a great many of those engines were imported in former years? A.—I think a few, a small number. They did not build the class of boiler which required that class of engine much here at that time.

Q.—As the demand for engines has increased, have you been able to meet it? A.—Yes; I think the demand can be easily filled yet.

Q.—Do you find the demand for gas engines increasing? A.—I do not see much difference in the demand.

Q.—Do you manufacture what they call gasoline engines? A.—No; it is the Otto gas engine we manufacture.

Q.—Do you take many boys in your business? A.—Not many boys.

Q.—Do they go to your shop with a view of learning the trade? A.—Those we take on usually have worked at it some time before. Occasionally we take on a new beginner, but very seldom.

Q.—Speaking of men in charge of engines: would a man in charge of an engine and boiler always be a skilled workman? A.—I do not consider it necessary that he should be skilled for what is required of him.

Q.—Do you think a man who is engaged on a boiler is a competent person to take charge? A.—No; I do not think he should be in charge, but there are men who have had a good deal of experience attending engines who never saw one built.

Q.—Would you consider them competent to take charge of engines and boilers? A.—To a certain extent; it depends on the complication of the engines and boiler.

Q.—Would you consider a person having no knowledge of the construction of a boiler, a competent person to take charge of a boiler alone—for instance, a boiler for heating a building? A.—He ought to know something about the nature of the boiler, the danger in getting the steam too high and the water too low; he ought to know what the effects will be, but I do not think it is necessary for him to know how to build a boiler.

Q.—Do you think a man in charge of a boiler or an engine should pass an examination for competency? A.—I think it would be a very good idea if this were carried out.

Q.—They would not necessarily all have to be of the first grade, I suppose? A.—No. A man attending a simple boiler would not require as high a grade certificate as one employed on a more complicated boiler and engine, or one who has two or three boilers in charge.

Q.—Do you know if there is any great demand among engineers to have a board

of examiners appointed, with a view to having certificates of competency issued?  
 A.—I have heard the subject broached, but I could not say that I know of any general demand.

Q.—When boys come into your shop to learn the trade, are they regularly apprenticed to you? A.—No.

Q.—And it depends upon their good behavior if they remain in your shop?  
 A.—Yes.

Q.—What wages do boys get who go to learn the engineering and machine business? A.—In learning the machinist trade it depends somewhat on their age. A boy of eighteen is worth more than a boy of fifteen, because he will learn more rapidly and he has more strength. I did make it a custom to pay boys, I think it was, 40 cents a day the first year, 60 cents the second, 80 cents the third, and \$1 the fourth—that is, boys commencing at fifteen or sixteen, but to boys who have commenced older than that, I have paid as high as 80 cents the first year and so on, up to \$1.25 a day.

Q.—Do you think it is possible for a machinist to become proficient in less than four years? A.—I have seen machinists who have worked seven years and were not good, while others who have worked about four years were good hands; it depends on the man's ability to learn, and his fitness for the business, and his industry.

Q.—Do apprentices learning the trade get a technical knowledge of engineering as well as a practical knowledge? A.—No; not generally; that is done outside.

Q.—Do you think it is necessary, in order for a man to be a skilled engineer, that he should have a technical education? A.—Yes; that is, to a certain extent. A man with a technical knowledge and who is a good mechanic is a better man than a mechanic without a technical knowledge. In many cases men who have not a technical knowledge are only equal to inferior men.

Q.—What is the best plan to impart this technical knowledge? A.—I do not know that I am capable of telling you. I would suppose the proper place would be in a school adapted for the purpose.

Q.—Would that instruction be more beneficial before or during the time the young man was serving his apprenticeship? A.—I think if they could get something of it during their apprenticeship it would be better.

Q.—Do you think that evening schools for the purpose would meet the requirement? A.—Yes.

Q.—Have you known instances of mechanics who have received technical instruction taking superior positions in the trade? A.—Yes; if they were mechanics as well.

Q.—Would it improve, generally, the condition of the standard of work? A.—I should want some time to consider that question. It is not the technical part that does the work; that only relates to the designing and drawing; the actual mechanical work is different.

Q.—Do you think, then, that an artisan is more successful who has obtained this technical knowledge? A.—Yes; he is a superior mechanic.

J. J. FRANKLIN, Superintendent of the Toronto Street Railway, called and sworn.

By Mr. HEAKES:—

Q.—Will you kindly tell the Commission the earnings of the men employed on the street railway? A.—We have different rates. Do you want any particular rate?

Q.—We want the average earnings of the men employed on the street railway?  
 A.—The conductors receive \$10 per week for six days work—they do nothing on Sunday—or at the rate of \$1.66 $\frac{2}{3}$  cents per day. Drivers for the same amount of work receive \$1.50; stablemen, \$8.50 per week. They have to attend about one and a-half hours on Sunday morning and about the same in the afternoon, and we call their work seven hours, although they work, as I have said, only about three hours on

Sunday, one and a-half in the morning and one and a-half in the afternoon, tending and watering the horses. Our laborers receive \$1.33 $\frac{1}{3}$  cents per day, or \$8 per week of six days. We have men receiving \$12, \$13 and \$15 per week in connection with the road. They are men who are above the class of conductors.

Q.—Are mechanics who work from 10 to 6 receiving as high as \$2.25 a day, \$2.50 and \$2.75? A.—Our blacksmiths in the shoeing department earn \$10 a week, and foremen \$11 and \$12. Our men, as a rule, in those departments, remain without change; they become connected with the company and stay there and seem to be satisfied. In all our departments men work six days a week with the exception, as I have said, of the stablemen on Sunday who go in the morning and afternoon to attend to the horses.

Q.—How many hours constitute a day's work for drivers and conductors? A.—They average, as near as I could get at all round, about eleven and a-half hours a day; that is about sixty-nine hours per week of six days. The sole duty of the drivers is to drive and they do not have the care of their horses after they are brought to the stable, but they simply drive them. They are on the cars about two-thirds of their time. Conductors have nothing to do with the horses, but simply attend to the collecting of the fares.

Q.—Do you think the hours can be reduced without causing any inconvenience to the public? A.—That is a question that has caused a great deal of discussion in the United States by probably more clever men than I am, and I can only repeat to you the general verdict arrived at there, that they consider that twelve hours a day for a man's work is about the accepted time. It entails a great deal of trouble when you go under that. Of course, on the other side they worked their men a great deal more than that until recently, but in this city we have always worked our men the time I have told you, never over that. No man has worked since my advent over twelve hours; always under that. In order to relieve those men a great deal of extra trouble would be caused, and I do not think the public would be as well served if you relieved the men under the present time, for you would have to get another class of men to go on the road for one hour as you would permanently. A commission sat in Brooklyn examining this matter, and the heads of a great many departments were there and they found that they could not consistently work their men under twelve hours; otherwise the public would suffer as well as the company.

Q.—Did the men in the employ of the companies give evidence before it? A.—I do not know; I did not attend. I happened to be speaking to some of the managers about it, and I gleaned my information from them. I did not attend the investigation, but I simply happened to be in the city, as I was down there for my health.

Q.—Did they claim that two shifts of men could not be used? A.—That is the way the men are employed now in a great number of cases; there are what are called short and long cars. For example, a car runs for fourteen or fifteen hours. During that fifteen hours' run the men who run over eleven and a-half or twelve hours on many lines get relieved twice, while doing their work, and for the run which occupies a certain number of hours they receive \$1.10 or \$1.15. If a man goes out with a car early in the morning he is allowed enough time to get his dinner and his tea, and the car is run along with two reliefs for probably fourteen hours, which is about the time of the car running on the street. Then we have long routes, and early and late cars. Those are always run by two shifts. Certain men take the car at a certain time at night, half-past six or seven. All the men's time is regulated by the time they commence in the morning. If a man goes on in the morning at half-past five his time commences then, and he consequently finishes earlier in the evening. Two men go on later and they perform the late service. Those men make half or two-thirds of the day's labor. We are not so particular in regard to the time allowed the men. We allow the men running on those shifts—what we call relief men—for

six trips we allow them seven trips, because they never make full time, and we never cut them close. If a man makes five trips we always consider them as six trips, and as I have said, we do not cut them close on the time—that is the extra men. In regard to our regular men who have to run overtime: we sometimes have to ask them to run an extra car at night, but they always get extra pay, and this pay is at the same rate at which the wages are paid. If a man runs one trip over time we generally allow him three-tenths of a day or three trips for two. If he makes a single trip he is allowed for two trips—that is in running overtime. In regard to our rate of wages, I find on investigating rates that are paid on the other side that our wages compare most favorably with those paid over there, that is, taking into account the hours of work and the Sunday work. The men have to work on Sunday over the line, and, of course, our men never do that here.

By Mr. FREED :—

Q.—Are the men anxious to run those extra trips, or would they prefer not to do so? A.—I never had any refusal.

Q.—Do you know if the men would rather not do so? A.—If a man does not want to do so we put another man on the car.

By Mr. HEAKES :—

Q.—Do the men frequently leave the service of the street railway company? A.—Yes; I do not know that they leave it frequently, but we have men who leave to better themselves, or think they may do so; but my experience is that they always want to come back.

Q.—As a rule, do the men employed on that kind of work stay any length of time at it? A.—Yes; we have men in the service who have been there for a good many years—since I came here, and I have been here seven years in the city with this company; and we have men who came here and that I took on myself after I arrived.

Q.—Are the men fined for being late, for instance? A.—No; never. We never fine any man whatever. We tell a man when we hire him: "Whenever you think you can better yourself we do not require any notice and you can go and say that you want to go. There are times and occasions when we do not want the service of men, and if you do anything that is not quite proper we will do the same by you, namely, we will tell you that we do not want you. We do not expect to receive any notice and we do not give any." We could not go on if we had to give every man notice. There might be something wrong about a man's money business, and yet we would not be justified in telling him about it. The man would think less of himself if we did so.

Q.—How often are the men paid by the company? A.—On Friday night; we never owe them a 5-cent piece.

Q.—Is there any objection on the part of the street railway company to men belonging to a secret society of any kind? A.—We have no objection to men belonging to anything except labor organizations; we do not employ men who belong to labor organizations.

Q.—Are the men in your employ required to sign a paper previous to entering your employment? A.—They are.

Q.—What is the nature of that agreement? A.—That they will not join any labor organization while in the employ of the company.

Q.—And if a man joins such an organization, what is the result? A.—It is optional with us whether we keep him on or not.

Q.—And do you consider that labor organizations have a bad influence on workmen? A.—I could only speak for the company; and I say as regards our company they have—I do not speak for anything else.

Q.—Have you any knowledge of any benefits that workmen have derived from the organizations? A.—I have not. I do not pretend to study the question outside of our own concern. I do not know enough about it.

By Mr. ARMSTRONG :—

Q.—Have you ever had any trouble with your men? A.—Yes.

Q.—Will you tell us the nature of that trouble? A.—It was a trouble—I really could not go into the whole matter. The men saw fit to quit the service of the company. We had, as near as I can recollect, discharged several men for very good and valid reasons. We were not able to tell those men what they were dismissed for. They went about among the men, and were picked up by some people who run some of the labor organizations in Toronto, and through them dissensions were brought into the company—the men were asked to join, and all that kind of thing. The trouble began in this way and it ended in the men going out. That is the thing in a few words.

Q.—Did the men make a demand on the company for shorter hours of labor, or an increase of wages? A.—I do not think they did; in fact, they did not. In my recollection of the company we have never had any trouble, except one from a few men in a certain department about an increase of wages, and it was given. But as regards this general demand of the men for an increase of wages, I do not think there was any; in fact, I am sure there was not.

Q.—What is the average length of time, in the twenty-four hours, that a driver may be out? A.—About eleven and a-half hours, on an average. We have always aimed, and do aim, that men shall work under twelve hours; I think eleven and a-half is the average, and if he is employed for that time he is relieved, so that about eleven and a-half hours is the average time which he is employed by the company during twenty-four hours. Of course, I know there is a mistaken idea that men work fifteen and sixteen hours at one time in the company's service, but that is quite untrue.

By the CHAIRMAN :—

Q.—How do they begin? A.—They begin at any hour in the day.

Q.—Supposing a man begins at half-past five o'clock, how long does he work? A.—He works eleven and a-half hours. His relief would come on then, and the man is relieved twice during the day's work; at all events, once. Our men wished to obtain one relief in the day, and we immediately gave it to them. I commenced to get those men off early at night by beginning early in the morning, and they were allowed one hour for dinner.

Q.—Do you include the dinner hour in the time you have mentioned? A.—No; I spoke of the number of hours they were constantly on the cars. The men showed a preference to have one relief, so as to get off early at night. When I spoke of eleven and a-half hours a day I referred only to the time they were on the cars.

By Mr. ARMSTRONG :—

Q.—When the men work eleven and a-half hours a day, what time have they during which to enjoy themselves with their family and obtain mental improvement? A.—I have given that question some thought, and I have given a good deal of attention to the matter of having shorter hours. The matter is like this: we try to pay the men fair wages, and we could not very well arrange the service so as to suit public convenience in any other way than we do. The reason I have already given why we could not reduce the hours was because we would have to pay an entire set of new men on the road for one hour only.

By the CHAIRMAN :—

Q.—Then it could be done by increasing the number of men employed? A.—Yes.

By Mr. ARMSTRONG :—

Q.—Have you given any thought to the condition of your men? A.—Yes; and I have studied to some extent the condition of similar men on the other side, in New York, Boston, Rochester and Buffalo and Chicago; I know a great deal about those cities, and the wages that are paid there by the street car companies. I repeat that on a comparison our men are better off than the men are there.

Q.—You say the average wages are from \$8 to \$9 per week for drivers? A.—No; \$9 a week is the lowest; \$10 is the pay for a conductor.

Q.—Are there many of your men who own their own homes, who earn that rate of wages, and have paid for their homes out of their earnings? A.—We have quite a number who have bought property and who are living in their own homes, and to my certain knowledge have earned their money in our company. We have quite a few of such men that I know of.

By Mr. HEAKES :—

Q.—In very severe weather are the men relieved at all during the day? A.—Yes; they are always relieved more frequently in severe weather. I don't know whether that is done this year or not. I have been away from business for three months, until very recently, myself, and I do not know whether it has been done this winter; but I have always made it a rule to relieve the men more frequently in severe weather. Last year we relieved the men right along, and the year before, during severe weather. Whether they have done so this year or not I am not able to say. We have about 600 men in the employ of the company, and it is very difficult to get them all relieved in the same day; but I am speaking of the majority of the men when I say we have not had any trouble with them, and I think they consider themselves fairly treated. Of course, it is a very peculiar business to conduct. There are things about it that are commonplace sometimes, but that is not the end of it.

Q.—After a man puts in a square, honest day's work to your satisfaction, do you think that you should tamper with his liberty in regard to saying whether he should belong to a society or not? A.—We never thought so until we had it proved to us. When this was unmistakably proven we made up our minds that we would not interfere with labor organizations so long as they interfered simply with the men's rights, but when they interfered with the company's rights that was a different question altogether.

By Mr. CARSON :—

Q.—You say that before the trouble, a year ago, the company agreed well with its men. Can you give the Commission any idea as to how long the men remain in your employ—conductors and drivers? A.—We had men two, three and four years. I could not give you a general idea, but we have a record of all those men in our books, most complete records of everything done during the last four or five years, and I can certainly say that we have men who have been in the service a long time, and I thought a good deal about that.

Q.—Was there, during those years, any discontent on the part of the men? A.—I do not remember any discontent having arisen, except on one occasion some years before that, and it was of very short duration. The trouble commenced about four or five months previous to the men going out. I may tell you this, and I tell you it with perfect truth, the company has never had any trouble, except from discharged men. I say that from knowledge and knowing it to be a fact. Unfortunately the labor people do not understand the distinction between those men and men in the company's employ, and they take discharged men up and hear what they have to say without hearing the other side.

By the CHAIRMAN :—

Q.—You say you discharge them for cause? A.—Yes.

By Mr. CARSON :—

Q.—You do not want that cause to be known? A.—I always felt that it is rather an injustice to the men if it is known. If a man is not the man you want it is unnecessary to brand him before the public as being a man of a certain class. I always endeavored to put the matter as quietly as possible with a man; that he is unfit and that it is not wise for him to know what the reason for his discharge is, and the company must have credit, for I never discharge men for doing nothing.

By Mr. ARMSTRONG:—

Q.—Has the company ever discharged a man on suspicion that he was a labor agitator? A.—No; never.

Q.—When the men have petitioned the company with a view to ventilating their grievances, in what spirit have they been met? A.—I do not know that they have ever been met. I know the company has been approached by outside people, but I do not know that the men ever approached the company.

Q.—Had they ever petitioned the company in regard to certain grievances immediately previous to the last strike? A.—I do not know of my actual knowledge. I have the company's records, but I could not tell you; but I do not remember before the trouble commenced of anything of that kind happening.

By Mr. CARSON:—

Q.—If it came to your knowledge that a good man, who has been in your employ for some time, belonged to a labor organization, would you discharge him? A.—No; not simply for that fact—not until he brought the organization business into the affairs of the company, and began to work to promote the organization. Then I do not say what I would do. If there is a man in the company's employ, and I know him to be a member of a labor organization, but he works along quietly and minds his own business, I do not think we would interfere with him. I am the man who has charge of those matters, and I would do nothing to him.

By Mr. ARMSTRONG:—

Q.—What house rent would a man with three or four of a family pay in a respectable locality? A.—I do not know the average. I know some of our conductors who pay from \$6 to \$7.50 per month. I know of some who pay more, but do not think they depend entirely on their earnings to pay their rent. I know of some men who rent larger and better houses, but they rent rooms; but the average man who lives with his family and pays his rent from his earnings pays for house rent from \$6 to \$7 or \$7.50 a month.

Q.—Will you tell us the street in this city where a man can obtain a house with five rooms for \$6 dollars a month? A.—You can get houses at the east end of King, off Sackville. I have in mind one of our timekeepers who is living in a very nice house on Oak street, off Sackville street, who is paying \$7.50 or \$8. A new lot of houses has been built on the north side. I asked him what rent he paid, as it is a very nice, comfortable place, and he has three children, wife and himself, and he told me the rent was \$7.50 or \$8 a month. There are such houses to be got on Sumach and Sackville, and I know one of our men who is living on George street. He has a clean, nice house, sufficient for himself and his wife and family, and I do not think he is paying over \$7 a month.

Q.—Between Duchess and Queen, on the west side, do you think that is a respectable locality? A.—He is a respectable man, and I have no reason to expect otherwise.

By the CHAIRMAN:—

Q.—Do you think he would live in a locality that was not respectable? A.—No; I do not think he would.

By Mr. HEAKES:—

Q.—He lives there in order to be near his work, I suppose? A.—Yes; but from my knowledge of the man he would not live there if he knew it was not in a good locality. I do not know that it is a bad locality. I have seen people the worse of liquor around there, but nothing more, and I pass there frequently. I know at the east end, on different streets, there are houses to be got at about those rents. Of course, this a question that I have not gone into very much, and I would not like you to take my opinion in regard to it.

Q.—In regard to those houses on Sackville street and Oak street—renting at \$6 a month? A.—I say the rents are between \$6 and \$7.50 a month, about that figure.

Q.—Is there a double frontage to the lot? A.—They are in front. I have a clerk down there. Some people would not like it, but I lived at one time in no better house; he has a nice house, and he is not paying over \$7—it is off Oak street, a kind of wide lane runs back. There are some rough-cast houses there—and they are neat, perfectly good, and comfortably built there.

Q.—Is that Maple street? A.—Yes. I was in his house when his wife was sick. He has it very warm and nice, and I was astonished that it was only heated by a cook stove. He can afford to pay more rent, if necessary, for he receives \$12 a week. He is, however, very comfortable there and he does not pay more than \$7 a month.

By Mr. ARMSTRONG:—

Q.—How much a week do you pay your saddlers? A.—Ten dollars.

Q.—Are they paid by the week or by piece-work? A.—By the week. We have no men employed on piece-work; all are employed on regular wages—our carpenters and mechanics of all classes.

Q.—What are the weekly wages of a carpenter in the employ of the company? A.—They receive from \$1.66 to \$2.75 a day. The men are graded according to their ability.

By Mr. FREED:—

Q.—If a man, at the end of his day's work, or in the course of work, rode on the company's cars, would he ride free? A.—Yes.

Q.—Before this strike of which you have spoken, did the men themselves make any demands on the company? A.—I do not think they did before the strike. I have no recollection of it.

Q.—Had the men themselves at any previous time made demands upon the company? A.—I think, if I recollect rightly, about three years ago there was a demand made, and at that time the wages received were \$8.50 per week for conductors and \$8 for drivers. There was a demand made, I think, and I also believe the demand was acceded to then, or shortly after the demand was made. We graded our men then; we gave men who had been in the service a certain time higher wages than others.

Q.—Were any of the men discharged shortly after the demand was made? A.—I do not remember the company being called upon by any of the regular men in their employ. I remember one of the strikers coming there, or heard he did so, but he was not in the employ of the company.

Q.—Has it been the practice of the company to discharge men who have made themselves officious in getting shorter hours and higher wages? A.—Not unless they neglected their work, or were disseminators of trouble.

Q.—Even after so doing he did not neglect this work? A.—That would be a question for the company to decide; it is quite questionable what the company might think; if the company thought so, of course it would be satisfactory.

Q.—What were the demands made on the company at the time of the strike? A.—I do not know of any demands being made.

Q.—Were not any demands formulated to your knowledge? A.—I do not really know.

Q.—Do you not know what the men struck for? A.—I do not think a great many of themselves knew. I think it was a kind of a forced arrangement all the way through. I think a great many of the men who went out did not know themselves why they went out. I was told so by the men. They were called out by the authorities, and had to go out.

Q.—Did any of the men who struck finally return to the service of the company? A.—Yes.

Q.—Are you able to tell us what proportion of the men came back? A.—I do not think more than, probably, fifteen or twenty were taken back.

Q.—Had you filled their places? A.—Yes.

Q.—Had you any difficulty in getting men? A.—None whatever.

Q.—Have you any difficulty now in getting men? No; the difficulty is the other way. It is the hardest part of my work to say "No" to the men who come in and ask for work.

Q.—Is that the case in summer as well as in winter? A.—Not as much in summer as in winter; but there is always a large demand on the part of men who want to get into the company's service.

Q.—Are you able to say whether any mechanics apply to you for work? A.—Yes.

Q.—Do you mean in the employ of the company this winter? A.—I mean employed generally? A.—Yes; we have quite a few mechanics working on the cars now.

Q.—Do any mechanics apply to you for positions as drivers? A.—Yes.

By Mr. ARMSTRONG:—

Q.—How many men were out of employment at the time of the labor difficulty; or was the service stopped altogether? A.—No; it was not stopped altogether, but the service was very inadequate. You refer now, I suppose, to the last big trouble?

Q.—To the trouble in March of last year? A.—The service was stopped one day or two days on account of the trouble in the streets, but after that the service was never stopped entirely.

Q.—Do you know the number of hands you took back after the strike as compared with the number of applications for work made by those in the employment of the company? A.—I think we took back fifteen or twenty.

Q.—And how many returned after the first difficulty? A.—They all came back then, but there was a misapprehension about it at that time.

Q.—Was there a written agreement between the company and the men? A.—I do not know about that.

Q.—That was a matter between Mr. Smith and the men? A.—Yes; I did not know anything about it.

JAMES MORRISON, Manufacturer of Brass Goods, Toronto, called and sworn.

By Mr. HEAKES:—

Q.—What class of brass work do you principally do? A.—All kinds; engineers and plumbers' brass goods, and so forth.

Q.—Do you do anything in mathematical instruments? A.—No.

Q.—Are there many men employed in brass work in this city? A.—We employ something like 110 or 115 hands. I could not say how many other shops employ.

Q.—What wages do brass-finishers get? A.—\$2.00 and \$2.50 a day.

Q.—Do they have steady employment at that rate? A.—Yes.

Q.—Do you keep your establishment open all the year round? A.—Yes.

Q.—Do you take on many apprentices? A.—There will be about two men to each apprentice. We have now seventy men on the roll, and thirty boys.

Q.—Do those boys all come with the view of learning the trade? A.—Yes.

Q.—Have you any regular style of apprenticeship? A.—We do not bind them. A boy understands when he comes that his term of apprenticeship is five years.

Q.—And he stays as long as he likes? A.—Yes; of course we do not bind him. We leave ourselves free to discharge boys if they are not suitable or capable for business.

Q.—What proportion of the boys are turned out finished workmen? A.—That is difficult to answer. Some boys give up business after being there a month or two, but I think in our trade about 50 per cent. serve their time.

Q.—Is the demand for brass-finishers in excess of the supply? A.—For skilled labor it is.

Q.—Do you find that this large number of apprentices does not keep up the supply? A.—Not in our city.

Q.—Do you know if many of the men go from this city to others to get better wages? A.—There would be no object in their doing so.

Q.—Do you employ any women or girls? A.—We employ three girls, and sometimes more.

Q.—At what work? A.—Making sand cores for the moulders.

Q.—What age are they? A.—I do not know whether they are girls or women. They will be from eighteen to twenty-five.

Q.—What can a female earn at that kind of work? A.—Two of them make \$5 a week, the other makes \$4.

Q.—It depends on their ability? A.—Yes; on their skill. They do not work piece-work, but we watch about what they can do, and if they are quick at their work they are paid accordingly.

R. C. WINLOW, Manager for J. D. King & Co., Manufacturers of Boots and Shoes, Toronto, called and sworn.

By Mr. HEAKES:—

Q.—You are engaged in the boot and shoe manufacture? A.—Yes; the firm are for which I am manager.

Q.—Do you manufacture all classes of boots and shoes? A.—Not the very cheapest. We manufacture about all kinds made in Toronto, but the cheapest kind are not made in Toronto.

Q.—Where do the cheapest class come from? A.—Quebec and Montreal.

Q.—Can you not manufacture as cheaply in Toronto as they can there? A.—No.

Q.—Do you find the competition in Quebec is very keen? A.—Wages are higher here. The competition is so keen in certain classes that we could not get cost price for them. We do not make them at all.

Q.—How many hands are employed in your establishment? A.—About seventy-five females, about 120 or 125 men and a few boys—about a dozen boys altogether.

Q.—What would be the average earnings of the female help? A.—The average earnings would be \$5 a week for every one in the place—for fifty or fifty-one weeks in the year. We stop for one week—between Christmas and New Year's, and for a few days afterwards there is not much doing, so it would make fifty full weeks in the year.

Q.—Is there a regular bill of wages? A.—Nearly all are on piece-work; perhaps half-a-dozen girls and thirty men are working by the day or week. The rest are all on piece-work.

Q.—Does the same rate of wages prevail in all shoe factories in Toronto? A.—The same rate of piece-work wages prevails.

Q.—What will a beginner amongst the females earn the first six months? A.—We do not have beginners. They must be experienced machine operators before we employ them. There are a few others, but shoe factories have been going on so long in Toronto that we never take on inexperienced female hands at all.

Q.—Do you take any apprentices? A.—No.

Q.—What would be the average earnings of the men? A.—There are so many different classes of work it would be difficult to say. I am hardly qualified to say, but probably from \$7 to \$15 a week.

Q.—Fifteen dollars a week would be the wages of a foreman? A.—No; one that runs a machine; some very experienced and very well qualified workmen would earn that, but of course there are very few who earn \$15 a week.

Q.—How many men does it take to make a boot now-a-days? A.—I suppose it takes about fifty, men and women.

Q.—Does the same article pass through fifty hands? A.—Yes; I should say so.

Q.—There is no chance for a boy to learn to be a shoemaker? A.—Not the slightest.

- Q.—Have you separate conveniences for men and women? A.—Yes.
- Q.—In separate apartments? A.—Yes; we have them on separate floors. We have the women on one flat by themselves, and the conveniences for them.
- Q.—Are the outside doors of these buildings locked or unlocked during the day? A.—We have two means of exit from the factory; one goes down from the warehouse to the front door, and the other to the side door. The hands all come in at the side door, which is opened by a spring latch. It opens outwards, and is closed from the inside, so nobody can get through, unless some one opens the door.
- Q.—Do doors in these large factories open outwards? A.—Yes.
- Q.—Is the lock of such construction that it can be easily opened? A.—Yes; the lock is one which you twist and open from the inside; no key is required.
- Q.—Is there any system of fining employed? A.—If operators damage work they are charged with the cost of the new material required to replace it.
- Q.—Are they charged for broken needles? A.—No; just for the material; and, of course, if a man damages a shoe when it is nearly finished he is obliged to take a pair, and he is charged with the price of them.
- Q.—Do you consider that is a fair practice, to make him pay for two shoes when only one is spoiled? A.—Well, it would be better than making him take the one.
- Q.—Do you charge him the cost of the stock in the shoe or the cost of the shoe manufactured? A.—The cost of the shoe manufactured, including all wages upon it, all the way through from the beginning to the man himself.

By Mr. ARMSTRONG:—

- Q.—If a young woman destroys a kid boot or blemishes it, is she fined? A.—She would have to take the pair of boots. That occurs very seldom. I do not remember such a thing happening with girls. Of course, it is only in the shop where the uppers are handled that the girls sew the shoes.
- Q.—Do the more skilled operators do basting on the boots? A.—Some women and girls do that alone, but they are not machine operators, of course.
- Q.—What wages do you pay a girl doing basting? A.—I think probably the lowest wages we pay are to errand girls, who earn from \$1.75 to \$2 a week, and then I think we have some basters whose wages run from \$3 to \$5 a week.
- Q.—What age are these young errand girls? A.—Well, I cannot say; but we have none under the limit named in the Factory Act; they are all over fourteen years of age.
- Q.—At what hour in the morning are the young women required to be there? A.—At 8 o'clock in the winter, and for a short time during the year at 7:30. For eight months in the year they come at 8 o'clock in the morning.
- Q.—Do you give many minutes' grace before the door is locked? A.—We give them five or ten minutes, but if they find that is not enough all they have to do is to walk in through the warehouse. I often see them walking in through the warehouse, and nobody objects.
- Q.—Is the party who locks the door a responsible man? A.—Yes.
- Q.—Does he hang up the key of the side door in the office? A.—There are two or three keys; one is kept in the warehouse, and we all know where it is, and one assistant foreman has a key in his pocket.

By Mr. HEAKES:—

- Q.—Is that door kept locked all day? A.—Yes; except during the dinner hour.
- Q.—What is the use of locking it? A.—We have drunken men coming in all the time. One of these men came up one day and got his nose hurt on a machine.

By Mr. ARMSTRONG:—

- Q.—Have you known young women to come down in winter time with a lunch-basket five minutes after eight, and find the door locked, and have to go home? A.—It may have happened, though I never heard of it. It might be five minutes past eight by somebody's clock.

Q.—Have you known of an accident in your establishment when the door was locked, and when the young women made a rush for the stairs they could not get out? A.—I do not know of such a thing. There was a false alarm some years ago, when the girls ran down. The first thing I heard was a good deal of noise from the girls in the street. I think half of them must have got there. We had two doors in use, one through the warehouse and one through the other way.

Q.—Are there any fire-escapes in your building? A.—Yes; and sprinklers all over the place.

Q.—Are highly-skilled female operators, those who work on kid-work, scarce in Toronto? A.—No; I do not think so.

Q.—Have you known many of them, within the last twelve months, go to the other side and receive higher wages? A.—We have had a couple go there. I do not know of any, but there may be an average of two a year who go.

Q.—Is the bill of pay to the women higher in Toronto than on the other side, or lower? A.—I have been informed that it is not lower. I believe it is the same for some things, but really I am not well qualified to speak on this point. Of course, it is understood there are no wages any where ahead of Toronto. We have had strikes in the business, of course.

Q.—When did you have the last strike? A.—The last one was with females in 1882.

Q.—You have had no difficulty in the trade since? A.—We had with the machine men, who struck once for twenty-four hours and went back.

Q.—Tell us the nature of the difficulty you had six years ago? A.—The females made a demand for higher wages, to which the employers would not accede, and they struck, and remained on strike about three or four weeks, and then came back to work at the old wages.

Q.—Did they go back to work on the promise that the employers would make a uniform bill of wages? A.—Yes.

Q.—With a slight advance? A.—No; there was no promise of that kind at all.

Q.—Would you be convinced if Mr. King and Mr. Charlesworth said they promised that advance? A.—Certainly.

Q.—Do you know how long the operators were kept waiting for the uniform bill of wages after it was promised? A.—I am not sure, but I think it was nearly a year. The employers commenced almost immediately to prepare it, but they found it a good deal heavier undertaking than they imagined. They worked a good many hours at night in order to prepare it.

By Mr. FREED:—

Q.—Is the factory inspector satisfied with the sanitary condition of your factory? A.—Yes; he says he is.

GARRETT F. FRANKLAND, Cattle Exporter, Toronto, called and sworn.

By Mr. HEAKES:—

Q.—You are engaged in the cattle trade? A.—Yes.

Q.—How does the cattle trade at the present time compare with four years ago? A.—Well, prices are not so good in Great Britain to-day as they were four years ago.

Q.—Do you find that since the exportation of cattle from Canada to England began the farmers are paying more attention to the grade of stock they keep? A.—Much more. Probably it would be as well for me just to make a general statement. In the year 1870 it was becoming recognized in Canada that if our agriculture was to prosper and increase we would have to seek some other market than the United States, as that country was growing a sufficient number of cattle for the demands of all their large cities. For some twenty years I did business with Albany, New York, Boston, and some other smaller places in the United States, but I found there were a great many horses, sheep and pigs being sent to these cities, in such numbers that

we were being undersold to some extent. Then, again, according to their usual custom, the Americans imposed this duty of 20 per cent. and it became evident that we in Canada would have to seek another market. We in Canada knew that for many years there had been a great scarcity of animal food in the great centres of population in Great Britain. It was not possible that more than 65 per cent. of the people should get money enough to purchase it. For eight years I went over there with animal food in barrels and sacks in large quantities, but it was not a paying business. In 1874 I found Englishmen, Irishmen and Scotchmen were short of their usual number of fat cattle, on account of contagious diseases, and they were in want of large numbers. I came back and looked around through our own Province; I knew pretty well what they had down in the Maritime Provinces and the Province of Quebec, and, comparatively speaking, I found I could not have got 10,000 head of cattle of sufficient quality to meet the demands of the export trade. As many of you know, we were feeding down at Gooderham & Worts' large yard a large number of cattle, as we have been doing every year during the last twenty years, and we have turned out the best cattle there to be found anywhere, by means of careful selection. A man in Glasgow had taken some thirty or forty over to the old country, but not having placed them in good steamers his venture was not a success. I made an arrangement with the Allan Company to put 200 head on board the "Waldensian." However, there was not near enough space, and I took another vessel. We were paying about \$4.50 per head for the accommodation. We paid no insurance, because the insurance companies did not seem to understand it, and in fact the steamship owners did not understand how we could put so many on board. We lost one animal, and we realized what you may consider the outrageous profit of about \$30 a head, after paying all charges. I spread that fact through the press, and ever since I have worked on the principle that we in Canada can raise beef cattle and horses equal to any part of the world, and a little cheaper than any other part of the world. Canada has been improving ever since then, but since 1874 the Veterinary Department of the Privy Council of Great Britain has been working at cattle diseases, and to a certain extent has got them under control. As a consequence, they are raising more cattle now in Britain themselves. Denmark went more heavily into the business in 1876, and then the United States thought this thing would continue, and they have overdone it and gone beyond themselves. As a result, these ranches and feeders have broken themselves and some of the banks, and still Canada has been and is the most successful country in the trade.

By Mr. FREED:—

Q.—Can cattle be shipped to England at a profit at present prices? A.—Well, they are not losing anything. In May, June and July of last year we shipped 2,000 head. They went over in eight steamers. When I began I was making about \$3 a head. The last four steamers lost me \$3 a head, and on the 2,000 cattle I lost \$2,800. This was the worst year we have had. From 1874 to 1881 it was profitable, though not so profitable as at the beginning. Since then the markets have fluctuated, and we cannot very well gauge what prices will be there. We may have the idea that we are going to make a fortune in the trade; the ship may not get there in time, steamers from other parts may get in, and as cattle must be immediately slaughtered, you cannot bring back the bloom to them. You must sell them at market prices.

Q.—Does the law require them to be immediately slaughtered? A.—Canada has a clean bill of health. We have to undergo twelve hours of quarantine and are examined by veterinary surgeons for contagious diseases, and after passing that examination the cattle can usually go to any part of the United Kingdom. American cattle must be slaughtered at the point of debarkation.

Q.—Is the regulation and restriction of the transit of cattle from the United States through Canada of advantage to the Canadian farmer? A.—I have always been against that traffic, and I do not think it should be permitted. They are so particular in England about this pleuro-pneumonia, which I know exists in the States,

that when we have gone into a place where American cattle were we have had to go into a small room and be fumigated before coming away. If so, cars passing through our country with cattle from the States are a danger to Canadian farmers.

Q.—Are the restrictions with regard to American cattle coming through Canada sufficiently strict. A.—I would not have them come at all. We have no desire in the cattle trade to have any truck with them at all.

Q.—Can you afford to pay Canadian farmers such prices as to warrant them in continuing to raise beef cattle? A.—The answer to that question is of so great importance that every farmer should understand it. It is necessary to raise cattle that there may be sufficient manure to go back to the land. No farmer can be successful without raising a certain number of cattle. If the farmer in this country would realise how much one animal gives him back for the food he gives it, he would consider that as long as he got paid by feeding that animal just what the food costs, without profit at all, he would have the manure as profit. In England the droppings of an animal during feeding time are valued at 8 sovereigns. If Canadian farmers looked at the matter in that light they would consider it more properly. As bad as English markets have been of late, from the inception of the trade up to the present time, England has enabled exporters to give larger prices than those buyers who purchase for home consumption in Canada.

Q.—Do you pay those large prices because you take the pick of the cattle? A.—No; we do not take the best; we take the heaviest and those in best form for shipping. We want heifers to weigh 1,200 or 1,400 pounds, whereas cattle for home consumption weigh 1,000 or 1,200 pounds. Montreal used to be a great market, but Quebec opened up her resources and will be able to supply this trade. We used to send cattle to St. John, but it has all been worked up by this oxen trade.

Q.—Have you had any cattle from the North-West? A.—We had some at Christmas and some last spring. They were very fine cattle, raised on prairie grass. I do not know what the future of that trade will be, but I think it will be extraordinary.

Q.—How do cattle from the Canadian North-West compare with cattle you have seen from the western parts of the United States? A.—Well, fifteen years ago we considered Illinois cattle the best that could be produced on earth. They generally selected their steers, and not tying them up as we do, they developed more bone and muscle and became larger. I found on examining those cattle from the North-West that they had been raised in the same way of wandering round and getting on grass. Nothing expands them so much. They develop something like western cattle. They develop as much bone and muscle in the Canadian North-West as anywhere else.

Q.—Is not that due, to some extent, to the fact that they have taken cattle into our North-West with a mixture of the Texas quality in them. A.—I would not consider that the Texan quality would be an improvement.

Q.—Does it not make them more hardy? A.—Well, they may be more hardy, but I would prefer having nothing to do with that old low breed of cattle. We used to think short-horned cattle could not bear cold because of their fine breed, but that idea is done away with altogether. These beautiful, shapely cattle can endure more than any other class of cattle we have, except Polled Angus.

Q.—Do you know anything of the experiment of crossing the buffalo with native cattle? A.—No; I do not. I have simply read accounts of it, but I imagine it can be done.

Q.—Can cattle raising be carried on with the view of seeking either the production of beef or the production of milk and butter, or can mixed cattle-raising be carried on to advantage. Can cattle be raised with a view to beef and dairy products or must one or the other be followed alone? A.—I have been under the impression for thirty years, after studying the matter carefully, that all farmers must have stock, though there will be certain parts of the country where the idea cannot be carried out. I am under the impression that mixed farming is the best and most likely to be successful. You require to feed say, three or four cattle; you have three or four cattle for milking, and so on. I would like to make the remark that if the Dominion

Government desire to benefit this trade they should be particular to see that ships have proper room and get a proper inspection at Montreal. The Government has an inspector, who is supposed to see that no cattle are placed on the ship that have not sufficient room for standing and lying down. That work has not been perfectly done, and I would like to impress on the Commissioners one point, and hope they will make representation about it, and that is this; there are some 60,000 head of cattle put on board steamers at Montreal on wharves where it would be a disgrace to drive a lot of Newfoundland dogs over. There are coal and bales of goods lying round, and there are diabolical carts and waggons that would frighten anything. The cattle get into a perspiration and they are put on board ship for a voyage of 3,000 miles in a very unprepared state. We represented about it to the Government, but of course it was only one voice to the contrary. If they would spend a few thousand dollars and give people a quiet place where cattle could be put on board after coal and other freight was taken on, the cattle would be rested when they got on, and the loss would not amount to one cent.

By the CHAIRMAN :—

Q.—Do you remember last year, or the year when a steamer lost a great number of cattle? A.—Yes; they were put on board in a beastly state of perspiration, and the ventilators were imperfect and the vessel was blazing hot.

By Mr. FREED :—

Q.—Do distillery-fed cattle bear the ocean voyage as well as those coming off the grass? A.—They bear it better than any cattle we have. We generally find about anything goes wrong it is due to the ventilation. The regular heat of the ship is about the same as that of our stables. We make ventilation a study. We have 700 head in one of our stables, and they are sometimes four or five hours at the same heat. What we want is an even heat, and we can get that on board ship.

By Mr. ARMSTRONG :—

Q.—Does the exportation of cattle from the Argentine Republic affect the Canadian cattle trade in England? A.—It does. You know they come over dead in refrigerators from there. The first year it was not successful. The carcasses I examined were imperfect; the meat was a little sour, and it was not a success. I would not say that they made any money, but they did not lose any, and last year they did well. That trade is going to continue, no doubt. Let it continue. The success of our Dominion lies in having the best cattle, and I claim this is the most suitable country to grow beef on earth, and we can grow it a little cheaper than in any other part of the world I know of.

Q.—Will \$3 per head, which that Republic is giving, be an inducement to export cattle? A.—They will never grow cattle for the express purpose of exportation.

Q.—Are there any exported on hoof? A.—No; none. Australia has sent them on hoof, but has been more successful with mutton.

JAMES MASSEY, Warden, Central Prison, Toronto, called and sworn.

By Mr. HEAKES :—

Q.—Will you please give the Commission your views as to the best method of employing convict labor, so as not to bring it into competition with outside labor, or to as small a degree as possible? A.—I think no convict labor can be employed without going into competition more or less with outside labor. There is nothing at which you can employ convicts but they must come into competition with outside labor.

Q.—What kind of employment would you recommend for convicts—what lines of work? A.—On that subject there are great differences of opinion even among philanthropists who have given the matter a great deal of study. Some hold the

opinion that convicts should be employed at hand labor only; that there should be no machinery introduced; others, again, express views the very opposite, that if the work of reformation is to be an object in the management of penal institutions then you must adapt them to the period in which they live, and make them accustomed to the use of machinery. So that upon that subject there is a great deal of diversity among prison managers themselves.

Q.—Do you think the Government of the day would be able to utilize convict labor successfully without loss? A.—So far as I am aware, no State in the Union, and from there I have drawn my information largely, has been able to employ her convicts successfully upon State account. That is to say, from a provincial point of view there is always a loss.

Q.—Do you think if convicts were employed in manufacturing supplies for gaols, prisons, asylums, and so on, and for the Mounted Police, there would be sufficient employment given to them to keep them employed—all classes of supplies, I mean? A.—In the Central Prison we manufacture clothing and boots and shoes required for all the gaols throughout Ontario, but it employs very few men.

Q.—Suppose you were to engage in the manufacture of blankets, cottons and such like goods, what do you think would be the result? A.—I suppose we could do that if the terms of sentence were sufficiently long, but the average term of sentence in the Central Prison is only about six months; that means, of course, that a great many are under thirty days, and a large number under two years, so that we have not the convicts long enough to make them skilled workmen in a great variety of employment. We get sometimes skilled men. If a man is known to be a hardened criminal the judge is very likely to send him where his imprisonment will have the best possible effect on him. One instance will illustrate that: A man in a neighboring county committed an offence. The judge did not wish to send him to Kingston, but to place him under discipline in the Central Prison, and gave him twenty months on each of the three commitments, so that he received a term of five years. But that, of course, was a very rare case.

Q.—Where prisoners are sentenced for more than two years, is it possible to employ them in the line indicated? A.—I think it is. You take our proficient cracksmen, and they are generally pretty shrewd, clever fellows. You can teach them anything if they are willing to be taught.

By the CHAIRMAN:—

Q.—What employment do you think would do for a penitentiary? A.—Perhaps I may be mistaken in the idea I have stated in regard to the question of prison management. I had the idea that our prison institutions should not only be places of punishment, for the purpose of deterring others from entering the criminal class, but they should be reform schools, to adapt men to honest work in life, and therefore to accomplish that work it is necessary to have a variety of labor in our penal institutions, so that you may have something that will be suitable to each man's ability.

Q.—What are the principal lines of business carried on the Central Prison now? A.—We have wood-working, broom-making, tailoring, shoemaking, and we have a number—a few—of machinists.

Q.—Do all those lines come into competition with outside labor? A.—We might say that they all do, with the exception, of perhaps, tailoring and shoemaking.

Q.—Is the labor in the Central Prison let out by contract? A.—Principally.

Q.—Are the prisoners themselves let out? A.—The contractor has all the varieties of labor under contract, for which we receive so much per day.

By Mr. HEAKES:—

Q.—How many men are let out as laboring men to the contractors? A.—They are let out at so much per day. The average would be about seventy all the year round.

Q.—At what branches of business are they principally engaged? A.—They are engaged at making wooden goods, from a brush down to a little toy-waggon, and playthings of that kind used by children.

Q.—Is it proposed to continue the system of letting the prison labor out by contract? A.—No; our contract expires in May, 1889, and it will be discontinued after that.

Q.—Has the Government or yourself thought of any scheme of employing those prisoners after the contract has expired? A.—We have not arrived at any conclusion. We have been consulting about the matter, but merely consulting, so far.

Q.—Do you think it is possible to find employment for those men within prison walls without competing with outside labor? A.—I do not think so. I think on that question there is, perhaps, if I am permitted to say so, not only a great diversity of opinion, but I think there are a great many mistaken ideas held with respect to it. For instance, take a man in either the Central Prison or the jail. If he was out and at liberty he would either have to work for a living or some one would have to keep him, because he would otherwise steal. So his competition in prison is less against free labor than it would be outside, because no convict will do a full day's work in prison.

Q.—How is it that you find under the conditions that you state that convict labor has driven free labor out of the market in the trades in which convicts are employed? A.—That had not been the case in Canada.

Q.—Has it not been the case in the broom-making industry? A.—That has not been the case, I think, in Canada.

Q.—Do you think there are as many broom-makers in Toronto to-day as there were ten years ago? A.—I should think there are as many to-day as there were then.

Q.—Would you be surprised to hear that there are not one-tenth of the number here to-day? A.—Ten years ago I do not think there were many men employed at broom-making in Toronto—that is, free labor. I was in business then and I was not able to buy brooms in Toronto; I always bought them in Montreal.

Q.—Taking into consideration the different facts, do you believe it would be possible for the Government to employ prisoners if they cannot compete with free labor in the manufacture of the same lines of goods at a profit? A.—I suppose the Government could manufacture at a profit. I believe that could be done, provided the Government would enter into the same economical system of managing the labor as employers do outside, but they cannot compete with free labor with convicts. The expense of maintaining the institution and the small amount of work the convicts do makes free labor more profitable.

Q.—If it pays a contractor, could not the Government make it pay? A.—There are not many contractors who make money out of the convict labor.

By the CHAIRMAN :—

Q.—How many years has this contracting system for convict labor been in force? A.—It has been in force about twelve years.

Q.—Is the labor of all the convicts rented to one man? A.—It is all rented to the same contractors—there are two firms.

By Mr. McLEAN :—

Q.—Do the prisoners in that shop run circular-saws and machinery? A.—Yes; wood-working machinery.

Q.—Have any accidents occurred? A.—Not many; sometimes men have cut their fingers off.

Q.—Suppose a man has cut his fingers off, does the Government recompense him? A.—In what way?

Q.—By recompensing him? A.—In some cases it is done on purpose. For instance, I had a man in the broom-shop who was determined not to do any work. He had served terms in prison, and not done anything. I was determined that if he would not work neither would he eat. I made him saw brooms, and took a great deal of trouble to teach him. He went out of prison at the end of his term, and he returned. He went to the knife and cut off the first two fingers of his right hand at the first joint, so that he could not work. We gave him no compensation.

Q.—What would the compensation amount to given by the Government if all

his fingers had been taken off? A.—I am not in a position to give that information, as those matters are settled by the Government outside of my department.

By the CHAIRMAN:—

Q.—It would depend on the man a good deal? A.—Yes; very largely.

By Mr. McLEAN:—

Q.—What would be the consequence, provided all convict work was stamped as such when it was sent out? A.—I do not think that would have any effect upon it; it would still be convict work?

Q.—People would know they were buying convict work? A.—Yes.

Q.—Would it have any effect on the sale? A.—They would get over that. In the State of Pennsylvania they are obliged to stamp everything that is manufactured in the prison as convict work, but they get over that very beautifully.

By Mr. ARMSTRONG:—

Q.—Do you think that if machinery was done away with a prisoner would be more competent and perfect in the trade, if not using machinery, in hand-work when he was released? A.—With us we could teach them very little. You must recollect that if the work had to be done by hand, and we had no machinery on which to employ them, they would not accomplish the same amount of work. Let me illustrate this: You put a man who has not been accustomed to mechanics' tools, and who is on a sentence of six months, to manufacture some article, and all his work will be botched. If you put him to a machine he gets not only accustomed to the machine, but an adept at it, and he becomes master of it and turns out perfect work. On leaving the prison he will seek employment at the same line of trade.

Q.—Do you think that in prisons contract work has a beneficial effect on them? A.—It depends on how the contract is conducted. For instance, it is injurious if you hand over the convicts to the contractor, as is done in the Southern States, and let him be the judge in regard to their work. The system was for the State to sell the convicts' work at so much per head, and place them under the absolute control of the contractors. That, of course, was slavery in the very worst form. I have visited the convicts in some of those States, and I found it was the very worst condition of slavery. If you lease the labor of the convicts to the contractor and give him equal control over the convict, and he is employed there—as is done in the Central Prison, where the contractor has nothing to do with the convicts except buying their work and instructing them—there can be no objection to the system.

Q.—Who supplies the foremen for the convicts in the prison? A.—The contractors do.

Q.—Is a convict not forced to do a certain amount of work in prison when the work is immediately under the control of the prison authorities? A.—That is not our experience. The trouble, if we have any, has been in not being able to get the shoemaking work down to a task. Most of the prisoners prefer to work to a task. In the broom-shop each one does a task, and after they have done it they can go on and do extra work, for which they get paid.

Q.—Is the broom contract for a long time? A.—They will expire both about the same time.

Q.—When there are not enough prisoners at the Central Prison is it not a common thing to send to the common gaols for prisoners? A.—By our Act of incorporation we are at liberty to bring prisoners from any other prisons, prisoners who are under sentence for fourteen days and upwards at hard labor.

Q.—Is that frequently done as between the Central Prison and the gaol? A.—More than two-thirds of the prisoners are from the county gaol.

By Mr. FREED:—

Q.—Who pays the fares when they are transported for this purpose? A.—The Government does.

By Mr. CARSON :—

Q.—Is it your experience that a criminal, unless he becomes so by mere accident, will be a criminal all his days, no matter what laws there are to prevent him?  
A.—If he abandons himself to a life of crime there is nothing I have ever yet been able to discover to stop him till he has run his course.

Q.—And he naturally becomes looked on with suspicion? A.—Yes.

Q.—Often, if such men are imprisoned for long terms could not their services be successfully utilized in manufacturing goods for the use of the Government? A.—That could be done if the men were imprisoned on long terms.

Q.—Take, for instance, the manufacture of militia tents and tent materials, could not this be done in Kingston, when the prisoners are there on long terms? Could not mail bags be also manufactured there? A.—I could not speak on that subject.

Q.—I am asking your opinion, based on your experience in the Central Prison. I understand you see a difficulty on account of the short term of imprisonment?  
A.—Yes. There is no difficulty in teaching anything if you have the men to apply it.

By the CHAIRMAN :—

Q.—Are your prisoners on the whole of more than average intelligence? A.—We are supposed not to work any unfit for hard labor.

Q.—On an average, do you consider they are more intelligent than the average men outside? A.—Not so much.

By Mr. McLEAN :—

Q.—What do the contractors pay the Government for these prisoners a day?  
A.—The rate they have been paying is 40 cents for ten hours.

Q.—Does the Government provide the contractors with all machinery, excepting engines and boilers? A.—No; we find only the power. We find boilers and engines and the main line of shafting, and they find everything else.

Q.—Do you find them a house? A.—Yes; the prison.

Q.—They do not have to pay any taxes for that? A.—No.

Q.—They pay no rent? A.—No rent.

Q.—Do you find any ground on which they are allowed to store lumber? A.—Yes; we have space sufficient for what they require within the walls.

Q.—Is there a drying kiln included? A.—Yes.

Q.—All that accommodation is there? A.—Yes; the drying kiln was erected at the opening of the prison when the work was let out to the Canada Car Company.

Q.—Has the factory inspector been through your machine shops in the Central Prison? A.—I think not.

Q.—Would not that come under control of the factory inspector? A.—I think not. Of course, we are willing to have him come around and go through.

Q.—Do you think the factory inspector should inspect that factory as much as any other factory? A.—As I say, I would not express any opinion in regard to that matter. I have no objection to his coming through because the shops will bear inspection at any time.

By Mr. HEAKES :—

Q.—Have you ever calculated what the accommodation, power, ground room, and so on, are worth? A.—I have not.

Q.—Have you any idea what those facilities would be worth to the contractor?  
A.—No; I have no idea.

Q.—You say he pays 40 cents a day for ten hours work? A.—And he has not made much out of it so far.

Q.—But he likes to hang on to it? A.—I think they are very anxious to sell out.

By Mr. FREED :—

Q.—Would it not be possible to employ the prisoners in producing goods that might be exported and sold elsewhere, and not interfere with our native mechanics?

A.—I have heard that spoken of, but I do not know whether you could find a market for prison-manufactured goods. I have heard of goods being manufactured in the Central Prison and sent to England. But why should England be made a dumping ground for our prison-made goods? I see nothing in that, because we cannot manufacture as cheaply as they do in Germany.

Q.—Is a profit among the first considerations in conducting operations in a prison? A.—Not with us.

Q.—Is it among the first considerations in the employment of the labor of the prisoners? A.—No.

Q.—The first consideration, I suppose, is the reformation of the prisoner? A.—Yes; our first duty is the safety of the prisoner and then to work upon his reformation.

Q.—You are aware that even if prisoners make only an unappreciable percentage of the article it may have a very disturbing influence on the market, and thereby a serious effect on free labor? A.—I never found it so. It is not the experience of men who have given the matter a great deal of thought on the other side. For instance, take a boot and shoe maker in New York State, or a hollowware casting shop in New York State. When an Albany prison took up the hollowware casting, it was only one-fortieth of 1 per cent.

Q.—But this disturbing influence being thrown on the market, does it not depreciate the whole labor of the country in that line of trade? A.—I do not think so.

Q.—Were not the shoemakers in Canada injured when shoes were made in the Kingston Penitentiary? A.—You have more competition in Montreal than you ever had in the Kingston Penitentiary, I believe.

Q.—Take an illustration. If sugar were sold at 6 cents per pound, and some one were to sell 1,000 pounds in Toronto at 4 cents, would it not disturb the market? A.—Only to a very limited extent.

Q.—If those limited quantities of woodenware and like goods are thrown into the market has not that a disturbing influence on the free labor employed at the trade? A.—It would be if the goods were sold under their value.

Q.—Are they not sold under their value? A.—They are not.

Q.—You say they are not? A.—To my certain knowledge they are not. I know the contractors have often refused to execute contracts at prices paid to outside labor.

Q.—Are you aware that prison-made brooms are sold in Hamilton at 10 cents each? A.—We manufacture some brooms. There will not be much over, perhaps, one pound of corn, hardly costing less than 1 cent per pound. You may take the figures as they are for corn, and 1 cent for handling and 2 cents for making the broom. You can get brooms made cheaper in Quebec than the contractor here is paying to have it done.

By Mr. HEAKES:—

Q.—The makers in Quebec furnish their own workshop and power? A.—Yes.

By Mr. FREED:—

Q.—Do not the contractors give the men rewards for good conduct, and interfere with the discipline of the prison in that manner? A.—No; we never allow that to be done.

Q.—Can it be done, in spite of your protests? A.—If that were attempted it would simply mean the expulsion of the man who did it. Only a short time ago I had occasion to turn two men out who had been the means of conveying articles to the prisoners, and whenever I discover such actions going on, no matter what position the employé might occupy, in connection with the prison, or the contractor, he has to go.

Q.—From your experience, are the prisoners able to earn a little money towards laying by a little pile at the expiration of their term? A.—In some cases we have had married men who have made quite a little money in the broom shop, and we

have paid it to support their families, and in some cases single men have gathered together a little money.

Q.—Do they get any share of the regular money which the contractors pay for their services? A.—No; no part of it.

Q.—Not at any time? A.—No; I hold that no contractor has anything to do with the prison life, and no influence on it in any shape or form.

Q.—The two parties who have the contract keep the machinery and tools in order, do they not? A.—Only to the extent of giving out work, instructing them in the use of the machinery and keeping the tools in order—not beyond that.

Q.—Have not prisoners been punished for not performing their allotted tasks? A.—Yes.

Q.—Is not that task sometimes more, considering the experience of the prisoner, than a man should be called upon to perform? A.—No.

Q.—Who fixes the task? A.—I do. In the broom-shop we take what an average workman—not a first-class, nor a poor workman—is able to do; the first-class man, who has served with us two or three terms, will make a good deal over; others never reach the stint. A tramp who would rather lay off from work, even if he were hungry, or would, perhaps, steal his children's clothing in order to get drink, would do nothing unless he had a task to perform.

Q.—If a prisoner fails to perform his task, what do you do? A.—We have to be governed by the mental or physical capacity of the man. If he is mentally or physically weak the facts are considered. If he possesses proper mental and physical qualities we determine the task for him and see that he does it.

Miss HELEN GURNETT, Dressmaker, Toronto, called and sworn.

By Mr. ARMSTRONG :—

Q.—Will you please tell the Commission the average weekly wages of a first-class milliner or dressmaker, or are both trades combined? A.—They are separate.

Q.—Take, then, a first class dressmaker; please state what would be her average wages? A.—I have never been in anyone else's workroom besides my own, and I run only a small business. My best hands receive \$5, \$6, or \$7; \$7 is the outside a week.

Q.—How many hours will a woman work per day for those wages? A.—From 8 until 6, with one hour at noon.

Q.—Take young girls going to learn the business; are they apprenticed? A.—Usually they are.

Q.—How many years have they to serve before they become experienced hands? A.—They think it dreadful if they have to serve six months.

Q.—What do they generally receive per week when they first go to the business? A.—They are supposed to serve six months without receiving anything. They are usually little girls who come right out of school. We have to teach them to sew; they cannot even so much as use a needle. My experience has been that sometimes a girl can be very useful in two months, but then she has been taught to sew at home.

Q.—Then you would consider a young girl who has some knowledge of sewing much more useful in the business than a young girl who has never been taught that branch? A.—Certainly.

Q.—Are there many dressmakers idle in Toronto at the present time, to your knowledge? A.—I could not say; there are none of mine idle; this is what we call the dull season.

Q.—What would be the average wages of a first-class milliner, to your knowledge? A.—I used to work at the millinery myself, and the wages—of course it is difficult to give you the average, but the best wages were about \$8 or \$9 a week. That, however, lasts a very short time; it would only be about four months in the year.

Q.—Are they employed a larger part of the year at less wages? A.—Yes; we

keep on the cheap hands and teach them while business is dull, because we have more time ourselves to show them how we want the work done.

Q.—Is there any idle season in the year with dressmakers when they are completely idle, and have nothing whatever to do, and if so, how long is that season? A.—I have been in business in Toronto for about seven years—not for myself, but altogether. We have never been obliged to close down for want of work, but I have usually given from two to three weeks in August to the girls for rest. I think we all need a rest. I do, I know, for I get worn out.

Q.—Could you tell us the difference between the wages for a first-class dressmaker in Toronto and the wages paid to a similar hand in the United States? A.—Yes; I have known girls who were working at \$4 a week to get \$7 there; and I have known others working here at \$2 a week, or \$2.50, to be paid \$5 or \$6 there. Those are the wages of two girls who have worked for me who have gone there and tried it and come back again.

Q.—You think, considering all things, that a young girl working at the dressmaking business in Toronto will, after taking all things into consideration and other expenses, be as well off here as in a similar city on the other side of the lines? A.—Living is cheaper here. A skilled hand can get higher wages in the United States and does not have to pay much more for board.

Q.—Do you think the millinery business is interfered with much from immigration from the old country? A.—They do not bring out any one who can do the work, except they are taught after coming here.

Q.—It is a new business here to them? A.—It is very different. We have old country girls who work for us, but we have to teach them their business over again. The first-class hands do not come out here. Occasionally an experienced hand comes out with a family, but as a rule they do not come out, except with a family.

Q.—You have to teach them, I presume, the styles, and there are more changes here than in the old country? A.—Yes; there is a quite different way of making dresses here.

By Mr. HEAKES:—

Q.—You have mentioned the rate of wages paid by yourself. Do you think that the general rate paid will be about the same as that you have mentioned? A.—There are more fashionable places than mine where the hands will obtain larger wages, and establishments that keep more hands and do a more select business, although in larger places they do piece-work.

Q.—Do you think that which you have given us would be a fair average of a dressmaker's wages, say \$5 per week? A.—I have girls to whom I give more than that, but the trouble is with girls that they are always looking to getting married; they do not make a business of dressmaking. I do not know why it is, but you can very seldom get young women to make up their minds that they are going to spend their lives in this business. They do not take enough interest in it, the interest in it they might take. The trouble is in the girls themselves, and of course with most of my good girls the trouble is they get married just when I get them where I want them. They leave me and I have to begin again.

Q.—They all believe in the principles of union? A.—Yes.

Miss M. J. WATSON, Dressmaker, Toronto, called and sworn.

By Mr. HEAKES:—

Q.—You are a dressmaker. A.—Yes.

Q.—Do you agree with the evidence of the last witness? A.—Yes.

Q.—Do you know of anything of interest in connection with people engaged in a dressmaking which has not been spoken of? A.—Well, of course the subject of wages. I think girls would be better paid if they were more competent. The

trouble is, we cannot get competent people. I think that comes from the want of an apprentice system. My experience has been, in fifteen years we have not had an apprentice inside of the house.

Q.—How long should a young person serve at dressmaking before becoming competent? A.—I don't think they could be first-class without serving three years; but, as it is, they come without any knowledge at all, and they are supposed capable right from the first. We have to look after our own interests, and, of course, they are not taught.

Q.—Doesn't it frequently happen that young people, taken on as improvers during the busy season, are discharged after the busy season is over? A.—Not if they are competent.

By Mr. ARMSTRONG:—

Q.—Do you know anything of the position of young women employed behind counters as clerks in stores of the cities? A.—Only from hearsay.

RICHARD WILKINS, Dry-goods Salesman, called and sworn.

By Mr. HEAKES:—

Q.—What are the average hours dry-goods salesmen are employed in Toronto? A.—I could not say the average. I work about ten hours.

Q.—Is there any difference between Yonge and Queen streets? A.—Yes; Queen street works longer hours. I use to work an average of thirteen hours a day. Now they consider ten short.

Q.—How much longer have salesmen on Yonge street to remain at business than those on King street? A.—Their stores are open all hours in the evening. It would bring it to an average of thirteen hours a day.

Q.—Have salesmen in Toronto ever made an effort to shorten hours? A.—Yes; but there are circumstances, such as difference in ability, which prevent them from combining, the same as in other work. There is a vast difference in the ability and experience, and employers make a difference.

Q.—Why should difference in ability prevent salesmen from combining for the common purpose of shortening hours? A.—Well, they don't generally combine on short hours; they combine on things such as wages.

Q.—Do you think if all stores closed at 6 o'clock you would be able to meet the requirements of the customers? A.—Certainly. I think it is only justice to those who do close that others should remain closed.

Q.—What percentage of the retail merchants in Toronto do close? A.—Taking numbers, I don't suppose more than one-third close at reasonable hours; but taking the amount of capital, perhaps one-half the capital would close at reasonable hours.

Q.—Will you tell us, please, what class of people buy in stores kept open after 6 o'clock? A.—To a great extent those who have all their time at their disposal and could go in their carriage, and go any hour of the day. Taking first-class establishments, we find people of wealth shopping after hours. We find a great many more so than of the laboring classes.

Q.—What is the system of apprenticeship in the dry-goods business? A.—There is none. A young man spending six months in a general store in business comes to the city, and competes with a man who has eighteen or twenty years' experience, and that man is supposed to coach him. It is a hindrance to the good men. I know a young man twenty years of age working for \$3, and other men are supposed to coach him on, which is to their hindrance in every way.

Q.—What would be the average wages of the salesmen in Toronto? A.—I suppose about \$8 is the average.

By the CHAIRMAN:—

Q.—What age would that be? A.—Married men, if they are any good, get, say, \$9 to \$10 on an average. Heads of departments get higher than that.

By Mr. HEAKES :—

Q.—Does it depend on the department that a man is employed in or on his own good business qualities? A.—To a certain extent on both. There are departments better paid than others, but of course ability has something to do with it.

Q.—Do you know if a salesman gets out of employment is there difficulty in finding employment? A.—Yes; there is great injustice in dismissing at the end of the season. For instance, at the 1st of January trade is comparatively over, and if a man is discharged he has trouble almost to find employment until April.

Q.—How long are engagements made for, as a rule? A.—For a year; you have to sign a paper that it terminates at one day's notice. The salary is stated to be for one year.

Q.—Is it generally the practice to dismiss salesmen in that way? A.—A great deal of it is done.

Q.—At what age do young men generally go to the business? A.—A great many of them start in stores as parcel boys.

Q.—Do you know what wages the young fellows get who start at the bottom? A.—About \$2 a week. He works a full day, and then has to carry parcels after that, because it is too tiring on the horse.

Q.—How much would his pay increase after that? A.—He might get \$2 the next year or \$2.50, but it increases very slowly.

Q.—Do you have much difficulty with young fellows going into a store on one street in Toronto and then staying for a while, and then moving to another? A.—No; unless he can hold his situation he is not thought much of, compared with a man who has held his situation for any length of time, though there are some who are thrown off at the end of the season.

Q.—Do you know what wages qualified hands who are females receive? A.—They get from \$3 to \$6, and a girl who gets \$6 a week holds her head as high as a millionaire's daughter, and dresses as well.

Q.—At what salary do they commence? A.—I believe they go to the millinery department without anything for six months and from that go behind the counter.

Q.—Do you know an establishment in Toronto where girls behind the counter seldom get more than \$4 a week? A.—No; I have not heard of that positively.

Q.—Is there such a supply of that class of labor that it is always possible to fill a store with beginners each six months for nothing? A.—Yes; I am speaking of going into the millinery department.

Q.—Are those girls permitted to sit down? A.—It is not looked upon very favorably. It is not so long ago that they would be told they were wearing out their clothes.

Q.—Taking into consideration the way that girls have to dress, do you think they receive sufficient pay? A.—No; I do not. I think if they do the work as well as men they should receive the same pay, but there are a few exceptional cases where they do, just where they settle down to the business and make it a life work, but as a rule they don't do that.

Q.—They look upon it as a stepping-stone or halting-place between that and another position? A.—Yes.

Q.—Have the salaries of salesmen increased or decreased in the last ten years on an average? A.—I don't think they have decreased, but I am hardly competent to judge. I think living is higher and I don't think they have increased according to the higher living.

Q.—Has the employment of female clerks in stores a depreciating effect? A.—Certainly. It throws men out of employment. More are employed, and yet employers can get two or three girls for the price of one man. I know of an instance where the father of a family was discharged on account of the dulness of trade. He had two daughters behind the counter. He was thrown out on account of the times, but they were retained at lower salaries.

Q.—Do you know if separate conveniences are always supplied for male and female clerks? A.—I think that is generally done. They are rather a respectable class of girls.

Dr. W. B. NESBITT, Toronto, called and sworn.

By the CHAIRMAN:—

Q.—Will you please give the Commission your opinion in regard to foods?  
 A.—In my opinion, in the first place, the people of the present time are eating a great deal more than is good for them or than there is any necessity for eating; in the second place, they are paying a great deal more for the amount of nutriment they obtain than there is any necessity to pay; and in the third place, they would be able to do better work and be in much better health if they obtained their foods on a better system, and ate less. The principal difficulty is that people, as a rule, know nothing about the constituents of foods, and what they really require as food, and how to cook them; they know much less about that matter than about other subjects. Experiments, and the general run of that sort of work by a great many experimenters, have shown that living is very, very cheap.

Q.—Do not the French people live more cheaply than the English? A.—Yes.  
 Q.—And they live well? A.—They live better than the English people in some classes. They buy their foods better, and combine their foods better, so as to obtain a proper amount of nutriment from them. You take an ordinary meal of beef and potatoes and analyze that meat and potatoes, and also take an equal quantity of beans and peas and analyze their constituents, and you will find that there is more nutriment in the beans and peas. In the same way, take nitrogenous foods, and you will get more of every class of nutriment from them, and especially more of what is especially required.

Q.—What will be the difference in the cost between the beef and potatoes and the beans and peas? A.—Rumford, as far back as 1795, got out some tables on this subject, and looking over them and applying them to the cost of living here I find that the cost of a good meal for a hard-working man will be about three-quarters of a cent. That is the cost of a good, palatable meal, and a man would be able to do more work on it than on meat and potatoes.

Q.—Is it not a fact that in Manchester and London there are dinners provided for children at 1 cent each? A.—Yes; that is the case.

Q.—The meal, I understand, consists of bread and soup? A.—This that I have mentioned is Rumford's soup. There have been quite a number of different kinds prepared.

By Mr. HEAKES:—

Q.—What would constitute a meal costing three-quarters of a cent? A.—In this one there would be about five pounds of barley, five pounds of cornmeal, four red herrings and some salt and seasoning. The cost of the whole, together with water sufficient to make a meal for sixty-four persons, averages about three-quarters of a cent, and gives about a quart of soup each.

Q.—Did that include the cost of fire and attendance? A.—There were more extensive investigations made, in which it was found that meals could be furnished at about a farthing, about a quarter of a cent each, including fire and attendance—two servants included.

Q.—Is it not a fact that given the same amount of animal food the French people can make much better use of it than the English? A.—I could give you striking instances of how little people know. If a boarding house mistress makes soup she generally throws out the meat afterwards, on the principle that all the good was boiled out of it, when, as a matter of fact, only one-third of the good is taken out of the meat when it is boiled.

Q.—Would you consider barley, indian meal and red herrings sufficient for a laboring man to do a day's work on in this country? A.—Yes; amply sufficient.

Q.—Would you like to do it yourself? A.—Yes; this is no hearsay, this is an actual fact.

Q.—You will never make the people believe it. A.—Perhaps not.

By the CHAIRMAN :—

Q.—Do not the Scotch Highlanders work on oatmeal, which they eat three times a day? A.—Yes.

By Mr. McLEAN :—

Q.—Do you know for a fact that the Scotch have nothing but oatmeal porridge to live on? A.—Scotchmen have milk with their meal in some instances; they have it but very seldom. It is principally porridge they live on.

Q.—Do you know they live on it, and do a day's work on it? A.—Yes; it is the same way with the Irishmen living on potatoes and buttermilk. It is an actual fact that they do it; they have the nutriments and constituents of food in the proper proportions. Some of the people in New England live on fish and beans.

By Mr. HEAKES :—

Q.—Has that style of food anything to do with the destitution of the Irish people? A.—I think that is due to want of work—they have nothing to do. The system of lands there and the action of England have thrown them out of work. They have got no work to do. It does not matter whether people live on potatoes and buttermilk or on oatmeal porridge.

Q.—Do you know the amount of food furnished to a soldier in the English army? A.—I do not know the exact rations. I was looking over the tables and it is a bad system—it is not adequate. The best statement we have is that for American laborers; and, as I have said, we have tables respecting the German laborers, and I may say that the Germans have done more in this class of work than any other experimenters. The American table gives 125 grammes of proteins, 125 grammes of phosphates, and 400 grammes of carbo-hydrates. For hard work add 25 grammes of phosphates and 25 grammes of proteins.

By the CHAIRMAN :—

Q.—Do you know of what pemican, which is consumed by people in the North West, is composed? A.—It is dried buffalo meat and fat. They take the meat and dry it, pound it in a mortar, mix some berries with it and put it in bags.

By Mr. HEAKES :—

Q.—Do you consider a soldier in the British army is over-fed? A.—I think he could do the work with less food.

Q.—Do you know what it costs to feed a soldier in Canada—how much a day? A.—I could not say.

Q.—Would you be surprised to learn that it is in the neighborhood of 23 cents? A.—I should not be surprised if it were in the neighborhood of 50 cents.

By the CHAIRMAN :—

Q.—What did it cost to feed a German soldier by the day during the war with France? A.—I do not know. The most extensive experiments were made, as I have said, by Rumford; the result was, as I have stated, that each meal cost three quarters of a cent. The principal difficulty is that people do not know what they require and do not know how to buy.

Q.—May not others besides workingmen be placed in the same category? A.—We found, as a matter of fact, that the working classes will buy the best; for instance, they buy sirloin, when they would get just as much nutriment from the neck, and for the latter they would pay about one-third of the price.

Q.—They do not know the commercial value? A.—They do not know the respective properties.

By Mr. HEAKES :—

Q.—Taking into consideration what a man has to pay for house rent and clothing for his family, say of six people, and taking his wages at \$1 a day, how much money can he afford to pay for sirloin steak? A.—It is not what he can afford but what he does spend.

Q.—What has he got to spend for sirloin steak after he has paid for fuel, clothing, house rent, and so on? A.—I will tell you as a fact, and it is the result arrived at by those who have made the most extensive investigations, that a man skrimps more on his clothing and house rent than he does on his meals.

By Mr. GIBSON :—

Q.—Who, then, buys the poor qualities of meat? A.—The people in comfortable circumstances buy cheaper meats than many poor people who are less able to afford it.

By the CHAIRMAN :—

Q.—Is it because these people in comfortable circumstances know the quality of the different parts of meat? A.—I think they know the value of it more than the others. Some men pride themselves on saying that they get for their families the best beef, flour and vegetables. Now, if you take the best flour, the whitest flour, the nicest looking flour, as a matter of fact, it is not the best flour; there is less nutriment in it than in other flour.

Q.—Is it not a fact that they do not buy that flour, for it is pastry flour? A.—I do not mean the pastry flour, but what they call the best flour. If you take flour such as that used to make brown bread you find the workmen do not buy it.

Q.—As a matter of fact, a man could not eat it and live on it. A.—All right. Your knowledge does not tally with experimental work.

Q.—Is it not a fact that different climates require different foods? A.—Yes.

Q.—Men in winter time, I suppose, could not live on brown bread? A.—No; you cannot live on that alone.

Q.—Do not the Germans live on blackbread and other things? A.—This is the way in which experiments are made. They put an animal in a glass case and analyze all the food given to him, and measure the amount of air that goes in and that the animal has taken so much and given out so much. From the data they arrive at the quantity of food an animal can live on. Experiments have also been made by feeding animals on one kind of food. The best portion of our foods is the proteins, on which we can do the most work. That class of food is present in lean meat, but an animal would starve soon after he used up all the fat in his body.

Q.—Are not these experiments made to show the effects of different foods? A.—Yes; and I may say these similar experiments have been made on animals and men. They put a man in a chamber in the same kind of way as an animal and feed him in like manner.

By Mr. GIBSON :—

Q.—We are talking about men who are working for a living: what have you got to say in regard to them? A.—Experimenters find that men require so much food when they are doing nothing, and when they are at work they require so much more. There is what is called potential energy in physics, which is the latent energy of a piece of meat, and represents the amount of work that can be done from it. Experimenters can calculate the relative amount of work that can be obtained from different foods, and the relative amount of foods required for different purposes. For instance, in cold climates a man has to keep warm and you have to give him something to furnish heat—that is to say, oils.

Q.—This is a different climate from that of France and Germany, I believe? A.—All you have to do is to supply the heat.

By the CHAIRMAN :—

Q.—Are not some parts of Germany pretty cold? A.—Yes; different foods give different amounts of heat, bulk for bulk. Take 100 parts of fat, and in order to obtain the same amount of heat you must take 240 parts of lean meat or 250 parts of sugar. By a knowledge of these facts you can arrive at the amount of the different consti-

tments of food required for laboring men. When a man knows what gives heat and what gives energy he can buy the foods that give him heat and energy, just the same as he can buy a suit of clothes. At present he buys an ordinary suit for every day wear and an extra suit for Sunday wear.

Q.—If men possessed this knowledge it would be a great benefit to them, would it not? A.—We have the knowledge, but the knowledge requires to be extended.

CHARLES ROGERS, Cabinet Manufacturer, called and sworn.

By Mr. HEAKES :—

Q.—You are engaged in business in Toronto? A.—Yes.

Q.—Do you manufacture all class of cabinet-work? A.—The finer kinds of it.

Q.—Is there more demand at the present time for a better grade of furniture than there was ten years ago? A.—Yes.

Q.—Can a better grade of furniture be produced to-day cheaper than an inferior kind ten years ago? A.—I don't know. I would not like to say.

Q.—Don't you think the extensive introduction of machinery has cheapened production to such an extent that good furniture can be produced as cheaply as inexpensive furniture could formerly? A.—There is a medium class which can, but I think when you come to the expensive furniture there is not much difference.

Q.—Can first-class furniture be manufactured by machinery? A.—Yes; assisted by machinery.

Q.—What wages do cabinet makers earn in Toronto? A.—Most of our men earn \$12 a week.

Q.—Piece or day's work? A.—Day's work. Our upholsterers, I think—skilled men—have \$14, \$15 and \$16.

Q.—Would that be the average rate in Toronto? A.—No; I can only speak for my own place. I don't think the average would come up to that.

Q.—Do cabinet-makers as a rule have employment steadily all the year around? A.—That is one point for our men. Carpenters are paid more perhaps, but they don't work in the winter season.

Q.—You cannot tell us what the general rate of wages is for cabinet-makers in Toronto? A.—No; but I should think it would be \$10 to \$10.50. I don't speak from a perfect knowledge of it. I think in my own shop there are few under \$12. I think perhaps the average of our place would be \$11 to \$11.50.

Q.—Has the introduction of machinery in your business made more work, or has it displaced men? A.—I think the tendency of machinery is to displace men. You turn out more work with the same number of men; as long as you have the demand it is all right, but when the demand ceases it is wrong.

Q.—What has been the increase on the wages of cabinet-makers during the last fifteen years? A.—Well, if you go back thirty years I could tell you more. When I came here thirty-five years ago a first-class cabinet-maker would get \$9 a week, and \$1.25 a day was a fair wage at what time.

By the CHAIRMAN :—

Q.—What would be his price to-day? A.—Two dollars, a day.

Q.—Taking into consideration the cost of living thirty-five years ago and the cost of living to-day is the mechanic better off to-day? A.—In some case he has much improved. He will pay higher for some things and less for others. I think altogether he is better.

Q.—During those thirty-five years almost all machinery has been introduced into business? A.—Yes.

Q.—Then the operatives have not reaped the benefit of the introduction of machinery? A.—Well, you might look at that in two ways. For instance, at the present time there are so many engaged in business. There is scarcely a little town or

village in Canada but has a cabinet factory with power going. Those men are not making money. If they were to make money of course they would have a larger proportion than the mechanic would, but that is not the case. The fact of those auction sales here has proved that the market is not sufficient to keep all those factories in a healthy state of operation.

Q.—Thirty-five years ago, how many hours a day did the men work? A.—Ten.

Q.—And to-day? A.—Ten hours.

By Mr. HEAKES :—

Q.—Men have been displaced; they work the same hours; they are no better off materially?

The CHAIRMAN.—The witness stated quite the contrary.

By Mr. HEAKES :—

Q.—I will put it in another way. If they worked ten hours twenty-five years ago and they do the same to-day, if there are fewer men in the business, of what benefit has been machinery? A.—I did not say there are fewer men in business.

Q.—I understood you to say machinery had displaced men? A.—That is the tendency, I said.

Q.—Have the men derived a benefit from the introduction of machinery? A.—Well, in regard to some things—for instance, food—I think they pay dearer, but in regard to clothing and furniture I think they get them cheaper—that is the better class.

By Mr. ARMSTRONG :—

Q.—Is there much furniture imported into Toronto to-day? A.—Yes; there is a good deal imported that is, in the way of introducing newer goods.

By Mr. CARSON :—

Q.—Those are principally patterns? A.—Certainly.

By Mr. ARMSTRONG :—

Q.—What class of furniture do those patterns belong to? A.—Household furniture.

Q.—Is there as much imported to-day as there was ten years ago? A.—I could not say, but there is a good deal imported, and I know it is for that purpose. I don't think that in Canada we have got into that systematic way of getting up furniture that they have on the other side on account of our limited market; but there, where they devote attention to special classes, they get up very handsome furniture.

Q.—Are there more furniture manufactories in the Province of Ontario at the present time than ten years ago? A.—I should think so, though I have no figures.

Q.—Then there is more demand for Canadian furniture? A.—Yes; the population has been increasing; for instance, in Toronto the population has increased.

Q.—Where do you find your market principally? A.—Chiefly in Toronto and among people well-to-do round about.

Q.—Is the market in outside towns increasing in volume? A.—Well, I do not know about that—just special customers.

Q.—Taking raw materials, for instance, is it Canadian-made which is principally used? A.—Yes; principally, but walnut lumber does not exist in Canada, and I have to import it from the other side. Veneers are all imported, too.

Q.—How long will it take a boy going into the business to learn cabinet-making properly? A.—I have had a good deal of experience with regard to apprentices. Altogether, I have been for the last fifty years in the business. I have had command of men and boys in the old country and here. Seven years was the apprentice term in the old country, and five years was the period in Hay & Co.'s, and that is about the time. As far as my own establishment is concerned, we have only one or two, and none under indentures.

Q.—As regards apprentices, do you think it would be beneficial to a boy and his employer that he should be indentured? A.—Yes; I think so. Unless apprentices

are well looked after and well trained it is no use. In Hay & Co.'s we had a very good system, and if followed by others would be beneficial. If an apprentice was taken on, he was taken on approval. No articles were taken until about two months, to learn whether he was adapted to the business and liked it, and if he was then indentures were made out. For a considerable time when a boy got to be one or two years at the business he cleared off to the other side, and any benefit which the firm got from training him was lost, because the first year or two almost nothing was made out of him; so they regulated wages to have a check upon that. They commenced with, I think, \$2. Five and a-half years was the time. They rose up by small advances, until the last eighteen months they got \$3.50. There was \$100 kept back, and if they served out their apprenticeship in a proper way they got a present of this \$100.

Q.—That accrued out of their wages? A.—No; it was not part of their wages, but was given as a bonus as a reason why they should fulfil their time. I never knew a case of a boy being refused it where he did as he should have done.

By Mr. CARSON:—

Q.—A man at \$2 a day, if he is sober and industrious, is he placed in as good a position as his employer, as far as making money is concerned, the way business is cut up at the present time? A.—Yes.

Q.—Supposing you were placed in the same position, at \$2 a day, wouldn't you as readily take it as to go into business? A.—I can tell you some of my own experience, and I think you are not far off the mark. When I commenced business here three years ago I did so for the purpose of making an opening for my family. The first year I took nothing out of the business, and my sons worked for half pay. In fact, if I had started business, and said to a man, "Now, I am starting to give you custom," it would have been about the same thing, because we made nothing, and came out in debt. I was putting in capital and employing men, and giving them good wages for nothing. I don't know how it will be for the second year; we are taking stock. Those men have lived respectably and, I think for \$2 a day, have lived comfortably.

By Mr. GIBSON:—

Q.—Isn't the manufactured stock worth anything? A.—Certainly it is.

Q.—Does not the employer make the stock he has at the end of the year? A.—Well, if I put in \$50,000, and at the end of the year I find I have covered the whole thing, I have made nothing, but lost the interest of my money.

Q.—And the man who made \$2 a day, how much has he made? A.—Well, they were in ease to myself, and had comfort in working as they did. There is no comparison in the comfort. I would not for anything change positions in that respect. They have nothing to do but attend to their work, and it is not hard upon them.

Q.—I wonder, with your opinions, you ever went outside a day's work? A.—How?

Q.—You are so fond of praising up the workingman's position? A.—You asked me if a man getting \$2 a day was not as good as his employer, with regard to his living and happiness. Now, taking the number of dollars a man is sacrificing, I don't think they can have much peace of mind. I don't think they can have any comfort.

Q.—In this advanced age, would it be possible for you to compete without the latest improved machinery? A.—No; we like to have the best. We have got the best.

Q.—It is necessary to have it? A.—Yes; if the working classes really want to benefit themselves there is a way of doing it without commencing strikes. Why don't they form a company on the co-operative principle?

By Mr. ARMSTRONG:—

Q.—Do you believe in profit-sharing? A.—Well, if I was a rich man I would try it in one way—that is, each man would attend to his own duty.

Q.—You believe in the principles of profit-sharing? A.—Yes.

W. MILLICHAMP, Manufacturer of Showcases, General Store Fittings and Cabinet Work, Toronto, called and sworn.

By Mr. ARMSTRONG:—

Q.—You are a silver-plate and fancy case manufacturer? A.—I am now engaged practically in the manufacture of cabinet work and store-fittings, and show cases only. I have changed my business.

Q.—Is there an increased demand in your class of goods? A.—Yes; we find it so.

Q.—Where do you principally find your markets? A.—Well, our trade extends throughout the Dominion—Upper Canada and the other Provinces.

Q.—How do you account for the increased demand for that class of goods? Has the purchasing power of the people increased, the population, or what? A.—Well, the increase of population builds up trade in different branches, but there is a desire on the part of storekeepers to make their stores more attractive than they used to be.

Q.—Is there much of that class of goods imported from the United States? A.—Not a great deal at the present time; there is some, principally in the Lower Provinces and Upper Canada. This arises from the difference in freight. Freight in Canada is much higher than in the United States, and that is the greatest drawback in our case. We could do well in New Brunswick, except for freight.

Q.—The high tariff placed on imported goods has been the means of increasing the volume of the manufactured article in Canada? A.—I don't think there can be any dispute about that point, for the National Policy has increased the manufacture of all classes of goods.

Q.—What would be the weekly wages of first-class men, highly-skilled men? A.—I pay for highly-skilled men as high as \$23 and \$24 a week. The next grade is \$18, and some get \$12 in our shop.

Q.—Have wages increased during the last five years in Toronto or Ontario? A.—Yes; they have materially increased since the introduction of the National Policy with the higher grade of workmen.

Q.—Where do you get your raw material from? A.—Principally from the United States. The reason we import from the United States is simply there is a great deal more consumed there, and they have a better mode of turning it out.

Q.—How long would it take an intelligent boy to learn the silver-plating business? A.—I think a young man going to that should serve five years, for his own interest, to make him a thoroughly competent man, to be able to take a good position in another establishment; and, in the case of such a man, his employer would be pleased to retain him after he was through with his time. I do not say they cannot learn it in much less time, because that depends on their ability and intelligence; but, taking it as a rule, I think if you take apprentices in at all, in the first place they should have an opportunity of seeing the trade for six or eight months to decide whether they can follow it. I don't think the principle of giving \$1.50 or \$2 a week, and so on, with a regular rise, is sufficient, because in two or three years they often become as efficient as some men; so I think it would be better, even if they are under indentures, by giving them an appreciation of the future in the way of holding out a special inducement.

Q.—What is the number of hours that constitute a day's work in your business? A.—Well, ten hours constitute a day's work, but we allow the man to work any hours they think proper.

Q.—Do they work on piece-work? A.—No; they work by the day, but we are supposed to open at seven and close at six. We pay for the number of hours the men work. We pay our men on Friday.

Q.—Do the men prefer Friday? A.—Yes; it enables their wives to go out to market on Saturday mornings, and they can go with their husbands if they wish.

Miss BURNETT, Milliner and Dressmaker, Toronto, called and sworn.

By Mr. ARMSTRONG:—

Q.—How many hands do you employ in your establishment? A.—I never employ more than twenty-five.

Q.—What, to the best of your knowledge, is the average weekly wages of a first-class milliner? A.—A first-class milliner receives about \$40 a month.

Q.—Take a young girl going to the millinery business, who has an adaptability to the business—how long would it take her to become a good hand? A.—As a general rule, it would take her three or four years.

Q.—Could you inform the Commission the age a young woman should go to the business, in order to be most serviceable to herself and her employer? A.—I think about fourteen or fifteen years.

Q.—You have had some experience with apprentices, I suppose? A.—I take very few apprentices.

Q.—Do you find any difficulty with young women going to the business first who have no knowledge of needlework? A.—Yes; that is one reason why I do not like to take apprentices, because we likely have to teach them needlework. That is a great want in the schools now, that the girls are not taught what is really the most useful thing for a young woman to know, a knowledge of needlework.

Q.—Is there any surplus of unemployed milliners or dressmakers in this city? A.—Yes; I think there are a great many unemployed milliners. Some of those hands are taken into the warehouses. Some of the shops take more apprentices than there are positions to fill. The result is, that those hands get a trifling knowledge of the business, not sufficient to enable them to fill positions well, and the consequence is, there are a great many going around idle looking for situations.

Q.—I presume it depends upon the custom of the establishment as regards the amount of work they receive in a season or a year; or are there dull and busy seasons in the trade? A.—There are just two seasons the year; the spring season is by far the best for millinery, particularly. It commences about March and lasts from March to the end of June. The seasons are short and a great many of the milliners employed get employment only for the seasons—they get about six months' wages during the year.

Q.—Do you think those women of the millinery business who only receive six months' wages in the year receive sufficient during those six months to keep them for the other six months when they are not employed? A.—I do not think an average milliner would. Their wages are only small, they do not get large wages, that is for a season hand. They are generally not very good hands. In most shops there are only two good milliners, and they retain their situations the year round. The others are season hands, who are there three or four months, and who are then out of employment, and if they have not homes to go to they are in rather a bad position.

Q.—Can you speak from a practical knowledge of the business in the United States or Great Britain as compared with the business in Canada? A.—I do not know very much about Great Britain now. I go home to buy, but I do not as much as formerly. I have not been there for fifteen years, except going to buy.

By Mr. HEAKES:—

Q.—Can you suggest any means by which continuous employment can be given to those girls? A.—There seems to be really more to fill the positions than there are positions for. I think too many girls go to learn the business. There is a class of girls who go to learn millinery and dressmaking in this country who, in the old country, would be in domestic services, which, indeed, they are far better adapted to than they are for the positions which they are endeavoring to fill now. If they depend on their own earnings while they are employed in filling situations of this kind they must live very poorly indeed.

Q.—Can you give any reason why a young woman in this country objects to go into domestic service so much? Have you ever thought of this subject? A.—I have often wondered why they do object so much, and I suppose it is because sometimes they do not get a good mistress. I dare say a great many of the girls have a hard time in service, and they like to have their evenings to themselves—I suppose that is the real reason.

Q.—Do you think that the system of education pursued in our public schools has anything to do with diverting the minds of the pupils from such work as domestic service? A.—I do not know very much about the system of education pursued in the public schools. Generally, farmers' daughters who come here to go to service, and the daughters of mechanics, who would make very good servants and fill those positions well, seem to be a little above this kind of work. I do not know whether it is the character of the education or what it is that causes this feeling.

By Mr. ARMSTRONG:—

Q.—Do you know, in addition to girls in stores having their evenings to themselves, there is this fact, that the girls look upon domestic service as being somewhat menial? A.—Yes; I think so, but in reality it is not so, because taking into consideration the homes some girls have who are operatives and filling situations in factories, taking the home life they have in the boarding houses in which they live, it would be far more respectable to be in domestic service, if they only knew it. But the difficulty is to make them believe it.

Q.—Have you any knowledge of young girls serving as clerks in dry-goods stores? A.—I have in my store four girls.

Q.—In those large establishments on King and Yonge streets, what is the number of hours they work per day? A.—There is a great variety of times: in large places on Yonge street the hours are very long, but in the higher-class places there are shorter hours; in fact, the higher class the store is the shorter are the hours.

Q.—Generally speaking, is it optional for a young girl, when there are no customers in the store, to sit down and take a rest, or is it compulsory to stand? A.—I do not know. I think in all respectable shops the girls can sit down if they are not working. I know there are some shops—Eaton's, and places like that—where there is a constant run of customers—where, if a girl is seen sitting down I dare say she will be dismissed; but I think where there is not a very great rush of customers, the girls could generally sit down.

By Mr. HEAKES:—

Q.—Is it necessary for the girls to stand all day in the store? A.—There should be seats in the shops, and no girl should be required to stand all day. They could easily have small seats at the back of the counter where, when the girl is not actually serving, she could sit down. It is injurious to a girl to be kept standing all the time; it injures her health very much.

W. H. WILLIAMSON, Gentlemen's Tie Manufacturer, Toronto, called and sworn.

By Mr. HEAKES:—

Q.—Do you confine your business wholly to the manufacture of scarfs and ties? A.—Yes.

Q.—What class of labor do you principally employ in your business? A.—We employ principally girls.

Q.—Of what age are the girls you employ? A.—They run from fifteen years up. We employ nothing younger than that.

Q.—What is the class of their occupation, and is it machine work? A.—No; not machine work, it is principally hand work.

Q.—Do they make these ties by the piece? A.—Yes; it is all piece-work.

Q.—Are there various prices paid in your business? A.—No; there is a uniform price.

Q.—For all classes of ties? A.—Yes; for bows and scarfs.

Q.—How much per day do the girls get? A.—They receive 50 cents per dozen on scarfs, and 15 cents and 15½ cents on bows.

Q.—What would be the average weekly wages of, say, an average girl? A.—Three dollars to four dollars a week.

Q.—And how many hours in the day would she be required to work in order to obtain that sum? A.—She will have to work eight hours, from 8:30 to 5:30. When we are busy the hours are longer.

Q.—Do you give your hands constant employment all the year? A.—We employ them about eleven months. Of course, we have slack seasons, the same as any other business.

Q.—What may be the highest amount a girl can earn in your business? A.—Some girls earn as high as \$6.50 to \$7 a week—that is, working overtime. We allow them to take work home and put in extra time in that way. Four dollars is the highest sum they receive for day work.

Q.—What is the lowest sum they reach? A.—Some cannot make more than \$2 per week. If a girl works faster she makes so much more money, of course.

Q.—I suppose that sum is paid to girls when they first go to the business? A.—Yes.

Q.—Do you find any difficulty in getting girls to fill your shop? A.—During some seasons of the year we do.

CAMPBELL MACKENZIE, Cartage Agent of the Grand Trunk Railway Company, Toronto, called and sworn.

By Mr. HEAKES :—

Q.—Do you do all the cartage of the Grand Trunk? A.—No; we do not do it all just now. There is another firm, the Hendrie & Co., and Sheddon, who do part of it.

Q.—How many men are employed in this carting business? A.—The Sheddon Company employ about ninety men in Toronto.

Q.—What hours do these men work in a day, from the time they go on in the morning till they get through at night? A.—They would average about ten hours a day, but in the very busy time they have to work longer hours.

Q.—Do they have to feed and clean their own horses? A.—They clean their horses, but they do not feed them.

Q.—Have they their own time after their day's work is done. A.—Yes.

Q.—What time do they get out in the morning? A.—Seven o'clock.

Q.—And what time are they through at night? A.—That time varies, but the average in the busy time would be about a quarter past six. In the slack time they get off earlier.

Q.—That would include the time occupied in feeding their horses, I suppose? A.—Yes.

Q.—What wages do teamsters receive? A.—We have three grades of wages. They begin at \$31 per calendar month, and after six months they are raised to \$33.50, and after a year they get \$36.

Q.—Do you furnish employment the year round to the number of men you have stated? A.—Yes; except in January, when we have some of them go off by turns. We commence with the single men and lay off about ten of them. When they come back we lay off another ten, the men taking turns until about the end of January or the first of February, when we are able to give them all work. In this way we do not discharge any men.

Q.—The object is to retain them in your employment and give them all some thing to do? A.—Yes.

Q.—Under the present system of cartage, can outsiders deliver and take freight from the sheds? A.—No.

Q.—Is there any regulation that would prevent other carters than the Sheddon or Hendrie Companies doing this cartage? A.—Yes; a merchant could do it, but he would not have any allowance made to him for it.

By the CHAIRMAN :—

Q.—The Grand Trunk does not charge cartage, I believe? A.—No; it is included in the rates.

By Mr. HEAKES :—

Q.—The cost of cartage is included in the freight rate. Do you do it for nothing? A.—They do not do it for nothing.

Q.—Is that the only regulation that would prevent independent carters delivering or receiving freight? A.—Yes; I suppose it is.

By the CHAIRMAN :—

Q.—You do not know of any other causes? A.—No.

By Mr. HEAKES :—

Q.—Do you know if there are any obstacles thrown in the way of independent carters delivering freight? Supposing a carter took a load from a store to the station, would they receive it at once or would they delay it? A.—I never knew them to delay it on purpose.

Q.—If an independent carter took a load down, would they receive it in turn? A.—Yes.

Q.—You do not know of any regulation in the law that prevents independent carters from carrying or delivering freight? A.—No; I do not know of any.

Q.—You never heard of any special legislation in the interest of the Grand Trunk on this matter? A.—No.

JOHN D. NASMITH, Baker, Toronto, called and sworn.

By Mr. HEAKES :—

Q.—You have been in the business for some time, I believe? A.—I have been in the business about seventeen years.

Q.—During the time you have been in the business for yourself has the condition of the men employed in the baking trade improved or otherwise? A.—I think it has improved in this city.

Q.—In what respects do you think the men have gained? A.—They work better hours and shorter hours.

Q.—Has the pay of the men increased? A.—Yes; it has increased.

Q.—What wages do bakers earn in Toronto now? A.—Bakers in this city receive about \$10 a week.

Q.—Would that be the average in your opinion? A.—Yes.

Q.—How many hours do they work? A.—They generally work about nine hours.

Q.—Formerly they were accustomed to working a great deal longer, I believe? A.—Yes; there were longer hours formerly. The men worked more hours formerly; there were periods between the time they started work and the time they quit when the work, as regards the men, was stopped, for they were simply waiting the different stages.

Q.—Has the shortness of hours been brought about by the introduction of machinery and improved conveniences? A.—Not to any great extent.

Q.—What have been the chief features in bringing about this reduction of hours? A.—The combination among the men.

Q.—Do they do the same amount of work equally well in the reduced number of hours as they formerly did in the longer hours? A.—I do not think they did quite

the same amount of work—of course, I only speak with regard to my own shop—but in my own shop the change has not been at all in the same proportion as it is in many other shops, because we always worked by day's work.

Q.—Did the shortening of hours have any effect in the direction of increasing the wages? A.—I do not think it did. The two work concurrently; they were brought about together.

Q.—Did it become necessary to employ more men when the hours were shortened? A.—I do not think it did, in most cases.

Q.—It was, then, just a re-arrangement of the hours of work? A.—Yes.

Q.—Do you have different grades of wages for bakers? A.—Only for foremen and other hands.

Q.—Do you take many apprentices to the baking business? A.—That has been, of late, the method.

Q.—Are those apprentices regularly indentured to your business? A.—I have only had, I think, two apprentices regularly indentured.

Q.—What system do you think is most satisfactory, the indenturing system or taking a boy to teach him his trade without any agreement being entered into? A.—I think the indenturing system is decidedly preferable.

Q.—Have you had any experience with flour made from wheat grown in the North-West? A.—I have used a good deal of it at one time and another.

Q.—How does that flour compare with Ontario flour? A.—A comparison of flour is a pretty ticklish business.

Q.—Do you find it satisfactory? A.—The flour from there is, as a rule, what we call strong flour; but a large proportion of it is not as fine or suitable for a good portion of our work as is the flour we get here.

Q.—Can you give us any idea of the difference of the cost of flour from the North-West and flour manufactured here? A.—No difference for the same quality.

WILLIAM CARLYLE, Baker, Toronto, called and sworn.

By Mr. HEAKES :—

Q.—Did you hear the evidence of the last witness (Nasmith)? A.—Yes.

Q.—Do you corroborate what Mr. Nasmith said? A.—Not altogether.

Q.—Will you please state the points respecting which you differ from him? A.—I differ from him on one point. He said he did not think there had been more employment given since the hours of labor were shortened. I do not think there are two opinions in regard to that. We cannot get men to do the work in nine hours that they did in twelve.

Q.—I think he spoke principally of his own business—he pays by day work. What difference do you think it has made in the employment? A.—I think there are one-fourth more men employed now.

Q.—Previous to the time the hours were shortened was there any surplus of labor in the baking trade? A.—Yes.

Q.—And since the hours have been shortened, in what relation is the supply to the demand? A.—I believe there is a surplus at all times; because the country supplied us with more help than we really required.

By the CHAIRMAN :—

Q.—You mean the country parts? A.—Yes; they come from the country parts to the city.

By Mr. HEAKES :—

Q.—Do you find the men who come in from the surrounding districts are as competent as the men turned out in the city? A.—No.

Q.—Do they command the same rate of wages as city men? A.—So far as my

own shop is concerned they would have to do so, because I have none there but men belonging to organized labor.

Q.—You have to pay the same rate of wages to all your men? A.—Yes; to all men.

Q.—That is one of the rules of organized labor? A.—Yes; it is one of the rules of organized labor.

Q.—Do you find that that rule works disastrously to your business? A.—No; I cannot say it does.

Q.—Do you think that since the men have been organized you have been able to deal with them any better than you were able to deal with them before? A.—I never have had any trouble in dealing with men in any way or at any time—I know of no difficulty.

Q.—What proportion has the increase of wages been in the baking trade during the last five years? A.—To answer that question properly you must take into consideration the difference in the hours of work now and formerly. We have reduced the hours from twelve to nine, and we give the men the same wages now. The wages are practically the same as they were five years ago, but the hours are one-fourth less.

Q.—The men, then, have been gainers in the number of hours they have to work? A.—Yes.

Q.—Have you noticed any difference since the hours were shortened in the reliability of the men to do their work? A.—I cannot say that I have noticed much; but I think, as a natural consequence, a man working nine hours must be more fresh the next morning than a man who has worked twelve or fourteen hours; it is reasonable to expect that.

By Mr. ARMSTRONG :—

Q.—Do you think the shortening of the hours of labor has a tendency to keep men sober; or rather is not a man more liable after working long and hard to drink than one who has not put in such long and tedious hours? A.—Yes.

Q.—Are the boss bakers organized in Toronto? A.—Not so far as their employes are concerned. They have an organization.

Q.—Will you please state to the Commission the object of the organization of employing bakers? A.—The organization is for mutual protection.

Q.—Does the association discuss or fix the price of bread? A.—Yes; we have a fixed price for bread.

Q.—Did the price of bread go up when the hours were decreased by the men? A.—Yes.

Q.—Are all employing bakers in connection with the organization? A.—No; not all.

Q.—Suppose a member of your organization should sell bread under the price fixed by the organization, would he continue to be a member, or would he be expelled or would he be punished in any way? A.—No; we have no way we could punish him.

Q.—Would he still continue to be a member of your organization? A.—Yes.

Q.—You have no objection to hiring organized labor? A.—No; none whatever.

Q.—Do you think organization has a tendency to make a man steady and more careful in his habits around the shop? A.—I do not think it. My personal opinion, so far as my own bread is concerned, and in connection with my men, is, that organized labor has been a benefit to our trade all through.

F. P. BIRLEY, Manufacturer of Paper Boxes, Toronto, called and sworn.

By Mr. HEAKES:—

Q.—What kind of paper boxes do you manufacture? A.—I manufacture all kinds of hardware, dry-goods and other boxes, also confectioners' boxes, and every class.

Q.—What class of help do you employ in your establishment? A.—I employ girls, principally.

Q.—At what age do you take those girls into your employ? A.—I take them about sixteen; that is about the youngest we care to take them.

Q.—Do they work day-work or piece-work? A.—They work pretty much all piece-work.

Q.—What can a girl earn in a week? A.—That depends very much on the girl. One girl will earn \$3 and another, employed at the same work, will earn from \$6.50 to \$7. It is very light work, and a girl requires to be very active with her fingers. Of course, the more active with her fingers she is the more work she can turn out.

Q.—Then you think the lowest wages you pay would be \$3? A.—No; there are some lower than that sum. For the first two or three months after they start work they do not actually earn more than \$1 a week; in fact, for the first week or two they spoil more than they make.

Q.—How long does it take to become proficient at the paper box making business? A.—It very much depends on the girl. Some girls become very clever at it inside of a couple of years, and other girls require to work at it five or six years to become tolerably proficient; in fact, to become proficient at the very finest work it takes six or seven years—that, of course, applies only to the fine work.

Q.—Take the average girl; how long will it be before she can earn, say, \$3 per week? A.—You might say three months, probably less than that.

Q.—Do those girls remain long in your employment? A.—Yes; as a rule they do. I have had them working for me ever since we started up, which is seven or eight years ago.

Q.—Do you have any difficulty in keeping up the supply of hands? A.—Some times; hands are very scarce at times. In the summer time such is the case more than in the winter, and that is the time, generally, when we have the most business—in the summer time.

Q.—At what hour do the girls go to work in the morning, and what time do they leave at night? A.—They work from eight to six, and on Saturdays they go on at eight and quit at twelve, noon.

Q.—Do they sit at their work? A.—Sometimes they sit and sometimes they stand. It depends on the class of work at which they are employed. There is some work at which they must stand and cannot sit. Some girls do not sit at all but prefer to stand.

Q.—Are the girls fined if they spoil work in your establishment? A.—No.

Q.—And if they are late in the morning, are they fined? A.—We have a system of locking the door. We allow them so long to arrive, and we have to adopt this system, because a year ago we would let them come in when they chose, and some of them did not come until nine o'clock. There were certain hands who came late every morning, so we put up a notice that the door would be closed at a certain hour, and if they were not there they must stop out till noon, which notice has had very good results.

Q.—How long is the outside door of the establishment kept locked after it is fastened in the morning? A.—It is kept locked until noon, as a rule.

Q.—Is the key left in the door? A.—Yes; I think it is.

Q.—In the event of any excitement taking place in the factory, do you consider it safe to have the outside door locked? A.—Of course, there is more than one door to the factory; there is a back door, and one leading from the office to the factory; so there is only one locked out of the three doors.

By Mr. McLEAN :—

Q.—What is the lowest wages you pay in your factory to any of the hands ?  
A.—I could not tell you that at the moment. I think we allow some hands for the first week's work \$1.50.

Q.—Have you many hands working at \$1.50 ? A.—No ; I do not suppose there are any at present.

Q.—What is the highest rate of wages you pay in your establishment ? A.—Our work is principally piece-work. We have a few girls on day work, and they receive 75 cents a day. The first week a girl comes to work she will spoil three or four dollars' worth of work, as this business is so very different from any other business.

Q.—How long have you been at the business yourselves ? A.—About nine years.

Q.—Is your business increasing ? A.—Yes it is. It is, comparatively speaking, a new business, and is in its infancy.

Q.—Do you find any American competition ? A.—Yes ; in what we call knock-down boxes there is quite a competition. There is some duty imposed on the boxes as there is on the material out of which they are made, and on boxes costing \$10 a thousand there will be \$7 stock and the balance, \$3, will be made up in the shape of wages. So we are actually protected to the extent of 25 per cent., the difference between the raw material and the made up stock.

Q.—If the duty were taken off would it affect your trade as regards American boxes ? A.—What about the raw material ? Almost all our straw-board is brought from the other side.

Q.—Yes ; and manufacture the boxes here ? A.—Yes ; I think it would benefit us a little here—that is to have both duties taken off. In some lines it would give us considerable benefit. As regards paper boxes, the freight in some classes is more than the boxes are worth, on account of there being so much bulk.

Q.—If the duty on American boxes was taken off would it be any benefit to you ? A.—No ; it would not be any benefit to us.

Q.—Would it be any injury to you ? A.—Yes ; unless something was done with regard to the raw material.

By Mr. HEAKES :—

Q.—Do you get all your raw material from the United States ? A.—We get our raw material from the United States, Germany and England.

Q.—Is not the raw material manufactured in Canada ? A.—There is some in Canada ; some lines are manufactured here.

By Mr. KERWIN :—

Q.—Are there many establishments in this city that carry on this business ?  
A.—There are three or four.

Q.—How many people are employed in your establishment ? A.—At present about eighty.

By Mr. ARMSTRONG :—

Q.—Are there many of your young women who earn from \$2 to \$3 a week and have to board themselves out of it ? A.—No ; they principally board at home. Not many of my hands earn from \$2 to \$3 ; the majority earn from \$3 to \$6.

Q.—Have you any men employed in your establishment ? A.—Yes ; we have men to do the cutting, and such like ; and boys also do the cutting.

Q.—Are there separate conveniences in the factory for the different sexes ? A.—Yes.

Q.—The men work by the piece, I presume ? A.—They work at what we call the cutting machines.

Q.—How much do they earn per week ? A.—What we call cutters earn about \$2 a day, or \$12 a week.

By Mr. CARSON:—

Q.—In regard to this raw material, did I understand you do say that it is made in Canada? A.—Some of it is manufactured here. There is some straw-board made in the country.

Q.—Do you use any Canadian-manufactured raw material? A.—No; not much, because we can buy the other a little cheaper, even with the duty on it, because it gives us a better result. Of course we get the raw material where we can get the best value for our money.

GEORGE HARRIS, Painter, Toronto, called and sworn.

By Mr. ARMSTRONG:—

Q.—You are a journeyman painter, I believe? A.—Yes; I am.

Q.—How long have you worked as a journeyman at your trade in Toronto? A.—I have worked at my trade in Toronto twenty years.

Q.—Are there different grades in your trade here? A.—There are different grades, but we do not recognize the grades at all.

Q.—How much per hour is the scale of wages among journeymen in your trade? A.—The minimum rate is 20 cents per hour.

Q.—How many hours constitute a day's work? A.—At the present time ten hours per day, and five hours on Saturday, and this applies to three months in the season, June, July and August. So far as the city is concerned, some of the shops have that work all the year round. Some shops only have it in the summer time. I am speaking now of my own shop.

Q.—Have the wages of painters increased during the past five years in Toronto? A.—They have increased during that time.

Q.—Have the painters received a shortening of hours also? A.—No.

Q.—Does your organization recognize apprentices? A.—We recognize the system of apprenticeship.

Q.—Do you believe that apprentices to the painting trade should be indentured? A.—I believe so.

Q.—What would you call a proper term for an active boy to serve in order to properly learn the trade of painting? A.—He should serve four years.

Q.—Do you find your organization has been of any benefit to the painters? A.—Undoubtedly so.

Q.—What is your opinion in regard to the settlement of labor difficulties, or rather, do you believe in the principle of arbitration in the settlement of disputes between employer and employés? A.—Yes; to this extent: that in order to avoid a strike if possible, it is desirable on every occasion that arbitration should be resorted to. Of course, I will admit that sometimes a strike is necessary, as a last resort.

Q.—Have you been connected with painters' organizations on the other side? A.—I have been connected with the International society.

Q.—What benefit does that do to the workmen? A.—We have a certain benefit connected with our International society. It must be remembered that we are young yet. The first inception of the International society here was on the 15th of last March, and Toronto took a prominent part in introducing the International body there. We simply met. There were very few met last summer in Toronto, but those that did meet established an International body. We were scarcely in a position to do that at that time.

Q.—And you have found that a benefit? A.—Undoubtedly; we have been successful from that time to this, so far as the business organization is concerned.

Q.—As regards the painters in Toronto: are they paid, as a general rule, weekly, fortnightly or monthly? A.—As a body, we are engaged by the hour. Our rate is per hour. Our minimum rate is 20 cents per hour for journeymen.

Q.—How are the men paid—at the end of every week or at the end of every fortnight? A.—Some men are paid fortnightly; some men are paid weekly. Those that are paid weekly are paid on Friday; those that are paid fortnightly are paid every other Friday. Outside of that, I am unable to give you any information.

Q.—Do you think if the men were paid weekly it would be a benefit to them? A.—Undoubtedly so.

JOHN ROONEY, Painter, Toronto, called and sworn.

By Mr. ARMSTRONG:—

Q.—You are also a journeyman painter, I believe? A.—Yes.

Q.—Do you approve of the evidence given by the last witness, Harris? A.—Yes; I corroborate every word Mr. Harris said. So far as the wages question is concerned, I think most of the shops in the city pay weekly, that is with the exception of one or two.

By Mr. HEAKES:—

Q.—What is the average number of days that painters work in Toronto? A.—That I can hardly say, but I can give you pretty nearly the average wages.

Q.—Will you please give to the Commission the average earnings of a painter in a year in this city? A.—The average wages of a painter in Toronto are something about \$400 a year.

Q.—Do you think many of them go over \$400 a year? A.—There are very few who do. There are over three months in the year when there is hardly anything doing; there are only six months when there is practically anything to do that you can talk about.

By Mr. CARSON:—

In case you were going to indenture yourself, would you be satisfied to become indentured for four years? A.—Yes; I had to be indentured for five years.

Q.—Were you indentured in this country? A.—No; I was indentured in the old country.

By Mr. ARMSTRONG:—

Q.—Did you ever work in the United States? A.—No; this is the only place I have worked. The painters are favorable to shorter hours than ten hours per day.

By Mr. GIBSON:—

Q.—How do your wages here compare with the wages paid in the old country? A.—It depends on what city you work in when you are in the old country. It does not vary but very little here from the prices paid in London.

Q.—Take a city of the same size as Toronto, in the old country, and how do the wages compare as between here and there? A.—Take Manchester, for instance, and there is a large difference between the wages.

Q.—Are you in as good a position in this country as a painter is in Manchester? A.—Yes; I know nothing to complain of, except that we are not making enough money. There is so very much time lost in this country that it takes a painter all his time to pull through. If he keeps out of debt during the winter it takes him all his time; he has got to be pretty steady during the summer in order to be able to get through the year.

By Mr. ARMSTRONG:—

Q.—Do you find many painters coming from the old country to Toronto? A.—Yes; a great many here.

Q.—Have they a tendency to work under the pay that Canadian painters receive? A.—They have that tendency when they first come out, but there are exceptions where they stick to that tendency right through.

By Mr. HEAKES:—

Q.—Do you not find the same conditions prevailing to a considerable extent among the native workmen here? A.—That is the great trouble.

By Mr. GIBSON:—

Q.—What class of work do you work at? A.—House work.

Q.—Could a painter on carriages have full time? A.—I cannot answer for that. We are representing the house-painters, not the carriage-painters.

WINDSOR, Tuesday, 6th December, 1887.

The Commission assembled in the Government buildings at 10 o'clock a.m.

The CHAIRMAN read the following letter:—

(Translation.)

“ ARCHBISHOP'S PALACE,

“ QUEBEC, 25th November, 1887.

“ A. W. BLACKBEY, Esq.,

“ *Secretary of the Royal Labor Commission, Ottawa.*

“ SIR,—In compliance with the desire you have expressed to me of having my opinion upon certain questions concerning the object of the Royal Commission, of which you are the Secretary, I will give my views upon some of these questions.

“ I. *Child Labor.*

“ II. *Female Labor.*

“ I write these two points, for they are to a certain extent intimately connected. “ 1st. It is necessary to provide means for the protection of morals in the factories, and outside of them, before entering and after going out. It also sometimes happens that employers make an abuse of their authority, and the law ought to be severe.

“ 2nd. The work exacted from children and persons belonging to the other sex should be neither too long nor too continuous. A short rest in the morning, and another in the afternoon, would spare many miseries and sicknesses, and would be easily compensated for by the owners of the factories, for the workmen having had a rest would work better.

“ III. *Sanitary arrangements of Factories.*

“ I have often heard parish priests of my diocese say that the majority of persons, and specially of girls, who leave their families to go and work in factories, return broken down by work, and consumptive, for the want of ventilation in factories. The atmosphere is vitiated by the bad smell of oils, by the dust caused by the machinery in operation, as well as by the workmen themselves; the lungs become incapable of fulfilling their functions. On the other hand, ventilation itself, if it is not made according to the rules of hygiene, may cause many accidents.

“ IV. *Arbitration.*

“ V. *Strikes and their results.*

“ Strikes are one of the great dangers of society, for they too often degenerate into deplorable disorders. It seems to me that it would be useful to establish a court of arbitration, whose members should be absolutely independent of the interested parties, to settle the difficulties which give rise to strikes.

“ His Eminence Cardinal Gibbons, who, as everybody knows, takes much interest in the labor question, is very desirous of seeing this measure adopted in the United States.

“ A law upon this question undoubtedly offers many difficulties, but time and experience could improve it.

“ Accept, Mr. Secretary, the assurance of my distinguished consideration.

“ E. A., CARD. TASCHEREAU,  
“ *Arch. of Quebec.*”

WILLIAM BENSON, Collector of Customs, Windsor, called and sworn.

By the CHAIRMAN :—

Q.—How long have you resided here? A.—A little more than nineteen years.

By Mr. FREED :—

Q.—Have you been collector in Windsor during those nineteen years? A.—Yes.

Q.—During this time I suppose you have been pretty familiar with the nature of the traffic crossing the river between Windsor and Detroit in both directions? A.—Yes.

Q.—Especially in this direction? A.—Yes.

Q.—Is there a good deal of illicit traffic? A.—Yes; there is.

Q.—And attempts which were frustrated, I suppose? A.—And attempts which were frustrated.

Q.—Now, is this illicit traffic mostly on the part of the residents of the two cities to get goods for ordinary use, or is it for transportation inland? A.—Both, Sir.

Q.—In which direction do you think is the largest body of illicit traffic? A.—It would be difficult for me to answer that question, but I should say there was almost an equal amount. If there is a difference, it is that there would be more brought into Canada than there is taken out of it.

Q.—Of course, where goods are smuggled or attempted to be smuggled, it is because they are dearer in the country to which they are taken than in the country where they are bought? A.—Yes; that of course would be the object of the party's fault, although sometimes they are mistaken in that, and we find occasionally that they would go and purchase articles on the other side which they can really get as cheap here.

Q.—What class of goods, for the most part, do you find brought from Detroit into Windsor, whether regularly through the Customs or irregularly? A.—Dry-goods, hardware, rubber goods and clothing.

Q.—These are cheaper in Detroit than in Windsor? A.—These would be considered cheaper there than here, and these are the articles which are particularly brought over in an illicit way.

Q.—What articles in your knowledge are for the most part purchased in Windsor for use in Detroit? A.—Silks, velvets, ribbons and gloves; these are the articles particularly taken from here, I think, and clothing of a certain class—the better class of clothing.

Q.—Better class clothing is cheaper in Windsor than in Detroit? A.—Yes.

By the CHAIRMAN :—

Q.—What do you mean by the better class; do you mean higher priced? A.—Yes.

By Mr. FREED :—

Q.—How about cottons—such as shirtings and sheetings? A.—We have had very little of that brought over recently; there was a time when that formed a considerable article of smuggled goods, but now it does not. I do not think we have made a seizure of a piece of cotton for the last two years. Cotton can be bought cheaper here than it can there, factory cotton especially.

Q.—Did you speak of boots and shoes? A.—I did not, but occasionally they would form another article of smuggled goods, but not to any considerable extent.

Q.—Would they be cheaper in Detroit than in Windsor? A.—Yes.

Q.—Ordinary articles of family consumption, say meat, for example, how is that? A.—That is an article about which I could scarcely give an answer. It can be bought cheaper on the other side than here, and occasionally a butcher will bring it over, paying the duty on what he brings, but that does not enter very largely into articles we import; salt meats, too, are cheaper on the other side—salt pork, for instance, and that is brought over in considerable quantities.

Q.—Are you able to speak of the prices charged by butchers in the two cities?  
A.—24

A.—No; I can speak of the prices here, of course, but I could not speak positively as to the prices on the other side.

Q.—What would be the prices for roasts and first-class steaks in Windsor?

A.—A York shilling for the choice cuts, and from that downward.

Q.—Is much beef sold here by the carcase or the quarter? A.—Not a great deal, I should judge; in going to the market I do not see it brought in very largely.

Q.—What is lamb worth? A.—Lamb is worth a York shilling a pound.

Q.—And veal? A.—Ten cents to a York shilling.

Q.—You are speaking of retail prices at butcher's stalls? A.—Yes.

A.—We can get some kinds of vegetables as cheap here as there, but for the most part vegetables are cheaper in Detroit.

Q.—Taking the ordinary articles in common use, can as much be purchased with an equal amount of money in Windsor as in Detroit? A.—Well, if I ventured to answer that it would be at a guess; I could not pretend to say positively.

Q.—How are rents in the two cities? A.—Rents are cheaper here.

Q.—Do many persons live in Windsor who are employed in Detroit? A.—Yes; a good many.

Q.—Do many business men who do business in Detroit live in Windsor? A.—No; there are a number living in Windsor who are employed in different places in Detroit, but not many men established in business; in fact, I do not at present know of any.

Q.—Do any live in Detroit who work or do business in Windsor? A.—A few.

Q.—Not many? A.—No; not so many as the other way; I mean that we have, I think, a greater number of people doing business in Windsor and living in Detroit than the other way. We have a number of firms the heads of which reside in Detroit.

By the CHAIRMAN:—

Q.—They have branch houses here? A.—Yes.

By Mr. FREED:—

Q.—What is the duty paid on live stock taken from Canada into the United States? A.—I think it is twenty per cent.; it is twenty per cent. on this side.

Q.—A gentleman tells me he saw some cows taken over alive; do they pay duty? A.—No; I think not. I think, too, there is provision for undressed fowl going in free; poultry of all kinds undressed, if I recollect aright, goes in free, but when dressed it pays duty. Eggs, too, go in free.

Q.—Animals coming into Canada from the United States alive pay what duty? A.—Twenty per cent.

Q.—And fowl? A.—The same; fowl are classed with other animals, except when coming in for breeding purposes, and then they are free.

Q.—Rents are considerably higher in Detroit than in Windsor? A.—Yes; considerably.

Q.—If it were not for the duty do you think there would be a large flow of provisions—vegetables, meats, &c., from and to Canada? A.—I think there would be an increased flow both ways.

Q.—Would the flow be mostly this way or the other? A.—Perhaps it would be more this way than the other; in this particular locality I am pretty well satisfied it would.

Q.—These things are produced more cheaply in Michigan than in Western Ontario? A.—Yes.

Q.—There is not a large manufacturing industry in Windsor? A.—Not very large, but it is largely increasing. We have a number of branches of firms that have come to remain, and quite a number have been established in the last three or four years.

Q.—Who established them, generally? A.—Generally, people from the other side.

Q.—The Detroit firms establish branch manufactories in Windsor? A.—Yes.  
 Q.—Do manufacturers from other places start establishments here? A.—I am not aware of any.

Q.—These firms you spoke of established them here so as to get the benefit of our markets without paying any duty? A.—That I suppose to be the reason. I should have mentioned that there is one firm recently established here—a candy manufacturer; he is not a Detroit man.

Q.—Are you able to speak of the rates of wages prevailing in Windsor and Detroit? A.—No; I could not be prepared to do that.

Q.—Some little time ago an attempt was made to prevent workingmen who live in Windsor from crossing the river to labor in Detroit? A.—Yes, sir.

Q.—Are you familiar with the circumstances? A.—Tolerably so.  
 Q.—Will you tell us, if you please, what you know about it? A.—In a general way?

Q.—Yes; such particulars as you think would be of interest? A.—The attempt was made on the other side, and it was enforced for a time, but upon consideration it was done away with. I had occasion to go over the river and interview the collector of customs there and some other parties, with one of the inspectors who was sent here by our Government to make inquiries on that particular subject. I accompanied him when he went to seek his information. I am aware that a number had been thrown out of employment for a time, but the greater number of them were re-employed on the other side again. The attempt had been made more by being forced upon the Government there than by any voluntary act of theirs, as I understood. The collector was disposed to look upon the matter leniently, but that was not the case westward, especially in Port Huron, where they were very particular. In Buffalo and other cities they were disposed to look upon it more leniently. It was agreed after some consideration, after it had been in force for some time, forced upon the employers as I understood by the Knights of Labor—it was agreed to make a test case and submit it to the supreme courts of the United States for decision. No decision, I believe, was ever arrived at, and things lapsed back into the old channel. The attempt was made to enforce against Canadians the law with regard to foreign labor contracts.

By Mr. ARMSTRONG:—

Q.—Are there any medicines illicitly taken over from Windsor to Detroit? A.—I could not say that.

Q.—Do you know what percentage of increase there is in house rents in Detroit over Windsor? A.—I could not answer that definitely, but I should imagine it was quite one-third.

By the CHAIRMAN:—

Q.—Considering their respective distance from business? A.—In the business parts of the city rents are double as much.

Q.—Could you give us any reason why vegetables should be dearer here than in Detroit? A.—I should say that from the description of the country around Detroit and the nature of the soil, and from the comparative sameness of the cost of labor, they would be able to produce them there cheaper.

Q.—The soil is better there? A.—Yes; in many parts it is; I am speaking of this particular locality, and not of Ontario.

By Mr. HEAKES:—

Q.—I suppose the farmers outside of Detroit make more of a specialty of raising vegetables for the market? A.—Yes; they do.

ROBERT KERR, Foundryman and Machinist, Walkerville, called and sworn.

By MR. FREED:—

Q.—How long have you resided at Walkerville? A.—About ten years.

Q.—What particular line of work do you carry on in your foundry? A.—We build engines, do general mill work, construct marine engines, and all class of iron and brass work, machine pumps, etc.

Q.—If it were not for the duties imposed, if there were perfect freedom of intercourse between Canada and the United States, would you be at a disadvantage as compared with the Detroit foundryman, or would you have an advantage over him? A.—I do not think we could stand at all unless we had protective duties on certain articles. There are a great many things against us, but there are more for us than there are against us.

Q.—How about the labor you employ; does it cost as much? A.—Our labor, I think, costs a little more than in Detroit. Being so close to Detroit you cannot keep good men unless you pay them high wages, and we have to keep first class labor. Such mechanics are anxious to get into the large cities, where there is more chance for a job than where there is only one shop.

Q.—How about the price of iron; are you in a position to answer as to that? A.—Our position at this end of the county makes iron higher to us; it is higher than if we were in Toronto. We have the extra freights to pay; then we are the only large foundry in this part of the county that can turn out very heavy forgings. At the present time we have an order in Scotland for large shafts, cranks and connecting rods; at Buffalo we have an order for steel castings, which will pay thirty per cent. duty. These we cannot get in the country.

Q.—Do you use pig iron? A.—Yes.

Q.—Is it not cheaper here than in Detroit? A.—About the same; there is very little difference. If we had to bring it from Detroit we would have to pay a little more.

Q.—If there were no duty on the iron coming into the country, would you be able to use the iron of the United States? A.—Yes; but we prefer Scotch iron for our particular use.

Q.—Is it bar iron, for example; what iron do you use? A.—We use all sizes.

Q.—I mean what makes? A.—Mostly Scotch iron. We get some from the United States, which we buy in case of need; but we order principally through firms in Montreal, Hamilton and Toronto.

Q.—Do you use the higher grades of iron, like South Staffordshire? A.—No; we may use a little bar iron. We use steel whenever we want a high class of material, and for general purposes we use just common iron.

Q.—Do you get Bessemer steel from England or from the United States? A.—Mostly from England, through Canadian dealers. We do not buy steel in very large quantities, and we get it through the dealers in the country. Sometimes we go to the United States, but as a rule we buy little there.

Q.—How are the prices of Bessemer steel? A.—We could buy it cheaper in the United States, but after paying duties we can obtain it cheaper from the old country.

Q.—How about crucible steel; do you make use of it? A.—Yes; that is what we are using now. We cannot always get it, unless we send to England for it, and it is a little cheaper, it not being exactly crucible steel but cast steel. We also get a high grade of cast steel, which is strong enough for our purpose, from Buffalo.

Q.—What cast steel do you get that is not crucible steel? A.—It goes through a special process; it is furnace steel.

Q.—It is open hearth steel? A.—Yes.

Q.—Then it is more like Bessemer than crucible? A.—Yes.

Q.—As to the prices of your product, how do they compare with Detroit prices? Do you sell as cheap as the foundrymen in Detroit? A.—Certainly we do with the same class of goods. Anything we make a specialty of we are fully as cheap as they are; but anything we do not make a specialty of, and which the Americans do make a specialty of in their large factories, we cannot compete in the price.

Q.—They have a large market, and consequently can carry on operations on a larger scale than you can? A.—Just so. In our peculiar situation we have to do everything. We are about the only foundry of any consequence here, and as such we are required to do a great variety of work, and consequently we cannot do it as cheaply as if we were doing more work of a special class.

Q.—Are you in a position to use machinery as largely or as much improved machinery as the foundries in Detroit? A.—If we were doing large quantities of special kinds of work we could do so. We have special machinery for what we make a specialty of, but that is all we can do.

Q.—Do I understand you to live at Walkerville? A.—Yes.

Q.—Have you any knowledge of the tobacco grown at Walkerville? A.—I know there is tobacco grown by Mr. Walker, of Walkerville.

Q.—Have you any special knowledge as to whether he has succeeded in that enterprise or not? A.—I can only repeat what I have heard from hearsay; I cannot state positively. I understand the crop has been better every year, owing to the improved cultivation of the land.

Q.—Are you aware of any particular theory he has in growing tobacco? A.—I am not.

Q.—Do you know anything as to whether tobacco grows better by cultivation on the same soil? A.—That is what I have been led to understand.

Q.—And it is supposed that in course of time when the soil gets in proper condition we may be able to grow as good tobacco in Ontario as in Virginia? A.—I suppose it would do better with a suitable climate as well as cultivation.

By Mr. ARMSTRONG:—

Q.—Are your employes organized? A.—Yes.

Q.—In the Knights of Labor or a trades union? A.—No.

Q.—Do the hands in your foundry belong to organized labor? A.—A few of them do.

Q.—Do they belong to organized labor on this side or in Detroit? A.—On this side.

Q.—How many hours a day do they work? A.—Ten hours.

Q.—Sixty hours per week? A.—Yes; they make up sixty hours now and get off earlier on Saturday.

Q.—Are they employed on piece-work or by the week? A.—On piece-work.

Q.—Have you a graded scale of wages? A.—No. We pay a man just what we think he is worth; the wages vary very much.

By Mr. HEAKES:—

Q.—Have you ever given the subject of arbitration for the settlement of disputes between capital and labor any thought? A.—I have never had any occasion to do so, because I never had any trouble whatever with my men; not a word of trouble. We have always had peace and quietness.

Q.—Perhaps you will favor the Commission with your idea as to the best method of settling disputes in your or any other business? A.—I certainly would have arbitration.

Q.—Arbitration, you think, would be better than any other system? A.—In the event of any differences arising between employers and their men I certainly would be in favor of arbitration.

Q.—Do you think, taking into consideration the loss both of time and capital owing to strikes, the Government would be justified in interfering and making arbitration compulsory? A.—I do not think so. I think if workmen had a better idea of business and the prices obtained they would better understand the course they should adopt than they do now. The great trouble is that they really think there is more profit in the business than they receive their share of. I do not think so myself.

Q.—Have you ever given the subject of industrial education any consideration? A.—No.

Q.—Would a school in which the principles of mechanics were taught be of any benefit to men in your business? A.—Yes, it would.

Q.—Have you any regular system of apprenticeship? A.—Yes; we engage boys of fifteen years to serve four years, and pay them a certain rate of wages, increasing every year.

Q.—Are the boys indentured? A.—No.

Q.—Do you think it would be better both for the boys and the employers if the apprentices were indentured? A.—Yes.

By the CHAIRMAN :—

Q.—One ground of complaint in Toronto was that boys indentured would run away? A.—They do run away sometimes, after much trouble has been expended on them.

By Mr. HEAKES :—

Q.—Do you think those boys would make better mechanics if they had some technical training in schools? A.—Yes; instruction in drawing and rudimentary matters would be a great help.

Q.—You have nothing of that nature here? A.—No; in Detroit I suppose they have; one great drawback to the trade is, that boys having served their time are not protected afterwards. I mean to say this, that an apprentice after serving his time should be protected in the same way as the school teacher, or the lawyer, or anybody else is protected. He should not be allowed to work at his trade unless he has served his apprenticeship.

By Mr. ARMSTRONG :—

Q.—Are your men paid weekly or fortnightly? A.—Weekly.

By Mr. FREED :—

Q.—I understand a number of American manufacturers are establishing branches in Windsor or this neighborhood? A.—There are a few in Windsor and one in Walkerville.

Q.—What manufactures are carried on in these places? A.—Drugs, a branch house having been established by a firm in Detroit, and another Detroit company have established a branch in Walkerville in another branch of business.

Q.—Any in your line of business? A.—No.

Q.—Have they any motive in coming here, except to overcome the difficulty they have in regard to the duties? A.—I fancy that was the main thing that brought them here, to avoid the duties? The great trouble in these branch establishments is, that the establishment will not be running for two or three days, and then they will bring over some workmen from Detroit and do a certain quantity of work. After that is completed they will return again.

Q.—Did you ever hear of the Knights of Labor of Detroit objecting to the laboring men coming here and working in Canada when they lived in Detroit? A.—I have heard of that, but I never paid much heed to it.

Q.—Do they object to men living in Detroit coming and working in these branch shops? A.—I never heard of that.

Q.—It is the other way? A.—Yes; the other way.

By Mr. ARMSTRONG :—

Q.—You say that the apprentice system is a protection to the boy? A.—I say that when a boy has served an apprenticeship he ought to be protected in his trade. There are a great many who get a little knowledge of the trade by being around a machine shop; they leave that shop and try to do something else, and get advanced in that way, and soon come out as mechanics, without having served their time at the trade. They never become really practical men, but they fill up places.

Q.—Are the employes more in favor of the apprentice system than the employers? A.—I favor the system of indenturing apprentices, although we have never enforced it.

Q.—The men are in favor of having the apprentices indentured, but the employers are careless about it; is that so? A.—No; I never heard of the question being raised, but I would prefer that there should be indentures made out on taking on a boy at the trade.

By the CHAIRMAN :—

Q.—Do you think your opinion is shared by other employers? A.—I think so. It is, however, not customary in this country.

By Mr. GIBSON :—

Q.—You were speaking of apprentices being protected; would the indenture system, assisted by technical education, really protect them? Would an apprentice be so skilled in his work that unskilled labor could not compete with him? A.—In mechanical trades there are classes of work of all kinds. There is, however, a standard of work.

Q.—Practically, what would be unskilled labor performed by men who would not hire as skilled mechanics? A.—There are plenty of mechanics not first-class, who have served an apprenticeship at certain classes of work.

Q.—And you grade the labor? A.—Yes.

By Mr. ARMSTRONG :—

Q.—Do the men receive their wages in cash? A.—Yes.

By the CHAIRMAN :—

Q.—Is there any truck system here whatever? A.—I do not think there is much of it; there is no doubt a little of it.

By Mr. ARMSTRONG :—

Q.—On what day of the week are the men paid? A.—On Monday afternoon.

Q.—Do they prefer that day to any other day in the week? A.—We adopted it, and always kept it up. We thought that if the men were paid on Monday there would be no opportunity for them to spend their wages on Saturday night, and in that way they would be able to keep their money longer during the week.

By Mr. HEAKES :—

Q.—Has the general condition of the men improved during the last ten years? A.—Yes; they are better off; they are better off in every respect, I think. I think he is a better mechanic to-day in every respect than he was ten years ago, both intellectually and morally. His intellectual capacity is better, and if a man tries to do right he is taken more notice of than he was ten years ago.

Q.—Do you think a mechanic is able to save much money, taking one year with another? A.—Our average wages are \$2.50 a day. We pay as high as \$3 and as low as \$2.00. But I think a man (it depends, of course, greatly upon his family, and the way they live) could save a little money.

Q.—Taking the average number of months a man is employed, the average wages and an average family, do you think a mechanic is able to save money? A.—They cannot save much money, because there is not steady employment all the time.

By Mr. ARMSTRONG :—

Q.—Do you think the shortening of the hours of labor has a tendency to improve the mechanic's mind? A.—Certainly. I would be in favor of shortening the hours of labor so long as all were governed by the same law in that regard. I think it would be better in every respect. Since improved machinery has come in it has cut down a great deal of labor.

Q.—A man must have a little time for his own pleasure, and for enjoying himself with his family if he works ten hours a day. A.—He would not have much.

By Mr. FREED :—

Q.—Do many of your men own the houses in which they live? A.—We live

at Walkerville and they all belong to one party. A couple of my men own houses of their own in Windsor. Most of them live in Windsor, a few in Detroit, and some in Walkerville.

Q.—Do many mechanics in Windsor own their houses? A.—Two of mine do.

Q.—Do many others? A.—I think a good many. A good many have built houses through associations and one thing and another of that kind. They acquire houses in that way.

Q.—Do you know anything about those associations? A.—Nothing further. If you buy a lot they advance money for the building of a house, and you pay off the amount in rent.

Q.—Are they mutual associations or loan associations? A.—Loan associations.

Q.—The parties make monthly payments? A.—Yes.

Q.—Do you know if they meet the payments pretty promptly or do they fall into arrear, and lose their properties? A.—I have not heard of any people losing their properties. No doubt a few years ago a great deal of property fell back into the hands of the company through failure to meet payments.

Q.—How long ago was that? A.—Seven or eight years ago, during the panic, when there was so much financial trouble.

By Mr. ARMSTRONG:—

Q.—Provided your men are not exactly on time at their work, is there any system by which fines are imposed? A.—We do not fine anybody. We dock the time if a man is half an hour late in the morning.

Q.—You dock them half an hour, if half an hour late? A.—Yes.

By Mr. CARSON:—

Q.—Are you acquainted with the working of the Ontario Factory Act? A.—I know something of it; not very much.

Q.—Has your place been inspected? A.—Yes; we had a party here last week. He examined it all over, and said it was all right.

Q.—In regard to the inspection, was the officer strict in his inspection? A.—I do not think anything more was required.

By the CHAIRMAN:—

Q.—Did the inspector do his duty in your opinion? A.—He went through everything; I went with him; he examined all the place. He did not see anything that was dangerous.

By Mr. CARSON:—

Q.—Do you think from the nature of his examination that he was a practical man, judged from a mechanical point of view? A.—I should think so.

Q.—For what rent could you get a comfortable mechanic's house in Windsor? A.—A house with five rooms would rent for \$6.00 a month; one with seven rooms for \$8.00.

Q.—Suppose a man was to rent a similar house in the suburb of Detroit, what rent would he pay? A.—I engaged a man the other day from Detroit, what house in Windsor at \$7.50 a month, and he said he was paying for a house with five rooms in Detroit \$14.00 a month. So he was paying double rent, and he had to go a long way out of the city to get a house.

Q.—You pay from \$2.50 to \$3.00 to good men? A.—Yes.

Q.—How does that rate compare with Detroit? A.—It is a little higher. We have a good many different departments, and must have a certain number of first-class men in each department; consequently, it brings our average up a little higher.

By the CHAIRMAN:—

Q.—You explain that rate of wages by the fact that mechanics prefer to live in cities? A.—Yes; where there is a better chance of obtaining work in case of being thrown out of employment.

M. H. MILLER, Manager of the Grape Sugar Refining Company and Dominion Starch Company, Walkerville, called and sworn.

By the CHAIRMAN:—

Q.—How long have you resided in Walkerville? A.—I have been there nearly two years.

Q.—How long have you been established there? A.—That is more than I can tell.

Q.—Several years? A.—They ran under the old management I think four or five years, and then previous to that they ran under other management several years.

By Mr. FREED:—

Q.—You use corn wholly? A.—Yes.

Q.—How many men do you employ? A.—Forty.

Q.—Where do you get your corn? A.—Some of it we get right here and some we import.

Q.—Do you find any difference in the prices? A.—We have to pay the same price here as for the foreign corn, with duty added.

Q.—Is there any difference in the quality for your purposes? A.—Yes.

Q.—What is the difference? A.—The American corn gives a better yield of starch—on the average, about seven pounds to the bushel.

Q.—Do you have any commercial product besides glucose? A.—Starch, corn syrup and dextrine.

Q.—You manufacture the glucose into syrup for daily use by adding sugar? A.—By adding cane syrups.

Q.—Where do you find your market? A.—All over the Dominion; we have shipped a little to British Columbia and we ship to Halifax and St. John.

Q.—What is the glucose used for? A.—It is used by confectioners in manufacturing candies.

Q.—What becomes of the refuse material? A.—That is a feed. The greater part of that is exported back to the United States. We haven't a sale for it here, but we expect to shortly; we are arranging to dry it and sell it here.

Q.—Do you sell it undried? A.—Yes; the water is only pressed out of it; there is seventy per cent. of water in it, but now we intend to make it perfectly dry.

Q.—Is it fed to cattle or hogs? A.—To cattle mostly.

Q.—What wages do you pay? A.—The wages vary from \$3.00 to \$1.25 a day.

Q.—Do you require much skilled labor? A.—Yes; about one-half of it—such as millers and engineers.

Q.—Where do you get the acids you use? A.—Most of them come from the United States; but we get some here.

Q.—Some are manufactured in Canada? A.—Yes.

Q.—Where in Canada? A.—London and Brockville.

Q.—What are they made from—pyrites? A.—From pure sulphur.

Q.—They are not manufactured from pyrites? A.—No; we cannot use pyrites; it has to be perfectly clear, and that is contaminated with arsenic, which would turn our goods green, and we could not sell them at all. It must be perfectly clear, so we can neutralize the acids.

Q.—Glucose, I understand, takes the place of sugar in confectionery? A.—No; if they use sugar they must convert it into glucose, else the candy would granulate. They must use the acids to cut the crystals.

Q.—You consider the glucose is purer, and that there is less danger of the presence of acid in a free form than sugar, so you convert it into grape sugar by the use of acids? A.—There is no trace of acid in our sugar or syrup; I defy a chemist to find any.

Q.—Is it not true that glucose is frequently mixed with a small quantity of sugar and sold for cane sugar or syrups? A.—No; I don't think so; corn syrups are higher priced than sugar.

Q.—Is not Californian honey sometimes made from glucose? A.—Well, I can not tell; I have never made any.

By Mr. McLEAN:—

Q.—How many hands did you employ, did you say? A.—Forty.

Q.—Are there any women employed? A.—No.

Q.—Any boys? A.—Well, there are two you might call boys; one is, I think, about 16 and the other 17, or perhaps they are 15 and 16. The others are men, all the way from 18 to old men.

Q.—What wages are paid the engineers in your employ? A.—Well, at present we are paying \$1.65.

Q.—What do you pay the millers? A.—Fifty-five dollars a month.

Q.—How many hours a day do they work? A.—You might say nine or nine and a-half; the machinery is kept running through the noon hour; we run from 7 a. m. till 5.30 p. m., and of course the miller takes his dinner there; the firemen have to work, because the machinery runs right along.

Q.—That would be nine and a-half hours a day? A.—Well, hardly that just now; we have to run until we get through our business. We may get through at 5 o'clock or a quarter to five, or they may be later.

Q.—So much to do each day? A.—Yes; we have a certain amount we must run through; sometimes it takes us to 6 o'clock, especially in the glucose department, and sometimes they get through at half-past four.

By Mr. ARMSTRONG:—

Q.—When you have 40 hands, what is the average wage per week? A.—In fact I never looked into the matter, but I should judge \$1.50 to \$1.60. I think we have some men to whom we pay \$3, some \$2.50, some \$2 and \$2.15.

By Mr. McLEAN:—

Q.—And some \$1? A.—No.

Q.—One dollar and twenty-five cents? A.—Yes.

By Mr. HEAKES:—

Q.—Have you your own cooerage in connection with the establishment. A.—No; not yet, but we expect to.

Q.—I suppose the material used for making barrels is plentiful here? A.—Yes, we manufacture our own boxes and we intend to get our timber and lumber here; we have been getting it up north by Barrie; we use basswood and whitewood.

Q.—And the barrels are made of what? A.—Basswood; and there is plenty of it here.

By Mr. ARMSTRONG:—

Q.—Do you use many barrels? A.—Yes.

Q.—Have you your own coopers? A.—No; we use about 30 to 35 barrels a day.

By Mr. HEAKES:—

Q.—Is it a healthy business for men to work in? A.—Yes; I have heard no complaint; they are there every day.

Q.—I know there is a very unpleasant smell about some parts of the process in Toronto? A.—Yes; but you get used to it; but if they use the old process of steeping it is very offensive.

Q.—Is that smell unhealthy? A.—No; it is not unhealthy, but it is very disagreeable. In that plan of steeping you leave the corn in hot water for seven days.

By Mr. FREED:—

Q.—Does the waste from your establishment run into the river? A.—Yes.

Q.—Is it not calculated to contaminate the water and make it unfit for drinking? A.—I do not think there is enough of it.

Q.—Are not the acids mixed with the waste? A.—The acids are neutralised,

and besides that does not run into the river. We use the sulphate of lime to neutralize the acids, and that we manufacture into a fertilizer, so it does not get into the river. The sulphate of lime is converted into a carbonate of lime, and that is not unhealthy in itself.

Q.—You use sulphuric acid, I believe? A.—Yes; but we use so little of it that even if it did get into the water, I don't think there is enough to contaminate. The only way we can get it out of the liquor is to neutralize it.

By Mr. McLEAN:—

Q.—Do you know of many men living in Windsor who work in the United States? A.—No; I don't know of many; I know of several.

By Mr. HEAKES:—

Q.—Have you any difficulty in getting men for your business? A.—No.

By Mr. FREED:—

Q.—Where does your skilled help come from? A.—They are all living in Windsor.

By the CHAIRMAN:—

Q.—Were they Americans or Canadians? A.—Canadians mostly—men we brought with us from Edwardsburg Starch Works.

By Mr. FREED:—

Q.—Where do you sell the starch? A.—All over the Dominion, from Winnipeg to St. John.

Q.—What protection have you on it? Two cents a pound.

Q.—And on glucose? A.—The same.

By Mr. HEAKES:—

Q.—Have you anything you could suggest to us? A.—No; everything suits us so far. Of course the duty is offset, we might say, by the duty on corn, fuel, and their supplies.

By the CHAIRMAN:—

Q.—You would prefer to get corn free? A.—Well, we are not finding any fault.

By Mr. FREED:—

Q.—How would the removal of the duty affect your business? A.—Well, just now I think it would affect us unfavorably.

Q.—Commercial Union for example? A.—I think Commercial Union would.

Q.—In what way? A.—We are really building up a business here, and in a year or two from now I do not think it would affect us—or four or five years, say—but at present it would. It is an infant industry, but in the course of time we would be able, I think, to compete with the Americans on the other side. Of course we have a little advantage in the duty, but there is not such a great deal.

WINDSOR, December 7th, 1887.

DANIEL MELOCHE, Fisherman, Sandwich West, called and sworn.

By the CHAIRMAN:—

Q.—How long have you resided in Sandwich West? A.—I was born and raised there. I am sixty-seven years old, and I have been fishing for forty-five years.

By Mr. FREED:—

Q.—Do you fish on your own account? A.—I do.

Q.—Do you employ anybody to work for you? A.—I do.

Q.—Where are your fisheries? A.—The only fishery I keep now is in front of my own place.

Q.—On the river? A.—Yes, on the Detroit River.

Q.—What fish do you catch there? A.—For the last few years we have been catching some herring and a few whitefish—very few.

Q.—Where do you mostly sell those fish? A.—Generally in Detroit; sometimes in Detroit, and sometimes we ship them to the New York market. I ship some there, but most of the time I sell them in Detroit to a party to supply daily consumption.

By Mr. WALSH:—

Q.—That is fresh fish? A.—Yes.

By Mr. FREED:—

Q.—Have you to pay duty on sending fish to New York? A.—Yes.

Q.—When you sell them in Detroit do you pay duty? A.—We have paid duty on herrings for the last few years.

Q.—When sold for immediate consumption? A.—Yes; they have made us pay duty; I have paid as much as \$9 in one day on a waggon load of fish.

Q.—If you take whitefish into Detroit have you to pay duty on them? A.—No.

Q.—Only on herrings? A.—Yes; and on sturgeon.

Q.—Do you know any reason why you pay duty on herrings and not on white fish? A.—Yes.

Q.—What is it? A.—They tell me they have made a law that all fish going into pack, to be salted or smoked, have to pay duty. I offered to swear that I was taking fish for daily consumption, and not to be salted or smoked, but they would not take my oath, and they made me pay duty, not on whitefish, but on herrings.

Q.—Do you know whether the fish are used in a fresh state or whether they are cured? A.—I think they are used for what is called daily consumption, because I do not take much fish at a time. I take them to Detroit central fish market. There it is distributed among the hawkers in small quantities. I am satisfied they are not used for smoking, that is to say all the whitefish I took there, except one load I took for smoking.

Q.—Can you get better prices in Detroit than you can in Windsor? A.—Yes; in fact we could not sell a waggon load of fish in Windsor.

Q.—The market is not large enough? A.—Just so. We may be able to sell two or three tubs, but that is the most we can consume in Windsor at a time. I am not the only party who sells fish here, and on any day other parties may be sending fish here.

Q.—Do you ship any to points in Canada? A.—I used to ship herrings to Woodstock, and I think some to London a few years ago.

Q.—Does any go as far as Toronto? A.—No.

Q.—Do you fish mostly from boats, or do you haul the nets ashore? A.—I fish with what we call seines: we have them out in the river in a boat, and we haul them ashore with horses.

Q.—Have you ever been interested in any lake fisheries? A.—Yes.

Q.—In what part of the lakes? A.—I have been interested in and have had pounds in Lake St. Claire.

Q.—What fish do you catch there? A.—I caught some herring, whitefish and a few sturgeon.

Q.—Are there as many fish as there were formerly in these waters? A.—No, they have been diminishing every year, except this year, which has been a little better than last, but it has been on the decrease for the last fifteen years to my knowledge.

Q.—What reason do you assign for the decrease in fish? A.—I think the decrease in fish is due to pound nets, with long extended leaders, which are miles

long. Since these pound nets have been in the lake the number of fish in Detroit river has kept on decreasing every year.

Q.—You think the fish are taken more rapidly than they increase? A.—I think it is natural for the whitefish to come and spawn in Detroit River in the fall, and for their eggs to remain there all winter and hatch in March or April, then drift down with the current. The pound nets with long leaders stop the fish from spawning in the river, for part of them are caught in these nets, and the others are kept back and spawn in the lake, and the great winds of October and November destroy all these eggs. That is my opinion, and I have spoken to other fishermen who seem to agree with me. These eggs should remain in the river all winter so as to hatch in March, and, as I have said, the rough winds will destroy the eggs if deposited in the lake. The spawning season is from about the 25th of October to the 10th of November. It is natural for the fish, as I have said, to come up into the river, but they are kept back by those leaders. A few will be caught here and there, but they will be small ones, too small for the market. The fishermen in the lakes sell the large ones and throw away the small ones; that is what has been done during the past few years, according to what I have been told. I never catch any small fish in Detroit River—that is as small as herrings. Small fish stay in the lake and they get caught in the pound nets.

Q.—Do you catch the fish during the spawning season? A.—Yes; during the spawning season. Some years ago there was a close season, and I was compelled to stop. I have caught fish from the 10th of October to the 25th of November.

Q.—There is a close season? A.—Yes; but it is not put in force. They fish all the time; there is really no close season.

By the CHAIRMAN:—

Q.—Is there a close season on the American side? A.—I am told there is; but for all that they fish all that time.

Q.—And on the Canadian side? A.—Yes; for the last two or three years. The Government used to be very strict on this side of the river, but not on the other.

Q.—Do you think if the close season were strictly enforced on both sides of the river there would be more fish? A.—There would be a little more, no doubt, but the main thing would be to stop the long leaders. From the moment the long leaders were used in the lake we saw the decrease of the fish; that happened the first year.

Q.—If all the fishing was stopped during the close season, would not the fish come up the river to spawn? A.—Yes; but I do not think seine fishing will hurt, because we formerly caught plenty of fish when we were fishing on both sides of the river. At that time every fishing ground was occupied, but now they are all deserted, because they do not pay. The pound nets stopped the fish from coming into the river, and the fishermen have been losing money trying to fish with seines, while the pound nets catch all the fish.

Q.—You think, then that if these pound nets were removed there would be more fish? A.—Yes; there can be no doubt of that. I felt the damage done right away; the first year the fish decreased in number.

Q.—Do the fishermen on the other side use pound nets also? A.—Yes; lots of them. There are more on the other side than on this side—a great many more.

Q.—Are there large numbers of fishermen in this district? A.—Yes; there used to be lots of money made in fishing in this county, but for the last three or four years it has been worth nothing.

Q.—You cannot make a good living out of it? A.—For my part I sold five of my fishing grounds, and only kept one, and that was because it was in front of my residence; and the party who bought them has been losing money. I had a pound net ground on Clare River, and I sold it, and out of three or four fishing grounds on Detroit River I sold three and kept one.

Q.—You sold them because they were no longer valuable? A.—Yes.

Q.—Do you know anything about Lake Huron fisheries? A.—I never fished in Lake Huron, but I have in Lake Michigan.

Q.—Are Canadians in the habit of fishing in Lake Michigan? A.—No; I was fishing there for an American fisherman at the time, when I was a young man, about forty-five years ago.

Q.—Fishing is pretty hard work, is it not? A.—It is kind of cold work in cold weather.

Q.—Is it not dangerous? A.—No. It is dangerous if you fish with gill nets in the lake. A great many have lost their lives at the work, because they have to go five, six or ten miles out, and sometimes they meet a storm and get drowned. But in the river I do not think it is dangerous. Three men were drowned at Belle Isle from a steamboat running them down, but that was an accident. Fishing is not dangerous in the river.

Q.—What wages do you pay to the men you employ? A.—I paid from \$30 to \$40 a month, and as high as \$50 for men to oversee.

Q.—Are fishermen employed the whole year round? A.—No.

Q.—How long? A.—What we call the fall fishing lasts from the 1st of September to 25th of November, about two and a-half months.

By the CHAIRMAN :—

Q.—Then I suppose there is the spring fishing? A.—Yes; there is the spring fishing, but it does not last more than a month. Generally we fish for small fish, such as perch, and small pickerel and sunfish? We generally fish in weirs at that time.

Q.—The men work at other occupations when they are not fishing? A.—Yes.

Q.—Are they employed at farming? A.—Yes; and when they are not busy they go and fish.

By Mr. FREED :—

Q.—How much do you get for your fish in Detroit; take whitefish and herring? A.—I contract to deliver white fish at from \$15 to \$25 per hundred.

Q.—About how much would they weigh? A.—About two and a quarter pounds, some two and a-half pounds, and even a little more. Sometimes they are a little larger than at other times: but the most I sell would run from two and a-quarter to two and a-half on an average.

Q.—Then what do you get for the herring? A.—From \$1.00 to \$3.00 a hundred, according to the supply. If the fish are plentiful we sell them at perhaps 50 cents a hundred, and if they are scarce we get \$1.50, \$1.75, or \$2.00.

Q.—About how much would herring weigh? A.—I used to put 300 herrings in a barrel, and the barrel would weigh about 200 pounds, so that they would weigh from one-half to three-quarters of a pound each. Herrings, like whitefish are some times larger and sometimes smaller. The first run in September is big herring, but when the heavy run comes they are all small.

Q.—Do you cure any of them in Canada? A.—Not for sale.

Q.—Is there any curing establishment near here? A.—Not that I know of.

By Mr. HEAKES :—

Q.—Is not shore fishing more destructive to the fish than fishing with seines? A.—What we call shore fishing is fishing on shore. What injures fishing is fishing with pound nets, to which long leaders are attached.

Q.—Do you not fish with gill nets in the river? A.—No; because they cannot stand it. The current is too strong, and they have to be used in the lakes, where there is no current. You cannot put pound nets in the river but in the lakes; the men put them near the mouth of the river, so as to stop the fish from coming up the river.

Q.—Do you not catch a great many small fish in these seines which you draw ashore? A.—No; no small white fish. The fish are pretty much of the same size; a trifle small sometimes, but they average about the same every year.

Q.—Do the fishermen favor a close season? A.—Some of the fishermen do,

although I do not think I do, because a close season with us would be just when we could catch the most fish.

Q.—And when you destroy most of the eggs? A.—I do not know about that. I do not think I ever saw pickerel spawn during the close season, unless it was the very last days of the season. They do not commence to spawn before the 15th or 30th of May.

Q.—Whitefish will spawn in October and November, I understand? A.—Yes, from 25th October to 10th November.

Q.—If fishing were prohibited during those dates, I suppose there would be more fish? A.—Yes; that would help it.

Q.—It would then be in the interest of fishermen to stop fishing during that time? A.—Yes; unless they could put the fish in pounds, and keep them there to spawn, when the eggs would be as well there as any place else in the river.

By Mr. FREED :—

Q.—Do you think it would be wise for the Government to establish official hatcheries for the fish, and official spawning places? A.—Yes.

By the CHAIRMAN :—

Q.—Then the two Governments would have to act together? A.—Of course that is providing the two Governments will do the same thing, because this river is narrow, and the fish have no regard for boundaries; they go from one side of the river to the other, according to the wind. We cannot catch the fish—for they always go against the current—if the wind is off shore, but if the wind changes to north-east or south we would catch more; and at the same time they would not catch any on the other side. As the fish go from one side of the river to the other, it would be no use for one Government to make laws unless the other Government made similar laws.

Q.—If in fishing you go over to the American side a little are you punished or are you driven back? A.—The river is so wide we do not require to go more than half way across; we do not go more than one-third or one-quarter of the distance across, because the river is about a mile wide where we fish. Besides, it would not be wise for us to have seines too long, for they would be difficult to draw on shore.

Q.—As a rule, I suppose they do not allow you to fish on the American side? A.—I have fished on the American side, and they have not stopped me. They say they have a law to stop it, but I never was stopped. I was selling my fish there at the time, and they never tried to stop me in any way.

By Mr. FREED :—

Q.—How many men do you think are employed in the fisheries in your district? Take Lake St. Clare and the River Detroit, on the Canadian side? A.—There are not many now, because as I have said the fishing grounds are pretty much all vacant. Twenty years ago more than one hundred men were employed; I do not think there are more than twenty-five or thirty men now.

Q.—Does that include the men who own the limits, and the men who work in them? A.—Yes. There are only two fishing grounds on the Canadian side of the Detroit River being fished this fall.

Q.—How many are fishing in Lake Erie? A.—There are half a dozen pound nets below Amherstburg and in that section, covering a distance of many miles. It is at the entrance of the river where they have these pound nets, with long leaders that prevent the fish going in to the Detroit River.

By the CHAIRMAN :—

Q.—Is there a good deal of fishing done by people for themselves in the river and the lake? A.—Yes.

By Mr. FREED :—

Q.—Is there anything else you wish to tell the Commission which has not been

covered by the questions asked? A.—The main object I have had for the last two years has been to stop pound fishing, because as an old fisherman I have felt the damage done by it. I even felt it the first and the second years. The fish have kept on decreasing ever since, except this fall. I am told that a law has been passed on the other side, compelling them to shorten the length of the leaders. Some good will be done by it, and at all events we have had a little more fish this season than last. That fact convinces me that if these pound nets were removed or the leaders taken off we might have during the next five years as many fish as we had twenty five years ago.

DANIEL ANTAYA, Fisherman, Sandwich West, called and sworn.

By the CHAIRMAN:—

Q.—You have heard the evidence of Mr. Meloche; what have you to say in addition? A.—The only thing I want to say is, that the Government have stopped us catching fish, that is pickerel, at the very time when we ought to have the privilege of doing so, that is in the spring of the year.

Q.—Do you mean during the close season? A.—Yes, during the close season, in the spring of the year.

Q.—You do not fish during the close season? A.—We do catch pickerel during the close season. It would be a good thing for the close season to start from the 15th of March.

Q.—And when should it close? A.—The close season might run from the 15th of March to the 15th of May.

Q.—You admit that you ought to be prevented from fishing when the fish are spawning? A.—Yes.

Q.—When do they spawn? A.—From the 15th of May to the last of May.

Q.—In that time you can fish according to law? A.—Yes.

By Mr. FREED:—

Q.—You approve of the general testimony given by the previous witness? A.—Yes; I think he has given all the information necessary, and we have been fishing together many years.

By Mr. HEAKES:—

Q.—You think if there was a close season for pickerel carried out, it would be better for the fishing? A.—Yes; if it were fixed from the 15th of May to the last of May it would be better for us.

Q.—And for the fish? A.—It would be better for the fish, for it would be during their spawning time. As the law now stands it stops us fishing when we could catch the most fish, without injuring the fish, as regards the spawning season.

Dr. JOHN COVENTRY, Medical Health Officer of the Town of Windsor, and President of the Medical Health Officers of Ontario, called and sworn.

By Mr. FREED:—

Q.—What is the sanitary condition of Windsor at present? A.—It is very good at present.

Q.—Have you a sewer system here? A.—Yes; a very extensive one.

Q.—Do you drain into Detroit River? A.—Yes.

Q.—Are most of the houses connected with the sewers? A.—Unfortunately they are not.

Q.—How long have you had sewers? A.—Since 1878; that is, we began in 1878, and we have been steadily adding every year since. They are brick sewers.

There are some sewers that were built before that time, but we do not count them now. They are wooden sewers.

Q.—What water supply system have you? A.—The water is taken from Detroit River. The system is a modification of the Holly system. The water is pumped all over the town; we have not twenty wells in use in the city.

Q.—How many of the old cess-pools remain? We are endeavoring to do away with them as rapidly as possible. I hope next year we will do away entirely with vaults. We have condemned wells wherever we can find them; they are still used by a few, who have an idea that the water from the river is scarcely good because it has not the old well flavor attached to it.

Q.—Do you find much difficulty in persuading people that river water is better than well water? A.—No.

Q.—Have you had many diseases, such as diphtheria, or scarlet fever, or typhoid fever, prevailing here? A.—Very few this year or last year; very few of any of these diseases since we adopted our present system of dealing with contagious diseases.

Q.—Do you find that contagious disease grows less as you improve the sanitary condition of the town? A.—Yes; and enforced quarantine as between infected and non-infected; we enforce that very strictly. We proclaim diphtheria, scarlet fever and small-pox. Every case is reported within twenty-four hours of its being discovered, and connections cut off from the house, except where it is necessary to carry supplies. If the head of the house is working where there are children he is stopped from working. In this matter we are assisted by all the manufacturers in the place, and the railways, which will not employ men who have contagious diseases in the house. When it is necessary to feed the family, and they have not means at their disposal, we do that at the public expense.

Q.—How is it as to children attending school? A.—Any children in a house where there is contagious disease are immediately prevented from going to school. The teacher is informed by the secretary of the Board of Health as soon as the existence of the disease in the house is reported to him.

Q.—Is plumbing properly inspected? A.—No, sir.

Q.—What is the condition of the plumbing, as far as you know? A.—Very bad.

Q.—In what respect is it bad? A.—In every respect; there is no redeeming feature in it—the construction of the drain, the trapping of the drain, the method of putting the pipes down, and the pipes used—everything is defective.

Q.—Are there ventilating pipes? A.—Very few, and wherever unearthed, they are found to be in a horrible condition.

Q.—Are the drains leading from the house to the sewer mostly pipe drains? A.—Yes; there are no woodenbox drains.

Q.—When they are dug up, do you frequently find them broken? A.—Not often broken, but badly connected, and filled with substances that should not get into them. An illustration of that occurred last week. I saw the Mayor with a man who was having a house drain taken up and inspected. The drain was found to be blocked; they put in a large iron rod and pulled out a painter's suit of clothes, which had stuck down the drain. You will find drains blocked with all sorts of things.

Q.—Do you find, as a consequence of the pipes being badly laid, that they sometimes sink down and open the joints? A.—Yes; but in a clay soil like ours it does not matter much; there is not much trouble from that source. In a gravelly or sandy soil it would be much worse, but here it is a very solid, hard clay, and it does not make much difference whether the joints are badly connected, especially in these drains. The sewers here are very deep—all the way from ten to twenty feet below the surface, and several of them are tunnelled.

By the CHAIRMAN:—

Q.—Do you require to make them that depth, owing to the nature of the ground? A.—No; it is to get the proper levels, so as to have a sufficient fall.

By Mr. FREED:—

Q.—Have you inspected the factories and workshops of Windsor? A.—I have made no regular tour, but I am frequently in them; when there is any report of any unsanitary condition I go, of course; but it is very seldom. This is not a manufacturing centre; they are not crowded at all. The buildings are new, well-ventilated, and their closets are tolerably well constructed.

Q.—Where male and female operators are employed in the same shop, have they separate conveniences? A.—I think so, but I cannot speak positively.

Q.—Are you familiar with the conditions of the homes of the working classes in and near Windsor? A.—Yes.

Q.—What condition are they in? A.—In fair condition—not what could be desired, but much better than in most places. We have only about three landlords in the town who systematically keep their houses and premises in an untenable condition—certainly not more than four.

Q.—How do you try to deal with these? A.—Well, at the present time we are dealing with one or two of them, and, on an appeal to the Council, they appointed an engineer, who, in conjunction with myself, made a report to the Council of how the premises should be dealt with. A sewer should be put down, connections made with that sewer to drain the premises, and the cost of it charged up against the property fronting on and benefited by the new works. The report is now before the Council and they are ready to deal with it.

Q.—Do you know whether many of the working people own the houses in which they live, or are they mostly tenants? A.—There are a large number of owners; I think there are a larger proportion of people who are owners of their premises than in other places that I know of. A great many people here are employed on the railways, the Grand Trunk and the Canada Southern, and most of them own their houses.

Q.—Windsor has made great progress within the last few years? A.—Yes.

Q.—Do you find that the working people keep pace with the merchants and manufacturers in building their own houses? A.—Yes.

By Mr. HEAKES:—

Q.—Do you flush your sewers frequently? A.—They are flushed of course by the floods; we have the single system of sewerage, not the double system; the rain-falls and the house drains all empty into the one sewer, and the rain-fall is the only flushing that has been adopted so far. This report from the engineer of which I spoke deals with that matter also. It is recommended that they be flushed every two weeks from the waterworks or from tanks constructed at the end of each sewer, taking a section of ten or twenty feet at the end, filling that with water and opening the flood-gate and allowing it to go down. That would probably be done every two weeks, unless there are thunder storms or heavy rain-falls in the meantime.

Q.—Do you find that such contagious diseases as diphtheria and malarial fever follow the line of the sewers? A.—No, sir.

Q.—I supposed that gases from the sewers would produce those diseases if they were not kept reasonably clean? A.—If the discharges from those diseases entered into the sewer, and there was a defective house drain, that would undoubtedly convey disease into the house.

Q.—Is there much diphtheria in Windsor? A.—Very little. We have a great many points of attack, but it rarely gets beyond the house in which it appears or one or two visiting friends beyond it. We have hardly a case of typhoid fever; we have not seen a case for a year. I look upon the reason for that as being that the whole supply of water is from the river, and as they have had a large number of cases of the disease in other cities and towns in Canada, this season, it would seem to show that the well water supply is a source of the disease, because we would have had just as much as other places if we had not depended entirely upon a purer supply of water.

By Mr. McLEAN:—

Q.—You spoke about never going in places, except factories, and said that you had visited a few factories to enquire into their sanitary condition. Will you tell us why you were sent for in any one case; what were the cases complained of? A.—I have visited tailor shops where there were cases of illness from gas being given off from their apparatus for heating irons. Carbonic acid gas given off from the charcoal was making the operators ill or keeping them in a debilitated condition; or they were feeling languid, faint or weak.

Q.—Do you find these shops large enough for the number of people working in them? A.—Large enough if a little expenditure of money was made to carry off these gases, enough, for instance, to place a funnel over the apparatus used for heating the iron. None of them was crowded in regard to the proportion of air space.

Q.—Was there any factory you visited in which the air space was deficient or the sanitary condition was not good? A.—No; none.

By the CHAIRMAN:—

Q.—Do you find employers ready to adopt your suggestions? A.—Yes.

By Mr. FREED:—

Q.—What are the sanitary conditions of the school houses? A.—Not good.

Q.—Are they large enough? A.—No; there are too many children to the number of schools and to the air space. The High School is very bad.

Q.—Is the river water as pure as that of the lower lakes—Lake Ontario for example? A.—Well it is muddier. In passing through Lake St. Clair that lake seems to be a sort of settling basin, and the water changes in passing through it from Lake Huron. It comes down from that lake laden with minerals; these muddy lake, and it takes them up as a mixture, in the form of mud, not as a perfect solution. The water is not as clear as it is coming down the St. Clair.

Q.—Does it take up any organic matter? A.—Yes; a good deal.

Q.—Vegetable organic matter? A.—Yes; and clay.

Q.—Clay does no harm, I believe? A.—No; I think not; I know of no disease that seems to prevail on account of it.

Q.—Do you consider the water reasonably wholesome? A.—Yes; but in danger of contamination pretty extensively. The village of Walkerville is now adopting a more perfect system of sewerage. It will carry into the river rapidly a large amount of sewage, and as our intake is below their main, our water will be contaminated by it.

Q.—And the remedy would be to carry the supply pipe further up. Mr. Walker, who owns nearly the whole of Walkerville, has been ready for some time past to join with us in taking our supply pipe further up the river.

Q.—What kind of gas do you use in Windsor? A.—The ordinary gas, with the perfected machinery, so I understand.

Q.—Coal gas? A.—Yes.

Q.—Not water gas? A.—No; there are a few places, perhaps, like the convent, where they manufacture and use their own gas, but I do not know what process they adopt.

Q.—The gas supplied to the public is pure coal gas? A.—Yes, and fairly good where they manufacture and use their own gas, but I do not know what process they adopt. I think it is of better quality than the average.

By Mr. WALSH:—

Q.—I suppose the water here has been subjected to analysis? A.—Not to an exhaustive analysis, but such an analysis as would show ordinary contamination.

Q.—And there is nothing deleterious in it? A.—Nothing specially deleterious. The danger is, that if there should be a disease like typhoid fever or cholera in Walkerville, the emptying of their sewer into the river would contaminate our water supplies. So far, we have had nothing we could trace to the water supply.

Q.—Have you any idea that the school board are aware of the condition of the schools? A.—Yes, they are quite aware of it. The school has been condemned by the provincial inspector, and they are now taking steps to get a suitable site for a building. They had made an appropriation, or I believe are about to make an appropriation, with the intention of purchasing a site this year and erecting a new school building next year. The other schools are very much crowded. We find no difficulty in getting the public or employers of labor, or the people themselves, to act upon any reasonable suggestion in regard to health. We had a good breaking in in that respect for them. We had the small-pox here, and there was some little opposition to the measures we took at first, but it was met pretty promptly, and the people were so well convinced that our measures were for the best that I have every reason to feel thankful for the assistance I got from nearly everyone.

Q.—Is vaccination carried out? A.—It is pretty well carried out. We have no compulsory vaccination law, other than the provincial one, but we have very little opposition to vaccination. We appoint public vaccinators whenever there are any cases in the neighborhood. All parties may come and be vaccinated; those who can pay are supposed to pay a small fee sufficient to cover expenses, while those who say they cannot afford to pay are vaccinated free.

Q.—I suppose that in all cases the work is done by experienced practitioners and the lymph used is good? A.—We always get it from a reliable source, and it is always bovine virus that we use; we never use virus from other children.

FREDERICK S. EVANS, of the Barnum Wire and Iron Works Co., Windsor, called and sworn.

By Mr. FREED:—

Q.—How long has your business been established in Windsor? A.—Three years.

Q.—Is it an independent industry? A.—Yes.

Q.—Not connected with any other establishment? A.—No.

Q.—Where do you find your market principally? A.—Throughout the whole Dominion.

Q.—What kind of work do you make? A.—We make altogether ornamental wire work, counter railings for banks, iron fences, metal work of all kinds.

Q.—Do you make steel iron, or steel wire? A.—No; we only manufacture goods from wire.

Q.—Do you use both iron and steel wire? A.—Yes.

Q.—Do you use much copper wire? A.—Not very much copper wire; we have no special use for it.

Q.—Do you import your wire in the state in which you use it? A.—Yes.

Q.—You do not draw your wires yourself? A.—No.

Q.—From what country do you import wire? A.—Most of it now from Montreal; it is Canadian made. Previous to Montreal firms manufacturing wire on the present system we got it from the United States; but in Montreal they are using American patents, and are making as good a wire as in the States.

Q.—Do you know what kind of iron they use? A.—Mostly all the iron wire made; what we call bright wire, which we principally use, is made from old steel rails, and it is really steel wire.

Q.—It is Bessemer steel? A.—Yes.

Q.—This makes a stronger and better wire? A.—Yes, it makes a tougher wire than anything else. In fact, the common, or what we call soft wire, would not answer in our business. We could not use it; it is not tough enough, and would not stand the strain.

Q.—Do you use any imported wire now? A.—Yes; in the fancy grades we get our wire from the other side of the line.

Q.—That is from the United States? A.—Yes.

Q.—Do you import any from Europe? No; American wire is better than European.

Q.—How do the prices in Montreal compare with the prices you formerly paid when you imported wire? A.—We are paying now about the same prices in Canada we would have to pay in the United States.

Q.—Do you mean you pay about the same price you would have paid for American wire delivered here? A.—Yes, with duty and freight paid. I figured it out a short time ago, and I made out two per cent. in favor of Canadian wire; the difference was very small.

Q.—What is the duty on wire? A.—Thirty per cent. now. Up to the last session of Parliament it was twenty-five per cent., but it was raised to thirty per cent.

Q.—Do you know whether the price on the other side has been rising, falling or remaining stationary? A.—It has advanced a little over there within the last year.

By the CHAIRMAN :—

Q.—Is that from speculation? A.—I do not know what the cause has been.

By Mr. FREED :—

Q.—Would it be because American manufacturers are making nails from Bessemer and old rails? A.—It might be from the scarcity of stock from which these goods are manufactured.

Q.—They are using Bessemer rails, I believe, for such purposes? A.—Yes; a great many old Bessemer rails are being manufactured into nails and other products.

Q.—Do you export any of your goods? A.—No; our trade is entirely in Canada.

Q.—Are such goods as you import brought into Canada? A.—Yes.

Q.—From what country are they imported? A.—Altogether from the United States, so far as I know.

Q.—Can the imported articles undersell you? A.—The duty on the wirework and the raw wire is just the same, and the difference in the labor and the amount they can manufacture is against us, which makes the price about equal. So we are not protected at all, except so far as labor is concerned on the other side.

Q.—Your labor is protected? A.—Yes, of course; if they bring wirework here, wire counter railing, for example, they have to pay thirty per cent., the duties being precisely the same.

Q.—Have the Americans large manufactories in which they can manufacture more economically than you can? A.—Yes; for instance, in Detroit there is a concern which employs five hundred hands.

By the CHAIRMAN :—

Q.—How many men do you employ? A.—Twenty-five or fifty at this season of the year; never less than twenty-five.

By Mr. FREED :—

Q.—Do you know of any under-valuation of wirework coming into Canada? A.—No, I have never investigated anything of the kind.

Q.—You have never heard complaints of that sort? A.—No.

Q.—How do the wages you pay compare with the wages paid in Detroit in your trade? A.—We pay just the same wages.

Q.—And you get all the men you want? A.—Yes.

Q.—Where do you get them? From Canada or the other side? A.—Mostly from the other side, but they live in Canada. There are only two men employed by us who live on the other side.

Q.—They settle here and become good citizens? A.—Just so. Of course, we do a fine class of work. It is mostly American work from American ideas, and we have to bring American workmen to carry it out.

Q.—How far east do you sell your goods? A.—As far as Cape Breton. We sent

over \$2,000.00 worth of goods to Cape Breton this season, and we have also sent to Montreal, Halifax, and Nova Scotia, and all the way down; and also to Vancouver, British Columbia, on the west.

Q.—Have you made any application to the Government within the last year or two to have the duties on wire increased? A.—No.

Q.—You are not aware of the petition that went to Ottawa within a year or two, with a view of having the duties on wire or wirework changed? A.—No.

Q.—Do you think a change in the duties is desirable? A.—On such wire as Canadian manufacturers are prepared to make I do not think there should be any change, because they are making just as good wire as they are on the other side. I think the industry should be fostered the same as any other.

Q.—They have the same right to protection for their industry as you have for yours? A.—Yes. On such lines as they do not propose to make, and for which the demand is not sufficient to guarantee them a return, the duties should be reduced or abolished, and such wire brought in free.

Q.—How can you tell what class of wire they do not propose to make; or are you judging by actual results? A.—I am judging by the actual demand for this special class of goods. There is very little demand for some class of wire and very little of it used. If a manufacturer was prepared to make it, he could make enough in a week to last the country a year.

Q.—Would it not be a very expensive thing to make? A.—Very expensive plant would be required.

Q.—Different machinery from that ordinarily used? A.—Yes, in the manufacture of flat wire. Take, for instance, the wires used for brooms and brushes. We can import \$500.00 worth of flat wire and make all the brushes wanted in a year. It is subject to thirty per cent. duty. That wire cannot be made here, and it should be allowed to come in free, or made subject to a revenue duty only. The Commission will see that this places the Canadian manufacturer in a condition in which he is little better off than the American. He has to pay the duty on the wire, but the American manufacturer can under-sell him, because he can make a large quantity, whereas there is not the demand in this country.

By MR. CARSON :—

Q.—What gauges of wire do you principally use? A.—We run from 2:0 to 14.

Q.—And with round steel wire? A.—About the same gauges. We do not use much of anything less than 14.

Q.—Do you find the Montreal wire is as durable as the Cleveland wire? A.—Yes, we have put it to a severe test.

Q.—In what way was it tested? A.—By twisting it.

Q.—Are you aware that the Cleveland wire on being twisted is more apt to break than the Montreal wire? A.—I do not think that it is more apt to do so.

Q.—Are you aware that they make for a special purpose what they call spring steel wire; that they recommend their wire for a special purpose; that they claim that unless a twist breaks once in five turns it is not up to the standard? A.—Yes.

Q.—Are you aware that unless the Cleveland wire breaks once in five turns it is not considered up to the standard? A.—I have never heard so; I never heard that they claimed that.

Q.—Do you know anything about the manufacture of springs? A.—No; we do not manufacture them.

Q.—That is what I had reference to. Do you find the Montreal wire as hard as the American wire? A.—Yes.

Q.—Do you find that the coppering is done as well? A.—No.

Q.—Take copper wire, for instance Nos. 9 and 10; have you used those numbers? A.—We use very little of that kind of wire. It does not come into ornamental work. We use very little copper wire of any kind.

Q.—Was the duty on that increased last year to thirty per cent.? A.—Yes.

Q.—What is No. 12 copper wire? A.—It is thirty per cent. now. It has been at that rate during the last year; it was twenty-five per cent. before that.

Q.—There is a certain clause in the Act permitting certain manufactures to be brought in free? A.—Yes.

By Mr. CARSON:—

Q.—Do you employ all men? A.—All men and boys.

Q.—What age do you take the boys? A.—Seventeen or eighteen.

Q.—Have you any very young children employed? A.—No; it is all very heavy work.

By Mr. McLEAN:—

Q.—What wages do you pay? A.—From \$5 a week to \$3 a day; our best men receive \$3 a day.

Q.—To whom do you pay \$5 a week? A.—To boys from seventeen to eighteen, who are learning the trade.

By Mr. ARMSTRONG:—

Q.—Do they work sixty hours per week? A.—Yes.

Q.—Are they paid weekly? A.—Every two weeks.

By Mr. FREED:—

Q.—Do you have apprentices? A.—No; we do not bind any boys.

Q.—Do they generally remain with you until they learn the trade? A.—If they do their wages are raised according as they become more useful.

Q.—Are many tempted to leave you and go to the other side? A.—I never had any do that. We have five men who receive \$2 and \$2.50 a day who learned their trade with us and are not twenty-one yet. One of our former apprentices now receives \$3 a day, and is one of the best men in the shop.

Q.—How long is required to learn the trade? A.—About two years.

Q.—Is the trade unhealthy in any way? A.—I do not think so.

Q.—Is the sanitary condition of the shop pretty good? A.—As good as it possibly can be. We have every convenience.

Q.—Is there much iron or steel dust or filings around? A.—More or less of it, not much; most of our iron is used with oil, and there is not much dust.

Q.—Is there any particular disease to which wire-workers are subject? A.—None that I ever heard. They are a pretty healthy set of men, taking them all round.

By the CHAIRMAN:—

Q.—There are not many days lost by them? A.—There is very little broken time.

By Mr. FREED:—

Q.—Is your business increasing, or otherwise? A.—Our business has increased steadily ever since we started.

T. M. WHITE, Windsor, called and sworn.

By Mr. FREED:—

Q.—What is your occupation? A.—A publisher and printer.

Q.—How long have you been in business in Windsor? A.—About six years.

Q.—You publish a weekly paper? A.—Yes.

Q.—What wages do you pay in Windsor in the printing business as compared with Detroit? A.—Slightly lower.

Q.—Is there any employment in Detroit exactly corresponding to that which you give your men? A.—No; I don't think there is. Any man I employ is supposed to work either on the paper or at job printing, or anything required in the office, and of course in Detroit they have them separate.

Q.—Do you employ your men by the piece or by the week? A.—Sometimes the one and sometimes the other. As a rule, by the week.

Q.—Do your men live in Windsor? A.—Yes. The business here fluctuates considerably and we have to employ outside help very often—or occasional help—which we get from Detroit.

Q.—Do your men pay lower rents in Windsor than they would pay in Detroit? A.—Well, I don't know about that; I don't think they do a great deal, though there are some lower. Workingmen's houses I don't think are much lower than in Detroit, as far as I have been able to see.

Q.—Can the workingmen get as low rents as near to the centre of business in Detroit as they would in Windsor? A.—No, they cannot.

Q.—They would get as low rents by going out for a considerable distance in the outskirts. A.—I think they would get as low rents about an equal distance from Detroit city hall.

Q.—But not as near to Detroit city offices as they would to yours? A.—No.

Q.—Then if they go a greater distance to their houses that means a loss of time and money for car fare? A.—Yes; car fare certainly.

Q.—Can you speak as to the cost of living in the two cities, other than rents? A.—I don't think there is much difference; I fancy if anything it will average a little more in this city from what I hear.

Q.—You are not prepared to speak positively? A.—No; not with any knowledge of my own, but simply from what I have heard people say who have lived on both sides.

Q.—Windsor has been improving very much in the last few years? A.—Yes; a great deal since I came here.

Q.—To what is this improvement mainly attributable? A.—Well, I think it is the National Policy.

Q.—In what way does the National Policy work? A.—Well, it has caused the establishment of several industries here and they have assisted real estate.

Q.—And given employment to many men? A.—Yes; to quite a number.

Q.—And this, of course, has caused more business to be done by merchants and others? A.—All; I don't know that our mercantile business is very large here; we have only two or three stores of any importance in the town.

Q.—People buy largely in Detroit? A.—Yes; an enormous amount of smuggling is done here.

Q.—Most of the goods are smuggled across? A.—Yes.

Q.—Do any of the small purchases pass through the custom house? A.—Well, I don't know as to that; I don't think a great many do.

Q.—That is an injury to the merchants of Windsor? A.—O, yes; it is an injury to the town.

Q.—Are the manufacturing establishments which have started here profitable? A.—Yes, I think they are; as far as I can see they are.

Q.—Are you well acquainted with the organizations existing among workingmen in Windsor? A.—No; I cannot say that I am.

Q.—Are the men pretty well organized? A.—I think they are; they have two or three assemblies of the Knights of Labor.

Q.—Have they the old fashioned trades union as well? A.—No; I don't think they have, but I am not certain.

Q.—Have any efforts been made to shorten the hours of labor here? A.—Yes; there was a threatened strike this summer in the building trade, but it was averted I think, by a compromise; it was threatened also in one of the cognate industries—the lumber, sash, and door establishments.

Q.—Did they shorten the hours of labor at all? A.—Yes; a compromise was effected.

Q.—Did the wages come down in proportion to the shortening of the time? A.—No.

Q.—They receive the same wages? A.—Yes.  
 Q.—Has this reform been generally acceptable to employers and employed?  
 A.—I think so.

Q.—You have heard no great fault found with it? A.—No.  
 Q.—Do the men seem to know how to use the additional time that they have on their hands pretty well? A.—I could not answer as to that.

Q.—Do you think there has been more drunkenness than before? A.—I could not say, but I don't think there is; the workmen around Windsor do not appear to be a drunken people at all.

Q.—They seem to be able to dispose of their surplus time as well as other people? A.—Yes.

Q.—Do you know any reason why a workman should get drunk as soon as he gets an hour's time on his hands? A.—No.

Q.—Do you know to what extent workmen in Windsor own the houses in which they live? A.—Well, a large proportion of them own their houses.

Q.—Do you know of any of them saving money in addition to living? Q.—Yes; a workman in Windsor can save money if he has constant employment.

Q.—Are there any female compositors in Windsor? A.—There are some.  
 Q.—Do you employ any? A.—No; but I have employed some; I don't now.

Q.—Did they give you satisfaction? A.—Not altogether.  
 Q.—Did you give them for the same work the same wages you would have given men? A.—No; not quite; they are not as good as men, and cannot make themselves as useful. If they had nothing to do but set type they would be all right, but they have not the endurance of men, and that is another drawback.

Q.—Are workmen able to get land on which to build on pretty reasonable terms? A.—Yes; they can get a lot within reasonable distance for about from \$200 to \$400.

Q.—What sized lot would that be? A.—Say fifty feet front by one hundred deep.

Q.—What distance would they have to go from the business centre? Would it be not a mile? A.—Possibly a little more.

By Mr. McLEAN:—

Q.—A mile? A.—No; I don't think so.

By Mr. FREED—

Q.—Have you any apprentices in your office? A.—I have two.

Q.—Are they apprentices, or are they boys just learning the trade, and free to go when they please? A.—Just learning.

Q.—Do you approve of an apprentice system? A.—Yes.

Q.—Do you think it would turn out better workmen? A.—Yes.

Q.—What is the reason that boys are not apprentices to the printing now? A.—Simply because it is not the custom; that is the only reason I see.

Q.—Would the boys themselves be willing to be apprenticed? A.—Some would, and some object; some of them think of course that it is an old fogy idea.

Q.—How do wages in Windsor compare at the present time with the wages when you came. A.—There is not a great deal of difference.

Q.—What is the value of money now as compared with then; will it purchase more or less? Will a dollar go further or less far in buying the ordinary supplies of life, clothing, food and rent? A.—It would average about the same; some things are dearer and others cheaper; I don't think there would be much difference.

Q.—Do you notice any difference in the steadiness of work which mechanics in Windsor have as compared with former years. Are they more steadily employed, or less? A.—I could hardly say as to that.

Q.—Are the factories and shops busier? A.—Yes, I think they are; there is more general work being done in Windsor now than there was six years ago.

Q.—When this strike was threatened, how was a solution arrived at, by arbitra-

tion or just by conciliation? A.—I think it was merely by the friends of the parties getting together and settling it for them; that is my recollection of it.

Q.—There was no time lost? A.—Yes, there was a little time lost—a few days.

Q.—Do you know of any co-operation amongst the men in Windsor? A.—No.

Q.—Either in production or distribution? A.—No.

Q.—Do you know of any co-operative building societies? A.—No.

Q.—When a workingman undertakes to build a house does he save means sufficient to do so, or does he borrow from a building society? A.—They usually have enough to pay an instalment down, and then they borrow from a building society or secure the money in some other way.

Q.—Do many Windsor people work in Detroit? A.—Yes; a great many.

Q.—When they go there to work do they retain their homes in Windsor or gradually drift over there for homes? A.—They mostly stay here.

Q.—On account of the cheaper rents? A.—Well, partly on account of the cheaper rents, and also on account of their families and connections being here; their associations are here.

Q.—Do many Detroit people work in Windsor? A.—Some—not a great many, as far as I know; there may be more than I am aware of.

By Mr. ARMSTRONG:—

Q.—What are the wages a compositor would work for by the week in Windsor—as a printer by the week? A.—From ten dollars to thirteen.

Q.—Are there any compositors in Windsor to-day receiving that? A.—Yes, I think so—that is general printers.

Q.—What are the standard wages for the same kind of a printer in Detroit? A.—I think they are fourteen dollars.

Q.—Is that the union scale there? A.—Yes.

Q.—How much per thousand does a compositor set for in Windsor? A.—Well, about twenty-five cents.

Q.—And what is the rate on piece work on an evening or morning paper in Detroit? A.—I am not sure.

Q.—Have you compositors working by the piece in Windsor? A.—Yes.

Q.—And they receive twenty-five cents per thousand? A.—Yes.

Q.—Do you give them the "fat" of the paper—the advertisements? A.—No.

Q.—I suppose they get that shared in Detroit? A.—Yes, I think so.

Q.—How many apprentices have you got? A.—I have three.

Q.—How many journeymen? A.—Three.

Q.—Do they belong to the Knights of Labor or a trades union, or any organization? A.—It is pretty hard for me to say.

Q.—Are they union men? A.—There is no union here.

Q.—They might be union men and belong to the union in Detroit? A.—No, I don't think so.

By Mr. McLEAN:—

Q.—What are the rents in Windsor at the present time for the average workman's house? A.—From eight to ten dollars—perhaps up to twelve dollars.

Q.—And I suppose the cost of rent, fuel, clothing, vegetables and so on, would be just about the same as in other places of the Dominion? A.—I think a little higher than in other places in the Dominion; I think it costs more to live here than in some other places.

By Mr. ARMSTRONG:—

Q.—Are your apprentices working by the piece or by the week? A.—By the week.

Q.—How much do they get? A.—Two dollars and upwards, according to the length of time they have been working.

Q.—You commence at \$2? A.—Yes.

- Q.—They serve five years? A.—No; three years is what they are supposed to serve.
- Q.—Is that the standard time that a boy serves his apprenticeship in Canada? A.—Well, I don't know about that. The custom varies. In some places it is five years, but they are not many.
- Q.—Five years is the standard by union law? A.—Well, it may be in cities, but in towns I think they compromise at four years as a rule.
- Q.—Do you prefer an indenture system? A.—Yes; it would be more satisfactory.
- Q.—I suppose your apprentices are indentured? A.—No.
- Q.—Are the journeymen opposed to the indenture system? A.—I have no idea.
- Q.—Do you have many changes among your apprentices? Do they leave your office and go to other places where they can better themselves? Have you many changes in that respect? A.—Not a great many.
- Q.—How many journeymen printers are there in Windsor? A.—I don't know.
- Q.—If it costs \$300 to buy a lot, how long would it take a workingman, supposing he gets ten dollars a week, to purchase a lot and build a house? A.—I don't know how long.
- Q.—Could he do it in ten years? A.—It would depend on the size of his family and his expenses.
- Q.—Say a family of three? A.—Yes, I think so.
- Q.—He would save money enough in ten years? A.—Yes; I think a careful man could.

—

ALEXANDER HENDERSON, Carpenter, Detroit, called and sworn.

By Mr. FREED:—

- Q.—How long have you lived in Detroit? A.—A little over three years.
- Q.—You have worked during that time at your trade? A.—Yes.
- Q.—What rate of wages are paid in your trade in Detroit? A.—They average from \$1.80 to \$3.00 a day.
- Q.—You work altogether by the day or hour? A.—By the hour now.
- Q.—How many hours a day now? A.—Nine hours.
- Q.—How do your rates run by the hour? A.—Some of our men will be paid \$1.98 a day, that is 22 cents an hour. I have known lots of men to leave work in Detroit through this 22 cents; they would not accept a cent less than \$2.00 a day.
- Q.—What are about the highest wages paid? A.—The highest wages paid in Detroit to good men are \$3.00 a day; that is paid to stairbuilders.
- Q.—How do these rates compare with the rates paid in your trade in Windsor? A.—The men in Windsor receive from \$1.75 to \$2.00 a day; that would be the price from about the last of May; they get those wages for nine hours here.
- Q.—There would be no reduction in the wages on account of the nine hours? A.—No.
- Q.—Have they a union in Windsor? A.—They have a Knights of Labor Assembly—a mixed assembly.
- Q.—Do those Knights who belong to the assembly work with those who do not? A.—Last May we had a meeting in Detroit, it was on the 1st. We had previously exchanged working cards with the mixed assembly of Windsor, and we notified them that unless they carried the nine hours a day, and raised their initiation fee to \$5.00 we would not recognize their cards. That forced on them the nine hours a day, for otherwise we could not recognize them, and accept their cards in Detroit.
- Q.—Do those carpenters in Windsor who are Knights of Labor work in the same shop, or do the same work with carpenters who are not Knights of Labor? A.—Yes, if they have a working card.
- Q.—Can they get a working card if they are not Knights of Labor? A.—No.
- Q.—Then if a man has not a working card the Knights of Labor will not work with him? A.—No; not unless he has a brotherhood card.

Q.—What is a brotherhood card? A.—The brotherhood is a society of carpenters on one side, and the Knights of Labor is the society on the other.

Q.—The brotherhood is in Detroit? A.—Yes.

Q.—Are you able to tell us anything about the differences in the rents in Windsor and Detroit? A.—I have not live in Windsor, and I do not know the rents there. You can get a nice cottage in Detroit for from \$7.00 to \$10.00 a month.

Q.—How far from the centre of the city can you get such a cottage? A.—About one mile and a-quarter.

By Mr. HEAKES:—

Q.—What do houses rent for near where you live? A.—They rent very low; some \$6.00; some \$7.00; and \$8.00 and \$10.00.

Q.—For a whole house? A.—Yes, my rent is \$8.00.

Q.—Are there two families in your house? A.—That is \$8.00 for both.

By Mr. ARMSTRONG:—

Q.—Do you say that the Knights of Labor went over to Detroit, and worked at lower wages than the Brotherhood of Carpenters? A.—No, I was not referring to Knights of Labor, but to a class of men who come in and work ten hours a day, while our laws lay down nine hours as a day's work.

Q.—These men did not belong to any organization? A.—No.

By Mr. HEAKES:—

Q.—Can you give us any idea of what will be the average earnings of a carpenter in Detroit in the year? A.—If I take my own average for twelve months I put it down at \$13.00 a week.

Q.—That is over \$600.00 a year? A.—Yes.

Q.—Do you think the trade averages that all through? A.—There are some, perhaps, who are not capable of doing the work I do, and as soon as a job is finished they are less quick to get another job.

Q.—I want to arrive at the average time a man would work, and what he would earn. How many days would a man work in Detroit as a carpenter? A.—It has been calculated at about two hundred and eighty-six days—that is outside work.

Q.—That is if he works every day? A.—Yes.

Q.—But what would be the average? A.—That would be about the average.

Q.—Does a carpenter work on Saturday afternoons? A.—Yes.

Q.—Does it not seem to be a pretty high average? A.—It was the average last year; we had an exceedingly good winter last year. All our men were in the car shops, and could work outside nearly all last winter. I worked outside all last winter, except two days.

Q.—I suppose carpenters in Detroit, with reasonable care, are able to save money? A.—They do, I believe.

Q.—If you have any suggestions in regard to the labor question will you give the Commission the benefit of them? A.—I will give you my opinion as an Englishman by birth, and one who has lived in Canada and the United States. For prosperity I take the United States; for familiarity I like Canada; and for home comforts I like home. I think it a pity or a shame to see a branch of my country like Canada, with its vast resources, not more prosperous.

By Mr. ARMSTRONG:—

Q.—How are the men paid in your trade in Detroit? A.—Weekly and fortnightly.

Q.—Are they paid in cash? A.—Yes.

Q.—Is there any apprentice system in connection with your trade in Detroit? A.—We have just started an apprentice system, but we wish it to be a binding agreement, and we cannot accomplish this unless the Legislature passes a law to that effect. We have sent petitions from Detroit to Lansing to get the Legislature to pass an apprentice law.

Q.—You mean a compulsory indenture system? A.—Yes.

By Mr. HEAKES:—

Q.—Have you an industrial school on Grand River street? A.—Yes.

Q.—What do they teach there? A.—They teach different trades there; but there is nothing much springs out of it. It is just to give youths some insight into business.

Q.—Is it intended for mechanics? A.—No.

Q.—Have you night classes for workingmen? A.—We have night classes at the high school for workingmen; the fee is \$20.00 a winter term, of six months, which is too high a fee for workingmen to pay.

By Mr. WALSH:—

Q.—Have you any free schools of that kind in the United States? A.—No night school.

By Mr. FREED:—

Q.—What reason do you give for union men refusing to work with non-union men? A.—We have great reason for not doing so. We have non-union men who are working ten hours a day while the union men are working nine hours. It is not right that a non-union man should work ten hours for an employer for whom I am working only nine hours. I do not see that it is right that we should be compelled to work with him, and we will not do so.

Q.—Why has not a man a right to work ten hours if he chooses? A.—He does what he likes in a free country. We at the same time ask the right to work with him or not as we choose; while at the same time he can work ten hours if he chooses to do so.

Q.—Do you ask the employer to discharge him or you will quit work? A.—If he will not discharge him we will leave.

Q.—You ask that they be discharged? A.—We ask the men for their cards. If they have not their cards the union men go away, and the employer comes around and asks what is up, and he discharges them.

By Mr. HEAKES:—

Q.—As a rule, do non-union men take any wages offered? A.—Yes.

By Mr. ARMSTRONG:—

Q.—Before any stringent measures are resorted to, I suppose you ask them to join the union? A.—Yes.

Q.—There is a difference between being a non-union man and a union man who violates the laws of the union? A.—Yes.

Q.—Your union makes a difference between men who have never belonged to a union and those who violate the laws of the union? A.—We make a great difference. We give a non-union man up to pay time to decide whether he will join the union or not, but we have not much difficulty in getting them to join.

Q.—You do not meet many men who refuse to join among those who never belonged to a labor organization before? A.—We have had considerable trouble with men from Windsor in getting them to join our organization.

Q.—What I mean is, do you find much difficulty with men coming from Canada before they belonged to the carpenter's union? A.—No.

Q.—The men to whom you refer do not belong to any labor organization to your knowledge? A.—No.

By Mr. GIBSON:—

Q.—Can you tell us the price of land per foot in your neighborhood? A.—There are three lots next to me which could be bought together for \$1,500. They have thirty feet frontage, and one hundred feet depth, each lot.

By Mr. FREED:—

Q.—How far is that from the centre of Detroit? A.—Just within one mile and one-eighth radius of the city hall. There are cheaper and dearer lots than those.

By Mr. ARMSTRONG :—

Q.—Does the American Brotherhood of Carpenters believe in the principles of arbitration? A.—They believe in them; that is the effect of one of the petitions we have sent to Congress; it is in favor of an arbitration law.

By Mr. FREED :—

Q.—Do you ask for enforced arbitration? A.—We ask Congress to enforce an arbitration law.

Q.—Do you ask that it shall be compulsory? A.—Yes.

By Mr. WALSH :—

Q.—Do you mean that the Government shall establish a court, or that there shall be arbitration between the parties themselves, or that the Government by a judge or other officials shall decide disputes between the parties? A.—It is that when a dispute arises between employers and employed, the employer shall appoint six, and the employes a like number of disinterested persons, and they shall appoint a chairman, and give a decision, which shall be final.

Q.—That is not compulsory arbitration? A.—Their decision shall be final.

By Mr. CARSON :—

Q.—During your experience as a union man, have you ever known a union man to refuse to work with a non-union man at the same rate of pay per day and nine hours? A.—Yes.

Q.—Simply because he was a non-union man? A.—Yes.

By Mr. FREED :—

Q.—Why did he refuse to work; do you think it was simply on the ground that he was a non-union man? A.—We have established nine hours as a day's work.

Q.—But if a non-union man works only nine hours also? A.—We wish them to come in and support our brotherhood and our cause. If they will not support our cause and belong to our brotherhood we wish to force them into it.

Q.—You wish to coerce non-union men into belonging to the union or you will drive them from the work, and have their place filled by union men? A.—If we cannot establish our cause without coercion we have to use coercion.

By Mr. ARMSTRONG :—

Q.—Did you ever find in the United States or England shops controlled by non-union men object to the presence of union men? A.—There are some shops in London that would not employ union men.

Q.—Did you ever know a shop filled by non-union men which objected to the presence of men on the ground of their being union men? A.—No.

Q.—Never in the United States or in England? A.—No.

RICHARD SOMERVILLE, cooper, Windsor, called and sworn.

By Mr. ARMSTRONG :—

Q.—How long have you lived here? A.—Seven years.

Q.—You have been working as a cooper all this time? A.—Yes.

Q.—What are the wages that coopers receive in Windsor? A.—They work by the piece, and their wages in my shop, which is the only one in Windsor, will not amount in the year to over a dollar a day.

Q.—Is it tight work? A.—Both tight and slack work.

Q.—Is there as much coopering done in Windsor now as there was when you commenced business first? A.—About the same.

Q.—What season of the year are you most employed in loose work, such as flour barrels, &c.? A.—All our work is about equal; from the 1st November till the 1st March is the busy time.

- Q.—Is the tight work as much done now as formerly? A.—Yes; a little more so since the sugar house started.
- Q.—What is the tight work generally used for? A.—Principally for syrups, and a few oil barrels and a few potash barrels.
- Q.—If the syrup factory was not in existence there would be little tight work done? A.—Work for about four men.
- Q.—Are there many journeymen working at the trade in Windsor? A.—About ten, I think.
- Q.—Have you a uniform rate of wages? A.—Yes.
- Q.—What is the scale for loose work? A.—Six cents a barrel.
- Q.—Do you get six cents a barrel for apple barrels as well as flour barrels? A.—We get five cents for apple barrels, but there are not over one hundred of them made in the year.
- Q.—Are the coopers all organized in Windsor? A.—They are mostly organized; most of them belong to an organization on the other side. Those working here don't belong to any society.
- Q.—Are there any objections raised as between organized and unorganized men? A.—Not in our shop.
- Q.—The men are paid weekly? A.—Yes; every Saturday night.
- Q.—A dollar a day the year round? A.—Yes; they average that the year round, but in spring they are not doing much.
- Q.—And they work solely at the coopering business for a living? A.—They generally go from here to the other side in summer time; they are going back and forward all the time.
- Q.—Is there much difference in the prices for work in Windsor and Detroit? A.—They pay Detroit prices in many things here; we are paid Detroit prices on beer work and little kegs.
- Q.—Are there many beer kegs made in Windsor? A.—We make for about two breweries—small beer kegs.
- Q.—Of course you have a scale according to the size of the kegs? A.—Yes.
- Q.—How are the men paid—weekly, fortnightly or monthly? A.—They are paid every Saturday.
- Q.—Do the men prefer Saturday as a pay day? A.—Yes; there is no doubt about that; our boss is very punctual in paying them.
- Q.—How many hours per week do they work—sixty hours? A.—Some are there from four o'clock in the morning till ten o'clock at night.
- Q.—Particularly the piece hands? A.—All the piece hands, but very few.
- Q.—Is it necessary that they should commence so early, or is it their own choice? A.—It is their own choice.
- Q.—Don't you think that piece work is injurious to the coopering business? A.—Certainly it is injurious.
- Q.—Have you any labor troubles in your trade? A.—No.
- Q.—Have you had any. A.—No.
- Q.—How many shops are there in Windsor? A.—Only one.
- Q.—Are there any apprentices? A.—No apprentices.
- Q.—The work is very heavy work? A.—Yes, extra heavy.
- Q.—In making flour barrels, what would be the average day's work on piece work? A.—By work being done as men should do it, fifteen would be quite sufficient for any man to work; if he does any more than that he hurts himself. That is one reason why a man works hard, and accumulates perhaps twelve dollars a week, and the next week perhaps he cannot work at all. They get tired out, perhaps, and don't work Monday or Tuesday, and they will not make more than five dollars, and perhaps less.
- Q.—How many days in the year could a cooper resident in Windsor, not one of the migrating crowd, get work? A.—I could not rightly tell, because they are going back and forward all the time, and a few years ago when the sugar house shut down

there were only ten men in the shop, and if it shut down to-morrow there would be only one or two men. It has recently started, and it shuts down every summer and commences every fall.

Q.—What are the sanitary conditions of the shop? A.—Pretty good.

Q.—I mean as to cleanliness and ventilation? A.—Well, there is lots of ventilation, because you can see the snow drifting in.

By Mr. WALSH:—

Q.—Are the shops comfortable enough for you to work in? A.—No.

Q.—Has there ever been any complaint made to the employers? A.—Yes; there has; I never saw it yet where the snow was drifting in but there would be a complaint.

Q.—Don't you think it would be to the advantage of the employers to improve it? A.—That is where the advantage is; they don't want to put repairs on.

By Mr. GIBSON:—

Q.—Do you think working coopers are paid a fair day's pay for the work they do? A.—They are in the branch called beer work; they get Detroit prices on that.

Q.—You can make good wages on that? A.—Well, not extra good wages. These two or three men that I mentioned cannot average more than a dollar a day in and out, taking the year through. Some weeks they make ten dollars, but in others they don't go near that.

Q.—And the men working on beer work make more than the men on flour barrels, and so on? A.—No; about the average run. The other is lighter work and you don't get flour barrel work constantly; no flour barrel shop in Canada will give steady work more than six months, from Montreal to Windsor.

Q.—There is no steady work the year round? A.—Not in flour barrels. There might be for an odd hand, but on the average they are generally discharged, and in the spring they are idle.

Q.—How do you put in the lost time? A.—Coopers put it in on the railway cars mostly; they are on the track all the time.

Q.—You have a pretty hard road to travel, taking it all round? A.—Yes.

Q.—Have you formed any idea what would be beneficial to journeymen coopers or coopers in general? A.—A day's work, like any other mechanic's.

Q.—Abolish piece and have regular prices for day's work? A.—Yes.

By Mr. ARMSTRONG:—

Q.—Is the making of flour barrels reduced in Canada the last few years? A.—Yes, most of the mills are bagging the flour; they manufacture the bags on the Welland Canal and ship them all over Canada.

By the CHAIRMAN:—

Q.—It is found to be cheaper? A.—Yes; cheaper and handier to put it in small packages.

By Mr. WALSH:—

Q.—Where are the flour bags mostly made? A.—Mostly on the Welland and Lachine Canals.

By Mr. CARSON:—

Q.—Are you speaking of paper bags or linen bags? A.—I am speaking of both. Paper bags are for the local trade and the linen bags are sent to Europe.

By Mr. HEAKES:—

Q.—What effect has machinery had on the cooper trade? A.—It has killed it.

Q.—In what way? A.—They have machinery to windlass the barrels, to joint the staves and do mostly every thing excepting putting on the hoops.

Q.—What effect has the introduction of machinery had on wages? A.—It has had a great deal of effect, because it has put more men in the field and they have to work cheaper to get employment.

Q.—It has almost driven the trade out of existence? A.—It has mostly.

By Mr. McLEAN :—

Q.—Why do coopers have to go to work at four o'clock in the morning? A.—To try to make a living.

Q.—Do they have to do it? A.—Well, they have not, but a great many do it. You find men in Chatham who, in the fall, work almost all night, and in summer they have hardly anything to do, and then they can send barrels down here and undermine us. They make flour barrels there for 22 cents.

By Mr. CARSON :—

Q.—Are you aware that apple barrels are sold on the market for 12½ cents? A.—I am not; I have heard of it.

Q.—Does convict labor interfere with you? A.—I could not say; I believe it does around Kingston and Toronto.

By Mr. WALSH :—

Q.—Do you use machinery in your work? A.—Yes; we have a stave mill for cutting out staves, and we joint them on a foot-jointer.

By Mr. FREED :—

Q.—Do boys go to work in coopers' shops to learn the trade? A.—No.

Q.—It does not attract them? A.—No; I don't think there is a man in the world would send his son to be a cooper.

By Mr. WALSH :—

Q.—Have you any idea what would remedy that matter? A.—Yes; day's work.

Q.—Anything else but that? A.—No; nothing else. Piece work is ruin-  
ation to all branches of trade, but particularly to ours, because our work is scattered.  
A man puts an advertisement in the paper to hire one or two men, and then in a few weeks he has to get rid of them.

By Mr. WALSH :—

Q.—Could not these men make some legitimate complaint, or have arbitra-  
tion between the employers and the men with regard to a legitimate day's wages?  
A.—They had arbitration over the river at certain times, but they were beaten out of  
it; the bosses broke it again. They had no trouble with our boss; they never asked  
him, nor did he ask them.

By Mr. HEAKES :—

Q.—Is the Coopers' International Union in existence? A.—No; it has gone up,  
there is nothing but the Knights of Labor now.

By Mr. McLEAN :—

Q.—Are the Knights of Labor a benefit to you? A.—Yes; only for organized  
labor we would be worse off still.

By Mr. ARMSTRONG :—

Q.—Is the doing away with piece work the only remedy you would suggest?  
A.—That would be the safest guide between bosses and men.

CHARLES SIMPKINS, Laborer, called and sworn.

By Mr. FREED :—

Q.—What is your business? A.—I am a general laborer now. I did learn the  
carpentering trade first, but I had to leave that and do anything I could to earn a  
living. I now do general laboring work, and I have been so employed for about  
twenty years.

Q.—Was any question raised to you on account of your color, when you were in  
the carpentering trade? A.—Not to my knowledge.

Q.—How long did you say you lived in Windsor? A.—About twenty years. Ever since the close of the Civil War.

Q.—Had you been in the South before that? A.—Yes.

Q.—What part of the South? A.—South Carolina.

Q.—And Uncle Sam set you free? A.—Yes.

Q.—What do you earn as a day laborer? A.—I average, I suppose, during the year, about \$1.12½ a day.

Q.—You get pretty constant work? A.—I have this summer, better than I have for many summers before. I have worked all summer since April at the rate of 12½ cents an hour.

Q.—How many hours a day do you work? A.—I am putting in nine now, and I only get nine shillings; when I put in ten hours I get ten shillings.

Q.—Have you pretty constant work in the winter time? A.—No; I am shut off in the winter. I get eight or nine months in the year, according to the weather, and whether the season is early or late. From the 1st of April to the 1st of December is what we can depend on; work is going on a little later this season than usual, and I am working yet.

Q.—What rent do you pay? A.—I am trying to build, and avoid paying rent. Last winter I paid \$7 a month rent.

Q.—Are you able to save enough money to buy a house? A.—I have undertaken it, and I am trying to get through with it.

Q.—What family have you? A.—Four children; I have had eight and have buried four.

Q.—Are you more fortunate or less fortunate than other men who do work as general laborers. A.—I could not say whether I am more or less so. I have been fortunate enough to get work whenever there has been any to be had.

Q.—Does a man who is industrious and steady get about all he wants to do? A.—Yes; in the summer time, when the work is to be done, I can get work whenever anybody else can—that is, laboring work.

Q.—Have you any union? A.—I belong to the Knights of Labor.

Q.—Do you fix any rates of wages for unskilled labor? A.—No; we have not got to that yet.

Q.—You get what wages you can obtain? A.—The laborers in our societies have not been attending to that part of the business.

Q.—What advantage have you in belonging to the Knights of Labor? A.—One advantage I have is that it has helped to keep me in employment.

Q.—Do you think it gives you employment where you would not get it if you did not belong to the Knights of Labor? A.—Yes, I think so.

Q.—How does it do that? A.—The brotherhood aids me to find work. I have been trying, and I am trying now in the assembly to get the time regulated the same as mechanics have got—that is, nine hours' work and ten hours' pay, but I do not know whether we will succeed or not.

By Mr. McLEAN:—

Q.—Would you rather work nine hours a day for nine hours' pay than ten hours a day for ten hours' pay? A.—It is the money I want. If I can get ten hours' pay for nine hours' work I would prefer that, but if not I would prefer to put in ten hours; for I want money.

Q.—Would it be a benefit to you to work only nine hours? A.—If I could get ten hours' pay for that time I would make good use of the other hour.

Q.—Of your four children, how many are going to school? Two are going to school and two are not old enough.

By Mr. WALSH:—

Q.—Do you consider a man working hard as a day laborer here is as good a position as a day laborer on the other side? A.—As a day laborer I do not know but that I am. Laborers get a little more wages on the other side, I am informed, but there are more of them.

FRANK ROLPH, Cabinet-maker, Windsor, called and sworn.

By Mr. FREED :—

- Q.—You work in Windsor? A.—Yes.
- Q.—How long have you lived here? A.—Four years last April.
- Q.—Is there much cabinet work done in Windsor? A.—There is only one shop.
- Q.—Is it a large shop? A.—It employs eight men.
- Q.—You don't manufacture on a large scale or do a regular manufacturing business? A.—No; it all belongs to the same firm pretty much.
- Q.—What wages are paid to cabinet-makers in Windsor? A.—As a rule, about \$10 a week.
- Q.—Do you work by the day, or the week, or the hour? A.—We all work by the day, excepting one man.
- Q.—Do you have pretty constant work the year round? A.—Well, we do here.
- Q.—You don't lose much time? A.—No, sir.
- Q.—Is your trade organized? A.—I am really not posted on that; I have been trying to find out whether they were organized throughout the Dominion or not.
- Q.—Here in Windsor have you a cabinet-makers union? A.—No.
- Q.—Do you belong to the Knights of Labor? A.—Some do and some do not.
- Q.—Those who belong to the Knights of Labor will work in the same shop with those who don't? A.—They have so far; last year we got them all into the union, excepting two men.
- Q.—Do many cabinet-makers own the houses in which they live? A.—I don't know but one, and I think that even in that case it is his son who owns the place.
- Q.—How many hours a day do you work? A.—Ten hours.
- Q.—Sixty hours a week? A.—Yes.
- Q.—How frequently are you paid? A.—Every Saturday morning.
- Q.—Cash? A.—Yes.
- Q.—Is the sanitary condition of the shop pretty good? A.—Well, it is not any of the best.
- Q.—In what respect is it defective? A.—Well, the shop in which I work has a barn on one side and closets on the other, and down under the building it is nothing but a quagmire, covered with water almost the year round. This last summer it was too dry, but we have had occasion once or twice to go under the shop to brace it up, and we had to crawl in on planks.

By Mr. GIBSON :—

Q.—Do you think that state of things would be deleterious to health? A.—Yes.

By Mr. FREED :—

- Q.—What wages do cabinet-makers get in Detroit? A.—I could not say; never worked in Detroit, though I have worked in other places in the States.
- Q.—What did you get in Michigan? A.—I worked there by the piece.
- Q.—Did you get less or more than you get here? A.—A good deal less than here. My work was not steady when I worked by the piece; I work by the day here. On the average, if I had good steady work I could make \$2 a day, but I did not have work more than half the time; that was about four years ago, and prices are not so good now.
- Q.—That was in Michigan? A.—Yes.

By Mr. McLEAN :—

- Q.—Have you much machinery in your place? A.—Yes.
- Q.—Is it properly protected? A.—Not in all cases.
- Q.—In what cases is it not protected? A.—The belting, for one thing; it is all done from overhead, and to any person unaccustomed to machinery it is very dangerous.
- By the CHAIRMAN :—
- Q.—Have you had a visit from the factory inspector? A.—I never saw one yet.

By Mr. McLEAN :—

Q.—Are there many boys working in the shop? A.—No; they are all of age, excepting one.

Q.—What do you mean by being of age. A.—Twenty-one years.

By Mr. HEAKES :—

Q.—Do you consider that piece work is injurious to the working man? A.—Yes.

Q.—That it reduces wages? A.—Yes.

Q.—And you have to work harder? A.—Yes.

By Mr. WALSH :—

Q.—Has any accident occurred from any machinery or belting being unprotected, or from the condition of the saws, or anything of that kind? A.—Yes.

Q.—In the establishment in which you are now working? A.—Yes.

Q.—Many of them? A.—I have known of five, but they have not resulted seriously. One of the men now is off work with mangled fingers.

Q.—Would that be the result of carelessness on the part of the man or the unprotected state of the machinery? Was the man competent to work at the machinery? A.—I must say candidly that it was a little carelessness on his part in not protecting the machines he was working on.

Q.—But if the machine was properly protected do you think the accident would have occurred? A.—It would on the work he was doing at that time.

Q.—So you think there was part carelessness on his part? A.—There was, in not protecting the machine at the time.

By Mr. CARSON :—

Q.—What machine was it? A.—The shaver.

Q.—Do you know that that is the most dangerous machine in the business? A.—Yes.

Q.—How could it be protected? A.—By putting a hood over the head.

Q.—Was it possible on that occasion? A.—No; not on that particular one.

Q.—Generally speaking, is it possible, situated as you are, for the belts to run up instead of running down? From what I understood you to say about the underpinning of your building they could not put a line of shafting under? A.—They could not now, without some extra expense, but for any person who is building a shop it is a very easy thing to put the building up from four to five feet and have the belting below.

Q.—Have there been any accidents from saws? A.—Yes.

Q.—Are there guards on the backs of the saws? A.—No; there are not; last week there was a man got knocked over by the saw, and there had been four cases of that same thing done in that shop this summer.

Q.—Have you known, during your experience, of men being disabled for life by accidents of that kind, a piece flying from a saw? A.—No; not in my own knowledge.

Q.—You have known them to be seriously wounded? A.—Yes; I have known them to be hurt pretty badly.

RICHARD D. WALKER, Laborer, Windsor, called and sworn.

By Mr. FREED :—

Q.—What is your business? A.—I am a laborer, and have been a night watchman.

Q.—For a factory? A.—No; for a steamboat plying between Windsor and Detroit, the steamer "Victoria."

Q.—Are many men employed as watchmen on the boats? A.—The company have about five watchmen during the summer months, one watchman on each boat; the company have five boats.

- Q.—Is there a watchmen on board each boat while it is laid up? A.—Yes; he goes on at six o'clock in the evening, and goes off at seven in the morning.
- Q.—What pay do these men get? A.—They get \$1.25 a night.
- Q.—How long does work last? A.—Two watchmen are kept on all winter and kept constantly going all the year round. On the "Victoria" I had constant work the year round.
- Q.—I believe you are not doing night work just now? A.—No; I am keeping a grocery. It is very wearing work on the steamer, and for that reason I was unable to do it any longer.
- Q.—Do you make the grocery business successful? I cannot say; I have not been long enough in it.
- Q.—Can you save any money on \$1.25 a day? A.—It is pretty close work.
- Q.—Have you any family? A.—There are only my wife and I. She is a very economical woman, but a man at that class of work has to eat three meals a day, and something through the night.
- Q.—Could you save enough money to start the grocery business? A.—I did not make it by working for the ferry company. My wife helped me a little in the matter.
- Q.—Did you ever do any laboring work about the city? A.—Yes.
- Q.—Did you get pretty good pay for that? A.—Not very much. It is not very easy work to get employment in this town.
- Q.—You have heard the testimony of the last witness? A.—Yes; but he was speaking of a later date.
- Q.—Do you approve of all he said? A.—Yes. I may say in regard to the work on the steamer that the watchmen have too long hours.
- Q.—How many hours do they work? A.—A watchman goes on at seven o'clock in the evening every other night, and he leaves at six o'clock in the morning; and the other evening he goes on at twelve o'clock. Some of the other men on the railway ferry have to come on at five o'clock at night, and stay till seven in the morning. They are found with constant work, but they are hardly able to stand it.
- Q.—Cannot they take a nap during these hours? A.—Occasionally they drop off to sleep during the winter.

—

JAMES WREN, Tailor, Windsor, called and sworn.

By Mr. FREED:—

- Q.—What is your business? A.—I am a journeyman tailor.
- Q.—Custom work? A. Yes.
- Q.—Are many tailors employed here? A.—About twenty-five.
- Q.—What would be the average wages received by journeymen tailors in Windsor? A.—Twenty-five cents per hour.
- Q.—Is that universal, or is it only paid to some? A.—It is paid to all journey-men tailors throughout the city.
- Q.—How does that compare with prices paid in Detroit? A.—Detroit is a good deal higher.
- Q.—How much? A.—One-third higher.
- Q.—Then they get twenty-six and two-thirds cents per hour? A.—In some shops; they have not a regular price in all shops.
- Q.—Do you get pretty constant work? A.—About six months in the year.
- Q.—And the other six months is broken time? A.—Yes.
- Q.—How much could a man earn in the course of a year who is industrious and works as much as he can? A.—The average would be about \$9 a week.
- Q.—You find it pretty hard to maintain a family on that, don't you? A.—Well, I don't know; I have not got any.
- Q.—Do you try to work as constantly as those who have? A.—Yes.

Q.—Is there any clothing made in Windsor that quietly slips across the river to the other side? A.—Yes.

Q.—That ought to make business pretty good in Windsor? A.—Yes; that is the only thing that keeps us alive here.

Q.—Does any clothing come from Detroit to this side in the same way? A.—Well, in ladies' wear I expect there is.

Q.—And how about ready-made clothing? A.—It is cheaper in Detroit than in Windsor.

Q.—And custom clothing is cheaper here? A.—Yes.

Q.—Have you a tailors' union? A.—Most of us belong to the Knights of Labor.

Q.—How many hours do you work? A.—From ten to sixteen.

Q.—Pretty long hours? A.—Yes.

Q.—That is when you are busy? A.—Yes.

Q.—At other times you don't get ten hours? A.—Sometimes we don't get two.

Q.—Is it possible to make any amendment in those hours? A.—I believe not.

Q.—In the busy season the work must be done? A.—Yes.

By the CHAIRMAN:—

Q.—About holiday time you have to work very hard? A.—Yes.

By Mr. FREED:—

Q.—The journeymen themselves would not like other men to come in and shorten those hours when they are busy? A.—Well, in that case they would have nothing to do in the slack times.

Q.—Do many tailors own the houses in which they live in Windsor? A.—Yes; quite a few.

Q.—Have they managed to save some money? A.—Yes.

By Mr. ARMSTRONG:—

Q.—Have you lived as a journeyman in other places besides Windsor? A.—Yes.

Q.—In Canada? A.—In the United States and Canada both.

Q.—Are there many young women work in the tailoring here in Windsor? A.—Yes; about fifteen.

Q.—They work principally on pants and vests? A.—Yes.

Q.—By the piece or by the week? A.—They work by the piece.

Q.—How much would a young woman get for making a vest of tweed, say? A.—One dollar to \$1.25, according to the kind of work.

Q.—What kind of a vest would that be? A.—Fine tweed and cloth are just about the same price.

Q.—Will she make a vest a day? A.—Yes.

Q.—And a tweed pair of pants? A.—\$1.25.

Q.—What is the difference between prices in the same work in Windsor and Detroit? A.—I think workmen in Windsor at the tailoring get as good pay as in Detroit.

Q.—Are you troubled with the apprentice question? A.—We have only had three boys in six years.

Q.—Does your order believe in indenturing apprentices in all trades? A.—No; they do not.

Q.—I mean the Order of the Knights of Labor? A.—I do not know whether they do.

Q.—Have you had any labor troubles in the tailoring business in Windsor? A.—No.

By Mr. CARSON:—

Q.—How many hours a day have the girls to work? A.—Well, those working by the day work about nine hours.

By Mr. FREED :—

Q.—They mostly take the work to their homes? A.—No; practically all the work is done on the premises.

By Mr. McLEAN :—

Q.—When girls do piece work on vests and pants how long do they work in the shop? A.—They generally go to work about 8 o'clock in the morning and, on piece work, remain until 8 in the evening.

Q.—Do they take work home, then, too? A.—No.

By Mr. ARMSTRONG :—

Q.—How is the sanitary condition of the shops? A.—Pretty good.

By Mr. WALSH :—

Q.—Where there are men and women employed in the same establishments, have they separate water-closets and all that sort of thing? A.—Well, in some of our workshops we have not got any water closets.

By the CHAIRMAN :—

Q.—None at all? A.—No.

By Mr. WALSH :—

Q.—Are there any establishments employing both ladies and gentlemen in which there are separate closets? A.—There is only one.

Q.—How many establishments of that kind are there in the city employing male and female labor? A.—Five.

By the CHAIRMAN :—

Q.—What is the largest number of hands they employ in any one shop at one time? A.—At different times they may have ten or twelve in the one shop.

By Mr. ARMSTRONG :—

Q.—Do you ever hear the hands complain for the want of those conveniences? A.—Yes.

FRANKLIN THORNTON, Stone-cutter, Windsor, called and sworn.

By Mr. ARMSTRONG :—

Q.—You are a stone-cutter by trade? A.—Yes; I have worked for over forty years at the trade.

Q.—How long have you worked at the trade in Windsor? A.—The first work I did here was on the custom house, about ten years ago.

Q.—Are there many stone-cutters in Windsor? A.—Not for buildings. There are a few marble shops here, and they generally do building work too.

Q.—Do any of them do stone-mason's work also? A.—Yes.

Q.—In the stone-cutting trade what stone is most used, Ohio or Credit Valley, or Pelee Island? A.—Ohio stone.

Q.—Do the stone-cutters prefer Ohio stone to cut? A.—I think they do. The stone used here is principally brought from Detroit, and is generally Ohio or Cleveland stone.

Q.—Have you worked in Canada, outside of Windsor? A.—I have worked in Detroit at the trade.

Q.—Is there much Credit Valley stone coming in here for use? A.—Not here. I have worked in all the shops here, and I never knew any of it to come in here. It is generally Cleveland stone we use.

Q.—Are you paid by the week? A.—I work by the day, principally, and I do a great deal of piece work.

Q.—How much per day do stone-cutters receive? A.—The stone-cutting business in this place is as vacillating and uncertain as anything you can strike upon. No one establishment can make a living out of it. At the marble works they cannot make a living at the marble business, and so they mix the other with it, and that keeps up a continual warfare. Builders think that marble-cutters should not travel outside of the marble business, and the scale of prices is regulated by Detroit.

Q.—Are stone-cutters receiving Detroit wages? A.—They are receiving just the same.

Q.—How much is that? A.—For a stone-cutter the highest wage is \$3.50 a day; next highest is \$3.00. Here let me say that business comes on with a rush. The masters have got to have men a certain length of time, and they pay high wages, because high wages are paid in the trade in Detroit.

Q.—Are stone-cutters organized by themselves as a body in this city? A.—They are not. A great many belong to the Stone-cutters' Union on the other side, but they live here. With masons it is the same. A great many of the stonecutters are good masons.

Q.—The stone-cutter in Windsor also works as a marble worker and a stone-mason? A.—Yes, they work at the three branches.

By Mr. WALSH:—

Q.—Is there any difference in the wages of a man working as a stone-mason and cutting stone, and are the wages of a stone-mason the same as a stone-cutter? A.—They are not so high.

Q.—When you go to work at stone-masonry you work for less than if you were stone-cutting? A.—Yes.

Q.—Is it a general thing for stone-cutters to work at mason's work? A.—Not as a general thing. Stone-cutters' and brick-layers' wages run about the same; they are the highest-paid mechanics in the building trade. They command higher wages than any other artisans in that trade.

Q.—Do brick-layers get more than stone-masons in Windsor, as a rule? A.—Yes.

Q.—Do brick-layers get more than stone-masons in Detroit? A.—They do.

Q.—Do they, as a general rule, in the United States? A.—Yes. I have been acquainted with the trade in the leading cities of the United States for many years. I served my time in Pittsburg.

Q.—In the building trade, do masons do plastering? A.—Not as a general rule.

Q.—Do bricklayers? A.—Not as a general rule.

Q.—Do they work at it at all? A.—A few work at it, but not as a general rule. There is a class of mechanics who exclusively work at plastering here.

Q.—But would they have any objection to stone-masons or brick-layers working at it, if they were competent? A.—I think not.

Q.—You have some slated buildings here? A.—Yes.

Q.—Have you slaters here as a separate trade, or what kind of workmen do slating? A.—They bring in artisans from abroad. I think there is not a slater in this place; I do not know of any.

Q.—So that slating is part of the mason's trade with you. No; I never so understood it. It is only within a few years that we have had a slated roof in the place.

Q.—With respect to the finishing of buildings—cornices and centre decorations—have you plasterers to do the work and make the moulds? A.—No; we have not. There is no regular establishment, but a few individuals do that kind of thing. I was on a building yesterday, where they were putting up a cornice and centre-piece which they brought from Detroit.

Q.—Do they put the centre-pieces up in blocks, or do they run them into a mould? The centre-pieces are made in moulds and are afterwards put up.

Q.—Do you know of any establishment in Canada which makes centre-pieces or any of these decorations? A.—No. There is no establishment in Windsor. They

charge for a centre-piece put up here \$4.50. You can buy them in Detroit, ready to put up, for \$1.00 each, and then there is a trifle to be added for the material used in putting them up. I notice that a man who put up four the other day charged \$18.00.

By Mr. HEAKES:—

Q.—How long does it take a man to put up a centre-piece? A.—It will take a man, with his scaffolding all ready, about thirty minutes.

Q.—The centre-piece costs \$1.00 and the man charges \$3.00 for putting it up, although it only occupies him thirty minutes, and fifty cents additional? A.—There is the cost of a little material to come out.

By Mr. GIBSON:—

Q.—Thirty minutes does not represent all the time occupied? A.—No; I mean it will take thirty minutes after the scaffold is put up.

By Mr. WALSH:—

Q.—Where do you get slates, when they are put on roofs here? Do they come from the United States, or are they obtained in Canada? A.—I do not know whether they come from the United States or not.

WINDSOR, December 8th, 1887.

JERRY BUCKLEY, Detroit, called and sworn.

By the CHAIRMAN:—

Q.—What is your occupation? A.—I am President of the Seamen's Union, and have been a sailor for eleven years previous to this.

By Mr. HEAKES:—

Q.—Please, in your own way, tell us what disadvantages the seamen are under on the lakes and what remedies you propose? A.—In the first place, vessels do not carry crew enough to enable them to do the work required.

By the CHAIRMAN:—

Q.—You are on the American side, but I understand your remarks apply to both sides. When they do not, just please tell us when they apply to the one or to the other? A.—I will tell you in regard to both of them. In the first place they do not carry crew enough to handle them, and in the second place they do not have places fit for men to sleep in. They generally sleep down below the forecabin, and the clothes are put in in the spring and never taken out during the season; they are left all winter, and not one in ten is washed in spring. They load the vessels to the top and put in all they can get in them.

By Mr. HEAKES:—

Q.—Have you any laws in the United States about the protection of vessels in the way of loading them? A.—No, sir. The Seamen's Union has spent thousands of dollars in Washington trying to get a law. There is a law but it is not in force.

Q.—When was it passed? It was passed a good many years ago.

Q.—You say it is not enforced? A.—No, sir; it is not.

By Mr. FREED:—

Q.—Is it enforced on Canadian vessels? A.—No; not on any vessels.

Q.—You are speaking of deck loads? A.—Yes; they carry deck loads, as much as they can pile on to them, on both sides.

By Mr. HEAKES:—

Q.—The Seamen's Union is an international body, is it not? A.—Yes.

Q.—You have headquarters in Chicago, with branches throughout Canada and the United States? A.—Yes.

Q.—You ship as frequently on Canadian vessels as on American bottoms?  
 A.—Yes, sir. In the summer time there is quite a few Canadian vessels trading between Detroit, Chicago, Milwaukee and Toledo.

Q.—And a man may ship from here to Buffalo on an American and come back on a Canadian vessel? A.—Yes; often that is the case.

Q.—Sometimes you ship down from here to Kingston on a Canadian vessel and come back on an American?

By the CHAIRMAN:—

Q.—By American law, what part of the seamen must be American? A.—The American law claims that two-thirds of the seamen should be American citizens, and all the officers, but they do not enforce that. It is a by-gone thing, and often they are all foreigners.

By Mr. HEAKES:—

Q.—Is there such a thing as hull inspection on sailing vessels? A.—Yes, sir; they inspect the hulls every season.

Q.—Is there a law in Canada compelling the inspection of hulls in sailing vessels? A.—I believe there is.

Q.—Do you know if it is carried out? A.—I think it is; I am not positive. It must be carried out, because a vessel which does not weight up cannot carry grain.

Q.—Are the officers, such as the captains and mates, obliged to pass an examination? A.—They are in Canada, but not in the United States.

Q.—How far does the examination for a certificate go? Is it a certificate of competency? A.—No, sir; it should be a certificate of competency, but it is not in all cases; influence has a great deal to do on both sides; it goes a great deal further on both sides than competency.

Q.—And men incompetent to handle a vessel frequently get certificates through favor. A.—Yes, through favors.

Q.—What sort of an examination do they put them through in Canada?  
 A.—Well, sir, I do not know.

Q.—Is there any law limiting or guiding the way of loading sailing vessels?  
 A.—No, sir; that is, if there is, it is not carried out.

By the CHAIRMAN:—

Q.—You say that vessels are loaded as if there were no law? A.—Yes; just as they like.

By Mr. HEAKES:—

Q.—As much as they can pile on? A.—Yes. For instance if her tonnage registers 275 they frequently put 650 to 700 tons in her. That is, a full sized canal vessel registering 275 to 350 they put that amount in her.

Q.—Taking an ordinary sailing vessel, carrying grain and coal—how much free room should she have? A.—For instance, a vessel carrying 20,000 should have a carrying capacity of water for 150 tons. Very often a vessel founders by being over-loaded, and they should have a carrying capacity above the average to carry this much above their register. In the fall of the year the vessels ice up a great deal, and it does not take much ice to make 100 tons. I have come down the river on a vessel with the covering board away under water.

Q.—Is it a frequent occurrence to load a vessel so heavy that her deck is just above the water? A.—Yes; it is done every day.

By the CHAIRMAN:—

Q.—You are talking of vessels on the lakes? A.—Yes.

By Mr. HEAKES:—

Q.—Vessels sailing Lakes Michigan, Huron, Erie and Ontario? A.—Yes.  
 Q.—Now, if a vessel was properly loaded, say that she had space in her hold of

the capacity you mention for water, what would be the difference in the risk of that vessel and one loaded so that her deck was almost flush with the water? A.—There would be considerable difference, because a vessel which was not fully loaded would be so much lighter in the water, it would be just the same as loading a man. If you put 100 lbs. upon a man and that is all he can carry and then you put 50 lbs. more and you make him carry it, he cannot go far, and if he has a rough road to travel he cannot go at all.

Q.—Do you know what proportion of the vessels which are wrecked are over-loaded? A.—The \_\_\_\_\_ which was wrecked at White Fish Point, Lake Superior, in a squall was overloaded; the \_\_\_\_\_ which was wrecked this fall was over-loaded; the City of \_\_\_\_\_ was also over-loaded.

Q.—Can you mention any Canadian vessels? A.—That Canadian vessel wrecked up on the Straits was overloaded, the \_\_\_\_\_ I mean.

Q.—Do you know anything about the \_\_\_\_\_ which foundered two miles out of Port Dalhousie? A.—No; I could not speak as to her.

Q.—And you could not speak as to the crew which was on board of her? A.—No; I never heard anything about her in particular, only that she was lost, and I saw that in the newspapers.

Q.—What would you consider the proper crew for a vessel to have a sufficient number for all purposes?

By the CHAIRMAN :—

Q.—They are generally masted schooners, are they not? A.—They are generally canal schooners, registering from 300 to 350, and they should have four men—an ordinary seaman and two mates, and the captain and cook. Those four men should be competent seamen.

By Mr. FREED :—

Q.—Are all men who ship as sailors competent seamen? A.—No, sir; they are not.

Q.—They take a great many green hands? A.—Yes, frequently; they will not pay the salaries to get sailors, and the sailors will not go on the vessels in the fall, so they ship anybody they can get for deck hands—farmers, for instance, or anybody who will go and take the job.

By the CHAIRMAN :—

Q.—Take one of those large three-masted schooners, and what should be the crew? A.—Those that carry a register of 700 to 800 tons should have at least eight or nine men before the mast, but none of them do it. The men they carry cannot handle them in really bad weather; if they are caught out in a gale of wind they cannot handle the canvas.

By Mr. HEAKES :—

Q.—Do vessels frequently leave port under-manned? A.—Yes; often.

Q.—Is it the practice? A.—It is done quite frequently. A vessel gets loaded and if a man leaves them they will not wait a minute to get one. If the tug is alongside they will go right out a man short. It is done frequently, every day almost, in the summer time. They do not do it so much in the fall, because they cannot get along very well without them then; they carry too short a crew even as it is in the summer.

Q.—Are vessels lost from having defective gear? A.—Very often; old canvas and bad halyards.

Q.—Is there law or custom compelling the inspection of the gear of a vessel? A.—No, sir.

Q.—Do you think the gear should be inspected with the hull? A.—I think it should.

By the CHAIRMAN :—

Q.—When the hull is inspected is not the gear inspected as part of it? A.—Yes

it is; the gear is the principal part, but they do not inspect the canvas or the gear; just the hull, and nothing else.

By Mr. HEAKES:—

Q.—How long will an ordinary Manilla rope last on a vessel? A.—When there is a good deal of chafing it would not last more than a season, such as the halyards, for instance. Sometimes they splice them and keep them patched, and by using the new end above and the old end down below they sometimes use them for two seasons.

Q.—Do you know of any vessels being lost from incompetency by taking a trick at the wheel? A.—Yes it is often the case that an incompetent man would be at the wheel, the vessel gibes and the boom is carried away, or sometimes the canvas; a vessel often founders in that way.

Q.—Do owners of vessels put green hands at the wheel? A.—They have a man in Cleveland called Rumsey, who ships men for vessel owners, and sometimes he ships a whole crowd of men and puts them on board. They have gone out on vessels when there was nobody could steer her but the captain and mate. This frequently occurred with large vessels going out of Cleveland.

Q.—Should not all men who ship as sailors be able to steer a vessel by the compass? A.—Yes, sir.

Q.—Can they do it? A.—All sailors can, but not all can who are employed on vessels.

Q.—Are many men shipped on the lakes who cannot steer by the compass? A.—Yes; about one-third—that is on sailing vessels. There are two-thirds of them on steamboats and barges that could not steer by compass.

Q.—Do not steamboats ship pilots in addition—don't they always carry them? A.—No; only on narrow passages, such as steamboats coming down through the Lime Kiln Crossings, but as a general thing they are all acquainted with the navigation through the rivers.

Q.—Do ordinary deck hands take the wheel on steamboats and barges? A.—They do on barges—the crews they ship are supposed to take the wheel, but lots of them do not know anything about it; about two-thirds of the men on barges do not know enough about sailing to steer.

By Mr. FREED:—

Q.—Is not the navigation of Georgian Bay very dangerous? A.—Yes.

Q.—Do incompetent men take the wheel on vessels in Georgian Bay? A.—I have not been up there much, but of the class of men who sail up there, as a general rule, about one-half of them are pretty fair seamen.

By Mr. HEAKES:—

Q.—Could you suggest to us some remedy to prevent the shipping of green hands? A.—Well, sir, I do not know of any remedy to prevent the shipping of green hands, any more than if it was made the law for a vessel to carry so many competent men and to put a heavy fine on vessels that did not carry such men.

Q.—Would it not be necessary to have some form of certificate for competent sailors? A.—Well, it would be necessary.

Q.—That is what I mean. If a vessel had to carry so many competent men according to her size, it would be necessary for these men to produce a certificate at every port they cleared from? A.—Yes, sir.

Q.—Would that meet the requirements? A.—Yes.

By the CHAIRMAN:—

Q.—If a man navigated for a certain time, would you consider him competent? A.—No; not in all cases. Some men are thick-headed and cannot learn.

Q.—Would you fix any time by which a man could qualify? A.—Well, if a man was a sailor—

Q.—I am speaking of an average man; I want to know if you could fix a time each that if a man had sailed for that time he would be a competent man in your view? A.—Well, any kind of a man would be competent in three or four seasons.

By Mr. FREED:—

Q.—Could you overcome the difficulty by forming a close union of competent men and refusing to ship on vessels under-manned? A.—We could not overcome it, unless the Government would help us and sustain us in it.

Q.—If you once sign with a vessel and you found before leaving port that she was under-manned, could you be punished for deserting her? A.—Well, I do not think they would punish a man for doing it, but they have done this—vessels are loaded at Escanaba to the very top with iron ore; they have got the officers and they have obliged them to do it through the influence of money and by bribing the officers in those places. The same thing has been done in L'Ance.

By Mr. WALSH:—

Q.—Do you know that to have been done of your own knowledge? A.—Yes; I do.

By Mr. FREED:—

Q.—Did you ever know that of any Canadian vessels? A.—No; they never go to Escanaba for iron ore.

By the CHAIRMAN:—

Q.—Have you seen any Canadian vessels on which sailors were obliged to go, even when they were overloaded? A.—Not that I know of.

By Mr. HEAKES:—

Q.—Has the Seamen's Union ever to your knowledge made an attempt to prevent the shipping of green hands? A.—Yes; we have.

Q.—You have done what you could to remedy the evil?

By the CHAIRMAN:—

Q.—Is that in the United States? A.—Yes; down at Washington. Mr. Powers was down there three different winters trying to get a law passed to prevent the shipping of incompetent men and prevent the overloading of vessels, and also about the sleeping accommodation in forecastles.

By Mr. HEAKES:—

Q.—Mr. Powers is president of the Chicago union? A.—Yes.

Q.—And he thought that a law should be passed to prevent the overloading of sailing vessels and steamboats? A.—Yes.

Q.—That competent seamen should be protected by certificates against green hands, that each vessel should carry so many competent seamen to her tonnage, and that the gear and sails should be inspected with the hulls? A.—Yes.

Q.—Are there any other points you could give us? A.—I do not know of any particularly, except with regard to the forecastles.

Q.—That they are not kept in a clean condition? A.—They are not kept in any condition at all. The decks leak and often the water runs down as freely as it would any place.

By Mr. FREED:—

How about the food the sailors get? A.—The food, as a general thing, is good. We cannot say anything against that.

By the CHAIRMAN:—

Q.—With regard to those vessels which were lost, was it said they were overmasted—that the masts were too high? A.—No; none were wrecked from being too lofty, that I know of.

Q.—Is there any talk about vessels being overmasted? A.—What makes these vessels cranky as a general thing and makes them roll over, is they take a big load

of lumber and pile on too much, and if the vessel is cranky and gets struck by a squall, the cargo being top heavy, this rolls her over. They often put on a vessel which would carry 200,000 feet of lumber in the hold about 150,000 on the deck, and that makes a pile eight or nine feet above the deck.

Q.—Do they come through the lakes with such a deck load as that? A.—Yes, and sometimes eight, or ten, or twelve, or fifteen feet on the deck.

By Mr. FREED :—

Q.—Are vessels ever lost in consequence of the cargo not being properly stowed away, so that it shifts? A.—Well, there is no chance for a cargo shifting inside, with iron ore, which will not shift; when it is grain and ore they pile them so full that there is no chance for shifting.

By Mr. HEAKES :—

Q.—What provision is made on board sailing vessels to save life? A.—There is nothing but the yawl boat.

Q.—And if it is washed away there are no life-preservers? A.—No, sir.

Q.—Is that a proper state of affairs? A.—No; there should be life-preservers for every man on the vessel, but I never saw one on board a sailing vessel in my life.

Q.—Do you know anything of the steamer——? A.—Yes.

Q.—When was she lost? A.—This fall, on Lake Michigan.

Q.—Did you ever hear what kind of life-preservers she had? A.—The papers said they were very poor, and that she had 150 tons more cargo in her than she ever had before.

Q.—Did you ever hear that her life-preservers instead of being made of cork were simply made of weeds and sawdust covered with canvas? A.—Yes; I have heard that, and it was stated in the papers.

Q.—Is that a usual occurrence, do you think? A.—It may be; I do not know, but it has never leaked out before.

Q.—Do you think that if the law respecting steamboats and their supplies were properly administered they would be able to carry such life-preservers? A.—No, sir.

Q.—Do you think the law is properly administered? A.—No, sir; it is not.

Q.—Do you think of any other points which you would like to mention? A.—Nothing more than this, that Canadian vessels going up on the lake shore loading square timber work their men for eighteen and sometimes twenty hours loading timber and standing in the water. Then they have to get away, and sometimes they are caught in the night on a lee shore, and the men are often kept out forty-eight to fifty hours.

Q.—Without a change of watch? A.—Yes; they work from daylight to dark in summer, and this is eighteen or twenty hours.

Q.—On sailing vessels, would it not be necessary to change the watch frequently? A.—Well, the men should get watch and watch. On a sailing vessel a man works twelve hours a day if he gets watch and watch immediately, but they never get it.

Q.—Don't they carry sufficient men to change the watch every four hours? A.—We do in fine weather but not in bad weather. They could carry men enough, but they don't, and the men are kept up sometimes forty-eight to fifty hours in bad weather without any rest.

Q.—How many men would it require to handle one of these three-masted schooners in a wind? A.—Three men and the officers would handle her.

Q.—That would be sufficient? A.—Yes; three men, the mate, captain and second mate.

Q.—Would not they require nine competent seamen and four officers to handle them? A.—No; six competent seamen—three officers.

Q.—You would change the watch every four hours and then go on again? A.—The captain, as a general thing, is only an ornament, anyway. He does not do anything.

By Mr. FREED :—

Q.—You spoke of the bad condition of the fore-castle awhile ago? A.—Yes.

Q.—Do vermin get into them? A.—I do not think vermin could live there.

By Mr. HEAKES :—

Q.—Is there any ventilation in the fore-castles? A.—Nothing but the scuttle, two feet square, where the men get down.

Q.—No port holes? A.—No ventilation of any description, except the scuttle and the space for the stovepipe.

Q.—Have you ever known the men called to go up on the decks to sleep? A.—Yes; they do so in summer; the men cannot sleep there at all. They would be suffocated.

Q.—Is the inspection of boilers any better than of hulls? A.—That is something I do not know anything about. In the United States they inspect the boilers every spring.

THOMAS MULHALL, Seaman, Detroit, called and sworn.

By Mr. HEAKES :—

Q.—How long have you been a sailor on the lakes? A.—Thirty-eight years past.

Q.—You have had a good deal of experience of the kind of vessels that sail the lakes and the way they are handled? A.—Yes.

Q.—Will you tell us any grievances you have to complain of? A.—Well, there is one grievance of late years. In former years they were all competent captains and mates of vessels; I lived in Kingston nearly twenty years and some of the oldest captains are very competent, but of late years, although we have grand exceptions, they have been replaced by younger men and cheaper men.

Q.—Do you think it pays to hire an incompetent captain on a small salary rather than a good officer at a good salary? A.—I am confident it does not.

Q.—Don't you think that an incompetent captain or officer of any kind would allow a vessel to depreciate? A.—I know of incompetent men who have taken charge of vessels, and I have been "nurse" myself for over five or six; they hold the position on account of running the vessel cheap, but they let the gear rot out in the first place and let the vessel run down, and when that happens, the next thing is that she goes to pieces.

Q.—Don't you think a good many officers on vessels, in order to keep their positions, try to save as much that way as possible; wouldn't they starve a vessel? A.—I have know that to be the fact at least ten times.

Q.—No competent man would stand at the expense in order to keep his vessel in trim? A.—No, sir; you always know a good, competent man by his vessel; his vessel is always clean and trim.

Q.—Can you suggest anything to us in the way of a remedy? A.—Some years ago I was in Canada when the new law came out, and I saw the young men who passed for captains, and though the examiners or inspectors, Mr. Harbottle, Mr. McLaren and Captain Taylor, were pretty strict men, I know there were young men who passed who were not fit for the position. I know the inspectors personally, but I know that some of the men got certificates who I know were not competent. I happened to be there when the first inspection was made, four years ago.

By Mr. WALSH :—

Q.—You consider that all these three men were competent to judge and examine? A.—I do, sir; I speak for the whole three of them.

By Mr. HEAKES :—

Q.—Do you know what the examination consisted of? A.—No, I do not; I

haven't been on a Canadian vessel for a great many years, though I was when I first came out.

Q.—Do you know if they examined the men in seamanship and navigation? A.—I don't know, but I don't believe they do.

Q.—I think they just examine them for color-blindness? A.—Yes; and for being pilots on the lake and otherwise.

Q.—Now, in view of your statement that you have confidence in the Board of Examiners, do you think the examination itself is a proper one? A.—Well, that is a question I could not answer, because I do not know what it is.

By Mr. WALSH:—

Q.—Were you ever on any foreign voyage outside the lakes? A.—Yes; for years and years; I began my career on the lakes and was off the lakes for six or seven years afterwards. I have been in China, Australia, France and on the Mediterranean and Black Seas.

Q.—In your experience, is it as dangerous on these lakes as when you were on foreign voyages? A.—Fifty per cent. worse.

Q.—You consider that under all the circumstances a man should be as thoroughbred a sailor to take charge on the lakes as he should be on a foreign voyage? A.—More so. I have been very nearly two years on one trip, and it was mere play to us compared with the lakes.

Q.—And these short voyages around shore are always the most dangerous? A.—Yes; and another thing, on a short voyage they will work you almost to death if you are in at port, and perhaps they will get under weigh after sixteen or seventeen hours, and sometimes twenty hours—they will get under weigh at night, and I have often been a mate on such vessels, and I would find every man asleep after such hours.

Q.—And you could not blame them? A.—No; I have had to move around myself, so that I would not go to sleep. I have been in the timber trade for a number of years.

Q.—That work you speak of was stowing cargo? A.—Yes; loading timber.

Q.—You think that lake navigation, under all circumstances, is more dangerous than foreign, and that men require, if anything, to be more competent seamen than for foreign voyages? A.—I do. It is only a pleasure to go on a southern voyage. I have often been on ships on such voyages, when we would hardly know when it was our watch to go below; we would sleep on deck, and be too lazy to go below to sleep.

Q.—There is another thing: If anything was wrong on board of your vessel, so that you wanted to make repairs, or anything of that kind, on a short voyage here, you had less time to do it in than if anything went wrong on a foreign voyage? A.—Certainly.

Q.—You found it more difficult if anything gave out suddenly to renovate it here than on a foreign voyage. A.—Yes.

Q.—So under all circumstances navigation and everything connected with sailing is more difficult here than on a foreign voyage? A.—Yes; and even here on the lakes it is only once in a while that we will have two men able to do anything if anything does give out. We may have a couple of men, and sometimes only one man able to do it.

Q.—Are men, as a rule, as able to handle themselves with regard to splicing sails and matters of that kind as on a foreign voyage? A.—Yes; our sailors are. We have both in Kingston and Toronto a union, and when a man has joined three of the oldest heads like myself will examine him to know if he is competent before we take him in.

Q.—Why is not that rule carried out here? A.—It is carried out in St. Catharines, Kingston and Toronto.

Q.—It is not carried out here? A.—No; in the small ports it is not carried out.

By Mr. McLEAN:—

Q.—How is it in Detroit? A.—Yes, we carry it out in Detroit. There are only a few vessels on the lower lakes under the union; more of them are running wild; they will ship anything they can get.

By Mr. HEAKES:—

Q.—Are sailors paid by the trip or by the month? A.—By the day.

Q.—Is it the practice to discharge sailors when they reach port? A.—On the United States side you only sign articles to a port.

Q.—And as soon as she is laid up you are clear? A.—As soon as she arrives, and the decks are clear, they call you aft, and give you your money; they only sign from one port to another, but if you are going the Lake Superior way you have to sign to come back.

By Mr. WALSH:—

Q.—How is the men's food? A.—As a general thing, we never complain much of the food, though sometimes I believe they leave port short of grub.

Q.—You consider that what the other witness stated with regard to bedding and the bad ventilation in the fore-castle is true; you endorse all he said? A.—Yes; I do, and I would suggest another thing. Years ago, when I came on the lakes first, though the vessels were smaller their fore-castles were larger than they are on the larger vessels now, and they were kept cleaner.

By the CHAIRMAN:—

Q.—Instead of growing larger they are growing smaller? A.—The vessels are growing larger; they can carry more cargo but they are getting smaller for our places. I used to sail a good deal from the State of Maine and in the winters I used to go down to New Orleans or to England or Havre and back; I have been in ten or eleven of these large ships in Maine, and their fore-castles are certified to be so many feet for so many men.

Q.—Did these boats carry passengers? A.—No; though I have been on some of the old class of ships which used to carry passengers.

By Mr. WALSH:—

Q.—Do you find that otherwise than knocking a great deal of work out of you and sailing with bad gear, are the officers generally kind to the men? A.—As a general thing we have no complaint on that score, and of course if you find that the officers are disagreeable the trips are short and you can jump him.

By Mr. HEAKES:—

Q.—What benefit is a shifting board on a cargo of grain? A.—On one occasion, seven or eight years ago, I left as mate on a certain schooner from Kingston, bound for Chicago with a load of salt for Chicago, where we were to take in a cargo of barley. The owner was a man who wanted to be cheap; we had no shifting board and I asked him for 500 feet of lumber to put one in, but he would not consent, and the result was that on the trip we shifted our cargo and it was only by good luck that we got into Milwaukee.

Q.—They don't take up much space? A.—Very little space.

Q.—Should they always be carried with grain cargoes? A.—Yes.

Q.—Whether a vessel is loaded full or not? A.—Yes; it is worse when they are not loaded full. There are many vessels which have a bad steering gear and ground tackle. For instance, I was up nearly five months trying to get a vessel off in Georgian Bay. She had no anchors and her chains and shackles never were out from the day the vessel was built, and it often happens that if a vessel has her shackles so that they will slip it may be the means of saving her. For instance, on one vessel I was on loaded from Chicago to Buffalo we saved the vessel by slipping our chain. Very often the windlass is never looked after from the day the vessel is built until she is old.

By Mr. WALSH :—

Q.—And when the shackles are not tried, you find when you want them in a hurry that you cannot avail yourself of them? A.—No; you cannot. There are many times when, if a vessel gets into a little difficulty and happens to slip her anchor you may save lives and property in that way.

Q.—But if your steering gear does not answer? A.—Then you are done up totally.

By Mr. HEAKES :—

Q.—That would all be covered by an inspection if it were properly carried out?  
A.—Yes.

EDWARD KEHOE, Seaman, Detroit, called and sworn.

By Mr. HEAKES :—

Q.—Will you please tell us about these barges on the lakes?

The CHAIRMAN—Do you intend to refer to the United States or to Canada, or to both?

The WITNESS—Yes; to both. There are a good many barges which are not capable of taking care of themselves on account of having only one mast and one sail. All vessels should have at least two masts and two sails, a foresail and a mainsail so as to be able to take care of themselves. These boats often go out in a tow, they break loose in gales, and the wind and the sea get so heavy that they cannot be picked up.

By Mr. WALSH :—

Q.—And if they do break away they cannot help themselves? A.—No; they cannot navigate.

By Mr. FREED :—

Q.—Are they sufficiently manned to handle sails if they had them? A.—No.

By Mr. HEAKES :—

Q.—Do you know of any case of a barge being lost from being undermanned or breaking away, as you say? A.—I have known a few; I have been on vessels and coming along in daylight we have picked up the crews of barges which had no canvas at all, and of course we took up the crews and let the barges go. I was on one vessel this fall; she was over-loaded with lumber, her gear was bad and finally it gave way. The mainsail went away and finally we got out on Lake Huron and were driven around for thirty-six hours in a gale. Finally, we drifted over to Goderich and let go our anchor and that was all that saved us.

Q.—Was that an American vessel? A.—Yes.

Q.—What sails would be absolutely necessary to handle a barge when dropped by a steamer? A.—A mainsail and foresail, with one jib or two jibs accordingly; she ought to have as much or more than a sailing vessel. If she is large enough to have a mizzen she should have one. You cannot handle her with a headsail unless she has a mainsail only when going before the wind, and if on a lee shore if you haven't enough canvas to work her off she would get on the beach and be apt to go to pieces. Many of these vessels run for ten or fifteen years and they never think of overhauling their eyes or rigging.

Q.—Are the spars frequently carried away from defective standing gear? A.—Yes.

Q.—How many seasons would an ordinary standing gear of wire rope last? A.—Well, if it is well parcelled up it should go ten years anyway.

Q.—You don't always get it well parcelled? A.—No. Then in regard to rigging there are a good many vessels have turnbuckles instead of deadeyes and lanyards, and there is no give to a turnbuckle. A good many get dismantled that way; they roll pretty heavy and away goes the mast, and in winter time the traction of the rigging will snap it.

By the CHAIRMAN :—

When is navigation over here on the lakes? A.—It is over now; it is considered closed about the 1st of December.

By Mr. WALSH :—

Q.—What is the regular season? A.—About from the 1st of April to the 1st of December.

By Mr. McLEAN :—

Q.—Do many boats run before the 1st of April or after the 1st of December?  
A.—They have left on the 28th of March, but they are not insured before the 1st of April.

By Mr. FREED :—

When does insurance end in the fall? A.—The regular season is to the 15th of November, but there is a special insurance to the 1st of December. There is another thing I would mention, though: sailing vessels which have no steam have women cooks, and that is the reason that a good many of them go ashore. The captains go below; they have a crowd of green hands and they don't know where they are; the captain goes below with the cook while the hands are on deck.

By the CHAIRMAN :—

Q.—You would do away with women cooks; you would not have them on board?  
A.—No; I wouldn't have them on board. Then it is generally the case that in heavy weather the cook cannot get around and the men have to go and get the grub for themselves. A good many of these vessels carry yawls, which are not fit for use; they are leaky and rotten and will hardly hold themselves together, so that when you put them in the water they fill up, and a good many of them don't carry thole-pins and oars enough, or they may carry broken oars. Many of these yawls are left on the upper deck until they are dry-rotted and no use; they are never touched for ten years.

Q.—Wouldn't the metallic yawls be better? A.—Yes.

Q.—Wouldn't they be as suitable for a schooner as for a steambot? A.—I don't see why they shouldn't. Then I think all schooners should carry two life-boats—one on deck and one on the davits. Sometimes when a vessel is out at sea the yawls get full of water and are carried away when the sea breaks over them. Then with regard to the pumps, they don't overhaul them in the spring as they should. I have been on board a vessel this fall; she had bad pumps; they were old and had not been overhauled for four or five years and we had quite a job to keep them free. A good many are the same way, and this is all because they try to run these vessels cheap; they hate to buy things. All vessels should carry at least two sets of pump valves, so that if one set gave out they would have others to put in their place. It is easy for a pump box leather to be carried away; they break off quite easily. Now, with regard to lake charts, a good many vessels don't carry them at all; the vessel I was in this fall didn't carry one and the captain got out on Lake Huron and didn't know where he was.

By Mr. WALSH :—

Q.—I was going to ask if they were, as a general rule, able to read the charts?  
A.—As a rule they do, but not all of them. There are lots of captains cannot read their own names, and I don't see how they could read or handle charts.

WINDSOR, Thursday, December 8th, 1887.

The Commission met at 2 o'clock p. m.

WILLIAM BENSON, Collector of Customs, Windsor, recalled.

By the CHAIRMAN :—

Q.—I understand that you wish to make a correction or an addition to your former evidence? A.—Yes; in speaking of the manufactures here I said that with one exception they were either branches of American houses or started by American capital. I find that there was one other recently established, a box factory, started by Mr. Stephens, of Chatham. Again, in speaking about the export of vegetables I forgot one rather important vegetable for which this neighborhood is rather famous, that is the article of radishes, of which there is a very large exportation from this place.

Q.—They require a peculiar soil, which you have got here? A.—Yes. I find on reference to the exports for May and June last that on that article alone they amounted to within a fraction of \$5,000, and I have seen as many as ten waggon loads going over on the ferry in the morning. There are two or three grades of them raised, and it is quite a sight to see them when they are in full crop. Many devote their whole time to that crop, and they make more off an acre of them than they do off the whole of the rest of their land.

By Mr. WALSH :—

Q.—Do many carry on market gardening here? A.—No; that is almost the only article they raise in that way.

By Mr. FREED :—

Q.—What soil is the best for radishes? A.—An alluvial soil, loamy on the top; sand will not do.

Q.—Sand makes the radishes knotty and woody? A.—Yes.

EDWARD H. FOSTER, Carpenter, Windsor, called and sworn.

By Mr. HEAKES :—

Q.—Have you been living here long? A.—Five years the last of next March.

Q.—What is the general condition of the carpentering trade in Windsor? A.—It has been very good lately. The wages, taken the year round, would be \$1.50 at the outside.

Q.—Are many men working in Windsor for that sum? A.—Take the year round we only work—that is outside work—seven months on an average. The men usually get \$1.75, some \$2.00 a day; they do not get above \$2.00.

Q.—What do you do the rest of the year? A.—We have got to do the best we can.

Q.—Do you work on the other side? A.—Some do. On the other side it is the same as here; there is nothing to do during some months. They have enough carpenters there to supply the demand, and there is other work to be done during the summer season. Men in Detroit have about the same wages as here.

Q.—What hours do you work in Windsor? A.—Nine hours.

Q.—Is that the general rule? A.—It was this summer.

Q.—Is it the same in Detroit? A.—Yes.

Q.—What is the rate of wages in Detroit? A.—The same as here.

Q.—One dollar and fifty cents or \$2.00 per day? A.—In Detroit some stair-builders will find work at \$2.25 a day.

Q.—What is the rate for average workmen? A.—The same as here. Detroit rules Windsor in regard to wages, because we have men working there, and the trade has to look after men and keep up prices.

- Q.—Is the trade organized in Windsor? A.—Yes.
- Q.—Have you any difficulty with men on the other side? A.—No; not good union men.
- Q.—You work together in that respect? A.—Yes.
- Q.—Has the condition of the carpentering trade improved since you have been here? A.—I do not think it has, except the shortening of hours has improved it this last year by taking men off the market.
- Q.—You think the men are better off now than they were five years ago? A.—Yes; they are.
- Q.—Then the trade has improved? A.—Yes; I say it has improved by shortening hours.
- Q.—Have you ever given the subject of industrial education any thought? A.—I think I have.
- Q.—Do you think apprentices who have the benefit of some industrial training would be better journeymen? A.—Certainly. That is the only thing that troubles us now. There is a difficulty in keeping out green hands who can just saw off a straight strip; we have a good many here who do not belong to the union. We have had men working who have been brought from farms and do not belong to the union.
- Q.—Are there many apprentices in your business? A.—We do not have any if we can help it; we do not want any for some time.
- Q.—Does your union object to apprentices? A.—No.
- Q.—What is the reason that you do not want apprentices? A.—We have lots of carpenters now in the market. If we had a law passed by Parliament by which boys, when they got out of their apprenticeship, received a certificate that they had served an apprenticeship we would be satisfied—that is a certificate saying that they had worked as long as they had been indentured for.
- Q.—Then you believe in the system of indenturing apprentices? A.—Yes.
- Q.—Does machinery come much into competition with you? A.—Yes; quite a bit.
- Q.—Has it had the effect of reducing wages? A.—Certainly.
- Q.—Does it reduce wages? A.—Yes; in all cases.
- Q.—Do you think machinery has been a benefit in the long run to the trade? A.—I do not see where it has; it has been a benefit in this way: we have to have more machinery to keep the shops going. Stop emigration and you would want no more machinery.
- Q.—Do you not think that the use of machinery has cheapened the production to such an extent that more work is now done than formerly? A.—Yes; more work is done.
- Q.—It has made more work? A.—No; I do not think it has made more work.
- Q.—Do the employers in Windsor pay the men partly in cash and partly in trade? A.—We will not take any store trade; not now. We want our money.
- Q.—How long is it since it has been done away? A.—Only about a year and a-half or two years; it has been done away because the men would not receive store trade.
- Q.—Then there is no truck system now? A.—No; the men will not have it.
- Q.—Have you given the question of arbitration in disputes between employers and their men any consideration? A.—I have not, to any extent.
- Q.—Do you think arbitration a fair means of settling disputes? A.—Yes; certainly.
- Q.—Would you be in favor of a law compelling arbitration? A.—Certainly; that is what we want.

By Mr. FREED:—

- Q.—What proportion of the carpenters in Windsor are not at work? A.—I think we have about one hundred and forty in our assembly.
- Q.—All carpenters? A.—We include about twenty machinists in it.

Q.—How many are engaged at the present time and how many are idle? A.—I could not say; a good many are out of employment, I think.

Q.—Are a good many finishing up buildings? A.—Yes; they generally close up about Christmas.

Q.—When do they begin in the spring? A.—We begin late in spring.

Q.—About the 1st of April? A.—Later than that, the last or the middle of April; most of the men get work about that time.

Q.—Between the holidays and the opening of the building operations in the spring, what work do carpenters get? A.—Not very much.

Q.—There is a great deal of inside work, is there not? A.—I do not know where it is to be got; there is no inside work here. I work myself in a shop, but we are laid off a couple of months in the winter. We will improve the trade here by carrying out the nine-hour system. I am out of work about three months, but there is a spurt in the trade all through the summer season.

Q.—In summer you are as busy as you can be? A.—Yes.

Q.—And you get a little work during the winter? A.—Only a little; the average of the men is something like ten months. The mill has to shut down a month or six weeks for repairs.

Q.—Do many carpenters own the houses in which they live? A.—Yes, quite a few own them. I used to own one myself.

Q.—About what rent would a carpenter expect to pay for a house in Windsor? A.—The rents are from \$8 to \$40 a month; the rents for cottages are from \$10 to \$12 a month.

Q.—Have you worked in Detroit? A.—No, never on the other side.

By Mr. HEAKES:—

Q.—Are proper facilities given to carpenters for scaffolding? A.—It is all included in the day's work.

Q.—Are you allowed to put up scaffolds in a safe manner always? A.—Sometimes the foreman does not like you to do so. You are told to put in a couple of nails, that they are enough, and that you had better save the nails.

Q.—Do you know of any accidents that have resulted from defective scaffolds? A.—Not in the last three years. Neither the foreman or anyone else can now stop the men from driving the nails they want for scaffolds.

Q.—Is there anything else in connection with the trade that you want to state to the Commission? A.—No.

By Mr. WALSH:—

Q.—Have any journeymen carpenters co-operated and taken work on their own account, independent of the bosses? A.—Not that I know of. There is one man who takes jobs around—jobbing and repairing. Most of the boss carpenters do repairing also; but the work done by that man I refer to does not amount to anything.

By Mr. McLEAN:—

Q.—What is the sanitary condition of your workshop? A.—It is very good; last summer it was not. In regard to machinery, there was a rip-saw that was not properly protected, and a child got near it one day and nearly got its head crushed. On the sand-papering machine there is no blower or anything to take the dust away. There should be a fan attached to draw off the dust, but at present the men have to inhale it all.

By Mr. HEAKES:—

Q.—Has the factory inspector been at your shop? A.—Not that I am aware of. After running that machine of which I spoke I am covered with dust all over my face, except two holes for my eyes and one hole through which I breathe. No doubt bellows should be attached to take away the dust from the man working it. A doctor once said to me that it was very hard on the lungs, and I know it is. I have been sick three or four days after running that machine, which is one that should not be used in its present condition.

THOMAS McNALLY, Woodwork Machine-hand, Windsor, called and sworn.

By Mr. HEAKES:—

Q.—You are a general woodworking machinist? A.—Yes, I claim to be a matching hand.

Q.—In the trade at Windsor are the machines run at a proper rate of speed? A.—According to my knowledge they are.

Q.—The gearing is arranged properly? A.—Yes.

Q.—Is the gearing, shafting and belting machinery properly protected? A.—I have a machine which is not very well protected.

By the CHAIRMAN:—

Q.—Has the inspector been at your place? A.—No; I have not heard tell of him in town.

By Mr. HEAKES:—

Q.—Are many men employed at woodworking machines in this town? A.—There are about eight or nine, that is general woodworking hands, in town.

Q.—What machines have you principally in the shop in which you work? A.—We do all kinds of factory work.

Q.—What machines have you? A.—Surfacer, planer, rip-saw, matching machine, hand-saw, scroll-saw, laster and shaper.

Q.—How are those machines, so far as protection is concerned? A.—We have a rip-saw and there is no loose pulley to shift the belt so as to stop the engine.

Q.—Is the belting always stopped when you shift the belting? A.—Yes.

Q.—Are accidents a frequent occurrence? A.—In working the rip-saw you may get the planks right in, and have to tell the man to shut down in order to get them out.

Q.—So an accident may occur? A.—No, there are no accidents; we are all very cautious.

Q.—Are you employed pretty much all the year round? A.—No; in the winter season we do not calculate to do much of anything.

Q.—About how many months in the year are you employed? A.—About seven or eight months; not that some years.

Q.—What wages are you paid? A.—One dollar and seventy-five cents per day.

Q.—Is the man who works eight months in the year capable of living the year on what he earns, in Windsor? A.—He has got to live pretty carefully, but he cannot save much out of it.

Q.—You have heard what the witnesses have said about house rent? A.—We get a house for \$6 a month, but it is pretty small—about two bed rooms, small at that, one kitchen, one front room and a sitting room.

Q.—What would a similar cottage rent for in Detroit? A.—It would depend on how far back it was.

Q.—About one mile from the centre of the city? A.—It would be a higher rent.

Q.—Can provisions be bought cheaper in Windsor or Detroit? A.—You can buy groceries and such like cheaper in Detroit.

Q.—How do prices generally compare in Windsor and Detroit? A.—There is not much difference; there might be in some lines, but not in general goods.

Q.—Do you know any employer in Windsor who pays partly in cash and partly in trade? A.—I do not.

Q.—Have you given the subject of arbitration in the settlement of disputes between capital and labor any thought? A.—Yes; I think that is the right way to get over any difficulty.

Q.—Are you speaking for yourself, or do you represent an assembly? A.—I am speaking for myself.

Q.—Would you favor a law that would make arbitration compulsory in all cases? A.—Yes.

By Mr. FREED :—

Q.—Are the shops closed for four months in the year in Windsor? A.—For about that time. We shut down about holiday time, and not much is done before April or May, even later some years.

By Mr. WALSH :—

Q.—Can you specify any articles of living that are dearer here than in Detroit? A.—Meat, for instance; also sugar.

Q.—What do you pay for sugar? A.—About one York shilling a pound; there are different grades.

Q.—What kind of sugar do you get for 12½ cents per pound? A.—Light colored sugar, granulated.

Q.—What is the price of tea? A.—About 50 cents a pound.

Q.—What are the prices in the United States? A.—Granulated sugar is seven cents or eight cents; I could not tell you the price of tea. Meat is cheaper.

Q.—What about bread and flour? A.—They are about the same.

By Mr. HEAKES :—

Q.—Do the working people go to Detroit to purchase meat? A.—I do not myself; I know a lot of them do so.

By Mr. FREED :—

Q.—How many pounds of granulated sugar do you get for \$1.00 in Windsor? A.—Ten pounds.

By Mr. WALSH :—

Q.—Do boys or others go near the machines to work them besides those practically acquainted with their working? A.—Yes.

Q.—Have any accidents occurred on that account? A.—No.

By Mr. HEAKES :—

Q.—Are boys set to work at the machines? A.—I have charge of two or three, and I have a boy there. I set the machine and start the boy running it. I have had about a dozen boys the last three or four months; the one I have now is about nineteen years old.

Q.—Boys are cheaper than machine hands? A.—Yes.

Q.—How much pay does a good boy receive? A.—About \$4.00 or \$4.50 a week.

Q.—And I suppose a man from \$9.00 to \$10.00 a week? A.—Yes.

GEORGE M. JENKINS, Carpenter, Windsor, called and sworn.

By Mr. HEAKES :—

Q.—Are you a machine or a bench hand? A.—I am a bench hand.

Q.—Are you employed inside or outside? A.—Outside.

Q.—How do you find work generally in this town? A.—During this summer it has been pretty good.

Q.—Better this year than before? A.—It has been the best summer I have had since I have been in the country.

Q.—How long have you been in Windsor? A.—Going on five years.

Q.—What average time does a man make in the year? A.—Some eight or nine months, some seven months.

Q.—None of you make full time? A.—No. There is not a man in Windsor with whom I am acquainted who makes full time.

Q.—Have you anything you want to suggest to the Commission? A.—I should like to see an arbitration law put in force.

Q.—You would prefer a law compelling arbitration to the present loose system? A.—Yes, I would like the Government to pass a law that eight hours constitute a legal

day's work in all Government works, and if a contractor should employ a man and no time be specified, eight hours should constitute a day's work.

Q.—Is that system in operation in any other place? A.—In Australia, I believe they only work eight hours.

Q.—You do not know if it is in operation in the United States. A.—No; I do not.

By Mr. WALSH:—

Q.—Do you know if it is in operation in New South Wales and Australia—that there is an understanding between employers and employés that they have to work eight hours? A.—Not always so.

Q.—Do you know it of your own knowledge? A.—I have heard it on good authority from men who have been there and come back again.

Q.—Have you any other information to give to the Commission? A.—I may say that the average earnings of carpenters in this city reach about \$1.00 a day all the year round—sometimes a little less.

Q.—How would you propose to remedy that state of things? A.—To reduce hours and cause a demand for labor.

Q.—Does not that remedy lie in your hands? A.—It does to a great extent, if we could only get the workmen to organize and stick by each other.

Q.—What are the hours of labor in Detroit? A.—Some work nine and others ten hours.

Q.—Do they work all day Saturday. A.—Yes.

Q.—I suppose you will be bound largely by Detroit in that matter? A.—No, we are not; we are not governed by Detroit at all. We were before we were organized; but since we have become organized in Windsor we are able to stand on our own feet.

Q.—How are you going to do in the case of the people of Lower Canada, who work ten or eleven hours a day, and are quite satisfied to do so? How could you prevent them from working those hours? What will you do if men from Lower Canada come here and are willing to work ten or eleven hours a day. Will you stop them? A.—We try to use legitimate means, for we do not desire to use force.

Q.—But if they are determined to work that number of hours, what are you going to do? A.—We will do the other thing: we will put our own power to work.

By Mr. FREED:—

Q.—Can the carpenters here get any occupation of any sort while the shops are idle? A.—Not in this city. We do not do anything.

By Mr. McLEAN:—

Q.—Where did you work before you came to Windsor? A.—At Torquay, in England.

Q.—Is the condition of the workingmen better in England than it is in this country? A.—In England the wages are not so high, and the rents also are not so high as here. The men are able to work a little longer in the year; the seasons are not so severe or so long.

Q.—Does the carpenter in England live any better than he does in this country? A.—It is just about the same thing. Articles are cheaper in England than here—clothes and groceries. One shilling in the old country will go nearly as far in the old country as one dollar will here.

By Mr. FREED:—

Q.—Then you would be glad to go back there? A.—No; I would not like to go back.

By Mr. HEAKES:—

Q.—Have you given the subject of industrial education any thought? A.—No.

Q.—Have you given the apprentice system any thought? A.—Yes.

Q.—Would you favor an indenture system as applied to apprentices? A.—Yes; I served seven years to the trade myself; I, however, think that seven years is too long for a man to be bound down.

Q.—Do you think better mechanics would be turned out if apprentices were bound to serve a term of years? A.—I am sure there would be. A green hand with an axe and a saw will employ himself as a carpenter and keep good mechanics out of employment. That is the evil in this country.

Q.—Is it the practice in Windsor to set an inferior man to work with a skilled man? A.—Yes.

Q.—Have they what they call a leading man, and they set anybody else under him? A.—Yes; that is the rule here, and in Detroit it is the same. They will employ one good man and three or four poor men to do the other part of the work, and the good man is to superintend and look after them.

By Mr. FREED :—

Q.—Would you have inferior workmen turned off work at the carpentering trade? A.—Yes; I would.

Q.—What would become of them? A.—There would be something else for them to do.

Q.—Would they be shutting out workmen from something else? A.—Certainly.

Q.—From what? A.—There are plenty of other things to do, laboring and working on the streets and in the factories, and one thing and another.

By Mr. FREED :—

Q.—Are those men whom you call unskilled men persons who have served an apprenticeship? A.—Those I have been acquainted with are.

Q.—Would it be proper that a man who had served his apprenticeship should not be allowed to work at his business? A.—Yes; it would be rather hard.

By Mr. WALSH :—

Q.—What particular work would such men not be able to do at the trade? A.—Finishing work in a building.

Q.—Have those men who have served a term of years done so in the old country or here? A.—In the old country.

Q.—And they are not able to do finishing work. Those men are not called good mechanics, surely, if they are not able to do that? A.—Hundreds and thousands cannot do it.

Q.—After having served their term at the trade? A.—Some of those cannot. I have known apprentices who have served seven years and could not put up a moulding, could not cut a mitre, and could not make a mitre box. Do you think such men are fit to go to work to make a scaffold that is not fit for a cat to stand on? Another thing I would like the Government to do, and it is this: to compel contractors for buildings to erect scaffolds that are strong enough for the men to walk on. The way this is done in this country is a great piece of folly; I have known many accidents to happen here through poor scaffolds that men have been obliged to go to work on, and after a little time they have broken down and accidents have occurred.

Q.—Have you, yourself, known accidents to occur through that cause? A.—Yes.

Q.—Was anyone hurt? A.—Yes; I know that one man fell a distance of twenty feet, and that was enough to break an arm, or a leg, or kill him.

Q.—What was the cause? A.—The contractors were in such a hurry that they would not give the man time to build a scaffold in a proper manner.

Q.—Do the workmen never remonstrate with them? A.—Yes; they do. There was an accident over in Detroit not so very long ago, when I was doing some work over there, on a large building.

Q.—Is that the general practice of bosses or foremen in this country, not to allow their men to make the scaffolding strong enough to bear them? A.—It is often done. I have noticed it many a time, and have spoken about it.

HENRY GNOSILL, Windsor, called and sworn.

By the CHAIRMAN:—

Q.—What is your occupation? A.—I am a brass-finisher in Barnum's Wire Works. I work in Windsor, and have been there two years next month.

By Mr. HEAKES:—

Q.—Have you many men employed in the wire works here? A.—About forty altogether, men and boys.

Q.—Is it the principal industry here? A.—Yes; and it is getting larger every year; since I have been here it is nearly as large again.

Q.—Do they give employment all the year round? A.—Yes.

Q.—What would be the average pay? A.—Different prices; there is no regular price. They pay a man according to what he is worth—blacksmiths, and finishers, and wire workers, and other men.

Q.—What is your part? A.—Brass and iron finishing and polishing.

Q.—What are the general wages of brass-finishers? A.—Two dollars is about the smallest; from that to \$2.25.

Q.—Are you employed all the year round? A.—When they get a man who is always what he ought to be he gets regular employment.

Q.—A good brass-finisher in the works would earn in the neighborhood of \$600 a year? A.—Two dollars and fifty cents a day.

Q.—Does it require much skill? A.—If he was not pretty smart he would not get \$2.50. It requires skill to be a brass-finisher.

Q.—I was speaking of the wire works particularly? A.—Well, it requires skill, too.

Q.—Do they employ many brass-finishers? A.—There are about five of us there now.

Q.—Do they employ many boys in these works? A.—Quite a few boys.

Q.—Of about what ages? A.—They take them on about 15 or 16, I suppose.

Q.—Do boys serve a regular apprenticeship to learn the business? A.—No; they do not serve an apprenticeship, but they have to learn. They have to stay two or three years, or that, before they let them learn. A boy has to show he is willing before they teach him.

Q.—And how long would he take to learn? A.—Two or three years.

Q.—So that he would have to stay at least five years to learn? A.—Yes; about five.

Q.—What amount would one of them earn in a week? A.—At first \$2.50 and \$3.00, and as they improve they raise them.

Q.—Do the boys do the work of men after being there a few months? A.—No, they do not.

Q.—They help the men? A.—Yes.

Q.—Do you use machinery to any extent? A.—Yes; quite a lot of it.

Q.—Is it well protected? A.—Yes; they look after the machinery pretty well, I am working on the most dangerous machine, I suppose, that is in polishing; it goes 3,000 revolutions a minute.

Q.—And there are not many accidents, then, from the machinery? A.—No. Sometimes they get a knock, but no one has got much hurt since I have been there.

Q.—Do the men design any of their own work, or are the designs furnished them? A.—They are furnished.

Q.—If there was technical education would it assist the wire-worker to learn his trade? A.—Yes; it would, because, of course, everything he gets is something different in wire work. He hardly ever gets two pieces alike.

Q.—If he had a knowledge of drawing and designing it would be a help to him? A.—Yes; it would, and he needs it, too. He cannot get along very well without it.

Q.—You think some kind of industrial education would benefit the boys who go

to the trade? A.—Yes; I think it would, that is what they need, but they do not take any notice of that.

Q.—Would it be a benefit if there was a regular apprentice system in the business? A.—I believe in apprentices.

Q.—Would it be a benefit to the boys? A.—Yes; it would, I think.

Q.—So that they could learn their trade better? A.—Yes; they would.

Q.—Have you anything you could suggest to the Commission which would better the condition of the workingmen? A.—Not that I know of. Working people within the last year and a-half have been improving as to wages since the Knights of Labor took it up. We have got on wonderfully better.

Q.—You believe in organization? A.—Yes; I do, to a certain extent, though I do not belong to any, but I thought a good many times that I would. I believe in it.

Q.—You think they have improved in condition? A.—Yes; indeed they have.

By Mr. McLEAN:—

Q.—Where did you work before coming here? A.—In Cincinnati, Ohio.

Q.—How do wages in Canada compare with those in the United States? A.—Well, wages are not quite so good here as there. I have worked in Toronto for a year, and I was born in England.

Q.—How do wages compare in Canada with those in Great Britain? A.—Well, they are not so good.

Q.—Is the workingman in your business better off here than in Great Britain or the United States? A.—Yes, a little better here, he makes a better use of his money, and, of course, that is his own matter.

Q.—How is it in the old county? A.—They do not get so good pay, but they can live cheaper, and rents are cheaper.

Q.—Have rents increased lately in this town? A.—Yes; wonderfully within these last two years.

Q.—How much have they increased? A.—They have increased one-third or over—well, they have increased one-third on the small tenement houses.

Q.—Workingmen's houses? A.—Yes.

Q.—Have wages increased that much? A.—Well, they have increased, but not one-third.

By Mr. HEAKES:—

Q.—How much can a brass-finisher earn in Cincinnati? A.—About \$3.00 a day.

Q.—Do they have constant employment? A.—That is according to what kind of man he is. A good man can always have constant employment; I always believe in that; I always did myself, and I find that good men are never out of work. I never was out of work myself.

Q.—What wages would a brass-finisher get in England? A.—Four shillings and six pence and five shillings a day.

Q.—Would he have steady employment there? A.—Yes; more steady than here. I worked thirteen years in one place, and I suppose if I had stayed in England I might have been in the same place to-day. I know lots of men who have been there for thirty years.

Q.—You think a man can live better in England on five shillings than he can on \$2.50 here? A.—No; I do not; a man can live better here because he gets more pay; and taking things all round, I suppose they are as cheap. Some things are cheaper there and some are cheaper here. Rents are cheaper there and I suppose groceries, but meat, I suppose, is dearer.

By Mr. McLEAN:—

Q.—Clothing is cheaper there? A.—Yes.

By Mr. FREED:—

Q.—Did you ever work in Detroit? A.—Yes.

Q.—Are you able to give us any idea of the comparative prices of food, &c., in Windsor and Detroit? A.—Yes; as good as any man in this town, because we have been selling food for ten years, and I have gone over and bought lots of it.

Q.—What articles are dearer in Windsor than in Detroit? A.—Sugar.

Q.—What do you pay here for sugar? A.—You can get granulated at 8, 8½ and 9 cents, and light brown for 7 cents.

Q.—What would granulated sugar be worth in Detroit? A.—If it is 9 cents here it is generally 1½ cents less over there. That is the general thing, because I have been in the business.

Q.—How is meat? A.—It is generally the same.

Q.—A little dearer in Windsor? A.—No; it is about the same, and if there is any difference it is a little cheaper there, about half a cent a pound.

Q.—What about vegetables? A.—When they come in season they are as cheap here as there, but over there they are shipped earlier from southern places, and most people buying early vegetables go to Detroit.

Q.—How about general groceries? A.—Almost all the canned goods are cheaper there.

Q.—How about butter? A.—It is as cheap here as there, and eggs are as cheap, if not cheaper. Milk is about the same price.

By the CHAIRMAN:—

Q.—Is not milk cheaper here in winter? A.—Well, I do not know much about milk. If it goes up to 6 cents here it is as high as it goes.

By Mr. FREED:—

Q.—How is bread? A.—It is about the same here as there.

Q.—And clothing? A.—Cheap clothing is a little cheaper there and good clothing is a little cheaper here. A great many come here to buy good clothing, and many go there to buy cheap clothing.

By Mr. McLEAN:—

Q.—Do I understand you to say that granulated sugar is 8 cents per pound retail? A.—Eight and a-half and 9 cents for granulated.

Q.—That is the retail price? A.—Yes; you can buy any amount for 9 cents.

By Mr. FREED:—

Q.—How many pounds do you get for the dollar?—A.—They do not make much out of it, because they claim they are selling at cost for the purpose of competing with those people across the river. Many people come over here from the other side to buy sugar.

By Mr. WALSH:—

Q.—Does immigration interfere with your business to any extent in this part?—A.—Not much.

Q.—Immigrants coming from any country? A.—Not much. There was a great deal about stopping the working classes from coming across the river to work; that was four or five months ago, but it all stopped. They were counting up the people, and they found one-half as many came from that side as went from this.

By Mr. McLEAN:—

Q.—Are there many mechanics live on this side who go to work in Detroit? A.—Yes; most of them are mechanics, carpenters, machinists, and so on, who do business backwards and forwards, and work.

By Mr. WALSH:—

Q.—What I mean by immigration is people coming from the old country? A.—Not many come to Windsor.

Q.—Do they interfere in any way with your business or trade? A.—No; I think not.

By the CHAIRMAN:—

Q.—You would not have liked if you had been shipped back to England the moment you landed in Canada? A.—Well, I am not particular where I go as long as I make a living.

Q.—You would not have approved of it? A.—No; I would not have approved.

Q.—You think you have a right to Canada as much as any Canadian born? A.—Yes; I think so.

Q.—You are a British subject? A.—Yes.

Q.—You think every British subject has a right to British territory? A.—Yes; I do.

THOMAS CROWLEY, Journeyman Shoemaker, Windsor, called and sworn.

By Mr. HEAKES:—

Q.—What is the condition of the shoe business in Windsor? A.—It is in a very poor condition, and has been for some time.

Q.—What has been the cause of that? A.—In a great measure, machinery. I am now speaking of custom shoemaking.

Q.—Does machinery interfere with custom work? A.—Materially.

Q.—What machines particularly do you speak of? A.—Well, there is the sewing machine, the riveting machine, and almost all kinds of machines.

Q.—All coming into competition with custom work? A.—Yes.

Q.—There is no hand-sewed work in Windsor now? A.—There is not the twentieth part of what there was ten years ago.

Q.—Hand-pegged work? A.—It is not so far behind, but I suppose it is fifty per cent. less than it was ten years ago.

A.—Are there many boots and shoes shipped in here from outside. A.—Of manufactured ones, yes—a number from factories in the east.

Q.—Can they be brought in here and sold cheaper than boots and shoes can be made in Windsor? A.—Decidedly, because they are made by machinery, and ours are made by hand.

Q.—Where are they principally brought from? A.—Toronto, Montreal and Quebec; in fact, everywhere where they are manufactured.

Q.—Have you any shoe factories in Windsor? A.—No; there are not any.

Q.—No slipper factories? A.—Nothing of the kind.

Q.—No factories in the shoe trade at all? A.—None at all.

Q.—How many shoemakers would there be employed as journeymen in Windsor? A.—I think there are about ten at present—that is counting all branches—sewed, pegged and repairing. In my memory there were over thirty.

Q.—What can a shoemaker earn in a week here, taking one week with another? A.—If I were to give the average of all branches of shoemakers it would not reach a dollar a day.

Q.—Take your own branch? A.—My own happens to be the best paid branch. I am a sewed shoemaker. If I were fully employed and able to work I could make about two dollars a day.

Q.—And as it is? A.—My average wages do not reach one dollar a day in the twelve months.

By Mr. HEAKES:—

Q.—You do not get very constant employment? A.—No, sir.

Q.—Are there many fine custom shoes made here? A.—I believe only what I make myself.

Q.—They are principally all brought in? A.—Yes.

Q.—If it were not for repairing there would be little to do? A.—Little to do, except heavy pegged boots for agricultural use.

By the CHAIRMAN :—

Q.—Do the farmers wear a different class from the mechanics? A.—Yes; they use heavy kip boots, but of course they use calf for Sundays, or some of them do.

Q.—What do these boots cost, factory made? A.—I am not acquainted with the factory prices.

By Mr. HEAKES :—

Q.—What would a long pair of hand-pegged boots cost in Windsor? A.—Calf boots, \$5.50 to \$6.00.

Q.—And kip? A.—Four dollars and fifty cents to \$5.00.

By the CHAIRMAN :—

Q.—You mean hand-made? A.—Yes.

By Mr. HEAKES :—

Q.—They did not cost so much as that fifteen years ago? A.—No.

By Mr. FREED :—

Q.—Are not hand-made boots really cheaper in the end than factory boots? A.—They are over 50 per cent. cheaper.

By Mr. HEAKES :—

Q.—Better stock in them? A.—Yes; and of course the workmanship is better.

By Mr. FREED :—

Q.—And of course they are more comfortable? A.—Yes, they fit the foot.

By Mr. HEAKES :—

Q.—Does prison labor come in competition with you? A.—Not in my own branch, but I believe it does in a great measure in other branches.

By the CHAIRMAN :—

Q.—What prison makes shoes for sale? Are you aware of any? A.—I understand they are made in Kingston, but it is only hearsay, and I cannot testify to the truth of it.

By Mr. HEAKES :—

Q.—Have you ever given the subject of arbitration any thought? A.—I have.

Q.—Will you give us the benefit of your ideas? A.—I think it is something which is absolutely necessary to create peace and harmony between employer and employed.

Q.—Would you favor a law compelling arbitration? A.—Most decidedly.

Q.—Do these disputes between capital and labor originate more with workmen than with employers? A.—I believe they originate with the workingmen, for this reason: in ninety-nine cases out of a hundred the man of capital crushes the man who has only his labor; a great number, not satisfied with just gains, wish to get what is not just. That is my experience in forty years.

Q.—Do you know any employer in your line who pays partly in cash and partly in store goods? A.—I do not.

By Mr. McLEAN :—

Q.—Do you work by the week or by the piece? A.—By the piece.

Q.—Do you think that piece-work has a bad effect upon your business? A.—I never knew it to be anything else than piece-work, but I believe if it were day's work it would benefit the workingman.

Q.—I suppose piece-work has been the rule in your business? A.—It has since I knew the business, and I believe long before.

By Mr. HEAKES :—

Q.—There are very few boys learning the trade now? A.—No, sir; no one is attempting to learn it.

Q.—I suppose in a short time shoemaking will die out? A.—Well, the present race of shoemakers will die out.

By Mr. McLEAN :—

Q.—Do you know if they make hand-sewed work in factories? A.—Yes; not in Windsor, but they do in Detroit. It is team work, where one man makes one portion and another man another.

Q.—They do not make the whole shoe? A.—No; perhaps it takes six or seven to make a shoe. I am speaking about the upper portion and not the bottoms.

By Mr. HEAKES :—

Q.—How many men does it take to make a shoe in the factory? A.—From six to seven.

By Mr. FREED :—

Q.—I suppose the condition of the shoemakers is due to the fact that there has been a revolution in the trade? A.—Yes; in a great measure.

Q.—Machinery has wholly revolutionized it? A.—Yes.

By the CHAIRMAN :—

Q.—And people generally use a cheaper article than formerly? A.—Yes; a less priced article.

By Mr. FREED :—

Q.—Whether it is a cheaper article is another question? A.—Yes; I doubt that.

By Mr. HEAKES :—

Q.—Have you any suggestion you could give us that we have not asked you for? A.—In respect to my own business, I scarcely have any, for the reason that I believe that, in common parlance, it is a played-out business.

Q.—Have you anything to say in relation to the labor question generally? A.—I believe that the present system of immigration is one of the greatest injuries that can be inflicted upon Canada. I am speaking of immigration as I understand it—aided and assisted by the funds from the Dominion and Provincial Governments, it is immaterial which.

By Mr. HEAKES :—

Q.—If those men came of their own accord, would you object to it? A.—Decidedly not.

By the CHAIRMAN :—

Q.—What class of immigration does the Federal or Provincial Government help? A.—I am only speaking a belief and not a positive knowledge at present, though I could have told some years back. Now I believe it is agricultural laborers, but under that head there are numbers of mechanics, and I know it from personal observation.

Q.—Do you think it would be a benefit to the farmers of Canada that there should be no agricultural laborers assisted? They are an important portion of the community. You think it does them no good that agricultural laborers should be encouraged by the Dominion? A.—I consider it an injury to the agricultural laborers at present in the country, because they are not fully employed now.

Q.—Not about Windsor? A.—I speak of Windsor.

By Mr. FREED :—

Q.—On what ground do you object to immigrants being encouraged to come to Canada? A.—On these grounds: there is sufficient labor, and there has been to my certain knowledge within the last seventeen years that I have resided in Canada.

Q.—Don't you think it desirable to get immigrants to take up the land that remains idle in Canada. A.—Well, sir, there is some reason in that, provided those immigrants were in a condition to take it up.

Q.—Is it within your knowledge that they are not? A.—Decidedly.

Q.—Have you seen the immigrants as they land? A.—I have seen them without a ten-cent piece in their pockets.

Q.—Where? A.—In Quebec.

Q.—How long ago? A.—Seventeen years ago.

By the CHAIRMAN :—

Q.—How many of these have you followed up? A.—It was not my business to follow them.

Q.—I am asking a plain question. Please answer, yes or no. A.—I have never followed any man.

Q.—Then you cannot tell how many of these ten-cent immigrants that you saw in Quebec seventeen years ago are well-to-do people now—some of them rich?

A.—There are some, I have no doubt, but they caused some others to be poor at the time they came by competing in the labor market.

Q.—At the same time you do not know how many became rich? A.—Of course, I have no personal knowledge.

By Mr. FREED :—

Q.—Do you know what proportion of the immigrants landing in Canada are mechanics and what proportion are agriculturists or common laborers? A.—I could not tell at the present time.

Q.—Did it ever occur to you that the number of immigrants who are not mechanics gives more employment to the mechanics than the mechanics who come with them can supply? A.—I cannot see how these men can give employment, when they have not means themselves.

Q.—Do you think that immigrants that come do not use clothing, boots and shoes, or that they do not live in houses? A.—As soon as they earn sufficient money to get it, they do.

Q.—At first, when they arrive, they do not wear clothing, or use boots and shoes or live in houses? A.—They do not come in a nude condition, I suppose.

Q.—And they eat food? A.—When they can get it.

By Mr. HEAKES :—

Q.—They do not all turn out employers of labor? A.—To my knowledge, few do, and I have always found that they compete with labor.

By Mr. WALSH :—

Q.—Do you think that Canada or America would be as prosperous as it is to-day if a law prevailed excluding those men who do not happen to be wealthy when they come to the country? A.—I do not mean being wealthy; I do not imply that.

Q.—I say, without being wealthy? A.—Provided he has a sufficiency to enable him to remain and keep him a short time independent, that he may not throw himself into the labor market and compete at lower prices than the existing prices which are paid.

Q.—That does not meet the question fairly, because perhaps two dollars would make all the difference in the world to that man and would keep him until he was earning more than would keep him independent. A.—That is so.

Q.—Do you think that this country, taken as a whole, would be as forward as it is to-day had immigration been stopped 25 years ago, say? A.—I think it would. I am speaking of assisted immigration; I do not think it ever was beneficial to any country.

By Mr. FREED :—

Q.—You were speaking of men coming here as agricultural laborers who were really mechanics. When did that take place? A.—In 1870, to my knowledge.

Q.—Do you know whether it takes place now or not? A.—No; I do not.

By Mr. WALSH :—

Q.—Don't you think that would have been a great hardship if it had been exercised towards yourself when you came here? A.—No; it would not; it would not be the first time I was on this continent.

Q.—There was a distinguished countryman of yours, who is a high authority on economy and matters of that kind, the late Thomas D'Arcy McGee, who said in his economic history, that every healthy adult landed in America is worth \$1,000 to the country if he had not a cent in his pocket? A.—I understand the point you allude to, and they may in a sense, but from my own personal knowledge I can only say that they make the rich richer and the poor poorer.

By the CHAIRMAN :—

Q.—Do you say that the poor of this country have become poorer? A.—I swear positively that I believe the competition—

Q.—I am asking you a simple question—yes or no? Do you say the people of this country are poorer now than they were 10 or 15, or 20 years ago? It is a simple question? A.—Taking the general class of all workingmen, I say yes.

SHERMAN R. MILLER, Seed Merchant, Detroit, called and sworn.

By Mr. FREED :—

Q.—I understand you are connected with the house of D. M. Ferry & Co. Detroit. A.—Yes.

Q.—You have a branch establishment in Windsor, I believe. A.—Yes.

Q.—How long has this branch been established? A.—It was established in 1879.

Q.—Why did you establish a branch here? A.—On account of the double duties we had to pay in order to do business here.

Q.—You do a considerable business in Canada? A.—Yes.

Q.—You found it unprofitable after the duties were imposed to conduct the Canadian business from Detroit? A.—Yes.

Q.—I suppose the seeds you import are brought from various countries? A.—Yes.

Q.—From what country, for the most part, do they come? A.—From England.

Q.—Do you import some seeds from the United States? A.—Yes.

Q.—What would they mostly be—clover? A.—No. There are certain classes of seeds we consider better American-grown than foreign-grown.

Q.—Where do you get your clover seed? A.—It depends upon the market; largely in Canada.

Q.—You get as good and cheap clover seed in Canada as in the United States? A.—Yes. It depends altogether on the crop. We do not buy any Canadian timothy. The lands in the western States are entirely free from foul weeds, and consequently we draw all our timothy from the west.

Q.—Do you do anything in flower seeds, bulbs and so on? A.—Yes.

Q.—Where do they come from? A.—The flower seeds and bulbs come almost entirely from Germany, and lately from France.

Q.—And the bulbs from Belgium and Holland, I suppose? A.—Bulbous roots from Holland more particularly.

Q.—If you continued to conduct the business from Detroit you would have to pay duty on those in the United States, and also the duty from the United States into Canada? A.—Yes.

Q.—So you established your Windsor branch in order that you might pay only one duty? A.—Yes.

Q.—I suppose the experiment proved a success? A.—Yes.

By Mr. ARMSTRONG :—

Q.—Is Windsor your only agency in Canada? A.—Yes.

Q.—Have your travelling agents out? A.—Yes.

By Mr. CARSON:—

Q.—How many hands are employed in the Windsor branch? A.—The number varies; in the busy season it will be in the neighborhood of fifty.

Q.—Male or female? A.—Female.

Q.—Do you employ many young girls? A.—No; very few.

By Mr. HEAKES:—

Q.—Yours is a light occupation, I believe? A.—Yes.

By the CHAIRMAN:—

Q.—Principally sorting? A.—Sorting, making bags, etc.

By Mr. HEAKES:—

Q.—And you find female labor more suitable than male? A.—Yes.

Q.—You pay the female labor more than male? A.—Yes; we have girls to whom we pay more than men.

By Mr. FREED:—

Q.—Do your hands go from Windsor to Detroit, or from Detroit to Windsor as need may require? A.—No; there is scarcely any American help employed on this side.

Q.—Most of the hands you employ in Windsor are permanently employed here, the same as your hands on the other side are permanently employed in Detroit? A.—Yes; we do not bring over help from the other side.

Q.—If there is a temporary slackness here do you find employment for the hands in Detroit? A.—We do not ourselves; they may go over. It is, however, the same for the hands on both sides, for when we are slack here they are slack in Detroit.

Q.—As manager of the business here you do not concern yourself with the Detroit business at all? A.—Not about the help; we neither take nor give.

CHATHAM, December 9th, 1887.

ROBERT G. FLEMING, Secretary-Treasurer Chatham Harvester Company, called and sworn.

By the CHAIRMAN:—

Q.—How long have you been in Chatham? A.—About 16 years.

By Mr. FREED:—

Q.—What class of agricultural implements do you make? A.—Self-binders, reapers and mowers.

Q.—In what part of Canada do you find a market? A.—Mostly in Ontario, but we do considerable in Quebec.

Q.—Do you send any to the North-West? A.—We have not since 1883, when we sent a car load.

Q.—Have you any competition from the United States? A.—None that we know of—very little, I think.

Q.—Have you had any in former years? A.—Not since we commenced that line of trade in 1883. We made reapers and mowers in 1880-81, but 1883 was the first year we turned out binders.

Q.—How do the prices of agricultural implements compare with the prices in the United States? A.—I think they are nearly the same, as far as I can find out.

Q.—You do not know of any material difference? A.—Very little. I have been over there considerably and I find the prices are the same for the same kind of article.

Q.—Can you speak of the quality of the implements made in the two countries? They are very similar; they go ahead and we follow up by getting the patterns and then making our own improvements necessary for our own country.

Q.—Is the material used in Canada as good as that used in the States? A.—I think so; some of our material comes from there.

Q.—What materials do you get from the United States? A.—The cutter bars and the cutting apparatus come from the United States through a firm in St. Catharines.

Q.—Is not the Canadian market large enough to have them made in Canada? A.—I do not know. We have never had the rolling apparatus to get them in proper shape.

Q.—What kind of steel is used in cutter bars? A.—I do not know the name, but it is considered a very good class.

Q.—A good, high grade of steel? A.—Yes.

Q.—Bessemer steel or steel of that class would not do? A.—I could not answer as for that, but we always order a good steel and we find it most satisfactory.

Q.—Steel similar to that which would be used in saws, for example? A.—No; not so good as that, excepting the cutting bars; the knives, of course, are a fine grade of steel.

Q.—Are many men employed in Chatham in this business? A.—Our average, I presume, would be probably 65 employed directly in the factory. Then we have four or five general agents outside on salary, and probably 30 or 40 on commission throughout the country in different parts.

Q.—Are there any other establishments in the same line in Chatham? A.—No; not the same.

Q.—About what wages are paid in this business in Chatham? A.—Well, for skilled mechanics, lathe hands, moulders and regular tradesmen, we pay probably \$1.50, \$1.75 or \$2 a day; it depends on the man a good deal.

Q.—Then you have some inferior labor—not highly skilled—haven't you? A.—Yes.

Q.—What do they get? Q.—It depends altogether on the men, but they get from \$1 to \$1.50 per day. We usually take a raw hand in and work him until we get him handy, and as he gets up his wages are raised according to his value.

Q.—Are you able to make a comparison of wages with any point in the United States—say, not a large city, but one about as large as Chatham? A.—No; nothing definite, but I think they usually pay higher than we do.

Q.—Do you think that the raw material, that is all material that comes to you for manufacture, is as cheap, or cheaper, or dearer in Canada than the United States? A.—I think the greater portion would be dearer, especially since this late change in the tariff.

Q.—What articles would be dearer? A.—I think common iron, ordinary steel, cotton duck and carriage bolts.

Q.—Do you think pig iron is dearer in Chatham than it would be in corresponding points in the United States? A.—No; I think it would be a little cheaper, because I think their pig iron is a little higher grade than ours and would cost more.

Q.—What kinds do you use? A.—We prefer a mixture of two kinds of Scotch iron.

Q.—Which brands of Scotch iron do you use? A.—No. 1 Gartsherry, or No. 3 Harrington and Hematite, about two proportions of the former to one of the latter, and we mix it with scrap.

Q.—The scrap you pick up in Canada? A.—Yes.

Q.—Do you use much bar iron? A.—Yes, considerable.

Q.—Where does it come from? A.—Mostly from England.

Q.—Is it Staffordshire or Welsh? A.—A good deal is from England, I think; we buy from the wholesale houses.

Q.—Do you buy Canadian rolled iron? A.—Some.

- Q.—Where from? A.—Hamilton.
- Q.—Is it good quality? A.—Not nearly so good as the English we think. We only buy it for a make-shift when we cannot get the other.
- Q.—For what reason is it inferior to the English? A.—It is not rolled nearly so correctly, and it is inclined to be seamy.
- Q.—In consequence of being made of scrap iron, I suppose? A.—I do not know the cause, but I do not think they have as good appliances for rolling. It is very crooked and not nearly so true to measure as the other, and we do not like it at all.
- Q.—About what rent would a good average mechanic pay in Chatham? A.—Well, of course it depends on the house. He could get a house with probably three rooms and three bedrooms for \$5 to \$7 a month.
- Q.—These are about such houses as the average mechanic rents? A.—Yes; I think so; I do not think it would exceed \$8.
- Q.—Can you give us much of an idea of the prices of ordinary articles for family consumption—provisions, groceries and so on, in Chatham? A.—Well, I don't know; I think there are others better posted. Our family is small and I do not do much of the buying.
- Q.—Has there been any considerable increase in the rents within the past few years in Chatham? A.—No; there has been a decrease. I know there is in outside houses, but I do not know how it is in stores. I think there is a decrease there.
- Rents have gone down the last eight or ten years.
- Q.—Apart from the business part of the town? A.—Yes; and I think even in that.
- Q.—The town has been growing in population, has it not? A.—Slowly. It has been growing in wealth considerably, and the class of buildings is better.
- Q.—Are you able to speak of the condition of the working people in Chatham, whether it is better or worse, or has remained stationary within your time? A.—Well, I could not say anything really definite; I think probably it is just about the same. Good men have always been able to get good wages and steady employment. It depends on the individual man.
- Q.—Have you any idea whether the working people save money or not? A.—I think the majority do not. There may be a few who do, but the majority do not.
- Q.—If they do not save money is it because they cannot get steady employment, or cannot earn large enough wages, or because they live up to their means? A.—I think because they live up to their means more than anything else.
- Q.—You think there is room for further economy, so that they could save money? A.—I think so.
- Q.—What is the principal fuel here? A.—Wood and coal.
- Q.—Is much coal used? A.—Yes; most houses, I think, use coal for heating purposes.
- Q.—What do you pay for anthracite coal? A.—Six dollars this year for what we call nut coal.
- Q.—What is good No. 1 hard wood worth? A.—About \$3.50 a cord. Soft wood is worth about \$2. We use that mostly for steaming.
- Q.—What do you include in soft wood? A.—Elm and soft ash and basswood—all kinds nearly.
- Q.—Any pine to speak of? A.—No; we have no pine here.
- Q.—Do you know if the workmen have trade organizations in Chatham? A.—I think so.
- Q.—What form do they take—trades unions or Knights of Labor? A.—Knights of Labor. I think there is no other. I think, however, there is a Moulder's Union.
- Q.—Have there been any labor strikes here lately? A.—There were last summer.
- Q.—What was the cause? A.—It was more particularly on account of the hours.
- Q.—They wanted shorter hours? A.—Yes.
- Q.—Did they succeed? A.—No; they did not.
- Q.—How long were they out of work? A.—There were only one or two factories that had trouble of that kind, and I think they were out of work two or three weeks.

By the CHAIRMAN :—

Q.—It was not general? A.—No; our men did not go out. We arranged matters with them without trouble.

By Mr. FREED :—

Q.—You talked the matter over with them? A.—Yes; they sent a committee down, and we told them what we could do, and there was no trouble. We acted as arbitrators and used our influence for the other people, and in opposition to the men there was the Business Men's Association formed, and they kind of worked together.

Q.—Is there a good understanding between employers and men? A.—We have no trouble with our men; I do not know how others get on, but I think they are all right.

Q.—What are the usual periods of payment in Chatham in the manufacturing industries? We pay weekly, on Friday night. We pay up to Thursday night, and then they have the money for marketing on Saturday.

Q.—That is the reason for making it pay-day? A.—Yes.

Q.—The Scott Act prevails in this county, I believe? A.—Yes.

Q.—Is it enforced? A.—I do not think so altogether; I imagine they are doing the best they can, but I know very little about it, as I am very seldom around those places.

Q.—Then you do not make Friday pay-day in order that it may have its effect in keeping the men out of saloons on Saturday night? A.—No; our idea was that our families would have the benefit of Saturday morning's market. However, I do not think we have a man about the place that drinks anything in the way of intoxicating liquors, as far as I know.

Q.—Are the working people of Chatham generally paid in cash? A.—I think so; I know of none paid any other way.

Q.—Do you know of any co-operation amongst the men, either in production or distribution? A.—No.

Q.—Have there been co-operative enterprises of any sort? A.—Nothing outside the joint stock companies.

Q.—I think you spoke to me of a biscuit or cracker manufactory? A.—That was co-operative, but it lasted a very short time.

Q.—Do you know what was the cause of failure? A.—Lack of capital.

By the CHAIRMAN :—

Q.—Do you know of any particular houses which have not increased in rent? A.—I have one of my own that I rent to a tenant. Six years ago I got \$6.50 to \$7 a month and now I get \$4, and the house has been kept in pretty nearly as good repair.

Q.—It is in good order? A.—Yes; just as good as then. There has been a decrease, but there are more houses than there used to be.

Q.—And a better style of houses? A.—Yes; more comfortable, I think.

By Mr. ARMSTRONG :—

Q.—You say that the labor trouble was for a reduction of hours of labor? A.—That was the principal trouble, I think.

Q.—From 10 to 9 hours? A.—It arose about quitting on Saturday night about 5 o'clock. We have always adopted the system of quitting at 5:30 on Saturday nights. The trouble did not arise in our factory at all, but in others. They wanted one hour, but they refused it.

Q.—Did any of the employes of the factory ask it as a body? A.—No; not as a body, but they did individually, and we told them we could not concede it, and it dropped at that.

Q.—The men then work 60 hours a week? A.—Fifty-nine and a-half hours.

Q.—You say the employers of labor have organized themselves into a body? A.—They did.

Q.—Is your firm a member? A.—I am individually.

Q.—Will you tell us the objects of it? A.—The object was to counteract any influence which might be combined in the other way.

Q.—Did the men attempt to settle the matter by arbitration? A.—They sent a deputation amongst themselves down to the manufacturers and the matter was talked over and arranged in that way. It was a kind of mutual understanding between the manufacturers and laborers.

Q.—That they would get the half hour? A.—That they would divide up and take the half hour, and in the meantime some factories gave the whole hour.

Q.—Was there a deputation sent from the District Assembly of the Knights of Labor to the manufacturers? A.—I think there was, but they did not call on us.

Q.—Did they call on the Manufacturers' Association? A.—No; it was not then formed, I think. It was formed afterwards.

Q.—A high-skilled mechanic in your branch of industry would receive about \$10.50 a week. A.—That would be a good ordinary mechanic. Our foremen get a good deal more, and then they are graded down. The foremen get \$3, others \$2.50, and from that down. An ordinary man working at moulding, or a lathe hand, or a vice hand, gets probably \$10.50 to \$11 a week.

Q.—Provided an ordinary mechanic receiving \$10.50 a week, with four of a family, paying \$7 a month for rent and living in an ordinary way, how much do you think he could save in a month out of his wages? A.—I do not know; I think it all depends on how the household is conducted. Views on economy on these questions differ a great deal.

By Mr. FREED:—

Q.—How many days in a year can mechanics in your establishment work? A.—Well, they will work between ten and eleven months. Some of them will be continuously with us, and then those men may go and do what they can outside. We usually shut down about six weeks.

By Mr. HEAKES:—

Q.—Do you work full time all the time you are working? A.—Yes.

By Mr. ARMSTRONG:—

Q.—Have you any overtime? A.—Often we have, and then we pay a time and a-quarter.

By the CHAIRMAN:—

Q.—When do you shut down? A.—About the middle of August.

Q.—At that time men are in demand? A.—Yes; they can get plenty of work if they want to. Then we keep probably twelve or so of our best men around us making changes in patterns, and things of that kind.

By Mr. HEAKES:—

Q.—Does this Employers' Association meet often? A.—No; it is almost defunct now.

By Mr. ARMSTRONG:—

Q.—It gets together when there is a labor trouble? A.—There has been only one. We met awhile ago and gave up the rooms; we held together just temporarily.

By Mr. McLEAN:—

Q.—Do you take all kinds of bosses into it? A.—Anybody who is an employer of labor.

Q.—No matter how small? A.—No; it does not matter. There are only probably about 12 to 15 altogether, and it usually winds up with an oyster supper, or something of that sort, and all go home.

By Mr. ARMSTRONG:—

Q.—Do you invite employés to these suppers? A.—We are very friendly with

the employés. There really is no object for the association now; it was just during that time that it was organized.

By the CHAIRMAN:—

Q.—There is too good feeling to require it? A.—There is no disturbance in any line that I know of.

By Mr. FREED:—

Q.—Do workmen in Chatham remain pretty constantly here, or they are going and coming? A.—They remain pretty constantly.

Q.—Do many of them own the houses in which they live? A.—I would think about one in four or five that we have.

Q.—You cannot speak of the others? A.—No; I do not come in contact much with them.

Q.—Of those working for you who do not own their houses, are many of them married men? A.—Yes; the majority I think.

Q.—The majority of those who do not own their houses are married men? A.—Yes; we have always adopted the principle in the town, that if we have a good man and he is a married man we like him to stay in the town, and we give him the preference.

By the CHAIRMAN:—

Q.—Are there any unmarried men that build houses? A.—Not that I know of—not laboring men or mechanics.

Q.—Do you know anything about the other towns about here? Is there a floating mechanic population—people who come and go if they think they can better themselves elsewhere? A.—I could not give you information about that. A good many of our own men have been with us 10, or 12, or 14 years.

By Mr. ARMSTRONG:—

Q.—Is there a public library in the town? A.—There is a Mechanics' Institute, to which mechanics can belong for \$1 a year; others pay \$2.

Q.—Is it appreciated much by the working classes? A.—I do not think it is as much as it should be.

Q.—Do you think if they had Saturday afternoons to themselves they would make a better use of it? A.—I do not think they would; that is my impression: I think extra time on their hands would not be used to their advantage.

Q.—A man working 59½ hours in a week, and supposed to go to bed about ten o'clock at night, will not have much time to devote to the pleasure of his family, or for excursions, or for going out to the green fields or parks in the evenings, except after night? A.—Well, he can have from 7 till nearly 9 in the summer.

By Mr. FREED:—

Q.—Why do you assume that if the workmen had more time they would not use it to their advantage? A.—The only reason I have is that if you take any holiday, if there is any drinking it goes on then. We have no men now who drink, but we used to have them, and they always came back used up the next day after a holiday—possibly because they had a holiday; I don't know.

Q.—Is it not because they had so little time that it is a novelty to them? A.—Well, I don't know; but I always put in every day a good long time and never felt the worse but the better for it.

Q.—As the hours of labor grow shorter do you find that dissipation among the working men increases? A.—Well, there has been no change here, so I could not speak as to that.

Q.—If it were true that the workingman does not know how to take advantage of the time he has, would it not be better to extend the hours of labor? A.—Well, I presume there is a limit in all things; I would not like to say what the right limit is.

Q.—Is it not true that a workingman may be tempted to drink sometimes

because he is overworked and overfatigued? A.—Well, I can only speak for ourselves, and I do not think we have a man of that kind.

Q.—Are not the men pretty tired at night? A.—We expect and exact a fair day's work, but I do not think we have anything unreasonable; it is mostly left to the foremen.

By the CHAIRMAN:—

Q.—How long have you been connected with workingmen? A.—About 16 years; we employ more than we used to.

Q.—Before that time, were you a workingman? A.—Yes; I was on a farm and I taught school.

Q.—How long did you work on the farm? A.—15 or 16 hours a day when necessary.

Q.—You were often tired at night? A.—Yes.

Q.—Did you ever work by moonlight? A.—Yes.

By Mr. HEAKES:—

Q.—There would be four months in the year you would do nothing but feed cattle? A.—No; we used to lumber, and it is hard work getting up at 4 o'clock in the morning to get the teams ready and go five or six miles to draw a load of saw-logs.

By Mr. ARMSTRONG:—

Q.—Do you think it absolutely necessary to have overtime? A.—Yes; it is a necessity sometimes. We get a press of work repairing, for instance; we cannot guard against it, as it comes in harvest time.

By the CHAIRMAN:—

Q.—You prefer not working overtime? A.—Certainly; it is more satisfactory not working overtime.

HUGH NEILSON, of Coltart & Neilson, Furniture Manufacturers, Chatham, called and sworn.

By Mr. FREED:—

Q.—Are you manufacturing on a large scale? A.—Not very.

Q.—Do you manufacture for the local market or the general market? A.—Well, we retail a little and we sell wholesale, but not a great deal.

Q.—How far do you send goods? A.—About as far east as London and as far west as Windsor.

Q.—Is there much of an industry of that nature carried on in Chatham? A.—No; not very much; we are the only ones that do much in that line.

Q.—What rates of wages do men receive in that business in Chatham? A.—Do you mean the average rate.

Q.—What would a good, fair skilled mechanic get? A.—About \$10 to \$12 a week, or else by piece-work.

Q.—Do those who work by the piece earn as much as those who work by the week? A.—Some of them do and some of them do not; that depends. Most of our present men are working by the day.

Q.—Do the men prefer working by the day or by the piece? A.—Most of them would like to work by the day best.

Q.—Have you had any trouble with your men of late—any strikes? A.—Not lately; we had just about a year ago this time.

Q.—What was the cause of that difference? A.—It was a question of short hours.

Q.—Was any concession made to them? A.—A little; not much. They wanted an hour on Saturdays and we gave them half an hour.

Q.—That was conceded? A.—Yes.

Q.—How long were they out? A.—Our men were out two or three weeks altogether. They struck two or three different times. It originated with the Knights of Labor.

Q.—And except for the half hour on Saturday the strike failed? A.—Yes.

Q.—Do your men stay with you pretty steadily, or are they roving? A.—Most of them stay with us steadily.

Q.—Do they get ahead in the world and buy houses for themselves? A.—Not many of them; they do not seem able to save a great deal, but a few of them do.

Q.—Have you any apprentices? A.—We have three.

Q.—Do they stay with you until they learn their trade? A.—Well, we have been nearly 15 years now in business and I do not think we have had more than two in all that time who stayed until the trade was learned.

Q.—They work a while and then go off elsewhere? A.—Yes; some of them get over a dollar a day somewhere, and they think that is big wages and they start off.

Q.—Can you get all the help you want? A.—Yes.

Q.—No difficulty in finding as many men as you require? A.—No.

Q.—Does much furniture come in from the United States? A.—There is none comes in, except occasionally some one from here goes down there, and sees something which takes his fancy, and does not mind the price.

Q.—How do the prices of furniture compare with those in the United States? A.—In lines which are manufactured extensively here, they are just as cheap here as on the other side.

Q.—Is there as good workmanship put into them? A.—Yes; just as good.

Q.—And as much taste? A.—People always think we have the best taste. They have large factories on the other side employing skilled men for designing, but in a small factory it does not pay to do that. The way we do, when we want a design, we buy something, and take a design of it; we do not keep a designer.

Q.—Do you employ much skilled labor? A.—No; very little.

Q.—Do you employ any men, who are partially skilled, at low wages? A.—A few on running machines; that is all.

Q.—If you employ only partially skilled men running machines, are not they liable to accident from ignorance of the machines? A.—Well, I don't know as they are. We don't find that they cut their hands any more than the skilled ones, and sometimes the skilled ones get careless.

Q.—Are your machines properly protected against accidents? A.—Yes.

Q.—Are the pulleys enclosed? A.—Not all of them.

By the CHAIRMAN:—

Q.—Did you have an inspector along to see your factory? A.—No, sir.

By Mr. FREED:—

Q.—Have you seen any factory inspector? A.—Not that I am aware of; if he was there, I did not know it.

Q.—Do you employ any very young boys? A.—We have got none under about fifteen or sixteen. There are a few working in the shop younger than that, perhaps, in the finishing room. We have one man who takes the contract to do the finishing, and we pay him by the piece, and he hires his own help. He has some boys, but I don't know any who are younger than fourteen. I do not include them as apprentices. They are apprentices to him, but they do not work directly for us.

Q.—Do you think the system of farming out the work is a good one? A.—Well, I think it is. We find it so in that one line. We know just exactly what it costs to finish a piece of goods.

By Mr. CARSON:—

Q.—Do you find that the furniture trade of this country is cut up, and that the margins are low for the employers of labor? A.—They are at present.

- Q.—Owing to the competition of trade in our own country? A.—Yes.
- Q.—And you find it is necessary to save yourself by employing cheaper labor when it can be utilized? A.—That is what we have to do to compete with others.
- Q.—Do you consider also, that a man, in order to make money out of the furniture trade, has to extend his business as well in that as in any other industry? A.—Yes; he has.
- Q.—Do you indenture your apprentice boys? A.—No; we never have done so.
- Q.—Do you object to doing so? A.—No.
- Q.—Supposing you should indenture a boy, don't you think that if a boy did not wish to remain he could make things so unpleasant for you that you would be glad to let him go? A.—That is the way we look at it. We have had boys who really did not seem as if they wanted to leave on their own account, but they made it so unpleasant that we had to let them go.

By Mr. ARMSTRONG :—

- Q.—How many hands have you got? A.—About thirty.
- Q.—What are the average weekly wages of the thirty men? A.—I do not think that they will average more than \$1.37½ a day.
- Q.—Is your firm capable of teaching a boy the trade thoroughly? A.—Yes.
- Q.—In all its branches? A.—In all its branches.
- Q.—Are the men in favor of the firm indenturing apprentices? A.—I never heard them express an opinion on that at all.
- Q.—You say that the labor trouble some time ago was an application on the part of the men for a shortening of the hours of labor? A.—Yes.
- Q.—Did the employers of Chatham form themselves into an association to counteract that movement on the part of the men? A.—Yes.
- Q.—They were successful in doing so? A.—Yes.
- Q.—Are there any married men earning \$1.37½? A.—Yes; as a rule they earn more than that.
- Q.—That would be the average? A.—I think that would be the average; it is not under that, any way.
- Q.—Don't you think it is very difficult for a man to save money and raise four or five of a family and pay house rent on those wages? A.—He cannot save much. I do not think I could, anyway.
- Q.—They work 59½ hours a week? Yes.
- Q.—Are the houses in which mechanics live in the outskirts of the town or in the centre? A.—They are pretty well towards the centre; they do not go very far to their work, any of them.

By Mr. McLEAN :—

- Q.—What is the sanitary condition of workingmen's houses? A.—I guess they are all pretty good, as far as I know.

By Mr. ARMSTRONG :—

- Q.—How is the sanitary condition of your factory? A.—It is good.
- Q.—It will pass inspection? A.—I don't know what the inspection would be.

By Mr. McLEAN :—

- Q.—Why would your men rather work by the day than by the piece? A.—I suppose they would not have to work so hard.
- Q.—To make \$1.37½ a day? A.—Of course a good many of these men earning low wages are working some of them on machinery. A few of them came to work for us and did not serve their time, and are not what we call expert workmen. We have not really good men working for less than \$1.50 to \$1.75 a day.

By the CHAIRMAN :—

- Q.—What proportion of married men have you? A.—I think two-thirds of them are married.

By Mr. ARMSTRONG :—

Q.—Have you had many accidents happen in the factory during the last year?  
A.—I don't remember many, excepting one man who was laid off three weeks; he cut his finger on a cross-cut saw.

By Mr. CARSON :—

Q.—Did not the saw have a guard on it? A.—No.

Q.—Do you make a practice of having your circular saws with guards on them?  
A.—No; there is no guard on any of them.

By Mr. FREED :—

Q.—If the boys who come to work for you had some technical education before they entered the shop it would be an advantage to them in learning the trade? A.—Yes; I think it would be a great advantage.

Q.—Is anything done in Chatham to give technical instruction to boys before they go to work? A.—Not that I know of; I don't think so.

By Mr. McLEAN :—

Q.—It would be a benefit to you as well if the boys were taught in that way before they went to work? A.—It would to us and it would to them.

DAVID WILSON, Farmer, Chatham, called and sworn.

By Mr. FREED :—

Q.—You live in the neighborhood of Chatham, I believe? A.—I do.

Q.—How long have you lived here? A.—Forty-eight years past.

By the CHAIRMAN :—

Q.—Did you open out your farm? A.—Yes; and I have worked it.

Q.—Were you then in the woods? A.—Yes; at that time it was all woods around here.

By Mr. FREED :—

Q.—Do you employ any labor? A.—I do.

Q.—What wages do you pay for ordinary farm hands? A.—At the present time \$15.00 and board.

Q.—Do you pay that all the year round, or only during the busy season? A.—I pay more than that during the busy time.

Q.—If you employ a man the year round you pay him \$15.00 a month and board? A.—I cannot hire a man for that, not a good, skilled laborer the year round.

Q.—If you employ a man all the year round, what wages do you pay him? A.—I would not get him much short of \$18.00 a month and board. He must then be a good one.

Q.—You do not need to employ hands so much as you used to do, I suppose?  
A.—As we enlarge a farm we are obliged to keep more hands than we used to do.

Q.—Do you have more machinery now than formerly? A.—Yes; but that increases our capacity to work more.

Q.—You get more land as you get more machinery? A.—Yes.

Q.—I suppose, as you make money out of the farm you buy more land? A.—Yes.

Q.—Then that shows a prosperous condition on the part of the farmers? A.—If the farmers would work as they could, we would have a very prosperous people.

By the CHAIRMAN :—

Q.—You are not afraid of work? A.—No; I never was ashamed to work. I was as poor as anybody once, but I am not now, thank God?

Q.—Where did you come from to this country? A.—From near Dublin, in Ireland.

Q.—Did you bring much money with you? A.—I had \$1,000 which my father left me. I came to this country in December, 1839.

By Mr. FREED:—

Q.—Are agricultural laborers scarce in this part of the country? A.—Good ones are.

By Mr. McLEAN:

Q.—What would you call a good one? A.—One who is willing to get up at five o'clock in the morning, attend to the team, and see to everything till eight o'clock at night.

By Mr. FREED:—

Q.—Those are pretty long hours, are they not? A.—Those are the hours I work myself; sometimes I work more. You will find me to-morrow morning at that hour among my cattle. I will be sixty-eight soon.

Q.—What products do you raise mostly in this county? A.—Taking an average, beans, cattle, clover seed and wheat.

Q.—Can you make money at even the present prices of wheat? A.—Yes; decidedly I can.

Q.—Did you ever calculate what it cost to raise cattle? A.—Yes.

Q.—For what price do you think you can raise them? A.—I think I can raise them for \$10 a year.

Q.—Would you sell them at three years old? A.—Yes; never younger.

Q.—About what would they weigh then? A.—Close on 1,400 pounds a piece for the market.

Q.—Do you not think they would cost you more than \$30 a piece? A.—No; not when you consider the benefit of the manure to the farm. That is the way I put it. There is an income in that way.

Q.—Have you seen any letters or statements recently published to the effect that cattle cannot be sold on the hoof for less than five cents per pound, live weight? A.—I have not, but I do not believe anything of the kind.

Q.—You think you can raise them for less money? A.—I am confident I can. I have one hundred and twelve head of cattle on my farm now.

Q.—Do you raise large quantities of beans? A.—We raise beans; I have nearly two hundred acres on my farm, and I have two other farms besides.

Q.—Do you raise much corn? A.—We do.

Q.—As fodder for cattle? A.—Yes.

Q.—Do you raise fodder corn? A.—Sometimes fodder corn, but as a rule we feed the cattle with corn in the ear. I have fed cattle on ground meal also.

By the CHAIRMAN:—

Q.—Do you feed corn in the ear to pigs? A.—You will take a number of cattle, and I will take a number. You feed them on ground meal and tie them up, and do what you can for them. I will take the same number and feed them with corn in the ear, and I will warrant I will bring mine to maturity quicker than you will yours, because the corn in the ear keeps continually forming saliva in their mouths, and this assists their digestion. I have seen cattle fed on meal take so much in one day that they were off their feed for three days afterwards. I have come to the conclusion that feeding cattle with corn in the ear is the way to do it.

Q.—Do you do anything in dairying? A.—Very little; we do not like to work our women too hard.

Q.—You think the chief work should fall on the men? A.—Most decidedly.

By the CHAIRMAN:—

Q.—Do you not think the majority of people think the other way? A.—I do not know; I am an Irishman. The Commissioners must remember that they are in a county that differs widely from any other part. They are in a county that possesses

the most productive soil on the earth ; I have heard that admitted by men who have travelled a great deal ; but the Commission are also in a flat country that perhaps eastern men would dislike, but if they once settled here and obtained the crops we raise they would not leave. It is the crops we raise here that attracts us.

Q.—How many farmers about here have made their own fortunes ? A.—A good many of them have, and sometimes the second generation spends them ; that is unfortunately the situation of our country.

By Mr. HEAKES :—

Q.—Is there a tendency on the part of young people raised on farms to drift into cities ? A.—There was a good deal more than there is now ; they are taking more interest now in their fathers' farms. There is a good feeling in that way spreading abroad. I have three sons ; we live within a stone's throw of them, and I have never heard one express a wish to go away.

Q.—Are the farmers in this county generally prosperous ? A.—As a rule they were, until the family grew up and became extravagant.

By the CHAIRMAN :—

Q.—I suppose they do not like to work like their fathers ? A.—Yes ; that is it

By Mr. ARMSTRONG :—

Q.—Do many farmer's sons take advantage of the Agricultural College ? A.—We do not look upon it as of any great value to us.

Q.—Why ? A.—As regards my family, I would be very sorry to send a son of mine there.

Q.—Do you think they do not get proper training there ? A.—I have seen them there with kid gloves on in hot weather. I thought that was not like the occupation of a farmer ; I like to see mud on their hands.

By Mr. FREED :—

Q.—You think a farmer does better plowing not wearing kid gloves ? A.—Yes.

Q.—Do you think the farmers of Kent require Commercial Union with the United States to make them prosperous ? A.—You would need to show me Commercial Union in a different light from the way I see it to convince me. Looking at it in the way I do, I consider it madness to get up and talk about it.

Q.—Have you ever calculated what it cost to raise a bushel of wheat, taking one year with another ? A.—No ; I never went minutely into it. I will give you an idea of what two acres produced within the last two seasons. It was manured and plowed for beans, fourteen acres.

Q.—What did that cost you ? A.—The manuring and tilling would cost us from \$80 to \$100. We will put in that same manure, and everything else connected with it for a crop of beans. The beans brought me \$360. We will put the two seasons together, for the land is now in clover seed. We take off these beans the cost of the bean straw. The straw paid for the harvest, for it is fully better than hay for cattle. Then we plowed with three horses on a three-forked plow. We did the plowing in three days, and put in about twenty bushels of seed wheat. We harvested that field with one of the Chatham company's champion machines, and we threshed thirty-four bushels of wheat to the acre. If you put the two crops together and make a conclusion, you will find there was a good result.

By the CHAIRMAN :—

Q.—Is it a light soil ? A.—It is a good strong clay loam.

Q.—Do you find it suitable for beans ? A.—Yes ; and for all other crops. We give it a plowing in the spring, and the crop is never a failure, even during a dry season, such as last. I could show you a field of forty-one acres that I had in, half in beans and half in corn. I fed the corn to the cattle and sold the beans at \$1.75 a bushel ; they were white beans. That crop gave me \$1,000. I have now twenty acres in wheat, and twenty acres ready for barley.

By Mr. FREED:—

Q.—I think you are a better farmer than Mr. Valency Fuller? A.—He has too much capital; he was born too rich.

Q.—Do you raise much hay? A.—Yes; I cut close upon one hundred acres of hay.

Q.—Where do you sell that mostly? A.—We do not sell it.

Q.—You turn it into beef? A.—Yes; I use it on the farm.

By the CHAIRMAN:—

Q.—I believe your farm is only one mile from town? A.—Only one mile; every child here knows me.

FRANCIS W. WILSON, Chatham, called and sworn.

By Mr. FREED:—

Q.—You are in the nursery business, I believe? A.—I run a general line of nursery business, and over three hundred acres of farm land.

Q.—Do you raise fruit, or only fruit trees? A.—I grow trees as a business, but I am going extensively into fruit.

Q.—What fruit flourish in this part of the country? A.—Any fruit that will grow in any part of Canada.

Q.—Peaches? A.—They do pretty well; we had a heavy crop this year. Small fruits of almost all kinds, all that will grow in Canada, do well here.

Q.—What kind of grapes do you grow? A.—Concord has been the leading variety; Niagara and Empire State are coming to the front.

Q.—Are they better grapes? A.—Yes; and they will sell for a better price. Empire State is a much better grape.

Q.—Do you grow the Catawbas here at all? A.—No; not much. The Catawba grape is grown on Pelee Island.

Q.—Is it too cold for it here? A.—It is not very safe here. It's a little late. The lake shore seems to suit it better. Peaches also do a little better on the lake shore than they do here. I have been growing large quantities of raspberries, which I have shipped to Montreal, where I have found a splendid market for them.

Q.—Where do you find the principal market for your fruits? A.—Of my crop of 4,686 barrels of apples I shipped about two-thirds to Chicago, about one-quarter to Montreal, and two car loads to Montana, one car load to Dakota and 200 barrels were sent by boat up the lakes. I have tried the Liverpool market, but I do not think it is as good a market now as the American.

Q.—There is too much danger, I suppose, of damaging the fruit on the passage? A.—There is no particular danger in that way, but there are so many dues and percentages, and so much stealing, that there is not much left for the grower. There is an agent's commission of 8 per cent.

Q.—Do you not lose many apples on the voyage? A.—No; I hardly lost any.

Q.—The shrinkage is altogether in the charges? A.—Yes. I think the loss is principally from the gouging of your commission men. I always sell my apples here free on board, and I will not take any order except for cash.

Q.—You have heard stories about apples getting damaged by the rolling of the barrels? A.—Yes; but we are too well experienced not to know how to pack them in order to prevent that.

Q.—Is apple growing a profitable industry? A.—It is the most profitable industry in Kent. It is undoubtedly much the most profitable.

Q.—How often do you calculate to lose a crop? A.—In my own experience, I have not lost a crop during the last twenty-three years; there has been a crop every year with me. My land is well adapted for fruits.

Q.—Do you give good shelter to your fruit trees? A.—Fruit trees will pay a

great deal better when they are protected with rows of evergreens. The land seems to do better and the trees are more natural, and the wind does not blow down the fruit.

Q.—Then you plant wind-breaks of evergreens? A.—I plant wind-breaks of Norway spruce, three feet apart which are a protection as well as an ornament. I claim that rows, three feet apart, do not take up more room on a farm than one row of twenty feet, and they grow very much more timber, and are better in every way.

Q.—Is the timber of any value? A.—It is now acknowledged in Scotland and other countries, to be one of the best. They grow till they are forty years old, and then they decrease on growth. I have on the north end of my farm four rows, six feet by four feet apart.

Q.—What fruit would you place next to the apples for profit? A.—Pears.

Q.—Where do you have your market for pears? A.—I have never shipped many pears; there are not many shipped from here. I intend trying it next year. I think Montreal would be our best market; the western market is not very good for pears.

Q.—Do pears stand shipment as well as apples? A.—No; not nearly as well. The winter varieties, however, would do well. You can hardly pick pears in time to get them on the market and sold before they perish.

Q.—You combine general agriculture with fruit raising? A.—Yes; I farm three hundred acres. I set out this year twenty-five acres of apple orchard. I had a special object in putting them in. I put the trees twenty-one by thirty feet apart, and I calculate after about twenty years to cut out every other one. I expect to get the best fruit from the trees about that time—eighteen or twenty years—and the trees will have room after that to grow.

Q.—Do you employ much help? A.—Yes; I employ a great deal of help most of the time. I have now in my employ about sixteen men, no boys. I have not employed any boys lately.

Q.—Do you take green hands or those familiar with the nursery business? A.—I have had a man this summer who is pretty well experienced, but as a general rule the experienced nurserymen—journeymen—we can get are a very poor class. They are all talk and do not do any work. They are pretty good to stand round, and tell you what they have done, but they do not work themselves. I find in my trade that good common sense is worth as much as a knowledge of the trade.

Q.—Then education does not unfit a man for the nursery business? A.—No; I have let good men go for lack of education.

Q.—Have you met any men who have passed through the Agricultural College at Guelph? A.—I have had conversations with such men. I think well of the college; and I differ with my uncle, the previous witness, in regard to that matter. I think the college is a good establishment. If I had boys old enough to go to it, the only reason I would not send them would be, because I have heard bad accounts of the conduct and character of young men going there—very bad accounts. So far as regards a man who has not his hands covered with mud not being a farmer, I do not think that is necessary.

Q.—What wages do you pay the men employed in your nursery? A.—I paid during the summer months, when I hired that way, about \$16.00 a month, and board and washing. I am paying at this time of the year \$12.00 for individual months, and I am paying one man \$200.00 and his board and washing. I have engaged that man for next year. I had him engaged this year at \$190.00, and board and washing; he is the best man I ever had as a laborer. Some of my men save as much as \$100.00.

Q.—Can you get all the help you want? A.—Yes. Last year I had much less trouble than formerly in getting help. We have had good men this summer, no boys. I think it is a good thing not to employ boys in such work as mine. When you want good work done you cannot get it done by boys.

Q.—Do you find men looking for work and unable to get it? A.—No. There is no need of that occurring; I employ any one who comes along who has any idea of

work. I engage them and they go to work, and if they are no good I dismiss them. I have now a lot of men chopping, and I give them 50 cents for soft and 75 cents for hard wood by the cord; they board themselves.

Q.—Do you think money is made off the land in Kent? A.—As I have said, I think apples are best; they do very well. Outside of that crop I think hay pays best.

Q.—Do you raise any stock? A.—Yes. I can, however, buy cattle at two years cheaper than I can raise them.

Q.—You buy cattle at two years and sell them at three? A.—Yes; I buy cattle at any age; I prefer them at about two years. I can make them fat more quickly. If I were to buy them all ready I would have too much opposition. I have shipped a good many car loads of cattle.

Q.—Have you ever calculated what it cost to put beef on the bones of these cattle you buy? A.—I never calculated it that way. I never had a good scales for weighing them, so as to be able to see how much they regularly gained. It costs me 25 cents per head a day for food, counting the manure equal in value to the work.

Q.—You consider that the manure is only equal to the work of caring for them? A.—Yes.

Q.—And you think they cost you 25 cents a day per head? A.—Yes; with the corn and hay we give them.

Q.—Do you keep them but one year? A.—No; that is the cost only for the winter.

Q.—What is the cost in the summer, when they are grazing? A.—Such cattle can be fed well for 5 cents a day on good grass, all they can eat.

Q.—Do you calculate to feed them half the year? A.—No; we do not feed them half the year. My cattle are running on grass now; I have a lot of cattle out. There is lots of grass in the field, and the cattle are getting better every day. We never feed over five months in the year.

Q.—What increase of price can you get after keeping an animal all year? A.—It varies very much. It depends more on the buying than anything else. If they are bought right, and the market keeps right, we generally make money. I always think it costs nearly \$1.00 a month in summer and \$2.00 a month in winter to keep cattle. I keep them well; it does not pay to keep them badly.

Q.—The cost, then, is \$18.00 a year? A.—About \$17.00. We calculate five months' winter here.

Q.—You calculate that the manure pays you for all the labor, and this amount of \$17.00 is the actual outlay? A.—It is the cost of feed at market prices. I calculate the feed at what it would sell for.

Q.—Then over and above what you expend, what increase of price would you get after keeping an animal a year? A.—That varies very much, according to whether they thrive. Our breed of stock in this country is poor, and if we were not very careful we do not make much. If we have been pretty careful and have a nice lot together, we sometimes make \$15.00 in three months, but I have sometimes kept animals a year and have not made anything. I could not tell you what the average we get is.

Q.—You principally depend on your fruit and the nursery? A.—Yes; I have seventy acres of wheat in, and it looks well.

Q.—Does it pay to raise wheat at the present prices? A.—It pays somewhat, but I can make more at other things. I think that if a farmer keeps his land protected by evergreens, and well manured, he can produce wheat at five York shillings a bushel. There is one point I would like to have the Commission note, and that is, that we, as farmers, have a very poor chance of knowing whether laboring men who offer themselves are any good or not. We can only judge of them after they have got into our employment. We cannot always depend on what a man says. I think there should be a law to compel every farmer to give a man who leaves his employment an honest recommendation, but not to say that he is worse or

better than he really is, but to give a thoroughly honest recommendation as to his merits, and the farmer should be very severely punished if this is not done. If such a law were passed and thoroughly enforced, then, when a laboring man comes to you he could show his papers from his last employer, and you could tell honestly what he is worth.

Q.—Do you think the Government could satisfactorily enforce such a law? A.—Yes. Several laws now in existence are just as awkward to enforce as this one would be. If employers knew that there was a severe penalty for failing to observe it, they would, for their own sake, carry it out. If I take a good man, I would sooner pay double the wages than lose him.

By Mr. ARMSTRONG:—

Q.—Could not farmers' granges carry out such a plan themselves? A.—I belong to the grange, but it is very difficult to run the grange here. They have about all died out. No; I do not think this law could be carried out as well by the granges as by the Government.

By Mr. FREED:—

Q.—Have you any other suggestion to offer to the Commission? A.—I would like to say that I think it would be a benefit to the country if the government were to allow some sort of bonus or make some definite enactment for setting out timber. I have figured it out myself, and I think to grow timber pays better than to grow almost any kind of crop. A person could plant black ash, white ash, walnut, and commence cutting black ash for poles after four or five years, and work from then till they were fifteen years old, and white ash and walnut would follow on.

By the CHAIRMAN:—

Q.—Walnut has pretty well disappeared from here, I believe? A.—Yes; but there is still a good deal left of it. There are sufficient woods still throughout the country to obtain a supply of seed. I set them out for my nursery purposes.

Q.—How far north will walnut grow? A.—It will grow up near Lake Simcoe.

By Mr. FREED:—

Y.—I think there was no walnut in the original forests there? A.—Not further north than London and Niagara Falls, I believe.

By Mr. HEAKES:—

Q.—Is it a rapidly growing tree? A.—Yes, the most rapid in the world; it is one of the most rapid I know of, and I grow a great many kinds.

By Mr. FREED:—

Q.—In how many years would a walnut tree, under ordinary circumstances, reach the diameter of one foot. A.—I do not remember to have noticed it. I think two feet in thirty years.

Q.—That is an extraordinary growth. A.—That would be under good surroundings. Our land here is naturally adapted for trees. The principal timber in the natural state of our forests here is walnut; it seems to be naturally walnut land. I have seen it grow six feet high in two years from the time of planting the nut. I can show trees that have run that high in that time.

Q.—In planting walnut with the idea of making timber, do you plant close together, so as to get straight trees? A.—Yes; and thin them out. Probably I sell them in my business after the first two years.

Q.—If they are isolated they branch out too much? A.—Yes; and do not make good straight logs. It is a comparatively clean timber, and is easy to run up straight. I may say that beans are a good paying crop with us.

Q.—You heard the testimony on that point given by your uncle, the previous witness? A.—Yes; I may say that his calculation is pretty far astray.

By the CHAIRMAN :—

Q.—How many bushels do you get to the acre? A.—More bushels than of wheat. I have grown forty bushels to the acre, but that is a very large crop.

By Mr. FREED :—

Q.—Is there not a great deal more labor in raising beans than wheat? A.—Yes; but we get more money for them, and we get the ground ready for wheat. The bean crop will leave the ground in good order and clear for wheat. If the land is cleared, all that is required is spring-harrowing, and everything is ready to drill in wheat.

Q.—Did you hear your uncle's answer, that bean straw is good fodder for cattle? A.—No.

Q.—You think that is rather exaggerated? A.—Yes.

Q.—Still it does make good fodder? A.—Yes; but it will physic cattle very badly. It has to be fed alternately with other food.

Q.—Are cattle fond of bean straw? A.—No; they will rather eat hay or corn fodder; but they will eat bean straw.

By Mr. McLEAN :—

Q.—You said you belonged to the grange? A.—Yes.

Q.—Is it a co-operative affair? A.—Yes.

Q.—Did you ever receive any benefit from the co-operative grange? A.—Yes.

Q.—What benefit did you receive? A.—At the time we had it in pretty good running order here, we got a great reduction on our machinery.

Q.—Any reduction on groceries? A.—I have bought groceries, but I got no benefit from them. It did not amount to anything. All those small lines should never have been taken up.

Q.—Did the grange organization have a tendency to reduce the price of groceries? A.—I think it reduced the price of everything the farmers bought.

By Mr. ARMSTRONG :—

Q.—Is not the organization continued in Toronto? A.—It is still in force in some of the back townships, but there is no grange lodge near the town. I cannot go to one without driving many miles. I went five miles regularly until the lodge broke up. I believe in farmers' unions. We need them as much or more than any other producers.

Q.—For the purpose of keeping up the prices of your produce? A.—To defend our own interests in every way—to get the legislation in Parliament we need. I do not think there are a sufficient number of farmers in Parliament to represent the farmers' interest. Who runs asks anything, and they generally get it, but the farmers do not send anybody to ask, and therefore we are left.

By Mr. McLEAN :—

Q.—Then you believe that farmers would represent you better than professional men? A.—Yes, they would know our feelings better. We do not want more than we have a right to obtain, but we do not like to see all other business interests represented by members of Parliament, and the farmers not properly represented. Some man from town comes along at election time, and we raise a "hurrah," think he is a good fellow, and vote for him. But his interests have preference to ours.

By Mr. GIBSON :—

Q.—Would not higher education remove the difficulty? A.—Yes; I think it would. In our country schools there are wrong studies taught altogether. They should teach in our common schools only those branches that are really necessary to a laboring man, and those subjects that every child ought to know and understand.

Q.—You believe in children gaining a thorough knowledge of everything taught? A.—Yes. For instance, I do not believe in teaching a child grammar, and compelling him to remember what a particular rule is, as I had to do, but to use

grammar in common talk. I think the Trustees' Society, lately established, will probably be a good thing in defending the interests of the pupils against so many branches of education being taught in the common schools, subjects for which there is no need.

Q.—You think too many subjects are taught? A.—If the Trustees' Union, at present being established, carries out its object—I do not know in detail what it is—we shall have a better common school educational system. If a person wants to give his child anything beyond the necessary branches of a common education he ought to pay for it. Our high schools should be charged at full rates, and our common School should be as free as the air we breathe. I do not care, even if we went so far as to furnish books free, and I believe in enforcing the attendance of children at the Common Schools. But, if parents intend their children to learn a profession, if they desire them to attend the high schools, and afterwards to pursue the study of law or a profession, they ought to pay for the instruction.

By Mr. ARMSTRONG:—

Q.—You believe in the State providing books for the children free? A.—I would not be opposed to it. I believe in making the common school system as free as possible. I believe, on the other hand, that higher education should be fully paid for.

By Mr. GIBSON:—

Q.—Education you think would promote a better knowledge of agriculture? A.—One of the troubles is that all humanity seems to be wanting a change, seems to be wanting something new. Whatever business a man is engaged in, he seems to be wanting to go into something else. We all think we have a harder life than any one else.

CHATHAM, December 10th, 1837.

JOSEPH E. SMITH, Painter, Chatham, called and sworn.

By Mr. ARMSTRONG:—

Q.—How long have you lived in Chatham? A.—About five years this last time; I lived here eighteen or twenty years ago; then I was away four or five years.

Q.—Are you a house painter or decorator? A.—A house painter.

Q.—What are the wages of a house painter in Chatham? They vary from \$1.50 up to as high as \$2 a day.

Q.—How many months in the year do you suppose you work on an average? A.—About eight months. There may be some exceptions to the rule, some who have inside work, but that is very scarce here.

Q.—If there is an open winter I suppose work goes on longer? A.—Yes; some what, but not very much.

Q.—Are many painters employed in Chatham? A.—There are a good many. I could not tell the number, because it is customary in the busy season to employ any one who can swing a brush. There are not so many who have been trained to the business.

Q.—Are there many apprentices at the business? A.—Not to my knowledge; I do not know as to that. I never apprenticed—not here.

Q.—Do you know if apprentices are indentured to the trade? A.—I do not.

Q.—Do journeymen prefer the indenture system with apprentices, that is, that a boy should be obliged to serve four or five years at the trade with the same employer and that the boss should teach him the trade. A.—I do not know of any boys employed that way. There may be some who go in to learn the trades; I do not know whether boys stay long enough to do so.

Q.—Are painters paid weekly, fortnightly, or monthly? A.—Weekly.

Q.—Do you prefer any special day as that on which to receive your pay? What day are you paid? A.—It is the general rule to pay on Saturday night.

Q.—Do the men prefer that day? A.—I do not know whether it is the men's choice or the bosses' choice.

Q.—Are the men paid in cash? A.—Yes; so far as I know.

Q.—How many hours constitute a week's work in your trade? A.—Ten hours a day, and six days.

Q.—Has there been any difficulty of late with the employers? A.—Not to my knowledge.

Q.—Did the men ever make any demand for shorter hours of labor since you have been here? A.—Not to my knowledge.

Q.—In case of labor troubles arising between employers and employed, would you prefer a system of arbitration; and if you would, what kind of arbitration would you prefer? A.—I would prefer arbitration; but I do not know whether I rightly understand you as to the kind of arbitration.

Q.—Would you prefer disinterested parties being asked by both sides to interfere and settle the dispute amicably without a strike: do you believe in such a system of settling trade troubles? A.—Yes; I do, if it is possible to do so.

Q.—Or would you think it better that the Government should form a standing board of arbitration to settle the difficulty? A.—I think if you could establish it as a rule that disputes should be settled by arbitration it would be better.

Q.—By the Government? A.—Yes.

Q.—Is there any profit-sharing with painters over and above their wages? A.—No; nothing more than what is agreed upon as wages.

Q.—Do you think it would have a good moral tendency on them to have Saturday afternoon holiday or shortened hours of labor? A.—That is a question. With a certain class it might be an advantage; with another class it might be a detriment. There is a certain class who so soon as they draw their wages would be off spending it in drink; another class would make the best use of the time they had. So that is an undecided question with me.

Q.—Do you not think that long hours and hard work have a tendency to cause men to drink more than they otherwise would? A.—Perhaps it might; I am not prepared to answer definitely that question. So far as my own experience goes, I know how it would be with myself.

Q.—In purchasing the necessaries of life, do men's wages go as far as they did five or ten years ago to the best of your knowledge? A.—I cannot see a great deal of difference with respect to the purchasing power of a dollar in eatables. Clothing is now cheaper than it was then.

Q.—Has house rent increased during the past five years? A.—Not to speak of.

Q.—Has there been any improvement in wages? A.—No.

Q.—Are the painters in Chatham organized? A.—No; not as a union.

Q.—Do you think that organized labor on the part of the working classes has a tendency to better their condition? A.—I could not answer that question, not having had any experience of organized labor; I never belonged to a union.

By Mr. FREED:—

Q.—Are the painters more or less constantly employed than they were in former years? A.—I could not answer as to that in this place, on account of there being more men employed than formerly. There used to be more men employed the year round than now, because, as I have stated, anybody can paint now-a-days, and contractors rush in then and get the work off their hands in as short a time as possible. If they employed mechanics the work would occupy a longer time and the men would be more constantly employed. Now they generally wind up before the frost comes on.

Q.—That is as regards house-painters? A.—Yes.

Q.—Do you know how it is with painters employed in the agricultural implement and waggon work? A.—They run about eight months in the year and then shut down. They do not run at all during the winter season.

Q.—Is there any other employment to be had when these mechanics are not

employed at their trade? A.—Some of them go to work on the streets, and some take up a hammer and saw and go to work as a carpenter, and others go to bucking wood. I am employed at the waggon works; I am not a permanent hand, but I work there when painting is slack, but I do not work in the painting department. The works run about eight months; that is the term they ran last year. Then they are idle, and the men get what work they can in the warehouses or elsewhere, for the painting business is shut down. It is the same with the harvesters; they run a little longer, commencing earlier in the spring, but they shut down a month or two in winter when there is nothing doing.

By Mr. HEAKES :—

Q.—What is the condition of workmen in Chatham generally; are they generally comfortable. A.—Some of them are pretty close run.

Q.—Do you think many save money out of their wages? A.—I do not think any of them do. The laboring classes do not; I do not save anything.

Q.—Do you think the mechanics have about all they can do to live? A.—Yes; that is unless they are contractors. What they may make out of the men may carry them through the winter. I know the laboring men are not able to save anything—at least I cannot. Whether I am the exception or not I cannot tell, but I cannot make enough through the summer to carry me through the winter. I could do so if I had steady employment. I had three months of steady work the first part of the season, but I have been on my own resources since, taking jobs and working by the day for others.

By Mr. FREED :—

Q.—Is much capital required to start in the painting business? A.—No; not a great deal.

Q.—Could a journeyman or several journeymen together take contracts for house painting on their own account, and do work instead of being employed by an employer? A.—Yes.

Q.—Do they do that at all? A.—There are three or four shops of that kind in this town.

Q.—In which journeymen co-operate to do the work? A.—Two journeymen go together as partners; they buy their material from the wholesale dealer and hire men; but there is no co-operative system more than a couple of journeymen joining together.

By Mr. WALSH :—

Q.—Is there much first-class painting, graining or decorating done here? A.—Yes.

Q.—Is there a large number of men capable of doing that work? A.—No.

Q.—They must be men, generally, who have served an apprenticeship to it? A.—Yes; men who have served their time. There are only, to my knowledge, three or four first-class decorators in the place.

Q.—All those decorators are grainers, too? A.—Yes.

Q.—Is there much work here in summer, or is there much finishing or painting inside of houses in the winter? A.—There might be two or three, perhaps, who have winter work, and they are heavy contractors who have it. The papering, painting and graining are generally done in the spring, during the cleaning time. The painters rush the work through and then there is a slack time until the busy time again comes round. Work has been unusually dull here this season, as no new buildings have gone up; most of the work has been renovating old buildings.

Q.—Is there anything you can recommend as a means of benefiting the trade, or are there any objections you can state to the present system? A.—I think if there was less of boys' labor it would be an advantage. The men take little boys and put them to the business, and of course they deprive men of a certain amount of work. An employer will take a couple of boys and put them in a man's place, giving them

three or four dollars a week; they will do a man's work, whereas there should be one man employed and perhaps one boy learning the trade. A firm should not be allowed more than one apprentice.

Q.—What ages are the boys? A.—Eleven, twelve, thirteen or fourteen.

Q.—As young as eleven or twelve? A.—Yes; but this is not in painting alone; it is the same in other businesses as well. The firm had two boys, one fifteen years, and I do not know the age of the other; but in a small firm like that one boy should do.

Q.—Do you think the apprentice system, when carried out thoroughly, tends to make better workmen and at the same time gives a better chance to the workingmen than the present system? A.—I think it would. Then an apprentice would commence at the bottom of the ladder and work to the top; now a boy goes ahead and picks up what he can, and never becomes a proficient hand.

JAMES W. BLAKE, Painter, Chatham, called and sworn.

By Mr. HEAKES:—

Q.—Are you an employer of labor? A.—No.

Q.—Are you a journeyman painter? A.—Yes.

Q.—You have heard what the last witness stated about the condition of trade; do you agree with him? A.—I do in regard to the apprentice system.

Q.—Do you in regard to the general condition of trade in Chatham? A.—Yes; I think I do.

Q.—What do you suppose to be the average earnings of a painter here? A.—The average earnings of a painter will be one dollar and a-half a day. That would be his average for four and a-half days in the week. He would run on that way for about seven months and then he would be thrown out; and if he could make twenty dollars or even fifteen dollars a month by cutting ice or working on the street, or anything else, he was doing first rate.

Q.—Then you cannot get employment at your trade all the year round? A.—No.

Q.—Very few painters I suppose, own their own houses? A.—Yes.

Q.—Do you know any painters in Chatham who own their own houses? A.—I could not say. A great many claim to own their houses, but whether they have a clear title to them I cannot say.

Q.—Do you know if they have accounts at the savings bank? A.—No.

Q.—You think they have not much to put in? A.—No.

Q.—What would it cost to rent a comfortable mechanic's house? A.—About four dollars a month.

Q.—A house with how many rooms? A.—The last house I rented contained a front room, dining-room, kitchen and two bed rooms upstairs, and a closet and pantry, woodshed, cistern and water. I paid four dollars a month rent.

Q.—Was that in the centre of the town? A.—No; it was towards Victoria Park.

Q.—How far from the centre of the town? A.—About ten minutes' walk. I was living in a row, not in a detached house.

Q.—Have you ever given the subject of industrial education any thought, such education as teaching boys the rudiments of their trade? A.—No; I have not.

Q.—Or giving them a skilled training in night schools after they have gone to a trade? A.—No.

Q.—Do you think it would benefit mechanics if there was such education open to them? A.—Yes; I do.

Q.—They would be able to perfect themselves in their business having been taught those branches? A.—Yes.

Q.—Have you ever given the question of the settlement of disputes by arbitration any thought? A.—Yes; I have.

Q.—Would you believe in a law providing compulsory<sup>o</sup> arbitration in all cases?  
A.—Yes; I would.

Q.—Have you ever had any labor disputes in Chatham? A.—Yes.

Q.—How have you settled them? A.—I was working for a merchant in the town. It was understood that the Knights of Labor would quit work on Saturday afternoon at five o'clock; the ringing of the market bell was to be the hour for leaving. So I went to my boss and said: The Knights of Labor propose to quit at five o'clock on Saturday night, and I would like to quit at that time; the carpenters and plasterers are also quitting at that time. He said: You can act at your own option. I said: I will quit then. I went to get my pay, and he said: You need not come back on Monday morning. I said: Why not? He said: If you think more of the Knights of Labor than for the man for whom you have been working, you had better look to the Knights of Labor for work. I said: all right. Next Monday morning at eleven o'clock he was up to the house after me to get me back to work. He got kind of scared at the Knights of Labor. To-day he is one of our ablest supporters in the Knights of Labor.

Q.—It did him good? A.—Yes.

Q.—Did you succeed here in establishing nine hours as a day's work on Saturday?  
A.—Yes; we have got it.

Q.—Is it generally adopted? A.—It is the custom. All connected with the building trade are supposed to quit at five o'clock on Saturday night. In factories and such shops the hands quit at half-past five.

Q.—Do you think the shortening the hours of labor is a benefit? A.—Yes; I do.

Q.—In what way? A.—In this way, that if the hours were shorter there would be more men employed to carry on the work. The best part of the year is in the spring, when paper-hanging, painting, decorating and cleaning up is all going on. If young men come along who have worked in a factory for two or three months and can use a brush, they are taken on, instead of employing mechanics to do the work. Such hands as I have mentioned are got for five dollars a week. They can put on the first and probably the second coat, but it requires the heads of the firm to finish up the work.

Q.—Do you know any other benefit accruing to workmen from shortening the hours of labor? A.—I do not know any.

By Mr. WALSH:—

Q.—Do workmen improve the time at their disposal in improving themselves?  
A.—A certain class will always do so, but another class, to my mind, will use their time in debauchery.

By Mr. HEAKES:—

Q.—In speaking of the average workmen, do you think if there were shorter hours they would use the time in dissipation? A.—No; I do not think they would; not the majority of them.

By Mr. WALSH:—

Q.—Do you think if schools for technical education were established here that the young men, who would naturally be most interested in them, would attend; do you think they would be glad for such an opportunity, from what you know of them? A.—Yes. I know we have a night school which gives the common education, and mechanics, young men and boys, attend it. I suppose there are about thirty-five attending that school. If they attend that school to get a common education, I think that anything affecting the interests of their trade would more particularly obtain their attention.

Q.—Do you consider it would be a great advantage to many young men to give them the opportunity of perfecting themselves in their trade? A.—Yes.

Q.—Do you think it would benefit the trade generally? A.—Yes; it would.

By Mr. FREED:—

Q.—Mechanics, as a rule, have their evenings to themselves now? A.—Yes.

Q.—Do they make pretty good use of that time? A.—I know that so far as I am concerned I try to put it to the best use possible.

Q.—Do you think it would be put to any worse use if that evening was lengthened by one hour? A.—I could not say.

Q.—Is there any reason to suppose it would be? A.—No; I do not think it would be.

By Mr. ARMSTRONG:—

Q.—Before the strike for nine hours took place in your shop, did you send a deputation from the men to the bosses to endeavor to settle the trouble before a strike was resorted to? A.—No. I went and told a certain number of young men who were Knights of Labor. They got round at different parts of the corner and began to talk about it. I suppose the boss overheard the conversation and thought that the boys would be kind of giving the block to him, and he thought the best thing was to take me on again. So I was out only half a day.

By Mr. FREED:—

Q.—You work ten hours now except on Saturday? A.—Yes. In our trade at this time of the year we do not get in more than eight hours a day. I may say that during the year I earned about five hundred dollars, according to my time book. I did some contracting, taking little jobs in the city on my own account. I thought I would do that if I could not get more than \$1.50 a day. Accordingly I started a little shop of my own and began contracting. I paid out for stock and trade \$1,400. My rent was \$50; wood and coal, \$25; I put my grocery bill at \$150; clothing \$50; furniture and such small things, \$40; doctor's bill, \$35; meat bill for the year, \$50; and vegetables \$25. On the whole year's work I went behind \$65 and worked all the time I could get any work to do.

By Mr. FREED:—

Q.—Your total receipts were only \$500? A.—Yes.

By Mr. WALSH:—

Q. How many have you in family? A.—Three—wife and two children.

RYNARD W. BRICKMAN, Carpenter, Chatham, called and sworn.

By Mr. HEAKES:—

Q.—What is the condition of the carpentering trade in Chatham? A.—I never worked a full year at the trade; I could not find anything to do.

Q.—What do you work at now? A.—I sometimes work on the railway, and here and there, and anywhere I can get a job.

Q.—Nothing very constant? A.—No.

Q.—Is it difficult to get constant employment here? A.—Yes.

Q.—How do you account for that? A.—I do not know how it is. There are some men who give you a job, and after you have been at it for a week or two they think you have done well enough, and they take on another man, so that a man gets only enough to live.

Q.—Do you think an ordinary workingman can live and pay all his expenses and be comfortable in Chatham? A.—Not on the wages he gets.

Q.—If a man were constantly employed in Chatham could he live comfortably? A.—I do not think it.

Q.—Is a man in Chatham always paid in cash? A.—I have been; I do not know how the rest have been.

Q.—You do not know of any store pay? A.—No.

Q.—You cannot tell us how many carpenters are engaged here? A.—I do not know.

Q.—What are their wages? A.—I could not tell that. But I know I was paid \$1.25 a day for three or four days when I worked.

Q.—I suppose there is not a great deal doing in that line now? A.—I do not know.

RALPH GOSSETT, Painter, Chatham, called and sworn.

By Mr. HEAKES:—

Q.—What branch of working do you work at? A.—I work at the carriage works at present.

Q.—Do they employ many men? A.—On an average, sixty-five?

Q.—Do they keep them going constantly? A.—They have this last twelve months, in this last season.

Q.—How many months in the year do they generally work? A.—This year we ran from the end of January to the end of September.

Q.—Is that considered a year's work? A.—It is a season's work.

Q.—Do they close down then? A.—Yes.

Q.—What do the hands then do? A.—They do the best they can; they shift for themselves.

Q.—Can a man employed at the carriage works during a season earn enough to keep him during the winter? A.—It would be pretty close.

Q.—How are they paid? A.—By day work.

Q.—About what wages does a reasonably good man earn during a season at painting? A.—My earnings were \$281.95 for the season. Out of that I had to pay back debts amounting to \$87, leaving \$194 with which to get through twelve months.

Q.—To keep you the whole season? A.—Yes.

Q.—They turn out a good deal of work there, I believe. A.—They turned out three hundred waggons this last season, besides extra work.

Q.—What is the reason the works are closed down? A.—I consider it is for want of storage.

Q.—Are they always closed down in the winter? A.—It has been the rule.

Q.—Can a man working a full season at full wages earn sufficient to keep himself out of debt? A.—I could.

Q.—Do you think many men in Chatham earn enough during the season to keep them the full year? A.—I think so. I may say that \$2.50 a day is the highest pay.

Q.—Can you tell us whether industrial education would be a benefit to the mechanic? A.—I think it would be.

Q.—In what way? A.—It would improve their minds, and make them able to lay out their money well when they got it.

Q.—I suppose it would turn out better workmen? A.—And better workmen, too.

Q.—In the settlement of disputes between capital and labor, how would you proceed? A.—By arbitration.

Q.—Would you favor a law making arbitration compulsory? A.—Yes; I would.

Q.—Is there much child labor employed in Chatham? A.—I do not know of any.

By Mr. WALSH:—

Q.—Are boys employed in your concern? A.—About three are.

Q.—How many grades of men are there at your business; they are not all, I suppose, first-class workmen? A.—On an average they are good workmen.

Q.—In carriage-making there are some men superior to others, I suppose? A.—In our paint shop they take on as brush hands anybody who comes along; but if they have men who can do their work they keep them in preference to strangers.

Q.—Is there any difference in the rate of wages paid? A.—No; they are paid alike, except strippers; they are paid extra.

Q.—How much do the stripers get? A.—Two dollars a day is their pay. Wood workers also get \$2.

Q.—Do you think, as a general rule, that the painting trade would be in favor of having an apprentice system? A.—An apprentice system is quite correct. I think it makes steady men.

Q.—Do you think it is better for the employer? A.—Yes; and for the workman, because boys will jump in under the present system and put men on one side.

By Mr. CARSON:—

Q.—Did you ever work at painting in the old country? A.—Yes.

Q.—How do the wages compare there and here in a town of this size? A.—A man would receive thirty-five shillings throughout the year, and would have nearly steady employment throughout the year.

Q.—His wages, then, would be better. Do you think the position of a painter is better in England than in this country? A.—Yes; a man in a painter's shop does not expect to be discharged at the end of the season, but to be kept on so long as he keeps himself correct. Besides, they do not work there in the same way. We have to rush and push to get the work out of our hands, but in England, when you are sent to do a day's work you are not asked to rush it. This makes work last longer.

Q.—Is the cost of living here higher than in the old country? A.—Meat is dearer there.

Q.—How is house rent? A.—About equal.

Q.—Is there ever any overwork time in Chatham? A.—I do not know of any; I only once got over-time.

Q.—It is absolutely necessary, on account of the demand for turning out work, that these rushes should take place? A.—It seems to be the system. You have got to fight against it.

Q.—Do you think if the work was done in an easier fashion it would be better for the trade? A.—It would better both for the trade and the men generally.

Q.—Do you think that could be done without any injury being inflicted on the employer? A.—I do not think it would injure him, because he could get his price, and at the same time meet the demand.

By Mr. HEAKES:—

Q.—Could you overcome the difficulty by shortening the hours of labor? A.—That would give more employment, and it would enable us to take on the surplus labor.

Q.—Have you ever made any effort to have the hours shortened? We tried to have the hours shortened. We signed a petition in favor of it, but we did not get it granted.

Q.—You did not succeed? A.—No.

Q.—Have you anything in connection with the labor question that you would like to state to the Commission? A.—I do not know that I have anything.

By Mr. WALSH:—

Q.—Do you consider the condition of the workingman of this country at the wages he receives as good as the condition of a workingman in the old country with thirty-five shilling a week? A.—I do.

Q.—Do you consider as a general rule, the status or character of the workingman is as good here as in England? A.—I do not doubt it is, and it might be better if the men had more time in which to do their work. They do not get sufficient time here.

Q.—There is more rush here than in England? A.—I am sure of it. They employ men by the day here, and when the work is done the men are out of a job.

Q.—Have you any piece work in your establishment? A.—Not in the workshop. We are paid day's work; but we have a certain amount to get out. It is as good as piece work at day's pay.

Q.—The firm understand what a man should do in a day? A.—There is no time to stand still.

Q.—Are you the only waggon shop here? A.—The only waggon shop of any size.

By Mr. HEAKES:—

Q.—If you do not do a certain amount of work in a day is your pay docked? A.—We would hear of it; we have a certain quantity to do every day.

Q.—A man is not fined if he fails to do it? A.—No. He would not stand a fine, because the firm have their remedy by being able to put him on one side.

Q.—I suppose if a man did not do what the company considered a full day's work he would stand a chance of losing his job? A.—Of course he would. He would have to get outside.

Q.—And a man, in order to do that amount of work, will sometimes do inferior work to get the quantity done? A.—When you get used to your work you can put it through quicker than an ordinary hand could do.

By Mr. WALSH:—

Q.—Yours is a large establishment? A.—We had seventy-three hands up to the end of August. Then they made a reduction.

Q.—Is it a healthy shop? A.—Yes.

Q.—Painting is not a healthy trade, I suppose? A.—Not healthy.

Q.—I have your good ventilation and water-closets, and so on? A.—Our water-closets are not as they should be. Our water is not as it should be; nor is the ventilation right. The paint shop is left closed up all night, and in the morning the atmosphere is fit to choke you.

By Mr. FREED:—

Q.—Were these facts reported to the factory inspector on his round? A.—I have not seen him. There is a steam pipe in the paint shop to keep it all right in cold weather, and when you enter the shop the atmosphere is enough to take away your breath.

Q.—Have you reported that fact to your employers, or have you found fault with it? A.—We have complained from one to another, but not to our employer. He knows it as well as we do.

Q.—Are your water-closets kept properly clean? A.—I have never seen them cleaned out yet.

WILLIAM PARTRIDGE, Laborer, Chatham, called and sworn.

By Mr. ARMSTRONG:—

Q.—You are a laborer, I understand? A.—Yes; now I am. I learned the trade of spring-maker.

Q.—Do you get steady employment? A.—Not all the time.

Q.—What are the wages you receive per day as a laborer? A.—Sometimes ten York shillings, sometimes twelve York shillings. But I do not get more than \$1.25 a day. I think a laboring man should have more than that.

Q.—Have you worked for the corporation, and for private contractors? A.—I have not worked for the corporation.

Q.—What is the nature of your work—digging out cellars? A.—Yes, digging out cellars, mixing mortar, and carrying hods—anything that comes handy.

Q.—Do you think the rate of wages paid laborers is sufficient to support a laboring man with a wife and family? A.—Twelve York shilling a day. I think, would be, has to pay his rent and provisions, and so on.

Q.—You cannot possibly save anything? A.—No; the way provisions are now; wood is pretty dear and things are high.

Q.—Have the wages of laborers increased during the last five year? A.—No; not much; you do not get more than twelve York shillings a day as a hodcarrier.

Q.—Then wages for the past five years have been at a standstill? A.—Yes.

Q.—Has the price of the necessaries of life increased? A.—They have in some cases.

Q.—In what articles? A.—Meat and flour. The way they have got flour and bread now is fearful. In London we can get it cheaper.

By Mr. FREED:—

Q.—What size are the loaves? A.—About two pounds.

By Mr. ARMSTRONG:—

Q.—Has the price of cordwood increased? A.—Yes.

Q.—Has the price of coal increased? A.—Yes; in some cases it has increased.

Q.—What do you pay a ton for coal in Chatham to-day? A.—I do not use coal, only cordwood.

Q.—Are there many laboring men in Chatham? A.—Yes; quite a few. Many good mechanics have to do laboring work, for they cannot get employment at their trade. I know when we slated the Catholic church there was a good mechanic helped with the slating.

Q.—Has this season been a prosperous one with you? A.—No; not very prosperous; I have seen better.

Q.—Can you give us any reason why this season has been dull? A.—They say it was on account of the Government we have, but I do not think that is the cause, for taking it all through it might be the same with another. There is a crisis over the whole universe now.

Q.—What do laborers do when there is not any of their regular work? A.—They do anything that turns up. Next week I am going to cut logs. I will be paid from 75 to 85 cents per thousand, and have to board myself.

By Mr. FREED:—

Q.—Do you generally buy bread or flour? A.—We buy both; sometimes we get two two-pound loaves for nine cents.

By Mr. WALSH:—

Q.—What did you formerly pay for these loaves? A.—The average price before was about four cents.

By Mr. FREED:—

Q.—Of course, there is no work at your old trade of spring-making? A.—No, I have not done anything at it for eighteen years. I was taken sick with typhoid fever, and gave it up. Afterwards I served an apprenticeship on the Grand Trunk at Hamilton. I afterwards went to work in London, where my father carried on business.

GEORGE S. HOPE, General Wood-worker, Chatham, called and sworn.

By Mr. ARMSTRONG:—

Q.—How long have you been working in Chatham at carriage wood-work? A.—I have been at Chatham for the last seven years; but I have only followed wood-working steadily for three years.

Q.—Are there many engaged in Chatham at your industry? A.—Yes.

Q.—What are the wages paid to a good hand? A.—They run from \$1.50 to \$2.00 a day; I rather think they would average about \$1.60. There are a few men, an odd man or so, who get \$2.00 a day, but more of them get \$1.50.

Q.—How many months in the year do your work, as a rule? A.—About nine months.

Q.—Then there are three months in which you are comparatively idle? A.—Yes.  
 Q.—Can you give any reason for that idleness? A.—I can give one reason: in the busy season the men who are doing business in that line put on an extra number of men and rush through the work, even working overtime in order to get through the rush. I think that is the cause of the slackness in the winter season—partially so, at all events.

Q.—There is a good deal of machinery used in your trade? A.—Yes.

Y.—Has it a tendency to do away with manual labor, and cause a certain number of men in your trade to be idle? A.—Yes; certainly it has.

Q.—Are there many apprentices at the trade? A.—Not that I know of; there is not a regular apprentice in this town in my trade.

Q.—Are there young boys working the machines? A.—Yes.

Q.—A good deal? A.—Yes; boys take the place of men.

Q.—When the men are employed, how long do they work for a week's work?  
 A.—Fifty-nine hours in the shop I am working in at the present time.

Q.—Are the men paid weekly, fortnightly or monthly? A.—Weekly, in the shop I work.

Q.—Are you paid in cash? A.—Yes.

Q.—On what day are you paid? A.—Saturday.

Q.—Do you prefer Saturday to any other day? A.—I would prefer Friday.

Q.—Why? A.—So as to have money to use on Saturday, which is the best market day in the week.

Q.—Are you aware of any truck system going on in Chatham with workmen?  
 A.—No; I am not.

Q.—Have you had any labor difficulties lately? A.—There was one about a year ago.

Q.—What was it about? A.—The workmen of the town, as a body, asked the employers to give them a reduction of one hour a week, and they objected. The consequence was that the workmen stood out for the hour and insisted on having it, and the employers said they would not give it. For that reason the employers locked us out, and we were locked out for one week.

Q.—I take it from your statement that the workmen sent a committee to represent the workmen of Chatham to the employers before they at last resorted to a strike? A.—Yes.

Q.—Their request was refused? A.—Yes. There was no strike, remember; it was a general lock-out. I suppose you would call it a boycott on one of the firms in town. The workmen refused to buy goods of that firm because they would not give the one hour a week. Their hands had been working sixty hours a week, and we asked them to give their hands one hour a week off. They refused to buy their goods the workmen refused to buy their goods. Then, because we refused to buy their goods the business men of the town joined in a body in what they called the Business Men's Association, for their own protection, and as one man they locked us out, and would not give us employment until we had lifted the boycott from that firm. We did not lift it, and the lock-out took place, and during that time a committee of the Business-men's Association and a committee of the workmen agreed on a settlement.

Q.—There was no organization of the employers before this demand for the decrease in the number of hours of labor took place? A.—Not that I know of, in this town.

Q.—This movement on their part was to counteract the effect of the workmen's demands in that respect? A.—Yes.

Q.—Do you think that association is in existence still? A.—I am satisfied it is.

Q.—That lock-out was not a complete success? A.—No; it was not a complete success.

Q.—In some cases did they arbitrate on the matter and settle the difficulties?  
 A.—Yes. The firm I worked for gave the hour without any hesitation whatever.

There was no trouble on their part; but they joined the Business-men's Association for all that, and assisted in helping the masters in keeping out their hands.

Q.—I presume, when the matter was settled many of the old hands went back to the old employers? A.—Most of them did. A few were left out.

Q.—Did the bosses when they went back re-engage and ask them to sign any iron-clad document, pledging themselves not to belong to any labor organization? A.—I could not say positively as to that. I do not know it for a fact.

Q.—Do you know if there was any iron-clad document? A.—I do not know any that was signed; I know one was got out.

By the CHAIRMAN :—

Q.—Were you asked to sign it? A.—No. I may say there is no better employer in Canada than mine to day.

By Mr. ARMSTRONG :—

Q.—Do you believe in arbitration in the settlement of disputes in labor difficulties? A.—I do.

Q.—You believe that is one of the strong planks in the platform of the Knights of Labor? A.—Yes; one of our strong planks.

Q.—Would it be better for difficulties to be settled by arbitrators selected by employers and employés, or would you like to see a Government board selected for that purpose? A.—I do not know whether I can answer that question positively.

For my own part, I consider that a plan by which both parties would agree on an arbitrator would be the best.

Q.—Provided there was some hitch, and both parties could not agree, would you like an arbitration to be made, appointed by the Government, to step in and settle the matter by law without respecting either party? A.—Yes; if it could be done in that way.

By Mr. WALSH :—

Q.—Would you favor compulsory arbitration? A.—Yes.

By Mr. ARMSTRONG :—

Q.—There is no Sunday labor in your business? A.—No.

Q.—There is a busy and rushing time in your trade? A.—Yes.

A.—No; I do not.

Q.—Do you think if the work were to go on more smoothly, so as to extend it over a long time during the year, it would be more beneficial to the employés, and not injurious to the employers? A.—I do.

Q.—Why is it otherwise? A.—The only reason I can give is in the words of my own employer. He said he would be investing his capital to buy stock to keep the men working during the winter season, with which to turn out products that he could not sell until the spring, and he would lose the interest on the money during that time—three or four months.

Q.—Do you not think the men would be more likely to save money if they had more steady work all the year round? A.—I do.

Q.—Do you think if the men had Saturday afternoon to themselves they would abuse that privilege, and not devote that time to their improvement, and to their families? A.—I think the majority of them would devote it to a useful purpose for their own good, while there might be a few who would probably be injured by it. I know, for my own part, that I would use it to good advantage.

Q.—Do you think the shortening of the hours of labor would have a tendency to improve the morality of the working classes. A.—I do.

Q.—You think that a man, when he is working ten hours a day, would be very much fatigued, and on returning home would be more likely to take a glass of intoxicating liquor, than if he worked a shorter number of hours and was not so much exhausted? A.—Yes; I believe that; I know it.

Q.—Do you think the formation of a Federal Bureau of Labor Statistics would be beneficial to the working class throughout the Dominion? A.—I do.

Q.—You have heard of the formation of one in Washington? A.—Yes.

Q.—From your own knowledge of that fact, do you think it would be beneficial if a Federal Bureau were established here? A.—I do.

Q.—Can you tell us anything as to the sanitary condition of the houses of the working classes in Chatham? A.—I do not think I have any reason to find fault, not to my own knowledge.

Q.—Is the purchasing power of a man's wages as great now as it was five, or more than five years ago? A.—No; it is not.

Q.—Can you tell us in what respect? A.—Wood and coal cost more now than they did five years ago.

Q.—Have rents during the past five years increased or decreased? A.—I think rents have staid about the same, nearly at an average.

Q.—Taking the wages of the working classes all round in this city, have they during the last five years increased or decreased or remained stationary? A.—They are pretty much at a standstill. There have been increases in some lines, and decreases in others.

Q.—Do you consider labor organizations are beneficial to working men? A.—I do.

By Mr. FREED :—

Q.—Do people in Chatham buy their vegetables, butter and eggs, from the farmers direct?—A. Perhaps not.

Q.—And Saturday is the best market day? A.—Yes.

Q.—Do the farmers come in early in the morning? A.—From ten to twelve o'clock is the best time.

Q.—So if a man is not paid till Saturday night he is placed at a great disadvantage? A.—Yes; in that regard.

Q.—You suffer to a considerable extent from the shutting down of the works during the winter season. Would the men be willing during the winter season only to take less wages, provided they got work? A.—Certainly they would be for a length of time rather than be idle. I have done so myself.

Q.—So if employers had to invest their money in material, and of course in labor, that reduced rate of wages would make it even for them? A.—I think it would.

Q.—Do you think the men would be willing to make such an arrangement? A.—I am fully convinced they would.

By the CHAIRMAN :—

Q.—You say that machinery takes away work from the workingmen; would you not have machinery used? A.—No.

Q.—What are you going to substitute for it? A.—I do not know what substitute you could have, unless you placed mechanics at the bench, as formerly.

Q.—Is there not much work that cannot be done without machinery? A.—Yes; a certain amount, with as good a profit to the employer as the work can be done by hand.

Q.—But by an expense being involved, that would make such work very unproductive? A.—Yes; some kinds of work.

By Mr. ARMSTRONG :—

Q.—You think that to shorten the hours of labor would be a good step, so that every workman might be employed? A.—Certainly, that would balance the evil better.

Q.—Take the articles principally made by machinery in your business: do they sell dearer or cheaper than when made by hand, or does machinery not cheapen production? A.—Not at all. The same article that was sold twenty or twenty-five years ago sells to-day for the same price, and yet it is got up to day at much less cost of production.

By Mr. FRED :—

Q.—Can you speak of that by experience? A.—For that length of time I cannot, but from what I know of actual experience during the last few years I can. I am satisfied that a fanning mill which sold twenty-five years ago for \$30, will sell to-day for the same price.

By Mr. WALSH :—

Q.—Is not the article better, and much improved? A.—It is improved to a certain extent, but the cost of the improvement is much less than the difference in the cost of production.

By Mr. FRED :—

Q.—Are you able to make any comparison between the wages received by a workman who made fanning mills thirty years ago, and the wages paid to such workman to-day? A.—Not for that length of time; but I have it from workmen beside me who have worked twelve or fourteen years in the same shop, that they made more money at that time than they do now; that they got better paid then for their labor than they do now.

Q.—You were making a comparison between what we will call the pre-machine day and the present. What I want to get at is a comparison of the wages then and now in that trade. You are not able to give the figures? A.—From what I hear from mechanics who work in the shop beside me, it seems that a man had better wages twelve or fourteen years ago than he has to-day.

Q.—What were the prices? A.—The same prices as now.

By Mr. WALSH :—

Q.—Are all the machines in your shop thoroughly protected? A.—They are reasonably well protected; I have no reason to find fault.

Q.—Are boys set to work at them without having been previously taught? A.—Yes; there is that trouble. There are green hands taken on and put at machines, whereby mechanics are sometimes put in great danger—such as putting a boy at a rip-saw, and probably he may cause the saw to come back on the man who is working it.

Q.—Have you any knowledge of accidents in your shop? A.—Slight accidents, but nothing fatal.

Q.—Has the factory inspector been around at your place? A.—Yes.

Q.—Did he notice those things you have mentioned? A.—He did not notice them; no one complained.

By the CHAIRMAN :—

Q.—Perhaps the men had not good reason to complain? A.—What I have reference to is, when a green hand is brought in—a boy, say—and is put behind a rip-saw, and he places both himself in danger and those working in the shop.

JOSEPH E. SMITH, recalled.

I want to say something with regard to the machine I work when I work in the blacksmith shop: it is a large shears punch. The big driving wheel has a cog-wheel and the cog-wheel works into that wheel. They are both exposed, and they work right into each other, about the height of a man. If a man happened to throw up his arm or his hand in passing he might be carried up into the machinery and be torn to pieces.

By Mr. WALSH :—

Q.—Have you to pass it frequently? A.—We are walking past it every few minutes. I have been cutting off a piece of bar iron, and the end has got caught in the cogs, and been brought right into the machine before I could get it out of the way. A man's clothing might be caught in a similar way. I have spoken about it and wanted it guarded. I put up a temporary protection myself. I merely put up a piece of wood, so as not to leave the cog-wheel exposed, but they have torn it down.

Q.—Was that protection in the way of anything? A.—No.

Q.—It was just for protection from that wheel? A.—Yes. Again, in the wood shop they have a rounder, heads which rotate, and they are full of knives. They used to have a guard rail, so that a man could not shove his hand right into the knives, but the man in charge has got so used to it that he thought he could work it without the guard. It was therefore removed, but last season a helper got his arm caught, and literally torn to pieces from the top of it down to the wrist. That guard has not been replaced. The man in charge thinks he is capable of running the machine without a guard. I merely speak of this because reference has been made to the Factory Act, and the inspector, if he has ever been around, has either not had this matter pointed out to him, or he has not noticed it, because the machine is still running in that way.

Q.—Does one man always work at that machine? A.—Yes; with a helper, and it was the helper that got hurt.

Q.—If the guard had been there the helper would not have been hurt? A.—Quite likely he would not, because the guard would have kept the man's hand out.

Q.—Would the guard prove an impediment to work? A.—No; because you could shift it and lift it up and down.

By Mr. FREED :—

Q.—Has the helper ever charge of that machine? A.—Sometimes one, and sometimes another.

Q.—Is the helper as much exposed as the man who works the machine. A.—Not quite so much. He will be further away from the machine, and has merely to hold the long timbers, and the man in charge works his hands right around the knives.

Q.—Do you know whether the factory inspector has been at your factory or not? A.—No. Neither that machine nor the one I am using is guarded.

EDWARD FITZTHOMAS, Chatham, called and sworn.

By Mr. ARMSTRONG :—

Q.—How long have you lived in Chatham? A.—About five years.

Q.—How long have you been working as a skilled laborer? A.—Just about that time. I started to work when I came.

Q.—Explain the nature of your work? A.—I am working at agricultural work. When I started there I was on as vice hand, and I have worked at that same work for five years, about seven months in each year.

Q.—How much do you earn per week? A.—I have been earning \$8 per week for the last two years.

Q.—That is an increase on what you were receiving? A.—Yes; I started at \$1 a day.

Q.—Are you a married man with a family? A.—Yes.

Q.—A tenant? A.—Yes.

Q.—How many hours per week do you work? A.—Fifty-nine and a-half.

Q.—You have half an hour on Saturdays? A.—Yes.

Q.—You do not consider that that is an extravagant amount to earn? A.—No.

Q.—Can you save any money from your wages? A.—No, sir.

Q.—How many men in that industry are employed in Chatham? A.—When they are running fully I should say between 60 and 70 hands.

Q.—What would the highest wages be? A.—Well, I think there are two or three men who get from \$2 to \$2.25 per day; those would be foremen, and one or two first-class workmen.

Q.—Are you employed the whole year round? A.—No.

Q.—How many months are you employed? A.—About seven months; between seven and eight months.

- Q.—During your idle time you pick up anything you can do? A.—Yes; I have to take any work I can get.
- Q.—Are the men belonging to your industry organized? A.—Well, they were, and they are to a certain extent now.
- Q.—You think it would have a tendency to raise their wages? A.—Yes.
- Q.—Do you think it would be a benefit if you were organized? A.—Yes.
- Q.—Do you think you are working too many hours in working 59½ hours per week? A.—Yes; I do.
- Q.—You think it would be a benefit to the working classes if they would work shorter hours, as far as their intellect is concerned, and their improvement? A.—Yes; I do.
- Q.—Has your branch of industry any labor troubles? A.—Yes; they had some here.
- Q.—Do you believe in arbitration in settling labor troubles? A.—Yes.
- Q.—Do you in compulsory arbitration, which might be instituted by the Government or by law? A.—Yes.
- Q.—Are you under the impression that labor organizations are beneficial to the working classes? A.—Yes.
- Q.—Are there any apprentices in your business? A.—Only about two, I think.
- Q.—Are they indentured. A.—No, sir.
- Q.—Do you believe in an indenture system. A.—Yes.
- Q.—Can you tell us the reason why? A.—Well, because we have apprentices there every year.
- Q.—Do you think a boy would learn his business more completely if he was indentured? A.—Yes.
- Q.—You are under the impression that the employer would be compelled to teach him his business? A.—Yes.
- Q.—Does anyone in your shop take contracts from the firm and then get men to do the work? A.—No; I do not think so—not that I know of.
- Q.—There is no sub-contract system existing? A.—Not that I know of.
- Q.—Have your employers any objection to their workmen belonging to labor organizations? A.—They have never said anything contrary to it.
- Q.—How are the men paid—weekly, fortnightly or monthly? A.—Weekly.
- Q.—On what day of the week? A.—On Friday nights now this season, Saturdays before.
- Q.—Do you prefer Friday nights? A.—Yes.—
- Q.—For what reason? A.—Well, it gives the women folks a chance to spend their money on Saturday morning.
- Q.—What would be the average rental for a house in a respectable locality for men in your business? A.—They run from \$5 to \$6 a month, and some higher.
- Q.—How many rooms would be in a house of that kind? A.—Well, generally about five rooms, and a woodshed and summer kitchen.
- Q.—Can you inform us of the sanitary condition of the workingmen's houses in Chatham? Are they good, fair or middling? A.—A great many of them are very bad.
- Q.—You know of no truck system as regards the payment of wages in Chatham? A.—No.
- Q.—Is there much machinery used in your shop? A.—Yes; quite a bit.
- Q.—Is it properly protected against accidents? A.—Yes; I think it is.
- Q.—Any overtime? A.—Well, they do work overtime sometimes.
- Q.—Do the men get extra for that? A.—Yes; they get work from 6.30 to 10 o'clock, and they get half a day.
- Q.—Would the men prefer that overtime should be done away with? A.—I think so.
- Q.—Do you think it could be done away with to the benefit of the men without injury to the employers? A.—Yes; I do.
- Q.—Is there any profit-sharing between employers and men? A.—No.

Q.—During your time in Chatham has the cost of living increased? A.—Well, I do not think it has; I think it has kept about the same since I came here.

Q.—Have wages increased? A.—Of course they have with me, but as a general thing I think they have decreased.

By the CHAIRMAN :—

Q.—You say you work about seven months in the year. What are those months? A.—We start about the 1st of November and we expect to go on to about June.

Q.—And when do you begin again? A.—Not until November again, and some times later on. The very old hands start before that time.

Q.—That is the general run—from November to June? A.—Yes, generally.

By Mr. FREED :—

Q.—Were you a skilled workman when you began work here? A.—No, sir.

Q.—A green hand entirely? A.—No; I had a trade of my own. I am a plater by trade, and I was useful in that way when I started. I was a great deal handier than a common laborer.

By Mr. HEAKES :—

Q.—Have the workingmen of Chatham any co-operation? A.—No; they have not.

EDWARD S. SPASHETT, Chatham, called and sworn.

By Mr. HEAKES :—

Q.—What is your business? A.—A bender of waggon and buggy material.

Q.—Are you engaged in the waggon works here? A.—Yes; I work at the waggon factory.

Q.—Do the waggon works run all the year? A.—No.

Q.—How long are they in operation each year? From what time to what time? A.—Well, some years eight months and some years nine months.

By the CHAIRMAN :—

Q.—From what time to what time? A.—They start about the middle of January and sometime they close down in September and sometimes in October.

By Mr. HEAKES :—

Q.—Working the whole season in the shop at full rates of pay, can a man in that business earn sufficient to keep him for the year? A.—Yes; if they would run the whole year around.

Q.—I mean just working for the season? A.—No; he would have to have something else to do.

Q.—Then for three months of the year you depend on some other occupation? A.—Yes.

Q.—Is it easy to obtain such work here? A.—Not very easy.

Q.—Is there good demand for labor in your slack time? A.—No; very little demand in our slack time. The three months we are out of work is a very dull time in Chatham.

Q.—As a rule, are the mechanics of Chatham comfortably settled and well off? A.—Just middling.

Q.—Do they manage to make ends meet? A.—Yes; I presume so.

Q.—What is the general condition of the workingmen here? A.—In what way? complain much.

Q.—As regards prosperity? Are they comfortable? A.—I guess they cannot.

Q.—Have there been any disputes between employers and men in your establishment? A.—Nothing to amount to much.

Q.—Any strikes? A.—No.

Q.—In the event of difficulty taking place between your employers and yourself, how would you prefer to have it settled; which do you think would be the easiest way of settling it? A.—When I say we had no strikes, I should have said that we had no strikes that would trouble them much. We had a little strike once, and we gave them to understand that if our demands were not met we would strike, and they were met right away. As a general thing, I rather think I would approve of arbitration.

Q.—You would prefer arbitration? A.—Yes; I do not believe in strikes.

Q.—Do you think that a law compelling the parties to a dispute to appoint arbitrators would be acceptable? A.—I think so.

Q.—It would be a fair means all round, in your estimation would it? A.—Yes; in my estimation.

Q.—Does it require a great deal of skill in your business? A.—Yes; quite a bit.

Q.—Do you take apprentices? A.—No; no apprentices.

Q.—Do you think if the men had an opportunity of improving their knowledge of the trade by a school of industry they would avail themselves of it? A.—Well, probably some might.

Q.—Do you think it would be a benefit to obtain a knowledge of drawing, designing machinery, &c.? A.—Yes; I think it would be a great benefit.

By Mr. GIBSON:—

Q.—Do you think that in your work the workman receives a fair share of the products of his labor? A.—I hardly know. I think that they receive a fair share, but if their hours were shortened I think it would be an improvement.

Q.—You think the masters pay as much as they reasonably can out of the product? A.—Yes; I think they do.

Q.—Machinery having reduced the cost of producing, has it been a benefit to you as a workman? A.—Yes.

Q.—Reducing the cost of production has raised your wages? A.—Machinery has been a benefit to the employer.

Q.—It has reduced the cost of production, but has that been a benefit to you, do you receive a share of the extra profit? A.—Yes; I think we do, I think the machine hands receive very good wages. The wages of the laboring class around here are the same common wages in town, \$1.25 a day.

Q.—Are there any sub-contracts in your establishment? A.—Nothing to amount to anything. There is one contractor, and he takes the contract for making waggons from the firm. There is nothing let to amount to anything outside of that.

Q.—In that case, there has got to be two profits? A.—Yes.

Q.—Before the producer, or the workman, can receive his share? A.—Yes.

Q.—Is not that a detriment to the workman? A.—I should judge it is.

Q.—If the work were carried on directly under the supervision of the proprietors they ought to be able to pay a larger wage to the wage-earner? A.—I should judge so.

By Mr. CARSON:—

Q.—Can you suggest anything to us which would benefit the working people? A.—I don't know.

By the CHAIRMAN:—

Q.—Do you know of any class of trade where they have apprentices indentured in any part of Ontario? A.—No; I have seen nothing of the kind in my travels.

Q.—You have been over part of Ontario? A.—Yes.

Q.—You work by day's work under the sub-contractor? A.—Yes.

Q.—What is your general run of wages while working? A.—Two dollars per day.

By Mr. ARMSTRONG:—

Q.—Does your firm take any work and let it out to contractors? A.—When they first started up they had a superintendent, and the superintendent now takes the work of building the waggons at so much per waggon.

By the CHAIRMAN :—

Q.—He does not receive pay as a superintendent, but as a contractor? A.—Yes.

By Mr. ARMSTRONG :—

Q.—That is on the principle of sub-contracting for the work? A.—Yes.

Q.—Do you think that if the firm would do the whole work themselves the men would be better paid? A.—I do not know as they would be any better paid, but it is quite evident that if they were not, the contract would be of more benefit to the company.

By Mr. WALSH :—

Q.—Do you import any material used in the construction of your waggons from the United States or elsewhere? A.—No.

Q.—Is not this bending you speak of imported from the United States and other sources—the bending used in making wagons, sleighs, &c.? A.—No; we do all our own business.

Q.—Is it not common in other places to have the bending imported from the United States? A.—No; there are bending works almost over the whole of Canada.

EDWIN CRAFT, Chatham, called and sworn.

By Mr. ARMSTRONG :—

Q.—You have heard the evidence of the last witness? A.—Yes.

Q.—Was there anything in it that does not accord with your own ideas? A.—No, I think not.

Q.—Have you any new suggestion in that branch of trade? A.—No; I do not know of any.

By Mr. GIBSON :—

Q.—Are you in the same branch of business as the former witness? A.—No.

Q.—What is your branch? A.—I work in the wood shop, where they make waggons—generally I am driving spokes.

Q.—That is work in the wheelwright's shop, &c.? A.—Yes, I work in the wheelwright's shop.

Q.—What are the wages paid in that department? A.—From \$10 to \$10.50 a week.

Q.—Is there a sub-contract in that department? A.—Yes.

Q.—The whole thing is let by sub-contract? A.—Yes.

Q.—You have to work pretty hard to make that much money? A.—Yes; pretty hard.

Q.—Wouldn't it be better if your firm would reduce the number of waggons they make in a day and extend the time—make the same number, but run it over twelve months instead of eight? A.—I think so.

Q.—And it would be just as well for the proprietors? A.—Well, I don't know that it would be just as well for the proprietors, but it would be better for the workmen.

Q.—If they got out the same number of waggons, all the difference would be the difference in the time of paying the money, would it not? They would not have to carry any more plant? A.—No; I don't think it would make a very great deal of difference.

Q.—Wouldn't it make a great deal of difference to you? A.—Yes; in one way.

The previous witness, EDWARD S. SPASHETT, hereupon made the following statement :—The reason they do not run twelve months in the year is that the season commences in the spring and ends in September, and if they worked the whole year around they would have such an abundance of them over that they would not know where to put them, and they have not capital enough to keep many in stock. Therefore, they run a certain time to fill their orders.

(Examination of Edwin Craft resumed.)

By Mr. HEAKES:—

Q.—Are there any waggons coming into Chatham from the United States? A.—No; I think not.

Q.—Did they used to come in here? A.—No; I think there were no waggons came in here from the United States at all; there have been buggies.

Q.—You don't manufacture buggies at all? A.—No.

By Mr. FREED:—

Q.—Do you make every part of the waggon in your shop? A.—Yes.

Q.—Hubs and everything? A.—Yes.

Q.—Where do you get the wood? A.—In the surrounding country; around here.

Q.—Is there plenty of it of good quality? A.—Yes.

Q.—Under the sub-contract system are the men driven more severely than they used to be when you worked directly for the company? A.—Well, I think about the same.

Q.—Is there any difference in the wages? A.—Well, I think there is a slight difference.

Q.—In what direction? A.—Downward.

Q.—You think the sub-contractor tries to make a little out of the men? A.—Yes.

Q.—Do you know whether the company sell for cash or on credit? A.—I do not know.

JOSEPH K. DICKSON, called and sworn.

By Mr. HEAKES:—

Q.—What is your business? A.—I am now engaged in real estate. For three years before that I was Street Commissioner, and before that I was for fifteen years in the lumber trade in this county.

Q.—Is real estate in good demand in Chatham? A.—No; I cannot say that it is.

Q.—There not many sales? A.—No.

By the CHAIRMAN:—

Q.—There is no boom here? A.—No; unless it is downward.

By Mr. HEAKES:—

Q.—About what is the value of a lot, say twenty feet frontage with one hundred depth, within a reasonable distance of the post office? A.—It depends a good deal on the locality, somewhere from \$1.00 to \$10.00 a foot frontage.

Q.—Where would a lot of the value of \$10.00 a foot frontage be situated? A.—From one hundred to one hundred and fifty rods from the market.

Q.—Do the working people own their homes here? A.—A portion of them do. The greater portion do not, so far as my knowledge goes.

Q.—Cannot a workman easily get himself a home in Chatham? A.—No; not at present wages; not an ordinary laboring man.

Q.—Supposing a man should purchase a lot, could he borrow money to build? A.—Not on the lot, but he might by getting somebody to put up a house, and giving a mortgage on the house and the lot—he might get some friend to do so. I do not think loan societies would take the risk.

Q.—They would not take the mortgage on the lot and advance money as the house progresses? A.—No such cases have come within my knowledge.

Q.—Then it is a difficult matter for a workingman to put a house up? A.—Rather so.

Q.—Is there as much lumbering done here now as formerly? A.—Not so much as ten or fifteen years ago.

Q.—What is the timber principally got out? A.—Timber is disappearing to a greater or less extent. We get white and red oak, white and black ash, a little sycamore, elm and basswood.

Q.—No hickory? A.—Not much hickory in this immediate neighborhood; you have to go a long distance to get much hickory.

Q.—How is walnut in this district now? A.—Very scarce, and what you get here is of an inferior class.

By the CHAIRMAN:—

Q.—Is any one planting forests? A.—Not that I am aware of.

By Mr. HEAKES:—

Q.—About what would be the cost of lumber per thousand in Chatham? A.—From about \$8.00 to \$25.00 or \$30.00 per thousand, leaving out walnut and cherry.

By Mr. WALSH:—

Q.—Have you much cherry? A.—Not now. We used to have a large quantity but it is disappearing with the other varieties of timber from the forests.

By Mr. HEAKES:—

Q.—Where do you get your pine for building purposes? A.—It principally comes from Georgian Bay territory.

Q.—What would be the price delivered here? I do not know. I have never handled pine to any extent, either buying or selling. Wages, moreover, are not so good to a laboring man now, so he cannot so easily get a home for himself as he could some years ago.

Q.—Wages have been going down? A.—Yes; I can remember when men received \$1.50 and \$1.75 a day, when they now receive \$1.25.

Q.—Are the men anxious to get employment at that rate? A.—Yes; there are more men than there is employment for.

Q.—Can you suggest anything that would benefit the working class in this neighborhood? A.—The first suggestion that I would like to give to Parliament is to pass a law prohibiting the manufacture of any machine for the next twenty years.

Q.—You think there is a sufficient supply now? A.—And a law providing that for the next fifty years no patents should go through the patent office. The over-production of machinery has caused a great many men to be thrown out of work. I know they have one machine in the waggon shop here that takes the place of about twenty men.

By the CHAIRMAN:—

Q.—Would you suggest that no more electric lights be made, so that the people might burn petroleum? A.—Unless they make great improvement in them.

Q.—Would you suggest that there be no more electric lights made? A.—I would suggest that the electric light be done away with, because I think it is injurious to the eyes, and prevents labor from getting employment.

By Mr. HEAKES:—

Q.—Do you think that with the machinery and facilities now possessed for manufacturing goods, workmen are paid in proportion to the profits the manufacturers can make? A.—The manufacturers or proprietors are making greater profits out of the number of machines turned out, be they waggons or farm implements, than they were doing when they had less machinery.

Q.—Do you not think that in view of the perfect machinery now possessed that the workmen should derive some benefit from it? A.—Certainly. If you supersede them with machinery they should receive benefit to a certain extent.

Q.—Either in the shortening of the hours or in the pay? A.—Yes.

Q.—Do you think shortening the hours would create a better demand for men? A.—If men worked eight hours instead of ten hours a day you would want one-fifth more men to do the same work.

- Q.—Would that take the surplus labor of the market here? A.—Hardly.
- Q.—Is there a tendency among young men living in the country to drift into the towns? A.—There is a tendency, from what I can learn, to seek clerkships.
- Q.—Do you mean by young men on farms? A.—Yes; and if their health is not very good.
- Q.—Has our educational system anything to do with that? A.—I do not know that I can give you a definite opinion on that point, for I have not studied it.

By Mr. ARMSTRONG:—

Q.—If a man borrowed money to build here, what interest would he have to pay if his security were good? A.—It depends on whom he borrows from—six, seven or eleven per cent.

Q.—Do you know of as high interest as eleven per cent. being paid? A.—I was informed by a man who borrowed money a year ago that he had to pay nine or eleven per cent.

Q.—Was his security good? A.—It was real estate.

Q.—Are many workingmen's houses in Chatham mortgaged, or do you know anything about it? A.—I do not know. I did not enquire into their private affairs, and therefore am not informed.

Q.—The elm of which you spoke, is it rock elm? A.—No; not in this western part.

Q.—Have you rock elm? A.—We have something called rock elm. It is between a rock and a smooth elm. It is termed by some here white elm.

Q.—Is that elm cut here, or shipped in logs? A.—There is a portion shipped to the American market, rafted over there, principally from the river Sydenham; not much from the Thames.

Q.—What has caused this surplus of labor in Chatham of which we hear so much? A.—One cause is the over-production of machinery. As machinery has increased the production of waggons and implements has not increased correspondingly. We have had a larger quantity of wagons made during the last few years than formerly in Chatham.

Q.—And a larger number of agricultural implements? A.—I think there has been. It is only a few years ago since they commenced making binders here,—I do not think over seven years.

Q.—Has there been any influx of labor during those years? A.—A few people have come in, but not enough to cause the present over-crowding of the labor market.

Q.—You think the surplus is due wholly to the introduction of machinery? A.—Principally to the introduction of so much machinery.

By the CHAIRMAN:—

Q.—Do all the waggons manufactured go out of the country, or are some kept for local use? A.—The waggons manufactured go to the North-West. A great many have been shipped to Manitoba and the North-West, but a great many are also used here.

By Mr. ARMSTRONG:—

Q.—Do you remember when there was not as much machinery as there is now? A.—I do.

Q.—Did the men at that time work over ten hours? A.—I do not remember that they worked over ten hours.

Q.—They worked ten hours then, and they work that number of hours now? A.—The law gave them ten hours for a day's work. I remember when the sawmills here had to run day and night.

By Mr. McLEAN:—

Q.—Do you think if it was not for the North-West there would be any more waggons made in Chatham. A.—Our home consumption would not require as many.

Q.—Would as many be manufactured? A.—Not unless they had some other market in which they could sell them. You could not dispose of them here.

GEORGE S. HOPE, recalled.

By Mr. ARMSTRONG:—

Q.—You are acquainted, I believe, with the sub-contract system that prevails to some extent in Chatham? A.—Yes; in my own line of trade.

Q.—Do you think it would be better if the employer himself would do the work, that he would receive more profit, and that the men would receive more work, if the sub-contract system were done away with? A.—I believe that the employer would receive greater benefit from his work, and better wages would be paid the men.

Q.—Then both would be benefited? A.—Yes.

By Mr. WALSH:—

Q.—Is there much sub-contracting done here? A.—I do not know that it is carried on to any considerable extent. This year the work in our shop, that is in the fanning mill business, has been done by sub-contract. I know that the men have worked harder. One of the contractors was the foreman last year, and he has two other men with him, and the foreman who worked there for a number of years is one of the sub-contractors. I say that the same foreman has worked the men harder, less wages have been paid, a cheaper class of men have been employed, and he has made a large profit, the proprietor paying him the same rate per fanning mill as the mills cost him last year, when he did the work by day work. The foreman, who, I say, is one of the sub-contractors, has made better wages for himself, and a large profit, besides, out of the labor of the men under him.

By Mr. ARMSTRONG:—

Q.—Do you consider that the system of sub-contracting is not beneficial to the employer or the workmen engaged? A.—I consider the system is a very bad one.

By Mr. FREED:—

Q.—Where are those mills mostly sold? A.—They are sold the world over; a number go to England; others go to the North-West; they are sold throughout the Dominion; a few have also gone to France; a few to Australia; but none are sold in the United States.

Q.—Have you any idea what proportion go to the North-West? A.—I should judge about one-quarter of the out-put.

By the CHAIRMAN:—

Q.—Are you speaking of this year? A.—We have manufactured about 2,800 mills, and about 500 have gone to the North-West.

By Mr. HEAKES:—

Q.—Has the price of the machine decreased? A.—No.

Q.—Then the extra profit that the foreman has made under the sub-contract has been made out of the men? A.—Yes.

Q.—The foreman gets the same price, and the sub-contractor makes a profit out of the men? A.—Which ought to go to the men.

By Mr. WALSH:—

Q.—Is the article turned out by the sub-contractor as good as that turned out when the work was done by the proprietor employing the men directly? A.—The greater part of it is; it is as a general rule, for the simple reason that most of the work is done by machinery, and where the contractors make their profit is by working the men a little harder, and getting a cheaper class of men—getting laborers who have no trade whatever to take the place of mechanics on work that really ought to be done by mechanics.

By Mr. HEAKES:—

Q.—Is there a tendency to displace mechanics and put in unskilled labor? A.—There is a greater tendency to do that under the sub-contract system than otherwise.

Q.—You think the sub-contract system fosters the employment of unskilled labor? A.—Yes; it does.

CHATHAM, Monday, December 12th, 1887.

T. H. TAYLOR, Chatham, called and sworn.

By Mr. FREED:—

Q.—You are manager of the woollen mill here? A.—Yes; owner.

Q.—How long have you been conducting it? A.—Thirty-one years.

Q.—Do you employ a large number of hands? A.—Between twenty-five and thirty all the time.

Q.—How many of these are skilled workmen? A.—Well, I cannot answer that exactly, six or seven or eight, somewhere about that.

Q.—Does it require much skill to carry on these operations? A.—Yes.

Q.—How long do boys serve at your trade before becoming expert? A.—It will take them three or four years for each part of the business.

Q.—How many departments have you? A.—Carding, spinning, weaving, fulling, dyeing and finishing.

Q.—And the men who work in one department do not work in the others? A.—Only a few of them can.

Q.—What are your principal products? A.—Cloths, flannels, yarns and blankets.

Q.—Where do you find your market? A.—It is principally local; we do some all over the Province pretty much, but our trade is principally local.

Q.—What rates of wages do skilled men earn in your mill? A.—From \$12 to \$15 a week.

Q.—These are men who have served a long time and understand the business thoroughly? A.—Yes.

Q.—Do they get pretty constant work? A.—Yes.

Q.—How constant? A.—Well, we have not shut down for these three years. We sometimes shut down a month or two in winter when business is slack.

Q.—What do unskilled laborers earn? A.—That would be boys and young help—\$6 to \$8 a week.

Q.—Do the boys earn as much as that? A.—The boys get only from \$2.50 to \$3.50.

By Mr. WALSH:—

Q.—What age are the boys? A.—Twelve to fifteen; we have not any under that.

By Mr. FREED:—

Q.—Has your business been growing, or decreasing or stationary? A.—It varies very much. Of course, we have been increasing it since I have been in the business until the last three years, when we have not increased it very much.

Q.—What classes of wool do you use? A.—Most of it is local wool, with a good deal of imported fine wool.

Q.—Do you use much coarse Leicester wools? A.—Yes.

Q.—Mixed with the fine wools, or for a separate class of goods? A.—Yes; for separate classes of goods.

Q.—Have you used any native Southdown wools? A.—Yes.

Q.—Do they take the place of imported wools at all? A.—Only partially; we have to mix fine imported wool along with it.

Q.—The native wools are too short? A.—No; it is not that but the quality is not there.

Q.—You require to have the Merino wools? A.—Yes.

By the CHAIRMAN:—

Q.—Where do you get them? A.—Mostly from the Cape and some from Australia.

By Mr. FREED:—

Q.—None from the United States? A.—No; the duties are too high.

Q.—It would affect you seriously if there were a duty on fine wools? A.—We cannot get it in the States; they can pay as much as we can.

Q.—It would affect you seriously if there were a duty on fine imported wools? A.—Certainly.

Q.—Do you think a duty on coarse wools makes any difference in the prices of them? A.—The duties coming here?

Q.—Yes? A.—We never import any from the United States; there is a great deal of it exported; we sell quite a lot to go there every year.

Q.—There is sufficient coarse wool to supply the market and leave a surplus for export in Canada? A.—Yes; as far as I know.

Q.—Have wages risen, or decreased, or have they been stationary? A.—They have been stationary with us.

Q.—For how long? A.—For four or five years.

Q.—Before that did they rise or fall? A.—They rose about that time.

Q.—Rose to a certain point and reached that point four years ago and they have remained stationary ever since? A.—Yes.

Q.—The number of your hands has been increasing pretty steadily until within three years? A.—Yes.

Q.—Do you find any market in the North West? A.—Well, not much. We have sent a few bales there, that is all.

Q.—Has the venture been satisfactory? A.—Yes, very; and I think we shall try it next year.

Q.—What hours do you work? A.—Sixty hours a week, from 7 to 6 o'clock, and we quit on Saturday night at 5:30.

Q.—Has any application been made to you to shorten the hours of work? A.—Yes; but not by my own employés.

Q.—How was that request settled? A.—Well, we merely shut down; they boycotted us and we shut down, and they came to time. I want you to understand that there was not one of my employés dissatisfied. I called them all into the office when the committee waited on me to ask them if they had anything to do with it and they said no; they were perfectly satisfied, and they sent a document to that effect.

Q.—If you had been left to deal altogether with your own men you would have had no trouble? A.—Not a bit in the world.

Q.—How have prices for your products been ranging? A.—Well, as for local trade it is very fair, but for wholesale trade it has been cut very close—in fact, there is nothing in it. I would rather shut down than run for the wholesale trade at present.

Q.—Does that answer cover all your products—blankets, flannels, yarns and cloths? A.—Yes, that is the woollens.

Q.—By yarns you mean knitting yarns? A.—Yes; I am in the flour business as well.

Q.—We will come to that presently. Can fine yarns, such as Berlin wools and yarns of that class, be made in Canada? A.—Yes; we make fine yarns.

Q.—Fine wools, such as they call Berlin? A.—Not exactly made that way, but they take the place of them.

By Mr. HEAKES:—

Q.—Do you make fingering yarn? A.—We call it fingering yarn, but it is not exactly like the imported.

By Mr. FREED:—

Q.—Is it as good? A.—Yes.

Q.—As soft a wool and as fine? A.—Yes.

Q.—Can you give any reason for the continued import of such large quantities of this Berlin wool? A.—No; I cannot give any reason.

Q.—If the people would only use the Canadian article you think they would have just as good an article? A.—Those who do are as well satisfied.

Q.—And it is very much cheaper? A.—Yes; in fact, I have sold ladies our yarn to go to the other side; I do not know whether they paid the duty or not.

Q.—Perhaps they think that imported wools are better there and we think that imported wools are better here? A.—That may be. They told me that they could buy them cheaper from me, and the same way in flannels and blankets on the other side.

Q.—Canadian blankets have a high reputation abroad, have they not? A.—Yes; I think they have.

Q.—Do you notice any change in the wool product of this district of late years? A.—Yes.

Q.—From Leicester to Down? A.—No; but the difference is in quantity. It is not one-quarter what it was five or six years ago in this county.

Q.—Do you find any change from the coarse Leicester wools to the finer wools? A.—Very little; I think if they would stick to the pure Leicester they would do well enough, but they introduce the Cotswold, which hurts the Leicester very much. It is too coarse and it has hurt the sale of it.

Q.—Can you tell us anything about the effect on wool of the change in fashion from woollens made of coarse wools to those made of the finer wools? A.—I do not know as I understand you.

Q.—Do you know that the fashion has changed from woollens made of coarse wools to those made of fine wools, from the Leicester to the Southdown, or anything of that nature? A.—I do not know; we have always been manufacturing both kinds here. We have more sale for wool made into fine flannels than we used to have, of course, and fine tweeds are higher than coarse, but we do not sell quite as much.

Q.—Are those made of coarse wools very durable? A.—In one way they are; for rough use they are, because the fine tears more easily than the coarse wool.

Q.—Is your sale of tweeds increasing? A.—Well, not this year, because it has been a bad year.

Q.—As a rule, do you think Canadian tweeds are coming more into use? A.—Yes; I think so; they are giving better satisfaction, I think.

Q.—And the manufacturers are learning to make them better? A.—Yes. In our case we use nothing for the local market but pure wool; we use no shoddy; but for the wholesale market we have to use it or we cannot stay in the market; the prices are cut so.

By Mr. WALSH:—

Q.—Or are you suffering from any difficulty in the matter of your trade? A.—No; I don't think so. I think the dull sales this season are owing to nothing but the weather.

By Mr. FREED:—

Q.—Is there any accumulation of woollen goods? A.—Yes; they are accumulating in this kind of weather; it is too mild, and that affects it very much.

Q.—For the whole season through are stocks accumulating through the country? A.—No; I don't think they have this year—not till lately.

Q.—Would it be any advantage to you if statistics of the trade were published annually throughout the whole Dominion by some Dominion authority? A.—Well, I could not answer that; I don't see that it would do us any harm and it might be of importance.

By Mr. HEAKES:—

Q.—Wouldn't it always be a ready means of ascertaining the state of the market? A.—Yes; I believe it would.

Q.—You could see how to place your goods better? A.—Yes; it would be in that way an advantage.

By Mr. ARMSTRONG:—

Q.—At the time this labor trouble happened to you, had you a competitor in the town? A.—No.

By Mr. HEAKES:—

- Q.—When you take boys into the mill what work are they generally put at?  
 A.—They are under the boss carder and picker.  
 Q.—Do they run the picker and carder machines? A.—Yes.  
 Q.—And make the same hours as men? A.—Yes.  
 Q.—Do you take these boys with a view of teaching them the business? A.—  
 No; not always; you can scarcely ever get a boy to stay with you long enough to  
 learn.  
 Q.—Do you ever have apprentices? A.—I never had one long enough.  
 Q.—Do you employ any women? A.—Yes; for weavers.  
 Q.—Do they work the same hours as others? A.—Yes; piece-work mostly; they  
 make \$3.50 to \$6 a week.

By Mr. FREED:—

- Q.—Are they girls or grown women? A.—They mostly run from fifteen to  
 twenty, and some are older.

By Mr. HEAKES:—

- Q.—They just simply run the machines—the loom,—and tend to the weaving?  
 A.—Yes; and then there is a boss weaver over them.

By Mr. FREED:—

- Q.—Does one girl run more than one loom? A.—No.

- Q.—Is that done at all in the trade? A.—No; very seldom.

By Mr. HEAKES:—

- Q.—It is not possible? A.—No; I don't think it is; it is not in my work.

By Mr. WALSH:—

- Q.—What are the special kinds of cloth you manufacture? A.—All kinds of  
 tweeds pretty nearly, and all sorts of dress goods, shirtings and so on.

- Q.—Where do your orders generally come from? A.—Montreal, Toronto,  
 Hamilton and London, sometimes. We sent quite a quantity of horse blankets to  
 London.

- Q.—Any further down east than Montreal?—A.—No.

By Mr. FREED:—

- Q.—You are interested also in a flour mill? A.—Yes.

- Q.—What grinding process do you use? A.—Rollers.

- Q.—Altogether? A.—Yes; well, we have stones in the mill for grinding  
 middlings; all the roller mills will have to come to have stones for middlings.

- Q.—What wheat do you use? A.—Well, we have the white and red wheat.

- Q.—Grown here? A.—Yes; mostly.  
 Q.—Do you get any North-western wheat? A.—We haven't had any yet;  
 freights have been so high that we couldn't handle it. I am negotiating with the  
 Grand Trunk people; the C. P. R. people haven't a station here and we have to  
 handle it over two roads.

- Q.—Can't you fetch in down by water from Port Arthur? A.—You would have  
 to bring a cargo—more than we would want at one time.

- Q.—You cannot handle a cargo? A.—No.

- Q.—What sort of vessels come to Chatham? A.—I have seen them with  
 10,000 bushels.

- Q.—How do the prices of wheat in Chatham compare with those in Toronto?  
 A.—They come very close together;—we pay 82 cents, and 84 cents is the price in  
 Toronto.

- Q.—You have to pay for local consumption more than the Toronto price, less the  
 freight? A.—Yes, we have done it all fall.

- Q.—When did this state of things begin—the local market ruling higher than the  
 export market? A.—I think Chatham has been doing that for a long time.

Q.—Seven or eight years? A.—Yes.

Q.—Was it so before 1878? A.—I could not answer that without looking at my books.

Q.—Were you in the business before 1878? A.—Yes; I have been in business over twenty-five years.

Q.—How many hands do you employ in the mill? A.—They average about ten when we are running night and day.

Q.—It does not require a full staff at night, does it? A.—No.

Q.—Where do you find the principal market for flour? A.—The Maritime Provinces altogether.

Q.—Do you mean Nova Scotia and New Brunswick? A.—Yes.

Q.—How does it reach there? A.—Sometimes by rail and sometimes *viâ* Boston; there is ten cents difference in it between the all-rail route and *viâ* Boston.

Q.—It would not pay to ship it all the way round by water? A.—No; I don't think so.

Q.—Has it been tried? A.—Yes; it has; I never did it, but I don't think it would pay.

Q.—For the reason that large enough vessels cannot come to Chatham? A.—Yes; and then you would have to have a large cargo, which means a great deal of money.

Q.—And you want to get rid of the flour about as fast as you manufacture? A.—Yes.

By Mr. WALSH:—

Q.—It is ten cents dearer by the all-rail route? Yes; and it was fifteen two weeks ago.

Q.—They have reduced it to ten? A.—I think it is ten now.

Q.—Ten cents to what place? A.—To Halifax from here.

By Mr. FREED:—

Q.—Where do you find a market for your bran and middlings? A.—I wish we could supply all the demand now.

Q.—Where is the demand? A.—It is all over the Province, and a great deal is sold locally.

Q.—For what purpose? A.—For feeding cattle.

Q.—Is the number of cattle being fed in this district increasing, then? A.—I could not answer that; I don't know; but there is a great demand for shipping.

Q.—To what points? A.—St. John, Halifax and all over the Maritime Provinces. We often ship mixed cargoes of flour, bran and shorts.

By the CHAIRMAN:—

Q.—What does the bran sell for? A.—Fourteen dollars per ton of 2,000 pounds. I never saw it so high here before.

By Mr. FREED:—

Q.—Do you barrel your flour or put it up in bags? A.—We barrel it mostly all for shipping; but, of course, we have a large local trade, and we barrel very little for that.

Q.—You put that in paper bags? A.—Yes; paper bags and sacks.

By Mr. HEAKES:—

Q.—Do you manufacture your own barrels? A.—No.

Q.—You don't know anything about the condition of the coopers? A.—No; I don't; they work by the piece, I believe.

Q.—Generally speaking, are the men in your employ comfortable in circumstances? A.—Yes; if they take care of their means, every one of them is comfortable. Most of them are buying property—those who are capable men—or using the money as they can.

Q.—You think that the laborers engaged in both your businesses earn sufficient to keep them all the year round and a little over? A.—Yes; that is the way it has been with our people; those who take care of their means always have a little over and are buying places for themselves.

Q.—Do you run the flour mill all the year round? A.—Yes.

By Mr. ARMSTRONG:—

Q.—Have you much competition in this town in flour mills? A.—O, yes.

Q.—Are any mills exempt from taxation? A.—Yes.

Q.—Don't you think that is kind of handicapping you? A.—I think it is a fraud, not only to me but to the public generally; poor people are paying the rich men's taxes.

Q.—How did the exemption take place in the first instance? A.—It is pretty hard for me to answer. I don't think the man would ever have left town if he hadn't got it.

By the CHAIRMAN:—

Q.—Was it a bonus, or how? A.—The Kent mills were burned out and the owner claimed he would not rebuild them unless he got exemption for ten years. I don't think he would have left, but he got it.

By Mr. ARMSTRONG:—

Q.—Would his taxation at a casual estimate be \$1,000 a year. A.—I don't know what he values it at, but I think it would reach from \$800 to \$1,000.

Q.—He could afford, then, if he chose, to sell his flour a little lower than those who are not exempt? A.—Yes; I think he might. I don't look at the evil that way; I consider if a man is free from taxation in that way some poor man is paying his taxes. I wouldn't ask it.

Q.—Did the labor trouble which happened in your woollen mills happen also in the flour mills? A.—When they shut down on me they interfered with the flour mill business altogether; it did not interfere with the other.

Q.—Were the other flouring mills interfered with? A.—No.

Q.—Do you pay at the same rate of wages as others? A.—Yes.

Q.—I guess you are not a member of the body which was spoken of? A.—No.

By Mr. HEAKES:—  
Q.—Has there ever been an effort among the workingmen of Chatham in regard to co-operation in business? A.—Not that I am aware of.

By Mr. ARMSTRONG:—

Q.—Can you give us an opinion with regard to the sanitary condition of Chatham: is it good, bad or indifferent? A.—No; I cannot just now.

By the CHAIRMAN:—

Q.—Have you any waterworks? A.—No.

Q.—You depend altogether on wells? A.—Yes; and we want waterworks, there is no question about that.

By Mr. FREED:—

Q.—Can you get a supply of pure water in the neighborhood? A.—Yes; about twelve miles off we could strike the Chenal Ecarté, which is the best of water.

By Mr. WALSH:—

Q.—Is there head enough to give you power? A.—My own plan would be to sink a pretty good sized pipe, and then let it flow it over and pump it up here.

By the CHAIRMAN:—

Q.—Are not many of the wells too near the refuse of the town? A.—Yes; they are.

By Mr. HEAKES:—

Q.—Have you public wells here? A.—They are boring them some now—one on the market, I think.

By the CHAIRMAN:—

Q.—Do you think it would be pure water they would get from near the market place? A.—It would be so low down that the surface water would not affect it; they are now down 72 feet, I think.

By Mr. HEAKES:—

Q.—Have you any system of sewerage here? A.—Yes; they have the town pretty well drained; there is a large sewer down King street, and several to the creek and river at different places.

By Mr. WALSH:—

Q.—Do the houses connect with that system of sewers? A.—Some of them do.

By Mr. FREED:—

Q.—Have you had any epidemics here? A.—We have had typhoid fever a good deal.

Q.—And diphtheria? A.—Yes.

By Mr. WALSH:—

Q.—Is Chatham extending itself or getting materially better from all points of view? Is it improving? A.—Yes; it is improving; it has very much improved in drainage, too; it is nothing like what it was when I came here.

Q.—What do you consider the general state of business? Is it holding its own, compared with other places? A.—It is, as far as I know; there are a great many complaints, but I think you will find that everywhere.

By Mr. FREED:—

Q.—Are there many demands upon charity, especially during the season when some of the factories are closed? A.—Well, I don't think there are many demands upon the city officials for relief, not that I am aware of, but I couldn't answer that positively, because I haven't anything to do with it.

Q.—Is there any organized charitable body in the town? A.—Yes.

Q.—Do you know whether the national societies have any serious demands upon them for benevolence? A.—I am not aware of it.

---

WILLIAM E. HAMILTON, B.A., T.C.D., Chatham, called and sworn.

By Mr. FREED:—

Q.—You are connected with the *Planet* newspaper? A.—Yes; I am editor at present.

Q.—You also publish a small paper called the *Market Guide*? A.—Yes.

Q.—How long have you been in journalism in Chatham? A.—Ever since I came here, in 1880.

Q.—Are you pretty familiar with the prices of general products in the market here? A.—Yes, I take them every week for my own paper and the *Planet*.

Q.—Can you give us some idea of the prices ruling at present in the more common articles of meats and vegetables, and so on? A.—I have here a table covering the period from 1879, to 1887 inclusive.

Q.—You have made a comparison of those different years? A.—Yes; the figures are as follows:

## EXTRACT FROM CHATHAM "PLANET," 1879-1887, INCLUSIVE—PRICES OF GRAIN.

DATE.		WHEAT.	OATS.	BARLEY.	CORN.	REMARKS.
1879, Dec. 10.....	Red.....	\$1.20 to \$1.26	30c to 37c	per 100 lbs. 90cto \$1.05	35c to 40c	Wheat is not closely graded in this market and practically there is little difference in figures for white and red.  Chatham is the greatest bean centre in Ontario.
	White.....	1.20 " 1.21				
1880 " 8.....	Red.....	1.00 " 1.03	32c " 34c	65 " 1.00	50c " 55c	
1881 " 8.....	White.....	1.18 " 1.21	38c " 40c	\$1.65 " 1.70	50c " 60c	
	Red.....	1.18 " 1.20				
1882 " 11.....	Red.....	88 " 90	38c " 40c	80 " 1.20	48c " 50c

Extracted by

W. E. HAMILTON, B.A., T.C.D.

Q.—Have you made any comparison in regard to other articles? A.—I have the prices here from my paper, for December 10, 1887.

Q.—They were gathered by yourself? A.—Yes; they are as follows:—

CHATHAM, December 10th, 1887.

Wheat, red winter.....	\$0 82 @ \$0 82
Wheat, white.....	0 82 0 82
Flour, per 100 lbs.....	2 00 2 25
Oats.....	0 30 0 31
Barley, per 100 lbs.....	1 10 1 25
Peas.....	0 40 0 45
Corn.....	0 45 1 50
Beans.....	1 25 6 25
Dressed hogs, per cwt.....	6 00 1 25
Potatoes, per bag.....	0 85 0 20
Butter, per lb.....	0 18 0 18
Eggs, per doz.....	0 18 0 06
Beef, by the quarter, per lb.....	0 04 0 07
Lamb, per lb, by the quarter.....	0 06 0 07
Mutton, by the quarter.....	0 06 0 05
Tallow (rendered).....	0 04 0 06
Hides, per lb.....	0 05 0 75
Sheep skins.....	0 50 8 00
Hay, per ton.....	7 00 3 70
Wood, hard.....	3 50 2 00
Timothy seed.....	1 75 4 50
Clover seed.....	4 50 0 25
Wool.....	0 20

Q.—Can you tell us the price of bread in Chatham? A.—I think six cents for a two pound loaf.

Q.—Can you tell us what bread was worth in 1879 or 1880, when wheat was dearer. A.—I cannot.

Q.—Do you know whether bread was any dearer then than now? A.—I know that bakers sometimes kept the prices up after flour had dropped.

Q.—There is no necessary connection between the price of flour and the price of bread? A.—Bakers ignore a drop in the price of flour, but they are very sensitive to a raise.

Q.—Are you familiar with the condition of the working classes in Chatham? A.—From personal acquaintance, with some of them. I have never, however, made any special enquiry.

Q.—Are you able to answer this question: are the artisan classes of Chatham as a rule struggling for existence, or are they able to save money? A.—I think in many cases they are tolerably comfortable. When they have good health and are economical they could save a certain amount of money.

Q.—Are there not a good many out of work during a considerable part of the year? A.—Yes; of certain classes. For instance, the season for bricklayers and masons is limited by the climate.

Q.—Are not some factories shut down during a considerable part of the year? A.—Yes.

Q.—And those men are idle then? A.—Certainly, the Chatham manufacturers having shut down.

By the CHAIRMAN:—

Q.—Do the men work elsewhere at that time? A.—It just depends whether they think the factory is going to be shut down for any considerable time or not. If they think it will be closed for a long time they will leave; if not, they will wait here.

Q.—Is there a relieving officer here? A.—We have a charity committee, and a home for the friendless to assist the permanent poor.

Q.—That is those who are disabled for work, or something of that kind? A.—Yes. The charity committee frequently called upon to give aid to persons who are able to work? A.—Not to my knowledge; there are exceptional cases, of course.

Q.—Could there be such a state of things without your knowing it? A.—If there was anything like marked destitution in town I would know it. We had a case the other day where a miller became injured through an accident. He shot himself in Detroit. He was taken charge of by the charity committee.

By Mr. FREED:—

Q.—Do people temporarily out of work frequently demand assistance from the town authorities? A.—I have not heard of many cases of that kind. It happens occasionally, of course.

Q.—What national societies are in existence in Chatham? A.—The only one I know is St. Andrew's.

Q.—Does it distribute much money in charity? A.—I do not think so.

Q.—Then there is no St. Patrick's or St. George's Society here? A.—I think there were at one time, but so far as I know they are not in active existence.

By Mr. McLEAN:—

Q.—Do you know of any charitable institution connected with the Catholic Church? A.—There is the Y. M. B. A.

Q.—That is an assurance association, is it not? A.—Yes; I think it is. Whether they undertake charitable work or not in addition I could not say.

By Mr. FREED:—

Q.—Do not the church authorities themselves distribute considerable sums to charity in connection with the Catholic Church? A.—I believe they do.

Q.—Will that be given to persons suffering from affliction, or to persons out of work? A.—I should think that would lie in the discretion of the resident priest.

Q.—You do not know as to the fact? A.—No.

Q.—Can you tell us anything about Mechanics' Institutes? A.—The Mechanics' Institute was founded about 1873, and has about two hundred and fifty members now. The main foundation of the society is the library and the reading room. There are about four thousand volumes in the library. Among these, there

are several of a scientific character, such as the Encyclopædia Britannica, and the Americana; the works of Tyndall, and so on. The *Scientific American* is taken, and also a technical paper, called *Iron*, published in England. The president last year, Mr. Riddell, is a working blacksmith, a master blacksmith; he employs men, and works himself; the present vice-president is a working carpenter. We have no free public library here. The subscription to the Institute is \$2.00 a year. With respect to the drawing classes—

Q.—Those are in connection with the Mechanics' Institute? A.—Yes; they are. They were established this fall, under the provisions of the Ontario Act, 1886. The expense is borne by a Government grant, \$3.00 a member up to twenty-five members, and above twenty-five members of \$1.00 a member, so that the total grant shall not exceed \$100.00. The teacher must hold a certificate of the Ontario Department in this particular branch, that is in drawing. The course consists of twenty-five lessons of two hours each, and in order for a candidate to qualify at the examination held at the end of the course, he must have taken twenty lessons at least. In May each year the Government appoints an examiner, who conducts the examination of the pupils here. Their work is then sent down to Toronto. The successful candidates receive certificates of standing, which are recognized in the high schools and art schools of the Province as equal to a certificate received from a high school or collegiate institute, so far as that branch is concerned. The course consists of mechanical, architectural and free-hand drawing. The object of the institution is to reach those engaged in the mechanical arts, where a knowledge of drawing is required. Forty one students have entered the class. The average attendance is thirty-five; the teacher is Mr. William Judson, of London. Some of the pupils are women; as regards sex, they are divided about half and half. Mechanics' of all trades are well represented, not only by actual mechanics, but by young men entering into mechanical business. In the case of the young women, the idea is to teach them the various branches of design, so far as they depend on drawing. Dr. May, the General Inspector of Mechanics' Institutes, says that young women who have passed through similar classes elsewhere have developed wonderful talent in designing work, and are employed at salaries ranging from \$600.00 to \$1,500.00 a year in large manufacturing establishments in the States. The institute pays the teacher \$75.00 a year for the course, and the fee is \$3.00 for each pupil. The institute has brought sets of designs from New York; I do not know the exact cost of them. The expense, taking the debtor and credit accounts, so far as the institute is concerned, outside of the Government grant, will show the institute to be a little behind, or the accounts will about balance. There is another educational agency in the shape of the McCaulay Club. It was established in 1883, with a membership of fifty. Mr. Patterson, the first president, is a manufacturer. It is the intention of the Mechanics' Institute to establish a course in book-keeping and English. The reading-room of the institute is open from nine in the morning to twelve, and from two to six, and from half-past seven every week day. The average number of readers is sixty each day.

By Mr. WALSH:—

Q.—Is that the circulating library? A.—Yes. There are estimated to be about fifty mechanics members. We have also a literary and scientific society in town which is very largely supported by mechanics. The president is Mr. Ed. Jones, a machinist, who was called to Toronto as an expert by Judge McDougal in the water-works investigation. We have forty-five members, and mechanics of the following trades are represented: Machinists, cabinetmakers and blacksmiths.

By Mr. McLEAN:—

Q.—I understand the yearly fee of mechanics is reduced to \$1 in the Mechanics' Institute? A.—I could not say about that; but I have heard that it was done through the employers.

Q.—What is the yearly fee for the McCaulay Club? A.—One dollar a year. One dollar a year is also the fee in the Literary and Scientific Society and it covers everything.

By Mr. ARMSTRONG :—

Q.—You have said that mechanics could live somewhat comfortably and save a little money? A.—Yes; I think so, if the mechanic has the good luck to have his health.

Q.—Provided a mechanic has four of a family, and he lives economically, but comfortably, and saves a little money, how much wages should he receive? A.—I suppose about \$14 a week.

Q.—How many journeymen mechanics in Chatham receive \$14 a week? A.—I could not say.

Q.—Are there ten? A.—I think there are more than that number, but I really could not say. Of course, I have never made special enquiry into the matter.

Q.—Does a journeyman, such as a carpenter, a tailor, a waggon-maker, a blacksmith or a bricklayer average \$9 a week in Chatham all the year round? A.—At a rough guess I should think about that. Of course, bricklayers get higher wages in the season.

By Mr. FREED :—

Q.—Are you in a position to speak from your own knowledge of the cost of living in Chatham, and of maintaining a family here? A.—No; I cannot say that I am; I am not a married man myself.

Q.—When you said a man should get about \$14 a week you were making a rough estimate? A.—Yes.

By the CHAIRMAN :—

Q.—Are there any trade combinations in town? A.—In the printing business some of the men belong to the Typographical Union, but there is no union in town.

Q.—Is there any among the employers? A.—I believe there is.

Q.—What is it? A.—I think there is an employers' society. I do not know what its name is.

Q.—Is it an employers' union? A.—Yes.

Q.—Is it in existence now? A.—Yes; I think it is; it was at one time.

Q.—Is there any combination among the farmers to keep up the price of their products? A.—I think there are some granges existing yet.

Q.—Is there any combination among farmers to fix the price of their produce? A.—Not that I know of. They all try to get what they can.

Q.—You know there is an electric car running at Windsor. Have you heard of any combination among the farmers against that, the combination stating that the company ought to use horses, so as to eat hay and oats? A.—I never heard of it.

By Mr. ARMSTRONG :—

Q.—Are you a practical printer? A.—No; I am not.

Q.—Do you know much about business in Chatham? A.—Just what I have picked up. My business is editing and reporting. You cannot help picking up a little by being in a newspaper office.

Q.—How are printers paid in Chatham? A.—By the week.

Q.—Are there any men on piece-work? A.—Not in our office, so far as I know.

Q.—How much per thousand ems do they receive? A.—I think 25 cents. I cannot speak positively; that is when they are on piece work very often.

Q.—How much per week do the week hands receive? A.—The rate varies very much. I should think about \$8.00 or \$9.00. The foreman, I think, gets \$12.00. Of course, Mr. Stevenson could tell you more accurately than I could.

Q.—You have reference to the *Planet* office? A.—Yes.

Q.—How many hands are employed there? A.—About eighteen altogether.

Q.—How many of them are boys? A.—The number I have given is exclusive of the publication bindery; they have a bindery in addition. I think they have about seven boys.

Q.—How much do the boys receive per week? A.—I could not say.  
 Q.—Are they indentured? A.—I do not think so.  
 Q.—How long have they got to serve before they become journeymen? A.—I think five years; I am not sure. Of course, all matters connected with the office are out of my department.

H. A. PATTERSON, Chatham, called and sworn.

By Mr. FREED :—

Q.—You are Mayor of the town? A.—Yes.  
 Q.—Are there many persons seeking relief from the city charities? A.—Very few.  
 Q.—Are those who do seek relief mostly persons able to work or those that are not? A.—They are mostly men that are trying to go from one part of the country to another; they are mostly asking for passage and very seldom for anything else.  
 Q.—They are not permanent residents of Chatham? A.—No.  
 Q.—Is there much actual poverty among the permanent residents of the town? A.—I don't think so; of course, we have a home for the friendless, for persons in misfortune.  
 Q.—What increase in population has there been in Chatham within the past few years? A.—Well, I'm not prepared to say.  
 Q.—Perhaps you would send us a memorandum of that? A.—Yes; I will have the clerk of the city send you that.  
 Q.—Can you give us any indication of the increase of trade? A.—Have you a Board of Trade? A.—We have recently formed a Board of trade.  
 Q.—You could not give us any comparative figures? A.—No; it has only been organized a few days.  
 Q.—Your are engaged in the planing business? A.—Yes.  
 Q.—What is the character of the work principally? A.—The manufacture of windows, doors and blinds.  
 Q.—Do you employ many men? A.—Not a great many; in the busy season we employ a good many on the docks and in handling lumber.  
 Q.—Do they get permanent employment? A.—No.  
 Q.—How much do they get during the year? A.—The men who do the handling on the wharf are hired by the hour at 20 to 25 cents.  
 Q.—How constantly are your skilled hands employed? A.—Well, I have always kept my mill running all the year round.  
 Q.—What wages do skilled men get? A.—From \$9 to \$11 a week for constant employment.  
 Q.—Those who are unskilled and working in the shop get how much? A.—One dollar and a-quarter a day.  
 Q.—Is employment with you considered much more desirable than with any other shops in the city? A.—I don't know.  
 Q.—Have you a superabundance of help seeking work? A.—No; I cannot say we have. During 1883 we paid higher wages than now, as high as \$12 and in one case \$13 per week.  
 Q.—Do many of your men own their houses? A.—Not many.  
 Q.—Do many of them save money. A.—Not many of them.  
 Q.—How long have you been in business in Chatham? A.—I have lived in Chatham since 1879.  
 Q.—Do you notice any improvement, or the reverse, in the condition of the working people since that time? A.—I think the position of the laboring men is just about the same.

By the CHAIRMAN :—

Q.—What proportion of married and unmarried men have you got in your employ? A.—I think they are mostly all married, with one or two exceptions; in fact, I cannot remember of any unmarried, excepting one boy.

By Mr. FREED :—

Q.—Do they remain pretty constantly with you? A.—Yes; I have men in the shop who have been with me five years.

Q.—Is machinery in your shop pretty well protected? A.—As well protected as I can get it.

Q.—Was it protected to the satisfaction of the inspector when he was round?

A.—When the inspector was there I did not see him, but I heard of no complaint and I would have heard if there had been any.

Q.—Are accidents in connection with the machinery frequent? A.—I have never had an accident.

By Mr. McLEAN :—

Q.—Do you know anything about the sanitary condition of Chatham? A.—It is in a very unsatisfactory state.

Q.—What is the cause? A.—The prime cause is that we have no system of waterworks here, and the point from which we would derive a supply is so distant that the town hesitates to issue debentures to a sufficient extent to get in a supply, although, I think, it would be money economically spent, even from a business standpoint.

Q.—Is the drainage of the town good? A.—It is very imperfect, from the fact that for years no system of drainage was pursued. A piece of drain would be put down, and if continued to the end of the street it would probably be four feet in the air, and the next street would be drained in another direction; there were no proper levels taken. We have in the corporation an assessment of over a million of dollars, and I think it would pay to employ a competent engineer, under whose supervision all this work should be done, and every drain put down should be put down as part of a system.

By Mr. FREED :—

Q.—Was any proper line ever established for sewers? There was years and years ago, but some of them are in bad condition.

Q.—They are not built to that line? A.—No; not in many places.

By Mr. ARMSTRONG :—

Q.—Have you a health inspector? A.—Yes.

Q.—Permanently employed from year to year? A.—Yes.

Q.—And you have an engineer the same? A.—Yes; but when I speak of an engineer I mean one who is consulted in reference to any particular public work which may be going on, and not the engineer under whose direction the drains should be put down.

Q.—How many industries in Chatham, if any, are exempt from taxation? A.—Very few; not worth mentioning.

Q.—Do any of these industries compete with those that are not exempt? A.—Yes; I think so, in some cases.

ARCHIBALD CAMPBELL, Chatham, called and sworn.

By Mr. FREED :—

Q.—You are engaged in the milling business? A.—Yes.

Q.—What wheat do you use mostly? A.—Red winter, principally.

Q.—Is it grown in this neighborhood? A.—Yes.

Q.—Do you mix it with any North-West wheat? We are trying that now. We have recently got a lot of No 1. hard, from Manitoba, and we are trying a mixture of that with our wheat here. We think it will improve the quality of the flour and make a stronger flour.

Q.—Where do you find your market? A.—Our market is in the Maritime Provinces, in Newfoundland and in the old country. We ship a great deal to Glasgow and Liverpool.

Q.—On your own account? A.—Yes.

By Mr. WALSH:—

Q.—Do you send a great deal of flour to Newfoundland? A.—Considerable. The trade, however, has only lately started. We have been shipping, possibly, one thousand bushels a year there, and perhaps we sent that quantity this year.

Q.—Do you find that trade increasing or otherwise? A.—It is increasing. We have only been sending flour there within the last two years.

Q.—To what house do your particularly ship? A.—To Messrs. West & Reedall, in St. John, and to Harvey, Harvey & Outerney, of New York, who have a branch in Newfoundland.

Q.—Do you know whether the flour sent to Newfoundland sells for cash, or does Newfoundland produce come back in exchange? A.—I presume it is all sold for cash. We always draw at ten days.

Q.—You make drafts rather than exchange? A.—Yes. We draw at ten days with the document attached. It takes a longer time than that before flour gets there. That is, however, the general way of doing business.

Q.—Where do you sell your bran and middlings? A.—We have been selling it this last season almost altogether in the eastern States—Massachusetts, Connecticut and New York.

Q.—Does it bring a better price there? A.—Decidedly.

Q.—Does it pay duty? A.—Yes. The present duty will be about \$2.60; of course it is higher now; \$2.20 is what we have paid all along until recently.

Q.—It pays you better to ship it to the eastern States than to sell it to local men? A.—Decidedly.

Q.—Do you sell much here? A.—We do not try; we can do better there. I have just received an order for three cars at \$23.00 a ton, delivered in Boston. Taking the duty from that, it is much better than we can do here.

Q.—Do you send any to Montreal? A.—Yes; we have sent some there.

Q.—What price do you get there? A.—We cannot realize anything like the price in Montreal we can in the eastern States. We have only sent altogether ten cars to Montreal since last harvest.

Q.—What will the cost of carriage to Montreal be per ton? A.—Four dollars a ton.

By Mr. FREED:—

Q.—You use rollers in your mill? A.—Yes.

Q.—What wages do you pay—take a skilled miller? A.—Skilled millers receive from \$9 to \$10 a week. The head miller, of course, gets a good deal more than that. The second miller receives \$10 and the others \$9.

Q.—What hours do they work? A.—Ten hours a day when we are running night and day; that is full time. Now we are running only half time. When we are running full time we work ten hours a day, except on Saturdays, when we shut down at five o'clock.

Q.—Is this constant, active, work, or are they simply watching the machinery? A.—They are just watching the machinery. They have nothing to do except to do that, and to keep the machinery oiled, and everything in running order.

Q.—Men are not engaged during these long hours in actual manual labor? A.—No; they have nothing of that kind to do.

Q.—What wages do the unskilled hands you employ receive? A.—\$1.25 to \$1.50 a day.

Q.—What hours do they work? A.—Ten hours, and nine hours on Saturday.

Q.—Is it an ordinary day's labor? A.—Yes.

Q.—None of them work at night? A.—No; some of them have to work at night also.

Q.—Do you pay them extra? A.—No. During the busy season when the mill is running twenty-four hours a day, the men change off. One man will take from twelve in the day till twelve at night and alternate that time with another. We leave it a good deal to themselves to arrange that matter. Some prefer to work one week all night, and then take day time for the next week, and so on.

Q.—Have you a cooper shop? A.—Yes.

Q.—What wages do the men earn? A.—They work altogether by the piece. It depends on themselves how much they earn. Some coopers make from \$15 to \$18 a week.

Q.—How many hours have they to work in order to earn that sum? A.—Not more than ten hours, or possibly eleven hours a day.

Q.—What is the least amount any of them earn? A.—The lowest would not be less than \$10.

Q.—Do you think any earn less than \$10? A.—No; I think not where they have steady work. Sometimes if business is slack coopers are limited to so many barrels a week. Then, of course, they cannot make so much money.

Q.—Are they employed the year round, more or less? A.—No; not all of them.

Q.—At what period of the year will they be absolutely idle? A.—Usually from about the middle of November or the 1st of December until the 1st of July or possibly June. Of course, some coopers have to be laid off altogether.

Q.—From this period to next July? A.—Yes. During the winter and early spring the mills, as a rule, are not running so strongly as in the fall. From 1st July to 1st December the mills are running very strongly, and the apple crop has to be taken care of, which makes a very great demand for barrels. There have to be a great many men employed then who cannot obtain employment for the rest of the year. So a good many have always to be laid off about the 1st of December.

Q.—And from that time there is no work for the cooper until July? A.—Probably not until June or July. They usually turn their hand to something else, whatever they can find to do.

Q.—Is it usual for them to get employment at something else? A.—No; not in Chatham.

Q.—Have you any idea as to what will be the yearly earnings of a cooper here? A.—In our shop we keep, I think, about six or seven hands constantly, the old stand-bys; they are kept constantly the whole year round. Then during the busy season other temporary hands are employed, men who are picked up because they can make a barrel. The regular hands will make \$9 or \$10 a week the year round.

Q.—And the others? A.—I am sure they will do that, because in the busy season they are at full liberty to make all they can. I am sure their yearly wages will average \$10 a week.

Q.—To what number are they limited at the present time? A.—I do not know, because we furnish the material and give the contract for the making of the barrels.

Q.—To a foreman? A.—Yes. We furnish the material, and he makes the barrels.

Q.—Does he supply the capital required? A.—Yes; it requires a large stock; it requires a man's whole time to look after that business. A large stock of headings, staves and hoops are needed, and the material must all be dry and well seasoned. We thought that party would do it better than we could. We have enough business otherwise to look after.

By Mr. WALSH:—

Q.—Do you furnish the machinery? A.—There is hardly any machinery required.

By Mr. FREED:—

Q.—Is there not much machinery in a cooper shop? A.—No; except the jointer. Every cooper furnishes his own kit, as he calls it.

Q.—So, substantially barrels are made by hand? A.—Yes; all made by hand. He

buys the stuff all ready. The staves have to be jointed, and the barrels are afterwards set right up in the shop. So, no machinery of any account is required in a cooper shop.

Q.—Do many of your hands own the houses in which they live? A.—No; not many of them; a few do.

Q.—Are they not able to save enough money to buy houses? A.—Some of them would be, I suppose, but it is pretty hard for a man with a wife and family to do so. It takes about all he can do to maintain his family, and educate and clothe them.

Q.—Then Chatham is rather a dear place to live in? A.—No; I do not know that it is dearer than other places. The average wage is about \$7.50 a week, I think.

Q.—And what is obtained by skilled labor? A.—Those who have higher wages, \$9 or \$10 a week, are practical millers and engineers. Two of our men, I think, own the houses in which they live. With the introduction of roller mills, and improved machinery, we do not require so many skilled men. An ordinary intelligent mechanic, or an intelligent man, is soon able to run a roller mill as well as a skilled miller could do. When there were stones to be dressed, under the old system of grinding, a man required to have served a long apprenticeship to the business, and have a great deal of practice, but now machinery has changed all that.

Q.—Do you not require great skill, so as to be able to mix wheat to make particular brands of flour? A.—Our wheat here is about all the same; there is very little mixture. The Manitoba wheat is about the first mixture we have made.

Q.—Does your flour run pretty uniform? A.—Yes; it must when the wheat is about all the same here.

Q.—Does it not vary from season to season? A.—I mean that each season's wheat will run about the same. One season may vary from another, but the wheat will be about uniform all through.

Q.—Where do you get your rollers? A.—The rollers come from Lowell, Mass., I think.

Q.—Did you not get any of them in Canada? A.—We have two mills, one at St. Thomas and another here. The machinery of the St. Thomas mill is all made in Canada, the rollers as well.

Q.—Where did you get the rollers? A.—From Goldie & McCullough, of Galt.

Q.—Are they as good as the imported article? A.—We hardly think the rollers are. We like the rollers here a little better, perhaps. That is owing to what we call corrugation, the cut in the rollers. We think they do a little better work, perhaps, than the others do. That, however, might be changed. It is, perhaps, owing to the system they have got into.

Q.—Is there any difference in the hardness? A.—No; they can make them as good in Canada as elsewhere.

Q.—They are all chilled iron? A.—Yes. One thing is, that on the other side they make so many rollers; they have been longer in the business, and they, perhaps, have got a little better up in the way of chilling them.

Q.—Is there any difference in the price between Canadian and imported rollers? A.—No; I think not much. The Canadian roller is, I think, a little cheaper.

By the CHAIRMAN :—

Q.—At large mills, such as Minneapolis, do they run regularly all the time, or do they work night and day during certain periods, and afterwards much shorter hours? A.—That is the way all the mills do.

Q.—You cannot run a mill regularly? A.—Some years are better than others; last year was a much better year than the previous one. The mills throughout Canada run pretty regularly all the year round. I think for twenty months our mill never stopped running, night or day.

Q.—That would be much better for the workmen? A.—Yes; a great deal better. This year the wheat is very poor throughout Canada; we have not a supply of wheat. It would be utterly impossible for a mill to run twenty-four hours a day, unless we could get in a supply of wheat.

By Mr. FREED :—

Q.—You mean the harvest was deficient? A.—Yes.

Q.—Not poor in quality? A.—It is poor in quality and deficient in quantity. The quantity is very short as compared with other years.

By Mr. WALSH :—

Q.—What will be the difference in price on the wheat you get from the North-West and the wheat produced in this neighborhood? A.—The difference in price is about 5 cents per bushel, that is, 5 cents more for the North-West No. 1 hard wheat.

Q.—That includes freight and everything else? A.—Yes; delivered here. I am of the opinion that it is the cheaper wheat of the two, but we have not tried it sufficiently yet to judge; in fact, we only got it in the other day, so I could not speak definitely about it.

Q.—You think the product will be better from it than from your own wheat? A.—I am sure it will be better; it makes stronger flour.

By Mr. FREED :—

Q.—You buy it delivered here? A.—Yes; it costs us 5 cents a bushel more.

Q.—You get the best quality? A.—No. 1 hard.

By Mr. HEAKES :—

Q.—Can you give the Commission any information in regard to the relations existing between capital and labor? A.—In what way?

Q.—For the general benefit of the working classes. A.—I do not know. That is a very complicated question.

Q.—What about the question of arbitration? A.—I think a board of arbitrators should be established. I think that would be a good thing.

Q.—Do you approve of compulsory arbitration? A.—Yes. A board might be established, so that when these unfortunate disputes arise, which are constantly arising, there might be some way of settling them, not involving the laboring man in such a tremendous loss as at present. A strike may result to that in the end; it may be beneficial to the working classes; but that result is obtained at a tremendous cost. The men are thrown out of employment for a long time, and in a good many cases they fail altogether. I think if the Government established a board of arbitrators, so that those disputes could be referred to them, and they could take them into consideration and settle them, it would be an advantage to both parties.

Q.—As an employer of labor, you would favor that plan? A.—Yes; I would favor it.

Q.—Have you ever given the subject of industrial education for mechanics any thought? A.—Yes; I have.

Q.—Give us the benefit of your ideas on the subject. A.—You mean in regard to night schools?

Q.—Either instruction in the public schools or in night schools, to teach the theory of the different trades to mechanics? A.—It would be difficult, I think, to have that taught in our public schools; the teachers would be unable to impart the information. It would be better to have night schools for that purpose.

Q.—Do you think mechanics would be benefited if they were instructed in the general principles underlying their trade? A.—No doubt of it. I think, too, there should be some law by which an apprentice would have to serve a certain length of time. Our really skilled mechanics are placed at a great disadvantage. Boys will come into a shop, and in a year or so they will pick up a sort of trade, and start out thinking they are skilled mechanics.

Q.—And I suppose they take any wages they can get? A.—Yes. But if the skilled men were protected by making apprentices serve a certain length of time, the same as is done everywhere else, that would be an advantage to mechanics.

By Mr. WALSH :—

Q.—Would it not also be an advantage to employers? A.—No doubt it would. We suffer a great deal from having unskilled men, men not fitted for their duties. You have got to trust certain things to them, and they learn at your expense.

Q.—If apprentices received a certificate of character and ability from their former employers, would not that be a good guarantee as to their ability? A.—Yes; that would be a good guarantee. In our business it is like this: when the busy season comes along there is a great demand for millers. An employer wants to secure first-class men; he employs the first man who comes along. Perhaps he does not know much about the business, but you have to put up with him.

By the CHAIRMAN :—

Q.—There is a great complaint made that employers rob one another of the boys who are employed. If a boy, engaged by one man, has partially learned the business, a rival employer offers him higher wages? A.—That is about the way.

Q.—How would you remedy that? You may say by indenturing apprentices, but how would that work, supposing a boy goes to another establishment? A.—You would have to get his father or guardian to go as security; that would stop the trouble.

By Mr. WALSH :—

Q.—Would there not be another guarantee? If he was indentured in one place and went away, any employer to whom he applied would ask if he was indentured? A.—Yes.

Q.—And if he could not produce his indentures the master would not give him work? A.—Yes.

Q.—Would the establishment of a Bureau of Statistics be a benefit to the manufacturers of the Dominion? A.—No doubt it would. It is by statistics and comparisons we obtain our data, and such statistics as you refer to, if they were reliable, would be of advantage. If we could not depend on the data they would not be good for anything.

MANSON CAMPBELL, Manufacturer of Fanning Mills. Chatham, called and sworn.

By Mr. FREED :—

Q.—How long have you been in business? A.—Since February, 1880, I have been running for myself.

Q.—What wages do skilled men who work for you earn? A.—From \$1.75 to \$2 a day.

Q.—And unskilled? A.—About \$1.25 a day.

Q.—Those are the wages they earn when at work? A.—Yes; and they would be for ten hours a day.

Q.—Do they get off an hour on Saturday? A.—We have given them one hour on Saturday, so they work fifty nine hours a week.

Q.—What proportion of the year would they be employed? A.—Nearly all the year. They were idle this year only one month, or two months at the outside. Last year they were idle, I think, not much more than one month; I forget the time exactly.

Q.—Taking one year with another you think your men would average more than ten months? A.—No; I do not suppose they would.

Q.—Do they average less than ten months? A.—No; about ten months.

Q.—What other work do they get employment at when the factory is closed? A.—When my factory is closed it is hard for them to get work, for it is at the wrong season.

Q.—Do they seek other employment? A.—I do not think, as a general rule, they do.

Q.—Do you think they earn sufficient money during ten months to support them the other two? A.—They could if they took sufficient care of it.

Q.—Do they not take pretty good care of it? A.—Some take very good care, and others take very poor care.

Q.—Is it not necessary for them to be very prudent to live? A.—Not what I would call very prudent.

Q.—Do any of them own the houses in which they live? A.—I think four hands I have own their houses.

Q.—Then it is possible for a man to save enough money out of his wages to buy a house? A.—Some of my men have saved enough to buy two or three houses.

Q.—They have earned this by their labor? A.—Yes; I know in one case a man has earned it by his labor.

Q.—Do you know anything about the interest men pay if they borrow money for building purposes? A.—No; I do not.

Q.—Have you any idea that the rates of interest are higher in Chatham than in other places? A.—No; I did not know they were any higher.

Q.—We have been told, for example, that a workman who borrows money to build a house is compelled to pay sometimes as high as eleven per cent. for his money. Can you speak as to that? A.—He would not be, provided the security was good.

Q.—Is your business increasing or decreasing, or is it stationary? A.—It is increasing from year to year.

Q.—Where do you find your market? A.—I find it altogether in Canada, but principally in Ontario.

Q.—Do you send your machines to the North-West? A.—Yes.

Q.—Is the trade increasing or otherwise? A.—I cannot say that it has increased for the last three years; it has been nearly the same for that time.

Q.—Are any fanning mills imported from the United States? A.—I do not think there are; if there are, there are very few.

Q.—Can you tell us the prices prevailing in the United States compared with those prevailing here? A.—I could not; I have no information whatever about their prices over there.

Q.—Can you tell us the prices prevailing now compared with those prevailing five years ago in Ontario? A.—We get a considerably less price than we did five years ago.

By the CHAIRMAN:—

Q.—For what are you now selling one of your machines? A.—Five years ago our average price per mill was \$27.00; now it is \$22.00.

By Mr. FREED:—

Q.—How will a comparison show as compared with ten years ago? A.—There will not be so much difference between ten years. I do not think the average price would be much more than \$27.00. There is not much difference between ten and five years, but the great difference has been during the last five years, since 1882.

Q.—Have you any knowledge of the price of fanning mills, say twenty-five or thirty years ago? A.—No; I have not.

Q.—Your memory cannot go back to that time? A.—No; I am only thirty-two years old.

Q.—Can you say what it was fifteen years ago? A.—Yes; I can give you a good idea.

Q.—What was the average price then? A.—Fanning mills are sold at different prices. When a man sells a fanning mill for \$30.00, even as long ago as fifteen years, he would give six months for the payment of the first \$10.00, a year for the payment of the second \$10.00, and a year for the payment of the other \$10.00.

Q.—Have the credits been shortened since then? A.—No; they are very much the same. There is a larger amount of cash got, but there are a good deal smaller profits.

Q.—Has the cost of manufacturing fanning mills been reduced? A.—Yes.

Q.—In consequence of the introduction of machinery? A.—Yes; somewhat on that account.

Q.—And for what other reasons? A.—My mill is made cheaper principally on account of the difference in construction.

Q.—Has the cost of labor been reduced? A.—No; it has not been reduced.

By the CHAIRMAN:—

Q.—Has the price of materials changed; is the price of lumber the same as it was ten years ago? A.—It is very much the same.

Q.—And what about cordwood? A.—Cordwood has increased in price. I suppose six or seven years ago softwood was worth \$1.50 a cord, and good hard \$2.75 to \$3.00, while now good hardwood is worth \$3.50 to \$4.00, and soft \$2.00.

By Mr. FREED:—

Q.—Has the cost of making fanning mills been reduced in proportion to the reduction on the selling price? A.—No; I do not think so.

Q.—Do you think there is a narrower margin of profit now than there was five years ago? A.—Yes.

Q.—And if you are doing as well as then, it is in consequence of the increase in the trade? A.—Yes; I consider I would have to make one thousand mills to obtain the profit I would have made out of seven hundred mills at that time.

Q.—Then you have more employment to give to the men? A.—Yes.

Q.—Do you give more constant employment than you did, or is it wholly an increase of hands? A.—It will just be by an increase of hands. We could never run the year round.

Q.—Has the iron work used in manufacturing mills increased considerably in cost? A.—The iron of the mill would not be increased unless you take the wire cloth into consideration. There is a great deal of wire cloth and perforated zinc used. If you take these together they form a large proportion of the cost.

Q.—Are they cheaper or dearer than they were formerly? A.—There is very little difference. Perforated zinc is a little cheaper.

Q.—Do all your men work directly for you, or do you let out the work to sub-contractors? A.—They have always worked for me up to this year, when I let the work out by the piece.

Q.—Do the men earn as much as formerly when they worked for you directly? A.—Yes; I think they do.

Q.—Have you heard any complaints from them that the foreman was making profits out of them? A.—No; not particularly.

Q.—You have considerable machinery in the shop? A.—Yes; quite a bit.

Q.—Have there been many accidents from it? A.—There have been none to speak of; last year there were none.

Q.—Was the factory inspector satisfied with the protection given to the machinery when he was around at your place? A.—I was not at home the day he was around, but he called, the foreman told me, and looked over the premises, and was satisfied with everything except one place, and that was not in regard to a machine, but because the opening in the elevator was unprotected. Since then we have put a protection around it, and if he called now he would say it was just as he wanted it. That was the only suggestion he left, and we complied with it.

By Mr. HEAKES:—

Q.—You say that the sub-contractor hires the men? A.—Yes.

Q.—Do you have the same profit on the machines as when you made them yourself? A.—Yes; just about the same.

Q.—The sub-contractor makes a profit out of the men? A.—The profit that the sub-contractor made was by looking after matters, and working the men a little harder, and looking after his own interest sharper than he would look after mine.

Q.—He makes a profit? A.—Yes.

Q.—Then there are two profits made before the laborer gets his money? A.—Yes. them to work harder? A.—That would be a hard matter to get at.

Q.—Do you mean profit sharing with the men? A.—I do not say that, but in this particular case it would be a hard matter.

Q.—Do you think the workman receives his proper proportion when there are two profits taken out of the work first? A.—I do not know. The way we came to enter into this arrangement was this: I know what the machines cost to make in 1886 when I hired the men myself, and had the same foreman. For 1887 I let the work to him for the same price as I had paid the year before.

By the CHAIRMAN:—

Q.—So you make no extra profit? A.—No; but I get the work done for precisely the same price as I paid the season before.

By Mr. HEAKES:—

Q.—Supposing you let the work to the men directly, do you not think you would get the work as well and cheaply done? A.—I should have to stay there all the time myself.

Q.—If you give the men the same interest as you give this foreman, do you not think they would work as hard? A.—I would have much trouble to do that, for I would have to deal with twenty men instead of one.

Q.—Could not the men form a co-operative society among themselves to take the work from you? A.—I do not think so; in fact, I think they could not.

Q.—You think co-operation would be a failure? A.—Yes; because I gave some work to two men this year, and they could not agree. If I gave this work to twenty men I am sure that number could not.

By Mr. FREED:—

Q.—Does this foreman make very large profits? Have you any idea what his income is? A.—No; I have not a very good idea.

Q.—Does he work himself? A.—Yes.

Q.—Do you think his wages are doubled by reason of his taking this contract? A.—I am quite sure they are not.

Q.—Would he get \$10.00 a week additional by reason of taking the contract? A.—I do not think so.

Q.—Would he get \$5.00 a week extra? A.—Probably he would.

Q.—Would that be a fair estimate, do you think? A.—Yes.

Q.—You have twenty hands employed? A.—In the summer season, when busy, we had about twenty hands, I think.

By the CHAIRMAN:—

Q.—I suppose this man who has the contract assumes a certain responsibility? A.—He is responsible for building the machines for that figure, whether they cost him more or not.

Q.—And whether the wages increase or not? A.—Yes.

By Mr. FREED:—  
Q.—Would 25 cents or 50 cents per week represent the sum the contractor makes of each man employed under him, independent of what he earns by his own labor? A.—No; I do not think as high as that.

Q.—Then this extra 25 cents or 50 cents or whatever sum it may be, is obtained, I suppose, by the men working harder than they used to work, and by good generalship? A.—He gets it from two sources, from being there all the time, and by looking sharper after the work, he taking more interest in it.

By the CHAIRMAN:—

Q.—Would you give that sub-contract to any man, unless he were a capable man, and one in whom you have every confidence? A.—No.

By Mr. FREED:—

Q.—Do the men who work for the sub-contractor give more services for the money they receive than when they were in your employ? A.—He gets more work out of them for the money than I did the year before.

By Mr. GIBSON:—

Q.—Then he works more faithfully for himself than he did for you? A.—You can put it in that way if you like.

By Mr. ARMSTRONG:—

Q.—Do you think that when this middle man was not in existence as such that the men were working pretty faithfully for you during the fifty-nine hours per week? A.—I had no reason to complain.

Q.—Supposing this man to get his profit, must they not work harder for him than they did for you, if you receive the same profit on the machines? A.—There is another way in which he has made a large profit, more than what the difference in the men's wages would come to. The machine was not the same, and by getting the casting turned out in a different shape there would not be the same amount of work to do. So there are different ways by which the foreman could save money.

Q.—Does the sub-contractor invest any money of his own in carrying on his contract? A.—No; no money whatever.

CALEB WHEELER, called and sworn.

By Mr. FREED:—

Q.—What is your business? A.—I am a cattle dealer and butcher.

Q.—How long have you been in business in Chatham? A.—I have been established myself for twenty-five years.

Q.—Had you any knowledge of it before that? A.—I am forty-five years old, and I have been at it in this town since I was ten or twelve years old.

Q.—Where do you buy your cattle principally? A.—Close to town, within a circuit of twenty miles.

Q.—Have you a local trade only, or do you ship cattle abroad? A.—We ship cattle to the old country.

Q.—How long have you been shipping cattle to the old country? A.—About five years.

Q.—And you are still in the business? A.—Perhaps we have got about enough of it?

Q.—There is not much money in it just now? A.—It is very bad.

Q.—For the local trade, does the demand remain about the same as it has been? A.—If you mean the consumption of fresh meat, it is increasing in Chatham and in the country. The farmers are giving up the use of so much pork, and are buying from the butchers. They are selling their hogs alive to the Ontario packing factories at Aylmer, Ingersoll, Toronto and other places, and buying more fresh meat; they have altered their style of living in that respect very much.

Q.—And better facilities are afforded them for getting meat? A.—Yes; they come to town oftener, and are changing their mode of living in that way.

Q.—Is the larger part of the meat which is sold on Chatham market retailed by butchers, or sold in quarters by farmers and others? A.—From November until about March, when it begins to get scarce, there is a large proportion sold by the quarter.

Q.—What is meat by the quarter worth just now—good average quality and condition? A.—Carcases, first quality, averaging 500 to 600 pounds dressed, are worth 5 cents a pound by the carcase; of course, it has to be the best to be worth that.

Q.—What would a hind quarter fetch? A.—Perhaps between 5 and 6 cents.

Q.—And a fore quarter? A.—A little over 4 cents; in fact, you might say 4 cents for the best.

Q.—Is much mutton bought by the carcass? A.—Very little; there is a little bought by the quarter; this is not much of a mutton-eating part of the country?

Q.—What would the beef which you say sells for 6, or below 6 cents for the hind quarter cost at retail at the butcher's stall? A.—Ten cents a pound for the choicest cuts.

Q.—Are you familiar with the retail trade? A.—Yes.  
Q.—Do the mechanics of Chatham get inferior and cheaper pieces of meat? A.—No, sir; they don't, for this reason—that the best is the cheapest.

Q.—And when they go to market they want the best? A.—The man who saws wood for a living in this town buys sirloin steak, and it is cheaper. Although I have been all my life in the business I cannot venture to give the reason, but perhaps it is that there are not many rich men here, and consequently the competition for the choicest cuts is not very great—that is, men who will have them at any price. We lack here customers who don't stick for prices, and that, perhaps, will make it plain to you that the choice cuts may be comparatively low, and coarse cuts about as dear as they are in Toronto, or any other city in Ontario.

Q.—When there are bargains in meat, or fowl, or vegetables, or other articles sold in the market, don't the working people, as a rule, watch out for them and snap them up? A.—To some extent they do, but peddlers and middlemen are the sharks in that business; they get the lion's share of the bargain.

Q.—How do the prices of meat by the quarter and the retail prices of meat compare with former years—say five or ten years ago, or as far back as you can remember? A.—I think they are quite as cheap now as they ever were within my recollection. Well, I would not like to say twenty-five years ago, but certainly within fifteen. Of course, twenty-five years ago it was very cheap once in a while, and strange to say, it used to be very dear once in a while in those old times. I know when I was a little boy, thirty years ago, a yoke of oxen sold for more money in the spring of the year than they will now to export to the old country, simply because there were hardly any in the country. The only time I knew beef to sell for 15 cents a pound in Chatham was twenty-five years ago, but it would only last for a week or two in the spring at the scarce time.

Q.—Wasn't that at a time when there was a great demand for cattle in the United States? A.—No; it was when feed was very scarce and there were no cattle within miles of the town.

Q.—How do the prices which you pay for cattle compare with the prices paid in former years? A.—They are cheaper now than they have been for fifteen years.

Q.—You pay less prices for them to the farmers? A.—Yes.

By the CHAIRMAN :—

Q.—Are they not superior cattle to what they were fifteen years ago? A.—Generally they are better.

By Mr. FREED :—

Q.—Can you account for the lowness of the price just now? A.—It is a general depression all over; it is caused nearly altogether by the depression in England.

Q.—The demand in England has fallen off? A.—The prices there are very miserable and the trade is very discouraging; we cannot get along with it at all; it is almost too bad to talk about. We are satisfied there is not a particle of honesty in the business at all. We have proved all that, too, but perhaps the wisest course is to stop the trade to a great extent.

Q.—Is the cheapness of cattle caused to any extent by the dryness of the season and the want of fodder? A.—No; not here. We felt it a little in August, but the rains came in nice time in the fall, and there is such an abundance of pasture here towards the fall after the crops are taken off, the soil is so rich, and the feed comes so quick, that people forget all about it and the cattle come up again.

Q.—Do you ship cattle out to any market now? A.—To Toronto and Montreal.  
 Q.—For local consumption there? A.—Yes; of course they pick some of the best for shipping.

Q.—After they leave your hands you don't know particularly what becomes of them? A.—Yes; we know they are sold to the butchers in Montreal and Toronto and the best picked out for export. We have returns from two carloads to-day.

Q.—Do you do anything in hogs? A.—Yes; we do a great business in hogs.  
 Q.—Where do you sell them? A.—A great many to Grant & Co., of Ingersoll, who pack them for the old country market. They butcher them in the old country way; they singe them. They buy all nice light hogs, such a hog as any sensible man would want for family use, not too heavy or too fat.

Q.—What are hogs fed on mostly? A.—Corn and barley.

By the CHAIRMAN:—

Q.—What weight of hogs do you speak of? A.—The perfection of a hog for the old county trade is one from 180 to 200 pounds live weight; they are all sold alive.

Q.—Not more than that? A.—No; from 180 to 200 pounds—a young hog and a nicely built one.

By Mr. FREED:—

Q.—What breed of hog seems to give the best satisfaction? A.—The Berkshire.

By the CHAIRMAN:—

Q.—About eight months old? A.—Younger than that if he has been fed well—seven or eight months.

By Mr. FREED:—

Q.—They sell them out as soon as the frost comes? A.—The trade is changing very much. It used to be that nobody sold them alive, but kept them to this time of the year feeding them as much corn as they could eat until they were very fat. This raising of live hogs is comparatively a new industry, and now they are inducing them if possible to raise more hogs and sell them before feeding them so much valuable grain. These hogs when in nice family condition are fed on grass and refuse grain, soft corn, early pease and stubble, with a little clover, slops, &c., and that makes the kind of pork which is most valuable now, so that the great rush of dressed hogs which used to come in is not so noticeable now.

Q.—Do you consider corn makes as good pork as pease? A.—Very much better—at least it is better looking.

By the CHAIRMAN:—

Q.—Is it as sweet? A.—Well, I don't know; I could not say, but I should think by cutting it that pea-fed pork is a little the juiciest. I can tell by cutting a piece whether it is good pork or not, because practice makes perfect in that respect; but for beauty, and firmness and color, and all shipping qualities after they are dressed, nothing can compare with corn.

By Mr. FREED:—

Q.—Corn is mostly grown around here for feeding to hogs? A.—Yes.

Q.—You raise more corn in Kent and Essex than in any other part of Canada?  
 A.—Yes; than in all other parts.

By the CHAIRMAN:—

Q.—They feed all portions of the corn when it is green? A.—No; they depend on pease right after harvest time and then they begin feeding corn. They set the boys at husking small quantities until the regular husking time comes round.

Q.—Do they feed the corn in the ear? A.—Almost altogether.

By Mr. FREED:—

Q.—What price do live hogs bring? A.—They are worth 5 cents a pound now.

Q.—Pound for pound, can you raise pork cheaper than beef? A.—Yes; you can, because the time comes into the calculation—eight months' time, which is very different from thirty-two months. The best cattle men sell the cattle at two years old past, but we haven't many of that kind, so it generally takes our men about a year longer than first-class men.

By Mr. WALSH:—

Q.—That would be four times as long as hogs? A.—They can have pigs coming in the spring, and by sticking the feed into them they can have them ready by the fall; frequently we have them from 200 to 250 pounds this time of the year.

By Mr. FREED:—

Q.—What do cattle on hoof bring now? A.—They vary. We are shipping a lot of cattle on Thursday; they are to be offered for sale into Toronto, and if not satisfactory they go on to Montreal. We have two markets in that way; we stop in Toronto first and then if we cannot sell there we go to Montreal and we have to sell there. This carload of cattle was fed by one of the leading farmers close to town here, and they will average between 1,300 and 1,400 pounds. They are very fine cattle; they only lacked the finish that the eastern men would give them, and they bring in 3½ cents a pound. That is the price paid.

By Mr. WALSH:—

Q.—Are there pork-packing establishments around here? Do they kill and cure hogs around here? A.—No; strange to say, it is the opinion of experts that this is not a good place for pork-packing; the establishment at Ingersoll is the closest one; it is a very large establishment.

By the CHAIRMAN:—

Q.—Do they make bacon at Ingersoll? A.—They have it arranged in this way: they have men, like ourselves, after the hogs and they look sharply after the kind we send them. Then they have butchers who cut up the hogs in such a way as to satisfy the Glasgow, London, Liverpool and Belfast markets.

By Mr. WALSH:—

Q.—Do they send bacon to Belfast now? A.—So I understand.

Q.—Are the hogs which are fed for eight months on grass and slops in the way you mentioned suitable for making good bacon? A.—I don't think there is better pork in the world.

Q.—Is it good to continue this grass-feeding up to the time they are killed? A.—We find by experience that the hog which is raised to trot round the farm, up and down the pasture-field, and at the same time is fed nicely, never suffers for water and is never fed too much, is a healthy, good-feeling fellow; he will come to town and go on board the car and travel to the slaughter house in first class condition. But a hog that has been penned up in the sty and over-fed, when he gets into the cars he lies down and you cannot get him to move, and when he gets to the slaughter house he is in bad condition.

By Mr. FREED:—

Q.—He does not enjoy his opportunities for travelling? A.—No; he does not travel with any pleasure at all.

By Mr. WALSH:—

Q.—You are in the habit of travelling about the country a great deal. What do you think is the general condition of the farmers in your part of the country? Is their condition now an improvement on what it was five, or ten, or fifteen years ago—their circumstances and their way of living? A.—Their way of living, keeping house, their modes of coming to town, their dress and the dress of their families, the furniture of their houses, and all that sort of thing, have immensely improved; there is no doubt of it at all. There is a wonderful improvement in that respect and I think there is in their wealth, too.

By the CHAIRMAN :—

Q.—Their houses are more comfortable? A.—Very much more comfortable.

Q.—And their stock is more valuable? A.—Yes; but they have not made their money in stock. This is a wheat-growing county and they are wheat crazy; they are just commencing to get over it, and they would not get over it now if they hadn't to. Wheat at 75 cents a bushel this year has done more for the stock interest than all the printing and preaching ever did before.

By Mr. ARMSTRONG :—

Q.—What is the best breed of cattle for foreign market? A.—Short-horn grades are the best.

Q.—And the easiest fed? A.—They are the best for all purposes.

By Mr. WALSH :—

Q.—As beef cattle? A.—Yes; the short-horn bull crossed on a good healthy native cow produces a splendid animal.

By Mr. FREED :—

Q.—Is this much of a dairying country? A.—Well, there are a good many dairies, but it is not carried on to so great an extent as down east. It is notoriously a bad place for butter.

Q.—What is the cause for that? A.—I think it is lack of spring water, and of nice facilities round the house for dairying, which they have down east. They do very well with cheese, but for some cause they have not had big success with butter. They are trying to establish creameries, and there is one south of us on Lake Erie.

By Mr. WALSH :—

Q.—Where there is a lack of pure spring water they have poor success in butter-making? A.—Yes; I have noticed that. I may say that the houses which farmers are building now are good houses, and they are also improving their grounds. They are also beginning to see the evil of growing grain altogether. The great drawback of the country is the growing of grain year after year. The temptation has been great to put a great number of acres of our nice level land into fall wheat, and get it off at once, but they have found their mistake in paying a great amount of money for their machinery.

Q.—Following up your idea, would be a bad thing for the makers of reapers and mowers? A.—Yes; but most of them have reapers and mowers now; and it has been a great drain to them to buy machinery. There are drills, harrows, mowing machines, cutting-boxes, threshing machines and steam engines, and the figures of the cost are something enormous. Besides that, some of the farmers are very wasteful of their machines by leaving them out in fence corners, and places of that kind.

Q.—What is the reason for the falling off in the market for export cattle? A.—The reason is this: Five or six years ago the English trade started; it started with big prices and a rush, and everybody went into the cattle trade with the expectation that good cattle, at any rate were always going to stay up at a good price. That big price means 5 cents or 5½ cents a pound in the Ontario pastures. That has tumbled down until now cattle are selling for 4 cents a pound in England, which is a tremendous difference. That has caused the present low prices.

Q.—Is there an overplus of cattle here at the present time? A.—Of our common cattle?

Q.—Yes? A.—Yes; there is, but we seem to have got over the worst of it. We send over hundreds and thousands of cattle in a year which are a disgrace to any person to send away; we send them over to Buffalo for anything we can get; they are sold there to farmers in New York State, who feed them till the next spring, turning them out on the grass, and then selling them at cities in the interior of the State, such as Syracuse, Rochester, Schenectady, and other places up and down the New York Central. There is an enormous trade done in Canada stockers in that way.

Q.—Have you any local market around here at all for cattle? Does any one ever come from Windsor to buy cattle? A.—Yes; the distillers.

Q.—Are they inclined to pay good prices? A.—Of course, they give just as little as possible, and they want the best cattle for tying-up purposes. They thoroughly understand their business; they know that if they buy a nice, thrifty two-year-old steer, and feed him on distillery slop, he will get fat quick, and of course a young, fat animal is the perfection of a killing beast now-a-days.

Q.—Is that kind of feed equal to the ordinary feed on a farm? A.—If I take an animal out of a distillery he is a splendid looking animal; I don't think any expert would wish a finer. But he is delicate; he has been fed and pampered on this warm hog stuff, so that when you put him on the cars to take him to Montreal he is like the hog I spoke of—he is no good. You must get him to market as quickly as possible. You ship him alongside of a good, squarely built, healthy, naturally developed animal, and one will arrive in England in the best shape while the other will be a regular wreck.

The Commission then adjourned, to meet at St. Thomas.

ST. THOMAS, December 13th, 1887.

Dr. JOHN B. TWEEDALE, Physician to the Board of Health at St. Thomas, called and sworn.

By Mr. FREED :—

Q.—What is the sanitary condition of St. Thomas just now? A.—It is very good at the present time.

Q.—Have you a good sewerage system? A.—We have had it extended very largely during the last few years.

Q.—Are the residences generally connected with the sewers? A.—Not to a very large extent.

Q.—Do you know what kind of plumbing is done in residences generally? A.—We have not had much complaint in regard to that matter.

Q.—Are you aware whether plumbing generally conforms to the requirements of the Ontario Act? A.—I think it does.

Q.—Are the ventilating pipes, as a rule, carried above the roof? A.—Yes.

Q.—And are the traps satisfactorily fixed, so that sewer gas is not forced up into the houses? A.—Yes.

Q.—What are the sanitary conditions of the school-houses? A.—They are very good.

Q.—Are the water-closets in the school-houses separated from them? A.—They are away from them.

Q.—Are they connected with the sewers? A.—No.

Q.—They have the old-fashioned privy vaults? A.—Yes.

Q.—What system of waterworks have they? A.—We have no system, except from the creek, but we make use of no water from there for household purposes.

Q.—You get water for household purposes from wells? A.—Yes.

Q.—Do those wells give sufficiently pure water? A.—No; not all of them.

Q.—Are they contaminated by surface water and by water which may filter through the soil? A.—They are, more or less so.

Q.—Has this impure water caused any epidemic? A.—I think not.

Q.—Or any disease which may not have risen to the dignity of an epidemic? A.—No.

Q.—Scarlet fever, for instance? A.—We have had no scarlet fever.

Q.—Or diphtheria? A.—Not to any extent; a few weeks ago it was acting as an epidemic in one locality, but I think it was caused by the effects of contagion in the school-houses; we then closed the school and stamped out the disease in the course of a few weeks.

Q.—Prompt action was taken? A.—Yes. The school-houses were closed and the Sabbath schools also, and the disease was stamped out in that section of the city.

Q.—Are you pretty well acquainted with the sanitary condition of factories in St. Thomas? A.—I have visited them all; we have no factories here to any extent.

Q.—Did you visit them in company with the provincial inspector? A.—I did not.

Q.—Do you know what the report on factories here was? A.—No; I do not know that he has visited St. Thomas.

Q.—You have not seen him? A.—We have not had any gentlemen connected with the Provincial Board in St. Thomas for two or three years.

Q.—Are you sufficiently acquainted with the factories to know whether the machinery is properly protected? A.—I would say it is not properly protected in some places.

Q.—Do you know whether any representation to that effect has been made to the proprietors? A.—I think not, that I am aware of.

Q.—You think further protection might be provided for that machinery as a precaution against accidents? A.—I do.

Q.—Would it come within your province to make such representations? A.—No.

Q.—Do you know the character of the milk sold in St. Thomas? A.—I have had no complaint in regard to it. There has not, however, been any chemical examination of it.

Q.—Is there any inspection of milk? A.—No.

Q.—Is there any inspection of food sold on the market? A.—Yes; I visit there every Saturday, more or less.

Q.—In your official capacity? A.—Yes.

Q.—Do you frequently have to condemn produce as unfit for food? A.—No; it is a very rare case, and it is now only in case of butter—in fact, I have not found any cases; one or two cases have been found by the chief of police when he has been making an inspection.

Q.—Are the persons punished in such cases? I think the butter was taken from them. There have been only one or two cases, I think, for several years.

Q.—Has there been nothing abnormal in the death rate of this city? A.—No; it is very trifling compared with what it has been in former years.

By Mr. HEAKES :—

Q.—Have you knowledge of any accidents occurring through this machinery not being properly protected? A.—I cannot say that I have, because the cases have not come under my observation when they have occurred.

Q.—Accidents have occurred? A.—Yes; I do not know the particulars, because I have not been called in professionally and have not made the necessary inquiries. In fact, it is almost out of my line of duty.

Q.—Do you know of any young children employed in factories here. A.—No.

By Mr. McLEAN :—

Q.—How far are the water-closets from the wells in the school grounds? A.—Quite a distance; I have not measured it, but it must be from 60 to 100 feet. In the case of one school the distance must be more than that.

By Mr. HEAKES :—

Q.—Do you think they are a sufficient distance to keep the water pure? A.—I do not think the water is pure.

Q.—The water from those closets travels a greater distance in some soils than in others, will it not? A.—Yes; more so in some soils than in others.

Q.—Is the soil in St. Thomas of a nature to favor that? A.—Some portion of it is. Some portion has a clay subsoil and another portion is gravel. The gravel allows the water to become more contaminated than the clay.

Q.—Has there been any case of sickness among children attending school that could be attributed to the water? A.—No; I cannot say there has been.

Q.—I suppose they do not use a sufficient quantity to injure them? A.—No.  
 The water used in the schools is not pure; I have examined some of it.  
 Q.—Does your jurisdiction extend beyond the city? A.—No.

JOHN ANDREWS, Farmer, Southwold, called and sworn.

By Mr. FREED :—

Q.—How long have you been a farmer in this district? A.—I was born in this city, and I have lived in sight of it ever since. I now live outside of it about two miles and a-half.

Q.—What are the principal crops raised in this neighborhood? A.—Fall wheat, oats, peas, corn, hay.

Q.—Do you do much in root crops? A.—Not very extensively; not so much as formerly.

Q.—Do you raise many cattle? A.—Yes.

Q.—Do you raise cattle for the neighborhood's consumption or for export? A.—Both.

Q.—Do you export very many cattle just now? A.—Not many. I never exported any myself; we sell to exporters.

Q.—Do you know whether the raising of cattle just now is profitable at the prices now ruling? A.—It is not.

Q.—What prices rule at present? A.—Stock cattle are probably not worth over from 2 cents to 2½ cents per pound; fat cattle from 3 cents to 3½ cents, and in the case of some very extra animals perhaps 4 cents.

Q.—What are the principal causes of the extremely low prices now prevailing? A.—They seem to be mainly on account of the depression in the old country markets.

Q.—Are farmers forced to part with their cattle on account of scarcity of fodder? A.—Some are; as a general rule I do not think they are.

Q.—Is the scarcity felt to any great extent in this district? A.—No; I think not.

Q.—What prices are paid for wheat here in St. Thomas? A.—The top price I last heard of was 83 cents.

Q.—That is for local consumption? A.—Chiefly so, I think; that is at the mills here, where the grain is milled.

Q.—Do you get the same prices from dealers to buy it in shipments? A.—Since the mills have been started here there has been very little bought for shipment.

Q.—The mills take nearly the whole supply? Yes.

Q.—Where do you find your market for corn? A.—We feed it, as a general thing.

Q.—To cattle or hogs? A.—To both.

Q.—Are many hogs raised here? A.—They are not very extensively raised here, though they are considerably.

Q.—Where do you find your market for hogs? A.—There is a home market here; there is a packing house at Aylmer and one at St. Thomas.

Q.—And they take pretty much the whole of the local supply? A.—Yes. Some are brought in fat, and they are taken, some to Montreal and some to Ingersoll.

Q.—I believe there is a large packing house at Ingersoll? A.—So I understand.

Q.—What prices are paid for hogs just now? A.—About 4 cents, I think, on foot.

Q.—Do you consider that hogs at 4 cents a pound are more profitable than cattle at the ruling prices? A.—I think they are.

Q.—What breeds are mostly in demand? A.—The improved Berkshire and the Suffolk—the smaller breeds. They mature more quickly.

Q.—And they are preferred by the packers? A.—Yes.

Q.—Do you raise many potatoes in this section? A.—We do not raise them very extensively.

Q.—Do you raise any for export? Not in this locality, I think.

Q.—What kind of a fruit country is this? A.—Very good.

Q.—What varieties of fruit do you raise? A.—Apples, pears and peaches; plums have failed these last two years.

Q.—Owing to what? A.—The curculio.

Q.—Cannot you protect them against that disease? A.—We have not succeeded, so far, to any extent.

By the CHAIRMAN:—

Q.—Is not that the enemy of the plum everywhere? A.—It seems to be so.

By Mr. FREED:—

Q.—What wages do you pay to farm laborers? A.—I had two hired men last summer; to one I paid \$16 a month, with board and washing, and to another \$15 a month. The latter was a young man.

Q.—Do you employ them the year round? A.—No; just six months.

Q.—Is it usual to hire them just for the summer season? A.—It has been the habit of late years, more so than formerly. I have always liked to hire my help by the year, and I would do so at any time sooner than hire them for six months.

Q.—Do the men themselves prefer to hire for only six months? A.—Yes; a great many do.

Q.—Why do they prefer it? A.—I can hardly tell you why.

Q.—Do those men get work at other places in the country? A.—No; a great many men get very little to do in winter and they expect to obtain very large wages in summer.

Q.—If you employed them by the year would you give them smaller wages? A.—Usually we give from \$130 to \$170 a year, with board and washing.

Q.—And they would rather take contracts for the summer months than take permanent places for the year round? A.—Of late years they appear to be of that opinion.

Q.—You do not employ as many men as formerly? A.—No; from the fact that I had a new farm and I was getting out the wood.

By the CHAIRMAN:—

Q.—Do farmers, as a general rule, employ as many hands as formerly? A.—No; not so many hands.

By Mr. FREED:—

Q.—Has the introduction of farm machinery made you more independent of laborers? A.—Yes.

Q.—Do you find any surplus of farm laborers on the average? A.—No; there is a scarcity of good farm laborers.

Q.—Is there much dairying done in this section of the country? A.—Considerable, but not just around here. If you go out a distance of a few miles you will find a number of cheese factories.

Q.—Any butter factories? A.—No; they have not been introduced here yet.

Q.—Are you able to speak on the relative profit on cheese and butter? A.—We always considered, when we were patronizing the factory, the price to be better from the cheese factory than would be obtained by making butter.

Q.—That is, by making butter yourself? A.—Yes.

By the CHAIRMAN:—

Q.—Are you able to tell us how it is between the cheese and butter factory system? A.—I am not prepared to speak on that point.

By Mr. FREED:—

Q.—Do cheese factories give dividends at the end of the year, or do they pay you a fixed sum for the milk? A.—It is done both ways, but as a general thing there is a dividend made when a sale is made.

- Q.—Whatever the milk has realized they pay it to the farmers? A.—Yes.
- Q.—What does that average, taking one year with another? A.—I think the last year we sent to the factory we realized 10 cents per pound, to the best of my recollection.
- Q.—How would that compare as regards a gallon of milk? A.—We reckon that it took 10 61-100ths to make one pound of cheese.
- Q.—Then a little more than one imperial gallon of milk is required for one pound of cheese. A.—Yes.
- Q.—How much has to be deducted to pay the running expenses of the factory? A.—They charge  $2\frac{1}{2}$  cents per pound for gathering and making.
- Q.—That would leave you about  $7\frac{1}{2}$  cents for your milk? A.—Most of it that year was sold for about  $12\frac{1}{2}$  cents. We got something near 10 cents a gallon, I think, for our milk.

By the CHAIRMAN:—

- Q.—Is not that a very high price? A.—Yes; that would be about six or seven years ago.
- Q.—How many months would the factory run? A.—I think that year we commenced sending about the 1st June and finished the first week in November.
- Q.—That is about six months? A.—About five months.
- Q.—Were you able to turn the milk to good account after the factory closed? A.—At that time we were raising cattle in the winter and making butter. It involves more labor, a good deal, but I did not consider it quite so profitable.
- Q.—If you were to send your milk to butter factories and got the skimmed milk back, would that prove advantageous to the farmer? A.—Yes; it would. In localities where that has been done they speak highly of the system; it is done throughout Waterloo.
- Q.—What is the price of milk in St. Thomas generally? A.—Five cents a quart, delivered. We are in the business.
- Q.—Is that all the year round? A.—Yes.
- Q.—Has it never been higher? A.—Not for any length of time during recent years.

By Mr. FREED:—

- Q.—Have you ever made any calculations as to the cost of cultivating an acre in fall wheat? A.—Not very particularly.
- Q.—Have you studied the subject, so as to be able to give us an estimate, or would your opinion be formed on purely guess work? A.—I could not give an answer without a little consideration.
- Q.—What is the paying price for wheat? A.—We can raise wheat for \$1 a bushel; that is when there is a fair crop.
- Q.—There has not been a fair crop for some time? A.—No.
- Q.—Do you still continue to raise wheat? A.—Not so extensively as formerly.
- Q.—What takes the place of it? A.—The stock business has taken the place of it to a very large extent.
- Q.—Have you ever calculated what it costs you to make one pound of beef? A.—Not very accurately.
- Q.—Farmers, as a rule, I believe, do not study their business so closely as to know what the various products cost them? A.—Not a great many of them.
- Q.—They hardly know when they are selling at a profit and when they are not doing so? A.—A great many do not. We know that wheat does not pay at present prices; that is the reason we are not growing as much as formerly.
- Q.—Do you know, or do you only think so? A.—We are satisfied as to that.

By Mr. HEAKES:—

- Q.—You spoke of the scarcity of agricultural labor. Can you give us any instance

of that scarcity? A.—There has been a great stimulus given to manufacturing, and many men have gone to the towns and cities.

Q.—Do they get better pay in town and cities? A.—I presume they think so.

Q.—Is it more steady employment? A.—The railway companies employ a great many men here, and they get steady employment. The factories, as a general thing, shut down occasionally. I do not think they have improved their condition very much by their removal; some are beginning to admit that fact.

Q.—Are there many married men among the farm laborers? A.—There are some.

Q.—As a rule, they are single men? A.—Yes.

Q.—Do you give a preference to single men on a farm? A.—We do where we have not tenement houses for married men to go into.

By the CHAIRMAN :—

Q.—If you had tenement houses would you prefer married men? A.—I would.

By Mr. HEAKES :—

Q.—Do many farmers in this neighborhood keep their hands all the year round? A.—Not a great many; it is not done so much as it ought to be.

Q.—What is the average length of time for which men are engaged in this district? A.—From three to six months.

Q.—Do you not think that has something to do with the scarcity of agricultural labor? A.—No doubt it has.

Q.—Have the farmers in this neighborhood gone into raising horses? A.—Yes; they have considerably.

Q.—What is a good horse worth here at three years old? A.—At that age they will run from \$80 to \$130.

Q.—Do you think it pays to raise horses? A.—Yes; I think so.

By Mr. ARMSTRONG :—

Q.—Do you think the general condition of the farmer has improved during the last eight, ten or twelve years? A.—I think so.

Q.—As regards dress—in artistic ideas round the house, and so on? A.—Yes; and as regards building.

Q.—Do you find many agricultural immigrants in this section? A.—A few of them; one of those I employed last summer was an immigrant.

By the CHAIRMAN :—

Q.—Does the stream of immigration come here? A.—Not a great deal.

By Mr. ARMSTRONG :—

Q.—When they come, do they generally find work? A.—Yes; they do. I was at the immigrant agent's office in Toronto last spring to procure laborers, and it was very hard to get them there. Whenever a lot came in they were taken up directly.

Q.—What is the name of the immigrant agent to whom you went in Toronto? A.—Mr. Donaldson.

By Mr. FREED :—

Q.—Do you think the farms in this neighborhood are largely mortgaged? A.—There are a good many, no doubt.

Q.—Do you know whether the mortgages have been increased or have been diminished? A.—I think they are increasing.

Q.—For what reason? A.—Very largely owing to the depression in the prices of grain from what has usually been obtained, and also in the value of stock.

By the CHAIRMAN :—

Q.—Do you think the present kind of farm work is as hard as the old variety? A.—No; I do not.

Q.—Did you or your father open out the farm? A.—We did.

Q.—You know what working was in those days? A.—I was born here in 1831, and my father moved into the woods, then two and a-half miles north, and I was reared there.

Q.—How far had you to go to the mill? A.—At that time about four miles.

Q.—You know that some had a great deal further to go? A.—Yes; and they had to travel over very bad roads to reach them.

Q.—Have you heard of any combination of farmers to raise the price of milk or any other product because they thought they did not sell at a sufficient high price? A.—There was a combination formed here in the city.

Q.—Of farmers? A.—No.

Q.—Have you ever heard of a combination made by farmers to settle the price of a product, with a view to obtain full payment for their labor? A.—No.

By Mr. ARMSTRONG:—

Q.—When laborers leave here at the close of the season do you find that they return next season? A.—Sometimes they do.

Q.—Is it a general rule or the exception? A.—It is the exception.

By the CHAIRMAN:—

Q.—Do many of them take farms for themselves afterwards? A.—Quite a number do.

Q.—They either rent or buy cheap places? A.—They rent, chiefly.

By Mr. FREED:—

Q.—Is there any grange in this section? A.—I think there is.

By the CHAIRMAN:—

Q.—Do you belong to it? A.—No.

Q.—Did you never belong to it? A.—I did for a short time, some years ago—eight or nine years ago. I could not see any benefit in it.

By Mr. FREED:—

Q.—Could you not obtain some articles cheaper through it? A.—My chief reason for leaving it was because they were sending to a distance for what they wanted, and leaving their own town, which they should patronize, and I did not believe in that. In fact, I showed them that they could get what they were buying as cheap in St. Thomas.

WILLIAM H. ANDERSON, Manufacturer of Carriage Woodwork, St. Thomas, called and sworn.

By Mr. HEAKES:—

Q.—What is your business? A.—I am a member of the firm of John Heard & Co., manufacturers of carriage woodwork.

Q.—Have you been long in business in St. Thomas? A.—We have but recently started; we have been running about three months.

Q.—How many hands do you employ? A.—Twenty-five altogether.

Q.—What do you manufacture in your particular branch of carriage woodwork? A.—Spokes, rims, shafts, poles. We propose going into wheels as soon as we can get the machinery in.

Q.—Where do you get your timber for that class of lumber? A.—Altogether in Canada.

Q.—Is it as good as American lumber? A.—I think, as a general rule, it is quite as good. While I say that, I am aware that there seem to be in some places in the United States large quantities of second growth; but I do not think it is any better than our own wood.

Q.—Is it any better? A.—I do not think so, but there is more of it. We have some as good as they have, but our supply is more limited.

Q.—Is a carriage made from Canadian wood as durable an article as if made from American wood? A.—Equally as durable.

Q.—Do you do anything in carriage hardware? A.—No; woodwork entirely.

Q.—What are the average wages of the men in your business here? A.—Taking our pay-roll, the average may be placed at \$1.25 a day. Some of our men are, however, paid very much higher wages—\$1.75.

Q.—What hours do they work? A.—Ten hours a day and six days a week.

Q.—Do you propose to keep your industry running all the year round? A.—Yes; with the exception of sometimes we will shut down for one or two weeks in the cold weather and fix up a little; in a general way, we expect to run the year round.

Q.—Then you do not intend to have a short season and afterwards shut down for three or four months? A.—No; we calculate to keep running regularly.

Q.—Do you find sufficient market for your manufactured goods? A.—Yes; we have had a sufficient market so far. Of course, we could increase our capacity with the same machinery by employing more hands, and thus turn out more work.

Q.—Where do you principally sell your goods? A.—Altogether in Canada; a great deal goes to the Maritime Provinces—in fact, the principal part. Perhaps I am wrong in saying that, for as much goes to Ontario. We sell our goods in all the Provinces, more or less.

Q. From your knowledge of the business, do you think the Canadian manufacturers are justified in going to the United States for the same class of machinery and work as are produced here; that is, those who put the buggies together? A.—No; except in this way: occasionally there are job lots sold in the States at cheap rates. I think, taking it on an average, anyone can purchase the similar article in quality here as in the United States. The prices are low.

Q.—It is the general rule I want to get at? A.—I have had several conversations with the buyer of one of the largest firms in Detroit. The last conversation I had with him was a year ago, and on making a comparison of prices, he agreed that our prices were a little lower than those of the United States. He said their firm was paying as much money for their goods as we were selling them for. I imagine our prices are about the same as the American prices for the same grade.

Q.—We have been told that American goods are much better than Canadian? A.—There are certain lines of goods in which they excel, but the material in the American goods is not so good as ours—that is, in oak stuff. I am comparing the quality of goods there and here.

Q.—Do you employ boys in your shop? A.—We employ boys, perhaps sixteen years old or something like that. We can only employ a few.

Q.—Are they apprentices? A.—No.

Q.—They are simply helpers? A.—Yes.

Q.—Have they any opportunity of learning the trade? A.—No; it is no trade to them, farther than their working at a job, and when they become experienced at it they are able to undertake heavier jobs the same as men do. It can hardly be called a trade, because we take men who have not been at it before and put them to work not at full wages, but when they can earn full wages we give them.

Q.—Is there a great deal of work turned out by machinery in the trade? A.—It is entirely so.

Q.—I suppose it has come into competition very largely with hand-work? A.—So far as our trade is concerned, it could not be done otherwise. Spokes were formerly made by hand, but it was an everlasting job; the only successful way of conducting the trade is with the aid of machinery.

By the CHAIRMAN:—

Q.—Is it very expensive work if done by hand? A.—It could hardly be done by hand and carry on the trade. Rims used to be sawn out and put in short pieces instead of being bent in one piece.

By Mr. HEAKES :—

Q.—Do you think the introduction of machinery in the carriage business has cheapened production to the consumer? A.—Yes; decidedly; that is to say, that a carriage of the same quality brought a much higher price before the introduction of machinery.

Q.—Do you think the cheapening of production by machinery has lowered the cost of labor in building carriages? A.—No; I think men of the same capacity get as good wages as they did before.

Q.—Do you think the workingman, taking into account the considerable advantages arising from the introduction of machinery, receive a proper share of that advantage in his wages? A.—Of course that is a question that requires a good deal of consideration; I am not prepared to speak positively with regard to it. The cost of the whole article is much cheapened by the use of machinery, and I think the workingman gets per day as much as he did before, when he worked by hand and worked the same number of hours.

Q.—Then he practically reaps no benefit from the introduction of machinery? A.—I do not know that he does. I am not prepared to speak definitely on that point. It might be questionable whether he does or not.

Q.—Do you think the introduction of machinery has made more work for the men? A.—It has diverted labor into different channels. There are not so many hands required in carriage shops now as formerly.

Q.—There are not so many employed? A.—No; not exactly in carriage shops, but they are employed somewhere else in making machinery to be used in producing carriages and other products.

By Mr. ARMSTRONG :—

Q.—Do your men live comfortably and save money? A.—Yes; a man who is sober and steady can live comfortably.

Q.—Are your men married men? A.—Most of them are married—the majority of them.

Q.—What rent would a mechanic with a family of four or five, or say three, pay for a house in a respectable locality in this city? A.—The rent men pay is from \$5 to \$8 a month; I think \$5 is the lowest.

Q.—What is the average amount of wages in your shop? A.—One dollar and twenty-five cents a day. The rent the men pay is, of course, in proportion to the wages they get.

Q.—Do you think a man who has a family can pay as much money on \$1.25 a day? A.—He cannot pay much money.

Q.—Do you think the purchasing power of wages is as great to-day as it was five years ago in this locality? A.—I could not say.

By the CHAIRMAN :—

Q.—Have you been here five years? A.—No; only a few months.

By Mr. FREED :—

Q.—Was your business in existence before you came here? A.—Yes. We carried it on at Amherstburg for several years. I was there for six years, and my partners were there for nine years, and they were in business at Lambeth for several years before that time. They were burnt out there.

Q.—Then it is a purely Canadian industry? A.—Yes.

Q.—Does this average wage of \$1.25 a day include the boys employed? A.—It includes every one employed. The men, of course, average more.

Q.—What is the highest pay to a skilled mechanic who is not a foreman? A.—We have men to whom we paid \$1.75 a day, who take the place of foremen, but we ourselves are merely the foremen and, take charge of the establishment ourselves.

Q.—What is the lowest wages you pay to an unskilled man? A.—A dollar a day.

Q.—Boys still less? A.—Boys, of course, are less, according to what they may be doing.

Q.—Are there more waggons used than formerly? A.—I believe so.  
 Q.—Do you think that considering the machinery actually employed in making carriages and the men employed in the manufacture of machinery used in the making of carriages, there are fewer or more men employed than there were before machinery was introduced into carriage manufacturing? A.—That is something I could hardly speak definitely on; I could not say.

By the CHAIRMAN :—

Q.—We had a witness before us the other day who says that Government should pass a law to prohibit the manufacture of any more machinery for twenty-five years. How would it have been if such a law had been passed twenty-five years ago? A.—It would have been a bad thing for the country, I think.

Q.—Where would have been our manufactories if there had been no machinery used except that which was in use twenty-five years ago? A.—It would have been very detrimental to our manufactures.

Q.—Would there have been any manufactures? A.—I do not know how the manufacturers could have worked; they could not have worked without machines.

Q.—What was the experience of the people at large in regard to carriage or other manufactured products; have they been increased in price? A.—The cost of carriages, years ago, when they were principally made by hand, was at least 20 per cent. more, and I think considerably more than that, than they are to-day of the same class.

Q.—What would a reaper cost; were there any reapers twenty-five years ago? A.—That is out of my line; I could not say how long they have been manufactured.

Q.—You think that other manufactures produced by machinery during the last twenty-five years have been reduced in cost from 25 to 50 per cent? A.—If there were no machinery everything would be increased in that proportion; carriages would be, and I think they could be made by hand as much as anything else.

Q.—You think manufactures are from 25 to 50 per cent. cheaper? A.—Yes; the production of manufactures by hand would certainly increase the cost that much.

Q.—So that if machinery were abandoned the country would be paying a tax of from 25 to 50 per cent. on the cost of these products? A.—Yes.

By Mr. ARMSTRONG :—

Q.—Where there is so much machinery used in the carriage trade, do you not think the shortening of the hours would employ the surplus labor, or do you approve of the shortening of the hours of labor when machinery has so largely taken the place of manual labor? A.—No; I do not see there would be much advantage in it. I think ten hours are not too long. I have noticed that men with shorter hours invariably waste the balance of the time.

Q.—Is that your experience? A.—I have noticed that is my experience.

Q.—When a man works ten hours a day what time has he to devote to his family to take them out for an airing and enjoyment, and to do the necessary jobs for himself? A.—The other two hours, I think, would hardly answer that purpose, a day in the week or half a day would be much better, if either was to be done.

Q.—Do your men get half a day a week when they ask for it? A.—They lose their own time.

Q.—You dock it out of their wages? A.—Yes; certainly.

Q.—Then the workingman goes out at his own expense? A.—Yes.

By Mr. WALSH :—

Q.—Are more carriages made now than there were ten or fifteen years ago? A.—I think there are a great many more.

Q.—The introduction of machinery has in some measure caused that increase? A.—Of course, the demand first of all caused the introduction of the machinery, but the work could not be done without the machinery.

Q.—Do you think that the increased number of carriages made at the present time is anything equal to the amount of labor that the machine takes from the men?

The proportion of waggons made now, you say, is more than before; would that proportion be equal to the amount of work the machinery takes from the men, if the waggons were made by hand? A.—I cannot understand the question. Do you mean that if machinery was not employed, in order to make the same number of carriages more men would be required than when made by machinery.

By the CHAIRMAN :—

Q.—The commissioner wants to know whether, supposing there were no improvements in machinery, more men would be employed to-day? A.—Yes; to make the same number of carriages.

Q.—Would the same number of carriages be made if no machinery had been introduced? A.—I do not know.

Q.—The men are paid the same wages at the present time as they were paid before? A.—About the same.

Q.—They get the same work as they did before? A.—They are employed as regularly.

Q.—Does an employer get more for his part of the labor now than he would if men were employed in place of using machinery. Does he receive more profits by using machinery now than before there was any used? A.—Do you refer to the manufacture of carriages? Our business is only connected with the woodwork, and that in a crude state, which we sell to dealers, and it goes into the manufacture of the carriages.

Q.—From what you have to do with the woodwork do you think employers make any more, say out of the woodwork, than they would if all the work was done by hand? A.—They do not make any more per cent. out of the article, but there is much more manufactured in each establishment, and consequently the aggregate product might be better than in establishments of the same kind working by hand. In our particular line it is somewhat problematical, because the work is never done by hand; and when you come to consider the question of the manufacture of carriages in carriage shops that is out of my line, and I cannot speak definitely in regard to it.

By Mr. ARMSTRONG :—

Q.—The profits on each body come in more frequently with the aid of machinery? A.—We do not make bodies.

Q.—Do not the profits come in more frequently when the different parts are made by machinery? A.—They would certainly do so.

Q.—Then the manufacturer is better off to-day, on the whole, than he was before machinery came into use? A.—His profits, of course, are finer on individual things, yet putting the whole together he is probably as well off. Certainly, it is somewhat problematical, because I am not sufficiently conversant with the carriage trade, that is as regards finished carriages.

JOHN HEARD, Carriage Woodwork Manufacturer, St. Thomas, called and sworn.

By the CHAIRMAN :—

Q.—Have you anything to add to what has been stated by the last witness; do you agree with what has been said by your partner? A.—Yes.

By Mr. FREED :—

Q.—At the risk of a little repetition I would like to ask your opinion respecting Canadian wood, hickory especially, for carriage wood as compared with that imported from the United States? A.—I think it is equally as good. I have seen considerable from the other side and our Canadian wood is as good, and I have had to do with it for twenty years.

Q.—Do you find any difficulty in selling your woodwork? A.—Sometimes there is a drug in the market, but it is not on account of the wood.

Q.—You do not think you are placed at any disadvantage in that respect as compared with the manufacturers who use wood from the other side? A.—Sometimes it might be a little more expensive in getting it here; I do not know about it.

Q.—Is it the material here that is more expensive than that brought from the other side? A.—The material here.

Q.—Do carriage builders ever ask you where your wood comes from? A.—We do not deal with carriage makers generally; it is the hardware men we deal with.

Q.—Do they know when they pick up a hub or a spoke whether it is Canadian wood or wood from the other side? A.—I do not think they could tell; I could not tell.

By Mr. HEAKES:—

Q.—As hickory grows and increases in size does it become tougher or does it deteriorate? A.—It deteriorates somewhat after it gets a certain size.

Q.—You prefer the small timber? A.—The small, young timber.

Q.—Is there much of that in this country now? A.—We get all we need at present.

By Mr. FREED:—

Q.—Do you get all the oak you need of first class quality? A.—It is getting very scarce now; we have to pay a higher price for it.

Q.—Is it the same whether you import it or use Canadian oak? A.—It is Canadian oak we are using.

By the CHAIRMAN:—

Q.—How far have you to go for it? A.—About sixty miles; from that distance to 100 miles.

Q.—There is plenty of that around here? A.—Yes.

Q.—A first-class quality? A.—Yes; I should judge so; but we use soft elm.

Q.—That is very tough? A.—Yes; it is very tough.

By Mr. GIBSON:—

Q.—Do your men work when they are working as if they took a pride in what they were doing, or do they work just to put in the day? A.—I have no fault to find with the men; they generally work pretty faithfully.

Q.—They generally work as if they took a pride in it? A.—I think they are satisfied with the work.

Q.—Do you think that education would assist in inculcating a love of the trade? A.—I do not know.

Q.—You never thought of it? A.—No.

By the CHAIRMAN:—

Q.—Did not men work as well before there were public schools as they do to day, and did they not do as much? A.—I think they worked pretty nearly as well; yes; I think they are getting a little careless now.

By Mr. FREED:—

Q.—Did you ever notice whether the men work more energetically, say in the first hour in the morning, between seven and eight o'clock, or the hour between five and six in the evening? A.—I have never seen any difference in that respect.

Q.—They work just as well during the last hour of the day as during the first? A.—Sometimes I think they work better, especially if it is a little cold in the morning.

By the CHAIRMAN:—

Q.—It is not hard work? A.—It is not.

By Mr. FREED:—

Q.—The men are not bodily fatigued when they quit work? A.—No.

Q.—Do you think ten hours is too long for them to work? A.—I do not think it is.

By Mr. ARMSTRONG :—

Q.—Do you not think the men should have a little time to improve their mental faculties? A.—Probably it would be better for them; I do not know whether it would benefit some of them; I do not think it would. If they have any time, I do not think they improve themselves much.

Q.—Do you not think that after working ten hours a man is more liable to take a glass of beer than if he were working nine hours, and had a little elasticity left in his legs? A.—I do not know.

By Mr. CARSON :—

Q.—Do you not think the glass of beer would give him elasticity in his legs? A.—I do not know.

By Mr. WALSH :—

Q.—Have you been a long time at the business? A.—Twenty years in the manufacturing business.

Q.—Are the men at the present time equal in all respects to the men you knew twenty years ago; are the workmen improving? A.—We have some very good hands and some who do not do very well.

Q.—Do you think that if the boys were indentured, in the event of their showing an aptitude for the trade, it would be in the interest of the boys and of the employers? A.—Yes.

Q.—Do you think the system is a good one or bad one? A.—I think if it was carried out it would be a good one.

Q.—Perhaps in our days, when education is advancing and all methods of labor are being improved, boys need not serve so long at their trade; but would it not give them a better standing before the community or where they were known, if they served an apprenticeship and afterwards obtained a certificate from their employer; would not that be an improvement to the trade? A.—I think it would be. I think the way it is now boys only get half the knowledge of the trade; they never get it fully, for they do not put in full time.

Q.—Then you really think that if the boys were regularly indentured—I do not mean every boy, but those who, after a time, show an aptitude for the trade—it would be better? A.—I think it would be better for them.

Q.—Is a man, after ten hours' work now, when he has machinery to help him in doing the heavy work of a trade, as tired as he was working the same number of hours twenty years ago? A.—The work is easier on the men.

\* \* \*  
Conductor on Grand Trunk Railway, called and sworn.

By Mr. FREED :—

Q.—You are employed as a railway conductor? A.—Yes.

Q.—What hours are conductors required to work? A.—The system we work on in train is first in and first out. That applies to any railway in Canada—I can speak for both roads represented by our association—that through trip conductors work first in and first out. They have to stand out on duty until they have finished that trip.

Q.—How long do the trips last? A.—They are liable to last any where from six to twelve hours as a usual trip. In case of delay or accident it would be longer.

Q.—What would be considered an average trip? A.—An average trip, taking the two roads into consideration, would be about ten hours.

Q.—After one of those trips, how long on an average would you lie off before being called on again? A.—The company will give you the right to book for eight hours' rest. That is the average on our road. On the Grand Trunk we have a right to book for twelve hours; but if you do so they think you are overdoing it. On the Michigan Central eight hours is the average rest allowed.

Q.—Do you mean to say that your average employment would be ten hours on and eight hours off duty? A.—It would be very hard to get an average in that way for on the Grand Trunk, especially since the amalgamation, we are running in such a shape that it is sometimes necessary to keep on running, and then we have a long rest. It depends on the state of the freight traffic. If there is plenty of freight we run hard; if the freight is slack we lie in here perhaps three days. So it would be hard to say that we are on duty ten hours and off duty eight hours, because sometimes we have ten or twenty hours' work on the round trip and then have three days' rest. We have to do that, not that we want to do it, owing to the state of the freight traffic.

Q.—What wages are paid to freight conductors? A.—On the Grand Trunk they have a classification of pay. When a man first starts running as a conductor he receives \$1.75 per day, that is for the first year; the second, third and fourth year he receives \$1.90 a day, and after that \$2.15, which is continued so long as he runs a freight train.

Q.—When he is promoted to be a passenger conductor, what will he receive? A.—When he is promoted to be a passenger conductor he gets into a shape that it would be pretty hard for me to tell you what he gets. Since the amalgamation the company have never made any standard rate of pay, and those conductors are liable for a passenger conductor. They are liable to go from a freight, where they might make by hard running \$80, \$85, or \$90 per month to a run on which they would not make more than \$55. Such is the state of affairs on the Grand Trunk. But speaking for the loop line division here, I may say that when a man goes on a mixed run, which is the next step in promotion, he receives \$2.15 per day, and if it is purely passenger and no freight, that is not a mixed train, he gets \$2.30 a day. After that a passenger conductor gets \$2.50 a day, which is the highest rate paid on the Great Western division between Buffalo and Windsor.

Q.—Has a freight conductor the responsibility of picking up cars at way stations? A.—Yes.

Q.—If he makes a mistake what is the penalty? A.—That altogether rests in the hands of the superintendent. He may lay you off for a month; he may fine you, or inflict what other penalty he sees fit.

Q.—If it is a serious offence he discharges you? A.—Yes.

Q.—Are conductors ever employed such long hours that they lack proper rest and are too fatigued to attend to their duties properly? A.—Very often.

Q.—Do mistakes happen in consequence of that? A.—I cannot say that I could prove it from the record, but I believe accidents could be traced to that cause. I would like, in connection with this matter, to make this statement: Owing to the low rate of pay here, and owing to the fact that if we get the right kind of trips and work sufficiently long, we may make a very fair rate of wages—there has been \$100 per month, losing rest—a man has to make 45 or 50 days in order to get \$100 per month, and to do this he has to run in and out. He may in that time not have time to get sufficient sleep, or barely so, and I do not think it is right that a conductor should run that time, but it has been done, and so far as I know no accidents has been traced to conductors having run so many hours and lost sleep. But he has made that big pay by running without taking what a man who is not accustomed to that kind of life would consider a proper amount of sleep.

Q.—Do conductors ever snatch a little sleep on the train? A.—That is rather a leading question. Yes; they do.

Q.—That is when they are overworked? A.—There are cases of it. You see that a train is sometimes put on a side track where everything is safe, and you may lie there one, two, or three hours, waiting for another train to pass. In that time a conductor may snatch a little sleep, which will refresh him.

By Mr. WALSH :—

Q.—Without incurring danger? A.—Yes.

By Mr. FREED :—

Q.—If a conductor is discharged for any oversight or neglect, is it easy for him to obtain employment with other companies? A.—A good deal depends on the state of feeling of your superintendent. If the superintendent himself considers that you have been a little hardly dealt with, and will furnish you with a recommendation, it may not be hard. But at present we have no way of going to another road and claiming a similar position to that we left.

Q.—What is the ordinary crew of a freight train? A.—Two brakemen and one conductor.

Q.—And on the locomotive? A.—Driver and fireman.

Q.—How many loaded cars are hauled, as a rule, over the air line? A.—Twenty-eight loaded cars is our load; that is according to the schedules.

Q.—Within what distance can you bring up a train? A.—That will depend entirely upon where you are.

Q.—Say on the level? A.—A good brakeman will stop a train in five train lengths—about half a mile.

Q.—When you are running and everything is straight the conductor and brakeman are in the caboose? A.—One is on the engine and one is in the caboose with the conductor.

Q.—And if danger is seen at an unexpected place can they jump promptly to their work? A.—They are supposed to do.

Q.—The brakeman in the caboose has to run out and climb up to the roof before he can settle the brake? A.—Yes.

Q.—And run from car to car along the roof? A.—Yes.

Q.—How does the engineer signal the conductor when he wants to signal him to put brakes on? A.—By shutting off steam and by whistling. Sometimes shutting off steam will not attract your attention.

Q.—Are there any bell cords on freight trains? A.—Yes; on the Grand Trunk all the cars have bell cords.

Q.—That is to enable the conductor to signal the engineer? A.—Yes.

Q.—That is an improvement on the old plan? A.—I do not consider it so.

Q.—Is it not necessary? A.—The bell cord is a thing which is unworkable.

Q.—Why? A.—It is impossible, as you will plainly see, with the deck of one freight car lower than another, with the running boards at different elevations, to get a bell cord to work round so many corners. It will not ring the gong with that length of pull. It is so liable to stick that it cannot be depended on. It is the last thing I would resort to if I were trying to stop my driver.

By Mr. McLEAN :—

Q.—How long does the Grand Trunk make those bell cords last? Does the company have a specified time which a bell cord has to last? A.—Not to my knowledge. I have never had any difficulty in getting my supply renewed.

By Mr. FREED :—

Q.—Suppose there was no bell cord, how would you signal the engineer? A.—I would send my brakeman on the top and set brakes in the rear. On the old Great Western system, where I believe we carried no bell cords, our system of stopping in an emergency was to set the brake until we attracted the driver's attention. He would feel the increased weight the engine was pulling, and he would look round to see what was the matter, and while the brakeman was up setting brakes the conductor would be giving the signal to his driver.

Q.—Do those bell cords have any other ill effect than that of being unworkable? A.—I would like to leave that question to the brakemen. I think I have heard them say that they have caused loss of life.

By Mr. HEAKES :—

Q.—Is there any such thing as black-listing on the railways? A.—I believe there is.

Q.—Have you heard of men being black-listed from one road to another? A.—Yes, I have heard of it.

Q.—Are the men fined frequently for offences? A.—Quite frequently.

Q.—Are those fines imposed for trivial offences? A.—Yes; very trivial in <sup>a</sup> great many cases.

Q.—Do the men lose much of their pay through that system of fining? A.—It altogether depends on the class of man he is, and on the luck he has.

Q.—It depends a good deal on the luck? A.—Yes; on what we term luck.

Q.—Have you known of cases where wages have been affected to any extent by fines? A.—Yes; I can name my own case.

Q.—What proportion of a month's pay would a man lose by fines before he was suspended? A.—There is no rule governing it on any road I know of. It is altogether at the option of the superintendent.

Q.—Is there any law in this country governing running boards on cars? A.—Not to my knowledge.

Q.—Do they vary much? A.—Yes.

Q.—How wide would you consider the running board ought to be for safety? A.—At least 3 feet.

Q.—What is the usual width of them? A.—There is no usual width; they run any where from 4 to 6 inches and up to 3 feet.

Q.—Are accidents frequently caused through those running boards? A.—They are.

Q.—Is there any protection for brakemen on the roof of a car? A.—None whatever.

Q.—Have brakemen ever asked for any protection? A.—I believe they have taken steps to do so.

Q.—Do the running boards project at the ends of the cars? A.—Only in some cases.

Q.—I suppose all roads are not alike in that respect? A.—No. I would like to say that the new cars on all the roads are having extending running boards.

Q.—Are the running boards on the new cars wider than on the old ones? A.—Yes.

Q.—Are they of uniform width? A.—Pretty nearly so; they are a very good width.

By the CHAIRMAN :—

Q.—What width? A.—They run about an average of 3 feet.

By Mr. HEAKES :—

Q.—Is it the purpose of the railways in Ontario to adopt that wide running board? A.—Not to my knowledge.

Q.—Have they taken steps to do it? A.—I have not heard anything of it if they have. I do not think that they have taken any steps to make a uniform standing.

Q.—You say that loss of life has frequently taken place from the narrow width of the running boards? A.—Yes; I think so. It is one of the principal dangers we have—the narrow running board and the absence of protection on the top of these cars.

Q.—Do brakemen more frequently get injured by falling between the cars or off the sides? A.—I can hardly tell; they both happen too frequently.

Q.—In case of accidents of that kind, and the brakeman losing his life, or being injured from falling between the cars or off the cars, has the brakeman any claim against the company? A.—In regard to the Grand Trunk, if the Employers' Liability Bill had gone into effect as regards that company, they would have a claim, I believe. But the Ontario Legislature saw fit to exempt the Grand Trunk, owing to the fact of their having already an insurance and provident society in existence, which they claimed were sufficient to meet all cases of disability or death of the men in the employ of the company, although the men themselves pay the fees which support the society.

Q.—Does this law apply to the Michigan Central in Canada? A.—I could hardly say. I have a copy of the Bill here.

By Mr. McLEAN:—

Q.—Is there much loss of life caused by the uneven height of the cars? A.—It is a source of danger. I cannot say whether there is much loss of life entirely due to that one feature, but certainly it increases the danger, of having to leap from one height to another on the slippery deck of a car.

By Mr. HEAKES:—

Q.—Do you think the men are sufficiently protected by their benefit society? A.—So far as I am able to judge, decidedly not.

Q.—I suppose it is a voluntary act on their part whether they connect themselves with the society or not? A.—No; it is compulsory.

Q.—Do they pay assessments, or are they charged so much per month? A.—So much is kept out of their pay each month.

Q.—There is no option in the matter? A.—There is this option——

Q.—Explain it. A.—The option is this: At the time of the amalgamation of the Great Western and Grand Trunk Railways it was optional with the employés whether they would connect themselves with the society or not; but those who have entered the service of the company since that date, or any one who has connected himself with that society, cannot leave it but is compelled to stick to it.

By the CHAIRMAN:—I observe by the Act that the clause applies to every company that will do what the Grand Trunk has done in regard to a provident or insurance society. (Clause read):—

“It is hereby enacted that where any railway company or employer has, in accordance with the provisions of any Act of the Parliament of Canada or otherwise, established an insurance and provident society or association, of which at least two-thirds of the employés of said company or employer shall have become members, and which society or association shall provide for its members aid in case of sickness, accident or death, to at least the extent and amount provided and secured in that respect by the Insurance and Provident Society or Association now established by the Grand Trunk Railway Company of Canada, in accordance with the provisions of certain Acts of the Parliaments of Canada, then and in every such case this Act shall not, until after 1st April, 1888, apply to any such railway company or employer.”

WITNESS:—The fact is the Grand Trunk is the only company which had at that time such a society, and it has been in existence for many years. A select committee of the Local Legislature considered the question last session, and debated whether the Grand Trunk should be permanently exempted or not. Since then each of the members has had sent him a series of questions by the committee, asking whether he would approve of the exemption or not.

By Mr. McLEAN:—

Q.—Have you received with that circular any notice from the Grand Trunk, or do you know of any having been received? A.—There are notices publicly posted wherever employés are likely to receive those questions from the Local Legislature. They contain a statement of Mr. Hickson's opinion, that in case the employés decided to answer those questions against the views of the Grand Trunk (that is the substance of the matter, but I can no doubt find a copy of the circular for the information of the Commission) he believes, so far as he knows, that the directors will consider it to be against their interest to continue the provident society, thus making a direct threat to the employés that if they signed those questions asked by the Government in a manner opposed to the Grand Trunk the men must abide by their actions and the providence society may be discontinued. In that case the men who belonged to the society for a large number of years will have paid in their money for nothing, that is to the insurance fund at least, because when they paid in they looked for some benefit, and if the Society were dropped their money would go to nothing.

By Mr. HEAKES :—

Q.—Are the men compelled to sign any papers absolving the company from all responsibility in case of accident? A.—They are.

Q.—The men who are in the employment of the company sign such a contract? A.—They did.

Q.—That was one of the conditions of service? A.—I could not say as to that. When the amalgamation took place there was a little contract provided which each man had to sign. There was a great deal of feeling among employes at the time. We took the opinion of men who were supposed to know, and we signed it under protest.

Q.—Will the Grand Trunk employ men who will not sign the contract?

The CHAIRMAN :—The law has provided for that. There must be some other consideration apart from the engagement. The Act says (clause read) : “No contract or agreement made or entered into by a workman shall be a bar or constitute any defence to an action for the recovery under this Act of compensation for any injury, (1) Unless for such workmen entering into or making such contract or agreement there was other consideration than that of his being taken into or continued in the employment of the defendant; nor (2) unless such other consideration was, in the opinion of the court or judge before whom such action was tried, ample and adequate; nor (3) unless in the opinion of said court or judge such contract or agreement, in view of such other consideration, was not on the part of the workmen improvident, but was just and reasonable.” Under the law as it stands now a man may sign that engagement and it amounts to nothing.

By Mr. HEAKES :—

Q.—For what amount does the Grand Trunk insure conductors' lives? A.—The scheme of insurance is arranged in six classes, known as A, B, C, D, E, F. The highest amount an employe is supposed to insure for is \$2,000; class B, \$1,500; class C, \$1,000; class D, \$750; class E, \$500; class F, \$250.

Q.—Is it optional with you what class you insure in? A.—It is.

By Mr. ARMSTRONG :—

Q.—Are there many covered bridges on the road? A.—Overhead bridges, you mean?—yes.

Q.—Is there a law in existence governing their height? A.—Not that I am aware of.

Q.—Have you heard of any accident within the last year from men being struck by the bridges? A.—No; I cannot say that I have.

Q.—Are any offences ever overlooked by the Grand Trunk? A.—No; I do not think they are.

Q.—Do the men prefer that the portion of the Employers' Liability Act should be applied to the Grand Trunk Company, or that they should be exempted on account of the provident society? A.—They would prefer to take the Act pure and simple.

Q.—When these notices were sent round by the Government, were they sent to the private addresses of the men, or to their postoffices or shops? A.—Speaking of myself, my letters have always been addressed to me, care of Grand Trunk. In coming through Stratford, last Sunday evening, I saw a pile of them in the company's telegraph office.

Q.—What were the directions on them? Conductor So-and-So, Grand Trunk Railway, Stratford.

By the CHAIRMAN :—

Q.—Do you know if under the terms of this benefit society of the Grand Trunk Railway a man would get an allowance, even if the accident were his own fault? A.—Yes; in any case of injury.

Q.—Whether it was his own fault or not? A.—Yes; in all cases, except diseases from immoral causes.

By Mr. ARMSTRONG:—

Q.—Do you know any men who will refrain from signing those Government questions, through fear of the Company? A.—Yes; I believe, I do.

By Mr. McLEAN:—

Q.—What is the limit of age, at which a man can become a member of the provident association? A.—It is limited to forty years, I think.

Q.—They must be sound of limb? A.—Yes; they must pass medical examination.

Q.—You cannot work for the company unless you belong to this provident association? A.—No. I would like to qualify that remark, by saying that you are not considered on the permanent staff unless you are a member of it. Men have been employed although they were not members of the provident society, but they are on what is called the temporary staff; they are not permanent members of the staff, and cannot call themselves on the line of promotion.

Q.—Are they as competent as the men otherwise engaged in similar work? A.—To the best of my knowledge they are. The only case that has come to my knowledge is that of a porter; he is a perfectly reliable man.

By the CHAIRMAN:—

Q.—You consider there is a difference between temporary and permanent employes? A.—Yes.

By Mr. McLEAN:—

Q.—Does this temporary hand get as much wages? A.—Yes; as other men do in the same class of work.

By Mr. ARMSTRONG:—

Q.—You said that the company had a black-list? A.—That is not the way the question was put. I said I had heard of such a thing as the black-list.

Q.—Have you heard that they publish a black-list every month? A.—If you term it so.

Q.—Have you seen it? A.—The company publish month by month a list of punishments. It is put out in this shape: it is a double sheet; on the front sheet there is a list of renewables and appointments, with a few instructions to agents and servants of the company; on the other sheet there is a list of offences and punishments attached. They term it the punishment sheet.

By Mr. HEAKES:—

Q.—What do they charge for the provident society? A.—It is 50 cents per month in the provident society. It is distinct from the insurance society. The insurance levy is according to the class you are in and the amount for which you are insured. The amounts to be paid for the provident society are: 40 cents per month for the ordinary class; for the hazardous, which includes conductors, firemen, brakemen and so on, the fee is 50 cents per month.

Q.—What percentage do they charge for the insurance? Q.—The \$250 class pay 5 cents a call.

By the CHAIRMAN:—

Q.—Have you compared the charges with those of other insurance companies? A.—No; I cannot say that I have.

By Mr. McLEAN:—

Q.—Supposing you were to go to work for the Grand Trunk in the middle of the month, as, for example, in the middle of this month, when would you get your pay? A.—In the middle of next month. The date of pay ranges over the system from the 10th to the 18th.

By Mr. HEAKES:—

Q.—When a death occurs, say in the \$250 class, how many men will be assessed? A.—Everyone.

Q.—Every man on the road? A.—Every man in the insurance society. Suppose a death occurs in class F, \$250, each man on the fund will pay 5 cents.

Q.—How many men would be paying that 5 cents? A.—The whole number. That is the lowest fee they can pay.

Q.—Suppose a death occurs in class A, what would those insured in class F pay? A.—Five cents.

By the CHAIRMAN:—

Q.—Sometimes, I suppose, there is a surplus? A.—I am not sure of that; I believe there is.

By Mr. ARMSTRONG:—

Q.—Do you know what becomes of the money derived from fines? A.—I have not the slightest idea.

Q.—Are the conductors formed into a brotherhood of their own? A.—Yes.

Q.—And it has a life insurance plan? A.—Yes.

Q.—Are the fees paid up promptly? A.—They have to be.

Q.—They prefer that system to any other? A.—It speaks for itself. I joined it, notwithstanding that I am compelled to join the other. We thus have our own insurance, and we believe it to be the best plan.

Q.—Do they consider it one of the best systems of life insurance? A.—We are proud of it, and we think it the best.

By Mr. FREED:—

Q.—What is the largest fine you know of as having been imposed on any employé of the company—that is, a money fine? A.—I know of one at \$60.

Q.—What was the salary of that man? A.—He was an engine-driver.

Q.—Are any double-headed trains run on this road? A.—Occasionally.

Q.—Not as a rule? A.—No; they have not been latterly.

Q.—What offence had this man committed, to be fined \$60? A.—I forget; it was something connected with a breakage on his engine.

Q.—What class of offences are generally punished by fine? A.—There is no class. The question of punishment on the Grand Trunk is entirely at the option of the superintendent. I would like to explain how they deal with serious offences. In case of a simple offence, such a little thing as carrying a car without a bill, which would detain a car until the bill caught up with it; that would be heard by the assistant superintendent. He would decide the question of fining the offender a day's pay, or whether he would let the offence pass with a caution. If anything occurs of a more serious nature it goes to the general superintendent of your division. He hears the case and decides the punishment; the amount is at his own option. If the case is of considerable importance, if there has been a wreck, or anything of that kind, it first comes before the divisional superintendent, who takes all the evidence in the case, and it is forwarded by him to a board of investigation, which sits in Montreal, and is composed of the heads of the department, and this board meets once a month. They adjudicate upon the case and decide what punishment is necessary to bring you into line again.

Q.—What kind of couplings are used for freight cars? A.—We get every kind; I do not know of any class of couplings we do not have to handle. In Canada we are fed by all the American roads, and of late years, since there has been a movement to get better couplings, one road will take up some improvement and another road will try another new coupling.

Q.—Are men frequently injured in the act of coupling cars? A.—Yes.

Q.—Could those accidents be avoided by any couplings now in use? A.—Yes; I believe to a great extent they could be.

Q.—Can cars be coupled safely and quickly by men who stand entirely outside the cars and not between them? A.—I have read about that being done, but I have never seen the test made, and I would hardly like to say.

Q.—What is the best coupling, to your knowledge, in use? A.—I would hardly like to give an opinion, for I have never seen a sufficient number of trials of them.

By the CHAIRMAN:—

Q.—There are many different varieties? A.—Yes. The master car-builders, in convention, could not decide which was the best coupling, and it would be rather presumptuous for me to give an opinion.

Q.—You consider some more unsafe than others? A.—Yes.

By Mr. WALSH:—

Q.—Do you consider them all unsafe? A.—I do. I also consider that they can hardly be made safe, so long as coupling is done.

By Mr. FREED:—

Q.—Are there many bridges on the line under which a man cannot pass standing on the top of a car? A.—There are none on our railway at present; they have all been raised.

Q.—You are speaking of the loop line of the Grand Trunk? A.—Yes.

Q.—So there is no practical objection with respect to the bridges on this line? A.—No.

By the CHAIRMAN:—

Q.—Formerly you had to dodge them? A.—Yes; you had to bow to them when you met them.

By Mr. FREED:—

Q.—Are accidents frequent by men getting their feet in frogs, or any part of the switches on the line, and being run down by locomotives? A.—Yes; they are frequent; but not so much so on our own line. I must say that of late years they have been a little more careful. The Act here provides for it.

Q.—Has any change been made in the frogs since that Act was passed? A.—Speaking for the Grand Trunk, they have been more careful than most roads in filling their frogs.

By Mr. ARMSTRONG:—

Q.—Are you acquainted with the couplings used on the D. L. & W.? What is your opinion in regard to them? A.—I think they are brutal.

Q.—Do you think that those cars should be prevented from passing through the Dominion? A.—Yes; I would like to have them stopped. The matter of which we complained is not so much the couplings as the deadwoods, the buffers. The deadwood is about 2 feet. The actual drawhead, where the link is entered and the pin holds it, is about 6 or 8 inches.

By the CHAIRMAN:—

Q.—Why do they couple them that way? A.—I cannot tell.

Q.—Is there anything gained by it? A.—I think they claim that in case of accident the two deadwoods coming together solidly save the body of the car.

By Mr. ARMSTRONG:—

Q.—They do not care anything about the body of the man? A.—Not a particle.

By Mr. HEAKES:—

Q.—Are the couplings on passenger cars safe? A.—Yes; I think they are perfectly safe.

Q.—Is it not possible to apply the same principle to a freight car? A.—I should judge so, but it would be a very great expense.

Q.—Could you not have a lever at the top of the car and couple them from the top? A.—Yes.

Q.—Are there deadwoods at the sides of the car? A.—Occasionally you meet one, but it is very rarely.

By Mr. McLEAN:—

Q.—How is the coupling on the Lehigh Valley and West Shore cars? A.—It is just as bad as the D. L. & W.; the West Shore is not so bad.

By Mr. HEAKES:—

Q.—It is not necessary for a man to go between the passenger cars to couple them? A.—No; not with the Miller coupling.

Q.—If that same system was adopted for freight cars would it not do away with all danger? A.—Yes; entirely.

By Mr. McLEAN:—

Q.—How is it on the other roads—Buffalo, New York and Pennsylvania? A.—They are the same; that is all the eastern roads. On some of the cars they have no deadwoods. Any road that has cars with deadwoods does an injury to the men who couple them, as they are in danger of their lives. When cars having that amount of deadwood come together you have to enter the links into the drawheads and withdraw your hand and arm sufficiently quickly to prevent being caught when they come together again.

By the CHAIRMAN:—

Q.—Has there been any legislation in New York State on the question? A.—A railway commission has been appointed, but whether anything has been done I don't know.

By Mr. FREED:—

Q.—Is the garnisheeing of wages frequent on this line? A.—It is quite frequent.

Q.—Is there any penalty attaching to men whose wages are garnisheed? A.—They are liable to dismissal at the option of the superintendent.

Q.—If they are not dismissed, is any other punishment imposed? A.—It is at the option of the superintendent whether he dismisses such a man or what penalty he will inflict.

Q.—How many members are there in this insurance society of the company? A.—I cannot give you the actual figures, but the society issues a list each month of those in the different classes, and the total number will run up somewhere in the neighborhood of eleven thousand.

Q.—That is in the whole of the classes? A.—I am not sure as to the number.

Q.—Each man in each class pays 5 cents at every death? A.—If a death occurs in class A all the members in that class pay 50 cents; in class B, 25 cents, and so on down to 5 cents.

Q.—Do the payments by the month equal the payments made on account of death? A.—No.

Q.—Is there a surplus? A.—No; there is a deficit. In class A, although in that class a payment of \$2,000 is supposed to be paid, the amount paid has never averaged more than, say \$1,100, because there are not enough members insured in that high class to meet the call. This is an argument to show that the men were not in favor of insurance, when there are 5,000 in class F and only a few hundred in class A.

Q.—So, as a matter of fact, so far as this insurance is concerned, it relieves the company from responsibility and compels the men to insure themselves against accident? A.—Yes; it does.

Q.—And the accidents may be caused by the company's neglect or by the men's own carelessness? A.—Yes.

Q.—Does the company pay anything whatever towards this insurance? A.—They pay \$10,000 a year.

Q.—Would that \$10,000 a year equal the claims probable on account of accidents? A.—I do not think so. I am not in a position to say how much their liability for accidents is, but I would certainly say that a few cases of neglect on their part would cost more than \$10,000 to the company.

Q.—If fines are imposed by an inferior authority, or by a division superintendent, can they be remitted on application to the general superintendent or general manager? A.—I presume they could be, but I have never heard of anything of the sort. As to the insurance matter and the payment by the company of \$10,000 a year, let me say this: You ask whether that sum would cover the liabilities of the company for damages; that, in case the company had not this provident society, which provides and pays doctors at certain points, the company would, in case of an accident, have had to pay doctor's full fees, whereas the provident society now pays them a stated salary, and the company gets the benefit of this. Probably over a very large system, such as the Grand Trunk is, with the number of accidents occurring, both to their own employés and the travelling public, if the company had to pay doctor's full fees more than \$10,000 would be required to provide medical attendance for injured persons.

Q.—The provident society just covers injuries? A.—It provides for the attendance of a doctor and a payment of \$3 a week in case of sickness or injury. It does not matter what the sickness is caused by, provided it is not from your own misconduct.

Q.—If a man is injured from causes over which he has no control, does the company continue to pay his wages while he is laid up? A.—No.

Q.—All he gets is the indemnity from the provident society? A.—For twenty-six weeks.

Q.—And that he pays for himself? A.—And that he pays for himself.

By the CHAIRMAN :—

Q.—Does the company never help an employé under such circumstances? A.—I never heard of their doing so, and I have been sixteen years in the employ of the company.

By Mr. ARMSTRONG :—

Q.—Have you ever heard of a man being paid off with \$100 in order to get him off the provident society? It seems to be a little scheme on the part of the provident society, which they are sometimes able to take advantage of. Have you ever heard of it? A.—In the provident society there is a provision in the rules that, after a man has been twenty-six weeks on the fund, the medical man shall examine him and state whether he is incurable or not. After that he can continue another twenty-six weeks, which gives him one year on the fund. Then another examination is held, and if he is pronounced incurable he is given \$100 and dropped off the fund. If a man thinks he is going to remain incurable, but still holds life in his body for some time, \$100 may be better to him than the chance of not being able to pay the assessments on the insurance, and if he thinks he would prefer to take \$100 down and drop the insurance he has a right to do so.

By Mr. McLEAN :—

Q.—Will you tell us in your own way how the officers of the provident society are elected, how the constitution is drawn up, and by whom? A.—I will try to do so. As near as I can recollect—I forget the actual number of the committee, but one-half of the number consist of officials of the company elected by the company. For example, Mr. Hickson, General Manager of the Grand Trunk, will be president of the provident and insurance society, and the company itself has the right to elect (it claimed this right owing to their having been generous enough to give \$10,000 a year to support the society) half of the committee. At each election of officers the employés who are members of the society have a right to elect the other half. Proxy votes are given to slips are used on which the names of seven or eight men who are thought suitable to serve on the committee are placed there, and you have the right to mark your ballot on that paper or add any name you see fit. In that way the next thing we hear is an announcement that certain men have been elected by the votes of the employés as committee-men. Of course the members of the Commission can see for

themselves in a moment how impossible it is for the men to elect anyone they desire, as the line covers many thousand miles of territory, and if we should agree at one point to unite on a man, believing that he will do everything we wanted, to have wrongs redressed and do his best to act as a representative of the men, it is still impossible to elect him. It is impossible to get our choice in any case. So year after year the same men hold office, and they act right in the company's interest, according to the best of my knowledge.

Q.—Have the proxies been tampered with? A.—Not to my knowledge; I could not say.

Q.—Have you ever heard of their being tampered with.

The CHAIRMAN :—This is a very serious charge.

WITNESS :—I have heard complaints of that kind from the men.

By Mr. FREED :—

Q.—Does this provident association cover all the company's line either in Canada or out of it? A.—Only in Canada, I believe. I believe the lines in Michigan and Maine are worked only under the company's control, and the provident society does not extend to them.

By Mr. HEAKES :—

Q.—If a man is discharged from the company's service or leaves the service of the company, can he still remain a member? A.—Yes.

By Mr. McLEAN :—

Q.—In regard to the P. & L. and D. L. & W. cars passing through Canada, how far would the men have to jump in passing from one car to another when the cars are running? A.—At least 4 feet—4 feet on an average; I have seen them longer and I have seen them shorter.

By Mr. FREED :—

Q.—Are the running boards sometimes covered with ice and snow in winter? A.—Quite frequently.

Q.—And if a train is running at a pretty good speed, and there is a wind blowing and the boards are pretty slippery, does not a man run considerable danger of being blown off? A.—Yes, especially when the train goes round a curve. Remembering what it is like on an icy sidewalk, you can judge what it is like on the top of a slippery freight car, even if there were not narrow running boards.

By Mr. McLEAN :—

Q.—To go back to the question of the frogs. What danger is there in the frogs not being blocked? A.—The danger to a man is that he may get one of his feet stuck in them.

Q.—Can you tell us about these frogs? A.—When a man is working at switching cars he has not time to watch very closely where he is going and his feet are very apt to stick fast in the frogs, because it is narrow, so that a man's foot is liable to go under the rail, it being hollow, with a key on top. That is the way a great many men have lost their lives.

By Mr. FREED :—

Q.—Then if a locomotive is not ready to stop in time the man is run down? A.—Yes; unless he twist his body so as to lose his leg only.

By Mr. HEAKES :—

Q.—Can you suggest anything that will improve the condition of railway employes running freight trains and make their employment safer and better? A.—Yes; I would suggest the railing on the top of the cars for the brakemen, so that in case of ice they might have it for purposes of protection. An extension of the width of the running board would also be an improvement, and deadwoods on cars should be abolished. The railing on the top would, of course, be for the brakemen to cling to if necessary.

By Mr. FREED:—

Q.—Would there be any objections to the railing, except on the ground of expense? A.—Not that I know of. I believe there might possibly be this objection, that in some cases a railing on the top of the cars would prevent ingress to some grain warehouse and elevators, and possibly the railing might scrape the bottom of some overhead structure.

By Mr. HEAKES:—

Q.—Could not the railing be made so as to be taken off in such cases? A.—I would prefer to see it fixed.

By Mr. CARSON:—

Q.—Could it not be sufficiently low that while it would prevent men falling off it still would not be in the way? A.—I think it could be.

Q.—Could there be any objection to the extended running boards coming closer together than 4 feet? A.—I cannot see any objection, except that of additional expense. That can be the only objection; but I may say that on the new cars they are adopting extended running boards in every case.

Q.—Lengthways as well as in width? A.—Yes.

By Mr. McLEAN:—

Q.—Is there anything you would like to say to the Commission that has not been covered by the questions asked? A.—I would like to state that the organization I have the honor of representing here this afternoon has one proposal it would like to see become the law in Canada, and that is the licensing of conductors.

By Mr. ARMSTRONG:—

Q.—That is, that conductors should pass an examination and afterwards receive papers? A.—Yes. I will hand to the Commission a copy of a Bill which has been drawn up by our organization, and when it has been altered sufficiently to meet the requirements in Canada it will be presented to the Legislature. The object of that Bill is to secure the licensing of conductors. (Witness handed in draft of proposed Bill).

\* \* \* , Conductor on the Canadian Division of the Michigan Central Railway; called and sworn.

By Mr. FREED:—

Q.—You have heard the testimony given by the preceding witness? A.—Yes.

Q.—Do you approve of it thoroughly? A.—Yes.

Q.—Can you add anything for the information of the Commission? A.—Of course, as far as the provident association is concerned, I know nothing of it. It has not any effect with us on the Michigan Central road.

Q.—If a man in the employ of the Michigan Central meets with an accident, does he receive any indemnity? A.—Not from the railway company, that I am aware of.

Q.—What do they do. Have they to grin and bear it? A.—Yes; if they have no insurance on their lives.

By the CHAIRMAN:—

Q.—Would not the Employers Liability Act apply to them if they were in Canada? A.—Yes; if it was fixed in such a shape that they could get anything.

By Mr. FREED:—

Q.—Are the men at a disadvantage in suing the company for indemnity? A.—It seems so.

Q.—Do you know of any who have suffered from accident for causes over which they had no control? A.—Yes.

Q.—Do you know cases in which they did not get any indemnity from the com-

pany? A.—I do not know any cases in which they did get any indemnity. I have never heard of a man receiving indemnity from the company.

Q.—Do you know anything about the Odbert case? A.—I know the circumstances of the case.

Q.—What were they? A.—There was a collision. You want to know, I suppose, how it was settled. I do not know anything in regard to the matter. It has been covered up.

Q.—How did the accident occur? A.—It occurred through the operator at Springfield failing to display the green signal. The east bound train which should have been held there was not held, but proceeded and met the west bound train  $2\frac{1}{2}$  miles further on. Both trains were running at about 25 miles an hour; they struck, and the brakemen on the trains endeavored to get on the top, and were killed. They had a brakeman on each train.

Q.—Was any indemnity paid the relatives of these men? A.—I have heard that Mrs. Odbert received \$1,000 from the Michigan Central.

By the CHAIRMAN:—

Q.—Did the accident occur in the United States? A.—No; in Canada, at Springfield, 13 miles east of St. Thomas.

By Mr. ARMSTRONG:—

Q.—Do you mean that the widow received \$1,000 to settle the matter? A.—I have heard that she settled with the company for \$1,000.

Q.—Do you approve of the licensing of conductors? A.—I have not given the matter much attention, but it seems to be the feeling of the conductors generally.

Q.—What do you think would be the results gained by so doing? Would the men be thereby placed in a better position? A.—The men who understand their business thoroughly would get employment in preference to those who do not understand their business. It would have a tendency to employ good, sober, steady men, I think, as their licenses would be liable to be taken away from them if they were not that kind of men.

Q.—Do you know of cases in which an improper length of time has occurred before they were investigated? A.—Yes.

Q.—Has this occurred to any great extent? A.—Yes; it is a frequent occurrence.

Q.—Is it to an unreasonable extent? A.—Yes.

Q.—Do the men complain about the delay? A.—Yes.

Q.—Does your superintendent, when train men go before him for investigation, extend to them that courtesy that should be extended by one man to another in the ordinary walks of life: in other words, are they treated courteously? A.—No; he is not a very courteous sort of a man; sometimes he is, and sometimes he is not.

Q.—Do you consider those men receive what you would call a fair trial? A.—Sometimes I do, and sometimes I do not. There are times when I consider the decision is not just.

By the CHAIRMAN:—

Q.—That, of course, arises in all cases in courts, and elsewhere? A.—Yes; the decision, so far as evidence is taken, may be all right.

By Mr. WALSH:—

Q.—Do you think that the hours which conductors or brakemen, or any other hands connected with the railway management work, are excessive? A.—Yes; I do.

Q.—Will you give the Commission a statement from what you know of the position the men are placed in, and how many hours they are obliged, or are asked, to work? A.—We are expected to help the company all the time; that is what is the matter. We are expected to do what they want us to do. We are often on duty thirty-six straight hours.

By the CHAIRMAN:—

Q.—Under what circumstances? A.—I have been thirty-six hours going from here to Windsor.

Q.—That is in a snow storm, I suppose? A.—With a heavy train. This may occur also when there are a great many trains on the road. It is an exceptional case.

Q.—What remuneration do you receive when you are placed in such a position, and when there is such a strain on your energies? A.—We get just the same amount of money for that as if we had done the trip in six hours.

Q.—Nothing extra? A.—No.

By Mr. FREED :—

Q.—Do you mean that if a trip occupies thirty-six hours you get the same pay as if it lasted only six hours? A.—Yes; we are paid by the trip. They pay the conductors on the Canada division of the Michigan Central \$2.75 for the trip from here to Windsor. We get \$2.75 if we are only seven hours going. We do not get any more if we are fifteen hours. It often occurs that we are fourteen or fifteen hours; sixteen or seventeen hours and even twenty hours have occurred.

Q.—What would be the reason for taking twenty hours on the trip? A.—It would be on account of trains breaking down ahead of us, or on account of some little accident having occurred, or from the road being blocked by freight—from there being more trains on the road than they could possibly handle, and the despatchers properly move.

By the CHAIRMAN :—

Q.—Have you been detained by snow storms? A.—We are not troubled very much by snow; we are troubled much more by there being too much traffic for one track.

By Mr. WALSH :—

Q.—Then I understand you to say that if you are double or treble the specified time in running that distance you would not be made any allowance whatever for it? A.—We would not be allowed anything. It has been going that way for the past four or five years; previous to that we were made allowance.

Q.—Has the weather anything to do with the delay? A.—It has a great deal to do with it. It often makes a small train a heavy one, owing to the rails becoming frosty and slippery, so that the wheels will not bite. The oil gets frozen and the cars do not run so easily.

Q.—Do you approve of the system existing on the road at present, or can you name any system by which the condition of affairs would be improved? A.—Yes; if the company would get us over the road in a little better shape, and give us a train we could handle and get there more rapidly, it would be better.

Q.—Is there any way by which a conductor going out with a train can know that it is not in accordance with the law; if he makes any objection, and points out anything wrong, is there any way of obtaining a remedy? A.—It is not for him to say.

Q.—So he has to go upon any kind of train given him? A.—There are certain rules specified to go by; he is supposed to take the train given him; you have either to take the train or lose the job.

By Mr. FREED :—

Q.—Are trains run wholly by telegraph? A.—All the extra and wild trains are run by telegraph.

Q.—How are the regular trains run? A.—They now run by time cards, and the extra trains have to keep out of the way.

Q.—When they lose time are they run wholly by telegraph? A.—No; they have to be a certain number of hours late before they lose their right of way.

By Mr. WALSH :—

Q.—Is there a certain number of cars specified to a train? A.—Different engines draw different numbers of cars.

Q.—Do they attach more cars than an engine is capable of drawing. A.—Yes; it occurs sometimes. If the superintendent gives orders to pick up cars, the conductor has to do so.

By the CHAIRMAN :—

Q.—I suppose that is only in case of necessity? A.—I do not know the necessity where there are so many trains—a train every hour or so.

By Mr. WALSH :—

Q.—Does that fall to the lot of every freight train? A.—Yes; I suppose it does; not always; it is an exceptional case. It frequently occurs that we take more cars than engines are rated for.

By Mr. CARSON :—

Q.—How many cars are generally drawn? A.—We pull from thirty-five to seventy-five on the Canada Southern.

Q.—How many empty cars? A.—We have drawn seventy-five empty cars.

By Mr. FREED :—

Q.—How many loaded cars are considered to make a train? A.—Forty-four loaded cars is the highest drawn by any of our engines.

Q.—What is the heaviest grade on the road? A.—I do not know exactly. There are no grades of any account.

By Mr. WALSH :—

Q.—Do the men, as a general rule, approve of the rules, and the manner in which the Michigan Central is governed here? A.—The men vary in opinion in regard to that.

Q.—Are any of the men in favor of the present system? A.—I have heard men speak favorably of it, and I have heard men speak against it.

Q.—Did you hear any other people speak against it? A.—More speak against it than for it.

Q.—What system would you prefer, or do you know of any system by which the difficulties might be removed? A.—I think both trains should have a meeting order, instead of holding one train by the green signal.

By Mr. CARSON :—

Q.—According to the statute, how many cars is a brakeman supposed to have charge of? A.—I am not aware as to that; I have heard that the number is ten cars.

By the CHAIRMAN :—

Q.—Are you speaking of the Dominion law? A.—I do not know what law; I have merely heard it.

By Mr. WALSH :—

Q.—How many cars do you think would be the right thing for one man to have charge of in order to make it absolutely safe for all connected with the train? A.—It depends on whether it is necessary to make a quick stop.

Q.—Are ten sufficient for one brakeman? A.—Yes.

Q.—With any degree of safety? A.—Yes.

Q.—Are all the signal lights what they should be on this road; do the men approve of the signal lights? A.—No.

Q.—What is the matter with them? A.—I do not approve of our order signal, stronger light, a light we can see farther.

Q.—What color would you prefer? A.—I would prefer a red light.

Q.—Would not that make much more confusion; is there not a red light already used for a danger signal? A.—But they could place that high enough so that we can see distinctly what it is.

Q.—What particular lights are used now? A.—There is a green light used for the telegraph system. White and red lights are used for the switch lights.

Q.—Would any other light be necessary for a switch light? A.—A green light would be better, in my opinion.

Q.—Would it not be confused with the other green light in any way? A.—It would be necessary to make a telegraph signal a red light if the switch light were changed.

Q.—How would you prevent confusion? A.—The ordinary light would have to be placed a certain height, so as to distinguish it from other lights. It is not owing to the necessity of making the ordinary light a red light, but it is in order to make it a clearer light—one that can be seen a sufficient distance to stop a train.

Q.—You would prefer some color different from the present one? A.—It would do if it were made larger, and placed where it could always be seen.

Q.—Have any of these lights been used in the manner you indicate on any other road? A.—They are used on the Michigan Central between Chicago and Buffalo.

By Mr. FREED:—

Q.—What time is required to set ten brakes, under ordinary circumstances? A.—Three or four minutes.

Q.—If you were running with forty loaded cars, and the signal for brakes was given, in what time could that train be stopped to a dead halt? A.—For a brakeman to hold a train of forty loaded cars it would depend on the rate of speed, the weather and the train. Some of the forty cars would be a great deal heavier than others. Some trains could be stopped in half a mile; some in less. Sometimes it would take a mile, working hard, to get the train brought to a stop.

Q.—Under ordinary circumstances, if the danger signal were shown, except on a long stretch of straight line, the train would be apt to be upon the danger before it could be stopped. Suppose a danger signal were given that the train had broken down, and the train of which you were in charge was running at full speed with forty loaded cars, would you, under ordinary circumstances, see that light in time to brake up before you ran into the train? A.—Under ordinary circumstances, yes. When we are following trains that way, and the weather is clear, we can stop a train all right; but sometimes we need the aid of the engine to stop it—often, in fact.

Q.—How would it be if the track is not straight? A.—There would be some danger.

Q.—Is there any reason why the air brake cannot be applied to freight trains? A.—No, except the money they cost.

Q.—Then a freight train could be stopped nearly as quickly as a passenger train? A.—Yes.

By the CHAIRMAN:—

Q.—Would not the weight of the train carry it a little further? A.—It would depend on the weight of the train.

Q.—A freight train is heavier than a passenger train? A.—Yes.

By Mr. FREED:—

Q.—Is an ordinary loaded freight car much heavier than an ordinary passenger car? A.—Not so heavy.

Q.—I mean, including passengers? A.—Not so heavy.

Q.—Why could it not be governed by its own brake, then? A.—Yes.

A.—Of course, it would depend on the weight of the passenger train as to how quickly it could be stopped. Passenger trains are shorter than freight trains. A loaded passenger coach is considered equal to three box cars.

Q.—If air brakes were attached to freight trains, and there was a brake on each car, could not a freight train be brought to a standstill within the same distance as a passenger train? A.—I think not.

Q.—Why does the length of train make a difference? A.—It is the weight of the train that makes the difference.

Q.—Would not each car be governed by its own distance? A.—We can stop one car quicker than another; we can stop some cars in half the distance we can stop others.

Q.—You have told us that a loaded freight car is not as heavy as a passenger car? A.—It is not.

Q.—Then why cannot a freight car be brought to a stand in the same distance? A.—There are so many more cars.

Q.—But has not each car its own brake? A.—Yes.

Q.—And does not each brake stop its own car? A.—Yes.

Q.—Then what extra weight is to be stopped? A.—That is something we do not know anything about; it is something that has never been tried on forty cars yet. We will know when we have had a little experience with it, and will be then better able to tell you. The engines carry only a certain pressure of air, and that will release the brakes on only a certain number of cars.

Q.—Are there not two classes of air brakes? A.—Yes; there is the air, and the automatic.

Q.—If automatic brakes were attached, then the moment the pressure is taken off, what happens? A.—The air brake would go on.

Q.—Then the engine could not hold the brakes, if there were too many cars for the pressure? A.—No.

By Mr. WALSH :—

Q.—How many hours should a man work in order to be able to do his work properly, both to the work and to himself? A.—Not more than ten hours.

Q.—Do you think that if railway men work more than that number of hours they should receive extra pay? A.—Yes.

JOHN WADDELL, St. Thomas, called and sworn.

By Mr. FREED :—

Q.—What is your business? A.—I am foreman in J. M. Green's house-furnishing factory—the woodwork department, sashes, doors and blinds. We do regular building contract work and I am one of the foremen.

By Mr. WALSH :—

Q.—How long have you been employed in that particular business? A.—Some where about eight years.

Q.—What kind of work do you generally get out. A.—We get out furnishings for just such houses as are built around this district of country.

Q.—Do you use much machinery? A.—Yes; we have a full set of machinery for all sorts of work.

Q.—How many hands do you employ? A.—At the present time we have about twelve or fourteen; when times were a little busier we had eighteen or twenty.

Q.—Do you keep running the whole year? A.—Well, pretty much. Last winter we shut down for about three months and the winter before something in the neighborhood of a month or six weeks or perhaps a little longer; I did not exactly keep track of the time.

Q.—Was it for want of employment you shut down or for the purpose of repairs? A.—For want of employment.

Q.—According to your own knowledge of the business for the length of time you have been connected with the establishment, is trade increasing or decreasing? A.—Well, it is decreasing at the present time, that is, within the last two years.

Q.—You mean to say that you have less work? A.—Yes.

Q.—Did you get work for more houses four or five years ago than now? A.—Yes.

Q.—Is the building trade here apparently at a stand? A.—It is pretty well at a standstill just at the present time; it has been so for the last eighteen months.

Q.—What wages are paid in the concern? A.—From \$1.50 to \$2, and foremen get a little over that.

Q.—You have no uniform rate of wages for any number? A.—No.

Q.—What proportion of the men are getting \$2 a day? A.—About four out of twelve, or about one-third.

Q.—And what is the next rate of wages below \$2? A.—One dollar and seventy-five cents.

Q.—How many are getting that, do you suppose? A.—Well, about one-half.

Q.—That is one-half of the remaining portion? A.—One-half of the whole.

Q.—What are the lowest wages paid to any skilled workman? A.—One dollar and fifty cents for skilled work.

Q.—Do you employ any other hands besides skilled workmen? A.—Well, we have what you would term apprentices, or young men serving their time; they don't exactly serve their time but they are working like under instructions, or working themselves up.

Q.—How many of those have you in your establishment? A.—We have three at the present time.

Q.—Has there ever been any of these young men regularly indentured? A.—No.

Q.—Is there any reason for that? A.—Not that I know of; I never heard of any reason.

Q.—At what age do you take on these young men? A.—About from fifteen to sixteen.

Q.—I suppose that being a foreman you feel yourself under some obligation to give these young men instructions in the business as they progress? A.—Yes.

Q.—Do you think it would be better for all concerned if young men of that description, after showing some adaptability as regards the trade, or a likelihood of their learning it efficiently, should be regularly apprenticed? A.—I do; most decidedly.

Q.—What advantage do you think it would be to them? A.—It would be an advantage to both parties that they should be indentured, because we would take more interest in them. If you take a young boy who indentures himself down for a time, it becomes a duty, as well as a saving of money, to shove him forward as fast as you can, and get all you can out of him; so it helps the employer and the young fellow at the same time.

Q.—I suppose that it would be better for labor generally if practical young men, after serving a time, were sent out to the world to look for employment, rather than sending out men who were, perhaps, not finished workmen. A.—Of course; by all means.

Q.—If apprentices, after serving a time and showing a good character—if they had their indentures to show as being fully carried out, and a letter of character from their employer, wouldn't they be a good recommendation to any man to employ them? A.—Not under our present rule of things around here; I would not place much reliance in them. Of course, I never got any of them, but I would not place any week's or two weeks' trial, and then I would know what he is. Of course, recommendations would help him.

Q.—You think that really would be better than to take young men as they are at present? A.—Yes; because if you take a young man in now, you do not know the minute he is going to get saucy and leave you, after you have shoved him along a bit; and, perhaps, you cannot feel justified in shoving him along further than his present wages will allow you, because you have nothing to look forward to in the future.

Q.—In using so much machinery, are they in all cases skilled hands that you send to work at these machines. A.—Oh, no.

Q.—Whom do you send to work them? A.—Some skilled men and some boys after they have been there a while. I always made it a rule in the machine department when there is a good stout boy pretty well adapted to the work to give him charge of the machine for six or nine months, or sometimes a year; it depends upon the position I have for him.

Q.—I suppose you begin on the lower scale, with planing, flooring or matching stuff, or something of that kind? A.—Yes.

Q.—And then by degrees you give him a sash machine? A.—Yes; I give him door and sash to make.

Q.—I suppose you have a shaper also? A.—Yes.

Q.—And a buzz-planer? A.—Yes.

Q.—Is the condition of your workshop such as you would like? A.—It is a good building for men to work in?

Q.—Are they well protected from the weather, and is it healthy to work in? A.—Well, our shop is pretty well under the weather; it has pretty nearly gone; it is an old building, and our employers have been promising for the last year or two to rebuild on a more extensive scale, but the present building is a poor one.

Q.—Have you any system of drainage there at all? A.—Yes; there is one drain under it.

Q.—Are there any water-closets? A.—There is a drain goes through under the shop.

Q.—Are there water-closets near to the shop? A.—No; they are pretty well to the back end of the shop.

Q.—Are they kept in a clean condition? A.—Yes; our sanitary inspector looks after them pretty well.

Q.—Does the Government inspector ever come to your building? A.—I have never made his acquaintance.

Q.—You don't know of his having been there? A.—No.

Q.—Has any accident from machinery occurred in your establishment? A.—No; we haven't had any serious accidents at all; there have been slight cuts, but there have been no limbs lost, nor anything of that sort.

Q.—Can you give any special reason why work is slacker now than it has been for the last year or two? A.—Well, there is nothing going on in the city to demand it; the town is built up for the number of people in it and there is no demand for building.

Q.—Are the workmen in this city of your trade, generally speaking, a good class of skilled workmen as far as you know? A.—There are a great many poor workmen in our trade here.

Q.—Have you any idea of the wages paid outside of your immediate business in your mill? A.—Well, they range from \$1.25 to \$1.75, and odd men get \$2.

Q.—Is there any system of organized labor here? A.—Yes.

Q.—Have you had any labor troubles here? A.—No.

Q.—In what condition is the organization? A.—Well, about one-half of the carpenters in the city belong to the organization that I belong to.

Q.—Has any difference arisen between them and their masters at any time? A.—No.

Q.—Suppose that differences did arise, what system do you think would be the best for settling matters between you? A.—Arbitration.

Q.—What kind of arbitration would you advise? A.—In which way do you mean?

Q.—What kind of arbitration would you advise—compulsory arbitrators appointed by the Government or arbitrators chosen by the two parties interested.

By Mr. HEAKES:—

Q.—Would you favor a law compelling both parties to go to arbitration? A.—Yes; I would.

By Mr. WALSH:—

Q.—If those parties could not agree, what would you advise? A.—Let them call in a third.

Q.—Who should that third party be? Would it do to have one appointed by the Government, who would be outside the interests of either of those people, or one chosen by themselves? Which would you prefer? A.—He ought to be a disinterested party.

- Q.—Chosen by these two? A.—Yes.
- Q.—In speaking of the want of activity in your employment, do you think that the building trade here is overdone at the present time? A.—Well, I don't know that it is overdone, but it is at a standstill.
- Q.—And you think the cause is not in the present condition of the trade, but that they have covered the requirements of the town? A.—Yes; for the amount of people that are here.
- Q.—Are the workmen here, as a rule, pretty well off in their circumstances? A.—They are in fair living circumstances as mechanics.
- Q.—Comfortable? A.—Yes; but they have to be pretty saving.
- Q.—Are any of them saving any money? A.—Not that I know of; I never heard any of them say that they were saving any.
- Q.—Do you know if any of them own their houses? A.—Yes.
- Q.—And the houses they live in, I suppose, are pretty comfortable for working-men's houses? A.—Yes; they are comfortable houses.
- Q.—What is the average rent that a workingman pays? A.—From \$8 to \$10.
- Q.—What accommodation does he get for that? A.—Well, he gets a house worth in the neighborhood of \$800 or \$900.
- Q.—How many apartments will there be? A.—Seven or eight rooms.

By Mr. HEAKES:—

- Q.—Is yours a purely local trade in sashes, doors, &c.? A.—Purely local.
- Q.—You don't ship to outside points? A.—Not to any distance; just the surrounding country.
- Q.—Are those boys you take in thoroughly taught the trade in all its branches? A.—No; they generally leave before they get taught.
- Q.—How long do you keep them on each machine? A.—That depends a great deal on circumstances. Sometimes they want to go through longer, sometimes they leave, and at other times there is no opening for them to be advanced.
- Q.—You don't turn boys out finished workmen at the end of their time? A.—We don't have them for any time.
- Q.—Do none of them stay with you? A.—Yes; we have turned out some.
- Q.—What proportion of the number of apprentices are finished workmen when they leave your establishment? A.—We have only turned out some two or three in eight years.
- Q.—You say that the workmen about here are poor workmen; can you account for it in any way? A.—I account for it by the system here; the contract system is here, to a great extent.
- Q.—What do you mean by the contract system? A.—That is, every Tom, Dick and Harry round the country is taking contracts.
- Q.—Do you mean sub-contracts or piece-work? A.—There is some odd sub-contracting, but I mean contracting right from headquarters.
- Q.—Then you think that none but employers of a large number of men should contract for buildings? A.—No; I think none but responsible men should contract for buildings, I don't care how many men they employ. They should be responsible men.
- Q.—Might not your apprentice system be responsible for the poor class of workmen in the neighborhood? A.—It assists it.
- Q.—Do you think that if industrial education were introduced, so that those boys might study the theory of their business, as well as the practical part, better workmen would be turned out? Supposing they were taught architectural drawing, Euclid, mensuration, vulgar fractions, and so on, do you think it would assist them to be better workmen? A.—There would be another consideration—to see whether you could get them to take it up. There are facilities enough for those studies, except architectural drawing, in our common schools.
- Q.—Supposing that boys were taught these elementary principles of mechanics, do you think it would improve them? A.—Yes; of course it would.

Q.—Would you favor some kind of industrial training for apprentices? A.—Yes.

By Mr. McLEAN:—

Q.—What benefit do you derive from the organization to which you belong?  
A.—Well, we derive a benefit by being able to consult with one another on the modes of our trade, and the way trade is done. We won't allow any into it except those who can earn a certain rate of wages, and we keep ourselves more together. We are trying to work our ends, if we possibly can, to get a little more advantage in future time. We haven't been very long organized yet, in order to go ahead and do anything, and we are not very strong here.

Q.—Is there any sick benefit attached to it? A.—There is a death benefit but no sick benefit.

Q.—Nothing for accidents? A.—No.

Q.—Do you find any accidents occur from scaffolding not being put up properly?  
A.—I haven't known of any accidents in this city for seven, or eight or nine years.

Q.—Is scaffolding, as a general thing, put up pretty securely? A.—I don't know anything about that; I don't know the outside work at all.

By Mr. WALSH:—

Q.—Do you know if your labor organization is looked upon by employers in any way as being against their interests? A.—Not that I have heard; we have some employers belonging to it, and I have not heard any employer say anything detrimental to it yet.

Q.—Have the employers themselves an organization here? A.—Not that I know of.

By Mr. FREED:—

Q.—Do you expect that your factory will close down for any time this winter?  
A.—I could not say; we have work enough to keep us nicely going now.

Q.—Would these lads, of whom you speak, accept lower wages as a consideration for getting better instruction? A.—Well, I never conversed with them on that point.

Q.—Do they show any desire to get any better instruction? A.—Yes.

Q.—Have you any desire to teach them? A.—Well, we shove them along just as far as we can, that is, to get out of them what we can and make them pay their way, because we are not sure of them to-morrow. They are liable to leave us at any time.

By the CHAIRMAN:—

Q.—Do you remember the time when apprentices were indentured? A.—Yes.

Q.—When was that? A.—I was indentured myself twenty years ago.

Q.—In this country? A.—Yes.

Q.—When did the system go out of vogue? A.—My indenture was the last one that was written in the shop I served my time in.

Q.—That was twenty years ago? A.—Yes; over twenty years ago.

Q.—Are there any other shops in which you have heard of indentures? A.—No; I have not heard of indentures being written since my own were written.

By Mr. FREED:—

Q.—Do you think the fact that you were regularly indentured, and served your time in the regular manner, made you a better workman than those turned out now-a-days? A.—Well, there were more pains taken with me in the first two years of my apprenticeship than there are with the generality of boys now.

Q.—Then you think that because these extra pains were taken with you, and because you became a superior workman, it enabled you to become a foreman? A.—Yes; I got on to be a foreman, inside of a year and a-half after I was through my indentures, and I have been foreman or had charge of work ever since.

By Mr. WALSH:—

Q.—What kinds of wood do you generally work up here? A.—Pine, oak, and all the kinds of woods to be found in this part of the country.

Q.—Do you send any men out of the factory to put up work at all? A.—  
Sometimes.

Q.—Do you take contracts in the mill for finishing houses outside? A.—Yes.

Q.—Do you know of any system of co-operation here between employés and employers, in regard to division of profits, or anything of that kind? A.—There is nothing here of that kind, to my knowledge.

Q.—Do you think such a system would be advantageous or otherwise? A.—  
No; I don't think it would be advantageous.

By Mr. ARMSTRONG:—

Q.—Don't you know that by an indenture system an employer of labor would be compelled by law to teach a boy his trade properly? A.—I don't think it would work in this country.

Q.—For what reason? A.—Boys are too independent; they are likely to run away if their employer does not suit them.

Q.—In that case, his parents can be punished for the boy? A.—Well, you can not hold parents responsible for boys now-a-days; a great many of the boys that we have don't stop with their parents at all.

Q.—Are the journeymen more in favor of the indenture system than employers of labor in St. Thomas? A.—Well, I never heard the employers express an opinion.

Q.—Did you ever hear the employés? A.—I have, and they are in favor of it.

Q.—Don't you believe that there is a hesitancy on the part of an employer which makes him shun a law which would compel him to teach a boy his trade, and that also makes him display carelessness about indenturing his apprentices? A.—  
No; I don't.

G. R. HOLDER, St. Thomas, called and sworn.

By Mr. FREED:—

Q.—What is your business? A.—I run a factory here called the featherbone factory.

Q.—How long has it been in existence here? A.—It was started last January, but it has been running on the other side for about two years.

Q.—Is this a branch of the establishment on the other side? A.—No; it is not a branch. I got up the business on the other side; I own half the patents on the both sides; so when I started the factory there and got it running I brought the patents here and started a factory here.

Q.—Couldn't you supply this market from the other side? A.—By paying the duties we could.

Q.—You came here on account of the duties? A.—Yes.

Q.—Have you a pretty large industry? A.—I should say we have about thirty-five or forty hands; we have had as high as eighty-five, but trade is very dull now.

Q.—This featherbone is a substitute for whalebone? A.—Yes.

Q.—Is it largely replacing whalebone? A.—In the United States it is, but not so much here; we are doing a good business in the States.

Q.—Do you find a market for all you can make here? A.—No; not here. It is hard to introduce it here; for some reason they don't take hold of it; perhaps we haven't advertised it enough. People are a little backward of taking hold of a new thing anyway.

Q.—What class of persons work for you? Are they unskilled laborers? A.—No; we haven't any in the featherbone line; we have skilled laborers, carpenters and others, in connection with it.

Q.—In connection with it? A.—Yes, we have to keep machinists, carpenters, and so on.

Q.—For the featherbone work itself, what class of people do you use? A.—Of

course, we have three foremen, then we have a forelady, and the rest are girls, and boys and women.

Q.—Do they require much skill? A.—Well, yes; they do, but of course they had all to be taught; I had to teach them everything in that line.

Q.—Within what time can they acquire skill to work at it? A.—I should suppose about six months in order to do our work in good shape.

Q.—After they have become skilled what can the women earn? A.—Some of our best ones make \$6 and \$7 a week, and from that down to \$2 according to how smart they are, the poorer ones doing the poorest class of work.

Q.—Do they work by the piece? A.—Nearly all of them do, except the foreladies.

Q.—How many hours do they work? A.—Ten hours a day and six days a week.

Q.—Is the work pretty constant? A.—Well, it generally is or should be. We have laid off some of our hands now on account of the dull times; we have considerable stock on hand.

Q.—Do you sell your goods wholly within the Dominion? A.—Yes.

Q.—How wide is your market? A.—Well we have men in Montreal now, and we have sent some goods up to Manitoba, but practically it is Ontario that we reach so far.

Q.—You are still working up your trade? A.—Yes; we have five men on the road, I think.

Q.—Do you use much machinery? A.—Yes; all the machinery in the featherbone line I invented myself and we use lathes, drills and so on.

Q.—Did you make the machinery in your own factory? A.—Yes; we do everything but casting.

Q.—You employ skilled workmen, of course, in making these machines? A.—I generally have made my own machines, excepting since I came here, but I have had so much to do and, my health being poor I have had a machinist until lately, but now my boy does the work on the lathe.

Q.—Do you require special machinery to make your machines with? A.—No; I just make them on common lathes, drills, shaping machines, and the like of that.

Q.—The machinery is not of peculiar construction; it is the ordinary iron machinery? A.—Yes; some of it is bought here and some is bought in the United States. Of course, I am from the other side and I bought all my machinery on the other side, and I brought over some drills and lathes with me.

Q.—Cannot you get it as good in Canada? A.—Yes; I have bought a better lathe here than I ever bought there. I got a lathe from London and a shaper from Hamilton better than I could have bought at home for the money.

Q.—Are they as substantial machines? A.—Yes. The last lathe was one for manufacturing an electric motor, which we are making as a side show, and it is a better lathe than any we could have got.

Q.—Then you have overcome your original idea that no good thing could come out of Nazareth? A.—Well, I never thought that, but I thought our machinery was better than yours; but I have got over that little prejudice.

Q.—Are the sanitary conditions of your factory pretty good? A.—I think they are pretty fair; I try to keep them pretty good. Of course, there is no sewer there, but our outhouses are nicely put up. I had a nice vault dug and had it heavily cemented.

Q.—Has the sanitary inspector visited it? A.—Yes; a good many times.

Q.—Have you separate closets for male and female employes? A.—Yes.

Q.—The provincial factory inspector approved of all your works? A.—He was there, I believe, but I was away. I think our secretary was there, but I don't know what the inspector said.

Q.—He ordered no changes? A.—No.

Q.—If it is not a trade secret, will you tell us how you make this featherbone? A.—I got up a machine, in the first place, through which the feathers are run, to take

the plumage off on both sides. After the plumage is taken off it is run through a machine, which splits it in halves, and then through another, which takes the pith all out of it. The quill is cut, but the top is just the same, and then I run it through another fine knife, which cuts it as fine as thread. Then it goes through a machine which winds it in around cord, with the thread round it. In another machine the four cords are wound into one, and next it goes through a sewing machine, which sews between each pair of cords, making the proper tension for use as bone in dresses and some of it for corsets. It is all covered by patents.

Q.—Is it much cheaper than whalebone? A.—Yes; I should say it was; and depend on the catch of the whale.

Q.—And the whalers cannot exhaust the supply of quills? A.—No.

Q.—The goose has come to stay with us? A.—That's what's the matter. Q.—How did you come to think you could use Canadian machines as well as United States machines in your industry? A.—In the first place, I paid so many duties that I got sick of it. I began to look around, to see if I could not strike something here. I am a pretty close buyer, and I figured the thing down pretty fine. I wrote to a man in Toronto, and he came to see me; and I went to London, looked through the works there, and bought a lathe and a shaper. Then I went to the exhibition at Toronto and stayed two weeks. I took a look through the Canadian machinery, and being a pretty good mechanic, I made up my mind that your machines were just as good as ours, besides being able to save the duties.

Q.—Did this exhibition in Toronto compare with those you have on the other side? A.—Well, in Toronto I was very busy; we had twelve hands there all the time.

Q.—You had an exhibit of your own? A.—Yes. We manufactured all our goods there, except the pithers. Mr. Chamberlain, State Senator for Michigan, and one of the leading men in connection with the prison at Jackson, who lives where our other factory is, was at the Toronto fair. I had always known him, and he is uncle to my partner in this business, and when I met him he said: "I have been all." He is a leading man among the State fairs on the other side; he has been to all such places, and I thought that if he said that was the best, he knew what he was talking about. Again, we had an exhibit on the other side from our factory there, where we make whips as well; we had whip-making machines of all kinds, and I went over to see it. They had a nice display, and I took it all in, but it did not begin to compare with Toronto.

Q.—I think you are becoming a pretty good Canadian? A.—Well, my business lies in Canada, but I think I manage to tell it just as it is. I think nobody could find fault with the Toronto exhibit.

By Mr. CLARK:—

Q.—How old is the invention? A.—It is five years since I started to invent the machinery. I was a little over a year in making the machine for the first time; I started fifty-six miles this side of Chicago, at Michigan City, Ind. I lived there twenty-two years.

By Mr. WALSH:—

Q.—Independently of your line of business, are those fairs calculated to do good throughout the country? A.—I should say they were; I wouldn't take \$1,000 for the good Toronto fair did me. Of course, it cost me a good deal to go, but I shall be there next fall.

By Mr. FREED:—

Q.—In what articles of dress is featherbone used? A.—In corsets and stays, for dresses where whalebones are used; there is where we sell largely. At home we sold last month \$8,500 worth of that bone. They are working over 200 hands there.

Q.—Is it used in coats at all? A.—No; they talked about putting it up and down the sides of pants, but whether they did or not I could not say.

Q.—It would make good backbone for invertebrate politicians? A.—Well, I have some of it up my backbone, although I am not a politician. I almost killed myself by making these machine by foot power in the first place.

Q.—Do you know of any reason why trade is dull now? Is the market supplied for the present time? A.—I lay it to the fact of the money market being so close; I think if money was a little plentier we would have the same trade as before. I find when we send out statements or drafts to merchants who are rated pretty fair they ask for longer time, and so on; so I judge money is pretty close through the country as well as in St. Thomas. I attribute it to that and to nothing else.

J. M. GREEN, St. Thomas, called and sworn.

By Mr. FREED :—

Q.—What is your business? A.—Manufacturer, builder and contractor.

By Mr. WALSH :—

Q.—What is the nature of your contracts? Do you include mason work &c., in a general tender? A.—Yes; usually; that has been my system, to take the whole work.

Q.—You take the whole building? A.—Sub-letting the different trades, mason work, plastering, &c.

Q.—You take the responsibility for all concerned? A.—Yes.

Q.—Is that system generally carried out here? A.—Well, until these last two years I think it has been the system, with a few exceptions.

Q.—Do you ever superintend the mason work and plastering yourself? A.—Yes; as contractor for the building, unless there is an architect, I take the superintendence and the whole responsibility.

Q.—Your particular work is carpenter work? A.—Yes; that is my particular work.

Q.—How many men do you employ? A.—Well, it varies a great deal, but I think the average of the last ten years would be about thirty men.

Q.—How do you find trade at the present time? A.—Well, trade is generally dull in the building line. I carry on a lumber business in connection with the factory.

Q.—Do you mean lumber in a raw state? A.—Yes; a wholesale and retail lumber yard.

Q.—Can you give any reason why trade is duller now than it has been for some years past? A.—Well, just referring to this place alone, it would be owing to the very rapid growth of this city. The city was remarkable for the rapidity with which it was built up, and two years ago it seemed to have a check, and it has remained just in that way, just a slow progress.

Q.—Do you think it is about equal to its requirements at the present time? A.—Yes; I think so.

Q.—What is the outlook for the future? Do you think matters will remain stagnant or will they improve? A.—I think they are on the eve of improving; I think things have turned, and my own private opinion is that the city will have substantial growth.

Q.—What wages do you generally pay to your carpenters? A.—For carpenters I always pay by the hour—17½, 18 and 20 cents.

Q.—Is there any labor organization here among the men? A.—Well, there is, or there has been.

Q.—Has there been any trouble between them and the employers? A.—Nothing here, I believe.

Q.—As an employer, in case of trouble, or anything of that kind, what way do you think would be the best way to settle it or avoid it? A.—Well, an amicable settlement between the parties interested is, I think, the best.

Q.—You mean arbitration? A.—No; I don't mean that.

Q.—What way then? A.—Between the employer and the men.

Q.—Without calling outside aid at all? A.—Yes; I don't think you can practically work outside aid in an adjustment; the cases will be so different, and if adjusted in that way, so unsatisfactory, that I have come to the conclusion that it is not practicable.

Q.—Have you stone-masons apart from bricklayers, or do they work all together? A.—They are separate trades.

Q.—What would be the wages of stone-masons and what has been the range for the last five years? A.—Well, I could only approximate, because I haven't had much to do with that labor. I think \$2.50 a day is about the ruling price for bricklayers, and stone-masons are 50 or 25 cents per day higher. That is my recollection of the wages.

Q.—Do bricklayers or masons work at plaster work, or are they separate trades? A.—Plastering is a separate trade. While a bricklayer by trade may take a contract for the masonwork, including the stonework and the brickwork, and also the plastering, yet he has separate gangs of men; each trade runs on its own basis.

Q.—What is the rate of wages for plasterers as a separate trade? A.—I think about \$2.50.

Q.—Do any of these trades undertake slating? A.—No.

Q.—That is a different trade again? A.—Yes.

Q.—Do men in putting on slates work by the day or by the hundred? A.—Any that I have had any knowledge of have always been by the day, and I think that is generally done.

Q.—What was the usual price paid? A.—The contract price was about \$8 to \$8.50 a square; that is what we pay. In making an estimate of a building I would estimate \$8.25 to \$8.50 a square, expecting to let it at \$8 to \$8.25. A square is 100 superficial feet or 10 feet square.

Q.—Do you use any machinery in your carpenter work? A.—Yes; I have a full line of machinery.

Q.—All that is necessary for carrying on your trade? A.—Yes.

Q.—Do you manufacture or ship any to outside places? A.—Yes; I distributed quite a large trade within the last two or three years.

Q.—Do you go outside of your own immediate circuit? A.—A few years ago I sent quite a number of houses to Winnipeg and up in that section, and as far as supplying manufactured material, I go as far as Burford, where I furnished five this year; also a church in Petrolia and a couple of houses up the line.

Q.—Was your venture in Winnipeg fortunate; was it one you would like to continue? A.—No; I just got through in time to make it lucky for me.

Q.—Then your venture was successful? A.—Yes; it was successful as far as it went.

Q.—With regard to lumber, what is the price of merchantable pine? A.—The retail price is \$15 for all common. Then, coming down to common boards, it is \$10 or \$12, and bill stuff, for the construction of buildings, is \$15 at retail.

Q.—Do you have far to go for that lumber now? A.—We ship it all from the Georgian Bay section.

Q.—Have you no heavy timber in this vicinity? A.—None but hardwood.

Q.—What do you use hardwood for? A.—In my business we don't use any hardwood, except occasionally for house finishings and that sort of thing.

Q.—Do you use much hardwood for finishing? A.—No; a small proportion of it; it is limited to a very few houses.

Q.—Have the houses you have had to do with been finished in good style—a high finish? A.—Yes; very good; they would compare with an yplace I know of.

By Mr. HEAKES:—

Q.—Do you favor arbitration, if the arbitrators could be chosen from the

parties to a dispute? A.—Yes; I would favor arbitration in preference to turmoil, or strikes, and loss to all parties concerned.

Q.—That is if parties who understood the business could be selected. A.—Yes; I only said before, that my view was that it was not very practicable to do that. I never had any difficulty with men that I could not adjust myself.

Q.—Unfortunately, difficulties may arise, which may be prevented if we had some system? A.—Well, in some cases there are, I suppose.

By Mr. WALSH:—

Q.—I forgot to ask you about apprentices. What is your idea about a system of apprenticeship? A.—Well, for sixteen years I have had apprentices during all that time, and my idea of apprentices has always been what I have done myself. I never have an apprentice bound. I take a boy, and say that I will give him a month's trial; I will give him an apprentice's wages, and as he improves I will increase his wages, if I keep him for a certain time. That is the usual bargain I make. I have had apprentices who became journeymen in three years, and sometimes a little less, but they are smart, active fellows. I have found for a system satisfactory. In cases where I have made a bargain, and arranged for a definite time, I did not think that the boys were so satisfied as those who were engaged in the way I have referred to.

Q.—How long did you keep those boys under apprentice's wages, even when you raised them year by year? A.—Generally about six months, and then gave them a raise, and perhaps in nine months another raise, and they get up to, perhaps, an average of about \$1 a day, after the first year. But those are specially good boys.

Q.—Did any of these apprentices remain with you for any length of time after becoming competent journeymen? A.—Yes; I have one young man who has gone to Petrolia for a short time. He started as an apprentice, and he has been working eight years; I think he is one of the best workmen in Canada; he is a carpenter. I have a brother of his in the same way; I think the second year he worked he got \$1.25 a day, and while he is not equal to the other as a workman, he is the best manager of men, and the best to run a job that I know of.

By Mr. HEAKES:—

Q.—Can you teach a carpenter his trade in two years? A.—I don't say that, but I say the way I have handled apprentices I have tried to push them along, and if it was in them they had an opportunity of developing it—that is, I have never tried to keep them on one thing, but have tried to make them general hands.

By Mr. McLEAN:—

Q.—You say you have those boys a month on trial; do they generally get paid for that month? A.—Always.

By Mr. WALSH:—

Q.—Would it be an advantage to boys learning the trade if, under the present system of education, or by carrying it a little further, some technical education were given them, so as to give them an idea of mensuration, the drawing of lines and things of that description? A.—A very great advantage.

Q.—Would it be a great advantage to boys if they had a knowledge of freehand drawing, so that by giving them a pencil they would be able to dissect a plan, for instance? A.—Yes. Training of that kind, when a boy comes to be a mechanic and requires to use it, would be very valuable.

Q.—From your experience in the trade you must know that such a thing is a great want among carpenters? A.—Very great, especially mensuration and the other things you have spoken of.

Q.—Have you freehand drawing in your high school here? A.—Well, I am not familiar with that.

Q.—But you think it would be an advantage? A.—Yes; I do.

By Mr. ARMSTRONG:—

Q.—When boys of your trade of fifteen or sixteen years are treated civilly by employers do you find them civil, obedient and willing to learn? A.—Yes, always. Of course there is a great deal in studying the disposition of the boy. Last spring I took in a boy at \$3.50 a week and I said, if I think you will suit and will make anything of yourself, and will be a benefit to me, I will keep you on and raise your wages. He was not there very long until I raised him 50 cents a week. In my judgment, if a boy sees you appreciate him it encourages him to do better work and to do it more willingly and cheerfully. Perhaps about the end of six months I would raise his wages to \$5 a week. That boy is still there, and I am very well satisfied and I think he is.

By Mr. MCLEAN:—

Q.—How many hours a day do your men work? A.—Ten hours during most of the summer. For the last six weeks we have been working eight hours, with a view of keeping the same number of hands on.

Q.—You pay them 17 cents an hour the year round? A.—Yes; the wages are the same per hour.

By Mr. ARMSTRONG:—

Q.—Are the men paid weekly? A.—On Friday, every two weeks.

Q.—Do they prefer that day to any other? A.—Well, I could not say, I think they do. When I adopted it I thought it was to their advantage to have that pay on Friday, and it is just as convenient for me. I have always paid that way; I pay in full in cash.

Q.—Have you found that the most favorable day? A.—I think it is an advantage of 10 per cent. to the men's families to have the money to use on Saturday's market, and suiting my own convenience, Friday is just as easy as it would be Saturday, or better. Saturday is a short bank day, and there is generally a little more business doing.

By Mr. MCLEAN:—

Q.—What age should a boy be before beginning to learn his trade? A.—Fourteen or fifteen years; I don't like to take them younger than that.

By Mr. FREED:—

Q.—Have many manufacturing industries been bonussed in St. Thomas? A.—Well, no; only one or two.

Q.—Has the effect been good to the city? A.—There have been two bonuses, and I think the results ought to be satisfactory, although I do not understand why our city should require to give bonuses to a manufacturing concern. The only reason I can give is that it is becoming fashionable the past few years.

Q.—One city bidding against another? A.—Yes.

By Mr. ARMSTRONG:—

Q.—And it is expensive to the tax-payer? A.—Yes. Above all places that I know of for manufactures, I never could see why St. Thomas should give a bonus.

By Mr. FREED:—

Q.—You think the natural attractions are sufficient? A.—I think so.

Q.—Has there been any complaint among tax-payers against bonusing these industries? A.—Yes; there has. It has always been a pretty close call to carry them, and in fact one bonus was voted down the second time this year. It was tried and lost, and then tried the second time and lost.

By Mr. GIBSON:—

Q.—Did bonusing these two give them undue advantages over others? A.—Well, in one case there were other factories in the same line, but in the second case it would not interfere with anything here.

Q.—The complaint, then, would be that it was giving one industry an unfair advantage over others? A.—Yes.

By Mr. McLEAN:—

Q.—Was it a sash and door mill? A.—No, it was a flour mill. I think, on the other hand, it benefited the place by making it a grain market.

By Mr. GIBSON:—

Q.—A benefit to the place, but an injustice to those who were in the business? A.—Yes.

By Mr. CLARK:—

Q.—What kind of timber do you use for scantling in frame stuff? A.—All pine, with occasionally a small amount of hemlock and chestnut.

Q.—Is there no spruce? A.—No.

Q.—Would you use it, if you had it? A.—I haven't much knowledge of it.

Q.—You know that it is a stronger wood than pine? A.—I didn't know it.

Q.—How far is this place from Georgian Bay, and what is the rate of freight per thousand? A.—Three dollars and sixty cents per thousand, or 15 cents a hundred.

Q.—Have you ever made inquiries whether you could land spruce from New Brunswick at a lower rate than that? A.—No; but we have lumber here which we bring from Ottawa.

Q.—Is there spruce in the Georgian Bay region? A.—I don't know as to that.

Q.—It was pine lumber you got from Ottawa? A.—Yes; and it was not a good quality either.

Q.—This \$15 stuff you speak of is all merchantable? A.—Yes; all sound, first-class bill stuff, with barn boards and stock boards.

Q.—Would the objection to spruce be that it is harder to work than pine? A.—I cannot say; I hardly know what spruce is.

By Mr. WALSH:—

Q.—It is white pine, but harder in its nature—a looser wood? A.—In the Georgian Bay section there is a spruce manufactured into flooring; I have handled a carload or two some two or three years ago.

By Mr. CLARK:—

Q.—Don't you find it far more lasting than pine? A.—Well, it is harder, but it does not take as well here for flooring.

Q.—Do you use any of the hard Southern pine for flooring? A.—No.

Q.—You use the soft pine altogether? A.—Yes. The spruce we handle only came a little cheaper than pine; it was \$10.50 on board the cars, which would make about \$1 difference in the cost at the mill.

By Mr. WALSH:—

Q.—You handled it in the rough state at \$10.50? A.—Yes.

Q.—And prepared it yourself afterwards? A.—Yes.

By Mr. ARMSTRONG:—

Q.—In bonusing industries, are the parties who receive the bonus compelled by law to employ a certain number of men, under the penalty of forfeiting the bonus? A.—Yes; that is the case here under the conditions under which the bonus was given; it is a matter of contract.

Q.—Are there any who have violated that law here? A.—There are only two industries working under that contract, and there was a rumor that there was one factory which didn't comply with the conditions of the contract, but after investigation I believe they were exonerated from that insinuation.

\* \* \* St. Thomas, called.

By Mr. FREED :—

Q.—What is your profession? A.—A locomotive engineer.

Q.—On what road? A.—On the Grand Trunk Railway.

Q.—Will you tell us any disabilities that engineers labor under that occur to you?

A.—On the Grand Trunk railway I am not aware that we are laboring under any disabilities at the present time, except it may be one, and that one is that if I am discharged

from this road and go to seek employment on another road, by the laws of the organization known as the superintendent society, they require a certificate of ability and good

conduct from the last road employing, and it is optional with my present superintendent whether he gives me that certificate or not.

Q.—How long hours do locomotive engineers generally work? A.—Our day is supposed to be eight hours, or a hundred miles, on an average of fifteen miles an hour.

Q.—You are frequently called upon to labor longer? A.—Yes; we are frequently called upon to do twenty-four hours.

Q.—When a man has been on twenty-four or twenty hours can he exercise that vigilance which is necessary for the safety of himself and the locomotive and train? A.—No; he cannot.

Q.—Is there any way of avoiding these long hours? A.—With us on the Grand Trunk, after being on duty twelve hours we can demand eight hours' rest. All you require to do is to write: "I require eight hours rest," and you get it.

Q.—Do you suffer any inconvenience under that arrangement? A.—No; we are allowed the eight hours but the minute the time is up you are called on.

By Mr. HEAKES :—

Q.—With regard to these certificates for engineers, can you suggest any mode of obtaining them? A.—None; unless it was made obligatory by law that they should be furnished with them—made obligatory as to engineers and all classes of trainmen who labor under the same difficulty. My remedy would be to make it obligatory on all the railway corporations to furnish such men with certificates of ability, services and conduct.

Q.—Would you require engineers to pass an examination? A.—Yes.

Q.—And if he passed you would require that the Government could compel a certificate to be issued? A.—No; I would compel the corporation that he was last employed with when dispensing with his services to give him a certificate of his services, a record of his good conduct and his physical and mental abilities for the position he has held.

Q.—Have you ever known of a case where an engineer could not obtain that certificate? A.—Yes; in this city.

Q.—When charges are brought against railway employes; who enquires into these charges or to whom are they referred? A.—I can only speak of the Grand Trunk in that connection. An engineer being reported for any damage or accident—crime you may call it—he has, together with his immediate officer over him, to make a report to the superintendent of that department, who, with the superintendents of the other two or three departments form a council before which he is tried.

Q.—Are these superintendents always practical railway men? A.—Nearly always; there are some exceptions.

Q.—Are men discharged through the ignorance of superintendents regarding a railwayman's duties? A.—There may have been such cases, but there are very few now. Men in my capacity don't allow them to discharge us now through their ignorance. The organization to which I belong has sufficient control and influence to demand a fair, impartial hearing, and to reinstate a man if he has not been justly dealt with.

Q.—If you had not such an organization do you think you would succeed as well? A.—O, no.

Q.—Can you give us any information with regard to the insurance scheme of your railway? A.—Yes; the Grand Trunk insurance scheme is one which is excelled by none in the Dominion.

Q.—What proportion of the amount received at death are you assessed for?  
A.—I pay 25 cents a death; I am not very heavily insured.

Q.—What class are you in? A.—Class D.

Q.—What amount do they pay in that class? A.—Seven hundred and fifty dollars.

Q.—In the event of a death in class D are all the members of the organization assessed for that in all the other classes? A.—Yes; to the amount of their classes.

Q.—Does the assessment cover the amount required? A.—Invariably so, with a surplus.

Q.—Have you ever known of a case where it didn't? A.—Only in the higher classes, when there is not a sufficient number in the two highest grades; I think they have never reached the \$2,000.

Q.—In the case of a death in the higher class, are the men assessed to the full amount? A.—They are merely assessed for the amount of the class in which they are insured.

Q.—The full amount of that class? A.—Yes.

Q.—And they don't receive the amount for which they are assessed in the higher classes? A.—They receive all that was really coming.

Q.—They don't receive the amount they are assessed? A.—They don't receive the amount of \$2,000.

Q.—Do you consider it a fair scheme, which assesses a man on the basis of a \$2,000 assessment, and then will not pay the amount? A.—In the manner in which they are assessed I consider it fair, because they only pay for what they receive.

Q.—Don't they pay 50 cents per death in the highest class? A.—Yes; I think they do. All in class A pay 50 cents if a death occurs in that class, and it runs down as low as 5 cents in class F.

Q.—How many members are there in this insurance plan? A.—I could not say at present—something over 10,000.

Q.—We were told this afternoon 11,000; is that near the figure? A.—Very near; it may be a little over.

Q.—In case of death in class F they assess for \$550 on 11,000 members; what becomes of that assessment? A.—The surplus goes to the next assessment.

Q.—Do you receive credit on the next? A.—Yes.

Q.—You pay less for the next? A.—Yes; if there is a surplus sufficient to pay the next there is no assessment issued.

Q.—Is it compulsory with the engineers on the road to join this benefit society? A.—I believe it is now; I think it is made a condition of service, but all who were employes at the time this was organized were not compelled to join. It was voluntary with them, but with those joining the road since it is made a condition of their service, provided they can pass the doctor's examination.

By Mr. ARMSTRONG:—

Q.—Don' you feel a little more independent in your position than the other hands on the road on account of the powerful organization to which you belong—the Brotherhood of Locomotive Engineers? A.—Well, I don't know; there are other organizations probably that feel as independent as we do; I don't know whether they do, not having been in the position, but judging from the results of the many investigations, I think they don't wield that influence which we do.

By Mr. HEAKES:—

Q.—Have you ever known a case of a man in the employ of the Grand Trunk Railway being unable to obtain a certificate from the superintendent on account of personal dislike? A.—As I said before, it is voluntary with them whether they would give one or not, but it would be hard for me to say why a superintendent might refuse one—whether it was personal dislike or from other causes.

Q.—If the superintendent had a personal dislike to a man would it be difficult to get one? A.—Yes.

Q.—Does the Government require the Grand Trunk Railway to deposit a certain guarantee sum for this insurance? A.—I don't know as to that.

Q.—Have you any means for recovering from the railway, outside of this insurance company, in case of accident? A.—No.

Q.—Are you compelled to sign a paper saying that you haven't any claim against the company? A.—Only as far as signing the rule book, that is one of the conditions. It is one of the conditions of service; you cannot occupy the position of an engineer, conductor, brakeman or baggageman, without passing the rule-book and time-card in which this is contained.

Q.—Are the road-beds of Canadian railways in so complete a state as to render them absolutely safe for trains? A.—That would be a hard question to answer. Generally speaking they are, but there may be exceptional spots which are not.

Q.—Do you know of any accidents, within the last two or three years, resulting from the road-bed not being in first-class condition? A.—No; I don't know as I do.

Q.—Are engineers compelled to pass an examination for color blindness? A.—Not on our road—well, they pass an examination for locomotive engineers promoted from firemen, in which you are tested on colors then, but not afterwards; there is a color test that you go through in the superintendent's office.

Q.—Is it a rigid test? A.—Not very.

By the CHAIRMAN:—

Q.—Is it sufficiently rigid for the protection of the people? A.—Yes; I think it doesn't go into a thousand shades, but it gives you a sufficient number to ascertain that you have the knowledge required. I refer to that because in the State of Alabama there is a color test in which they have about a hundred different shades—so many that a milliner would hardly be able to tell them. That would not be a fair test.

By Mr. HEAKES:—

Q.—Do you think that the signing of this book of rules deprives you of any rights under the law of the land as against the company for damages? A.—I think it does, because it makes it so difficult to recover that you might as well be without it.

Q.—Has your society ever taken any step to have that law withdrawn? A.—No. These rule books have passed through the Privy Council and have been sanctioned; it is the law then, and it would require the Privy Council to abrogate them before we could do anything with them.

Q.—Are you aware that Mr. Bell, the solicitor of the Grand Trunk, holds a different opinion? A.—My superintendent has told me differently, but I am not aware for myself. I raised some objections some years ago, when I was sent for at Hamilton to sign that paper when the Grand Trunk fused with the Great Western, and Mr. Domville, my superintendent, said it was only a matter of form; he said, "You need not get your back up; Mr. Bell says this doesn't deprive you of any rights under the law."

Q.—When a train is on the road, who is responsible for that train? A.—The engineer and conductor.

Q.—Who is responsible in chief, or is it a joint responsibility? A.—It is a joint responsibility in certain things; still the engineer is under the direction of the conductor, but both are equally responsible if anything happens.

Q.—When the engineer wishes to communicate with the conductor what signals does he use? A.—He opens the whistle two or three times in a particular way; we use a succession or series of sounds on the whistle. Or he might go back to him if he was at a station or siding; otherwise, he would sound the whistle several times and then signal them forward.

By Mr. FREED:—

Q.—Is the inspection of locomotive boilers pretty rigid? A.—As to that I could not say. They are washed out and examined here periodically, but the examination at these outside stations is not so rigid as it is at a head station like Hamilton.

Q.—Are explosions of locomotive boilers frequent in Canada? A.—Not in this western part. I never knew of one real explosion on the Great Western division of the Grand Trunk, and I have been on it nineteen years.

Q.—Do you approve of engineers running over more than one division? A.—No.

Q.—Is it customary to cause them to do so? A.—It is on the Great Western division of the Grand Trunk.

By Mr. HEAKES:—

Do accidents occur from engineers being sent out on roads they are not acquainted with? A.—Till they are acquainted with them they are usually furnished with a pilot, but there is not that degree of safety that there would be if they were confined to one division.

Q.—Have you known of an accident occurring from that cause? A.—None that I could positively attribute to that cause, although that might be a factor in an accident.

By Mr. ARMSTRONG:—

Q.—Have you known of an engineer going out on a road for the first time without a pilot? A.—No; not with a train; they may have gone with an engine, though I am not sure that I remember that.

Q.—Do you remember the Humber disaster? A.—Yes.

Q.—Was not the engineer on the train comparatively a new man on that division? A.—The engineer on the one which struck?

Q.—Yes? A.—I don't know; but I think he had been on a sufficient length of time to understand it.

Q.—It was given in evidence that he had never received a pilot, and he was on his second trip? A.—It might be so, but I am not positive.

By Mr. HEAKES:—

Q.—Are round crown sheets on locomotive engines more dangerous than flat ones? A.—They are in one sense and not in another. The round ones are not liable to corrode; they will not hold the deposit on them as much as on the flat ones; the water has a greater motion all through—it keeps up a continual motion. Where there is any degree of danger in them it is by reason of their less water space—that is all. Otherwise they are strong, and I believe more safe as far as mud goes. There is danger in the flat one of the mud depositing where the fire strikes it, preventing the water from getting to the plate, and the plate becomes crystallized as a matter of course.

By Mr. CLARK:—

Q.—By whom is the inspection of boilers made? Is it made by men in the service of the company or the regular insurance inspector? A.—By men in the service of the company. There is a practical boiler-maker at every locomotive station for the purpose of repairing and examining.

By Mr. HEAKES:—

Q.—Are engines ever sent out with the tubes leaking? A.—They may occasionally, but that is optional with the engineer himself. I need not go out with an engine if I have reported work to be done on her, and if I do, I go on my own responsibility.

By Mr. McLEAN:—

Q.—Would the mechanical superintendent allow you to take out a defective engine? A.—Not if he knew it.

By Mr. FREED :—

Q.—Is an engineer confined pretty much to one engine, or does he change?  
 A.—Well, since the Grand Trunk got us we have been changing round. There is one man to one engine, but he has generally to lie off and let another take his engine, so there is not an engine for each man. On the Great Western each man had his engine but on the Grand Trunk there is a limited supply of locomotives to do the same mileage.

By Mr. HEAKES :—

Q.—Is there anything you could suggest which would improve the condition of railway engineers—anything in the matter of signals, for instance? A.—Yes; I think the present system of station signals is defective. My idea is that no white light should be exhibited on the main line but the white light of the head-lamp, the hand-lamp of course.

Q.—Are accidents frequently caused by confusing signals in that way?  
 A.—Well, there was one not long ago on the Canada Southern, which in my judgment was directly attributable to white lights.

By the CHAIRMAN :—

Q.—How was that? A.—It was down between Brownsville and Springfield. According to the evidence of both engineers that was the cause of it. There is a system of using corrugated lights both for semaphores and switches; they are white, and at a distance they look almost head-lamps.

By Mr HEAKES :—

Q.—What kind of light would you prefer for semaphores, switch lights and order boards? A.—For switches I would prefer green, for semaphores red, and for order boards white and red. Still the order board might be white, but that was the system I was accustomed to on the old Great Western, and it will be borne out by all here that we had the best system of station signals in Canada.

By the CHAIRMAN :—

Q.—That was altered when you went on the Grand Trunk? A.—Yes; when we assimilated with the Grand Trunk.

By Mr. HEAKES :—

Q.—Is there any voluntary statement you would like to make? A.—As I said before, a system of black-listing has been pursued, and still affects not only locomotive engineers but all other classes of employés. All superintendents demand that we bring with us a certificate of our qualities for the position we seek to assume. It is not like the position of a carpenter, a tailor or a blacksmith; we are placed in charge of a number of lives, and it is necessary that superintendents should know that we have those qualities which will enable us to conduct a train to its terminus; without that certificate we are powerless; they will not hire us, and we are placed in an unenviable position, for we cannot compel the superintendent to give us one. He may, through personal spite or other reason, withhold that certificate from us. That state of things applies to engineers, and I believe to conductors and brakemen as well. To-day there is walking on the streets of St. Thomas a man who had a position, and has another position offered to him, but the local superintendent of the Michigan Central refuses to give him a recommendation.

By Mr. CLARK :—

Q.—Have you had any trouble with strikes? A.—Well, we had on the Grand Trunk some years ago, before we amalgamated with the Western, and, of course, as members of this organization we were in sympathy with them, and supported them.

JOHN NOBLE, St. Thomas, called and sworn.

By the CHAIRMAN:—

Q.—What is your line of business? A.—An engineer and blacksmith.

Q.—In what shops? A.—In the Michigan Central at present.

Q.—Here at St. Thomas? A.—Yes.

By Mr. HEAKES:—

Q.—Have you any special information to volunteer respecting the condition of the men in those shops? A.—I don't think of anything just now respecting the shops, but I would prefer giving information in another direction.

Q.—Please give us that? A.—I would like to see abolished the system of granting bonuses to manufacturers, and exemption from taxation in a great measure, with the exception, probably, of church property—that is the property the churches stand on—and school property. We are all pretty much equally interested in those, and no party would be placed in a much more advantageous position than the other by abolishing exemptions from taxation on these portions of property. With regard to the system of bonusing, it places the careful workingman, who saves a little money, and would like to go into business on his own account, at a great disadvantage. He has to compete, not only against the accumulated capital of other capitalists, but he has to compete against public money as well, and it places him in a bad position. He has to pay a portion of those taxes that the bonus has created by giving to others to compete against him. If I am manufacturing boots and shoes in St. Thomas, with my own capital, or the accumulated capital belonging to several of my fellow-workmen, and a large capitalist is granted a bonus of \$10,000, or \$15,000 or \$20,000, he is placed in a very advantageous position over me. It is not to be supposed that I can compete with my own capital, or with a co-operative capital of \$3,000 or \$4,000, against some one who boasts a capital of \$20,000 or \$30,000, with the addition of a bonus of \$10,000, \$15,000 or \$20,000.

The CHAIRMAN.—In this inquiry we have to deal with facts, and we cannot enter into all those general questions, or there would be no end of them. You can tell us facts with regard to the injurious effect of particular bonuses being given, but you must not enter into all these matters, like an essay written on the subject.

By the CHAIRMAN:—

Q.—You believe that the system of bonuses is injurious to the workingman? A.—Yes, sir; it seems next to impossible to establish co-operative manufactures as long as it is in vogue.

Q.—Supposing a bonus were given to a co-operative establishment? A.—I never knew of such a thing.

By Mr. ARMSTRONG:—

Q.—You don't believe in exemption from taxation? A.—No.

Q.—You think it should be done away with? A.—Yes.

Q.—Do you believe in the principle, in St. Thomas, of publishing the assessment roll, so that every person may see whether he is properly assessed or not? A.—Yes; I do.

Q.—Are there any kinds of property you would like to see exempt? A.—There are none I would like to see exempt, but I would not object to see property on which churches or public schools stand exempted.

Q.—You would not like to see graveyards exempt? A.—Well, I would not object to that.

The Commission then adjourned until 2 o'clock on Wednesday.

ST. THOMAS, Wednesday, December 14th, 1887.

WILLIAM RISDON, Manager of the Erie Iron Works, St. Thomas, called and sworn.

By Mr. FREED:—

Q.—What are the principal products of your works? A.—Small implements, plows, cultivators, harrows, general castings and foundry work.

Q.—Mostly agricultural implements? A.—Yes; and general jobbing.

Q.—How long have you been in operation in St. Thomas? A.—Just four years in December or January.

Q.—Is it an original industry, or was it moved from another place? A.—It is an original industry as far as St. Thomas is concerned, but it was run about two years in St. Thomas before we took hold of it.

Q.—Is your trade increasing or decreasing, or is it stationary? A.—Well, it is increasing.

Q.—Do you employ a large number of hands? A.—Not many; we employ from twelve to fifteen men the year round.

Q.—What rates of wages do you pay to skilled workmen? A.—We pay \$1.50 to \$1.75 as the regular rate of wages to skilled men.

Q.—You employ some unskilled men? A.—We do at certain seasons of the year.

Q.—What do you pay them? A.—As a rule, \$1 a day, or \$6 a week.

Q.—Do you employ any boys? A.—We have none at present, but we have had them; we have had one or two boys about half the time we have been here.

Q.—Do they learn any branch of the business thoroughly? A.—Yes.

Q.—And go out skilled workmen? A.—Well, I can't say that we turned out many; we have been there only four years, and now we have none at all.

Q.—Do you know whether any of your men save money and buy property? A.—Some of our men own their own homes here in town. Some of them, too, save money from the wages they get, as far as we can judge. I don't know it for a fact that they do; I only judge from appearances.

Q.—You know that some of them own the houses in which they live? A.—Yes.

Q.—Is their employment pretty constant the year round? A.—Yes; the men we have there now we employ the year round—that is the number we have at present.

Q.—Occasionally you have extra hands? A.—Yes.

Q.—Is your machinery well protected? A.—Fairly so.

Q.—When the inspector of factories was round did he find any fault with the machinery? A.—None that I know of.

Q.—Or with the sanitary condition of the shop? A.—He reported none to us. He was there and made a visit? A.—Really I don't know; I do the travelling myself, and he may have been there when I was away, but I don't remember. He has not been there to my knowledge.

Q.—I suppose that would be the best answer you can give, that he had not been there to your knowledge? A.—Not to my knowledge.

Q.—Where do you get the wood you use in these implements? A.—We get the wood all in our immediate neighborhood, with the exception that when we want first-class plow handles we import from Ohio.

Q.—Why? A.—Simply because they have a style of handle we require when farmers ask for a certain kind of plow.

Q.—Because the wood is better or because they know better how to put it into shape? A.—I think the wood is better, as far as I can judge. We have been running four years, and we have only imported 500 pairs, so that is not a very large quantity.

Q.—Are you able to say whether this wood lasts longer or gives better satisfaction than the Canadian wood? A.—Well, I think it does, as far as I can judge. I wouldn't like to say there is not just as good timber, but the oak timber we have had from there has given good satisfaction.

Q.—Is it pure white oak? A.—Yes; well, we call it swamp oak, but it is good and tough and has a good grain to it, so that the handles we get from there we don't paint at all; we just varnish them.

Q.—What iron do you use? A.—Principally Canadian iron for the last year.

Q.—Londonderry iron? A.—No; it is made at the Hamilton, Ont., rolling mills.

Q.—But the pig iron? A.—We use Scotch pig iron.

Q.—Unmixed Scotch? A.—Unmixed Scotch.

Q.—Do you mix different brands? A.—Yes; Summerlee and Calder; our wrought iron we did import until last year from England.

Q.—Do you use steel or chilled iron in plows? A.—Steel for mould boards and beams.

Q.—Where do you get the steel? A.—From England. We have had one or two consignments from New Glasgow, N. S., but principally English steel.

Q.—Does Nova Scotian steel gives as good satisfaction as English? A.—Yes.

Q.—Is it dearer or cheaper? A.—Dearer.

Q.—Would you use it altogether if you could get it at the same price? A.—I think so, as far as I can judge.

Q.—From which of the rolling mills at Hamilton do you get iron? A.—The Ontario Rolling Mills; and we have had one car from the Hamilton Forging Company.

Q.—This Hamilton iron is good iron? A.—Yes; for our purposes it answers well.

Q.—Have you had any labor troubles in your factory? A.—No.

Q.—Any demands upon you for increased pay, shorter hours, or anything of that sort? A.—We have had some demands for increased pay.

Q.—How were they settled? A.—We generally gave them what they asked for, or compromised with them as well as we could.

Q.—You met your own men and discussed the matter with them? A.—Yes.

Q.—Were the discussions carried on in a friendly manner? A.—Always.

Q.—Was it an even dicker between you? A.—We generally split the difference—that was the way.

Q.—I mean that the men were just as free to make a good bargain as you were? A.—O, yes; we never had them come in a body; sometimes one would say that he wanted an increase of pay, and so far we have given it to them.

Q.—Did you ever dismiss a man for being too energetic in pressing demands? A.—No, sir.

Q.—What hours do your men work? A.—Ten hours a day, or sixty hours a week.

Q.—Has there been any general demand in St. Thomas for shorter hours of labor? A.—There was rather a spurt, about two years ago, when the Knights of Labor started. I heard a little talk of our shop; they wanted eight hours a day, and the answer I made was: "If you want it I am ready for you, but of course we will make the pay accordingly." The matter died away, and I didn't hear anything more about it.

Q.—How did they look upon that answer? A.—They didn't look upon it very favorably; but they thought they would rather work ten hours and get the full pay. I have a standing agreement with our men to work nine hours a day, but those that we pay \$2 a day to are to have 20 cents an hour, but we haven't done it this winter, so far.

Q.—They didn't press that demand? A.—No; they preferred working ten hours as long as we didn't object.

By Mr. CLARK:—

Q.—You don't think ten hours are too long for a man to work in your business? A.—No; I think it would be time wasted if it was lost. Our blacksmith's fires burn better in the evening; they can see as well what they are doing with the aid of a lamp, and if they are using furnaces there is that much heat lost entirely in the evening. They don't object to it, and I don't.

By Mr. ARMSTRONG :—

Q.—Don't you think when a man works ten long hours and goes home and gets his supper and cleans himself—and he is generally supposed to be in bed at ten o'clock in order to give his employer a good day's work the next day—don't you think that he has very little time to improve his mind and enjoy himself with his family? A.—Well, I do think that. Of course I have to work myself and I feel that I haven't very much time to enjoy myself. I don't leave the shop until six o'clock, and I feel that it is rather cramping on a man's time to work regularly from seven till six—that he hasn't much time for social improvement or enjoyment. Then again, on the other hand, there is so much trouble with men in the use of liquor, and one way and another, and so many of them use that time for gratifying their own personal desires, that they don't take the time with their families which they might.

Q.—Is that your opinion regarding the working classes of St. Thomas? A.—No, I am only taking exceptional cases; I don't think it is the rule; I think it is the exception. We have many railroad men in St. Thomas and there is a great deal of that kind of thing going on; they are away from home so much when they could go home if they liked and have a good time. There is more or less of that done.

By Mr. HEAKES :—

Q.—Have you a free library here? A.—Yes.

Q.—Is it generally used by the working people? A.—It is.

Q.—Do they take considerable advantage of it? A.—Well, I don't know about working people; I have attended, and I find a great many young people there, children of working people, and I have talked with the manager of the library, and he says books are being taken rapidly and that he has all his time occupied in distributing books.

Q.—Have you any idea what proportion of the books in the library are taken by workmen to their homes? A.—No; I have not; I have no means of knowing particularly, not having looked into the matter, but I think the free library is well patronized.

By Mr. ARMSTRONG :—

Q.—Don't you think it would be more patronized if the working classes had a few hours to themselves on Saturday afternoons? A.—Yes; I think it would. Then again we must remember that these workmen have a society of their own and they look out pretty well for that; there is a good deal of time taken up in these societies. Mind you, I am speaking now on general principles. My own men, as far as they are concerned, I am satisfied would rather work ten hours than be cut off, but still the eight-hour system would be good if the extra two hours were only used for mental improvement, or used as they should be.

Q.—Do you consider that the working classes, during the past five years are more intelligent than they were the previous five years? A.—I certainly do.

Q.—Then it stands to reason that when the shortening of hours takes place workmen do, as a general rule, improve their intellects? A.—Yes; to a great extent; that is my opinion.

J. B. MORFORD, St. Thomas, Division Superintendent of the Michigan Central Railway, called and sworn.

By Mr. FREED :—

Q.—You are manager of the company? A.—No; I am Division Superintendent of the Canada division of the Michigan Central, between river and river.

Q.—That is the old Canada Southern? A.—Yes; the Canada Southern division.

Q.—You employ a great many men? A.—Yes; we have a considerable number.

Q.—And do a large traffic? A.—A very large.

Q.—What do engineers on this line earn? A.—Our engineers run upon a mileage basis. We pay them 3 cents and  $3\frac{1}{2}$  cents a mile—passenger men have  $3\frac{1}{2}$  cents and freight men 3 cents, and if they make full months they make from \$100 to \$140 a month.

Q.—How many make full months? A.—I think nearly all our passenger men and, I should judge, very many of our freight men for the last several months. That is a matter I could not very well answer correctly, because their time and mileage is kept in the mechanical department, under Mr. Flynn, and I only give an opinion from what I judge from the train sheets on which these men run.

Q.—You are familiar with the train sheets? A.—Yes; I consult them frequently. Often we send for drivers and firemen to go out, and they claim that they haven't rest enough, and, of course, we do not exact it if it is rest they want. If we find them off eighteen or twenty-four hours and don't take rest, we don't generally take that as an excuse.

Q.—Are not the trips sometimes lengthened out by storms, or delays, or accidents of various kinds? A.—In the winter time we have delays, but in four years we haven't had but two collisions causing delay to any extent.

Q.—Are not freight trains especially delayed frequently at side stations; are they not side-tracked? A.—Not usually so. The through time figured up within a month for a freight train, including coarse freight, as we call coal and common merchandise, such as salt, in comparison with a stock train, would be four and a-half to five or six hours on road freight, and taking the whole thing through the average would be nine hours and thirty minutes to a trip.

Q.—The trip is from St. Thomas to Windsor? A.—From Windsor to St. Thomas, and from St. Thomas to Mount Rose or Victoria, Niagara River. The distance to Windsor is 109 2-10 miles; the distance to Mount Rose, is 111 and the distance I think to Victoria is 118 miles. The average time made with a man during several months was about nine hours and thirty minutes train time, from the time they reported at the station for duty and the time they got into the terminus.

Q.—Aren't they sometimes delayed very greatly beyond these hours? A.—Occasionally in foggy weather. In such weather we use the block system. We hold one train at a station until the other passes the preceding station, which makes a delay of perhaps an hour more on the division. Sometimes an engineer starts out with a coal run, dead freight of heavy tonnage; the rails are in bad shape, like last night, and the engine may be twelve, or thirteen, or fourteen hours on the road, but for such services we pay our men. We pay our engineers for labor over, I think, ten hours or twelve.

Q.—If delayed beyond ten or twelve hours they get paid extra? A.—Yes; over twelve hours they get so much an hour; we have agreed with conductors and brakemen in the same way.

Q.—Have you known a train to be twenty-four hours on the road? A.—Yes; last winter when we had the blockades of snow and when trains were tied up on the eastern division.

Q.—Could the men get sleep? A.—Yes; they were instructed to get rest, and arrangements were made to call them when needed. I would appoint one of the oldest of the crew, say at Waterford, and tell him to take charge and to see that the men got rest until we called for them.

Q.—Is it not sometimes the fact that these trainmen are required to be on duty for eighteen, twenty or twenty-four hours without the possibility of getting sleep? A.—No sir; I don't think there is a case on record where one of our men has been on duty eighteen hours; there may be, possibly, but I don't know when it was. You understand that St. Thomas is the home for about nine-tenths of our employés on the road; our men live here, and if they are ten hours going to Windsor, and they are called to return, they are ready to return as soon as

they have got their breakfasts, or their way-car fixed up, so as to get here and get a rest. I have never asked a conductor or brakeman to go out without sufficient rest; and we have what we call a report of engineers' rest—that is engineers and firemen.

Q.—Is each engineer confined to his own engine for the time being? A.—No, sir; we run double crews, when business requires it, rather than have that amount of rolling stock or engine power in the round house idle.

Q.—You are now speaking of your own road? A.—Yes; I know nothing of anybody elses; it is about all I can do to take care of myself, and do it safely.

Q.—What sized freight trains do you run—say of loaded cars? A.—That is according to the engine; they are allotted according to the number of cars—twenty-five to fifty-two cars. Our average train will be about thirty-five cars.

Q.—When you run a train of, say forty cars and upwards, what would be the crew? A.—A conductor and two brakemen.

Q.—In case anything is seen on the track, or anything happens which necessitates the stopping of one of these trains, within what distance is it possible to brake train; up? A.—That depends altogether on the quality of the brakes on the train; some are easier than others, and a coal train, for instance, would take longer.

Q.—You have no control over the brakes? A.—No; we are running everybody's car.

Q.—And, to a large extent, cars which are foreign to your road? A.—Yes; we run many on which the brakes are not quite as good as our own, but we pay as much attention to our freight equipment, with regard to brakes, as we do to passenger equipment.

Q.—If a bridge should be down, or any accident occur, or any obstacle in the way, requiring that signal should be given, and the engineer signals, "brakes on," within what distance could a train be stopped to avoid collision or other accident?

A.—If the signal is given according to our instructions, no train would ever get into that broken bridge. We require every man who goes back with a danger signal to go back twenty-five telegraph poles, and if it is a curve, we compel him to go back around until he can see ten telegraph poles, and there are no trains, I think, at the speed we run, which could not be stopped within three-quarters of a mile, if the brakemen are in their places.

Q.—What kind of running boards are on the freight cars which pass through here? A.—They are about the same as on other freight car equipment.

Q.—What width are they? A.—I think about 20 inches, but I could not answer that question exactly, because there are different kinds of cars and different kinds of running boards on foreign cars.

Q.—Would it be difficult to place guards on either side of the running boards, so that the men may protect themselves in running along them? A.—No, sir; guards could be placed on cars very readily and not at a very great expense, but to do that we would have to unite with the American railroads and have them do it, because if not it would be more dangerous than now. The men would depend more on the guard and be less careful than they would if there were not any.

Q.—If one road were to introduce them would not other roads see it was a good thing and copy the example? A.—I cannot answer that question. If other railroads in Canada or the United States will adopt any system of safety to trainmen we will be the first to go in with them for it.

Q.—Would not greater safety be reached by widening the running board? A.—I don't know that it would. Personally, I know something about that by experience, as I travelled the running board for six or seven years, and I don't know that I ever made a mis-step, and they were very much narrower then than they are now-a-days.

Q.—Are accidents frequent from men falling from the top of cars? A.—Yes, sir; but not where the men are looking where they are going. There may be cases, of course, where trains pull apart at the time that a brakeman is crossing and then he

will probably go down. Last winter there was one man who came to town and bought a pair of new boots; he had been wearing shoes, and in going along he tumbled over against the next car and fell down and was killed. I have seen brakemen who, instead of following the running board as they should, would jump from the end of one car on to the other, and of course there is always danger in frosty or slippery weather; a man's feet are liable to go from under him and throw him off the car. But I claim that where men take the responsibility on themselves the railway companies are not to blame.

Q.—Isn't there always a disposition on the part of officials to try to lay the blame for an accident on the men? A.—No, sir; and I will tell you what I have done last winter right along. When we have had sleet storms and when I knew the decks of freight cars were in bad condition and unsafe for the men to go over, I have telegraphed to the conductor and engineer to run their trains with special caution, as we did not want the men on deck on such nights. We have done that in several instances.

Q.—Is that the custom with you? A.—Yes; more or less since I have been connected with the road. If it is a bad night I tell my dispatcher by telephone to tell the men on the road to be careful; the men will say that; they cannot say anything else. We do everything with the appliances we have for their safety.

Q.—Are accidents frequent to men when coupling cars? A.—We have such accidents.

Q.—From what do they arise? A.—A portion of them from carelessness.

Q.—And the other portion? A.—Well, it sometimes occurs that the dead-woods on the cars may be decayed, and if a man goes in to couple he may be injured if he is not careful. I don't know that I can call a case of that kind to mind, but there are such cases.

Q.—Is it not possible to use a coupler by which the cars can be coupled without making it necessary for the men to pass between? A.—Yes, sir; and I am happy to say that our people are adopting that kind of a coupler, and as soon as it is decided by managers what coupling or draw-head will be used it will be universally adopted. We have several hundreds of the Ames coupler, which do not require the men to go between the cars. We have not decided whether to adopt the Ames or the Janey, but either the one or the other will, I think, be adopted universally by the various lines, and I would not be surprised if it was the Janey.

Q.—If railway men who understand this question can make up their minds which would be the best and safest coupler, would you consider it to be a subject for legislation to make it compulsory on the roads to use such a coupler? A.—I think the roads will adopt it without legislation. Last week I directed my train master to get the views of conductors and brakemen running freight trains on this division with regard to the Ames and the Janey—which they consider is the best and safest—which is decidedly safe and which they would recommend, and their opinion will have much to do with the kind of coupler we shall adopt.

Q.—Your railway experience extends over a number of years? A.—About thirty-six years.

Q.—Are you sufficiently familiar with the views and feelings of railway men in Canada and the Northern States to enable you to say whether the roads would study economy at the expense of human life, or would they spend large sums of money to prevent accidents and save life? A.—I don't know much about the managers of Canadian railways; I haven't much to do with them and don't come in contact with them, but I do with the managers of the United States railways. We have twice a year in New York a time convention meeting, where these subjects are brought up, and I know there is not a manager that is doing a business where they are earning fixed charges to-day who is not ready and willing to adopt anything—not for economy's sake but for life's sake—anything which will be beneficial to life or will save life.

Q.—Save life and prevent accidents to employes of the road? A.—Yes; we are now studying the air brake question, and within a year probably we shall be fully equipped with air brakes to be used by engineers.

Q.—You mean the application of air brakes to freight trains? A.—Yes; we have agitated that right along and our people are taking it up. Westinghouse has a train which he has had in Chicago, Buffalo, Boston and other places. He has made several tests and he has proven that a train running thirty miles an hour can be stopped in 560 feet with thirty cars.

Q.—To how long a train can the air brake be applied? A.—To every car in a train, if it is 100.

Q.—There will be sufficient power in a locomotive to control 100 brakes? A.—If the air works you can control 100 as readily and as quickly as you can one.

Q.—What is the cause of the indisposition on the part of companies and managers to adopt that brake for freight trains? A.—It is universally talked of as something which will be done inside of a year.

Q.—Will the expense be great? A.—About \$25 a car, I think.

Q.—Has the question of expense delayed action in this matter? A.—No, sir; the only cause of delay is to get what we consider is the best and most efficient device for the purpose.

Q.—The air brake was applied to passenger trains how long ago? A.—I think about fifteen years ago.

Q.—Has there been any substantial reason why it has not been applied to freight trains before now? A.—I don't know that there has. Yes; one reason was that until the last three or four years 18 miles an hour used to be considered fast time for freight trains, and it was not then considered necessary to put on air brakes as long as there were careful brakemen. Then one trunk line started fast time trains; its competitors said they could do as well as it could, and another said, "We will do better than both," and now they have got to 30 and sometimes 35 miles an hour, and now it is necessary to get air brakes to protect their business and for safety.

Q.—Is the increased speed of freight trains consistent with economy? A.—No; I don't think the increased speed of freight trains is economy by any means.

Q.—There is a certain speed which is the most economical, and to fall below or go beyond it is not economy? A.—I made a test with two trains last summer which satisfied me. We have what we call the limited express, No. 5, which leaves here at 10 o'clock in the morning for New-York. It is seven cars all told, including the baggage car, coaches and sleepers. We have another, the Atlantic express, consisting of ten cars. The Atlantic express speed was figured at 27 miles an hour while the limited express, No. 5, ran an average of 53 miles an hour, and on the distance to Windsor, 110 8-10 with the seven cars running 53 miles an hour, we used five tons of coal and with the ten cars running 27 miles an hour we used 2½ tons, showing a saving of over 65 per cent. against fast time.

Q.—Are there other items of expense besides the consumption of coal? A.—Yes; it is very expensive in the wear and tear of machinery and to equipment to run fast trains. We would not like to do it if other roads didn't do it.

Q.—I was speaking more particularly of the increased speed of freight trains. A.—Of course in order to do a large business you must have a certain rate of speed. Now with steel rails heavier locomotives and longer trains have been possible.

Q.—Can this increased speed be attained without great waste of fuel and great wear and tear? A.—No; I don't think so.

By the CHAIRMAN:—

Q.—Do you think there is a great increase of fuel? A.—Of course there is in fast time; I should say there might be a saving of 50 per cent. as against fast time.

Q.—On freight? A.—Yes.

By Mr. FREED:—

Q.—Why, then, do you increase the speed of freight trains? A.—We are obliged to; competition alone obliges us to do it. We wouldn't have a railway man in St. Thomas if we didn't compete with the North Shore and other lines.

Q.—Are accidents on freight trains more frequent than on passenger trains?

A.—No; I don't think so; I think the statistics for the last year will show an increase of accidents on passenger trains as against freight trains.

Q.—More lives of employés lost? A.—Yes; and more passengers—more people lost.

Q.—Have you had any labor difficulties with your men? A.—No, sir. I am glad to say that I think our men and their managers are harmonious; I don't think there is a grievance of any kind. I must refer to Mr. Jones here, who is pretty well posted, and perhaps knows my men more than I do and hears more what they say; as they would not say much to me. There has never been a case of a grievance brought up by brakemen, or engineers, or trainmen of any kind, which has not been satisfactorily adjusted.

Q.—Have you had demands for increase of pay? A.—Only yesterday we settled the matter with the trainmen and they are satisfied.

Q.—Settled by simply discussing the matter among yourselves? A.—The conductors appointed two conductors, and the brakemen appointed two brakemen, and they wrote me after investigation with the general superintendent at Detroit, asking my presence, thinking perhaps I would help them out, which I did a little. We had a meeting and we agreed on a certain basis of pay. They came back here, called a meeting of the balance of the men, and they disagreed. They wanted other concessions and they called for another meeting. We granted it and the day before yesterday we settled it satisfactorily to everybody.

Q.—In discussing these labor questions or any question which may arise between the company and the men, do the men stand on the same footing that you stand on? Do you stand right up face to face like men in any other commercial transaction? A.—Yes, sir. If I hear there is any trouble going on I send for a certain portion of them and hear what the trouble is, and before going out of my office it is generally fixed up.

Q.—They are as free as you are? A.—They are as free to come to my office as you are; I never turn the key against any man.

Thomas Jones here stepped forward and said: I would like to corroborate everything which Mr. Morford has said. He has always been ready to meet any committee we have sent and to give us a fair, impartial hearing. I do not work on his line, but we always found that to be the case and his own employés say the same thing. I am glad to be able to say so.

The WITNESS.—Mr. Jones has been chairman of the committee perhaps half a dozen different times with my men, and that is the reason I refer to him.

Q.—If any man makes himself conspicuous as a leader among the workmen, or if he is prominent in demanding concessions for them—shorter hours or increase of pay, or anything of that kind, is he not sometimes discharged? A.—No, sir.

Q.—Is he not sometimes given a discharge for other reasons when this is the real reason? A.—No, sir; I have never to my knowledge since I have been in Canada discharged or suspended a man except for a just cause—either for drinking intoxicating liquors to excess or direct violation of the time-card rules. I don't hold anything against a man in that way. Any man on our road has a right to his opinion; we don't care what his religious principles or his politics are, or what association he belongs to, as long as he conducts himself in a mannerly way, so as not to disgrace the officers of the company who employ him.

Q.—Pardon me if I press this matter a little closely. I hold that a workman in selling his labor should have the same right and stand exactly on the same footing as the man who employs that labor? A.—I hold the same opinion; I would not vary from you a bit.

Q.—In view of the whole situation, you tell us frankly and positively that the men in the employ of your company here stand on a perfect equality with their employers in selling their labor, in making their arrangements or demanding rates of wages? A.—Yes; as far as I know.

Q.—And in speaking out for what they consider they should have? A.—Yes, sir; and they generally get what they ask for if it is within reason.

Q.—When men are killed or injured while in the discharge of duty, what indemnity do they get from the company? A.—Do you mean the family?

Q.—The family, if he is killed, and the man if he is injured? A.—If the man is injured and belongs to what we call here the railroad hospital, of which he can be a member by paying 50 cents a month, he can, if he wishes, be taken into the hospital and furnished with medical attendance and his board until he is discharged by the physician.

Q.—Does his pay go on? A.—No, sir.

Q.—Whether the accident arises from his own carelessness or not? A.—No; circumstances sometimes alter cases. Say we had a collision and through that collision an employé was injured—I think our company would protect him and pay him a portion if not all his pay.

Q.—Do they do so? A.—We have had cases where we have done so.

Q.—It is not general? A.—No, sir; because we haven't hurt very many people. We sometimes cut a finger off or have an injury of that kind which confines a man to the hospital or to his home for three or five weeks, and they never expect compensation. Of course, it is done in the discharge of duty, but I guess they don't do so on any railroad. If we kill a man we do what no other railroad does, I think. If a man is killed while on duty we furnish the funeral attendance, hearse and so many carriages and we pay for such services; we don't ask the widow or children of that employé to pay that expense.

Q.—Do you give any compensation to the widow? A.—No, sir.

Q.—You consider that railway men get such remuneration as to cover the liability to accident and death? A.—I think that as a general thing railroad employés are paid better salaries than any other business that is done in this country where there is as much risk of danger as there is on railways. We pay them just what they have asked; they certainly ought to be satisfied, and if not it is not the fault of the railway company.

Q.—They ask just the rates that are going? A.—No; they ask more; we are paying much heavier wages for our train service than any other railroad in Canada is paying.

By Mr. HEAKES:—

Q.—Are the men in the employ of the Michigan Central required to sign any document before commencing service? A.—We require our men going on duty on freight trains to sign an agreement that the company will not be held responsible or liable in case of accident to their person while on duty, in regard to coupling cars. We tender to every man who is employed on a train to couple a safe, made on purpose to reach in and take hold of the coupling and raise it up and enter it into the next drawhead, so that the man himself will not have to go in between, and in that case to compel him to sign an agreement that he will not hold the company liable in case he is hurt in such-and-such duties.

Q.—Is that agreement signed by the Michigan Central Railway Company or by some guarantee company? A.—It is signed by the employé himself.

Q.—Is it furnished by the Michigan Central? A.—Yes; and witnessed by the employing officer.

Q.—Isn't there a certificate required from some guarantee company? A.—Not except when they handle the company's money.

Q.—Freight conductors and brakemen are not required to have it? A.—No, sir.

Q.—If a man is discharged for cause, could he obtain employment on a railroad without a certificate from a guarantee company? A.—If a man employed on the road is discharged for cause and that cause is violation of the rules, to which all men are sometimes liable, we will give him a letter stating the time he was first employed, what he was first engaged at, when he was promoted from his first employment to a

better position and when he was discharged. I don't go even so far as to say that I had discharged him for so-and-so. I sign it and tell the man that is the best I can give him. I say, "I give you more than you had when you came; you are discharged for cause, but you look for employment and say to the man you apply to that you refer him to me." We don't ask our men to go away without a letter of some kind, except he is discharged for drunkenness, and in that case I give him nothing, except a letter saying that he was discharged for getting drunk.

Q.—Will conductors on your road be allowed to take out trains without having a certificate from a guarantee company? A.—On freight trains we don't ask it but on passenger trains we do. The conductors don't pay for it and the other officers of the company furnish it for themselves. The company bind these men through the guarantee company.

Q.—A conductor without a certificate from a guarantee company could not obtain employment? A.—He could not obtain employment on this railroad of ours if he had forty certificates, unless he had worked himself up from a brakeman.

Q.—Would you call that black-listing the conductor? A.—No; it is our system; we make our own men. When we hire a brakeman we give him to understand that if he is all right and straight and conducts himself well, when his time comes he will be made a conductor, first on a freight train, and so on along as vacancies occur, and the same with the engineers and firemen.

By the CHAIRMAN :—

Q.—It is the same as not making a man captain of a vessel until he has been mate? A.—That is it exactly. We know we have better service by making our own conductors and engineers than by taking them from another road.

Q.—You don't take other railway men if they offer? A.—No; because we haven't any use for them.

By Mr. CLARK :—

Q.—Could you give us some idea of your system of signals—whether you have any suggestion to make which would improve them or whether you think they could be improved? A.—We have adopted a system of signals which was universally adopted by the time convention of railroad managers—the most experienced and able men in the United States and Canada. It has been thoroughly ventilated and gone over meeting after meeting and year after year. The code of signals on our road is the code adopted by that convention. I don't think the Grand Trunk have adopted it.

By the CHAIRMAN :—

Q.—You don't think the Grand Trunk use them? A.—I don't think so.

By Mr. HEAKES :—

Q.—Do you know, if a conductor is discharged from a passenger train for cause, whether he can get a certificate from a guarantee company? A.—If he is discharged from our passenger trains for taking money——

Q.—Or any cause? A.—He cannot get a certificate from the guarantee company, because our auditor's business is to notify the company that he has misplaced the trust with the company.

Q.—He is practically black-listed? A.—Not any more than a clerk would be in a bank.

By the CHAIRMAN :—

Q.—Or a man convicted of obtaining money under false pretences? A.—Yes. Supposing you are doing a large business and you have a book-keeper in your employment in whom you have confidence, and some night he robs your safe and goes to another State, and after a while you find him and arrest him, would you turn around and give him a certificate and say that he would be a man who would serve you well?

By Mr. HEAKES :—

Q.—That is not a fair way or putting it ; I didn't ask you about a man being discharged for stealing money—I said for any cause ? A.—You must state the cause.

Q.—There are many causes ? A.—Yes ; there are many causes that men are discharged for, but if a man was discharged for stealing or for intoxication he would not get another certificate.

Q.—Are those the only two reasons ? A.—Yes, sir ; if a man came to my office and abused me to-morrow, and asked me for a letter, if he had served so many years on the road, I would give him the letter.

Q.—Upon what evidence do you generally depend to prove charges against conductors on passenger cars ? A.—That is a question you will have to ask the manager. He takes up all those things and then directs me what action to take when the matter is investigated. Thank heaven, I don't have to do that part.

Q.—You don't have to put the spotters on ? A.—I don't have to do that part.

Q.—Do you think it is possible for a man to be discharged wrongfully through ill-will by these spotters ? A.—I believe there are many cases where they have got the wrong men, but I think when a man has shown to the company that he has been libelled or that the man was mistaken he is reinstated. I have known many such cases.

Q.—They always get an opportunity of clearing themselves ? A.—Yes ; I haven't had occasion to discharge but one passenger conductor on my road for four years until last week. I discharged him for running on the time of another passenger train thirty minutes on the New York Central track.

Q.—That would not prevent him getting a certificate ? A.—I gave him a letter or reference stating how long employed, when he was dismissed, but I don't think I would even tell what he was dismissed for. They could refer to me if they wanted to and then I would have to tell them, probably, what I discharged him for. I don't say that because a brakeman, conductor or engineer violates the time-card rules he should not get a job somewhere else ; and I do say that I am obliged to discharge many of our men for cause, and that if I was transferred to-morrow to a trunk line and many of these men came to me for a position I would hire them, because I know the men ; I know them as well as if I had brought them up, as far as ability is concerned. I have given many letters to the effect that Mr. So-and-so left our service at such a time for cause ; during his time of service he did his work faithfully and well, and so on. I have gone further, and said that if I were in the position of employing railroad men I would not hesitate to employ him ; and every man has got a place somewhere, I guess. That is more than a great many men do.

By Mr. ARMSTRONG :—

Q.—Are men generally suspended before their case comes up for investigation ? A.—Yes ; they have to be.

Q.—Is there an unnecessary time elapses between the time of suspension and the time of trial ? A.—Our rules now are that we suspend the man at the time of the accident. Of course, it sometimes occurs that we have to take both crews if it is a head collision or a rear collision ; we must have the evidence before us before we can decide, and in that case we suspend all hands that we think are implicated or that we want as witnesses. If we find that we have suspended an engineer, or a conductor, or a fireman, or a brakeman for investigation, or we want him as a witness, when we know he is not guilty we pay him for his lost time. If we find that we have taken a man off and at the end of the investigation circumstances are such that we consider that it is one of those things that is perhaps liable to happen, or we decide that it might have been worse, we turn to the man's record and see what it is, and if it is good I tell him to go to work, and I pay him for the time. If it is a case that demands decided action and the man is guilty, he is suspended for ten days or thirty days, or longer, as the case may be, and he is notified of the time of suspension, and if he doesn't want to take that he has the privilege of taking a place somewhere else.

By Mr. McLEAN:—

Q.—Will the use of air brakes do away with the services of any brakemen? A.—No; we shall require the same number, because if they fail to work we have no help.

By Mr. FREED:—

Q.—The law requires you to keep so many brakemen? A.—On passenger trains it does, but it does not specify freight.

By Mr. McLEAN:—

Q.—How many loaded cars on a freight train do you think a brakeman should be able to handle in case of accident? A.—Four to six if he is on deck, but there are men that don't go on deck often. The head brakeman we allow to ride on the engine, except passing through stations or at railway crossings, and so on, and the rear brakeman with the conductor on the caboose, and when it is on a descending grade they have to go to their places until it is passed. We do not ask our men to be on deck except in such cases. In my time we had to ride out in storms and everything else.

By Mr. FREED:—

Q.—You have no side ladders now? A.—We have a few cars with them but they are not used to go up, except in switching.

BYRON J. WADE, called and sworn.

By Mr. FREED:—

Q.—What is your business? A.—A farmer.

Q.—You live in this neighborhood? A.—Yes; five miles west of here.

Q.—How long have you lived there? A.—All my life.

Q.—How much land do you farm? A.—I have only seventy-five acres.

Q.—Do you make a pretty good living off that?— A.—Yes.

Q.—What crops do you raise principally? A.—Wheat, oats, barley, corn and hay.

Q.—Any cattle? A.—Yes; cattle, sheep and horses.

Q.—Do you produce more milk than you consume? A.—Yes; we make it into butter and cheese.

Q.—Do you sell any milk to factories? A.—We have not for the last ten years.

Q.—Did you formerly? A.—Yes.

Q.—What can you get for milk from the cheese factories? A.—I forget now what it was; I have sold for ten years to a cheese factory.

A.—Well, it was profitable then in our factory; I do not know whether it was because of the factory, but I think it was as much as any other.

Q.—Do you produce much fruit? A.—Not a great deal.

Q.—This is a pretty good fruit country? A.—I think it is an average fruit country.

Q.—What do you get for beef cattle? A.—It depends a good deal on the quality.

Q.—Say good fat steers, three or four years old? A.—Good fat cattle will average from \$35 to \$45.

Q.—How much would that be a pound? A.—About 3½ to 4 cents live weight, I should judge.

Q.—Do you consider that a fair price? A.—Well, cattle are very low at the present time. Of course these have got to be first quality to bring these prices.

Q.—If prices remained at 4 cents a pound live weight for good fat cattle would you feel encouraged to go on raising them? A.—Yes; I think so; that is in connection with other branches.

Q.—Is it profitable to raise wheat at present prices? A.—Well, we could barely make a living out of it; that is all.

Q.—Have you ever made a close calculation of the cost of cultivating an acre of wheat? A.—No; I have never put it in plain figures.

Q.—You would not be able to give us any figures without studying the question out pretty carefully? A.—No; not without figuring it up.

Q.—What does wheat average just now? A.—Something over 80 cents, I think. There is a little advance in the price just now.

Q.—Is this a pretty good wheat country? A.—Yes; very good.

Q.—What do you consider an average yield of winter wheat? A.—It would be about twenty bushels—sometimes more and sometimes less; this year it was considerable less.

Q.—This was an exceptionally bad year? A.—Yes.

Q.—And of spring wheat? A.—There is not much spring wheat raised around here; I cannot say anything about it.

Q.—Do you know if the farmers in this neighborhood are getting into debt, or are they paying off their mortgages, or simply keeping out of debt, or how? A.—I can hardly say; I think the majority of them are holding their own at least.

Q.—Do you think many of the farms in this neighborhood are mortgaged? A.—That I could not tell you.

Q.—Do you think that with reasonable economy and prudence, and judgment, a farmer in this county, at the present time, can make a fair living at present prices?

A.—At present prices they can make a living, but they have to use a great deal of economy.

Q.—With plenty of hard work? A.—Yes. Of course, we had prosperous times for a while, and they helped to tide over the hard times.

Q.—The railroads made a great improvement in this county, didn't they? A.—Yes; a great improvement.

Q.—They secured better prices for the farmers? A.—Yes; and opened up the country better.

Q.—Is there much timber left in the country here? A.—Yes; there is considerable timber, but it has got pretty well run over.

Q.—As a rule, do the farmers have more wood on their farms than is necessary to provide them in fuel? A.—Well, a great many are selling. It is getting close for it.

Q.—What do you get for good No. 1 wood in St. Thomas? A.—I do not know; I haven't sold any for a long time, but I presume about \$4 a cord.

Q.—What wages do you pay for good farm hands? A.—Do you mean by the day or by the month?

Q.—How do you generally employ them? A.—Wages generally run in our neighborhood this year about 1\$ a day for good farm hands, or \$18 a month and board.

Q.—Are they employed, as a rule, all the year round, or only for the season?

A.—Some employ them the year round, but the majority, I think, only for the summer season.

Q.—Is there a surplus of farm labor? A.—No; there does not seem to be a surplus; in fact, in summer time it was pretty well picked up.

Q.—Do you farmers, in this neighborhood, live as comfortably as you did fifteen, twenty or twenty-five years ago? A.—Yes; I think so.

Q.—More comfortably? A.—Yes; I think they have more luxuries.

By the CHAIRMAN :—

Q.—They live more expensively? A.—Yes.

By Mr. FREED :—

Q.—Have farm buildings improved or deteriorated? A.—Improved.

Q.—Better houses and barns? A.—Yes.

Q.—More farm machinery? A.—Yes; of course, buildings on some places have got more dilapidated, but on the whole they are better.

By Mr. ARMSTRONG :—

Q.—When the agricultural laborer is not employed the whole year round, what becomes of him? A.—Well, I can hardly tell you. They seek employment in other places.

Q.—Does he migrate toward the labor centres? A.—Well, in our neighborhood there are several I am acquainted with who are farmers' sons themselves, working out and of course, they go home in winter, and those who are not farmers' sons probably cut wood, or do something of that sort.

By the CHAIRMAN :—

Q.—Any lumbering? A.—No; there is not much lumbering here.

By Mr. ARMSTRONG :—

Q.—The ones I speak of are those who came out to this country—not native Canadians? A.—I do not know where they go to, I am sure; sometimes, I suppose, they get jobs in towns and other places.

Q.—Do they generally go back again to the farm or remain in the city, to the best of your knowledge? A.—Well, I cannot tell you; I cannot keep track of them.

By the CHAIRMAN :—

Q.—Do they often come back to you for relief in winter? A.—No; I never saw any of them.

By Mr. ARMSTRONG :—

Q.—Do any of them settle down and become farmers on small holdings? A.—Well, I haven't known any of them personally.

By Mr. HEAKES :—

Q.—What is the reason farmers do not employ laborers all the year round? A.—They do not need them.

Q.—Then when it is said there is a great demand for agricultural laborers in this country it is not true? A.—Of course there is at certain times. A farmer's is not like many other kinds of business; there is a rush of work at certain seasons and at others there is not any.

By the CHAIRMAN :—

Q.—What would become of your crops if you could not get labor in summer time? A.—I suppose they would have to go into the ground again if we could not do it ourselves.

By Mr. HEAKES :—

Q.—Do you think farm laborers would be scarce if they could get employment all the year round. A.—I do not know as that would make any difference.

Q.—Don't you think that constant labor would keep them in the country? A.—Of course, if a man was employed he would not leave the country.

By Mr. ARMSTRONG :—

Q.—In what you call the busy season, how many hours a day do the farm laborers work? What do you think a day's work mean? A.—It depends greatly on what work you are doing. In harvest you cannot commence work for binding or cutting much before eight or nine o'clock, on account of the dew, and this is the same with drawing in; of course, if there is not a heavy dew you can commence it earlier and work from that time, sometimes not until sundown, and sometimes till sundown.

By Mr. CLARK :—

Q.—That would be until eight or nine o'clock in summer? A.—It is very seldom we work until that time, though some will.

By Mr. ARMSTRONG :—

Q.—How may farm laborers is a self-binder supposed to take the place of?

A.—With the reaper we calculate for four men to bind, besides the driver, and the one who sets up; they would make a good gang to go into a field. Now, of course, you only need a driver and one to set up.

Q.—Supposing you went back to the cradle, how many men would you require to do the work that the self-binder does? A.—I cannot tell you that.

Q.—The binder will do away with the work of four men? A.—Yes; in a full gang.

By Mr. FREED :—

Q.—How many horses do you use to the binder generally? A.—Two or three; they are getting now so two horses can work them all right; one team can work them all day.

By Mr. CLARK :—

Q.—Do you get any better prices for produce than you did ten years ago? A.—I do not think so; everything is low now.

By Mr. CARSON :—

Q.—Are prices lower this year than last? A.—I think cattle are.

By Mr. FREED :—

Q.—Do you use the gang-plows to any great extent? A.—Not to break up land with, but we use them on summer fallows or to break up ground in spring.

Q.—Do you drill-in your grain mostly? A.—Some do and some do not.

Q.—Are you able to tell us how much it would cost you to cultivate an acre of wheat in the old times, when you swung the cradle? A.—I never swung the cradle; that was before my time.

Q.—You cannot calculate what it would cost you now to cultivate an acre of wheat? A.—I cannot tell without figuring it up.

Q.—However, the cost of raising wheat is much reduced by the introduction of machinery? A.—Yes, but machinery is very expensive, too. A man can handle his farm better with machinery, because he cannot always get labor when he wants it.

By the CHAIRMAN :—

Q.—Do you think it would be possible to harvest your crops without machinery? A.—No; I don't think it is; four, or five or six years ago, wages were up to \$1.50 to \$3 a day.

By Mr. McLEAN :—

Q.—Was that during the whole season? A.—No; just the harvest season.

Q.—A couple of weeks? A.—Two or three weeks.

By Mr. ARMSTRONG :—

Q.—Do you hear of many agricultural immigrants coming into the country? A.—Not a great many; a few in our section.

By the CHAIRMAN :—

Q.—This is not the place where immigrants come to, generally. Property is dear here, is it not; not many cheap farms? A.—No; not many cheap farms.

Q.—Not a place where immigrants come to, generally? A.—Not to buy farms unless they have means.

By Mr. WALSH :—

Q.—What rotation of crops do you consider most advantageous in the farming business? A.—Clover after wheat, or wheat after clover; summer fallowing, wheat and clover, and barley will follow, or wheat after barley.

Q.—Would what is advantageous here apply to the Province of Ontario as a general thing? A.—I should judge so, though, of course, there may be other parts where the soil is different. I would only say to a certain extent, though.

Q.—With regard to your products generally, what market do you consider the best; the home market or the foreign market? A.—Well, our home market would not amount to much; we have to have a foreign market because the supply is greater than the demand in this section for farm produce.

ROBERT MCKAY, Foreman of the Car Department, Canada Southern Division, Michigan Central Railway, St. Thomas, called and sworn :—

By Mr. FREED :—

Q.—What operations are carried on in the car department here? A.—The whole of the car construction throughout.

Q.—Woodwork, ironwork and wheels? A.—The wheels are cast in close proximity to the place by a private company.

Q.—How many men are employed by the company in the shops? A.—In the car department somewhere about two hundred, but of course that does not include the locomotive department, which is distinct.

Q.—What rates of wages are paid skilled mechanics in these shops? A.—The average for mechanics in the car department would be something about 17½ cents per hour.

Q.—What hours do they work? A.—Nine hours for about three and a-half months in the year—from about the middle of November to the 1st of March.

Q.—And the rest of the year? A.—Ten hours.

Q.—Are the men pretty constantly employed? A.—Yes; we have our permanent staff, and sometimes there are a few more, but generally we have about the same number as at present; it fluctuates a trifle.

Q.—Have you ever had any labor difficulties there? A.—Never—well, not for a number of years. Some eight or nine years ago there was a slight difficulty, but it was soon arranged. At that time we were behind hand with their wages, but that was all adjusted to the satisfaction of the company and the men. You really could not call it any difficulty.

Q.—Is the machinery in these shops well protected? A.—Yes; we have had no accidents. I am one of the oldest employes; I have been there since the organization of the road.

Q.—When the factory inspector was around did he find any fault with any of the machinery? A.—I never saw him.

Q.—Have you any difficulty in getting all the men you want? A.—Not in the least. We have splendid shops, the men are treated as men and we always have any amount of applications.

Q.—Where do these applications come from? A.—From the country and often from a distance. I have frequently received letters applying for positions, but we generally try to recruit from the ranks or increase our force from people resident in the neighborhood.

Q.—Do many of your employes own their own houses? A.—The majority of them. I must say that the workmen in the car department especially are a very good class of men—provident, very industrious and intelligent, and perfectly satisfied; most of them have either acquired homes or are in course of doing so. The economy practised by them is something surprising; they must understand financing to a fine thing to distribute their wages as they do and keep up appearances.

Q.—In building houses, do they save enough themselves or do they borrow from the banks and other sources? A.—I could not give an accurate answer to that. Some of them, no doubt, have to borrow, but I don't know as to that. I don't know of any man in that position, but I suppose they purchase them ready built on time and pay them by instalments.

Q.—Do you know of any societies to encourage the men in building houses for themselves or buying them? A.—No; I don't know that there is any society which gives any special inducements in St. Thomas.

Q.—Are there any speculators who build houses and sell to them? A.—I believe there are one or two builders who have built one or two workingmen's houses, but how the buying or selling is effected I do not know.

Q.—Do you employ many boys? A.—None at all.

Q.—You have no apprentices learning any of the trades? A.—No, sir. We have boys whose position is equivalent to that of apprentices. They come in there

perhaps at twelve or fourteen years of age and have been generally kept along until they have acquired a thorough knowledge of the trade. I received a letter from one last night; he stopped in California and he has gone into an important branch of the business—stair building—a young man who started in our shop.

Q.—They remain until they learn the trade pretty well? A.—Well, we advance them every year in their pay. Some of them display more ability for acquiring a knowledge of mechanics than others do and they advance more rapidly.

Q.—Can you volunteer any suggestion which would be for the advantage of the men? A.—Well, I don't know that I could in regard to the relations to the company under whom they are working. Their wages are paid promptly and the men are perfectly satisfied, apparently. I never hear a murmur, and in times past when there was murmuring it generally emanated from those who were less skilled than the others, in order to take advantage of the superior abilities of their fellow workmen.

By Mr. ARMSTRONG :—

Q.—What wages do good mechanics receive? A.—The average is \$1.75 per day. Some get 18, 19 or 20 cents an hour; the lowest is 16 cents.

By Mr. HEAKES :—

Q.—In car building, do you work by what is known as standard altogether. Does everything go by the standard system? A.—I don't understand you.

Q.—Is your system different from the Grand Trunk car shops in any respect? A.—No; I don't know that it is. I think in regard to turning out of the work our shop will compare favorably with any other.

Q.—Do the men get constant employment in car building here? A.—Yes.

Q.—And turn out all classes of cars? A.—Yes.

Q.—Have you any piece-work? A.—Not any; we have never had any.

By Mr. CARSON :—

Q.—You have some very long belts in your establishment? A.—Yes.

Q.—Those belts generally run down; the counter-shafts are above? A.—They are what we might term vertical belts.

Q.—Are those counter-shafts below protected? A.—Yes; there is a guard to turn the box in.

Q.—In case of a man carrying an armful of small stuff, if he should fall is he not liable to fall into the belt? A.—No; the arrangement of the machinery is such that I think no man has any occasion to carry the stuff in that way.

Q.—Don't you think a box could be arranged around those belts to protect them more thoroughly? A.—It might, but we have never heard of an accident of that kind.

Q.—But the way they are arranged an accident might occur in the way I have mentioned? A.—Yes; it might occur; there might be a little more protection, but the men there are very competent and very watchful.

By the CHAIRMAN :—

Q.—To prevent accidents, wouldn't it be worth while to do something? A.—Yes; there are boxes for them but the men don't use them; they are cumbersome and more in the way than anything else.

By Mr. CARSON :—

Q.—Sometimes the oldest hands in factories are injured through carelessness on their part, and the machines not being properly protected really makes them dangerous? A.—Of course all belts are more or less dangerous; still, I don't think there is anything very hazardous in our belts; very few of them run on the floor horizontally.

Q.—For instance, I notice that you have a large saw for butting off; don't you think a circular guard should be placed over the saw? A.—You could have an off guard on top, but the saw is always cutting away from the operator. Of course, a

man could put himself into a position to get into danger, but there is really not much danger in that way. The revolution is towards the rear while the operator is in front.

By Mr. ARMSTRONG:—

Q.—Are your men paid weekly or monthly? A.—Monthly.

Q.—Do they prefer to be paid that way? A.—I think it is to the advantage of the company to pay monthly; they have to go over a large tract of road, and so much travelling would have to be done that it would be almost impossible to pay them oftener.

Q.—It may be an advantage to the company, but is it an advantage to the men? A.—Well, I don't know that it would be with the class of men that we have. Those men are able to appropriate their monthly payments to the different objects they have in view. We scarcely have such a thing as a garnishee, and it is a rule of the company that if a man is garnisheed twice he is dismissed, and that gives us a better class of men—men who look after their own interests.

Q.—You never heard them complaining about the length of time elapsing between one pay day and another? A.—Never; nothing of the kind has come to my knowledge.

GEORGE WRIGLEY, Printer, St. Thomas, called and sworn.

By Mr. ARMSTRONG:—

Q.—Suppose you first tell us something about the printing business. What is an ordinary job hand worth in St. Thomas? A.—I do not know what wages are paid.

Q.—Have you any journeymen? A.—Yes.

Q.—How much do you pay them? A.—One hand, my foreman receives 17½ cents per hour.

Q.—How much do you pay your journeymen? A.—I have only had one hand; I paid him \$1 a day, \$6 a week. He had been a year and a-half at the business.

Q.—Have you many apprentices? A.—One, at \$1.50 per week.

Q.—What is the general age at which apprentices are taken on in the printing business at St. Thomas? A.—From twelve upwards. Some probably younger than twelve.

Q.—How long do they serve? A.—That I could not say.

Q.—Do you know anything about the newspaper branch of the printing business? A.—I have been the publisher of a newspaper for eight years.

Q.—Do the men work by piece? A.—Nearly all work by piece in St. Thomas.

Q.—How much per thousand ems do they receive? A.—Twenty-two cents, I think, is the figure.

Q.—Do the piece-hands receive any portion of the fat matter, such as advertisements and tabular matter? A.—In regard to that, I could not say positively, for I have no knowledge of the custom in the large offices.

Q.—Is there much plate-matter in St. Thomas? A.—Considerable.

Q.—Where does it come from? A.—From Buffalo; I think some comes from there; all from Buffalo or the other side.

Q.—Do you think that is a preventive of more men being employed? A.—On the whole, I do not think it affects the number of men generally, for the reason that where plate-matter is used a greater number of offices are established, and that being the case, the number of employes is about the same as it would be if no plate-matter were used. Then again, the offices that use plate-matter publish more reading matter than they would do if they could not get plate-matter to use.

Q.—When plate-matter is used, are not the piece-hands compelled to lay off for want of something to do? A.—I do not think that that is the case, more than

formerly, when no such matter was used. It has always been necessary, more or less, for some hands to lie off at different times; it has always been the custom, and been necessary.

Q.—You have known that to be the case, that men have been laid off several days in the week when no plate-matter was used? A.—Yes; and when plate-matter was used.

Q.—Do you know of cases of men being laid off when plate-matter was used? A.—There are always a number of hands who work when things are busy in the office, and they have no work when things are not busy.

Q.—Have you known men to be laid off in the printing business at the time plate-matter was not used because either no copy was ready or there was no type to distribute? A.—I have not had any personal experience as to how that is. I understand it has been the same here as in every other place where printing is done.

Q.—In every other place where printing is done. Is it so in Toronto or Hamilton, to your knowledge? A.—I have always understood there has always been in labor centres where printing is done a number of hands who get work part of the time, but not all the time. But on this point I have no practical knowledge.

Q.—Do you know the length of servitude in St. Thomas for apprentices to the printing business? A.—There is no regular time.

Q.—When boys are out of their time do the employers take them on as journeymen, and give them journeymen's wages, or are they discharged and a new batch of boys brought in off the streets? A.—I have heard complaints that they are not advanced as they should be in St. Thomas.

Q.—How do you mean advanced? A.—There are too many green hands taken on.

Q.—When they have served a length of time and consider themselves journeymen, what would you prefer to do with these men? A.—In some cases we keep them on and in other cases they go elsewhere, where they can do better.

Q.—That is rather fencing with the question. Let me ask you this: when boys have been four or five years at the business, and when they demand a certain amount of wages, approaching that of journeymen, do the employers say: "I will not give you that amount; you can work for smaller wages or you can go?" A.—Without wishing to have you imagine that I desire to avoid the question, I may say that this is a matter on which I have no personal knowledge.

By the CHAIRMAN:—

Q.—I understand you wish to say something to the Commission about schools.

A.—When I was asked to give evidence I said there was one point on which I would give evidence if I gave evidence at all. As an old teacher, I have thought considerable recently as a student of the labor question that the ages at which children attend a school are different from those which should prevail. I do not think a child ought to attend school until he or she is seven years old. I think the first twenty-one years of a man's life should be divided into three periods of seven years each; the first seven years to be given to building up a good, strong constitution; the second seven years, between seven and fourteen, to obtaining a good English education, not the higher branches at all, but good common school education; and the third period, between fourteen and twenty-one, should be used for obtaining knowledge of a profession or trade. During the second seven years, between seven and fourteen, the higher branches should not be taught at all in the common schools; there are altogether too many of the higher branches taught in the common schools, the result being that the lower branches are not studied so thoroughly as they ought to be.

By Mr. FREED:—

Q.—Are you familiar with the kindergarten system? A.—Not particularly so. I know what it is, and that is all.

Q.—Do you think the attendance at kindergarten schools of children between five and seven years is a detriment to their health? A.—No; I think children under seven might attend kindergarten schools.

Q.—Do you think that technical instruction might be combined with the ordinary common school course between the ages of seven and fourteen—an elementary knowledge of the use of tools and things which will be of advantage in mechanical trades during future years? A.—Yes; to a certain extent. The text books might embrace, or should embrace, that information, as well as all scientific information.

Q.—If a boy calculates to become a mechanic, could not some lessons be dispensed with advantageously, and others substituted which have reference to technical instruction? A.—Certainly so.

Q.—Have you made any study of this question? A.—I have thought of it considerably.

Q.—Have you any suggestions to offer in this connection? A.—Nothing further than that I think the present system should be amended, probably in the way suggested, to divide the periods into seven years each, and to do away with the higher branches entirely in the common schools. My idea is that during the third period, between the ages of fourteen and twenty-one, those who continue to attend school for the purpose of learning a profession should pay for their instruction. During the period between seven and fourteen the schools should be free; what is learned during that period should be learned free, but after that time children should pay for the instruction they receive at the high schools.

Q.—Do you think that five years are necessary to teach the child the ordinary branches of English education? A.—I think they could obtain a good English education if that time was properly applied.

Q.—Could it not be acquired in much less time? A.—In very much less time if the time were properly used. I think the working people of the country are not dealt with properly when they are called upon to pay a portion of the expense of maintaining higher schools, and allowing children of the wealthier class of the population to attend them for the purpose of learning a profession. That is the point I wish particularly to bring before the Commission.

Q.—If higher education were made more expensive would it not prevent the children of the comparatively poor from getting any higher education whatever? A.—To some extent it might.

Q.—Would it not have a tendency to make the distinction between the rich and the poor more distinct than it now is? A.—I do not think it could or would. I think any workingman who has a child, or two children, whom he desires should learn a profession, can earn a sufficient amount of money to pay for their education in the higher schools in order to enable them to acquire a profession.

Q.—You have a collegiate institute in St. Thomas? A.—Yes.

Q.—A good one? A.—Yes.

Q.—What is the rate of school tax in St. Thomas? A.—I do not know. I have been a resident here only a short time.

Q.—Do you know what is the cost of maintaining collegiate institutes? A.—That I could not say.

Q.—Have you any idea what the total cost of its maintenance is in proportion to the total assessment of the city? A.—No; I could not answer that question.

Q.—Do you think it is as much as to be appreciable to the average mechanic in St. Thomas? A.—I think it amounts to a considerable sum.

By Mr. ARMSTRONG:—

Q.—Do you think that the portion of the Government money that goes to colleges and universities should be diverted to the public schools, in the shape of purchasing books, so that books may be free? A.—I approve of that system at the common schools.

Q.—On the principle of the greatest good to the greatest number? A.—Yes; that is it.

Q.—Are there any children, in your opinion, among children of mechanics, who reach as high as a university education? A.—Very few.

By Mr. MARSH:—

Q.—Do you know anything of the model school system in this country? A.—Yes; I think it is a very good system.

Q.—What is the system adopted here? A.—Teachers, of course, have got to go through the course of training in the school under the new Act before they can get a certificate of qualification.

Q.—How are the schools supported? A.—I think there is a Government grant. It is eight years since I was a teacher.

Q.—Have the public to pay anything to those schools. I suppose higher education is taught there? A.—The public does not directly; they do indirectly, if there is a Government grant.

Q.—Do you think the public money could be applied to a better system, even taking your system into account? Suppose the system were to prevail, what branches would you consider sufficient to furnish a common school education for these children? A.—The three principal ones would be the three R's, grammar and geography.

Q.—How far would you go with the third R, arithmetic? A.—I would not expect that to embrace algebra or geometry.

Q.—Do you not think that for the son of a mechanic, who is intended subsequently to learn a trade, mathematics are important, especially if he is going to be a carpenter or a builder? A.—The first three books of Euclid would be very essential, and algebra also.

Q.—Do you know any reason given for teaching these higher branches to children in the common schools? Take algebra, for instance; do you know any reason given for teaching it in the common schools? A.—I do not know to what you particularly refer.

Q.—Do you know the reason given why it is taught in the public schools when it may not be essential to the trades which most boys will ultimately follow? A.—I think it is a study that would benefit any one, no matter what his course in after-life may be. I do not object to the study of those subjects; it is a point I have not thought out particularly as to what should be taught in the public schools, but the elementary branches are not thoroughly taught at present—not so much as they would be if the other plan I have mentioned were adopted.

By Mr. HEAKES:—

Q.—Are the wages in printing offices in St. Thomas always paid in cash? A.—I believe not.

Q.—Men sometimes receive orders on stores? A.—Yes.

Q.—Is it done to any extent? A.—So far as I am concerned, I am one party who gives orders occasionally, but they are always received voluntarily; there never has been any system of compulsion, so far as I am concerned, although I have given orders.

Q.—Is it within your knowledge that men prefer orders on stores to cash? A.—If there has been any particular store at which they are dealing they would as soon receive an order as cash.

Q.—Do they prefer an order on a store to cash? A.—My answer is, that orders are sometimes received just as willingly as the cash would be. In my case they have always been so.

Q.—Do you give the hands an order on the store where they wish an order? A.—I never give an order to an employé on any store he does not wish an order on.

Q.—Do you select the stores, or do the men select the stores? A.—The men select the stores.

Q.—That they have received orders on? A.—Yes. I am sorry you have introduced the question, and I am sorry that I became a witness, for I can see where you are driving.

Q.—Did you see one of the circulars issued by the Commission? It states, "Inquiries relative to what is called the truck system." You understand that the

truck system is part orders and part cash. We understand that the workmen of the Dominion, generally, have been agitating to have that abolished. My only reason in asking the questions was to ascertain to what extent the system has been carried on in the towns we visit. A.—Not to cast any reflections on others, you can ask me any questions you choose on the matter. Since I have, in my answers, in a measure, committed myself, I want to say, in justice to myself, that I have never given any thing but what was just as acceptable as cash. We do business, more or less, with tradesmen who expect that trade will be taken in return, and in paying my hands, on some occasions, I have asked the question, knowing that they were dealing in particular stores, "Would you just as leave have an order on such and such a store?" In some cases it has been received very willingly; there has been no objection offered; there never has been any complaint; I am satisfied of that.

Q.—Do you know if they get full-cash values for these orders? Q.—I know that I am supposed to get full-cash value.

Q.—You get credit for the full-cash value. Do you know if the men get full-cash value for the value of the order? A.—Perhaps not.

Q.—Would it not be a better system to always pay the men cash? A.—I think it would.

By Mr. ARMSTRONG :—

Q.—Are there not many instances in one of the printing offices in St. Thomas in which this is done? A.—Do you wish to press the question?

By Mr. McLEAN :—

Q.—How long did you teach school? A.—About eight years.

Q.—How many times in those eight years were the books in any branch changed? A.—A great many times.

By Mr. HEAKES :—

Q.—Do you find merchants in St. Thomas, in giving printing work to the offices, insist on the printer taking payment in trade, in many cases? A.—Here and in every other place they do so, more or less.

Q.—That, I suppose, is the general reason why men are sometimes paid in that way? A.—Yes.

ROBERT MCKAY, re-called.

By Mr. HEAKES :—

Q.—What do you consider the best coupler for freight cars in use? A.—Considering the number of cars and the number of different draw-bars we have, I consider the Safford draw-head is the best; it is not an automatic coupler. There is a protection for the hand when the draw-heads come together; there is a place for the hand, and there is no chance for a man to get his hand smashed if at all careful. The number of patent couplers is very large, and unless you can compel all the roads doing business in Canada—for you cannot legislate for the United States, and you cannot refuse the cars, and uniformity is almost an impossibility—the new patents will not amount to anything, except to the patentees and those interested.

Q.—Do you know anything of the Ames coupler? A.—Yes; we use that. The Ames is the one adopted as a standard on the Canada Southern division of the Michigan Central.

Q.—Are the men required to go between the cars with the Ames coupler? A.—Yes; if it comes into contact with another, which is as likely as not. If there are two Ames couplers a man has not to go between the cars. As we build new cars and alter cars we put on the Ames coupler, which is an automatic coupler. It is a coupler that does not recommend itself to any railway company, for it is very expensive, and it is not a perfect coupler; it gets out of repair very quickly, and is altogether an expensive affair and is not a perfect one.

Q.—What is your opinion of the Janey coupler? A.—It is a very good coupler, but unless you can make all the couplers Janey's or Ames it is no use.

Q.—In view of the fact that some change is necessary, what coupler do you consider the best? A.—I think the Janey is preferable to the Ames. There are very few of them in use in Canada.

Q.—Could the Miller coupler be adapted to freight cars? A.—I suppose it is not an impossibility, but it would entail a vast amount of expense on the rolling stock.

By the CHAIRMAN:—

Q.—What would it cost? A.—You would have to alter the coupler considerably from what it is now with the Miller platform. In introducing the platform to merchandise cars you have to have it project accordingly, so as to enable the brakeman to go from one to the other. On this division, I must say the company have adopted every precaution to protect the men, that is, by having the running bars a proper distance, so that they will not come in contact when the springs are compressed. The compression in the springs will amount to about 5 inches.

Q.—I suppose the link-pin with the Safford head is about as good a one as you have? A.—Yes; and about as profitable.

\* \* \* Brakeman, M. C. R., St. Thomas, called and sworn.

By Mr. HEAKES:—

Q.—How long have you been employed as brakeman? A.—Four years and five months.

Q.—Will you tell us, please, if the brakemen have any grievances or if there are any means which you would suggest of bettering the condition of the brakeman's life? A.—Well, they have a good many grievances, and considerable improvements could be made to better their condition.

Q.—Just tell us what they are? A.—First, the running boards on the top of box cars should be widened a little, so as to make it better for brakemen running along them. The expansion between the cars is rather long in many cases and it is really necessary that it should be shortened. We have cars running over this road on which the frame of the car would project out 15 or 16 inches more than the top, and then we have the slack between the draw-bars, which will make it more still. Together this makes it quite a distance to step from one car to another, and if it is a windy night or the decks are bad we have to go down the end of one car and crawl up the end of the other.

Q.—What would you consider the proper width of running boards for safety? A.—Thirty inches.

Q.—You speak of the distance between the cars when running of being too great; can you tell us nearly what that distance is? A.—From 2½ to 3 feet.

Q.—A man would require to stand clear of the end of the car when jumping, and he would want to land clear on the other car, so he would have to jump 4 feet at least? A.—He would on some cars.

Q.—What is the average width of running boards now? A.—They vary considerably, from 30 inches down to what I should judge to be about 1 foot.

Q.—Have you any idea which is the best way to construct a running board? A.—To my idea lengthwise and some are put in short lengths, crosswise. Which is the best? A.—To my idea lengthwise is the best.

Q.—On an ordinary car, what is the distance between the deadwood and the end of the draw-head on your road? A.—There is no deadwood; there is a timber going across on the top of the draw-bar, but we don't consider it to be the deadwood. What we consider to be the deadwoods are the timbers down each side of the draw-bar.

Q.—Is there not a piece of wood bolted to the end sill of the cars to prevent them coming together? A.—No; the draw-bars touch first.

Q.—How much spring have these draw-bars got? When they come together how much will they spring in? A.—They vary; it is a hard thing to tell.

Q.—How far should the running boards project over the ends of the cars in order to avoid striking together when the draw-bars meet? A.—Taking the ordinary car, about 9 inches over the end of each.

Q.—Are you supplied with rubber shoes in the winter time? A.—No.

Q.—If you were supplied with them would the life of brakeman be safer? A.—I don't think so. From what I have seen and heard of rubber, it gets slippery after wearing it awhile.

Q.—Are you required to remain upon the cars for any length of time when running? A.—While descending grades we are supposed to be on top.

Q.—And when not going down grades you are supposed to be in the caboose? A.—Yes; except when going through stations.

Q.—Now, how about bell cords on freight trains? How do they work? A.—In my idea they are no use.

Q.—Are they any source of danger? A.—They are.

Q.—In what way? A.—Well, they are always getting down along the sides of the train and the brakeman has to step on the edge to get them up, and the least jar is liable to throw him off. Then, in walking along the deck of the train when you are in a hurry you step on it and it will roll under your foot.

Q.—Are accidents frequent to brakemen from that cause, or through the bell rope in any way? A.—As far as practical experience is concerned, I am not well versed in that, as I haven't had anything to do with it very long.

Q.—Brakemen when out on the road are supposed to do all the coupling required in picking up cars? A.—Yes.

Q.—Do you find that in way-stations the frogs are all filled? A.—I think they are all filled on our road with wood blocks.

Q.—The danger has been removed from that source? A.—Yes; I think it was about a year ago they put them on.

Q.—What is the usual trip for a brakeman—the number of hours on the road? A.—The train I am on, taking it on the average, is about eighteen hours going one way over the road.

Q.—Without any rest? A.—Yes.

Q.—How many trips do you make in a week? A.—Two round trips in the week.

Q.—That would be seventy-two hours in a week? A.—Yes.

Q.—How much rest are you supposed to get between trips? A.—Well, I don't know; I haven't seen any official notice that we are supposed to take any—only go when we are called.

Q.—You cannot claim any number of hours for rest? A.—Not on the Michigan Central, that I am aware of, and I have been on four years and five months.

Q.—What class of trains do you run on? A.—A way freight.

Q.—Is that a more dangerous train than a regular freight? A.—Well, yes; I think it is.

Q.—Where does the extra danger come in? A.—We are always coupling and uncoupling cars at way stations.

Q.—Are you required to do that at night as well as day time? A.—Yes.

Q.—Is a brakeman paid by the trip or by the month? A.—On local freights we are paid by the month.

Q.—What wages do the Michigan Central pay for local freight? A.—Fifty dollars a month.

Q.—No allowance for overtime? A.—No.

Q.—No allowance for detentions for way stations? A.—No.

Q.—Can you tell anything about the couplings in use on your line? Do you consider them dangerous? A.—Some of them I do.

Q.—Which ones are they? A.—There is a kind of patent draw-bar they have got up which I consider very dangerous, for this reason: On this way freight business

we have to couple on with the push-bar to the engine as often as otherwise, and in coupling with the patent draw-bar it is apt to go right through, and you are liable to get caught. That is the Ames coupler, or the Toledo.

Q.—Isn't it considered by railway men one of the best that has been invented yet?  
A.—I don't know; it is not in my estimation or in the estimation of any that I have spoken to.

Q.—Do you know anything of the Janey coupler? A.—No; I do not.

Q.—You have never seen it? A.—Not that I am aware of.

Q.—Do you know the Miller coupler? A.—Yes; that is used on passenger coaches.

Q.—Could the principle of the Miller be applied to freight trains? A.—Well, I don't know as it could.

Q.—Have you ever seen a coupler which, in your estimation, would be perfectly safe? A.—Well, no; I don't think so.

Q.—Which do you consider the safest draw-head in use at the present time? A.—What they call the Safford draw-head.

Q.—The one which has room for the hand between the end? A.—Yes.

Q.—Is there much difficulty in making up trains through the unequal height of cars? A.—Sometimes there is.

Q.—Isn't there a draw-head on some cars now which will enable you to connect easily cars of a different height? A.—There are a few that you can change the link from one place to another on the draw-bar; there are two different places for it.

Q.—Can you suggest to us any means whereby the risk to brakemen may be reduced? A.—Well, there is one case I see where I think it could be reduced a good deal, and that is by placing a hand rail along the top of the car for protection.

Q.—Where would you recommend this rail to be placed? A.—Along the running board—on the side of the running board.

Q.—On each side? A.—No; one side, I think, would do.

Q.—Is it the practice on your road when trains are delayed for orders to be sent to the men to take rest? A.—I have never heard of any.

Q.—And you have been on the road four years and have been detained frequently? A.—Yes.

Q.—And you have never received orders to take a rest? A.—No, sir. Last winter we left here on time; there was a snow block, and we got into Windsor about twenty-five minutes before we were due to leave; we had just time to wash and clean up before going back again, and it was after dark when we got back.

Q.—Were you on duty all the time? A.—Yes.

Q.—You were not asked to take any rest? A.—No.

Q.—In case of accident, would the company compensate the men in any shape? A.—I have never heard of any.

Q.—Are you required to sign a paper when you enter the service protecting the company against actions from the consequences of accidents? A.—Yes; there is something to that effect.

Q.—Have you any provident system on the Michigan Central like that on the Grand Trunk? A.—No.

Q.—No insurance? A.—No.

Q.—Then you have no protection from accident at the hands of the railway company? A.—No.

Q.—When a man is disabled on the Michigan Central do they ever pay his expenses; or do they make it a practice to pay the expenses of a man who is laid up? A.—I have never heard of them doing so.

Q.—Did you ever know of a case in which the company paid the doctor's bill and the board of a man who was injured by accident? A.—I never heard of any.

Q.—Do they furnish medical attendance to their men at the expense of the company when they are injured? A.—No; not that I am aware of. They have a doctor here but whether they pay him at their own expense or not I don't know.

Q.—Is the doctor furnished to the men free of charge? A.—I could not tell you that.

Q.—When a man is suspended how long does it take before he gets his case tried? A.—Sometimes it takes quite a while—I could not say how long. I believe there are some who are laid off and don't know whether they were going to work or not.

Q.—When a man is suspended for some offence, and after investigation has been found innocent, does the company pay him his wages while suspended? A.—I never heard of any instance of it.

Q.—Do they allow him for loss of time? A.—I never heard of it.

Q.—A man may be suspended without his knowing the cause and kept suspended for a month or more, and lose his time, without receiving any benefit? A.—Yes.

Q.—Are men discharged on the Michigan Central without their case being investigated? A.—I could not say as to that.

Q.—Who generally investigates charges against brakemen? A.—The superintendent.

Q.—The general superintendent of the road? A.—The division superintendent. Of course there are some cases where the train-master uses his own judgment upon it.

Q.—Are these superintendents always practical railway men? A.—I could not say.

Q.—In the case of a man being discharged, can he appeal to anybody above the person who has discharged him? A.—No.

Q.—Would it prevent a brakeman from getting employment on another road if he were dismissed in that way? A.—In which way?

Q.—If a man were dismissed without any charge being brought against him to his knowledge would he be able to get a similar situation on another road? A.—He might if he went so far west that they could not get any track of him.

Q.—Does the Michigan Central furnish employes on leaving their service with a certificate of service and character? A.—I believe so.

Q.—In all cases? A.—I don't know that they do in all cases, but I believe that they do in some.

By Mr. FREED:—

Q.—After running eighteen hours, as you say, how long are you allowed to rest after you are sent out? A.—Just until the train is due to leave.

Q.—How long would that be on the average? A.—About five hours.

Q.—And would you then be eighteen hours on duty again? A.—Hardly that much; it would just depend on the business of the road; sometimes it would and sometimes not.

Q.—After that eighteen hours' service how much time pay are you allowed? A.—We are paid by the month and we make two round trips a week.

Q.—If you ran from here to Windsor would you be eighteen hours on the road? A.—Yes; that is the run exactly.
